# ACKNOWLEDGMENTS

The publication of this work, initiated in 1952, was conceived and inspired by the late Luke Myshuha, LL.D., editor-in-chief of *Svoboda*, the Ukrainian daily appearing in the United States since 1893, the late Dmytro Halychyn, president of the Ukrainian National Association, Inc., and Clarence A. Manning, Ph.D., Associate Professor of Slavic Languages at Columbia University.

The first volume appeared in 1963. The preparation of the second volume, as was the case with the first, required much work on the part not only of the editors and authors, but also of many others who generously contributed towards its completion. It would be impossible to list all those who collaborated in some way in the preparation of this volume. The editors and the sponsor wish to express their gratitude and appreciation to all of them, especially to the following:

George Shevelov, Lubow Drazhevska, Stephen Protsiuk, Augustine Stefan, Zenon Stefaniv, and Roman Szporluk for consultation and reviewing parts of the manuscript;

Jacques Hnizdovsky—for designing the cover;

George Poliansky, Nicholas Kulytsky, Ivan Tesla, and Arcady Zhukovsky—for the preparation of maps and diagrams;

Lada Hordynsky, Maj. Nicholas S. H. Krawciw, Roman Olesnicki, and Christine Padoch—for partial translation of the manuscript.

Mildred Milanowicz—for secretarial work.

# FOREWORD

Several years ago the publication of the first volume of *Ukraine: a Concise Encyclopaedia* was uniformly acclaimed in numerous reviews. An "outstanding reference book," wrote one reviewer, "a monumental compendium of information about Ukraine, its land, people, history, and culture," declared another, and a third described it as "the most complete reference book on Ukraine available in English." Some reviewers stressed the special features and authoritativeness: the more than sixty scholars, many of them of international reputation, who had contributed articles; the carefully selected and often extensive bibliographical surveys attached to each contribution; the more than six hundred illustrations and maps in a text of 1097 double-column pages; and the highly particularized table of contents which, combined with an exhaustive index at the end, enabled the user to locate any of a multitude of entries with complete ease. Still other reviewers emphasized that the work would attract an audience wider than the purely academic one because of its "broadly viewed analyses of Ukrainian problems" which were "treated with great lucidity and drive, clarifying much that has too often been obscure or ignored"; and that only "objective scientific methods" were employed in articles dealing with the present Ukrainian Soviet Socialist Republic. This impartial approach, one reviewer pointedly declares, may serve to correct Western historians who write about Ukraine and its people, about their past and present aspirations, without ever going further than "the material provided for them by Russian historical literature, which has rather a strong imperialistic bias and does not show respect for facts."

One may anticipate that such enthusiastic praise will be echoed in the critical reception of the present second and concluding volume of this ambitious project which has been so handsomely published by the University of Toronto Press. The same meticulous care and scholarly probity are reflected in the prodigious effort involved in this final volume, with its 1262 pages of text, plus xliii preliminary pages and 132 Index pages, 727 illustrations, 22 black and white and 8 color plates, as well as 6 color maps in envelope at back, and in the treatment of its thirteen major thematic divisions: The Law; The Ukrainian Church; Scholarship; Education and Schools; Libraries, Archives, Museums; Book Publishing and the Press; The Arts; Music and Choreography; Theater and Cinema; The National Economy; Health and Medical Services and Physical Culture; The Armed Forces; and Ukrainians Abroad.

These major thematic divisions complement completely those in the first volume, several of which, like history and literature, run to book length. In fact, the combined twenty-one subject areas, with their numerous subheadings, offer a vast comprehensive coverage, in about three million words, of every aspect of Ukraine from its origins to the present. Here is God's plenty

for scholars, teachers, students, or interested readers. The important place of the second largest body of Slavic peoples in history and culture has at last been fully chronicled and evaluated for the edification of the English-speaking world.

If utility is one of the principal aims of every serious reference book, then currency is a vital factor in achieving it. That is, an encyclopaedia can never afford to be anything less than "up to date." This becomes doubly true of a reference work in which one considerable area concerns the Ukrainian Soviet Socialist Republic, where things change so swiftly. Moreover, here truth is constantly challenged by suppressed or doctored facts and information by misinformation. But the challenge of current knowledge about the Ukrainian Soviet Socialist Republic, such as recent nationalistic developments, to take only one example, must be promptly met with the same scholarly honesty and factual correctness as has been used in the treatment of such material in the present volumes. In fulfilling this obligation to readers of maintaining a steady flow of current information of historical significance, perhaps one may be allowed to hope that the editor of *Ukraine: A Concise Encyclopaedia* has already planned the preparation of periodical supplements of such material for distribution to subscribers until such time as a new edition of the *Encyclopaedia* seems warranted.

Inspired by the magnificent contribution of the *Encyclopaedia*, I mentioned in my "Foreword" to the first volume the need to strengthen advanced education on Ukraine in our centers of Slavic study. In particular, I suggested that chairs of Ukrainian studies should be established, library resources built up, "and in the major disciplines of the field more textbooks and reference works, suitable to the special needs of English-speaking students, should be produced." The first and most essential reference work, *Ukraine: A Concise Encyclopaedia*, has now been provided. Some of the other *desiderata* I indicated have since been gloriously realized through what seems a miracle of collective human effort in planning and fund-raising by the Ukrainian communities of the United States and Canada, with organized students playing a prominent part, namely the establishment at Harvard University of a projected Center of Ukrainian Studies with eventually three chairs in history, language, and literature, which will offer undergraduate and graduate courses leading to the A.M. and Ph.D. In addition, the Center will provide for a Ukrainian Research Institute; the publication of a Harvard Series of Ukrainian Studies; and an expansion of the University Library's holdings of Ukrainian books and serials, for which the voluminous bibliographical listings in the *Encyclopaedia* could serve as a valuable initial guide to essential acquisitions.

This comprehensive program is already well underway. Courses in Ukrainian literature are being offered by a distinguished visiting professor in the field, and in Ukrainian language and history by regular Harvard faculty members of these departments who are prepared to teach such disciplines. Study for advanced degrees in the three disciplines is under special committees of the departments involved. Further, a Summer Program in Ukrainian

Studies is designed to provide opportunities for students of other colleges and universities to receive such instruction if it is not available to them in their own institutions. A five-year publication plan also has been adopted for the Harvard Series of Ukrainian Studies which include: bibliographical works, textbooks, source studies, original monographs, and reprints and first editions of complete or selected classic works in Ukrainian humanities. In addition, a Selected Union Catalog of Ukrainian Subjects is in the process of consideration. Finally, a full-time expert to supervise the Ukrainian collection in the Widener Library is to be appointed. With such a carefully planned and vigorously supported over-all program, one can confidently assert that the preparation of a new generation of young students in the field has begun, and the hope is that they will eventually make their own scholarly contributions to the subject and by their teaching stimulate the growth of Ukrainian studies in other Slavic centers of learning in the midwest, the far west, and in Canada.

To mention, however briefly, in this "Foreword" so large a development of high promise as the Harvard Center of Ukrainian studies is perhaps illuminating, for the project can hardly fail to be regarded as a logical continuation, on another level, of the educational zeal and momentum that went into the conception and achievement of *Ukraine: A Concise Encyclopaedia.* Both were animated by the same spiritual heritage among like-minded people—a loving memory of a distant motherland, unforgotten and unforgettable. Only some such emotion could have kept alive the unswerving faith of members of the Shevchenko Society, the Ukrainian National Association, and their numerous co-workers as they struggled for years with a multitude of problems in organization, selection, scholarship, writing, proofreading, editing, and financing that are inevitably connected with the publishing of so huge an undertaking as the *Encyclopaedia.* Though aware that Ukraine is now controlled by a government that bases its information releases on expediency, they have never lost the conviction that scholarship's primary justification is the indefatigable search for truth. And it is the search for truth about the past and present of their motherland to which they have dedicated these magnificent volumes of learning in the fervent hope that one day the truth will set free the Ukrainian nation and peoples.

ERNEST J. SIMMONS

FOREWORD ix

INTRODUCTION xxxv

I. THE LAW

1. THE HISTORY OF JURISPRUDENCE 3
   Until the Middle of the Eighteenth Century 3
   From the Mid-Eighteenth Century to 1917 4
   In Central and Eastern Lands: In Western Lands
   From 1917 to 1940 7
   In Central and Eastern Lands: In Western Ukraine and Abroad
   After 1945 9
   In the Ukrainian SSR; Abroad

2. THE PRINCELY ERA 10
   Sources of Law 10
   Customary Law; Legislative Records; Reception of Byzantine Law
   State Law 13
   General Characteristics; State Territory; Population; The State Structure
   Civil Law 16
   The Institution of Property and Possession; Obligations; Family Law
   Criminal Law 19
   Crime; Punishment
   The Judicial System 20
   Procedure 20

3. THE LITHUANIAN-RUTHENIAN PERIOD 22
   Sources of Law 22
   Customary Law; Legislative Records; International Agreements; Writs of Privilege; Land Writs; Official Compilations of Laws; The Reception of German Law
   State Law 24
   General Characteristics; Population; The Central Government; Administration; Local Administration
   Civil Law 27
   Property Law; Obligations; Family Law

Criminal Law 30
General Remarks; Crime; Punishments
The Judicial System 31

4. THE HETMAN STATE (1638–1781) 33
Sources of Law 33
Treaties with Muscovy; Collections of Laws
State Law 34
General Characteristics; State Territory; Population; Government; Traces of the Ukrainian Political Order under Russia
Civil Law 38
Property and Possession; Family and Inheritance Law; Ukrainian Civil Law under Russia
Criminal Law 40
General Characteristics; Crime; Punishments
The Judicial System 41
Court Proceedings

5. UKRAINE UNDER POLISH DOMINATION IN THE FOURTEENTH TO EIGHTEENTH CENTURIES 44
Galicia 44
Sources of Law; Government; Civil Law; Criminal Law; Procedure; Courts
Central Ukrainian Provinces 47
Sources of Law; Government; Civil and Criminal Laws; Courts

6. IN THE RUSSIAN AND AUSTRO-HUNGARIAN EMPIRES FROM THE LATE EIGHTEENTH CENTURY TO THE OUTBREAK OF WORLD WAR I 49
The Russian Empire 49
Introductory Remarks; The Central Government; Legislation; Territorial Administration; Home Rule; Civil Law and Procedure; Criminal Law and Procedure; Judicial System
Austro-Hungarian Empire 52
Introductory Remarks; The Central Government; The Central Administration in Galicia and Bukovina; The Autonomous Administration of the Lands; Civil Law and Procedure; Criminal Law and Procedure; The Judicial System

7. UKRAINIAN STATEHOOD 1917–20 55
Characteristics of the Constitutional Development of the Ukrainian State 55
The Period of the Central Rada 56
Organization and Legal Character; Four Universals of the

Central Rada—the Road to Sovereignty; Statute of the Higher Government of Ukraine; Third Universal of November 20, 1917; Fourth Universal of January 22, 1918; Legislation of the UNR; Constitution of the Ukrainian National Republic
The Period of the Hetman State 60
The Organization of the Hetman Government; Other Laws of the Hetman; Manifesto on Federation with Russia
The Period of the Directory 61
Organization of the Directory; Constitutional Resolution of the Labor Congress (January 22–28, 1919)
Western Ukrainian National Republic 63
Political Representation of the Western Ukrainian Territory; Constitutional Resolution of October 18, 1918; Proclamation of the Ukrainian National Rada of November 1, 1918; Fundamental Provisional Law of November 13, 1918; The Constitutional Effect of the Act of Union; Dictatorship in the Western Province of the UNR
International Legal Status of the Ukrainian State 66

8. WESTERN UKRAINIAN TERRITORIES BETWEEN THE TWO WORLD WARS 70
Galicia and the Northwestern Territories 70
Western Ukraine under Polish Occupation; Legal and Actual Status of the Ukrainian Population under Poland; Law and Courts; Soviet Occupation in 1939; German Occupation (*Generalgouvernement*)
Bukovina and Bessarabia 73
Under Rumanian Occupation; System of Government; Civil Law and Courts; Soviet Occupation in 1940
Transcarpathia (Carpatho-Ukraine) 74
End of 1918 and Beginning of 1919; Under Czechoslovakia, 1919–38; Autonomous Carpatho-Ukraine, 1938–9; Under Hungary, 1939–44; The Transitory Period, 1944–5

9. LAW AND GOVERNMENT OF THE UKRAINIAN SSR 77
System of Government 77
Basic Principles of Political Organization of the Ukrainian SSR; Constitutional Evolution; The Central Government of the Ukrainian SSR; The Legal Nature of the Soviet Federation; The Legal Status of the Ukrainian SSR within the USSR; The Communist Party of Ukraine; Local Government in the Ukrainian SSR; Citizenship of the Ukrainian SSR; The Territory of the Ukrainian SSR
Social Organizations of the Ukrainian SSR 95
General Remarks; Trade Unions; The Young Communist League; Cultural Associations of the Ukrainian SSR;

Scientific and Technical Organizations; Other Mass Organizations
Civil Law 101
Sources of Civil Law of the Ukrainian SSR; Personal Law; Law of Property; Law of Obligations; Family Law; Land Law; Collective Farm Legislation; Labor Law; Civil Procedure
Criminal Law and Procedure 109
Substantive Criminal Law; Criminal Procedure
Judicial System 115
Sources of Law; Main Characteristics of the Court System; Courts on the Ukrainian Republic Level; The Supreme Court of the USSR; Supervisory Powers of the Prosecutor General of the USSR; Legal Assistance; Administration of Justice outside of Regular Courts

## II. THE UKRAINIAN CHURCH

1. UKRAINIAN CHURCH HISTORIOGRAPHY AND THEOLOGY 120
Church Historiography 120
Before the Nineteenth Century; The Nineteenth and Early Twentieth Centuries in Central and Eastern Ukraine; The Nineteenth and Early Twentieth Centuries in Western Ukraine and Abroad; 1917–67
Theology 130
Before the Seventeenth Century; The Seventeenth Century; The Eighteenth Century; The Nineteenth and Twentieth Centuries

2. THE HISTORY OF THE UKRAINIAN CHURCHES 132
Christianity in *Rus'*-Ukraine Prior to the Official Conversion (989) 132
Before the Ninth Century; The Spread of Christianity in *Rus'* in the Ninth and Tenth Centuries
Christianity in *Rus'*-Ukraine From the Eleventh Century to the Mid-Fourteenth Century 135
The Conversion of Volodymyr and the Christianization of *Rus'*-Ukraine; The *Rus'* Church as a Metropolitanate of the Byzantine Patriarchate; The Tatar Invasion: Attempts at Collaboration between the *Rus'* Church and the West; The Disintegration of the Kievan Metropolitanate: The Galician Metropolitanate
The Ukrainian Church in the Lithuanian-Polish Realm and the Kozak Hetman State 143
From the Middle of the Fourteenth Century to the Beginning of the Fifteenth Century; The Florentine Union;

The Last Half of the Fifteenth Century and the Sixteenth Century; The Union of Berestia (1595–6); The Religious Struggle in Ukraine; The Project of a Kievan Patriarchate; The Mohyla Period; The Church in the Kozak-Hetman State during the Seventeenth and Eighteenth Centuries; The Church in Right-Bank Ukraine
The Orthodox Church in Ukraine in the Nineteenth and Early Twentieth Centuries 161
The Orthodox Church in the Ukrainian Lands of the Russian Empire; The Expansion of the Orthodox Church in Right-Bank Ukraine; Structure; Metropolitans and Bishops; The Russification of the Orthodox Church in Ukraine; Distinctive Ukrainian Features of the Orthodox Church in Ukraine

The Destruction of the Uniate Church in the Russian Empire; The Greek Catholic Church in Galicia under Austrian Rule; The Greek Catholic Church in Western Ukraine
The Church in Transcarpathia 195
Before 1850; 1850–1918; 1918–44; After 1944
The Church in Bukovina 198
Before 1774; Under Austrian Rule; After 1918
The Ukrainian Catholic Church Abroad 200
North America; Europe
The Ukrainian Orthodox Church Abroad 204
Protestantism (Evangelical Churches) in Ukraine 208
The Beginnings of Protestantism; The Rebirth of Protestantism; The Baptists; The Situation in the USSR; The Lutheran Church; The Reformed Churches in Western Ukraine; Ukrainian Protestants Abroad

3. CONSTITUTION OF THE UKRAINIAN CHURCHES 213
Principal Ukrainian Churches 213
The Name; Differences and Similarities; The Status of the Ukrainian Churches; Legal Foundations of the Ukrainian Churches; Church Councils; Church Hierarchy; The Clergy; The Faithful

The Church and the State 226
Liturgical Language and Customs 228
Religious Tolerance 230

III. SCHOLARSHIP

1. SCHOLARSHIP IN UKRAINIAN LANDS TO 1850 232
From the Princely Era to the End of the Fifteenth Century 232
The Sixteenth to the Eighteenth Centuries 235
The Kievan Mohyla Academy
The Nineteenth Century to 1850 238

2. SCHOLARSHIP IN THE CENTRAL AND EASTERN UKRAINIAN LANDS FROM 1850 TO 1917 242
Institutions of Higher Learning 243
Learned Societies 244
The Role of the Zemstvos 245
Ukrainian Studies in St. Petersburg and Moscow 246
The Ukrainian Scientific Society of Kiev 247

3. SCHOLARSHIP IN WESTERN UKRAINIAN LANDS AND ABROAD (1850–1918 248
Western Ukrainian Lands 248
Schools of Higher Learning; Other Scholarly Institutions; Abroad (1850–1918)

4. CENTRAL AND EASTERN LANDS AFTER 1917 252
The Period of Ukrainian Statehood 252
In the Ukrainian SSR in the 1920's 254
The Ukrainian Academy of Sciences; Other Scholarly Institutions
Suppression of Ukrainian Scholarship in the 1930's 261

5. THE UKRAINIAN SSR, 1945–66 266
General Characteristics 266
The Academy of Sciences of the Ukrainian SSR 267
Higher Education Establishments 270
Government Research Institutes 270
Learned Societies 273
Coordination of Scientific Research, Training of Scientific Personnel 274
Scholarship Policy and its Results 274

6. IN WESTERN UKRAINE AND IN THE EMIGRATION, 1919–45 278
In Western Ukrainian Lands to 1944 278
Abroad, 1919–45 280
In Czechoslovakia; In Other European Countries

7. ABROAD, 1945–67 284
In Western Europe, 1945–9 284
1950–67 285

IV. EDUCATION AND SCHOOLS

1. HISTORY OF PEDAGOGICAL THOUGHT AND PRESENT STATE OF RESEARCH 291
Before the Nineteenth Century 291
Central and Eastern Lands in the Nineteenth and Early Twentieth Centuries 292
Western Lands before 1918 294
The Period of Ukrainian Statehood 295
The Ukrainian SSR, 1919–32 295
The Ukrainian SSR, 1933–66 297
Western Ukraine, 1918–39 298
Abroad after 1918 299

2. TO THE END OF THE EIGHTEENTH CENTURY 300
To the Mid-Sixteenth Century 300
Before Adoption of Christianity; After Adoption of Christianity; From the Mongolian Invasion to the Mid-Sixteenth Century
From the Mid-Sixteenth to the Mid-Seventeenth Centuries 303
Catholic and Protestant Schools; Revival of Ukrainian Schools; Brotherhood Schools; Kievan Mohyla Collegium
From the Late Seventeenth to the Nineteenth Century 308
General Characteristics; From the Latter Half of the Seventeenth to the End of the Eighteenth Century; Elementary Schools; In Ukrainian Lands in the Polish Republic

3. IN UKRAINIAN LANDS IN THE RUSSIAN EMPIRE IN THE NINETEENTH AND TWENTIETH CENTURIES 313
General Characteristics 1800–60 313
Schools of Higher Learning; Secondary Schools; Elementary Schools
General Characteristics 1860–1917 317
Preschool Education; Teachers' Schools; Secondary Schools; Professional Schools; Institutions of Higher Learning
Educational and Cultural Movement 323
Before 1900; 1900–17; Schools and Extrascholastic Education in Kuban

4. UKRAINIAN LANDS UNDER AUSTRIA-HUNGARY 327
Education in Galicia 327
Before 1860; Second Half of the Nineteenth Century and Early Part of the Twentieth

Educational and Cultural Movement in Galicia 334
Before 1860; 1860–90; The Twentieth Century
Education in Bukovina 337
Schools; Extracurricular Activities
Education in Transcarpathia 339
Before 1860; 1860–1918

5. THE PERIOD OF UKRAINIAN STATEHOOD 341
Ukrainian National Republic (UNR) 341
Western Ukrainian National Republic 342
Kuban 343

6. THE UKRAINIAN SSR 343
The 1920's 343
New School System; Preschool Education; The Labor School; Professional and Higher Education; Educational Methods; Administration; Extracurricular and Communal Activities; Evaluation
The 1930's 350
Beginnings of Russification; Social Discrimination; Changes in the School System; Vocational Education; Educational Methods
From 1941 to 1958 355
Sovietization of Western Ukraine
From 1959 to 1969 359
The 1959 School Reform; Preschool Child Care; Elementary and Secondary Schools; Curriculum, Theory, and Methods; Vocational and Semi-Professional Schools and Tekhnikums; Professional Military and Party Education; Higher Education; Planning of Admissions and the Allocation of Graduates; Students and Faculty; Extracurricular Activities

7. EDUCATION IN WESTERN UKRAINE IN 1919–44 AND ABROAD 371
Ukrainian Lands Under Poland 371
General Characteristics of the School System; Educational System; School Network; Polonization of Ukrainian Schools; Struggle for Ukrainian Schools; Schools of Higher Learning; Extracurricular Education
Transcarpathia 1919–39 381
Schools; Extracurricular Education
Ukrainian Lands under Rumania 383
Schools; Extracurricular Education

8. ABROAD FROM 1919 TO THE 1950's 384

Between World Wars I and II 384
After World War II 386

9. THE PERIOD OF WORLD WAR II 388
General Remarks 388
In the *Generalgouvernement* 389
Kindergartens; Elementary Schools; Gymnasiums; Teachers Seminaries; Professional Schools; Public Professional Courses; Other Education

V. LIBRARIES, ARCHIVES, MUSEUMS

1. LIBRARIES 392
To the End of the Eighteenth Century 392
From 1800 to 1917 in Central and Eastern Ukraine 392
The Period of Ukrainian Statehood 393
From 1920 to the Present 394
From 1800 to 1945 in Western Ukrainian Lands 396
The 1946–66 Period in the Ukrainian SSR 398
Abroad 400

2. ARCHIVES AND ARCHAEOGRAPHY 401
To the End of the Eighteenth Century 401
The Nineteenth and Early Twentieth Centuries 402
Central and Eastern Lands; Western Ukrainian Lands
The Period of Ukrainian Statehood 404
1920's–30's 404
Ukrainian SSR; Western Ukrainian Lands
After 1940 406
Abroad

3. MUSEUMS, CULTURAL AND HISTORICAL LANDMARKS 408
To the End of the Eighteenth Century 408
The Nineteenth and Early Twentieth Centuries 408
Central and Eastern Lands; Western Lands
From 1917 to the Present 412
Central and Eastern Lands in 1917–32; 1933–9; Western Ukrainian Lands in 1918–45; 1939–45; 1945–65; Beyond the Borders of Ukrainian Territory
Historical Archaeological Landmarks and the Preservation of Historical and Cultural Monuments 422

4. RESERVATIONS AND CONSERVATION 424
Before 1920 424
1920 to 1940 424
From 1940 to the Present 425

## VI. BOOK PUBLISHING AND THE PRESS

1. SURVEY OF BIBLIOLOGICAL RESEARCH 428
   Central and Eastern Ukraine 428
   Western Ukraine and Abroad 430

2. BIBLIOGRAPHY 431
   Beginnings of Ukrainian Bibliography 431
   Development in the Eighteenth and Nineteenth Centuries 432
   Early Twentieth Century 435
   After 1917 435
   In the Ukrainian SSR, 1932–66 438
   Abroad since 1945 439

3. THE BEGINNINGS OF PRINTING 441
   Szwajpolt Fiol's Printing in Cracow 441
   Belorussian-Ukrainian Printing 441
   Ivan Fedorovych and His Activity in Ukraine 442

4. BOOK PRINTING IN THE SEVENTEENTH AND EIGHTEENTH CENTURIES 444
   Printing in Lviv 444
   Itinerant Printing-Publishing Shops 445
   Book Printing in Kiev 446
   Book Production in Pochaïv, Chernihiv, and Other Ukrainian Cities 449
   Printing in the *Hrazhdanka* Type in Ukraine 449

5. NINETEENTH AND EARLY TWENTIETH CENTURIES 450
   Eastern and Central Lands before 1917 450
   In Western Ukrainian Lands before World War I 453
   During World War I 456
   The Years of Ukrainian Statehood, 1917–20 457

6. BOOK PUBLISHING 1919–66 458
   Between Two World Wars 458
   Ukraine under Soviet Occupation; Western Ukrainian Lands; Ukrainian Publications Abroad
   During World War II 467
   Ukrainian Territories; Abroad
   The Post-World War II Period 469
   In Ukraine; Abroad

7. THE SALE AND DISTRIBUTION OF BOOKS 473
   To the End of the Eighteenth Century 473
   Nineteenth and Early Twentieth Centuries 473
   1917–65 474
   Abroad 476

8. THE PRESS 476
General Characteristics 476
Beginnings of the Ukrainian Press 477
The 1860's through the 1880's 479
From 1880 to 1906 481
1906–14 484
World War I (1914–18) 488
War of Liberation (1917–20) 489
Under Soviet Occupation (1919–45) 492
The Press in Western Ukraine 1918–39 496
Ukrainian Press Abroad (1920–45) 503
Ukrainian Press in World War II (1939–45) 505
The Press in the Ukrainian SSR after 1945 507
Ukrainian Emigration after World War II 515

9. RADIO AND TELEVISION 519
Radio 519
The Development of Radio Broadcasting in Central and Eastern Ukraine before 1945; In the Ukrainian SSR from 1945 to 1966; In Western Ukraine from 1918 to 1945, and Abroad since 1945
Television 522

VII. THE ARTS

1. UKRAINIAN ART RESEARCH 524
The Beginnings 524
The Twentieth Century 524
Under Soviet Pressure 526
From 1945 527
Abroad 528

2. ARCHITECTURE 529
Wooden Architecture 529
Early Periods; The Sixteenth to Nineteenth Centuries
Stone Architecture 536
The Princely Era; Transitional Period (End of the Thirteenth to the Sixteenth Centuries); The Baroque Period; Architecture of the Nineteenth Century
National Traits in Architecture 547
Architectural Trends in Ukraine under the Soviet Regime 549

3. SCULPTURE 551
To the End of the Eighteenth Century 551
The Greek Era; Era of the Princes; Fourteenth and Fifteenth Centuries; The Renaissance; Baroque

The Nineteenth and Early Twentieth Centuries 554
Classicism; Realism; Modern Sculpture; From 1917

4. PAINTING 557
To the End of the Sixteenth Century 557
Antiquity; The Princely Era; Fourteenth to Sixteenth Centuries
Baroque and Classicism 561
The Nineteenth and Twentieth Centuries 562
Realism; New Trends
Art in Soviet Ukraine 565
Art in Western Ukraine and Emigration 567

5. GRAPHIC ARTS 570
The Beginnings, Eleventh to Fourteenth Centuries 570
The Fifteenth to Seventeenth Centuries 570
The Baroque Period, Eighteenth Century 571
The Nineteenth Century 572
The Twentieth Century 573
After World War II 574

VIII. MUSIC AND CHOREOGRAPHY

1. MUSICAL EDUCATION AND MUSICOLOGY 576
Musical Education 576
Musicology 578

2. HISTORY OF UKRAINIAN MUSIC 579
Eleventh to Seventeenth Centuries 579
Eighteenth and Nineteenth Centuries 582
Twentieth Century 588
Under the Soviet Regime

3. MUSICAL PERFORMANCE 593

4. THE FOLK AND ART DANCE 601
History and Present State of Research 601
Origins and Development of the Ukrainian Dance 602
The Ritual Dance; The Folk Dance; Dance in the Popular Theater; Classical Ballet in Ukraine; Modern Art Dance

IX. THEATER AND CINEMA

1. THEATER 614
Theatrical Studies 614
Nineteenth and Early Twentieth Centuries; 1917–32; 1933–66

Drama Criticism 616
Theatrical Education 617
The Ancient Ukrainian Theater 618
Primitive (pre-Christian) Theater; Princely (Knightly) Theater; Popular Theater; Liturgical Drama; Kozak Baroque Theater
Period of Development of the Professional Secular Theater (1780–1881) 622
Introductory Remarks; The Serf Theater; The Origins of Professional Theater; Repertory; Actors; Directing; Amateur Groups of the 1860's and 1870's; Origins of the Ukrainian Theater in Galicia; The Rus'ka Besida Theater
Ethnographic Theater and the Beginnings of Modern Theater (1881–1917) 633
General Characteristics; Organization of the Theater; Dramaturgy; Actors and Directors
The Modern Ukrainian Theater since 1917 641
Theaters, Their Organization and Activity; Theatrical Life in Western Ukraine; Dramaturgy; Actors and Directors; Theater in 1941–4
Theater in the Ukrainian SSR from 1945 650
Organization of the Theater; Dramaturgy; Theaters, Directors and Actors; Conclusion
Ukrainian Theater in the Emigration in Europe, 1945–8 658

2. CINEMATOGRAPHIC ART 661
Before 1920 661
The Period of the All-Ukrainian Photo-Cinema Administration (VUFKU) 661
From 1930 to 1941 664
1941–55 665
From 1956 666

X. NATIONAL ECONOMY

1. STATE OF RESEARCH, HISTORY OF ECONOMIC THOUGHT, AND STATISTICS 669
State of Research 669
Before 1914; The 1914–45 Period; 1945–67
History of Ukrainian Economic Thought 681
Before the Mid-Eighteenth Century; From the Mid-Eighteenth to the Mid-Nineteenth Century; From the Mid-Nineteenth Century to 1917; 1917–67
Statistics 686
In the Russian Empire; Ukrainian SSR in the 1920's; Ukrainian SSR after 1930; Western Ukraine

2. GENERAL INTRODUCTION 693
Conditions of Development 693
Natural and Historical Conditions; Socio-Economic and Political Conditions in Modern Times
Ukrainian Economy in Nineteenth and Early Twentieth Centuries 696
Central and Eastern Lands; Western Ukraine
Ukrainian Economy in the Interwar Period 700
The Ukrainian SSR; Western Ukraine
Ukrainian Economy after World War II 702
General Characteristics; Planning and Administration; Human Resources; Capital Resources; Natural Resources
Structure and Level of Development According to National Income Accounts 707

3. THE SOVIET ECONOMIC SYSTEM IN UKRAINE 710
Historical and Political Development 710
"War Communism"; The New Economic Policy; Preobrazhensky's Proposal and Stalin's Correction; Exploitation of Agriculture; Monopolistic "Inflation"; The Turnover Tax
A Formal Model of the Soviet Economic System 715
Economic Discrimination among Social Classes; Economic Discrimination among Nationalities; Economic Exploitation of Ukraine; Russia's Gain at Ukraine's Expense
Principles Underlying the Present Soviet Economic System 724
The Soviet Economic Government 726
Economic Planning 727
The Financial Plan; The Labor Plan; Territorial Plans; Some Peculiarities of the Ukrainian Plans

4. MINERAL RESOURCES 734
Statistics of Reserves 734
Fuel and Energy 734
Coal; Peat; Petroleum; Gas; Shale
Primary (Natural) Fuel and Energy Resources 739
Metals 740
Iron; Manganese; Titanium; Mercury; Magnesium; Other Metals
Non-Metals 743
Refractory Materials; Moulders; Abrasives; Mineral Pigments; Fillers; Natural Construction Materials
Chemical Minerals 746
Mineral Salts; Mineral Fertilizers; Sulfur; Ozokerite

5. INDUSTRY 750
General Characteristics 750

Before the Eighteenth Century; Eighteenth Century and First Half of the Nineteenth; 1860–1914; Western Ukraine Before 1914; 1917–20; 1921–8; The Prewar Five-Year Plans; The Period of World War II; Post-War Period; Analysis of Recent Conditions; Development of Western Ukraine; Industrial Development of Individual Western Oblasts in 1964
Branches of Ukrainian Industry 782
Electric Power Industry; Fuel Industry; Metallurgy; Machinery, Equipment, and Fabricated Metal Products; Chemical Industry; Construction Materials; Glass, China, and Pottery Industry; Wood-Working and Allied Industries; Light Industry; Other Branches; Food Industry; Home Industry

6. AGRICULTURE 840
Agricultural Development in Central and Eastern Ukraine from the Early Nineteenth Century to 1914 840
Prior to 1861 (Period of Serfdom); 1861–1905; The 1905–13 Period and the Stolypin Agrarian Reform
Agriculture in Western Ukraine before 1914 848
Before 1848; After 1848
Agriculture in Central and Eastern Ukraine, 1914–39 849
1914–21; The NEP Period; 1929–44
Agriculture of Western Ukraine between 1914 and 1939 858
1914–19; 1920–45
Agriculture in the Post-War Period (1945–68) 860
Agricultural Policies; Collective Farming; State Farms
Principal Branches of Agriculture 864
Crop Cultivation; Land under Crop; Grain Economy; Industrial Crops; Oil-yielding Plants; Potatoes, Vegetables, and Cucurbitaceous Plants; Fodder Crops
Arboriculture and Viticulture 880
Animal Husbandry 882
Before 1914; 1914–41; From 1941 to the Present
Fishing 890

7. FORESTRY 895
Forests of Ukraine and their Significance 895
Forest Planting; Changes in Forestation; Forest Management

8. UTILIZATION AND MANAGEMENT OF WATER RESOURCES 904
Water Management 904
Up to Early Twentieth Century; The 1920's and 1930's; 1940 to the Present
Irrigation 908

Water Supply and Sewerage 909
Other Improvement Measures
Prospects for the Future 910

9. TRANSPORTATION AND COMMUNICATIONS 912
General Characteristics of Transportation 912
Natural Conditions; History of Transportation; Present State
Railroads 914
Before 1914; 1914–39; From 1940 to the Present; Economics of Railroad Transport; Railroad Lines and Junctions
Sea Transport 921
Natural Conditions; Before 1917; 1917–40; 1940 to the Present; Principal Ports
River Transportation 924
General Characteristics; The Dnieper Basin; Transportation along Other Rivers
Motor Vehicle Transportation and Roads 927
Before 1914; The 1920's and 1930's; Present State
Air Transportation 929
Pipelines 930
Communications 931

10. EXTERNAL TRADE 933
Trade Balance of Ukraine in 1909–13 933
Period of Ukrainian Statehood (1917–20) 935
The Ukrainian SSR in the 1920's 935
Trade Balance of the Ukrainian SSR before World War II 936
Main Export Commodities
Trade with Russia and the Rest of the USSR after World War II 938
Freight Balance
Ukrainian SSR's Participation in the USSR's Foreign Economic Relations 944
Trade with Eastern Europe; Trade with Western Europe; Trade with the Near East and Africa; Trade with Asia; Ukrainian SSR's Trade with the Americas; Scientific and Technical Assistance to the Developing Nations; Ukrainian SSR's Products at International Fairs and Exhibitions; Foreign Tourism

11. FINANCE 952
History until 1917 952
The Ukrainian State, 1917–20 956
Soviet Finances before the 1930 Reform 958

The Present Financial System 960
The Soviet Ruble; Banking and Credit; The State Budget of the USSR; State Budget of the Ukrainian SSR; Local Budgets; Business Finance; Insurance

12. THE COOPERATIVE MOVEMENT 978
Central and Eastern Lands 978
Prior to 1917; 1917–20
In Western Lands 982
Prior to 1918; 1920–44
Cooperatives under the Communist Regime 987

13. PEOPLE'S WELFARE 989
Living Standards before World War II 989
Money Incomes in the Interwar Period 990
Real Incomes under Stalin 991
Income Policies after World War II 993
Incomes of the Collective Farmers 995
Private Plots 996
General Levels of Consumption 997
Housing 999
Urban Communal Facilities and Services 1001
Social Security Programs 1001
Some Inter-Republic Comparisons inside the USSR 1003

XI. HEALTH AND MEDICAL SERVICES AND PHYSICAL CULTURE

1. HEALTH AND MEDICAL SERVICES 1005
State of Research in the History of Health and Medical Services in Ukraine 1005
Health Care to the End of the Eighteenth Century 1007
Early and Princely Periods; Health Care in the Fourteenth to the Eighteenth Centuries
Health Care 1800–1914 1011
Ukrainian Lands in the Russian Empire; Ukrainian Lands under Austria-Hungary
The Period of Ukrainian Statehood 1017
Health Care in the Ukrainian SSR 1018
The Years 1920–22; The Years 1923–30; 1931–34; The Famine; The Years 1935–40; The Period of World War II
Present State of Affairs 1021
Organization of Health Care; Curative-Prophylactic Efforts; Medical Education and Personnel; Maternity and Child Care; Sanatoria and Health Resorts; Sanitary-Epidemiological Services; Mortality

Health and Medicine in Western Ukraine (1920–39) and in the Emigration 1026
Ukrainian Lands under Poland; Transcarpathia; Emigration

2. PHYSICAL CULTURE 1031
Prior to the Eighteenth Century 1031
The 1860–1917 Period 1031
Western Ukrainian Lands; Central and Eastern Lands
1917–20 1034
Physical Culture in the Ukrainian SSR (1920–40) 1034
After 1945 1035
Physical Culture in Western Ukraine and Abroad 1038

## XII. THE ARMED FORCES

1. HISTORY AND PRESENT STATE OF RESEARCH 1041
General Works and Research 1041
The Lithuanian-Polish Period 1041
The Kozak Period 1042
In the Russian and the Austro-Hungarian Empires 1042
The Period of the Ukrainian War of Liberation 1043
Ukrainians in the Soviet Armed Forces 1044
The Years 1939–53 1044

2. HISTORY AND ORGANIZATION 1045
Ukrainian Armed Forces until 1781 1045
The Princely Era; The Lithuanian-Polish Period
The Kozak-Hetman Period 1050
Ukrainians in Foreign Armies before 1917 1059
The Russian Empire; The Austro-Hungarian Empire; Ukrainian Sich-Riflemen (USS)
Ukrainian Armed Forces during the War of National Liberation (1917–21) 1065
The Ukrainian Central Rada; The Period of the Hetmanate; Directory; The Ukrainian Galician Army (UHA)
Ukrainians in Foreign Armies from 1918 1080
Ukrainians in the Soviet Army; Ukrainians in the Polish, Rumanian, and Czechoslovak Armies (1919–39)
Ukrainian Military Formations in 1938–43 1085
Ukrainians in Foreign Armies during World War II 1086
Ukrainian Units in the German Army; The Ukrainian Legion; Division Halychyna and the Ukrainian National Army; Defense Guard and Police Units
The Ukrainian Insurgent Army 1089

## XIII. UKRAINIANS ABROAD

1. GENERAL CHARACTERISTICS 1093
History, Distribution, Number 1093
Demographic Characteristics 1095
Social Problems 1096

2. IN THE UNITED STATES 1100
Ukrainian Immigrants and Their Settlements 1100
History of Ukrainian Immigration; Demographic Structure and Statistics; Geographical Distribution; Occupations and Professions
Religion and Churches 1108
The Ukrainian Catholic Church; Orthodox Church and the Ukrainians; Ukrainian Protestants
Organizations 1121
Fraternal Associations; Political and Civic Organizations; Other Organizations
Politics: Programs and Action 1130
National-Political Differentiation; Promoting the Cause of Ukrainian Independence; Ukrainians in American Politics
Education 1135
Adult Education
Economic Life and Organization 1138
Cultural and Community Life 1139
Press and Publishing; Fine Arts, Architecture, and Folk Art; Music; Theater, Film, and Dance; Scholarship; Museums, Archives, Libraries; Radio, Television; Sports

3. IN CANADA 1151
History of Ukrainian Settlement 1151
Number and Distribution
Church Life 1159
General Characteristics; The Ukrainian Catholic Church; The Ukrainian Greek Orthodox Church; Ukrainian Evangelical (Protestant) Church Communities
Social and Political Life 1168
Social and Political Organizations; Cultural-Educational, Women's, Youth, Veterans, and Professional Organizations; Ukrainian Canadian Committee; Political Life and Ties with the Native Land; Participation of Ukrainians in Social and Political Life of Canada
Cultural Life 1175
Schools and Education; Press and Publications; Ukrainian Literature in Canada; Architecture, Painting, and Sculpture; Music; Theater, Dance, Cinema; Scholarship;

Libraries, Archives, and Museums; Radio Broadcasting and Television; Sports

Economic Life 1188

General Characteristics; Industrial Occupations; Business and Enterprise; Professional Organizations

Assimilation of Ukrainians 1192

4. IN BRAZIL 1194

History of Ukrainian Settlement 1194

Number and Distribution of Ukrainians 1195

Religious Life 1197

Social and Political Life 1198

Schools 1201

Press and Publications 1202

Literature, Scholarship, Arts 1202

Economic Life 1203

5. IN ARGENTINA 1204

History of Ukrainian Settlement 1204

Number and Distribution of Ukrainians; Economic Status 1205

Religious Life 1207

Social and Political Life 1209

Schools and Education 1210

Press, Publications, Radio Programs 1211

Art and Literary Life 1211

Scholarship 1212

6. IN OTHER COUNTRIES OF LATIN AMERICA 1212

In Paraguay 1212

History and Territory of Settlement; Economic Life; Religious Life; Community Life

In Uruguay 1214

In Venezuela 1214

In Chile 1215

7. IN WESTERN EUROPE 1215

In Germany 1215

Prior to 1945; After 1945

In Austria 1218

Before 1914; 1914–18; 1938–50; After 1950

In France 1220

History of Settlement; Number and Distribution of Ukrainians; Religious Life; Social and Political Life; Educational and Cultural Life; Arts and Folklore

In Great Britain 1226

History of Settlement; Number, Demographic Character-

istics, and Distribution of Ukrainians; Religious Life; Community Life; Educational and Cultural Life; Economic Life
In Belgium 1230

8. IN CENTRAL AND EASTERN EUROPE 1233
In Poland 1233
Before 1914; 1920–40; During World War II; After 1944; Number and Distribution of Ukrainians in Poland; Church Life; Cultural Life; Press and Publications; Literature, Art, Scholarship
In Czechoslovakia 1239
History of Ukrainian Settlement; Statistics and Distribution; Political, Cultural, and Economic Development; Religious Life; Education and Schools; Adult Education; Literary and Artistic Life; Publishing and Broadcasting; Scholarship
In Yugoslavia 1248
Ukrainians in Bačka and Srem up to 1918; Ukrainians in Bosnia and Slovenia before 1918; Ukrainians in Yugoslavia in 1918–41; After 1945
In Rumania 1253
Prior to 1918; 1918–40; Ukrainians in the Present-Day Rumanian Socialist Republic

9. IN ASIA AND AUSTRALIA 1257
In China 1257
In Australia 1258
History of Ukrainian Settlement; Number and Distribution; Religious Life; Social and Political Life; Educational and Cultural Life; Economic Life; Assimilation

INDEX 1263

# INTRODUCTION

Like Volume I of *Ukraine: A Concise Encyclopaedia*, published in 1963 by the University of Toronto Press for the Ukrainian National Association, this second volume is also the result of a cooperative effort by many authors, editors, and their associates, as well as translators, reviewers, and consultants. As in the first volume, which contains eight sections (general information, physical geography and natural history, population, ethnography, language, history, culture, and literature), the information in the second volume is based on the material compiled in the *Entsyklopediia ukraïnoznavstva*, published in Ukrainian by the Shevchenko Scientific Society in 1949–52. The editorial work on the second volume was made considerably easier by the experience gained in preparing the first volume and by suggestions offered by those who reviewed it. Most of the chapters in Volume II were thoroughly checked, supplemented, and updated (essentially until 1969, in some cases until 1970). Some were completely revised and supplemented with new material on the state of research in various fields of Ukrainian studies and culture. Such chapters as National Economy, Health and Medical Services, and Ukrainians Abroad constitute original contributions by knowledgeable specialists in each of the respective fields. All chapters are richly illustrated and supplemented with maps, diagrams, and color and black-and-white plates (The Arts). Extensive bibliographies are appended to each chapter.

The second volume embraces the following fields: law and government; the churches; scholarship; schools and education; libraries, archives and museums; the press and book publishing; the arts; music and dance; theater and cinema; national economy; health, medical services, and physical culture; armed forces; and Ukrainians abroad—a total of thirteen chapters containing articles written by 87 authors.

Each chapter offers a general survey of its respective area, both in the past and in modern times, with emphasis on major developments and essential facts rather than interpretation. In some cases (e.g., the chapter on National Economy) illustrations have been chosen independently of the text to amplify the material. Six color maps of Ukraine (physical, administrative, two ethnographic, geological, and soils) constitute a valuable addition to the volume. As in the first volume, the alphabetical index of names, places, and organizations will assist the reader in finding the desired information.

## Explanatory Notes

### *I. Transliteration of Ukrainian and Russian*

*A.* In the text and the bibliographies a modified Library of Congress system of transliteration is followed but without diacritical marks and

ligatures. The principal departure from the accepted pattern is: the letters є, й, ю, я when initial letters of words are transliterated as *ye, y, yu, ya* (not *ie, i, iu, ia*).

*B.* In the articles on language and on some maps in Volume I a system of international transliteration commonly used in Slavic linguistics has been followed.

TABLE OF TRANSLITERATION

| | *A* | | *B* | |
|---|---|---|---|---|
| а | a | | a | |
| б | b | | b | |
| в | v | | v | |
| г | h | | h | |
| ґ | g | | g | |
| д | d | | d | |
| е | e | | e | |
| є | ye | initially, otherwise -ie (e.g., *yednist'*, but *obiednannia*) | je | |
| ж | zh | | ž | |
| з | z | | z | |
| и | y | | y | |
| й | y | initially, otherwise -i (e.g., *yoho*, but Stryi) | j | |
| і | i | | i | |
| ї | ï | | ji | |
| к | k | | k | |
| л | l | | l | |
| м | m | | m | |
| н | n | | n | |
| о | o | | o | |
| п | p | | p | |
| р | r | | r | |
| с | s | | s | |
| т | t | | t | |

| Russian | г | g |
|---|---|---|
| | е | e (je) |
| | и | i |
| | й | i (j) |
| | ы | y |
| | э | e |

## *II. Names of Persons*

As a rule Ukrainian and Russian family names are transliterated according to the Table of Transliteration. However, Ukrainian family names ending with -ський (and Russian names ending with -ский) are transliterated as -sky; those with the endings -цький/-цкий/ are transliterated as -tsky. Polish family names are given in their original form.

For general ease in reading, Ukrainian, Russian, and Polish given names in the main text have been anglicized, except where the spelling of a Slavic name has been popularly accepted in English usage (e.g., Ivan, not John) or where no English equivalent of a Slavic name exists (e.g., Yaroslav). However, in order to facilitate cross-references in the index the anglicized form of the name is followed there by the Ukrainian name in parentheses, spelled out according to the Table of Transliteration, e.g., Hrushevsky, Michael (Mykhailo), Doroshenko, Peter (Petro), Khvylovyi, Nicholas (Mykola).

## *III. Geographical Names*

In general geographical names in the territory of the Ukrainian Soviet Socialist Republic as well as of the adjacent lands predominantly inhabited by the Ukrainians, appear in the Ukrainian form according to the Table of Transliteration. Doubling of consonants in the endings is omitted, e.g., Podilia, Polisia, Zaporizhia.

Some well-known geographical names retain the form generally accepted in English usage, although they differ from the original form. Among these are the following:

Belorussia (on some maps Byelorussia or White Ruthenia)
Brest-Litovsk (on historical maps, Berestie; in the text, Berestia)
Bucharest (Rumanian: Bucuresti)
Bukovina (Ukrainian: Bukovyna)
Cracow (Polish: Krakow)
Crimea (Ukrainian: Krym)
Dnieper (Ukrainian: Dnipro)
Dniester (Ukrainian: Dnister)
Galicia (Ukrainian: Halychyna)
Kiev (Ukrainian: Kyïv)
Lithuania (on historical maps: Grand Duchy of Lithuania)
Moscow (Russian: Moskva)
Muscovy (on historical maps)
Odessa (Ukrainian: Odesa)
Podlachia (Ukrainian: Pidlashshia; Polish: Podlasie)
Prague (Czech: Praha)
Sea of Azov (Ukrainian: Oziv)
Vistula (Polish: Wisła)
Volhynia (Ukrainian: Volyn')
Warsaw (Polish: Warszawa)

Russian geographical names are used within the mixed Ukrainian-Russian territory (eastern Kuban region, the northern Chernihiv region—in the Russian SFSR). Double names, Ukrainian and Polish, are used within the formerly Ukrainian ethnic territory now under Poland: Buh (Bug), Kholm (Chełm). In cases of changes in geographical names, those in present use are given first, followed, in parentheses, by the older name (or names), e.g. Donetske (Stalino, Yuzivka). For technical reasons it has not been possible to maintain uniformity in the transliteration of geographical names on the maps.

In order to avoid possible confusion in the identification of geographical names, the different spellings of the same place will be given in the index—both those resulting from the use of two systems of transliteration and other non-Ukrainian forms of geographical names of major Ukrainian localities and areas, e.g., Chernihiv (Russian: Chernigov), Kharkiv (Kharkov); Lviv (Polish: Lwów; Russian: Lvov; German: Lemberg); Chernivtsi (Rumanian: Cernauti); Uzhhorod (Czech: Užhorod; Hungarian: Ungvar; Russian: Uzhgorod).

## *IV. A Note on Bibliographies*

Selected but comprehensive bibliographies appear at the ends of chapters or sections. Relevant sources (books, monographs, articles) in many languages are cited in the accepted bibliographical manner. Initials are used instead of the full given names of authors, which frequently appear in the transliteration of the language of the source (Grushevsky, M., when in Russian) or their otherwise common usages (Tschizevskij, Chyzhevsky as well as Čiževsky; Borschak as well as Borshchak).

## V. *List of Abbreviations*

This is a composite list of abbreviations used both in the text and in the bibliographies. The abbreviations are given in the original language with explanations in English translation. For additional abbreviations used in bibliographies, the original is given in parentheses.

UKRAINE: A CONCISE ENCYCLOPAEDIA

# I. The Law

The scope and treatment of the material in this chapter are largely determined by the fact that Ukraine has enjoyed full political independence only for certain periods in her history; at other times she was under foreign domination [Vol. I, pp. 581ff.]. Consequently, Ukrainian law, as the creation of a national legislature, rooted in national traditions, based on moral principles and a sense of justice, and motivated by the needs of the Ukrainian people, could develop only during these periods of independence. Such Ukrainian law, in the strict sense, will be treated most extensively; however, the editors deem it proper not to restrict this section solely to the treatment of this law.

The historical presentation of material is based on periods usually accepted in Ukrainian historiography. It starts with the Princely era, which is followed by the period of Lithuanian and Polish domination, the period of independence in the Hetman state, the period under Russian and Austrian domination prior to World War I, the time of independence after World War I, another period of alien domination between the two world wars, and the present status within the USSR.

Within each period, the material is basically divided into sources of law, government (state law), civil law, criminal law, and the judiciary, except, perhaps in the presentation of the present status under the Soviet rule, which requires broader treatment because of its peculiar social, political, and legal structure.

Because Ukraine's independence was only too often interrupted by periods of foreign domination, additional problems arise in the presentation of the material. Thus, for example, it is difficult to delineate the scope of the science of law in Ukraine, because Ukrainian legal writers were often compelled to publish their works in other languages, particularly in the language of the occupying power (predominantly Russian), if they wanted to engage in scholarly research, and many were compelled to teach in non-Ukrainian schools. On the other hand, foreign scholars did research and wrote about Ukrainian law (e.g. that of the Princely era) presenting it as Russian law.

Ukrainian legal terminology could not fully and freely develop under such conditions. Especially at this time, though formally legislation is being passed by the Ukrainian SSR, its terminology undergoes the process of imposed Russification, as in all other spheres of life, conducted by the Soviet regime [Vol. I, pp. 504ff.].

## 1. THE HISTORY OF JURISPRUDENCE

### UNTIL THE MIDDLE OF THE EIGHTEENTH CENTURY

With the consolidation of Kievan *Rus'* a period of marked development of customary and statutory law began. However, the idea of jurisprudence as a separate academic discipline was not as yet in existence. The first Slavic attempt to codify laws, the *Ruskaia Pravda* (*Rus'* Law), resulted from the practical need for a written and ordered code. Although the authors of *Ruskaia Pravda* remain unknown, it is evident from the text that

a group of jurists were active in the late eleventh and early twelfth centuries compiling the laws of the realm. The three editions of the Lithuanian Statute also testify to the activity of notable jurists and compilers.

During the period of the Kozak-Hetman state, the traditions of legal study and writing were carried on to a large extent by the scholars at the Kievan Mohyla Academy. Among the more important legal experts educated at the Academy were: Basil Stefanovych (1697–1773), who, during the rule of Hetman Daniel Apostol, worked on the Komisiia Knyh Pravnykh (Commission on Legal Registers) preparing a code of Ukrainian law entitled *Prava po kotorym suditsia malorossiiskii narod* (Laws by which the Little Russian People are Judged), and Theodore Chuikevych (d. 1759) who in 1750 produced a textbook on court procedures, *Sud i rozprava* (Court and Litigation). The Academy also produced a number of legal scholars who continued their studies at West European universities. Lacking sufficient opportunities in Ukraine, many jurists continued their work in St. Petersburg or Moscow, often attaining prominent positions among Russian legal scholars.

The principal figure among these legal experts was Theophan Prokopovych (1681–1736) who, summoned by Peter the Great, went to St. Petersburg and there produced a number of treatises dealing with the legal and political principles of absolute monarchy.

## FROM THE MID-EIGHTEENTH CENTURY TO 1917

### In Central and Eastern lands

Modern trends in the development of legal studies in the Russian empire during the latter half of the eighteenth century were first evident in the area of the philosophy of law. During the eighteenth century, ideas of the natural law philosophy penetrated Russia. The first proponents of this philosophy in the empire were foreign scholars, principally Germans. The first eastern European to produce an independent treatise on natural law on the Russian territory was Volodymyr Zolotnytsky, a Ukrainian born in 1791 in the Kiev region. His work was entitled *Sokrashchenie estestvennogo prava* (A Concise Analysis of Natural Law, 1764). The first professor of Moscow University born within the borders of the Russian empire (Nizhyn) was a Ukrainian, Semen Desnytsky, who obtained his doctorate in law at the University of Glasgow. Having been influenced by western European thought, he theorized on the necessity of limiting monarchical power and of establishing an independent judiciary.

Two Ukrainians from Transcarpathia, Basil Kukolnyk (1765–1821) and Michael Baluhiansky (Baludiansky, 1769–1847), gained prominence in Russia when, after completing studies at European universities, they were invited to work in St. Petersburg. Kukolnyk lectured in Roman and Russian civil law at the University and left several printed works on these subjects. Baluhiansky succeeded Michael Speransky (1772–1839) as head of the commission on the codification of laws.

Early in the nineteenth century, the centers for legal studies in Ukraine were the universities of Kharkiv, Kiev, and Odessa. In 1840 a department of jurisprudence was established at the Nizhyn Lycee. Studies in canon law were conducted at the Kiev Theological Academy. During this period, the study of philosophy was discontinued at the universities of the Russian empire, and in its place the so-called "encyclopedic study" of law was substituted. A Ukrainian jurist, Paul Degai (d. 1849), a graduate of the University of Kharkiv, produced the first text on the encyclopedic study of law to appear on Russian territory: *Posobie i pravila izucheniia rossiiskikh zakonov i materialy k entsiklopedii, metodologii i istorii rossiiskogo prava* (An Aid to and Rules of the Study of Russian Law and Materials on the Encyclopedia,

Methodology, and History of Russian Law, 1831). The principles of Hegelian thought were espoused by Nicholas Piliankevych (1819–56), an alumnus of, and later professor at, the University of Kiev where he lectured on the encyclopedic study of law. His principal published work is the *Istoriia filosofii prava* (History on the Philosophy of Law, 1849).

As part of the tsarist regime's Russification policy the principal academic positions in the law departments of the universities of Ukraine were given to Russian scholars. Nevertheless, many Ukrainian specialists contributed to the development of jurisprudence at that time, including Leonid Bilohryts-Kotliarevsky (1855–1908, criminal law), Alexis Huliaiev (1863–1923, civil law), Volodymyr Karpeka (civil and financial law), Alexander Fedotov-Chekhovsky (1806–92, civil and Roman law), and Peter Lashkariov (1833–99, canon law). Important contributions to the establishment of a department of law at the University of Kiev were made by the criminologist Sava Bohorodsky (1804–57). His work was continued by his pupil, Alexander Kistiakovsky (1833–85), who later became a noted authority on criminal law and litigation. His chief work was *Elementarnyi uchebnik obshchego ugolovnogo prava* (A Basic Handbook of General Criminal Law). Kistiakovsky was also a staunch advocate of instituting trial by jury in Russia. Among other Ukrainian legal scholars lecturing at the University of Kiev were Basil Nezabytovsky, a jurist holding Kantian views and a supporter of a strict separation of the rights and powers of the populace and the government, and Bohdan Kistiakovsky (son of Alexander), an authority on the philosophy of law and outstanding proponent of Kantian philosophy. In contrast to Russia, Kantian ideas were strongly rooted in Ukraine.

Notable figures among Ukrainian professors at the University of Kharkiv were: Dmytro Kachenovsky (1827–72), a specialist in international law, who in the course of a conference in London (1862) raised the question of codifying international law; Volodymyr Gordon (1871–1926), an expert in the matters of civil law and litigation and author of a large number of works in his field; Michael Chubynsky (1871–?), one of the finest criminologists in the Russian empire and author of *Ocherki ugolovnoi politiki* (Outlines of Criminal Policies, 1905) and *Kurs ugolovnoi politiki* (Textbook on Criminal Policies, 1912); Vsevolod Danevsky (1852–98), a specialist in civil law; and Andrew Stoianov (1830–1907), an expert on international law and the history of law.

Although law studies at the Nizhyn Lycee were more devoted to the practical application of law, the theoretical works of Pius Danevsky (1820–92) deserve mention; these include *O istochnikakh mestnykh zakonov nekotorykh gubernii i oblastei Rossii* (On the Sources of Local Laws of Several *Guberniyas* and Regions of Russia, 1857) and *Istoriia sozdaniia Gosudarstvennogo Sovieta v Rossii* (The History of the Creation of the Government Council in Russia, 1859).

Among leading jurists at the University of Odessa were Peter Kazansky (international and administrative law), L. O. Borovykovsky (1844–1905, civil law), and A. Pryhara (1836–74, constitutional law).

A number of legal scholars of Ukrainian descent lectured at other universities in the Russian empire. Among them were Nosenko, an expert on civil and commercial law, Isachenko and Semchenko, specialists in civil law, and V. Oleksandrenko, a professor of international law at the University of Warsaw.

Much research work was done on the laws of earlier periods in Ukrainian history. At first the venue of historians, a number of specialized legal works appeared in the latter half of the nineteenth century. These volumes concentrated on

the problems of Old-*Rus'*, Western-*Rus'*, Southwestern-*Rus'*, and "Little-Russian" law. Polish scholars (Tadeusz Czacki, Ignaciusz Daniłowicz and, in the twentieth century, Stanisław Kutrzeba) contributed to research in the law of these periods, treating it as regional law of the Polish republic. On the other hand, Russian scholars studied the laws of Kievan *Rus'* and of the Hetman state as part of imperial Russian law. This practice reflected the contemporary official historical method. Among the Russian legal researchers were Basil Sergeevich, Constantine Nevolin, Boris Chicherin, Michael Diakonov, Paul Silvansky, and Michael Vladimirsky-Budanov. An outstanding Ukrainian scholar, Theodore Leontovych (1833–1911), professor of *Rus'* law at the University of Odessa, produced several basic works in his field. Other valuable works on Old-*Rus'* and Lithuanian-Ruthenian law were contributed by Nicholas Ivanyshev, Nicholas Vasylenko, Basil Nezabytovsky, Yoanykii Malynovsky, Nicholas Maksymeiko, Ivan Bielaiev, Ivan Lappo, Michael Slabchenko, and Alexandra and Peter Yefymenko.

With the national revival in the nineteenth century, there was growing interest in the legal and governmental structures of the Hetman state. In the latter half of the century the Istoricheskoie Obshchestvo Nestora Letopistsa (Historical Society of Nestor the Chronicler) was established. The Society, at first independent and later (1874) attached to the University of Kiev, engaged in a thorough study of Ukrainian history, including legal questions. The Society sponsored lectures which were later printed in its publication *Chteniia* (Readings), as well as the periodicals *Kievskaia Starina* (Kievan Antiquity) and *Arkhiv Yugo-Zapadnoi Rossii* (Archives of Southwestern Russia). Separate monographs were also published by the Society, the most significant being A. Kistiakovsky's *Prava po kotorym suditsia malorossiiskii narod. Ocherk svedenii o svode zakonov, deistvovavshikh v Malorossii* (Laws by which the Little Russian People are Judged—a Survey of Information on the Code of Laws Operating in Little Russia), a work which survived to

FIGURE 1. NICHOLAS MAKSYMEIKO

FIGURE 2. STANYSLAV DNISTRIANSKY

encourage further research. Historical source material, such as the *General'ne sledstvie o maetnostiakh gadiachskogo polka* (General Investigation of the Hadiach *Polk* Estates, 1893) and similar documentations concerning the Pereiaslav (1896), Kiev (1892), Pryluky (1896), Nizhyn (1901), and Chernihiv (1908) *polks*, were also published.

**In Western Lands**

The centers of legal scholarship in Ukraine's western lands were the law departments at the Universities of Lviv (estab. 1784) and Chernivtsi (estab. 1875). Because of prevailing social and political conditions, a large majority of legal scholars at these institutions were non-Ukrainians, mostly Poles, many of them outstanding teachers. Among the few Ukrainian professors at the University of Lviv were Stanyslav Dnistriansky (1870–1935), Alexander Ohonovsky (1848–91, private law), and Peter Stebelsky (1857–1927, criminal law).

Attempts were made to organize centers of legal scholarship independent of the universities. Substantial efforts towards this end were made by S. Dnistriansky, outstanding legal theorist and expert on civil law (his principal work,

*Zahal'na nauka prava i polityky* [General Study of Law and Politics, 1923]). In an attempt to popularize legal studies, he edited the periodical *Chasopys' pravnycha i ekonomichna* (Journal of Law and Economics). Dnistriansky also served as editor for a series of legal monographs, entitled *Pravnycha Biblioteka* (Law Library, four volumes) published in Lviv. A society of lawyers was organized which published the quarterly *Pravnychyi Vistnyk* (Law Herald, 1910–13) containing articles of both practical and scholarly interest.

## FROM 1917 TO 1940

### In Central and Eastern Lands

The situation created by the war of liberation (1917–20) did not permit further development of legal scholarship, although the state universities in Kiev and Kamianets Podilsky, the Ukrainian Academy of Sciences, and the Ukrainian Society of Jurists were established during this period.

With the Communist takeover of Ukraine, the two principal centers of legal studies became, on the one hand, Ukraïns'ka Akademiia Nauk (Ukrainian Academy of Sciences), and on the other, the law departments of the universities.

The study of Ukrainian historical law developed primarily at the Academy of Sciences in Kiev. The center of this research work was the commission for the study of western Ruthenian and Ukrainian law, which was part of the Socio-Economic Department of the Academy. The commission, established in 1919, was headed by Nicholas Vasylenko (from 1920). Its work consisted mainly of the study of archival material in Kiev, Moscow, and other cities, and research on specific topics and questions. It published seven volumes of *Pratsi*, recording the results of the scholars' research. Aside from these publications, *Materiialy do istorii ukraïns'koho prava* (Materials on the History of Ukrainian Law) also appeared. Significantly, all these works were printed in the Ukrainian language.

FIGURE 3. NICHOLAS VASYLENKO

FIGURE 4. ROSTYSLAV LASHCHENKO

The unfinished work of R. Lashchenko, *Lektsiï po istoriï ukraïns'koho prava* (Lectures on the History of Ukrainian Law), which appeared in Prague in 1923, influenced the commission to create a separate branch of legal studies on the history of Ukrainian law. The plan of work and study of this section was worked out by I. Malynovsky, who based it on the following premises: that during the Princely period in *Rus'*, the government had its own code of laws; that the Lithuanian Statute fundamentally incorporated existing old *Rus'* law; that the Hetman state created its own code of laws; and that only after the destruction of the autonomous Hetman state did the period of independent Ukrainian lawmaking end. Legal studies at the Academy became centered around the work of three commissions: one, planning the program and schedule of work on a course in the history of law of the Ukrainian people; a second, the Commission for the Study of the Customary Law of Ukraine; and a third, the Commission on Legal Terminology. The following important works resulted from the activity of these commissions: Nicholas Vasylenko's *Zbirka materiialiv do istoriï Livoberezhnoï Ukraïny ta ukraïns'koho prava XVII–XVIII st.* (Collected Materials on the History of Left-Bank Ukraine and

Ukrainian Law in the Seventeenth and Eighteenth Centuries), *Yak skasovano Lytovs'ki Statuty* (How the Lithuanian Statutes were Abolished), and *Pochatky rozroblennia Zakhidno-Rus'koho prava* (Beginnings of the Development of west-*Rus'* Law); N. Maksymeiko's *Pro smerdiv Rus'koï Pravdy* (On *Smerds* in the *Rus'* Law); *Hromads'kyi (kopnyi) sud na Ukraïni* (The Community (*kopnyi*) Court in Ukraine, two vols.) by I. Cherkavsky; and L. Okinshevych's *Tsentral'ni ustanovy Ukraïny-Het'manshchyny* (Central Institutions of Hetman-Ukraine: Vol. 1, the Central Council; Vol. 2, the Council of Officers). Source materials, such as the *General'ne slidstvo pro maietnosti Starodubs'koho polku* (General Investigation of the Starodub *Polk* Estates, 1929) and a similar study on the Lubny *polk* (1931), were published. When the repression of Ukrainian cultural life began in early 1930, the activity of these commissions and scholars came to an end.

Legal studies at Soviet Ukraine's institutions of higher learning other than the Ukrainian Academy of Sciences in Kiev showed strong Marxist influences. Jurisprudence as taught in university law departments and similar departments at the institutes of national economy concentrated primarily on the practical application of law to further the needs of Soviet economy.

In the 1920's two contrasting trends in jurisprudence became evident, conservative and revolutionary. The conservative school was mostly represented by pre-Revolutionary jurists, who approached the study of law according to the traditional, dogmatic methods, and regarded the law as the determinator of the rules governing social and economic life. These scholars produced works dealing principally with constitutional, administrative, criminal, civil, and family law (Y. Paliienko, O. Yevtykhiiev, V. Kobalevsky, H. Volkov, S. Landkof, O. Malytsky). Prominent among these jurists was a Transcarpathian, V. Hrabar, an outstanding expert on international law and a prolific author (164 works).

In contrast to the conservatives, the revolutionary scholars attempted to arrive at new interpretations of law which would correspond to the idea of "socialist reconstruction." Towards the end of the 1920's, this tendency led to the rejection of every law as "bourgeois" (legal nihilism). As a result of these trends, law departments at the universities of Ukraine were closed. In the mid-1930's, however, the ideas of "socialist law" came to the fore, with A. Vyshinsky as chief spokesman. "Socialist law" imbued with new meaning the traditional concepts ("legal person," "legal capacity," "ownership," "cooperatives," etc.). New branches of law, such as *kolkhoz* (collective farm) law, were also created.

FIGURE 5. VOLODYMYR HRABAR

FIGURE 6. ANDREW YAKOVLIV

Kharkiv, then the capital of the Ukrainian SSR, became the principal center of legal research and discussion. There, the Ukrainian Juridical Society together with the People's Commissariat of Justice of the Ukrainian SSR published, from 1922, the Russian-language *Vestnik sovietskoi iustitsii na Ukraine* (Herald of Soviet Justice in Ukraine). In 1929 the Herald began to be printed in Ukrainian, and its title was changed to *Visnyk radians'koï iustytsiï* (Herald of Soviet Justice). In the period 1926–31, the journal *Chervone Pravo* (Red Law) also appeared in Kharkiv. The two publica-

tions served as a base for the creation of a new journal, *Revoliutsiine Pravo* (Revolutionary Law) in 1931. This periodical, published until 1941, appeared semi-monthly, first in Kharkiv and later in Kiev.

The characteristic feature of the time was the control of law research by Party theorists at universities and scholarly institutes.

**In Western Ukraine and Abroad**

The post–World War I center of law studies in Galicia was the legal commission of the Shevchenko Scientific Society, headed by Volodymyr Verhanovsky (1875–1946). A number of articles dealing with problems of jurisprudence appeared in the organ of publication of the Association of Ukrainian Lawyers and the Society of Ukrainian Jurists, the journal *Zhyttia i Pravo* (Life and Law, 1928–39), edited by Constantine Levytsky. Among the outstanding jurists of the time were Stephen Baran, Volodymyr Starosolsky, Lev Hankevych, George Paneiko, and Stephen Shukhevych. Important works on the history of law appearing at that time were *Pro pravne stanovyshche tserkvy v kozats'kii derzhavi* (On the Legal Status of the Church in the Kozak-Hetman State, 1927) by Nicholas Chubaty, and Ivan Krypiakevych's *Studii nad derzhavoiu Bohdana Khmel'nyts'koho* (Studies on the Ukrainian State under Bohdan Khmelnytsky, 1926).

Ukrainian jurists who were forced by circumstances to emigrate continued their scholarly and pedagogical activity principally at the law department of the Ukrainian Free University in Prague. Among these were such prominent scholars as Otto Eichelman (constitutional and international law), Michael Lozynsky (international law), and V. Starosolsky (constitutional law). Works on the history of Ukrainian law were written by R. Lashchenko, Andrew Yakovliv (*Do istorii kodyfikatsii ukrains'koho prava XVIII st.* [On the History of Codification of the Eighteenth Century Ukrainian Law, Prague, 1937]), and Alexander Lototsky (*Avtokefaliia* [The Autocephaly, two vols., 1938]).

## AFTER 1945

**In the Ukrainian SSR**

With the growing appreciation of law in the socialist political and economic systems, legal studies began developing anew after World War II. Socialist legal doctrines were imbued with more concrete meaning—a process to which many Ukrainian jurists (among them legal theorist Peter Nedbailo) contributed significantly. Among others who gained prominence during this time were: Volodymyr Koretsky, outstanding expert and author of more than fifty works on international law; Vadym Diadychenko, an authority on the history of Ukrainian law; as well as Peter Mykhailenko, Margaret Orydoroha, Eugenia Melnyk, Borys Babii, Ivan Pakhomov, Basil Yanchuk, and Anatole Taranov. Many non-Ukrainian scholars, for the most part Russians, have been working at the universities of Ukraine. In like manner, a number of Ukrainian jurists work at Soviet universities outside of the Ukrainian SSR. Among them is Serhii Bratus, who for almost thirty years has held important positions in the scholarly institutions of Moscow. He is considered a co-author of the existing Soviet civil law.

After World War II, the only center of activity in the field of jurisprudence, other than pedagogical activity, was the section on government and law of the Academy of Sciences of the Ukrainian SSR in Kiev. It was not until 1958 that the Ukrainian-language journal *Radians'ke Pravo* (Soviet Law) began to appear (at first semi-monthly, from 1965, monthly). This publication serves as the official organ of the Supreme Court of the Ukrainian SSR, the Public Prose-

cutors of the Ukrainian SSR, the juridical commission of the Council of Ministers of the Ukrainian SSR, and the section on government and law of the Academy of Sciences. The journal avoids theoretical questions, concentrating principally on practical problems. Jurisprudence continues to adhere strictly to the official Communist Party line, and serves the needs of the Soviet socialist economic order.

### Abroad

The main center of law studies in the emigration is the department of law and socio-economic studies at the Ukrainian Free University in Munich where textbooks on many branches of law are produced in manuscript form. Other institutions engaged to some degree in legal studies include the Shevchenko Scientific Society, the Ukrainian Free Academy of Arts and Sciences, and the Ukrainian Lawyers Association in the United States. The principal topics of study among the émigré jurists are: history of old Ukrainian law (Basil Hryshko, Leo Okinshevych, Jaroslaw Padoch, Andrew Yakovliv); history of Ukrainian constitutional law (Matthew Stachiw, Sokrat Ivanytsky, Volodymyr Lysyi); international law (Bohdan Halaichuk, Vasyl Markus, Roman Yakemchuk, George Fedynsky); and critical analysis of Soviet law (Alexander Yurchenko, Jurij Starosolsky, Andrew Bilinsky). Research in canon law is conducted by the Rev. Meletius Wojnar, OSBM.

*J. Starosolsky, A. Bilinsky*

# 2. THE PRINCELY ERA

The Princely era [Vol. I, pp. 581ff.], which lasted for half a millennium (eighth through the thirteenth centuries) is the earliest period of Ukraine which offers historical proof of the existence of a legal order. The basic areas of law developed during this period (constitutional, civil, and criminal law and procedures) from primitive forms to highly developed systems which were acknowledged in the history of medieval Europe.

## SOURCES OF LAW

The monuments of Ukrainian law during the Princely era are divided into the following groups as to form: symbolic, oral and manuscript. The principles of

popular customary law have survived in the form of oral tradition (legends, antiquities, rules of conduct). Surviving manuscripts contain records of legislative and judicial acts of state and judicial authorities.

As to content, the monuments of Ukrainian law are divided into official and unofficial compendia of laws, state acts, and judicial decisions of all kinds in a number of collections, administrative acts of state and local authorities, and so on. Records of statutory and international agreements were also preserved in manuscript form.

**Customary Law**

Customary law was the only source of legal norms during the pre-state period, and it is also the major source of law during the early period of statehood of the Ukrainian people.

FIGURE 7. INITIAL PAGE OF *Ruskaia Pravda* (THIRTEENTH-CENTURY MANUSCRIPT)

The earliest and most important monument of the old norms of customary law is *Pravda Ruskaia*, rendered in the scientifically acceptable form of *Ruskaia Pravda* (*Rus'* Law). The original of *Rus'* Law did not survive. There are some 300 copies of the *Rus'* Law, the earliest being the Synodal of the thirteenth century, the Pushkin of the fourteenth century, the Academic of the fifteenth century, the Trinity, and Karamzin. The copies are divided as to size into short (approximately 40 sections), medium (up to 60 sections), and broad (100 to 125 sections). Researchers divide the copies into three basic editions as to content: brief, broad, and medium.

The brief edition of the *Rus'* Law with 43 sections is the earliest. It consists of two parts: the first (sections 1 to 17) originated in the eleventh century; the second contains the remaining sections and was compiled during the reign of the sons of Yaroslav the Wise. The material of the first part is organized in an orderly fashion, and section 1 contains the earliest norm of the prehistoric period dealing with the rules of blood vengeance. The later, second part, supplementing the first, is unorganized, being merely set in a chronological order. It contains later norms of customary criminal law and procedure and the Princely decrees of Yaroslav and his sons. In formulating and organizing the collected material the author displayed great legal erudition. He expounds the norms of customary law and decrees in a generalized manner, foregoing casuistry.

The broad edition is also composed of two parts: the first of the early and the second of the late twelfth century. Like the brief edition, the first part is systematic according to subject matter and contains the entire brief edition as well as the Princely decrees of Yaroslav's sons. The second part is a supplement of the first, organized in a chronological order.

The medium edition originating in the fourteenth century is an abbreviation of the broad edition and has no significance of its own. It was compiled for use by ecclesiastical courts.

The *Rus'* Law is the most complete and most important monument of customary law of the Ukrainian people. In addition to customary law it contains

Princely decrees. The latter, however, are by their content, form, and mode of expression more akin to customary law than to written codes, because they were promulgated according to need, in supplement, amendment, or development of customary law. It can be assumed that these decrees first appeared in oral form. Hence, the *Rus'* Law can be considered a general compendium of customary law.

The norms compiled in *Rus'* Law indicate that it had been collected for the practical purpose of giving the judges an opportunity to render just decisions on the basis of binding laws, and to give the parties to litigation equal opportunity to present their cases in court. The large number of copies of the *Rus'* Law indicates that it was used in the courts and not merely as a written record of Ukrainian law handed down to future generations. The manner of composition of the *Rus'* Law in its various editions and the supplementary amendments of the original text indicate clearly that when the brief edition was used in practice, it was found to contain gaps and an insufficiency of rules which were gradually supplemented in the later editions in the course of perhaps two to three centuries as in the case of the Lithuanian Statute of 1529.

**Legislative Records**

Monuments containing rules of law occupy a secondary position in the history of sources of the early period. The legislative activities of the state authorities were insignificant and dominated by customary law.

"PRINCELY DECREES" AND "INSTRUCTIONS" were the product of legislative activities of princes within the state. The purpose of the Princely decrees was to supplement or amend customary law. Most of these decrees found their way into the *Rus'* Law. The "instructions" were decisions of princes pertaining to finances, such as levies and taxes accruing to princes, and judicial fees.

PRINCELY AGREEMENTS (or treaties) were of greater legal significance. Most were in written form and belong to the group of earliest legal monuments. The surviving texts can be divided into three groups: international treaties, pacts between princes, and agreements between princes and their people.

Four texts of treaties between *Rus'* and Byzantium have survived. The first is the text of an agreement of Prince Oleh of Kiev, dated 907 A.D. This oral agreement appears to be a preamble to a written treaty concluded by the same prince in 911 [Vol. I, p. 585a]. It was a supplement of the first, and contained provisions of public and private international law. The third agreement, also in writing, was concluded by Prince Ihor and the Byzantine Emperor Constantine VII Porphyrogenitus in 945. The treaty of 911 had been broken by an unsuccessful attack of *Rus'* on Byzantium and hence the new treaty was unfavorable to *Rus'*. The fourth treaty was concluded between Prince Sviatoslav and Emperor John I Tzimisces. This was merely an armistice agreement and contained no other provision. The treaties of 911 and 945 were in Greek and Slavonic and contained provisions of Byzantine and Ukrainian public and private law.

CHURCH DECREES were legislative acts of princes determining the legal position of the church within the state, organizing ecclesiastical courts, and providing for the support of the church (tithing). Church decrees whose texts have been preserved were issued by Prince Volodymyr the Great and Yaroslav the Wise in copies of the thirteenth and fourteenth centuries, respectively.

**Reception of Byzantine Law**

As a result of the reception of a number of provisions of Byzantine law in Ukraine, the following compilations of Byzantine law became binding upon ecclesiastical courts and exerted an influence on Ukrainian law: *Nomocanon*, a collection of ecclesiastical law, including the teachings of the Apostles and

FIGURE 8. YAROSLAV I, THE WISE (THIRTEENTH-CENTURY FRESCO)

resolutions of ecumenical synods, as well as numerous decrees of emperors in ecclesiastical matters. Collections of lay Byzantine law reached Ukraine together with the *Nomocanon*, for example, *Ecloga* (Judicial Law for the People), *Prochiron*, and *Knyhy zakonnyia* (Books of Laws), the latter a compilation of Byzantine laws collected in *Rus'*. The reception of Byzantine law and with it of Roman law enriched Ukrainian law with new legal concepts, terms, and provisions.

## STATE LAW

### General Characteristics

The report of a chronicler on ninth- and tenth-century *Rus'*-Ukraine leads to the assumption that by this time the tribal states of the Ukrainian territories had reached a degree of unification which subsequently led to the formation of the Ukrainian nation [Vol. I, p. 578].

There is little information about the organization of tribal states. It is certain, however, that they were headed by chieftains of local tribal origin. The social stratification showed a distinct class of elders (old people, city elders) from which came the class of warriors and elite which aided the prince in governing his domain.

As in the history of other nations, the role of the former tribal states in Ukraine was taken over by territorial organizations composed of different tribes. The tenth and eleventh centuries represent a period of new emerging states which were called *zemlias* (lands). These were the lands of Kiev, Chernihiv, Pereiaslav, Volhynia, Halych, and Turiv-Pynsk. The very names indicate that the principal city of each land was of paramount importance; hence the land usually derived its name from such a city. These lands did not become completely submerged in the broader state organizations of the Varangian princes of the Rurik dynasty, particularly Volodymyr the Great and Yaroslav the Wise. Later, with the process of fragmentation of the state organization, which corresponded to the feudal fragmentation of authority in medieval Europe, the land became the basic component of the unified state. Even later (twelfth and thirteenth centuries), when the process of emergence of small vassal states became far more prevalent, traces of the old division into land-states still remained discernible.

### State Territory

The state of Volodymyr the Great included vast territories inhabited by Ukrainian tribes, as well as those which gave rise to the Russian and Belorussian nations. During the reign of Yaroslav the Wise, the Kievan Realm lost the main part of its Belorussian lands (Polotsk).

Subsequently, in connection with the fragmentation of the national territory among the numerous heirs of the Rurik

dynasty, the Ukrainian state organization became in many respects similar to the feudal structure of Europe of that period. Whereas the territory of *Rus'*-Ukraine remained basically unchanged, there were fundamental changes within its structure. The monolithic state of Volodymyr and Yaroslav was split into a number of lesser states which became increasingly independent of each other and of the Grand Prince of Kiev, until in the thirteenth century the authority of the latter became merely nominal, although the tradition never died out that this was a single nation. The Kievan prince became much less powerful than many European kings of the time. Under these circumstances the Ukrainian-*Rus'* state of the twelfth and thirteenth centuries became a conglomerate of states, where each smaller unit (*zemlia, volost'*) was in the nature of a state, even maintaining territorial integrity. These were conditions of feudal dependence of the smaller princes on the stronger rulers, a pyramid headed by the nominal ruler of *Rus'*-Ukraine—the Grand Prince of Kiev.

**Population**

The population of *Rus'*-Ukraine [Vol. I, pp. 612–15] was divided into separate groups which differed from each other not only in social and economic position but also in legal status. The groups were numerous and varied and the legal differences among them were not clearly defined. These groups formed the core of the later estates.

In the society of *Rus'*-Ukraine the difference between the ruler (prince) and the citizen of the upper class (boyar) was not very marked. In some respects the princes were just like the upper classes of society, and on the other hand, the boyars had certain privileges of princes, such as the right to maintain their own troops.

In the earlier period (tenth and first half of the eleventh centuries) there was a division of the boyars into landed boyars (of the older, local origin), and the *druzhyna* (princely retinue) consisting of warriors and knights born elsewhere, mostly Varangian in origin. The differences between them subsequently disappeared, but there appeared groups widely different in social position. The first were the boyars, the princes' men, *ohnyshchany*, comprising the highest group. Then came the *otroks*, *hrudi*, *dits'ki*, who belonged to the lower groups, corresponding to the so-called ministerials of western Europe. During the early period, the boyars of *Rus'*-Ukraine were mostly knights dedicated to military service. In time, however, they acquired land and turned into landowners. This was particularly evident in the principality of Halych in the thirteenth century. The *Rus'* Law noted a number of legal privileges of the boyars, particularly in the law of inheritance.

THE URBAN POPULATION of *Rus'*-Ukraine, called *hrazhdany* (townspeople, burghers), also consisted of numerous and unequal groups. The highest ranking were *hosti* (guests) and *kuptsi* (merchants engaged in foreign trade). The next rank was *chorni liudy* (the black people). The cities of the time did not have any local government and the urban population did not constitute a closed estate group.

THE RURAL POPULATION consisted of two groups. The first were the *smerds*, actually free people who were called to join military expeditions. The first indications of the future limitation of freedom of this group were manifested on the estates of the princes, as the *smerds* became legally inferior in a number of matters, particularly inheritances. The *zakupy* (bonded persons) were a separate rural group. They were people who voluntarily assumed bondage under a landlord until they would work off their indebtedness. During the period of bondage they were deprived of most legal rights, being equal in status to slaves. The group of slaves or serfs was at the bottom of the social ladder. They had no rights of any kind. They were not sub-

jects of the law, but merely its objects. The status of slave was the result of birth, capture in war, punishment for crime, indebtedness beyond the hope of redemption, voluntary sale into slavery (children sold by parents), and marriage to an alien slave.

**The State Structure**

The state structure of *Rus'*-Ukraine in this period was a form of monarchy, with the prince as the ruler. With feudal fragmentation, each subdivision of territory was headed by a ruling prince (see above) who recognized the supremacy of a higher prince and through the latter ultimately the Grand Prince of Kiev.

The order of inheritance of princely thrones was governed by the principle of partial seniority, according to which all members of the Rurik dynasty had the right to inherit the major princely thrones, depending on their respective position within the dynasty. Under this principle the death of a prince resulted in a shift of all minor and junior princes from one fief to another, depending on individual seniority, and the importance of the fief. Other principles tended to offset this method of inheritance: restriction of a throne to members of a family of princes which was closely associated with a particular land (the principle of *otchyna* [fatherland]), election of a prince by a town meeting of the elders of the capital city (this method repeatedly violated the principle of seniority), and the capture of a throne by force of arms.

The privileges of a prince as ruler of a land or fief consisted of the right of legislation (princely decrees and instructions), judicial functions, appointment of the local administration and its control, and foreign policy. The prince was the commander-in-chief of the armed forces of a land or principality. However, the institution of clear separation of powers was unknown, and as a result, different branches of government competed with each other. There were cases of duplication, the council of boyars and sometimes the town meeting having rights almost identical with those of the prince. In different parts of the state of the Rurik dynasty there was a preponderance of one or another branch of government. Whereas the prince dominated as monarch in the Russian lands, in the lands of Novgorod and Pskov as well as in Belorussia the town meeting was more powerful. In Ukraine the council of boyars played the most important role as the seat of power. The position of the council of boyars was particularly strong in the principality of Galicia (Halych), whereas in Chernihiv the other centers of power were predominant (inheritance by seniority was most widely practiced in Chernihiv, being rather the exception in other principalities).

The *viche* (town meeting) was an organ of direct government by the people. It functioned as an assembly of the citizens of the capital city, and considered matters and passed resolutions pertaining to the entire principality. In Ukraine, meetings convened at irregular intervals, whereas in Novgorod and Pskov they met regularly. Participation was by full-fledged citizens of the capital city, as well as citizens of lesser cities if they were present in the capital. The meeting convened in the palace of the prince, in the marketplace, or in a churchyard. The prince usually presided at the meeting, but sometimes this function was performed by a bishop or *tysiats'kyi*. There were no regular agendas for consideration by a *viche*. Voting was unanimous in principle, with the majority trying to sway the minority to its point of view. The scope of competences of a meeting usually coincided with that of a prince or council of boyars. Mention should be made of many instances of the election of a prince by a meeting, thus making him an elective monarch. A meeting would also conclude a pact (so-called *riad*) with the prince, which became the nucleus of a constitutional system of government.

THE COUNCIL OF BOYARS competed with other organs of central government. It was a meeting of boyars who, together with the prince, decided on state matters of the land or principality. The council of boyars was an institution which under normal historical development could have evolved into an organ of representative parliamentary government. At that time, neither Ukraine nor any other state had a representative type of government.

The question has long been debated whether the council of boyars was a legal institution, or simply "the prince talking things over with his boyars," without any obligation on his part (the Russian legal historian, V. Sergeevich). Whereas in Russian Suzdal and Vladimir the council of boyars was undoubtedly only an advisory body, the case was entirely different in Ukraine, where the prince held regular meetings with his council of boyars. There is a great deal of evidence showing that the council's advice was binding upon the prince. The council of boyars, particularly in the principality of Galicia, often compelled the prince to change his plans and decisions.

SNEMY (CONVENTIONS OF PRINCES) were bodies meeting for special purposes in matters concerning the entire union of princely states. They were attended by princes accompanied by their chief advisers (members of the council of boyars) to consider matters pertaining to all principalities which recognized the supremacy of the Grand Prince of Kiev. Since the real power of the latter was relatively insignificant, these conventions reflected the weakness of the ties binding the union of states. They did not meet regularly or often, and they did not develop any clear form of organization. In most European countries, kings' councils developed into representative parliamentary institutions. This did not take place in Ukraine because of the decline of the Ukrainian state organization in the thirteenth and fourteenth centuries.

Local administration was of a dual nature. On the one hand, there were remnants of the old local government going back to the pre-Rurik period: the decimal system of representatives of 10 (*desiats'kyi*), 100 (*sots'kyi*), and 1,000 (*tysiats'kyi*) households. They gradually came under the rule of princes who began to appoint persons to these offices. Simultaneously, the princes developed a new system of administrative offices entirely subservient to themselves, *posadnyks* and *tyvuns*. Whenever they were in charge of territorial subdivisions, the authority of these offices corresponded to that of princes. However, some *tyvuns* had only limited jurisdiction (as court bailiffs, tax collectors, and highway supervisors).

