PREFACE

This volume is very much the product of its time. The idea of a comprehensive statistical volume on the Ukrainians in Canada was born with the appearance in 1965 of the *Historical Statistics of Canada*. The idea received further impetus in 1967 with the celebration of the Canadian Centennial. This historic event evoked a widespread patriotic outburst among the Canadian ethnic groups which manifested their cultural heritage by publishing a variety of books and brochures on their role and contribution to Canadian society.

The idea of a statistical compendium was developed at meetings of the Ottawa Chapter of the Shevchenko Scientific Society. The first step towards realization of the project was taken when the Society established a compendium team, which in 1969 obtained an extended grant from the Canada Council to finance the project. After several years of intensive research and compilation by the team, the compendium was successfully completed and appraised. It goes to print at a time when Canada's existence as a nation is being debated and challenged. It is the sincere hope of the compendium team that its work will make a positive contribution to Canadian nationhood.

It was planned from the start that the compendium's statistics would cover the 80-year period from 1891, the year when the first Ukrainian immigrants arrived in Canada, to the 1971 census, which at that time was still to be taken. Subsequent events decreed otherwise. Our involvement in the compendium had become total but when we surveyed the material after having assembled the 1971 census statistics, new data from federal and provincial elections during the period 1972 to 1975 had become available. After including the most recent material in the section on political participation, and also adding the latest statistics, specifically, the appointment of the fourth Ukrainian to the Canadian Senate in December 1976, the work on the compendium was brought to a close. Hence the compendium's statistics cover the 85 years from 1891 to 1976, dates which have been incorporated in its title.

The compendium would not have been possible without the support of a number of Canadian institutions which provided funds for the remuneration

of research assistants, typists, and statistical clerks, for the purchase of 1971 census data from Statistics Canada, for travel associated with the project and for photocopying, stationery and typing supplies. We are particularly grateful to the Canada Council whose grant enabled the project to be launched and carried through to an advanced stage of preparation, and whose assessors, through their critical remarks and comments, helped to determine its general form and content. We are grateful also to the Canadian Institute of Ukrainian Studies at the University of Alberta, the Ukrainian Canadian Shevchenko Foundation in Winnipeg, the Iwachniuk Ukrainian Studies and Research Fund of the University of Ottawa, the Ukrainian Canadian Committee—Montreal Branch, and the SUS Foundation in Toronto, all of which provided additional grants to assist in the completion of the compendium.

Our sincere appreciation is extended to the officials of several Ottawa institutions for permitting the use of their services or facilities; to the University of Ottawa for assuming the financial accounting in the disbursement of project funds and its Department of History for providing a meeting room, a typewriter and other services for use by the compendium team; to the Public Archives and National Library of Canada for making available study rooms wherein most of the data compilation was conducted; to Statistics Canada for providing access to ethnic data from unpublished materials; and to the Department of Employment and Immigration, Special Projects Division, for providing access to their archival material on early immigration to Canada. We are grateful to the Ottawa Chapter of the Shevchenko Scientific Society for its initial support.

The compendium is the result of the joint endeavour made by its authors, William Darcovich, Paul Yuzyk, Ivan Tesla, Boris Myhal, Zenon Yankowsky and John Wochyshyn; the first two also served as editor and associate editor, respectively. Most authors assumed responsibility for more than one topic. As members of the compendium team, the authors were responsible for the basic planning, the research, the writing and the content of their sections. During the preparation of their work they were assisted by the support staff in the collection, checking and collation of data. In the final stage the editors reviewed the entire text to ensure the consistency of judgment and uniformity of style. The authors gave their efforts and time without remuneration.

Gloria Prokopowich and Luba Ewashko were responsible for a major part

of the data compilation and verification which they performed with diligence, and for the typing of tables and text, which they did with patience in spite of numerous drafts. Particularly, we wish to acknowledge the efforts of Gloria Prokopowich in compiling the population data for small areas (Section 21) and for conducting the initial searches on Ukrainian candidates seeking political office (Section 33). Similarly, we wish to acknowledge the effort of Luba Ewashko in seeking out and compiling unpublished data on religious denominations, education and the labour force (Sections 30, 32 and 40) from Statistics Canada.

Besides the authors, several other persons were involved in the compendium's preparation. In his capacity as research assistant, Ivan Tesla carried out assigned research and assisted with data collection and drafting of texts for sections outside his responsibility. Frank Boardman maintained liaison with Statistics Canada, assisted with data collection, verification and proofreading, and reworked parts of the literacy series in Section 32. Mervin Hunchak assisted in the preparatory stages of Section 31 by obtaining data on education from unpublished sources at Statistics Canada and by participating in discussions on the outline of the section. Stephen Jaworsky reviewed parts of the text in Section 52 dealing with Canadian citizenship. Before his untimely death, the late Rostislav Choulguiine had started the planning of Section 33, Political Participation. Irene Chewpa, Irene Ulitsky and Sophie Laschuk assisted with data compilation in the early stages of the project.

A number of persons reviewed individual sections, provided supplementary material or otherwise assisted in the preparation of the compendium. Their contributions to its improvement are herewith gratefully acknowledged. The late V.J. Kaye kindly made available to us data on Ukrainian immigrant arrivals based on his researches of ships' passenger lists; these proved very helpful in filling data gaps in the immigration series during the decade from 1891 to 1900. He also contributed to the section on political participation by helping to identify Ukrainian candidates. A number of Statistics Canada staff provided assistance with various section drafts. Jenny R. Podoluk commented on the language and income data of Sections 31 and 42 respectively, and on a number of other sections which at the time of review were in draft form; we are also grateful that her insistence on limiting the contents of the compendium's statistical series compelled us

to be more selective and critical than we would have been otherwise. R.S. Ellis reviewed the statistics on farms and farm operators in Section 41 and A. Romaniuc commented on the population estimating procedures in Appendix B. D.R. Bradley commented on the enumeration of age statistics in Section 22.

W.D. and P.Y.
April, 1977

The editor cannot close these lines without expressing deep sorrow that his wife, Helen, did not live so see the compendium in print. As a supporter and a critic of the compendium, her counsel contributed to its content. Her forbearance and fortitude, in the face of her failing health, gave him the strength, in those times when all other motivation had ebbed away, to persevere and to continue with the work.

W.D.
July, 1977

POSTSCRIPT NOTE

Since the writing of the preface an academic conference entitled *Social Trends among Ukrainian Canadians* was held in September, 1978 at the University of Ottawa under the auspices of the Canadian Institute of Ukrainian Studies, Edmonton. The compendium was its central theme. Many scholars who analyzed various aspects of Ukrainian life in Canada relied on the compendium manuscript for their data.

The editors are most grateful for the financial support received from the trustees of the Ukrainian Studies and Research Endowments of the University of Ottawa, which permitted the publication of the volume by the University of Ottawa Press. Gratitude is expressed to W.D. Gilbert for the final editing of the textual material, and to Sylvia Carrière for her skill in typing the manuscript as photo-ready copy for printing.

BIBLIOGRAPHY	820

<i>Series</i>	<i>Section 22 (cont'd)</i>	<i>page</i>
22.71-84	Population, 10 Years of Age and Over, by Ethnic Origin, Age Groups and Sex, Canada and the Provinces, 1921 to 1936	164
	SECTION 30	
30. 1-12	Population of Ukrainian Ethnic Origin, by Religious Denominations, Sex and Rural-Urban Status, Canada and the Provinces, 1931 to 1971	177
30.13-26	Population of Ukrainian Ethnic Origin by Religious Denominations and Total Number of Greek Catholic and Greek Orthodox, Metropolitan Areas and Cities over 30,000, by Sex, 1931 to 1971	183
30.27-44	Greek Catholic Denomination by Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, 1931 to 1971	191
30.45-62	Greek Orthodox Denomination by Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, 1931 to 1971	199
30.63-74	Religious Denominations by Selected Ethnic Origins, Sex and Rural-Urban Status, Canada and the Provinces, 1931, 1941 and 1971	207
30.75-84	Religious Denominations by Designated Names for Ukrainians, Sex and Rural-Urban Status, 1931	211
	SECTION 31	
31. 1-10	Knowledge of Official Languages by Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, Population 10 Years of Age and Over in 1921 and Total Population in 1931-1971	224
31.11-20	Knowledge of the Official Languages, Population of Ukrainian Origin, by Place of Birth, Rural-Urban Status and Sex, Canada and the Provinces, 1971	230
31.21-39	Knowledge of Ukrainian Mother Tongue, by Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, Population 10 Years of Age and Over in 1921, and Total Population in 1931 to 1971	231
31.40-49	Mother Tongue, Population of Ukrainian Origin, by Place of Birth, Rural-Urban Status and Sex, Canada and the Provinces, 1971	236
31.50-59	Mother Tongue, Population of Ukrainian Origin, by Place of Birth, Rural-Urban Status, Sex and Selected Metropolitan Areas, 1971	237

Series	page	
	Section 31 (cont'd)	
31. 60- 75	Percent of Ethnic Origin with Own Mother Tongue for Selected Origins, by Sex and Rural-Urban Status, Canada and the Provinces, 1921 to 1971	238
31. 76- 91	Mother Tongues, Ukrainian Population 10 Years of Age and Over, Canada and the Provinces, 1921 and 1931	240
31. 92-102	Ukrainians with non-Ukrainian Mother Tongue (Excluding English and French), by Sex, Canada and the Provinces, Population 10 Years of Age and Over in 1921, Total Population in 1931, 1941 and 1971	241
31.103-116	Non-Ukrainians with Ukrainian Mother Tongue, by Ethnic Origin and Sex, Canada and the Provinces, Population 10 Years of Age and Over in 1921, Total Population 1931, 1941 and 1971	243
31.117-136	Knowledge of Ukrainian Mother Tongue, All Ethnic Origins, by Age Groups, Sex and Rural-Urban Status, Canada, 1931 to 1971	245
31.137-148	Knowledge of Ukrainian Mother Tongue, All Ethnic Origins, by Age Groups, Sex, Rural-Urban Status and Provinces, 1951 to 1971	247
31.149-155	Immigrant Population with Ukrainian Mother Tongue, All Ethnic Origins, by Period of Arrival, Sex and Rural-Urban Status, Canada and the Provinces, 1961	253
31.156-162	Immigrant Population with Ukrainian Mother Tongue, All Ethnic Origins, by Period of Arrival and Sex, for Census Metropolitan Areas and Selected Cities 30,000 and Over, 1961	254
31.165-167	Language Most Often Spoken at Home, Population of Ukrainian Origin, by Sex and Rural-Urban Status, Canada and the Provinces, 1971	255
31.168-177	Language Most Often Spoken at Home, Population of Ukrainian Origin, by Place of Birth, Sex and Rural-Urban Status, Canada and the Provinces, 1971	256
31.178-187	Language Most Often Spoken at Home, Population of Ukrainian Origin, by Place of Birth, Rural-Urban Status, Sex and Selected Metropolitan Areas, 1971	257
31.188-197	Own Language Most Often Spoken at Home, by Selected Ethnic Origins, Sex and Rural-Urban Status, Canada and the Provinces, 1971	258
31.198-208	Ukrainian as the Language Most Often Spoken at Home, All Ethnic Origins, by Sex and Rural-Urban Status, Canada and the Provinces, 1971	259
31.209-228	Ukrainian as the Language Most Often Spoken at Home, All Ethnic Origins, by Age Groups, Rural-Urban Status and Sex, Canada, 1971	260

Series	Section 31 (cont'd)	page
31.229-240	Ukrainian as the Language Most Often Spoken at Home, All Ethnic Origins, by Sex, Age Groups and Rural-Urban Status, Provinces, 1971	261
31.241-242	Ukrainian Mother Tongue and Language Most Often Spoken at Home, All Ethnic Origins, by Counties, Census Divisions and Urban Areas of 10,000 and Over, 1971	262
SECTION 32		
32. 1- 12	Illiteracy of the Population 10 Years of Age and Over, by Ethnic Origin, Sex, Age and Place of Birth, Canada and the Provinces, 1921 to 1936	277
32. 13- 26	School Attendance by Ethnic Origin and Sex, Canada and the Provinces, Population 7-14 Years of Age 1931 and 1936, and Population 5 Years of Age and Over 1941 to 1971	281
32. 27- 38	School Attendance of the Population 5 Years of Age and Over, by Ethnic Origin and Age, Canada and the Provinces, 1961 and 1971	283
32. 39- 48	School Attendance of the Population 5 Years of Age and Over, by Ethnic Origin, Age and Place of Birth, Canada and the Provinces, 1961 and 1971	285
32. 49- 62	School Attendance of the Population 5 Years of Age and Over by Ethnic Origin and Sex, Cities 30,000 and Over, 1941 and 1951	287
32. 63- 76	School Attendance of the Population 7-14 Years of Age, by Ethnic Origin, Sex, Rural-Urban Status and Place of Birth, Prairie Provinces, 1936	289
32. 77- 92	School Attendance of the Population 7-14 Years of Age, by Months at School, Ethnic Origin, Sex and Place of Birth, Canada and the Provinces, 1931	290
32. 93-106	Years of Schooling, Population 5 Years of Age and Over Not Attending School, by Ethnic Origin, Sex, Rural-Urban Status and Cities 30,000 and Over, Canada and the Provinces, 1951	292
32.107-120	Years of Schooling, Population 5 Years of Age and Over Attending and Not Attending School, by Ethnic Origin, Sex, Rural-Urban Status and Cities 30,000 and Over, Canada and the Provinces, 1936 and 1941	297
31.121-136	Highest Level of Schooling Attained, Population 5 Years of Age and Over by School Attendance, Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, 1971	300

Series		page
	Section 32 (cont'd)	
32.137-152	Highest Level of Schooling Attained, Population 5 Years of Age and Over, by School Attendance, Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, 1961	304
32.153-159	Highest Level of Schooling Attained, Population 5 Years of Age and Over of Ukrainian Ethnic Origin, by Age and Place of Birth, Canada and the Provinces, 1971	309
32.160-175	Highest Level of Schooling Attained, Population 5 Years of Age and Over, by Ethnic Origin, Age and Place of Birth, Canada and the Provinces, 1961	312
32.174-184	Highest Level of Schooling Attained, Population 5 Years of Age and Over Attending School, by Ethnic Origin, Age, Mother Tongue and Language Most Often Spoken at Home, Canada and the Provinces, 1971	317
32.185-195	Highest Level of Schooling Attained, Population 15 Years of Age and Over Not Attending School, by Ethnic Origin, Age, Mother Tongue, Language Most Often Spoken at Home, Canada and the Provinces, 1971	321

SECTION 33

33. 1-226	Federal Elections and By-elections; Votes Cast in Constituencies with at Least One Ukrainian Candidate in Elections Held from 1904 to 1974	337
33.227-379	Manitoba Provincial Elections and By-elections; Votes Cast in Constituencies with at Least One Ukrainian Candidate in Elections Held from 1914 to 1975	348
33.380-475	Saskatchewan Provincial Elections and By-elections; Votes Cast in Constituencies with at Least One Ukrainian Candidate in Elections Held from 1912 to 1975	356
33.476-615	Alberta Provincial Elections and By-elections; Votes Cast in Constituencies with at Least One Ukrainian Candidate in Elections Held from 1913 to 1975	361
33.616-666	Ontario Provincial Elections and By-elections; Votes Cast in Constituencies with at Least One Ukrainian Candidate in Elections Held from 1945 to 1975	369
33.667-681	British Columbia Provincial Elections and By-elections; Votes Cast in Constituencies with at Least One Ukrainian Candidate in Elections Held from 1941 to 1975	372

Series		page
	SECTION 40	
40. 1- 14	Participation in the Labour Force, by Sector and Ethnic Origin, Both Sexes, Canada, 1921 to 1971	389
40. 15- 30	Numbers and Participation in the Labour Force, by Ethnic Origin, Canada and the Provinces, 1921 to 1971	390
40. 31- 42	Major Occupational Groupings, by Ethnic Origin, Both Sexes, Canada, 1921 to 1971	392
40. 43- 58	Occupations of the Labour Force, 15 Years of Age and Over, by Ethnic Origin, Both Sexes, Canada and the Provinces, 1971	393
40. 59- 70	Occupations of the Labour Force, 15 Years of Age and Over, by Ethnic Origin and Sex, Canada and the Provinces, 1971	394
40. 71- 86	Occupations of the Labour Force, 15 Years of Age and Over, by Ethnic Origin and Sex, Canada and the Provinces, 1961	396
40. 87-102	Occupations of the Labour Force, 14 Years of Age and Over, by Ethnic Origin and Sex, Canada and the Provinces, 1951	398
40.103-118	Occupations of the Labour Force, 14 Years of Age and Over, by Ethnic Origin and Sex, Canada and the Provinces, 1941	400
40.119-134	Occupations of the Labour Force, 10 Years of Age and Over, by Ethnic Origin and Sex, Canada and the Provinces, 1931	402
40.135-140	Occupations of the Labour Force, 10 Years of Age and Over, by Ethnic Origin and Sex, Canada, 1921	404
40.141-146	Occupations of the Labour Force, 10 Years of Age and Over, by Birthplace, Ethnic Origin and Sex, Canada, 1931	405
40.147-160	Occupations of the Immigrant Labour Force, 10 Years of Age and Over, by Period of Arrival, Ethnic Origin and Sex, Canada, 1931	406
40.161-172	Professional and Technical Occupations, by Ethnic Origin and Sex, Canada, 1921 to 1971	407

50.163-182	Ukrainian Immigration to Canada, by Countries, Occupational Groupings and Calendar and Fiscal Years, 1896 to 1952	524
50.183-196	Ukrainian Immigration to Canada by Country of Birth, Fiscal Years 1926-27 to 1950-51	527
50.197-212	Ukrainian Immigration to Canada, by Country of Citizenship, Calendar and Fiscal Years 1951-52 to 1966	528
50.213-227	Ukrainian Immigration to Canada, by Country of Last Permanent Residence, Calendar and Fiscal Years 1944-45 to 1967	529
50.228-234	Ukrainian Immigration to Canada by Countries and Language, Calendar Years 1931 to 1937	530
50.235-244	Ukrainian Immigration to Canada 10 Years of Age and Over, by Countries and Language, Calendar and Fiscal Years 1925-26 to 1943	531
50.245-255	Immigrants 10 Years of Age and Over by Countries, Ukrainian Language Facility and Ethnic Origin, Fiscal Years 1925-26 to 1938-39	532
50.256-272	Ukrainian Immigration to Canada 10 Years of Age and Over by Countries, Literacy, Age Groups and Sex, Fiscal Years 1928-29 to 1938-39	533
50.273-283	Ukrainian Immigration to Canada, 10 Years of Age and Over by Countries, Literacy, Age Groups and Sex, Fiscal Years 1925-26 to 1927-28	535

<i>Series</i>		<i>Page</i>
Section 51 (cont'd)		
51. 99-112	Immigrant Population by Period of Arrival, Ethnic Origin and Sex, Census Metropolitan Areas and Cities 30,000 and Over, 1961	576
51.115-126	Immigrant Population by Period of Arrival, Ethnic Origin and Sex, Cities 30,000 and Over, 1951	578
SECTION 52		
52. 1- 13	Citizenship and Naturalization of the Population, by Ethnic Origin and Sex, Canada and the Provinces, 1921 to 1971	591
52. 14- 25	Country of Citizenship (Allegiance) of the Non-naturalized, by Ethnic Origin and Sex, Canada and the Provinces, 1931 to 1971	595
52. 24- 41	European Countries of Citizenship (Allegiance), by Ethnic Origin and Sex, Canada and the Provinces, 1931, 1936 and 1941	598
52. 42- 57	Province of Birth of the Canadian-born Population by Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, 1921 to 1941 and 1971	600
52. 58- 69	Birthplace of the Immigrant Population by Ethnic Origin, Sex and Rural-Urban Status, Canada and the Provinces, 1931 to 1971	605
52. 70- 87	Population Born in Europe, by Ethnic Origin, Sex, Rural-Urban Status, and Country of Birth, Canada and the Provinces, 1931, 1941 and 1971	615
52. 88-101	Birthplace of the Urban Population, by Ethnic Origin, Sex, Metropolitan Areas and Selected Urban Areas of 30,000 and Over, 1931 to 1971	621
52.102-109	Birthplace of Population, Metropolitan Areas, by Ethnic Origin and Sex, 1971	629
SECTION 60		
60. 1-16	Births of Both Sexes to Married Mothers, by Ethnic Origin of Father, Canada and the Provinces, 1921 to 1971	645
60.17-32	Births by Sex to Married Mothers, by Ethnic Origin of Mother, Canada and the Provinces, 1922 to 1951	647
60.33-48	Births by Sex to Unmarried Mothers, by Ethnic Origin of Mother, Canada and the Provinces, 1922 to 1971	650
60.49-67	Births of Both Sexes with Ukrainian Father, by Ethnic Origin of Mother, Canada and the Provinces, 1921 to 1951	653

<i>Series</i>		<i>page</i>
	Appendix A (cont'd)	
A. 9-16	Annual Estimates of Ukrainian Population (June 1), Canada and the Provinces, Census and Intercensus Years, 1921 to 1971	802
A.17-24	Annual Estimates (June 1) of Adherents to the 'Greek Church', Canada and the Provinces, Census and Intercensus Years, 1921 to 1931	803
A.25-40	Annual Estimates of Adherents to the Greek Catholic and Greek Orthodox Denominations, Canada and the Provinces, Census and Intercensus Years, 1931 to 1971	804

Section 71: Crime. The annual convictions for indictable offences, classified by ethnic origin and province for the years 1948 to 1968, are presented in this Section.

Appendix A: Intercensal Population Estimates. The series comprise intercensal annual estimates of the total population of Canada and the provinces from 1891 to 1971 and similar estimates of the Ukrainian populations and Greek-rite denominations from 1921-1971. They are intended to facilitate the calculation of "incidence" rates such as births, deaths, and marriages.

Appendix B: Numbers of Ukrainians in Canada: A Correction and Extension. This is an analytical appendix. It utilizes the data on immigration and births and deaths provided in other Sections to make an upward adjustment to the Ukrainian population reported in the 1901 to 1971 censuses. The adjustment also provides an estimate of the Ukrainian population in 1896.

Appendix C: A Listing of Additional Compendium Data. More information is available for some Sections than is published in the compendium. This appendix lists the additional data that has been deposited in the Public Archives of Canada.

This position was adhered to until the 1951 census. In that year, and again in 1961, the reporting of Canadian and American origins continued to be discouraged, but enumerators were instructed to record them if respondents insisted. A reply of "unknown origin" was also permitted from persons of mixed ancestry or those who, for other reasons, were unable to identify their ancestry (D40, p. 2). In 1971, with the self-enumerative questionnaire, the instructions (F22, par. 15) regarding Canadian, American and unknown origins were similar to 1951 and 1961 and provision was made for their reporting as write-ins.

In 1951 and 1961, slightly over one percent of the population reported Canadian, American and "unknown" origins (Table 20.1). In 1971, with self-enumeration, the percentage had fallen to 0.6. The data are not indicative

TABLE 20.1
Numbers of Canadian, American and Unknown Origins
Canada, 1951 to 1971

Year	Ethnic Origin			Total Population	Per- cent ²
	Canadian	American	Unknown		
1971	71,325	11,245	40,065	122,635	21,568,310 0.6
1961	118,185	15,786	70,163 ¹	204,134	18,238,247 1.1
1951	71,759	14,152	65,882	151,793	14,009,429 1.1

²Ethnic total as percentage of total population

Source: C13, p. 16; D40, p. 2; Unpublished data, Statistics Canada

of a general classification breakdown, provided the reporting of the three origins is widely distributed among ethnic groups.

Mainstays to the Ethnic Classification

An ethnic classification has been a part of all decennial censuses since Confederation (E48, p. 2); it has also been a part of some noncensus statistics for many years. However, there is no general agreement on the need to perpetuate ethnic distinctions. One view implicit in several census reports is that the classification is a temporary one appropriate to a new country. The reporting of Canadian and American origins as well as attempts in some censuses to record those who had resided in Canada three generations or more as

Canadians in a "special sense" (A5, pp. xiv, xv) can be viewed as protests against the ethnic classification. Such classifications were dropped from crime, morbidity and immigration statistics and from most vital statistics in the late fifties and in the sixties. An ethnic question was included in the 1946 quinquennial census, but in a last-minute decision ethnic origin was not recorded. On the other hand, a decision had been made to drop the ethnic question from the 1961 census but this was reversed by the government of the time.

By 1971 the ethnic classification in the census was the only one of importance in Canadian statistics. Nevertheless, with computerization and linkage to other census series, the 1971 census had the potential to provide more ethnic data than was available from all sources in previous years.

Support for the continuation of the ethnic classification stems from several sources. Foremost is the presence of two major peoples and a special obligation to record the French who possess certain definite rights under the Canadian constitution (B1, p. 45). Canada's immigration policy and the continual admixture of peoples creates a further obligation "to ascertain the biological cultural or geographic material being built into the foundation of the nation ..." (A12, p. xxxv). Support for ethnic classification has also come from certain groups themselves, such as the French, Ukrainian, Jewish and other origins who are especially concerned with having continuous data on their numbers. There is also a growing realization of the need for better ethnic data on the Native Peoples.

THE MULTICULTURAL COMPOSITION OF CANADA'S POPULATION

The statistics in this Section provide an outline of Canada's "ethnic tableau" and cover 27 of the larger ethnic groups into which the population is classified. In spite of weaknesses in data quality, the statistics are considered useful for inter-ethnic comparisons. The counterpart ethnic classification of the immigrant flow to Canada is shown in series 50.304-363.

Series 20.1: Ukrainian Origin

This is the basic series concerning Ukrainians. It serves as a standard of reference and as a check total for the more-detailed census classifications

of Ukrainians in other Sections. The series is divided by subgroups of Ukrainians in series 63-66.

*Series 20.2-7 and 20.30: Other Slavic,
Austrian, Hungarian and Romanian Origins*

These series are of relevance to Ukrainians as they include the important leakage groups or alternative origins under which Ukrainians can report themselves in census enumeration. In the inter-war period the more important leakages were, in the order listed, to the Polish, Austrian, Romanian and Russian origins (Table 41.2).

Series 20.8-11: British Origins

With the British, the question on origin usually elicits a geographical response: the country or original place of residence and implied cultural surroundings before coming to Canada (B1, p. 45). Due to a high rate of inter-marriage over a number of generations, the series for the English, Irish and Scottish are less reliable than the series for the British group as a whole. The English group appears to be overstated as English was always the first example in the instructions to enumerators and in the census questionnaires; this may have led some respondents into thinking that English meant "English-speaking culture" (E12, p. 19).

Series 20.12: French Origin

The French are the largest ethnic group in Canada as of 1971 if the likely overstatement of the English is taken into account. The series is unique in that it can be extended to the first Canadian census in 1666.

Series 20.14: German Origin

The Germans are the fifth largest ethnic group after the French, English, Irish and Scottish. The decline in the number of Germans shown in the 1921 and 1941 censuses is usually attributed to leakages to the Dutch and Austrians to avoid association with the enemy during the two wars.

Series 20.23: Jewish Origin

The large increase in the Jewish sector of the population in 1971 arises from a change in census policy. In that year, persons were classified to the Jewish origin by religion or by ethnicity (E12, p. 20). In previous censuses they were classified to the Jewish origin only by ethnicity.

*Series 20.24-27 and 20.37: Asians,
Native Peoples and Negroes*

Offspring of white and nonwhite marriages began to be classified by origin of father in 1951. The change removes such offspring from the nonwhite groups if their father was white, which may reduce the numbers remaining. The numbers of Chinese, Japanese and Negroes do fall in 1951 (series 24, 25, 37), partly due to this change and partly to other factors (D40, pp. 7, 10). Native Peoples increased in 1951 as the removal of metis from their numbers had already occurred in 1941 (series 26).

Other Series

Series 29-39 show origins not specified separately in series 1-27 but included in series 28. Series 40-62 are the provincial counterparts of series 1-28, except that some groupings are broader and there is no sex classification.

UKRAINIANS IN THE ETHNIC CLASSIFICATION

This examination focuses on (i) the polyonymy of Ukrainians and its relationship to census ethnicity and (ii) the definitions, explanations and procedures used in identifying ethnicity for the population in general and Ukrainians in particular. The latter examination occurs over three periods: the early censuses from 1901 to 1916, the censuses from 1921 to 1941 and the post-war censuses from 1946 to 1971.

Polyonymy of Ukrainians in the Census

The names Galician, Bukovinian, Ruthenian and Ukrainian, used to designate Ukrainians in the Canadian censuses, were of European origin. Ruthenian

Statistics on Ukrainians by designated names are shown also in Section 50 on Immigration (series 50.24-38) and in Section 30 on Religious Denominations (series 30.75-84).

Figure 21.4

A complete description of changes in boundaries of subdivisions within counties and census divisions and in incorporated centers through amalgamation, annexation and the incorporation of new centers is provided in census publications (D5, E1). The population of incorporated areas is generally shown by the boundaries existing at each census date.

As a rule, the smallest areas shown are those containing at least 15 or more Ukrainians in any census year. However, judgment is exercised in the actual choice of areas, providing some flexibility to the rule. The choice depends on the variation and stability of the Ukrainian population from census to census, the population in contiguous areas and other considerations. The main objective is to provide the most meaningful set of small-area data.

Urban Agglomerations in 1961 and 1971

Census grouping of urban centers into larger communities started in 1931 and 1941 when census metropolitan areas (CMA) were introduced (C13, p. xiv). In 1961 urban agglomerations comprised census metropolitan areas and other major urban areas (UA). Metropolitan areas comprise groups of urban communities which are in close economic, geographic and social relationship. Other major urban areas possess characteristics similar to metropolitan areas, but in most cases the core cities are smaller (D3). In 1971, definitions of urban groupings were broadened to include population limits; a metropolitan area is the main labour market of a continuously built-up area with a total population of 100,000 or more; other major urban areas had continuously built-up areas with populations of less than 100,000 (E5). The numbers of urban agglomerations in 1961, and the additions and changes in status in 1971, are shown in Table 21.1. Also shown are urban areas of more than 25,000 without fringe populations, and urban areas which have been grouped for purposes of this Section.

Seventeen CMAs and 20 UAs were established in the 1961 census (D3, Tab. 10) and in 1971 their number was increased to 22 and 38 respectively (E3). The increase is due in part to the definitional changes and in part to the increase in size of the urban areas, in line with growing fringe populations.

The populations of the 17 census metropolitan areas, with boundaries as defined in 1961, were extended back to 1941 (D40, Tab. 6) to provide comparable populations for these areas from 1941 to 1961. Similarly the 20 major

¹100,000 or more population in 1971; no minimum population limit in 1961; ²called census agglomerations in 1971; the term major urban area (UA) continues to be used here for simplicity; ³For the core city in 1961; ⁴In 1971 this was the minimum population of the agglomeration, not just for the core city; the maximum population in 1971 to be less than 100,000; ⁵Combined in series 281 and 315 as Sydney-Glace Bay UA to be comparable with earlier censuses; ⁶Includes parts in Saskatchewan; ⁷Includes Keewatin; ⁸Unincorporated; ⁹Includes part in Saskatchewan; ¹⁰Includes Battleford.

urban areas, with 1961 boundaries were extended to 1951, providing comparable population figures for 1961 and 1951 (D3, Tab. 11).

In extending the concept of the census metropolitan areas to the 1936 and earlier censuses, the general rule followed was to continue to include all incorporated and unincorporated centers that were wholly included in the 1961 boundaries and to exclude unincorporated centers that had been partly included. However, in extending the major urban areas prior to 1951, only the incorporated centers that were part of such areas in 1961 were included. Generally, new incorporated centers included in the enlarged 1971 CMA and UA boundaries were not extended to the earlier censuses.

In the series which follow, CMAs and UAs are shown in italics to distinguish them from other subdivisions and to indicate that their populations are not additive with those of other subdivisions into county or census division totals. An asterisk immediately after the name of an incorporated center or other subdivision indicates that its population is included in all years in a CMA or UA; on the other hand, an asterisk attached to a figure indicates that only the population in that year is so included.

Series 21.295-342: The Atlantic Provinces

Of the 46 counties and census divisions in the Atlantic Provinces, 13 are detailed by subdivisions. Sydney-Glace Bay (series 315), a coal-mining and steel-producing community, has the largest concentration of Ukrainians; the Halifax metropolitan area is the next largest. Other urban areas shown are St. John's, Saint John, Moncton, Fredericton and Charlottetown.

There was an especially large percentage increase of Ukrainians in Chatham and Oromocto, New Brunswick, between 1961 and 1971 (series 327, 333).

Series 21.343-462: Québec

Of the 20,325 Ukrainians in Québec, 18,050 or 90 percent live in the Montréal metropolitan area, whose constituent municipalities are shown in detail (series 409-434). The next, but very much smaller concentration of Ukrainians is in Hull County which comprises part of the Ottawa-Hull metropolitan area (series 504). The mining towns of Val-d'Or and Rouyn-Noranda, and the aluminum refining centers of Chicoutimi and Jonquière have small concentrations of Ukrainians.

Series 21.463-934: Ontario

The Ukrainian population in Ontario is primarily urban, with sizable numbers residing in the major industrial, commercial and raw-material producing centers of the province. Of the Ukrainian population of nearly 160,000 in 1971, 61,000 lived in the Toronto metropolitan area, whose constituent parts are shown in detail (series 909-933); about 98,000 lived in the "Golden Horseshoe" comprising Oshawa, Toronto, Hamilton, Guelph, Brantford, Kitchener and St. Catharines-Niagara.

Thunder Bay with 11,000, Windsor with 7,000, Sudbury with 5,600, Ottawa with 5,100, London with 3,400, Sault Ste. Marie with 2,800 and Sarnia with 1,020 are other centers with a large Ukrainian population. Ukrainian populations of more than 1,000 are also found in Kenora and Fort Frances (series 616 and 774).

Rural Ukrainians associated with fruit, tobacco, or mixed farming, are found in significant numbers in Haldimand, Lincoln, Norfolk and Oxford counties, and in Simcoe and York counties where they are associated with truck farming on the Holland Marsh.

Series 21.935-1782: The Prairie Provinces

The Ukrainian population in the Prairie Provinces is characterized by substantial numbers in the farm, rural nonfarm and urban sectors. Further, the rural population is most concentrated in the northern or parkland part of the provinces (the aspen grove belt) comprising census divisions 5, 11, 12, 13, 14, 17, 18, 19 and 20 in Manitoba, 9, 10, 14, 15 and 16 in Saskatchewan and 10, 11, 12 and 13 in Alberta.

In 1971, Winnipeg with 64,000 had the largest number of Ukrainians of any Canadian city and accounted for well over half the 114,000 Ukrainians in Manitoba. Edmonton with 63,000 and Calgary with 16,000 together accounted for more than half of the 136,000 Ukrainians in Alberta. Saskatchewan is the most rural province and its largest cities — Regina, Saskatoon, Moose Jaw, Prince Albert, North Battlefield and Yorkton, with a combined Ukrainian population of 33,000 — accounted for only 38 percent of the total Ukrainian population of 86,000.

Another characteristic of the Prairie Provinces is the high

Series 21.1935-2097: Regional Districts in British Columbia

These series show the Ukrainian and total population for British Columbia for the 29 regional districts established for the 1971 census (Fig. 21.4). As detailed and historically comparable figures are given by census divisions in the preceding table, the purpose of these series is to tie in as much as possible with the former divisions by showing where the urban areas are located and to provide a base for future census comparisons. The series also show the distributions between the incorporated and unincorporated population for the regional districts.

TABLE 22.1

Urban Population in 1951, by 1941 and 1951 Definitions,
by Ethnic Origin, Canada and the Provinces

Components of the Definitional Change	Canada ¹		All Origins						
	Ukrai- nian	All Origins	Atlantic Provinces	Québec	Ontario	Manitoba	Saskat- chewan	Alberta	British Columbia
1951 Urban population using 1941 definition	177,374 ²	7,941,222	597,230	2,728,798	2,753,226	384,429	370,681	488,188	615,052
Add: Metropolitan parts not otherwise urban and unincorporated centers over 1,000	39,955 ³	1,116,714	154,160	95,042	563,389	80,723	1,452	19,587	199,637
Subtract: Incorporated centers under 1,000	18,765 ⁴	429,683	12,068	126,522	65,516	25,572	119,663	58,100	21,218
1951 Urban population using 1951 definition	198,564	8,628,253	739,322	2,697,318	3,251,099	439,580	252,470	449,675	793,471
Change from 1941 to 1951 definition	21,190	687,031	142,092	-31,480	497,873	55,151	-188,211	-38,513	178,419
Change from 1941 to 1951 definition as % of 1941 definition	11.9	8.7	23.8	-1.2	18.1	14.3	-31.9	-7.9	29.0

¹Includes Yukon and Northwest Territories; ²Calculated from Table 22.2 as 44.9% (col. 7) of 395,043 (col. 8);

³Estimated residually; ⁴Ukrainian population in incorporated centers under 1,000 from Section 21.

Source: C18, p. 35.

TABLE 22.2
Changes in Urbanization Levels, by Alternative Definitions,
by Ethnic Origin, Urban Population, 1941 and 1951

Population	Rural and Urban Population in 1941 using 1941 Definition			Rural and Urban Population in 1951 using 1951 Definition		
	1941		1951		Percent Number	Percent Number
	Rural	Urban	Rural	Urban		
Ukrainian	305,929	66.0	34.0	70.1	29.9	55.1
A11 Origins	11,506,655	45.7	54.3	49.1	50.9	45.7

¹Based on 1941 definition of rural and urban, with incorporated centers under 1,000 included as rural for comparative purposes.

Source: C18, Tab. IV, pp. 145-146.

Series 22.57-70: Population 90 Years of Age and Over

This table provides information on aged persons, those 90-94 and 95 years of age and over. As the numbers of Ukrainians in these ages are small, the cross-classifications are limited to sex and rural-urban status and, geographically, to Canada and the Prairie Provinces. The series are useful in studies of longevity.

Series 22.71-84: Population 10 Years of Age and Over

This table shows more aggregated age classifications for 1921 and 1931 than in the basic series. The 21-years-and-over age grouping provides information on the voting population; for the Ukrainians, numbers in the 10-years-and-over age group in 1921 and 1931 are the same as for mother tongue (Series 31.89) and literacy (Series 32.3) in Sections 31 and 32. The numbers for all origins differ slightly because coverage in the three classifications is not entirely the same.

By aggregating the data in the 1941 and later censuses, it is possible to obtain comparable age data for the under-10 (0-9 years) and the 10-years-and-over age groups from 1921 to 1971.

¹ Includes Yukon and Northwest Territories; ² Includes persons with age not stated; ³ Includes members of the Royal Navy whose province of residence not known.

Source: A6, Tab. 98; A12, Tabs. 33, 35, 52; B3, Tab. 10; B12, Tabs. 35, 80; C1, Tab. 17; H3.

where it comprises small national minorities such as Arabs in Lebanon, Jordan, Syria, Iraq and Egypt, and some Iranians and East Indians. The churches are organized as autonomous bodies under the jurisdiction of their own patriarchs in union with Rome.

Series 30.27: Ukrainian

Ukrainians constitute the main ethnic group of the Greek Catholics, comprising on average over 80 percent of total adherents (Table 30.1). Series 44, therefore, can be considered as a proxy for Ukrainian ethnicity when a direct ethnic classification is not available, as in the case of marriages (Section 60).

TABLE 30.1
Ukrainians in the Greek-rite Denominations
Canada, 1931 to 1971

Year	Greek Catholic			Greek Orthodox		
	Ukrainian (series 27)	Total (series 44)	Percent Ukrainian	Ukrainian (series 45)	Total (series 62)	Percent Ukrainian

1941	152,907	185,657	82.4	88,874	139,629	63.7
1931	130,534	186,654	70.0	55,386	102,389	54.1

Series 30.28-31: Other Slavic and Austrian Origins

The Polish, Russian, Czech, Slovak and Austrian origins may include some Ukrainians who, because of citizenship or residence, tended to identify with these origins. Each origin fell off sharply in 1971, and the number of Poles and Russians had been declining since 1931, supporting the view that some Ukrainians among them had identified themselves with their true ethnic origin. The large increase of Austrians in 1961 can probably be attributed to immigration (series 52.82).

Russians were upward, while the counterpart trends for the Greek Catholics were downward. Also in 1961, there was a considerable increase in the number of Austrians.

Series 30.50-60: Non-Slavic Origins

For the same reasons as the Greek Catholic denomination, the British, German and French groups may include some Ukrainians. The large residual series "other Europeans" comprised mostly Greeks in 1971, but there were also Yugoslavs, Romanians and Bulgarians (series 69-74). The Asiatic group is believed to include Arabs from the Near East (Lebanon, Syria, Egypt), Iranians, Armenians, East Indians and others.

SUPPLEMENTARY DATA

*Series 30.63-74: Greek-rite Churches
by Selected Ethnic Origin*

The series segregates "other Europeans" in series 41 and 59 by ethnic origin. The data are not available for all years and, when available, were not consistently subdivided. The series provide a more-complete description of the variety and numbers of non-Ukrainian adherents to the Greek Catholic and Greek Orthodox churches.

*Series 30.75-84: Greek-rite Churches
by Designated Names of Ukrainians*

The series are based on unpublished sources from the 1931 census. They are of interest because they present the Greek Catholic and Greek Orthodox denominations by the various names by which the Ukrainians were known in the early censuses, i.e., Bukovinian, Galician, Ruthenian and Ukrainian.

DENOMINATIONAL GROUPINGS

Data for three denominational groupings, traditional Ukrainian, nontraditional and the Greek-rite denominations are summarized in Table 30.2. From 1931 to 1971, Ukrainians formed a majority of the adherents in the traditional Ukrainian denominations. However, the majority has been declining,

Source: Series 27-44 and 45-62.

and in 1971 was close to disappearing, the proportion of Ukrainians being 52.2 percent, a decline from 82.6 percent in 1931. Conversely, the proportion of Ukrainians in the nontraditional denominations has been growing (col. 4) and threatens to attain majority position if the trends continue. Movement of affiliations from the former to the latter group represents a form of assimilation where traditional Ukrainian denominations are abandoned but Ukrainian ethnicity is retained.

The total for the Greek-rite denominations has increased continuously since 1901 (col. 8). From 1951 there was an accompanying sharp increase in the relative number of non-Ukrainian adherents (col. 9), primarily among the Greek Orthodox (Table 30.1).

Series 30.13-26 (continued)

¹For 1961 and 1971 population applies to metropolitan areas; earlier years apply to the population of core cities;
²Includes Verdun from 1931 to 1951;
³Fort William and Port Arthur combined in 1951 and 1961;
⁴Ottawa only from 1931 to 1951.

Greek Catholic Denomination by Ethnic Origin, Sex and Rural-Urban Status,
Canada and the Provinces, 1931 to 1971

(Status: T = both sexes, M = male, F = female, U = urban, R = rural, f = rural farm, N = rural nonfarm)

¹Same as series 30.1; ²Same as series 30.2.