The social and legal organization of the principality of Galicia [Vol. I, p. 604] produced a new governmental structure, similar to that of western Europe, particularly as regards the relationship between the monarch and his nobles. This was caused by the fact that the princely dynasty had not branched out so widely as in the eastern territories, where the impoverished princes (as in Chernihiv) were themselves reduced to the status of nobles. The attempts of the Galician princes to ascend to the status of kings (equal in rank to the neighboring rulers of Poland and Hungary) can also be attributed to western European influences.

*L. Okinshevych*

## CIVIL LAW

The rules of civil law effective in Ukraine during the first period of statehood were not codified into a separate collection of legal records, but were dispersed among the rules of constitutional, administrative, and even ecclesiastical law (the same situation prevailed in other nations during this period).

### The Institution of Property and Possession

The rules of civil law of this period

do not clearly define either the subject or the object of the law of property within the modern meaning of the term. The dominion of a person over a "thing" was realized only over chattels by the fact of possession. The concept of the right of property disconnected with actual possession came to be realized by the people of Kievan *Rus'*-Ukraine only gradually. The *Rus'* Law contained some indications on property rights of the princes, boyars, and churches such as bees' nests, metes of lands, obliteration of brands on bees' nests, purchase and sale, real and chattel mortgages. Other monuments mention lands of peasants (*smerds*) and their horses. Subjects of the law of property or possession included physical persons and legal persons (bishoprics, monasteries, clans, and communities), combining both individual and community law of property. However, the term "property" must always be used in relation to the feudal order of the time, which had its own rules separating the different elements of property law within society, and particularly the right to alienate real property. There are many problems as regards the juridical nature of land holdings of the peasants.

Provisions of the *Rus'* Law indicate that possession of bees' nests gave the owner also certain rights to lands which were called "honey lands." Metes were also designated as "honey land metes." The home and courtyard were also designated as the property of the possessor. As regards chattels, which were defined by the terms arms, clothes, ornaments, cattle, grain, manufactured goods (hides and pelts, honey, wax), they were all the object of private property. Even the slaves, serfs, and bonded workers were considered to be the property of the master. The children of slaves, just as the offspring of cattle, were the property of the owner. Anything acquired by a slave belonged to the master, except what he had on his person.

The provisions of the *Rus'* Law on bees' nests, beaver dams, and *perevisy* are indicative of the primitive methods of acquiring ownership: all creatures not under the domination of any person became the property of the person capturing them and exercising dominion over them. The *Rus'* Law does not contain any rules establishing the acquisition of property rights by prescription. The possessor of a chattel could use it and dispose of it, and this right was guaranteed by law, the owner having the right to pursue his property in trover.

**Obligations**

According to the *Rus'* Law, civil obligations could arise only between persons unrestricted in their legal capacity, either as a result of a contract or tort connected with material damage. Contracts mentioned are purchase and sale, loan, lease and mortgage.

Both real and personal property could be alienated by purchase and sale. The *Rus'* Law provided that not only money could be loaned, but also grain, cattle, honey, wax, furs, and so on. Loans could be made subject to payment of interest or free of interest. If the value of a loan was in excess of three pieces of silver, the loan agreement had to be concluded in the presence of witnesses. Interest could be charged monthly or annually. Loan agreements among merchants did not have to be witnessed. The debtor had to make any statement in court under oath. If a debtor was unable to pay his debts through his own fault, he could be sold into bondage by the creditor. The debtor was usually sold in the market place and the money obtained was divided among creditors in the following order: foreign creditors first, then the prince, and finally local creditors.

The *Rus'* Law specifically mentions leases of personal services which could lead to slavery, unless the contract specified that slavery was excluded in the concrete instance. Practice also recognized leases of specific services, such as man and horse or man, horse, and plow.

Lands were also subject to leases. Mortgage is an institution known to all primitive codes of laws which evolved from chattel mortgages.

**Family Law**

**Marriage law.** The basic institution of family law is marriage, which in the pre-Christian period was performed by stealing the bride, purchase, or home-bringing. The essence of the latter form of marriage consisted in bringing the bride to the house of the groom, where he paid for her, and she brought along a dowry. The institution of dowry was known during the Christian period of *Rus'* and survived much longer. The *Rus'* Law provided that marriage contracts should be a free expression of the will of the parties, hence the age of the parties was an important part of the contract. There was a minimum age requirement for the groom and a different one for the bride.

Although the Church required the introduction of monogamy, in practice there were many instances of polygamy, even during the reign of Volodymyr and Yaroslav. Byzantine practice considered marriage a regular contract which could be either in writing or symbolic, but the Church regarded it a sacrament. The efforts of the Church remained largely ignored for a long time. There were many reasons for voiding a marriage during this period: communicable disease, sterility, prolonged absence of one of the spouses, taking monastic vows, incompatibility, and adultery.

Divorce took the form of a decree by an ecclesiastical or lay court, or a bill of divorcement served upon the wife by the husband.

The *Rus'* Law does not contain any special provisions on family law, except the first section, which mentions parents as being bound by the rules of blood vengeance. It makes a distinction between legitimate and illegitimate children, defining the latter to be the offspring of a slave-concubine. After the death of the husband, the wife assumed full control of the family estate if the children were minors, or, if any children were of age, she would be treated as an equal of the sons, or receive a part of the estate according to the will of the husband or by operation of the law. If a criminal was convicted to suffer "seizure and banishment as an outlaw," the wife and children had to share his fate.

**Tutelage.** The institution of tutelage was fairly clearly defined in the *Rus'* Law. In the absence of a father and mother, minor children would remain under the tutelage of the closest relative until they reached majority. A widowed mother, as well as a step-father, were charged with the duties of guardians. The guardians were bound by law to accept the property of the minors and to restore it fully when they reached the legal age. Guardians were either appointed by the authorities, or by the father in his lifetime.

**Inheritance law.** According to the *Rus'* Law the estate of a deceased person was called *zadnytsia* (remainder) or *statok* (estate). Some scholars believe that only real property comprised the estate, and that chattels and claims were excluded. Rights and obligations were excluded, according to Vladimirsky-Budanov and Hrushevsky. Since there are no clear indications in the *Rus'* Law that land could be included in an estate, some researchers believe that only chattels could be included. Inasmuch as the *Rus'* Law included the house and yard in the estate, one may assume that land could also be included.

Only family members were entitled to the estate, both by testament and by operation of the law. In the absence of next of kin, the estate would devolve upon the prince. The testator was believed to express not so much his own will as that of the family in dividing his estate among the next of kin. Testaments were usually in oral form, written wills being rare. A father and mother had the right to will property in favor of children, and the husband could leave a "separate part" in favor of his widow.

In addition to children, the Church could also be mentioned in a will, for the "repose of the soul" of the deceased. The order of inheritance was different for boyars and *smerds*. The estate of a *smerd* was divided only among his sons, unmarried daughters being entitled only to a dowry. In the absence of sons, the estate of a *smerd* went to the prince. The estate of a boyar went to his daughters if there were no sons, and not to the prince. There was a widow's share of the estate if she was living with the children. Illegitimate children (offspring of slaves) were not entitled to any inheritance. The mother had the right to divide her part among the children or leave it to one son, or even a daughter. Children of the blood inherited equally, children of different fathers, from the mother. Disputes about dividing estates were within the competence of ecclesiastical courts, although there were exceptions to the rule when it came to dividing the estate of a prince among his children.

*V. Hryshko*

## CRIMINAL LAW

Ukrainian criminal law in this historical era underwent constant changes, with dominating periods of vengeance, ransom, compositions, and state levies. The first two periods were periods of private criminal law, when trial and judgment were placed in the hands of the aggrieved party. Only a free person came under the jurisdiction of criminal law.

### Crime

A crime was called an *obyda* (insult), indicating the ancient origin, when a crime was considered a private damage inflicted upon a person or property. Gradually, however, it came to be considered a breach of the peace, and hence the perpetrator, in addition to being liable to the aggrieved person, was also subject to punishment by the state. Crimes against persons were divided into intentional and unintentional. Intentional crimes differentiated between murder with malice and murder without malice. Crimes against the body were divided into maiming crimes and bodily injury. At one time maiming was treated identically with murder. Subsequently, only permanent crippling was punished equally with murder. Crimes against honor and liberty were very severely punished: for example, for hitting a man with a sheathed sword the fine was 12 pieces of silver, but for hitting a man with a bared sword it was only 3 pieces of silver. Crimes against property included larceny, robbery, keeping found objects or keeping a fugitive slave, illegal use of the property of another, and malicious destruction of the property of another, including violation of boundaries, arson, and fraud. The highest punishments were meted out for arson and professional larceny (horse-thieves), the penalty being "seizure and banishment as an outlaw."

Crimes against the public interest were divided into crimes against the interests of the community and crimes against the state. Among the former, crimes against religion were dealt with according to provisions of ecclesiastical law. The most prevalent were crimes of witchcraft, *volkhvuvannia* (sorcery), and robbing of graves and objects of cult. Among crimes against the family, we must mention general crimes, such as murder, theft, bigamy, incest, adultery, and abandonment. Crimes against morals included rape and sodomy. Under existing circumstances there were hardly any crimes against the state: neither lese majesty, nor high treason. However, there was a defined concept of treason of the people (conspiring with the enemy).

### Punishment

Punishment was called penalty and vengeance. The earliest punishment was vengeance, which was subsequently replaced by ransom and finally by public fines.

Vengeance did not merely mean repayment for the damage, because even in the earliest times it was an institution

for preserving the peace, which was considered to have been breached by commission of a crime. In historical times vengeance was limited and controlled by the state, and by the middle of the eleventh century, it was entirely abolished.

Cash ransom was for a long time in existence along with vengeance and its application was at the election of the aggrieved party. The amount of ransom was governed by the extent of the damage.

Public punishments were divided into three categories: seizure and banishment as an outlaw, *vyra* (payment), and sale for fine.

Seizure and banishment as an outlaw meant deprivation of personal and property rights. The punished person was placed beyond the pale of the law, he was banished, and sometimes, if the property was not sufficient to pay for the damage, he was sold into slavery. The seized property was used to cover the damage, and what was left went into the state treasury. This was the punishment for the most heinous crimes: arson, professional horse-thieving, and robbery.

*Vyra* was the severest money punishment for homicide and mortal injury. Under certain circumstances the community helped the criminal to pay his fine. Sometimes the fine would be cut in half. *Prodazha* (sale for fine) was the punishment for minor crimes. It was in the range of one to 12 pieces of silver. The money went to the treasury of the prince (if any damages had been assessed they went to the aggrieved party).

The death penalty was introduced by Volodymyr the Great under the influence of the Byzantine clergy. It was soon replaced, however, by fines.

## THE JUDICIAL SYSTEM

The prince presided over the Princely court as the chief judge, or delegated this function to subordinate officials. Judicial power was among the chief prerogatives of the prince, and the duty to dispense justice was the principal duty of the ruler. Officials acted on behalf of the prince only on his authority and only within the limits of such authorization. The most important officials with judicial authority were the *tyvun* and the bailiff. Other officials included guardians and scribes. Trials were held in the capital at the court of the prince, or in other locations where the prince was temporarily in residence. In addition to the capital and assize courts, there were permanent Princely courts in the provinces administered by mayors or deputies of the prince. The entire population was subject to Princely courts, with some exception as to persons (clerics) and matters.

The town meeting court (*vichovyi sud*) at first had general jurisdiction, but its scope was later limited to matters of special importance.

The community or people's court functioned during the earliest time as the only judicial body, later becoming an adjunct of the Princely courts. The basic unit was the village court, consisting of "men of justice" presided over by an elective elder. These courts considered all matters and also took part in preliminary investigations.

Private courts or courts of the nobles, also called dominial, were conducted by landlords with jurisdiction over slaves and commercial matters.

Ecclesiastical courts functioned in the dioceses of bishops and were under the supervision of the latter. Their jurisdiction included clerical persons and their families, as well as church servants; also ecclesiastical matters, such as crimes against the faith and against the sanctity of marriage, marital disputes, and inheritances. These courts were based on the authority of the *Nomocanon* and ecclesiastical decrees of princes.

## PROCEDURE

Ukrainian legal procedure, as that of

other countries, developed from self-help and private procedure in early times to public trials and rules of procedure. Process usually began on the demand of the aggrieved party, but there were also the beginnings of public indictment. The trial was a contest of the parties before the court which constituted the third party. The court only supervised the order of trial and determined its outcome. Trials were held publicly, with active participation of the citizenry (peers). Process was oral, in the presence of the parties and witnesses.

Suit was brought either by agreement between the parties submitting the case to the court, or by summons issued to the adversary for a specified day in court. The defendant's failure to appear could result in a judgment by default. In criminal matters, when it was necessary to establish the indemnity of the criminal or to find a lost object, trial was preceded by an investigation.

The *svod* (summary) was originally the trial itself, leading to judgment and execution. Subsequently, it became the means to restore lost property and discover the criminal. It was preceded by a public announcement of loss. Return of property within three days went unpunished, and holding it after that was punishable, unless the possessor disclosed from whom he had lawfully acquired it.

*Honennia slidom* (following the trail) was used in cases of homicide and larceny when the person of the criminal was unknown. The owner of the lost property "followed the trail" in the presence of citizens, and if it led to a house the owner was considered the thief unless he was able to divert the trail elsewhere. If tracks led to a village, the citizens were duty-bound to trace them further. The latter procedures required the observance of all old solemn forms.

At one time the trial ended in direct combat–duel. Later, verbal combat ("word against word") was substituted, the parties corroborating their statements with proof. The court conducted probative procedure which was the essence of the trial and announced the judgment which was the automatic outcome of the proof. Proof consisted of: witnesses (only free people, and there is doubt whether women could testify) under oath; divine judgment (ordeal), such as trial by water, fire, or duel, and casting lots. Later, real evidence was used, such as bruises on the body, wounds, the corpse, tracks, stolen goods, and so on.

The court announced the judgment orally. The court did not execute civil judgments; that was up to the party. Criminal judgments were carried out by the prince or his appointed officials. The state aided the aggrieved party, who could compensate his loss out of the property of the debtor, or put him in slavery, if the property was insufficient.

# 3. THE LITHUANIAN-RUTHENIAN PERIOD

Following the decline of the Princely state organization [Vol. I, pp. 610ff., pp. 618ff.], Ukrainian territories came under the rule of Lithuania in the fifteenth century, and subsequently under Poland. This caused serious political, social, and legal changes in these territories. However, old Ukrainian legal institutions remained in effect for a long time, and exerted a considerable influence on the systems of the occupying powers, particularly Lithuania.

## SOURCES OF LAW

Numerous legal records have survived from the Lithuanian-*Rus'* period in written form, and from the latter part even in printed form. Most were written in the official *Rus'* language (a mixture of Church Slavonic, Ukrainian, and Belorussian). As an exception to the rule, some records are in Latin and German.

### Customary Law

After the decline of the Kievan Realm, customary law again became the only source of law in Ukrainian territories which had endured the Tatar invasion. It remained in force also in the Galician-Volhynian state, even following its annexation by Poland, until the end of the fifteenth century (the period of the *Rus'* Law). The Ukrainian territories brought their own customary law (their antiquity) into the Lithuanian state. The Grand Dukes of Lithuania proclaimed the principle "don't touch the old, don't introduce the new," and thus affirmed customary law in Ukraine and contributed to its further development. Soon it became binding throughout the Lithuanian-Ruthenian state.

### Legislative Records

Many records of legislative activity have survived from the Lithuanian-Ruthenian period, nearly all in written form, including the third edition of the Lithuanian Statute which was printed in 1588. By content, these records can be divided into international pacts, writs of privilege, land writs, and legal codes.

### International Agreements

First among these are agreements and pacts between the Lithuanian-Ruthenian state and Poland which determined the different forms of union between these states and caused changes in the status of the Lithuanian-Ruthenian state. These are: the Union of Krevo of 1385, which introduced a personal union; the Vilna Agreement of 1401, which provided for a union of mutual assistance and security; the Union of Horodlo of 1413, reaffirming the personal union; and the Union of Lublin of 1569, which instituted a real union between Poland and Lithuania and contributed to the spread of Polish influence and Polish law. Pursuant to the Union of Lublin, most of the Ukrainian lands which were part of the Lithuanian-Ruthenian state were annexed by Poland. However, both the Lithuanian Statute and the official *Rus'* language were recognized.

Certain commercial and economic treaties which contained norms of public law are also among pacts of an international character.

**Writs of Privilege**

Under this title, the Grand Dukes of Lithuania issued numerous juridical acts, different in form and content. They were divided into privileges for nobles and particular privileges. The latter included exceptions to general laws, or individual laws in favor of groups, institutions, or persons. This group also included privileges granted to villages, cities, and their owners affirming their right to be governed by the Magdeburg Law, and writs of security to cities and lands protecting them from breaches of local laws and misdeeds of the local administration.

**Land Writs**

Land writs are the most important monuments of legislation of the pre-statute period. Unlike privileges, which introduced new rules, the land writs kept the old laws in force. They were issued to all people of a certain territory in confirmation of the old rights of the entire land, to determine its relation to the state and to the general laws. Eight such writs for Ukrainian lands (*zemlias*) have survived: for Galicia (1456); for Dorohychyn (1516); for Lutsk (1424); two for Volhynia (1501 and 1509); two for Kiev (1507 and 1529), and one for the county of Bilsk in Podlachia. These writs contain a large amount of legal material in civil and criminal law and procedure for the early period, as well as rules for the dominial courts of the nobles.

**Official Compilations of Laws**

Along with the process of consolidation of the Lithuanian-Ruthenian state, a need arose by the middle of the fifteenth century to unify binding laws in official compilations for the use of courts. To fill this need, codification of effective customary and written law was undertaken which resulted in two codes of binding laws: *Sudebnyk Kazymyra* (Judgment Book of Casimir) and the Lithuanian Statute.

The draft of the *Sudebnyk Kazymyra* of 1468 was compiled in the administrative chancery on order of the Grand Duke Casimir and ratified by the *Sejm* (*Soim*, parliament) in Vilna in 1468. It

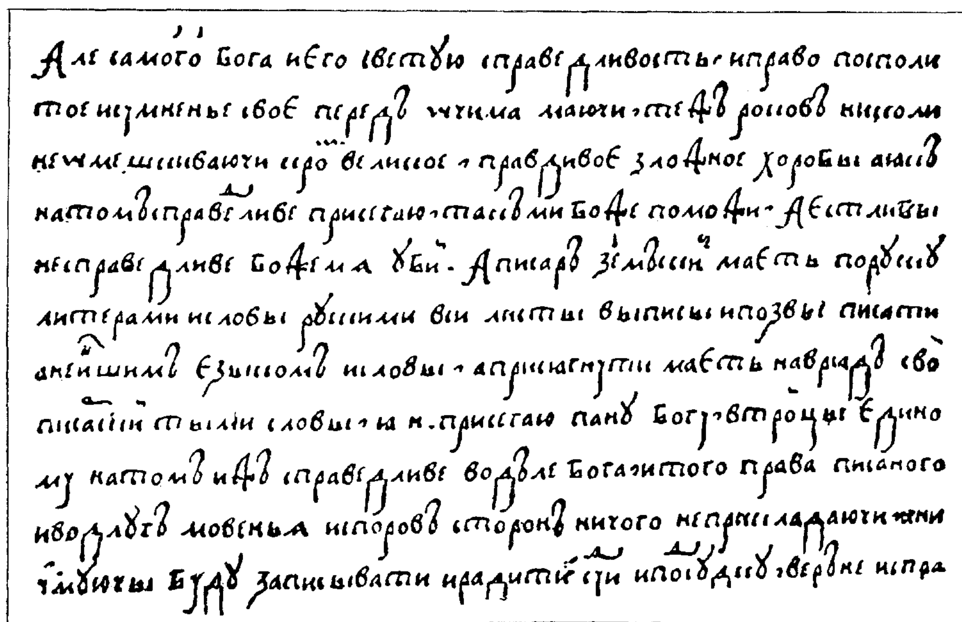

FIGURE 9. EXCERPT FROM THE MANUSCRIPT OF THE LITHUANIAN STATUTE

contains 28 sections, dealing mostly with criminal law and procedure. Also included are old provisions of customary law.

The Judgment Book of Casimir was not a complete compilation of laws of the Lithuanian-Ruthenian state, however, and there was a growing need for a complete code. The nobles in particular insisted on a codification of their privileges, and on the determination in a general law of the various rights of nobles, both of the magnates as well as the lesser nobility. The code was confirmed in 1529 under the title "STATUTE OF THE GRAND DUCHY OF LITHUANIA" and it was made public in written form. After it had been in effect for twenty years, work was started on a new edition. The second edition was approved in 1566, but not in all sections.

Since by the Union of Lublin the status of Lithuania changed and new administrative and judicial organs made their appearance, the need arose to revise, amend, and supplement the text of the second edition of the Statute, to make it fit the changed circumstances. The new text, considerably expanded and better organized than the first edition, was approved by the *Soim* of 1588, and simultaneously printed by the Mamonicz brothers in Vilna, becoming effective in the Lithuanian-Ruthenian state, as well as in Ukrainian territories annexed by Poland, in 1589. The Statute was translated into Polish in 1588, with an addition of excerpts from Polish laws, and it was printed in Vilna in 1614. The Statute of 1588 was the culmination of the process of unification of the separate legal systems of the lands of *Rus'* and of Lithuania. Instead of a multitude of local laws and decrees, there was now a general law, common to all and binding upon all people of the Lithuanian-Ruthenian state. The social trend of the Statute reflected the privileged position of the estate of nobles. The edition of 1588 made the Statute a superior work to many European codes of that period. The Statute was effective as an official code of laws also in the Hetman state, where it was recognized as "the old fundamental law."

FIGURE 10. THIRD LITHUANIAN STATUTE PUBLISHED IN 1588

### The Reception of German Law

The reception of German law came about indirectly, through Poland. Elements of German law became to be recognized in the Lithuanian-*Rus'* state in the form of particular law, which was granted by the Grand Dukes of Lithuania as writs of privilege directly to the cities, permitting such cities to use the Magdeburg Law.

## STATE LAW

### General Characteristics

During the fourteenth through the sixteenth centuries, Ukrainian state law survived in the northern part of Ukraine (Chernihiv, parts of Polisia and Volhy-

nia), which had not been ruined by the Tatar invasions and where some small duchies maintained their independence even after the Tatar invasions. In the second half of the fourteenth century, these small principalities became vassals of the Grand Dukes of Lithuania, but until the second half of the fifteenth century they preserved their identity. Hence, these principalities also preserved norms of Ukrainian law which had been effective in their territories in the pre-Lithuanian period. During the second half of the fourteenth and the first half of the fifteenth centuries, the Grand Duchy of Lithuania was actually a union of states in which a number of Ukrainian and Belorussian vassal duchies were grouped around the Duchy of Vilna. By the mid-1400's, there was a gradual process of decline of statehood in the lands and duchies comprising the Grand Duchy of Lithuania, and by the early sixteenth century there was an almost complete territorial division into *voievodstvos* (provinces) and *starostvos* (counties), and state officials were substituted for vassal princes [Vol. I, pp. 623–4]. The process of liquidating fragmentation and consolidating the state organization of the Grand Duchy of Lithuania was not complete, however, when by the middle of the sixteenth century a large portion of the Ukrainian lands of the Grand Duchy was annexed by Poland.

**Population**

The population of the Grand Duchy of Lithuania [Vol. I, pp. 624–6] was socially stratified into groups, more or less following the pattern of the previous period. The highest group, with the greatest privileges, were the *paniata* (lords), including the former *kniazhata* (princes) who had lost the status of territorial rulers. They were direct vassals of the Grand Duke and were bound to supply him with their own troops in wartime. Their holdings were inhabited by subvassals, the nobles who occupied their lands.

However, a majority of the nobles held their own lands, comprising the upper middle class which replaced the former boyars and corresponded to the class of knighthood of medieval Europe. The *shliakhta* (nobles) enjoyed a number of privileges granted to them in writs of privilege and subsequently made permanent in the Lithuanian Statute. The 1588 edition of the Statute indicates that the nobles had by this time become a separate social class, having absorbed the small princes from above and the boyars and servants from below.

The boyars and servants (*sluhy*) were the lowest group of the higher social class. They were midway between the nobles and free peasants (yeomen). Like the nobles, they owned land and for this they were bound to military service, but they had no peasants as their dependents.

The land ownership of the higher classes, and particularly of the nobles of the fourteenth and fifteenth centuries, corresponded to the western European fief, but it came to resemble outright ownership at a faster rate than in the rest of Europe.

The rural population (peasants) was also divided into several social strata which were unequal in their legal status. The greatest differences were between the group which had freedom of movement (*liudy pokhozhi*) and those who were bound to the land (*liudy nepokhozhi*) and to their master, the first step leading to serfdom.

**The Central Government**

The central government of the Grand Duchy [Vol. I, pp. 623–4] consisted of three organs which at times competed with each other. The Grand Duchy was headed by the Grand Duke, a monarch who acceded to the throne by a combination of inheritance and election (the election was among the sons of the previous Grand Duke). He held the supreme executive, legislative, and judicial power. He maintained diplomatic rela-

tions with other nations, declared war and concluded peace, appointed state officials, and controlled their activities. He also exercised the function of dividing lands according to the rules of feudal holding.

Another organ in the central government was the Council of Nobility (so-called *pany-rada*). At first, this was a meeting of the most influential among the vassals of the Grand Duke, but gradually it was joined by high-placed state officials who eventually gained greater power and relegated the princelings and the lords to a minor role. The council also included the Catholic bishops. The competence of the council coincided and competed with the power of the Grand Duke. The legal status of the council was clearly defined in 1492 and 1506 when the Grand Duke promised to share his power with the council. The council grew in importance because of frequent and long absences of the monarch in Poland, of which he was simultaneously the king. During these absences the country was actually governed by the council. With the development of assemblies of nobles, the council of lords became an upper legislative chamber, frequently able to overrule the monarch.

The development of *Soims* (Polish *Sejms* [parliaments, assemblies]) in the Grand Duchy of Lithuania occurred in the late fifteenth and the first half of the sixteenth centuries. It was a representative institution of the parliamentary type. The latter feature, however, became clearly defined much later. Even in the early sixteenth century, assemblies were attended by local deputy administrators, each with a handful of nobles whom they had "elected" from among the nobles of their county. Gradually it became customary for the nobles to elect deputies from among their own number. In 1564 a precise order of representation of nobles in assemblies was adopted. According to this set of rules, two nobles were to be elected as deputies for every county at a specially convened meeting. In addition to electing deputies, the county assembly (*soimyk*) issued a written instruction to its deputies which was binding upon them in voting in the *Soim* of the Grand Duchy.

The *Soim* was similar to other European parliamentary institutions of the time. These organs were composed of representatives of the social estates. The unusual feature which characterized the assembly of Lithuanian-*Rus'* was the fact that its deputies represented only one social class—the nobility. This feature was instituted under Polish influence.

In certain respects the competence of the *Soim* coincided with that of the Grand Duke and of the Council of Nobility. It is particularly important to emphasize its right to levy taxes, and especially of increased taxes for wartime expenses. It was here that the idea of a state budget took its origin. Resolutions of the *Soim* were either affirmed or vetoed by the Grand Duke in the form of "replies."

**Administration**

As a result of the slow process of creating a single unified state from a conglomerate of vassal principalities, a central state administration was also emerging very slowly. The offices of a central administration were established during the fifteenth century. They developed from offices of dignitaries and officials, which were grouped around the Duke of Vilna. Hence, their competence was initially limited to the Duchy of Vilna and spread to the territory of the Grand Duchy of Lithuania at a very slow rate.

The most important office was that of the marshal. The marshal of the land was the person of first rank in all ceremonies of the court of the Duchy, and in the absence of the Grand Duke he presided at meetings of the lords. The marshal of the court was his assistant and deputy. The chancellor and his deputy headed

the chancery of the Grand Duchy. The treasurer of the land and treasurer of the court were in charge of financial matters of the country (the latter as deputy). The land hetman (later called grand hetman) and the hetman of the court were the military commanders during military expeditions. Subsequently the hetman of the court (later called field hetman) was the commander of mercenary troops.

**Local Administration**

Local administration, which was under the Grand Duke, appeared after the abolition of the local administration of princes. The position of the latter was now assumed by deputies (*namisnyky-derzhavtsi*) of the Grand Duke (in smaller communities—*tyvuns*). The country was later divided into provinces (*voievodstvos*) and counties (*starostvos*), the former headed by governors (*voievodas*) and their deputies (*kashtelians*), the latter by *starostas*.

## CIVIL LAW

**Property Law**

The records of law of the Lithuanian-Ruthenian period are more explicit than those of the Princely state in their definition of the person who is subject of the law, such person being endowed with broader rights in civil law. They are also clearer in determining the legal capacity of the different categories of people, which is particularly evident in the different social classes, with a set of civil rights peculiar to each class. The Lithuanian Statute recognized third parties in civil proceedings: servants, subjects, and apprentices had the right to sue for damages in the name of their master. Objects under the rule of civil law were also more clearly defined, particularly land.

As regards property law in the Lithuanian-Ruthenian state, the position of the Ukrainian territories, historically bound with the fate of Lithuania and subsequently Poland, was different. Here, there was only a gradual acceptance of the nobles' property inheritance rights. The dominant form was land holding under a contract or grant. The possessor had a limited right over the property which he held, because he did not have the right of alienation. The actual users of land, the peasants who did not belong to the ascribed class, tilled their own land and enjoyed full property rights. However, the reform of 1557 placed the right of property of peasants in serious jeopardy, and the Lithuanian Statute of the third edition ultimately deprived the peasants of property rights to land, but not to chattels.

The Lithuanian Statute recognized the property rights of the state (king's lands), the church, and townspeople within city limits, as well as those of the nobles and magnates.

The institution of pledge is a characteristic of the Ukrainian law of real property. In addition to the present form of mortgage, historically there is also the fiduciary and "pignus" form of pledge. Under the fiduciary form, the creditor took not only possession and use of the pledged object, but enjoyed full ownership until the moment of redemption by the debtor. The development of juridical ideas progressed in the direction of making the position of the debtor easier, the result of which was the "pignus" form of pledge, under which the debtor remained the owner of the pledged object, the creditor merely having its use and possession. This form of pledge was widespread in Ukraine even in the Lithuanian-Polish period, but with the following modification: the development of Ukrainian mortgage law went even further in protecting the rights of the debtor, by permitting him to retain his property right not only for the duration of the term of the mortgage, but several such terms until the redemption by the debtor's heirs (regardless of the number of generations). Thus the creditor's right of mortgage never changed

into the right of property (like the American "once a mortgage, always a mortgage") unlike Russian law and some western European laws. This peculiar form reflected the old idea of non-alienation of real property rights. As an exception, there was a permissible form of mortgage with forfeiture, which had to be stipulated in the original agreement with clear mention of the term after which there would be a forfeiture. The Lithuanian Statute also permitted chattel mortgages, particularly of cattle and horses. Chattel mortgage agreements could also be oral.

The rule of prescription played a much more important role in the Lithuanian-Polish period than before, in both forms, that is, limitation of the right to sue and acquisition of property rights by length of time of holding. This legal rule played the part of a stabilizing factor in civil law relations. According to sources of urban (Magdeburg) Law, the rule differed from the statute of limitations binding upon the nobles not only in terms of duration, but also in content. Lawful possession in good faith was considered a clear requirement of Magdeburg Law, and without it acquisition of property rights by prescription was impossible, whereas the Lithuanian Statute did not clearly define these requirements.

**Obligations**

**Purchase and sale.** This contract was closely associated with the development of individual property rights during this period. Contracts of purchase and sale could be entered into by people of all social classes.

Real property of the landed gentry, purchased or acquired otherwise than by inheritance of family estates, could be freely alienated, as could lands of the free peasants (yeomen) until the middle of the sixteenth century. The 1588 edition of the Lithuanian Statute enjoined the peasants from alienating lands tilled by them without the consent of their masters. During the Kievan *Rus'* period, the act of purchase and sale was symbolic; now, however, the Lithuanian Statute prescribed strict forms ("If any alienation forever be not according to the Statute, it shall be void and no one shall acquire the thing therein described"). The sale of one's own person (or of a wife or children) into slavery was still considered lawful, except during the time of famine. Whenever such a sale was void, the seller only had the duty to return the purchase price or render services for same.

Along with purchases and sales, there was a widespread practice of exchange or barter which was fully approved by legislation.

**Loans.** Borrowing became somewhat altered: the old complex rules about interest, which characterized the early period, were abolished. Lending agreements for sums of money in excess of 600 coins had to be in writing under penalty of non-recovery of the loaned amount. Loans of sums in excess of 12,000 coins were very closely scrutinized by the authorities; if notes for such loans were lost, an immediate "protestation" had to be submitted to the government, under oath of witnesses who were aware of the contents of such document. In the event of the death of the creditor, the debtor was obliged to repay the loan to his heirs according to the law of inheritance, and there was no statute of limitations on loans.

**Leases.** The *Rus'* Law rules governing leases of personal services were modified in the direction of a greater freedom of the person leasing his services. Such leases could no longer end in slavery. The dominant rule of the Lithuanian Statute was that no free person could be put in everlasting slavery for any act or crime. A term of service became a substitute for slavery. Property, houses, locations, animals, grain, and land could also be leased.

**Surety agreements, guarantees, and gifts.** These terms were known to the law

of this period, as well as joint and several obligations, indicating that civil law was rapidly developing. In addition to agreements which gave rise to rights and duties, there were also obligations arising under the operation of law or as a result of breaking a law. This is primarily the area of tort law, which the Lithuanian Statute determined according to the social status of the tortfeasor. The growth of trade and commerce also gave rise to rights and duties of groups. In comparison with the period of *Rus'* Law, the Lithuanian Statute provided broader individual rights with the emancipation of persons from the onerous family and tribal ties.

### Family Law

**Marriage Law.** Family law made considerable progress during this period. Marriage acquired the significance of a contract in addition to being a sacrament. Monogamy finally replaced polygamy. The rule of law now was: "If any person have a wife living and take unto himself another—he shall be punished on the throat." The same rule applied to women. Nevertheless, there were still instances of polygamy. The Lithuanian Statute contained prohibitions against marriages between relatives up to the fourth degree inclusive. Such marriages were void, children were declared illegitimate, and part of the property of the guilty parties was turned over to the state. The Lithuanian Statute raised the age of permissible marriages for men to 18, but for women it remained at 13, as before. The increase of the age limit indicates a trend toward greater responsibility of the parties entering into marriage. Free expression of the intent to marry became a prerequisite, and since a girl could marry at 13, the consent of her parents was indispensable. Violation of this rule by a woman produced dire consequences: loss of right to a dowry and inheritance forever.

**Divorces and annulments.** Divorces and annulments were within the competence of ecclesiastical courts. During this period not only children of concubine slaves, but any children born out of wedlock were considered illegitimate. Because of the rigid structure of society, a noble widow marrying a commoner lost all her parental property. The provisions of marriage law determined in great detail all personal and property relations both of the married couple and of parents and children.

**Custody.** Jurisprudence of that period widely described the institution of custody, which was considerably affected by Magdeburg Law.

The law of inheritance was fairly rigid. The following provisions of inheritance law were changed in relation to the period of the *Rus'* Law: the testator was free to select a beneficiary from outside the circle of heirs at law, as regards chattels and real property acquired by the testator himself. However, property inherited from a father or mother could not be freely bequeathed. A will could be made only by a person enjoying full civil rights. From making wills the law excluded minors, persons under monastic vows, sons living in one household with their father as regards parental property, captives and slaves, servants of the household, insane persons, outlaws, and dishonored persons. A testator could change his will several times, although there was a requirement of good memory and sound mind. Strangers could also be beneficiaries. A testator could disinherit his own children if they were guilty of misdeeds against him. It was necessary to enjoy full rights in order to be entitled to bequests. Servants and peasants bound to the land could only bequeath one-third of their chattels at will, the remaining two-thirds going to the children. In the absence of children, the two-thirds went to the landowner. Free peasants could dispose of all their chattels.

Daughters inherited only one-fourth of their fathers' estates. The dowry was included in this part. Sons had no priority

as against daughters in inheriting the estates of their mothers.

## CRIMINAL LAW

### General Remarks

The moral basis of criminal law of this period became entwined with social inequalities of the time. Criminal law became noticeably softer toward crimes committed by nobles and harsher toward other social classes. Penal law became more strict. Accepting the doctrine of deterrence, both general, as well as special, it followed the pattern of western European law. The old principle of vengeance became obsolete. Respect for the dignity and honor of the person was limited to the nobility. Full criminal liability was reached at the age of 14, later raised to 16. All persons were under the protection of the law, except outlaws, who could be killed without criminal liability. Officials of the Grand Dukes were under special protection of the law, and other persons could also be granted letters of protection.

To invoke criminal liability there had to be a breach of law and guilt of the defendant. Guilt was established if the defendant was aware of the illegality of his act and had intent to commit such an act. There were higher penalties for repeated offenses and habitual criminals. The desire to establish a causal relationship between the act of the criminal and its result indicated considerable progress in the development of criminal law. Crimes committed in actual self-defense went unpunished. Attempted crimes were treated the same way as crimes actually committed, preparatory acts sometimes being also included. There was a clear distinction between principals and accessories to a crime, the latter being further divided into helpers and abettors.

### Crime

A crime was regarded primarily as violation of the legally protected sphere of the private interests of the aggrieved party, an act of violence, disregard of the law, and breach of peace. The earlier view that crime was within the scope of private law gradually gave way to the view that crime was a breach of public peace.

Among CRIMES AGAINST THE PUBLIC WEAL, the most important was lese majesty, heretofore unknown in Ukrainian law. The most heinous form of this crime was conspiracy against the ruler, his life and health, and attempts to remove him from the throne, or occupy same after his death. Criticism of decrees and judgments of the Grand Duke and unbecoming conduct at his court were also among the crimes of lese majesty.

The list of CRIMES AGAINST THE STATE was brief. The most typical were: treason, escape to the enemy, insurrection with intent to breach the peace of the land, surrender of a fortress to the enemy, attempts on the lives of officials, especially judges, release of prisoners. Included in this group were also military and wartime crimes: desertion from the battlefield, breach of peace during a military expedition, sale and delivery out of the country of arms, metal, farm tools, and so on, and crimes committed while in service. Crimes against the commonweal included forgery of public documents, forgery and use of seals of the duke and public offices, and forging currency. The latter crimes were considered dangerous to the safety and economy of the state, and were punishable by death ("on the throat or by fire"). Crimes against religion included heresy, converting Christians to other religions, and keeping of Christian concubines by non-Christians. It is interesting to note that the law of this period did not list the crime of witchcraft or blasphemy. Crimes against the family were: bigamy, incest (knowing), adultery, bride stealing. On the demand of the church most of these crimes were punishable by death. Among crimes against morals, the most conspicuous was seduc-

tion, which was punished by cutting off the nose, ears or lips, and repeated offenders were punished by death; also rape, prostitution, and extramarital relations were all punishable by death.

CRIMES AGAINST PRIVATE PERSONS, particularly those against the life of persons, were called homicides and were classified as intentional (and then it could be either heavy or light), unintentional (e.g., through negligence), and accidental (completely free of any punishment, just as was homicide in self-defense). The case method of classification of crimes against the body divided assault into intentional, unintentional, and accidental, also unprovoked and provoked, open and secret. Injury inflicted in a duel was very severely punished, since duels were prohibited. Use of a dangerous weapon made the crime more severely punishable. Crimes against honor reflected the spirit of division of society into classes. Whereas common crimes provided equal treatment for all, defense of honor was the exclusive privilege of the nobility. The most serious were the questioning of someone's noble birth and a charge of illegitimacy. Since the person of every nobleman was inviolate, any attempt on a nobleman's liberty was severely punished. Crimes against domestic tranquility were treated the same as breaches of the peace. An invasion of one's home or yard was qualified as breach of the peace of the land. Punishment for these crimes increased with the consequences of the crime. Crimes against property included robbery, larceny, and petty theft, the value of the object qualifying the degree of punishment. There were also sale and concealment of stolen property, embezzlement, obliteration of metes and boundaries, violation of quiet enjoyment, deceit, and arson.

### Punishments

Punishments in this period were a combination of a system of composition (ransom) and public penalties. Private penalties are the most controversial subject of criminal law of this period. Some scholars consider them to be merely payment of damages, but others treat them as punitive in nature. There is evidence in the records of the period that they were a combination of damages and penalty. Most important among these was payment for the head of the person killed, and another was payment for pain and suffering of an injured person, also for insult to his honor and restriction of liberty.

PUBLIC PENALTIES included in the first place the death penalty, which was applied in many forms and became more and more widespread. Forms of execution ranged from chopping off the head, to quartering and impaling. Corporal punishments, although less frequent, were applied in the form of cutting off limbs, ears, nose, lips, and beating with whips. Deprivation of liberty was first used as a preventive measure of holding the defendant for trial, in the case of convicted persons for execution, and in the case of debtors as an enforcement of payment. Subsequently, imprisonment as such turned into a form of punishment and was divided into heavy and light. The former was in a dungeon, the latter in above-ground premises of the jail. Terms of imprisonment ranged from three weeks to one year and six weeks (any term had to be divisible by three). Dishonor was a punishment applicable to nobles, and corporal punishments only to commoners. Only the ruler could pronounce judgment of dishonor.

## THE JUDICIAL SYSTEM

The judicial system in the Ukrainian territories within the Grand Duchy of Lithuania passed through four phases, the significant years being 1386, 1566, and 1569. Prior to 1386, the old law was in force in Ukrainian territories and old judicial institutions remained unchanged. The only innovation was the judicial

power of the Grand Duke over the feudal princes.

After 1386 (Union of Krevo), Lithuania and the Ukrainian territories came under the influence of western European and Polish law. The judicial system was based on several types of courts. State courts were divided into central and provincial courts and they were controlled by the Grand Duke and his officials. The provincial courts first included courts of state governors and later also county courts and courts of landowners holding under the name of the Grand Duke. These courts were presided over by one judge and tried cases of free people and persons subject to the private rule of the Grand Duke as landlord. After 1529, two noblemen assessors were added to each court. In 1542, provincial courts were turned into courts of the second instance. The next instance were the courts of the local diet. The central courts consisted of the household, commissioners', and assessors' courts and the court of the council of lords. These courts were mostly concerned with appellate matters, and if the Grand Duke did not personally participate (as he did in some), they acted on his authority and were under his supervision. He also reviewed all their judgments and could affirm, change, or set aside any judgment. In this period the courts had the following auxiliary personnel: guardians, messengers, bailiffs, scribes, and vergers.

City courts operated in privileged cities. They were jury courts consisting of an elected panel of jurors. The usual jury consisted of 12 men and was presided over by the mayor (elder). This court had jurisdiction over civil and criminal matters of the townspeople. Some cities were divided into ethnic jurisdictions with separate courts for each nationality.

Community courts, also called *kopni* (courts of three-score) were an institution of the old customary law of prehistoric times. They were non-periodic courts of large communities, where people assembled in groups. The courts met at the call of the aggrieved party, the local elders, or the landowner; sometimes they were called by a defendant who wished to exonerate himself. These *kopni* courts retained their classless character, persons of all classes appearing before them and in all matters except the most heinous crimes. Appeals from these courts went to the city courts. The system was recognized by the state and was made part of the state judiciary.

Dominial courts first had jurisdiction over matters of landlords against serfs and bonded persons, but subsequently also over matters of free people living on property of the landed gentry.

The judicial system entered into its third stage of development with the second edition of the Lithuanian Statute. The central courts were left virtually unchanged (only the courts of the council of lords were abolished), and the provincial courts were replaced with land, castle, and chancery courts.

The fourth phase in the development of the judicial system began with the Union of Lublin of 1569 (see "Ukraine under Polish Domination").

# 4. THE HETMAN STATE (1638-1781)

## SOURCES OF LAW

The most important source in this period was customary law which had come into existence over a period of centuries. Its influence is clearly evident in the general system of the Hetman state: the election of the hetman, the election and introduction of regimental and company administration, the judicial system, and the substantive criminal and civil law.

### Treaties with Muscovy

Treaty provisions concluded between the government of Muscovy and the Kozak officers corps on the occasion of the installation of a new hetman were an important source of law. They set forth general principles of the administrative and legal structure of the Ukrainian state and its legal position relative to the Russian state. Although these provisions ostensibly affirmed the autonomous position of the Ukrainian state, they introduced certain changes which gradually narrowed this autonomy while broadening the power of Muscovy. The most significant was the Treaty of 1654 (the Pereiaslav Treaty, see below, also Vol. I, p. 640). The universals of the hetmans were the basic form of current decrees of the hetman administrations. They were issued in the name of the hetman and were kept in standard form. They promulgated the rules governing land inheritances and other property, military obligations, and the duties of Kozaks, townspeople, and peasants toward the administration of the officer corps. The universals can be divided into several groups according to content. The general universals referred to the entire country or the entire population. Special universals, also called "instructions," dwelt upon individual institutions, estates, or groups. Land universals concerned land grants and confirmed the property rights to land by purchase, inheritance, and so on.

Protective and immunity universals were issued to individuals to protect their property and persons.

### Collections of Laws

The most important among these were the codes of law of the preceding period, and particularly the Lithuanian Statute

of 1588 which remained a handbook of Ukrainian courts until 1840.

Along with the Lithuanian Statute, the courts used the Magdeburg Law and its variant, the so-called Chelmno Law.

Since these collections were written in foreign languages (Latin and Polish), a decision was made in 1728 to organize a commission of Ukrainian lawyers which was to translate these (and other) codes into Russian, compile a new code, and submit it "for approval" to the tsar. This work was completed in 1743. The translations submitted for approval were shelved by the Senate until 1759, when they were sent to Hetman Cyril Rozumovsky for review, revision, and amendment to conform with the then existing situation. This project failed to win approval because it was opposed by the Ukrainian officer corps. Nevertheless, it is an important monument of the laws in effect at the time. The commission gave it the title "Laws by Which the Little Russian People are Judged," but this designation did not correspond to its contents, since it was actually a collection of laws of the Zaporozhian Sich. It contains a preamble on the scope of the code as to territory and persons, as well as provisions of constitutional, administrative, civil, and criminal law, the judicial system, and the judiciary. In compiling the code the commission used the following sources: the Lithuanian Statute of 1588, the law books of Magdeburg Law, the hetmans' universals, and some Russian laws. The commission itself composed many rules and definitions of law, making combinations of different foreign sources and adapting them to Ukrainian customary law and the practice of the Kozak courts. The draft of the code was very popular in Ukraine. Professor Alexander Kistiakovsky published its full text in Kiev in 1879.

*A. Yakovliv*

## STATE LAW

### General Characteristics

In the aftermath of the successful uprising, in 1648, of the Kozak armies, led by Hetman Bohdan Khmelnytsky [Vol. I, pp. 634ff.], the Kozaks held power over the Ukrainian territory along the Dnieper River. Thus Ukrainian national statehood was reborn.

Since it was the Kozak estate which was victorious in pursuing the national goals, its organs of government assumed control of the central government after 1648. The hetman became the holder of all power, and the colonels and captains became his local administrators (over the entire population). The state itself retained the name of the Kozak armed forces, the ZAPOROZHIAN SICH. A distinction must be made as to the dual meaning of this term: (1) the Ukrainian Kozak armed forces; (2) the Ukrainian state created by the Kozaks.

In 1654 the Ukrainian state entered into a union with Russia. The legal nature of the Treaty of Pereiaslav has long been debated. Some researchers regard this treaty as a military alliance, some as an act of personal union, some as a real union, and some, finally, as providing that Ukraine become a protectorate of Russia (noting, however, that during the time of Hetman Khmelnytsky this dependence was purely nominal, and only later, in the process of a weakening of the Ukrainian position, did it become real). The latter view seems to be most prevalent. Also, it should be noted that with the election of each hetman, new agreements were concluded with Russia, modifying somewhat the legal relations between the parties, without, however, changing the fundamental principle that Ukraine was a separate political entity [Vol. I, p. 640].

In 1662–3, Ukraine was split into two state organizations, the Left Bank (in association with Muscovy) and the Right Bank (in association with Poland, and later Turkey). This cleavage became even more complete as a result of the Peace Treaty of Andrusiv of 1667 [Vol. I, p. 645]. The Right-Bank Ukrainian state ceased to exist in 1676 and no subsequent attempts to renew it proved successful.

As a result of the defeat at Poltava in

1709 the Left-Bank state came under stricter control by Russia, which from then on began to interfere actively in the domestic affairs of the Hetman state.

**State Territory**

The territory of the Ukrainian Hetman state did not include all ethnographic Ukrainian lands. Excluded from it in the west were Galicia, Kholm, and western Volhynia, and in the east *Slobids'ka Ukraïna*. In the south, uninhabited lands remained outside the borders of the Ukrainian state. On the other hand, in the northern parts of the provinces of Chernihiv and Starodub, the Hetman state included some Belorussian lands. After the fall of the Right-Bank Hetman state, Left-Bank Ukraine was limited to the provinces of Chernihiv and Poltava. The territory was divided into administrative districts, *polks*, and the latter into *sotnias*; this method of division also applied to military and judicial districts. There were 10 *polks* in Left-Bank Ukraine. Its capital was successively Hadiach, Baturyn, and, following the defeat of Hetman Mazepa, Hlukhiv. The capital of the state headed by Hetman Khmelnytsky was Chyhyryn and it remained the capital of Right-Bank Ukraine until 1676.

**Population**

The legal position of the different groups of population was characterized by the fact that after 1648 the country renewed for some time the division of the population into social estates, corresponding to the stage of social development of the Ukrainian people, and placing Ukraine in an analogous position to that of other class societies of Europe of that period.

The Ukrainian nobility partially supported the liberation struggle of Khmelnytsky and served the people by organizing the administrative and military apparatus. However, in the subsequent course of developments, although the nobility attempted to retain its position of an upper social stratum, it lacked sufficient numbers and power to do so. Hence the upper stratum of the Ukrainian state was formed out of the Kozak leadership, which slowly absorbed the surviving Ukrainian nobility. Thus, the "eminent military society," *Znachne viis'kove tovarystvo*, became the leading social class.

The Kozak officer corps within the Ukrainian state assumed forms peculiar to a service aristocracy, its members serving in a military as well as in a civilian capacity. Their legal position was determined by a system of privileges: the right to own landed property, exemption from the jurisdiction of local courts, participation in a Ukrainian parliamentary body—conventions of Councils of Officers—tax privileges, and so on. Their legal duty consisted of military service in the name of the landed estate, still, even in the seventeenth century, according to the feudal principle. In the eighteenth century the estates became the unrestricted property of members of the officer corps. In 1785 a majority of the Ukrainian upper stratum was granted the rights of the Russian nobility.

The peasant class was at the other end of the social scale. Most of the Ukrainian peasants who participated in the revolution of Hetman Khmelnytsky became liberated from their landlords for a certain period. However, even during the time of Khmelnytsky, this liberation was not complete and did not include the peasants settled on properties of the Orthodox monasteries. At that time many peasants joined the ranks of the Kozaks and thus retained their status of free peasants (yeomen). In the Hetman state, however, the process of organization of the civil and military administration proceeded along the lines of rewarding persons of merit (eminent comrades-in-arms) with landed estates. Gradually, the residents of such estates promised to help the owner "by obedience." Thus serfdom returned, and transference from one estate to another was made more difficult. The process of placing all peasants of

Ukraine in servitude was not complete, however, until 1783 when Left-Bank Ukraine was annexed by Russia.

The Kozaks remained a separate social class, with a set of different legal rights and duties. They did not become elevated to a higher class after Khmelnytsky, because, by absorption of numerous peasant elements, the Kozaks became too numerous. Hence, in Hetman Ukraine, the Kozak was essentially a free farmer, tilling his own land, sometimes with several families of neighbors, who were not, however, his serfs.

The mode of life of the Kozaks was similar to that of the peasants. However, just as the members of the officer corps, the Kozaks were obligated to military service in time of war. Representing an intermediate social class, the Kozaks were under the jurisdiction of particular laws (instructions of the hetmans) which regulated the transition of peasants to the Kozak class (prohibited entirely in the eighteenth century) and vice versa (although this was legally prohibited, it did exist in practice). The burden of military service on persons who did not enjoy the aid of serf labor and the inclusion of the Kozaks in the ranks of those forced to labor by the Russian government in the eighteenth century (construction of canals, fortresses, etc.), caused the Kozaks to abandon their class voluntarily and join the lower class of peasants.

The townspeople basically retained their former legal status in the Hetman state, with most of the large cities operating under the privileges of the Magdeburg Law.

The clergy constituted a special social class, and persons of clerical ancestry who did not continue in the profession of their parents were included in the class of the officer corps.

**Government**

During this period the government of Ukraine was headed by the hetman. The position of hetman contained the seeds of a struggle of two forms of government, republic and monarchy. The latter principle predominated during the terms of office of B. Khmelnytsky, I. Samoilovych, and I. Mazepa, whose terms were the longest. During their terms, the hetman was in the category of an elected monarch for life. The former principle predominated during the terms of office of most of the remaining hetmans.

The hetman was elected by the General Council. The hetman-elect could refuse the office (by placing the mace on a table and thanking the army for the honor). The hetman was the commander-in-chief, chief administrator, and chief magistrate. He was responsible for foreign policy, accepted envoys, and enacted legislation (by issuing universals); an important function of the hetman was granting lands for service, to the officer corps and troops.

The General Council (*Heneral'na Rada*) was a convention of the Kozak armed forces to decide matters of state. As such, the General Council was an organ of direct government by the people, with the provision, however, that the government was in the hands of a single social class—the Kozaks. In the eighteenth century, the General Council lost its previous importance, retaining merely an ornamental nature: according to old custom it confirmed the election of a hetman from among candidates selected by the Russian government.

The competences of the General Council included the election of the hetman, acceptance of his resignation, ratification of new constitutional and international documents such as treaties with Russia and in some instances matters of international policy, and election of the highest officials and judges.

The Council of Officers (*Rada Starshyn*) was a body which gradually reduced the influence of the General Council and, during the terms of Samoilovych and Mazepa, replaced it completely. The Council of Officers, which convened at regular intervals, usually

following major holidays, in the hetman's capital, consisted of the Kozak officer corps (usually fully represented), the eminent military society (usually through elected delegates), and representatives of the townspeople. The Council of Officers can be regarded as a form of estate parliament of the hetman period in Ukraine. The most detailed description of the activities and organization of this parliament is contained in the so-called Constitution of Hetman Philip Orlyk issued in Bendery in 1710.

The higher officials of the Ukrainian Hetman state were for the most part of military rank. They were all primarily members of the Council of Officers and executors of directives of the hetman and the Council. The highest rank was that of quartermaster-general (*heneral'nyi oboznyi* [chief of artillery]), followed by two general judges, the treasurer-general (in charge of financial matters), the secretary-general (actually chancellor), two general aides-de-camp (*heneral'ni osauly*), the sergeant-at-arms general (*heneral'nyi khorunzhyi*) and the adjutant-general (*heneral'nyi bunchuzhnyi*). The four last-named officers had no specially defined duties and appeared to be assistants and aides to the hetman.

Each regiment was headed by a colonel (*polkovnyk*), who functioned as a local military commander, administrator, and judge. He had assistants corresponding to those of the hetman. There was also a regimental council (*polkova rada*) which in a number of instances had a voice in the election of a colonel and decided important matters of the given regiment. In the eighteenth century, it was frequently replaced by the regimental officers' council. Regimental chanceries were organized in the eighteenth century as permanent administrative bodies, acting with an advisory council.

Each company was headed by a captain (*sotnyk*) who performed the same functions as a colonel, but within the limited territory of a captaincy. The captain also had aides of the same designation as the hetman and colonel. A company (*sotnia*) Kozak council elected the captain and considered important matters of the company in the seventeenth century.

ZAPORIZHIA [Vol. I, pp. 662ff.] occupied a separate position within the Hetman state after the 1670's. It grew into a *sui generis* state body, dependent upon Hetman Ukraine in the form of a vassal state. The territory of Zaporizhia comprised an area settled by Kozaks along the lower reaches of the Dnieper. In the eighteenth century peasants settled there alongside the Kozaks. Its center was the Sich. The population of Zaporizhia was not graded into as many classes as the Hetmanate; there were no townspeople, and the peasants made their appearance only in the eighteenth century.

At first the Kozaks constituted the bulk of the population. Gradually a division of the monolithic Kozak stratum into a junior and senior grade began, the senior developing into a leading (noble) class. This process was never completed, however, and in the eighteenth century there were only two basic social classes, the Kozaks and peasants. The legal capacity of the former was much broader. Only the Kozaks participated in the government of the country, and popular rule was therefore limited. During the sixteenth and seventeenth centuries, the Kozaks of Zaporizhia observed celibacy, but in the eighteenth century a majority of the Kozaks were married, keeping their families on ranches without the right to visit Sich. At first the Kozaks engaged in community farming, platoon units acting as producers and consumers. Large-scale farming developed in the eighteenth century and along with it, Kozak landed estates.

The Kozaks as a social class were bound to bear arms. The peasants of Zaporizhia, however, were a free class, obligated only to pay taxes to the Kozak military. Peasants sometimes lived on the Kozak ranches as their semi-dependent

neighbors, and this was the first step toward serfdom.

The SICH COUNCIL was the fundamental governmental body in Zaporizhia. It met at frequent and regular intervals (election of the quartermaster was held annually, allotment of lands among platoons twice a year, etc.). This was a general meeting of the Zaporozhian Kozaks which convened on the parade grounds. Matters could not be properly debated or considered by such a large body, there was no tally of votes, and matters were decided in favor of what appeared a majority to the eye. The competence of the meeting was: legislation for the Sich, administration and justice, international relations, matters of war and peace, and election of the *otaman* (chief) and Sich officer corps.

The OTAMAN, who headed the executive branch, was elected for a short term of one year and was always at the call of the Council. Therefore his power was of a republican type. He was the military commander of the Kozaks (in wartime his powers were considerably greater), administrator, and chief judge. He was aided by the Sich officer corps: judge, secretary, and aide-de-camp. A council of Sich officers met frequently to consider matters within the competence of the *otaman*.

In the eighteenth century there developed the ZAPOROZHIAN PALANKA, a lower administrative unit headed by a colonel. It had jurisdiction over the population of a corresponding area of the free lands of Zaporizhia. The lowest unit in the administrative division of Zaporizhia, the platoon (*kuren'*) was not tied to a certain territorial unit of the Zaporozhian lands. The platoon, of which there were 38 to 40, was a military unit of the Sich Kozaks, as well as the administrative unit in peacetime into which Zaporizhia was divided. The term *kuren'* denoted a common building or barracks in the Sich housing the Kozaks. The term also denoted an economic organization which conducted a common enterprise (production of honey and wax, fishing, hunting, wine-making, cattle raising, etc.), whose products were consumed by the unit (platoon). The platoon was headed by a *kurinnyi otaman* elected from among the Kozak members of the unit.

The Zaporozhian lands were incorporated by Russia and the Zaporozhian state was liquidated in 1775.

**Traces of the Ukrainian Political Order under Russia**

Some traces of the Ukrainian state structure were discernible within the territory of the Russian governorships which had constituted the Hetman state (the *guberniyas* of Chernihiv and Poltava) as late as the late eighteenth and early nineteenth centures. Thus, until 1842, these territories were governed by the Lithuanian Statute, and the Magdeburg Laws were binding in the cities until 1835. The additional social class of Kozaks still existed. The Kozaks lost their status of a military service class, but retained their personal freedom and did not merge with the class of serfs. The general court was reestablished for a certain period during the reign of Paul I. Following the abolition of the Lithuanian Statute, the law of the *guberniyas* of Chernihiv and Poltava still retained some of its provisions, particularly concerning the law of inheritance. These provisions remained in force until 1920.

The Zaporozhian Kozaks, migrating to the territories of Kuban [Vol. I, p. 790] established a Black Sea (since 1864—"Kuban") Kozak organization. The organization of its grass-roots administration indicated a continuation of the basic principles of popular government of the Kozak class continuing into the nineteenth and twentieth centuries.

*L. Okinshevych*

## CIVIL LAW

**Property and Possession**

The nobility, the former upper class which supported the new Ukrainian

Hetman power, maintained its property rights to land, including the right to alienate and bequeath it. The Kozaks, the most influential class in the Hetman state, solidified their land holdings during the insurrections and retained perpetual property rights with unlimited right of alienation.

The new upper class of Kozak officers gained access to large land holdings as a result of rewarded military service as well as contracts, with the right to bequeath such properties to heirs, not under the laws of inheritance but only on "merits of military service" and the ability to carry out administrative duties. During the term of Hetman Daniel Apostol, the land privileges of the nobility and Kozak officer corps, were formally unified, and a tolerant attitude was assumed toward the laws of inheritance. "The General Investigation of Properties" elevated this private possession of land to a property right and actually made it permanent. The new grants by the next hetman, Cyril Rozumovsky, discern only one property title: "to have and to hold forever and to his heirs."

The peasants were in a different position. Those living on lands of the monasteries and nobles were placed under the Lithuanian Statute soon after 1648. Although according to the Statute they were to be considered only tenants, they actually retained the right to alienate the land. This met with immediate resistance on the part of the monasteries and nobles. The peasants of the Kozak landholdings enjoyed the right of free disposal of real property much longer; their lands had mostly been acquired by "occupation," and the peasants managed to retain their rights throughout the second half of the seventeenth century, until the Kozaks took these lands as their own. The peasants of the "free military estates," that is, of the state land fund, had numerous duties to perform for the state, and hence they enjoyed the right to dispose of property to the fullest extent and for the longest time.

**Family and Inheritance Law**

The Hetman state adopted nearly all provisions of the Lithuanian Statute and the Magdeburg Law, some right after 1648 and some later. That during the period of the existence of the Hetman state some provisions of civil law, and particularly family and inheritance law, were modified, can be clearly noted from the draft of the Code of 1743. Among these were: stricter financial liability of the guilty party in actions for breach of promise and pre-nuptial contracts; granting to illegitimate children some inheritance rights to property acquired by the natural father, and the right to support and education from the natural father. The 1743 Code clearly defined the role played by customary law in the interpretation of the intent of the law, giving leave, in the absence of provisions of law, to judge "according to good custom."

**Ukrainian Civil Law under Russia**

Following the abolition of the Lithuanian Statute and the Magdeburg Law on the territory of the Hetman state, some provisions of active local civil law were nevertheless incorporated in the *Svod Zakonov* (Digest of Laws) of the Russian empire, and remained in force in the *guberniyas* of Chernihiv and Poltava until 1920. Among these provisions were the following: a creditor could hold mortgaged property only for three years from the date of its sale to a third party by the debtor, after which he had to seek satisfaction directly from the debtor (Vol. X, Section 1459, part 1); all actions for damage to real property were governed by a three-year statute of limitations (this term originated in Chapter 11, Section 52 of the Lithuanian Statute; in Russia these terms were ten years); if there were surviving sons, the daughters were not entitled to the estate, only to a dowry, which could not exceed one-fourth of the estate for all daughters; a mother's estate was inherited equally by sons and daughters; a sister could sue her brothers for dowry within ten years

of her marriage (for heirs of the daughter the limitation ran from the time of her becoming of age).

A provisional division of property, conducted according to the Lithuanian Statute, became final ten years after a minor reached majority. As regards laws of inheritance, the Russian code was compelled to tolerate inheritance among Ukrainian peasants according to the age-old customary law which was quite the opposite of Russian law.

## CRIMINAL LAW

### General Characteristics

The law of this period shows a deeper understanding of law and justice, a better system, and a more comprehensive definition of individual crimes. There was a continuation of the dual principles of public and private law. Free persons as well as slaves were protected by the law. Slaves were treated as persons under criminal law, and with the exception of "private crimes" for which they could be prosecuted by their master on the principle of dominial power, their criminal acts came under the jurisdiction and punishment of public courts. All persons were objects of crimes, without regard to class or nationality. In time, persons from the higher estates enjoyed greater legal protection.

Depending on criminal intent, crimes were divided into intentional and unintentional. The law also recognized accidents where the perpetrator went unpunished, but was liable to pay damages. Liability was mitigated by: provocation, extreme poverty, hunger, unthinking acts of minors, acting under duress, and so on. Acts of self-defense went unpunished; retaliation mitigated the punishment of the attacker. Attempted crimes were also punishable. The law distinguished principals and accessories, the latter being often less severely punished.

### Crime

Crimes were classified approximately according to the same system as in the preceding period.

CRIMES AGAINST THE PUBLIC INTEREST were divided into crimes of lese majesty, against the state, and against society. Crimes of lese majesty were identical as in the previous period. CRIMES AGAINST THE STATE, such as treason, divulging state secrets, surrender of a city or fortress to the enemy, and exporting arms and strategic materials, were all punished by the severest penalties. Particular punishments were applied to certain crimes: forgery of coins was punished by pouring molten lead into the felon's throat. CRIMES AGAINST SOCIETY included crimes against religion, morals, and the family. Crimes against religion were punished very severely: overt crimes, such as blasphemy, abandonment of faith, witchcraft, and sorcery, were punished by "direct death," usually burning at the stake, and in lighter cases by "political death" – deprivation of rights, exile, and corporal punishment. CRIMES AGAINST MORALS included deceit for gain, rape, unnatural acts with minors regardless of sex, kidnapping of women, and extramarital relations. Punishments for these crimes ranged from death to flogging in public. CRIMES AGAINST THE FAMILY included: adultery committed by either spouse, deliberate bigamy, incest, abortion, and homicide or abandonment of an illegitimate child. These crimes were punished with the greatest severity, usually by beheading. A husband could kill a man with impunity if he caught him in the act of adultery with his wife.

CRIMES AGAINST PRIVATE INTERESTS were divided into crimes against life, body, honor, liberty, and property. CRIMES AGAINST LIFE, that is, homicides, were divided into intentional and unintentional, and intentional into heavy and light. The severity of the crime was affected by the social position of the criminal in relation to the victim, the relationship between them, force used, weapons used, day or night, and so on. Intent and malice were presumed in the case of patricide. Habitual criminals

were punished more severely. Intentional homicide was punished by death. For unintentional homicide, the punishment was also usually death, but the execution was "mild," that is, by beheading. CRIMES AGAINST THE BODY were divided into maiming, wounding, and beating. CRIMES AGAINST HONOR AND LIBERTY developed particularly widely during the second half of this period, with the formation of a class society. CRIMES AGAINST PROPERTY, formulated under the system of law of the Lithuanian Statute, were differentiated according to the element of violence and classified as robbery, theft, or misappropriation. Theft (larceny) could be grand or petty, depending on the value of the stolen object (the demarcation line was 20 rubles) and the circumstances of the crime. In principle there was only one form of punishment for larceny, hanging, although lighter punishment was meted out in practice.

**Punishments**

The death penalty was the most frequent among PUBLIC PUNISHMENTS. It was used not only for crimes against the state and society, religion and morals, but also in a large number of instances for crimes against private interests. Common forms of the death penalty were beheading and hanging, the latter being considered the most shameful. Special forms of the death penalty were quartering, burning at the stake, burying alive up to the neck, pouring molten lead down the throat. In addition to these forms, the courts were at liberty to choose even more painful death penalties than provided by law. This was usually a combination of torture followed by the death penalty. The death penalty was also combined with dishonor of the criminal after death. Corporal punishments were either beating or maiming, and from the moral aspect they were divided into regular and shameful. Beatings were carried out in public at a stake. The penalty of deprivation of liberty became one of the most widespread forms during this period. Imprisonment could be either jail or arrest. Arrest was often used as a preventive measure or compulsion. Persons in military service were held in "army" prisons. Penalties of deprivation of honor and rights could be imposed by all courts.

Additional punishments could be imposed along with the main penalties: exile from the community, church penance, recantation of slander, public begging for forgiveness, and others. Exile from the community severed a person's ties with it, without depriving the person of his general rights of citizen. It was usually applied in cases of public flogging. Church penance was a form of correction of the criminal. It was imposed in cases of crimes against the family and humanity. Church penance had to be repeated four times a year during solemn holy days. The criminal stood in the church door and publicly admitted his guilt.

PRIVATE PUNISHMENTS were intended to correct a wrong and punish the offender at the same time. These were money fines, some going to the aggrieved party, some to the state, and frequently equally divided between the two. Among the principal fines was the head fine, a private penalty for homicide. The fine differed according to the social class of the victim, and fluctuated between 24 and 120 rubles. This fine was often doubled, as, for example for women or officials. Fines for slander were imposed according to the social status of the aggrieved party. These fines were set forth in a tariff, ranging from 4 to 64 rubles, sometimes imposed in double amounts.

## THE JUDICIAL SYSTEM

The judicial system of the Hetman state is divided into two periods: the period of Kozak courts (1648–1763), and that of the so-called Statute courts (1763–83).

During the period of Kozak courts the judicial system consisted of state (Kozak),

city, community, dominial, ecclesiastical, and some special courts.

THE KOZAK STATE COURTS comprised a four-stage organization, divided into provincial and central courts.

THE PROVINCIAL COURTS, which were subordinate to Kozak State courts, consisted of a network of courts of subservient status: village,* *sotnia*, and *polk*. The village courts decided small civil and criminal matters of local and non-resident Kozaks. These courts were collegial. The next stage was the courts of the *sotnias;* they were also collegial, presided over by the captain (*sotnyk*), and they considered civil and criminal matters of the Kozaks from the area of the *sotnia*. Matters between Kozaks and townspeople were subject to joint courts of Kozaks and townspeople. Courts of the *polks* were established in the seats of *polk* districts. They acted as courts of the first instance for Kozak officers, and as appellate courts for appeals for *sotnia* courts in civil and criminal cases. The court was presided over by the colonel (*polkovnyk*). The regimental chancery also acquired some judicial privileges in the eighteenth century.

The CENTRAL COURTS (subordinate to Kozak state courts) comprised the General Military Court, the General Military Chancery, and the Hetman's Court. The General Military Court functioned in the residence of the hetman. At first it was the highest tribunal of the land, but subsequently its decisions could be appealed to the General Military Chancery. This court consisted of the judge-general and other members of the corps of chief officers and eminent Kozaks. It acted as the court of the first instance in matters concerning the corps of generals, colonels, aides-de-camp, and persons "under the protection of the hetman," and as a court of appeals for decisions of the higher courts. The Court of the General Military Chancery appeared only in the eighteenth century under Russian pressure. This Chancery had appellate jurisdiction, and unnecessarily increased the number of appellate instances. The Hetman's Court based its jurisdiction on the judicial power of the hetman as chief magistrate. Its competence was theoretically unlimited. The hetman could take any matter under advisement, either in the first instance, or after judgment of the lower courts. His decision was final.

The system of CITY COURTS (equivalent to Kozak state courts) comprised city hall and magistrate courts, which basically continued the organization of the previous period.

COMMUNITY VILLAGE COURTS decided small matters of the peasants in civil and criminal cases. The widespread CIVIC (*kopni*) COURTS of the previous period did not thrive in the hetman period, although they survived into the eighteenth century. Popular participation, which was afforded earlier by the *kopni* courts, was extended during the hetman period to almost all courts on the principle of collegiality, that is, representatives of the people sitting in on all proceedings.

The DOMINIAL COURTS continued in local matters. They declined after 1648, but subsequently with the new division into a class society they were revived, although in a much milder form than before.

ECCLESIASTICAL COURTS maintained their separate status from the previous period. The state did not interfere in the ecclesiastical judicial system, but considerably narrowed its jurisdiction. Clerics were now subject to lay courts in all criminal and important civil matters.

During the period of the so-called STATUTE COURTS, introduced during the years 1760–3 by the great judicial reform of Hetman Rozumovsky on the pattern of the judicial system of the Lithuanian Statute, the basic units of the judicial system of the Hetman state, the Kozak courts, were replaced by land, city (*polk*), and chamberlain courts, headed by a reformed General Military Court. The re-

*There were *two* types of "village courts"—those within the system of Kozak state courts and those defined as "community courts."

form did not touch any other courts. The main advantage of the reform was that it limited the number of appellate instances to two and separated judicial power from the administrative.

The judicial system of the Zaporozhian Sich deserves special mention. It was based on the general administrative organization, because there was no separation of the administrative and judicial power of Sich. The lower courts in Sich consisted of the courts of platoon *otamans* and colonels, while the higher were the courts of the military judge, the *otaman* of Sich, and the Sich Council. The military judge conducted trials independently. His decision could be appealed to the Sich *otaman* or Sich Council. The Sich *otaman* was considered the chief magistrate, and his decisions were final. However, in peacetime his decisions could be appealed to the Sich Council. He had the right to condemn to death and to pardon the sentenced. The court of the Sich Council was held with the participation of all Kozaks present in Sich. Only very important matters were placed before the Council.

**Court Proceedings**

The sources of procedural law during this period were the same as those of the earlier period. However, procedural law was undergoing considerable changes, particularly as a result of the reform of the judicial system in the eighteenth century under the influence of the formalistic Russian procedure. The negative features of this process are the merging of judicial and administrative power in the hands of the Kozak officer corps, and the endless number of appellate instances which caused delays in the administration of justice. Court proceedings began with the filing of a complaint which the plaintiff submitted to the court secretary. The case was then called and the court ordered the plaintiff to explain his case. This was followed by the defendant's answer, which was first limited to formal objections and then material denials. The plaintiff had the right to reject the defendant's objections "to the face." If the defendant so desired, he could make a reply, which was called justification of the defendant. Then the court conducted the trial, taking evidence, and, completing the case, gave judgment in closed session. The judgment was issued after "comradely consultation" (with members of the bench) and "taking the law into account." Decisions of the courts could be appealed in regular course, by suing the judge, or by permission to sue anew. The appellate court considered the case on the basis of the pleadings and minutes and could either change the judgment or affirm it.

## 5. UKRAINE UNDER POLISH DOMINATION IN THE FOURTEENTH TO EIGHTEENTH CENTURIES

Two historical events, nearly two hundred years apart in time, brought Ukrainian lands under Polish domination: Galicia (with the Kholm region) was annexed by Polish kings under their dynastic claims in 1387 [Vol. I, pp. 610ff.], and the bulk of the remaining Ukrainian territory was incorporated as a result of the Union of Lublin in 1569 [Vol. I, pp. 623ff]. The subsequent constitutional, legal, and judiciary development of these two parts of Ukraine took place separately and under different conditions and, therefore, require separate treatment.

### GALICIA

#### Sources of Law

After the death of George II in 1340, the last Ukrainian prince of the (distaff) line of the House of Roman, the kings of Hungary and Poland advanced their claims to Galicia while the local Ukrainian boyars (noblemen) tried to preserve the country's independence. A military and political struggle followed that lasted for nearly half a century. During that period Galicia was for some time under a sort of oligarchic government of the Galician boyars (Dmytro Dedko), then was occupied by the Polish king Casimir the Great, and later enjoyed a measure of autonomy under a Hungarian royal governor. The final annexation by Poland was completed when in 1387 the Hungarian princess Jadwiga became the queen of Poland.

The period that followed the annexation was called the "time of the *Rus'* law in Galicia" (*tempus iuris Ruthenicalis*), because the laws of the former Ukrainian Galician-Volhynian state remained in force, and contemporary Ukrainian was still the official language of the documents of that time. However, Polish officials and judges more and more often applied Polish laws, and Latin, the official language of Poland, rapidly replaced the Ukrainian language. In addition, Polish settlers brought their laws into the country. Even more significant were German laws granted to towns and cities (Magdeburg Law) and especially to the large groups of immigrant German settlers.

The reform of 1434 (Privilege of Jedlnia) finally introduced Polish laws to Galicia. However, certain customary laws remained in force within the Ukrainian population and "communities under *Rus'* laws" (along with those under German and Armenian laws) continued.

Customary laws were still in use in Poland and, as such, became in part a source of law in Galicia. More important were statutory laws codified in the "Statutes of Casimir the Great" in 1347, which were in part translated into the Ukrainian language. The king granted privileges and issued edicts, decrees, and ordinances which had the force of law. Provincial assemblies passed legal norms called *laudum*. Somewhat later, parliamentary (*Soim, Sejm*) legislations (*constitutiones*) became a basic source of law.

**Government**

Before the annexation by Poland, Galicia consisted of the principalities of Halych, Peremyshl, Zvenyhorod (later Lviv), and Belz. According to the Polish system, this territory was now divided into three provinces (*voievodstvos*): Lviv with the lands (*zemlias*) of Lviv, Halych, Peremyshl, Sianik, and the counties of Sambir and Zhydachiv; Belz; and Podilia. They were called the Ruthenian *voievodstvos*. Each land was divided into territories called *ambitus* which, in turn, consisted of village communities.

The annexation made Galicia a mere province of the kingdom of Poland. As such it remained until the partition of Poland in 1772. For a few decades the traditional Ukrainian administrative setup was retained: *voievodas* were, as before, at the head of the provinces as administrators and judges; but the royal Polish officers, the *starosta* with the *starosta* general in Lviv, were placed above them. Lower officers, such as the *sots'kyi, desiatnyk*, or *tyvun*, also remained in office though gradually losing their importance.

In 1434, Polish administration was introduced in Galicia. The Ukrainian *voievodas* were replaced by Polish *wojewodas*, the highest land officers. A castellan was put in charge in each land of the Ruthenian *voievodstvo*; finally the *starostas*, king's representatives, with administrative and some judicial powers, were appointed in each county of the land. From then on, this system of the *starostas* became a basic form of administration in Galicia.

**Civil Law**

The main body of the civil law that went into effect in Galicia was the General Land Law (*ius commune terrestre*). Special laws, such as the German Law, Canon Law, Jewish Laws, etc., were limited in scope and significance as regards the Ukrainian population. Polish civil law was almost entirely customary, based on medieval sources and ideas, and it remained so until the partition of Poland. It was largely determined by two factors: blood relationship and soil. It paid relatively little attention to foreigners; chattels and transactions with them were also of little concern. Property rights were mostly concerned with land and its ownership by members of the family. The absolute and hereditary right of nobility to their land (*allodium*) was recognized. The Ukrainian peasant, who under the old law was an owner of his land, now became only its user, while the nobleman became its owner; the peasant was attached to the land. But many norms of the old customary law rooted in the *Rus'* Law (*Ruskaia Pravda*), especially those regulating family and related relations, remained in effect in Ukrainian communities in Galicia for a long time.

**Criminal Law**

Polish criminal law, which was extended to Galicia after its annexation, was partly codified in Casimir's Statutes and partly in later separate statutes or constitutions (e.g., that of 1726). How-

ever, customary law remained an important supplementary source of criminal law. Traditional concepts of crime and punishment incorporated in the *Rus'* Law and later in the Lithuanian Statute persisted in the Ukrainian communities in Galicia for centuries. Polish criminal law had a religious character. Misfortunes of the state were related to God's anger; a criminal was considered a sinner against God's will and, since the king was the supreme judge, also a violator of the king's will. Crimes were basically divided into public (against the state and the ruler, against the financial interests of the state, against state authorities, heresy) and private (against bodily security, honor, property rights, etc.). Punishment was regarded as vengeance of the ruler or of the law (*vindicta iuris*). But public vengeance (*vindicta publica*) was the dominant Polish concept of punishment. The idea of general deterrence as the object of punishment became evident quite early.

**Procedure**

After the codification of Casimir's Statutes, the unity of civil and criminal procedure was generally preserved until later (circa fifteenth century) peculiarities of criminal procedure in cases of public crimes developed. The procedure was accusatory: "there shall be no trial without a plaintiff" was the principle recorded in the Statutes. The trial was oral and public. The principle of disposition, which made it possible for the parties to agree on the rules of procedure, developed early; it helped overcome trial formalities and speed up procedure. Appeals of court rulings could be taken to one higher instance, except from decisions of private courts of landholders (original dominial courts).

**Courts**

During the first decades following the annexation of Galicia, the courts which had jurisdiction over the Ukrainian population remained basically unchanged. Somewhat later, the *starosta* (*capitaneus*), the king's officer, was given judicial power. The *starosta* courts were collegial, with some noblemen and a "judge" versed in the law which governed the parties participating as assessors. These courts applied Polish rules of procedure as well as the old Ukrainian substantive law with respect to local Ukrainian population. Appeals from the decisions of these courts could be taken to the court of the *starosta* general in Lviv.

The reform of 1434 introduced the Polish judicial system with a clear class character. CITY (*grodzki*) COURTS as state courts were presided over by the *starosta*, with a city judge as his assistant. The court had jurisdiction over all inhabitants of the district in more serious criminal cases (and over the king's peasants in all matters). LAND (*ziemski*) COURTS became autonomous courts of the nobility with a land judge presiding and assessors from among the noblemen participating in the trial. These land courts later (seventeenth century) lost their significance in favor of the city courts. The courts of *viche* (Polish *wiec* [assembly] of the noblemen acted as appellate courts for both the city and the land courts until they disappeared in the fifteenth century.

By far the greatest part of the Ukrainian population of Galicia was subject to the jurisdiction of the COMMUNITY COURTS in cities and villages. City courts functioned mostly under the German (Magdeburg) laws granted to the city. They had jurisdiction over all townspeople in civil and criminal cases, but burghers ruled by other than German laws (e.g. Jews, Armenians) were tried by mixed courts with assessors from their own groups. Village courts retained most of their Ukrainian character; they remained basically unchanged in their composition and procedure and applied old Ukrainian law as before. They tried all civil and minor criminal cases.

There were also new DOMINIAL COURTS introduced in Galicia. Originally, in

Poland, they were private courts of landed gentry for trying their peasant serfs. In Galicia, however, they changed into collegial courts with assessors from among the peasants. Unlike their Polish counterparts, they functioned under law and were to apply those legal provisions which pertained to the parties in court. In certain cases, the peasants could appeal from their decisions to public courts. However, the magnate, acting as judge, was actually not bound by the law. In addition, not only did his court serve as the appellate court for village community courts, but he was entitled to take over from those courts more important cases for his decision. Other courts, such as the king's court, replaced in the sixteenth century by crown tribunals, courts of the *Sejm*, ecclesiastical courts, and so on, had little bearing on the Ukrainian population in Galicia.

King Casimir the Great, who first occupied Galicia in 1340, intended to make Ukrainian Galicia a Polish province. His successors continued the policy and made courts and laws its instruments. Polish settlers brought their laws into the country even before the Polish law was officially introduced in Galicia. More important, German colonists in cities and towns under the Magdeburg Law, were granted a privileged position which allowed them to run city governments while Ukrainian burghers were deprived of this opportunity. As presiding judges in their courts, Polish *starostas* played a role in this policy of colonizing Galicia, and the dominial courts contributed greatly to the decline of the village courts with their old Ukrainian legal traditions.

## CENTRAL UKRAINIAN PROVINCES

### Sources of Law

In 1569 the Kingdom of Poland and the Principality of Lithuania signed the Union of Lublin by which these two countries, until then joined in a personal union through a common monarch, entered into a real union. Lithuania was compelled to cede to Poland the Ukrainian provinces which had belonged to her since the fourteenth century [Vol. I, pp. 618ff.]. These provinces now became a part of the Polish Kingdom, with the Polish constitutional law as the basic source of their political and social structure.

The most important source of law (civil and criminal) was the Lithuanian Statute (see *supra*, pp. 23 ff.). Before the incorporation of the Ukrainian provinces, two editions of the Statute were published. The second edition of 1566 remained in force in these provinces until the third (and final) edition was published in 1588. It was an enlarged edition (488 sections) and incorporated all the changes that were deemed necessary under the influence of the Polish legal concepts. Nevertheless, it remained basically the old Statute. It remained in force in the Ukrainian provinces under Poland until the end of the Polish rule and long afterwards. In Poland, the Lithuanian Statute had the force of a supplementary source since no uniform code of laws was available in that country. The Statute was written in the Ukrainian language and a Polish translation was later made of the third edition. It included provisions of public law, privileges of the nobility, judicial system and procedure, civil law (family, obligations, property), and criminal law.

The so-called Lithuanian Matrix (princely archives of legal documents) was an important collection of laws. For the Ukrainian provinces under the Lithuanian Statute a similar official collection was established in Warsaw, called the Volhynian Matrix. Court records should also be mentioned as an important source of legal material.

### Government

The Ukrainian provinces incorporated as a result of the Union of Lublin were organized in three *voievodstvos* on the Polish pattern: Kiev, Volhynia, and Bratslav (later also Chernihiv). The *voie-*

*vodas* and the *starostas*, officials under the Polish law, were their chief administrators (see *supra*, "Galicia"). An elected king was at the head of the state; but his powers were greatly curtailed by the Polish gentry and nobility, who formed the diet and the senate and were the only class entitled to participate in the government. Since according to the provisions of the Union of Lublin Ukrainian nobility was granted equal rights with their Polish counterparts, it was technically the only Ukrainian group with some influence on the affairs of the state. However, the policy of discrimination against non-Catholics and of assimilation of the upper classes of society gradually deprived the Ukrainian people of its leading class—the nobility. At the same time, Ukrainian social structure was changing on the Polish pattern. Poland was at that time a monarchy based on the estates with a clearly defined differentiation according to privileges granted to each of them. The ruling estate in Poland was the nobility (*szlachta*). Within Ukrainian society, this process brought about a clear-cut division into separate social classes. The former classification of nobility, free citizens and peasants, semi-dependents and slaves, was replaced by two chief estates: the nobility, which included former princes, lords, and boyars, and which had full rights to own landed property, and the peasant class which was losing the right to personal freedom and became attached to the land owned by the nobility. Somewhere between the two classes were the burghers. Because of the privileged position of the German and Polish settlers in the cities under the Magdeburg Law, this Ukrainian class had little opportunity to play a significant role.

In addition to these classes, another Ukrainian estate emerged in the fifteenth century and developed into a powerful organization: the Kozaks [Vol. I, pp. 629ff.]. The origin of the Kozak organization can be traced to the migration of people from the central Ukrainian regions to the free lands of the Ukrainian steppe region. As an important paramilitary organization, the Kozaks enjoyed special rights and were subject to special laws. In the sixteenth century the Kozaks were enrolled in an official Polish register which gave them a special status. Their organization consisted of territorial units called *sotnias* (hundreds) and *polks* (regiments) with *sotnyk* and *polkovnyk* as their leaders. They were assisted by councils of officers. The central government was headed by a hetman elected by military councils (*Radas*) in a democratic way. The *Rada* had also authority to depose a hetman. The general staff served as the hetman's council. All these officers and the governing bodies were recognized as organs of the (Polish) government and were given a relatively broad autonomy. The Kozaks developed their own norms of civil and criminal law and procedure, rather informal and based on customs.

The Kozaks who lived beyond the Dnieper rapids formed a special organization called Zaporizhia. The Zaporozhian Kozaks recognized that fact that they were subjects of the king of Poland. But with the Polish administration unable to control their territory, they had little if any respect for Polish laws.

### Civil and Criminal Laws

These laws were based on the Lithuanian Statute (3rd edition). Insofar as they departed from the old norms of the Statute, they were similar to those prevailing in Galicia.

### Courts

Courts in the Ukrainian *voievodstvos* (after the Union of Lublin) were reorganized according to the Polish system (see *supra*). For a decade (1579–89), the tribunal at Lutsk (Volhynia) was recognized as their higher court. But this Ukrainian (Ruthenian) tribunal was abolished and the general tribunal at the Polish city of Lublin took over the former's appellate functions. An autonomous court system for the Kozaks

emerged at this time and was officially recognized by the end of the sixteenth century. It gave the hetman the authority to try the cases of the Kozaks.

# 6. IN THE RUSSIAN AND AUSTRO-HUNGARIAN EMPIRES FROM THE LATE EIGHTEENTH CENTURY TO THE OUTBREAK OF WORLD WAR I

As a result of the three partitions of Poland (1772, 1793, and 1795), the Russo-Turkish War (1769–91), the Napoleonic Wars, and the Congress of Vienna (1815), the Ukrainian territories came under the domain of two vast empires—the Russian and the Austro-Hungarian.

All Ukrainian territories which had been formerly part of Poland (with the exception of Galicia) were annexed by Russia and joined with the Ukrainian territories already in Russia's possession [Vol. I, pp. 667ff.]. The western Ukrainian territories, that is, Galicia and Bukovina, fell under Austria. Transcarpathia had already been part of Hungary for centuries.

This new partition of Ukrainian territories brought about fundamental changes in the constitutional and legal conditions.

## THE RUSSIAN EMPIRE

### Introductory Remarks

During the latter half of the eighteenth century, Russia had eradicated all legal foundations of national home rule on the Ukrainian territories [Vol. I, pp. 656ff.]. Regular central Russian administration was introduced, but basic Ukrainian laws continued to be in effect for a long time. The Lithuanian Statute was in force until 1840 when the Russian *Svod zakonov rossiiskoi imperii* (Digest of Laws of the Russian Empire) of 1835 was introduced in Ukraine. However, some norms of the Lithuanian Statute (particularly in the field of inheritance) were incorporated into the Russian Digest of Civil Laws and remained in effect in the Ukrainian *guberniyas* of Chernihiv and Poltava until 1920. In the cities, the Magdeburg Law was replaced in 1835 by the Russian *Gorodovoe polozhenie* (city law). In all other fields of administration, laws and decrees of the Russian government were put into effect in Ukraine.