SECTION 31

LANGUAGE KNOWLEDGE AND USE

William Darcovich

Language is one means of ethnic identification and it has been used in Canadian censuses to identify groups such as the Ukrainians and others for whom birthplace or other criteria are inadequate (Section 20). It can be used as an expression of ethnic integration or of ethnic and cultural preservation of a minority in relation to a majority group. Language is also a means of communication and is so viewed by the majority of people. The series in this Section relate in some measure to each of these aspects of language.

The Section deals with three types of language series: (1) official language, (2) mother tongue and (3) language spoken at home. The first two relate to individuals, though active or passive use of a language in conversation or listening is a group activity. The third is a group concept and implies at least two persons in the home with sufficient knowledge and motivation to use a particular language in speaking; they may also use the language in an active or passive form in various situations outside the home.

RELATIONSHIPS BETWEEN LANGUAGE CONCEPTS

Official language, mother tongue and language spoken at home can be separate language concepts or they can represent a single concept. For most people of British origin, and to a lesser extent of French origin, the concepts are reduced to one as English or French can be at the same time the official language, the mother tongue, and the language most often spoken at home.

For other ethnic groups, the concepts have important meanings as separate entities. Knowledge of either or both official languages usually implies their wide use in communication outside and inside the home and a high degree of participation by the group in Canadian life. If at the same time there is knowledge of the mother tongue, it can indicate the extent to

Series 31.40-59: Mother Tongue by Place of Birth

Place of birth has an important bearing on the languages reported as mother tongues. The data show the place of birth of Ukrainians reporting Ukrainian, English and French mother tongues in 1971; series 40-49 are by provinces, sex and rural-urban status and series 50-59 by sex for 18 census metropolitan areas.

Series 31.60-75: Own Mother Tongue and Language Retention

Continuing with the first type of series on the mother tongue, this table shows, for a selected number of ethnic groups, the proportion with a knowledge of their "own" mother tongue. The ratio of own language to the total population for the ethnic group can be used as a proxy for the extent of language retention by that group, with language retention being understood as being the converse of linguistic assimilation. With Ukrainians, for example, linguistic retention has declined from 93 percent in 1931 to less than 50 percent in 1971. An interesting comparison is with the decline in the rate of endogamy shown in Table 62.3.

Similar declines in retention ratios have occurred for most other groups except those of Dutch and Italian origin (series 67, 69). An important factor affecting these trends is the percentage of each ethnic group that is Canadian-born (Table 31.1). Other factors also affect language retention ratios, such as sex composition, provincial distribution and the rural-urban status of the ethnic group; series 60-75 shows their effects on language retention by using them as classification variables.

Comparison of language retention ratios may be made between Ukrainian and other individual ethnic groups or between Ukrainians and a standard group which could comprise an average of all selected origins such as series 74, or a partial average such as in series 75 which excludes the British and French origins.

TABLE 31.1
Percent of Population Canadian-born, by Ethnic Origin
Canada, 1931 to 1971

Ethnic Origin	Year				
	1971	1961	1951	1941	1931

Indian and Eskimo	98.1	—	99.5	99.6	99.3
Total	86.6	84.3	86.0	82.8	78.6

Source: Based on ratio of series 52.1, total Canadian-born Ukrainian population to total Ukrainian population in series 20.1. Ratios for other origins calculated similarly.

*Series 31.76-91: Mother Tongue of
Ukrainians 10 Years of Age and Over*

The table shows supplementary data relating to the first type of series, i.e., the mother tongue of Ukrainians in 1921 and 1931 for the lingual population (10 years of age and over). As data for both the total and lingual populations are available for 1931, inferences can be made about the knowledge of the Ukrainian, English and French mother tongues by the 0-9 age groups in 1921. For example, in 1931, 52,135 persons (series 22 less series 76) or some 92 percent of the total of 56,765 in this age group (series 90) reported the Ukrainian mother tongue. Such information can be used to estimate the Ukrainian mother tongue among the total Ukrainian population in 1921 (see text on series 188-197).

Series 31.92-102: Ukrainians with Non-Ukrainian Mother Tongues

The table relates to the first type of series on the mother tongue. It provides detail on the languages covered by series 25, 31 and 37, except that data for 1951 and 1961 are not available. The data for 1921, except for the Ukrainian, English and French mother tongues, are the same as in series 76-91.

Several possibilities may be advanced as to why Ukrainians would report a non-Ukrainian language (other than English or French) as a mother tongue. One is early exposure to a non-Ukrainian language from living or growing up in a community in Europe or in Canada that was not Ukrainian-speaking; another, the language recorded may be that of the mother in mixed marriages. On the other hand, some persons may not be of Ukrainian origin. These possibilities would not be numerous, as borne out by the small number of such persons (series 25) in relation to those with Ukrainian and English mother tongues (and French in Québec), and in relation to the opposite situation, non-Ukrainians with a Ukrainian mother tongue (series 26).

Series 31.103-116: Non-Ukrainians with Ukrainian Mother Tongue

The table provides the ethnic composition of series 26, 32 and 38 for 1921 to 1971 with the exception of 1951 and 1961, for which data were not available. The table pertains to the second part of the series, the Ukrainian mother tongue of all ethnic origins.

Some of the non-Ukrainians reporting a Ukrainian mother tongue may, in fact, be Ukrainians who were not classified properly because they interpreted country of residence, birth or citizenship as identifying their ethnic origin. They may comprise a large number of those shown as Poles, Austrians, Romanians and Russians, the traditional leakage groups for Ukrainians, and some Western European origins in 1971. Some may be offspring of mixed marriages and others may be as reported: Germans, Russian, Poles and Jews whose mother tongue may nevertheless be Ukrainian because they had lived in Ukrainian territories.

population in urban areas by period of immigration is shown in series 51.99-112.

LANGUAGE SPOKEN AT HOME

Language spoken at home, defined as "the language presently being used most frequently by the person in his or her home" (E15), was reported in the 1971 census and applied to all persons, including infants. It is a group rather than individual concept of language and in this regard it is useful as an index of linguistic assimilation or retention as it indicates actual usage of the mother tongue, one of the official languages or some other language. Although it is a new source of data, it is based on concepts which originated in earlier censuses. Language retention rates for Ukrainian and other origins, based on language spoken at home, have been calculated in studies by Statistics Canada (E53, E34).

As in the case of mother tongue, these series are of two types. The first type refers to the Ukrainian language spoken at home by Ukrainians (series 163-197). The second type refers to Ukrainian spoken at home by all ethnic origins (series 198-242). The latter are larger numerically than if Ukrainians alone are considered; in this regard they are the counterparts of the series on Ukrainian mother tongue for all ethnic origins (series 27).

Series 31.163-187: Languages Most Often Spoken at Home

The series show Ukrainian, English, French and other languages spoken at home by the Ukrainians, i.e., they are the first type of series. Series 163-167 show these languages by provinces, sex and rural-urban status and are the basic series on this topic; series 168-177 further classify the languages by place of birth of individuals, a characteristic which has an important bearing on language use in the home; alternatively series 178-187 show the use of these languages by census metropolitan areas.

Series 31.188-197: Own Language Spoken at Home

This table shows "own" language spoken at home for the Ukrainian and for a selected number of other ethnic groups, and it can be considered as a

*Series 31.241-242: Ukrainian Language by
Subprovincial Areas, All Origins*

These series are also of the second type. They show Ukrainian mother tongue and Ukrainian spoken at home for counties, census divisions and urban areas where at least 25 persons report the Ukrainian mother tongue and at least 5 report as speaking Ukrainian. The series should be used in conjunction with the total population for subprovincial areas in Section 21. Since they are for all origins, the series on census metropolitan areas are larger in magnitude than in series 50-59 and 178-187.

¹Sum of census divisions and counties may not equal provincial totals because areas where little Ukrainian is known or spoken are omitted; ²Provincial totals same as in series 27 and 229; ³District Municipality, comprising the former Territorial District of Muskoka as well as part of Unorganized in Territorial District of Nipissing; ⁴Regional Municipality, comprising the former counties of Lincoln and Welland; ⁵Regional Municipality, comprising the former county of Carleton as well as Cumberland Township in Russell County; ⁶Metropolitan Municipality, comprising that part of former York County previously known as "Toronto Metropolitan Corporation"; ⁷Regional Municipality, comprising that part of the former York County outside old "Toronto Metropolitan Corporation"; ⁸Census Divisions; ⁹Regional Districts, replace former Census Divisions.

SECTION 32

EDUCATION AND TRAINING

William Darcovich

Education is generally understood to include formal academic and nonacademic training obtained from attending schools of various kinds; it can also include informal training, such as the teaching of children at home and the training of adults through correspondence courses or by self-instruction. The absence of education, due to lack of formal or informal training, can be considered as illiteracy.

Census data on education have been collected under several definitions, in response to varying needs. In earlier censuses, when a large part of the population was rural and foreign-born and education facilities were less developed, interest was primarily in determining the extent of illiteracy. This was a "negative" aspect of education, focusing on the absence of the basic skills of reading and writing, and it prevailed from 1921, when illiteracy by ethnic origin was first recorded, to 1936. In a developing society this simple concept of education could not last and was supplemented, as illiteracy declined, by progressively more positive and broader concepts which permitted a better indication of the depth, quality and distribution of education among the population. The new orientation, which introduced a basic division into the education statistics, began with the 1931 census. There followed a gradual improvement and an increase in usefulness of the series, but the continual changes in the classification complicated the series and resulted in a minimum amount of comparability and continuity between successive censuses.

To provide a guide to the better understanding of the data, Table 32.1 outlines the kinds of education series classified by ethnic origin, their duration and years of overlap and the ages of the population to which they apply. The preschool population (0-4 years) is consistently excluded from classifications of literacy. This assures that series for "not attending school" and for "no schooling" which appear later in the Section are more meaningful as they are likely to contain mostly adults who have not gone to school.

TABLE 32.1
Nature of Education Series, 1921 to 1971

² Also 5 years and over.

* available
.. not available

The education series are obtained from census data available in published and unpublished form. Correspondence was undertaken with a number of universities in Western Canada to investigate what information was available on student registration by ethnic origin. No useful data were available from this source.

ILLITERACY

Series 32.1-12: Illiteracy Data

The series record the number of illiterate persons, 10 years of age and over, in the population. The data are available from 1921 to 1936, a period when there was still interest in illiteracy, and represent the simplest education statistics. Classification is by ethnic origin, province, sex, age groups and place of birth.

Definition of Illiteracy

Illiteracy in the census is generally defined as the inability to read and write in any language. In 1921, 1931 and 1936 censuses, this information was derived from two questions: "can you read" and "can you write" (A6, p. vii). The responses were divided into three categories: (1) "can read and write", (2) "can read only" and (3) "cannot read or write". Persons classed as illiterate were those who fell into the third category, i.e., "cannot read or write".

What constitutes the ability to read or write is not stated precisely in the 1921 and 1931 censuses. From statements in the 1936 census (B12, p. xi) it appears that the intention in the earlier censuses was to include as illiterate those totally lacking in ability to read and write; those able to sign their names or to write a few words were considered to have only a superficial knowledge and were likewise to be classed as illiterate.

In the 1936 census, ability to read and write was defined more objectively: "a person able to read the newspaper is considered as able to read, and a person able to write a short letter as able to write" (B12, p. xl). With the higher knowledge requirement, those who "cannot read or write" would comprise a higher proportion of persons than in the first two censuses and in this respect the data for 1936 is not entirely comparable with them.

Series 32.93-106: Population Not Attending School

The table provides data on the years of schooling for persons not attending school in 1951, classified by provinces, sex, rural-urban status and cities of 30,000 and over. The data are "backward-looking" in that they show the educational attainments of those who have ended their training. Counter-part 1951 data for those attending school are available for all origins but not for Ukrainians.

Series 32.107-120: Population Attending and Not Attending School

The series differ from the above in that the total population (attending and not attending school) is classified by years of schooling, province and sex in 1936 and 1941, and also by rural-urban status in 1936, and by cities in 1941. Unfortunately, the two parts of the population are not separated so that it is impossible to compare the education attainments of those attending school with those who are not.

LEVEL OF SCHOOLING

These series provide data on the highest grade or year attained at school or university for the years 1961 and 1971. Level of schooling is an advancement over years of schooling as the level attained can be independent of the time or effort spent in training and can allow for accelerated progress or for failures and repetition of grades. It also indicates the actual level and kind of training attained, which is more meaningful in an analytical framework than is years of schooling.

Level of Schooling Defined

The 1961 census first used the level of schooling as a measure of educational attainment, a method which was also used in the United States and is advocated by the Statistical Office of the United Nations (D43, p. 2). The 1961 question on the level of schooling was: "the highest grade or year of schooling ever attained by the person" and was directed to persons still at school as well as to adults whose formal education had terminated (D43, p.1).

These cautionary remarks should be kept in mind in extending years of schooling data to 1961 and 1971.

*Series 32.153-173: Level of Schooling
by Age and Place of Birth*

Age and place of birth are important classification variables for the level of schooling, particularly for the Ukrainians, whose older generations had much lower levels of training than their offspring. Using the appropriate total population by age groups in Section 22, it is possible to compare educational attainments of the current generation (under 25 years), with earlier generations (over 25 and over 45 years). Birthplace adds a further dimension to such comparisons, as the educational attainments would be expected to be quite different for the older persons who are also foreign-born.

Series 153-159 show Ukrainians only, as counterpart 1971 data for all origins by ages and birthplace are not available. As is usual with other series, the 1961 data (series 160-173) are for Ukrainian and all origins.

ACADEMIC AND OTHER TRAINING

This is a new classification of schooling attainment introduced in the 1971 census. It provides greater realism and a further analytical dimension to education statistics (E11) by topping the academic attainment levels with vocational and post-secondary nonuniversity training. The latter is defined as training received in institutions "such as technical institutes, teachers' colleges, community colleges, nursing schools, private business colleges, private or provincial trade or vocational schools, seminaries and school for the blind and deaf" (E9). It should be noted that the institutions covered are the same as those used in 1971 for defining school attendance.

Series 32.174-184: Population Attending School

The series show the academic, vocational, and post-secondary nonuniversity training for the population 5 years of age and over attending school. A feature of the series is the classification of school attendance by

knowledge of the Ukrainian mother tongue and use of Ukrainian at home. Knowledge and use of Ukrainian applies to all origins and not to Ukrainians alone.

Series 32.185-195: Population Not Attending School

The series indicate the same levels of schooling as above except they are for the population 15 years of age and over not attending school. They are not comparable with data in series 121-136 as the latter apply to population 5 years of age and over not attending school.

Vocational Training

One aspect of nonacademic schooling is vocational training. It is defined as "courses of the vocational trade or apprenticeship type following quite closely occupational categories in the census *Occupational Classification Manual* (E29).

Generally such training requires only the minimum of academic background. Nevertheless, as the potential of a person to benefit from this instruction is a prime requisite for eligibility, the highest incidence of vocational training occurs among those who have achieved some secondary school instruction (series 176, 178 and 187, 189).

Table 32.2 shows the number of persons who have completed vocational courses. These persons are defined as those "who at some time prior to the census date at June 1, 1971 had completed a full-time vocational training course of at least 3 months' duration" (E29). The number of Ukrainians completing courses is smaller than the sum of persons in vocational and other training courses in series 176, 178, 180, 183, 184 and 187, 189, 191, 194, 195. This is because the latter also includes persons who have not completed vocational training.

卷之三

SECTION 33

POLITICAL PARTICIPATION

Paul Yuzyk

Section 33 deals with the participation of Ukrainians in Canadian political life. The data comprise the election results in over 600 federal and provincial constituencies in which Ukrainian candidates ran for office. They include the names, the votes cast, the party affiliation for all candidates in these constituencies and the candidate's occupation wherever it is available. Also included are the names and other data for candidates and others appointed to higher political office. Participation in local governments is not covered as the subject, in spite of its importance to the political development of Ukrainians, is beyond the scope of the Section.

The data for federal elections are taken from the Reports of the Chief Electoral Officer (M3) and for provincial elections from the Parliamentary Guide (M2).

POLITICAL PARTICIPATION DEFINED

Participation in the political process is a complex activity and a single definition cannot be expected to cover all its aspects. For purposes of this Section, political participation is defined as running for or seeking election to political office. Success at the polls is not the prime consideration as the task is to report all Ukrainian candidates who participated in elections without regard to the results of their activity.

Such a definition implies more political participation than may be apparent at first sight. It implies an awareness of local or "grass root" problems and of larger provincial and national issues, the existence of a political philosophy on the part of the candidates and a motivation to stand for election. It also implies that considerable preparatory efforts have been undertaken: running for office in local governments, being active in business or community affairs, joining or being active in political parties, going through the nomination procedures and conducting the campaign itself.

voting, only the first count is shown; for multimember constituencies, those elected in the final count are shown by an "e" (series 502). For single-member constituencies the final count does not frequently change the position of the leading candidate. However, where a change does occur, the winning candidate is indicated (series 499).

UKRAINIAN CANDIDATES IN FEDERAL ELECTIONS

Data on Ukrainian participation in federal elections span, with interruptions,

the 70 years from 1904 to 1974 and include 18 general elections and 4 by-elections (series 1-226). Two periods may be identified: the first from 1904 to 1940 and the second after 1940, roughly the periods before and after World War II.

*Series 33.1-19: The 1904-1940 Period
and the Rural Ethnic Base*

Ukrainian candidates who ran for federal office in the first period sought support among the highly ethnic, rural-based communities in the Prairie Provinces (Table 33.2). Of the thirteen constituencies with the largest Ukrainian population, only Winnipeg North, Edmonton East and Springfield had large urban electorates (population in centers of 1,000 and over), though in the last two the major part of the population was still rural. The boundaries and names of these constituencies changed in subsequent redistributions but the ethnic composition of the population remained mostly unchanged until World War II. Of 19 Ukrainian candidates contesting elections in this period, only two (series 16 and 19) were outside the areas included in Table 33.2.

The first electoral success was achieved by Michael Luchkovich in 1926 (series 4), the fourth Ukrainian candidate to seek federal office; he was re-elected once (series 10). Anthony Hlynka was the other successful candidate (series 17) in this period. Neither winning candidate represented the party in power.

This rural ethnic area was also the political base for the first Ukrainian candidates in provincial ridings. Canora and Redberry in Saskatchewan, Gimli, Ethelbert and Fisher in Manitoba, Whitford, Vegreville and Edmonton East in Alberta are examples of such ridings.

*Series 33.20-226: Extension of the
Political Base after 1940*

Starting with the war, political participation spread from the Prairie Provinces to Ontario, British Columbia and Québec; the other extension was to urban constituencies in many areas. Urban electoral strength also appeared to come from the highly ethnic communities but no data are available to support this view as the population of electoral districts is not

Source: A5, Tab. 26.

classified by ethnic origin in census reports after 1921. Some indirect evidence may be obtained by referring to the Ukrainian population in census subdivisions (Section 21) and relating it to the total population of electoral districts which is detailed by subdivisions (A3, Tab. 10; C2, Tab. 9; C13, Tab. 5; F21).

Other changes in the post-war period were a higher frequency of Ukrainian candidates and a higher frequency of ridings with more than one Ukrainian candidate; a wider representation on the occupational spectrum, including businessmen and professionals; the appearance of candidates with one parent not Ukrainian; more candidates on the side of the party in power and a higher rate of successful candidacies.

UKRAINIAN CANDIDATES IN PROVINCIAL ELECTIONS

In considering provincial elections it is useful to classify them into two groups, (i) the Prairie Provinces and (ii) Ontario and British Columbia. The groups are distinguished by differing starting times and by different stages of advancement in political participation.

Series 33.227-615: Prairie Provinces

As in federal elections, political participation in the Prairie Provinces can be usefully divided into two periods: the pre-World-War-II period ending with the 1938, 1940 and 1941 elections in Saskatchewan, Alberta and Manitoba, respectively, and the period after these elections. Political activity during the first period was primarily in the rural areas outlined in Table 33.2. Although the incidence of Ukrainian candidates was low, the first election of Ukrainian candidates in Alberta (series 479) and Manitoba (series 228) occurred before World War I, more than a decade ahead of similar success in the federal field.

The second period was characterized by an increased number of Ukrainian candidates seeking office and by the extension of candidacies to urban ridings.

Series 33.616-681: Ontario and British Columbia

Political participation in Ontario and British Columbia started at about

provincially (series 525). Not all careers were marked by a period of success at the polls. John Hnatyshyn (series 14, 392) contested several federal and provincial elections without being elected. He was later appointed to the Senate.

In some cases political careers continued in the family. For example, Ray Hnatyshyn (series 219), elected federally in 1974 after an initial defeat provincially (series 441), was the son of John Hnatyshyn. Michael Hryhorczuk (series 282), elected to the Manitoba Legislature three times and Attorney-General in 1955-58, was the son of Nicholas Hryhorczuk (series 248) who had previously been elected to the Legislature several times.

APPOINTMENTS TO HIGHER POLITICAL OFFICE

Tables 33.4 and 33.5 show the Ukrainians who attained higher political office. By the end of 1977, the list comprised a Lieutenant-Governor, four Senators, two federal cabinet ministers and 17 provincial cabinet members or speakers. All appointments to higher office were made after World War II.

SECTION 40

LABOUR FORCE BY OCCUPATIONS AND INDUSTRIES

Zenon Yankowsky

This Section, dealing with the labour force, provides the basic data on the occupations and industries in which individuals are employed and which influence their economic welfare and social status. The series on the ethnic classification of the labour force provide data which can be related to the traditions, history, skills, training and job opportunities of Ukrainians, from which inferences may be drawn on their contribution to Canada's economic activities.