The system of government in the Ukrainian territories during this period was based on the constitutions of 1832 and 1906.

### The Central Government*

Russia's absolute monarchy had been in a state of development since the

*For details see Vol. I, pp. 689–96.

eighteenth century and this condition prevailed until the introduction of the constitution of 1906. The central government was headed by the tsar-emperor, who was vested with absolute power and authority (Law of 1721, Constitution of 1832). The constitution of 1906 was supposed to bring about a constitutional monarchy, but it still endowed the tsar with "supreme autocratic power" (Art. 4), and stated explicitly that "the central administrative power [was] to rest exclusively in the hands of the tsar" (Art. 10). In spite of reforms, the tsar retained the character of an absolute monarch until the fall of the empire in 1917. In the administration of the state, the tsar was aided by the following organs of government: the Senate, appointed by the tsar, which was originally an executive, legislative, and judicial body, but subsequently retained only the function of the supreme tribunal of cassation; the State Council as an advisory organ in legislative matters which, following the reforms of 1906, became the high legislative chamber; the Cabinet of Ministers; and the Holy Synod, the latter being the highest administrative organ of the Orthodox Church which was also headed by the tsar.

**Legislation**

At the beginning of this period, in line with the old Russian tradition, the will of the tsar was the sole source of law. The constitution of 1832 affirmed this, although it required a certain formal expression of the tsar's will (law, decree, etc.) to acquire a binding force. The reforms of 1906 introduced basic changes into legislation. The constitution provided for an elected State Duma as the legislative body, but the tsar introduced a bi-cameral system, decreeing that the State Council was a higher chamber and endowed it with greater power than the Duma. The Council's membership was as follows: one-half appointed by the tsar and one-half elected according to estate rosters, which allocated many votes to the clergy and nobility—estates which were traditionally in favor of the monarchy. The tsar convened the Duma and had the power to dissolve it. In addition, he had the power to issue emergency laws without the concurrence of the Duma. Thus, the legislative power of the Duma, an elected body, was very restricted.

**Territorial Administration**

During the reign of Catherine II, Russia, and later Ukraine, were divided into *guberniyas* (provinces) and these into counties or *uezds.* Ukraine was divided into ten *guberniyas* and these constituted three general-governorships, headed by general governors appointed by the tsar and responsible to the tsar only.

**Home Rule**

*Polozheniie o gubernskikh i uezdnikh uchrezhdeniiakh* (Law on Provincial and County Institutions) of 1864, introduced elective *zemstvos* (land institutions) in both *guberniyas* and counties as organs of local home rule. In Ukraine they were introduced between 1865 and 1870, except for the Right-Bank territories where they did not come into existence until 1911. Assemblies acted within the provinces and counties as advisory organs, and the *zemstvo* executive boards as executive organs of home rule. The *zemstvos* were under the supervision of governors and the Ministry of Internal Affairs.

**Civil Law and Procedure**

The Civil Code (*Svod zakonov*) of 1832 was a compilation of Russian laws of the seventeenth through the nineteenth centuries and as such it was basically different from western European codes. It showed very little influence of the Roman law. The fundamental concepts and definitions were later borrowed from the French law. There were considerable lacunae in the code; it lacked guiding lines and was strictly casuistic without any system. The code was re-edited several times with supplements

(the last edition came out in 1914). It consisted of four parts: family law; law of property; obligations; and inheritance law.

Marriages and divorces were within the jurisdiction of the Church, but obligations of marriage were of a lay nature.

In the law of property, there is a confusion of the terms "possession" and "property." The law did not provide a clear definition of the meaning of property nor did it protect the bona fide purchaser, being guided by the principle of strict forfeiture.

The law of obligations was very incomplete. Many types of contracts were not even considered. Legal majority was achieved at the age of 21, with legal capacity for certain acts at the ages of 14 and 17. There was no specific form required of legal acts, except that the sale of real property required notarial acknowledgment and witnesses.

Intestate inheritances were governed by the degree of blood relationship. If there were sons, the daughter received a lesser portion. The position of spouses, daughters, and parents was inferior. In the absence of direct descendants, lateral relations took precedence over parents. Contracts of inheritance were unknown.

The Commercial Code of 1832 was based on Russian customary law with strong additions of the French Code de Commerce. The code provided for the following forms of commercial ventures: open partnership, undisclosed partnership, corporation, and cooperative.

The Code of Civil Procedure of 1864 was patterned on the French code and it was based on the principles of controversy, orality, public hearing, and unhindered evaluation of evidence. The court considered only evidence submitted by the parties.

**Criminal Law and Procedure**

Russian criminal law introduced into Ukraine was codified in 1832. It was based on Russian tradition of casuistry. The punishments showed lack of systematization in the law. There were nine types of punishment: death, corporal punishment of many cruel forms, exile with labor, deportation, compulsory settlement in Siberia, settlement in remote localities, military service, prison and arrest, fines, church contrition, and disciplinary penalties.

The severity of the punishment did not necessarily fit the crime. A new criminal code went into effect in 1845 with discernible features of Bavarian and French law. It was amended in 1864 and 1885, but retained Russian traditions. Also, some new institutions were introduced. In particular, the law retained its casuistic nature (2,224 sections). Exile and corporal punishment were retained. Death penalty was provided only for political crimes. Even intent was punishable in the case of political crimes.

Parts of a new criminal code went into effect in 1903. Its general principles were strongly influenced by the criminal codes of Germany, Belgium, and France. Crimes were divided into three groups: felonies, minor crimes, and petty offenses. Felonies were punishable only if committed with intent. The system of punishments was modernized. The main penalty and additional penalty replaced the numerous previous types of punishments. Nevertheless, the system of punishments remained reactionary: death penalty (only for crimes against the state), exile with forced labor (for life or 15 years), deportation for settlement, heavy imprisonment, fortress prison, arrest, and fine. The code had no provision for suspended sentences. The detailed part was as casuistic as the old.

**Judicial System**

Prior to the judicial reform of 1864 the courts were part of the administration. The administrative organs could give orders to judges and even remove them from office. The judicial system operated along the division into estates (separate courts for the nobility, clergy, townspeople, and peasants) in line with the Russian tradition. There was no equality under law. The judges had no adequate

legal training, and judges with a college education were scarce.

The Judicial System Law of 1864 followed the French and British pattern. Judges were made independent and could not be removed from office during good behavior. They were governed by law and could be removed from office only pursuant to a final criminal judgment (after 1885, also as a disciplinary measure). The law proclaimed that all men were equal under the law. Estate courts were abolished except for the village and ecclesiastical courts. Two new types of courts were established: courts of general jurisdiction and justices of the peace. Courts of general jurisdiction had two instances: district courts and courts of appeal. Judges were appointed by the tsar on the recommendation of the minister of justice from among candidates suggested by the courts. District courts also supervised trials by jury, the latter being entitled to vote only on the guilt or innocence of the defendant (12 jurors). The court of appeals was the appellate instance, with one court for several *guberniyas.* The Senate was the Court of Cassation. Justices of the peace had jurisdiction over minor matters. They were locally elected. The code of procedure provided for a simplified procedure before justices of the peace, and appeal from this instance was to a council of the peace consisting of three justices of the peace.

The minister of justice was the attorney general (chief prosecutor) with a *prokuratura* organized under him in the courts of all instances. According to the French pattern, the prosecutor was not only the accuser in criminal cases and responsible for the investigation, but also had supervision of "legality," that is, the observance of laws and directives on the part of officials and institutions.

After 1864, the Bar was organized into a professional association in accordance with western standards. Admission to the Bar was conditioned upon completion of studies of law and a five-year apprenticeship.

All notaries were government employees and their main functions were official authentication of documents and taking depositions.

## AUSTRO-HUNGARIAN EMPIRE

### Introductory Remarks

When Galicia was incorporated in Austria from Poland (1772) and Bukovina from Turkey (1774), the Austrian monarchy was going through the period of Enlightened Absolutism and, simultaneously, a centralization of its administration. Hence, Galicia was immediately annexed as an integral part of Austria. Bukovina, first a military district, became a district of Galicia in 1787. Attempts to annex Hungary and Transcarpathia and make them an integral part of Austria failed. The Ukrainian part of Galicia, together with the western Polish part, was given the name of the (Austrian) "Kingdom of Galicia and Lodomeria."

On February 26, 1861, the emperor promulgated the constitutional law (The February Patent) which provided for a home-rule status for the "lands," including Galicia and Bukovina. Thus Bukovina was also given the status of a "land." The amended Patent and four additional fundamental laws, all dated December 21, 1867, became the new constitution of Austria, which thus embarked upon the road of constitutional government. The empire now became a dual monarchy under the name of Austria-Hungary. Galicia and Bukovina became autonomous lands, while Transcarpathia remained a Hungarian province. Galicia and Bukovina were governed by Austrian laws, and Transcarpathia—by Hungarian.

### The Central Government*

The executive power was vested in the emperor. He exercised it through his imperial and royal ministers, appointed

*See also Vol. I, pp. 718–24.

by him and responsible to him. This government was applicable to Galicia and Bukovina completely, and to Transcarpathia to the extent that the treaty with Hungary establishing the dual monarchy transferred some powers to Austria (foreign affairs, the royal household, defense, and the treasury).

The central legislative branch of Austria and her lands was a bicameral parliament (*Reichsrat*) which, in accordance with the February Patent of 1861, represented the kingdoms and lands of the Austrian monarchy. The parliament consisted of a chamber of lords and a chamber of deputies. The chamber of lords consisted of all male adults of the ruling dynasty, hereditary representatives of the noble families, the higher clergy, and other representatives appointed for life by the emperor. The Greek Catholic metropolitan was a permanent representative of the Ukrainians.

The Austrian chamber of deputies was at first composed of delegates of the land assemblies. The election law of February 2, 1873, introduced direct voting to the Austrian chamber of deputies, who were elected for a term of six years in four classes (*curias*) of voters: big landowners, chambers of commerce and industry, cities, and rural communities. The *curia* electoral system was abolished only in 1907 with the introduction of general equal, direct, and secret voting (with the exclusion of women).

Law No. 142, one of the fundamental laws of 1867, introduced equality among all nationalities of Austria with a guarantee of the right of national development and the use of their own language in schools, public institutions, and courts. Personal rights of citizens were also guaranteed.

### The Central Administration in Galicia and Bukovina

Administratively, Austria was divided into 14 lands, including Galicia and Bukovina. The larger lands (e.g., Galicia) were governed in the name of the imperial government by governors; and the smaller (e.g., Bukovina), by land presidents. The lands were divided into counties headed by county commissioners. The larger cities such as Lviv and Chernivtsi had their own charters and were governed by city councils.

### The Autonomous Administration of the Lands

According to the Land Statutes of 1861, Galicia and Bukovina had their own autonomous land administrations. Legislative functions were performed by the land diets, and the administrative by an elective land executive board and its subordinate territorial administrative bodies. Such organs in Galicia were county councils and county executive boards, and the local organs were directly subordinate to the land diet and the land executive board.

The land diet was unicameral. It consisted of elected and ex officio members. The latter included archbishops and bishops of the three Catholic rites and the rectors of the universities of Lviv and Cracow. The presiding officers (speakers) were appointed by the emperor for each session.

### Civil Law and Procedure

At the time when Galicia and Bukovina were being annexed by Austria, new civil legislation was in the formative stage. The new civil code was made public in 1811, and became effective January 1, 1812, for all of Austria, including Galicia and Bukovina, except for the regions of Chortkiv and Ternopil where it was introduced in 1816. In its provisions, the code was clearly influenced by the "law of nature" (Roman law of property) and by Kantian philosophy. It was a modern code with progressive ideas although it did preserve some institutions of the feudal period (e.g., form of split estates). It was supplemented by the Commercial Law of 1862. The Code of Civil Procedure was introduced on August 1, 1895. It was based on the principles of orality and open court, and provided for three instances

with appeals to a second instance and revision to the Supreme Court.

**Criminal Law and Procedure**

During the early years of Austrian occupation of Galicia and Bukovina, criminal law and procedure were governed by the so-called *Constitutio Criminalis Theresiana* of an ecclesiastical nature. The Law of 1789, which amended it, was more secular but it was only the Law of 1803, effective as of January 1, 1804, which can be considered a modern code. Finally, the Imperial Patent of May 27, 1852, introduced a new criminal code which remained almost unchanged until the fall of the monarchy. Criminal law became emancipated from feudal influences, introducing the period of the so-called "Classical School". The code subscribed to the principle of *nullum crimen, nulla poena sine lege*, which was considered a guarantee of justice (formal concept of crime). Punishment was considered a just retribution also designed as a deterrent and rendering the criminal harmless. The Code of Criminal Procedure came out on May 23, 1873. It was based on a combination of principles of the process of inquiry (during the investigating stage) and accusation (during the trial stage) with proper guarantees of the defendant's rights. The functions of indictment and trial were separated; the trial was oral, public, and direct, with the search for material truth and weighing of all evidence brought forth at the trial.

THE PROSECUTING ORGAN (procurator, state attorney), representing the state, had the duties to prosecute criminal acts, indict before criminal courts, and supervise execution of criminal sentences. There was a prosecutor attached to every criminal court. In his function he was independent, except for supervision by a higher ranking prosecutor.

THE BAR in Austria was a profession of counselors and attorneys licensed to represent their clients before the courts and other public institutions. The Bar association verified the professional qualifications of candidates, licensed them to practice, and supervised their professional conduct.

NOTARIES were qualified lawyers licensed to verify signatures, acknowledge instruments, draw up contracts, etc. They were organized in Notarial Chambers which supervised their professional conduct.

**The Judicial System**

The fundamental law on judicial power of 1867 proclaimed the principle of independent courts and judges, and empowered administrative tribunals to examine the validity of administrative orders and directives. The judicial system was separated from the administration at all levels. County and district courts (criminal and civil) were general courts of the first instance; higher land courts were courts of the second instance (appeal). There was a land court for Galicia in Lviv, which also had jurisdiction over Bukovina. The Supreme Court and the Court of Cassation in Vienna were courts of the third instance.

# 7. UKRAINIAN STATEHOOD 1917-20

The Russian Revolution and the disintegration of the Austro-Hungarian monarchy after World War I gave the Ukrainians the opportunity to restore their independence in their own national state organizations. The conditions thus created, political and otherwise, were different in both parts of Ukraine, as was the process of their constitutional and legal development. These differences, and the main political developments which created them, are reflected in the presentation of the material in this chapter.

## CHARACTERISTICS OF THE CONSTITUTIONAL DEVELOPMENT OF THE UKRAINIAN STATE

In the short period of its independence, the Ukrainian nation was not able to create a complete body of laws which usually constitute the legal system of a state. Many of the old laws, Russian and Austrian, such as civil and penal laws, rules of procedure, and so on, remained in force pending future amendments. However, several fundamental legislative acts of a constitutional nature were passed. On their basis the law of the new Ukrainian state developed. They manifest certain traits characteristic of the concepts and the form of government they created. Most significant are the following:

1. SOURCES OF THE RIGHT TO INDEPENDENCE. As the authors of the American Declaration of Independence of 1776, showing "a decent respect for the opinion of mankind," explained the causes of their separation by the laws of nature and the truths they believed in, the authors of the constituent declarations of the revived Ukrainian state called upon the two basic sources of the right to independence: the tradition of Ukrainian statehood and the indomitable will of the people to restore it, and the natural right of national self-determination which had gained recognition in the western world and was incorporated in the 14 points of President Wilson (see the Acts of the Ukrainian Central Rada of January 22, 1918, the Ukrainian National Rada of October 18, 1918, etc.).

2. NATIONAL SOVEREIGNTY. The four Universals of the Ukrainian Central Rada express the rapid development from the original (tactical) ideas of a federation with the new Russian republic (First Universal of April 10, 1917) to the declaration of full state sovereignty (Fourth Universal of January 22, 1918). Western Ukraine declared its full independence and sovereignty by the resolution of the Ukrainian National Rada of October 18, 1918.

3. IDEA OF THE UNIFICATION OF ALL UKRAINIAN LANDS. By its Act of January 22, 1919, the Ukrainian National Republic realized the natural desire of the Ukrainian people, who had lived under Russia and Austria, to unite into one unified state.

4. REPRESENTATIVE DEMOCRACY. In spite of the difficulties created by the war, the first government of the restored Ukrainian state was already based on the broadest possible democratic representative foundation. The Ukrainian Central Rada was elected by the delegates of all major Ukrainian political, cultural, and civic organizations; the Ukrainian National Rada in Galicia was convened in Lviv at the invitation of the Ukrainian Parliamentary Representation in the Austro-Hungarian Parliament and the representatives of Ukrainian political parties.

5. CONSTITUTIONAL GOVERNMENT. From the very beginning of the drive for independence, the striving for a constitutional form of government under the rule of law was manifested. The Ukrai-

nian Central Rada, as a legislative body, adopted the first constitution of the Ukrainian National Republic on April 29, 1918, earlier by far than any other successor-state of Russia or Austria. The Ukrainian National Rada of Western Ukraine, on November 13, 1918, just 13 days after the declaration of independence, passed the Provisional Fundamental Law which became the constitutional basis of the state.

6. Republican form of government. Although the traditional form of the last Ukrainian independent state was based on monarchical rather than republican principles, and the two empires under which Ukrainians had lived afterwards were autocratic monarchies, the Ukrainians accepted a republican form of government for their revived state in 1917. An attempt to introduce a monarchical form under the hetman did not gain broad popular support and after seven months of existence had to yield to a republican form.

7. Liberalism and civil rights. The fundamental constitutional acts of the restored Ukrainian state show distinct liberal trends, striving for social reforms and providing for a wide range of civil liberties based on the equality of all before the law. National minorities—Russians, Jews, Poles—were not only assured of cultural autonomy but were granted by law the right to representation in the government.

## THE PERIOD OF THE CENTRAL RADA

### Organization and Legal Character

After the outbreak of revolution in Russia and the proclamation of the right of self-determination of peoples by the Provisional Government, representatives of Ukrainian political, cultural, and civic organizations in Kiev founded, on March 17, 1917, the Ukrainian Central *Rada* (Council) and vested it with authority to be the official representative of the Ukrainian provinces which until then had belonged to the Russian empire [Vol. I, pp. 727ff.]. For its final and formal sanction, the Central *Rada* was to convene an All-Ukrainian National Congress of delegates of all Ukrainian political parties, cultural and professional organizations, as well as territorial units. The Congress took place in Kiev on April 19–21 with the participation of 900 delegates. It reappointed the *Rada* as the representative government of Ukraine. Its 150 members were elected according to a prearranged system: two-thirds were representatives of territorial units (*guberniyas*, cities) and one-third represented political parties and other organizations, including representatives of national minorities. In this manner, a democratic, representative form of government was instituted in Ukraine.

The Central Rada expressly referred to the fact that it derived its powers from the representatives of the people (e.g., in its First and Third Universals). According to the intent of the electors, the Rada was the legislative body of Ukraine. However, since war was still in progress at that time and the full assembly of the Rada could not continue in session or be called on short notice, a "Little Rada" was elected from among its members with legislative authority between the full sessions and with the task of preparing legislation for approval by the plenary session. It was also authorized to appoint an executive body, the so-called General Secretariat, which was responsible to it. The President of the Central Rada, elected by the Congress in a secret ballot (Michael Hrushevsky), was to perform the functions of the President of the Republic.

### Four Universals of the Central Rada—the Road to Sovereignty

The All-Ukrainian National Congress, invoking the right of self-determination of peoples, passed a resolution calling for the national, territorial autonomy of Ukraine "within the new Russian state" under the condition that the latter would

be transformed into a federal democratic republic. This resolution expressed the views of the majority of political leaders of the older generation who deemed it impossible to establish a sovereign state immediately and directly.

The Russian Provisional Government rejected the demand of the All-Ukrainian National Congress to recognize the autonomy of Ukraine. Consequently, the Central Rada, invoking the authority bestowed upon it by the people, announced the autonomy of Ukraine by its First Universal of June 23, 1917.

This Universal was the first independent act of the Ukrainian Government elected by the people. At the same time, it was a revolutionary act, as it was executed without the consent and against the will of the Russian Provisional Government which, technically, was still regarded as the supreme legal authority in Ukraine.

The following were the main constitutional provisions of the First Universal: the Ukrainian Central Rada was recognized as the legal government of Ukraine, elected by the will of the people in order "to guard the rights and privileges of the Ukrainian nation"; it was stated that the All-Ukrainian National Congress expressed the will of the people that "Ukraine be free," an autonomous state in federation with the Russian Republic, and that the laws which were to establish a new order in Ukraine were to be legislated only by a Ukrainian parliament, elected in a democratic manner; it announced that, in accordance with the above, and because the Russian Government did not agree to the autonomy, from then on "Ukraine would herself build her life" as an autonomous state. Pursuant to the resolution of the All-Ukrainian National Congress, this autonomy was to be as extensive as to grant Ukraine the status of a subject under international law (it demanded that Ukraine be given the right of independent participation in the Peace Conference).

Presently, the Provisional Government was compelled to accept Ukraine's autonomy as a fact and was ready to recognize it formally under the condition that the Central Rada be supplemented by representatives of national minority groups. Accepting this demand (and acting in the spirit of the resolutions of the All-Ukrainian Congress) the Rada, on July 16, 1917, issued its Second Universal in which it announced that the Central Rada would be "supplemented on a just basis by representatives of other nationalities which live in Ukraine" and that, together with them, it would prepare the laws establishing an autonomous system. Thus, the Second Universal was a step toward Ukraine's autonomy with the proviso that the Central Rada formally become a representative body of the entire population of the country, including national minorities.

### Statute of the Higher Government of Ukraine

Moving towards autonomy, the Central Rada, on July 29, 1917, drafted the Statute of the Higher Government of Ukraine which may be regarded as the first constitutional act of the restored Ukrainian state with respect to its internal structure. The Statute provided (Art. 1) that the General Secretariat should be "the highest state organ of government" in Ukraine; it would be formed by the Central Rada and be accountable to it. However, the Provisional Government would have authority to approve the Secretariat. It would be composed of 14 secretaries. The rights of national minorities would be insured by three posts of deputies to the Secretary of National Affairs, reserved for one Russian, one Pole, and one Jew (Art. 4). All organs of government would be supervised by the General Secretariat (Art. 6). The Statute further provided that a State Secretary for Ukrainian Affairs would be appointed as a member of the Provisional Government "to guard the interests of Ukraine in the work of the Provisional Govern-

ment" (Art. 9). He would be appointed with the consent of the Central Rada. All legislative proposals of the Rada, as a legislative body, would have to be sanctioned by the Provisional Government. Thus the autonomy, as designed by the Central Rada, would be rather broad, with the Russian Provisional Government having merely the right of sanction. The Russian Government had its own project, a "Provisional instruction concerning the General Secretariat of the Provisional Government in Ukraine." According to it, the General Secretariat was to be an organ of the Provisional Government rather than of the Central Rada, although the latter had to propose its members. It was intended to be a limited local autonomy of some (not all) Ukrainian *guberniyas* with full control of the Provisional Government over all more important matters. The Central Rada refused to accept such a proposal.

**Third Universal of November 20, 1917**

By its Law of November 20, 1917, called the Third Universal, the Central Rada declared that from that day on, Ukraine was to become the Ukrainian National Republic (UNR). While formerly Ukraine was only to be "free," with national territorial autonomy, she now became an independent state with a republican form of government. A Constituent Assembly of Ukraine (which was to meet within a month) was to decide upon a possible federation of the Ukrainian National Republic with the Russian Republic, if the latter would become a "federation of free and equal nations." Until such time as the Constituent Assembly could convene, the Central Rada remained as a legislative and the General Secretariat as the executive authority without any control by the Provisional Russian Government.

The Universal established the territory of the UNR with the proviso that the borders in territories with mixed nationalities would be decided upon by a plebiscite. The courts in the UNR were to be "just" and act "in accordance with popular sense of justice." Civil rights such as freedom of speech, press, religion, assembly, unions, strikes, and the inviolability of person and home were guaranteed; an eight-hour working day was established; capital punishment was abolished; personal freedom and the rights of national minorities were also guaranteed. Yielding to the demands of the time, the law announced the nationalization of large landed properties which were to be allotted to farmers.

From the viewpoint of constitutional law, the Third Universal was a constitutional act which established an independent and sovereign state. Only by its own will could Ukraine join the Russian Republic in a federation as an equal and free federal republic. Until that time the UNR was to function as a sovereign state and could enter into international relations (declaration of the General Secretariat of December 24, 1917).

**Fourth Universal of January 22, 1918**

War and political developments made practically any kind of federation with Russia impossible [Vol. I, p. 740ff.], and it was evident that popular sentiment in Ukraine was against it. For this reason, on January 22, 1918, the Central Rada passed another constitutional law, the Fourth Universal, by which it announced that the Ukrainian National Republic had become "an independent, free, and sovereign state of the Ukrainian people." Thus the sovereignty of the UNR was formally established by the representative body of the Ukrainian people. The new state became a subject under international law, and it acted as such when it entered into negotiations with the Central Powers and signed the peace treaty at Brest-Litovsk on February 9, 1918. The Law of January 22, 1918, retained the main provisions of the Law of November 20, 1917.

**Legislation of the UNR**

The main legislative acts of the Ukrainian National Republic in the period of the Central Rada pertained to the realization of the provisions of the Third and Fourth Universals which laid the foundations for the new order. On November 29, 1917, the Central Rada enacted the electoral law which provided for a general, direct, equal, proportional, and secret vote. The law of December 17, 1917, established the Supreme (called "General") Court in Ukraine. The agrarian reform law of January 31, 1918, carried out the resolutions of the Third Universal concerning the nationalization of large landed properties. The laws on the citizenship of UNR, on the state emblem, credit notes, monetary system, and so on were further results of the legislative activity of the Central Rada during this initial period of restored Ukrainian statehood.

**Constitution of the Ukrainian National Republic**

The constitution of the UNR of April 29, 1918, marked the climax of the legislative activity of the Central Rada. It showed the determination of the Rada to provide the new state, as soon as possible, with a constitutional basis (this constitution came years ahead of the constitutions of other new states which were established after World War I), and to insure the rule of law in the country (Art. 22). On the other hand, the constitution offered modern constitutional principles to the UNR, as its creators obviously made a thorough study of modern constitutional achievements in the field of state law.

The constitution consisted of eight chapters and a total of 83 articles. The general provisions stated that Ukraine was a "sovereign, independent, and free" state. Its form was republican and representative-democratic: the sovereign power in the Republic was vested in the people, who realized it through the All-Ukrainian National Congress (Arts. 2–3). The latter was a unicameral parliament elected for a term of three years in a general, equal, direct, secret, and proportional election (Art. 27). The chairman of the Congress was to perform the functions of the President of the State. Legislative activity was the primary task of the Congress. It also appointed, at its chairman's proposition, the supreme executive authority—the Council of People's Ministers, which was accountable to it. The Congress also appointed the judges of the General (Supreme) Court for a term of five years. The courts had exclusive jurisdiction over all civil, criminal, and administrative matters. The trial was to be oral and public. The constitution guaranteed broad civil rights (Chap. II), such as the equality of all under law regardless of origin, religion, nationality, education, or property; arrest was permitted only on the order of the court; capital punishment was abolished, and corporal punishment and other penalties violating human dignity were forbidden; the inviolability of home and mail was guaranteed as was the freedom of speech, press, conscience, and assembly. Article 6 of the constitution granted full national and cultural autonomy to minority groups in Ukraine. For its realization, the constitution introduced (Chap. VII) the institution of Nationalities Unions, a feature not known to other systems at that time. The Unions were to see to it that the "rights to freely form their national life" (Art. 69) by such national minorities in Ukraine as Russian, Jewish, and Polish were implemented. Other nationalities could be granted such privileges by the General Court upon a petition signed by at least 10,000 citizens. The Unions of Nationalities had legislative authority in matters under their jurisdiction and were to represent the interests of their national groups before state and civic organizations. The Unions of Nationalities were to be elected by their national groups

and their organs were to become state organs.

Political developments, particularly the coup which brought the hetman to power, did not allow this constitution to become effective.

## THE PERIOD OF THE HETMAN STATE

### The Organization of the Hetman Government

On April 29, 1918, Paul Skoropadsky, a direct descendant of the family of the former Hetman Ivan Skoropadsky (1708–22), staged a successful coup d'état in Ukraine. Assisted by German forces, he removed the Ukrainian Central Rada and issued a *Hramota* (Manifesto) directed to the population, in which he proclaimed himself "Hetman of All Ukraine" [Vol. I, p. 746]. On the same day, he issued a Law on a Provisional Government in Ukraine.

Neither the manifesto nor the law outlined the precise form of government in specific terms. The manifesto only expressed the intent to once again establish order in "the resurrected Ukrainian state," an order which the "previous administration was unable to accomplish." For the time being, this action was to constitute a "change in government," and a parliament which was to convene had the task of further determining the exact form of government. There is little doubt, however, that the Hetman's intention was to introduce a monarchical government into Ukraine. The manifesto and law dispensed with the official title "Ukrainian National Republic" in which the concept of a democratic, republican form of government was implicit. Instead, the title "Ukrainian State" or "Ukraine" was substituted. The manifesto asserted that the Hetman himself would temporarily assume "full authority."

In accordance with the law of April 29, 1918, the supreme power of the state rested exclusively with him until such time as the diet would convene (Art. 1). The Hetman had final power to either accept or reject laws proposed by the Council of Ministers, without the participation of any legislative body. His authority extended to appointing the chairman (*otaman*) of the Council of Ministers, and to confirming as well as dismissing its members (Art. 3). Likewise, he could appoint and dismiss justices of the General (Supreme) Court. Finally, he was commander-in-chief of the standing army and navy. Nevertheless, this was to be a state under the rule of law, insofar as it was to rest "on a strict basis of laws promulgated in a prescribed way" (Art. 23), and the General Court would be "the supreme guardian and protector of the law" (Art. 42). The law introduced two classes of persons, Kozaks and Citizens, and even though their definition was not given, the Kozaks in accordance with old traditions were to be the privileged class [Vol. I, p. 658]. The law's important measure was the repealing of land reforms introduced by the Central Rada and the reestablishment of the right of private property. In practice, this resolution vested power in the hands of the large landowners on whom the Hetman relied. The majority of them were non-Ukrainians, for the most part hostile to Ukrainian statehood. This factor, and the immediate opposition from the broad strata of population against the new agrarian policy, placed the hetman in a very precarious position.

### Other Laws of the Hetman

Following the laws, Hetman Skoropadsky issued a series of decrees which reorganized the governmental system largely after the old, tsarist pattern. The district militia was reorganized into the National Guard and placed under the Ministry of Internal Affairs (law of August 9, 1918). City and provincial self-government was abolished and in-

stead the old organs of Duma were reestablished. New electoral laws for provincial and city organs were based on old census regulations (law of November 5 and 23, 1918). In the field of agriculture, the law of June 14, 1918, allowed free selling and buying of land, but with the requirement that permission be secured for the sale or purchase of over 25 desiatynas (i.e., over 67.5 acres). Another law established the National Land Bank for facilitating the liquidation of large landholdings, which once again became private property and for which the government also compensated the owners. In the cultural field, the Hetman issued a series of decrees which strongly advanced the development of education, science, and art. The series of decrees also included the reshaping of the Ukrainian Armed Forces, while the law of July 24, 1918, introduced universal military conscription.

**Manifesto on Federation with Russia**

The manifesto of November 14, 1918, in which the Hetman proclaimed a union between Ukraine and the future Russian federation was perhaps the most significant document of the Hetman regime. The manifesto was signed only by Hetman Skoropadsky, without the required counter-signature of the Chairman of the Council of Ministers, and without the indication of the Hetman's title. The manifesto on the federation explained that the states of the Entente insisted on Russia's reconstruction, and that the national independence of the Ukrainian people could only be ensured in such a federation.

On the day following the proclamation of the Manifesto, a revolt broke out against the Hetman. This revolt was organized by the Ukrainian National Alliance in which all the Ukrainian democratic parties were united.

On December 14, 1918, Hetman Skoropadsky announced his resignation as head of State and subsequently left Ukraine. The Chairman and several members of the Council of Ministers surrendered to the Directory. Thus, the Directory assumed power in Ukraine.

## THE PERIOD OF THE DIRECTORY

**Organization of the Directory**

The Directory was organized by the Ukrainian National Alliance (Ukraïns'kyi Natsional'nyi Soiuz) which consisted of nearly all Ukrainian political parties in opposition to the Hetman, as well as representatives from trade unions and military organizations. For this reason, the Ukrainian National Alliance constituted a broad representative body of the Ukrainian population and regarded itself as the heir of authority which first belonged to the Central Rada.

The Directory consisted of five members. Its immediate task was to restore the former democratic government in Ukraine and to summon Ukraine's constituent assembly. Until this time, the Directory was to exist only as a temporary "supreme power of the Ukrainian National Republic" with vast judicial and executive authority.

With its first laws the Directory abolished the Hetman's laws, primarily those dealing with agrarian reforms and labor. Thus, it restored the legal conditions prevailing during the period of the Central Rada [Vol. I, p. 754], as it had stated in its insurgent declaration of November 15, 1918. However, in its declaration of December 29, 1918, the Directory retreated for a brief period of time from the concept of a representative democracy, confining popular representation within the government to "the working people": peasants, laborers, and the working intelligentsia. "The non-working classes, who exploit, live and prosper at the expense of the working classes" were to be excluded from participation in the representation.

A month later the Labor (Trudovyi) Congress, although convoked by the representatives of the working population only, reestablished the constitutional principles of universal representation.

**Constitutional Resolutions of the Labor Congress (January 22–28, 1919)**

On the directive of the Ukrainian National Alliance the Directory, on January 22, 1919, convoked the Labor Congress [Vol. I, p. 755]. Its members represented the working classes of the population in the proportion of 377 from the peasants, 118 from the workers, and 33 from the working intelligentsia, as well as 65 representatives from the Western Ukrainian National Republic.

Events in the spring of 1919 and the proximity of the war front did not permit the Congress to adopt a full constitution, but on January 28, 1919, it accepted a "law on the provisional government of the UNR." Its primary constitutional provisions were as follows: the law rejected the principle of a labor dictatorship and reinstated the idea of a representative democratic government; to implement this principle a "national parliament of the Great Sovereign Ukrainian republic" was to be elected by popular vote (Art. 5).

The law separated legislative power from the executive, but for the transitional period of the war the Directory was to act as the supreme authority in the UNR. It was authorized to adopt laws which were essential for the national defense, but to submit them for approval to the next Congress in session. Executive power was to be vested in the Council of Ministers appointed by the Directory. The organs of local administration were to be determined by general election.

The Congress and its laws of January 28, 1919, did not create a new governmental system. It had a temporary character, dictated by the difficult war circumstances of the time. The Congress adjourned as a general assembly, but not before it had appointed individual members to prepare legislative proposals for a future, full meeting. As a result, the Directory retained supreme authority within the government, although its legislative powers were restricted.

The All-Ukrainian National Rada in Kamianets approved on May 13, 1920, a proposed "basic law on the constitution of the Ukrainian State." Although the resolution could not become law under the circumstances, it illustrates the underlying political thinking of the Ukrainian leaders. The proposed law established the Ukrainian National Republic as a sovereign state with a democratic-republican parliamentary system. The individual provinces (lands) were to be united on a federative basis. The first section of the law enumerated broad civil rights and freedoms for all citizens (without special privileges for the working people) and guaranteed "national and cultural development" for the national minorities.

The separation of power was observed strictly: legislation would be in the hands of the *Soim* and state Rada. The head of state, elected by the state Rada, would be vested with executive powers and share them with the Council of Ministers. The courts were independent. Broad territorial self-government was ensured. The latter resolution was incompatible with the existing situation, which required that the Directory retain legal power for the duration of the enemy occupation of Ukraine. For this reason, the Directory issued two laws on November 12, 1920: "on provisional supreme power and the legislative procedure in the UNR" and "on a national state council of the UNR."

The first law declared that "until the time when a complete constitution, accepted by a popular representative body, became effective in the UNR," supreme power would be divided among the Directory, the National State Council, and the Council of Ministers. The head of the Directory was to perform the usual duties of the president of the UNR.

The National State Council, according to the second law, would consist of "representatives of the population and political, civic, scientific, professional, and cooperative organizations." This Council was a legislative body. The chairman of the Council of Ministers were to have executive powers. In the case of the head of the Directory being incapacitated, his reponsibilities were to be assumed by the chairman of the Council of Ministers.

It soon became apparent that because of political circumstances (the Directory already resided outside of the Ukrainian territory in Poland) the National State Council could not be elected in accordance with these laws. Thus, with the Directory's final laws, approved on January 9, 1921, a new provisional legislative organ was created to act outside of the Ukrainian territory. This organ was the Council (Rada) of the Ukrainian National Republic. The Council was to be composed of representatives from Ukrainian political parties and civic organizations and was to be vested with the legislative authority required for the proper functioning of the government. Yet the law clearly stated that such matters as "the system of government and permanent constitution, change in the labor and agrarian legislation, and the rights of national minorities were to be under the sole jurisdiction of a new legitimate organ of popular representation which would be convened on the Ukrainian National Republic's territory" (Art. 2). Thus ended the legislative activity of the UNR in the period of the Directory.

## WESTERN UKRAINIAN NATIONAL REPUBLIC

### Political Representation of the Western Ukrainian Territory

Because of more liberal conditions in the Ukrainian territories under Austria-Hungary (Galicia, Bukovina, and Transcarpathia), the Ukrainian population had the opportunity to elect their own political representatives [Vol. I, p. 718ff.], even under rather restricted electoral laws. There were Ukrainian delegates in the Austrian Parliament in Vienna, in the House of Lords, and in land diets in Galicia and Bukovina. Furthermore, in the second half of the nineteenth century, various Ukrainian political parties existed in these lands legally. Finally, in accordance with historical tradition, the bishops of the Greek Catholic Church, to which practically the entire Ukrainian population of these territories belonged, were not only spiritual leaders but also acknowledged political figures. Thus, when the Austro-Hungarian monarchy was in the process of disintegration at the end of World War I, the Ukrainian population of Galicia and Bukovina was assured of good political leadership. This leadership began to act swiftly when it became apparent that Austria had lost the war.

On October 18, 1918, at the invitation of Ukrainian representatives of both Austrian Houses of Parliament, a meeting took place in Lviv in which Ukrainian delegates from the land diets of Galicia and Bukovina, bishops from the Ukrainian Catholic dioceses, as well as three representatives from each of the Ukrainian political parties participated. This representative body of the Ukrainian people (which at that time constituted about 74 per cent of the total population of these territories) established itself as the formal representative government of the Ukrainian territories under Austro-Hungarian rule. It was called the Ukrainian National Rada.

### Constitutional Resolution of October 18, 1918

On the day of its establishment, the Ukrainian National Rada issued its first constitutional resolution. Invoking the right of national self-determination and the will of the Ukrainian people, the Rada resolved that the Ukrainian national territory under Austria-Hungary

was from then on a Ukrainian state. The October 18, 1918, resolution did not mention the secession of this new Ukrainian state from Austria, which then was trying to reorganize itself on a federative basis. The question was still left open whether to include the Ukrainian state in this federation. Nevertheless, the resolution of October 18, 1918, clearly designated the new Ukrainian state as a subject of international law. It denied the Austrian Minister of Foreign Affairs the right to speak in its name and demanded the right to participate independently in the Paris Peace Conference. Furthermore, the resolution emphasized the unity and integrity of all Ukrainian lands under Austria-Hungary, particularly of eastern Galicia with the Lemkian region, Bukovina, and Transcarpathia (Sec. I). The Rada proclaimed itself a representative authority for the entire Western Ukrainian population (including non-Ukrainian minorities), and guaranteed to national minorities the right of representative participation within its ranks.

The resolution of the Ukrainian National Rada laid down a provisional constitutional foundation and announced that it would prepare the final constitution later. Already at that time the Rada made it known that the future constitution would provide for a popular representative body elected by a general, equal, secret, and direct ballot, with proportional representation and the right of national cultural autonomy of minorities ensured.

**Proclamation of the Ukrainian National Rada of November 1, 1918**

In order to carry out the constitutional organization of the new state, the Ukrainian National Rada demanded that the Austrian governor of Galicia and Bukovina surrender his authority. Upon his refusal, the Rada decided to take over the power by revolutionary means. On the night of November 1, 1918, it accomplished a coup with the help of Ukrainian military units in the Austrian Army [Vol. I, p. 771]. In this manner the government of Western Ukraine was transferred to the Ukrainian National Rada. Also on the same day, the Rada issued a proclamation informing the population that the Ukrainian state which had been legally established on October 18, 1918, would, from that day on, be sovereign, with the Rada as "the supreme authority of the state." The proclamation restated the provisions of the resolution of October 18, 1918, concerning the equality of all inhabitants, regardless of nationality or religion, participation of minority representatives in the government, and the convocation of the constituent assembly. With the exception of the constitution, all other Austrian laws would remain in force until they could be replaced by new ones.

**Fundamental Provisional Law of November 13, 1918**

Soon after the proclamation of Galicia's Ukrainian statehood, the Poles attacked its territory and battles raged near Lviv, the capital city. The Ukrainian National Rada, having appointed the first government (the Provisional State Secretariat), proceeded to work on the legal foundations of the new state. Acting as a legislative body, the Rada passed the Provisional Fundamental Law of the Western Ukrainian National Republic on November 13, 1918. This provisional constitution had five articles: it established the new name of the state, the Western Ukrainian National Republic (ZUNR [Art. 1]), designated its territory (Art. 2), and stated its sovereignty (Art. 3). The people were to participate in the government through their representatives elected by general, equal, direct, secret, and proportional voting (Art. 4). Until the time when the constituent assembly could be duly elected, the Ukrainian National Rada and the State Secretariat would retain full power. As the "supreme authority," the Rada had primarily legislative functions. The executive branch,

the State Secretariat, was to be appointed by the Rada and was accountable to it.

Later, by the law of January 4, 1919, the organization of the Ukrainian National Rada was more specifically delineated. The office of the presidium of the Rada was established, as well as an executive committee consisting of ten members under the chairmanship of the Head of the Ukrainian National Rada. This committee (*vydil*) was authorized to appoint the secretariat and the heads of departments, grant amnesty, approve and announce laws, and perform collectively other functions of the head of state. There was no provision for the office of the president, but the Head of the Ukrainian National Rada was regarded as president.

The administrative system, provisionally regulated by the law of November 16, 1918, was largely based on the Austrian system. Other laws (criminal, civil, etc.) remained in force as far as they did not contradict the new system. The law of November 21, 1918, established an independent judiciary with the Supreme Court at the top of the system. Other important laws of that time were: on education (February 13, 1919), on the official language (February 21, 1919), on the citizenship of ZUNR (April 18, 1919), and on parliamentary elections (April 15, 1919).

The Rada also began to carry out social reforms, but it was not able to execute laws to this effect. The agrarian reform was announced by the law of April 14, 1919. It provided for the expropriation of large landed properties whose owners did not personally cultivate them, and dividing them among the landless small farmers.

From the constitutional aspect, the most important law of the Ukrainian National Rada was the resolution of January 3, 1919, on the union of ZUNR with the Ukrainian National Republic. As early as November 10, 1918, the Ukrainian National Rada had instructed the State Secretariat "to take the necessary steps for the unification of all Ukrainian lands into one state." The State Secretariat accordingly concluded a preliminary treaty with the Directory of the UNR on December 1, 1918, at Khvastiv. By its law of January 3, 1919, the Ukrainian National Rada ratified this treaty and announced the "union of ZUNR and UNR into one, sovereign National Republic." The Directory also ratified the treaty, and on January 22, 1919, the "Universal on the all-Ukrainian Union" was proclaimed during the session of the Labor Congress in Kiev and approved by it.

**The Constitutional Effect of the Act of Union**

This proclamation incorporated the provisions of the preliminary agreement of December 1, 1918, and of the ratifying laws of ZUNR and the Directory. Consequently, the Western Ukrainian National Republic (ZUNR) became a part of the Ukrainian National Republic (UNR) and the UNR accepted ZUNR as its part (Arts. 1–2 of the treaty). Thus, technically speaking, the UNR's territory increased by the territory of the ZUNR and the latter ceased to exist as a separate state and its territory was called the Western Province (*Oblast*) of the UNR (ZOUNR). This province was granted territorial autonomy.

Details of the union and the scope of the autonomy were to be worked out by special committees and ratified by the two governments. After that, a constitutional assembly of the unified state was to amend the constitution in consideration of the unity. Until the time of the meeting of the constituent assembly, the legislative power in the territory of the former ZUNR was to remain in the hands of the Ukrainian National Rada, and the executive power in the hands of the State Secretariat.

Because of war hostilities [Vol. I, pp. 772ff.], the constituent assembly could not meet in session, and the Ukrainian National Rada and the State Secretariat

continued to function as a sovereign government of the Western Province of the UNR. This fact created frequent difficulties in their relationship with the Directory [Vol. I, p. 762].

**Dictatorship in the Western Province of the UNR**

War events hindered the proper functioning of the Executive Committee of the Rada and the State Secretariat. For this reason, by the decree of June 9, 1919, the presidium of the Rada Executive Committee and the State Secretariat vested in the "authorized dictator" the authority to exercise all military and civilian powers which until then had been exercised by the Executive Committee and the State Secretariat. Thus, although the Ukrainian National Rada retained its legislative power, all the executive power was vested in a single person. The dictator was limited to executive functions (those of the President and the Cabinet) and he was accountable to the Rada. Under the circumstances, however, these limitations and his accountability remained a fiction.

Because of the international political situation [Vol. I, p. 774], the dictatorship aimed at the restoration of Galicia's independence and prepared a project of a constitution of the Galician state on a democratic basis. But the territory of ZOUNR was already occupied by Poles and, in the south, by Rumanians. The Ukrainian National Rada and the dictator were forced to leave [Vol. I, p. 778]. Subsequent activity of the dictator was limited to diplomatic efforts abroad.

*J. Starosolsky*

## INTERNATIONAL LEGAL STATUS OF THE UKRAINIAN STATE

The modern Ukrainian state proclaimed by the Third Universal of the Central Rada in November, 1917, was the result of a revolutionary movement animated by the ideas of freedom and the principle of national self-determination. Although the constitutive document of the Ukrainian National Republic stated the intention of Ukrainians to remain within the Russian democratic federation and although the Ukrainian leaders attempted to form a federal government, this idea never materialized because of the Bolshevik seizure of power and the ensuing chaos in the rest of Russia. Ukraine had now become a *de facto* sovereign state which resulted from the dissolution of the former Russian empire. The only Russian government in control of the major part of the country, namely the government of the Soviets, had recognized this act of Ukrainian self-determination. However, the Soviets were never recognized by Ukraine as the federal government of the whole of former Russia.

The Ukrainian National Republic, viewed as a continuation of the Ukrainian historical statehood (Kievan *Rus'*, the Kozak state), legally was a new political entity. It seceded from the Russian state and as such acquired in international law, along with other newly formed non-Russian border states, the status of a successor state.

The recognition granted to Ukraine by Soviet Russia in December, 1917, and shortly thereafter by France and Great Britain and antedating the declaration of definitive independence on January 22, 1918, was the first declaratory act of the Ukrainian personality in international law. This in turn was strengthened by the peace treaty with the Central Powers in Brest-Litovsk in February of 1918.

During the ensuing years, the Ukrainian national state under three different regimes (Central Rada, Hetmanate, Directory) exercised effective control and jurisdiction over a sizable portion of the national territory. Its constitutional powers were properly organized, the armed forces operated in defense of national independence, law was promulgated and enforced, and the population was accorded Ukrainian citizenship.

Despite the fact that between March and November, 1918, Ukraine was politically and militarily dependent on the German Reich and Austria-Hungary, her existence as a state was effective in the light of the fundamental attributes of a sovereign state: territorial supremacy, treaty-making powers, the right of legation, and the power to wage war and make peace. The status of independence existed until the government and its military forces left the Ukrainian territory at the end of 1920. As a government-in-exile in Poland, the Ukrainian government enjoyed a brief period of limited international status (immunities of state were recognized) until Poland signed a peace treaty with Russia and Soviet Ukraine in Riga in March, 1921.

BOUNDARIES. The Ukrainian National Republic had internationally recognized boundaries in the southwest (Brest-Litovsk Peace Treaty) and in the north (peace treaty between the Central Powers and Soviet Russia of March 3, 1918). The northern boundaries with Russia were confirmed in the preliminary peace treaty between Ukraine and the Russian SFSR of June 12, 1918. The definitive settlement of the boundaries was left to the Russo-Ukrainian peace conference in Kiev which, however, failed to produce a peace treaty.

Boundaries with the newly established Don Cossack Republic were also provisionally delineated by the Ukrainian-Don Cossack agreement of August 7, 1918. No boundary settlement took place in the Rumanian sector. Ukraine upheld her claims to Bessarabia in the southwest (occupied by Rumanians) and in the south to the Crimean peninsula which did not come under Ukrainian jurisdiction until 1954.

RECOGNITION. The recognitions granted to Ukraine were numerically and qualitatively sufficient to consider her a full-fledged subject of international law. Between 1917 and 1921, 25 states accorded recognition to Ukraine. Nineteen of them extended full recognition (*de jure*), four a tentative one (*de facto*), and in two cases the nature of the recognition was controversial (between *de facto* and *de jure*) and subsequently withdrawn (Britain and France before the Brest-Litovsk Treaty).

*De jure* recognition was granted to Ukraine under the government of the Central Rada by the following states: Soviet Russia (diplomatic notes, Brest-Litovsk Treaty, and preliminary peace treaty with Ukraine); Central Powers—German Reich, Austria-Hungary, Bulgaria, and the Ottoman Empire (peace treaty); under the Hetman government the Ukrainian state was recognized by Rumania, the Don Cossack Republic, Kuban (commercial and other agreements, establishment of diplomatic relations), and Poland (exchange of representatives); under the Directory, Ukraine acquired additional recognition from Georgia, Azerbaidzhan, Czechoslovakia, Estonia, Lithuania, Latvia, Finland, the Holy See (exchange of diplomatic representatives), and Argentina (decree of Argentinian government of February, 1921, when the Ukrainian government was already in exile).

TREATY-MAKING POWERS. The Ukrainian state under three constitutional regimes (Central Rada, Hetmanate, Directory) concluded a series of international treaties, thus enjoying and exercising full treaty-making powers. Among those agreements the most important one

FIGURE 11. DELEGATION OF THE UNR AT THE BREST-LITOVSK PEACE CONFERENCE

was the Brest-Litovsk Peace Treaty which Ukraine signed with the Central Powers on February 9, 1918. A series of economic and trade accords with Germany and Austria-Hungary followed. Ukraine also negotiated a commercial agreement with Rumania and trade and transportation accords with the Don Cossack Republic, Kuban, and Georgia.

The preliminary peace agreement with Soviet Russia signed in Kiev on June 12, 1918, and the accords on the resumption of transportation as well as on the consular relations were aimed at the normalization of relations with Russia. By denouncing the Brest-Litovsk Treaty and by initiating hostilities against Ukraine at the end of 1918, Russia also abrogated these agreements unilaterally. On April 21, 1920, the Directory concluded a political and military alliance with Poland known as the Warsaw Treaty. In addition, the Ukrainian trade missions abroad negotiated a number of technical transactions, relating to commerce.

International Organizations. As an independent state Ukraine joined the following international organizations and agencies: the International Commission of Maritime Navigation on the Black Sea in 1918; the Universal Postal Union in 1919; the International Telegraph Union; and the International Radio-Telegraph Union. In 1920, the Ukrainian government applied for membership in the League of Nations. The Council postponed its decision for a year and then took no action because the Ukrainian National Republic did not have effective control over the territory.

Institutions of International Relations. In December, 1917, the Central Rada established a separate secretariat for foreign affairs (formerly nationality affairs) and appointed a delegation to the peace conference in Brest-Litovsk. In January of 1918, the secretariat became the ministry of foreign affairs. At the same time it gave accreditation to the first foreign diplomatic representatives in Ukraine: John Picton Bagge (Representative of Great Britain) and General Tabouis (Commissaire de la République Française auprès du Gouvernement de la République Ukrainienne). After the Brest-Litovsk Peace Treaty the Ukrainian government proceeded to exchange diplomatic missions with the Central Powers. During the Hetmanate, Ukraine was represented in 10 foreign countries, and the government accredited 11 foreign missions in Kiev. In September, 1918, Hetman Paul Skoropadsky made the first and only state visit of a Ukrainian head of state to a foreign country when he visited Germany and met with Wilhelm II. In the summer and fall of 1918, Kiev was also the site of a peace conference between Ukraine and Soviet Russia.

Under the Directory, Ukraine maintained 11 legations abroad which had official status. The names of Ukrainian diplomats were included in official diplomatic lists and they enjoyed diplomatic immunity. In a number of other countries Ukraine had unofficial missions which developed informal relations with local authorities. The heads of Ukrainian missions abroad met in a series of nonperiodic conferences.

The Ukrainian state maintained consular relations with other countries, particularily in 1918. In addition to those countries which had their diplomatic representatives in Kiev, the following states maintained consulates in Ukraine: Belorussia, Denmark, Estonia, Greece, Italy, Latvia, Lithuania, Norway, Persia, Spain, Sweden, and Switzerland. The Ukrainian government opened consulates mainly on the territories of the successor states of former Russia. In Soviet Russia alone there were more than 30 consulates and consular agencies in addition to two consulates-general in Moscow and Petrograd. Beyond the territory of the former Russian empire, Ukrainian consular offices were opened in Poland, Germany, Sweden, and Switzerland. In other countries with which Ukraine

maintained working relations, all consular affairs were handled by diplomatic missions.

UKRAINE AS A BELLIGERENT POWER. The Ukrainian Republic enjoyed another fundamental power of a sovereign state —the right to wage war and to conclude peace. Being a successor state to Russia, she was a belligerent nation on the side of the Allies (Entente). As such Ukraine concluded the peace treaty with the Central Powers at Brest-Litovsk. Having rejected an ultimatum of the Petrograd People's Commissariat in December, 1917, Ukraine became a belligerent in the first Russo-Ukrainian war started in January, 1919, after negotiations between the two sides failed to settle their differences. Following Russian invasion of the Ukrainian territory, the government of Ukraine formally declared war on Soviet Russia. The second war, however, did not terminate by any legal act between the belligerents. Ukraine was *de facto* conquered in 1921 (*debellatio*).

As for other belligerent factions in the former Russian empire which operated on the Ukrainian territory (White armies of General Denikin), Ukraine, although in an actual conflict with them, was not in a formal state of war. The armed conflict with Poland from November, 1918, until July, 1919, was technically a war waged by the Western Ukrainian National Republic.

THE WESTERN UKRAINIAN NATIONAL REPUBLIC (ZUNR). As a result of the disintegration of the Austro-Hungarian monarchy, the Ukrainians of eastern Galicia, northern Bukovina, and Carpatho-Ukraine established their state within the Ukrainian ethnic boundaries. This political entity did not gain full recognition from other powers. However, it entered into *de facto* economic and diplomatic relations with some of the neighboring states. The Paris Peace Conference treated ZUNR as a separate political-legal entity and refused to recognize its incorporation by Poland for eight months. Although the international community made unsuccessful attempts to mediate between the belligerents, the war ended with the Polish occupation of the territory which was forcibly incorporated into the Polish Republic. The conquest of Ukrainian territory by Poles was not internationally sanctioned. The Supreme Council of the Paris Conference authorized the Poles merely to occupy the territory and to introduce a provisional administration, retaining for itself sovereignty over that territory in the name of the Allied Powers. Its mandate over the Western Ukrainian territory was later given to the League of Nations. It was only in March, 1923, that the Council of Ambassadors, acting on behalf of the League, finally incorporated eastern Galicia into Poland.

While in exile, the government of the Western Ukrainian National Republic made diplomatic efforts to defend the separate status of the occupied land. It dissociated itself from the government of the Ukrainian National Republic which negotiated a settlement with the Poles to the detriment of Western Ukraine. The union between the two Ukrainian states proclaimed on January 22, 1919, could not be fully realized because of the war [Vol. I, p. 773]. Despite the temporary cooperation between the two governments, Western Ukraine legally preserved its separate statehood. It kept its own diplomatic representations which enjoyed official status in several states [Vol. I, p. 774]. Also, a separate delegation was sent to the Paris Peace Conference.

# 8. WESTERN UKRAINIAN TERRITORIES BETWEEN THE TWO WORLD WARS

## GALICIA AND THE NORTH-WESTERN TERRITORIES

### Western Ukraine under Polish Occupation

In the aftermath of World War I, Western Ukraine was partitioned among Poland, Rumania, and Czechoslovakia. As a result of the Ukrainian-Polish (1918–19) and the Soviet-Polish (1919–21) wars, the territories of western and northwestern Ukraine (western Volhynia, western Polisia, Kholm, and Podlachia) came under Polish domination [Vol. I, p. 833].

On March 15, 1923, the Conference of Ambassadors of the Allied Powers formally assigned the territory of Galicia to Poland (which had held this territory by force of arms), in accordance with Section 87 of the Treaty of Versailles. The annexation of the northwestern Ukrainian territories by Poland was ratified under international law by the Treaty of Riga, concluded on March 18, 1921, between the Russian SFSR, the Ukrainian SSR, and Poland.

The legal status of Ukrainians in northwestern territories was somewhat different from that of the Galicians. Whereas by the Treaty of Riga, Poland agreed to respect the cultural and religious rights of the Ukrainian population without a legal formulation of these guarantees, the decision of the Conference of Ambassadors guaranteed autonomous rights for Galicia. As early as September 26, 1922, the Polish Sejm passed a law on home rule for the *voievodstvos* (provinces) of Lviv, Stanyslaviv, and Ternopil. However, the Poles used this law merely as a tactical maneuver, and after Galicia was awarded to Poland, the law was never implemented.

### Legal and Actual Status of the Ukrainian Population under Poland

The Ukrainian population in Poland was fully entitled to the provisions of the Treaty of Versailles on national minorities concluded between the Allies and Poland on June 28, 1919. Poland had agreed to respect the rights of the Ukrainian national minority. The League of Nations assumed the responsibility of implementing these provisions. The guarantees were included in Sections 108 and 109 of the Polish Constitution of March 21, 1921 [Vol. I, p. 834]. Legislative and administrative policy, however, imposed gradual restrictions on the rights of national minorities until finally, on September 13, 1934, the Polish government issued a unilateral declaration rejecting the treaty on national minorities.

The Polish constitution of March 21, 1921, was founded on democratic republican principles. It proclaimed the people to be the sole source of power and authority. In legislative matters the people were represented by a diet and a senate. The executive power was

vested in the president and the council of ministers. Independent courts were given judicial power. The constitution was characterized by the supremacy of the legislature and limited powers of the head of state. The government appointed by the head of state was responsible to, and controlled by, the legislature. Under the constitution, elections were to be general, equal, secret, direct, and proportional. To counterbalance the central state bureaucracy, the constitution provided for a three-level territorial home rule (communities, counties, and provinces). The constitution enumerated a long list of rights and freedoms of citizens, typical of all democratic systems. Independent courts were to guarantee these freedoms.

The constitution was interpreted in the direction of limiting the role of the legislature and increasing that of the government and the presidency. Important amendments were added to the constitution following the coup of Marshal Piłsudski in May 1926. The president was empowered to issue decrees with the force of laws, upon *ex post facto* ratification by the legislature. Ukrainians in Poland participated in all elections, with the exception of that of 1922, when Ukrainians in Galicia boycotted the election because the legal status of Galicia had not been guaranteed. With few exceptions, the elected Ukrainian representatives (1922–20, 1928–48, 1930–27) and senators (5, 11, and 5, respectively) were members of the opposition. The last election was held under conditions of terror [Vol. I, p. 843]. A new constitution was adopted in 1935 in clear violation of the constitutional process. It rejected the principle of the will of the people, making the state the sovereign, as the "common weal of all citizens" (Art. 10). The people lost their sovereign rights, and citizens were rated according to the "value of effort and merit for the common good" (Art. 7). According to the new constitution, the state was headed by the president, with the diet, the senate, and other state organs being "under the supremacy of the president." All power was vested in the presidency, thus formally abrogating the principle of separation of powers and the parliamentary system.

The new election law of July 8, 1935, introduced the so-called two-mandate election districts. Candidates for deputies were nominated by special colleges thus removing the principle of general and proportional elections. The importance of the senate grew; one-third of its members were appointed by the president, the rest were elected by an "elite" (educational qualification, persons of merit and trust). The elections of 1935 and 1938 returned 14 Ukrainian deputies and 5 senators, but this was not so much a reflection of the voting as direct negotiations between Ukrainian representatives and the Polish government [Vol. I, p. 846].

Home rule was limited by the law of March 23, 1933, which introduced two levels of territorial home rule. The lower level consisted of (*a*) rural communities headed by a chief and a board and (*b*) urban communities made up of city councils headed by mayors (city presidents). The higher level consisted of counties with councils and boards. The county boards were supervisory organs over city and community boards, and the provincial governor (directly or through county commissioners) exercised control over the county boards and city councils. Professional men were usually elected to the posts of community chiefs or city presidents. They had to be confirmed by the provincial governor. This peculiar election system with its methods of candidate selection gave the administration an opportunity to reduce and eventually eliminate the importance of national minority groups.

Administrative and political practice discriminated against national minorities, particularly the Ukrainians. They were deemed a "destructive element." Polish citizens of Ukrainian nationality had

little chance of securing appointments to state and local office. With few exceptions, there were no state schools with Ukrainian as the language of instruction, and some departments of universities were closed to Ukrainians. The law of agrarian reform was widely utilized to colonize Ukrainian territories with Polish settlers. The number of Ukrainian deputies and senators was far below the ratio for the Ukrainian population, and they exercised little influence on legislation [Vol. I, pp. 841–50].

### Law and Courts

The Polish government preserved the laws inherited from the former occupational powers. Pre-revolutionary Russian law was in effect in the northwestern Ukrainian territories, and Austrian law in Galicia. The law of 1926 was designed to remove the resulting conflicts. A uniform system of laws for the entire territory of the Polish state evolved gradually in a few areas of law.

A new judicial system and a new organization of prosecuting organs were introduced by the law of February 6, 1928. City and district courts (justices of the peace in former Russian territories) were the courts of the first instance; courts of appeal constituted the second instance (in Ukrainian territories there were courts of appeal in Lviv and Lublin), and the Supreme Court was the third and final instance. Trial by jury was abolished in 1938. The minister of justice was simultaneously the chief prosecutor, supervising the attorneys acting in courts of all instances. The law of March 19, 1928, unified the criminal procedure. Civil procedure was unified in 1930 and criminal law in 1932. The latter was patterned on modern western European principles. The law of obligations and commercial law were unified in 1933. Other fields of law remained unchanged.

The presidential decree of August 26, 1932, on courts martial, was made applicable to major crimes, especially those of political nature. This decree severely limited the rights of defense, as well as other guaranteed freedoms. The court martial procedure was applied mainly to members of the Ukrainian underground. In addition, by the presidential decree of June 18, 1934, a concentration camp was set up in Bereza Kartuzka which was filled mostly with Ukrainians suspected of revolutionary activity.

### Soviet Occupation in 1939

On September 17, 1939, following the outbreak of war between Poland and Germany, the Soviet Red Army occupied the western Ukrainian territories of Poland. Provisional and local organs of government (soviets) were established while military occupation lasted, and a national assembly was convened in Lviv, October 26–27, 1939. It proclaimed the unification of Western Ukraine with the Ukrainian SSR. On November 1, 1939, the Supreme Soviet of the USSR passed the law on the incorporation of Western Ukraine in the Soviet Union as part of the Ukrainian SSR. The Ukrainian Supreme Soviet, by its law of November 15, 1939, confirmed the incorporation. Constitutions of the USSR and of the Ukrainian SSR, as well as all laws, were put into effect in the incorporated territories.

### German Occupation (Generalgouvernement)

During the German occupation, Western Ukraine (Galicia and the northwestern areas which had formerly belonged to Poland) were included in the *Generalgouvernement* on August 1, 1941, instituted by the decree of October 12, 1939. The decree of October 26, 1939, on "the organization and administration of the occupied Polish territory," which provided that former Polish law should remain in force insofar as it did not interfere with the occupation and administration of the German authorities, was extended to the western Ukrainian territories. Thus former Polish civil law,

criminal law, procedure, and the court system (without the Supreme Court) were in effect again. The return of the Soviet regime in 1944 reinstated the Soviet legal system in western Ukraine.

*A. Bilinsky*

## BUKOVINA AND BESSARABIA

### Under Rumanian Occupation

Ukrainian territories under Rumania comprised two former lands—Bukovina, which was part of Austria until 1918, and Bessarabia, which was formerly part of the Russian empire [Vol. I, pp. 856ff.]. The annexation of Bukovina by Rumania was recognized under international law by the Treaties of Saint-Germain (September 10, 1919) and Sèvres (August 10, 1920), and of Bessarabia by the Treaty of Paris of October 28, 1920. The latter was never recognized by the Soviet Union. By a separate Treaty of Paris concluded with the Allied and the Associated Powers on December 9, 1919, Rumania guaranteed its minorities (including the Ukrainians) equal treatment regardless of race, religion, or mother tongue; the rights to use their languages in private and public life, including courts; and the teaching of their mother tongue in elementary schools. These obligations on the part of Rumania were placed under the guarantee of the League of Nations. By the law of December 19, 1919 (concerning Bukovina) and the law of October 9, 1919, the Ukrainian provinces were granted a kind of limited home rule: the traditional laws and the court system were to be preserved; two representatives of each of the two provinces were to become members of the Council of Ministers, and one of them was to be the chief administrator in the province. However, by the law of April 4, 1919, Rumania placed these provinces completely under the control of the central government. The administration and the judiciary were ultimately unified by the laws of June 14 and 26, 1924.

### System of Government

Rumania received a new constitution on March 29, 1923 (which replaced that of 1866). According to the new constitution Rumania was a constitutional monarchy. The judiciary was granted considerable power in that it passed judgment on the constitutionality of the laws and executive acts. A bicameral parliamentary system was approved. However, the election law of 1925 stipulated that in order to be entitled to a candidate on the ballot, the political party had to poll at least five per cent of the national vote. Consequently, Ukrainians had to enter into agreements with other parties and nationality groups to place candidates on the ballot. The position of Ukrainians deteriorated considerably with the introduction of the new constitution of February 27, 1938, which gave the king broad dictatorial powers, and replaced the parliamentary system by a "corporate state." The number of deputies and senators was reduced and their terms of office were extended (one half of them were appointed by the king). Pursuant to the new constitution, the king abolished all political parties, including the Ukrainian National Party, and permitted only a single party, National Rebirth.

### Civil Law and Courts

The civil law of 1811 was at first in force in Bukovina, and the Russian law of 1832 (with amendments) was in force in Bessarabia. The Rumanian civil law of 1864, which was patterned on the French Civil Code, was extended to Bessarabia, part in 1919 and the rest in 1928, and to Bukovina in 1938, with the exception of certain provisions concerning domestic relations. A new unified code was enacted in 1939, although it was never implemented.

Also, in the field of criminal law, the old laws were at first in force in Bukovina and Bessarabia: the Austrian codes of 1852 and 1872 in the former and the Russian code of 1885 and 1903 in the

latter. The Rumanian criminal code of 1864, which closely followed the French code of 1812, was introduced in Bessarabia as early as June 1, 1919. The new Rumanian criminal code of March 18, 1936, went into effect throughout Rumania (on January 1, 1937), including Bukovina and Bessarabia.

The court system was composed of justice courts or city courts in the regions, tribunals in the counties, appellate courts, and the Supreme Court of Cassation and Justice. Decisions of the justice courts could be appealed to a tribunal; decisions of a tribunal of the first instance could be appealed to the courts of appeals and, if the tribunals acted on an appellate instance, to the Supreme Court of Cassation. Decisions of the court of appeals could be contested in the Supreme Court of Cassation.

To justify the policy of Rumanization a theory was invented that the Bukovinian Ukrainians were allegedly "Ukrainianized Rumanians" and hence no minority rights accrued to them as Rumanians. Instead all efforts were made to "return them to the motherland." In order to facilitate the implementation of this policy under the guise of state security, a state of emergency was proclaimed in the border areas of Bukovina and Bessarabia inhabited mostly by Ukrainians. With short interruptions, this state continued until 1940. Police terror and courts martial prevailed. Ukrainian cultural and civic associations were dissolved and Ukrainian primary and secondary schools were turned into Rumanian schools (law on public education of July 1924).

The Rumanian pressure on the Ukrainians increased after the introduction of the new constitution of 1938 and the 1938 law on military zones, which permitted removal of undesired persons from the border areas. This made it possible to deport Ukrainians from these territories and to replace them with Rumanians [Vol. I, pp. 857–9].

**Soviet Occupation in 1940**

In June 1940, the government of the USSR "suggested" to the Rumanian government that it should cede northern Bukovina and Bessarabia to the Soviet Union. On June 28, 1940, the Rumanian government agreed to the ultimatum, and on the same day, Soviet troops occupied the ceded territory. On August 2, 1940, the Supreme Soviet of the USSR passed a law on the incorporation of Bukovina into the Ukrainian SSR. Bessarabia was included in the Moldavian Autonomous Republic (until then a part of the Ukrainian SSR) and the Moldavian SSR, the thirteenth constituent republic of the USSR, was formed. The constitution of the USSR of 1936, the republic constitutions, and all pertinent laws were immediately put into effect in the annexed territories.

*I. M. Novosivsky*

## TRANSCARPATHIA (CARPATHO-UKRAINE)

**End of 1918 and Beginning of 1919**

After the fall of Austria-Hungary in November, 1918, [Vol. I, pp. 787ff.], the Hungarian Republic endeavored to hold at least some of the nationalities by offering them autonomous status. The government had promulgated law No. X, of December 21, 1918, regarding the autonomous Ruska Kraïna (Ruthenian Land) according to which a provincial *soim* was to be created, together with the office of a governor, regional administration, and a separate Ruthenian ministry in Budapest. Self-government would be limited to domestic administration, the judicial system, and economic and cultural affairs.

In March, 1919, the *soim* was elected, a body which was to meet for two brief sessions. The Hungarian Soviet Republic reasserted the autonomy of Ruska Kraïna with the exception of the governorship, which was replaced by a People's Commissariat. In practice, the autonomy was

short-lived, and only in the central part of Carpatho-Ukraine at that, the western part being occupied by the Czechs, the eastern by the Rumanians. Hungarian control over Carpatho-Ukraine ended with the retreat of the Hungarian Red Army from the area, at the end of April, 1919.

While theoretically the rule of the Western Ukrainian National Republic was being extended to the area, in practice, however, no Ukrainian administration was introduced, except for a few villages in the eastern part, the so-called Hutsul republic.

**Under Czechoslovakia, 1919–38**

As a result of activities conducted by the Carpatho-Ukrainian immigrants in the United States, and in the wake of political changes occurring in the region in 1919, as well as the decisions of the Peace Conference (Saint-Germain Treaty, September 10, 1919), Carpatho-Ukraine was incorporated into the newly created Czechoslovak Republic. Incorporation included a proviso for broad autonomy in cultural and administrative affairs [Vol. I, pp. 788–9]. Legal bases of the autonomous status were to be the provisions of the above-mentioned treaty and the Czechoslovak constitution of February 29, 1920.

The legislative and administrative autonomy "compatible with the unity of the Czechoslovak State" was to be extended to affairs of culture, that is, education, language, religion, and local self-government. The region was to have its own legislative body (*soim*), an executive (governor), and adequate representation in the national parliament.

Until 1938, the guaranteed autonomy was not fully realized. The self-governing status of the region was determined by the Prague government which paid little attention to the international and constitutional obligations. In November, 1919, the Czechoslovak government passed temporary "General Statutes for the Organization and Administration of Subcarpathian Ruthenia," by which an autonomous directory was created, consisting of five members with advisory powers, and a regional administration headed by an administrator. Dissatisfaction led to the resignation of the directory. On April 4, 1920, Prague introduced some changes in the general statutes providing for the offices of a temporary governor, a vice-governor (the chief of the civil administration), and a gubernatorial council (a surrogate of the *soim*) with advisory prerogatives. The appointed governor was limited to representative functions, since the vice-governor, a Czech, held the real power. Because of Prague's delaying permanently the resolution of the question of autonomy, the governor resigned in protest in 1921. However, the new governor nominated in 1923 was content with his figurehead functions.

In 1927–8, the territorial administration of Czechoslovakia was reorganized and, consequently, Carpatho-Ukraine was put on an equal basis with three other regions (Bohemia, Moravia-Silesia, and Slovakia). As a result the Podkarpats'ka *Rus'* (Subcarpathian *Rus'*) had the following governmental structure: a regional president, regional representation (a consultative assembly of members, two-thirds of whom were popularly elected and one-third nominated by the central government), and an office of regional administration. The administrative seat was in Uzhhorod, capital of the region. The office of the governor with his honorary functions remained the only vestige of the guaranteed territorial autonomy. As late as 1926, local self-government was also reorganized. The traditional system of counties (*zhupy*) was abolished. The new districts, *okruhas*, were subordinated to the regional administration, which now became the second administrative level, and the ministries in Prague served as the third instance.

Under pressure of autonomist elements in the 1930's, the government at Prague agreed to put into effect the guaranteed autonomy "by stages." Law 172 of June 26, 1937, renewed the gubernatorial council, and the functions of the governor were somewhat extended, but no definite election was set for the *soim*.

In Carpatho-Ukraine, as well as in Slovakia, under the Czechoslovak regime after 1919, the court system of the Hungarian Kingdom as established by the law of 1877 continued. Proceedings were regulated by the Hungarian code of 1896, and the Hungarian criminal and civil law codes also remained in effect. There were three levels of courts: district, regional (one for several districts, in all, three in Podkarpats'ka *Rus'*), and the superior court.

For Carpatho-Ukraine there existed a separate chamber in the superior court of Košice. Judges of lower courts were appointed by decree of the governor.

**Autonomous Carpatho-Ukraine, 1938–9**

It was not until the autumn of 1938 that a serious move to effectuate the autonomy began to take place under the pressure of foreign and domestic developments in Czechoslovakia. The autonomous government was not structured according to the provisions of the constitution, but pragmatically, as the new situation required. On October 8, 1938, Prague had nominated the first autonomous cabinet (government) of Carpatho-Ukraine, consisting of four ministers and two under-secretaries. The new constitutional status of Carpatho-Ukraine was contained in law No. 328 of November 22, 1938, which was passed by both houses of the Czechoslovak parliament. The law stated that the legislative power of the autonomous province (now called "state") was vested in the *soim*, and the executive power would be exercised by a cabinet consisting of three members nominated by the President of the Republic. Excluded from the competence of the autonomous government were foreign policy, national defense, citizenship, customs, currency, postal and communication services, railways, and legislation regarding criminal, civil, and commercial law. Between October, 1938, and March, 1939 (after a short period of Andrew Brody's premiership), the autonomous cabinet was headed by Prime Minister Monsignor Augustine Voloshyn. The *soim*, consisting of 32 representatives chosen in the general election of February 12, 1939, held just one session on March 15, 1939. Because of a sequence of international events (occupation of Bohemia by Germany, Slovakia's declaration of its independence), the *soim* proclaimed an independent Carpatho-Ukrainian Republic. After a few days of existence, the Hungarian occupation put an end to the Republic [Vol. I, pp. 853–6].

Some authors tend to qualify the status of Czechoslovakia between October, 1938, and March, 1939, as a federal state. However, analysis of constitutional acts and the organs of power attest to the lack of typical federal institutions in this system. It was a particular system (*sui generis*) of a composite state, in which either a trend toward normal federal institutions or a pattern of loose association was possible as a future development.

**Under Hungary, 1939–44**

From the point of view of international law, the Hungarian occupation of Carpatho-Ukraine in the second half of March, 1939, was a typical debellation, whereby the military action was not terminated by any international act. Also, annexation of the region was not sanctioned even by a plebiscite. The new status of Carpatho-Ukraine was defined in a decree of the Hungarian government (No. 6200 of July 1939). The region was named the Subcarpathian Territory and it was granted somewhat more extensive self-government than that of the Hungarian counties. Chief administrator of the region was a high-

placed official, the High Commissioner of the Regent (a Hungarian), aided by a principal counsellor who was nominated from among prominent local leaders. These two officials governed the territory (local administration, cultural and social affairs) within the framework of the general laws and directives set up by the Budapest government. No elections were held in Carpatho-Ukraine to local, regional, or central state organs. Ten representatives from the region were appointed by the chief of state to the Hungarian Lower House and three to the Upper House.

**The Transitory Period, 1944–5**

The Soviet occupation of Carpatho-Ukraine in October, 1944 put an end to Hungarian domination over the region. According to several international acts, Czechoslovak sovereignty was to be re-established here. However, the Communist Party, with the support of the Soviet army and political agents, created its own apparatus of local administration, based on the so-called people's committees. A provincial congress of the committees' delegates convened on November 26, 1944, in Mukachiv, and passed a resolution incorporating Carpatho-Ukraine into the Ukrainian SSR. The Czechoslovak government was put under pressure to cede the region to the USSR and this was formalized by the Soviet-Czechoslovak Treaty of June 29, 1945. The region in the meantime was administered by a 17-member People's Council of Transcarpathian Ukraine, elected by the provincial congress. The people's council was both a legislative and an executive body. By means of decrees, the council introduced a series of measures typical of sovietization during the "people's democracy" stage, such as nationalization of industry, agrarian reforms, and anti-Church measures. On January 22, 1946, the *oblast* organs of administration were formally created in the Transcarpathian *oblast* of the Ukrainian SSR, and on January 25, 1946, the Soviet legal system was introduced.

Basically, the same court system as under Czechoslovakia was in effect under the new Hungarian rule of 1939–44. In December, 1944, people's courts in the districts, and the Supreme People's Court of Transcarpathian Ukraine in Uzhhorod, were created. Also, a special court for political crimes was set up. The latter was inspired by the "revolutionary legality."

# 9. LAW AND GOVERNMENT OF THE UKRAINIAN SSR

## SYSTEM OF GOVERNMENT

**Basic Principles of Political Organization of the Ukrainian SSR**

The Ukrainian Soviet Socialist Republic (Ukrainian SSR) is one of 15 constituent members of the Soviet federation—the Union of Soviet Socialist Republics (USSR). For this reason, its political, social, and economic structure is determined by and derived from the basic principles of the political, social,

and economic structure of the USSR. These formal principles, which are enumerated in the constitutions of the Ukrainian SSR and USSR and elaborated in Soviet official pronouncements and legal writings, can be summarized as follows:

1. The Ukrainian SSR is a socialist state of workers and peasants.
2. The socio-economic foundation of the Ukrainian SSR is the socialist economic system, in which all property (state and cooperative) and all means of production and distribution are "in socialist ownership," that is, they are nationalized by the state.
3. The economic life of the Ukrainian SSR is determined and directed by the comprehensive national economic plan, which is an integral part of the over-all national economic plan of the USSR.
4. The political foundation of the Ukrainian SSR is the "soviets of working people's deputies," who represent the people and the power that is vested in them.
5. The Ukrainian SSR entered the USSR "voluntarily" and has reserved for itself "the right to secede."
6. The Ukrainian SSR is a "sovereign" and "independent" state, whose "sovereignty" and "independence" are limited only by corresponding provisions (Art. 14) of the USSR Constitution.
7. The Ukrainian SSR is organized and operates in accordance with the Soviet state operational principle of "democratic centralism."

## Constitutional Evolution

**The Constitution of the Ukrainian SSR (1919).** The first constitution of the Ukrainian SSR was adopted on March 10, 1919, during a politically and militarily fluid situation in Ukraine, when the Bolsheviks, with the aid of Soviet Russia's Red Army, had established, for the second time, Soviet Ukrainian government in Kharkiv and were waging a war of aggression against the Ukrainian National Republic [Vol. I, pp. 794–9]. Both the constitution of the Ukrainian SSR (1919) and the government for which it provided were closely patterned on the constitution of the Russian SFSR (1918) and its government. The central government consisted of: (*a*) All-Ukrainian Congress of Soviets of Workers', Peasants' and Soldiers' Deputies as the supreme legislative body of the Ukrainian SSR; (*b*) All-Ukrainian Central Executive Committee (Vseukraïns'kyi Tsentral'nyi Vykonavchyi Komitet [VUTsVK]) as the legislative-executive body serving during the period between the sessions of the All-Ukrainian Congress of Soviets; and (*c*) the Council of People's Commissars of the Ukrainian SSR as the administrative organ (cabinet) of the government. A number of People's Commissariats (ministries) were established for the purpose of administering various branches of state operation.

The present status of the Ukrainian SSR as a constituent member of the USSR was originally derived from the signing of the "Declaration and the Treaty (Articles) of Union" on December 30, 1922, by the terms of which the Ukrainian SSR formally entered into a federal union with three other Soviet republics—the RSFSR, the Belorussian SSR, and the Transcaucasian Federation (ZSFSR)—to form the USSR. This formal act consummated the long process of military and political re-conquest by Bolshevik Russia of the bordering non-Russian republics, incorporating them into a new state formation called the "Union of Soviet Socialist Republics" [Vol. I, pp. 740–6, 756–70, 799–809].

**The Constitution of the USSR (1924).** The first Constitution (Fundamental Law) of the USSR was promulgated as the law of the land on January 31, 1924. It established the basic state structure for the USSR, which in its broad outlines exists until the present day. While incorporating the "Declaration and the Treaty (Articles) of Union," the new constitution of the USSR was based on

the constitutional practice and the well-tried principles that had for years (1918–22) governed relations within the RSFSR, which, being itself a federation, served as a model for the authors of the USSR. The central institutions of the RSFSR were converted with no change in substance into central institutions of the USSR. The sovereign authority was thus transferred to the new All-Union Congress of Soviets—the residual institution of the previous congresses of Soviets of the RSFSR—forming the nominal parliament of the USSR. The effective parliament of the USSR was the All-Union Central Executive Committee (VTsIK), which, unlike its predecessor in the RSFSR, consisted of two chambers: the Council of the Union and the Council of Nationalities. The former consisted of members elected by the All-Union Congress of Soviets from representatives of the Union Republics in proportion to the population of each; the latter, the federal chamber, was composed of five delegates from each Union Republic and Autonomous Republic, and one from each Autonomous Region elected by executive committees (legislatures) of the member republics and regions. The Presidium of the All-Union Central Executive Committee acted between the sessions of the latter as both the legislative and executive organ. The executive-administrative power was vested in the Council of People's Commissars (Sovnarkom) of the USSR. The tripartite division of the RSFSR People's Commissariats (ministries) was adopted, with only a slight alteration of terminology, for the USSR commissariat system: All-Union Commissariats operated only at the federal level with no counterpart in the republics; Joint Commissariats were of indirect centralist type, in which the principle of dual subordination was applied whereby the commissariat was responsible to both the Union Republic's Sovnarkom and the head office of the same commissariat in Moscow. The third category, Republic Commissariats, existed only at the Union Republic level and had no Union (central) counterpart. The third branch of government was the Supreme Court of the USSR, which had a unique right of passing on the constitutionality of legislation of Union Republics (see below, p. 117).

Each Union Republic was reserved "the right to secede" from the USSR by Article 4 of the constitution, which, unlike any other article in the constitution, could not be amended without the unanimous consent of all Union Republics (Art. 6). (See also below, p. 88.)

In keeping with Article 5 of the USSR constitution (1924), which provided that the constitutions of all Union Republics had to conform to that of the USSR, the constitution of the Ukrainian SSR (1919) was amended accordingly on May 10, 1925. In the meantime, a new constitution for the Ukrainian SSR was being drafted.

**The Constitution of the Ukrainian SSR (1929).** The second Constitution (Fundamental Law) of the Ukrainian SSR was adopted by the Eleventh All-Ukrainian Congress of Soviets on May 15, 1929, and it was a close copy of the constitutions of the USSR (1924) and the RSFSR (1925). The central government of the Ukrainian SSR was closely patterned on that of the USSR. There was the All-Ukrainian Congress of Soviets as the supreme legislative body; a unicameral All-Ukrainian Central Executive Committee as the legislative-executive body serving during the period between the sessions of the All-Ukrainian Congress of Soviets; Council of People's Commissars as the administrative organ (cabinet) of the government; and the Supreme Court of the Ukrainian SSR (see below, p. 116 ff.). The Council of People's Commissars of the Ukrainian SSR consisted of two types of commissariats (ministries): Republican Commissariats and Joint Commissariats. In addition, the All-Union (central) Commissariats could appoint their delegates to sit on the Council of People's

Commissars of the Ukrainian SSR (and other Union Republics) to ensure that its work conformed to central policies in Moscow—an arrangement which in practice transformed the Council of People's Commissars of the Ukrainian SSR into a local executive organ of the central (Union) government in Moscow. The constitution enumerated the functions of each of the organs of the central government.

The Ukrainian SSR reserved to itself the "right to secede" from the USSR. The competence of the Ukrainian SSR was circumscribed by appropriate provisions of the constitution of the USSR (1924). Within the confines of the Ukrainian SSR there was formed the Moldavian Autonomous Soviet Socialist Republic with its own constitution, and with its government organs subordinate to those of the Ukrainian SSR on autonomous principles (Art. 18).

**The Constitution of the USSR (1936).** In keeping with the Soviet constitutional theory on the role of constitution in the Soviet state, that is, that it should reflect the changes in the socio-economic and class structure of the Soviet state which had taken place since the adoption of the first constitution of the USSR (1924), the Soviet government promulgated on December 5, 1936, a new Constitution (Fundamental Law) of the USSR or popularly known as the "Stalin constitution." This constitution (as amended to date) is in operation in the Soviet Union at the present time.

The new USSR constitution retained all the essential forms of the federal structure of the USSR as it was established in 1924, although it also introduced some important modifications. First of all, it established one legislative body, the Supreme Soviet of the USSR, which replaced the old All-Union Central Executive Committee and the All-Union Congress of Soviets. The Supreme Soviet is a bicameral legislature, consisting of the Council of the Union and the Council of Nationalities. The Council of the Union consists of deputies elected directly from electoral districts (one deputy per 300,000 population). The Council of Nationalities—the federal chamber—consists of a fixed number of delegates from the various national state formations comprising the USSR. Union Republics, the constituent members of the federation, have 32 deputies each (until 1966, they had 25 each). Other national units of lower political status in the hierarchy of Soviet statehood were given a graduated scale of representation: Autonomous Republics, 11; Autonomous Regions, 5; National Areas, one each. Compared with the representation under the 1924 constitution, this arrangement recognizes the juridical position of Union Republics vis-à-vis other autonomous formations. This system, however, still gives overwhelming preponderance in representation in the federal chamber to the RSFSR, which alone has 251 seats (32 of its own plus a total of 219 for its autonomous units) as compared to only 32 seats each for most other non-Russian Union Republics. In practice, however, numerical representation is meaningless in the Soviet Union, since there is no free inter-play of political forces, and all decisions in the Supreme Soviet are taken, as a rule, unanimously.

In the interim between sessions of the Supreme Soviet, there is a Presidium, which has a dual role: while it is vested with legislative powers of substantial importance, it also serves as the Soviet Union's chief-of-state, a type of "collegial president." It consists of 33 members, 15 of whom are at the same time chiefs-of-state of their respective Union Republics. Traditionally, however, the chairman of the Presidium of the Supreme Soviet has performed the functions of the chief-of-state (Arts. 48 and 49).

The administrative machinery under the constitution of the USSR (1936) was basically a carry-over from that established by the 1924 constitution. The Council of Ministers (prior to 1946 called

Sovnarkom or Council of People's Commissars) comprises the executive branch of government (cabinet). For the purpose of administering the various branches of national economy within the framework of the Soviet federal system, the three-level division of ministries (formerly commissariats) was retained from the 1924 constitution. These levels are: All-Union; Union-Republic (joint); and Republic (Arts. 64–78) (see above, p. 79).

The judicial branch of government consists of the Supreme Court of the USSR, which under the present constitution is vested with supervising the judicial activities of all the judicial organs of the USSR and those of the Union Republics (Art. 104). It does not have the power to decide on the constitutionality of the All-Union laws, or, unlike its predecessor of 1924, of the laws of the Union Republics. The power to interpret the All-Union laws (and presumably the constitution of the USSR) has been vested in the Presidium of the Supreme Soviet of the USSR, whom the Supreme Court only advises. As far as it is known, however, this power of constitutional review has never been exercised. (See also "The Judicial System").

**The Constitution of the Ukrainian SSR (1937).** The present Constitution (Fundamental Law) of the Ukrainian SSR was adopted on January 30, 1937, at the Extraordinary XIV All-Ukrainian Congress of Soviets. In keeping with Article 16 of the constitution of the USSR (1936), which provided that each Union Republic's constitution "is drawn up in full conformity with the constitution of the USSR," the constitution of the Ukrainian SSR (like those of other Union Republics) is practically a copy of the USSR constitution in both form and substance. This constitution (as amended to date) governs the operations of the Ukrainian SSR at the present time. With the adoption of the new constitution, the name of the Ukrainian SSR was changed from "Ukrainian Socialist Soviet Republic" to "Ukrainian Soviet Socialist Republic."

The constitution of the Ukrainian SSR (1937) contains 127 articles grouped into 11 chapters. Chapter I (12 articles) deals with the social structure of the Ukrainian SSR. Chapter II (seven articles) deals with the state organization of the Ukrainian SSR, and forms the political foundation of the Soviet Ukrainian statehood. Chapters III–VII outline the structure, functions, and procedures for the formation of the central and local governmental systems of the Ukrainian SSR, their competence, powers, and jurisdiction. Chapter VIII (16 articles) enumerates the rights and duties of citizens of the Ukrainian SSR. Chapter IX (10 articles) provides for the electoral system. Chapter X (three articles) describes the state emblem (coat of arms), flag, and capital of the Ukrainian SSR. And chapter XI (one article) provides the procedure for amending the constitution.

**The amendments of 1944.** On February 1, 1944, apparently in preparation for postwar diplomacy vis-à-vis the western powers, the constitutions of the USSR and of each Union Republic were amended to read that "each Union Republic has the right to enter into direct relations with foreign states, to conclude agreements, and to exchange diplomatic and consular representatives with them" (Art. 18a), and that "each Union Republic has its own Republic military formations" (Art. 18b). Accordingly, the People's Commissariats (Ministries) for Foreign Affairs and Defense were reorganized from the All-Union type to Union-Republic (shared) commissariats, and the Ukrainian SSR government established in Kiev its own Commissariats for Foreign Affairs and Defense [Vol. I, pp. 885, 895–8].

These amendments were closely patterned after the rejected proposals of Ukrainian Communist leaders (Skrypnyk and Rakovsky) in 1923, at the time of the adoption of the first constitution of the USSR (1924). Constitutionally speak-

ing, the amendments were a restoration of juridical powers and prerogatives which the Ukrainian SSR possessed prior to the formation of the USSR. They also constituted a radical departure from the traditional practice, both Soviet and non-Soviet, of centralization of control of foreign affairs and defense. Although in actual practice the amendments have had very limited application in the case of foreign affairs, and no practical application in the case of defense and military formations, they have raised many controversial issues in terms of international law and practical politics for both the Soviet Union and the western world [Vol. I, pp. 895–8].

**The Central Government of the Ukrainian SSR**

The central government of the Ukrainian SSR (like that of other Union Republics) is fashioned along the same structural and functional lines as the central government of the USSR, with some exceptions, primarily those relating to the federal structure of the USSR. It is divided into three coordinate branches of government—the legislative, executive, and judicial. But the principle of separation of powers between these branches, as it is known in western democracies, is conspicuously absent and has been denied by Soviet constitutional lawyers. Rather, the Soviet Ukrainian state (like the entire USSR) is organized on the principle of fusion of powers, and the distinction between formal state functions and their respective branches is based primarily on the need for division of labor in the government. In addition to these traditional three state functions, there have developed in the course of time (especially since the 1930's) two other state functions, planning and control, which, because of the totalitarian nature of the Soviet state, have evolved into specific powers of government and are discharged by special planning and control organs (Gosplan and Peoples' Control Organs). (See also National Economy.)

The operation of the Soviet Ukrainian state (like that of the USSR) is based on the principle of "democratic centralism" both within the Republic and vis-à-vis the federal center (USSR). Originally developed by Lenin for application in the Communist Party's organization and operations, the rules have been modified to suit the governmental and administrative structure of the Soviet state. They include: (*a*) election of all organs of state power from below; (*b*) responsibility and accountability of lower state organs to the higher ones; (*c*) absolutely binding nature of the directives of higher organs for the lower ones; (*d*) absolute subordination of the minority to the final decisions of the majority; (*e*) control of the activity of state organs, officials, and deputies; (*f*) full conformity of the acts issued by lower state organs to those issued by the higher ones; (*g*) application of the system of dual subordination in the work of executive and administrative state organs. In brief, "democratic centralism" is a rationalization for the traditional Soviet practice of centralization, conformity, and regimentation in state and administrative operations.

**The legislative branch.** The highest legislative organ of the Ukrainian SSR is the Supreme Soviet. Unlike previous constitutions, under which there were several bodies with legislative function, the 1937 constitution of the Ukrainian SSR reposits all legislative power in one organ, the Supreme Soviet of the Ukrainian SSR, although other state organs still exercise this function to some degree.

The Supreme Soviet of the Ukrainian SSR is a unicameral legislature consisting of deputies elected directly by a universal suffrage for a period of four years from electoral districts of 100,000 population each. It is required to meet twice a year, although extraordinary sessions may be summoned by its Presidium. The

sessions of the Supreme Soviet usually last only a few days, and the "debates" consist of speeches expressing approbation of the legislation on hand or of the Soviet government's domestic or foreign policy. In the past, all questions put before the Supreme Soviet have been, without exception, adopted by unanimous vote. It follows, therefore, that this body, lacking sufficient time to deliberate and any evidence of dissent, is little more than a rubber stamp of the Communist Party and the Soviet government organs.

The Supreme Soviet elects a Presidium to serve as the interim body between the sessions. The Presidium has a dual function—executive and legislative (see below, p. 84). In the exercise of its legislative function, the Presidium issues decrees, many of which, though not all, have to be passed on by the Supreme Soviet when it convenes. These decrees, however, take effect immediately, and have the force of law at times as far in advance as six months prior to the next session of the Supreme Soviet at which they are considered and, as has been the past practice, always approved. Other legislative functions of the Presidium include: convening the Supreme Soviet; conduct of national referendum (never held in the past); setting aside decisions and orders of the Council of Ministers and *oblast* councils if these are in conflict with the law; authoritative interpretation of the law.

The legislative competence of the Supreme Soviet of the Ukrainian SSR extends to areas which are not otherwise covered by Article 14 of the USSR constitution (Arts. 13 and 19, Ukrainian SSR constitution). The list in Article 14 is rather extensive and embraces practically every field of any political and economic significance, leaving to the Ukrainian SSR (and other Union Republics) a very limited number of legislative areas of secondary importance. In addition, in areas in which the USSR does not exercise legislative jurisdiction, it can and does "determine the principles of legislation" for all the Union Republics.

The legislative authority of the Ukrainian SSR Supreme Soviet can be measured by its budgeting powers and its role in the fiscal field. The All-Union government is vested with exclusive authority not only to approve the unified state budget of the USSR but also to determine the taxes and revenues which go into the Union Republic's and local budgets. After the central government in Moscow sets the expenditures and revenues of the Ukrainian SSR, the latter's Supreme Soviet has to adopt it as a matter of formality, for it cannot modify it in any considerable way. It can increase it only if it finds new sources of income within the Republic. Taxes, however, cannot constitute such new source of revenue, since the Union Republic has no right to establish taxes on its own initiative. Soviet taxation is the exclusive domain of the Union, and the Union Republic serves solely as tax collector for the central government. Such vast concentration of financial power at the center by definition implies great concentration of political power as well.

Considering the brevity of sessions of the Supreme Soviet of the Ukrainian SSR, there is a number of standing commissions (whose number and activity have recently increased), which review legislative proposals in advance of the sessions of the Supreme Soviet. While much of the operation of these commissions is obscured from the public eye, it seems that legislative proposals receive a more detailed consideration there than they do in the Supreme Soviet. The deliberations of the commissions, however, are closely guided by their Party contingent.

The Supreme Soviet originates very little, if any, legislation on its own initiative. The bulk of its laws are initially issued as decrees of the Presidium or decisions and orders of the Council of

Ministers, some of which may be submitted before the Supreme Soviet for ratification. Since the constitution does not specify which decrees and decisions have to be ratified, many of these acts remain in force as law without even a nominal approbation by the Supreme Soviet. Sessions of the Supreme Soviet are frequently preceded by plenary meetings of the Central Committee of the Communist Party at which major policy decisions are made and the legislative program for the current session is formulated. These, in turn, are issued either in the form of joint resolutions of the Central Committee and the Council of Ministers, which may be submitted for ratification to the Supreme Soviet, or as formal legislative proposals of the government (Council of Ministers) to the Supreme Soviet.

**The executive branch.** The executive functions in the Soviet Ukrainian state (as in the USSR as a whole) are performed by two distinct and separate institutions: the chief-of-state, or the president, and the head of government, or the premier.

The chief-of-state of the Ukrainian SSR is the Presidium of the Supreme Soviet of the Ukrainian SSR (see above, p. 83). It consists of the chairman, two vice-chairmen, the secretary, and 15 members. It is a type of "collegial president," although most of the state functions, as a rule, are performed by the chairman of the Presidium, who has popularly been regarded as "the President." As in many other states, the Soviet chief-of-state is of much ceremonial importance and very limited political power. The constitution of the Ukrainian SSR (Art. 30) enumerates 11 formal powers, seven of which fall into the category of executive functions: it appoints and removes ministers (usually at the initiative of the chairman of the Council of Ministers); exercises the right of pardon of citizens sentenced in courts of the Ukrainian SSR; grants citizenship of the Ukrainian SSR. Perhaps the least important but most frequently exercised function is the purely formal one of awarding decorations and titular honors. Two other functions would be politically significant if they were ever exercised in practice: to appoint and recall diplomatic envoys of the Ukrainian SSR to foreign states; and receive credentials of and recall diplomatic representatives accredited to the Ukrainian SSR by foreign states. In the absence of diplomatic relations between the Ukrainian SSR and other states, these powers have never been exercised since the constitution was amended in February 1, 1944 (see above, pp. 81 ff.).

The executive power for the purpose of administering the state is formally vested in the Council of Ministers, which until 1946 was known as the Council of People's Commissars (Radnarkom). The Council and its chairman constitute the equivalent of cabinet and prime minister respectively, that is, they are the Government of the Ukrainian SSR. They are appointed by the Supreme Soviet of the Ukrainian SSR, and are formally responsible to it, and between the sessions to its Presidium. The size of the Council of Ministers varies with the changes in the number of ministries at any given time. It consists of the chairman (premier), first vice-chairman, vice-chairmen, ministers, chairmen of the State Planning Commission (Derzhplan), the State Security Committee—*KGB* (Secret Police), and various other state committees.

The functions of the Council of Ministers fall into two broad categories, executive and administrative, and they include (Art. 43): coordinating and directing the work of various ministries and state administrative agencies; ensuring the fulfillment of the national economic plan and state budget of the Ukrainian SSR; ensuring the maintenance of public order; guiding the work of the *oblast* executive committees; providing guidance in the sphere of foreign relations

and defense of the Ukrainian SSR. The last two powers are on paper only (see above, pp. 81 ff.).

In the performance of these functions, the Council of Ministers is the principal source (in terms of numbers) of Soviet legislation in the form of its decisions and ordinances, and bills introduced in the Supreme Soviet. Although decisions and ordinances are not laws in the juridical sense and do not require affirmation by the Supreme Soviet, they often have the force of law in practice. Those bills that are introduced in the Supreme Soviet have always and without exception been adopted by a unanimous vote.

In terms of real political and economic power, the Council of Ministers is the most important organ of the three formal branches of government of the Ukrainian SSR. It is the apex of administrative and executive control over the resources of the country, and the center from which the economy is planned and directed. It is significant that its members are at the same time top Party officials—members of the Politburo and the Central Committee of both the CPU and CPSU. In relation to the Council of Ministers of the USSR (in Moscow), however, the Council of Ministers of the Ukrainian SSR (in Kiev) plays a subordinate and secondary role. It is responsible primarily for the function of operational direction—that is, carrying out the plan and policies centrally conceived and formulated in Moscow—and does very little, if any, planning and policy formulating on its own. Even in local affairs, any initiative must be coordinated with the over-all policy objectives of the government and the Party in Moscow.

It is significant that the constitution does not mention the power which traditionally belongs to the executive branch of government, namely, policy determination and organization. This is explained by the peculiarly Soviet arrangement whereby the function of policy formulation is in practice delegated to the Party Congress and its Central Committee in Moscow (see below, pp. 90 ff.).

**Administration.** For the purpose of administering various aspects of national life, there are two types of ministries represented in the Council of Ministers of the Ukrainian SSR: Union-Republic and Republic.

The UNION-REPUBLIC MINISTRIES reflect the federal structure of the USSR, and the Ukrainian SSR's membership therein. They operate in the field of concurrent jurisdiction, that is, fields in which both the USSR and the Ukrainian SSR have direct interest. They are found on both levels, in Kiev and in Moscow, and they operate according to the Soviet principle of dual subordination: the Union-Republic ministry in the Ukrainian SSR is subordinated to both the Council of Ministers of the Ukrainian SSR and to the corresponding Union-Republic ministry of the USSR in Moscow. While the Union-Republic ministries (on the Union level), as a rule, are not supposed to engage in direct administration in the Republic and should be only guiding the work of their counterparts on the Republic level, in practice, however, the Union-Republic ministries on the Republic level act only as agencies of their counterparts in Moscow and have little, if any, autonomy themselves. In addition, Union-Republic ministries in Moscow can administer directly a number of establishments within the Republic according to a list approved by the Presidium of the USSR Supreme Soviet (Art. 76, USSR constitution).

The second type, the REPUBLIC MINISTRIES operate on the Republic level only, and they are subordinated and responsible only to the Council of Ministers of the Ukrainian SSR. These ministries have no counterpart on the All-Union level. They operate in the field of residual jurisdiction, that is, fields which are of local character and devoid of any signifi-

cant economic or political power (e.g., communal economy, social insurance, local industries and transportation). While the number of Union-Republic ministries has always remained high (with the exception of a short period during Khrushchev's decentralization experiment, 1957–64), the number of Republic ministries has always been low, ranging from four to eight.

The past Soviet practice has been to shift functions from one level to another and abolish old and create new ministries at any level (All-Union, Union-Republic or Republic) whenever it was deemed politically or economically expedient, with little or no regard for the Union Republic's interest or for the federal principle of the USSR, and at times even in contradiction to specific provisions of the constitutions of the USSR and the Union Republics. This has been especially true in the so-called socio-cultural sphere (education, culture, public health, social insurance), in which the Union Republics have been vested with residual jurisdiction (Art. 19, the constitution of the Ukrainian SSR), and the Union has only the prerogative "to determine basic principles" of activity in this sphere. In obvious disregard for these constitutional provisions, the Soviet government in Moscow has recently centralized the administration of culture, public health, and higher and secondary education by transforming previously Republic ministries into Union-Republic or shared and by establishing counterpart ministries in Moscow. Such practice can be explained only by the absence in Soviet practice of appropriate review of the constitutionality of the acts of the Soviet government and also by the apparent political impotence of the Union Republics vis-à-vis the central government in Moscow.

Since ministries are listed in the constitution of both the Ukrainian SSR and the USSR, every such change in the ministry or shift in function has required a constitutional amendment for either constitution or both. This in one way accounts for the Soviet simplicity of the amending process.

**The judicial branch.** The judicial branch of the Ukrainian SSR consists of the Supreme Court of the Ukrainian SSR, which is the highest judicial body in the Republic. The chief function of the Supreme Court is the supervision of the judicial activities of all judicial organs of the Ukrainian SSR. It does not have the power to decide on the constitutionality of the laws of the Republic. The power to interpret the laws of the Republic (and presumably the constitution of the Ukrainian SSR) has been vested in the Presidium of the Supreme Soviet of the Ukrainian SSR, whom the Supreme Court only advises. As far as it is known, this power has never been exercised in the Ukrainian SSR. The Supreme Court consists of five members, elected by the Supreme Soviet of the Ukrainian SSR for a term of five years. The chairman of the Supreme Court of the Ukrainian SSR (like those of other Union Republics) is, by virtue of his office, also a member of the USSR Supreme Court (Arts. 84–87). (See also The Judiciary.)

### The Legal Nature of the Soviet Federation

The USSR is, in the formal sense, a federation of 15 Union Republics of which the Ukrainian SSR is the second largest in terms of population. Both Soviet and non-Soviet legal writers admit that the Soviet federal system is *sui generis* unclassifiable except on Soviet terms and one to which it is difficult to apply conventional criteria of federations developed in the West. The two most important characteristics of the Soviet federation are: (1) it is based on the national-territorial principle as distinguished from most other non-Soviet federations, which are based on the administrative-territorial principle; (2) each constituent member of the federation, that is, the Union Republics, has the

right to secede from the Union (Art. 17, USSR constitution; see below, p. 88).

The Bolsheviks, like their predecessors the classical Marxists, were initially, in both theory and practice, opposed to federation as an organizational principle for a socialist state. They adopted federalism only after the October Revolution as an expedient and an integrative force for achieving political unity among the various non-Russian nations in the aftermath of the defunct Russian tsarist empire. Their declarative purpose, therefore, was "to solve the national question" within the forcefully integrated Soviet multi-national state. In pursuit of this objective, Soviet political strategists have devised an elaborate and complex system of national-territorial state formations meticulously reflecting the multinational nature of the Soviet federation and affording every nation and every major nationality juridical recognition in one of several forms of "Soviet national statehood." In this way they have tried (1) to cater to national feelings of the non-Russian nationalities by skillfully manipulating the classical concepts of "national sovereignty," "national statehood," "national autonomy"; (2) to create a political-psychological safety system for the pent-up nationalism; and (3) to enlist the loyalties of the member-nationalities.

Juridically speaking, only Union Republics are subjects of the Soviet federation (the USSR). Other national-autonomies (i.e., Autonomous Republics, Autonomous Regions, and National Areas), although they are represented in the federal chamber—the USSR Council of Nationalities—by Soviet criteria have not qualified for "full national statehood" in the form of Union Republic. They are, therefore, subordinate members of the Union Republic in which they are located. Most of them are located in the RSFSR, the largest of the 15 Union Republics and a federation in its own right based on these national autonomous units.

Under the present constitution of the USSR (1936), representation is graduated in favor of Union Republics: Union Republic—32; Autonomous Republic—11; Autonomous Region—5; National Area—one each (see above, p. 80).

In the USSR, as in other federations, competence is formally divided between two levels of government—the Union and its members, the Union Republics—represented by a three-tier organization of ministries (see above, pp. 79, 81). However, the supremacy of the Union is assured by the following: (1) *Kompetenz-Kompetenz* in the Soviet federation resides in the Union, that is, the Union has the right to enlarge its own competence by amending the constitution; (2) All-Union (federal) laws are supreme in the land, and the Union can disallow any conflicting legal act of a Union Republic; (3) all Union Republic constitutions must conform to the All-Union constitution.

Federation, in Soviet legal theory and political consideration, has always been viewed as a necessary and useful transitional stage to the Marxist-preferred centralized, unitary, and integrated state prior to its ultimate "withering away." While retaining the formal paraphernalia of a federal state, the Soviet federation has in practice operated over the past decades as a unitary and centralized state *par excellence*, in which the administrative machinery of the central government has had dominance over other branches—legislative and judiciary. Aside from the policy predilections of the central government, there are within the system of Soviet federation a number of institutions which, themselves being organized and operated on a centralized and unitary principle, have acted as centralizing forces on the operation of Soviet federalism, cutting across the established federal lines. The most important of these are: the Communist Party, whose role in particular is crucial for the operation of the Soviet federation (see below, pp. 89 ff.); Centralized Economic Plan-

ning; and the Procuracy Service (see p. 117).

### The Legal Status of the Ukrainian SSR within the USSR

**The competence of the Ukrainian SSR.** The USSR constitution (Art. 15) and the Constitution of the Ukrainian SSR (Art. 13) declare that the Ukrainian SSR is a "sovereign" and "independent" state, whose sovereignty and independence are limited only by the provisions of Article 14 of the USSR constitution. Article 14, however, encompasses every field of any significance either by granting the Union exclusive jurisdiction or by reserving to it fields in which it has the prerogative to "determine basic principles" and "determine the principles of legislation," which upon closer examination leaves not a single major activity to the Ukrainian SSR beyond the scope of Union's authority (see above, pp. 83 ff.).

**The sovereignty of the Ukrainian SSR.** The question of "sovereignty" within a federation has been recognized by most constitutional lawyers as a complex and a difficult one. Soviet constitutional lawyers subscribe to the theory of "dual sovereignty," that is, that both the Union and its constituent members, the Union Republics, are sovereign. The Soviet claim of "sovereignty" for the Ukrainian SSR (and other Union Republics) is based on three main premises: (1) the Ukrainian SSR entered into union with other Soviet Republics "voluntarily," and likewise "voluntarily" surrendered some of its prerogatives of statehood and part of its sovereignty; (2) the Ukrainian SSR has the right to "freely secede" from the USSR (Art. 14, Ukrainian SSR constitution); (3) the territory of the Ukrainian SSR may not be altered without its consent (Art. 15, Ukrainian SSR constitution).

The claim to "voluntary union" has little historical basis. The four-year armed struggle (1917–21) between the Ukrainian National Republic and Soviet Russia bears witness to the forceful incorporation of Ukraine into the Soviet Russian empire, which in 1924 adopted the name "USSR" [Vol. 1, pp. 725–70].

The right to secede, while being a unique prerogative of a member-state among the existing federations, is a mere paper right without any practical meaning in the face of the overwhelming coercive power in the hands of the Party, police, and the military of the USSR. Even in terms of juridical provisions, neither the constitution of the Ukrainian SSR nor that of the USSR provide any formal procedure for the institutional exercise of this right. Furthermore, this right to secede can be abrogated by the central government in Moscow at any time by a simple amendment to the USSR constitution. For unlike its predecessor of 1924, the present USSR constitution does not provide any safeguards or restriction against amending or repealing Article 17, covering the right to secession (see above, p. 79).

Soviet past practice has blemished the official Soviet claim that the territory of a Union Republic may not be changed without its consent (Art. 18 of the USSR constitution), as some examples from recent history illustrate: part of the ethnic Ukrainian territory was ceded to Poland in 1945 without the participation of representatives of the Ukrainian Soviet government either in the negotiations or signing of the treaty between Poland and the USSR; in 1956, the Karelo-Finnish SSR was abolished as a Union Republic and its territory was annexed to the RSFSR and granted the lower status of an Autonomous Republic (Karelian ASSR), thus losing its right to secede and all the other rights that go with the status of a Union Republic.

The Soviet theory of "dual sovereignty" maintains also that each Union Republic can redeem portions of its sovereignty which it had surrendered earlier to the Union. This is based on the Soviet theory that the nation or people is the true repository of sovereignty as expressed in the nation's will. A nation can surrender

parts of its state sovereignty to another state (e.g., the USSR), but it retains for itself the sovereign right to retrieve them. It can be said, therefore, that the nation or people possesses "potential" but inalienable sovereignty. As an example, Soviet jurists cite the recovery by Union Republics of their original sovereign right to separate foreign relations by amendment of the USSR constitution on February 1, 1944 (see above, pp. 81 ff.). An extreme example of the exercise of this sovereignty would be a complete secession from the Soviet Union.

### The Communist Party of Ukraine

**The party organization.** The Ukrainian SSR, as other Union Republics and the whole USSR, is a one-party political system. The sole political party is the "Communist Party of Ukraine" (CPU). [For historical background, see Vol. I, pp. 794–831.]

The CPU is not a separate national party organization, but rather a branch of the All-Union organization—the "Communist Party of the Soviet Union" (CPSU)—and is subject to central (Moscow) control and direction. The original idea of separate, autonomous national Communist parties organized along federal lines, as proposed at numerous Party congresses prior to the October Revolution, was never adopted, and the CPSU has remained a highly centralized, disciplined political organization with branches in the Union Republics, Autonomous Republics, and other political and administrative subdivisions of the USSR.

The organizational structure of the CPU is modeled on the CPSU and parallels the political-administrative structure of the Republic. The Party is organized along the "production principle," that is, its basic units are formed in places of work in order to permit the Party to fulfill one of its chief functions of guiding and controlling economic activities in every sector of the national economy. At the bottom of the pyramid are primary Party organizations (once called "cells") on collective and state farms, factories and industrial establishments, educational institutions, administrative offices, and military formations. Above primary organizations come rural and city *raion* organizations, *oblast* organizations, and the Republic organization.

Intra-party elections are indirect, from bottom upward. Candidates are usually selected or at least approved by the higher Party officials, although on occasion disagreements are known to have taken place at various Party levels on the question of candidates. Each primary organization elects annually a secretary and a directing bureau, and every two years delegates to the *raion* conference. In each *raion*, a conference of delegates of primary Party organizations elects a committee which in turn elects a *raion* bureau and three secretaries. The *raion* conference also elects delegates to the next-higher level, the *oblast*, who elect the *oblast* committee; the committee elects a bureau and secretaries. The *oblast* conference elects delegates to the Union Republic Party congress. The Republic congress elects the Central Committee, which, in turn, elects its Presidium and the Secretariat. At each level, the First Secretary is always in command. Approximately every four years, large city *raions*, *oblasts*, and the Union Republic congresses elect delegates to the All-Union Party Congress. The latter, again, elects its Central Committee, which, in turn, elects its Politbureau, the Secretariat, and the Committee of Party Control. The Union Republic congresses always precede the All-Union Party congresses.

Both elections and appointments in the Party organization are controlled by the Party Apparat (Apparatus), consisting of full-time paid Party officials known as *apparatchiki*, who occupy all the important power positions inside the Communist Party.

The Party is organized and operates in accordance with Lenin's ubiquitous

concept of "democratic centralism" which is the "guiding principle" for the Party. It provides for: (*a*) election of leading Party bodies from the lowest to the highest; (*b*) periodic accountability of Party bodies by their respective Party organizations; (*c*) absolute Party discipline and absolute subordination of the minority to the majority; (*d*) absolute binding character of the decisions of the higher bodies upon the lower bodies. In practice, this concept provides a useful rationalization for the most strict intra-Party discipline for individual members and Party organizations.

**The role of the party in the Ukrainian SSR.** The operation of the Soviet state, economy, and society in general cannot be properly understood without the appreciation of the role played by the Communist Party at every level of the state pyramid.

Prior to 1936, there was no mention in the USSR constitution (1924) of the role of the Communist Party in the Soviet state, although Soviet legal writers were then outspoken about it (e.g., G. S. Gurvich, S. I. Raevich, and others). Article 126 of the USSR constitution (1936) juridically defines the role of the Party as being an organization of "the most active and politically conscious citizens in the ranks of the working class, working peasants and working intelligentsia," which constitutes "the core of all organizations of the working people, both public and state." While the Communist Party is neither a state nor a government institution, it is in both theory and practice the prime mover of every important action, and it imparts its own system of norms on the political process within the Soviet state.

From the organizational aspect, the Party's outward and formal organizational hierarchy closely coincides with the Soviet federal and administrative-territorial state structure reaching down to the lowest village and the smallest factory. Informally, the Party machinery is closely interwoven with that of the state, especially in the administrative sector of the executive branch of government, through the so-called principle of "interlocking directorship," whereby high state officials at both All-Union and Republic levels are at the same time high Party functionaries. For a long period, even the office of the USSR Premier was occupied by the First Secretary of the CPSU (e.g., Stalin and Khrushchev). Such a system provides the institutional base for the Party dictatorship in the Ukrainian SSR and the USSR as a whole.

The Party plays an important role in the Soviet legislative process. All important legislation adopted by the Supreme Soviet is originally formulated or at least approved by the Party. In addition, the Party (through its Central Committee) acts as legislator by issuing its own "directives" and "theses," or "joint decisions" of the Central Committee and the Council of Ministers, which are legally binding on state administrative organs in keeping with the Soviet theory of strict subordination of the state apparatus to Party guidance and control. The Party, therefore, has a choice of making its will known to various segments of the Soviet society: it can seek compliance with its decisions either from outside the constitutional framework by the use of Party organization at each level of state administration or it can use the formal state channel and wrap its directives in a cloak of legitimacy in the form of a law passed by the Supreme Soviet or a decree issued by its Presidium.

The Party plays an especially significant role in the sphere of planning and control at all levels. It is no accident that the constitutions of the USSR and the UkrSSR do not grant to their respective *de jure* governments (the Council of Ministers) the prerogative of policy formulation, because it traditionally has been exercised by the Party (see Art. 33c of "The Party Rules"). This in fact makes the Party's Politbureau the *de facto* government of the USSR and the Ukrainian SSR. The Party exercises control in

the following ways: (1) by its unrestricted control over the enforcement powers of the state; (2) by maintaining a monopoly on the nomination of candidates for elections at all levels; and (3) significantly, by controlling the *nomenkliatura*, that is, a Union-wide selection of personnel (a form of gigantic patronage system). The *nomenkliatura* system works across federal lines without regard to Republic frontiers or their jurisdiction. Frequent interchange of personnel—from Moscow to various Republics and between different Republics—takes place under the guise of "exchange of cadres" without regard to nationality or the preferences of the persons involved. Strict intra-Party discipline makes this horizontal mobility possible even under most difficult circumstances. One of the harsh consequences of this system has been "Russification," that is, subjection of non-Russian Party workers and their families to the process of denationalization or complete Russification, and, conversely, injection of large numbers of Party workers of Russian nationality into the national fabric of the non-Russian Union Republics.

Since the Communist Party of Ukraine is only a branch of the CPSU, and is strictly subordinated to the latter organizationally and operationally, it serves as a "transmission belt" for passing policy decisions of the central Party organs in Moscow to the government of the Ukrainian SSR in Kiev, thus reducing the autonomy of the Soviet Ukrainian government on any important matter to choosing the best means of carrying out these decisions. It is true that high Party officials of the CPU (who are at the same time high government officials of the Ukrainian SSR) are also members of the CPSU Central Committee and, in a few instances, even of its Politbureau, and in this way they are at least in the position to influence the broad Party policy decisions in their formulating stage as concerns the Ukrainian SSR. To what extent this is actually being done is not known because of the secrecy that surrounds high-level Party deliberations. What is known, however, is that whatever autonomy does exist in the Ukrainian SSR, it can only exist within the framework of the control exercised by the highly centralized Communist Party of the Soviet Union.

The Party also plays a significant role on the local level. Local Party committees (in the cities, factories, farms, schools, etc.) perform important administrative and control functions by way of exercising their prerogative to appoint or approve candidates for all public office as well as managerial and administrative positions, verifying the production levels and schedules of plan fulfillment, determining the allocation of scarce consumer goods within their area of jurisdiction, controlling and supervising cultural and social activities of the local population, and so on. Virtually no activity of any importance escapes the watchful eye and the guiding hand of the Party organization on the local level.

**Local Government in the Ukrainian SSR**

**Administrative-territorial division.** The Ukrainian SSR is divided into 25 administrative *oblasts*. Each *oblast* is in turn subdivided into *raions*. There are two types of *raions*: urban, found in large cities, and rural, which consist of a number of *sil'radas* (village councils) with the seat located in a small town or a large village. As of July 1, 1967, there were 475 *raions* and 8,550 *sil'radas* in the Ukrainian SSR. The cities are under the Republic, *oblast*, or *raion* jurisdiction. There are also settlements of urban type [Vol. I, p. 153].

**Local government organization.** Each of the above-named administrative subdivisions has a soviet or council (*rada*) of "working people's deputies" elected from single-member electoral *raions* for a two-year term. Elections are from single-candidate nominations prepared or at least approved by the local Party

organization. The deputies' councils, in turn, elect an executive committee at *oblast*, city, and *raion* levels, and an executive body of three officers (chairman, vice-chairman, secretary) at the village level. In large cities, the executive committee elects a presidium which runs the administration between the sessions of the executive committee. The constitution of the Ukrainian SSR prescribes in detail the minimum required frequency of sessions by the councils at various levels (Arts. 61–3). The deputies, in addition to sitting in council, also serve on the committees or sections into which the councils on the city and *oblast* levels are divided. For the purpose of more effectively administering the various sectors of municipal or *oblast* economy, the councils at those levels create, as part of the executive committees, special divisions or administrative departments with the approval of the Presidium of the Ukrainian SSR Supreme Soviet (Art. 69). In addition (and this is very significant for proper evaluation of Soviet local government), at the *oblast* level, there are attached to the regional deputies' councils ("as conditions require") special departments representing the All-Union (USSR) ministries, the Ministry of Communications of the Ukrainian SSR, and the Committee for State Security (Secret Police) (Art. 70).

The Soviet principle of "dual subordination" applies also to local administration: the executive organs at each level are directly accountable both to the councils that elected them and to their respective executive organs on the next higher level. Similarly, the councils and executive organs at each level can abrogate decisions of their respective councils and executive organs immediately below them.

**The role of local government.** The role of local government under Soviet conditions is unlike that known in the western world. First of all, the organs of local administration are officially described as agencies of the central government (Art. 54)—a role that is assured by the application of the principle of "democratic centralism," by the omnipresent influence of the Party, and especially by their financial dependence on the central government. Unlike their western counterparts, Soviet local government bodies have no financial autonomy. Their budget is initially determined, together with the budget of the Union Republic, by the All-Union government in Moscow and subsequently sub-allocated without any significant modification by the Union Republic government. They do not have the right to tax or any significant source of income other than the centrally assigned budget. (see also National Economy). The popularly elected councils at all levels are, as a rule, weak, and the real seat of power resides in the executive committees and their presidiums which in practice act as agents of the Party. Aside from the traditional problems of administration, the local organs are active in some aspects of control and management of the economic activity in their administrative areas, and especially in helping to secure the fulfillment of assigned economic plans. The councils also serve as a safety valve by providing the ventilation of grievances against local officials, and they help create the semblance of widespread popular participation in local government.

### Citizenship of the Ukrainian SSR

The Ukrainian SSR (like all other Union Republics) has its own citizenship and the right to admit to citizenship of the Republic (Arts. 17 and 19u, Ukrainian SSR constitution). Since the Ukrainian SSR is a constituent member of the USSR, this raises the problem of "dual citizenship." Article 17 provides that each citizen of the Ukrainian SSR is automatically a citizen of the USSR, and that each citizen of any other Union Republic enjoys on the territory of the Ukrainian SSR the same rights as the citizens of the Ukrainian SSR. This pro-

vision puts in question the practical meaning of the "Republic citizenship" since every USSR citizen can enjoy the same rights and privileges on the territory of the Ukrainian SSR without even becoming a citizen of the Ukrainian SSR and irrespective of the time and duration of his residence.

According to constitutional provisions, only Union Republics have the right to admit aliens to citizenship (Republic and simultaneously USSR) and the Union only provides legislation concerning Union citizenship and the rights of foreigners (Art. 19u, Ukrainian SSR constitution; Art. 14v, USSR constitution). By the law of 1938, however, the USSR Supreme Soviet authorized the Presidium of the USSR Supreme Soviet to admit aliens to Soviet citizenship, thereby limiting the right of the Presidium of the Ukrainian SSR Supreme Soviet to admit to citizenship only those persons residing on the territory of the Ukrainian SSR. In practice, however, citizenship, as a rule, has been granted to aliens by the Presidium of the USSR Supreme Soviet, and it is the USSR (not the Republic) citizenship that has been accorded international recognition.

The constitution of the Ukrainian SSR (and the USSR) has an elaborate list of "fundamental rights and duties of citizens" of the Ukrainian SSR. It is ironic that the adoption of this portion of the constitution was made at the height of the Great Purges (in 1937), when fundamental human freedoms and civil rights of millions of Soviet citizens were being violated daily without the opportunity for redress or constitutional protection.

Articles 99–102 establish the so-called economic rights, which include the right to employment and leisure, the right to social security and education, and equality of rights for women. In practice, however, the observance of these economic rights by Soviet authorities has been made dependent on economic requirements and political considerations of the regime in power (see also National Economy).

Articles 103–9 enumerate basic freedoms and civil rights. As in the case of the economic rights, these "guarantees" have been made by past Soviet practice only declaratory in nature. "Freedom of conscience" has been consistently violated in respect to individuals and whole religious groups; instead, its corollary, "freedom of anti-religious propaganda," has been intensified under official sponsorship. "Freedom of speech, press, assembly and demonstrations" has been permitted only if it is "in accordance with the interests of the toilers" (Art. 106), which in practice means whenever the Party, which interprets "the interests of the toilers," will so permit. Recent arrests, trials, and sentencing of writers and intellectuals underscore the hollowness of these constitutional provisions. Soviet history abounds in violations of these rights—searches and seizures without warrants, illegal arrests and deportations or executions without trial—all attesting to the fact that constitutional rights of the individual in the Soviet Union are not covered by a guarantee when questions of policy of the regime in power is involved.

Article 103 of the Ukrainian SSR constitution (and Art. 123 of the USSR constitution) guarantee complete equality of nations and races and prohibit discrimination in any form because of national origin or race. The Soviet practice, however, has not lived up to either the letter or the spirit of this constitutional provision. Soviet history is replete with examples of national discrimination and inequality practiced against individuals, groups, or whole nations. The hegemony of the Great Russian nation over the non-Russian nations, established in the 1930's in the political, cultural, and socio-economic spheres, has never been officially renounced and is being perpetuated to the present day. Russification has remained at the heart of the nationality policy of the Communist Party of the

Soviet Union, albeit formally couched in such terms as "rapprochement (*sblizhenie*) of nations" or "fusion (*slianie*) of nations" of the USSR, which in reality mean the ultimate absorption of non-Russian nations of the USSR by the Great Russian nation. Any overt opposition to the process of Russification has been usually branded as "bourgeois nationalism" or "nationalist chauvinism," and has been equated with subversion and made punishable under loosely interpreted articles of the Criminal Code of the Ukrainian SSR.

On the other hand, the system of government of the Ukrainian SSR and the USSR has not provided an effective channel through which persons or groups may seek legal redress of grievances stemming from allegations of national discrimination. In fact, such interpellations are implicitly discouraged by the Soviet regime's broad application of its police powers. There is no official body (agency or commission) which could investigate alleged violations of national rights, and oversee, control, and report on the application of the constitutional provisions and related laws in the sphere of national rights.

Corollary to the enumerated freedoms and rights of citizenship, the constitution (Arts. 110–13) also lists the duties that go along with Soviet citizenship (i.e., the duty to work, serve in the armed forces, observe laws, maintain labor discipline, safeguard socialist property, and defend the country).

Under the USSR constitution of 1924, each Union Republic had the exclusive right to determine the rights and duties of its citizens. The present constitution (1936) transferred this prerogative to the All-Union government.

### The Territory of the Ukrainian SSR

The present territory of the Ukrainian SSR (232,046 sq.mi.) was formed in the aftermath of World War II, and it includes most of the historic ethnic lands of Ukraine inhabited by a majority of Ukrainian population.

The territory of the Ukrainian SSR was originally designated by the Treaty of Riga (March 18, 1921), whereby the territory of the Ukrainian National Republic was partitioned between Soviet Russia and Poland, and Soviet rule was finally instituted in central and eastern Ukraine. One-third of the Ukrainian ethnic territory was still outside the boundaries of the Ukrainian SSR and formed parts of Poland (Galicia, Volhynia, the Kholm region, Podlachia, and western Polisia), Rumania (Bukovina and Bessarabia), and Czechoslovakia (Carpatho-Ukraine). Sections of the Ukrainian ethnic territory were also incorporated in the Russian SFSR (Kuban, parts of Donbas, Stavropol *krai*, Black Sea *guberniyas*, northern counties of the Chernihiv *guberniya*, southern parts of the Kursk and Voronezh *guberniyas*, etc.) [Vol. I, pp. 24ff.]. Additional Ukrainian territory (the Tahanrih district) was transferred to the Russian SFSR in 1924. The Putyvl county of the Kursk *guberniya* was added to the Ukrainian SSR.

The borders of the Ukrainian SSR, as established in 1921 (and modified in 1924), remained unchanged until 1939 when as a result of the Soviet-German partition of Poland, Western Ukraine (Galicia and Volhynia) was annexed to the USSR and became part of the Ukrainian SSR. Subsequently, parts of Bukovina and Bessarabia, ceded by Rumania in 1940, were also incorporated into the Ukrainian SSR. At the same time, on August 2, 1940, the former Moldavian ASSR was promoted to the status of a Union Republic and was therefore excluded from the Ukrainian SSR. In 1945, Carpatho-Ukraine was formally ceded by Czechoslovakia and made part of the Ukrainian SSR as the Transcarpathian *oblast*. In 1954, the Crimea was added to the Ukrainian SSR.

Article 15 of the Ukrainian SSR constitution guarantees the territorial integrity of the Ukrainian SSR by providing that

its territory may not be altered without its consent. At the same time, Article 6 of the USSR constitution vests absolute ownership of the land and the natural resources in the USSR. This obvious constitutional inconsistency and the problem of "dual ownership" has never been satisfactorily resolved in the Soviet constitutional law.

[For Coat of Arms, Flag, Capital of the Ukrainian SSR, see Vol. I, pp. 31ff.]

## SOCIAL ORGANIZATIONS OF THE UKRAINIAN SSR

### General Remarks

The Constitution of the Ukrainian SSR (Art. 106) provides that citizens have the right to unite in social (mass) organizations "in order to develop organizational initiative and political activity." Social organizations are defined in Soviet literature as being "voluntary associations of the working people" and they may consist of the following types: trade unions, youth organizations, cultural associations, and scientific and technical societies. This constitutional right can be exercised by Soviet citizens only "in conformity with the interests of the working class" (Art. 106), which in practice means that social organizations are closely and unequivocally controlled by the state. In order to form a new organization, association, sports club, or cultural society—from the center down to the lowest level—a license must be obtained from the state authorities for the area from which membership is to be drawn. Existing model charters must be followed; in the absence of a model, the law requires the authorization of the Presidium of the Supreme Soviet of the Ukrainian SSR for each new organization.

All legal social organizations in the Ukrainian SSR (and the USSR as a

whole) are made to serve the purposes of the state and the Party in organizing the masses. By Soviet definition, social organizations, together with the organs of state power and state government, constitute a political organization of the Soviet society under the leadership of the Communist Party, which itself is considered to be "the highest form of socio-political organization of the working people." Social organizations constitute "non-party blocs" (i.e., organizations outside the framework of Communist Party), whose officers are nominally selected by popular elections; in practice, however, the Party nominates or at least sanctions candidates for elective offices. Each social organization contains within its fold functional cells of the Party apparatus, which constitute the nucleus of that organization.

Social organizations serve many purposes within the Soviet state: (1) they assure effective supervision and leadership over the people of all social classes; (2) they involve them in "Communist education" (political indoctrination) appropriate to the particular intellectual level, profession, or age; (3) each organization is an instrument of Communist power and control in its own particular sphere; (4) each organization serves as a transmission belt for making the will and policies of the Communist Party known to various segments of Soviet society. Almost every individual in the population is involved in a social organization of one type or another. Soviet authorities, as a rule, distrust the unorganized, that is, the uncommitted, unsupervised, or apathetic. By mobilizing the population through personal involvement, the Soviet regime attempts to secure from the individual personal commitment to the Soviet system.

Structurally, many social organizations follow the organizational pattern of the Communist Party in that they are organized on Union-wide basis with separate branches set up in each Union Republic, territory, region, and district. These branches are hierarchically subordinated to the central headquarters in Moscow on the principle of "democratic centralism."

**Trade Unions**

The broadest-based social organizations in the Ukrainian SSR are the trade unions. The Ukrainian trade union movement enjoyed an independent existence during the period of the Ukrainian National Republic (1918–20). The All-Ukrainian Trade Union Congress, held in Kiev on May 21–7, 1918, created the Ukrainian Central Council of Trade Unions (*Utsentroprof*). Its fate, however, was closely bound with the fate of the Ukrainian national state, and the subsequent Bolshevik take-over of Ukraine meant also Bolshevik reorganization of the Ukrainian trade unions and their incorporation into the All-Russian (later All-Union) Trade Union Council in spite of the fact that, until 1923, the All-Russian Trade Union Council in Ukraine was controlled by the Mensheviks. The Trade Union Congress, held in Kharkiv, November 3–8 1924, reorganized the trade unions in Ukraine and created the All-Ukrainian Trade Union Committee (VUPK) and the All-Ukrainian Council of Trade Unions (VURPS). These bodies were later liquidated at the height of the Great Purges (1937), and the trade union movement suffered a serious blow and subsequent decline. After World War II, a reorganization and revival of trade unions in Ukraine took place when the first Republican Trade Union Conference elected, in 1948, a new Ukrainian Republic Council of Trade Unions (URRPS), which exists to date.

Trade Unions of the Ukrainian SSR (as in the entire USSR) are organized on an industrial rather than craft basis and they include all workers, manual and white collar, within a given branch or segment of the economy. Each branch trade union is organized vertically for the whole of the USSR, corresponding to the terri-

torial-administrative subdivisions of the country. Each Union is headed by a committee at each level—factory, city or *raion*, *oblast*, and Union Republic—and by a central committee on the All-Union level in Moscow. In addition to the vertical structure, trade unions are also organized horizontally on inter-union basis from the *oblast* up: trade union councils on the *oblast*, Republic, and All-Union levels provide a common leadership to all branch trade unions on each corresponding level. The highest governing body of the trade unions of the Ukrainian SSR is the Republic Trade Union Congress, and in the intervals between congresses the work is directed by the Ukrainian Republic Council of Trade Unions. The trade unions of the Ukrainian SSR are an integral part of the trade union organization of the USSR.

Membership in the trade union is nominally voluntary, but in practice almost obligatory for all paid workers (manual and office) in public enterprises. In 1965, there were in the Ukrainian SSR over 20 branch trade unions and 99,675 organizations with a total membership of 13,617,029 or 95.6 per cent of all workers and civil service employees in the Republic.

The new program of the Communist Party (1961) outlined three basic tasks for trade unions in the USSR: (1) political—to serve as an instrument of Party policy and an organ of Communist education; (2) production—to serve as an auxiliary organ of the state apparatus for maintaining labor discipline, raising productivity of workers, and ensuring fulfillment and over-fulfillment of production plans; (3) to serve as a reservoir from which to recruit part of the administrative and economic bureaucracy.

Soviet trade unions have been given supervision over the operation of state social insurance budget (pensions, grants, funding of health resorts, sanitoriums, etc.). They keep check on industry; supervise operations of labor supply agencies; and act as an intermediary or transmission mechanism between the Party and the working masses. In practice, Soviet trade unions are identified more with the Party and the state than with workers (for additional information, see National Economy).

**The Young Communist League**

One of the striking characteristics of modern totalitarianism is the attention paid to the organization and indoctrination of youth. This is especially true of the Soviet Union whose government from its inception has made an extraordinary effort to win the support of the maturing generations and mold their behavior, thoughts, and aspirations.

The Leninist Young Communist League (YCL) of the Ukrainian SSR (*Komsomol*) is the largest youth organization and the second most important of the mass organizations in the Ukrainian SSR. It is organized along the same lines as the Communist Party (see above, pp. 89 ff.), with its major subdivisions following a hierarchical order: primary organizations on the local level (school, factory, collective farm, army unit, etc.); city or *raion* organization; *oblast* organization; Republic organization; and finally, the All-Union organization. YCL organizations on each level of the pyramid are controlled and supervised by the corresponding Party organ as well as by the next higher YCL organ. The highest body of the YCL is the Congress, which must meet at least every two years. It elects the Central Committee, which directs the work of YCL in the intervals between congresses, and the Central Auditing Commission. The Central Committee, in turn, elects its own Bureau and Secretariat. Members of the Bureau and Secretariat usually are at the same time high-ranking Party members, and frequently also members of the CPU Central Committee. Similarly, the first secretary of the YCL committee at each level of the pyramid is also a member of the corresponding Party committee at that level. The Komsomol of the Ukrai-

nian SSR is only a branch of the All-Union Komsomol organization.

Any person between the ages of fourteen and twenty-eight who has been recommended by either two Komsomol members or one Party member may become a member of the Komsomol. Membership in the Komsomol is made attractive and pressures to join are strong. Komsomol is considered, in the Soviet official view, the vanguard of youth, ready to volunteer for the most strenuous and disagreeable tasks, guardians of morals, manners, and political fidelity, exemplary wherever they find themselves, outstanding workers, models of discipline, a stimulus to their associates, and a constant help to their superiors.

Komsomol serves as "the active assistant of the Party" and a reservoir from which the Party recruits its new members. It is a school for "upbringing young people in the spirit of Communism" (Party Statutes, Art. 60) and an instrument through which the Party indoctrinates and controls the youth. It assists the Party in putting its directives and policies into effect. Formally, however, it is not a party organization. Its members, unless they were actually admitted into the CPSU, are considered "partyless." It prepares the youth for military service through a program of paramilitary training (DOSAAF). It plays an active role in the maintenance of public order through Komsomol patrols (people's guards), which are vested with auxiliary police power in relation to youth in the streets and places of amusement. It is a reservoir of agitators and propagandists of the Communist cause. Komsomol has also been entrusted by the Party with the task of supervising the day-to-day operations and activities of Pioneers (an organization for school-age children), where indoctrination of Soviet youth begins.

On January 1, 1965, the Komsomol of the Ukrainian SSR had a membership of 3,835,539. Its publications include 11 newspapers and six journals. Of these, two newspapers are on the Republic level: *Molod' Ukraïny* (Youth of Ukraine, in Ukrainian) and *Komsomol'skoe Znamia* (The Komsomol Banner, in Russian); the most important journals are: *Dnipro, Zmina* (Change), and *Znannia ta Pratsia* (Knowledge and Work). Its publishing house *Molod'* publishes books for the youth.

**Cultural Associations of the Ukrainian SSR**

The Soviet regime has always viewed literature and the arts in utilitarian rather than aesthetic terms, as instruments in shaping the new society (Stalin once said that writers are "engineers of the human spirit"). Like other sectors of social endeavor, literature and the arts are mobilized for the building of Communism. To this end, Party-sponsored unitary cultural associations were established in the 1930's, replacing the hitherto heterogeneous groups of cultural organizations. Through these associations, the Party has been able to exercise control and censorship over the creative efforts of the literati and the artists, to enlist the masses in the struggle for Communism, to establish a monopoly over the principal means of artistic expression, and to enforce one official form of Soviet literature and art—"Socialist Realism."

**Union of Writers of Ukraine (SPU):** founded in 1934, it replaced several autonomous Ukrainian writers' associations, many of whose members were liquidated or exiled [Vol. I, pp. 1043–59]. Its members are Ukrainian poets, writers, playwrights, literary critics, translators, and also those non-Ukrainian men of letters who live and work in Ukraine. Its publications are: newspapers: *Literaturna Ukraïna* (Literary Ukraine); journals: *Vitchyzna* (Fatherland), *Prapor* (Banner), *Zhovten'* (October), *Vsesvit* (Universe), *Raduga* (Rainbow), *Radians'ke Literaturoznavstvo* (Soviet Literary Study); publishing house: *Radians'kyi Pys'mennyk* (Soviet

Writer). As of January 1, 1965, the Union had 723 members.

**Union of Artists of the Ukrainian SSR (SKh URSR)**: founded in 1932, after a number (about 10) of independent organizations of Ukrainian artists were abolished. Its first organizational congress, however, did not take place until 1938, after many Ukrainian artists were liquidated. It unites artists and art critics of the Ukrainian SSR, and has 11 regional branches. Its publication is *Mystetstvo* (The Arts). As of January 1, 1965, the Union had 1,380 members and alternate members.

**Union of Composers of Ukraine (SKU)**: founded in 1932, after a number of independent Ukrainian composers' associations were abolished. Its first organizational congress was held in 1939. Its members are composers and music critics of Ukraine. From 1933 to 1941, it published a journal, *Radians'ka Muzyka* (Soviet Music). At present it does not have an organ of its own, and only co-sponsors the journal, *Mystetstvo* (see above). As of January 1, 1965, the Union had 148 members.

**Union of Journalists of Ukraine (SZhU)**: founded in 1959. Its members are professional journalists actively engaged in the press, radio, television, press services, and publishing houses, and also those active rural and workers' correspondents who have mastered the art of journalism. As of January 1, 1965, the Union had 4,713 members.

**Union of Cinematography Workers of Ukraine (SPKU)**: founded in 1957. Its first organizational congress was held in 1963. Its members are motion picture actors, directors, script-writers, critics, editors, and engineering and technical personnel. It co-sponsors the journal *Mystetstvo*, and, since 1961, publishes a supplement called *Novyny Kinoteatru* (Cinema News). As of January 1, 1965, the Union had 306 members.

**Ukrainian Theatrical Association (UTT)**: founded in 1944 for the purpose of promoting Ukrainian theater. Its members are theatrical art workers of Ukraine. As of January 1, 1965, the Association had 3,477 members.

**Choral Association of the Ukrainian SSR (KhT URSR)**: founded in 1959 for the purpose of promoting the development of choral and other types of musical art, its members are individual professional and amateur musicians, and professional and amateur choral, musical, and choreographic organizations. As of January 1, 1965, the Association had 150,000 members.

**Union of Architects of the Ukrainian SSR (SA URSR)**: founded in 1933. Its members are architects and other specialists who work in the field of architecture. The Union publishes, together with the State Committee for Construction of the Council of Ministers of the Ukrainian SSR, the official journal *Stroitel'stvo i Arkhitektura* (Construction and Architecture, in Russian). As of January 1, 1965, the Union had 1,503 members.

**Society for the Preservation of Historical and Cultural Monuments:** founded in 1966 for the purpose of discovering, studying, and preserving monuments of antiquity in Ukraine. In 1968, the Society had over 90,000 members.

**Pedagogical Association of the Ukrainian SSR**: founded in 1960. Its members are school teachers, educators, and scholars. As of January 1, 1965, the Association had 28,000 members.

### Scientific and Technical Organizations

There is a number of scientific-technical organizations whose purpose is to promote productivity, research, national defense, and health and well-being. As a rule, they are either local branches of central (Moscow) organizations or Republic counterparts of the All-Union organizations to which they are subordinated. They provide the Party with an additional channel of control over the educated elite in the country. The following are some of the more important organizations: Ukrainian Botanical Society; Ukrainian Microbiological Society;

Ukrainian Entomological Society; Ukrainian Republic Society of Parasitologists; Ukrainian (Pavlov) Physiological Society; Ukrainian Biochemical Society; Ukrainian Hydrobiological Society; Geographic Society of the Ukrainian SSR; the Ukrainian Branch of the All-Union (Mendeleev) Chemical Society; Ukrainian Society for the Preservation of Nature and the Promotion of the Development of Natural Resources.

**Other Mass Organizations**

**Comrades' courts.** Comrades' courts, originally established during the period of War Communism (initial phase of Communist rule, 1918–21), were revived after 1959 as an arm of the state to help preserve public order. Their role is conceived to be persuasive rather than coercive: they aim to "educate" Soviet people by organized social pressure of neighbors and colleagues, although one of the means is punishment.

Comrades' courts consist of members elected for a two-year term at a general meeting called by factory or local trade union committees, collective farm boards, or executive committees of local soviets. The meetings of the court are informal and are usually held after working hours at a factory, apartment house, neighborhood, or collective farm. Cases are heard in public, and conventional legal language and procedural guarantees applied in regular courts are waived. The decisions of the court are final, although some may be subject to review by the people's courts. The type of cases they consider are primarily those involving minor infractions against public order (hooliganism, petty speculation, or theft of social or state property, drunkenness in public places, violation of labor discipline, etc.). The courts' jurisdiction has been broadened recently to include cases under the "anti-parasitic laws," whereby a comrades' court may recommend that a person who leads a "parasitic mode of life" be sentenced to two to five years of exile with compulsory labor at a specified location. While this sentence must be confirmed by the executive committee of the local soviet, the accused is not protected by the normal rules of evidence and proof in spite of the severity of the sentence. He has neither the right to defense nor the right to appeal. This constitutes a powerful weapon in the hands of a social group at the service of the state and operating outside the regular machinery of administration of justice.

In 1964, there were over 37,000 comrades' courts in operation in the Ukrainian SSR with a total membership of over 170,000.

**People's guards.** People's guards is a voluntary organization of citizens formed in the Ukrainian SSR in 1961 to help protect public order. Their main aim is crime-prevention. They are detailed to apartment buildings, factories, collective farms, public places, recreational areas, city streets, state frontiers, and so on. They work on a part-time unpaid basis, patrolling areas where anti-social acts (drunkenness, rowdiness, hooliganism, blackmarketeering, etc.) are likely to occur. Their activities include offering guidance and advice on proper behavior and respect for law, issuing warnings in minor cases, apprehending offenders, and generally assisting the regular as well as secret police. A people's guard unit is headed by a commander. Units within a city or district are coordinated and led by a city or district command. Local Party agencies are charged with organizing and supervising people's guards, who serve as the eyes and ears of the Party and of the security agencies within the community. In 1965, there were in the Ukrainian SSR 32,300 people's guard units with a total membership of 1,700,000.

**Ukrainian Republic Organization of DOSAAF.** The Ukrainian Republic Organization of the All-Union Voluntary Society for Assistance to the Army, Air

Force, and the Navy of the USSR (DOSAAF) was established in 1953 as a mass organization with the primary aim of preparing the youth for military service by providing military and paramilitary training on a part-time basis (at school, after working hours, weekends). The training includes military science, familiarization with weapons and military equipment, physical training, and various aspects of civil defense. In addition to preparing the youth for military service, DOSAAF serves as a training ground for home defense reserves as well as another channel for political indocrination of the citizenry, and especially the youth.

## CIVIL LAW

The civil law as set forth in this chapter follows the traditional continental concept in that it is a statutory regulation of legal relations between autonomous, legally equal persons, and legal entities in such principal areas as property, obligations (contracts, torts), family law, and inheritance. The Soviet Ukrainian civil code, however, though its form is based on the continental system, departs from the system in scope.

Soviet jurisprudence and, consequently, the civil codes of the Union Republics, define civil law as the body of rules which regulates property rights and related non-property relations (Sec. 1 of the Ukrainian Civil Code). Originally, the Marxist doctrine regarded this law as "bourgeois," because it was based on the concept of private ownership destined to wither away in a true Communist system, in which all means of production would be nationalized (there would be no private property, no commodities, and no money). An attempt to introduce such a system in the years of War Communism (1918–21) failed completely. In 1921, the Soviet government adopted the New Economic Policy (NEP), a market system with a partial recognition of private property and initiative; state enterprises were to participate in legal transactions with funds assigned to them by the state. After the introduction of the Five-Year Plans (in 1928), these state enterprises became mere executors of state planning.

### Sources of Civil Law of the Ukrainian SSR

During the first years of Soviet rule in Ukraine, decrees on nationalization of various branches of industry were introduced. In fact, however, they were merely implementing the nationalization laws of the central government in Moscow. The nationalized industries did not become the property of the Ukrainian SSR, but rather a part of the general funds of the Russian SFSR. On July 26, 1922, a decree on property rights was passed in the Ukrainian SSR. These rights were to be protected by the laws of the Republic and its courts. The first Civil Code of the Ukrainian SSR was enacted on December 16, 1922, and went into effect on February 1, 1923. Although passed by the Ukrainian legislature, the Code was not the latter's creation but a copy of the Russian code.

The new Soviet constitution of 1924 gave the Union legislature the exclusive power to enact "fundamentals" of civil legislation for all the constituent republics. Since no "fundamentals" were passed at that time, the Ukrainian Republic retained the power to legislate in respect

to the entire civil law. It lost that power under the Union constitution of 1936, which made all civil legislation the exclusive prerogative of the Union. However, the decree of February 11, 1957, reversed that provision and again limited the Union jurisdiction to the "fundamentals." Pursuant to this decree, on December 8, 1961, the Supreme Soviet of the USSR adopted the "fundamentals of Civil legislation." The present Civil Code of the Ukrainian SSR, virtually incorporating the "fundamentals," was adopted by the Supreme Council of the Ukrainian SSR on July 18, 1963, and became effective on January 1, 1964. It has eight chapters which cover general provisions, law of property, obligations, copyright, law of discovery, law of invention, inheritance law, and provisions of private international law.

**Personal Law**

The Civil Code regulates relations of persons and legal entities. All citizens of the Ukrainian SSR and other Union Republics are equally capable of enjoying civil rights and equally subject to certain obligations (legal capacity). Having completed 18 years of age, they also have the right to engage in legal transactions (legal competency). Because of the Soviet social and economic systems, the code deals extensively with legal entities. These are primarily state organizations. As a rule, the state as such does not enter into relations covered by civil law, but acts through state enterprises and other organizations, namely those which receive from the state some fixed and working assets in "operative management" with the obligation to work according to approved economic plans; those which are financed by the state budget and have separate estimates; and those financed by other sources and having also separate estimates. Other legal entities are collective farms (*kolhosps*) and other cooperative and mass organizations. Their legal capacity is determined by law and by their charters in accordance with the established objectives of their activity. With their autonomy thus restricted, they are similar to state organizations. Especially in the case of the collective farms and similar types of cooperatives, this limitation of legal capacity and competency results in their exercising their property rights as little more than "operative managements" of state organizations. Although they own their property, they do not have subjective rights in their relations with the state. The state may order a merger of collective farms or liquidate them, but a collective farm cannot decide upon its own dissolution.

**Law of Property**

The Ukrainian Civil Code (like the constitution of the Ukrainian SSR), defines four types of property: state property, cooperative property, property of mass organizations, and personal property. The first three types form the so-called socialist property. Their common characteristic is that they do not constitute private property, but a special type of property with assigned functions in the planned economy.

**State property.** The nature and attributes of state property are described in both the constitution and the Civil Code. Land, natural resources, water, and forests are in the exclusive ownership of the state. They can be assigned to cooperatives, mass organizations, or private persons for perpetual use only. Also designated as state property are industrial plants, mines, electric power stations, means of transportation and communication, banks, state-organized enterprises, and housing facilities in the towns and urban-type settlements. They constitute fixed assets and as such can be transferred to cooperatives, collective farms, and mass organizations under special regulations. But they cannot be alienated to private persons with the exception of certain types of property the sale of which is permitted to citizens by special legislation of the Union or of

the Ukrainian SSR. On the other hand, working assets, such as raw material, money, and so on, which are used in one production cycle, can, when owned by the state, be transferred from one state organization to another, to cooperatives, mass organizations, and private persons on an exchange basis and according to their purpose and the approved planning.

**Cooperative property.** Among types of cooperative property, the collective farm is most important. It may consist of the means of production (fixed assets) and working assets. Under the law, the cooperatives may dispose of their property in accordance with the provisions of their charters. In collective farms, however, these charters are uniform and imposed by the state. Moreover, their right to dispose of their property is limited by state regulations which have the force of statutes, and by the state's "recommendations," which, as a rule, are approved by the collective farm members and become binding. Consequently, the collective farms cannot exercise their right of ownership freely, in accordance with the will of their members.

**Property of mass organizations.** Property of mass organizations, such as labor unions, is regulated by provisions essentially similar to those concerned with cooperative property.

**Personal property.** The constitution and the Civil Code recognize private property of citizens. However, their right to exercise ownership is limited. It is considered as "derivative" from socialist property, since its basic source is the work of citizens in state and cooperative organizations. Only property which "serves to satisfy their material and cultural needs" can be owned by citizens. Personal property must not be used for purposes of exploitation of other people's work or for acquiring profits. Private property may consist of earnings from work, savings, dwelling house, and other objects of personal need and comfort. But the Code limits personal ownership to one house or apartment and to a living area of up to 60 sq. meters per family.

**Law of Obligations**

Legal relations between creditors and debtors can arise from transactions and circumstances such as contracts, administrative acts, and torts. Such relations between private persons do not differ in kind or consequence from those known to non-socialist countries. But the Soviet law limits the freedom of parties to enter such relations: for example, a private person may not conclude contracts to buy, rent or lease more than one dwelling house or an apartment that exceeds the living area allowed by law. On the other hand, legal relations between socialist organizations (state enterprises, collective farms) show the characteristics of the Soviet economic system. They arise from acts of economic planning. In some instances, administrative acts implementing the planning directly impose certain obligations on the organizations. In most instances, however, the acts of economic planning merely obligate these organizations to conclude pertinent contracts. Within the economic planning, it is the plan rather than the will of the contracting parties that decides on the essentials of its contents. Thus the contract becomes a legal means by which the government carries out the economic plan. The "autonomy" of the enterprises is restricted to secondary details of the contracts. In the case of non-performance or improper performance of the obligation, the debtor must pay the creditor a penalty if such is stipulated, or compensate him for the damages. Considering that all property of state enterprises is owned by the state, the above provision would mean that the state imposes penalties on itself and obligates itself to compensate for damages. A state enterprise is, on the one hand, a state agency, and on the other, it represents collective interests of the members. Improper performance of a contract lowers the chance of premiums for the

members and, therefore, directly affects their interest. As a rule, disputes between members of particular enterprises (parties to a contract) are decided by state arbitration. In cases of obligations arising from torts, the code, following the Principles of 1961, technically improved the position of private citizens as it introduced the principle of compensation for damages caused by irregular acts of state officials (Sec. 442 of the Ukrainian Civil Code) and even "in particular cases and within limits especially provided by law" by acts of criminal investigation, prosecutors, and courts (Sec. 443). However, the Supreme Court of the USSR (on October 23, 1963) narrowed the number of state functionaries liable for damages, and no law has been passed setting forth the particular "cases and limits" of tort liability of criminal investigators, prosecutors, and courts.

The Code also provides for the protection of the rights of authors, discoverers, and inventors. But the state (the Ukrainian SSR or the USSR) may determine the author's fees and have the right to utilize the invention for which a patent had been issued.

The provisions of the Code concerning inheritance supersede the special Union decree of March 14, 1945, but, with few exceptions, does not depart from it. Although the Union decree recognized three groups of heirs at law, the Ukrainian civil code established two groups: children, spouse, and parents; and brothers and sisters of the deceased. Within each group, the heirs at law inherit in equal shares. Citizens can bequeath their property by will to any other citizen whether or not included in the group of heirs-at-law, as well as to the state, cooperative, or other public institutions. But minor or incapacitated children, incapacitated spouse or parents, or other dependents of the deceased retain the right, regardless of the will, to at least two-thirds of the share to which they would be entitled in case of intestate succession. Illegitimate children inherit only from their mother.

**Family Law**

Family relations are regulated by the Code of Laws of May 31, 1926, concerning Family, Guardianship, Marriage, and Civil Registrar's Office of the Ukrainian SSR, and by the Principles of Legislation of the USSR and the Union Republics on Marriage and the Family passed by the Supreme Soviet of the USSR on June 27, 1968, effective as of October 1, 1968. Until the Principles are incorporated in a future Ukrainian code, the provisions of the 1926 Code remain applicable but only insofar as they do not contradict the Principles (decree of the Presidium of the Supreme Soviet of September 20, 1968).

The 1926 Code was an independent act of the Ukrainian legislature which differed in system and contents from the analogous Russian Code, especially in regard to marriage. While the Russian jurists recognized *de facto* common law marriages in the first codification in 1919, the Ukrainian legislature refused to recognize them as valid unless duly registered with the civil registrar's office. It was under the pressure of the Russian legislators that the Ukrainian Code permitted the legalization of *de facto* marriages by subsequent registration. Later, the decree of the Presidium of the USSR Supreme Soviet of July 8, 1944, established the rule that only marriages "duly registered give rise to marriage rights and obligations."

The Principles of June 27, 1968, established uniformity of the basic provisions concerning family relations in all Union Republic codes. Unlike the Ukrainian Code of 1926, the Principles stress the role of the family in the Communist society. The preamble states that the promotion of the welfare of the Soviet family "in which social and personal interests are harmoniously combined" is one of the most important tasks of the Soviet state. It adds that "the Communist upbringing of the growing generation . . . is the obligation of the family." Section I declares the task of the legislation to be "further strengthening of the Soviet

family based on the principles of Communist morality," and the preparation of children for active participation in the "building of the Communist society." One of the fundamental duties of the parents is to rear their children "in the spirit of the moral code of a builder of Communism . . ." (Sec. 18). Parents may be deprived of their rights if they fail to fulfill their child-rearing obligations (Sec. 19).

The registration of the marriage by the civil registrar's office is the only recognized form of a valid marriage and the source of personal and property rights of the spouses (Sec. 9). Full equality of these rights is assured to both spouses (Sec. 3). A marriage can be terminated by annulment when conditions of a valid marriage are violated, or by divorce upon request of one or both spouses when "continued cohabitation of the spouses and preservation of the family have become impossible." In both cases it is the People's Court that makes the decision pursuant to a regular court proceeding. Divorce by a mere registration of the will of the spouses at the civil registrar's office is not permitted by the Principles. The marriage age is set by the Code at 16 years for women and 18 years for men.

Mutual rights and obligations of parents and children are based on the paternity duly recorded by the civil registrar's office (Sec. 16). The parentage of children born to unmarried parents is established by the joint application of the parents to the civil registrar's office. If no joint application is submitted, the paternity can be established by the court, but only in respect to children born after the effective date of the Principles that is, October 1, 1968. Thus two different categories of children born to unmarried parents are established: those born before the effective date of the Principles who are deprived of the privilege of having their paternity established by a court and those born afterwards who do have that privilege. Another characteristic of this law is that the court bases its decisions concerning paternity not on the biological criterion of descent but on the "cohabitation and maintenance of a common household by the child's mother and the respondent before the child's birth, or the joint rearing or support of the child" as well as on the proof that the respondent had recognized his fatherhood. Medical proof of fatherhood (blood test, etc.) with respect to a man who did not maintain a common household with the child's mother, did not support the child, and did not admit his fatherhood is inadmissible. Children whose paternity is established by joint parental application or by a court decision enjoy rights and obligations equal to those of children born to married parents.

The Code permits adoption and contains provisions to regulate guardianship, changes of name, and declarations that a missing person has died.

**Land Law**

The land law regulates relations based on state ownership of the land and its use according to the interest of the state. The Soviet Russian decree on land of November 8, 1917, laid the basis for the nationalization of all land and the formation of one all-Union Land Fund with the title to it held by the state. The effect of the decree was later extended to all countries conquered by the Bolsheviks, including Ukraine. Since then, all important laws and normative acts passed by the Ukrainian SSR concerning land relations have merely implemented the directives of the central Soviet government in Moscow. The first constitution of the Ukrainian SSR (1919) did not include any provision concerning the ownership of the land, because all pertinent nationalization laws were adopted by the Soviet central government. Contrary to the traditional concept that the incorporation of a territory does not automatically change the status of land ownership within this territory, the Soviet theory and official position is that

after the incorporation of a territory into the USSR, it is automatically included in the all-Union Land Fund and becomes the property of the USSR. Thus the incorporation of western Ukrainian territory by the USSR made the former a direct property of the USSR.

In Ukraine, the Land Code of November 29, 1922, is technically the basic source of law regulating land relations. It was patterned after the Russian code. Its effect is rather limited in view of many Union laws and regulations. On December 15, 1928, the Union law (general principles of land use and management in the USSR) was issued for the purpose of becoming a framework of pertinent Republic regulations. Several other laws and decrees, most of them issued by the Union government, supplement the land regulations. One of them, the decree of the Council of Ministers of the USSR, established a uniform system of land registry under the Union Ministry of Agriculture. In the Ukrainian SSR, it is administered through the Ukrainian Ministry of Agriculture. *Oblast* and city executive committees are in charge of special state registers in which all users of the land in the given territory are duly recorded.

The Land Code restates the principle of the constitution (Sec. 6) that the land, its mineral wealth, waters, and forests, are state property. The state, however, exercises the right of ownership through its various agencies and other organizations (e.g., collective farms) to which the use of the land is allocated. The law regulates the rights and duties of the users and legal relations arising in this connection. The concept of "socialist use" of the land means the possession and utilization of the allocated land according to the purpose designated for it by state planning. The state issues regulations which determine the nature of the "use." Thus the right to use becomes, in relation to the state, identical with the duties.

According to its economic purpose, the land is divided into several categories, each administered by a proper authority. Lands with agricultural assignment, managed by the Ministry of Agriculture of the Ukrainian SSR, constitute the bulk of the land fund. Others are: lands of special designation (for plants, military installations, resorts, schools, etc.) city lands, forests, waters, and lands of state reserve.

**Collective Farm Legislation**

Although the system of collective farms has become the basic form of Soviet agriculture, there is no one single code of laws to regulate all legal aspects of the relationship concerning the organization and activity of the farms, their management by the state, and their relations with the members. These relations are regulated by many Union and Ukrainian Republic laws, of which the most important is the "Model Charter of Agricultural Cooperatives" approved by the Central Committee of the Communist Party and the Council of People's Commissars of the USSR on February 17, 1935, and the charters of particular Ukrainian collective farms based on the Model Charter. Since the legislation usually embraces other types of agricultural land users (such as the state farms [*radhosps*] or even small individual farms), the title of "agricultural legislation" is suggested by some legal writers as more appropriate.

Technically, collective farms are cooperatives. In reality, however, they represent a special form of state management of agriculture. This management is now supervised by the Union-Republic Ministry of Agriculture and its organs.

The collective farm land is state property allocated to it in perpetuity and free. On the other hand, all means of production, buildings, cattle, machinery, money, and so on, are owned by the *kolhosp*. All products are also property of the collective farm, but they have a "socialist" character in that they must serve the whole population and not only

the members of the collective farm. The state unilaterally fixes the prices and determines the quantity to be delivered according to the plan. The leadership of a collective farm is elected by its members. But its chairman, elected upon nomination by a Party or government agency and most often a Party member, is the actual responsible manager.

The unit of piecework, called *trudoden'* (labor day), is still largely accepted as the basis for the computation of the wages for collective farm members. However, small plots of land may be assigned to every household in a collective farm. Householders enjoy the yield of such plots in addition to the basic income derived from the work in the collective farm.

Plots may also be allotted from the collective farm land to non-members, workers, and employees residing in the area. Such workers thus become individual users of the state-owned land.

State farms (*radhosps*) are another type of land users covered by the collective farm legislation. Their land, buildings, cattle, and products are state property. Their legal status is similar to that of the state industrial enterprises.

**Labor Law**

Section 12 of the constitution of the Ukrainian SSR states (as does the constitution of the USSR) that "work in the Ukrainian SSR is a duty and a matter of honor for every able-bodied citizen, according to the principle 'he who does not work, neither shall he eat'." While this duty was at first mostly of a moral character, the nationalization of the basic means of production and the introduction of total economic planning made it a vital necessity and a duty strictly enforced. The production and distribution monopoly of the state now determines the legal and factual status of the worker. The code of labor laws of the Ukrainian SSR of December 2, 1922, regulates the relations arising from this situation. A series of additional union laws and regulations supplement this old law. The law bases the employer-employee relations on a contractual method of hiring. The contract is described as an agreement of two or more persons, on the basis of which one party (the worker) performs some work for the other party (the employer) for a remuneration. It is interpreted that by such agreement the worker is included in the collective of a socialist enterprise, an organization, or a government agency and becomes subject to its internal regulations. The duty to work begins at the age of 15 (12 years for a farmer). The work relationship cannot be shaped according to the will of the parties to the work agreement. It depends upon the tasks of the socialist economic system in general and is determined by the government together with trade unions. The law forbids any discrimination in the employment of workers. However, the law sets forth employment provisions which make it possible for the government to carry out policies in regard to national, ethnic, social, and other groups of the population. Thus young experts who graduate from professional schools are obliged to serve for three years in areas assigned to them according to plans designed by government agencies and trade unions (Resolution of the Central Committee of the Communist Party of the USSR of 1928). Every year, young experts from non-Russian areas, including Ukraine, are sent to Siberia, Kazakhstan, and other remote areas, away from their home country, as a measure of denationalization. The labor law also makes it possible to resettle whole groups of inhabitants in sparsely populated areas. Although the individual or group contracts are termed voluntary, the pressure of the Communist Party and other channels is usually applied. The management of such resettlements is carried out by the Council of Ministers and the State Planning Commission of the USSR, acting through the Republic Council of Ministers and special committees of the

local councils. "The right to work," according to Soviet interpretation, does not mean the right to "choose the place of employment at one's own discretion without taking into consideration the needs and interests of the state."

Labor discipline is strictly enforced by the labor law, by several special decrees, and by the criminal law. The decree of the Presidium of the Supreme Soviet of the USSR of June 26, 1940, imposed strict penalties for various labor offenses such as tardiness, willful absence from work, and willful dereliction. The Standard Rules of Internal Labor Order of January 12, 1957, mitigated but still upheld the concept and penalties of these labor offenses. The Union decree of January 31, 1957, incorporated into the Ukrainian labor code established special committees for the settlement of labor conflicts. These committees are composed of representatives of the enterprises and the work unions. The worker may appeal from a committee decision to a people's court which then tries the case under the provisions of civil law.

Trade unions are professional associations of workers. They are headed by the Central Council of Trade Unions of the USSR and have corresponding Republic, *oblast*, and local organs. Their branches also exist in all enterprises and institutions. They are regarded as "social" organizations (provision in the constitution). In reality, they are managed by Party functionaries and constitute a part of the planned economy. All normative acts concerning the problem of work are issued by or with the cooperation of the trade union organs, especially the Central Council of Trade Unions.

**Civil Procedure**

All disputes between state enterprises or socialist organizations are heard and determined by the state arbitration (see "Court System," below). Civil courts have jurisdiction only over cases in which at least one party is a natural person or a collective farm. There are some disputes, however, which may be settled by administrative organs. Civil courts may adjudicate cases in which no controversy is present. Civil matters of lesser importance may also be settled by so-called comrades' courts (see "Court System," below).

The first Code of Civil Procedure of the Ukrainian SSR was put into effect on October 31, 1924, and the second on December 1, 1926. Both were more or less copies of the analogous Soviet Russian codes. On the basis of the principles of civil procedure of the Soviet Union and the Union Republics, on December 15, 1961, the third Code of Civil Procedure of the Ukrainian SSR was enacted on July 18, 1963. It became effective on January 1, 1964. The Code regulates court procedure in cases arising from civil, family, labor, or collective farm relations (with the exception of those under the jurisdiction of administrative organs). It consists of six chapters (general provisions, parties to the law suit, procedure in the court of the first instance, procedure in the courts of cassation and supervision, execution of court decisions, international procedural questions.) Some procedural norms are also contained in the law on the court system (Ukrainian SSR, June 30, 1960), in the family code, and in the Union "Principles of Civil Procedure." Civil procedure before the comrades' court is regulated by the provisions of the law on comrades' courts of the Ukrainian SSR, of August 15, 1961.

The Ukrainian Code of Civil Procedure (just as those of the other Union Republics) differs from the laws of nonsocialist countries. The violation of individual rights is not only a violation of private rights but also a violation of the interest of the state. Therefore, the principle that the plaintiff has the "dispositive right" to submit a civil case to court, support it or withdraw at his will, has a different meaning in the socialist states. Along with the parties to a civil court trial, the prosecutor has the right, as in

criminal matters, to submit a case to the court if he feels that the interest of the state requires it; he may intervene at any stage of the trial and appeal to a higher court without the consent of the parties. He has even the right to "protest" against a final judgment, thus reopening the case. Also, the court has the right to adjudicate independently of the claims of the parties; its duty is to consider not only the evidence submitted by the parties but also that which it deems necessary to establish material facts. It also has the right to adjudicate in excess of the plaintiff's claim where it is necessary to protect state and public interests. In certain cases provided by law, organs of state administration, trade unions, and other public or social organizations may also take court action to protect the rights of citizens regardless of their wish. Thus, in many respects, the civil procedure resembles the criminal one, except that a pre-trial investigation is not provided.

The new Code of Civil Procedure abolished the former and complicated jurisdictional system by providing that the People's Court exercise general original jurisdiction. Yet higher courts have the right to take over the proceedings in every case. Unless otherwise provided, the trials should be direct, oral, speedy, and public. The language of the court should be Ukrainian, but persons of non-Ukrainian nationality may use their own language.

The decisions of the court may be protested or appealed to the court of higher instance. The higher court, by an action called cassation, may annul, reverse, or modify the decision of the inferior court.

## CRIMINAL LAW AND PROCEDURE

### Substantive Criminal Law

**Sources.** The present criminal code of the Ukrainian SSR is the third such code enacted since the establishment of the Republic. Before the first code was adopted, several pertinent decrees of the Soviet Russian government were made directly applicable to Ukraine immediately after the defeat of the Ukrainian National Republic. The first criminal code of the Ukrainian SSR was enacted by the Central Executive Committee in 1922, but it was no more than a translation of the Russian code then in force. One year after the formation of the

Union of Socialist Soviet Republics (1923) the Union enacted its "Basic Principles of Criminal Law." The 1924 legislation became the basis for the second criminal code of the Ukrainian SSR promulgated by the Ukrainian legislature in 1927.

On December 25, 1958, with the enactment of "Principles of Criminal Legislation of the USSR and its Constituent Republics," "The Law Concerning Responsibility for Crimes against the State," and the "Law on Military Crimes," the Supreme Soviet of the USSR laid the foundation for new criminal legislation in the Union Republics. On December 28, 1960, the Supreme Soviet of the Ukrainian SSR enacted the present criminal code which became effective on April 1, 1961. Although it is technically a law of the Ukrainian Republic passed by its own legislature, it includes essential portions of the criminal laws enacted by the Supreme Soviet of the USSR on December 25, 1958.

The code's "General Provisions," based largely on the USSR's 1958 "Principles of Criminal Legislation," deal with such matters as the concepts of crime, criminal responsibility, criminal sanctions, and the like. Within that framework, which had been already laid out for them, the Ukrainian legislators were free to make such adjustments as establishing additional aggravating or mitigating circumstances and providing minimum terms for detention in prisons, labor camps, or exile.

The Ukrainian criminal code is applicable to all persons who commit crimes on the territory of the Ukrainian SSR as well as to Soviet Ukrainian citizens who commit crimes abroad. In addition, "in consideration of the international solidarity of workers," the code also applies to all persons who commit "especially dangerous crimes" against any socialist state.

**The objectives of criminal law.** The first section of the code states that its primary objective is "to protect the Soviet social and political order, social property, persons and rights of citizens, and the entire socialist legal order from criminal attacks." In this respect, the code follows the long-established tradition of Soviet criminal enactments. As early as 1919, the "Guiding Principles of Criminal Law of the Russian SFSR" defined the criminal law as a "system of legal norms and other legal measures designed to protect, by way of repression, the system of social relation of the given class society against violation" of legal norms. This basic philosophy was further developed in the statements of purpose contained in the criminal code of 1922, in the "Principles" of 1924, and all subsequent codes. The 1927 Criminal Code of the Ukrainian SSR stated that its objective was ". . . to ensure judicial and legal protection of the Soviet state and its legal order against socially dangerous acts (crimes). . . ." In this manner, the class character of the criminal law was officially established as a tool of the ruling class in its struggle against its enemies. It made the socialist system—and not the individual—the principal object of legal protection. This philosophy became the cornerstone of Soviet criminal policy and a guiding principle of judicial practice.

The new Soviet criminal legislation of December 25, 1958, and, consequently, the Ukrainian criminal code of 1960, extended the object of protection for the first time to "persons and rights of citizens." While this concession (as well as the abolition of the principle of analogy—see below) was considered necessary to "strengthen socialist legality," there is no indication that the basic philosophy has been changed. "The basic Leninist principles concerning the organization and work of Soviet courts remain unchanged . . . ," according to the Supreme Soviet. Consequently, expediency and political considerations continue to dominate the administration of criminal justice and often lead to discrepancies between the written law and court prac-

tice. This is particularly apparent in the court's interpretation of the concept of crime and criminal responsibility (see below).

**Concept of crime.** Soviet jurisprudence and legislation, including that of the Ukrainian SSR, have always professed the so-called "material concept of crime." The Guiding Principles of 1919 originated this concept and all subsequent legislation followed suit. It was also faithfully supported by Soviet jurisprudence.

The material concept of crime rests on the notion that every act or omission which threatens the Soviet system is "socially dangerous" and hence criminal. It is not essential that such an act be specified by statute as a crime. In the 1930's, a reform movement (Krylenko's draft) attempted to eliminate that part of the code which enumerated and defined all the individual crimes. It was assumed at that time that a general provision of the statute to the effect that every socially dangerous act constituted a crime and called for sanctions made such special enumeration unnecessary and, in fact, inconvenient. This attempt was not successful. But another logical expression of the material concept of crime—the so-called "principle of analogy"—was introduced early into the Soviet legislation. Whenever an act considered by the judge as "socially dangerous" was not directly included in the criminal statute, it should be judged by analogy with those provisions of the statute which define an act most similar in kind and importance. The perpetrator was to be sentenced accordingly.

This "analogy" provision constituted a break with the principle of *nullum crimen sine lege* (no crime without law) which was recognized by western jurisprudence as a basis for justice and as a safeguard of individual liberties. But Soviet jurisprudence hailed the principle of analogy as the highest achievement of "socialist justice."

It survived for nearly forty years. It became apparent, however, that this principle created an uncertainty in the administration of justice. The reform of December 25, 1958, led to the abolition of the principle of analogy.

Thus the old "bourgeois" principle of *nullum crimen sine lege* was restored in the Ukrainian Criminal Code, which defines the crime (Sec. 7) as a "socially dangerous act, specified by a statute, which attacks the Soviet social and political order." Yet the Code and jurisprudence still recognize the material concept of crime as one of the basic principles of criminal legislation, and "social danger" as its criterion. Consequently the Code provides that the absence of social danger deprives an act of its criminal character even though it is specified as a crime in a statute (Sec. 50 of the Ukrainian Criminal Code). On the other hand, it is a long-established practice that the assumed "social danger," especially in persons allegedly hostile to the regime, subjects them to criminal prosecution regardless of their "guilt" in accordance with the meaning of the law.

**Criminal responsibility.** Under the present legislation in Ukraine, criminal responsibility is based on guilt—intentional guilt or guilt by negligence. The essence of Soviet philosophy behind the concept of criminal responsibility does not rest on guilt in this formal meaning. Just as the "socially dangerous" character of an act makes it materially criminal, so the "social danger" of a person justifies repression. This philosophy can be detected throughout Soviet legislation, jurisprudence, and court practice, although criminal intent and negligence, state of emergency, and self-defense were recognized as criteria of that danger on the part of the perpetrator. Soviet legislation of the 1920's (Ukrainian Criminal Code, 1927, Sec. 5) went so far as to state that "measures of social defense" (punishment) should be applied to persons who are socially dangerous because of their connection with criminal environment or because of their past activity. Neither was there a requirement of guilt in the

provision that in the case of a serviceman escaping abroad, all adult members of his family who lived with him or were supported by him before his escape should be punished regardless of their knowledge or assistance in the escape.

The present Code (1960) introduces for the first time the term "guilt," but it does not abolish the concept of social danger. Section 50 provides that when an act committed by an offender has "lost its socially dangerous character or the offender ceases to be socially dangerous" he should be relieved from criminal responsibility. Social danger is also a factor in determining criminal responsibility of minors under 18 years of age: "measures of educational nature which do not constitute punishment" may be applied to such persons if the court finds that the crime they committed does not represent great social danger.

In general, only minors who have reached the age of 16 are criminally responsible. But in the case of murder, larceny, rape, and other serious offenses, minors over 14 years of age are regarded as criminally responsible.

**Criminal sanctions.** The terminology of criminal sanctions in Soviet legislation underwent a rather dramatic development before it reached its present form. The traditional term "punishment" was used in the early years. The criminal legislation of 1922, however, omitted mention of "punishments" altogether and retained only "measures of social defense." It even went so far as to make a blunt statement that these measures "are not intended as retribution or punishment." Yet, while these codes were still in force, the term "punishment" found its way back to later statutes and court practice. Finally, the Union legislation of 1958, and consequently the Ukrainian Code of 1960, accepted the term "punishment" as the only form of criminal sanction. Now, "measures of social defense" have become—as far as the terminology is concerned—a thing of the past.

This terminological development, however, did not change the basic Soviet concept of criminal sanction. In 1919, Lenin and the Russian Communist Party were in agreement that justice was an organ of proletarian dictatorship, an instrument of coercion and teaching of discipline. Lenin told the legislators that criminal law ". . . ought not abolish terror, [because] to promise that would be to deceive ourselves or the people; rather it should substantiate and legalize the terror in principle, clearly, without hypocrisy or adornment" (letter to Commissar D. Kursky). All criminal legislation in the Soviet Union basically subscribed to this purely expedient task. Punishment as a moral issue (just retribution for a wrong done) has been rejected as a "bourgeois" idea. It is now merely said to express a negative appraisal of the perpetrator and his deed on the part of the Soviet state. According to the present code, the purpose of penalties is not only to punish but also to reform and reeducate the convicted person as well as to discourage him and other persons from committing crimes.

In sentencing, the judge should be guided by what the code calls "socialist consciousness of the law." This vague criterion of judgment implies the knowledge and realization of actual political issues, including Communist Party directives, which determine Soviet criminal policy at a given time. It is supposed to help the judge determine the degree of acual "social danger" inherent in the act, a question that should be his primary consideration.