The Section draws together the statistics on the Ukrainian labour force from several censuses. Previously, data (M19), brief notes (M26, V.II, pp. 1188-92) or analysis (M13, p. 33) had been confined to individual censuses.

DATA SOURCES

The data on the labour force cover the years from 1921 to 1971, and are classified by occupations, industries, ethnic origin, sex, and provinces or regions. Data for 1941, 1951 and 1961 were obtained directly from census publications and are shown after appropriate summary or consolidation. Complete 1931 data on the Ukrainians were not available in the census publications for that year as in most series they were classed, along with other origins, as "Eastern Europeans". Unpublished material in Statistics Canada classified Ukrainians separately and this was the basis for most of the 1931 data in this Section. The unpublished data are likewise not complete due to missing worksheets for some provincial areas (Table 40.1).

The 1921 data on Ukrainians were also obtained from unpublished Statistics Canada material for that year. For 1971, the data for all origins and for Ukrainians were obtained from census publications and from special computer tabulations.

TABLE 40.1

Reconciliation of the Gainfully Employed for Missing Data and
Other Adjustments, Ukrainian Ethnic Origin, Canada, 1931

(1) Total population, Ukrainians, 1931	225,113	(series 20.67)
Less: Galicians	1,772	(series 20.63)
Bukovinians	182	(series 20.64)
Yukon and Northwest Territories	3	(series 20.66)
Total	1,957	
(2) Adjusted Ukrainian population	223,156	(B6, Tab. 18)
(3) Population in (2) 10 years and over	166,865	(B6, Tab. 18)
(4) Population in (3) gainfully occupied	79,592	(B6, Tab. 18)
(5) Population in (4) less missing data on occupations for 3,192 persons in New Brunswick, Québec, Ontario and British Columbia	76,400	(series 39, 119)
(6) Population in (4) less missing data by industries for 2,335 persons in New Brunswick, Québec, Ontario and British Columbia	77,257	(series 221, 223)
(7) Population in (4) less missing data on 2,806 persons by occupation and birthplace	76,786	(series 145)
(8) Population in (4) plus 703 persons 10 years of age and over estimated to be the gainfully employed among the Galicians and Bukovinians ¹ in (1)	80,295	(series 15)

¹Based on factors of 0.5900 and 0.0768 from B6, Tab. 18 applied to population of 122,772 males and 102,341 females, respectively, in 1931.

Ukrainians grew faster in the finance, insurance and real estate industries.

Series 40.223-239: Distribution by Provinces

These series show industrial employment of the labour force by provinces and sex from 1931 to 1971. They have been adjusted to facilitate industry comparisons over the forty-year period. Starting in 1951, electricity, gas and water utilities were combined with transportation and communication into one industry; prior to 1961 public administration was taken out of the larger service industry to permit showing employment in government for the entire period.

Before World War II, agriculture was the main industry of employment for Ukrainians in the Prairie Provinces and British Columbia. After the war and especially by 1971, agriculture retained this importance only in Saskatchewan, with service, trade and manufacturing becoming the principal employment industries in Manitoba, Alberta and British Columbia. In Ontario and Québec, manufacturing, service, trade, transportation and construction were the principal industries of employment for Ukrainians.

Series 40.223-238 (continued)

Population (Section 20). In 1971, the identity of the ethnic definition was maintained through the Agriculture-Population Linkage Program (E50). This was a computer linkage of the Censuses of Agriculture and Population which provided access to the data and classifications of both censuses. "Place of birth" is defined later in the Section under this heading.

Farm Operators

The farm operator is the person who is directly responsible for the agricultural operation of the farm and he may be the owner, tenant or hired manager (B12, p. xlvi; C7, p. xxii; E48). In the case of a partnership or other multiple-operator holdings, only one person is considered to be the operator, serving to equate the number of farm operators with the number of farms (E48). As farms reflect the characteristics of their operators, an ethnic classification of farm operators is the equivalent of a like classification of farms.

Farms

As a general concept, a farm comprises "all the land which is directly farmed by a person conducting the agricultural operations, either by his own labour or with the assistance of his household or hired employee" (B12, p. xlvi; C7, p. xx). A farm can consist of a single parcel of land or a number of separate parcels held under the same or different tenures and operated as a single unit. When a farm has parcels of land situated in different enumeration areas or municipalities, its location is determined by the location of the headquarters parcel (E48).

Given the above, the specific definition of a farm in the 1941 census was a "tract of land one acre or more in extent [which] must have produced in 1940 agricultural products of \$50 or more, or be under crops or employed for pasture in 1941" (C7, p. xx). In the 1936 (B12, p. xlvi) and earlier censuses (A8, p. ix; A12, p. li), the definition was substantially the same. By 1971 the value of production was changed to gross sales, and a census farm was defined as a "farm, ranch or other agricultural holding of one acre or more with sales of agricultural products during the twelve-month period prior to the census of \$50 or more" (E48).

Nonresident Farms

In 1936 there was some duplication in the number of farms because parts of a farm located in a different enumeration area than the headquarters parcel, or complete farms where the operator resided off the farm, were considered as nonresident farms (B12, p. xlvii). In the 1941 census, "nonresident" and "resident" farms in the same municipality were combined, leaving as duplication only the nonresident farms in another enumeration area (C7, p. xx). The numbers of such farms are not large and they are included with "farms not typed" in 1940 and as "other" farms in 1935 (series 33-44).

FARMS AND FARM AREAS

These series include data on the number, acreages and tenure of farms.

Series 41.1-10: Numbers of Farms

The table provides the basic series on farm numbers. Series 1 is the complete count of all farms in the censuses shown. Series 2, slightly larger than the count of all farms except in the Atlantic Provinces, shows the estimate of total farms for 1971 obtained from a 33-percent sample of farm operators; it provides a check total for more detailed series in other parts of the Section which are also based on the sampling procedure. Series 3 shows the number of farms that were classified by ethnic origin; in 1971 all farms were so classified but in 1936 and 1941 the ethnic classification was incomplete due to "not stated" and "not specified" categories. The number of Ukrainian farm operators in the Prairie Provinces in 1931 (series 4) is estimated by using place of birth (Table 41.2) as a proxy for ethnicity. Series 5-10 show other origins of interest to Ukrainian ethnicity.

Series 1-10 are the only ones in the Section which show farm operators for the Atlantic Provinces and Québec. Due to the small numbers of Ukrainian operators, data for these provinces are not shown separately in the remaining series but are included in the Canada totals.

Series 41.11-22: Land Use

These series show the total farm areas for 1936, 1941 and 1971, and the areas improved, unimproved and in crops for 1971. The total per-farm area for Ukrainian operators in 1936 is estimated from series 61, 63 and 65 on the assumption that the average acreage in each size category (1-50, 51-100 acres, etc.) is at its mid-point.

Total farm area can be defined as all land under the farmer's control and includes land not under cultivation or pasture and waste land (B12, p. li). Grazing leases or crown lands are included; however, land used on a per-head grazing permit or fee basis is excluded (E48).

Improved land is defined as land that has been brought under cultivation and includes cropland, pasture, summer fallow and areas such as farmsteads, home gardens, farm lanes and roads and improved lands lying idle. New breaking is the area of virgin land that was first ploughed in 1970 (E48); in 1971 it is part of the improved land area.

Unimproved land includes woodland and other areas such as native pastures or hayland, sloughs, marsh and rocky land, etc. (E48).

Series 41.23-32: Tenure

The series describe the manner in which land is held by farm operators. Farms are classified by tenure depending on whether the operator owns, rents, leases land from others, or manages land for others. Accordingly, with the exception of the 1971 census when paid managers were asked to report if the land they manage is owned or leased by their employers (E48), farm operators are classified as owners, tenants, part owners-part tenants, and paid managers.

Among owners, the operator is considered to have full title to all the land he operates, even if there is an existing debt against the land. It is the most common form of tenure, but has been giving way to part ownership-part tenancy (series 27-28).

FARM PRODUCT TYPES

Farm type in the 1936, 1941 and 1971 censuses is based on the main farm product produced, as determined by gross sales. For example, if 51 percent of

Source: A12, Tab. 76; A8, Tab. 57.

This is because Ukrainian operators reporting (i) Canada and (ii) European countries such as Austria, Poland, Romania and Russia as places of birth are excluded. The estimate is considered to be particularly low in 1921, when only 1,833 reported being born in Ukraine, compared with 6,904 in 1926. With Ukrainian immigration in 1921-1926 being small (series 50.28), the large 1926 increase of farm operators born in Ukraine may be due to transfers from other countries of birth in 1921.

The ratio of 69.1 percent of foreign-born Ukrainian farm operators in 1941 (series 159) suggests that in 1926 this proportion was higher still,

and hence that the data on place of birth for 1926 are suitable for estimating certain farm characteristics for Ukrainian farm operators such as average size of farm (Table 41.3). These estimates of farm size for 1926, along with counterpart figures for other census years, are shown in series 93-106.

SERIES 41.1-10

Numbers of Farms by Ethnic Origin of Operator,

¹¹Same as series 3 and 4 except for farms not classified by sales for all origins: Canada includes Atlantic Provinces and Québec.

SERIES 41.93-106

Average Farm Size by Ethnic Origin of Operator, Canada and Selected Provinces, 1936, 1941 and 1971

¹Derived by dividing series 11-22 by series 3 or 4; ²Derived from series 37-41; ³Derived by dividing series 69-80 by series 3 or 4; ⁴Average gross sales per farm obtained by dividing totals in series 81-92 by series 3 or 4; ⁵For 1970; ⁶Estimated on the basis of

⁷ Includes Atlantic Provinces and Québec.

Source: Tab. 41-3 for 1926 average size of farm for all origins.

DEFINITIONS

To better interpret the data in the following tables, the terms income, families, households, individuals and rural-urban status are defined below.

Income

In 1951 income was defined as accruing from wages, salaries, piece rates, commissions and tips (C17, p. xiii). Additional sources were included in 1961 and income was defined as accruing from (i) wages and salaries, as before, and (ii) net income from business (but excluding net income from operating a farm), (iii) government transfer payments, (iv) pensions, (v) interest, dividends and other investment income, and (vi) other regular income such as from roomers and boarders, alimony, etc. (D35). In 1971 the definition was similar except that net income from farming was also included (E38). In both 1961 and 1971 the underlying concept was to indicate income from all sources, though in 1971, with the inclusion of net farm income, the concept was more nearly attained than in 1961. Receipts occurring sporadically, such as inheritances, gifts and lotteries, are excluded from income.

Family

In 1951 and 1961 the family was defined as a husband and a wife or a single parent, together with any unmarried children, living together in the same dwelling (C15, p. xxi; D36). In 1951 a wage-earner family was one in which the family head was a wage or salary earner; a family head was always the father in a husband-wife family, the father or mother in single-parent families.

Household

A household had a wider definition than the family in the three census years. It includes the family, but in addition may comprise a group of unrelated persons, two or more families sharing a dwelling, or one person living alone.

Individuals

In 1961 all individuals residing in households were enumerated for census purposes; however, only individuals aged 15 and over residing in a 20-percent sample of private nonfarm households were asked to answer the income questions (D55). In 1971 individuals aged 15 and over residing in a 35-percent sample of private households, including farm and collective dwellings, were asked to provide income data (E38). In 1951 all individuals earning wages and salaries were asked the earnings questions (C17, p. xiii).

Rural-Urban Population

In 1971 the urban population is defined as including all persons in metropolitan areas and in cities, towns and villages over 1,000; the farm population includes all persons residing on farms, including census farmers and others, and the rural nonfarm population includes persons living elsewhere than on farms or in urban areas. A more detailed definition is provided in Section 22.

SERIES 42.1-6: INCOMES OF WAGE-EARNING FAMILY HEADS IN 1951

These series show the incomes of family heads, in terms of wages and salaries, by ethnic origin and age. The table also gives total and wage-earner families, making it possible to determine the number of family heads who are non-wage earners, such as the self-employed.

Although the data in 1951 and in the first table for 1961 (series 8) can be said to be based on the incomes of individuals, they are in fact not very comparable. The median is used to indicate income levels in 1951, and the mean in 1961; in general, for typical income distributions, the median is below the value of the mean. Also, the 1951 incomes are for family heads, while in 1961 they are for all individuals of a household, many of whom would be expected to earn lower incomes, or have no income, compared with the family head. The table is, therefore, most useful for comparisons of 1951 incomes by ethnic origin and age.

Incomes of Ukrainians were generally lower than for all origins, and lower than for the British, German and Jewish groups. Incomes peaked at

ages 35-44, but the relative position between ethnic groups at the peak ages was the same as for all ages.

INCOMES OF THE NONFARM POPULATION IN 1961

In 1961, incomes are shown for individuals and families by ethnic origin and sex of the nonfarm population 15 years of age and over. The ethnic classification of the family is based on origin of the family head.

Series 42.7-18: Incomes of Nonfarm Individuals

These series show the average level and distribution of incomes for nonfarm individuals classified by sex. Averages are based on individuals with incomes and on all individuals, including those without incomes. The latter averages are considerably lower as the number of persons without income (series 18) is a large proportion of individuals over 15 years of age. Except as indicated in Table 42.1, average incomes in 1961 for Canada (series 7-8) are not comparable with 1971 (series 34-35) as the latter includes farm individuals.

The distribution of incomes is shown by the number of individuals falling in income classes which range from under \$1,000 to \$10,000 and over. Except for the last class, which is open-ended, the mid-point may be used as a rough approximation for the average income in the class. The distributions can be used to calculate the proportion of recipients in each income class and these ratios may be compared with the counterpart 1971 ratios for Canada (series 36-41) if the latter are aggregated for 1961 income classes. This is on the assumption that the distribution of incomes for the farm population does not differ greatly from that of the nonfarm population.

Series 42.19-33: Incomes of Nonfarm Families

The table shows income levels and distributions for nonfarm families. As for individuals, the average incomes are calculated for families who report some income, and for all families (inclusive of families with no incomes). The two averages are not greatly different since the proportion of families with no incomes is much smaller than in the case of individuals. As several family members can receive incomes, the average income per family is higher

Incomes of individuals from all sources were higher for the urban than the rural sector (series 47-49). For Ukrainians, incomes were generally below those for all origins except in the urban and rural sectors and rural non-farm subsector of the Atlantic Provinces and Québec, and in the rural non-farm subsector of Ontario, Manitoba and British Columbia. The generally lower income of Ukrainians in the farm sector is also noted in series 41.121-128.

Wages and salaries were the primary source of income in all sectors, except in Saskatchewan where the highest source was from self-employment in farming.

Incomes of nonfarm individuals, specially calculated for 1971, are shown in Table 42.1 to provide a comparable point with 1961. Incomes of nonfarm individuals in 1971 are substantially higher than in 1961 and there is a narrowing of income disparity between Ukrainians and all origins.

World War II due to lesser emphasis on agricultural settlement, the desire to leave displaced persons camps as soon as possible, and the availability of air transportation.

NAME DESIGNATIONS OF UKRAINIAN IMMIGRANTS

These series show the number of immigrants arriving in Canada classed as Galicians, Bukovinians, Ruthenians and Ukrainians. They are considered to be variant designations for Ukrainian ethnic origin and are summed to obtain the total number of Ukrainian immigrants.

There are two Ukrainian national names that distinctly refer to the Ukrainian ethnic origin: Ruthenian, which is the Latinized name for "Rusyn", and Ukrainian, the modern name. Before World War I, Ukrainians at home and abroad were known primarily by their ancient name "Rusyn" (Ruthenian). This name and its variant "Rusnak" still survives among Ukrainians in Slovakia and Yugoslavia in Europe, and in the United States, among Ukrainian immigrants from Transcarpathia.

The modern name "Ukrainian" originated in the twelfth century and was in common use, interchangeably with "Rusyn" in the Hetman State of the seventeenth and eighteenth centuries. Since the name became associated with Ukrainian aspirations for political independence, it was not recognized officially by the regimes that controlled Ukrainian ethnic territories. In the Austro-Hungarian Empire, the name Ruthenian was recognized officially, though it was also acceptable to use the name of the province of origin. Accordingly, names like Galician and Bukovinian were applied to the Empire's Ukrainian inhabitants, though more general names such as Austro-Hungarian, Austrian or Hungarian were also used. In the Russian Empire, both Rusyn and Ukrainian were replaced by "Little Russian" and "Russian" in official usage, names by which Ukrainians also became known abroad.

Series 50.24: Galicians

The term Galician was first used to classify immigrants in 1896 (I2, 1896, pp. 118-119) following Professor Oleskow's visit to Canada in 1895. Ukrainian immigrants from Galicia had been entering Canada prior to 1896 but

particularly true of the destination figures for Québec and Manitoba before World War I. Montréal was the first "passing through" center whose job opportunities attracted single immigrants to stay for various lengths of time. Winnipeg was a similar center for immigrants going to the Prairie Provinces. The series for Manitoba and Québec, therefore, overestimate the number of immigrants who remained permanently. This is confirmed by an examination of the 1911 and 1921 censuses, which show a much smaller Ukrainian population than could be expected from available destination figures.

Series 50.62-77: Provincial Destinations

The data for 1904-1963 are obtained from unpublished sources (J1, V. 3-24) and are shown by calendar year; prior to 1904 the data are from published departmental reports.

Before World War II, immigrants from overseas (series 62-69) comprised mostly persons and families intending to settle and work on the land and the majority indicated the Prairie Provinces as their destination. After the war, the importance of agricultural settlement diminished and the major destination shifted to Ontario.

Before 1914 and in 1948-1952, Québec ranked second to the Prairie Provinces as a province of destination but, as indicated above, the figures probably overestimated the immigrants who remained permanently. The numbers destined directly to the Maritime Provinces and British Columbia were generally small except before 1914.

Series 50.78-93: Urban Destinations

These series obtained from unpublished sources, supplement those for the provinces by providing information on destination to the major cities. Montréal, Hamilton, Toronto, Winnipeg, Edmonton and Calgary attracted most of the Ukrainian immigrants after World War II.

AGE COMPOSITION

Series 50.94-103: Basic Data

These series extend from 1896 to 1961. Changes in definitions and lack of

Ukrainian S.S.R. (series 183-187). After the war, immigrants born in the Ukrainian territories still predominated, though many had been up-rooted by the struggle and had fled to other countries. This was most apparent by the number born in Austria and Western European countries (series 190-194), who were mostly children of Ukrainian displaced persons.

*Series 50.197-227: Countries of Citizenship
and Last Permanent Residence*

These two sets of series can be compared starting in 1951-52. Generally, the number of immigrants giving Ukraine, Poland and Russia as countries of citizenship (series 197-199) is higher than the number giving them as countries of last permanent residence (series 213-215). As displaced, stateless persons and refugees, many Ukrainian immigrants established residence in non-Iron Curtain countries before emigrating to Canada (series 219-226).

Starting in 1955, a considerable number of stateless immigrants began to be recorded (series 211). They were persons born in parts of Poland, Czechoslovakia and Romania which were annexed by the U.S.S.R. after World War II. Living outside these countries at the time of annexation, not being citizens of the country of which they resided, and not wishing to be repatriated to the U.S.S.R., they renounced their citizenship and became "stateless".

LANGUAGE

There are two sets of language series. One classifies Ukrainian immigrants by their facility in the Ukrainian and other languages; the other classifies immigrants with a facility for the Ukrainian language by ethnic origin.

Series 50.228-244: Language Facilities of Ukrainians

The first language series show a large proportion of Ukrainians with a non-Ukrainian language facility. How facility is to be interpreted is not clear as a definition of language, i.e. whether it is the mother tongue, the language spoken, written or read, or the language learned at school, is not given. Many Ukrainian immigrants did not have the opportunity for Ukrainian schooling and it hypothesized that in responding some gave the language of their instruction at school. Hence the considerable numbers of

Deportation was normally proceeded by an inquiry of the court, a board or an officer-in-charge. Most common reasons for deportation were criminal offences, physical or mental debility and becoming a public charge. Deportation of the head of a family or of a dependent member of a family may result in the deportation of all members of the family at the same time (I7, p. 18.

EMIGRATION OF UKRAINIANS FROM CANADA

Some Ukrainian immigrants or their descendants, after various lengths of stay in Canada, returned to their homeland or migrated to the United States. Canada has no emigration statistics and it is impossible to quantify such movements precisely.

Kaye, in examining documentary material in the files of the Department of the Interior, observed that for the early period of Ukrainian settlement in Canada (to 1900) there were few references about the return of families to their country of origin. Also, in the course of preparing the Dictionary of Ukrainian Canadian Biography (M21, p. xvi), Kaye examined many obituary notices of pioneer Ukrainian settlers in Manitoba and noted that some surviving children had emigrated to the United States, to farms in North Dakota and Minnesota and to industrial centers such as Chicago and Detroit,¹ but on the whole this movement south was not large. After World War II, Ukrainian professionals began to take advanced training in the United States, but only a small number are known to have continued their careers in that country.

In the twenties and thirties, some Ukrainians are known to have returned to their homeland in Europe, but their numbers were not believed to be large.

¹Based on private communication from V.J. Kaye.

SECTION 51

PERIOD OF IMMIGRATION

Ivan Tesla

The data in this Section provide information on the "stock" of immigrants at each census date; this is in contrast with the annual "flow" of immigrants in Section 50. The immigrant stock is classified by period of arrival to Canada, dividing the number of immigrants at each census date into length-of-residence groups. Additional data by period of immigration are available in the series on language (Section 31) and on occupations (Section 40).

The data can help to indicate cultural differences among immigrants and the extent of their acculturation associated with the length of Canadian domicile. The data can also be used in comparisons of immigrant flows and stocks.