Confinement is the most widely applied penalty and can be served either in a prison or in "correctional labor camps," from three months to ten years (15 for more serious crimes).

Capital punishment (by shooting, customarily in the back of the head) is accepted by the code (Sec. 24) as an "exceptional" measure (it was previously called "supreme measure"). The code as well as Soviet jurisprudence stress the

exceptional and temporary character of capital punishment. Three times in the past (1917, 1920, and 1947), the death penalty was suspended formally to show the "genuine socialist humanism" (as stated in the decree of the Presidium of the USSR Supreme Soviet on May 26, 1947). Yet following each suspension it was introduced again after a short period of time, as a necessary measure to combat serious crime. According to the "Principles" of December 1958, incorporated in the Ukrainian code, the death penalty is applicable in nine cases of crimes against the state. However, soon after the criminal code became effective, several special decrees of the Presidium of the Supreme Soviet of the USSR extended the death penalty to many other crimes such as stealing state property, currency speculation, counterfeiting, and bribery. Thus, in reality, capital punishment has always been a common and widely used penalty in the USSR, including the Ukrainian SSR.

The list of penalties also includes exile with forced residence in specified localities (as a rule in remote parts of the USSR); expulsion from the place of residence; forced labor without confinement; deprivation of certain rights; fine; public reprimand. Certain traditional penalties are now abolished: for example, "declaration as an enemy of the people with deprivation of Soviet citizenship and expulsion from the Soviet Union forever," a measure that proved to be more appealing than punitive.

The "Special Part" of the Ukrainian Criminal Code (Arts. 56 to 263) lists all punishable individual crimes. It does not recognize the traditional European tripartite division of punishable acts (French—crimes, délits, contraventions) or the Anglo-Saxon division (felony, misdemeanor) depending upon their gravity. Instead, they are all called crimes. In accordance with the idea of "social danger" crimes against the state dominate the list. They number 26 (treason, espionage, terrorism, subversive activities, sabotage, etc.). This group, along with military crimes, was contained in the all-Union legislation of December 25, 1958, and included in its entirety in the Ukrainian Criminal Code. Since socialist ownership and economy are regarded as the basis of the Soviet socialist system, "crimes against socialist property," which come next, also hold a prominent place in the code, as attested to by the strictness of penalties, including the death penalty.

**Criminal Procedure**

**Sources.** The procedure in criminal cases is regulated by the Ukrainian Code of Criminal Procedure of December 28, 1960, effective as of April 1, 1961, which superseded the code of 1927. Its general provisions incorporate the Soviet Union's "Principles of Criminal Procedure" of December 25, 1958. Within the framework of rules for apprehending, charging, and prosecuting suspected offenders, for appealing from court decisions, and for post-conviction procedures, the Code departs in many respects from the traditional European principles.

The Code establishes the principle that the court should be the only agency entrusted with the administration of criminal justice (Sec. 15). Allegedly, the punitive powers of the state security organs or the Special Board in the Ministry of the Interior have been suspended. However, some instances of extra-judicial criminal justice survived the reform of 1958, and social organizations were later granted criminal trial powers in certain cases (see below, "Court System"). Trial by jury is not known, but "people's assessors" sit with the judge.

The preliminary investigation consists of regular police investigation (by "militia," agencies of state security, and other specialized agencies) and of the pretrial investigation required in certain cases and conducted by special "investigators" of the prosecutor or state security. The prosecutor is the only official in control of the investigation and appeals

against his decisions go to the higher ranking prosecutor. The court is excluded from this part of the proceedings.

The law guarantees certain rights to the person on trial, but some essential ones cannot be taken at their face value. Both, the constitution (Secs. 90, 81) and the Code of Criminal Procedure provide that the court proceedings in Ukraine be conducted in the Ukrainian language (with translators provided for those who do not know that language), that (with few specified exceptions) the trial be held in an open court, and that the defendant have the right to defense. However, it is common practice for the agencies of criminal justice to use the Russian language. Moreover, unless the state agencies decide that a public trial is expedient, the majority of political cases are tried in secret sessions.

The defendant also has the right to be informed of the charges, to submit evidence, to appeal the decisions. But he is allowed a defense counsel only after the pre-trial investigation is completed. Thus he has no legal assistance during this stage of pre-trial proceeding which, in Soviet practice, is most crucial and too often produces "confessions" and other admissions of alleged facts. Neither the typical Anglo-American institution of *habeas corpus* nor any other legal measure to obtain prompt relief from illegal detention is provided by the code. A preliminary arrest by order of the prosecutor alone may be extended up to nine months (Sec. 156).

The Code provides that "the burden of proof should not be shifted onto the defendant" and that judgment and conviction should be rendered only when the guilt of the defendant has been proven in the course of the court trial.

In political cases, however, the criminal judge can—and often does—accept at his discretion the evidence produced by the prosecutor as sufficient to prove the guilt of the defendant while rejecting the evidence submitted by the latter.

The western principle that the defendant is presumed innocent until proven guilty is not accepted in the law of the Ukrainian SSR nor in the law of the Union. The legislative drafting committee "vigorously rejected attempts to introduce such principle" as an "obsolete dogma of bourgeois law" which is "in deep conflict with the essence of Soviet socialist law."

A traditional characteristic of the criminal procedure is the domineering position of the public prosecutor (see also Court System). He is a state official and an executor of the government's and Party's policies in the realm of criminal justice. In practice, his influence on the conduct of the trial and the court's decisions is considerable. However, his role is especially evident in the pre-trial proceedings where he is the sole master. The "investigator" is an officer of the prosecutor and under his orders. The appeals against the investigator's decisions go to, and are decided by, the same prosecutor. He approves searches, seizures, and arrests.

Cassation appeals or protests may be lodged against court judgments to one higher appellate court.

The present Ukrainian Code of Criminal Procedure has been rewritten to include provisions and terminology patterned on the western principles which were formerly rejected. Yet it is not so much the wording of the statute, but rather the traditional court and police practice as well as the Party policy that determines the course of Soviet criminal justice. This is the way of political expediency and "expediency is one of the principles of Soviet criminal legislation."

## JUDICIAL SYSTEM

### Sources of Law

While the struggle of the Bolshevik forces against those of the Ukrainian National Republic was still in progress, the Provisional Decree on People's Courts and Revolutionary Tribunals was issued by the Ukrainian SSR government on February 19, 1919. It was followed by the implementing instruction of the Ukrainian People's Commissariat of Justice of May 12, 1919 (on the courts). By that time, the Russian SFSR had already set the pattern by its three decrees on courts (the first on November 22, 1917). The government of the Ukrainian SSR, being subject to the central Communist Party control in Moscow, had to follow that pattern in its basic ideas. Thus people's courts were established, consisting of elected judges and people's assessors who, unlike jurors in the western systems, were to participate actively in the trial. Revolutionary tribunals were also established in Ukraine on the Russian model to try acts "especially dangerous to the proletarian revolution." However, the Ukrainian decree rejected the provision of the Russian decree allowing a short form of trial, especially one without formal indictment and defense. In 1921, the tribunals were abolished. A new decree of the Council of People's Commissars of the Ukrainian SSR (October 26, 1920) was issued, especially designed to bring the decree of February 19, 1919, into closer conformity with the Russian decrees on courts. It made several amendments, such as the requirement that the judges demonstrate their political qualifications by their "work in such proletarian organizations as the party, labor unions, and worker's cooperatives." During the NEP period, the organization of the judiciary was somewhat less centralized. This fact was expressed in the decree on the court system of the Ukrainian SSR of October 23, 1925. However, in the 1930's, a strict centralization of the judiciary took place: it was climaxed by the Union Law on the Judiciary of August 16, 1938. Nine years later, the law of February 11, 1947, again transferred the right to legislate on the judiciary to the constituent Republics, with the provision that the Republic laws be based on the principles to be enacted by the Union legislature. The Principles of Legislation concerning the Judiciary of the USSR and the Constituent and Autonomous Republics was enacted on December 25, 1958. Based on these principles and incorporating them, the Law on the Judiciary was passed by the Supreme Soviet of the Ukrainian SSR on June 30, 1960.

### Main Characteristics of the Court System

Lenin's reminder that "it would be sinful for a Marxist to forget that the court is an organ of the government" has never been forgotten by Soviet legislators or the Soviet jurisprudence. It is an accepted and widely practiced concept. The idea of separation of powers is rejected by Soviet jurisprudence as a survival of the capitalist way of thinking. "The action of courts must be coordinated with the activities of the government and of the Communist Party" and "the judge's decisions should agree with the policies of the Party and the government." The Ukrainian law restates the provision of the all-Union "Principles" of December 25, 1958, that the courts should in all their activities "educate the citizens . . . in the spirit of devotion to their country and to Communism . . . of careful attitude toward

socialist property, observance of labor discipline, and respect for the rules of socialist community relations."

Both the constitution (Sec. 92) and the law state that "judges are independent and subject only to law." This does not mean that they are "independent of the socialist state." In reaching their decisions, the judges should be guided by the "socialist consciousness of law" which is based on their knowledge of government and party policies at any given time. A decision of the Supreme Court of the USSR (of April 19, 1959) directly instructs them to follow the directions of the 21st Congress of the Communist Party. Being elected (for five years), they are also dependent upon their constituents to whom they are responsible for their work and by whom they may be recalled before the expiration of their terms. Since their nomination as well as the motion to recall them originates in the Communist Party organizations, the independence of the judges is a fiction.

A rather broad and active participation of the people in the administration of justice is another characteristic of the court system in the Ukrainian SSR. Not only do elected people's assessors actively participate in court trials along with a judge, but also representatives of social organizations may take part in criminal and even civil trials as accusers or defenders, along with the parties, the public prosecutor, or the official defender. In addition, the so-called comrades' courts (see pp. 118 ff.), elected by the people, have the right to try certain matters and impose punitive measures outside of court.

**Courts on the Ukrainian Republic Level**

Section 1 of the Law on the Judiciary provides that the court system in the Ukrainian SSR consists of *raion* people's courts, *oblast* courts, and the Supreme Court of the Ukrainian SSR. The *raion* people's court (municipal if established in a city) constitutes the lowest and basic court instance in the system. It has original jurisdiction in most civil and criminal cases. The cases are tried by benches consisting of a judge and two people's assessors. Judges are elected by the inhabitants of the *raion* or the city, respectively, for a period of five years. The right to nominate candidates rests with the Communist Party organizations, trade unions, youth organizations, and so on. People's assessors are elected at general meetings of workers and employees at their places of work for a period of two years. Both the judges and people's assessors must systematically report to their constituents on their work. They can be recalled before the expiration of their terms on the initiative of the organizations entitled to place the nominations.

The *oblast* courts have original jurisdiction in more important cases assigned to them by law: in civil cases this jurisdiction is limited usually to divorce cases; in criminal matters, the jurisdiction extends to cases of high treason and other crimes against the state, premeditated murder with aggravating circumstances, and so on. The *oblast* courts also act as courts of appeal against decisions of the *raion* courts. In addition, they have supervisory power over the *raion* courts.

Judges of the *oblast* courts are elected by regional councils of people's deputies for a period of five years. They have to report to these councils on their work and can be recalled before the expiration of their terms. The benches in cases of original jurisdiction are composed of a judge and two people's assessors. In cases of cassation, the bench consists of three judges.

The Supreme Court of the Ukrainian SSR is the highest court of the Republic. It supervises the entire court system in the land. It acts primarily as a court of appeal against decisions of the *oblast* courts in civil or criminal matters. But it has also original jurisdiction in excep-

tionally important civil or criminal cases assigned to it by law or accepted for trial by its own decision, or in criminal cases transferred to it by the decision of the prosecutor (procurator) of the Republic.

The Supreme Court consists of a president, deputy presidents, judges, and people's assessors. It sits as a civil trial division, as a criminal trial division, or as a plenary session. The latter, in which the prosecutor participates, in addition to supervisory functions has the right of legislative initiative in the Presidium of the Supreme Soviet of the Ukrainian SSR.

The judges of the Supreme Court are appointed by the Supreme Soviet of the Ukrainian SSR for a period of five years. They have to report on their activities to the Supreme Soviet, and may be dismissed if their activities are not in line with government or Party policies.

**The Supreme Court of the USSR**

As the highest all-Union court authority, the Supreme Court of the USSR has the supervisory power to review the decisions of the Ukrainian Supreme Court (as well as of all other Republic supreme courts) presented to it by way of "protests" made by its president or the prosecutor general of the USSR in case of violation of all-Union laws or infringement of the interests of other Union Republics.

The Supreme Court of the USSR also has original jurisdiction over citizens of the Ukrainian SSR in especially important cases, both civil and criminal, provided by law.

Another Union court with jurisdiction over citizens of the Ukrainian SSR is the court martial (Military Tribunal) established by the Union law of December 25, 1958. The courts martial are established in units of the armed forces, garrisons, and military districts. Their jurisdiction extends over criminal cases of all military personnel and of any civilians involved in a case with at least one member of the military, as well as over all cases of espionage, regardless of the status of the accused.

**Supervisory Powers of the Prosecutor General of the USSR**

The agency which supervises the "legality and uniformity" of the decisions of the Ukrainian SSR's courts is an institution of the USSR. It exercises its powers on behalf of the central government which means on behalf of the Communist Party. This agency is the prosecutor (procurator) general of the USSR. The Soviet Ukrainian Constitution (Sec. 93) provides that the prosecutor general of the USSR shall have the highest supervisory power over all ministries and other organs of administration of the Ukrainian SSR with respect to their strict observance of law. The decree of the Supreme Soviet of the USSR sets forth the supervisory powers of the prosecutor in the USSR. This law provides (Sec. 5) that "the organs of the prosecutor of the USSR form one centralized system, headed by the prosecutor general of the USSR, with the lower-level prosecutors being subordinate to the higher-level ones." Consequently, the prosecutor general of the USSR appoints (for a period of five years) the prosecutor of the Ukrainian SSR, as well as *oblast* prosecutors, and approves the nomination of the *raion* prosecutors submitted to him by the prosecutor of the Ukrainian SSR. The orders and directives of the prosecutor general are binding on all his subordinate prosecutors. These orders and instructions can be repealed only by the Presidium of the Supreme Soviet of the USSR, if they are contrary to the law. The prosecutor general is appointed by the Supreme Soviet of the USSR to which he is responsible. Because of his position and powers, the prosecutor general of the USSR, both directly and indirectly, exerts a significant influence on the judiciary in the

Ukrainian SSR as the representative of the central government and the Communist Party. He "acts under the leadership of the Party and follows its directions." His influence is felt especially in criminal matters (see Criminal Procedure) but he can also enter a civil trial and act independently of the parties directly concerned (see Civil Procedure). He can "protest" against all decisions of the Republic courts and have the case reopened if he feels that the interest of the state warrants it. The prosecutor takes part in court sessions and can submit his conclusions. His participation in plenary sessions of the Supreme Court of the Ukrainian SSR (as well as of the USSR) is obligatory under law.

**Legal Assistance**

The constitution of the Ukrainian SSR (Sec. 91) guarantees the accused the right of defense. In accordance with this provision, the Law on the Judiciary of June 30, 1960 establishes (in Sec. 17) a college of lawyers for the purpose of "conducting the defense in court, as well as affording other legal aid to citizens, enterprises, and organizations." These colleges are voluntary associations of persons engaged in the practice of law. Members of the colleges practice law in offices called "juridical consultations." Acting as a defense counselor in criminal cases is perhaps the most important function of the lawyer. In certain cases his assistance is required by law (see Criminal Procedure). Legal writers agree that the lawyers cooperate with the court in reaching a correct decision and, consequently, are "agencies of the administration of justice." They differ, however, in their opinion as to whether he is merely an "assistant to the court" or whether his status in court is based on his legal relationship to his client. The lawyer is bound by professional secrecy. However, the question is raised as to whether he is obliged to reveal to the authorities his knowledge of a crime against the state, planned or committed, about which he learned from his client in confidence.

**Administration of Justice outside of Regular Courts**

The principle that justice in the Ukrainian SSR (as well as in the entire USSR) should be administered only by courts is proclaimed by the constitution, the all-Union Principles on the Judiciary, the Ukrainian Law on the Judiciary, and other laws. There are instances, however, when trials in civil and criminal cases are conducted and decisions are made by organs other than regular courts.

The State Arbitration Board is an agency established by the Union decree of 1931, to which "all controversies arising between economic agencies concerning the execution of contracts" have to be submitted for settlement. The decision of such an arbitration board is compulsory, with exceptions provided by law.

Comrades' courts in various forms have existed in the Soviet Union since 1919, when the Russian SFSR introduced such "disciplinary courts" for the purpose of deciding on cases of violation of internal regulations in an enterprise and of work and labor union discipline. Later, the jurisdiction of these and similar courts was extended to include small thefts and all forms of violation of the "rules of socialist intercourse." The comrades' courts are based on the decree of the Presidium of the Supreme Soviet of the Ukrainian SSR, issued on August 15, 1961. The courts are a form of people's participation in the administration of justice, greatly encouraged in the Soviet Union, especially since the 21st Congress of the Communist Party. Comrades' courts are "elective people's agencies designed to promote actively the education of the citizens in the spirit of Communist attitude to work, to socialist property, etc." (Sec. 1). The courts are

established in enterprises, organizations, secondary and higher institutions of learning, collective farms, and so on with no less than fifty members. The chairman, his deputy, and the secretary are elected by an open ballot. The appearance before the court is obligatory. It can apply measures of reprimand, censure, and fine. It may also forward the files of the case to regular courts for criminal action. Its decisions are final.

# II. The Ukrainian Church

## 1. UKRAINIAN CHURCH HISTORIOGRAPHY AND THEOLOGY

### CHURCH HISTORIOGRAPHY

**Before the Nineteenth Century**

The beginnings of Ukrainian church historiography date back to the Princely period. The very first works of historical nature—chronicles, biographies (lives) of prominent church leaders, accounts of the construction of churches and monasteries—contain both factual material on the history of the Church in *Rus'*-Ukraine and distinct historical conceptions, largely associated with particular events or persons. Such are the "lives" of the saints of the eleventh century (particularly Princes Borys and Hlib), and stories of the builders of the Kievan Cave Monastery. Even in this early period, the historians of the time showed an interest in specific problems of church history, particularly the origin of Christianity in *Rus'*-Ukraine. Only a few of these historical and hagiographic works have been preserved; some fragments survived in *Povist' vremennykh lit* (Tale of Bygone Years), the Kievan and Galician-Volhynian chronicles, and other writings of the period. They still remain the principal source of Ukrainian church historiography. Later editions and compilations of these works during the Lithuanian-Polish period were merely a continuation of the old church-historical tradition.

Research into church history intensified in the late sixteenth and early seventeenth centuries. There were chronicles and collections of chronicles, and various writings associated with church activity, for example, numerous reports of synods, diaries of churches and monasteries, indicating that Ukrainian church historiography was flourishing at the time. Historical works describing the religious struggle in Ukraine following the Union of Berestia in 1596 constitute a separate group. The opposing parties frequently resorted to church history, taking, for the most part, an uncritical approach in defense of their respective positions, which was reflected in the nature, content, and even style of these works.

A broad interest in church history began to emerge in Ukraine in the first half of the seventeenth century. This was caused, on the one hand, by the Orthodox-Catholic rivalry in the search for a renewal of church unity, and on the other hand, by the extensive church-cultural activities of Metropolitan Peter Mohyla and his *Atheneum* in Kiev. The past of the Ukrainian church now became the subject of a series of treatises and other publications by Ukrainian church leaders. Along with church and monastery chronicles, new attempts at a scholarly interpretation of events, institutions, and persons made their appearance. All these works were still on the border of theology and hagiography, on the one hand, and church history, on the other, with an overwhelming preponderance of the former. This can be observed in the Hustyn Chronicle, in the diaries of Peter Mohyla, the *Patericon* of Sylvester Kosiv, and in the later works of the Uniate bishop of Kholm, Jacob Susha.

A purely scholarly approach to the problems of church history did not begin

to appear until the eighteenth century. But even then, the works of Orthodox scholars associated with the Kiev Academy, and those of Greek-Catholic authors, mostly Basilian monks, were clearly tendentious in the defense of their respective church-political interests and sectarianism. The following works belong in this category: Archbishop George Konysky's treatises, the monograph of Nicholas Bantysh-Kamensky, *Istoricheskoie izvestiie o voznikshei v Pol'shi unii* (Historical Report on the Union Appearing in Poland, 1795), and the works of the Uniate metropolitan Leo Kyshka and other Catholic authors of the period. The work of the Basilian monk Ignatius Kulchynsky, *Specimen Ecclesiae Ruthenicae ab origine susceptae fidei ad nostra usque tempora* was of a more comprehensive nature; it appeared in 1733 and contained a history of the Ukrainian Church from the Catholic standpoint.

Special and local problems of Ukrainian church history were treated in the works of Ivan Oleshevsky (on the history of the Basilian Order and its monasteries in the seventeenth century), Clement Khodykevych, Cornelius Srochynsky, and Ioanikii Bazylovych.

**The Nineteenth and Early Twentieth Centuries in Central and Eastern Ukraine**

A scholarly treatment of the history of the Ukrainian Church was initiated in the nineteenth century. The origins of these studies can be traced to the activities of the Kiev Mohyla Academy and they are associated with the names of Metropolitan Samuel Myslavsky and his associates, Bishops Theophan Shyianov-Cherniavsky and Ireneus Falkovsky. Attention was focused on the history of the church monuments of Kiev. It was only when the academy was reorganized on the pattern of a higher educational institution of theology in 1819 that studies of church history became more systematic. The metropolitan of Kiev, Eugene Bolkhovitinov, was the initiator of this trend, writing works on the history of the main religious centers of Kiev—the Cathedral of Saint Sophia and the Cave Monastery, as well as the history of the metropolitanate of Kiev. Metropolitan Eugene also established the Yevheniie-Rumiantsev prize to encourage talented students of the academy to research Kievan church history. The following prominent church historians of Ukraine and Russia were either graduates or faculty members of the Kiev Theological Academy: Makarii Bulgakov, rector of the academy and, later, metropolitan of Moscow, author of the monumental *Istoriia russkoi tserkvi* (History of the Russian Church, Vols. I–XII, 1857–83) and Orthodox bishops of Ukraine: Philaret Humylevsky, Gabriel Rozanov (author of a treatise on the Zaporozhian Monastery on the river Samara, 1838), and Archbishop Feodosii of Katerynoslav (author of the history of the eparchy of Katerynoslav, 1890).

The Kiev school of church history with its leading center, the Kiev Theological Academy, came into existence in the second half of the nineteenth century. This school was characterized by monographic research of various periods of Ukrainian church history (primarily the sixteenth-eighteenth centuries), its main centers, and leading figures. Other scholarly institutions of Kiev took part in this research, particularly the Archaeographic Commission, the Nestor-Chronicler Historical Society, the *Kievskaia Starina* (Kievan Antiquity) group, and later the Ukrainian Scientific Society. The work of these institutions exerted an influence on scholarly centers outside of Kiev, for example, the university chairs of church history in Kharkiv and Odessa, the Odessa Society of History and Antiquity, the Kharkiv Historical-Philological Society, the provincial societies of church archaeology, archive commissions, museums, etc., chiefly in Volhynia and Podilia. The influence of the Kiev school was felt far beyond the borders of Ukraine, evoking an interest in Ukrainian church history among Russian, Polish, and for-

eign historians. Monographs on the history of the Ukrainian church of the seventeenth and eighteenth centuries constituted an important contribution to Ukrainian church history, particularly the works of Philip Ternovsky (*Ocherki iz istorii Kievskoi eparkhii* [Outline of History of the Kiev Eparchy, 1879]); Serhii Ternovsky (*O podchinenii Kievskoi metropolii Moskovskomu patriarkhatu* [On the Subordination of the Kiev Metropolitanate to the Moscow Patriarchate, 1872]); Ivan Malyshevsky (*Kievskie tserkovnye sobory* [Kiev Church Synods]; *Variagi v nachal'noi istorii khristiianstva v Kieve* [The Varangians in the Early History of Christianity in Kiev]; *Zapadnaia Rus' v bor'be za veru i narodnost'* [Western *Rus'* in the Struggle for Faith and Nationality, Vols. I–II, 1895–7]); Nicholas Petrov (works on the history of the Basilian Order, the Kiev Academy, church monuments of Kiev, research of historical sources, etc.); Stephan Golubiev's monumental *Piotr Mogila i ego spodvizhniki* (Peter Mohyla and His Champions, I–II, 1883–98) in addition to numerous treatises; Theodore Titov (*Russkaia pravoslavnaia tserkov v pol'sko-litovskom gosudarstve v 17–18 vv, 1654–1795* [The Russian Orthodox Church in the Polish-Lithuanian State in the Seventeenth and Eighteenth Centuries], I–III, 1905–16), *Istoriia Kievo-Pecherskoi Lavry* [History of the Kievan Cave Monastery], vols. I–II, Kiev, 1880). Their numerous disciples published a number of monographs (in *Trudy* [Transactions] of the Academy and as separate books) on Ukrainian church leaders of the eighteenth century, particularly the metropolitans and the state of the metropolitanate of Kiev under their care (the works of I. Rybolovsky, I. Hraievsky, M. Shpachynsky, F. Rozhdestvensky, A. Bilhorodsky, and V. Chekhivsky); authors such as A. Osynsky, S. Kurhanovych, V. Ivanytsky, H. Bulashev, to mention a few, wrote about other church leaders. The researchers of this school published studies about clergy of the Hetman State of the latter half of the eighteenth century (A. Diianyn on the history of churches and monasteries, M. Mukhyn and A. Krylovsky on church-community organizations, theological education, church art, etc.).

The works of Kievan historians are also associated with the Kiev school of church history, e.g., Peter Lebedyntsev (on Kievan church monuments, the Cathedral of St. Sophia, Cave Monastery, and the gold-domed Mykhailivsky Monastery), his brother Theophan Lebedyntsev (a monograph on Melchisedec Znachko-Yavorsky); Nicholas Ohloblyn, Sr.; S. Kryzhanivsky; Peter Orlovsky; Lev Matsiievych; the Kharkiv historians, Amfiian Lebediv (on the Bilhorod eparchy of the seventeenth and eighteenth centuries) and I. Stelletsky; the Volhynian historians, Nicholas Teodorovych, Andrew Khoinatsky, and O. Fotynsky; the Podilia historian, Yukhym Sitsinsky (*Istoricheskie svedeniia o prykhodakh i tserkvakh podolskoi eparkhii* [Historical Survey of the Parishes and Churches of the Podilian Eparchy, vols. I–VIII, 1895–1911]), and other collections; the Chernihiv historians, Peter Dobrovolsky, Peter Doroshenko, and Arkadii Verzilov; the Poltava historians, Lev Padalka, Matthew Astriab, and Ivan Pavlovsky.

The leading nineteenth and twentieth century historians of Ukraine also concentrated on problems of church history, particularly Michael Maksymovych (treatises on church lore of the Kiev and Pereiaslav areas); Nicholas Ivanyshev (*Svedeniia o nachale unii* [Survey of the Beginnings of the Union, 1859]), Nicholas Kostomarov (*O prichinakh i kharaktere unii v zapadnoi Rossii* [On the Causes and Nature of the Union in Western Russia, 1842]); Volodymyr Antonovych (*Ocherk' sostoianiia pravoslavnoi tserkvi v yugo-zapadnoi Rossii s poloviny XVII do kontsa XVIII v.* [Outline of the State of the Orthodox Church in South-Western Russia from the Middle of the Seventeenth to the End of the Eighteenth Century, 1871]); Orest Levytsky (*Vnutrennee sostoianie zapadno-*

*russkoi tserkvi v Pol'sko-Litovskom gosudarstve v kontse XVI st. i uniia* [The Internal Structure of the Western Russian Church in the Polish-Lithuanian State at the End of the Sixteenth Century and the Union, 1884], *Yuzhno-russkiie arkhierei v XVI–XVII v.* [South Russian Hierarchs in the Sixteenth and Seventeenth Centuries], *Tserkovni spravy na Zaporozhu* [Church Matters in Zaporizhia]); Alexander Lazarevsky (on the clergy in the Hetman State); Nicholas Vasylenko; and Michael Hrushevsky (chiefly in his *Istoriia Ukraïny-Rusy* [History of Ukraine-*Rus'*]). An important contribution was also made by the publication of archive material on the history of the Ukrainian Church in *Arkhivy yugo-zapadnoi Rossii* (Archives of Southwestern Russia, part I, Vols. 1–12, 1859–1914), *Pamiatniki* (Monuments) of the Kiev Archaeographic Commission (Vols. I–IV, 1845–59); in publications of various academic institutions and scholarly societies, particularly in *Chteniia* (Readings) of the Nestor-Chronicler Historical Society, and *Zapiski* (Notes) of the Odessa Society of History and Antiquity; regional study societies and archive commissions; journals (such as *Kievskaia Starina*), *Trudy* (Transactions) of archaeological congresses and eparchial reports.

Church historians, Ukrainian and Belorussian, who worked on the history of the Ukrainian Church while living outside Ukraine, were closely associated with church archaeographic activities in Ukraine. The following deserve mention: Hilarion Chystovych (*Ocherki istorii zapadno-russkoi tserkvi* [Outline of History of the Western Russian Church, vols. I–II, 1882–4] and the monograph *Feofan Prokopovich i yego vremia* [Theophan Prokopovych and his Times, 1868]); Platon Zhukovych, author of the monumental study *Seimovaia bor'ba pravoslavnogo zapadno-russkogo dvorianstva s tserkovnoi uniei*, 1602–32 (The Parliamentary Struggle of the West Russian Nobility Against Church Union, 1602–32, Vols. I–VI, 1901–12); Constantine Kharlampovych (the monograph *Malorossiiskoe vliianie na velikorusskuiu tserkovnuiu zhizn'* [Little Russian Influence on Great Russian Church Life], Vol. I, 1914).

A number of new researchers interested in the broader aspects of Ukrainian church history, especially in the origins of Christianity and church in Ukraine, appeared in the early twentieth century. Among them were: Volodymyr Parkhomenko, author of the monograph *Ocherk istorii pereiaslavsko-borispol'skoi eparkhii (1733–85) v sviazi s obshchim khodom malorossiiskoi zhizni togo vremeni* (Outline of History of the Eparchy of Pereiaslav-Boryspol [1733–85] in Connection with the Contemporary General Course of Life in Little Russia, 1910) who then turned to ancient history research, particularly in his works *Drevne-russkaia kniaginia Ol'ga* [*Vopros o kreshchenii eia*] (The Ancient *Rus'* Princess Olha [the Question of her Baptism], 1911) and *Nachalo Khristiianstva na Rusi, Ocherki iz istorii Rusi IX–X v.* (The Beginnings of Christianity in *Rus'*. Outline of History of *Rus'* of the Ninth and Tenth Centuries, 1913). Natalia Polonska-Vasylenko wrote the treatise *K voprosu o khristiianstve na Rusi do Vladimira* (On the Problem of Christianity in *Rus'* before Volodymyr, 1917). During this period the future historians of the Ukrainian Church, Alexander Lototsky and Basil Bidnov published their early works (p. 126). On the other hand, Ukrainian historians paid close attention to the history of the Ukrainian Catholic Church (pp. 124, 126–8), and showed an increasing interest in the history of the Protestant movement in Ukraine (Viacheslav Lypynsky).

### The Nineteenth and Early Twentieth Centuries in Western Ukraine and Abroad

Galicia, and particularly Lviv, was the second important center of research on the Ukrainian church history in the nineteenth and twentieth centuries. Monographs and source studies prevailed. Be-

cause of specific historical conditions, the conception of a Ukrainian Church was crystallized here at an earlier date than in eastern Ukraine, at least that of the church's Catholic branch, and this had some effect on the formation of a Ukrainian church historiography in eastern Ukraine. The problems of church history in Galicia and Transcarpathia were studied by Ukrainian as well as by several Polish historians.

During the nineteenth century, individual (mostly local) problems of church history were studied by: Michael Harasevych, author of the massive *Annales Ecclesiae Ruthenae*, published in 1862; Denis Zubrytsky, with his publication of sources on the history of the Ukrainian rural clergy of the seventeenth and eighteenth centuries; T. Zakhariiasevych, Jacob Holovatsky, Michael Malynovsky, Anthony Dobriansky, and particularly Anthony Petrushevych and Isidore Sharanevych. In his *Svodnaia galitsko-russkaia letopis'* (Summary of Galician-*Rus'* Chronicles, Vols. I–II, 1872–89), A. Petrushevych paid particular attention to various events in the church history of Galicia; he also wrote a number of monographs on the church in Galicia and Bukovina.

The works of I. Sharanevych were of a more scholarly nature, particularly his *Patryarchat Wschodni wobec Kościoła Ruskiego i Rzeczypospolitej Polskiej* (Eastern Patriarchate in Relation to the Ruthenian Church and the Polish Commonwealth, 1879), *Stavropigiiskaia tserkov Uspeniia vo L'vove* (The Stavropygian Church of the Assumption in Lviv, 1896); *Cherty iz istorii tserkovnykh benefitsii i mirskogo dukhovenstva v Galitskoi Rusi* (Outline of History of Church Benefices and the Lay Clergy in Galician *Rus'*, 1902).

The first to attempt a synthetic history of the Ukrainian Church was Julian Pelesh, bishop of Peremyshl, who wrote *Geschichte der Union der Ruthenischen Kirche mit Rom* (History of the Union of the Ruthenian Church with Rome, Vols. I—II, 1881—2), which contains an outline of the history of the entire Ukrainian Church prior to the Union of Berestia, and of the Ukrainian Catholic Church.

Major scholarly treatises on the history of the Ukrainian Church in Western Ukraine and of the Ukrainian Catholic Church in particular began in the late nineteenth and early twentieth centuries and are associated with the activities of the Shevchenko Scientific Society, Metropolitan Andrew Sheptytsky, the Lviv Stavropygian Brotherhood and finally the Basilian Order. These were works by Alexander Sushko on the period preceding the Berestia Union; Bohdan Buchynsky on the history of the Union; Theodore Sribnyi on the history of the Lviv Stavropygia from the beginning of the sixteenth to the end of the eighteenth century published in *Zapysky Naukovoho Tovarystva im. Shevchenka* (Memoirs of the Shevchenko Scientific Society); *Z dziejów Synodu Brzeskiego, 1596* (History of the Brest Synod 1596) by Ivan Franko (1895); *Prychynky do istorii unii* (Notes on the History of the Union, 1895) by Cyril Studynsky and other researchers on the Berestia Union; the documentary *Monumenta Confraternitatis Stauropigianae Leopoliensis* (Vols. I–II, 1895–8); and other publications, particularly those associated with the tercentenary of the Union.

The number of works on the history of the church in Transcarpathia was much smaller. The researchers and authors were: Michael Luchkai; Alexander Dukhnovych (*Istoriia priashevskoi eparkhii* [*v Ugorskoi Rusi*] History of the Priashiv Eparchy in Hungarian *Rus'* [Russian translation of 1877]); Ivan Dulyshkovych; and George Zhatkovych.

Polish and Russian historiographers of the nineteenth century also showed interest in Ukrainian church history and treated it as part of general church history either in the Russian empire or the Polish Commonwealth. Russian historians, particularly M. Karamzin, S. Soloviov, and V. Kluchevsky dealt with these problems in both general and special

treatises on the history of Russia. Russian church historians of the nineteenth century, beginning with Archbishop Ambrose Ornatsky, author of *Istoriia rossiiskoi ierarkhii* (History of the Russian Hierarchy, Vols. I–VI, 1807–15) and ending with Eugene Golubinsky, author of the monumental *Istoriia Russkoi Tserkvi* (History of the Russian Church, Vols. I–II, each in two books, 1880–1917) paid even closer attention to these problems. Hennadii Karpov, Vitalii Einhorn, Ivan Shliapkin, and particularly Michael Priselkov in *Ocherki po tserkovno-politicheskoi istorii Kievskoi Rusi X–XII vv.* (Outlines of Church-Political History of Kievan *Rus'* of the Tenth through the Twelfth Centuries, 1913), wrote monographs on this same subject.

Polish historians referred in their works primarily to the history of the church in Ukrainian territories of the Polish Commonwealth, particularly to the Greek-Catholic and Roman Catholic Church. Special attention was given to these problems by Bishop Edward Likowski in the monograph *Unja Brzeska* (The Berestia Union, 1896) and the extensive work *Dzieje kosciola unickiego na Litwie i Rusi* (History of the Uniate Church in Lithuania and *Rus'*, Vols. I–II, 1906); Antoni Prochazka, Władysław Czermak, Jozef Tretiak, Anatoli Lewicki, Józef Fiałek, Władysław Abraham, and Kazimierz Stadnicki.

Among the few west European researchers of church history in Ukraine, the most noteworthy are: Karl Goetz, author of *Das Kiever Hoehlenkloster* (The Kievan Cave Monastery, 1904); Joseph Fiedler, author of works on the history of the Union; and P. Pierling, a researcher of Vatican archives and author of the work *La Russie et le Saint-Siège* (1896).

**1917–67**

Following the restoration of national and church life in Ukrainian territories in 1917, Ukrainian church-historical scholarship encountered serious and, often insurmountable, difficulties. Rich as it was, the heritage of historiography from the previous period did not treat the history of the Ukrainian Church separately; it was integrated into either the general history of the Russian Church or the history of the Orthodox and Greek-Catholic churches within the entire Polish Commonwealth. The conception of the Ukrainian Church as a separate entity had not yet evolved, nor was it recognized in the scholarly research of eastern Europe.

On the other hand, the course of events after 1917, particularly in central and eastern Ukraine, produced conditions that hindered a further development of church historical scholarship. The anti-religious policy of the Soviet regime virtually precluded any scholarly research into Ukrainian church history. The liquidation of the Ukrainian Autocephalous Orthodox Church and, later, the Ukrainian Greek Catholic Church (1946), coupled with the closing down of all ecclesiastic scholarly institutions (starting with the Kiev Theological Academy in 1920) and societies, and an outright prohibition of any kind of research in this area—literally drove church historical scholarship abroad, having wholly isolated it from sources in Ukraine. With the exception of research in the field of church archaeology, art, and, to some extent, history of church land tenure and economics, nearly all other publications of the Ukrainian SSR could be classed as atheistic propaganda, with little relation to genuine scholarship. Problems of church history, particularly of the Orthodox Church in Ukraine, could only be developed by Ukrainian historians abroad and to some extent in Western Ukraine.

The centers for study of the history of the Ukrainian Orthodox Church in the 1920's and the 1930's were the following: the Ukrainian Scientific Institute in Warsaw (A. Lototsky), the Orthodox Theological Faculty of Warsaw University (B. Bidnov, Dmytro Doroshenko, Viacheslav Zaikyn, and Ivan Ohiienko),

and the Orthodox Theological Seminary in Kremianets.

The works of A. Lototsky dealt with the clergy, ecclesiastical law, and church structure in Ukraine. Even before 1917, Lototsky had published several treatises on these subjects in *Zapysky NTSh*. As an émigré, Lototsky concentrated his attention on broader problems of the Ukrainian Church: in addition to special treatises on the ecclesiastical decrees of Volodymyr the Great and Yaroslav the Wise, he published the monographs *Ukraïns'ki dzherela tserkovnoho prava* (Ukrainian Sources of Ecclesiastical Law, 1931) and *Avtokefaliia* (Autocephaly, Vols. I–II, 1935–8).

The author, B. Bidnov, of the monograph *Pravoslavnaiia tserkov' v Pol'she i Litve* (The Orthodox Church in Poland and Lithuania, 1908) and *Materialy po istorii tserkovnogo ustroistva na Zaporozhe* (Materials on the History of Church Structure in Zaporizhia, 1907), also published abroad several treatises on church history, particularly on the last archimandrite of the Zaporozhian Sich, Volodymyr Sokalsky, on the life and work of the theologian Adam Zernikav, and the historiographic study *Doslidzhennia tserkovnoï istoriï v pravoslavnykh kraïnakh* (Research on Church History in Orthodox Countries, 1931).

D. Doroshenko, who focused his attention primarily on church history in his general works on Ukrainian history as well as in his *Ohliad ukraïns'koï istoriohrafiï* (Survey of Ukrainian Historiography), while living abroad, published a series of articles in addition to his broad treatise *Pravoslavna tserkva v mynulomu i suchasnomu zhytti ukraïns'koho narodu* (The Orthodox Church in the Past and Present of the Ukrainian People, 1940).

The present metropolitan Hilarion, I. Ohiienko, devoted many of his works to the history of the Ukrainian Church in the seventeenth and eighteenth centuries. He published the following monographs: *Ukraïns'ka Tserkva. Narysy z istoriï Ukraïns'koï Tserkvy* (The Ukrainian Church. Sketches from the History of the Ukrainian Church, Vol. I–II, 1942) and after the war—in Canada—*Ukraïns'ka tserkva za Bohdana Khmelnyts'koho* (The Ukrainian Church under Bohdan Khmelnytsky, 1955), *Ukraïns'ka tserkva za chas ruïny* (The Ukrainian Church during the Time of the Ruin, 1956), and a history of the monastery of Pochaïv (1961). He also recorded the lives of Dmytro Tuptalo (1960) and Arsenii Matsiievych (1964), and the canonization of saints in the Ukrainian Church (1965).

V. Zaïkyn wrote about the beginnings of Christianity in *Rus'*-Ukraine and the participation of the laity in church administration; his works include the study *Z suchasnoï ukraïns'koï tserkovnoï istoriohrafiï* (On Modern Ukrainian Church Historiography, 1927).

In 1934 E. Sakovych published treatises on the Orthodox Church in Poland from 1788 to 1792, and in 1936 on the synod of Pinsk, 1791.

Ukrainian Catholic church historiography developed quite freely outside the Ukrainian SSR until 1939 (in Galicia, Transcarpathia, and, after the war, chiefly in Rome), having at its disposal appropriate archive material. The main centers of research were: the Ukrainian Theological Academy and the Ukrainian Scientific Theological Society in Lviv, headed by Rev. Josyf Slipyj (*Pratsi* [Transactions] and the quarterly *Bohosloviia* [Theology] 1923–39); and the Order of Saint Basil the Great (*Zapysky Chynu Sv. Vasyliia Velykoho* [Proceedings of the Order of St. Basil the Great], Zhovkva 1924–39, edited by Rev. Josaphat Skruten); and, to some extent, the Shevchenko Scientific Society.

Among the noteworthy lay church historians are: Stephen Tomashivsky, author of the treatise *Petro, pershyi uniiats'kyi mytropolyt Ukraïny-Rusy* (Peter, the First Uniate Metropolitan of Ukraine-*Rus'*, 1928) and *Vstup do istoriï tserkvy na Ukraïni* (Introduction to the History of the Church in Ukraine, 1932); and Nicholas Chubaty, author of the monograph *Zakhidnia Ukraïna i Rym v XIII*

*v. v ii zmahanniakh do tserkovnoï unïi* (Western Ukraine and Rome in the Thirteenth Century in its Struggle for Church Union, 1917), the treatise *Pravne polozhenia tserkvy v kozats'kii derzhavi XVII-XVIII* st. (The Legal Position of the Church in the Kozak State of the Seventeenth-Eighteenth Centuries, 1925), the lectures *Istoriia uniinykh zmahan' v ukraïns'kii tserkvi* (History of Union Attempts in the Ukrainian Church, Vols. I-II, 1935), and the monumental work *Istoriia khrystiianstva na Rusi-Ukraïni* (History of Christianity in *Rus'*-Ukraine, 1965).

Individual problems of church history were developed by Nicholas Andrusiak, author of several treatises on church history of the seventeenth century, Ivan Krypiakevych, Melaniia Bordun, and Omeljan Pritsak. Volodymyr Sichynsky, Volodymyr Zalozetsky, Nicholas Holubets, Hilarion Svientsitsky, and Michael Dragan all conducted research into the history of church architecture and art. The historiosophic work of V. Lypynsky, *Relihiia i tserkva v istorii Ukraïny* (Religion and Church in the History of Ukraine, 1925), occupies a special place of distinction.

Historian-clerics worthy of mention are: J. Skruten (source studies on the biography of St. Josaphat Kuntsevych, church historiography, and history of the Basilian Order); Theophil Kostruba (*Narysy z tserkovnoï istorii Ukraïny X-XIII st.* [Outline of Church History of Ukraine of the Tenth through the Thirteenth Centuries, 1939]); Roman-Stephen Lukan (history of Basilian monasteries in Galicia and Transcarpathia); and Andrew Ishchak (studies on the union and autocephalic struggle in Ukraine in the thirteenth through the fifteenth centuries). Individual problems of church history were also developed by Theodosius Halushchynsky, Cyril Korolevsky (study of sources), Makarii Karovets, Peter Tybynsky, and Bishop Gregory Lakota.

The history of the church in Transcarpathia was the subject of works by Anthony Hodynka, Oleksii Petrov, Eugene Perfetsky, Basil Hadzhega, and Hlib Kinakh.

After World War II, the main center for research on the history of the Ukrainian Orthodox Church was at first the Theological Academy of the Ukrainian Autocephalous Orthodox Church in Munich (N. Polonska-Vasylenko on church history, Alexander Ohloblyn on church historiography, Basil Hryshko and Leo Okinshevych on ecclesiastical law history), and later the Scientific-Theological Institute which subsequently moved to the United States, and the Ukrainian Scientific Orthodox Theological Society in Canada under Metropolitan Hilarion Ohiienko. Simultaneously, research on modern Orthodox Church history in Ukraine was conducted by the Institute for the Study of the USSR in Munich (N. Teodorovych and others), and by individual scholars in the U.S., Canada, and Europe (Leonid Sonevytsky, Paul Hrytsak, Ivan Korowytsky, Bohdan Bociurkiw, I. Levkovych, and A. Zhukovsky). In addition to the numerous published works of Metropolitan Hilarion, works which merit mention are: *Narysy z istorii ukraïns'koï pravoslavnoï tserkvy* (Outline of History of the Ukrainian Orthodox Church, Vols. I-IV, 1955–66) by Ivan Vlasovsky; the monograph of L. Sonevytsky, *Ukraïns'kyi yepyskopat Peremys'koï eparkhiï v XV-XVI st.* (The Ukrainian Episcopate of the Peremyshl Diocese in the Fifteenth and Sixteenth Centuries, 1955); and *Istorychni pidvalyny UAPTs* (Historical Foundations of the Ukrainian Autocephalous Orthodox Church, 1954) by N. Polonska-Vasylenko. History of church art was the subject of studies by Peter Kurinnyi and Alexander Povstenko.

Ukrainian Catholic Church historiography was strongly developed in the postwar period. Its main center was Rome, where the Basilian Order not only revived the publication of *Analecta OSBM* in 1949 (six volumes were published by 1967), but expanded the publication to include monographs (23

volumes published by 1967) and developed broad archaeographic and publishing activity on the basis of archive materials in the Vatican. The history of the Ukrainian Church was the main object of this research, particularly that of the Greek-Catholic Church (42 volumes of documents were published between 1952 and 1967). This work was initiated and supervised by the protoarchimandrite of the Order of St. Basil, Athanasius Welykyj, with the participation of Ireneus Nazarko, Michael Wawryk, Isidore Patrylo, and G. Harastei.

The activity of the research center in Rome expanded in the 1960's with the renewal of the Ukrainian Theological Society, and the establishment of Pope St. Clement Ukrainian Catholic University in 1963 on the initiative of Joseph Cardinal Slipyi, which, within a short period, was able to publish a series of monographs on the history of the Ukrainian Church, by N. Chubaty, I. Nahayevsky, and Basil Lencyk. It also began the publication of Vatican archive materials on the history of the Ukrainian Church, collected at one time through the efforts of Metropolitan Sheptytsky (*Monumenta Ucrainae Historica*, Vols. I–III, 1964–6).

Among the works published by Ukrainian Catholic historians during the 1940's and 1960's, the following are worthy of mention: the monograph of Bishop Ivan Prashko in 1944 (*De Ecclesia Ruthena Catholica sede Metropolitane Vacante 1655–65*); those of the priests I. Nahayevsky, I. Nazarko, Myron Stasiv, I. Patrylo, B. Lentsyk, Athanasius Pekar; and the numerous treatises of A. Welykyj, M. Wawryk (history of the Basilian monasteries), Myroslav Marusyn, Alexander Baran (history of the Church in Transcarpathia in the eighteenth and nineteenth centuries), Meletius Wojnar (history of ecclesiastical law), Meletius Solowij (history of the Kiev Uniate metropolitanate under Alexander I), Ivan Chomyn, Rodion Holovatsky, Ivan Bilanych, Stephen Vivcharuk, Bohdan Kurylas, and Peter Isaiw.

Gregory Luzhnytsky's *Ukraïns'ka Tserkva mizh Skhodom i Zakhodom* (The Ukrainian Church between East and West), 1954, is a synthesis. Materials on the history of the church and religious life in Ukraine are contained in the symposium *Relihiia v zhytti ukraïns'koho narodu* (Religion in the Life of the Ukrainian People, edited by Volodymyr Janiv, *ZNTSh*, vol. 18, 1966).

Treatises and materials on the history of the Ukrainian Church were also published in the Canadian Ukrainian Catholic journal *Logos*.

As a result of the work of the apostolic visitatorship (created in Munich in 1946) in its Church-Archaeographic Commission, a number of studies were published on the Moscow theory of the church-historical aspect of the "Third Rome" by A. Ohloblyn, N. Polonska-Vasylenko, B. Krupnytsky, B. Hryshko, Ivan Mirchuk, and Hans Koch, in the period from 1951 to 1954.

Foreign historians, particularly Polish, German and Russian émigrés, were also interested in the history of the church in Ukraine. Polish historians working on Ukrainian church history include K. Lewicki, *Ksiażę Konstanty Ostrogski a Unja Brzeska 1956 r.* (Prince Constantine Ostrozky and the Berestia Union of 1596 [1933]), Kazimierz Chodyniecki, Janusz Wolinski, Aleksander Łapinski, Józef Umiński, Aleksander Deruga, and Teofil Długosz; and in the postwar period Oskar Halecki (the monograph *From Florence to Brest 1439–1596* [1958]), and Walerian Mejsztowicz.

German historians concentrating on the history of the Church in Ukraine were: Hans Koch (*Byzanz, Ochrid und Kiew*, 1938); Edward Winter (*Byzanz und Rom in Kampf um die Ukraine, 955–1939* [Byzantium and Rome in the Struggle for Ukraine, 955–1939, 1942], *Russland und Papsttum* [Russia and the Papacy, 1960]), A. Ziegler (*Gregor VII und der Kiewer Grossfürst Izjaslav* [Gregory VII and the Kiev Grand Duke Iziaslav, 1947]).

Russian émigré historians paid considerable attention to Ukrainian church

history, particularly Eugene Shmurlo; Michael Taube (*Rom und Russland im X bis XII Jhd.*, 1947); Nikolai Baumgarten (*Chronologie ecclésiastique des terres russes du X au XII siècle* [Ecclesiastical Chronology of Russian Lands from the Tenth to the Thirteenth Century, 1930]; *Saint Vladimir et la conversion de la Russie* [Saint Volodymyr and the Conversion of Russia, 1932]), Vladimir Moshin; G. Ostrogorsky; George Vernadsky; Anthony Kartashev (*Ocherki po istorii russkoi tserkvi* [Outline of History of the Russian Church, I–II, 1959]); G. Fedotov (*The Russian Religious Mind, Kievan Christianity*, 1946).

Vatican church historians devoted considerable attention to the church history of Ukraine in their general and specialized works. Among these were: A. Amman (*Untersuchungen zur Geschichte der kirchlichen Kultur und des religioesen Lebens bei den Ostslawen* [Investigation of the History of Church Culture and Religious Life of the Eastern Slavs, 1955]), G. Hoffmann; and Michael Lacko (history of the church in Transcarpathia). There was less interest in Ukrainian church history among French and Anglo-American historians (but note should be made of B. Leib, *Rome, Kiev et Byzance à la fin du XIe siècle* [Rome, Kiev, and Byzantium at the End of the Eleventh Century, 1924], and the American historian of Czech descent Frantisek Dvornik). Such Rumanian historians as P. Panaitescu, T. Ionesco, and E. Turdeanu showed an interest in Peter Mohyla and Gregory Tsamblak.

Soviet Russian historical science has lately displayed an increasing interest in church history, especially Ukrainian (for example, the works of Jacob Shchapov).

There has been very little research on the history of Protestantism in Ukraine. Protestant trends and organizations in Ukraine were mainly described by Orest Levytsky, author of the source study "Sotsyniianstvo v Polshe i yugo-zapadnoi Rusi" (Socinianism in Poland and Southwestern *Rus'*) published in *Kievskaia Starina*, 1882; English edition, with an introduction by D. Čiževsky, "Socinianism in Poland and South-West *Rus'*, *Annals* of the Academy of Ukrainian Arts and Sciences in the U.S., 1953; M. Hrushevsky, particularly in Vol. 6 of *Istoriia Ukraïny-Rusy* and in the treatise *Z istorii relihiinoï dumky na Ukraïni* (On the History of Religious Thought in Ukraine, 1925]), V. Lypynsky, who wrote the treatise "Ariians'kyi soimyk v Kyselyni na Volyni v maiu 1638 r." (The Arian Assembly in Kyselin in Volhynia in May 1638, *ZNTSh*, vol. 96); and Domet Olianchyn. There are also publications on the history of modern Protestantism in Ukraine whose authors are representatives and leaders of contemporary Protestant trends in Ukraine (Basil Kuziv *et al.*).

Polish and, to some extent, German historians devoted more attention to Protestantism in the lands of the former Commonwealth of Poland, particularly Ukraine. Apart from earlier publications by W. Zakrzewski, I. Szujski, I. Bukowski, Szczęsny Morawski, and the Russian-Polish historian Nicholas Liubovich, there are the following: Kazimierz Chodynicki, *Reformacja w Polsce* (The Reformation in Poland, 1922), and particularly Stanisław Kot, the author of a number of works on Protestantism, especially the monograph *Socinianism in Poland* (1957).

*A. Ohloblyn*

**BIBLIOGRAPHY**

There is no general outline of Ukrainian church historiography. Some relevant material, mostly of a bibliographical nature, is contained in general and special works on the history of Ukrainian churches as well as those dealing with the history of Ukraine and Ukrainian historiography, particularly in Prymitky (Notes) to Vols. 3, 5, 6, 7, and 8 of *Istoriia Ukraïny-Rusy* by M. Hrushevsky and in the English-language "Ukrainian Historiography" by D. Doroshenko and A. Ohloblyn in the *Annals* of the Ukrainian Academy of Arts and Sciences in the U.S. (Vols. V–VI, Nos. 4 [18], 1, 2, 19–20, New York, 1957).

Other works containing relevant material are: V. Zaïkyn, "Z suchasnoï ukraïns'koï tserkovnoï istoriohrafiï" (Modern Ukrainian Church Historiography) in *Zapysky Chyna Sv. Vasyliia Velykoho* (Transactions of the Order of Saint

Basil the Great, II, 3–4, Zhovkva), 1927; L. Okinshevych, "Nauka tserkovnoho prava na Ukraïni" (Science of Ecclesiastical Law in Ukraine) in *Biuleten' bohoslovs'ko-pedahohichnoï akademiï UAPTs* (Bulletin of the Theological and Pedagogical Academy of the Ukrainian Autocephalous Orthodox Church), No. 2, Munich, 1946; I. Vlasovsky, *Narys istoriï Ukraïns'koï Pravoslavnoï Tserkvy* (Outline of History of the Ukrainian Orthodox Church), Vol. 3, Chapter V, New York and Bound Brook, N.J., 1957; Michael Wawryk, OSBM, "Bibliohrafichnyi ohliad Vasyliians'koho Chyna za 1935–1950 rr." (Bibliographical Survey of the Basilian Order from 1935 to 1950) in *Zapysky Chyna Sv. Vasyliia Velykoho*, Series II, Vol. III (IX), Nos. 1–2, Rome, 1958.

## THEOLOGY

### Before the Seventeenth Century

The beginnings of theology can be traced back to the efforts of Yaroslav the Wise (religious schools, monasteries, transcription and translation, particularly of religious book), Volodymyr Monomakh, and the works of Metropolitans Hilarion, Nicephorus, St. Theodosius of the Caves, Clement Smoliatych, Cyril Turivsky, and other leaders of the Princely period. This was the period of translation and distribution of the works of Saint Basil the Great (*Shestodnev*), John Chrysostom (*Zlatostrui, Zlatoust*), Symposia of lesser works, parables, adages (*Zlataia Tsep, Izmarahd, Pchela*), etc. C. Smoliatych was in favor of a philosophical education for the clergy, particularly the utilization of excerpts from the then little-known works of ancient authors, and of a symbolic method of interpretation of the Holy Scriptures. Work in canon law manifested itself from the very beginning of the Kievan church in the compilation of manuscript codes, which were called "Nomocanons" and "Kormchi knyhy" and which culminated in the publication of *Nomocanon* in Kiev in 1620. The Florentine Union led to lively activity in religious scholarship (1439) and resulted in the publication of *Poslannia Mysaila* (The Pastoral Letter of Mysail) in 1476. The sixteenth century saw the beginning of a struggle between the adherents of the West and Byzantium in Ukraine which produced particularly sharp polemics around the subject of the Berestia Union (1596) with the participation of its adherents: P. Skarga, *Opysannia i oborona soboru rus'koho beresteis'koho* (Description and Defense of the *Rus'* Synod in Berestia); I. Potii, *Uniia, Harmoniia, Antirrisis*, etc.; and its opponents — S. Zyzanii, *Kazania*, etc.; Christopher Filaret, *Apocrisis; Ektesis* by an anonymous author; Klyryk Ostrozky; H. Smotrytsky, *Kliuch tsarstva nebesnoho* (Key to the Kingdom of Heaven); George Rohatynets, *Perestoroha* (Warning); and Ivan Vyshensky, who wrote on many western religious and socio-religious problems, criticizing contemporary philosophy and theology.

In the second half of the sixteenth century there was an active group in Ukraine and Belorussia translating and commenting on the Holy Scriptures (Gregory, Prior of the Peresopnytsia Monastery, Valentine Nehalevsky, and Basil Tiapynsky), and authors of the "teaching gospels," that is, expounders of the texts of the Gospel for the broad masses of the faithful. Acting at the same time was the Ostrih group of theologians (H. Smotrytsky, V. Surazky, M. Bronevsky, C. Ostrozsky, and M. Smotrytsky). The adherents to the Western theology based their writings on the Greeks, but took their method and some theological theses from the Latin West.

### The Seventeenth Century

Work on the dogma of the Eastern Church was particularly important. In Kiev, following the publication of two catechisms in 1595 and 1627, the *Ispovidannia viry* (Confession of Faith), compiled under Metropolitan Peter Mohyla, was approved by the synod of 1640, and became a major book for the entire Orthodox East. The *Traktaty pravoslavni bohoslovs'ki pro pokhodzhennia Sv. Dukha* (Orthodox Theological Treatises on the Origin of the Holy Ghost)

by Adam Zernikav (1682) constituted an important contribution to theology at that time.

Liturgical literature, particularly in the seventeenth century, was also the subject of special studies, culminating in the publication in 1629, of *Sluzhebnyk* (Book of Services) and in 1646 of *Trebnyk* (Missal).

Works on homiletics were characterized by the book *Nauka abo sposib skladania kazania* (Art or Method of Sermon Composition) by Yoannikii Galiatovsky (1659), which was exceptional for its time.

Intensive collections of patrological material resulted in the publication of patericons (lives of saints), particularly the *Pechers'kyi Paterícon*, which came out in 1635, although its origin dates back to the thirteenth century.

In the first half of the seventeenth century, the religious polemics became more refined. Authors on the Orthodox side were: Zachariah Kopystensky (*Palinodiia*); Meletius Smotrytsky (until 1627); Leontii Karpovych (*Propovidi* [Sermons]); Cyril Stavrovetsky (until 1625, *Zertsalo bohosloviia* [Mirror of Theology, 1618]); Andrew Muzhylovsky (*Antidotum*); and later P. Mohyla (*Litos, Antologion*); Innocent Gizel; J. Galiatovsky; and Lazar Baranovych. On the Catholic side were I. Potii; Peter Arkudii; Joseph Veliamin Rutsky; M. Smotrytsky (*Apologia*); Leo Krevza (*Oborona yednosti tserkovnoi* [Defense of Church Unity]); Ivan Dubovych; and Anastasius Seliava.

From both standpoints, one can speak of the Kiev School of Theology. By the second half of the seventeenth century its influence spread to Muscovy (Epiphanii Slavynetsky [d. 1675] and Simeon Polotsky [d. 1680]), which caused a reaction against "Kievan teaching" in Moscow. Peter I took advantage of the works of Ukrainian theologians for his own reformist purposes, among them T. Prokopovych, who favored Protestantism (d. 1736); Stephen Yavorsky, an adherent of Catholic principles and scholastic method (d. 1722), author of *Kamen' very* (Rock of Faith); and Dmytro Tuptalo (d. 1709), author of a number of theological treatises.

**The Eighteenth Century**

In the first half of the eighteenth century, regular courses of theology were read by professors and rectors of the Kiev Mohyla Academy: I. Krokovsky, I. Popovsky, Kh. Charnutsky, O. Volchansky, I. Levytsky, S. Kuliabko, V. Liashchevsky, S. Liaskoronsky, and many others; and in Muscovy, F. Lopatynsky (*Sviashchennoie uchenie* [Sacred Teaching, 1706–10]). In the second half of the eighteenth century Kiev theology reverted to the system of T. Prokopovych, who at one time had read the entire course of theology (*Vstup do bohosloviia* [Introduction to Theology, published in Koenigsberg, Breslau, and Moscow]). He was followed by such theologians as S. Myslavsky (d. 1796), author of *Dogmaty pravoslavnyia very* [Dogmas of Orthodox Faith, 1760]), and Ireneus Falkovsky (d. 1827).

With Prokopovych, Protestant influence displaced the Latin-scholastic elements of the "Kiev school" at the same time as the pressures of Russification were being felt. Among Ukrainian Catholic theological works of the eighteenth century, the following are worthy of mention: *Bohosloviia nravouchytel'naia* (Theology Teaching Good Habits, 1751); *Narodovishchanie* (People's Knowledge, 1756); *O sviatom sakramente evkharystii* (On the Holy Sacrament of the Eucharist) by Andrew Zavadovsky; an introduction to theology by Theodore Basarabsky (1771); and numerous sermons for parish priests and teachings for parishioners by Dobrylovsky, and others.

**The Nineteenth and Twentieth Centuries**

By the nineteenth century Ukraine was taken over by Russian synodal theology, directed against Ukrainian theological thought and method. All traces of

"Uniate" theology were eradicated by ecclesiastical and administrative methods. The Ukrainians became a force of "passive resistance" against "synodal theology" with such authors as: Sylvester Malevansky (d. 1908) in dogma; M. Olesnytsky, and N. Stelletsky in moral theology; V. Pevnytsky in homiletics; and P. Malytsky and many others in church history. The Kiev Theological Academy remained the main center of theological thought throughout the nineteenth and early twentieth centuries, with *Trudy Kievskoi Dukhovnoi Akademii* (Transactions of the Kiev Theological Academy) publishing many theological works, including important material on the history of the Ukrainian church. Soviet rule put a stop to any development of theology in Ukraine.

Ukrainian Catholic theology developed according to Western patterns in the Galician (Lviv and Peremyshl) and Transcarpathian diocesan seminaries, in the Barbareum of Vienna, and in the Greek, subsequently Ukrainian, Collegium in Rome. Among Ukrainian Greek-Catholic theologians, the better known names of the nineteenth century were: I. Snihurovsky, M. Harasevych, M. Malynovsky, G. Yakhymovych, S. Sembratovych, A. Petrushevych, O. Bachynsky. I. Bartoshevsky, J. Pelesh, O. Milnytsky, I. Dolnytsky, and K. Sarnitsky. In the twentieth century, between the two world wars, Lviv, with its Theological Scientific Society, became the center of Greek-Catholic theology. Well known among Greek-Catholic theologians and representatives of related disciplines were: A. Ishchak, B. Laba, J. Slipyi, M. and T. Halushchynsky, A. Hlynka, S. Sampara, S. Rud, B. Lypsky, P. Tabynsky, and P. Rudyk.

Until 1939, Warsaw was the center of Ukrainian Orthodox theology, with an Orthodox chair of theology. Engaged in the study of theology were: B. Bidnov, I. Vlasovsky, I. Ohiienko, Nikanor Abramovych, and A. Lototsky.

At the present time, there is no theological research in Ukraine. Abroad, the attitudes are polemical and apologetic, and only indirectly theological.

*S. Tyshkevych and A. Welykyj*

# 2. THE HISTORY OF THE UKRAINIAN CHURCHES

## CHRISTIANITY IN RUS'-UKRAINE PRIOR TO THE OFFICIAL CONVERSION (989)

### Before the Ninth Century

Recent research on the early civilizations of the Black Sea littoral shows that Christianity had already penetrated the coastal regions of Ukraine in the first century A.D. It is clear that the geographical area known in Hellenistic times as Scythia included that portion of Ukraine which adjoins the Sea of Azov (the Kuban area of today) and the environs of the Straits of Kerch. And Christian tradition holds that it was in Scythia that the apostle St. Andrew Pervozvannyi (First Called) preached.

During apostolic times the western portion of Scythia which bordered on the Black Sea belonged to the Roman empire and the eastern portion formed the independent Hellenistic kingdom of the Bosporus. Here, where there was considerable religious freedom, the Jews had formed Congregations of Worshippers of the Supreme God during the time of Christ. At the time of Christ

Jewish colonies already existed in most of the Greek cities of southern Ukraine (western Scythia) and it was in these colonies that the apostles usually began their missionary work. Although the Roman administration included Christians — legionnaires or administrative officers — the authorities were generally hostile to the Jewish and Christian communities in the Roman portion of the Black Sea littoral, mainly because adherence to the Roman gods was a test of loyalty to the state. Consequently, the Jews and Christians were persecuted here as in other parts of the empire. Indeed the Black Sea area became a place of exile for many Christians from other parts of the empire. The fourth pope, St. Clement I (*ca.* 88–97), was banished with several hundred Christians to Khersones (Kherson) in the Crimea. Here, however, St. Clement's missionary activity was so successful that he "converted the entire local populace to his faith." As a result, Trajan ordered that he be put to death and his body cast into the Black Sea. However, the Christians recovered his body and interred it. Later in 860 the Slavic apostle, St. Cyril, exhumed the relics of St. Clement and moved them to Rome. In 989 the head of St. Clement was sent by Pope John XV to Volodymyr the Great (989) on the occasion of Volodymyr's baptism and marriage. This relic was preserved in Kiev as a sacred national treasure until the end of the twelfth century. (Pope St. Martin I (649–55), who was sent to Khersones in the seventh century by the heretic Byzantine emperor, Constantine II, also died there as a martyr.) Despite the active Christian communities in Roman Crimea, Christianity developed to a greater extent within the territories of the Bosporan kingdom in the first three centuries. Thus Cadm, the archbishop of Bosporus, was present at the First Council of Nicaea, but not the bishop of Khersones.

It is likely that Christianity spread from the cities on the Black Sea to the tribes living in the area of present-day Ukraine. Certainly by the beginning of the second century Christianity had established a foothold among them, especially those living in the Roman province of Dacia, which bordered on present-day Bukovina. Christian merchants and artisans, who came into Ukraine from the Roman empire, left significant traces on the religious outlook of these tribes (who later came to be called the Antes). Procopius of Caesarea noted that the Antes believed in a single god of lightning and thunder, although their monotheistic creed was combined with a belief in the forces of nature (demons, water nymphs, and other minor deities).

During the last half of the third century, the Germanic Goths [Vol. I, p. 576a] entered southern Ukraine from the Baltic area and destroyed the Greek colonies on the Black Sea littoral and with them the local Christian communities. (In one of his works, Emperor Constantine Porphyrogenitus mentions that in the tenth century there were ruined cities of stone with churches along the Black Sea.) Before long, however, the Goths themselves began to adopt Christianity: the western Goths (Visigoths) accepted Arianism and the eastern ones (Ostrogoths) orthodox Christianity. Although most of the Goths were driven from Ukraine by the Huns at the end of the fourth century, Gothic Christian communities remained in northern Crimea and their metropolitanate in the city of Dorus became the center for the organization of the newly converted peoples of the area about the Azov Sea. The earliest Christian eparchy (diocese) created on Ukrainian soil was that founded in Tmutorokan on the Taman peninsula; it belonged at first to the metropolitanate of Dorus.

**The Spread of Christianity in Rus' in the Ninth and Tenth Centuries**

The Tmutorokan *Rus'* attack on Constantinople in 860 [Vol. I, p. 583a]

threatened to destroy the capital and, according to legend, only the guardianship of the Virgin Mary saved the imperial city: a stormy sea destroyed the *Rus'* fleet. Still the frequent *Rus'* attacks on Byzantium compelled the emperor to seek a reconciliation with *Rus'*. Having prepared the ground by negotiations and gifts, Byzantium decided that the interests of the empire dictated the conversion of *Rus'* to Christianity, in order, as Patriarch Photius said, "to transform the people of *Rus'* from enemies into friends and subjects of the Roman empire." This kind of ecclesiastical imperialism, formulated in the ninth century by Photius, the leading ideologist of Byzantinism, became the doctrine of the empire and seriously influenced the future course of relations between *Rus'* and Byzantium.

Christian missionary activity among the people of *Rus'* began around 867 with the despatch of a missionary bishop. A miracle (a gospel thrown into the fire did not burn) is alleged to have convinced the *Rus'* of the veracity of the Christian faith. There was a political coup in Byzantium in 867 but it did not affect this missionary work. The new patriarch, Ignatius, and the new emperor, Basil of Macedon, continued to support Christian missionary activity among the people of *Rus'*, work which was crowned with the creation of a diocese for *Rus'*, probably Tmutorokan. At first, this diocese belonged to the Gothic metropolitanate, but later became an independent archdiocese and so remained even when Tmutorokan *Rus'* became part of the Realm of *Rus'* in the tenth century, fifty years before the baptism of Volodymyr. Christianity was also spreading among the *Rus'* people along the Dnieper River. The Kievan princes, Askold and Dir, were already Christians.

While Tmutorokan *Rus'* was being drawn into the sphere of Byzantine Christianity, the western Ukrainian lands found themselves within the orbit of Slavic Christianity, which had begun to spread from Greater Moravia in the 870's, as a result of the activity of the Slavic apostles, SS. Cyril and Methodius, and their disciples. Upon the invitation of the Greater Moravian Prince Rostyslav (863), Cyril and Methodius arrived in Greater Moravia and began to preach the Christian faith in the Slavic language, with a separate Slavic rite which occupied an intermediate position between the Latin and the Byzantine rites. They translated liturgical books into the Slavic language and their work was supported by Pope Adrian II and his successors. From here the Slavic rite spread to the east, to the province of White Croatia, the eastern borders of which extended at that time to the upper Buh, the Bystrytsia, and the Tysa rivers. On the eve of the destruction of the Greater Moravian state by the Magyars, Pope John IX (899) reorganized the hierarchy of the Greater Moravian Church, appointing a metropolitan and three bishops, two of them for the White Croats. One of these bishops settled in Cracow in Poland, the other in Peremyshl on Ukrainian territory. (The existence of a cathedral in Peremyshl at the beginning of the tenth century was confirmed by archaeological excavations conducted in 1960.)

Thus, one hundred years before the official conversion of *Rus'*-Ukraine, both Tmutorokan *Rus'* in the east and the Peremyshl area in the west were already Christianized and had their own hierarchies, although the two areas followed different rites. The diocese of Tmutorokan at first used the Byzantine rite and Greek liturgical language, but at some point, presumably when the Tmutorokan area came under the influence of Kievan *Rus'*, the Slavic liturgical language came there from Bulgaria, gradually displacing the Greek. However, certain Slavists (Volodymyr Lamansky and Nicholas Nikolsky) think the Slavic liturgical language and Cyril-Methodian rite gradually spread east from the Peremyshl

region not only into Western Ukraine but also into the Dnieper region.

The turning point in the political and the religious life of *Rus'*-Ukraine and, indeed, in all of eastern Europe was the invasion of Kiev by the Varangians under the leadership of Oleh from Novgorod and the establishment of Kiev as the capital of a great eastern European empire in the years 879–82 [Vol. I, pp. 583–5]. The establishment of relations between Kiev and other Christian countries contributed to the expansion of Christianity not only among the *Rus'* people but also among the Varangians. At the time of the second treaty between *Rus'* and the Greeks in the year 944 [Vol. I, p. 586], half of the *Rus'* delegation was Christian. In Kiev the Christians had already built the Church of St. Elias.

In the middle of the tenth century, the Kievan state was governed by Princess Olha (945–64) [Vol. I, pp. 586–7]. She adopted Christianity and had planned to Christianize her realm according to the Byzantine rite, but after unsuccessful negotiations with Byzantium in 957, she turned to the German emperor, Otto I, and asked him to send Latin missionaries. (At the time the difference between the rites was not significant.) However, the mission of Bishop Adalbert to *Rus'* proved unsuccessful. A rather strong pagan reaction prevented Princess Olha from carrying out her plan, after her son, Sviatoslav the Conqueror, began governing the state (964) [Vol. I, p. 587]. Nevertheless, she brought up two of her grandsons, Yaropolk and Oleh, as Christians. A third grandson, Volodymyr, was raised by his uncle, Dobrynia, in a pagan Varangian environment. Princess Olha died in 969, and was later glorified by the Kievan Church as the first saint of *Rus'*-Ukraine.

Sviatoslav's successor in Kiev, Yaropolk, wanted to realize his grandmother's plan of Christianizing the realm. The tragic death of his father Sviatoslav, who perished in 972 as a result of a Greco-Pecheneg plot, forced Yaropolk to turn to the enemies of the Byzantine emperor—the Holy Roman emperor, Otto I, and the pope. In 973 Yaropolk's envoys appeared at the Diet of Quedlinburg. In connection with this, Pope Benedict VII sent a mission to Kiev.

## CHRISTIANITY IN RUS'-UKRAINE FROM THE ELEVENTH CENTURY TO THE MID-FOURTEENTH CENTURY

### The Conversion of Volodymyr and the Christianization of Rus'-Ukraine

In 977 a war erupted between Yaropolk and his half-brother, Volodymyr, who was reigning in Novgorod [Vol. I, p. 590]. Yaropolk died in 980 and Kiev found itself in the hands of a pagan faction led by Volodymyr. Having become the sole master of the realm, Volodymyr sought to establish a single state religion, bringing together the common and tribal gods into one pantheon, with Perun at the head. In 980 the *Povist' vremennykh lit* (Chronicle of Bygone Years) listed such gods as Khors, Dazhboh, Stryboh, Symarhl, and Mokosh; statues of them were set up by Volodymyr on the hill facing his palace in Berestiv. The treaties of the earlier princes—Oleh, Ihor, Sviatoslav—also mentioned Veles (Volos), presumably the *druzhyna*'s (prince's retinue) god of prosperity and trade. But before long Volodymyr himself turned to Christianity, which had continued to spread throughout *Rus'*-Ukraine. The Kievan Realm's annexation of the Cherven cities in 981 with their episcopal see of Peremyshl also contributed to the strengthening of Christianity in the realm.

Volodymyr was baptized, probably in Vasyliv (Vasylkiv) in 986 or 987, although there were already various views on this matter when the Chronicle of Bygone Years was written. Records of Volodymyr's conversion can be found in both contemporary Kievan sources—

Chronicle of Bygone Years, the writings of the monk Jacob, *Pamiat' i pokhvala kn. Volodymeru* (In Memory and Praise of Prince Volodymyr), *Zhytiie Volodymyra* (The Life of Volodymyr)—and foreign sources—Yakhia of Antioch, Zonares, Kedren, Dietmar of Merseburg, Peter Damianus, and others. After the marriage of Volodymyr to Empress Anna (989) in Khersones, which had been conquered by *Rus'* forces, Volodymyr returned to Kiev and declared *Rus'* a Christian country [Vol. I, p. 591].

FIGURE 12. BAPTISM OF *Rus'* (MINIATURE FROM THE CHRONICLE OF CONSTANTINE MANASIIA)

Little is known about the beginning of the church hierarchy in *Rus'*-Ukraine. The arrival of Greek metropolitans from Byzantium in 1037 and the ensuing dependence of the Kievan Church on the Byzantine patriarch suggested to the first historians of the *Rus'* Church that Volodymyr might have brought a metropolitan and bishops with him from Byzantium on his return from Khersones. Further research did not support this view, however. The Chronicle of Bygone Years—a work written by a cleric—does not mention a Kievan metropolitan prior to 1037, and no Greek source records that Volodymyr brought the first members of the hierarchy from Byzantium.

This evidence led the historians of the Church, beginning with Eugene Golubinsky, to assume that the *Rus'* Church during the time of Volodymyr was self-governing and independent of the Byzantine patriarch. In their search for the first head of the *Rus'* Church some scholars accepted the view that he came from Byzantium, a view rejected today by the majority of east European historians but one which is still maintained in the West; others (primarily western Catholic historians) supposed that he came from Rome. The Russian historian, Michael Priselkov, advanced the view that the church hierarchy in Kiev came from the patriarchate of the Bulgarian Church in Okhrida, a theory now widely held. Modern research, particularly on Taman *Rus'* (George Vernadsky, Michael Miller, and others) and on the church history of White Croatia, suggests that it was not necessary for Volodymyr to bring in a hierarchy from Byzantium or Bulgaria because dioceses already existed in Tmutorokan and Peremyshl, and that he probably obtained the consent of the Byzantine patriarch for self-government in the *Rus'* Church. New bishoprics were then established at Volodymyr Volynsky, Greater Novgorod, Polotsk, Chernihiv, Kiev, and probably Turiv. The first archbishop of the *Rus'* Church was probably called Leontius, and the second, Ivan.

The economic administration of the *Rus'* Church rested in the hands of a clergyman brought from Khersones—Nastas Korsunianyn—and was based on tithes which Volodymyr gave to the Church in 996 upon the completion of the first Kievan cathedral—the Church of the Virgin Mary or the Desiatynna (Tithes) Church. Volodymyr secured the legal and material position of the Church of *Rus'* with a church statute. The Church was made independent of the government, and its organization was constructed on the principle of harmony between state and church.

The Church of *Rus'* and Volodymyr's government also maintained normal relations with the pope and the Roman emperor. There is evidence that the Kievan Realm was drawn into plans of Emperor Otto III for the creation of a universal Christian league of nations.

After his conversion to Christianity, Volodymyr became a model Christian

ruler. As a result, he came to be revered in *Rus'* as a saint shortly after his death (1015), even though for about two centuries the Byzantine Church refused to recognize saints of *Rus'* extraction, especially Princess Olha and Volodymyr the Great.

While the Kievan Church preserved its administrative independence of the Byzantine patriarch, Greek clergy, architects, and artists had already come to *Rus'*-Ukraine with Volodymyr's Greek wife. They established schools and built churches decorated after the Greek model. The custom of *Rus'* pilgrims visiting Greece, especially Mount Athos, to acquaint themselves with Christian monastic life developed during Volodymyr's time, one of the first of these pilgrims being St. Antonius of the Kievan Cave Monastery. Also well known for their knowledge of the Greek language and theological literature were the future Kievan metropolitan, Hilarion (Ilarion), the Novgorod bishop, Luke Zhydiata, and others.

The death of Volodymyr the Great dealt a severe blow to the development of the *Rus'* Church. The four-year struggle for the Kievan throne [Vol. I, pp. 592–3] put an end to the further development of ecclesiastical and missionary organizations. The loss of the Cherven cities, and with them the Peremyshl see, brought great harm to the young Church. The struggle for power among the sons of Volodymyr led to a partition, the lands on the left bank of the Dnieper River coming under the rule of Mstyslav, while those on the right bank were under Yaroslav.

At the time of this struggle, the *Rus'* Church produced its first two martyr-saints, Borys and Hlib, two princes of *Rus'* extraction who were murdered on the order of Sviatopolk the Damned. They were canonized by Archbishop Ivan (probably in 1026), and were later revered not only in the Kievan Church but also in the churches of other Slavic peoples.

**The Rus' Church as a Metropolitanate of the Byzantine Patriarchate**

It is not known how long Archbishop Ivan lived. After his death some complications presumably led Yaroslav the Wise to agree (*ca.* 1036) to place the Kievan Church under the jurisdiction of the Byzantine patriarch. The first metropolitan, Theopemptos, who was a Greek, arrived in Kiev in 1037. Little is known about his activities; it appears, however, that he remained in Kiev for six years (1037–43). The Chronicle of Bygone Years records only one ecclesiastical event in which he took part—the consecration of the rebuilt Tithes Church, although much is known about Yaroslav's work for the Church at that time: the construction of the foundations under the Cathedral of St. Sophia, the erection of the Golden Gate, and the establishment of a book-copying institution at St. Sophia's, for example. An ecclesiastical nationalist opposition to the Greek metropolitan emerged in Kiev with the aim of restoring the former autonomy of the Kievan Church. It was led by Hilarion, the prince's confessor and a gifted theologian and ascetic.

The maltreatment of *Rus'* merchants in Constantinople in 1043 led to a conflict between Kiev and Byzantium which developed into a three-year war. About that time Theopemptos' duties as metropolitan ended. The break in political and ecclesiastical relations between *Rus'* and Byzantium gave Hilarion an opportunity to advance the basic ideas of Kievan Christianity. He did this solemnly in the presence of Yaroslav in a sermon delivered at the tomb of St. Volodymyr in the Tithes Church: this message was embodied in his well-known theological work, *Slovo o zakoni i o blahodati i pokhvala kahanu nashemu Volodymeru* (Sermon on the Law and Grace and an Eulogy to our *Kahan* Volodymyr [Vol. I, p. 978]). In them Hilarion developed his Christian Ukrainian philosophy of history. Before God, in the words of Hilarion, all nations stand equal, but

God's grace called some to their duty sooner, others later. The Lord called *Rus'* at the end, but this had no bearing on the superiority or the inferiority of *Rus'* in relation to other nations. Though the *Rus'* people were called last of all, their land soon shone with glory to all the ends of the earth. The instrument of God's grace in *Rus'* became our sovereign (respectfully called *kahan*) Volodymyr. It was God's grace alone which converted him to Christianity; and he, out of pagan darkness, began to shine with the light of Christianity, was baptized, and baptized his people out of purely idealistic motives. The ideals of Christ's gospel became the basis of life in *Rus'* and they must remain such forever. It was natural that Volodymyr, inspired by God's grace, should have accepted Christianity for himself and for his entire people; he should, accordingly, be counted among the saints. It is noteworthy that Hilarion did not mention the participation of the Byzantines in the conversion of *Rus'* to Christianity.

The war with Byzantium came to an end in 1046, but there was no return to the dependence of the Kievan Church upon the Byzantine patriarch. On the contrary, in 1051, Yaroslav assembled the bishops and installed Hilarion as metropolitan, without the assent or knowledge of the Byzantine patriarch.

Within a year of Hilarion's accession the Chronicle relates the establishment of the Kievan Cave Monastery (Pechers'kyi manastyr) which became and remained for many centuries a holy place and the center of Christian life in Ukraine. The founder of the Monastery was St. Antonius, a monk from *Rus'* who had been ordained at Mount Athos about 1030. His successor was Varlaam. The third abbot, St. Theodosius, carried out a reform of the monastic rule. He replaced the eremitic way of life of the monks with a collective one based on the rules of St. Theodore Studite. In addition to pursuing an ascetic way of life, the monks were required to labor

FIGURE 13. ST. ANTONIUS PECHERSKY (PAINTING BY N. AZOVSKY)

FIGURE 14. ST. THEODOSIUS PECHERSKY (DETAIL OF THE ICON, THIRTEENTH CENTURY)

physically and mentally. The Cave Monastery soon became the center of learning and a model for all the monasteries within the Church of *Rus'*. St. Theodosius preached that not only private life but also political life must be based on the principles of an evangelical love for one's neighbor and social justice [Vol. I, p. 978a].

It is not known how long Metropolitan Hilarion remained at the head of the Kievan see. About the time of the first banishment of the Great Prince Iziaslav (*ca.* 1069) from Kiev, a Greek metropolitan, George, appeared in the city. Disliked by the *Rus'* people for his doubts concerning the sanctity of SS. Borys and Hlib, he returned to Greece about 1073. The metropolitan's throne remained vacant for some years. After the death of Iziaslav (1078), a new metropolitan came to Kiev about 1080; this man was Ivan II, an erudite and tactful Greek. His successor, Ivan III, another Greek, occupied the throne for only one year. Then, from 1090 to 1097, Kiev was again without a metropolitan. His duties were carried out by Bishop Ephrem of Pereiaslav, sometimes called the metropolitan of Pereiaslav. A descendant of a Kievan boyar family, he was one of the first monks of the Cave Monastery (ordained by St. Antonius) and had spent a long time in one of the monasteries in Constantinople. Called by Prince Vsevolod to the see of Pereiaslav, which was established shortly after the

death of Yaroslav, he greatly aided the development of that diocese. During his administration, the feast of the transference of the relics of St. Nicholas of Myra was introduced into the *Rus'* Church, an act which attests to the bishop's benevolent attitude toward Western Christianity. It appears that his successor, Metropolitan Nicholas, was also a native of *Rus'* (1097–1101).

The times of Yaroslav the Wise and his heirs were periods of intensive development in the Church's organization and the further Christianization of the realm. During the reign of Yaroslav, two new bishoprics were established in Yuriïv and Bilhorod near Kiev; they served as auxiliaries to the metropolitan see, especially when the latter was unoccupied. During the last half of the eleventh century missionary work was conducted in the northern regions, in particular in the Rostov-Suzdal lands, and a bishopric was established in Rostov. This mission was conducted by Leontius and Isaiah, monks of the Cave Monastery. Both died a martyr's death there.

Until the second decade of the twelfth century, Byzantine influences could not penetrate deeply into the Kievan Church. The road was opened by the Kievan Grand Prince Volodymyr Monomakh, son of a Greek princess. During the first half of the twelfth century (1103–45), three Greek metropolitans of Kiev, Nicephorus, Nicetas, and Michael, pursued a deliberate policy of imbuing the Church of *Rus'* with Byzantine ecclesiastical ideals and a more hostile attitude towards the Catholic West. This development is attested by the biting anti-Catholic polemical literature which appeared under Nicephorus and other Greek clerics. The most intolerant was the *Slovo o viri khrestianskoi i latyn'skoi* (Sermon on the Christian and Latin Creed) by Theodosius, a Greek who was forced upon the Cave Monastery as abbot by Nicephorus. With the aid of Volodymyr Monomakh, Metropolitan Nicephorus thus succeeded in destroying for fifty years the leading role which the Cave Monastery had played in the ecclesiastical and national life of *Rus'*-Ukraine. The Greek metropolitans strove to place their kinsmen in the Cave Monastery and tried to fill the episcopal sees with Greeks. In *Rus'*-Ukraine, these attempts were, as a rule, frustrated by the opposition of the native princes and boyars; in the northern lands of the Kievan state, however, the policy met with greater success.

The forty-year-long direction of the Kievan Church by Greek metropolitans led, in 1145, to a sharp conflict between Metropolitan Michael and the Kievan Grand Prince Vsevolod. Michael was forced to leave Kiev, having first obtained a written pledge from his adherents in the northern sees, led by the Bishop of Novgorod, Niphont, that they would not participate in the services of St. Sophia's during his absence. A strong national and ecclesiastical reaction followed. In 1147, the grandson of Volodymyr Monomakh, Iziaslav Mstyslavych, acceded to the Kievan throne. He summoned a council of bishops of the Church of *Rus'* which was presided over by Onufrius, bishop of Chernihiv. At this council Clement Smoliatych, a monk of the Zarub Monastery, was elected metropolitan of Kiev, by a majority of five or six bishops to two. All the bishops of *Rus'*-Ukraine voted for the election of Smoliatych; those opposed were bishops from the non-Ukrainian north—Novgorod and Smolensk; the bishop of Suzdal-Vladimir in the north did not participate in the council. Immediately after his election, the bishops installed Clement as metropolitan, despite the protest of Bishop Niphont. Bishop Onufrius argued that the bishops of the Church of *Rus'* had the right to elect their own metropolitan, having blessed him with the relics of St. Clement which were preserved in the Tithes Church.

Metropolitan Smoliatych was one of the very best representatives of Kievan Christianity. An erudite ascetic, he was

an expert not only in Greco-Byzantine literature, but also in classical Greek literature. The chronicler wrote that "up until now there has never been such a scholar in the *Rus'* land and never will be after him." In his few works which have been preserved [Vol. I, p. 986], he proclaimed the necessity of Christian love towards the lower classes. Deeply patriotic and a venerator of the saints of *Rus'*, he was also a firm believer in universal Christianity. In a work attributed to him, the saints of *Rus'*-Ukraine occupy a separate place, but there is also a section on popes who were saints. He boldly reproached all transgressors of Christian morality, including princes, princesses, boyars, and the common people.