PERIOD OF ARRIVAL BY CENSUS YEARS

The stock of immigrants are classified as arriving by progressively more distant 5- and 10-year periods to 30 and 40 years before census date, as illustrated schematically in Table 51.1. Thus the last row of the first column includes the immigrant population in Canada in 1971 who arrived between the start of 1967 and the end of May, 1971, the second column those who arrived between the start of 1961 and the end of 1966, and the last column those who arrived before 1931. The information for other censuses can be interpreted similarly.

Series 51.1-28: Basic Data

These series are subdivided later in the Section to show more detail and hence are considered to be the basic data on period of immigration. The series are classified by the same periods of arrival as shown in Table 51.1; series 1-16 are for the 1931 to 1971 censuses. Series 17-28 are for the 1936 census.

TABLE 51.1
Periods of Immigration, by Censuses,
Canada, 1931 to 1971

Census Year	Period of Arrival Before Census Date					
	First	Second	Third	Fourth	Fifth	Before
1931	1926-1931	1921-1925	1911-1920	1901-1910	—	1901

1971	1967-1971 ¹	1961-1966 ¹	1951-1960	1946-1950 ¹	1931-1945 ¹	1931

¹Not of same duration as other periods in the column.

Series 51.29-44: Returned Canadians

The 1931, 1936 and 1941 data by period of immigration include returned Canadians. They are defined as persons born in Canada who have lived three or more years in another country and then resumed residence in Canada (F5, p. 43). To regain Canadian citizenship, they had only to acquire Canadian domicile (five years' residence). Such persons cannot be rightfully considered as immigrants, as they were originally born in Canada; hence they are excluded from total immigration figures in series 1-16 and 17-18 but not from immigration in individual periods. The adjustment, after including the "not stated", makes the series comparable with the immigration figures in series 52.4 and 52.11.

The numbers of returned Canadians were small in 1931 and 1936 but increased sharply in 1941, probably due to the outbreak of war in Europe. The series may be used to indicate the extent of emigration among the Canadian-born in the inter-war period.

THE FLOW AND STOCK OF IMMIGRANTS

The kind of comparisons possible between the numbers of "flow" and "stock" immigrants is illustrated in Table 51.2. It shows (i) the total flow or actual immigrant arrivals by periods and (ii) the stock or the number of immigrants at the relevant census date who reported arriving in these

series 1-16 can be recombined for the years 1961-65 and 1966-71, providing data which would be comparable to that for similar periods in censuses before 1971.

Series 51.61-84: Rural-Urban Status

These series provide a rural-urban breakdown of series 1-16 for 1951, 1961 and 1971. The breakdown is available for Canada for each of the three censuses and provincial counterparts are available for 1951 and 1971. The periods of arrival are the same as in Table 50.1, except for 1971 when 1951-1960 is broken out into two five-year periods, 1951-1955 and 1956-1960.

*Series 51.85-126: Metropolitan Areas
and Cities, 1951, 1961 and 1971*

These series provide information on the period of immigrant arrivals for the main urban centers of Canada. The series are arranged in three separate tables, one for each census. The periods of arrival in each table are the same as those in series 1-16 and Table 51.1.

statistics after 1947. The classification of immigrants as (i) Canadian nationals, (ii) British subjects without domicile and (iii) aliens, was replaced in 1951 by a classification that categorized the population as citizens of Canada or of other countries; the new classification also provides data on the extent to which immigrants are naturalized.

In order to provide more-uniform and consistent statistics, 1931 and 1941 data for the British-born were redefined to be more in line with the 1951 classification. This was done by assuming that the British-born with acquired domicile were equivalent in status to naturalized immigrants; also it was assumed that the British-born with allegiance to non-Commonwealth countries (aliens) and those who had not acquired Canadian domicile were equivalent in status with the non-naturalized.

The adjustments are outlined in Tables 52.1 to 52.4; they over-state what would be the expected Canadian citizenship status for the British-born in 1931 and 1941, as not all who meet residence requirements seek naturalization.

Series 52.1-5: Ukrainian Immigrants

Designation of naturalization status for the Ukrainians was relatively simple as no Ukrainian immigrants are reported as being British-born. From 1931 Ukrainian immigrants not yet naturalized were designated as aliens or as citizens of other countries in published census reports. The two designations are equated with the non-naturalized immigrant population (Table 52.1).

The top section of Table 52.2 shows data available from census classifications, except for columns 3 and 6 which are from Table 52.1. The derivation of the lower part of Table 52.2 is described in the footnotes. The closing of the two parts of the table gives the Canada data for series 1 to 5 inclusive.

Series 52.6-13: All Immigrants

Citizenship classifications of the total immigrant population in the 1931 and 1941 censuses are given in the top part of Table 52.3. British-born Canadian nationals (column 1) are defined as those with acquired domicile

columns 4 and 5 are the same as in Table 32.3; Derived data in column 6
published data in column 1 and derived data in column 4; Derived data in column 8 are the sums

⁶ Includes 35 "not stated" in
of published data in column 2 and derived data in column 5;
⁷ Includes 1,372 "not stated" and "not classified" as to citizenship in 1941.

The sum of series 3 and 5 and 12 and 13 equal the total population for Ukrainians and all origins in series 20.1 and 20.28 respectively.

Series 52.14-41: Citizenship of the Non-naturalized

Series 14-23 extend series 3 and 13 by providing the country of citizenship of immigrants not naturalized in Canada, according to four groupings: (i) Continental Europe, (ii) United Kingdom, (iii) United States and (iv) other countries. The series are available from 1931 to 1971 by provinces and sex.

Series 24-41 provide the country of allegiance for immigrants in 1931, 1936 and 1941 who came from Continental Europe. Ukraine is reported as one of these countries in 1931, but the figures are combined with those for the U.S.S.R. (series 24, 25); they are, however, shown separately in Table 52.5.

¹Included in U.S.S.R., series 70 and 71.

Series 52.102-109: Migration to Metropolitan Areas

The series provide data on birthplace by metropolitan areas for 1971. The Canadian-born in series 88 and 89 are classified by province of birth (series 103, 104, 107, 108) and serve to show the extent of migration to the metropolitan areas from other provinces. The greatest influx of Ukrainians was to Vancouver, Toronto, Edmonton, Winnipeg and Calgary. This is not the total influx as migration from within the province and of the foreign-born is not available.

MIGRATION: AN ADDENDUM

Though not related to citizenship or birthplace, the data in Table 52.7 relate to that on migration in series 42-57 and 102-109. Persons who changed residences between census dates in 1956 and 1961 are defined as movers. They are further classified as being intramunicipal, intraprovincial or interprovincial. The data apply to persons 5 years of age and over, and exclude migrants from abroad. The data are based on a 20-percent sample of private households (D38, pp. 1-5).

TABLE 52.7

Five-Year Internal Movement Rates, by Ethnic Origin and Sex,
Canada, 1956-1961

(Sex: T = both sexes, M = male, F = female)

Source: D38, Tab. 2.

About 44 percent of the Canadian population is classed as movers in the period 1956-61 (Table 52.7). Ukrainians are lower in intraprovincial but higher in interprovincial movements.

SECTION 60

VITAL STATISTICS¹

Vital statistics may be defined as the collection, tabulation, and interpretation of data relating to human nativity, mortality, morbidity, marriage, adoption and divorce. Data on births, deaths and marriages are shown in this Section; data on morbidity and marital and family status are shown in Sections 61 and 62.

Only births and deaths are classified by ethnic origin; for marriages, no ethnic classification is available and religious denominations are used as proxies for Ukrainian ethnicity.

HISTORICAL DEVELOPMENT²

Vital statistics on a national scale commence with the year 1921. Before this, it was impossible to compile national series due to variation between provinces of legislation concerning vital statistics, incomplete registration, lack of uniformity in classification and presentation, and lack of a body to co-ordinate the statistics.

As provided under the Statistics Act of 1918, and as the result of two Dominion-Provincial Conferences on vital statistics held in Ottawa in June and December of 1918, a plan was prepared whereby the Dominion Bureau of Statistics and the Vital Statistics Office in each province would co-operate in the production of national vital statistics. Under the national system, registration and collection of vital statistics was made compulsory and was to be carried out, as before, by provincial authorities; to ensure uniformity in procedures, the legislation of each province was to conform in its essential features to a Model Vital Statistics Act adopted by the 1918 Conferences.

An essential part of the co-operative scheme was that the registration of vital statistics should be made on standard registration forms approved

¹This Section was a joint undertaking, with the authors of other Sections contributing.

²Based on L4, pp. 7-10.

by the Conference and supplied to the provinces by the Bureau. Copies of the completed forms were to be forwarded to the Bureau for compilation of national statistics, ensuring uniformity in the treatment of the material. The Bureau (later re-named Statistics Canada) thus serves as the statistical clearing house engaged in the co-ordination, analysis and publication of the vital statistics of Canada.

In 1920, all provinces except Québec entered the co-operative system for the production of national vital statistics and the first annual report covering the eight provinces was established for the year 1921. For reasons associated with its system of registration, Québec found it impossible to enter the national system until 1926. Vital statistics for the Yukon Territory and Northwest Territories first appeared in 1951 and for Newfoundland in 1949.

It is important to note that the primary function of the registration system is to obtain and preserve documentary evidence concerning births, deaths and marriages. This is necessary to protect the legal rights of individuals for such practical purposes as the settlement of estates, insurance and pensions, the tracing of ancestry, the establishment of legal dependency or providing proof of identity. The production of data is of secondary importance, as is usually the case with administrative statistics.

Before 1944, vital statistics were classified by place of occurrence. In 1944 births and deaths began to be classified by residence, births being classified by the residence of the mother (L1, p. 188). Marriages continue to be classified by place of occurrence. In 1945, a new federal-provincial agreement provided for the establishment of a Vital Statistics Council, the task of which was to work toward the improvement of legislation, registration techniques, and the quality of Canadian vital statistics (L9, p. 258).

By 1947, it became apparent that the model bill of 1918 no longer fully met the requirements of an adequate registration system and that the study of new uniform legislation was essential. At the request of several provinces, the Minister of Trade and Commerce called a conference at Ottawa for the specific purpose of studying the technical provisions of a new Model Vital Statistics Act (L1, pp. 185-188). As a result, the Uniform Vital Statistics Act was agreed to in 1949, incorporating the technical requirements laid down by the conference, and recommended for enactment. The Act forms the basis of recommendations which may be made to provincial governments.

CLASSIFICATION OF BIRTHS AND DEATHS BY ETHNIC ORIGIN

The ethnic classification of births and deaths began in the early twenties after a number of censuses since Confederation had wrestled with the problems of ethnicity and had advanced the concepts somewhat. Although ethnic classifications were not of primary concern for vital statistics, the national system adopted with only minor modification the census nomenclature for the ethnic groups which had evolved to that time; thus in classifying Ukrainian ethnicity, terms such as Galician, Bukovinian and Ruthenian do not appear as complicating names, except in the initial years.

The official registration forms for births and deaths state that "racial origin is defined in terms of the people or races to which the person—traced through the father—belongs, whether English, Irish, Scottish, French, German, Russian, Ukrainian, etc. The term 'Canadian' or 'American' should not be used ... as they express citizenship ..." (L4, pp. 12, 13). The definition is patterned on those prevailing before the 1951 census (Section 20), where ethnicity has a combined biological, cultural and geographic significance (B1, p. 45): in both definitions the term "racial origin" is used for ethnicity, identification is through the father, Canadian and American origins are not to be used, and examples of ethnic origins are provided. The collection procedures differed from those in the census by the absence of an enumerator and the guidance he could provide to respondents.

The reply to the ethnic and other personal questions on the registration forms is made by the "informant". In all provinces except Québec, the responsibility for the registration of births falls on the parents; barring them a relative, nurse or any person who can provide the personal information, can complete the form (L13, p. 302). In the case of a death, the informant is generally a relative of the deceased, but may also be any other person who had knowledge of the facts (L13, p. 306). In Québec the responsible person is the parish priest or clergyman who performs the baptism or burial (L12, p. 300).

Defining ethnicity by examples provides the respondent with some leeway in its interpretation and introduces the possibility of more errors in classification than if the definition was more rigorously specified. Nevertheless, including Ukrainian as one of the examples is considered to be a

favorable influence on the reporting of Ukrainian ethnicity; the presence of the example on the registration form would tend to dissuade those with social stigma or uncertainty about their origin from reporting themselves as non-Ukrainians.

In the fifties, questions were being raised about the usefulness of the ethnic data and there followed a period of general erosion in their reporting by the provinces. Ontario discontinued recording ethnicity in 1960 and in the same year British Columbia confined its reporting to the Indian, Eskimo, Negro, Chinese, Japanese and East Indian origins. Alberta discontinued in 1968 and Manitoba in 1969. Newfoundland has never recorded ethnic origin.

BIRTHS

The series on births are divided into two broad categories: by ethnic origin of the father and by ethnic origin of the mother. This division is unique to birth statistics and provides information that is not available in other series. Births may be further classified as live births or stillbirths and as occurring to married or unmarried mothers. The latter classification provides an indication of illegitimacy among live births.

Strictly speaking, a legitimate child may be defined as one whose father and mother were married to one another at the time of conception. However, it is general practice to consider children from conceptions occurring before marriage as legitimate, provided that the parents are married to each other at the time of the birth. An illegitimate child may be legitimized by subsequent marriage of the parents. The Province of Ontario deserves special mention in this respect. Beginning in the year 1949, only those births in which the marital status of the mother was reported as single have been counted as illegitimate births.

Infants born dead are defined as stillbirths; all births tabulated are exclusive of stillbirths.

Series 60.1-16: Births by Ethnic Origin of Father

These are considered to be the basic birth series. They are available for a longer period (1921 to 1971) than other birth series and are comparable with various census statistics where ethnicity is also determined on the

basis of male ancestry. The series are for total births to married mothers and are not available by sex. They may be used to calculate "crude" birth rates by relating the births to the annual Ukrainian and total populations in Appendix A.

Series 60.17-48: Births by Ethnic Origin of Mother

Births by ethnic origin of mother are classified by the conjugal status of the mother, i.e., whether married or unmarried. Series 17-32 show such births by sex to married mothers for the years 1922 to 1951; they are somewhat higher in number than births by origin of father.

Series 33-48 show the corresponding births, by sex, to unmarried mothers. Births of both sexes are shown from 1922 to 1971, but male and female births are available only from 1923 to 1951. As it has been the practice to code illegitimate births, for which the ethnic origin of the father is known, to fathers, the number of illegitimate births that are actually classified to unmarried mothers is understated.

By adding the births for married and unmarried mothers, a series for total births by ethnic origin of mother can be obtained for 1923 to 1951; they can be considered as counterparts to total births classified by ethnic origin of father (series 1-16).

Series 60.49-86: Births by Ethnic Origin of Parents

The series show births by provinces by ethnic origin of parents from 1921 to 1951; the Maritime Provinces are excluded but may be obtained residually. Parents are classified by 18 different origins, with the Ukrainian origin also including those classified as Galician in the years 1921 to 1924. The origins herein correspond generally with the origins in the ethnic classification of religious denominations (Section 30) and in the ethnic classification of the total population (Section 20), allowing maximum comparability with census series.

Series 49-67 show births with Ukrainian fathers by ethnic origin of mother. Series 68-86 show births to Ukrainian mothers by ethnic origin of father. The series may be used, in the form as shown, in studies of endogamous and exogamous marriages among Ukrainians; the series may also be

used to calculate endogamous and exogamous birth rates (series 87-102).

Series 60.87-102: Births with Both Parents Ukrainian

These indexes are derived from the source material for series 1-16 and 49-86. In calculating indexes for Ukrainians, the denominator is the sum of births with Ukrainian fathers and Ukrainian mothers (series 67 and 86), while the numerator is the births in which both parents are Ukrainian (series 49 and 68). For example, for Canada for 1951: $60.4 = (5873 + 5873) \div (9639 + 9813)$.

The indexes for all origins are calculated somewhat differently, from data not shown in these series. Births, with both parents of the same origin, are summed by provinces and nationally for all ethnic groups and expressed as a ratio of the counterpart total births (series 2, 4, ... 16).

Though based on births, the indexes can be considered as proxies for the rate of intermarriage. For example, in 1951 (series 87), 60.4 percent of the births in Canada were to endogamous couples (both parents Ukrainian) and the remainder, 39.6 percent, were to exogamous couples (only one parent Ukrainian). The comparable indexes for couples of all origins were 62.1 and 37.9 percent.

The indexes indicate mostly a historical rate of endogamy; while they include births from recent marriages, they are heavily weighted by births from marriages contracted in the past. Rates of endogamy for marriages being contracted are estimated in Table 60.3; the "stock" of Ukrainian endogamous marriages at a given point of time is shown in the family statistics in Section 62 (Table 62.2).

The indexes must be used with caution. Observed differences in endogamy between ethnic origins may be affected by demographic factors such as age of single and married women (series 62.29-60), sex ratios in the population (series 22.1-16) and other considerations. These should be taken into account before observed differences are attributed as being due to ethnicity.

The rate of endogamous Ukrainian marriages (series 87) declined steadily from 92.2 in 1921 to 60.4 in 1951; the rate for all origins (series 88) rose to 76.6 in 1926, the year Québec entered the national registration area, and subsequently declined to 62.1 in 1951. The rate for Ukrainians

remained above that for all origins from 1921 to 1947, after which it fell below.

Series 60.103-122: Births by Age of Mother and Fertility Rates

The series show births for mothers in the child-bearing ages for Canada from 1925 to 1951. If combined with age data for women (series 22.17-56) and the population of married women (series 62.45-60), the specific fertility rates, by age group, for total and married women in Canada can be calculated. Table 60.1 gives the rates for all women, 15 to 49 years of age, for the Prairie Provinces, 1926 to 1936.

DEATHS

Aside from numerous administrative and legal needs for death statistics, they are also useful in calculating and analyzing various crude and specific death rates by ethnic origin. This should be done more in the sense that observed differences are attributable to the varying life-styles between origins rather than to any inherent ethnic differences in survival ability or in longevity.

Series 60.123-138: Basic Mortality Data

These series, classified by province and sex, and extending over the 51-year period from 1921 to 1971, are considered to be the basic mortality series. The mortality data which follow provide further detail on these basic series, but for fewer years.

Series 60.139-148: Mortality by Seasons

The series show deaths by quarterly periods from 1952 to 1964, with the months of January to March comprising the first quarter (winter season). The series are useful for the comparison and analysis of seasonal patterns. It should be noted that there is a discontinuity in the Canada totals (series 139 and 140) between 1959 and 1960.

TABLE 60.1

Specific Fertility Rates of Women 15-49 Years, Based on Total Women in Age Class, by Ethnic Origin and Age of Mother, the Prairie Provinces, 1926, 1931 and 1936

Year	Age of Mother					
	15-19	20-24	25-29	30-34	35-39	
1936	Ukrai- nian Origins	Ukrai- All nian Origins	Ukrai- All nian Origins	Ukrai- All nian Origins	Ukrai- All nian Origins

					18.1	7.2

Source: B8, Tab. 12; Methods of calculating fertility and reproduction rates given in B8, pp. 41, 82, 103, 155.

Series 60.149-200: Mortality by Age

Series 149-186 show deaths for Canada by five-year age groups and sex for the period 1940 to 1962. Series 187-200 show similar data for the provinces except that age is consolidated from 18 to 6 groups. Most of the consolidation was in the mature ages, 20-34 and 35-49 years, where death rates do not differ appreciably. If combined with the corresponding age data in Section 22, it is possible to calculate age-specific death rates for the census and intercensus years, the latter by intercensus interpolation of the population by age.

Series 60.201-216: Infant Mortality

The table shows deaths occurring within the first year of life for 1925 to 1959, classified by provinces and sex. If considered in conjunction with the data on total births (series 1-16), the series may be used to calculate infant mortality rates by ethnic origin.

LIFE EXPECTANCY

Life expectancy is the number of years that a person of any specified age may be expected to live. Life expectancy is based on age-specific mortality rates observed in a given time period. The life expectancy values in Table 60.2 are taken from unpublished abridged life tables (L5) and are for the populations of the Prairie Provinces and Québec. The life expectancies are based on the age distributions from the 1961 census, on the reported deaths for the years 1960, 1961 and 1962, and on births for the years 1959, 1960, 1961 and 1962.

In general, life expectancy for Ukrainian males is somewhat higher than for all origins except for ages late in life; for Ukrainian females life expectancy is only marginally higher. At the same time, the spread in longevity between Ukrainian males and females is not as great as for all origins.

MARRIAGES

The marriage registration forms (L4, p. 15) contain questions on the

TABLE 60.2

religious denomination of brides and bridegrooms. The information is obtained by the clergyman or person officiating at the marriage ceremony. Data on the ethnic origin of brides and bridegrooms were not available from these certificates.

Religious Denominations as Proxies for Ethnicity

Because the Greek Orthodox and Greek Catholic¹ denominations are the traditional religions of the Ukrainians, it is considered that they can be used as proxies for Ukrainian ethnicity. Non-Ukrainians also belong to these denominations so that the quality of the proxies is of concern. For the

¹See Section 30 for other names by which this denomination is known.

Greek Catholics, non-Ukrainians formed about 20 percent of the denomination from 1931 to 1971 (Table 30.1). As the proportion of non-Ukrainians is not high and as many of them belong to other Slavic, Austrian and other European origins, whose rates of marriage and intermarriage can be expected to be similar to Ukrainians, it is concluded that the Greek Catholic denomination can be a useful proxy for Ukrainians for the entire period of the marriage series.