The next twenty years were dominated by a struggle between the older Kievan Monomakhovychi (Mstyslavychi) and the younger Suzdalian branch (Yuriievychi) [Vol. I, p. 603]. Kiev fell victim to this struggle in 1169 when it was devastated by the Prince of Suzdal-Vladimir, Andrew Bogoliubsky. In church matters either the national or the Byzantine party took the upper hand depending upon who controlled Kiev – the Mstyslavychi or the Yuriievychi. Metropolitan Smoliatych probably died before the devastation of Kiev. Greek metropolitans continued to hold the see of Kiev after the destruction of the capital until the Tatar invasion in 1240. At that time, however, the princes of both Suzdal-Vladimir and Novgorod, who had long resented the Church's subordination to Greek influence, demanded the establishment of separate metropolitan sees, over the objections of the Kievan metropolitan. Two metropolitans of the last quarter of the twelfth century, Michael II and Nicephorus 11 (1182–97), in particular, enjoyed support in *Rus'*-Ukrainian circles.

As a consequence of the nationalist ecclesiastical movement in the middle of the twelfth century and the election of Clement Smoliatych as metropolitan of Kiev without the sanction of the Byzantine patriarch, the influence of the Cave Monastery revived under the direction of Archimandrite Polycarp, an ardent supporter of Metropolitan Smoliatych and a close friend of the devout Kievan prince, Rostyslav Mstyslavych, brother of Iziaslav. Literary activity was resumed in the Cave Monastery, the fruit of which was the *Patericon* [Vol. I, p. 983]. It was probably at this time that the Ukrainian legend of St. Andrew was born in Kiev. In the domain of the Byzantine patriarchate, it was thought that St. Andrew was the founder of the Byzantine Church which was thus equal to the Church of Rome. According to the Ukrainian legend, St. Andrew was on his way from Sinope to Rome by way of the Dnieper River. He spent the night on the spot where Kiev stands and, arising early, blessed the Dnieper hills on which the city was later to be built. From there St. Andrew went north to Novgorod where he was amazed at the barbaric customs of the natives. Then he crossed the Baltic Sea on his way to Rome. This legend had the patriotic aim of proving that the site of the capital of *Rus'*-Ukraine, Kiev, had been blessed by St. Andrew.

A characteristic feature of the Church of *Rus'* in the Princely era was its tolerant attitude towards Roman Catholicism. Even after the separation of the churches in the year 1054, relations were maintained between the state and church of *Rus'*-Ukraine and the Church of Rome. Close ties existed between Kiev and Rome during the reign of Iziaslav Yaroslavych, to whom Pope Gregory VII granted the title of king. Iziaslav sent a pallium for the tomb of the missionary of Catholicism in Poland, St. Wojciech-Adalbert. The Kievan princely dynasty had numerous ties through marriage with the Catholic rules of western Europe. Catholic monks often visited Kiev where they received generous assistance from the princes and boyars. The churches of SS. Jacob and Gertrude in Regensburg were built with assistance from Kiev in the first half of the twelfth century. Western Catholic saints, who were not

recognized by the Byzantine Church, were revered in *Rus'*-Ukraine (Magnus, Canute, Olaf, Beowulf and such Czech saints as Vitus, Viacheslav, and Ludmila). The Ukrainian Church also celebrated the day of the transference of the relics of St. Nicholas from Myra in Lycia to Bari in Italy, even though this event had been extremely annoying for the Byzantine Church. The influence of Catholic ecclesiastical law was noticeable in Ukraine. Generally speaking, all the people of *Rus'*-Ukraine displayed a great tolerance and esteem for Western Christianity and its Church.

In time this situation changed drastically. Relations between the two churches, already strained since the schism of 1054, deteriorated, particularly after 1204. In that year Latin crusaders attacked Constantinople and, after plundering Byzantium, established a Latin empire (in existence until 1261) and installed a Latin patriarch there. The Byzantine emperor and patriarch found safety in Nicaea. During this period, Greek metropolitans often came to Kiev from Nicaea, and, finding sympathy in *Rus'*-Ukraine, they were able to disseminate anti-Latin sentiments. Also at this time, the Dominican and Franciscan monks extended their missions to the east. Reaching Kiev, they urged the people to accept the Latin rite which gave rise to anti-Catholic feelings in Ukraine. In 1291, Prince Vsevolod finally expelled the Dominican mission from the capital and forbade it to return. In this atmosphere, the efforts of Pope Innocent to bring the Church of Galicia-Volhynia into union with Rome (the first attempt was made in 1207 and the second in 1214) were doomed to fail.

**The Tatar Invasion: Attempts at Collaboration between the Rus' Church and the West**

Two prominent princes remained in Ukraine after the Tatar invasion: the Chernihiv prince, Michael, and the Galician prince, Daniel Romanovych [Vol. I, p. 607]. Taking advantage of Kiev's weakness, Michael took possession of the capital and had a new metropolitan, Peter Akerovych, installed there (*ca.* 1242). When the news reached Kiev that Pope Innocent IV had summoned an ecumenical council in Lyon for the year 1245 to consider the question of the Christian world's defense against the Tatars, Prince Michael dispatched Metropolitan Peter to attend. Peter aroused general curiosity there, since he was the first living witness of the Tatar invasion to appear in western Europe, and to provide important information on the Tatars.

Using that information, the Pope dispatched one of his envoys, Plano Carpini, to the main Tatar headquarters in Mongolia. On the return trip, the Pope's mission visited Prince Daniel in 1247 and held talks with him which led to the conclusion of the union of the Ukrainian-*Rus'* Church with Rome. In 1253 Daniel received a royal crown from the Pope and a promise of aid from the Christian West against the Tatars. But this aid did not materialize; instead, the ties with the Pope brought upon Daniel's realm a new Tatar attack, and he was forced to break off his relations with the Pope [Vol. I, pp. 603–8].

Having appointed Cyril to the Kievan metropolitan see, Daniel sent him to the Byzantine patriarch in Nicaea for consecration. The patriarch installed Cyril II as metropolitan of Kiev but only after Cyril had accepted two conditions: first, that he would not settle in the territory of the Galician-Volhynian state (in view of Daniel's relations with Pope Innocent) but would reside either in Kiev or in the north, in the Suzdal-Vladimir land; and secondly, that he would enter into friendly relations with the Tatars, a condition demanded by the Nicaean Greek emperor and the patriarch, enemies of the Latin empire in Constantinople.

Metropolitan Cyril II (1251–81) faithfully carried out these requests. He resided either in Kiev or in Pereiaslav and Vladimir-on-the-Kliazma, that is, in Suzdal-Vladimir territory, which at the time

was partitioned into small principalities. In 1247 Cyril summoned a council of several bishops to Vladimir-on-the-Kliazma from the territory controlled by the Tatars. A number of ecclesiastic reforms were adopted at the council.

Soon after his move to the north, Metropolitan Cyril made a journey to the Golden Horde and acquired important privileges for the Church (ecclesiastical *yarlyk*). He even received permission to establish a Christian bishopric (Sarai-Pereiaslav) in the Tatar capital of Sarai. On his deathbed in northern Pereiaslav, Metropolitan Cyril directed that his remains be transferred to Kiev and interred in St. Sophia's Cathedral.

**The Disintegration of the Kievan Metropolitanate: The Galician Metropolitanate**

The transfer of the seat of the Kievan metropolitanate to the north in 1299 by Maxim, the Greek who succeeded Cyril II, evoked a strong reaction on the part of the Galician-Volhynian government which demanded that the Byzantine patriarch establish a separate metropolitanate in Halych for the Church of the Galician-Volhynian state. Fearing that the union with Rome might be restored, the emperor and the patriarch met this demand. The Galician metropolitanate was created by the decree of Emperor Andronikos and Patriarch Athanasius (1302–3), with Niphont (1302–5) as the first Galician metropolitan. Byzantium took this step with misgivings and continually sought to liquidate the Galician metropolitanate. When Metropolitan Niphont died in 1305, the Galician Grand Prince George (Yurii) Lvovych sent his own candidate, Abbot Peter from Ratna, to Constantinople for consecration. That same year the Kievan metropolitan, Maxim, died in the north. Patriarch Athanasius took advantage of this circumstance to detain Metropolitan Peter in Byzantium and make him metropolitan of Kiev, rejecting the candidate proposed by the Prince of Tver, at that time the most powerful among the princes of the Suzdal-Vladimir land. As he had done earlier with Metropolitan Cyril II, the Patriarch apparently obtained from Metropolitan Peter pledges that he would not settle in the territory of the Galician-Volhynian state and that he would live only in the north as was the custom with his predecessors. When Metropolitan Peter arrived in the territory of the Prince of Tver, the latter refused to accept him. Metropolitan Peter had to submit to the guardianship of the Muscovite prince, Ivan Kalita, a protégé of the Tatars; as a result he was favored by the Tatars and upheld the pro-Tatar policy of Ivan Kalita. Peter was buried in Moscow, thus giving an ecclesiastical precedence to the hitherto insignificant city. For this the Muscovite Church recognized Metropolitan Peter as a saint. The disillusionment which the Galician-Volhynian prince experienced with Peter, his own candidate for the Galician metropolitanate, presumably led George Lvovych to restore ties with Rome. He probably received the royal crown from Pope Clement. Nevertheless, this did not lead to a prolonged church union.

FIGURE 15. KIEVAN METROPOLITAN PETER

The efforts of the patriarch to transfer the seat of the Kievan metropolitanate to the north led to its disintegration. Not only did the patriarch have to appoint a separate metropolitan to Halych (Gabriel, Theodore), he also had to appoint one to Lithuania (1317). It is true that the successor to Metropolitan Peter, Theognost (1328–53), a Greek, made constant attempts to liquidate the new metropolitan sees and tried to bind Kiev, the ancient metropolitan see, closely to

Moscow, but for a long time his efforts were futile. The Galician metropolitan, Theodore, acquired some power over dioceses in the Kiev region and even in that of Chernihiv (Briansk). These attempts at church consolidation were upheld by the shrewd Kievan prince, Theodore, who maneuvered between the Tatars and Lithuania and united the Ukrainian lands on both sides of the Dnieper.

## THE UKRAINIAN CHURCH IN THE LITHUANIAN-POLISH REALM AND THE KOZAK HETMAN STATE

### From the Middle of the Fourteenth Century to the Beginning of the Fifteenth Century

The fall of the Galician-Volhynian realm brought in 1347 an end to the separate church organization and thus to the Galician metropolitanate. With the accession of Theognost's successor, Alexis, to the metropolitan see at Moscow in 1353, the Kievan see virtually ceased to exist. While the Moscow metropolitan still carried the canonical title of metropolitan of Kiev, his jurisdiction was in fact confined to the Grand Duchy of Moscow. At the same time, a new attempt was made in Kiev to install its own metropolitan in the person of Theodorit, a Ukrainian who was blessed by the Bulgarian metropolitan in Trnovo. Though the Archibishop of Novgorod was inclined to acknowledge the Kievan metropolitan, Theodorit was unable to maintain his position in Kiev.

When nearly all Ukrainian and Belorussian lands, including Kiev, found themselves under the rule of Lithuania after 1362, the Lithuanian prince proposed candidates for the Kievan see. As early as 1353, two candidates for the Kievan see had appeared before the Byzantine patriarch: Alexis, the choice of the Muscovite tsar, and Roman, the candidate of Olgerd, the Grand Prince of Lithuania. Roman enjoyed the support of the Prince of Tver because he was related to Olgerd through the Tver princes. The patriarch had no alternative but to consecrate both candidates and, at the same time, to acknowledge the partition of the Kievan metropolitanate. Alexis received the title of metropolitan of "Kiev and all *Rus'*," and Roman (1353–61) that of metropolitan of "Lithuania and Volhynia." Alexis strove to advance his rights to Kiev and actually came to the city once; Olgerd ordered him arrested and released him only upon the request of the patriarch. The death of Roman (1361) improved Metropolitan Alexis' prospects for a short time, but Grand Prince Olgerd did not give up his position and continued to demand a separate metropolitan for Lithuania and "Little *Rus'*," that is, the dioceses of the old Galician metropolitanate.

FIGURE 16. KIEVAN METROPOLITAN ALEXIS

Whatever the patriarch was prepared to do for Olgerd, he also had to do for the Polish king, Casimir. Metropolitan Alexis completely neglected the territory of Galicia and Kholm, which was occupied by Casimir, although it contained three dioceses: Galicia, Peremyshl, and Kholm. Within these lands only the Galician bishop, Antonius, was still living. Presumably under pressure from the Galician boyars, Casimir sent a sharp letter to the patriarch of Constantinople, demanding the re-establishment of the Galician metropolitanate which had been officially abolished by the patriarch in 1347. In the event of a refusal, Casimir threatened to order the conversion of *Rus'* to Catholicism. With this letter Casimir sent Antonius as a candidate for metropolitan (1371). The patriarch was forced to concede and Antonius was

consecrated as metropolitan of the three western Ukrainian dioceses.

Casimir's success encouraged Olgerd to begin an offensive against the patriarch and the Muscovite metropolitan, Alexis, whom he accused of actively supporting Muscovy's policy of encroachment against the Principality of Tver. In 1373, the patriarch sent to the territory of the metropolitanate his plenipotentiary, hieromonach Cyprian, who conducted the investigation against Alexis in such a manner that before long (1375) he was himself installed by the patriarch as metropolitan of "Kiev and All *Rus'*," while Alexis was still alive. This development evoked protests from Moscow, the more so since Cyprian began to extend his jurisdiction even to the northern dioceses, which were hostile to Moscow. But after the deaths of Metropolitan Alexis (1378) and Grand Prince Olgerd, Cyprian was able to pursue his personal ecclesiastical and political ambitions to become the sole metropolitan of "Kiev and All *Rus'*," with a seat in Moscow. This was realized in 1390.

After Metropolitan Cyprian (1375–1406) acceded to the see in Moscow he maintained friendly relations with the Muscovite prince. Through skillful actions he united the Lithuanian and Galician sees with the Muscovite metropolitanate. The Galician metropolitan, Antonius, died about 1392, and King Jagiello wanted to appoint as his successor the bishop of Lutsk, Ivan, who had occupied the Halych see for several years and presumably performed the duties of the metropolitan. But Metropolitan Cyprian, with his influence in Constantinople, was able to frustrate Jagiello's plans and succeeded in having the Galician metropolitanate abolished in 1401. The liquidation of the Galician metropolitanate had very detrimental consequences for the Orthodox Church under Poland. As early as 1375 a Roman Catholic see was established in Halych to be a center for the organization of the Latin dioceses in the western Ukrainian lands. In 1406 the Orthodox bishopric of Halych ceased to exist and was not revived for 130 years. Only a vicar of the Kievan metropolitan remained in Galicia to administer the Galician diocese and its possessions. This office was even given to laymen, who subsequently came to be appointed by the Roman Catholic archbishop of Halych-Lviv. The Galician Latin archbishopric also became the metropolitan see for the new Latin missionary dioceses in the Ukrainian lands – Peremyshl, Kholm, Volodymyr Volynsky, Lutsk. The vicar of the Kievan metropolitan managed the properties of the Galician diocese in such a manner that the major part of them was transferred to the Latin eparchy of Lviv.

After the death of Metropolitan Cyprian the Muscovite and the Lithuanian portions of the Kievan metropolitanate again expressed a desire for separate primates. But the patriarch of Constantinople consecrated a single metropolitan, Photius, a Greek, who settled in Moscow. The Lithuanian Prince Vytovt at first accepted Photius, but in time liquidated his powers over the dioceses within his state. Accusing Photius of extortion in the Lithuanian dioceses, Vytovt assembled a council in Novhorodok in 1414, for the purpose of electing a new metropolitan. Cyprian's nephew, the Bulgarian Gregory Tsamblak, was elected (1415–19/20). When the patriarch refused to consecrate him, the bishops of Polotsk, Smolensk, Lutsk, Chernihiv, Volodymyr Volynsky, Turiv, Peremyshl, and Kholm assembled at a council the following year, and, in the presence of princes and boyars, consecrated Gregory as metropolitan, invoking as precedent the installation of Clement Smoliatych (1147) without the consent of the Byzantine patriarch. Metropolitan Photius and the patriarch retaliated by excommunicating Tsamblak (1416).

### The Florentine Union

The Lithuanian metropolitanate continued to draw nearer the West. In 1418 Gregory Tsamblak attended the ecumen-

ical council in Constance which considered the matter of Huss. There Tsamblak expressed a desire for the unification of the churches, but his action had no tangible consequences. After Metropolitan Photius' death (1431), the Lithuanian Grand Prince Svidrigailo was successful in having his protégé, Herasym (1431–5), ordained in Constantinople rather than the Muscovite candidate – Jonas. In 1435, during Svidrigailo's struggle with Poland [Vol. I, p. 620], Herasym was accused of high treason and executed. In 1436, having again rejected the candidacy of Jonas, the patriarch appointed, as metropolitan of "All *Rus'*," Isidore (1436–58), a Greek who was one of the most enlightened men of his time. In 1438 Isidore participated in the councils at Ferrara and Florence, which considered the question of the union of the churches – a cause that was energetically championed by Isidore. In July, 1439, the Act of the Florentine Union was signed, which settled not only the controversial dogmatic issues dividing East and West, but also the differences in ecclesiastical practices and administration on the basis of full equality of the churches of both rites under the leadership of the pope.

FIGURE 17. KIEVAN METROPOLITAN AND CARDINAL ISIDORE

Isidore understood the Union in the widest sense of the word, a sense for which neither the Orthodox nor the Latin Catholics in eastern Europe were spiritually prepared. (The Orthodox did not attend the Roman Catholic churches when he conducted services there, for example.) The Roman Catholic clergy in Poland and Lithuania did not recognize the Union because it was proclaimed by the council under the direction of Pope Eugene IV at a time when Poland recognized the Basel anti-pope, Felix V, as the true head of its Church. Moreover, the Roman Catholics of Poland and Lithuania did not want a unification of churches, but a Latinization of the Orthodox Church. Metropolitan Isidore did not meet with any opposition in Ukraine. The Kievan prince, Olelko (Alexander), and the boyars took a positive attitude towards his action. But it did meet with hostility in Moscow. When Isidore arrived there in 1441, he was imprisoned, but he escaped to Lithuania and from there to Rome.

After Isidore's escape, the Muscovite prince made efforts to have him condemned in Constantinople, but he was unsuccessful, since the patriarch backed the Union. Accordingly, Moscow proceeded, without the consent of the patriarch, to appoint her own metropolitan, Jonas, who became the first Muscovite metropolitan independent of Constantinople, thus beginning the autocephaly of the Muscovite church (1448). Although the metropolitan in Moscow continued to use the title of "metropolitan of all *Rus'*," after 1460 he was only the metropolitan of Moscow and not of Kiev. This had beneficial consequences for church life in Ukraine and Belorussia since the jurisdiction of the Kievan metropolitanate now extended only over the non-Muscovite lands of ancient *Rus'*-Ukraine, Belorussia, and Greater Novgorod.

The idea of an ecclesiastical union between the Orthodox and Catholic churches evoked strong opposition from the Roman Catholic clergy, since by making the two churches equal, the reason for the penetration of the Polish-Latin mission into Ukraine and Belorussia was removed. The open resistance of the Latin clergy within the Polish-Lithuanian state to the Florentine Union and to Metropolitan Isidore was headed by a Latin archbishop, Matthew of Vilna. Cardinal Zbigniew Olesnicki, the real power in Poland, outwardly vacillated between Rome and Basel but secretly supported this struggle against the Union. Lithuania and Poland came to an agreement with Moscow which for-

mally deprived Metropolitan Isidore of authority over the Ukrainian-Belorussian Church (1449) and transferred it to the ecclesiastical jurisdiction of the Orthodox Metropolitan Jonas.

Rome condemned the anti-Union action of the Polish-Lithuanian government and continued to recognize Isidore as the metropolitan of Kiev, although he did not return again to his see. (Having been named a cardinal, Isidore died in Rome in 1463.) It was not until 1458 that the patriarch of Constantinople, Gregory IV Mammas, who supported the Union and was then living in exile in Rome, appointed as the metropolitan of Kiev, Gregory Bolharynovych, a pupil of Isidore and an adherent of the Union. But his jurisdiction was to extend only over that portion of the Kievan see which was outside the boundaries of the Muscovite state, the ten dioceses of Kiev, Volodymyr, Lutsk, Halych, Peremyshl, Kholm, Turiv-Pynsk, Polotsk, Chernihiv, and Smolensk. Thus the Catholic side of the Union also affirmed the separation of the Muscovite church from Kiev. The Kievan metropolitans transferred their seat to Novhorodok and later to Vilna.

### The Last Half of the Fifteenth Century and the Sixteenth Century

In 1453 the Turks conquered Constantinople, the seat of the Byzantine patriarch, the ecclesiastical superior of Ukraine at that time. This event was of enormous significance for church life in Ukraine. The cultural élite of Byzantium, who had participated in the Florentine Union, for the most part emigrated to Italy, strengthening the new cultural trend in western Europe – the Renaissance. The Orthodox Church of the former Byzantine empire was forced to break with Rome in line with the political interests of Turkey. After the Union of Krevo in 1385, and especially after the Union of Horodlo in 1413, the legal position of the Orthodox Church in the Lithuanian-Ruthenian state deteriorated. Its members were denied the right to occupy governmental posts, and its metropolitan and the bishops could not participate in the diets or in the Council of Nobility. Even more difficult was the position of the Orthodox Ukrainians under Poland – the provinces of Galicia and Kholm. Throughout the entire fifteenth century and until 1539, the see of Halych remained vacant and the Ukrainian Orthodox population of the capital city of Galicia, Lviv, was discriminated against and even persecuted by the Catholic Polish-German municipal authorities.

The Kievan metropolitan, Gregory Bolharynovych (1458–75), and his successors maintained their ties with Rome until the end of the fifteenth century, although they encountered frequent difficulties in doing so. From the mid-fifteenth century on the popes took little interest in the matter of the Kievan metropolitanate but turned all their attention, after the fall of Constantinople, to the organization of an anti-Turkish league. As a consequence, the ties between the Kievan metropolitanate and Rome grew weaker. After the death of Metropolitan Joseph Bolharynovych (1498–1501), the Kievan see fell to Jonas II (1501–7), the Muscovite confessor to the Lithuanian Grand Princess Helen, the daughter of the Muscovite Grand Prince Ivan III. Neither he nor his successors maintained any ties with Rome.

Metropolitan Joseph Soltan (1507–21) was one of the outstanding Kievan metropolitans. His reforms (the Council of Vilna in 1509) were the last bright moments in the history of the medieval Ukrainian Orthodox Church. Nevertheless, they could not be maintained during the sixteenth century because the right of patronage was appropriated by the king. Successors to Metropolitan Joseph were appointed by the king contrary to the canons of the Orthodox Church and without the blessing of the patriarch– e.g., the appointments of Sylvester (Stephen) Belkevych, an aide and treasurer to the Lithuanian Grand Prince, in

1556, and of Elias Kucha, a courtier, in 1557. The metropolitan's authority was bypassed in the appointment of bishops, and episcopal sees were often filled with laymen who had earned the favor of influential protectors. Such appointees did not change their way of life. They engaged in wars, hunts, and feasts and regarded their dioceses primarily as a source of income that could be bought, sold, or pawned. The priests, badly educated and impoverished, were no better than the bishops.

During the middle of the sixteenth century Protestantism in various forms—Lutheranism, Antitrinitarianism (Socinianism), and Calvinism—began to spread rapidly in Ukraine, penetrating the upper strata of society in particular. While Protestantism was mainly hostile towards Catholicism, in essence it was also directed against the Orthodox Church. It helped to develop education: Protestant schools were built (Hoshcha, Kyselyn, Liakhovtsi in Volhynia); the gospel was translated into a language closer to popular Ukrainian (Simon Budny, the *Peresopnyts'ke Yevanheliie* [The Peresopnytsia Gospel], the Krekhiv *Apostol*, and others). Protestantism also contributed to the Polonization of the higher strata of the population, however, because of its increasing use of Polish in sermons and church services. To lead the struggle against Protestantism in Poland and Lithuania, the Jesuits arrived in 1568 and established a network of their schools, some even in Ukrainian territories.

Some Ukrainian magnates, who remained adherents of the Orthodox faith, and the burghers rose in defense of the Orthodox Church against the dual pressure of Roman Catholicism and Protestantism. Church brotherhoods began to appear in Ukraine (see also p. 225). At first, they concerned themselves only with the physical needs of the churches and the acquisition of wine and candles for services; they also introduced order and discipline into the churches and supported orphans and the elderly. Subsequently, their role expanded. They began to use their influence to have better people selected as clergy and bishops and founded brotherhood schools which began to compete with the Protestant and Catholic ones. The first brotherhood (of the Assumption Church in Lviv) had been founded in the mid 1400's, but it was during the 1580's that the brotherhoods became a significant factor in the church life of Ukraine. They were begun in many Ukrainian towns in Galicia, Volhynia, Podilia, and the Kiev region. The brotherhoods interfered with the competence of the bishops in striving to control the morals of the clergy, however, and this created friction between them and the higher clergy. In particular, hostile relations developed between the Lviv bishop, Gedeon Balaban (1569–1607), and the Assumption Brotherhood in Lviv. When the eastern patriarchs visited Ukraine—Joachim of Antioch in 1586, and Jeremiah of Constantinople in 1589—they paid great attention to the brotherhoods and praised the piety and zeal of their members. In 1586 Jeremiah conferred upon the Assumption Brotherhood the right of stauropegion, which exempted it from the authority of the local bishop and placed it under the patriarch. In time the right of stauropegion was granted to the brotherhoods in Kiev and

FIGURE 19. GEDEON BALABAN

Lutsk. Such an attitude on the part of the patriarchs evoked even more displeasure from the bishops and served as one of the impulses towards a church union with Rome.

**The Union of Berestia (1595–6)**

It was in such circumstances that the idea of a union of the Orthodox and Catholic churches, projected nearly 160 years earlier at the council in Florence, was reborn in Ukraine. It was expected that such a union would raise the Ukrainian clergy out of its state of decay and check the advance of Polish Roman Catholicism into Ukraine. This idea was conceived in the circle of a Ukrainian magnate, Prince Constantine Ostrozky (1527–1608), a protector of the Orthodox Church. Prince Ostrozky founded an academy in Ostrih (*ca.* 1580) with a printing shop in order to provide for the Orthodox an education comparable to that offered by the Polish Jesuit colleges. The rector of the academy was Herasym Smotrytsky. In 1581 in Ostrih, the complete New Testament was printed for the first time in Church Slavonic. The translation, based on a thorough study of the Greek and Hebrew texts, was done by a group of scholars affiliated with the Ostrih Academy. This text was spread among all the Slavic churches.

Searching for ways to improve the position of the Orthodox Church, Prince Ostrozky, began talks on union in 1583 with the pope's legate, Antonio Possevino, who had just returned from an appointment in Moscow. Ostrozky also conferred with the papal nuncio, Balonetto. He was supported by Adam Potii, a Brest castellan whom Ostrozky persuaded to become the bishop of Volodymyr under the name of Hypatius (Ipatii). Ostrozky's notion of a union with Rome envisaged the retention of the Greek rite and all the rights of the old Kievan metropolitanate. He wanted to establish the union with the consent of the patriarch at an ecumenical council. The occasion for beginning direct negotiations regarding union was provided by the visit of Patriarch Jeremiah of Constantinople to Ukraine in 1589. Jeremiah's lack of familiarity with local church practices had led him to issue a number of inconsistent decrees which had created further chaos in the Ukrainian Church. For example, he had deposed Metropolitan Onysyphor Divochka (1579–89), who was twice married before his ordination, although such a violation of church canon was prevalent among the clergy. In his place the patriarch had installed Michael Rohoza (1589–99), but because he did not trust him completely, the patriarch then appointed the bishop of Lutsk, Cyril Terletsky, as the patriarchal exarch. This tactlessness evoked the displeasure of the hierarchy who were outraged by the patriarch's policy, exactions, and greed for money.

FIGURE 20. HYPATIUS POTII

FIGURE 21. CYRIL TERLETSKY

Personal grievances and ambition were not, however, the only factors which contributed to the cause of the union. Many people hoped that in a union with Rome it would be possible to increase the Ukrainian Church's independence of the Polish government and to safeguard the church from Latinization on the one hand and from the influence of the Moscow patriarch (a patriarchate was created in Moscow in 1589) on the other.

In 1590 Gedeon Balaban first began secret discussions concerning union with Jan Solikowski, Catholic archbishop of Lviv. For this plan Balaban won over

the bishop of Lutsk, Cyril Terletsky, and the bishop of Volodymyr, Hypatius Potii. The secretive methods of the clerical supporters of union and their failure to inform Prince Ostrozky of their negotiations evoked sharp opposition on his part. He now applied all his energies to a struggle against a union. He and his adherents advanced demands for a universal union of churches and not merely one of the churches of Ukraine and Belorussia. Proclamations against a union were printed in Ostrih and disseminated among the populace. The brotherhoods worked with the Prince. Prince Ostrozky tried to get King Sigismund III to assemble a council to decide the question of a union, but the king declined. Under the influence of Prince Ostrozky, Bishop Balaban and Michael Kopystensky, bishop of Peremyshl, repudiated the idea of union.

In spite of Prince Ostrozky's opposition, Bishops Potii and Terletsky left for Rome in the fall of 1595 as representatives of the episcopate. There, Pope Clement VIII formally accepted the Ukrainian-Belorussian Church into the body of the Catholic Church. The terms of the Union provided for the retention of the Eastern rite and all former rights of the Kievan metropolitanate, and the royal privileges granted to the Orthodox Church were confirmed. On the questions of dogma the decisions of the Council of Florence (1439) were accepted as binding. This agreement was to be announced at a council of the Ukrainian-Belorussian Church.

In October 1596 a council assembled in Berestia (Brest) for the proclamation of the Union with Rome. Attending the council were representatives of the pope, envoys of the king, Metropolitan Rohoza, all the bishops except Balaban and Kopystensky, and many representatives of the clergy. Also present were a number of Jesuit leaders, including Peter Skarga. At the same time, at the Brest residence of the Ostrozkys, Prince Ostrozky and his son, Bishops Balaban and Kopystensky, the *protosynkel* of the patriarch of Constantinople, Nicephorus, the archimandrite of the Cave Monastery, both monastic and secular clergy, and delegates from the nobility and burghers—about 200 persons in all—assembled. Both councils declared the other illegal and appealed to the King. Sigismund III supported the Union and did not heed the protests of the Orthodox. He promised the Uniate Church his guardianship, equality of status with the Latin clergy for the Uniate clergy, Senate seats for the bishops, and so forth.

The Ukrainian-Belorussian Church then split. The majority of the hierarchs, some of the clergy, and some of the nobility and townsmen backed the Union. Bishops Balaban and Kopystensky, Prince Ostrozky, and a considerable number of the nobility, the burghers, and the peasants, as well as the brotherhoods, opposed the Union. A struggle began between the two camps. The Polish government did not fulfill its promises to give the Uniate clergy equal status with the Roman Catholic clergy because Polish Catholics, with the exception of the king, did not sympathize with the Union which hindered the Latinization and therefore the Polonization of the Ukrainian people. These broken promises gave the opponents of the Union arguments against it.

While he failed to grant equality to the Uniates vis-à-vis the Roman Catholics, Sigismund III favored the former in other ways: Orthodox churches and ecclesiastical lands were transferred to the Uniates, for example. The struggle led to the publication of much polemical literature, with both sides participating in the debate. Ivan Vyshensky, Philaret Christopher (presumably Martin Broniovsky), Meletius Smotrytsky, and others spoke in support of the Orthodox cause. The cause of the Union was argued by many including Skarga, Potii, and, after his conversion to the Union, Smotrytsky.

FIGURE 22. CAVES OF ST. ANTONIUS AND ST. THEODOSIUS (FROM THE BOOK *Besidy sv. Ivana Zolotoustoho*)

**The Religious Struggle in Ukraine**

Searching for allies, the Orthodox formed a bloc with the Protestants led by the Radziwill family. In 1599 a general Protestant-Orthodox confederation took place in Vilna, and in 1606 about fifty thousand Orthodox and Protestant nobles gathered for a conference in Sandomierz presided over by Prince Janusz Radziwill, a Calvinist. Protestantism in Poland could not give the Orthodox any greater assistance, however, because the number of Protestants and the significance of Protestantism in Ukraine, and in the Polish Commonwealth in general, declined sharply during the seventeenth century.

During the 1620's, the Kozaks began to play a great role in the religious struggle. In 1620, during the hetmanate of Peter Sahaidachnyi [Vol. I, p. 632], the Orthodox hierarchy was restored in Kiev under the protection of the Kozaks. (After the deaths of Bishops Balaban, in 1607, and Kopystensky, in 1610, only one Orthodox bishop remained in all of Ukraine—Jeremiah Tyssarovsky of Lviv.) Taking advantage of the visit to Kiev of Patriarch Theophanes of Jerusalem, Hetman Sahaidachnyi succeeded in having him consecrate a metropolitan, Job Boretsky (1620–31), and five bishops: Meletius Smotrytsky (Polotsk), Isaiah Kopynsky (Peremyshl), Ezekiel Kurtsevych (Volodymyr), Isaac Boryskovych (Lutsk), and Paisii Ipolytovych (Kholm). Sigismund did not recognize this hierarchy, and the bishops, under threat of punishment by the state, could only reside in Kiev under the protection of the Kozaks. By the middle of the seventeenth century, Kiev had regained its place as the spiritual capital of Ukraine. In 1615, the Epiphany Brotherhood was established there, with a brotherhood school which attracted prominent scholars. Archimandrite Yelysei Pletenetsky (1599–1624) established a printing shop in the Cave Monastery and began to publish books.

At the same time the Uniate part of the Ukrainian Church had to struggle for existence at the diets and courts and in everyday life throughout the entire tenure of Metropolitan Hypatius Potii (1600–13), the successor to Michael Rohoza. The new metropolitan, Joseph Veliamin Rutsky (1613–37) turned his

attention to the internal organization of his church. He carried out a thorough reorganization of monastic life and devised the rules for the Basilian Order. He strengthened the discipline among the clergy and saw to the establishment of a general seminary in Minsk for the

FIGURE 23.
YELYSEI PLETENETSKY

FIGURE 24.
VELIAMIN RUTSKY

education of the clergy. He fought against the conversion of the Uniates to the Latin rite. In 1624 Pope Urban VIII issued a decree which, under church penalties, prohibited transfers from the Uniate to the Latin rite—a decree which was sabotaged, however, by the king and the Polish clergy.

Metropolitan Rutsky painstakingly upheld the purity of the Eastern rite and the "Ruthenian" (Ukrainian-Belorussian) character of the Uniate Church. In a letter to his students in Rome, he advised them to study Church Slavonic, the literary language of the time: "Let them know that you are good Ruthenians." The most prominent of Rutsky's assistants was Archbishop Josaphat Kuntsevych of Polotsk (1618–28), a native of Volhynia and a man who was profoundly convinced of the usefulness of the Union to the religious and national well-being of the Ruthenian people. The viability of the Union filled the Vatican with optimism concerning its mission in eastern Europe. Pope Urban VIII (1644) expressed this feeling to Bishop Methodius Terletsky of Kholm: "Through you, my Ruthenians, I hope to convert the East."

But the Kozaks fought against the Uniate Church after 1620. Under their spiritual leaders, Metropolitan I. Kopynsky, Bishop E. Kurtsevych, and Archpriest Andrew Muzhylovsky, they opposed any agreement whatsoever with the Uniates and instead sought support from Orthodox Muscovy.

The Kozaks did not allow either Metropolitan Potii or Metropolitan Rutsky to settle in Kiev. Instead of unification and peace, strife and hostility spread through Ukraine: "*Rus'* is destroying *Rus'*." In 1597 there was an attempt on Metropolitan Rohoza's life and in 1609 on Metropolitan Potii's; in 1623 Archbishop Kuntsevych was murdered in Polotsk; in Kiev the metropolitan's vicar, Anthony Hrekovych, and others, were drowned in the Dnieper. Nearly 100 clergymen were killed.

Similar excesses were committed by the Uniates, who were supported by the Polish government. The diets of nobility (especially in Volhynia), the Orthodox deputies, and the brotherhoods (Vilna, Lviv) complained at the sessions of the Polish diet about the violations of the latter's agreements "regarding the Greek faith," but the diet kept on postponing the investigation of these grievances. Besides, by the "Greek faith," which was given certain guarantees, the government understood the Uniate rite. The Orthodox were losing their churches, property, and buildings; they were deprived of the right to occupy governmental posts and were prohibited from carrying their dead through the streets of towns. The Uniate bishops frequently resorted to terror to convert the Orthodox to the Union. On the other hand, the Uniate Church was not only denied equal rights with the Roman Catholic Church, but the Catholics of Poland also did everything to liquidate the Union and to facilitate the spreading of Latin Catholicism. Some of the Uniates changed to the Latin rite, ignoring the pope's prohibition. At the same time, some of the Orthodox began to side with Moscow.

Such a position evoked among the leading representatives of both churches a desire to put an end to the disunion, to "reconcile *Rus'* with *Rus'*," in the words of Metropolitan Rutsky. The majority of Orthodox hierarchs consecrated in 1620 were also inclined to this course.

**The Project of a Kievan Patriarchate**

The spiritual father of the idea of church unification was Meletius Smotrytsky (*ca.* 1578–1633) who after his journey to the Near East secretly went over to the Catholic camp (1627). He was the author of the project for creating a Kievan patriarchate designed to unify the divided churches of Ukraine and Belorussia. The Kievan patriarchate was to be under the jurisdiction of the pope, but the "Ruthenian" church was to retain complete internal autonomy.

FIGURE 25. ST. JOSAPHAT KUNTSEVYCH

In 1628 a council took place in Kiev, at which the question of unification of the Uniates and the Orthodox was to have been decided. But the council took place under pressure from the Kozaks who threatened with death even Metropolitan Boretsky and Archimandrite Peter Mohyla of the Kievan Cave Monastery as well as Smotrytsky. The following year the council was to assemble in Lviv, where for the second time the representatives of both churches were to come to an agreement on reconciliation and unification. Previous to this meeting two separate councils met for the purpose of electing delegates to Lviv: the Uniates in Volodymyr Volynsky and the Orthodox in Kiev. The Orthodox nobility did not come to the Orthodox council and the Kozaks spoke out against a joint council. Even though it was attended by 500 clerics, the Orthodox council did not consider itself empowered to elect delegates for Lviv without the participation of lay representatives. Only a few participants came to Lviv council and therefore the meeting had no particular significance. The unification of the churches never materialized. After the death of Sigismund III (1632), his son Władysław IV [Vol. I, p. 633] immediately took steps to solve the church question in Ukraine and Belorussia. A new charter, *Punkty Zaspokoiennia obyvateliv hrets'koï viry* (The Articles to Reassure Citizens of the Greek Faith, 1632), permitted the Orthodox to build churches, schools, and presses, to found brotherhoods, to take office, and to elect hierarchs; dioceses, churches, and ecclesiastical property were divided between the two churches. There were to be two metropolitans, one Orthodox and one Uniate. Peter Mohyla was elected Orthodox metropolitan. Although Metropolitan Rutsky and the Polish bishops protested against the royal charter, the king in 1635 reconfirmed this document.

FIGURE 26. MELETIUS SMOTRYTSKY

**The Mohyla Period**

Peter Mohyla (1596–1647; elevated 1632), the son of a Moldavian ruler and a very well educated man, was one of the most prominent Ukrainian church leaders of his time. In his youth he had sympathized with the Union and always favored an agreement between the churches. Mohyla extended the authority of the metropolitan and strengthened the power of the hierarchy over the brotherhoods. He was successful in having many possessions which had found their way into the hands of the Uniates returned to the Orthodox Church. Old monasteries took on a new life and others

were established together with schools, hospitals, and presses. He also did much to encourage education, particularly at the Kievan brotherhood school which

FIGURE 27. KIEVAN METROPOLITAN PETER MOHYLA

became Mohyla Collegium (1632, see p. 307). Mohyla paid great attention to the restoration of ruined ancient shrines of Kiev. Of particular importance were the literary activities of Mohyla and the group of scholars whom he had gathered around Mohyla College. A brilliant preacher, he left behind a considerable number of sermons, as well as the *Uchytel'ne Yevanheliie* (A Gospel for Teaching), and he published a *trebnyk* (missal) which was used for a long time. During Mohyla's time a group of theologians headed by the one-time rector of the Kievan school, Isaiah Trofymovych-Kozlovsky, compiled the *Pravoslavne ispovidannia viry* (Orthodox Profession of Faith) which was adopted at the Kievan council in 1640 and later approved by the Eastern patriarchs. Translated into various languages, this great catechism of the Orthodox faith was disseminated throughout many lands (the first edition appeared in Holland in 1667). The *Kratkyi Katekhysys* (Short Catechism), published by the Cave Monastery in 1645, long remained the only Orthodox Church manual on religion both in Ukraine and abroad.

Mohyla favored the creation of a patriarchate under the guardianship of the pope, a move which was also supported by Metropolitan Rutsky and his successor, Raphael Korsak (1637–40). However, the idea was not accepted by the majority of the Orthodox Ukrainians and did not meet with support from Rome. Thus unification of churches within a Ukrainian patriarchate did not materialize during Mohyla's time.

### The Church in the Kozak-Hetman State during the Seventeenth and Eighteenth Centuries

With the creation of a Kozak state under the leadership of Hetman Bohdan Khmelnytsky, the Orthodox Church became the established church in Ukraine. However, relations between the Church and the new state went through a complex period of change. Khmelnytsky's victory created very favorable conditions for the Orthodox Church. In the lands bordering on the Dnieper River, the Union was partially dissolved. The hetman authorities returned to the Orthodox Church the shrines which it had lost as well as monasteries and ecclesiastical domains. In addition, some possessions of the Roman Catholic Church were transferred to the Orthodox. Benefiting from these favors, the Church enlarged its landed properties considerably, acquiring through various means new domains, along with the right to payments and servile labor from the common people. Assisted by various economic privileges given to it by the hetmans, the Church extended its economic activity, especially in trade and industry. The hetmans, especially Ivan Samoilovych and Ivan Mazepa, as well as the whole Kozak officer class, were generous patrons of the Church, building majestic new shrines and monasteries with state and personal funds, and donating many

precious ornaments to them. The freedom which the guardianship and the material aid of the hetman authorities gave the Church had a great influence on the expansion of its educational and charitable activities.

Legal and political relations between the Church and the state were more complex. At the beginning of the Khmelnytsky period, the Church, in the person of Metropolitan Sylvester Kosiv (1647–57), not only attempted to influence the social and cultural life of the country, but also wanted to participate in governing the state. These tendencies, though growing steadily weaker, remained a factor in Church-state relations throughout the last half of the seventeenth century. The Church's desire to participate in internal politics while remaining neutral in external affairs could be partially explained by its socio-economic interests, but was primarily a result of the fact that a large number of the Ukrainian and Belorussian lands, although legally subject to the jurisdiction of the Kievan metropolitanate, were outside the boundaries of the Kozak-Hetman state and under Polish domination. The Church thus wished to maintain a position of neutrality in Ukraine's struggle with Poland and to secure its independence of the Ukrainian secular authorities, even if this policy necessitated aid from Moscow. On its part, the Hetman government consistently pursued a policy which upheld the primacy of the state authority and sought to preserve all its rights and prerogatives with regard to the Church (patronage and investiture, for example), while representing and defending the Church's interests before foreign powers. It was not until the reign of Hetman Mazepa that a degree of harmony was achieved between the Church and the state.

However, the main danger to the Ukrainian Church during the early hetmanate period came from Muscovy. After the Treaty of Pereiaslav in 1654 [Vol. I, p. 640], the Muscovite government strove to subordinate the Ukrainian Orthodox Church to the patriarch of Moscow. Though the agreement of Bohdan Khmelnytsky with Tsar Alexis Mikhailovich did not refer to the dependence of the Ukrainian Church on Moscow, a later version of this treaty which the Moscow government forced upon George Khmelnytsky in 1658 did define this dependence. The aspirations of Moscow met with resolute opposition from the Ukrainian clergy, especially Metropolitan Kosiv. After his death, Bishop Dionysius Balaban of Lutsk (1657–63), a man of anti-Muscovite orientation and a supporter of Hetman Ivan Vyhovsky, was

FIGURE 28. DIONYSIUS BALABAN

FIGURE 29. JOSEPH NELIUBOVYCH-TUKALSKY

elected metropolitan. After Vyhovsky's break with Moscow, Metropolitan Dionysius left Kiev and the Muscovite government ceased to recognize his jurisdiction, a view they continued to hold under his successor, Joseph Neliubovych-Tukalsky (1663–75). Moscow illegally appointed its supporters as "guardians" of the metropolitan see—Archbishop Lazar Baranovych of Chernihiv, Bishop Methodius of Mstyslav, and a former Nizhyn archpriest, Maxim Fylymonovych. Under the terms of the treaty of Andrusiv of 1667 [Vol. I, p. 645], and the "eternal peace" with Poland of 1686 [Vol. I, p. 647], the Ukrainian Church on the left bank of the Dnieper found itself under the authority of Moscow while that on the right bank was under Poland. Metropolitan Tukalsky, Hetman Peter Doroshenko's closest adviser in his struggle for

Ukraine's independence, had only the right bank of the Dnieper under his jurisdiction; the western Ukrainian lands (Galicia, Volhynia, and Podilia) were administered by Metropolitan Antonius Vynnytsky (1663–79), elected bishop during the rule of Hetman Paul Teteria. The Left Bank was governed by the "guardians" of the metropolitanate appointed by Moscow.

After the deaths of Tukalsky and Vynnytsky, Ukraine remained without an Orthodox metropolitan until 1685 when, by order of the tsar, Hetman Samoilovych assembled a council in Kiev for the election of a metropolitan. The bishop of Lutsk, Prince Gedeon Sviatopolk-Chetvertynsky, was elected for a five-year term, and was consecrated as metropolitan in Moscow. The Ukrainian clergy submitted a protest to the patriarch of Constantinople, calling his attention to the small number of clergy who attended the council. However, Patriarch Dionysius — acting under the influence of the Grand Vizar, who was afraid to antagonize Moscow—gave his consent to the transference of the Ukrainian Church to the jurisdiction of the patriarch of Moscow, for which he received generous gifts from Moscow. (Shortly thereafter, when the Council of Eastern Patriarchs deprived Dionysius of his patriarchate for uncanonical conduct, one of the accusations against him was his illegal surrender of the Ukrainian Church to Moscow.)

FIGURE 30. METROPOLITAN GEDEON, PRINCE SVIATOPOLK-CHETVERTYNSKY

The Muscovite government and the patriarch issued charters which guaranteed wide autonomy for the Ukrainian Church: the Kievan metropolitan was not subject to the court of the Muscovite patriarch and was to be elected for life by the local council of clergy; the Kievan Mohyla College, which became an academy in 1694 (approved by Tsar Peter I in 1701), retained its academic autonomy; the right of free publication was retained. All these promises were subsequently violated by the Muscovite government. Before long, the Kievan Orthodox metropolitanate lost all its dioceses except the Kievan eparchy itself. The diocese of Chernihiv (by petition of Archbishop Lazar Baranovych) and the see of Mohyliv-Mstyslav (in Belorussia) were brought under the direct jurisdiction of the Moscow patriarchate, while the western Ukrainian dioceses (Lutsk, Lviv, and Peremyshl) in time joined the Union (see below, p. 157). The Kievan Mezhyhirsky monastery (1687), which also served the spiritual needs of the Zaporozhian Sich, and the Kievan Cave Monastery (1688) were granted stauropegion rights by the Muscovite patriarch. Restored in 1700, the Pereiaslav bishopric was soon also subordinated to Moscow. The Church of *Slobids'ka Ukraïna* belonged to the diocese of Bilhorod which was directly subordinate to the Moscow patriarchate, and later to the St. Petersburg synod.

The fortunes of the Ukrainian Church rose again during the rule of Hetman Ivan Mazepa, 1678–1709 [Vol. I, p. 648] when the Kievan metropolitan see was occupied by Varlaam Yasynsky (1690–1707) and Ioasaph Krokovsky (1707). Mazepa collaborated with them, protecting the Church from the centralizing policy of the Moscow patriarchate, and looked after spiritual growth and material prosperity. By recommending Ukrainian candidates for the higher ecclesiastical posts in Russia, Mazepa was able to maintain ecclesiastical and cultural leadership in eastern Europe in the hands of the Ukrainian Church. But Mazepa's defeat in the war against Russia had catastrophic consequences for the Ukrainian Church. Little by little, the latter lost its autonomy. The Ukrainian episcopate was forced to take part

in anathematizing Hetman Mazepa. Suspected of opposition to Peter I, Metropolitan Krokovsky was taken to St. Petersburg. He died unexpectedly on the way (1707), and a successor was not appointed until 1722.

In 1721, Peter I abolished the Moscow patriarchate and replaced it with a collegiate institution—the Holy Synod headed by a procurator as the tsar's representative. The Riazan metropolitan, Stephen Yavorsky, was appointed president of the synod with Archbishop Theodosius Yanovsky of Novgorod and Archbishop Theophan Prokopovych of Pskov as vice-presidents; all three were Ukrainians. Although the relations between the synod and the Ukrainian episcopate were at first conducted through the Hetman government, this did not arrest the decline in the autonomy of the Ukrainian Church. After 1721, contrary to the rights and traditions of the Ukrainian Church, Kievan metropolitans were no longer elected by councils, but were appointed by the tsar from among candidates selected by the synod. The first of them was Archbishop Varlaam Vonatovych (1722–30) who even lost his title of metropolitan. This title was restored only in 1743 when it was given to his successor, Raphael Zaborovsky (1731–47), who was a patron of the Mohyla Academy and responsible for many of the valuable pieces of art in Kiev. Timothy Shcherbatsky was the first metropolitan (1747–57) who was transferred from the Kievan see to the Moscow metropolitanate. Metropolitan Arsenius Mohyliansky (1757–70) was ordered to delete the words "Little Russia" from his old title, Metropolitan of Kiev, Halych, and Little Russia. In 1767, when a commission that was to compile new laws for the Russian empire was being elected, the Ukrainian clergy made unsuccessful efforts to have the old rights restored to the Ukrainian Church. Metropolitan Gabriel Kremianetsky (1770–83) systematically conducted a centralizing policy in the Ukrainian Church. During his tenure, the synod also took over the right to appoint abbots for the Ukrainian monasteries. During the time of Metropolitan Samuel Myslavsky (1783–96), monastic property in Ukraine was secularized; many monasteries were closed and the remainder were now maintained by the state.

FIGURE 31. THEOPHAN PROKOPOVYCH

Russian was introduced as the language of instruction in the Mohyla Academy. Yerofei Malytsky (1796–9) was the last Ukrainian to occupy the metropolitan see of Kiev. His successor, Gabriel Bonulesco-Bodoni (1799–1803), a Moldavian, was the first of a succession of foreign metropolitans. Thus, over a period of 120 years, the Russian government destroyed the distinctive features of the Ukrainian Church and the autonomy which had been promised in the charters of the Muscovite tsar and the patriarch in 1686.

**The Church in Right-Bank Ukraine**

During the last half of the seventeenth century the Uniate Church found itself in a difficult position. The Polish government continued to discriminate against its members (e.g., Uniate archbishops were denied seats in the senate) and the Polish bishops strove to establish control over the Ukrainian-Belorussian Church and constantly promoted its Latinization. After the death of Metropolitan Anthonius Seliava (1640–55), a successor was not confirmed for ten years.

The position of the Uniate Church improved a little at the end of the 1660's, after the Russo-Polish war and the partition of Ukraine by the Treaty of Andrusiv. Kozak influence declined, and in 1668 King Jan Casimir approved all the previous privileges of the Union. In addition, the Ukrainian-Belorussian Church displayed great internal strength,

especially in its metropolitans—Gabriel Kolenda (1655–74), Cyprian Zhokhovsky (1674–93)—certain bishops (Bishop Jacob Susha of Kholm, writer and scholar), and the Basilian Order. The

FIGURE 32.
GABRIEL KOLENDA

FIGURE 33.
JACOB SUSHA

Union also enjoyed considerable support from the Polish king, Jan Sobieski. In 1680, on the initiative of the king and Metropolitan Zhokhovsky, a final attempt, the Lublin Talk, was made to reach an understanding between the Orthodox and the Uniates. However, it had little success, mainly because of the opposition of Prince Gedeon Sviatopolk-Chetvertynsky, the Orthodox bishop of Lutsk, and the Orthodox nobility of his diocese.

At the same time, the Orthodox Church in Right-Bank Ukraine was in a state of decay. This process was caused by several factors: the weakening influence of the Kozaks; the reduction in the number of Orthodox, owing to the mass transfers of population to the left bank of the Dnieper; the separation of Kiev from the center of Ukrainian Orthodoxy by the Polish-Muscovite border; the Polonization and Catholicization of the Ukrainian nobility; and, most of all, the political oppression by Poland. The brotherhoods began to decline. Although the "eternal peace" between Poland and Moscow gave the Orthodox in Poland certain rights and guarantees (the right to have bishops ordained by the Kievan Orthodox metropolitan and to remain under his jurisdiction; the right of intervention by the Russian government in the event of persecution of the Orthodox Church or its faithful), the condition of the Orthodox Church within the Polish commonwealth, in fact, deteriorated still further.

At the end of the seventeenth century and the beginning of the eighteenth, Galicia began to join the Union: in 1692 the Peremyshl diocese (Bishop Innocent Vynnytsky) and in 1700 the Lviv diocese (Bishop Dionysius Shumliansky). The Lutsk diocese followed in 1702 (Bishop Dionysius Zhabokrytsky) and in 1708 the ancient stronghold of Orthodoxy in Galicia, the Stavropygian Brotherhood. In 1712 the Pochaïv monastery also joined the Union. With the spread of the Union in the western Ukrainian lands, the Kievan Catholic metropolitanate included nine eparchies, seven of them in Ukraine: the Kievan metropolitan see (with no permanent residence, but located in Radomyshl during the middle of the eighteenth century), Pinsk-Turiv, Berestia-Volodymyr, Kholm-Belz, Peremyshl-Sambir-Sianik, Lviv-Halych-Kamianets, and Lutsk-Ostrih. Only one Orthodox diocese was left within the bounds of the Polish commonwealth: the Mohyliv-Mstyslav eparchy in Belorussia. (During the eighteenth century its bishops were Ukrainians—Prince Sylvester Sviatopolk-Chetvertynsky, Arsenius Berlo,

FIGURE 34.
GEORGE KONYSKY

FIGURE 35.
LEO KYSHKA

Joseph and Hieronymus Volchansky, George Konysky, and others.) Orthodox Ukrainians in Poland proper did not have their own bishop. Their parishes and monasteries were subject to the

Kievan metropolitan and later to the bishop of Pereiaslav also, but the actual authority of the latter was not great.

Having lost their last hope of agreement with the Orthodox Church, the Uniate Church went its own way. Before long, Latin innovations began to appear in its rite and canons. In order to introduce uniformity in the Uniate Church, Metropolitan Leo Kyshka (1714–28), after some five years of preparation, convened a synod in Zamostia in 1720 which established the Uniate Church as an independent ecclesiastical unit within the Catholic Church. The Zamostia synod shaped for a long time the rite and the spiritual and cultural features of the Ukrainian-Belorussian Catholic Church. It brought the rite and organization closer to the Latin Church (certain innovations in the rite, low masses, liturgies at the side altars, the neglect of the type of confession used in the Eastern Church, for example), thereby deepening the division from the Ukrainian Orthodox Church.

The Zamostia synod also revealed differences dividing the diocesan clergy and the Order of St. Basil the Great. The Basilians had been for a long time the most enlightened of the clergy. During the last half of the seventeenth century, however, many Poles found their way into the Basilian ranks and this led to the Order's estrangement from the Ukrainian secular clergy and the parishioners. Until 1674 metropolitans served simultaneously as protoarchimandrites of the Basilian Order, but at the synod of Zamostia, the Basilians secured a provision that the bishops should be named from among their order; other candidates first had to take monastic vows. Friction developed between the Basilians and the metropolitans over this point.

During the eighteenth century, the Basilians gained further strength because the Zamostia synod had ordered all the Ukrainian-Belorussian Catholic monasteries, which in some eparchies were still governed by the old Eastern rule, to unite and form a single order of Basilians. In 1739 another Basilian province (the Ruthenian Crown Land) was created, with headquarters in Lviv. The Basilian schools had considerable influence on education (see p. 312).

The increased Latinization of the Ukrainian-Belorussian Catholic Church was accompanied by intensified efforts at Polonization. More and more often sermons were given in Polish. As would be expected, the differences deepened between the Polonized higher clergy and the lower distinctly Ukrainian clerics and their flock which now consisted almost exclusively of the peasant serfs. These differences were the causes of the internal weakness of the Uniate Church, a weakness intensified by the constant threat from Russia. The Russian government interfered with church affairs in Poland under the pretext of its "guardianship" of the Orthodox, provided for in the "eternal peace" of 1686. The opportunity to do so was supplied by the increasing intolerance of the Polish nobility towards the "dissidents"—the Orthodox (often called the "disunited") and the Protestants; the growing weakness of Poland also invited such interventions. Under pressure from Russia, the question of the "dissidents" was constantly discussed at the diets, leading the Polish government to acknowledge certain rights for the "dissidents," but this evoked protests from the Polish gentry and the Catholic clergy. Russia's desire to intervene in ecclesiastical matters on the Right Bank was served by the *Koliïvshchyna* in 1768, the Bar Confederation of the same year, and the first partition of Poland in 1772.

By the middle of the eighteenth century, only a few score Orthodox parishes remained in Right-Bank Ukraine. In religious matters they were subject at that time to the bishop of Pereiaslav. In 1753, he appointed Melchisedec Znachko-Yavorsky as the abbot of the Motronynsky monastery in the province of Kiev and entrusted him with the over-all ad-

ministration of the Orthodox monasteries in the province. Under the leadership of Znachko-Yavorsky, the Motronynsky, Medvediv, Lebedyn, and other monasteries became the nucleus of a national religious movement aimed at the Polish landlords (the peasants were promised aid from the Russian tsarina, Catherine II) and Catholics, especially the Uniates. In a short time, entire villages began to return to Orthodoxy.

FIGURE 36. MELCHISEDEC ZNACHKO-YAVORSKY

Polish-Ukrainian relations deteriorated still further as a result of the Bar Confederation [Vol. I, p. 661a) which also opposed the defense of the Orthodox by Russia and the granting of rights to the "dissidents." This confederation contributed to the increase in the persecution of the Orthodox, especially the clergy, by the Catholic Poles. When the Russian army under the command of General Krechetnikov entered Poland to suppress the Bar confederates, the Ukrainians thought that it had arrived to protect them, and the insurrection of the Haidamaks, the *Koliïvshchyna*, erupted in the provinces of Kiev and Bratslav [Vol. I, pp. 661–62]. During this uprising, the Uniates suffered great losses, including the destruction of the Basilian college of Uman. After the suppression of the Bar confederates and the *Koliïvshchyna*, the Russian army remained in Poland and began the arrest of Uniate clergymen whose parishes had been occupied by the Orthodox during the insurrection. The Uniate metropolitan, Philip Volodkovych (1762–78), petitioned Catherine II for protection but had no success.

After the partition of Poland in 1772, the southwestern portion of the Uniate Kievan metropolitanate found itself in Austria (see below, p. 185), the Belorussian archdiocese of Polotsk went to Russia, and the rest remained in Poland, where the metropolitans continued to reside. After the death of Metropolitan Volodkovych, the metropolitan see was occupied in succession by Leo Sheptytsky (1778–9), Jason Smogorzhevsky (1780–8), and Theodosius Rostotsky (1788–1805). The only Orthodox eparchy in Poland, Mohyliv - Mstyslav, went to Russia. The situation of both Ukrainian churches was grave.

FIGURE 37. JASON SMOGORZHEVSKY

In Right-Bank Ukraine after 1772, the Polish administration began to seek out the supporters of the Russian government among the lower Uniate clergy. In Volhynia in particular, the so-called Lutsk tribunals operated, investigating the complaints and denunciations against the Uniates, and scores of Ukrainian Catholic priests were executed. Under Polish pressure a series of Uniate parishes, which had gone over to Orthodoxy during the *Koliïvshchyna* and the Russian occupation, now reverted to the Uniate Church. The banning of the Jesuit Order was also of significance in the internal life of the Ukrainian-Belorussian Church, since the Polish Commission on Education subsequently turned over a number of Jesuit schools and monasteries to the Basilians. In 1781, the Uniate metropolitan was at last seated in the senate.

The Russian synod, to which the Orthodox Church in Poland was subject, transferred the Orthodox who remained in Poland to the jurisdiction of the bishop of Pereiaslav, Victor Sadkovsky (1785), the vicar of the Kievan metropolitanate. Assiduously implementing the policy of the Russian government against the Uniate Church, Sadkovsky contributed to the conversion of many Uniate parishes to Orthodoxy. The position of the Orthodox Church in Poland was

legalized by the Polish Four-Year Diet (1788–92) which carried out fundamental reforms in the country and adopted a new constitution on May 3, 1791; it proclaimed religious freedom for the "dissidents" and decided to create an autocephalous Orthodox Church in Poland. The Orthodox synod of Pinsk in 1791 accepted the government regulations concerning the constitution of the Orthodox Church in Poland: conciliarism (*sobornopravnist'*), electiveness of clergy, and the participation of laymen in the administration of the Church. The hierarchy, consisting of an archbishop and bishops, was to be subordinate to

FIGURE 38. "MIRACLE OF POCHAÏV" (PAINTING BY N. ZUBRYTSKY, 1704)

the patriarch of Constantinople. The resolutions of the Pinsk council were approved by the Polish Diet in 1792, but the further partitions of Poland (1793 and 1795) did not permit their realization, and the Orthodox Ukrainians found themselves under the Russian synod. The Ukrainian Catholics were split into two parts by the boundaries of Russia and the Hapsburg monarchy. Completely different fates awaited these two branches of the Ukrainian Catholic Church.

## THE ORTHODOX CHURCH IN UKRAINE IN THE NINETEENTH AND EARLY TWENTIETH CENTURIES

### The Orthodox Church in the Ukrainian Lands of the Russian Empire

**The destruction of the autonomy of the Ukrainian Orthodox Church.** The subordination of the Ukrainian Church to the patriarch of Moscow (after 1686) and subsequently, to the Russian synod (after 1721) opened the road for the gradual destruction of the autonomous ecclesiastical rights of Ukraine and the elimination of the traditional characteristics of Ukrainian religious and social life (see pp. 228–9). But until the mid-eighteenth century, this process of destruction was hindered by the great influence of

Ukraine in the ecclesiastical and cultural life of the Russian empire. Nearly all of the episcopal sees in Russia, including those in the capital, were occupied by hierarchs of Ukrainian extraction and education (mainly graduates of the Kievan Academy). The development of Russian culture and enlightenment was greatly assisted by Ukrainian cultural forces which helped to disseminate Ukrainian customs and traditions in the empire.

Also the existence of the Kozak-Hetman state was a safeguard for the Ukrainian Church in asserting her autonomy and traditional rights vis-à-vis the Russian ecclesiastical authorities. Moreover, the power of the Ukrainian government within the Church was strong. Until the death of Ivan Skoropadsky, the hetmans had rather broad powers of patronage and were even involved in the investiture of the hierarchy, especially the bishops and the abbots of monasteries. The hetmans granted to the hierarchy estates as well as various financial and economic rights and privileges and safeguarded and defended them. The instructions of the Russian synod to the Church's institutions in the Ukraine were sent through the hetman. This dependence upon the hetman's authority occasionally worked to the detriment of the Church, which led it to ask that it be made directly subordinate to the Russian authority, especially in property matters.

The destruction of the Kozak-Hetman state during the last half of the eighteenth century hastened the Russian synod's domination of the Ukrainian Church. The Russian government ignored the Ukrainian clergy's memorandum (Articles Regarding the Rights of the Little Russian Clergy) of 1767–8, in which it declared its right to retain its ancient privileges. A great blow was dealt to the Ukrainian Church by the reform of 1786, which secularized the properties of the monasteries and cathedrals and established the *shtaty*, a system of state support of the clergy (extended in the nineteenth century to all secular clergy). In the reform, a considerable number of monasteries were either closed or deprived of state support (which effectively denied them the material means of existence). Finally, in the 1780's, Russification of the Church and theological education was accelerated. The Kievan Academy and the colleges in Chernihiv, Kharkiv, and Pereiaslav were particularly affected. As a result, the Ukrainian Church was left defenseless and found itself a direct dependent of the Russian synod.

**The Expansion of the Orthodox Church in Right-Bank Ukraine**

The annexation of Right-Bank and southern Ukraine to the Russian empire in 1795 led to a resurgence of the Orthodox Church in these areas which had long been dominated by the Polish Catholic government. In southern Ukraine this change was accomplished in a comparatively peaceful way as part of the colonization and development of new lands, but on the Right Bank expansion proceeded at the price of the destruction (for the most part, violent) of the Uniate Greek-Catholic Church. Begun under Catherine II, the liquidation of this Church continued at a slower pace and with less violence during the reigns of Paul I and Alexander I, reached its apogee during the rule of Nicholas I with the forcible disbanding of the Basilian Order after the Polish uprising in 1830–31 and the "reunion" of the Belorussian and Lithuanian Uniates in 1839, and was concluded under Alexander II with the liquidation of the Union in the Kholm region and Podlachia in 1875 (see p. 184). As a result, the Orthodox Church in these areas found itself dependent on the Russian government and its local administration. Only the spontaneous opposition of a large number of the Ukrainian, especially the rural clergy in Right-Bank

Ukraine helped to preserve many customs and traditions of the Ukrainian Church in this area.

**Structure**

Beginning in the seventeenth century, and especially during the first half of the eighteenth century, the Russian government conducted a policy of decentralization of the Ukrainian Church. Individual dioceses were subordinated directly to the synod and the jurisdiction of the Kievan metropolitan was restricted to his own eparchy. Eventually he was left with only the title and the honors of a metropolitan and a permanent membership in the synod. By the mid-eighteenth century the words "Little Russia" had been eliminated from the metropolitan's title and only the semi-fictitious designation "Kiev and Halych" was retained.

FIGURE 39. RESIDENCE AND CHANCERY OFFICE OF THE METROPOLITAN IN KIEV (EIGHTEENTH CENTURY)

During the nineteenth and twentieth centuries the Orthodox Church in Ukraine was divided into the following eparchies: Kiev, Volhynia, Katerynoslav, Poltava, Tavriia (created in 1859, with the see in Symferopol), Kharkiv, Kherson (created in 1837, with the see in Odessa), Kholm (created in 1907), and Chernihiv. Each diocese was headed by a ruling bishop or archbishop except that of Kiev where the head was a metropolitan. In some cases these hierarchs were assisted by vicar-bishops. At the beginning, the vicariates existed only in the eparchy of Kiev (the bishops of Chyhyryn and, subsequently, of Uman, of Kaniv, and of Cherkasy); later they were established in other dioceses, particularly in Volhynia (the bishops of Kremianets, Volodymyr Volynsky, and Ostrih), but also in Katerynoslav (the bishop of Pavlohrad), Podilia (the bishops of Balta and of Vinnytsia), Poltava (the bishop of Pryluky), Kharkiv (the bishop of Sumy), Kherson (the bishops of Novyi Myrhorod, Yelysavethrad, and Mykolaïv), and Chernihiv (the bishop of Novhorod Siversky). Altogether there were 10 diocesan and 16 vicarial bishops in Ukraine in 1917.

Most ruling bishops had their sees in the capitals of *guberniyas* and were assisted by ecclesiastical consistories. The ruling bishop appointed the members of the consistory and its affairs were administered by a secretary—a layman who was subordinate to the Oberprocurator of the synod. Vicar-bishops did not exercise administrative authority. The cathedral archpriests (the senior priest of the main church in a county seat) also lacked any administrative functions. Parishes in every district were united into a deanery (*blahochyniia*), the dean (*blahochynnyi*) being elected at the little councils (*soborchyky*) of clergy. The latter—the only survivals of the old self-government—also included sextons and church elders. The jurisdiction of the little councils and the deans was confined strictly to internal affairs such as the settlement of misunderstandings among the parish personnel and decisions on the best ways of executing the orders of the consistory. The consistory appointed the parish priests and the sextons; the parishioners elected only the church elders.

Every diocese had its official publication—the *Yeparkhial'ni Visti* (Eparchial News), the official section of which contained the orders of the church authorities and information concerning pastoral

practice. Each diocese operated a seminary for future priests, ecclesiastical schools (preparatory schools for the seminaries), and eparchial secondary schools for girls—daughters of the clergy.

In view of the Church's official status, the functions of the parish priests resembled in part those of civil servants. They kept parish registers (births, deaths, and marriages) which had legal standing. In addition to their income from private land holdings (usually averaging 36 dessiatines [1 dessiatine = 2.7 acres], sometimes more) and from religious services, the priests received state salaries.

**Metropolitans and Bishops**

Although Ukrainians were sometimes appointed to the episcopal or vicarial sees, all the Kievan metropolitans of this period were of Russian extraction, with the exception of the Moldavian Metropolitan Gabriel Bonulesco-Bodoni (1799–1803). They were as follows: Serapion Aleksandrovsky (1803–22), Eugene Bolkhovitinov (1882–37), Philaret Amfiteatrov (1837–58), Isidore Nikolsky (1858–60), Arsenius Moskvin (1860–76), Philophei Uspensky (1876–82), Platon Gorodetsky (1882–91), Ioanikii Rudnev (1891–1900), Theognost Lebedev (1900–3), Flavian Gorodetsky (1903–15), and Vladimir Bogoiavlensky (1915–18). Some of them were good administrators, some were especially interested in church education and culture (Aleksandrovsky—vice-president of the Russian Biblical Society—and Bolkhovitinov), some were known for their strict ascetism, but virtually all of them displayed mediocre qualities and were entirely uninterested in the life of the Ukrainian Church. The only exception was Metropolitan Bolkhovitinov (1767–1837), a noted scholar and author of numerous works on church history and archeology, the history of literature, and bibliography. A native of the Voronezh region, he even considered himself a Ukrainian and rendered great services to the cultural advancement of Kiev; he founded a center for the scholarly study of Kievan antiquities at the Kievan Theological Academy and fostered research into the ecclesiastical history and archeology of Kiev.

Ukrainians or persons favorably disposed towards Ukrainians could be found among the hierarchies of other

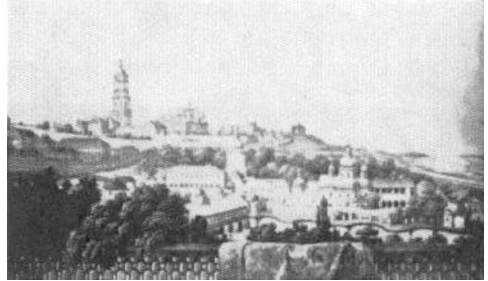

FIGURE 40. KIEVAN CAVE MONASTERY (PAINTING FROM THE MID-1800'S)

Ukrainian cities, the abbots of Ukrainian monasteries, and the rectors of the Kievan Theological Academy which replaced the Mohyla Academy in 1819. Among these men the most notable were the bishops of Chyhyryn, vicars of the Kievan metropolitanate—Theophanes Shyianov-Cherniavsky, Ireneus Falkovsky, a well-known scholar of the late eighteenth and early nineteenth centuries and Cyril Kunytsky; Philaret Gumilevsky, the bishop of Kharkiv and later archbishop of Chernihiv, an historian of the Church and of local ecclesiastical antiquities; Archbishop Gabriel Rozanov of Katerynoslav and Bishop Theodosius Makarevsky of Katerynoslav—researchers into the history of the Zaporizhia and southern Ukraine; and the rectors of the Kievan Theological Academy—Innocent Borisov, later bishop of Kharkiv and archbishop of Kherson, and Makarii Bulgakov, an historian of the Kievan Academy, later metropolitan of Moscow and author of a multi-volume history of the Russian Church.

**The Russification of the Orthodox Church in Ukraine**

Members of the hierarchy sympathetic to Ukraine were exceptions to the general trend to Russification and downgrading of the Ukrainian Orthodox Church in the nineteenth century. Theological education in Ukraine was the first branch of the Church to be subjected to Russification. The Kievan Theological Academy, which became an important center of theological and historico-ecclesiastical learning during the last half of the nineteenth century, and the ten theological seminaries (one in each eparchy) were in effect Russian schools. Russian pronunciation was introduced into the reading of liturgical texts; hitherto the language of the divine services in the Ukrainian Church had been old Church Slavonic with a Ukrainian pronunciation because it was understood by the faithful. Individual texts such as the gospels were also in the vernacular. The same text delivered with a Russian pronunciation was almost incomprehensible to the local population. The Ukrainian language soon ceased to be used even in sermons. Local features of the rite and liturgy were systematically prohibited and orders were given to adhere to the Russian practice. Among the local customs eliminated were the traditional form of oath by the young couple during the marriage ceremony, the affusion of the infants with water during baptism, and keeping the doors of the iconostasis open for the most part during the liturgy. The priests were forced to grow long beards and to wear sacerdotal vestments on the Muscovite model; the active participation of the congregation in the church services and parish life was restricted; the practice of frequent sermons, which was very popular in the old Ukrainian Church, was limited. The church brotherhoods were banned and the election of priests by the parishioners was discontinued.

The aim of these prohibitions was not only to fuse the Ukrainian Church with the Russian, but also to eliminate those customs which the Ukrainian Church held in common with the Orthodox Church in Bukovina and with the Uniate Greek-Catholic Church in Galicia.

The synod took over control of the local church presses and censored their publications, so that they would not contain any differences or "separate dialect." Thus, in the 1720's, after it had published the *Misiatseslov* in 1718, the press of the Kievan Cave Monastery was ordered by the synod to submit the publications to ecclesiastical censorship so that they "would contain no departures from the Russian print." Deviations from this rule were punishable by fines and confiscations, as happened, for example, with the Chernihiv Troïtsky-Illinsky press in 1724.

Local features were removed from church architecture, painting, and sculpture. Buildings in the Ukrainian (Kozak) Baroque or Rococo manner were no longer erected, not only because of the lack of generous patrons, but also because they were of non-Russian style. In 1800 the building of churches in the Ukrainian style (see Architecture, p. 546) was prohibited. Instead, Russian-style churches or even copies of the Russian shrines were built—the new Desiatynna (Tithes) Church in Kiev and the Troïtsky Cathedral in Pochaïv in 1911 (a copy of the Troitsky-Sergeevsky Lavra Cathedral near Moscow). Wooden architecture was attacked, and in place of the typically Ukrainian three- or five-domed churches (usually with a separate bell-tower), the synodal type of rural church was introduced and came to be predominant in the twentieth century. Older types of churches were preserved mostly outside the Russian empire in Galicia, Transcarpathia, and Bukovina. Statues—viewed as a manifestation of Western influence—were removed from the old churches, and the local tradition of icon painting was repressed. In particular,

the activity of the painting school in the Kievan Cave Monastery was discontinued.

FIGURE 41. POCHAÏV MONASTERY

The subordination of the Ukrainian Orthodox Church to the Russian authorities and its Russification were not confined to the spheres of spiritual, cultural, and educational life. The Russian government persistently drew the ecclesiastical institutions and clergy of Ukraine into the orbit of its reactionary and anti-Ukrainian policy, a policy which manifested itself particularly at the beginning of the twentieth century in Volhynia and Kiev. Many representatives of both the secular and the monastic clergy and even the hierarchy were active members of Russian political organizations of the extreme right, including the Soiuz Russkogo Naroda (Union of the Russian People). One of the main centers of this movement was the Pochaïv Monastery (Lavra) headed by the archimandrite, Vitalii Maksymenko. Also reactionary and anti-Ukrainian in character was the activity of the archbishop of Volhynia (formerly of Kholm), Evlogii Georgievsky, in Galicia while it was occupied by the Russian army in 1914–15.

### Distinctive Ukrainian Features of the Orthodox Church in Ukraine

Despite all these measures, the Russian tsarist authorities did not succeed in destroying the national features and traditions of the Ukrainian Orthodox Church. In general, the people's way of life was bound, through the annual agricultural cycle, to the church, and the populace continued to practice the old rites during these holidays. Among those traditions which continued were the mixtures of ancient pagan and Christian rites surrounding Christmas and Easter. These included the blessing and consumption of special foods (*kutia, paska*), the sprinkling of homes and livestock with consecrated water, the singing of ancient folk songs (*koliadky, shchedrivky*), praying over the graves of the deceased, processions, and the three-day ringing of church bells. The majority of such songs, prayers, and rites were unknown in Russia; they still exist in Ukraine, despite Communist efforts to destroy them.

Nor did the rural clergy submit quietly to Russification. Because of the clergy's close relations with the people and because of hereditary parishes which descended from father to son (or son-in-law), the clergy from Russia did not infiltrate the villages, but remained for the most part in the towns. The rural clergy continued to use the Ukrainian language in their daily life, although the Russian language predominated in sermons and official transactions. Theological seminaries, in which the majority of the students were from the surrounding areas, played a special role in the Ukrainian national renaissance, producing a series of prominent political and cultural leaders. The seminaries in Poltava and Kamianets Podilsky were particularly active in this respect. During the 1880's and 1890's, secret Ukrainian circles already existed in most theological schools. Their subsequent discovery by the police (for example, arrests of students of the Volhynia seminary in 1907) and the dismissal of students from these schools only served to intensify the activity of the seminarians in the political field.

Until the official prohibition of the publication and dissemination of books in Ukrainian, in 1863 and 1876 respectively, there were attempts to publish books with a religious content in the

Ukrainian language—Taras Shevchenko's *Bukvar* (Primer) in 1860, the sermons of Archpriest Basil Hrechulevych in 1849, and the publication of the lives of saints and the sermons of Ivan Babchenko and Stephen Opatovych. The Ukrainian translation of the Bible, begun in the middle of the nineteenth century by Panteleimon Kulish and Ivan Puliui, could not be published in Russia; it appeared in Vienna in 1903 under the imprint of the British Bible Society. It was only after the 1905 revolution that the Gospels in Ukrainian were first published in Russian-held Ukraine (1906–14); this translation was one done by Philip Morachevsky almost fifty years

FIGURE 42. VIEW OF THE VYDUBETSKY MONASTERY NEAR KIEV

earlier. The editor of this text was Bishop Parfeniius Levytsky of Podilia (a native of the Poltava region) who had gathered around himself a group of ecclesiastical (Yukhym Sitsinsky, Cyril Starynkevych) and secular leaders (Serhii Ivanytsky, Nicholas Bychkovsky, and others). He also permitted the clergy to use the Ukrainian language in sermons and even secured temporarily (1907–12) the introduction of Ukrainian in the parish schools in Podilia. However, this permission was repealed shortly after and Bishop Parfeniius was transferred to central Russia. The activities of the Bishop of Kremianets, Ambrose Hudko, who also used Ukrainian in sermons throughout the villages, met with less resistance. The authorities tolerated such sermons—because of political considerations—but only in the western outskirts of the Ukrainian ethnographic territory, the Kholm region. Archbishop Alexis Dorodnytsyn, a Ukrainian by birth, translated prayer books into Ukrainian.

The national consciousness of the clergy grew steadily during the early years of this century. The Ukrainian faction in the Russian duma included several clergymen (A. Hrynevych, K. Volkov, M. Senderko, O. Trehubov among others). The contributions of the clergy to the rebirth of the Ukrainian state in 1917 and in the following years was substantial, and the sons of priests or the graduates of the theological schools occupied many of the highest posts in the new state. Among them were the chief of state, Simon Petliura; the premiers, Viacheslav Prokopovych and Volodymyr Chekhivsky; and the minister of confessions, Alexander Lototsky.

## THE ORTHODOX CHURCH IN UKRAINE SINCE 1917

### The Church and the Ukrainian Revolution

The political rebirth of the Ukrainian state in 1917 catalysed hitherto suppressed Ukrainian aspirations within the Russified church and a national church movement grew up. Early in December 1917 the movement assumed an organized form with the establishment of an

All-Ukrainian Orthodox Church Council (Vseukraïns'ka Pravoslavna Tserkovna Rada) headed by Alexander Marychiv, an army chaplain, and Alexis Dorodnytsyn, a retired archbishop who resided at the Kievan Cave Monastery. Challenging the authority of the newly restored Moscow patriarchate and the Russian bishops in Ukraine, the council demanded Ukrainization of the Church, complete independence from Moscow (autocephaly), and the restoration of the traditional form of conciliar government (*sobornopravnist'*). In view of the bitter hostility of the local episcopate, the council appealed directly to the patriarch of Moscow, Tikhon, who blessed (approved), with certain conditions, the convocation of the First All-Ukrainian Church Congress (Vseukraïns'kyi Tserkovnyi Sobor) and appointed his delegates to this gathering. The sobor, which convened in Kiev in January, 1918, was interrupted by the Soviet invasion, before any decisions on the future of the Ukrainian Church could be reached. The work of the All-Ukrainian Orthodox Church Council (which dissolved itself with the convocation of the sobor) was carried on by a newly re-formed Brotherhood of SS. Cyril and Methodius.

FIGURE 43. ST. SOPHIA CATHEDRAL IN KIEV

By the time the sobor reconvened in June, 1918, under the new Hetman regime, the Russian elements in the Church had significantly strengthened their position, especially with the accession to the see of Kiev of Metropolitan Anthonius Khrapovitsky, a staunch opponent of the Ukrainian movement. A pro-Russian majority at the second session of the sobor, having barred the Rada members from the sessions and expelled its liberal supporters, rejected the principal demands of the Ukrainian church movement. On July 9, 1918, the sobor adopted a Statute for the Provisional Supreme Administration of the Orthodox Church in Ukraine. Without waiting for its ratification by the Hetman government, Patriarch Tikhon approved the statute by his letter to Metropolitan Anthonius Khrapovitsky of September 26, 1918.

Although it provided for the election of the bishops at diocesan sobors and of the Kievan metropolitan at an all-Ukrainian sobor, the statute (as amended at the Patriarch's request) left the Patriarch with the authority to "confirm and bless" the metropolitan and the diocesan bishops in Ukraine. It also provided that the "resolutions of the All-Russian Church sobors, as well as decisions and directives of the Holy Patriarch shall have obligatory force for the entire Ukrainian Church." The latter was to be governed by a triennial Ukrainian Church sobor and between such sobors, by a holy sobor of (Ukrainian) bishops and the Supreme Church Council—all three to be headed by the Metropolitan of Kiev and Halych. Theoretically, this statute remains in force at the present time, though in practice the Russian Orthodox Church has ignored it since the 1940's. The statute was rejected by the Ukrainian church movement and, speaking for the Hetman government, the Minister of Confessions, Alexander Lototsky, declared at the fall session of the sobor (November 12, 1918) that the Ukrainian Orthodox Church ought to possess autocephaly.

With the overthrow of the Hetman regime, the new Directory government took action to realize the autocephaly of the Church. In December, 1918, it

FIGURE 44. EPISCOPATE OF THE UKRAINIAN AUTOCEPHALOUS ORTHODOX CHURCH, 1921–6

removed Metropolitan Khrapovitsky from his post, and on January 1, 1919, it issued the Law on the Supreme Authority of the Ukrainian Church which provided for the complete independence of the Ukrainian Church under its own synod. The continuing opposition of the majority of bishops and the second Bolshevik invasion of Ukraine prevented the effective implementation of this decree.

During the second Bolshevik occupation (February-August, 1919) the Ukrainian church movement took advantage of the new Soviet church legislation to "register" a number of Ukrainianized parishes under a reconstituted (Second) All-Ukrainian Orthodox Church Council. Having been temporarily disbanded during the short-lived occupation of Kiev by the Russian White Army of General Denikin (August-December, 1919), the council resumed and further expanded its activities in the early months of 1920 and was registered by the Soviet authorities as an independent union of Ukrainian Orthodox parishes. Soon afterwards the Kievan Bishop Nazarius suspended all the clergy of Ukrainian parishes; the council replied on May 5, 1920, with a formal proclamation of the autocephaly of the Ukrainian Orthodox Church.

The three-year-old struggle for control of the Church between the Russian nationalists entrenched in the hierarchy and the higher clergy and the Ukrainian nationalists among the lower clergy and laymen thus culminated in the division of the Orthodox Church in Ukraine into two hostile bodies: the Russian (Patriarchal) Church deriving its strength from its control of the entire hierarchy in an episcopate-centered church, from canonical continuity, and from the habitual allegiance of the conservative majority of believers; and the Ukrainian Autocephalous Church embracing the nationally conscious believers attracted by the national language and rites of this church and its message of national independence, religious fundamentalism, and social radicalism. By 1923, a third contestant entered this ecclesiastical

struggle in Ukraine, cutting into the clerical and lay following of the Patriarchal Church. This was the Living Church soon replaced by a more moderate Renovationist (Synodal) Church—an offshoot of the frustrated reform movement in the Russian Church.

**The Ukrainian Autocephalous Orthodox Church 1920–30**

Having severed its links with the Russian episcopate, the All-Ukrainian Church Council was able at first to secure archpastoral leadership for the Ukrainian Autocephalous Orthodox Church (Ukraïns'ka Avtokefal'na Pravoslavna Tserkva [UAPTs]) in the person of a Ukrainian archbishop, Parfenius Levytsky of Poltava. However, when the sobor of bishops in Kiev decided in February, 1921, to unfrock all the autocephalist clergy and ordered, under threat of anathema, an immediate dissolution of the UAPTs, Archbishop Parfenius broke his connections with it. With no bishop now willing to assume the canonic leadership of the Ukrainian Autocephalous Church or to ordain its episcopate, the First All-Ukrainian Sobor of the UAPTs which met from October 14 to 30, 1921, took the fateful decision to create its own episcopate by resorting to the practice of the ancient Alexandrine church. On October 23, Archpriest Basil Lypkivsky (b. 1864), the spiritual leader of the Ukrainian national church movement and one of the organizers of the All-Ukrainian Church Council (in 1919 in Kiev he had celebrated the first liturgy in modern Ukrainian), was ordained Metropolitan of Kiev and All Ukraine through a laying-on of hands by the clerical and lay members of the sobor. Then, jointly with the sobor members, Metropolitan Lypkivsky consecrated Archpriest Nestor Sharaïvsky as another bishop and, late in October, the two hierarchs ordained four other priests as bishops for several Ukrainian dioceses.

This departure from the established Orthodox procedures, as well as a series of canonical reforms adopted by the 1921 sobor, not only alienated some clerical supporters of the movement, but also resulted in a virtual isolation of the UAPTs from other Orthodox churches which refused to recognize the canonic validity of its episcopate. Nevertheless, in the face of violent opposition on the part of the Russian Church, the UAPTs rapidly expanded its following among the Ukrainian peasantry and intelligentsia. By early 1924 it embraced 30 bishops and some 1,500 priests and deacons serving over 1,100 parishes in the Ukrainian SSR, although concentrated primarily in the provinces of Kiev, Podilia, Chernihiv, and Poltava. During the 1920's, the influence of the UAPTs spread beyond the Ukrainian SSR to Ukrainian colonies in central Asia, to émigrés in western Europe, and in particular to the Ukrainian settlers in Canada and the United States where a separate diocese was formed (with some 148 parishes by 1927) under Archbishop John Theodorovich.

FIGURE 45. METROPOLITAN BASIL LYPKIVSKY

After 1922 the Soviet authorities began to impose increasingly severe restrictions upon the Ukrainian Autocephalous Church which they accused of nationalistic tendencies. During the years between 1923 and 1926, they attempted to split the UAPTs by supporting a "progressive" faction—the Diial'no-Khrystova Tserkva (Active Church of Christ)—within its ranks. The latter was allowed to publish a journal, *Tserkovne Zhyttia* (Church Life, two issues in 1925), and some books. But when this faction failed to seize control of the UAPTs, the Soviet police resorted to repressive measures, and in the summer of 1926 arrested Metropolitan Lypkivsky and a number of other autocephalist leaders and ordered the dissolution of the Church's central body—the All-Ukrainian Church Council. At the Second All-Ukrainian Church Sobor in October, 1927, the authorities forced the dismissal of Metropolitan Lypkivsky who was replaced by Metropolitan Nicholas Boretsky. After a brief period of toleration during which the UAPTs was permitted to publish its journal *Tserkva i Zhyttia* (Church and Life, 1927–8) and to issue several religious books, the regime undertook (beginning in 1929) massive repressive measures against the autocephalist episcopate and clergy, closing most of the Ukrainian parishes.

Charging the UAPTs with collaboration with the recently "uncovered" underground Union for the Liberation of Ukraine (Spilka Vyzvolennia Ukraïny) the authorities staged the "extraordinary sobor" in January, 1930, which formally "dissolved" the Ukrainian Autocephalous Orthodox Church. Metropolitan Boretsky and a number of other autocephalist leaders, including the Church's principal ideologist, Volodymyr Chekhivsky, were imprisoned or exiled. The remnant of the Church (some 300 parishes) was allowed to reconstitute itself at the end of 1930 as the Ukraïns'ka Pravoslavna Tserkva (Ukrainian Orthodox Church) under Metropolitan Ivan Pavlovsky of Kharkiv.

FIGURE 46. VOLODYMYR CHEKHIVSKY

FIGURE 47. METROPOLITAN IVAN PAVLOVSKY

Closely watched by the regime, this Church was progressively decimated; its last parish was suppressed in 1936. In January, 1938, the NKVD again arrested the retired leader of the UAPTs, Metropolitan Lypkivsky who perished in unknown circumstances. Altogether, according to Ukrainian Orthodox sources, the Bolsheviks killed two metropolitans of the UAPTs, 26 archbishops and bishops, some 1,150 priests, 54 deacons, and approximately 20,000 lay members of the regional and parish councils, as well as an undetermined number of rank-and-file believers.

**The Russian (Patriarchal) Church in Ukraine**

The rise of the UAPTs, while weakening the hold of the Russian Church over the Ukrainian village and virtually depriving it of any following among the Ukrainian intelligentsia, still left the Patriarchal Church as the largest ecclesiastical body in Ukraine. Its principal sources of strength were the conservatism of the clergy and a sizable and strategically placed Russian minority in Ukraine. Weakened by the emigration of most of its diocesan bishops, the Patriarchal Church in Ukraine was administered after August, 1921, by Metropolitan Michael Yermakov—the first of the patriarchal exarchs for Ukraine. The mounting Bolshevik persecution of the Church during the early years of the regime

resulted in the closing of all theological schools and publications and the majority of the Church's monastic institutions. While the establishment of a *modus vivendi* between Patriarch Tikhon and the Soviet government eased the pressure of the exarchate during 1923–4, the expansion of the regime-supported Renovationist (Synodal) Church into Ukraine brought about the defection of some bishops and a large number of clergy to the *obnovlentsi* (Renovationists). In 1925 a group of Patriarchal and Renovationist bishops and clergy, led by Bishop Theophile Buldovsky of Lubny who had left the Patriarchal Church in the fall of 1924, formed still another ecclesiastical organization in Ukraine. Attacking the Church's subservience to Moscow and its failure to Ukrainianize the exarchate, the Lubny group proclaimed itself an autocephalous Ukrainian Orthodox Church (known as Soborno-Yepyskops'ka Tserkva). Although it continued until the mid-thirties, the Buldovsky group failed to attract a large following in Ukraine.

With the death of Tikhon in 1925, the Soviet authorities prevented an orderly succession to the patriarchal see and attempted in the ensuing confusion to split the Russian Church further and to transfer its leadership to pro-Soviet elements. In the renewed campaign of arrests and deportations of clergy, Metropolitan Michael and most of the exarchate's bishops were removed from Ukraine and were not allowed to resume their posts until 1927, after they joined with the patriarchal *locum tenens*, Metropolitan Sergei (Stragorodsky), in pledging unconditional loyalty to the Soviet state. During the short-lived "peace" in church-state relations that followed, Metropolitan Michael was able to rebuild the exarchate's organization in part—to fill some vacant episcopal sees, to ordain new clergy, and to recapture much of the Renovationist following. By 1928 the exarchate's strength was semi-officially estimated at some 4,900 parishes.

Exarch Michael died in March, 1929, and was succeeded by Archbishop Constantine Diakov of Kharkiv. The violent anti-religious campaign begun that year against all denominations in the USSR brought a new wave of church closings and the arrest and deportation of bishops and clergy throughout Ukraine. During the early 1930's, all the remaining monasteries and nunneries in Ukraine were suppressed. Exarch Constantine continued to preside over the rapidly shrinking Church until his arrest in 1937. By 1938 the few remaining Patriarchal bishops were imprisoned or deported along with large numbers of clergy. By mid-1941, when the Germans invaded the Soviet Union, not more than five parishes of the Russian Orthodox Church survived in Soviet Ukraine (1938 boundaries).

**The Renovationist (Synodal) Church**

The Renovationist Church (Obnovlens'ka Tserkva) emerged in 1923, out of several radical factions—Zhyva Tserkva (Living Church), Tserkovne Vidrodzennia (Church Regeneration), Soiuz Hromad Staroapostol's'koï Tserky (The Union of Congregations of the Ancient-Apostolic Church)—which had made unsuccessful attempts to seize control of the Russian Patriarchal Church in 1922–3. Supported by the authorities, the Renovationist movement spread into Ukraine taking the form at first of an autonomous and, after 1925, of a nominally autocephalous church officially designated as the Vseukraïns'ka Spilka Relihiinykh Hromad Avtokefal'noï Pravoslavnoï Synodal'noï Tserkvy (All-Ukrainian Union of the Religious Congregations of the Orthodox Autocephalous Synodal Church). Headed by Metropolitan Pimen Pegov of Kharkiv (formerly archbishop of Podilia) and an all-Ukrainian synod, the Ukrainian Renovationist Church pursued a somewhat more

conservative line than its counterpart in the Russian SFSR. It actively wooed its Ukrainian following by claiming an autocephalous status and by allowing some use of the Ukrainian language in its affairs, including the publication (1925–8) of a bilingual journal, *Golos Pravoslavnoi Ukrainy* (The Voice of Orthodox Ukraine), soon renamed *Ukraïns'kyi Pravoslavnyi Blahovisnyk* (Ukrainian Orthodox Evangelist). Because they enjoyed the support of the Soviet authorities until 1927, the Renovationists were able to gain control of a large number of churches (some 4,500 in 1925; but only 2,200 in 1928). They failed, however, to win a following in Ukraine except in the largely Russified urban middle class. During the years from 1926 to 1929, the Renovationist synod was allowed to maintain a small higher theological school in Kiev, the only institution for the training of clergy in Ukraine at the time. With the "normalization" of relations between the patriarchate and the government, the Renovationist Church, having lost its preferential status, rapidly disintegrated, with most of its clergy returning to the Patriarchal Church. Metropolitan Pimen continued in office until his removal in 1936; in 1937 he was arrested by the NKVD and deported from Ukraine together with the remaining Renovationist bishops. By the end of the 1930's, the Renovationist Church in Ukraine had become virtually extinct, unlike its counterpart in Russia where the remnants of this church were permitted to subsist until its "self-dissolution" in 1943.

**Soviet Anti-Religious Measures in Ukraine**

With the consolidation of Soviet rule in Ukraine, the regime's measures against religion in Ukraine have taken several interrelated forms: restrictive legislation on "cults," anti-religious propaganda, and administrative harassment of religious groups culminating at certain periods in police terror. Soviet ecclesiastical legislation in Ukraine, beginning with the Separation Law of January 22, 1919, was closely modelled on that of Soviet Russia: all religious groups were deprived of their rights as legal organizations, and their entire property was transferred to the state; all clergy were denied electoral rights; religious education was banned from schools and restricted to persons over 18 years of age; the only legal form of religious organization recognized by the regime were the local "religious associations" (consisting of fifty laymen; since 1929–twenty) and (smaller) "religious groups," which had to be registered by the local administrative bodies; organized religious practices were brought under minute surveillance by the administrative and police departments through the compulsory registration of all religious associations and groups, and of their statutes and clergy, through contracts for the use of the nationalized churches, and through the licensing of church conferences. These devices enabled the regime to intervene in internal church affairs, to favor some and discriminate against other church factions and denominations, and to arbitrarily suppress legal religious activities by denying "registration" or staging "popular demands" for the closing of churches. In 1929 "religious propaganda" was banned by a constitutional amendment and the tightening of the ecclesiastical code prohibited religious groups from engaging in any activities other than the narrowly conceived "performance of cult." In the same year, atheist indoctrination was made obligatory in the Soviet school system. Such indirect measures as the introduction of a five-day week in 1929–30, "passportization," and collectivization—together with the imposition of discriminatory taxation on local congregations—further served to restrict religious practices and to deprive the believers of both houses of worship and clergy. Since 1929–30 the Soviet police

has increasingly applied direct terrorist measures against the episcopate, clergy, and lay leaders of all denominations, charging them with a variety of political crimes.

While thus attacking the organized forms of religion, the regime has relied on massive anti-religious propaganda to attack the religious beliefs of the masses. In 1927 a separate organization—the Union of the Godless of Ukraine (Spilka Bezvirnykiv Ukraïny)—was formed under the auspices of the Communist party (1,400,000 members in 1932). This organization employed the state's mass media, including the journal *Voiovnychyi Bezvirnyk* (The Militant Godless) 1925–35, to compromise and intimidate ecclesiastical leaders, to ridicule religion, and to incite mass campaigns for church closings (especially in 1929–30 and 1937–8). While the outward success of the anti-religious campaign in Ukraine in the interwar years could be measured by the almost complete suppression of legal religious practices by the end of the 1930's, the growth of a "religious underground" in the Ukrainian SSR and the rapid revival of organized religious life in wartime Ukraine attest to the limited success of the Soviet anti-religious measures.

**1939–41**

With the Soviet occupation of Western Ukraine, the moribund Moscow patriarchate undertook with the regime's support to extend its jurisdiction over the large Orthodox diocese of Volhynia, embracing at that time three bishops and some 800 parishes. Early in 1940, the patriarchical *locum tenens*, Metropolitan Sergei, dispatched to the newly annexed territories a Russian archbishop, Nicholas (Yarushevich), with the title of metropolitan of Lutsk and Volhynia and exarch for the western *oblasts* of Ukraine. Before long, Nicholas succeeded in bringing Archbishop Alexis (Oleksii Hromadsky) of Kremianets and his vicar Simon (Ivanovsky) under Moscow's jurisdiction; the other vicar, Bishop Polycarp (Sikorsky) of Lutsk, while entering into *communicatio in sacro* with Nicholas, declined, however, to sign the required pledge of loyalty to the patriarch.

At the same time, the patriarchate began preparations for the "conversion" of the Ukrainian Catholics in adjacent Galicia. Early in 1941, Metropolitan Nicholas visited Lviv calling for the "reunion of the Uniates," and in March 1941 a Galician Russophile, Panteleimon Rudyk, was ordained in Moscow as Orthodox bishop for the solidly Greek Catholic diocese of Lviv. These preparations for "reunion" were, however, interrupted by the outbreak of German-Soviet hostilities.

Under the first Soviet occupation of Western Ukraine, local church organizations were left largely intact. However, Soviet ecclesiastical legislation was extended to these newly occupied territories: church lands and monastic property were nationalized and steep taxes were imposed upon the parishes and the clergy, depriving the latter of the material base for their subsistence; religion was banned from schools and public life; and the Church was deprived of all facilities for the publication of religious literature. Although there was as yet no mass anti-religious terror, many clergymen were arrested and over forty either executed or deported.

**The Church in German-Occupied Ukraine**

The German occupation of central and eastern Ukraine was followed by a spontaneous revival of church life in these territories. The surviving clergymen celebrated mass baptisms of children and youths and marriages. Local church councils were formed by the believers, which recovered former churches or found new facilities for their parishes.

In these new circumstances the Orthodox Church in Volhynia split into two ecclesiastical entities—the Autonomous and Autocephalous churches—which soon

also developed in central and eastern Ukraine.

The first of the two groups, known after August, 1941, as the Autonomous Orthodox Church (Avtonomna Pravoslavna Tserkva) in Ukraine, reaffirmed its canonical subordination to the Moscow patriarchate but declared this subordination in abeyance so long as the patriarchate was subject to Soviet control. Headed by Archbishop Alexis Hromadsky who soon assumed the title of metropolitan and exarch of Ukraine, the Autonomous Church based its claims to recognition on the 1918 statute granting autonomy to the Ukrainian Church. Embracing the more conservative strata of the Orthodox, as well as Russian-oriented elements among the clergy and faithful, this church soon expanded its hierarchy to sixteen bishops, with Archbishop Panteleimon (Rudyk) installed in Kiev. With two exceptions, all the monasteries and convents in Volhynia adhered to this group. In central and eastern Ukraine, the Autonomous Church soon succeeded in restoring a number of monastic institutions, including the Kievan Cave Monastery.

The second ecclesiastical group which developed early in 1942 under the spiritual authority of Metropolitan Dionysius (Valedinsky) of Warsaw, was the Ukrainian Autocephalous Orthodox Church (Ukraïns'ka Avtokefal'na Pravoslavna Tserkva). It was led by Bishop Polycarp (Sikorsky) who was elevated by Metropolitan Dionysius to the rank of archbishop and appointed administrator of the Autocephalous Church. (Subsequently Polycarp assumed the title of metropolitan.) The Autocephalists, while repudiating the 1921 canonical reforms of the UAPTs, admitted its surviving clergy and faithful into their ranks. In 1942 the Autocephalous Church was joined by Metropolitan Theophile Buldovsky of Kharkiv, who emerged from his forced retirement after the Soviet withdrawal to re-establish his jurisdiction in Left-Bank Ukraine. Eventually expanding to a total of 15 bishops and some 1,500 clergy, the Ukrainian Autocephalous Orthodox Church brought into its ranks the more nationally conscious strata of the Ukrainian Orthodox who welcomed the revival of the Ukrainian language and native religious traditions of the church.

FIGURE 48. METROPOLITANS DIONYSIUS AND POLYCARP

To heal the widening ecclesiastical rift, leaders of the Autocephalous and Autonomous churches met in Pochaïv in October, 1942, and reached a tentative agreement to unite the two groups in a single Ukrainian Autocephalous Orthodox Church. The union failed to materialize, however, in the face of strong opposition on the part of both the Russian-oriented Autonomous bishops and the German occupation authorities. The relations between the two churches deteriorated further after Metropolitan Alexis Hromadsky was killed in 1943 (probably accidentally) in an ambush set up by Ukrainian partisans. Subsequently the partisans also assassinated the Autonomous bishop, Manuel (Tarnavsky). Since some of the Autocephalist clergy were maintaining contacts with the anti-German Ukrainian partisan movement, many priests were persecuted by the Germans. Churches were often burned with congregations and priests

inside them. At the same time a number of Ukrainian clergymen fell victim to Bolshevik (especially in Polisia) and Polish (in the Kholm region) partisans.

With the German retreat in 1943–4, several Autonomous bishops and all but one (Metropolitan Buldovsky) Autocephalous hierarch sought exile in the west. Their example was followed by a certain number of the clergy. In the territories reoccupied by the Soviet army, representatives of the Moscow patriarchate incorporated the remaining Autonomous bishops and clergy into the Russian Church. Autocephalous parishes were also "reunited" with the patriarchate, with many of the UAPTs priests and lay leaders executed or deported to forced labor camps; some clergymen, including Metropolitan Buldovsky, were stripped of their sacerdotal functions. Since that time the Ukrainian national church exists only outside the boundaries of the USSR.

FIGURE 49. EPISCOPATE OF THE UKRAINIAN AUTOCEPHALOUS ORTHODOX CHURCH IN 1944

### The Ukrainian Exarchate Since 1944

Meanwhile, a significant shift took place in the Soviet regime's attitude towards the Moscow patriarchate. Reciprocating for the latter's support of the Soviet war efforts, the government lifted a number of long-standing restrictions on the activities of the Russian Orthodox Church, permitting the re-opening of the churches, several theological schools, and some monasteries. In the fall of 1943 the regime permitted the election of Metropolitan Sergei to the patriarchical see of Moscow. Following Sergei's death, Metropolitan Alexis (Simansky) was elected patriarch at the local sobor in January, 1945, which adopted a new statute for the Russian Church, incorporating the official concessions received from the regime. To ensure minute political surveillance of the Church's activities, a governmental Council for the Affairs of the Russian Orthodox Church was established in the fall of 1943.

Under Stalin's new religious policy the Russian Orthodox Church enjoyed privileges denied to some other denominations in the Soviet Union. It was allowed not only to retain the churches and monasteries reopened in Ukraine during the German occupation, but also to establish its jurisdiction over the Orthodox parishes in Bukovina and Transcarpathia and to displace the forcibly dissolved Ukrainian Greek Catholic Church in Galicia and Carpatho-Ukraine. By the early 1950's the Russian Orthodox Church in the Ukrainian SSR reportedly embraced some 8,500 churches with approximately 6,800 priests, organized in 19 dioceses corresponding to administrative divisions of the Ukrainian SSR. It also maintained three theological seminaries (with nearly 500 students) in Kiev, Odessa, and Lutsk and some 38 monasteries and convents. Thus Ukraine accounted for more than one-half of all the Orthodox churches and monasteries in the Soviet Union, with the highest density of active congregations in the western *oblasts*.

Despite this great concentration of Orthodox parishes in the Ukrainian exarchate, the latter has been denied any semblance of ecclesiastical autonomy, with each diocese, monastery, and theological institution subordinated to Moscow, and the position of exarch of Ukraine reduced to a purely honorary one. From 1944 to 1964 the post of

exarch had been occupied by a Russian, Metropolitan Ioan (Sokolov) of Kiev and Galicia: in 1964, another Russian, Ioasaf (Leliukhin), was appointed to succeed Ioan as metropolitan of Kiev and exarch of Ukraine. After Ioasaf's death in 1966, the post of exarch went to the young (born in 1929) Archbishop Filaret (Denysenko). In recent years a disproportionately large share of episcopal sees in Ukraine have been filled with Russian hierarchs. Except in the western *oblasts*, the Ukrainian language and religious customs have largely been banned from ecclesiastical use in Ukraine, with the Church used as a medium of Russification. The only Ukrainian-language periodical published in Lviv, *Pravoslavnyi Visnyk* (Orthodox Messenger), appearing from 1946 to 1962 (and again from 1968) was largely confined in circulation to the "reunited Uniates" in Western Ukraine.

The political surveillance and administrative control over the Orthodox Church in Ukraine has been entrusted since 1944 to the plenipotentiary of the Council for the Affairs of the Russian Orthodox Church (renamed in 1966 the Council for the Affairs of Religious Cults) attached to the Republic Council of Ministers, and to its *oblast* representatives.

Following the death of Stalin, the position of the Orthodox Church in the USSR progressively deteriorated. A four-month wave of anti-religious violence in mid-1954 was followed by milder forms of atheist propaganda. In the winter of 1958–9 the regime began to impose increasingly severe legal and administrative restrictions upon the Church's activities, gradually withdrawing Stalin's wartime concessions and committing massive resources to an anti-religious campaign. In Ukraine, an anti-religious journal, *Voiovnychyi Ateïst* (The Militant Atheist) was launched in 1960; renamed *Liudyna i Svit* (Man and the World) in 1965; it has a printing of 83,000 copies. The press, radio, and television, along with a large number of professional and volunteer agitators, were committed to the "anti-religious front." Instruction in atheism was introduced throughout the school system of the Ukrainian SSR to supplement a growing network of "museums," "universities," "houses," and "corners" of atheism. In 1963 alone, some 222,000 lectures on atheistic topics were offered to a total audience of thirteen million. At the same time, the regime has made persistent efforts to introduce Communist substitutes for religious holidays and ceremonies.

Under the mounting pressure of the regime, more than half of the churches and four-fifths of the monastic institutions in Ukraine have been closed in recent years. (In 1964 approximately 20 to 25 churches were closed, destroyed, or turned to other uses every month in Ukraine, the majority being in the western *oblasts.*) The authorities also forced the closing of the theological seminaries in Kiev and Lutsk and succeeded in sharply reducing the number of students in the Odessa seminary. Some bishops and priests have been officially accused of political and moral offenses (in particular, "illegal" baptisms of children, the teaching of religion to minors, distribution of religious objects) and subjected to repressive measures. Several diocesan sees have remained vacant for years, with a growing number of congregations deprived of pastoral care. The suppression of a large number of parishes has been driving Orthodox believers into the growing religious "underground" in Ukraine, hitherto largely reserved for the "prohibited" denominations, especially the Ukrainian Greek Catholics. Khrushchev's removal in October 1964 has been followed by a slight moderation in the anti-religious campaign in the Ukrainian SSR.

## THE ORTHODOX CHURCH IN POLAND

### 1919–39

In the eastern lands of the Polish state established after World War I, adherents to the Orthodox Church numbered close to four million. Most of these people were Ukrainians (2.5 million) who lived in Volhynia, Kholm, and Polisia and Belorussians who lived in Polisia and the Vilna region. Russians and Czechs were not numerous, although Russian influence in the Church remained strong owing to the extensive Russification of the local Orthodox Church before World War I when these territories had formed a part of the Russian empire.

In the first years of Polish rule (1919–20) the Church lost a portion of its property when the Polish authorities deprived almost 500 churches (located mostly in the area west of the River Buh) of their lands. Despite wartime destruction in the territories in which the Orthodox lived, local church life gradually returned to normal; it centered around the remaining bishops and institutions established by the clergy and laymen, such as the Volodymyr ecclesiastical administration which was formed in Volhynia in 1919. The desire of the local Orthodox Ukrainian-Belorussian population to terminate their dependence on the ecclesiastical center in Moscow coincided with the policies of the Polish government. For this reason, the Moscow-oriented bishops were not allowed to assume leadership of the Church, and it came to be headed by a metropolitan of Ukrainian origin, George Yaroshevsky, a former rector of St. Petersburg Theological Academy who had come to Warsaw from Italy in 1921 and been given the title of exarch by the Moscow patriarchate. Metropolitan George convoked a sobor of bishops in January, 1922, which adopted the Provisional Rules of Church-State Relations which were made public by the Polish government in 1922. He also strove for the separation of the Church from Moscow and this deepened the differences within the episcopate and brought forth protests from supporters of the Church's continuing ties with Moscow. In the midst of the internal struggle, Metropolitan George was assassinated (1923) by a Russian opponent of his policy. Bishop Dionysius Valedinsky of Kremianets became the new metropolitan. He found himself in a difficult position because the Polish administration, in attempting to assimilate the minorities, had begun to destroy the cultural life of the non-Poles, closing their schools and other educational institutions (see p. 179) and persecuting their churches. The Metropolitan, meeting the authorities halfway, made unsuccessful efforts to preserve the Church's independence in purely ecclesiastical affairs at the price of concessions to the government. Internally the Church was weakened by the national differences among its believers, especially by the clash of Russian and Ukrainian interests.

Metropolitan Dionysius continued his predecessor's efforts to secure autocephaly. He terminated relations with Moscow and turned to the patriarch of Constantinople. In 1924, with the cooperation of civil authorities, the

Orthodox Church in Poland acquired autocephaly through a charter (*tomos*) of the Ecumenical Patriarch, with Dionysius receiving the title of His Beatitude. The *tomos* emphasized that the subordination of the Kievan metropolitanate (which included the lands now under Polish rule) to Moscow in the seventeenth century had been a violation of the canonical rules. Even though a decree had been published by the president of the state (1930) concerning its convocation, the next step in the reordering of the Church, a local sobor, was never realized because of the procrastination of the secular authorities. The pre-sobor conference consisting of 30 clergymen and laymen had not completed its work when the Polish state fell in 1939. But in 1938 the authorities did promulgate the Internal Statute of the Polish Autocephalous Orthodox Church and a presidential decree, On the Relation of the State to the Polish Orthodox Church. These two enactments made the Church dependent on the state by giving the state the power of sanctioning all ecclesiastical appointments from bishops to sextons, by introducing Polish as the official language in the Church, and by other similar regulations.

The metropolitanate was composed of five dioceses: Warsaw-Kholm, Volhynia, Vilnius, Grodno, and Polisia; in some dioceses the ruling bishops were assisted by vicars. There were theological seminaries in the dioceses of Vilnius and Volhynia (Kremianets), and in Warsaw there was a theological lyceum and a theological department at the University (after 1924). But the seminaries were gradually eliminated as the authorities favored the schools in Warsaw which were designed to produce a new type of priest—the Orthodox Pole.

As a consequence of these measures, the number of Orthodox clergy declined. Along with the confiscation and destruction of churches in 1929 and 1930, 111 Orthodox churches were closed, 59 were destroyed, and 150 were converted into Roman Catholic churches in the Kholm and Podlachia regions in the early thirties. In addition, a "revindication" campaign was conducted in all dioceses with the aim of depriving the Orthodox of those churches that had in the past belonged to the Greek Catholic (Uniate) or Roman Catholic churches. The destruction of churches assumed major

FIGURE 50. ORTHODOX CHURCH IN THE VILLAGE POKROVKA (KHOLM AREA) DESTROYED IN 1938

proportions in 1938 when, within a few months, almost 150 churches were destroyed in the Kholm area and in Podlachia, among them many ancient shrines dating back to the fifteenth century. Protests made in the Polish parliament, the intervention of Metropolitan Dionysius at the highest levels, the echoes of these events in the world press, a message of protest (confiscated) issued by the metropolitan of the Greek Catholic Church, Andrew Sheptytsky, and the resistance of the local population were all of no avail.

Concurrent with the "revindication" policy, the authorities resorted to various methods to convert the Orthodox to Catholicism. Thus after 1923 the "New Union" (see p. 193) was fostered, but it had no significant success. Simultaneously with the Polonization of the theological seminaries, the "new" (Gregorian) calendar and the Polish liturgical language were introduced in the Church (the Commission for the Translation of Theological Books into Polish, 1934); the most politically submissive students of the theological schools were shown special

favors and were subsequently chosen to fill the highest Church posts (Bishops Timothy Shreter and Matthew who led the Polish Orthodox movement, for example). The campaign of forcible conversion to Catholicism was most intense in the border zone of Volhynia. It was conducted by army units, especially the Corps of Frontier Guards; those peasants whom the authorities considered to be of Polish ancestry but who had no desire to change their religion were driven from their home villages. (Especially grave incidents occurred in the village of Hrynky in 1937). The campaign was unsuccessful, however, since only 4,000 of a projected 350,000 "converts" agreed to change their religion.

Even under these special circumstances, the Orthodox Church in Poland was at this time the only one in the Ukrainian ethnographic territories which had any Ukrainian characteristics. (The Ukrainian church in the USSR was completely destroyed and churches in Bukovina and in Transcarpathia were numerically insignificant.) In 1921 the Volhynian diocesan congress had resolved to allow the use of the Ukrainian language in church services and Bishop Dionysius had blessed the translations of theological texts. Both Dionysius' successor, Archbishop Alexis Hromadsky, and Bishop Polycarp Sikorsky of Lutsk were well disposed to the Ukrainian influences in the Church. There were also many nationalists among the Ukrainian clergy and lay leaders of Volhynia and the Kholm region. The Ukrainian Scientific Institute in Warsaw and the Society of Peter Mohyla, founded in 1931 in Lutsk, attracted an influential group of lay church leaders (Alexander Lototsky, Ivan Vlasovsky, Michael Kobryn, Serhii Tymoshenko, and others). They prepared and published translations of theological texts and works on the history and organization of the Church. The number of Ukrainian religious periodicals increased, although individual journals were short-lived, since they were usually suppressed by the Polish administration. The best-known of these periodicals were *Tserkva i Narid* (The Church and the People, 1935–8), *Dukhovnyi Siiach* (The Spiritual Sower, 1927–31), *Za Sobornist'* (For Conciliarism, 1932–5), and *Shliakh* (Pathway, 1937–9). For a long time the Kremianets Theological Seminary was in fact a Ukrainian school, and in the Theological Department of the University of Warsaw many young Ukrainians were educated under the guidance of Ukrainian scholars. Neither the weakening Russophile traditions of the Church's central administration nor the Polonization fostered by the government could arrest the spontaneous Ukrainian movement.

Excessive enthusiasm for this movement frequently contributed to disunity in ecclesiastical life, leading as it did to sharp attacks on the Church's leadership (the 1927 Church congress in Lutsk in which 524 delegates from the parishes took part or the mass demonstrations at the Pochaïv Monastery in 1933). For the most part, the younger priests sympathized with the demands of the nationalist movement for the introduction of the vernacular into the church services, the participation of laymen in church life, and other changes. However, the radical methods of this movement alienated conservative elements in the clergy. This led to the marked polarization of the clergy, which was so detrimental to church life that during World War II the Church in Volhynia, and indeed in most of Ukraine, split into two parallel and competing ecclesiastical organizations (see pp. 174–6).

### In the Generalgouvernement

As a consequence of the war in 1939 and of the frontier changes, a small part of the Polish Autocephalous Orthodox Church (the Warsaw-Kholm diocese and part of the Grodno eparchy) found itself on the territory of the *Generalgouvernement* [Vol. I, p. 874], while the other dioceses remained under Soviet occupa-

tion. Under German pressure, Metropolitan Dionysius of the Polish Orthodox Church resigned in 1939 in favor of the Archbishop of Berlin and Germany, Seraphim Lade (a Russified German).

After the fall of Poland, Ukrainian church life in the Kholm region and Podlachia revived rapidly. Several dozen former Orthodox churches which had been either closed by the Poles or transformed into Roman Catholic churches were reopened; a series of new parishes was organized. An active ecclesiastical center emerged in Kholm—the Ukrainian Church Council—headed by Protopresbyter Ioan Levchuk. Of great significance was the return of the ancient cathedral in Kholm which had been seized by the Poles in 1918; the cathedral was recovered as a result of the intervention with the German authorities by the head of the Ukrainian Central Committee, Volodymyr Kubijovyč [Vol. I, p. 875]. Thanks to his efforts, Metropolitan Dionysius resumed his ecclesiastical leadership in mid-1940 (Archbishop Seraphim returning to Berlin), after pledging loyalty to the German authorities in Cracow, and began to cooperate with the Ukrainian community. Shortly afterwards Professor Ivan Ohiienko (Archbishop and later Metropolitan Hilarion) was ordained bishop of Kholm while Archbishop Palladius (Vydybida-Rudenko) was placed in charge of the small Cracow-Lemkian diocese.

FIGURE 51. METROPOLITAN HILARION (IVAN OHIIENKO)

The Autocephalous Orthodox Church in the *Generalgouvernement* (this was its new name) consisted of three dioceses—Kholm-Podlachia (175 parishes in 1943), Cracow-Lemkian region (35 parishes), and Warsaw (*ca.* 10 parishes)—each with its own consistory. The Church's central institution was the sobor of bishops, headed by Metropolitan Dionysius who also administered the diocese of Warsaw. In 1942, the sobor of bishops adopted an internal statute for the church, based on the internal statute of the Polish Orthodox Church but containing a number of changes. In 1943 the statute was acknowledged by the German authorities. Ukrainian became the official language of the Church, and Church Slavonic with the Ukrainian pronunciation was adopted as the liturgical language in Ukrainian parishes. Clergymen were to be trained in the theological seminaries of Kholm and Warsaw.

The further growth of the Orthodox Church under the *Generalgouvernement* was prevented by the subsequent course of the war and the chaotic circumstances which prevailed at the end of the German occupation [Vol. I, p. 889], in particular the attacks of Polish partisans on the local Orthodox Church in the Kholm region and in Podlachia. In 1944, shortly before the arrival of the Soviet armies, the hierarchs and some of the Orthodox clergy emigrated to the West. Metropolitan Dionysius returned to Warsaw in 1945, but Archbishops Hilarion and Palladius left for America and thus the Autocephalous Orthodox Church in the *Generalgouvernement* ceased to exist. In Poland, the number of Orthodox adherents decreased greatly as most of them were transferred to the USSR under the terms of the Polish-Soviet agreement of 1945. Those who remained were, with few exceptions, deported by the Polish authorities to the new territories annexed by Poland from Germany.

**At Present**

On his return to Warsaw, Metropolitan Dionysius resumed his leadership of the Orthodox Church. There were two other Orthodox bishops in Poland who came out of retirement, one of them being Timothy Shreter. The pro-Russian elements in the Church, which felt stronger in the altered political situation, began a

campaign against Metropolitan Dionysius. They objected to his previous aspirations towards independence from Moscow, which had resulted in the proclamation of autocephaly in 1924, as well as to his services to the Ukrainian Autocephalous Orthodox Church in 1942–3 and his loyalty to the Germans. In 1948 a delegation (including the two bishops from Poland) which claimed to speak on behalf of the Polish Autocephalous Orthodox Church was sent to Moscow. The delegation rejected and condemned the autocephaly of 1924 and asked the Moscow patriarchate to confer a "canonical" autocephaly on the Polish Church. This request was granted in 1948 and the church became known as the Pravoslavna Pols'ka Avtokefal'na Tserkva (Orthodox Polish Autocephalous Church) or PPATs. Metropolitan Dionysius was deprived of his position.

For some time, the Polish Orthodox Church had no leader, but in 1951 the patriarchate of Moscow granted the request of the Polish Church and released the Archbishop of Lviv and Ternopil, Makarius (Oksiiuk), to assume the post of metropolitan. After his death Bishop Timothy became metropolitan. He died in 1962 and the metropolitan see remained vacant until 1965. Since 1965 the Church has been under the administration of Metropolitan Stephen Rudyk, the former archbishop of Białystok-Gdańsk.

The metropolitanate is divided into four dioceses: Warsaw-Biała, headed by the metropolitan (95 parishes); Białystok-Gdańsk (50 parishes); Poznań-Łodź (15 parishes); and Wrocław-Szczecin (46 parishes). The few remaining islands of Ukrainians in the Kholm area and in Podlachia—the lands which before 1945 were densely populated by the Orthodox most of whom were exiled to the USSR or westward—fall in the first two of these dioceses. The churches the exiles left behind were ruined by the new Polish settlers, even though some of them were valuable artistic and historical monuments (architecture, icons, old prints, manuscripts). The cemeteries are also being destroyed along with other traces of the past inhabitants.

Today the Polish Orthodox Church has nearly one-quarter of a million adherents, the majority being Ukrainian (though because of the persecution, many Orthodox officially call themselves Polish Catholics). They are served by some 150 priests and 10 deacons. In all, there are 206 parishes, a monastery in Yablochyn in Podlachia, and a nunnery near Simiatychi in the Białystok region. Since 1951 an ecclesiastical seminary has been operating in Warsaw. Candidates for the priesthood may obtain higher theological education in the Section of Orthodox Theology at the Christian Academy in Warsaw. (In 1963 there were 43 students.)

The Ukrainian language has disappeared from the administration and services of the Church and has been replaced by Russian, Polish, and Church Slavonic with the Russian pronunciation. The monthly organ of the Polish Orthodox Church, *Tserkovnyi Vestnik* (Church Herald), is also published in the Russian language.

## THE UKRAINIAN CATHOLIC CHURCH SINCE 1800

### The Destruction of the Uniate Church in the Russian Empire

After the first partition of Poland (1772), Russia acquired the Belorussian Polotsk region including the entire Uniate archdiocese of Polotsk. Although Empress Catherine II guaranteed, in the partition agreements, freedom of religion

to Catholics of both rites (among them over 600,000 Uniates), her attitude towards the Uniate Church was hostile from the start. In contrast, the Latin Church was tolerated, and its bishop (after 1782, the archbishop of Mohyliv, Stanisław Siestrzencewicz-Bohusz) even had the right to convert Uniates to Roman Catholicism. Though it was banned by Pope Clement XIV in 1773, Catherine left the Jesuit Order intact in Russia and allowed it to maintain its own colleges.

Following the new partitions of Poland (1793 and 1795) and the annexation of the Right Bank and Volhynia to Russia, almost 3,300 Ukrainians and Belorussian Uniate parishes, with over three million adherents, found themselves in the Russian empire. Having liquidated the Kozak-Hetman state, the Russian government was consistently destroying all elements of distinctly Ukrainian political, cultural, and religious (see p. 165) life in Left-Bank Ukraine. It would not tolerate the Uniate Church on its territory because the latter's pro-western character could impede the Russification of the Ukrainian population. To be sure, in the Treaty of Grodno in 1793, Catherine once again guaranteed the Uniates religious freedom but by 1795 she had already abolished four Ukrainian Uniate dioceses—the metropolitanate, Lutsk-Ostrih, Volodymyr-Berestia, and Pinsk-Turiv—leaving only the Polotsk archdiocese in Belorussia intact. Orthodox Bishop Victor Sadkovsky received orders to convert the Uniates. The decision of Empress Catherine to destroy the Union, the violent methods of the Russian administration, particularly the removal of those priests who did not wish to embrace Orthodoxy (many were imprisoned and exiled to Siberia) and their replacement with the Orthodox clergy, the national intolerance of Poles towards Ukrainians, the passivity of the rural population—these factors all led to the adoption of Orthodoxy by 9,000 Uniate parishes and the majority of the faithful during the years from 1768 to 1796. One hundred and forty-five Basilian monasteries were closed, the property of bishops was confiscated, and Metropolitan Theodosius Rostotsky was exiled to St. Petersburg.

The death of Catherine II (1796) brought an end to the destruction of the Uniate Church in Ukraine and Belorussia. Her successor, Paul I (1796–1801), was tolerant towards Eastern Catholicism and concluded an agreement with the apostolic nuncio, Lorenzo de Litta, on the basis of which a part of the Uniate hierarchy in Ukraine was restored (decree of April 28, 1798). Those Uniates who had been exiled to Siberia were allowed to return and their confiscated property was restored to them. Bishop Josaphat Bulhak was appointed to the Berestia diocese (excluding the Volodymyr area), and Bishop Stephen Levynsky to the Lutsk diocese. The metropolitan archdiocese and the Pinsk-Turiv eparchy were not restored, however. (Metropolitan Rostotsky continued to reside in St. Petersburg until his death in 1805.)

FIGURE 52. JOSAPHAT BULHAK

FIGURE 53. HERACLES LISOVSKY

In 1806 Tsar Alexander I restored the Uniate Metropolitanate and appointed as metropolitan Bishop Heracles Lisovsky of Polotsk. After his death Gregory Kokhanovych succeeded to the see, with the title of Metropolitan of the Uniate Church in Russia (but not of Kiev). Because the Tsar had autocratically nominated metropolitans and created new dioceses, Rome refused to grant formal

recognition to these acts but rather tolerated them without confirming the appointment of the two metropolitans. Metropolitan Lisovsky was known for his desire to purge the rite of Latin influences which some interpreted as an inclination to Orthodoxy. He also desired to recover those Uniates who had been converted to Roman Catholicism. After the death of Metropolitan Kokhanovych (1814), a successor was not named until 1817 when Tsar Alexander appointed Josaphat Bulhak, the bishop of Berestia, as metropolitan. Rome confirmed this appointment (1918), by conferring on him, as the Delegate of the Apostolic See, all rights except the title of the Kievan metropolitan.

The Uniate Church in Russia was subordinated to the Roman Catholic Ecclesiastical College in St. Petersburg (created in 1801, with Archbishop Siestrzencewicz as its head). In 1804 a separate department for the affairs of the Uniate Church was created within it under Archbishop Lisovsky. A Uniate theological seminary was organized at the University of Vilnius (Wilno).

The new Russian tsar, Nicholas I (1825–55), whose policy was designed to finally destroy Ukraine's distinctive character, resolved to abolish the Eastern Catholic Church in Russia. In 1825 the Uniate Church in Russia still had four dioceses with one metropolitan, two bishops, and three vicar-bishops, close to 1,600 parishes and 2,000 clergy, 37 monasteries and 10 convents, and approximately 1.5 million adherents. Beginning in 1827, Tsar Nicholas restricted the rights of the Basilian Order, the chief source of support for the Uniate Church. On the basis of a plan proposed by the assessor of the Uniate Department, Joseph Semashko (who became a bishop in 1829), Nicholas I issued a decree (1828) whereby the Uniate Department in St. Petersburg was separated from the Latin College, the Lutsk and Berestia dioceses were abolished, and Semashko was charged with the task of purging the Uniate rite of Latinism. The immediate pretext for the liquidation of the Eastern Catholic Church was the participation of some Uniate priests and monks in the Polish insurrection of 1830–1. In 1835 a special committee was created for the "conversion" of the Uniates to Orthodoxy, and in 1837 the Uniate Church was subordinated to the Oberprocurator of the Holy Synod. After the death of Metropolitan Josaphat Bulhak in 1838, Semashko and his vicars, Basil Luzhynsky and Anthonius Zubko, forced the clergy subordinate to them to accept Orthodoxy. On February 12, 1839, in Polotsk, they proclaimed the Union of Brest null and void and announced the accession of the Uniates to the Russian Orthodox Church. Many clergy who refused to adopt Orthodoxy (593 out of a total of 1,898) were exiled to Siberia or the interior of Russia. To commemorate this "voluntary reunion" Tsar Nicholas ordered a medal with the cynical inscription "separated by force—1596, reunited by love—1839." Pope Gregory XVI, in his allocution of November 22, 1839, protested the liquidation of the Union as did the Galician Metropolitan Michael Levytsky. In all, some two million faithful—both Belorussians (the majority) and Ukrainians (mostly in Volhynia)—were thus "converted."

Remnants of the Uniate Church in the Russian empire survived only in the Kholm region and Podlachia because these territories, as parts of the former (up to 1831) autonomous kingdom of Poland, still had a degree of autonomy. The sole Uniate diocese (Kholm) that remained in Russia after 1839 was located in this area. The Latinization and Polonization of the Uniate Church and its clergy in the Kholm region and Podlachia had proceeded quite far. The Kholm diocese had been subordinated during 1807–30 to the Galician metropolitanate and afterwards directly to Rome. In the 1830's the Russian government began to restrict the rights of the Kholm bishop and to propagate Ortho-

doxy and Russification. In a move designed to displace the local clergy loyal to the Catholic Church, the authorities began to bring in Russophile priests from Galicia who helped to spread Orthodoxy.

The last Uniate bishop of Kholm was Michael Kuzemsky from Galicia (1868–71). After his removal under pressure from the Russian government, a Galician priest, Markyl Popel, was appointed administrator of the Kholm diocese; he aided in the ultimate destruction of the Union. In 1875 the Kholm diocese was subordinated to the Orthodox metropolitan of Warsaw and Popel became his vicar with the title of bishop of Lublin. The liquidation of the Union was accompanied by mass repressions of those peasants who did not want to leave the Church, as well as the imprisonment and exile of "recalcitrant" priests (43 by March, 1874). Still, many of the 290,000 Uniates became Orthodox in form only. Thus, in 1905, when the Tsar issued his Toleration Act which permitted a return to the Roman Catholic Church, but not the Eastern Catholic Church, almost 40 per cent of the Orthodox in the Kholm region and Podlachia became Roman Catholics.

FIGURE 54. MICHAEL KUZEMSKY

### The Greek Catholic Church in Galicia under Austrian Rule

In the first partition of Poland (1772), Austria acquired Galicia and its two dioceses—Lviv-Halych and Peremyshl-Sambir-Sianik, as well as parts of the dioceses of Kholm, Belz, and Lutsk. After 1795 all of the Kholm diocese came under Austrian rule and remained so until 1809. For a short time afterwards it belonged to the Duchy of Warsaw but in 1815 it became part of the Russian-controlled Polish kingdom.

Compared with its past status under Polish rule (see pp. 156 ff.), the legal and moral position of the Uniate Church in Galicia changed for the better after it was placed under Austrian rule. The Austrian monarchs, Maria Theresa and Joseph II, made the Eastern Catholic Church an equal of the Roman Catholic. In 1774 the Church's name was changed from Uniate to Greek Catholic. In order to raise the educational level of the Ukrainian clergy, candidates for the priesthood were sent from Galicia and Transcarpathia to the Greek Catholic Theological Seminary in Vienna, which was opened by Maria Theresa in 1775. The seminary, called Barbareum (after the Greek Catholic church of St. Barbara to which it was attached), existed until 1784. In 1783 a Greek Catholic theological seminary, organized on the western model, was opened in Lviv. At first, it was to serve only the Lviv-Halych diocese, but after two years it accepted candidates from outside of Galicia. In 1784 Joseph II also established a university in Lviv but since its language of instruction was Latin and some Ukrainian students who were untutored in Latin could not take advantage of the lectures, a Studium Ruthenum was established for them in 1787 at the university, where the lectures were given in the "popular Church-Ruthenian language." (It lasted until 1809.) Graduates of the Barbareum, the Lviv Theological Seminary, and later of the University of Lviv, supplied the Greek Catholic Church with a cadre of enlightened clergymen and at the same time raised the level of religious and national life in Galicia.

The favorable Austrian attitude towards the Greek Catholic Church was used to advantage by the bishop of Lviv, Leo Sheptytsky (1749–79; after 1778, the metropolitan of Kiev and Halych), in his efforts to gain rights for the Greek Catholic Church equal to those of the Roman Catholic Church. He was also known for his completion of St. George's Cathedral in Lviv. His successor, Peter

Biliansky (1781–98) did much for the development of the elementary school system.

With the partition of the Kievan-Galician metropolitanate between Poland and Austria, and after 1795, between Russia and Austria, the administration of the Lviv, Peremyshl, and Kholm dioceses was difficult; therefore, immediately after the first partition of Poland, the question of creating a metropolitan see in Lviv, to which all the Greek Catholic dioceses on the territory of the Austrian empire would be subordinated, was raised. However, Hungarian opposition postponed the project's realization, and it was only after the third partition of Poland that the Galician bishops requested the Austrian government to re-establish the old Galician metropolitanate which had existed in the fourteenth century (see p. 144). Although the Austrian government sympathized with this cause, the Kievan metropolitan, Rostotsky, was against the re-establishment because he performed—as had his predecessors—the metropolitan's duties throughout the entire Kievan-Galician see. It was only after his death in 1805 that Emperor Francis I approved (1806) and Pope Pius VII sanctioned (1807) the restoration of the see with the Galician metropolitans acquiring rights similar to those of the Kievan metropolitans. The efforts of the Ukrainian Church leader Michael Harasevych and Bishop Anthony Anhelovych of Peremyshl contributed much to the restoration of the metropolitanate. Bishop Anhelovych became the first metropolitan (1807–14). The last steps in the equalization of the Greek Catholic and Roman Catholic Churches were the imperial decrees of 1813 and 1816 instituting consistories (the bishops' advisory bodies for administrative affairs) in both dioceses. (Pope Pius IX ratified both chapters in 1864.) The powers given to the Galician metropolitan by the Holy See in 1807 were restricted by the concordat signed by Austria and the Holy See in 1855, and afterwards by the resolution of 1874, under which the nomination of metropolitans, bishops, and consistory members (*kryloshany*), and the division of dioceses or the creation of new ones were made the prerogative of the Austrian monarch.

Because the Greek Catholic Church was granted equal status with the Roman Catholic Church and because the Ukrainian clergy obtained the same rights as the Polish clergy and thus increased their educational and economic status, the Greek Catholic Church became the national church of the Galician Ukrainians and the Greek Catholic clergy their leaders. For a long time the Church was the representative and defender of the rights of the Ukrainian people before the Austrian administration and in the struggle with the Poles. Although the Greek Catholic Church was confined to the territory of the Habsburg monarchy after 1839, it now experienced a renaissance after centuries of decline. From the end of the eighteenth century on, the Church assumed a particularly important part in the education of both the clergy and the masses. Among those who played important roles in this development were the bishops of Peremyshl, Michael Levytsky (1813–16) and Ivan Snihursky (1817–40), and Ivan Mohylnytsky, a member of the consistory (see p. 334). Bishop Levytsky continued to work in this field in the Lviv diocese after he became metropolitan of Galicia in 1816. (In 1856 he was made a cardinal; he died in 1858.) He arranged for Ukrainians to be appointed to several chairs in the theology department of the University of Lviv.

The Greek Catholic hierarchy and clergy of the time were noted for their conservatism and their devotion to the Church's traditions and rites, and to the Church Slavonic language. They had no sympathy for new cultural and social trends. Although characteristically aristocratic and mainly Polish-speaking in both private and public life, they considered themselves Ukrainian (Ruthenian) and

FIGURE 55. MICHAEL CARDINAL LEVYTSKY

FIGURE 56. GREGORY BARON YAKHYMOVYCH

took an anti-Polish stand in ecclesiastical and political matters. But a younger generation of priests, brought up in the spirit of Romanticism and western liberal democracy, began to emerge in the 1820's and 1830's. They made their first impact in the field of literature (the Rus'ka Triitsia [Ruthenian Trinity] led by Markiian Shashkevych [Vol. I, pp. 698 and 1009]), publishing their works in the language of the people.

The Greek Catholic Church played a dominant role in the political awakening of Galician Ukrainians in 1848; the Supreme Ruthenian Council was led by the energetic Bishop Gregory Yakhymovych (metropolitan, 1860–3), and subsequently by a member of the consistory, Michael Kuzemsky [Vol. I, p. 699]; these clergymen were the initiators and leaders of such organizations as the Congress of Ruthenian (Ukrainian) Scholars (Sobor Ruskykh Uchenykh) and the enlightenment society, the Galician-Ruthenian (Ukrainian) Matytsia (see p. 334).

In the 1850's, and especially in the 1860's when the Austrian government transferred the administration of eastern Galicia to Polish hands, the entire Greek Catholic hierarchy – the *sviatoiurtsi* (named after the metropolitan cathedral of St. George in Lviv)—disappointed at the lack of support from the central Austrian government and frustrated by their own inability to do anything about it, went over to the Russophile movement [Vol. I, pp. 700 ff.]; the latter oriented itself culturally and partly politically towards Russia, stressing at the same time its loyalty to the Austrian monarchy. As in the past, the Russophiles utilized Church Slavonic which now was transformed into *yazychiie* (patois), a mixture of the Church Slavonic, Ukrainian, and Russian languages and etymologic orthography. They continued to show contempt for the vernacular and took a hostile attitude towards the populist movement, which developed in the 1860's under the influence of the democratic currents in Dnieper Ukraine and which stood for a Ukrainian national platform, including the preservation of the vernacular in literature [Vol. I, pp. 701 ff.].

In the ecclesiastical sphere, the *sviatoiurtsi* desired a return to the purity of the Eastern rite, which had fallen under Latin influence over the years. When the Poles attempted to take advantage of their superior strength to convert the Greek Catholics to the Latin rite, Metropolitan Spyrydon Lytvynovych (1863–9) arranged, in 1863, an understanding between the two rites—the Concordia—which under the threat of ecclesiastical penalties prohibited the change from one rite to another without the approval of the Pope. This concordia was ratified by the Pope and the Austrian emperor and was made public by all the bishops of the Eastern Catholic and Latin rites. For some time this agreement was observed but subsequently the Poles began to evade it and in the 1920's and 1930's it was ignored.

Russophilism, which continued to spread, placed the hierarchy of the Greek Catholic Church in a difficult position. It had acquired a political coloring and become increasingly controlled by Russian influences; it contributed more and more to the spread of Orthodoxy. This increased Russophilism manifested itself in such events as the transfer of the entire Uniate diocese of Kholm to Orthodoxy under the direction of several dozen Greek Catholic clergy, the conversion to Orthodoxy of the well-known Galician priest, Ivan Naumovych, and the population of the village of Hnylychky in the

Zbarazh district. These developments led to the resignation of Metropolitan Joseph Sembratovych (1870–82) under pressure from Emperor Franz Joseph. An additional factor in Sembratovych's resignation was the influence of the Polish gentry who resented the metropolitan's campaign against drunkenness among the peasantry, for this deprived the gentry of their revenue from the sale of whiskey, a monopoly of the landowners. After the resignation of Joseph Sembratovych, the *sviatoiurtsi* lost their influence and the new metropolitan, Sylvester Sembratovych (1885–98; created a cardinal in 1895) adopted a Ukrainian national platform. This shift in the metropolitan's orientation was influenced by the populists' clear superiority over the Russophiles at that time [Vol. I, pp. 702–3], and the fact that the majority of the clergy adhered to the populist philosophy. Apart from performing their pastoral duties, the clergy became increasingly active in various spheres of Ukrainian national life and contributed greatly to the national rebirth in Galicia. By then, however, the political leadership in Galicia had already passed into the hands of the lay intelligentsia. The latter, along with the peasant leaders, were also in command of Ukrainian political parties, some of which—for example, the Ukrainian Radical party [Vol. I, p. 703]—had an anticlerical bias (formerly an attribute of a section of the populists). The loss of political influence by the Greek Catholic clergy was also caused by the participation of Metropolitan Sembratovych in the creation of the "new era"—an attempted agreement with the Poles [Vol. I, p. 703], particularly because he continued to adhere to this even after it had failed.

FIGURE 57. SYLVESTER CARDINAL SEMBRATOVYCH

FIGURE 58. JULIAN PELESH

At this time several important events occurred in the internal life of the Greek Catholic Church. The first of these was the reform of the Order of St. Basil the Great, which had declined and lost its former significance (only 50 monks remained). The reform was carried out by the Jesuits on the orders of Pope Leo XIII in 1882. The reform justified itself insofar as it led to the intensification of the work and the elevation of the moral-spiritual level of the monastic clergy, but it was modelled on the Latin order and therefore brought into the Greek Catholic Church Latin elements alien to the Eastern ecclesiastical spirit. After the reform, Basilian activity increased particularly in the missionary field, with the publication of popular religious pamphlets and the monthly *Misionar* (Missionary) published in Zhovkva. Scholarly works by Basilians were also published. The reformed Basilians assisted in the reformation of the women's Basilian order which played an important role in secondary school education (gymnasiums and teachers' colleges). Later the Basilians also directed the Congregation of the Sister Servants of Mary Immaculate, founded in 1892 by Father Cyril Siletsky, who devoted themselves to preschool education, bringing up children and youths, and raising religious and educational levels among the masses.

Of great significance was the Lviv synod convoked in the autumn of 1891 by Metropolitan Sembratovych, almost two hundred years after the Zamostia synod of 1720 (see p. 158), to clarify the questions of the rite which almost every clergyman endeavored to solve in his own way: adherents of the Latin rite wished to draw the Greek Catholic

Church still nearer to Roman Catholic rite, while the "Easterners" wanted to purge the rite of Latinisms. At the synod which was presided over by the papal legate, Augustine Chiasca, two trends emerged—conservative and reformist. The reformists supported by Roman circles were unsuccessful in their efforts to introduce celibacy for the clergy. The Lviv synod set down the number of feasts and fasts, and ordered the matters of church discipline, the judiciary, and the divine service. Among the decisions of the synod was a new resolution which made both the secular and the monastic clergy eligible for episcopal office. (The Zamostia synod had granted this right only to the Basilians, but in practice the Austrian government ignored this decision and appointed bishops from among the secular clergy.) The rights of the metropolitan, which had been progressively curtailed, were further limited by the Lviv synod so that the office was confined to a few honors and the right to receive appeals, as has long been the case in the Roman Catholic Church. In general, the Lviv synod brought the Greek Catholic Church closer to the West. Although its resolutions applied only to the province of Galicia, they were also adopted in Transcarpathia and in the United States.

A new bishopric was created in Stanyslaviv in 1885 so that the Galician Greek Catholic province now embraced three dioceses. The first bishop of Stanyslaviv was a learned theologian and Church historian, Julian Pelesh.

A new period in the Greek Catholic Church began with the appointment of Count Andrew Sheptytsky as metropolitan in 1900. A descendant of an old Ukrainian, but Polonized, boyar family which in the eighteenth century had included Metropolitans Athanasius and Leo and Bishops Varlaam and Athanasius Sheptytsky, Andrew Sheptytsky returned to the Eastern rite and joined the Basilian order. In 1899 he became the bishop of Stanyslaviv and in 1900 the Galician

FIGURE 59. METROPOLITAN ANDREW SHEPTYTSKY

metropolitan, a position he retained until his death in 1944. His activities extended into all spheres of life, not only the ecclesiastical, and reached far beyond the boundaries of Galicia. He endeavored to restore the old Eastern tradition and purify the rite, and favored the union of the Eastern Church with the Western. He led the union movement in both the East and the West, and he was the initiator of and participant in the congresses of the ecclesiastical leaders of the various Slavic peoples called to discuss a union of the churches. These congresses met at Velehrad, the capital of the ancient Great Moravian state and the city of the Slavic apostles Cyril and Methodius (since 1907). Metropolitan Sheptytsky was thus a pioneer in the cause of bringing together the churches, anticipating by fifty years the decisions of the Second Vatican Council.

Metropolitan Sheptytsky did much for the development of theology and the education of the clergy. He reorganized

the Greek Catholic Theological Seminary in Lviv and helped to open seminaries in Stanyslaviv (1906) and Peremyshl (1907). He sent the most capable theology students to Rome, Vienna, Innsbruck, and Fribourg (Switzerland) for advanced study. He restored the ancient order of St. Theodore Studite (1904), basing it on the Rule of the Kievan Cave Monastery, thus renewing the Eastern monastic tradition of Ukraine which had lapsed when the Basilians adopted more Western ways. In 1913 he introduced the Congregation of the Most Blessed Savior (Redemptorist Fathers) who had adopted the Eastern rite and who were already active as missionaries among the Ukrainians in Canada. In addition to the reorganization of the Basilian Sisters which he had conducted on behalf of the Order of St. Basil the Great and the Congregation of the Sister Servants of Mary Immaculate, Sheptytsky also established such congregations for women as St. Joseph and Myronosytsi (1910), St. Josaphat (1914), and the Studite Sisters (1921). All these orders and congregations pursued active religious and social work.

The efforts of Metropolitan Sheptytsky also led the Holy See to appoint the first Greek Catholic bishop for the Ukrainians in the United States in 1907. In 1910 Sheptytsky visited the American and Canadian Ukrainians and as a result of this visit a bishop for the Ukrainians in Canada was nominated in 1912 (see p. 201).

Metropolitan Sheptytsky was also a generous patron of Ukrainian cultural, educational, humanitarian (orphanages, hospitals), and economic institutions. In particular he patronized the arts and in 1905 founded the National Museum in Lviv (see p. 412).

Metropolitan Sheptytsky encouraged the clergy to participate in community life. Although he did not interfere in the internal political life of his Ukrainian charges, he more than once came out in defense of the political rights of the Ukrainian people, particularly as a member of the Austrian house of lords (Herrenhaus) and the Galician diet: in 1906 he headed the Ukrainian delegation to the Emperor concerning the reform of elections to the Austrian parliament, and his speeches, both in the Herrenhaus concerning the establishment of a Ukrainian university (1910) and (February 2, 1918) the Austro-Hungarian ratification of the Treaty of Brest-Litovsk with Ukraine, and in the Galician diet on the agreement between the Ukrainians and the Poles concerning changes in the Galician constitution and the reform of elections to the diet (1914), were well known.

With the Russian occupation of Galicia in 1914, Metropolitan Sheptytsky was arrested and exiled deep in Russia, where he remained until the revolution in 1917. While returning from exile, Metropolitan Sheptytsky organized the Russian Catholic Church, appointing Father Leonid Fedorov exarch of Russia (1917) by virtue of powers he received from Pope Pius X (1908). At this time Ukrainian Greek Catholic parishes appeared in Kiev, Odessa, Katerynoslav, and other localities.

### The Greek Catholic Church in Western Ukraine

During the existence of the Ukrainian state (1918–20), the Greek Catholic clergy participated actively in political affairs. Metropolitan Sheptytsky and other hierarchs, as well as a considerable number of clergy, were members of the National Rada (Council) of the Western Ukrainian National Republic. Many priests participated in the county radas and became county commissioners or worked in the administration of the country. Fathers Francis Xavier Bonn (representative to the Vatican) and Josaphat J. Jean were in the diplomatic service. Some 80 clergymen served in the Ukrainian Galician Army as chaplains. Over 1,000 clergymen were subsequently arrested by the Polish authori-

ties because of their participation in the building of the Ukrainian state. Of these, five were executed without trial and dozens died in prisons and internment camps.

After World War I and the failure of the Ukrainian liberation struggle, the entire Galician province of the Greek Catholic Church found itself under Polish occupation. Near the end of 1920 Metropolitan Sheptytsky had travelled to Rome and western Europe in order to reestablish connections with the Holy See and Catholic centers in the West which had been disrupted by the war. During this journey, and again at the time of his canonical visit in 1921–3 to the United States, Canada, Brazil, and Argentina, the Metropolitan more than once spoke in favor of the Ukrainian cause. It was for this reason that on his return to his see in the autumn of 1923, he was confined for some time in the Poznań region by the Polish administration; he was freed only after a protest from Pope Pius XI. The Greek Catholic Church in Galicia was protected from Polish interference by the concordat of February 10, 1925, between the Holy See and Poland. Nevertheless, the Poles continued to attack both the clergy (e.g., mass arrests for the "falsification" of birth certificates [Vol. I, p. 847]) and the Ukrainian character of the Greek Catholic Church; the concordat notwithstanding Greek Catholics were required to change over to the Roman Catholic rite in order to obtain positions in state institutions or enterprises, a body of Greek Catholic Poles, mainly a fiction, was created, and so forth. To isolate the Lemkian region from Ukrainian influence, the Polish administration supported the spread of Orthodoxy in this region, which was anti-Ukrainian in character. In 1934, influenced by Poland, Rome carved out of the Peremyshl diocese a separate apostolic administration for the Lemkian region in which Russophile and Polonophile influences prevailed.

Despite Polish pressure, the Greek Catholic Church acquired still more of the characteristics of a Ukrainian national church before World War II. (It was more and more frequently called the Ukrainian Catholic Church.) Its clergy worked in all spheres of Ukrainian national life and the anticlerical sentiments which had formerly been found in part of the Ukrainian community disappeared. Without reservations, Metropolitan Sheptytsky was considered to be the spiritual leader of Galician Ukrainians.

The ecclesiastical policies of the Greek Catholic Church were not uniform. The division between the Byzantine and Western orientations in the Church increased after World War I. The first current (its adherents were called "Easterners"), desirous of preserving Eastern Christian spiritualism, theological thought and rite, and the legal-canonical organization in the Church, strove for a return of the Greek Catholic Church to its original character. The orientation to the traditional Byzantine way was strongest in the Lviv archdiocese, centering around Metropolitan Sheptytsky and his auxiliary bishop, Ivan Buchko (ordained 1929), and around such theological and church journals as the monthly *Nyva* (The Field, 1904), the quarterly *Bohosloviia* (Theology, 1923), the weekly *Meta* (The Goal, 1931), and the monthly *Dzvony* (The Bells, 1931). It was especially cultivated by the Studites. The pro-Western current was centered around Bishops Gregory Khomyshyn (1902–46) and Josaphat Kotsylovsky (1916–47) and the Basilian Order. Among their organs were the weeklies *Nova Zoria* (The New Star, 1926) and *Ukraïns'kyi Beskyd* (The Ukrainian Beskyd, 1928), the learned journal *Analecta Ordinis Sancti Basilii Magni* (1924), and the quarterly *Dobryi Pastyr* (The Good Shepherd, 1931). Of considerable significance was the institution of compulsory celibacy for the clergy in the Stanyslaviv diocese in 1920 by Bishop Khomyshyn, and in the Peremyshl diocese in 1925 by Bishop Kotsylovsky—in both cases against the wishes

FIGURE 60. GREGORY KHOMYSHYN

FIGURE 61. JOSAPHAT KOTSYLOVSKY

of Ukrainian public opinion. However, compulsory celibacy was not introduced in the Lviv archdiocese by Metropolitan Sheptytsky.

Because of complete Polonization of the University of Lviv (see pp. 377–8), the Greek Catholic Church itself had to take care of the higher education of the new generation of clergy. Accordingly, a theology department (which considered itself a part of the Ukrainian Underground University) was established in 1920 at the Greek Catholic Theological Seminary in Lviv; in 1928 the theology department was reorganized and became the Greek Catholic Theological Academy, with Joseph Slipyi as its rector. In addition, there were theological seminaries in Peremyshl and Stanyslaviv, and the monastic orders ran schools. As in prewar times, the Metropolitan sent the better students abroad for advanced studies, especially to Innsbruck and Rome. Secondary schools—the "minor seminaries" in Lviv and Rohatyn and the schools of the Basilians (Buchach) and Redemptorists (Holosko)—prepared candidates for the theological schools.

Theological scholarship centered around the Greek Catholic Theological Academy which published *Pratsi* (Proceedings) and other works and the Theological Scientific Society in Lviv founded in 1923 which published the quarterly *Bohosloviia* (Theology), *Pratsi* (Proceedings), and other works. (For details, see p. 279.)

In order to include the laymen in the apostolate activity of the Church, branches of the Katolyts'ka Aktsiia (Catholic Action) were established in all dioceses during the 1930's. Organized along the lines of similar groups in the Roman Catholic Church, the ruling body of Catholic Action was the General Institute in Lviv, composed of representatives of Catholic organizations such as the Society of Ukrainian Catholic Students, Obnova (Renewal), the youth organization, Orly (Eagles), and the educational society, Skala (The Rock). In 1931, on the initiative of Metropolitan Sheptytsky, the Ukrainian Catholic Alliance (Ukraïns'kyi Katolyts'kyi Soiuz) was established with the object of assuring the Catholic faith a proper place in public life and of supporting the development of the Ukrainian people in a Christian spirit.

Monastic orders and congregations played a great role in the life of the Greek Catholic Church. The most prominent of these was the Basilians who distinguished themselves in missionary work, in the organization of the Societies of the Virgin Mary (Mariis'ki Druzhyny) and in their publishing activities. They also maintained secondary schools in Buchach and Dobromyl and centers for theological and philosophical studies in Lavriv and Krekhiv. In 1938, the Galician province of the Basilian Order had 123 priests, 103 students, and 151 brothers. The Studites, with Metropolitan Sheptytsky as archimandrite and his brother Clement as abbot, had eight monasteries in 1935 and included 16 priests, 9 deacons, 54 *skhymnyks* (professed monks), 58 monks, and 34 novices —171 members altogether. The center of the order was the Univ-Sviatoioansky Monastery. Attached to the monastery in Lviv was the Studite Scientific Institute (the Studion) and a valuable library containing works on the history of the Eastern Church. The Redemptorists, with their headquarters in Holosko Velyke near Lviv, had five monasteries (one

TABLE I

| Diocese | Parishes | Churches | Priests | Faithful |
|---|---|---|---|---|
| Lviv | 1,267 | 1,308 | 1,004 | 1,300,000 |
| Peremyshl | 640 | 1,268 | 657 | 1,159,000 |
| Stanyslaviv | 455 | 886 | 495 | 1,000,000 |
| Apostolic administration for the Lemkian region | 129 | 198 | 128 | 128,000 |
| TOTAL | 2,491 | 3,660 | 2,284 | 3,587,000 |

of these was in Kovel in Volhynia), 22 priests, 12 clerical brothers, 27 lay brothers, and 7 novices—68 members in all. The Basilian Sisters had nine religious houses and 260 nuns; the Studites had one religious house and 65 nuns; and the Sister Servants of Mary Immaculate, 80 religious houses, 392 nuns, and 46 novices. Other women's orders had smaller memberships.

Table I shows the strength of the individual dioceses of the Galician Greek Catholic province in 1938–9, based on the 1943 *Pontificio annuario.*

The activity of the Greek Catholic Church was confined by the 1925 concordat to the territory of Galicia. Accordingly, the Union activities among the Orthodox Ukrainians and Belorussians in Poland were conducted without any cooperation from the Greek Catholic Church, and Bishop Joseph Botsian, who was ordained in Kiev in 1914 by Metropolitan Sheptytsky as bishop of Lutsk, was not admitted into his diocese by the Polish authorities. A few Uniates were formally organized into "parishes of the Catholic Church of the Eastern Slavonic rite" and were directly subordinated to Roman Catholic bishops. Only in 1931 did Rome assign an apostolic visitator for these neo-Uniates; he was the Ukrainian Bishop Nicholas Charnetsky, a Redemptorist residing in Kovel in Volhynia. The neo-Uniate clergy were Jesuits of the Eastern rite. In church services and the rite, in language and in their vestments, they adhered to the model of the Synodal Russian Orthodox Church. The Union in the Eastern Slavonic rite was never widespread (about 25,000 adherents with 46 priests in all of Poland). In 1931 a theological seminary was founded in Dubno (Volhynia) at which candidates for the neo-Uniate priesthood were trained by the Jesuits.

With their occupation of Western Ukraine in 1939, the Soviets abolished ecclesiastical institutions such as schools and theological seminaries, closed monasteries and presses, and confiscated all Church property. The teaching of religion in schools was prohibited and was replaced by atheistic propaganda. As yet there was no mass persecution of the clergy, although in 1939–41 the Bolsheviks arrested and exiled 27 clergymen and executed seven priests in the Lviv archdiocese. The churches still remained open for services, although heavy taxes were imposed on both churches and clergy. In May, 1940, Metropolitan Sheptytsky convoked a diocesan synod which met for two months. Its task was to deepen the faith of the clergy and faithful, to renew the Christian life in the Church, to defend the faith, and to strengthen endurance under new conditions. By ordaining an Orthodox bishop for Lviv (Panteleimon Rudyk) in March, 1941, the Bolsheviks hoped to undermine the authority of Metropolitan Sheptytsky and to prepare the way for a union of the Greek Catholic and Russian Orthodox churches (for details, see p. 174).

By the German-Soviet Treaty of August 23, 1939, the eastern borderlands of Galicia fell in the Soviet and the western in the German sphere of interest. Later the western parts were incorporated into the *Generalgouvernement.* They contained part of the Peremyshl diocese and the entire apostolic administration for the

Lemkian region [Vol. I, pp. 874–5]. The former was administered by Bishop Kotsylovsky's auxiliary bishop, Gregory Lakota, while the Rev. Alexander Malynovsky was placed in charge of the Lemkian apostolic administration after February, 1941. The Greek Catholic Church faced no obstruction from the German authorities. The latter did not interfere with the internal life of the Greek Catholic Church even after the occupation of Galicia in June–July, 1941, and its incorporation into the *Generalgouvernement* [Vol. I, p. 887], but the activity of the Church was restricted by severe wartime circumstances.

Metropolitan Sheptytsky died on November 1, 1944, at the time of the second Soviet occupation of Galicia. His post was filled by Archbishop Josyf Slipyj who had been secretly consecrated on December 22, 1939, as archbishop-coadjutor with the rights of succession. Soon after the death of Metropolitan Sheptytsky, the Bolsheviks resumed the process of the liquidation of the Greek Catholic Church which had been interrupted in 1941. The NKVD began a campaign of mass terror against the clergy which culminated on April 11, 1945, with the imprisonment of Metropolitan Josef Slipyj and Bishops Nicetas Budka and Nicholas Charnetsky in Lviv, and Bishop Gregory Khomyshyn and his auxiliary bishop, Ivan Liatyshevsky, in Stanyslaviv. Arrested later were the apostolic visitator for the Ukrainian Catholics in Germany, Peter Verhun, and on June 25, 1946, the Bishop of Peremyshl, Josaphat Kotsylovsky, and his auxiliary bishop, Gregory Lakota; the latter two were deported to the USSR. Some of the arrested bishops died in prison while others were tried in Kiev in March, 1946. They were accused of various imaginary crimes committed during the years of the German occupation and were all sentenced to long prison terms. Several bishops perished in prison or in exile, and two died soon after they were released. Only Metropolitan Slipyj survived. After almost eighteen years of exile he was released by the Bolsheviks, as a result of the efforts of Pope John XXIII, and arrived in Rome on February 9, 1963.

After the arrest of all the bishops and many of the clergy, the Soviet authorities sponsored the "Initiating Group for the Reunion of the Greek Catholic Church with the Russian Orthodox Church." It was headed by priests Gabriel Kostelnyk of the Lviv archdiocese, Michael Melnyk of the Peremyshl diocese, and Anthony Pelvetsky of the Stanyslaviv diocese. This group was promptly recognized by the Council of Peoples' Commissars of the Ukrainian SSR as the "sole provisional ecclesiastic-administrative organ" of the Greek Catholic Church. The Initiating Group convened a sobor in Lviv during March 8–10, 1946, which was attended, according to the official report, by 216 clergymen and 19 laymen. This gathering proclaimed the end of the Union of Brest of 1596, a break with the Vatican, and a "reunion" with the Russian Orthodox Church. These resolutions were non-canonical and illegal because the sobor was convened by a non-canonical group (only the hierarchy may convene a sobor). Agencies of the Soviet government hostile to the Church participated in the preparation of this gathering and subjected the clergy and faithful, as well as the sobor delegates, to mass terror. Not a single canonical hierarch of the Greek Catholic Church was present. Moreover, the sobor was prepared and directed by members of the Initiating Group who had already embraced another faith—Orthodoxy (two of them were ordained Orthodox bishops)—and acted on the orders of the Moscow patriarchate of the Russian Orthodox Church. The Soviet authorities recognized as binding on the Greek Catholics all the decisions of the Lviv sobor and prohibited the activities even of individual Greek Catholic parishes. The regime thus acted in gross violation of the Soviet legislation on religious cults, whereby the church is separated from the state, the decisions of the church

sobors and hierarchy have no public legal force, and the local religious congregations (represented by their *dvadtsiatky* [groups of the twenty lay trustees]) are not bound by any compulsory decisions of their ecclesiastical superiors.

Over 300 clergymen protested this reunion but without effect. The Holy See declared the resolutions of the pseudo-sobor null and void. Pope Pius XII issued two encyclicals, *Orientales Omnes* (December 23, 1946) and *Orientales Ecclesias* (December 15, 1952), in defence of the persecuted Ukrainian Church.

The liquidated Greek Catholic Church was subordinated to the Moscow patriarchate and Orthodox bishops were appointed in Lviv, Stanyslaviv, and Drohobych. (With the abolition of the Drohobych *oblast* in 1959, this diocese was also abolished.) Thus the Galician metropolitanate ceased to exist and the Ukrainian Catholic Church went underground. The many clergy who refused to adopt Orthodoxy were arrested and sentenced to long years of imprisonment or exile. Those who were subsequently freed were not allowed to resume their pastoral duties.

Metropolitan Slipyj who has resided in Rome since 1963, was named archbishop-major in that year, and in 1965 he was honored with the title of cardinal (see p. 203).

## THE CHURCH IN TRANSCARPATHIA

### Before 1850

Christianity was probably introduced into Transcarpathia during the last half of the ninth century. It came both from Greater Moravia (see p. 134)—from the Church of SS Cyril and Methodius—and, in the Byzantine form, from Bulgaria. For a long time there was no bishopric in Transcarpathia which belonged traditionally to the Peremyshl diocese. Consequently religious life was centered in the monasteries, particularly those of St. Nicholas on Chernecha Hora near Mukachiv and St. Michael in Hrushiv in the Marmarosh region. The latter received the right of stauropegion from the patriarch of Constantinople in 1391. The first documentary evidence concerning the episcopate in Transcarpathia dates from 1491 when the king of Hungary, Ladislas Ulashlo II, confirmed Ivan I as bishop; the latter lived in the Monastery of St. Nicholas and was subject to the patriarch of Constantinople. Orthodoxy in Transcarpathia (part of Hungary since the eleventh century; [Vol. I, p. 710]), was in the position of a tolerated minority. The lot of the clergy and monasteries depended on the goodwill of the local Hungarian landlords. The bishop and clergy were the natural protectors of the Ukrainian population before the Hungarians; the Transcarpathian Ukrainians preserved their nationality primarily because of their religious distinctiveness.

The partition of Transcarpathia in the seventeenth century into the eastern portion, the Marmarosh region, and the western part, which was subject to the Calvinist princes of Transylvania [Vol. I, p. 710], influenced religious developments in this area. The Orthodox Church

was at that time in a state of decadence; the bishops of Mukachiv were dependent upon the Calvinist magnates who attempted to introduce elements of the Reformation into the Orthodox Church. This caused a movement for the union with Rome. After the unsuccessful attempts initiated by Bishop Athanasius Alexander Krupetsky of Peremyshl in 1614, the Bishop of Mukachiv, Basil Tarasovych, together with 63 clergymen, accepted the Union in 1646 in Uzhhorod. At the synod of 1652, during the episcopal rule of Peter Partenius Petrovych Rostoshynsky, the Union was accepted by all of western Transcarpathia which was under the rule of the Habsburgs. Bishop Joseph de Camelis (1690–1706), a Greek by birth, consolidated the Union. In the Marmarosh region, which belonged to Transylvania until 1720, an Orthodox diocese continued to exist, however; it accepted the Union only in 1710–20.

FIGURE 62.
JOSEPH DE CAMELIS

FIGURE 63.
ANDREW BACHYNSKY

Because of the lack of canonical confirmation of the Union by the Apostolic See, the Hungarian Latin bishops of Eger (Erdily) attempted to subordinate the Mukachiv bishops as their vicars. Consequently, Bishop Manuel Olshavsky (1743–67) began a struggle for the independence of the Mukachiv eparchy. Finally in 1771, at the request of Empress Maria Theresa, Pope Clement XIV made the eparchy independent of Eger (during the episcopate of Ivan Bradach, 1767–72), and subject to the Hungarian metropolitan of Esztergom. The reorganization of the Mukachiv eparchy was conducted by the most outstanding hierarch of Transcarpathia, Bishop Andrew Bachynsky (1773–1809). He transferred the seat of the diocese to Uzhhorod (1775) and strove to unite Transcarpathia and Galicia into one church province under the direction of a metropolitan, but the Hungarians were opposed to this. He looked after the education of the clergy and was instrumental in the establishment of the Barbăreum in Vienna (see p. 185). He opened a theological seminary in Uzhhorod in 1777, organized a network of parochial elementary schools, and was the patron of cultural advancement in Transcarpathia. In 1818, a new diocese was created in Transcarpathia—the Priashiv (Prešov) see, which was also subordinated to the Esztergom metropolitan.

**1850–1918**

After 1848, and especially after the agreement between Austria and Hungary in 1867 [Vol. I, p. 712], the Magyarization of the Greek Catholic Church began. The latter gradually turned into a docile instrument of the Hungarian policy of assimilation, despite the opposition of some of the clergy. The bishops, whose nomination was influenced by the Hungarian government, contributed most to Magyarization. The Bishop of Mukachiv, Stephen Pankovych (1867–74), who transferred the students of theology from Vienna to Budapest, was the first in this series of Magyarophile bishops. In the parochial schools, the Hungarian language was progressively introduced as the language of instruction. In 1875, the Hajdudorog vicariate was created for the purpose of Magyarization. In 1912 it was transformed into a diocese which consisted of the southern part of the Mukachiv diocese and portions of the Priashiv and the Rumanian (Transylvania) dioceses. Within this diocese the Hungarian liturgical language was introduced. The efforts of Pope Leo XIII to subordinate the Transcarpathian eparchies to the

planned patriarchate in Lviv were opposed by Cardinal Simor, primate of Hungary. Educational societies, led by the clergy (the Society of St. Basil the Great and others), and the press, began to decline. Russophilism was spreading among the clergy as a counterweight to Magyarization, and only a few of them were supporters of Ukrainian nationalism (Augustine Voloshyn, Basil Hadzhega, and others). Hungarian pressure increased during World War I. The Latin alphabet was introduced in the parochial schools and the Gregorian calendar was adopted in 1916. (The efforts of the Bishop of Mukachiv, Julian Firtsak, to introduce it in 1911 had not succeeded because of the opposition of the faithful.) The separation of Transcarpathia from Hungary in 1918–19 prevented further Magyarization of the Greek Catholic Church in Transcarpathia.

**1918–44**

After the annexation of Transcarpathia to Czechoslovakia, both Greek Catholic bishops, Anthony Papp of Mukachiv (1912–24) and Stephen Novak of Priashiv (1913–18), abandoned their dioceses and went to Hungary. Their successors, the apostolic administrator of Priashiv, Bishop Dionysius Niaradi of Križevci (replaced in 1927 by Bishop Paul Goidych), and of Uzhhorod, Bishop Peter Gebei (1924–31), supported the national movement. A *modus vivendi* (ratified in 1928) was reached between the two eparchies and the Czechoslovak government. Finally in 1937 Rome separated both eparchies from the Esztergom metropolitanate and subordinated them directly to the Eastern Congregation in Rome. Rome's plans to create a Mukachiv metropolitanate were interrupted by the war. In 1920 the Basilians arrived from Galicia and reformed the Transcarpathian monasteries (which until then had no ties with the Basilian Order); this reform led to a renewal of the religious spirit. The Basilians also contributed to the growth of Ukrainian nationalist tendencies which had spread very slowly among the secular Greek Catholic clergy, who remained for the most part either Russophile or Magyarophile. Bishop Alexander Stoika of Mukachiv (1932–43) also maintained a pro-Hungarian stand.

As a reaction against the Magyarization of the Church, Orthodoxy began to spread in Transcarpathia, winning over nearly one-third of the parishes during the first years of Czechoslovak rule, especially in the Marmarosh region. Membership in the Orthodox Church increased from almost nothing in 1918, to 61,000 in 1921, and to 121,000 by 1930. The Orthodox had two dioceses, in Uzhhorod and Mukachiv, and were subordinated to the Serbian patriarch. The Orthodox clergy were almost entirely Russophile.

During the period of autonomous and independent Carpatho-Ukraine (1938–9), Bishop Stoika remained in the territory occupied by the Hungarians. Accordingly, Rome named Bishop Niaradi as the apostolic visitator for Carpatho-Ukraine; he performed this function (with his residence in Khust) until the Hungarian occupation in March, 1939.

The local Orthodox Church was then headed by a Czech, Archbishop Savatii (Antonin Hrabec) of Prague, who was subordinate to the patriarch of Constantinople by whom he had been consecrated.

**After 1944**

The occupation of Carpatho-Ukraine by the Bolsheviks in 1944–5 brought with it a persecution of the Greek Catholic Church similar to that which had occurred in Galicia. In 1947 Bishop Theodore Romzha, successor to Bishop Stoika, was murdered, and terror was employed against the clergy to force them to embrace Orthodoxy. Subsequently, priest Ireneus Kondratovych proclaimed the abolition of the Union in Mukachiv on August 28, 1949. The Orthodox diocese of Mukachiv-Uzhhorod was also subor-

dinated to the Russian patriarch in Moscow.

After the war, the Priashiv diocese remained within Czechoslovakia, but after the Communist coup in 1948, the Greek Catholic Church was quickly liquidated there also. In 1950, Bishop Paul Goidych (died in prison in 1960) and his vicar, Basil Hopko, were arrested and sentenced to prison. On April 28, 1950, a sobor of "reunion" with the Orthodox Church took place in Priashiv. The former Priashiv diocese was divided into the Priashiv and the Michajlovce (Mykhailivtsi) sees. They belong to the Orthodox Church in Czechoslovakia, which in 1951 received its autocephaly from the Moscow patriarchate. The Ecumenical Patriarch of Constantinople does not recognize this autocephaly and the Orthodox Church in Czechoslovakia maintains close ties with Moscow.

FIGURE 64.
THEODORE ROMZHA

Two of the four eparchies of the Orthodox Church in Czechoslovakia are in the Priashiv region. Eparchial councils, which conduct their affairs partly in Ukrainian, exist in both dioceses. A Ukrainian-language church monthly *Zapovit sv. Kyryla i Metodiia* (The Testament of SS. Cyril and Methodius) is published in Priashiv. The Priashiv diocese had almost 180,000 faithful and 120 parishes in 1966; and the Michajlovce diocese, 110,000 and over 100 parishes. (The entire Orthodox Church in Czechoslovakia numbers 315 parishes.)

Since 1951, the clergy is trained in the Priashiv Department of Theology which in 1959–60 had 68 full-time students and in 1965–6, 30. The majority of priests and bishops of this church are of local extraction. The first bishop of Priashiv was Dorophei (in secular life, Dymytrii Fylyp) who became the metropolitan of the Orthodox Church in Czechoslovakia in 1964. His successor in Priashiv is Nicholas Kotsvar. The Michajlovce diocese is headed by Bishop Cyril. All are natives of Transcarpathia (see also Ukrainians Abroad, pp. 1243–4).

## THE CHURCH IN BUKOVINA

### Before 1774

Christianity spread to Bukovina from Kiev during the princely era, and the area formed part of the Kievan metropolitanate. In the twelfth century, Bukovina belonged to the Galician diocese and during the years from 1303 to 1340 to the Galician metropolitanate with its seat in Lviv. After the occupation of Galicia by Poland, the Orthodox Church in Bukovina lost its ties with Lviv and the Bulgarian archbishop from Okhrida took over the guardianship of the Church (1340–1401). After the annexation of Bukovina by the Moldavian principality [Vol. I, p. 707], the ruler, Alexander Dobry, established an independent Moldavian metropolitanate in 1401, with its seat in Suchava (Suceava). In 1630 the seat was transferred to Jassy (Jasi). The Moldavian metropolitanate embraced the Radivtsi (Rădăuti) eparchy which administered the church life of Bukovina (except for the Suchava district). Prior to the annexation of Bukovina by Austria (1774), there were 31 bishops in Radivtsi. From the sixteenth century, Church

Slavonic predominated in the church and the clergy enjoyed the benefits of the educational, religious, and cultural achievements of Kiev and Lviv (ecclesiastical schools, brotherhoods, books). During the sixteenth and seventeenth centuries, some church leaders (Metropolitan Dosytei) and some monasteries (Putna, Suchava, and Drahomyrna) also had an influence on other Ukrainian lands.

**Under Austrian Rule**

After the Austrian annexation of Bukovina in 1774, the Bishop of Radivtsi, Dosytei (Dosoftei) Khereskul (Herescu), was named Bishop of Bukovina by the Austrian authorities in 1781 and transferred his residence to Chernivtsi in 1782. From 1783 to 1873, the Bukovinian diocese was dependent upon the metropolitan in Karlovats (Slovenia). During the years from 1782 to 1785 the Austrian government nationalized the property of 20 monasteries (mainly forests, 20 per cent of the entire area of Bukovina) and created a religious fund to finance the requirements of the Bukovinian eparchy: the maintenance of the clergy, the schools, and so forth. The Bukovinian diocese experienced its greatest development during the administration of Eugene Hakman (1835–73) who was successful in acquiring autocephaly for the Church in 1873, with the creation of the metropolitanate of Bukovina and Dalmatia. In Chernivtsi, he erected a cathedral (1844–64) and a metropolitan's residence (1864–82)—the most impressive edifices in Bukovina.

The Bukovinian clergy received their education mainly in the clerical school in Putna which was transformed into the Theological Institute of Chernivtsi in 1824 and, with the emergence of the University of Chernivtsi, into the Orthodox Department of Theology (1875–1940). This institution was one of the leading educational and scholarly centers of theology in the Orthodox world. The Bukovinian ecclesiastics had the best education in all of Ukraine. They took an active part in the area's cultural, social, and political life, defending the national rights of the Ukrainians in Bukovina (Fathers Basil Prodan, Isidore and Gregory Vorobkevych, Eugene Semaka, Titus Tyminsky, Theophilus Drachynsky, for example).

In the Bukovinian diocese, rivalry between the Rumanians and the Ukrainians was constant. The Rumanians prevailed for a long time. It was not until 1873 that the Ukrainian language achieved equal rights within the church; the ecclesiastical journal, *Kandelia,* appeared in both Rumanian and in Ukrainian, the Ukrainian section being edited by Isidore Vorobkevych. In 1895 the Ukrainians achieved complete equality with the Rumanians when they received two trustees in the consistory and two chairs with instruction in Ukrainian in the Department of Theology (Denis Yeremiichuk-Yeremiïv and Eugene Kozak). However, the Ukrainians failed to realize their objective—the partition of the metropolitanate into separate Ukrainian and Rumanian dioceses—since the Austrian authorities and the Rumanians were against such division.

Under the Austrians there were nine bishops and a metropolitan in Bukovina. Among the bishops were two Ukrainians, E. Hakman and V. Repta. The third Ukrainian was T. Tyminsky (1917–19), but he was pensioned off after the occupation of Bukovina by Rumania. The great champion of the religious rights of the Ukrainians in Bukovina under Austrian rule was Eugene Pihuliak, a member of parliament.

**After 1918**

During the Rumanian period (1918–40; [Vol. I, pp. 856–9]), the Bukovinian metropolitanate was renamed (1925) the Metropolitanate of Bukovina and Khotyn and annexed to the Rumanian patriarchate in Bucharest. Throughout the entire period of Rumanian occupation, a persistent struggle went on against

the Rumanianization of the Orthodox Church. This struggle was headed by several Ukrainian priests—Eugene Kozak, Theophilus Drachynsky, Semen Smereka, Kasiian Bohatyrets, and Peter Kateryniuk. The Ukrainian bloc of the diocesan assembly (1932–8) which was headed by Alexander Kupchanko and Nicholas Haras spoke in defense of Ukrainian interests. Towards the end of the Rumanian occupation, the Ukrainians lost almost all of their rights in the ecclesiastical-religious field. Under Rumanian rule, the Bukovinian metropolitanate numbered close to 650,000 faithful, with 310 parishes (one-half of which were Ukrainian) and 390 clergymen (including 135 Ukrainians). There were four metropolitans during this time.

During the Soviet period (from 1940) most of the Ukrainian priests left Bukovina and the clergy had to be recruited from among the deacons. After World War II, the diocese of Chernivtsi was created, headed by the bishop of Chernivtsi and Bukovina (from 1961 Bishop Damian Marchuk, a native Volhynian). In southern Bukovina, which belongs to Rumania, a metropolitanate was created in Suchava.