The situation with the Greek Orthodox denomination is somewhat different. The proportion of non-Ukrainians has always been higher, about 40 percent to 1951, increasing to about 60 percent by 1971 (Table 30.1) as a consequence of the large flow of Greek immigrants (series 50.334) after World War II. Prior to 1951 it could be argued that, as for the Greek Catholics, the marriage rates for the non-Ukrainian Greek Orthodox would not be greatly different from those for the Ukrainians; this position was not tenable after World War II as the non-Ukrainians, primarily the Greeks, were more urbanized (series 20.22) and had shorter domicile in Canada than the Ukrainians. The Greek Orthodox denomination is therefore considered to be a useful proxy for Canada only before 1951.

Series 60.217-256: Basic Marriage Series

This is the basic table on marriages. It summarizes, by provinces, all available data from 1921 to 1971 on the numbers of Greek Orthodox, Greek Catholic and total brides and bridegrooms. The series also serve as control totals for marriages classified in greater detail later in this Section.

Series 60.257-320: Religious Denominations of Spouses

These series are in two parts. The first and more detailed part is for Canada (series 257-292); it shows Greek Orthodox and Greek Catholic brides and bridegrooms, classified by the more important religious denominations of their spouses. It also shows marriages within (series 257, 267) and outside the denomination or marriages that can be classified as endogamous and exogamous. The classification is made at the time of marriage and may not indicate the actual religious affiliation after marriage.

The second part contains counterpart data for the provinces (series 293-320). They are shown for a reduced list of affiliations due to the small number of observations in some denominations. Data for the Atlantic Provinces are also omitted due to the small number of observations; they may be obtained residually by reference to series 257-292.

*Series 60.321-341: Endogamy and Exogamy
for the Ukrainian Denominations*

The table shows the rates of endogamy for the Ukrainian denomination and for all marriages. They are current rates based on marriages being contracted and differ somewhat from the rates of endogamy based on births (series 87-102) and for families (Table 62.2). They are calculated from the source material for series 257-320 by taking the endogamous marriages for brides and bridegrooms and dividing by their total numbers. For example, for Canada for 1971, the Greek Orthodox endogamous rate is obtained as follows (series 257, 265, 275, 283): $61.5 = (1854 + 1854) \div (3227 + 2805)$.

The comparable rate for all marriages is obtained by summing endogamous marriages for all denominations and dividing by the total number of brides and bridegrooms. The rate of exogamous marriages can be obtained by subtracting the endogamous rate from 100.

The endogamous rates for the Atlantic Provinces are omitted from the table due to the small number of marriages contracted, and to the high year-to-year variability which they exhibit. In Québec and British Columbia, variability of the endogamous rates also tends to be high and it may be helpful to use moving averages as a smoothing device.

Trends in Endogamy by Denominations

The Greek Catholic endogamous rates (series 322-340) declined appreciably between the twenties and the seventies in all provinces, and particularly in British Columbia. The downward trend was interrupted in the late forties and early fifties, most notably in Ontario, presumably because the post-war burst of Ukrainian immigration increased their endogamous marriage rates.

The Greek Orthodox endogamous rates exhibit a similar downward trend over the entire period only in the Prairie Provinces (series 330, 333, 336).

In the other provinces and Canada (series 324, 327, 339, 321), the Greek Orthodox rate began to rise in the fifties with the influx of a large number of Greeks and other non-Ukrainian Orthodox, who as newcomers to Canada would have considerably higher rates of endogamy than Ukrainians.

Rate of Endogamy for Ukrainians

In order to determine a rate of endogamy for all Ukrainians, the rate for the Greek Orthodox and Greek Catholics are combined (Table 60.3). Prior to 1951, the endogamous rates for these denominations show similar downward trends and it is reasonable to take their annual average as a proxy for the endogamous rate for all Ukrainians. After 1951 the rise in the Greek Orthodox rate of endogamy is not considered to represent the actual situation among the Ukrainian Greek Orthodox. Their rate is believed to have declined, similarly to that for the Ukrainian Greek Catholics, a position which is supported by the decline in the Greek Orthodox rates for the Prairie Provinces. Hence, in 1961 and 1971 the Greek Catholic rate alone is used as a proxy for the rate of endogamy for all Ukrainians.

TABLE 60.3
Estimates of Endogamous Marriage
Rates for Ukrainians,
Canada, 1921 to 1971

Year	Endogamous Marriages Among:		
	Greek Catholic ¹	Greek Orthodox ²	Both Denomina-tions ⁴
1971	38.7	.. ³	38.7
1961	53.5	.. ³	53.5
1951	63.5	54.9	59.2
1941	66.9	64.9	65.9
1931	79.7	83.3	81.5
1921	87.4

¹From series 322; ²From series 321; ³Values for 1961 and 1971 not considered appropriate;
⁴Average of Greek Orthodox and Greek Catholic rate for 1931 to 1951; Greek Catholic rate only in 1961 and 1971; in 1921 average of 1921, 1922 and 1923 for series 321 and 322.

Exogamous marriages based on religious denomination may be endogamous when based on ethnicity. Such would be the case for Ukrainian spouses when one was Greek Catholic and the other Greek Orthodox, or if one was of the United Church and the other a Roman Catholic. No attempt has been made to adjust for such marriages in the calculations in Table 60.3.

Despite shortcomings in the data, changes in the rate of endogamy shown in Table 60.3 are large and cannot be ignored. In the period from 1921 to 1971 the decline in Ukrainian endogamy has been continuous, with only temporary slowdowns after peak periods of Ukrainian immigration as in the twenties and in the post-war years. By 1971 the rate had fallen to 39 percent, a decline of more than half from the level of 87 percent in 1921.

SECTION 61

MORBIDITY STATISTICS

John Woychyshyn

Information on the incidence of disease, which can also be related to ethnic origin, is of interest to researchers in medicine, ethnology, sociology, economics and other fields. Unfortunately, a comprehensive set of morbidity statistics classified by ethnic origin has not been developed in Canada. What exists are isolated series, discontinued after a period of time, that can be considered as falling in the ambit of morbidity statistics. These are shown in this Section and, though far from what would be desirable, they are considered to have analytical or historical value, particularly because of the paucity of ethnic data on morbidity.

The available series are confined to tuberculosis, mental diseases and blindness. They are obtained from published sources; the series on tuberculosis and mental health from the annual statistical reports on these diseases by Statistics Canada (M5, M4) and the data on the blind from the 1931-1951 censuses. Contacts were made with the Heart and Cancer Associations of Canada and with a number of hospitals but their records did not contain suitable ethnic data.

RECORDING OF ETHNICITY

Ethnicity for tubercular and mental patients is obtained from morbidity cards which contain data on the patients' personal characteristics. Morbidity cards for tuberculosis were adopted in 1937 after discussion and agreement with the provinces, resulting in uniformity in the card content (M5, 1937, p. 5). Morbidity cards were adopted for mental disease in 1932 (M4, 1932, Pref. p. 4), but coverage and reporting were not always uniform (M4, 1956, pp. 23-24).

Ethnicity of the patient was one of the questions on the morbidity card. Published reports do not indicate how ethnicity was obtained. It is understood from consultation with officials of Statistics Canada that the classification is based, as in the census, on the ethnic origin of the

father and institutions were supplied with instruction manuals to help carry out the classification. The main departure from the census was that much less control could be exercised over the actual collection of ethnic data. Questions could be posed by the institution's admittance officer, administrator, secretary or clerk or by the nurse or doctor in charge; there could be a lack of uniformity in procedures, few opportunities for explanations or clarifications to questions and little possibility to check answers. Similarly, the replies could be given by the patient or someone in his stead such as parents, relatives, guardians or friends. This provided the maximum possibility for subjectivity and departure from the intent of the question if the concept of ethnicity was not understood, if ethnicity was in doubt or if ethnic stigma was present.

Ethnicity for blindness is defined in the same way as for other census series (Section 20).

TUBERCULOSIS

The series provide data on admissions to institutions for tuberculosis treatment classified by ethnic origin, sex, type of admission, age, place of birth or type of tuberculosis. The longest series are on total admissions and extend from 1937 to 1960 when the ethnic classification was discontinued. The 24-year period covers an important part of tuberculosis history in Canada when treatment in specialized institutions had reached a peak, and when improved surgical techniques and the use of new drugs had begun to increase the recovery rate and to reduce the incidence of the disease. Also, toward the end of the period the number of patients treated in specialized institutions began to decline and the number treated in general hospitals and at home began to increase.

The ethnic classification covered over 30 origins and only few patients were left unclassified. Its scope was drastically reduced in 1961 (M5, Tab. 38) to include only the indigenous and non-indigenous populations, or the high and low tuberculosis incidence groups respectively.

Definition of Tuberculosis Terms

The diagnostic classification of tuberculosis used in the Section is based on the International Statistical Classification of Diseases, Injuries and

Causes of Death (M5, 1951, p. 6; 1959, pp. 11-12). These references also provide the nondiagnostic definitions.

The term tuberculosis, used without qualification, means any type of tuberculosis. There are two main categories, respiratory and nonrespiratory. Respiratory tuberculosis applies to any part of the breathing apparatus and includes pulmonary as well as occupational, pleural, primary and other respiratory tuberculosis. Nonrespiratory tuberculosis refers to the disease in body areas other than the respiratory system.

Pulmonary tuberculosis may be classified as "minimal", "moderately advanced", "other" and "unspecified". Pleural tuberculosis has two categories: "with effusion" and "without effusion".

First admissions are patients admitted for the first time to a sanitorium or a tuberculosis unit in a hospital for treatment of the disease. Readmissions include patients who were previously treated for active disease in a tuberculosis institution, whose disease was reactivated and who are again admitted for treatment.

Series 61.1-14: Admissions to Institutions

The series show total admissions by sex and provinces (except the Atlantic Provinces, where the number of Ukrainian admissions is very small); they comprise first admissions and readmissions and can be used to calculate gross rates of tuberculosis incidence in the population. For example, the Ukrainian and total populations of Canada in 1951 were 395,048 and 14,009,429 respectively (series 20.1, 20.28); with 383 Ukrainian and 15,684 total admissions, the gross incidence rates are 98 and 117 tubercular persons respectively per 100,000 of population. For 1941, the comparable rates are 88 and 97 persons. Similar calculations with first admissions and readmissions can provide comparative figures on primary and secondary incidence rates. Gross rates for intercensal years can be calculated by reference to the annual figures of Ukrainian and total population in Appendix A.

Admission data have a number of limitations when used as incidence rates. One is that they show only new and reactivated cases and do not represent the actual presence of the disease among the population. Those undergoing treatment, those diagnosed as tubercular but unwilling to enter

institutions, and those suffering with the disease but not diagnosed are not included in the data. Also, towards the end of the period, an increasing number of diagnosed cases were being treated at home as out-patients. Nevertheless, the figures are considered useful for inter-ethnic comparisons within the same year.

Ukrainian admissions began to decline steadily after 1949 (series 1). For all ethnic origins (series 2) the decline does not begin till 1953 or four years later. The reason for the decline beginning earlier for the Ukrainians is not clear; a possibility is the high incidence and the later application of improved medical treatment to the indigenous population.

Series 61.15-52: Classification of Admissions

Series 15-30 show tuberculosis by site and stage of advancement for the years 1937-1940. Pulmonary tuberculosis was by far the most prevalent type and there were more admissions for advanced than for minimal cases. Pleurisy accounted for about one-third of the admissions and nonrespiratory tuberculosis for the remainder.

Series 31-38 show tuberculosis by age groups for the years 1937-1940. The disease is most prevalent in the productive years, the peak morbidity being in the 20-24 age group for both sexes. Series 39-52 show admissions by place of birth and by period of immigration for the years 1954-1957.

The series permit the calculation of specific tuberculosis rates by age, sex, birthplace and period of immigration if the appropriate annual figures for the Ukrainian and total population are estimated with the help of data in Appendix A and from the nearest census in Sections 22, 51 and 52. Observed differences in rates should be treated cautiously as they may reflect the occupational and employment backgrounds of the patients or their access to diagnosis and treatment and may not be associated directly with ethnicity.

MENTAL ILLNESS

Data on mental illness refer to all mental diseases, i.e., to persons with psychosis, of which there are many types, and to those without psychosis: mental defectives, epileptics, alcoholics, drug addicts and others (M4, 1932, Tabs. 17, 24). Admissions refer to persons admitted to mental

treatment hospitals, psychiatric treatment hospitals or units, and hospitals for the mentally defective without psychosis such as epileptics (M4, 1955, p. 6).

Series 61.53-68: Mental Illness Admissions

The series show the first admissions to mental health institutions by ethnic origin, sex and selected provinces from 1932 to 1961. The Maritime Provinces and Québec are not shown separately because of the very small number of Ukrainian admissions.

The series can be used to derive gross rates of mental illness by ethnic origin based on new admissions. For example, using similar procedures to that of tuberculosis, gross rates of mental illness in 1951 for Canada per 100,000 of population were 70 for Ukrainians and 60 for all ethnic origins.

Reservations on the use of the series are similar to those for tuberculosis. The data are for new admissions and do not represent the total incidence of mental disease in the population as they do not include readmissions and those undergoing treatment, those diagnosed but not in institutions, and those who are suffering from mental disease but were not diagnosed. Also, coverage has not been uniform as some hospitals did not adopt morbidity cards; some adopted them at different times, and some with cards did not report regularly (M4, 1956, pp. 23-24).

The additional limitation for the institutions covered is that ethnicity becomes less completely reported after 1947 when a gradually increasing number of admissions are classified with origin "not specified". This could reduce the number of Ukrainian admissions shown, and particularly in Ontario after 1955, in British Columbia after 1958 and in Manitoba and Alberta after 1959. The series should be used, therefore, with due caution.

THE BLIND

Data on the blind were collected in the censuses continually from 1871 to 1951. In 1931-1951 the data were classified by ethnic origin. In the censuses, blindness is defined as total; that is, affecting both eyes. For adults the test is inability to see and read prescribed letters at a

distance of one foot. For children under ten the test is the ability to distinguish and recognize certain objects at distances which varied from census to census (B5, p. xxi; C4, p. xix; Cl4, p. xiii).

Table 61.1 shows the number of blind persons in 1931-1951 and the incidence of blindness. The latter has been consistently lower for Ukrainians.

TABLE 61.1
The Blind, by Ethnic Origin,
Canada, 1931-1951

Year	Blind Persons		Incidence of Blindness (per 100,000)	
	Ukrainian	All Origins	Ukrainian	All Origins
1951	241	13,124	61	94
1941	150	9,962	49	87
1931	94	7,343	42	71

Source: B5, Tab. 133; C4, Tab. 52; Cl4, Tab. 67.

Eye diseases and blindness were of concern to officials in the early immigration years when care was being taken to ensure that the handicapped and those with contagious diseases did not enter Canada. Between 1902 and 1917, out of 4,943 medical rejections of entrants at Canadian ocean ports, 3,062 were for trachoma, an infectious eye disease (I2, 1915-16, 1916-17).

SECTION 62

MARITAL AND FAMILY STATUS

Ivan Tesla

Data on marital status cover persons 15 years of age and over, classified as single, married, widowed, divorced and separated. The available data are for the period 1931 to 1971. The marital classifications are largely inapplicable to the population below 15 years of age.

Family data can be considered an extension of marital statistics. They provide information on family size, age composition, school attendance, household type, ethnicity of spouses and parents, and other characteristics of families. The data are available from 1921 to 1971, but have not been collected as systematically as marital statistics; hence they lack uniformity and are less comparable over time.

Prior to 1961, marital and family data were obtained from census publications. In 1961, this source was supplemented by unpublished material from Statistics Canada, particularly on age groups. For 1971, most of the data are from unpublished census sources.

DEFINITION OF MARITAL STATUS CATEGORIES

The "married" are persons who have married once as well as those who have remarried after being widowed or divorced (A6, p. x). Except in 1941, the married include all married persons, whether living together or apart for any reason, unless a divorce had been obtained (C13, p. xv).

The "separated" are defined as married persons who were permanently separated for domestic reasons but not divorced at the time of the census. For 1941, the separated were included with the widowed and divorced; for other years, they were included with the married (C1, p. 135). The separated formed less than 2 percent of the married in 1941.

The "divorced" are persons whose marriages have been legally dissolved. Their number is comparatively small, but has been rising. The exact number of divorced persons may be underestimated due to adverse social attitudes towards divorce (C18, p. 81).

The "single" are defined as persons 15 years of age and over who have never married (E26, p. 15). The "widowed" are persons who have survived the death of their legally married partners.

Although the definitions appear to be straightforward, the resulting data are nevertheless subject to some error. Men who have deserted their families may report themselves as single or widowed; unmarried mothers may report themselves as married and divorced persons may report themselves as single, married or widowed (A6, p. x). Also, the intention appears to be to cover marriages and to exclude common-law relationships, but this may not be always achieved in the statistics.

DATA COMPARABILITY

For Ukrainians, the separated are included with the widowed and divorced in 1941 and also for some series in 1971; the exceptions in 1971 are the metropolitan areas (series 11) where the separated are included with the married, the same as for all origins.

In order to help users make some adjustments for this anomaly in the Ukrainian series, directly where applicable or indirectly by estimation and proration, the numbers of the separated for Ukrainians are shown in Table 62.1. They are obtained by subtracting the sum of the widowed and divorced (series 17 and 23) from series 5 which includes the widowed, divorced and separated.

INTERRELATIONSHIPS AND USES

Marital status, like age and sex, is one of the important demographic characteristics. Data on the number and distribution of single persons is useful in predicting future married status; on married persons, to estimate family size and the natural growth of the population; and on the widowed, divorced and separated to indicate the duration and stability of marriage. The marital categories also provide some of the basic data for investigations of the social and economic well-being of the population. The value of the marital data can be enhanced if it is used in conjunction with available series on births, deaths and marriages (Section 60) and with the family statistics which follow.

MARITAL DATA

Series 62.1-8: Basic Marital Data

The series comprise data on marital status by sex, provinces and rural-urban status. Provincial series show geographic distributions, while the rural-urban series permit the study of marital status in essentially different cultural environments. Unfortunately, the continuity of the rural-urban series is broken as data for 1941 are not available.

It will be noted that there is a greater number of males among the singles (series 1, 2) and a preponderance of females among the widowed and divorced (series 5, 6).

Series 62.9-16: Marital Status by Urban Areas

The series show the marital status of the population in 20 urban areas. The data for 1961 and 1971 are for metropolitan areas and are shown in italics to indicate that they are not entirely comparable with the earlier years, which are only for the core cities. Marital data for urban areas below metropolitan size and larger than 30,000 are also shown.

These cities should be considered as a subgroup at one extreme of the rural-urban continuum. The numbers in the marital categories, the age of marriage and family size would be expected to be different from the urban average and from cities under 30,000 in size.

Series 62.17-28: The Widowed and Divorced

The widowed and divorced are provided separately only in 1971 and 1931. The sum of widowed and divorced in 1931 is the same as that in series 5 and 6; in 1971 their sum differs from series 5 because the latter includes the separated.

Series 62.29-76: Marital Status by Age

The series classify the marital data by age and provinces from 1931 to 1971, and by rural-urban status for 1961 and 1971.

A number of age periods are of importance in analyzing marital status. Ages 15 to 24 comprise persons after the primary educational level, many of whom are still students; ages from 15 to 64, or preferably from 25 to 64, constitute the labour force or working population, and 65 is the normal retirement age. The optimum age of marriage is considered to be between 25 to 34 years, but this changes in narrow limits from one decade to the next, depending on social and economic conditions; ages 15 to 45 are considered to be the normal reproductive ages for women.

Series 29-44 show age groups for the single, series 45-60 for the married and series 61-76 for the widowed and divorced.

*Series 62.77-128: Women Ever Married
by Age at First Marriage*

The 1971 data are for women 15 years of age and over (E8) while the 1941 data appear to be for all women ever married (C3, p. xvi). Series 77-92 are for 1971; they contain more data for Ukrainian than for all women as a rural-urban classification by provinces is not available for the latter. Series 93-110 are for 1941; series 111-128 are also for 1941, but have the added feature that the age of women at first marriage is cross-classified by present age.

The designation "women ever married" includes the married, widowed, separated and divorced (E8). When compared with the sum of series 3 and 5, there are small discrepancies. In 1971 this is due to sampling but in 1941 the reason is not clear.

DEFINITIONS OF FAMILIES AND HOUSEHOLDS

For census purposes, a family is defined as a husband and wife or a single parent, together with any children (own or adopted) who have never married, living in the same dwelling (C15, p. xxi). The family head is usually the father but may be the mother.

A household is a broader concept than the family. A household consists of a person or a group of persons occupying one dwelling (D36). It usually consists of a family with or without lodgers; it may also consist of a group of unrelated persons or two or more families sharing a dwelling, or one person living alone. The household head is normally the person responsible for the maintenance of the household (C15, p. xxi). This could be the family head, the eldest in households comprising related members, or the person can be arbitrarily chosen in households comprising unrelated persons.

A dwelling is defined as a structurally separate set of living quarters with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside (D36).

FAMILY AND HOUSEHOLD SERIES

Series 62.129-166: Household Characteristics

The series provide data on households in 1971, classified by various characteristics of the head of the household. Series 129-144 can be considered as the basic household series; they classify heads by ethnic origin, province, age and marital status and by the kinds of families: husband and wife, husband only, wife only, widowed.

Series 145-166 show the same classifications for 18 metropolitan areas except that the divorced and unmarried (series 159-166) are not classified by age.

Series 62.167-198: Use and Knowledge of Ukrainian Language

The series indicate the extent of language retention among Ukrainians. Series 167-182 show the number of Ukrainian household heads who use Ukrainian most often as the language of speech in the home; the series are classified by province of residence and rural-urban status and by 24 of the larger cities. Series 183-198 show counterpart classifications but differ basically as the data are on knowledge of the Ukrainian mother tongue by Ukrainian family heads.

Of the two sets of series, the first is the more useful as it shows actual language use in 1971. As the average Ukrainian household comprises 3.15 members ($580,660/184,240$; series 20.1, 167), a maximum of 185,000 could be estimated as speaking the Ukrainian language in 1971 ($3.15 \times 58,675$); this assumes that all members of the household are able to speak Ukrainian. The minimum figure is 117,000, assuming at least two persons per household are able to speak it. The actual number is 132,535 (series 31.192), suggesting that there are few children who know the Ukrainian language at the conversational level.

Series 62.199-211: Husband-and-Wife Families and Endogamy

The series show the extent of intra- and intermarriage among Ukrainians and a number of other ethnic groups in 1961 and 1951.

Series 199 show the husband-and-wife families by ethnic origin of the husband; in 1961 there were 105,687 families in which the ethnic origin of the husband was Ukrainian; of these, 65,309 (series 200) had Ukrainian wives. Also, there was a total of 107,828 wives whose ethnic origin was Ukrainian. The extent of Ukrainian endogamy in 1961 is calculated at $(65,309 + 65,309) \times (100) / (105,687 + 107,828) = 61.2$ percent; in 1951, the comparable figure is 72.8 percent. Counterpart figures for all origins are 75.6 and 79.9 percent and are obtained by summing the endogamous families for all origins and expressing them as a percentage of all families. For purposes of comparison, rates of endogamy for the more important ethnic origins, calculated on the same basis as for Ukrainians, are shown in Table 62.2. The rates of exogamy can be obtained by subtracting the above percentage from 100.

TABLE 62.2
Rates of Endogamy for
Selected Ethnic Origins,
Canada, 1951 and 1961

Ethnic Origin	Rate of Endogamy	
	1961	1951

All Origins	75.6	79.9

¹From D40, p. 36.

marriages contracted which have survived as normal families (husband and wife, with or without children) to census date. Such families are heavily weighed by marriages contracted in the past and represent more the historical rather than the current rates of marriage endogamy.

Summary of Endogamy Measures

Other measures of endogamy were calculated in Section 60 and are summarized along with those of this Section in Table 62.3. The three sets of measures

TABLE 62.3

Rates of Endogamy for Ukrainians, by Different Concepts
of Endogamy, Canada, Census Years 1921 to 1971

Census Year	Families; Husband and Wife of Same Origin		Births; ¹ Father and Mother of Same Origin		Marriages	
	Ukrai- nian Origins		Ukrai- nian Origins		Ukrai- nian ²	All Denomi- nations ³
	All	Ukrai- nian Origins	All	Ukrai- nian Origins		
1971	—	—	—	—	38.7	61.4
1961	61.2	75.6	—	—	53.5	69.7
1951	72.8	79.9	60.4	62.1	59.2	70.0
1941	—	—	75.6	67.9	65.9	69.1

¹From series 60.87-88; ²From Table 60.3, based on religious denominations; ³From series 60.323; ⁴Adjusted for estimated rate of endogamy in Québec.

were not available for the same year and differ in level for years in which they overlap. While they are based on different data concepts and procedures, they nevertheless give results which are not unexpected if the conditions are such that endogamy is generally falling. Thus, in 1951 endogamy for Ukrainians is highest for normal families because they reflect an historical situation with regards to marriage and intermarriage; endogamy based on births is lower because it is confined to the reproductive ages of families and represents the more recently contracted marriages. Finally, endogamy for marriage tends to be the lowest because it reflects only current or actual rates of endogamy, unaffected by the past.

The three sets of figures have the common feature that they show a declining trend in endogamy for Ukrainians over the years for which they are available. Endogamy for all origins is also declining though not as rapidly and somewhat less uniformly in the case of marriages.

Series 62.212-223: Family Characteristics

The series provide data on family characteristics of the Ukrainians and of the British, French, German and Jewish origins for purposes of comparison. The data are available for 1951 only. The characteristics include age, family types, families with children, number of children under 25 and living at home, their age, school attendance, and participation in the labour force.

There are three family types: "own household" consists of families whose head was both head of the family and the household; "not own household—related" are families whose head is related to the household head by blood or marriage; "not own household—not related" include mostly lodging families (C15, p. xxi).

Series 62.224-247: Nativity of Parents

The series present data on the nativity of parents of persons enumerated in the 1931 and 1921 censuses. There were four categories of nativity classified by age: (i) both parents were Canadian-born, (ii) both parents were immigrants and (iii) and (iv) parents were of mixed nativity. The series differ and are to some extent incomparable because the 1931 classification included both the Canadian-born and immigrants while in 1921 it included only the Canadian-born.

When started in the 1921 Census of Population, the purpose of the classification was to identify persons whose families had resided in Canada for three generations or more as "Canadian" in a special sense (A5, pp. xiv, xv). With reference to Ukrainians, 1921 was 30 years after the start of their immigration to Canada, and 25 years after it had begun in mass form; in 1921 there were only 132 third-generation Ukrainians (series 236); since the series are for the Canadian-born, there were also 56,594 second-generation Ukrainians (series 238). In 1931 there were 3,509 third-

generation Ukrainians (series 224); the number of second-generation Ukrainians in 1931 is estimated to be about 125,000. This is based on a Canadian-born population of 128,821 (series 52.1), less 3,509 for the third generation.

*Series 62.248-256: Children Born
to Married Mothers*

The series show children born to married mothers in 1930 by age of mother, based on data obtained from birth registrations (B8, p. 61). Ukrainian mothers of 25 years of age and over in 1930 had more children per mother born alive (series 253) and more surviving (series 254) than mothers of all origins. Children born alive and not surviving (series 253 minus 254) were higher for Ukrainian mothers above age 25.

A Statistics Canada publication (E52) provides 1971 data on children born to married women classified by ethnic origin and age groups.

SECTION 70

ETHNIC PRESS

William Darcovich

Statistics on the ethnic press are limited to the numbers and circulation of the publications. The statistics are obtained from secondary sources, the Canada Year Books and the Royal Commission on Bilingualism and Biculturalism; these in turn obtained the data from a trade journal, *Canadian Advertising Rates and Data*, and from special studies.

DEFINITIONS

The ethnic press can be defined (M9, p. 172) as comprising private publications that appear regularly and are designated for ethnic groups other than British and French. Usually the publications are in the language of the ethnic group they represent, though publications in English or French or in mixed languages are included if their content is ethnic. Publications printed elsewhere but sold in Canada are excluded.

NATURE OF THE DATA

Available data on the ethnic press are considered to be less reliable than statistics for the English and French language press. In the main this is because ethnic publications are mostly weeklies, monthlies and other low-frequency publications that do not require an audited statement of circulation to be listed in *Canadian Advertising Rates and Data*. The Audit Bureau of Circulation of Canadian Advertising canvassed ethnic publications through sworn statements and other means; however, coverage was not complete as most of the publications did not consider it to their advantage to make their circulation public in *Canadian Advertising*.

Nevertheless, if the proportion covered remains about the same over time or between different ethnic publications, the data can be of value if used with caution and if too much accuracy is not expected from the results. They can be used to indicate long-term trends in numbers and circulation

for a particular ethnic origin, to indicate their relative magnitudes between different origins, and generally to make comparisons with counterpart statistics for the English- and French-language publications.

Ethnic press statistics may be related to ethnic data on mother tongue and language spoken at home (Section 31), to the annual immigrant flow to Canada (Section 50), and to the immigrant population (Section 51). Consideration of these factors can result in a more meaningful interpretation of press statistics than if they are used alone.

SERIES 70.1-14. ETHNIC PUBLICATIONS

The series provide the numbers and circulation of ethnic publications including dailies, semi-weeklies, weeklies, semi-monthlies, monthlies, quarterlies, semi-annuals and annuals—the range of publications considered to comprise the ethnic press. The series cover selected years from 1905 to 1965 and are the result of a special study conducted for the Royal Commission on Bilingualism and Biculturalism which relied on data obtained from the files of the Audit Bureau of Circulation (M9, p. 343).

Of the total of 155 ethnic publications reported in 1965 (series 7), 6 were dailies, 10 semi-weeklies, 65 weeklies, 15 semi-monthlies, 51 monthlies and 8 quarterlies, semi-annuals and annuals. Likewise, of the total circulation of 742,000 in 1963 (series 14), semi-weeklies accounted for 40,000, weeklies for 461,000, monthlies and semi-monthlies for 148,000, quarterlies for 27,000, and the remaining publications for 66,000 (M9, pp. 173-177).

Of the 33 Ukrainian publications in 1965 (series 1), 5 consistently published in Ukrainian and English and 3 in English only (M9, p. 177); the remainder published in Ukrainian.

SERIES 70.15-32. ETHNIC WEEKLIES

In terms of numbers and circulation (series 1-14), the weeklies are the mainstay of the ethnic press. In general, English and French weeklies serve local communities; but the ethnic weeklies have a wider geographic base, with subscribers in many parts of Canada where members of their ethnic groups live.

Numbers (series 15-23) and circulation (series 24-32) of ethnic

weeklies, classified by the language of publication, have been shown in the Canada Year Books. The data are obtained from the Audit Bureau of Circulation of Canadian Advertising which carried them back to 1938, the latest complete prewar year. The following indicates how the data are obtained by the Audit Bureau:

In regard to weekly newspapers, it is difficult to obtain reliable circulation figures from many of the weekly publishers who do not subscribe to the Audit Bureau. In these cases, therefore, total circulation (paid and free) has been taken where such figures are supported by sworn statements or some other reliable record.

(M1, 1948-49, pp. 786-787)

The number and circulation of ethnic weeklies showed a sharp increase from 1954 to 1955; no explanations are provided in the Canada Year Books or by the Audit Bureau as to the reasons for the change. However, it is known that the ethnic press expanded rapidly in the early fifties due to the large increase of immigration and ethnic populations. The change may be due, therefore, to a more complete listing of existing weeklies in *Canadian Advertising Rates and Data*, and not to any sudden increase in the number of weeklies published between the two years.

In the late fifties reservations began to appear in the Canada Year Books on the reliability of the circulation figures (M1, 1961, p. 917), and in 1959 and 1960 the publication of these figures for all weeklies was discontinued (M1, 1963-64, p. 843).

SECTION 71

CRIME STATISTICS

William Darcovich

Crime statistics are derived from administrative records and, like other statistics from these sources, have proven difficult to classify by ethnic origin. The available crime statistics on Ukrainian ethnic origin are presented in this Section.

INDICTABLE OFFENCES DEFINED

... the criminal code enacted by the Dominion Parliament ... prohibits the commission of defined acts that are injurious to others or the state. It also prohibits omission to perform defined duties. These acts or omissions are "indictable offences", that is offences for which the wrongdoer may be prosecuted, and are punishable by a fine or imprisonment or both. (M18, p. 1)

Six classified offences are considered indictable under the Criminal Code. They are offences (i) against the person, (ii) against property with violence, (iii) against property without violence, (iv) malicious offences against property, (v) forgery and other offences against currency, and (vi) other offences not included in the first five. Offences against federal statutes are also considered as indictable (M6, 1968, p. 19).

Nonindictable offences are those that are not expressly made indictable (M6, 1951, p. 22). Generally, nonindictable offences include the less serious crimes. Many more persons are charged with nonindictable than with indictable offences.

ETHNIC ORIGIN

Ethnic origin in crime statistics is traced, as in most other ethnic statistics, through the father. Although published sources state that ethnic origin "denotes a race of people, i.e., descendants of a common ancestor or a group having a distinctive culture" (M6, 1951, p. 18), they do not state by whom or how the question on ethnic origin is posed to the person being arraigned. It is only indicated that the information is difficult to

obtain, and that the "not stated" category tends to be high. This feature of the ethnic classification results in some under-enumeration of the reported ethnic groups, though the extent to which individual groups are affected is unknown.

SERIES 71.1-12. CONVICTIONS FOR INDICTABLE OFFENCES

The series show the number of adults (persons 16 years of age and over) by ethnic origin who were convicted of indictable offences in the post-war years 1948 to 1967; for persons convicted more than once during the year, the conviction shown is for the most serious offence. The series should be considered as proxies for the actual offences committed and for indicating whether crime is increasing or decreasing; this is because some offences are not reported to the authorities, and of those that are, not all lead to charges or convictions.

At the Canada level, the series exhibit an upward trend and considerable variation from year to year. The provincial series exhibit similar patterns except there is no upward trend for Ukrainians in Manitoba and Ontario.

More information can be provided if the convictions are related to their respective total populations. For example, using the population figures in Appendix A for Ukrainians and all origins in 1961, the resulting conviction rates are shown in Table 71.1.

Conviction rates for Ukrainians in 1961 were below those for all origins except in British Columbia. The ethnic classifications probably underestimate the number of Ukrainian convictions and the total Ukrainian population. As it can be assumed that the underestimation is approximately of the same degree for each series (M14, pp. 9-10), the calculated conviction rates would not be expected to depart greatly from their actual rates. Hence the reasons for the difference between the conviction rates for Ukrainians and those for all origins are not likely due to classification errors. Provincial rates for Ukrainians can be ranked in the same order of magnitude as for all origins, suggesting that both rates responded similarly to varying provincial circumstances.

Conviction rates can be calculated for other years by recourse to the annual data in Appendix A. Such rates may be used to show trends in

TABLE 71.1
 Conviction Rates by Ethnic Origin,

 on Ukrainian and total
 population in Appendix A.

convictions and to make interprovincial and interethnic comparisons. However, the calculations would be considered as "crude" crime rates as they do not allow for differences in the age, sex, rural-urban status, and place of birth of the two populations or in the nature of the crimes committed. Some allowance for age may be made by calculating crime rates with reference to the population 15 years of age and over in Section 22.

APPENDIX A

INTERCENSUS POPULATION ESTIMATES

The Section provides intercensus annual estimates for Canada and the provinces of the (i) total and (ii) the Ukrainian populations, and of adherents to the (iii) Greek-rite churches, and (iv) the Greek Orthodox and (v) Greek Catholic denominations. This is for the convenience of users who may wish to use these figures to calculate annual rates for data on births, deaths, marriages, morbidity, crime and the ethnic press (Sections 50, 60, 61, 70 and 71 respectively).

SERIES A.1-8. TOTAL POPULATION

The series provide census and intercensus estimates of the total annual population from 1891 to 1971. The calculation of each year's estimate starts with the latest census figures as a benchmark and adjusts them for births, deaths, immigration, emigration and internal migration. The calculation ends with the next succeeding census which serves as a basis for the revision of all estimates in the intercensal period (C18, p. A-1; M1, 1973, p. 184).

SERIES A.9-16. UKRAINIAN POPULATION

Annual estimates of the number of Ukrainians are provided from 1921 to 1971 by interpolation from available census figures, including the 1926 and 1936 quinquennial censuses for the Prairie Provinces.

SERIES A.17-40. ADHERENTS TO THE GREEK-RITE CHURCHES

These estimates are obtained by interpolation from census data. For series 17 to 24, adherents to the Greek-rite churches are available from the 1921 census, and for 1931 the figure used is the sum of the Greek Catholic and Greek Orthodox denominations for that year (series 30.44 and 30.62 respectively). The latter denominations are estimated separately from 1932 to 1970 in series 25 to 40; if the two estimates are summed, the series for the Greek-rite churches may be estimated to 1971.

APPENDIX B
NUMBERS OF UKRAINIANS IN CANADA:
A CORRECTION AND EXTENSION

William Darcovich

Statistics on the numbers of Ukrainians were greatly under-reported, especially in the earlier censuses. This Appendix attempts to do two things: (i) to correct the under-reporting by estimating the actual numbers of Ukrainians, based on annual data on immigration and births and deaths in other Sections of the compendium, and (ii) to estimate the numbers of Ukrainians prior to 1901 when no data were available from the census. Since the corrections are substantial, the Appendix also attempts to indicate from where in Canada's population the additional Ukrainians may arise.

RATES OF NATURAL INCREASE FOR UKRAINIANS, 1891-1971

The rate of natural increase can be defined as the annual excess of births over deaths, divided by the total population and expressed as the number of persons per 1,000 population. Rates of natural increase for the total population are available from 1921, the year when birth and death statistics began to be recorded nationally. Before 1921, rates of natural increase for the total population were estimated based on demographic data in the censuses.

Rates of natural increase for Ukrainians were calculated from data for births and deaths from 1921 on (Section 60) and the annual estimates of Ukrainian population in Appendix A (series A.9). Before 1921 the rates of natural increase are estimated. Some demographic characteristics of the Ukrainian population that affected the estimates are shown in Table B1: a more rural and younger population, a higher proportion of males to females and a high proportion of mature (marriageable or near-marriageable) males to females among incoming Ukrainian immigrants before 1929 and hence, by inference, a similar relationship of males to females in the total population.

The years 1891-1920 are a unique and difficult period for estimating rates of natural increase. This is because the Ukrainian population in

¹From Section 22; ²Estimated on the bases of total male to female immigrant flow, 1896 to June 1901; ³From series 50.96-97; over 12 years 1896 to 1910, over 14 years 1911 to 1929, over 18 years 1930 to 1961; ⁴To June 1901; ⁵From July 1901.

Canada starts from zero in 1891, passes through a period of rapid increase before World War I, mostly as a result of immigration and the demographic constraints indicated in Table B1. Under such conditions population growth would not be expected to occur according to patterns for established rural societies.

Calculated rates of natural increase from 1921 to 1971 are shown in Table B2 (columns 1 and 2). Estimated rates are shown for 1891-1920 (column 1). Rates of natural increase for purposes of estimating the Ukrainian population are shown in column 3.

³Birth and death rates from Section 60 and annual population from Appendix A; ⁴Adjusted to level of all origins;

⁵Adjusted downward from calculated rates in column 2;

⁶Estimated.

Adjustments made in 1956-1971 put the Ukrainian rates on a par with those for all origins. It was reasonable to do this as the Ukrainian population was acquiring the demographic characteristics of the total

population (Table B1); also, the differences in calculated rates of natural increase for the two populations were small and appeared to be due to the progressively less-complete reporting of Ukrainian births and deaths by provinces, starting in 1960.

In the twenties, the calculated rates were 26.3 in 1921-25 and 20.8 in 1926-30. An examination of the data on births and deaths from which the rates were derived, and comparisons with the rates for all origins led to the conclusion that the calculated rates were unduly high. In the initial years of registering vital statistics, there appeared to be some delayed registration of births that had occurred before 1921, swelling reported births above actual numbers. Alternatively, all deaths were not registered in the early years of the system's operation (M1, 1927-28, p. 159). The result was an overestimate of the actual natural increase, a condition which appeared to have righted itself by the thirties. As a consequence of these considerations, and taking into account the relationship between the rate of natural increase for Ukrainians and all origins, the rates were adjusted to 20.5 in 1926-30 and 21.0 in 1921-25.

In determining the rate of natural increase for Ukrainians prior to 1921, (i) the demographic characteristics of the Ukrainian population in Table B1, (ii) the rate for all origins, (iii) the rate for Ukrainians in the twenties and (iv) the length of Ukrainian domicile in Canada were considered.

A high rate of rurality and a young population are generally associated with high rates of natural increase. For Ukrainians, the emergence of a rate of natural increase commensurate with these conditions was constrained by the high ratio of males to females and the high proportion of mature (or marriageable) males to females among the population, particularly prior to 1914 (Table B1). The constraint was strengthened by the closed nature of Ukrainian society, which limited the opportunities for males to marry outside the group; thus in 1921, the rate of endogamous marriages for Ukrainians was 87.4 percent (Table 62.3).

By assessing the effect of these demographic characteristics and considering the total rate of natural increase, that for the Ukrainians is estimated to be 14.0 for 1891-1901, the same as the total rate; 17.0 in the period 1902-11, somewhat below the total rate; and 18.0 in 1912-20, above the total rate which was affected by the war. For the entire period 1891-

1920, the estimated rates of natural increase for Ukrainians are close to those for the total population which was then highly rural (Table B1); also, the estimated rate for Ukrainians in 1912-20 was approaching their adjusted rate in the early twenties.

By 1920 the Ukrainians had been domiciled in Canada sufficiently long to have corrected the imbalance in numbers of males to females of marriageable age; younger females had matured, excess males were not being added as immigration had ceased during the war, and there were more opportunities for marriage outside the group. The demographic conditions were right, therefore, for the high rate of natural increase, inherent in rural populations, to emerge in the twenties and there commences a period when Ukrainian rates are above the total rates (Table B2, column 4).

ESTIMATES OF UKRAINIAN POPULATION, 1891 TO 1971

The rates of natural increase developed for the Ukrainians (Table B2, column 3), together with the data on Ukrainian immigration (series 50.3) are the bases for estimating and correcting the numbers of Ukrainians in Canada over the 80-year period 1891-1971. An example of the calculations for the years 1900-1902 is given in Table B3.

In calculating the population (Table B3), half the rate of natural increase is applied to the current year's immigrants (column 2) on the assumption that they enter throughout the year and that their stay in Canada in the first year averages half a year. On the other hand, the full rate of natural increase (column 5) is applied to the population already resident in Canada at the start of the year. The sum of the two calculations gives the estimated number of Ukrainians at the end of the calendar year (column 7). For census years the population estimate at year-end is prorated back to June 1.

The estimated population which results from carrying through such calculations from 1891 to 1971 is shown in Table B4 (column 2). Starting from an initial entry of two immigrants in 1891, the population was estimated to have grown, as a result of immigration and natural increase, to 1,200 by 1896, the eve of mass Ukrainian immigration to Canada: the estimated population rose to 26,200 in 1901 and to 711,000 by 1971. The estimated population is always higher than that appearing in the censuses, confirming the

widely-held beliefs that the census underestimates the total number of Ukrainians, particularly before 1931.

With exceptions of 1921 and 1961, successive census enumerations appeared to become progressively better in identifying and recording Ukrainians. For example, in 1901 only 22 percent of the estimated population was recorded by the census, while by 1971 this figure had risen to 82 percent, and has been higher than 75 percent since 1941 (Section 20).

EVALUATION OF THE POPULATION ESTIMATES

In evaluating the population estimates, the quality of the data on immigration and natural increase and the assumptions underlying population growth should be considered.

Section 50 is considered to provide improved data on Ukrainian immigration to Canada over published immigration figures as it includes as Ukrainians, in the early years, the Galician, Ruthenian and Bukovinian

subgroups. Ukrainian emigration from Canada is not taken into account due to lack of data. The available evidence (Section 50) suggests that it was small and would not have affected the population estimates greatly.

For the rates of natural increase, there are two factors to be considered. Firstly, the annual figures on Ukrainian population from 1921 on (Appendix A) are themselves interpolated from census data which have been indicated to be too low. The interpolated population data can nevertheless be suitable for obtaining rates of natural increase on the assumption that Ukrainians are under-reported to a similar degree in birth and death statistics. The assumption appears reasonable in that by 1921 there was considerable similarity in concepts and procedures between ethnic classifications in the census and vital statistics. Moreover, there is considered to be a certain level of ethnic awareness prevalent among the Ukrainian population at any one time; it tends to provide a degree of uniformity in ethnic responses irrespective of some enumeration differences from one survey to another.

Secondly, given the above it was still considered advisable to make some adjustment to the rates of natural increase in the early twenties and from 1956 on, after an examination of the figures indicated weaknesses in the data in these years.

Of the 80-year period covered by the population estimates, calculated rates of natural increase for the Ukrainians are available for 50 years. For 25 of these years, from 1931-1955, they are used as calculated; for the years 1926-30 and 1956-71 they are adjusted only marginally, and in the years 1921-1925 they are adjusted substantially; for the 30-year period 1891-1920, due to lack of data, they are estimated judgmentally. The developed series on the rates of natural increase may therefore be weakest in the first 30 years of the period.

ASSUMPTION UNDERLYING THE ESTIMATE OF POPULATION GROWTH

The estimate of population in Table B4 (column 2) should be interpreted as being the maximum number of Ukrainians at each census, resulting from all previous years' immigration and natural increase and based on the assumption that, under the definition of ethnicity prevailing at each census, it was possible to identify Ukrainians with 100 percent accuracy. In fact,

the differences between the reported and estimated population (Table B4, column 4) are large and it is important to indicate how they arise. This is done by reference to the Venn diagrams in Figure 1.

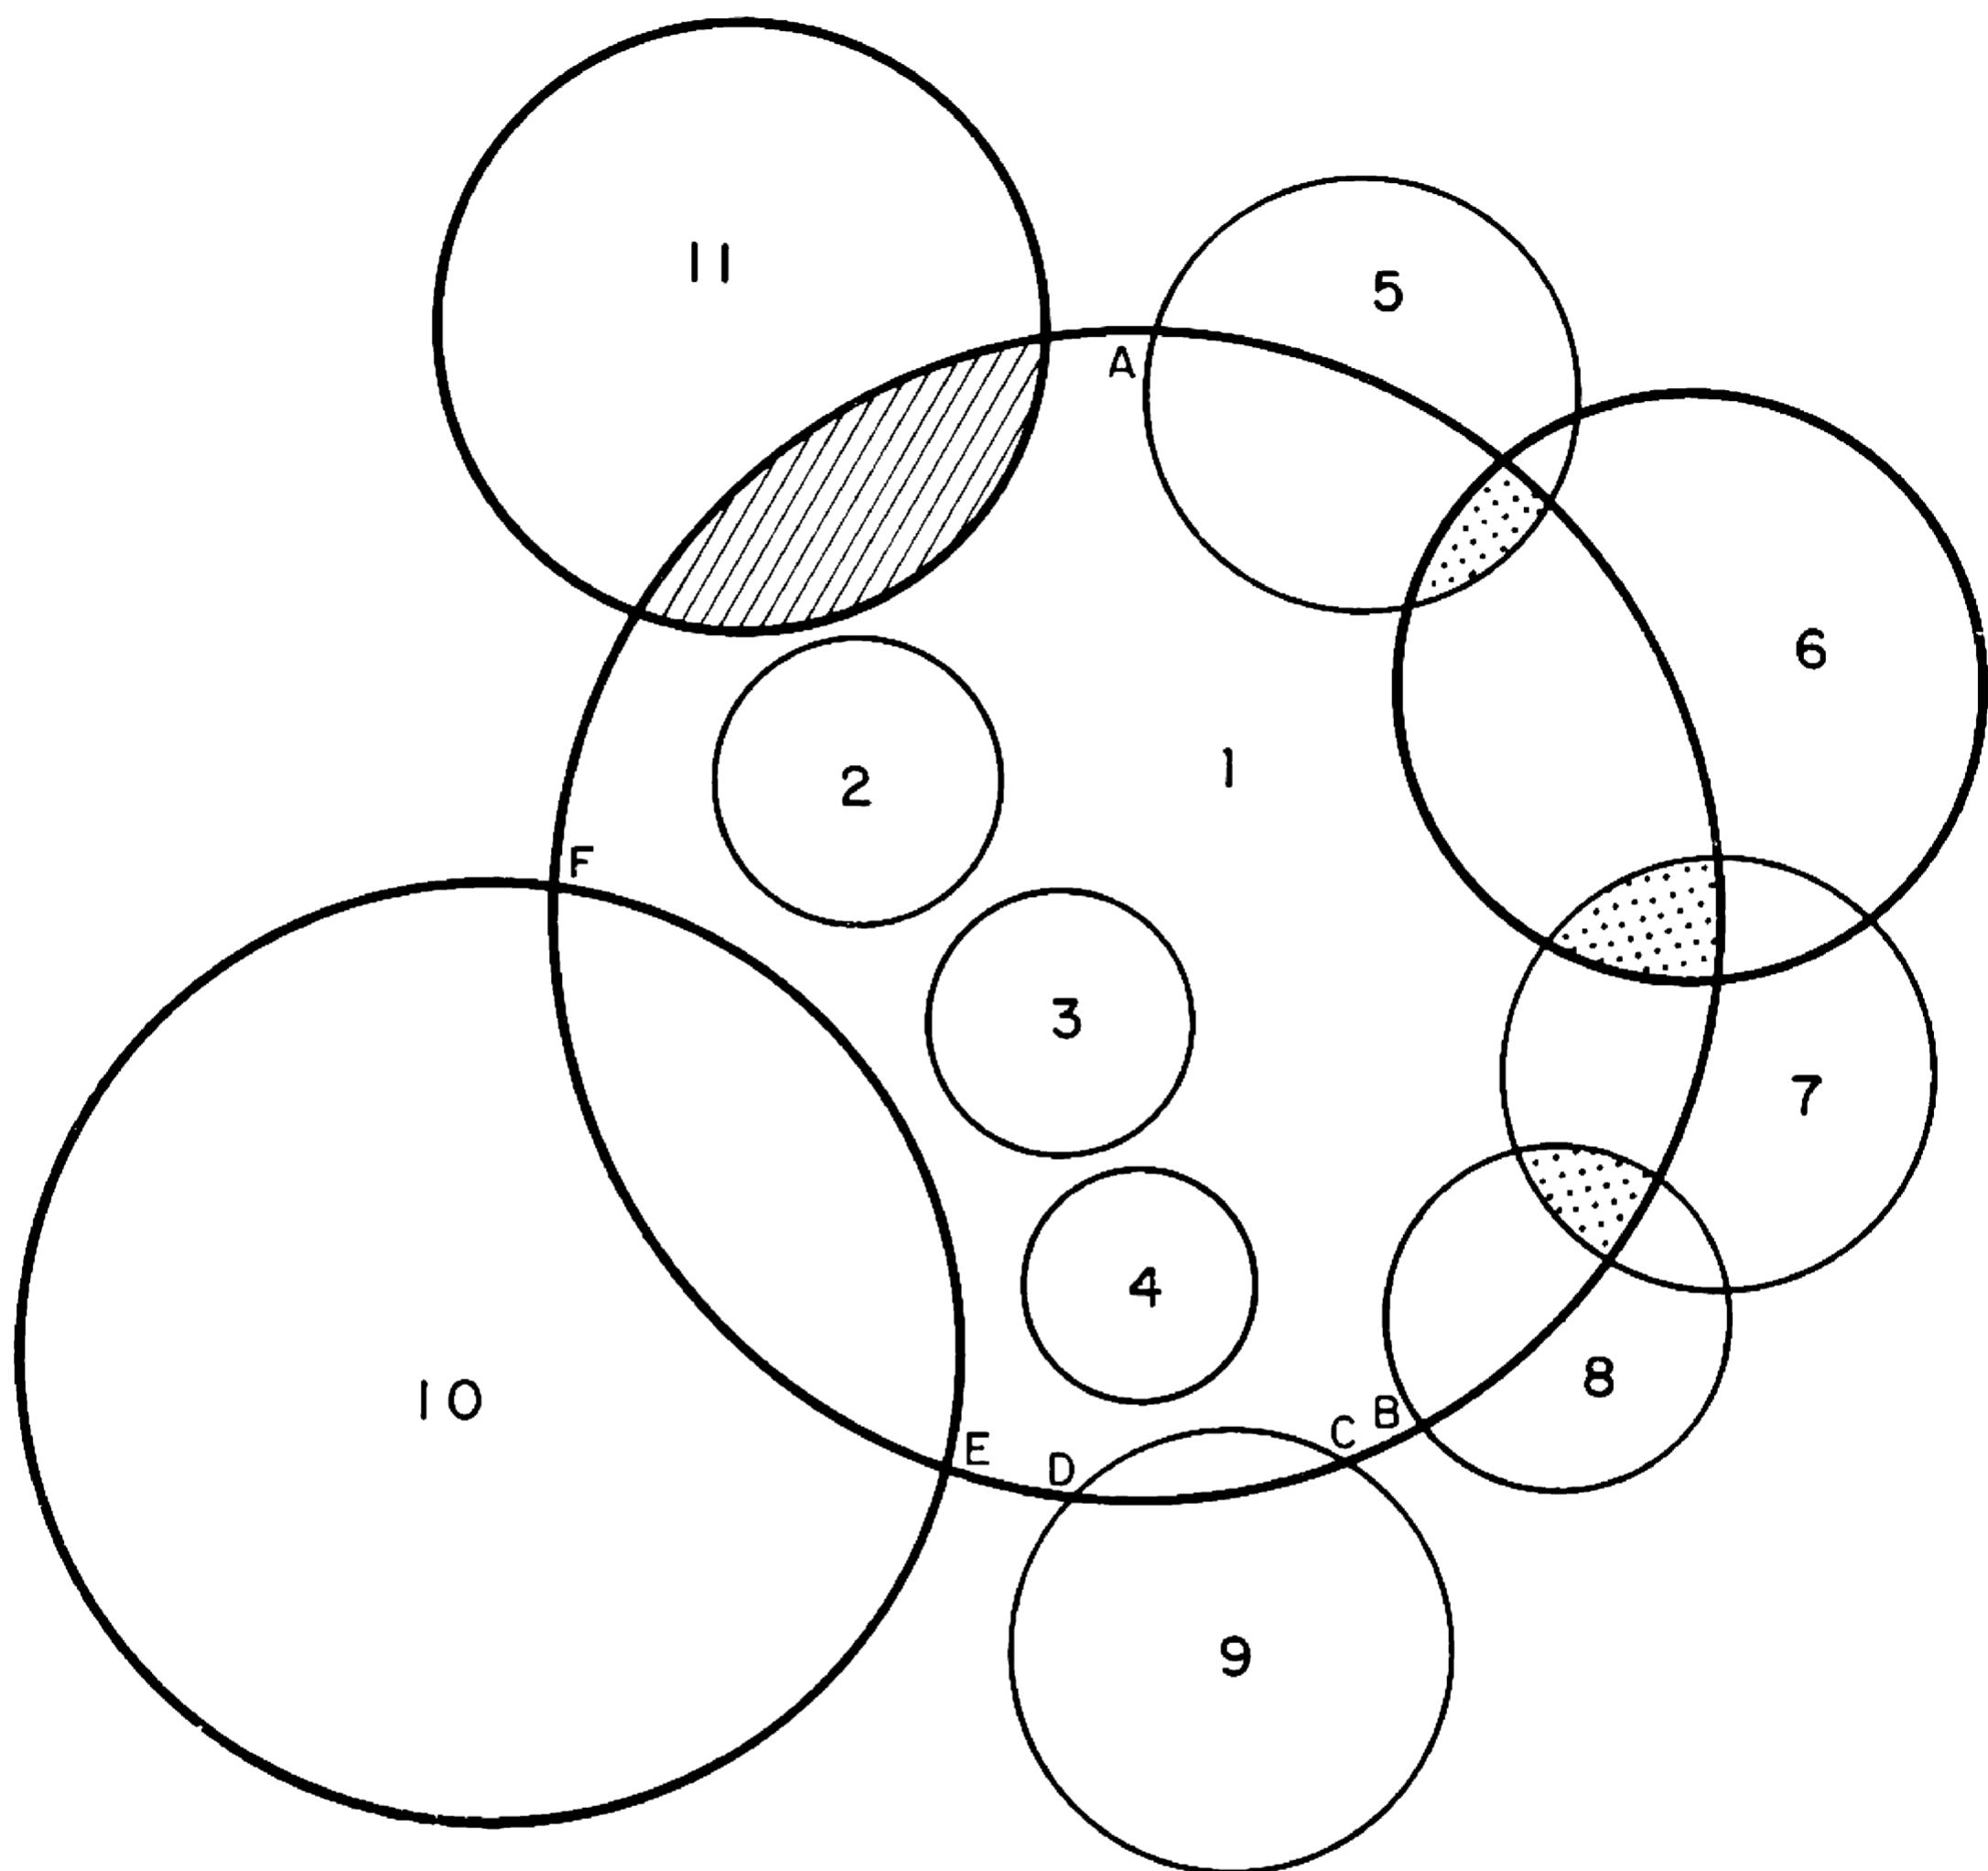

Circle 1 represents the maximum Ukrainian population at a given census date and is envisaged as expanding in area with the growth of the population. Circles 5 to 9 represent the Austrians, Poles, Russians, Romanians, Czechs, Slovaks and Yugoslavs, respectively. They are shown as encroaching on circle 1 because at each census there were leakages of varying numbers of Ukrainians to these origins (Section 20). The encroachments tended to diminish with time as Ukrainian identity became more clearly established in the censuses. The encroachments of circles 5 to 8 with each other (dotted areas) indicate that leakage of Ukrainians may change from one origin to another; for example, from the Austrians to the Poles as sovereignty over Ukrainian territories changed between censuses.

Circle 10 is likewise shown as an encroachment. It is intended to include those who lose their ethnic identity through assimilation and who report themselves as non-Ukrainians even though a correct interpretation of the ethnic definition in the census would classify them as Ukrainian. This group would include the offspring of intermarriages where the male ancestor was Ukrainian, and also other persons who, due to stigma or misunderstanding of the ethnic question, identified themselves as non-Ukrainians, or in some censuses as Canadians or Americans. The encroachment of circle 10 would tend to increase with succeeding censuses because of the rapid increase of intermarriage among the Ukrainians (Table 62.2) and the increasing opportunities of not adhering to the strict definition of ethnicity, especially in second and succeeding intermarriages. By definition, circle 10 excludes the offspring of intermarriage where the mother was Ukrainian.

Circle 1 also includes some non-Ukrainians (circle 11); these may be Mennonites, Jews, Poles, Russians or Germans who could identify themselves as Ukrainians within the definition of ethnicity in census and birth and death statistics. However, such additions to the Ukrainian origin are considered to be much less than the leakages (M13, p. 9) of Ukrainians to other origins.

The estimated Ukrainian population at a given census date less the leakages due to encroachments (circles 5 to 10) is the Ukrainian population recorded by the censuses, which can be indicated by the residual area

VENN DIAGRAMS FOR UKRAINIAN ETHNICITY

Circles Represent:

- 1 - Ukrainians according to census definition of ethnicity.
- 2 - Galicians
- 3 - Ruthenians
- 4 - Bukovinians
- 5 - Austrians
- 6 - Poles
- 7 - Russians
- 8 - Romanians
- 9 - Czechs, Slovaks, Yugoslavs, Hungarians, others.
- 10 - Various ethnic origins which are recipients of Ukrainians due to assimilation, including "Canadian" or "American" origins.
- 11 - Non-Ukrainians falling within census definition of ethnicity: Mennonites, Germans, Jews, Poles, Russians, Byelorussians.

ABCDEFA of circle 1. In the 1901 census, the residual area was confined entirely to the Galicians (circle 2), a subgroup of the Ukrainians, and in that year the census is estimated to have reported only 22 percent of the maximum Ukrainian population (Table B4). In the 1911 census the Ruthenian and Bukovinian subgroups were added (circles 3, 4) and the percentage of Ukrainians reported in the census rose sharply. In the 1921 and 1926 censuses, in addition to the three subgroups, Ukrainians were also designated directly as such (Section 20). In the 1931 and succeeding censuses, the designation of Ukrainian subgroups was discontinued and the Ukrainians reported were equated with the entire residual area ABCDEFA.

OTHER POPULATION ESTIMATES

An estimate of the Ukrainian population in 1901-1921, based on affiliations with the Greek-rite churches, are shown in column 5, Table B4. The figures are considered to comprise mostly Ukrainians as the numbers of other origins (Greeks, Russians) who could be included were not large at that time. The estimates are smaller than in column 2 of Table B4 because of exclusions of Ukrainians affiliated with other denominations such as Roman Catholics.

The under-reporting of Ukrainians in the census has been recognized by others. Hurd proposed upward adjustments for 1931 (B9, p. 224) and Ryder for 1951 (M25, p. 475). However, they were considerably lower than those in Table B4. For the period of early settlement, the opinion of informed observers indicates the Ukrainian population to be much higher than shown in early censuses. Kaye indicated that by the year 1900 "Ukrainian settlers in Canada passed the 20 thousand mark" (M20, p. 362). Philippovich indicated, based on the opinion of federal immigration officials, that the Ukrainian population in 1903-1904 was about 80,000 (M24, p. 489), higher than interpolations from the estimates in Table B4.

SUMMARY

The corrected Ukrainian population is determined by applying rates of natural increase developed in this appendix to data on annual immigration. The population estimates which result are substantially higher than the

population reported in the censuses and are considered to be a closer approximation to the Ukrainian population in Canada at each census date. This is under the assumption of 100 percent accuracy in interpreting and applying the definition of census ethnicity so that there would not be, as there is in fact, various leakages of Ukrainians to other ethnic origins.

APPENDIX C

A LISTING OF ADDITIONAL COMPENDIUM DATA

This appendix lists supplementary data relating to the compendium Sections and indicates where it is available. Although not published, the additional data are nevertheless considered to have some value to scholars and students doing detailed research and analysis on Ukrainians in Canada. They comprise worksheets, microfilms, computer print-outs, photocopies and early drafts of some of the published Sections. To make this material readily available to users it has been deposited in the Public Archives of Canada under the reference: "*Darcovich, William and Yuzyk, Paul: Supplementary Data to the 'Statistical Compendium on the Ukrainians in Canada, 1891 to 1976'*".

The material deposited comprises the following items:

- (1) Codes G1-G34 inclusive as described in the bibliography.
- (2) Codes H1-H14 inclusive as described in the bibliography.
- (3) Section 21. Population by Subprovincial Areas: This is a file of worksheets on all places in Canada, incorporated and unincorporated, with a population of five or more Ukrainians for the census years 1911 to 1961.
- (4) Section 32. Education and Training: Early drafts contained more detail by level of schooling and age, particularly for 1961.
- (5) Section 40. Labour Force by Occupations and Industry: Part 40(a) contains a more-detailed listing of occupations and the industrial distribution of the labour force than is given in the compendium; the additional data are available by provinces and by sex, 1921 to 1961; for 1931 there is a detailed break-out of the data at the Canada level by sex and place of birth, i.e., whether Canadian- or foreign-born, and by length of residence in Canada; for 1971 a computer print-out gives complete occupational detail for the Ukrainians by provinces (both sexes only). Part 40(b) contains the original worksheets of the labour force by occupations and industries, 1921 to 1961, with additional data in the footnotes. Data for 1971 is also listed in G9.
- (6) Section 50. Immigration to Canada: An early draft of this Section

provides more detail than is published in the compendium, particularly on immigration from the United States, and on immigration by ports, sponsorship and fiscal years.

- (7) Section 60. Vital Statistics: Early drafts of this Section give more detail on births, deaths and marriages; in births, more ethnic origins are used in the classification of parents than in the compendium which highlights Ukrainians; also, age of mother at time of giving birth is provided by individual years; in deaths there is more data on month and age of death; in marriages, more religious denominations are used to classify brides and bridegrooms than in the compendium which focuses on the Greek Catholic and Greek Orthodox denominations.

BIBLIOGRAPHY

A. 1901 TO 1926 CENSUSES

Fourth Decennial Census of Canada, 1901, Dept. of Agriculture, Ottawa.