**The Ukrainian Catholic Church.** There were also Greek Catholic Ukrainians in Bukovina who had come from Galicia during Austrian times. The first Greek Catholic parish was established in 1811 in Chernivtsi and the first deanery in 1841; they were subject to the Lviv metropolitan and from 1885 to 1923 formed part of the diocese of Stanyslaviv (now Ivano-Frankivske). In 1911 the Bukovinian part of the diocese embraced two deaneries, 17 parishes, and 28,000 adherents. In 1923 an apostolic administration was created for the local Ukrainian Catholics with its seat in Seret (headed by Father Clement Zlepko). It was subject to the Greek Catholic metropolitan in Blaha (Transylvania). In 1930 the administration was transformed into a general secretariat (Father Michael Symovych) and placed under the Marmarosh diocese in Baia-Mare. Greek Catholic Ukrainians in Bukovina enjoyed greater national cultural freedom than the Orthodox Ukrainians, thanks to Rumania's concordat with the Vatican. After World War II, the Greek Catholics in Bukovina were forcibly converted to Orthodoxy.

*A. Zhukovsky*

## THE UKRAINIAN CATHOLIC CHURCH ABROAD

Almost all the Ukrainians who emigrated overseas in the nineteenth century to the United States, and later to Canada and Brazil [Vol. I, p. 196] were Greek Catholics because the emigrants came from Galicia and Transcarpathia. Late in the nineteenth century some Orthodox Ukrainians began emigrating from Bukovina and their numbers were increased by former Greek Catholics who had crossed over to Orthodoxy. From that time on, the Ukrainian community abroad has included the faithful of both churches and in time also members of various Protestant denominations.

The beginnings of the Ukrainian Catholic Church abroad date back to the early eighteenth century when Ukrainians began to settle in Bachka (on the territory of present-day Yugoslavia; see pp. 1248 ff.). Through the efforts of Empress Maria Theresa, a separate diocese was established for them by Pope Pius IV in 1777, with its seat in the town of Križevci in northern Croatia. In the seventeenth century a Ukrainian-Belorussian center was opened in Rome; it became the seat (after 1617) of the procurator of the Order of St. Basil the Great and of the Greek College of St. Athanasius which was attended by a considerable number of Ukrainian and Belorussian students. In 1784 a Greek Catholic parish (the Church of St. Barbara) was established in Vienna—an important center for Ukrainians in the Austrian empire. During the eighteenth cen-

tury other Ukrainian Catholic centers were also founded—the Greek Catholic parishes in Budapest and Cracow and the monastery of the Basilian Fathers in Warsaw.

**North America**

The number of Greek Catholics abroad increased in the latter half of the nineteenth century, with the emigration of Ukrainians overseas [Vol. I, p. 196]. In all the countries of new settlement, the Ukrainians initially had neither their own clergy nor separate parishes. In time the larger concentrations of Ukrainians began to organize parishes and to build churches, but the Greek Catholic clergy were subordinated to the jurisdiction of the Roman Catholic bishops, which contributed to their Latinization. The Latinization of the clergy also led some Greek Catholics to embrace Russian Orthodoxy. It was only through the efforts of Metropolitan Sheptytsky that Rome nominated bishops for the Greek Catholics in North America: Soter Ortynsky for the United States (1907) with a see in Philadelphia who did not have full jurisdiction at first but became an autonomous exarch in 1913, and Nicetas Budka for Canada (1912) with a see in Winnipeg who immediately became an autonomous exarch. By 1914, over half a million Greek Catholics lived abroad, of whom over 300,000 were in the United States and nearly 100,000 in Canada. Later some of the Greek Catholics went over to the Ukrainian Orthodox churches in Canada and the United States, and some joined Protestant denominations. In 1924 Rome created two separate church organizations for the Greek Catholics in the United States—one for the Galician Ukrainians and the other for the Transcarpathian Ruthenians —the Pittsburg exarchate—who had had a separate apostolic administration since 1916.

Following World War II, great changes took place in the organization of the Church hierarchy for the Ukrainian Catholics abroad. In 1948 the Ukrainian Catholic exarchate in Canada was divided; in addition to the original one in Winnipeg, new exarchates were set up in Edmonton and Toronto. In 1951 a fourth exarchate was established in Saskatoon. In 1956 a Ukrainian Catholic metropolitanate with its seat in Winnipeg (with Maxim Hermaniuk as the first metropolitan) was established by Pope Pius XII and the existing exarchates were elevated to the status of dioceses. In the United States a new exarchate was created in Stamford in 1956. Two years later a Ukrainian Catholic metropolitanate was created with its seat in Philadelphia (with Constantine Bohachevsky as the first metropolitan) and the exarchate was transformed into a diocese. In 1961 a third diocese was established in Chicago. In 1963 the exarchate for the Transcarpathians was divided into two dioceses—Pittsburgh and Passaic, N.J. (see also Ukrainians Abroad, 2. In U.S.).

New exarchates for Ukrainian Catholics were created in Australia (1958), Argentina (1961), and Brazil (1962; from 1958 to 1962, the local Ukrainian bishop had only limited jurisdiction).

**Europe**

During World War II, many Ukrainians were transported to Germany for forced labor. To meet their spiritual needs a series of pastoral posts was established there, and in 1941 Rome appointed an apostolic visitator for the Ukrainian Catholics in Germany. (The first Ukrainian parish had been established in Berlin in 1927.) In 1940 the first Ukrainian Catholic parish was established in France (Paris). In 1946 the Vatican appointed Bishop Ivan Buchko as a separate apostolic visitator for Ukrainian Catholics in western Europe. Bishop Buchko appointed general vicars for Germany (from 1948), France, Belgium, and Great Britain. Subsequently, Ukrainian bishops were appointed for Ukrainian Catholics in Germany (1959), France (1961), and Great Britain (1963;

during 1961–3 without full jurisdiction) to head exarchates in these countries.

Thus in 1966, outside the borders of the USSR, there were approximately 1,300,000 Ukrainian Catholics including over 300,000 Transcarpathian Ukrainians (Ruthenians). Over 250,000 live in Europe. In Poland, where 150,000 Ukrainian Catholics do not have their own separate Church organization, they are served by some 100 clergymen who, for the most part, are assistants of the Roman Catholic parish priests and have been conducting services in both rites. In the early 1960's the Ukrainian Catholics in Poland were allowed to establish 16 separate parishes. Nearly 40,000 Ukrainian Catholics and over 40 Ukrainian clergymen live in Yugoslavia as part of the Križevci diocese, which has 54,000 faithful and 60 clergymen. Almost 70,000 faithful and 100 clergy live in western Europe (headed by an apostolic visitator in Rome and three bishops). The former Ukrainian Greek Catholic parishes and faithful in Hungary have become completely Magyarized and are outside the sphere of the Ukrainian Catholic Church and its hierarchy.

FIGURE 65. ARCHBISHOP IVAN BUCHKO

Most of the monastic orders which operated in Ukraine are active abroad. The largest of these are the Basilians (328 members in 1962 including 159 priests) and the Eastern branch of the Congregation of the Most Blessed Savior —Redemptorists (almost 50 priests); others include the Studites (about 25 priests), the Eastern branch of the Selesian Order (approximately 20 priests), the Oblates, and the Christian Brothers. The largest of the women's congregations are the Sister Servants of Mary Immaculate (930), the Basilian Sisters (170), the Missionaries of St. Mary the Protectress, and the Missionaries of Christian Love.

The individual dioceses and orders are —as they were in Ukraine until 1945— immediately subordinate to the Eastern Congregation in Rome. Some degree of communication among the Ukrainian Catholic bishops abroad is provided through metropolitanates, conferences of the episcopate (attended by all bishops), and provincial synods (the first held in Winnipeg in 1962). The decree of the Second Vatican Council (1964) on the Eastern Catholic churches and the confirmation of the powers of the archbishop-major (now with a temporary residence in Rome), which were made

FIGURE 66. UKRAINIAN CATHOLIC BISHOPS AT THE FINAL SESSION OF THE VATICAN COUNCIL II IN ROME

equal to those of a patriarch, resulted in the establishment (1965) of the conference of Ukrainian Catholic bishops.

The Ukrainian Catholic Church abroad does not have its own higher theological school, and candidates for priesthood are taught in foreign schools. The Pontifical College of St. Josaphat in Rome and the theological seminaries of St. Josaphat in Washington, D.C., and in Zagreb (Križevci diocese) are the only educational institutions in which the Ukrainian Catholic rite, the Church Slavonic language, and, in part, the history of the Ukrainian Church are being taught. The theological schools of the individual orders only prepare students for higher theological studies.

Of the two rival tendencies in the Ukrainian Catholic Church in Ukraine —the Eastern and the Western—the Latin influence has gained distinct superiority abroad (except in the Križevci diocese). Celibacy of the clergy is the rule of all dioceses. From the very beginning external influences have tended to bring the liturgy of the Ukrainian Catholic Church closer to that of the Roman Catholic Church. Church Slavonic remains the basic liturgical language, but the Ukrainian language is used in the catechism and sermons. The local language is being used with increasing frequency so as to reach the younger generation. The Gregorian calendar is used in most dioceses, either in whole or in part. Parallel with the movement to introduce the vernacular into the liturgy of the Roman Catholic Church, attempts have been made abroad to replace Church Slavonic with the Ukrainian language and in some cases to introduce English as a liturgical language in the Ukrainian Catholic parishes in the United States and Canada. This latter trend initiated by some of the American-educated clergy, encountered sharp opposition from the conservative elements of the clergy and faithful. In most of the dioceses of the Ruthenians this innovation has been adopted, however.

At the present time the world center for Ukrainian Catholicism is Rome. Rome is the seat of the Eastern Congregation, of the main administration of the orders

FIGURE 67. ARCHBISHOP MAJOR JOSYF CARDINAL SLIPYJ

(the protoarchimandrite of the Order of St. Basil the Great, the general administrations of the Basilian Sisters and Sister Servants of Mary Immaculate), and since 1963 of the archbishop-major. The Inter-Diocesan Liturgical Commission, which is charged with the revision of liturgical texts and their translation into Ukrainian, is located in Rome. The greatest concentration of Ukrainian theologians who are studying at the papal universities is also to be found there. Finally, Rome is the principal center of Ukrainian theological learning—with scholarly publications issued by the Basilians (*Analecta Ordinis Sancti Basilii Magni*, collections of documents from the Vatican archives) and by the Learned Theological Society (restored in 1960) and its organ *Bohosloviia* (Theology). The Ukrainian Catholic University, named after Pope Clement, was established in 1964 under the aegis of Cardinal Slipyj.

It is active mostly in the fields of scholarship and publishing.

(For greater detail on the Ukrainian Catholic Church in various countries of Ukrainian settlement, see chapter XIII, Ukrainians Abroad; see also pp. 213–31, Constitution of the Ukrainian Catholic Church.)

## THE UKRAINIAN ORTHODOX CHURCH ABROAD

A small number of Orthodox adherents arrived in North America from Bukovina at the end of the nineteenth century, as well as a few from Ukrainian lands in Russia (mainly from the Kholm region, Podlachia, and Volhynia). The number of Ukrainian Orthodox increased primarily through the absorption of former Greek Catholics who left their Church for varied reasons (see p. 1109). From 1891–1917, 163 Greek Catholic parishes in the United States went over to Orthodoxy. Initially, Orthodox Ukrainians in North America did not form separate religious congregations but joined the already well-established parishes of the Orthodox mission of the Russian Church. Today their descendants still form a large section of the Russian Church's adherents.

The subordination to the Russian Orthodox Church did not satisfy all Orthodox Ukrainians. Many Greek Catholics who were inclined to Orthodoxy also desired their own church. Several factors—the short-lived revival of the Ukrainian state, the conversion of some Ukrainian Greek Catholics in Canada to Orthodoxy (see pp. 1160 ff.), and the arrival in North America after World War I of a number of nationally conscious Orthodox clergy as well as many new immigrants—gave impetus to the movement for a Ukrainian church. In 1918, the Ukrainian Greek Orthodox Church in Canada (Ukraïns'ka Hreko-Pravoslavna Tserkva u Kanadi) was established (see pp. 1165 ff.), and in 1919–20 the Ukrainian Greek Orthodox Church in America (Ukraïns'ka Hreko-Pravoslavna Tserkva v Amerytsi) (now the Ukrainian Orthodox Church of the USA—Ukraïns'ka Pravoslavna Tserkva v SShA; see p. 1117).

For several years these churches sought to acquire their own episcopates until a hierarch of the Ukrainian Autocephalous Orthodox Church, Bishop John Theodorovich, arrived on their invitation in 1924 and assumed the leadership over the Ukrainian Orthodox churches in both the United States and Canada as well as scattered parishes in South America. However, some in the church were dissatisfied with a hierarch ordained in the Ukrainian Autocephalous Orthodox Church in Kiev (headed by Metropolitan Lypkivsky), as some of the Orthodox had reservations of a canonical character. Therefore some parishes, especially the newer ones that had left the Catholic Church, did not enter the Ukrainian Orthodox Church in the United States but created a separate ecclesiastical organization—the Ukrainian Orthodox Church of America (Ukraïns'ka Pravoslavna Tserkva Ameryky), headed by Metropolitan Bohdan Shpylka until his death in 1965. Efforts to unite these two churches and the clarification of the

canonical status of Metropolitan John Theodorovich in 1949 helped to bring the two churches closer together, but they did not achieve a complete union.

The Ukrainian Orthodox Church abroad has been strongly influenced by the large number of Orthodox Ukrainians who emigrated at the end of World War II, at first to West Germany and Austria, and later to other parts of the world. The Orthodox Ukrainians and clergy who left Ukraine in 1943–4 and settled in Europe (mainly in Germany and Austria) for several years before they went overseas belonged to a number of Orthodox Church organizations. Each of the three main Ukrainian churches—the Ukrainian Autocephalous Orthodox Church, the Autonomous Church (see p. 175), and the Church of the *Generalgouvernement* (see p. 181) charted a different course.

The hierarchy of the Ukrainian Autonomous Church, headed by Archbishop Panteleimon Rudyk, soon acknowledged the jurisdiction of the Russian Church and ceased to exist as a separate entity. The majority of the clergy followed their bishops but the rank and file whose numbers among the émigrés were few in comparison with the followers of the Ukrainian Autocephalous Orthodox Church dispersed among various Orthodox congregations, both Russian and Ukrainian.

The hierarchy of the Autocephalous Church in the *Generalgouvernement* dispersed: Metropolitan Dionysius returned to Poland in 1945; the second and third bishops emigrated to Canada and the United States respectively, where they joined other churches. This church thus ceased to exist.

The hierarchy of the Church with the greatest number of émigré followers, the Ukrainian Autocephalous Orthodox Church (UAPTs), spent some time in Warsaw after leaving Ukraine. There, in 1944, a sobor of bishops was held which adopted a Provisional Statute on the Administration of the Ukrainian Autocephalous Orthodox Church. The statute provided that the highest body in the UAPTs was to be the sobor, with the synod as its executive arm. In the early years of the sojourn in western Europe (Germany, Austria, France, Great Britain, and Belgium) parishes were organized among the larger concentrations of Ukrainian emigrants, especially in the Displaced Persons camps [Vol. I, pp. 912–13]. In 1946 a Theological-Pedagogical Academy was opened in Munich (called after 1947 the Theological Academy). In 1952 the Academy ceased to function and was replaced in part by the Theological-Scientific Institute. The synod of the Ukrainian Autocephalous Orthodox Church published (in 1948–9) a monthly *Bohoslovs'kyi Visnyk* (Theological Messenger). A well-organized parish life, church brotherhoods and sisterhoods, and choirs helped attract the faithful from other churches to the UAPTs; the number of UAPTs clergy increased greatly during these years. In 1946 there were 71 parishes in West Germany, with a somewhat smaller number of parishes spread over several other European countries. In 1948 the faithful in Germany and Austria were served by 103 clergymen and 18 deacons. Several bishops of the Ukrainian Autocephalous Orthodox Church were consecrated during these years which also witnessed the revival of a national Belorussian church (with the consecration of Bishop Basil).

Though it was united organizationally, the Ukrainian Autocephalous Orthodox Church in Europe did not have a homogeneous membership. Its hierarchy and the majority of its clergy belonged to the UAPTs, formed at the time of World War II with the blessing of Metropolitan Dionysius (see p. 175). It adhered to the traditional canonical view of the apostolic succession and the internal organization of the Church. The majority of the clergy of the UAPTs of 1942 came from the western Ukrainian lands where, despite restrictions by alien authorities, the Church had not experienced such destruction as had occurred in Soviet Ukraine. The Church in Western Ukraine was not compelled to adopt such extreme

measures as the ordination of the hierarchy at Kiev in 1921 in the long-forgotten manner of the ancient Alexandrine Church. Within its ranks the secular elements did not have such a decisive influence on church life as had the followers of the UAPTs constituted in 1921 under the leadership of Metropolitan Basil Lypkivsky. The old UAPTs was completely liquidated by the Soviet regime (see p. 171) and before World War II not one active bishop or even a single parish of this Church remained in existence. At the time of the German occupation, the surviving individual priests of this Church restored some of the old parishes. They recognized the hierarchy of the UAPTs (reconstituted in 1942) who arrived in eastern Ukraine, and subsequently as members of that church they found themselves in the emigration. Here some followers of the Church of Metropolitan Lypkivsky emphasized the necessity of a wider participation of the secular element in church life (conciliarism); they also held divergent views on the authenticity of the episcopal ordinations in the UAPTs of 1921.

These dissensions culminated in 1947 in the division of the Church. The group which proclaimed itself to be the true heir of the UAPTs of Metropolitan Lypkivsky was headed by Archbishop Gregory Ohiichuk. Despite attempts at reconciliation, the two churches could not be reunited and they continue to exist as separate organizations. The UAPTs church of 1921 was left with only a few parishes in Europe, Australia, and South America, after the departure of Archbishop Gregory for the United States where the majority of its parishes had been located.

By the end of the 1940's the ranks of all three Ukrainian Orthodox churches in North America had been enlarged as a result of the emigration of UAPTs adherents from Europe, including the majority of its bishops and clergy. However, some bishops declined to join the established churches and organized two small Ukrainian autocephalous Orthodox churches. One of these was the Ukrainian Autocephalous Orthodox Church in Exile (Ukraïns'ka Autokefal'na Pravoslavna Tserkva v Ekzyliu), founded in 1954 by Archbishop Palladius (who had belonged to the Autocephalous Church in the *Generalgouvernement*), and Archbishop Ihor (a hierarch of the UAPTs as reconstituted in Ukraine in 1942). Since the then existing churches in the United States and in Canada considered themselves American and Canadian churches, respectively, these two hierarchs wished to retain their independence (autocephaly), insisting that their church was only acting in exile and that it was its irrevocable duty to return unchanged (as concerns structure, tradition, and rites) to the homeland after the change in the latter's political regime. They invoked the 1924 *tomos* of the Ecumenical Patriarch which granted autocephaly to the Church (in Poland) embracing part of the territory of the Kievan (Ukrainian) metropolitanate. The UAPTs in exile consists of ten parishes in North America and a few in South America.

The second new ecclesiastical organization in North America is the Ukrainian Autocephalous Orthodox Church—Sobornopravna (Conciliar, the Church of 1921) which also designates itself the UAPTs Abroad and considers itself the direct heir of the UAPTs of the late Metropolitan Lypkivsky. The clergy and faithful of this church arrived in the United States after World War II, following their church's separation in 1947 from the UAPTs of 1942. The church is led by Archbishop Gregory and has ten parishes, mainly in the United States. Some of the parishes left the UAPTs (*sobornopravna*) and gathered around the Metropolitan Lypkivsky Ukrainian Orthodox Brotherhood (with the organ *Tserkva i Zhyttia* [Church and Life], published in Germany), and Archbishop Eugene Bachynsky in Switzerland.

The Ukrainian Autocephalous Orthodox Church of 1942 retained its center

in western Europe under the leadership of Metropolitan Polycarp, and after his death (in Paris in 1953), Metropolitan Nikanor Abramovych (d. 1969) who resided in Karlsruhe (West Germany). The Church's official quarterly *Ridna Tserkva*

FIGURE 68. METROPOLITAN POLYCARP SIKORSKY

(The Native Church) is also published there by the Theological-Scientific Institute. As a result of the mass migration of the UAPTs members overseas and the entrance of those who settled in the United States and Canada into the local Ukrainian Orthodox churches, the UAPTs of 1942 is now a small church. Some 30,000 faithful and nearly 50 priests and deacons have remained in Europe, including 20 in Germany (they are administered by the Supreme Ecclesiastical Administration attached to the metropolitan), 6 in France, 17 in Great Britain (headed by an administrator), and several in Belgium and Austria. Almost 30 clergymen work outside of Europe, including 20 in Australia and 10 in Argentina, Brazil, and Venezuela.

Thus there are now six Ukrainian Orthodox churches abroad. The structure of these churches is determined by their organizational and canonical principles and by the national frontiers of the countries of their settlement. Since 1957 the three largest churches—the Ukrainian Greek Orthodox Church in Canada, the Ukrainian Orthodox Church of the United States, and the Ukrainian Autocephalous Orthodox Church in Europe have maintained a spiritual union. Spiritual unions also exist between each of these churches

Still, after almost three decades abroad, the Orthodox churches have failed to found an indigenous organizational form. The time was too short for the Ukrainian Orthodox Church to recover after centuries-long persecution in tsarist Russia and later in the USSR where this persecution assumed the most extreme forms. The physical destruction of its bishops, clergy, and its most active followers, the liquidation of its theological schools and the press, the prohibition on the teaching of faith and the performance of pastoral duties, and the loss of all property and material resources—all these factors could not but introduce chaos into the church's subsequent process of restoration. During World War II many people who had been convicted of ecclesiastical activity in the USSR were liberated from prisons and joined in the reconstruction of the Church, but their views often contradicted the convictions of those who had grown up in the West. As a result, several church jurisdictions emerged which do not have a single administrative or even coordinating center. Some of them do not maintain a communion of prayer with each other but others engage in sharp polemics even on such matters as participation in the ecumenical movement or cooperation for the future unification of all churches along the lines proposed by the last Vatican Council. Several attempts at a reunion of these churches have failed to bring about tangible results.

This instability facilitates the work against the Ukrainian churches on the part of their traditional adversaries. The

Ukrainian Orthodox Church of the United States has not been able to join the Permanent Conference of the Canonical Orthodox Bishops of the Two Americas, to which the smaller Ukrainian churches belong. Thus some Ukrainian Orthodox churches remain isolated from the common concerns of the world's Orthodox churches and their relations with the ecumenical patriarch are limited to infrequent personal contacts.

There are no accurate data on the number of Orthodox Ukrainians abroad since they are scattered over a wide area. Some remain outside organized religious life or have joined the Orthodox churches of other nationalities. Only in the larger communities do the Orthodox Ukrainians have their own churches, parish halls, and Sunday schools. In other communities they either join with the nearest (often very distant parish) or are visited by a priest on designated days of the year. All the Ukrainian Orthodox churches suffer from a great shortage of clergy. This shortage becomes more acute with every year as the older priests die and new candidates for priesthood do not come forward.

The Ukrainian Orthodox churches abroad embrace nearly 300,000 Ukrainians. Over 100,000 Ukrainians from Transcarpathia belong to the American Carpatho-Ruthenian Orthodox Greek Catholic Church. Even greater is the number of the Ukrainian Orthodox who belong to non-Ukrainian Orthodox churches, particularly in the United States—the Russian Orthodox Greek Catholic Church of America and the Russian Orthodox Catholic Church in America (Patriarchal Exarchate, i.e., under the jurisdiction of the Patriarch of Moscow).

(For more details about the Ukrainian Orthodox Church in the various lands of Ukrainian settlement, see chapter XIII, Ukrainians Abroad; see also p. 113 ff., The Constitution of the Orthodox Church.)

## PROTESTANTISM (EVANGELICAL CHURCHES) IN UKRAINE

### The Beginnings of Protestantism

Protestantism, the third great branch of Christianity, did not have a significant influence in Ukraine. The spread of Protestantism in Ukraine was impeded by its relatively late appearance and by such obstacles as geographical remoteness from the lands in which Protestantism had emerged, the social structure in Ukraine which was different from that in Germany or England, the particular cul-

TABLE II*

| Name | Church leaders | Numbers | | | | |

tural level of the country, and its distinct ecclesiastical religious characteristics. Some Protestant movements such as Anglicanism or Methodism, originally local in character, found absolutely no response in Ukraine. Others, such as the Lutherans, the Baptists, and the Adventists, were unable to establish themselves properly before the arrival of Soviet rule and the beginning of the systematic destruction of all faiths.

The beginning of the evangelical movement in Ukraine dates back to the sixteenth century, but favorable conditions for new religious currents became evident as early as the fourteenth century when doctrines began to appear which undermined the confessional principles of the dominant churches. There was a sect of *stryhol'nyky* in Novgorod at this time which did not recognize the priesthood. After their condemnation, some of them escaped to Galicia. The *bychovnyky* or *pokutnyky* (flagellants or penitents), who were known in thirteenth- and fourteenth-century Poland, may have also wandered through Ukraine. A more prominent role was played by the sect of *zhydivstvuiuchi* (Judaizers, whose doctrine was related to that of the *stryhol'nyky*), which taught that the Messiah had not yet come, did not recognize icons and churches, and proclaimed the free interpretation of the Holy Scriptures. Working on translations of the Old Testament, the Judaizers anticipated some of the principal ideas of the Reformation.

The Reformation first reached Ukraine in the fifteenth century through Hussite refugees from Bohemia who came to Poland and Western Ukraine. By the middle of the sixteenth century Calvinism had reached Ukraine through Poland and Lithuania where it was patronized by the court of King Sigismund Augustus. By then some communities of "new believers" already existed in the western lands of Ukraine. They had their own preachers and schools and were organized into three reformation "districts": Ruthenia, Belz, and Podlachia. However, Calvinism made little headway among the masses because it lacked the sociopolitical militancy that had characterized its spread within the Catholic Church in the West. By then the Orthodox Church already had no political influence, the clergy was not the dominant class of the population, and the Slavonic liturgical language was not as foreign to the people as was Latin in the West. As a new vogue, the "new faith" found its converts primarily on the estates of the rich families, such as the Hoisky, Nemyrych, or Chaplych, as well as among the burghers.

Among the "new faith" movements, one radical offshoot of Calvinism, Antitrinitarianism (known also as Socinianism), acquired special popularity. This group rejected the teachings about the Trinity, predestination, and the sacraments, but in other questions of faith had much in common with other Protestant doctrines.

The Calvinists and Socinians made significant contributions to the growth of cultural life, also arousing great interest in ecclesiastical and educational affairs. In line with the general tendency of the Reformation to use the vernacular, they translated the Holy Scriptures into Belorussian and Ukrainian. These translations began to appear in the middle of the sixteenth century. The Protestant groups began to read the gospels and the epistles in the vernacular and to use it in sermons. In this way a series of Ukrainian translations appeared (Nehalevsky's *Novyi Zapovit* [New Testament] in 1581), Tiapynsky's *Yevanheliia* [Gospel] at the end of the sixteenth century, the *Peresopnytsia* Gospel in 1556–61 [Vol. I, p. 992]; and others). Socinianism continued to spread in the seventeenth century and it became well established in Volhynia – Kyselyn, Hoshcha, Berestechko, and other large estates—where there were at least 25 congregations.

There are contemporary accounts of the sudden, though short-lived spread of new religious trends. At the beginning of

the seventeenth century Ivan Vyshensky, a noted Orthodox conservative [Vol. I, p. 994], complained (he obviously exaggerated) in his works that "all have become heretics . . . this one an Evangelist, this one a Baptist, and this one a *subotnyk.*"

Lacking support among the lower strata of the population, the Protestant movements did not survive. The Counter-Reformation dealt them a destructive blow. Brought into Poland and the Ukrainian lands, the Jesuits turned their special attention to the education of youth. Consequently, the children of Protestants, after finishing Jesuit schools and inheriting paternal wealth and influence, disavowed the faith of their fathers. By the beginning of the seventeenth century (1608) a Jesuit college was already in operation in Lviv. Jesuit schools were also opened in Lutsk and a number of other places. This network of schools played a major role in winning the most capable of the Protestant and Orthodox youth to Catholicism.

Later, wars, political changes, and the pressures of occuping powers all affected the higher social strata, arresting the further development of Protestantism. Nevertheless, there was no lack of individuals among the leading circles of Ukraine who took a somewhat critical attitude towards the formalism, doctrine, and practices of the dominant churches (Gregory Skovoroda, the Brotherhood of SS. Cyril and Methodius, Taras Shevchenko, Panteleimon Kulish, Nicholas Kostomarov, Michael Drahomanov, Ivan Franko, and others). The Protestant movement was reborn in the nineteenth century among a completely different social group and in response to different stimuli.

**The Rebirth of Protestantism**

At the end of the eighteenth and the beginning of the nineteenth centuries, many immigrant farmers from the West, especially from Germany, settled in the Ukrainian lands, mainly southern Ukraine; among them were Lutherans, members of the Reformed Church, and Protestants of other confessions.

Among these denominations were the Mennonites who, as did some other evangelical movements, dispensed with an ecclesiastical organization, the baptism of children, the clergy (the symbolic eucharistic rite being performed only by the elders of the community), and participation in public life and military service. They did not adhere to a single doctrine and each community was independent in its faith and organization. The Mennonites, along with other immigrants from Germany, settled in the steppe regions of Odessa and Molochna and the cities of Katerynoslav, Kherson, and Kharkiv. Before World War I they numbered (without the Crimea, Don, and Kuban regions) 75,000. Since they were of German extraction, they had various restrictions imposed upon them during World War I and as well-to-do farmers they, together with other Germans (for example, the colonists in Volhynia), suffered very much at the time of the revolution. In order to save themselves, thousands left for Canada in the 1920's. Those who stayed behind were destroyed at the time of forced collectivization in the 1930's and during World War II, only a small number of them escaping with the retreating German armies in 1943. There are almost no Mennonites in Ukraine now, although as late as 1925, the Ukrainian Mennonite General Conference was attended by 84 delegates representing 25,000 organized members.

A similar fate also befell other religious groups of German colonists who settled in the various provinces of Ukraine.

**The Baptists**

The contacts of the indigenous population with German settlers gave rise in the mid-nineteenth century to a mass movement of Evangelical Christians, popularly called Shtundism. Local peasants who were hired to work for the wealthy colonists participated at German

homes or churches in religious gatherings for the study of the Holy Scriptures. These gatherings were called hours (*Stunde* in German, from whence Shtundists). This movement, initially close to Calvinism with a pietist coloring, later acquired a distinct Baptist character (after 1868). The rise of Shtundism was assisted by the diffusion and strengthening of Baptism among the German settlers. At this time German Baptists conducted particularly intensive missionary activity among the Germans in Ukraine. The Union of Baptists in Russia, which was recognized by the Russian government, was organized in 1884. Among the Ukrainian population this movement was far removed from any major social concerns and was under Russian influence, with the Russian language used in the Baptist communities. This worked against the cultural-national interests of the Ukrainian people and some alienation is still noticeable among many Baptists. The Evangelical Christians and Baptists were particularly numerous in the Kherson, Katerynoslav, Kiev, and Volhynia regions. The state authorities and the dominant Orthodox Church joined in combating these movements and many of their adherents were deported to Siberia. The position of the Evangelical Christians and Baptists improved with the proclamation of the toleration law in 1905. This not only helped them to grow, but also contributed to the emergence of new currents such as the Pentecostal Christians. American influence in particular contributed to the spread of this group.

The earlier religious restriction in Russia forced large numbers of Evangelical Christians and Baptists to emigrate to North America in the 1880's and 1890's. The descendants of the Shtundists now live in the state of North Dakota.

**The Situation in the USSR**

Until the revolution in 1917 there were two main Baptist groups in the USSR: the Union of Baptists (Soiuz Baptistov) and the Union of Evangelical Christians (Soiuz Yevangel'skikh Khristiian). The differences between them were not substantial and they were driven closer together in the post-revolutionary epoch of religious persecution.

At present, there are nearly 5,000 Baptist communities in the USSR with over half a million members (and some five million sympathizers) who are officially united in the All-Union Council of Evangelical Christians and Baptists (Vsesoiuznyi Soviet Yevangel'skikh Khristiian Baptistov). (These data are only projections as are all statistical data on religious groups in the USSR.) The Baptists are headed by the Moscow Soviet Council of twelve members who are approved by the authorities and who appoint local preacher-presbyters. The country is divided into 70 districts each headed by a presbyter-superintendent. The All-Union Council embraces the following groups: Evangelical Christians, Baptists, Christians of the Evangelical Faith-Pentecostal, Adventists, and Mennonites. However, not all the faithful wish to subordinate themselves to Moscow's leadership and these people are particularly persecuted. The trials and convictions of Evangelical Christians (and members of other churches) continue to take place. Particularly frequent are convictions of Jehovah's Witnesses (the great show trials of 1959).

The mystic sects of Great Russian origin occupied a separate place among the religious currents in Ukraine. Although they shared some traits with the Baptists, such as the rejection of icons, churches, and clergy, and stress on the study of the Bible, their beliefs did not spread among the native population and some of them lived in isolated communities until the time of the revolution. Among these sects (Khlysts, Dukhobors), the most widespread group was the Molokans who settled in southern Ukraine and in the northern Caucasus in the second half of the eighteenth century. Their only native Ukrainian offshoot was the sect of the Maliovantsi in the Kiev region, but it was unable to win many adherents.

**The Lutheran Church**

The Baptist communities lived their own lives, having little in common with the Lutheran Church, of which the adherents were for the most part German. The Lutheran Church had far less influence on the indigenous population. Its organization, religious ritual, and church architecture were not radically different from the Orthodox-Catholic forms and for this reason commanded little attention from the population. The Lutheran churches (*kirkhy*) were located primarily in the cities, especially in Western Ukraine and in the larger centers of eastern Ukraine. In addition to Germans, the Church also included Czechs (in Volhynia) and some Hungarians (in Transcarpathia). Many Lutherans were persecuted after the revolution of 1917–18 as a people of foreign extraction and as a wealthy stratum of the population. At the present time, this Church has virtually disappeared from the Ukrainian lands, although in 1914 the Lutherans had 234 congregations with 225 clergymen (Estonia and Latvia are primarily Protestant) in the Ukrainian (without Galicia) and Russian territories.

**The Reformed Churches in Western Ukraine**

Between the two world wars the Reformed churches in the Polish-controlled Western Ukraine developed along different paths than those in the east.

In Galicia and Volhynia, the influence of Ukrainian Protestants in Canada and the United States (united in the Ukrainian Evangelical Union of North America [Ukraïns'ke Yevanhel's'ke Obiednannia Pivnichnoï Ameryky]) contributed in 1925, to the rise of a Calvinist-type of reformation movement which formed the Ukrainian Evangelical-Reformed Church (Ukraïns'ka Yevanhel's'ko Reformovana Tserkva) with a consistory in Kolomyia. This church, led by Bishop Basil Kuziv, benefited from the temporary protection of the Evangelical Reformed Church in Poland. It was composed of 35 congregations and had almost 5,000 official members served by 17 preachers. Their organ was the monthly *Vira i Nauka* (Faith and Science).

FIGURE 69. BASIL KUZIV

The Ukrainian Lutherans were organized in the Ukrainian Evangelical Churches of the Augsburg Confession (Ukraïns'ka Yevanhel's'ka Tserkva Augsburg-z'koho Virovyznannia) headed by a missionary church council. This church had over 20 congregations with 16 preachers and some 5,000 members. Among their leaders were Theodore Yarchuk, who perished in a Soviet prison, and pastor Hilarion Shebets. The Lutheran organ was the monthly *Stiah* (Banner), and the Church's headquarters were located in Stanyslaviv. This group profited from the legal guardianship of the German Evangelical superintendent in Galicia.

With the Soviet occupation of Western Ukraine in 1939, the Ukrainian Reformed and Lutheran churches were liquidated. Some of the churches' preachers and members were exiled to Siberia and many of them perished there; others managed to escape to the West.

The Western Ukrainian Evangelical Christians and Baptists outside Galicia remained to a great extent under foreign influence although a desire for their own national character and leadership grew in their ranks. They published a monthly *Pislanets' Pravdy* (Messenger of Truth) in Lviv, edited by L. Zhabko-Potapovych. The number of Evangelical Christians and Baptists grew between the two world wars, especially in western Volhynia, where they had built many new prayer houses and enjoyed substantial moral and material assistance from the Baptist churches in western Europe and

America. The war and the Soviet occupation did not interrupt the activities of their numerous congregations with several tens of thousands of faithful, but they were henceforth subordinated, as were the Baptists and Evangelical Christians in eastern Ukraine, to the leadership of Moscow.

**Ukrainian Protestants Abroad**

Outside the Soviet bloc, however, Ukrainian Protestant groups are developing freely. They were strengthened by the post–World War II arrival in the United States and Canada of considerable numbers of more nationally conscious Ukrainian Baptists and Evangelical Christians. Their total membership approaches 150,000 of which 100,000 live in Canada and 50,000 in the United States. (See Ukrainians Abroad, pp. 1119–21 and 1167–8.)

# 3. CONSTITUTION OF THE UKRAINIAN CHURCHES

## PRINCIPAL UKRAINIAN CHURCHES

Believers in the Ukrainian SSR do not officially possess their own national churches since these churches have been formally abolished. Over 35 million Christian Ukrainians who belonged mainly to the Orthodox or Greek Catholic churches are now officially considered either atheists or members of the Russian Orthodox Church. A certain number of them practice illegally the religious rites of the abolished churches (mostly Catholic). At present Ukrainian national churches exist openly only outside the USSR.

**The Name**

The majority of Ukrainian people belong to the Orthodox Church; the Greek term "Orthodox" dates from the earliest period of the Christian Church when it denoted the "true creed" of the entire Church. After separation, this designation was adopted by the majority of Eastern churches (Ὄρθοδοξ, i.e. Holy Orthodox) to distinguish them from the Roman Church. When part of the Ukrainian Church entered into a union with Rome, the new church came to be known as the Uniate, the Greek Catholic, or the Ukrainian Catholic Church of Byzantine rite. The term "Greek" in the name of the Ukrainian churches (Greek Catholic, Greek Orthodox) has no ethnic connotation, but merely indicates that in the past the Ukrainian Church was within the spiritual and jurisdictional sphere of the Byzantine church. Thus, in 1607, the Polish *Sejm* (parliament) adopted a constitution for the "Greek religion" which may have applied to both the Orthodox and the Uniate; in 1649, Hetman Khmelnytsky demanded a privileged status for the "ancient Greek law"; and in the 1667 Treaty of Andrusiv Poland agreed to tolerate the Greek Ruthenian religion. For centuries this Church was known in official documents as the Church of *Rus'* (Rus'ka tserkva) or Ruthenian Church (the Uniates appear in the Roman docu-

ments as Rutheno-Catholici) while in Muscovy-Russia it was called the Kievan Church or the Church of Little Russia. All these designations are relative. Historically, they applied to the church of both the Ukrainians and the Belorussians and reflected the close historical and ecclesiastical links between these two neighbouring Slavic peoples. The ethnic designation "Ukrainian Church" became current only during the last century.

**Differences and Similarities**

The two principal Ukrainian churches are separated by essential differences of dogma and canon law. Unlike the Orthodox Church, the Ukrainian Catholic Church shares with the entire Catholic Church the dogmas of the procession of the Holy Spirit from both Father and Son (*Filioque*), the Immaculate Conception of the Mother of God, Purgatory, and the Pope's infallibility when speaking *ex cathedra*. It also accepts a single administrative center for the entire Catholic Church.

Although both churches base themselves on the Holy Gospel, the apostolic succession, and the apostolic rules, the Orthodox Church does not recognize a series of ecclesiastical laws binding the Catholic Church. It observes only the rules of the first seven ecumenical councils, some local councils, and the resolutions of the local sobors (councils) of the Kievan Church and its successors.

However, in their external manifestations, in their ecclesiastical culture and religious consciousness, the two churches have remained closely related to each other. Therefore, even after the separation, a sense of ecclesiastical unity survived among the people as shown by frequent intermarriages and common church feasts, rites, and customs. Both churches have nearly identical divine services, a common liturgical language, similar church buildings and chants. Both adhere to the so-called old style, i.e., the Julian calendar dating from 46 B.C. and lagging 13 days behind the generally used Gregorian calendar. The Gregorian calendar (1582), used by the Western Catholic and Protestant churches, has been partially adopted in recent times by the Ukrainian Catholic Church abroad. In both churches the lower ranks of the clergy marry (celibacy is a recent and partial phenomenon in the Ukrainian Catholic Church).

**The Status of the Ukrainian Churches**

From its beginnings as the official church of the Kievan *Rus'* and, especially, in the Kozak Hetman state, the Ukrainian Church enjoyed extensive autonomy. Its status was derived from the overall administrative structure of the ecumenical Orthodox Church which consists of a varying number of autocephalous, self-governing, local (national) churches. Although the term autocephaly does not appear in church canons, independence of a local church resulted in practice from the confluence of the factors of nationality and administrative-territorial independence, as has been the case with the Kievan *Rus'*.

While canonically the Ukrainian Orthodox Church did not possess autocephaly, as the Kievan metropolitanate it enjoyed broad autonomy. Later, it achieved near independence within the jurisdiction of the patriarch of Constantinople, with its constitution revealing features of a distinct local church. From its establishment, the Kievan Church had its own hierarchy headed by a metropolitan who was appointed by the patriarch. Tendencies towards broader emancipation of the Kievan metropolitanate from Constantinople were early manifested in the election of Hilarion (in 1051) and Clement Smoliatych (in 1147) as metropolitans of Kiev, without the approval of the Greek patriarch [Vol. I, p. 603]. Defending the election of Smoliatych, Prince Iziaslav Mstyslavych declared to the Byzantine envoy that if the patriarch continued to appoint a metropolitan for *Rus'*, without agreement with Kiev, "we shall ... adopt an

eternal law to the effect that [the metropolitan] be elected and installed by the bishops of Rus' ..."

The jurisdiction of the patriarchs of Constantinople was restricted to acts of higher canonical order and spiritual and religious care, such as the blessing and installation of metropolitans, transfer of metropolitan sees, granting of stauropegion, and visitations. However, the ecclesiastical contacts between Kiev and Constantinople were weak and intermittent, as shown by the fact that during its entire existence the Kievan metropolitanate was visited by the patriarch of Constantinople only once, in 1588–9.

The Ukrainian Orthodox Church began to lose its relative independence in the second half of the seventeenth century. Following the political union between the Kozak state and Muscovy in 1654, the Muscovite church attempted to extend its jurisdiction over the Kievan metropolitanate. As amended in 1659, this act provided that the Kievan metropolitan be "under the blessing" of the patriarch of Moscow; however, the metropolitan was assured that there would be no appeals to Moscow against his decisions and that he would rank second only to the patriarch. Fearing the loss of its autonomy under Moscow's jurisdiction, the Kievan clergy declined to accept this provision and begged the tsar "not to separate the clergy from the jurisdiction of the Holy Patriarch of Constantinople, to whom they are subordinated by the Divine Law, baptism, and the rules of Holy Fathers." This declaration was accompanied by a petition from the Kievan metropolitan and the "Holy Sobor" which pointed out that subordination to Constantinople is "the root of all our liberties and rights," and that the Kievan Church was "joined and united" with the patriarchate of Constantinople "by the law of God through St. Apostle Andrew and the canons of Holy Fathers." Later, the Kievan sobor of 1685 called the Patriarch of Constantinople "our father from time immemorial." Continued union with Constantinople was also called for by secular spokesmen; thus the envoys of the Zaporozhian Sich demanded in Moscow that the 1659 amendment be nullified because "we abide by the will of the Patriarch of Constantinople." These protests were ignored since the annexation of the Kievan Church was political in purpose: in the words of a contemporary Muscovite official, Opanas Ordin-Nashchokin, "the unity of peoples can be realized only through the break with the patriarch of Constantinople and through uniformity with Moscow in faith and ecclesiastical administration." The transfer of canonical jurisdiction over the Kievan metropolitanate from Constantinople to Moscow took place in 1686. The gradual liquidation of the distinct features of the Kievan Church ended in complete loss of the autonomy of the Kievan metropolitanate. Yet the memory of the Church's past autonomy continued to survive. At the Pinsk congregation of 1791, the Orthodox in Poland renounced their dependence on the Russian Church and declared their allegiance to the patriarch of Constantinople who had the power in theory to consecrate their bishops.

With the restoration of Ukrainian statehood, the government passed a law in 1919 establishing autocephaly. This law stated that "the Ukrainian Autocephalous Church with its synod and ecclesiastical hierarchy shall not be subordinate in any respect to the All-Russian patriarch." Russian church authorities refused to recognize this act (e.g., in the same year, the Russian bishop of Kamianets Podilsky suspended a number of Ukrainian priests for "breaking with the Moscow patriarch by [their] recognition of the autocephaly of the Ukrainian Church"). After the promulgation of the 1919 law the Ukrainian government began negotiations with the patriarchate of Constantinople to secure its recognition of autocephaly, but political developments intervened. Meanwhile, a spontaneous Ukrainian church move-

ment headed by the All-Ukrainian Orthodox Church Rada challenged the authority of the hostile Russian episcopate and, in May, 1920, the church Rada proclaimed the establishment of the Ukrainian Autocephalous Orthodox Church (see p. 170). Despite the fall of the Ukrainian state, the church continued to develop during the 1920's until its suppression by the Soviet regime.

The western portion of the former Orthodox metropolitanate of Kiev, which found itself within the Polish borders after World War I, acquired autocephaly in 1924 by a thomos of the patriarch of Constantinople, signed by twelve Eastern metropolitans, which stated "the separation of the metropolitanate of Lithuania and Poland from our see . . . and its union with the Holy Muscovite church took place in complete violation of canonic rules; moreover, this [union] failed to respect all the provisions concerning a complete ecclesiastical autonomy of the Kievan metropolitan who held the title of Exarch of the Ecumenical See." During World War II, this autocephaly was extended to eastern Ukraine, where the hierarchy of the Ukrainian Autocephalous Orthodox Church was reestablished in 1942. But on their return to Ukraine, the Soviet authorities once again suppressed this church. The Ukrainian Orthodox Church, although divided into several independent jurisdictions, continues to exist among Ukrainian exiles and settlers in western countries, but most of its branches are not recognized by the older Orthodox churches.

Under the terms of the Union of Berestia (Brest) in 1596, the Uniate Church secured autonomous status within the Catholic Church. The rights of the Kievan metropolitan were recognized and he was given the power to approve, consecrate, and install bishops within the metropolitanate of Kiev-Halych. The Uniate Church experienced its greatest development during the eighteenth century, when it embraced some 11 million faithful in Right-Bank Ukraine, Belorussia, Galicia, and Transcarpathia. After the partition of Poland, the rights of the Kievan metropolitans diminished steadily, and in 1838 the Kievan Catholic metropolitanate was abolished. The Uniate (Greek Catholic) Church survived in southwestern Ukraine (Galicia and Transcarpathia), following its suppression in the Russian-controlled Ukrainian and Belorussian territories. The Galician metropolitanate, restored in 1807, was granted the rights of the Kievan metropolitans by Pope Pius VII. Following World War II, Soviet authorities banned the Greek Catholic Church in Ukraine, but it continues to exist openly outside the USSR.

**Legal Foundations of the Ukrainian Churches**

The recognition of a church's separate identity (*sui juris*) may be either formal and explicit or factual and implicit. The Kievan Church was, in fact, recognized as a separate eccleciastical entity at the time of its organization when it was placed under its own hierarch—the metropolitan.

Ecclesiastical laws governing the Kievan metropolitanate were based on the canons of the Byzantine church which were known in *Rus'* in translated collections such as *Nomokanon 50 tytuliv* (*Nomocanon* of Fifty Titles); John Scholastic (sixth century), called in Slavic translation *Nomokanon sviatoho Metodiia* (*Nomocanon* of St. Methodius); *Ustiuzhska Kormcha* (thirteenth century); *Nomokanon 14 tytuliv* (*Nomocanon* of Fourteen Titles) in the first version of 629 (*Efremivska Kormcha* of the twelfth century) and second version of 883. During the seventeenth century, within one decade, canons were published in Kiev in three editions (1620, 1624, 1629). *Kormcha Knyha* (The Rudder Book) composed about 1207 by the Serbian Archbishop Sava and other collections of church laws exercised great influence. The Kievan "rudder books" supplemented the Byzantine canons with

the rules and resolutions of local sobors, patriarchal charters, regulations of metropolitans, and ecclesiastical statutes of the *Rus'* princes. Among the latter, the best known were *Ustav* (Statutes) of Volodymyr the Great and the so-called *Svytok* (Roll) of Yaroslav the Wise, which along with *Ruskaia Pravda* constituted civil ecclesiastical laws equivalent to the Byzantine νομοι (civil laws). Over the years, many other acts affected the status and organization of the Kievan Church, including the charters of local princes, enactments of the Lithuanian princes and Polish kings, the rules of the 1791 congregation of Pinsk (never implemented), the nineteenth-century statute of spiritual consistories, the local All-Russian sobor of 1917–18, and the resolutions of the 1918 All-Ukrainian Church sobor, the law "Concerning the Supreme Authority of the Ukrainian Autocephalous Orthodox Church" passed by the Ukrainian Government in 1919, decisions of the 1921 sobor of the Ukrainian Autocephalous Orthodox Church, Soviet ecclesiastical legislation, and acts affecting the separate parts of the former Kievan metropolitanate (in the case of the Orthodox Church in Poland, for example, the "Provisional Rules Concerning the Relations between the Church and the State" of 1922).

The canonical framework of the Ukrainian Catholic Church was shaped by the papal bulls, constitutions, and decrees of the Apostolic See, as well as decisions of its own provincial councils, especially the comprehensive resolutions of the 1720 synod of Zamostia ratified by the Pope in a specific form. Subsequently, the Lviv synod of 1891 amended the ecclesiastical rules to recognize the established practice of the Church and adapted them to Austrian ecclesiastical laws. The norms of the Basilian Order in the seventeenth and eighteenth centuries were established at quadrennial convocations of its general drafters. The church hierarchy also took part in these convocations, with the metropolitan presiding.

**Church Councils**

One of the outstanding features of the Ukrainian Orthodox Church has been the conciliar system of ecclesiastical government involving the participation in decision-making (usually through sobors) of all its members—the episcopate, the clergy, and lay believers. This system, however, lacked stability: it thrived in conditions of political freedom but declined in unfavorable circumstances, e.g., in the nineteenth-century Russian empire. Moreover, the respective rights and proportionate weight of its three component elements were never codified and varied with the circumstances.

Within the Byzantine Church, the conciliar system was abandoned at an early stage. It was revived only after 1453 when the status of state church was lost. Conciliarism did not develop in the Roman Church which has been characterized by the monarchical principle of ecclesiastical government. In the Ukrainian Catholic Church also the minor clergy and laymen have had little influence on the conduct of church affairs.

The supreme organ of the *Rus'* Church —its national or local sobor—met according to need to determine important matters, particularly to elect the head of the Church. Thus, in 1147, a local sobor elected a *Rus'* native, Clement Smoliatych, as metropolitan; another important sobor was held in 1274. The diocesan sobors which elected bishops and dealt with local matters acted in a lesser capacity. They normally convened at a fixed time (the first week of Lent). Of a different nature were the annual sobors of clergy (pastoral councils) popularized by Peter Mohyla (1647) in his metropolitan eparchy.

Christopher Philalet, author of the once popular work *Apokrisis* (1597), stated that church sobors should consist of all parts of the Church—bishops, clergy, and laymen. He supported his argument with references not only to Holy Scriptures (Acts of the Apostles,

XV, 22–23) but also to the authority of the early Roman Church (Popes Nicholas I and Pius II). Conciliarism flourished in the Ukrainian Orthodox Church, particularly in the seventeenth century. Thus the 1621 sobor in Busha was attended not only by the hierarchy and clergy, but also by a "multitude of people." In 1628, Metropolitan Job Boretsky invited "the higher ranks of clergy and laymen . . . [and] common people elected by brotherhoods and districts" to the provincial sobor in Kiev. Participants in the Lviv sobor of 1641 included besides the metropolitan, his exarch, abbots of three monasteries, and the city's higher secular clergy, along with such laymen as representatives of the Lviv brotherhood, 112 delegates of the local Orthodox gentry, and representatives of brotherhoods from other cities of the Lviv eparchy. The Kiev sobor of 1620 restored the practice of having electoral sobors select metropolitan and diocesan bishops; such a sobor of "spiritual and secular estates" elected a bishop of Chernihiv in 1657. Some sobors were called to deal with specific problems, e.g., the 1628 council at Horodok which considered the possibility of holding a joint sobor with the Uniates, or the Kievan sobor of 1629 which adopted a new book of services.

Conciliar traditions are maintained by the Ukrainian Orthodox churches abroad. They convene sobors of the clergy and faithful and, in the intervals between sobors, episcopal sobors and church councils (radas). The church council of the Ukrainian Orthodox Church in the United States consists of 3 bishops, 13 priests, and 10 laymen. One of the Ukrainian Orthodox churches in which laymen play an especially important role has even adopted the term Sobornopravna (Conciliar) in its semi-official name (Ukrainian Autocephalous Orthodox Church-Conciliar).

Initially, the institution of sobors in which laymen participated existed in the Uniate Church also. In the course of time, however, the lay influence declined and eventually these gatherings became restricted to the clergy. The 1720 synod of Zamostia, attended only by the bishops and clergy, provided for the annual convocation of the eparchial sobor. This sobor played a significant role in the history of the Uniate Church and survived in a modified form—synods convened according to local needs (e.g., the 1898 eparchial synod in Peremyshl, the 1906 archeparchial synod in Lviv, the 1911 eparchial synod in Canada, which promulgated the rules of the local Greek Catholic Church, and the 1959 synod of Philadelphia which adopted the archeparchial statute).

**Church Hierarchy**

**The Patriarchate.** Faced with a gradual erosion of the autonomy of the Ukrainian Church and violation of its rights by secular authority, some ecclesiastical leaders strove to raise the Church's status to the position of equality with other churches or to secure support from the powerful Roman Church. These aspirations were manifested both in the Union activities and in the attempts to secure for this almost disfranchised church the rights of a patriarchate. Through the efforts of the Jesuit Father Possevino, the matter of a Kievan patriarchate was raised as early as 1585. In 1617, after the Union of Berestia, the Orthodox and Uniates met to discuss unification on the basis of a patriarchate and, in 1627, a conference of Catholic bishops prepared a special plan for implementing this project. Plans for a patriarchate were revived during the administration of the Orthodox metropolitan Peter Mohyla, but were discarded after his death in 1647. They were again brought to light in 1674 by the Catholic metropolitan Gabriel Kolenda, but after the subordination of the Ukrainian Orthodox Church to Moscow the question became irrelevant.

The idea of a separate patriarchate was raised in Lviv in 1843 and again after World War II by the Ukrainian

Catholic episcopate at the Second Vatican Council. The Council's decree concerning the organization of national churches recalls that "a patriarchate is the traditional form of authority in the Eastern Church" and, accordingly, expresses a wish that "new patriarchates be created wherever needed. . . ." Demands for the completion of the canonical organization of the Ukrainian Catholic Church in the form of a patriarchate, which would equalize it in status with other Eastern Catholic churches, have been strongly advocated by Ukrainian Catholic laymen abroad. However, the idea of such a patriarch—his title, place of residence, powers, and denominational character—has found no common interpretation among Orthodox and Catholics.

**Metropolitans.** In Byzantine law, between the ranks of patriarch or archbishop major, on the one hand, and that of bishop, on the other, there is an intermediate position occupied by a metropolitan who, in addition to his own eparchy, exercises some authority over other bishops of the given province. While in the Western Church the title of a metropolitan is now merely honorary, in the Eastern churches the rights of metropolitans varied over the centuries, depending on ecclesiastical and political circumstances.

During the entire history of the Church in *Rus'*-Ukraine, it was headed by metropolitans who were subordinate to the patriarch of Constantinople, and in the case of the Uniates to the Roman pope. The patriarch's authority over the metropolitans was confined to major canonical matters and spiritual and religious care, thus leaving each metropolitan a free hand in the administration of his church province. In the Kievan state and for some time after its decline, the metropolitan was, in fact, the spiritual head of all eastern Slavs, and therefore held the title, Metropolitan of All *Rus'*. After the establishment of the Moscow patriarchate and the extension of its authority over the Kievan Church, "Little Russia" replaced "All *Rus'*" in the title (from 1688).

In Kievan *Rus'* a metropolitan was elected by bishops of the entire metropolitanate, subject to ratification by the patriarch of Constantinople who could also remove a metropolitan. The mode of election and the composition and powers of electors changed in the course of history. In Kievan *Rus'* metropolitans were elected by the episcopate and clergy with the participation of the prince. After 1620, the electors included the bishops, the clergy, the hetman, and the Kozak officers. On one occasion (in 1632) a metropolitan was elected by laymen—deputies of the Warsaw *Sejm*. In the Polish Commonwealth bishops elected candidates for the metropolitan see, who were then presented by the king to the patriarch. Occasionally, the king himself appointed a candidate who applied to the patriarch for approval.

The metropolitan (who normally served also as bishop of the Kievan eparchy) convened sobors of the bishops in his metropolitanate, presided over these sobors, implemented the execution of their decisions, visited the eparchies in his metropolitanate, and represented the Church before the higher state authorities. In Kievan *Rus'* and in the Hetman state the metropolitan wielded considerable political influence. After the Church's union with Moscow, the metropolitans gradually lost their rights and since 1721 have not had provincial powers. Though they retained the traditional title of metropolitan, in reality they were reduced to the status of appointed, not elected, eparchial bishops. In time, Ukrainians ceased to be appointed to the Kievan metropolitan see which, during the nineteenth century, was predominantly Russian. For a short time, following the 1917 revolution in Russia, some of their ancient rights were given back to the Kievan metropolitans but were lost again under the Soviet regime. At present, the Kievan metropolitan has virtually no ecclesiastical

jurisdiction outside his eparchy. Only the metropolitans of the Ukrainian Orthodox churches abroad retain an independent overall authority.

Following the Union of Berestia, the Uniate metropolitans of Kiev and All *Rus'* were granted the same powers as the Kievan Orthodox metropolitans, on the basis of the papal bull *Magnus Dominus* of December 23, 1595 and the constitution *Decet Romanum Pontificem* of February 23, 1596, by which they could constitute bishops in the province of Kiev without the authority of the Holy See. They were elected directly at the gatherings of bishops and protoarchimandrites of the Basilian Order and were recommended by the Polish king to Rome for approval. With the restoration of the Galician metropolitanate in 1807, its heads were granted the same rights as the Kievan metropolitans. These rights were confirmed by Pope Pius VII in his bull *In universalis Ecclesiae regimine*, but were progressively curtailed by the Austrian government, the Roman Curia, and even the metropolitans themselves, who were finally left with merely the title and some honors. They also retained the right to hear appeals in line with the long-established practice of the Latin Church. At present, two provinces of the Ukrainian Catholic Church abroad are headed by metropolitans—Canada since 1956, and the United States since 1958. In 1963 the present Galician metropolitan Josyf Slipyj was declared archbishop major. According to the new code of Eastern churches, the jurisdiction of an archbishop major may embrace several ecclesiastical provinces headed by metropolitans, and he may create new eparchies and provinces and appoint bishops and metropolitans in his own bishopric independently of the Apostolic See (see *Motu proprio, cleri sanctitati*, Can. 326; Second Ecumenical Vatican Council, Decree on the Eastern Catholic Churches, No. 9–10). However some of these functions have not yet become effective.

As for the non-jurisdictional offices above that of bishop, four cardinals have so far been appointed in the Ukrainian Catholic Church by the Pope. In the Orthodox Church, patriarchs appointed exarchs who had supervisory disciplinary powers. This had also been the custom followed by the popes after the Union (the appointment of Bishop Cyril Terletsky as exarch in 1598). The present Orthodox metropolitan of Kiev holds the title of exarch of the Moscow patriarch, but without any special powers.

**Bishops.** In Kievan *Rus'*, bishops were originally appointed with the prince's consent by the episcopal sobor headed by the metropolitan. Later, they were elected by the representatives of the church community, including the prince, and were consecrated by the metropolitan. In the fourteenth century, the sobor of bishops elected three candidates, of which one was consecrated by the metropolitan. Secular rulers influenced the choice of bishops and occasionally refused to recognize them or admit them to their sees, as happened in Poland in the case of the Orthodox hierarchy restored in 1620. Similarly, civil authorities in the USSR have a decisive voice in choosing candidates for episcopal offices.

Bishops for Ukrainian Catholics were chosen by the metropolitan, and in recent times they have been nominated by the Holy See with the agreement of the government, according to tradition and the terms of concordats with individual countries.

Distinguished diocesan bishops in both the Orthodox and Catholic churches received the title of archbishop. Initially there were only eparchial bishops in the Kievan metropolitanate. Vicars or auxiliary bishops in the Greek Catholic Church date from the seventeenth century and in the Orthodox Church from the eighteenth century.

In modern times, the Ukrainian Catholic bishops for Ukrainian émigrés residing in the territories of the Latin Church have been called exarchs. At present,

there are five such exarchates, three of them in Europe. In administering their eparchies, bishops received assistance from various institutions which were known by different names at different times.

**Ecclesiastical administrations.** In the past, eparchies were administered by *klyrosy*, one of the peculiarities of the Ukrainian Church. Members of a *klyros*, known as *kryloshany* (distinguished priests of the city in which the episcopal cathedral was located and of its environs), performed administrative duties of varying importance in the eparchy, participated in the clerical court, had a voice in the appointment of the clergy and abbots, and took care of the financial and economic affairs of the eparchy. A *klyros* was directly responsible to the bishop or his vicar. This institution survived in the Ukrainian Orthodox Church until the introduction of the synod rule in the Russian Church in the eighteenth century. The functions of *klyrosy* in Russia were taken over by spiritual consistories.

The constitution of the Orthodox Church within the Russian empire was determined by the so-called *Dukhovnyi Reglament* (Ecclesiastical Regulations) of 1721 (the second part of which dealt with "episcopal matters") and numerous decrees of the synod which were subsequently passed to interpret and develop the provisions of the *Reglament*. The 1841 statute of the consistories gave shape to the eparchial administration in which a powerful role was assigned to a lay secretary of the consistory who was directly subordinate to the governmental representative in the Church—the oberprocurator of the Holy Synod. All the activities of the Church were placed under the control of these two institutions—the oberprocurator and the synod—which supervised all aspects of eparchial life: the eparchial bishop, the consistory, the school council, schools, charitable work, publications, the clergy, and monasteries. Attached to the consistory was a court which dealt with the affairs of the clergy and, to some extent, of laymen (marriage and divorce).

Consistories in the Ukrainian Orthodox Church abroad are not subordinate to any secular agency but report only to ecclesiastical authorities and sobors.

In the Ukrainian Catholic Church the *klyros* had evolved by the early nineteenth century into a *kapitula* (capitular chapter), an advisory body attached to a cathedral and embracing distinguished clergymen—*kryloshany*. Consistories of the Ukrainian Catholic Church consist of canons (*kanoniky*), consistorial councillors, referees, an archivist, and the chancellor.

The Orthodox parish clergy were under the direct supervision of elected *protopopy* (first priests) whose functions (clearly defined, especially in the seventeenth century) included the collection of taxes for the metropolitan and the bishops. *Protopopy* were subordinate to visitators recruited from among the educated regular clergy. Of higher rank were the exarchs of the metropolitan (there were two permanent exarchs—one for Lithuania and one for Poland), who represented the Church in secular courts. Exarchs were usually appointed from among the archimandrites of the principal monasteries.

The duties of the *protopopy* later passed to the deans (*dekany* or *blahochynni*) who were elected by the parish clergy, usually at their conferences (*soborchyky*). These gatherings, which dealt with local church matters, were also attended by deacons (*diaky*) and church elders (*starosty–tytari*) elected by the parishioners to maintain order in the church. Abroad the functions of *starosty* have largely been assumed by parish councils which administer the economic affairs and upkeep of the parish churches.

The abnormal conditions experienced by the Orthodox Church in Ukraine at certain periods of its history resulted more than once in a decline of ecclesi-

astical organization, administration, and religious life in general. Early in the seventeenth century there was a catastrophic shortage of clergy, especially in the episcopate. Thus, over a number of years only one Orthodox hierarch remained—the Lviv bishop Gedeon Balaban (1569–1607). By the 1620's the ranks of the parish clergy had decreased to such an extent that, according to Laurentius Drevinsky, a deputy to the Polish *Sejm* from Volhynia, "the churches are closed, ecclesiastical property has been destroyed, there are no monks in the monasteries and only the cattle are being kept there . . . children are dying without baptism and the dead are being carried away from the cities like carrion, without any funeral." A similar situation existed in the Ukrainian SSR during the 1930's. At present, the Church continues to suffer from the shortage of clergy. In the entire Ukrainian SSR only one small theological seminary in Odessa survives.

### The Clergy

**Eparchial clergy.** The Ukrainian clergy is divided into the "white" or eparchial and the "black" or regular clergy (monks). In contrast to the Roman Catholic Church in both the Orthodox and the Greek Catholic churches the eparchial clergy may marry. The needs of maintaining a family and bringing up children have compelled the rural clergy to devote a considerable part of their time to farming on church land. Their other sources of income—parishioners' payments for church services and a small and unstable pay from the state—were merely supplementary to their income from farming.

Family life tied the parish priests to a single place, and thus priestly families emerged which resided for generations in the same parish, developing close links with the population and becoming (especially in Western Ukraine) leaders in the fields of education, economics, and politics. These intimate ties between the clergy and the people have been officially severed in the USSR where the "servants of cult" are forbidden to engage in any activities outside the church and are subject to many other restrictions and pressures.

In both Ukrainian churches candidates for the clergy may marry only once (before being ordained as subdeacons). No second marriage is allowed after consecration. In the Greek Catholic Church the number of unmarried clergy has increased as a result of the Church's tendency towards celibacy. The Lviv synod of 1891 left the choice of celibacy to each individual candidate for the priesthood, but later, in the first half of the twentieth century, celibacy was made obligatory in two out of three theological seminaries in Galicia (Stanyslaviv and Peremyshl). In 1929, the Sacred Congregation for Eastern Churches decreed the introduction of celibacy for all Oriental Catholic clergy in North and South America and in Australia.

**Monastic orders.** While the "white" clergy concentrated on the pastoral care of the faithful, the regular clergy sought spiritual perfection in monasteries. Monastic life evolved from the early anchorites (hermits), through Byzantine monastic rules to the recent forms of Latin discipline.

Monasticism appeared in Ukraine with the arrival of Christianity. After a brief hermitic period (St. Antonius Pechersky), it emerged according to the rule of St. Basil. In 1072, St. Theodosius Pechersky introduced a rule based on the Studite *Typicon* in the Kievan Cave Monastery. This rule served as a model for other monastic centers during the eleventh to the thirteenth centuries. Monasteries were headed by hegumens, the larger ones by archimandrites, who in turn were subordinate to the episcopate, except for the lavras (such distinction was granted to two Ukrainian monastic centers—the Kievan Cave and the Pochaïv and stauropegion monasteries, which were directly responsible to the patriarch or the Holy Synod. The smallest monastic centers, *skyty*, had no independent status but were subordinate

to the nearest large monastery. Monasteries were usually founded by wealthy families, although in some cases they were established by individuals from lower social strata or by organizations. In Kievan *Rus'*, monasteries often developed in the place of residence of a pious individual who sought perfection in seclusion (both lavras originated in this way). Monastic institutions played an important role in the colonization of uninhabited areas since the saintliness of their founders attracted individuals who fled from the world in search of salvation, as well as those who wished to invest their money or labor in the development of a new religious center. The role of the monasteries as centers of culture and education began to decline after the Holy Synod increased its control of their internal affairs. Their rights were progressively limited by the law of 1722 ("Regulations concerning the parish clergy and the monastics") and the supplementary decrees of 1764, 1766, and 1770, which set forth detailed rules for monastic life and curtailed the cultural role of the monasteries. Monks were even prohibited from keeping paper and ink in their cells. Following the monastic reform in central Russia, secularization of monasteries in the Kievan metropolitanate was undertaken in 1786 and 1788. In some areas this reform was carried out in the nineteenth century and involved classification into three categories and the regulation of the property held by the "established" (*shtatni*) monasteries. Numerous Orthodox monasteries were deprived of their legal and material bases by a Soviet government decree of January 23, 1918. The authorities, by persecuting monks and pilgrims, are destroying even those monasteries that survived World War II.

At the present time the Ukrainian Orthodox Church abroad maintains no monasteries.

In the Uniate Church, Metropolitan J. V. Rutsky consolidated all monasteries under his jurisdiction into a centralized congregation of Basilians in 1617. Approved by Pope Urban VIII in his *Exponi Nobis* of June 20, 1631, this congregation subsequently included monasteries from other dioceses. In line with the decision of the 1720 synod of Zamostia, monasteries of the eparchies which had recently embraced the Union (Peremyshl, Lviv, and Lutsk) established a similar congregation at the Lviv chapter meeting in 1739. In 1743, both congregations merged into the Basilian Order. The order was headed by a protoarchimandrite, and its two (after 1780, four) provinces were administered by *protoihumeny* (first hegumens). Individual monasteries were directed by archimandrites appointed for life, or by abbots with a four-year tenure. With 22 places reserved for them at foreign papal universities, the Basilians had a number of highly educated clergy and gained distinction for their schools, missions, and publishing houses. Their relationship to the bishops was regulated by special agreements. In 1772, the order had 144 monasteries with 1,225 members, including 944 priests, 190 clerics, and 91 brothers.

After the partition of Poland, the Basilian Order was dissolved within the Russian empire. It survived only in Austria (in Galicia), where it was reformed by the Jesuits in 1882. Since 1931, the General Curia of the order has been located in Rome. The new Basilian constitution of 1906 exempted the order from the jurisdiction of the bishops and abolished the office of archimandrite. The actual constitutions were made to conform with the new code of Eastern churches and were approved by Pope Pius XII in 1954. Prior to World War II, the Basilians spread beyond Galicia and included 658 monks. Since the Soviet occupation of Western Ukraine and the destruction of the Basilian monasteries there, the order has continued its activities among Ukrainians in the United States, Canada, Brazil, Argentina, and England, and has a monastery in Warsaw. In Rome, where its General Curia and Scholasticate are located, the order

operates its publishing house (Analecta OSBM, published until 1941 in Zhovkva) and St. Josaphat's College.

The other Ukrainian Catholic orders and congregations were formed in the twentieth century. Through the efforts of Metropolitan Andrew Sheptytsky the Studites were restored to revitalize the early forms of Eastern monasticism. Until 1939, they were centered at their monastery (lavra) in Univ, Galicia. At present the Studites have two monasteries (lavras), one in Woodstock, Ontario (Canada) and one near Rome. The Congregation of Redemptorists, founded in 1732, established its Eastern, Ukrainian branch in 1905 in Canada. Originally, this branch was composed of non-Ukrainians, mainly Belgians. In 1913, the Ukrainian Redemptorists established themselves in Galicia (Zboïska, near Lviv) and later spread into Transcarpathia and Volhynia. Their main mission is now located in Canada (Yorkton, Sask.), with other centers in the United States, England, and Australia. The Redemptorists engage primarily in missionary activities. The Salesians formed their Eastern branch in 1930. This society concentrates on the education of youth and has operated the Ukrainian Little Pontifical Seminary in Rome since 1959. In the United States, there is also an Eastern branch of the Franciscan Order.

From ancient *Rus'* times until the establishment of the Soviet regime, many nunneries existed in Ukraine. The earliest known female monastery was the Kievan Convent of St. Irene (1037). In the thirteenth century, the Polotsk convent acquired special prominence because of the activities and piety of its nuns. Prior to World War II many convents, including two large houses in Volhynia (Korets and Zymne), gained prominence through their manifold activities. All Catholic and nearly all Orthodox convents have now been liquidated by the Communist regime in Ukraine. The native monastic tradition is being maintained abroad by Ukrainian Catholic convents such as the Sisters of St. Basil the Great. Based on the rule of St. Basil, these nunneries were once widespread in eastern Europe. After the Union, Metropolitan J. V. Rutsky arranged the rules for the Basilian convents, but they remained decentralized. When the Union in the territories of tsarist Russia was dissolved, the Basilian Sisters remained only in Galicia. In recent times they have expanded their activities into other European countries and overseas (the United States and Argentina). Their main preoccupations have always been secondary education for girls and the training of youth. The order is now governed by its new constitutions of 1951 and 1958 and is headed by its General Curia in Rome. In 1921, Metropolitan Sheptytsky organized the female equivalent of the Studite monasticism. The Studite Sisters have no houses abroad. The Congregation of Sisters Servants of Mary Immaculate was established in 1892 in Galicia. Centered primarily in Krystynopil and Lviv, this congregation concentrated its activities on the education of youth and the care of the sick, orphans, and the aged. Approved by Pope Pius XII in 1956, it is presently active among Ukrainians in the United States, Canada, Brazil, Poland, Czechoslovakia, Yugoslavia, and Italy. Headed by their General Curia in Rome, Sisters Servants maintain 91 religious houses with 621 sisters. Sisters of St. Joseph, Myronosytsi (Chrism-Bearers), Sisters of St. Josaphat and of the Holy Family, and Sisters of Mercy of St. Vincent were also active before the last war in Galicia. Abroad, Missionary Sisters and Catechist Sisters engage in charitable and educational work. (See also The Ukrainian Catholic Church abroad, pp. 192–3.)

### The Faithful

The prominent role played by laymen in the Ukrainian churches may be explained not only by their piety or interest in ecclesiastical affairs but also by the fact that, being deprived of its own political representation at different stages of Ukrainian history, the population sought

expression in church organizations. Under these circumstances, the ecclesiastical hierarchy assumed the role of spokesmen for the nation (this was the case with the Ukrainian Catholic Church under Austria and Poland in the nineteenth and twentieth centuries), while church sobors acquired the significance of national assemblies. Under the wing of the Church, public societies, publishing houses, schools, homes for orphans and the aged, and institutions for the cultivation of arts and sciences emerged.

The most prominent institutional expression of laymen's activities in the Orthodox Church were brotherhoods (see p. 147), i.e., organizations of faithful centered on the parish churches, which were known as early as the twelfth century. At first their activities were confined to the care of their parish church, but from the fifteenth century brotherhoods assumed greater importance (e.g., the Stavropygia Brotherhood in Lviv). As their influence increased, brotherhoods obtained charters confirming their rights and privileges (e.g., the royal charter of 1538 approving the statutes of the Vilnius brotherhood) from the higher secular and ecclesiastical authorities. In 1588, the patriarch of Constantinople granted to the Lviv brotherhood the privilege of stauropegion exempting it from the authority of the local hierarchy and placing it directly under the patriarch's jurisdiction. In 1620, a similar privilege was granted to the Lutsk brotherhood by the patriarch of Jerusalem. The brotherhoods came to influence the affairs of the entire Church. Thus, the Lviv brotherhood was instrumental in the restoration of the Galician bishopric around 1539, helped to improve preaching in the Church, and enlisted trained preachers. Brotherhoods maintained internal discipline through religious and moral education of their members and controlled their behavior through their own courts. They formed youth organizations, homes for the aged and the infirm (the so-called *shpytal's*), secondary and higher schools, and printing shops. The most active brotherhoods attracted attention and members from outside their own parishes. Thus the Moldavian voievodas and boyars were among members of the Lviv brotherhood and, in 1620, Hetman Sahaidachnyi "with the entire Zaporozhian Host" joined the Kievan brotherhood. The clergy, including the hierarchy, also belonged to brotherhoods.

Brotherhoods became, in fact, patrons of the Church and engaged in its internal affairs, attempting to control the clergy and the bishops. Their interference evoked the displeasure of the episcopate and caused discord within the Church, which led the enemies of Orthodoxy to claim that "it is not the clergy who lead the people, but the people who lead the clergy." Reforms carried out by Metropolitan Mohyla in the seventeenth century provided canonical solutions for most of the controversial issues.

Brotherhoods continued their activities until the nineteenth century when the entire Ukrainian-Belorussian Orthodox Church found itself under Russian rule, which imposed restrictions upon the brotherhoods and confined the scope of their activities to the local parish. Within the Ukrainian Catholic Church, brotherhoods have had only limited, local significance; abroad, however, they are active. For example, the *Pokrova* brotherhood has in fact been in charge of Orthodox church life in Argentina since 1946.

The parochial and interparish female organizations—sisterhoods—have played a less significant role in the Church. They are responsible for decorating the churches and maintaining Sunday schools, and engage in charitable work. In the Ukrainian Orthodox Church in the United States, an especially active role has been played by the Sisterhood of Princess Olga. The Ukrainian Orthodox League performs similar functions in the United States.

After the revolution of 1917 church councils with strong lay influence emerged within the Autocephalous

Ukrainian Orthodox Church (see p. 170). Parishes not joining this movement adhered to the so-called consistorial administration which prevailed over a period of several centuries. The 1921 sobor vested the administrative power within the Church in elected councils—the All-Ukrainian Orthodox Church Rada, the Small Rada, and the *povit* or *raion* (district), *volost'* (township), and parish councils. Most of the members of these councils were liquidated by the Soviet authorities. The church councils reemerged in Ukraine during World War II and played an important role in the short-lived revival of the Ukrainian Autocephalous Orthodox Church. Of special importance were the All-Ukrainian Church Council reestablished in Kiev in 1941, the Rivne Church Council in Volhynia, and the Kholm Church Council which helped rebuild the Orthodox Church in the Kholm and Podlachia regions. Among the numerous Orthodox church councils formed among the postwar refugees in Europe, the parish council in Mannheim (Germany, 1946) was especially active. In the United States, a particularly prominent role is played within the Conciliar Church by the Ukrainian Orthodox Church Council.

The role of laymen progressively declined, although it came to be more clearly defined and differentiated. Among Ukrainian Catholic societies for laymen the so-called third orders are of a strictly ecclesiastical nature; they are associated with monasteries (of the Basilian Order) and strive towards Christian perfection. The Catholic brotherhoods also not only cultivate piety but perform charitable tasks. In another category are societies whose aims are restricted to piety and Christian perfection. These include the widespread Apostolate of Prayer and Marian societies (*Druzhyny*) which have been in existence since the seventeenth century and were restored in Galicia in the late nineteenth century. They are active abroad, especially among the youth.

The ecclesiastical and social tasks of the early brotherhoods are performed by Catholic Action which attempts to project Christian attitudes onto all aspects of human life, including politics. Among Ukrainian Catholics, Catholic Action found expression in the students' and graduates' society Obnova which has worked internationally through its membership in Pax Romana and continues its activity abroad, along with such societies as the Ukrainian Catholic Brotherhood, the Ukrainian Catholic Women's League, and the Ukrainian Catholic Youth (all in Canada), and similar organizations in other countries. The Ukrainian Christian Movement has been active since 1955 in the field of the lay apostolate and has been working towards greater understanding between two main Ukrainian confessions. While these ecclesiastical and social organizations enjoy relative organizational autonomy vis-à-vis the Catholic hierarchy, they submit fully to it in questions of religious doctrine.

## THE CHURCH AND THE STATE

Christianity penetrated the lands of *Rus'* long before it was formally introduced in its Byzantine form as the official creed at the end of the tenth century. In adopting the new creed *Rus'* followed the example of the south Slavic states which were thereby politically strengthened and brought into the cultural sphere of Byzantium. Eastern Christianity attracted Slavic rulers by its caesaropapistic characteristics; hence the attempts of these rulers to imitate Byzantine customs, to secure for themselves the title and powers of a tsar, and for the head of their church the dignity of a patriarch (in Bulgaria, during the rule of Tsar Simeon, in 927; in Serbia, during the rule of Stefan Dushan in the mid-fourteenth century). In *Rus'*, the strength of local traditions accounted for significant differences from the Byzantine models in the constitution of the Church and its

relations with the state. The Church in the Kievan state acquired considerable influence in secular matters, and the local laws granted extensive rights to it. Unlike Byzantine emperors, the Kievan princes did not exercise complete power over the Church, which was, moreover, a part of an ecumenical system, the center of which was located outside the jurisdiction of the Kievan prince. The leaders of the Kievan Church (e.g., Theodosius Pechersky, 1035–74) exerted considerable influence on the conduct of state affairs, and the Church's extensive activities in educational, cultural, charitable, and other fields complemented the work of secular agencies in these areas. Ecclesiastical autonomy was affected little by the material support received from the princes who assigned one-tenth of their income—*desiatyna* (tithe)—for the maintenance of the Church. Tithes were also paid to diocesan bishops by the local princes and to the parish clergy by the faithful. In addition the Church had its own sources of income: from episcopal administration, for the services of the clergy, from the supervision over measures and weights, and from ecclesiastical property and donations.

The Mongol invasion in the middle of the thirteenth century (see p. 141) interrupted the normal development of the Church. The country emerged from the Mongol-Tatar rule politically divided, and ecclesiastical life developed henceforth under different conditions in the separate parts of the former Kievan realm. Nevertheless, despite changes in political boundaries and regimes, the Church showed considerable stability and the Kievan metropolitanate continued to unite in one ecclesiastical jurisdiction the divided Ukrainian-Belorussian lands and population, symbolizing their past political unity. Thus, in the Lithuanian-Polish state, the Orthodox Church became a representative of the "Ruthenian" nationality, against whom discrimination was practised. A similar role was played by that part of the Church which adopted union with Rome at the end of the sixteenth century. Religious confession became synonymous with nationality. Therefore, in the Kozak wars against Poland, the defense of the faith became a major slogan attracting the support of the masses. Kiev, former state capital and the center of religious life with its many shrines, was called the "new Jerusalem" in the seventeenth century, being looked upon as the new holy city of Orthodoxy. The flowering of the Ukrainian Orthodox Church during the seventeenth and early eighteenth centuries ended with the destruction of the Kozak Hetman state and the subordination of the Kievan metropolitanate to the Russian Holy Synod. On the other hand, the Austrian annexation of Galicia from Poland created far more favorable conditions for the development of the Ukrainian Catholic Church in this part of Ukraine.

The political and ecclesiastical expansion of Moscow was accompanied by the increasing fusion of church and state powers along the lines of the Byzantine model. The fall of Constantinople (1453) and the Turkish conquest of the southern Slavs led Moscow to claim the status of a "Third Rome." In 1492, Metropolitan Zosima of Moscow addressed the Muscovite prince as "the new tsar Constantine of the new city Constantinople-Moscow." This sacral notion of the tsar with its caesaropapist implications clashed in the second half of the seventeenth century with the theocratic aspirations of the Muscovite church. Under Peter I, it became only an extension of the state machinery (1721). With its absorption into the Russian Church, the Ukrainian Church lost the privileges and autonomy it had enjoyed in the Kievan *Rus'* and in the Kozak Hetman state.

The restoration of Ukrainian statehood in 1917–20 was accompanied by the emergence of a powerful movement for the Ukrainization and democratization of the local Orthodox Church and its emancipation from Russian control. Out of this movement emerged the Ukrainian Autocephalous Orthodox Church which

was, however, suppressed along with other churches by the Soviet authorities during the 1930's. Under the new Soviet church policy dating from the early 1940's, the governmental authorities exercise close control over the activities and internal affairs of the Orthodox Church and other religious denominations. For this purpose, two special agencies were established under the Council of Ministers of the USSR—the Council for the Affairs of the Russian Orthodox Church (1943) and the Council for the Affairs of Religious Cults (1944)—with their plenipotentiaries attached to the republic and *oblast* authorities. In January, 1966, the two agencies were merged into a single Council for Religious Affairs. The council exercises powers of veto over candidates for bishops, determines the places of residence for the hierarchy, has the final voice on admissions to theological schools, and may force the dismissal of undesirable clergymen. The narrowly defined framework of ecclesiastical activities confined the clergy to church buildings and deprived the Church of its traditional social functions. Since the forcible absorption of both national Ukrainian churches by the Russian Church, the Church in Ukraine has been deprived of its traditional traits—conciliarism in its constitution, and national liturgical forms.

## LITURGICAL LANGUAGE AND CUSTOMS

Ukrainian churches are parts of the world church bodies—Orthodox, Catholic, and Protestant—and share with these denominations common beliefs. Their national traits, however, give to Ukrainian churches their distinct character.

One of the distinguishing features of the Ukrainian Church (and other Eastern churches) has always been the use of a popularly understood language. The church language was based on one of the south Slavic languages into which Greek texts necessary for the dissemination of Christianity were translated in the ninth century. In *Rus'*, these translations were read by the clergy with the local pronunciation, which made them intelligible to the eastern Slavs. In the course of time, independent translations of Greek texts were made and original works were written in the literary language of *Rus'*. Thus, from the beginnings of Christianity in *Rus'*, both the Gospel (the Ostromyr Gospel of 1056, the Kievan Gospel of 1092, etc.) and church services could be understood by laymen. Later, in connection with new religious currents in sixteenth-century Ukraine, translations of the Scriptures into the vernacular, such as the Peresopnytsia Gospel of 1556 or the Krekhiv Epistles of the mid-sixteenth century, appeared. Evangelical texts were often published with explanatory sermons (the so-called Instructional Gospels), thus facilitating the understanding of the Scriptures by the masses. In addition, certain liturgical texts and prayers were published in the living language (e.g., *Catechesis* of 1645).

It was only in the eighteenth and nineteenth centuries that the introduction of Russian pronunciation of Church Slavonic made the liturgical language less comprehensible to the faithful. In modern times, the Ukrainian Autocephalous Orthodox Church introduced Ukrainian as the liturgical language. Most of the Ukrainian Orthodox churches abroad use Ukrainian in liturgy, though some continue the traditional use of Church Slavonic with Ukrainian pronunciation. This is the language being used in divine services by the Ukrainian Catholic Church and, in line with the decisions of the Second Vatican Council, the Ukrainian Catholic Church is also considering the introduction of the living language into the liturgy (some parts are already celebrated in Ukrainian).

In contrast with the practice of other Orthodox churches, especially the Russian, preaching flourished in the Kievan Church. In addition to numerous collections of sermons published in Ukraine,

there also appeared theoretical works on preaching, such as the 1659 text by Archimandrite J. Galiatovsky, *Nauka, albo sposob zlozhenia kazania* (Instruction or Method of Composing Sermons).

Divine services celebrated in the Kievan Church had many local peculiarities that were later banned under Russian rule. For example, the Proskomide was celebrated over five prosphoros (not seven, as in Moscow); the "royal gate" in the church was seldom closed; the Gospel was read while facing the congregation; and sermons were delivered immediately after the reading of the Gospel. The seventeenth-century service books (*trebnyks*) recorded many local rites: baptism could be administered not only by immersion but also by affusion; during the marriage ceremony the bride and groom recited a special oath; flowers were blessed on the feast day of Makovei (August 1). There were local peculiarities in the ceremonies of consecration of deacons and priests. In the so-called *misiatseslovs* (menaias), it was the native saints who were honored primarily until the Russian menaia was introduced in 1784.

In recent times, the Ukrainian Autocephalous Orthodox Church has revived some of these ancient customs, such as the reading of the Gospel while facing the congregation; the audible rendition of the eucharistic prayers; the addressing of the congregation before the Credo with the greeting "Christ is among us."

The departure from the ancient ecclesiastical and liturgical customs was less noticeable in the Ukrainian Catholic Church. Their reinstatement may be facilitated by the decree of the Second Vatican Council stating that "Eastern priests and monks ought to celebrate liturgy according to the rules and traditions, in line with their established customs . . ."

Among other characteristics of the Ukrainian Church, a special place belongs to its liturgical chant. In the early centuries of Kievan Christianity, this chant was based on short Greek melodies which soon fell under the influence of local works and were set to music. Especially prominent was the monks' choir of the Kievan Cave Monastery during the sixteenth and seventeenth centuries. Early in the seventeenth century, the choir of the Lviv brotherhood, directed by Theodore Sydorovych, acquired fame by its polyphonic singing (up to eight parts). A peculiar kind of music—the so-called *znamennyi rozspiv*—developed in Ukraine and the theoretical interest in church music was early represented by the *Musykiiskaia hrammatyka* (Grammar of singing, 1677, 1678, 1679) of Nicholas Dyletsky. Although the composers of church music (Dmytro Bortniansky, Maxim Berezovsky, Artem Vedel) followed models of western, especially Italian, schools, nevertheless their works reflect popular motifs (*khody*). It was because of these popular *khody* that their works were either not welcome or even prohibited in Russia. The 1917 revolution was followed by a short-lived renaissance of original church music based entirely on popular motifs, as represented by the liturgies of Alexander Koshyts, Nicholas Leontovych, and Cyril Stetsenko (especially his requiem service [*panakhyda*] for mixed choir). Popular church singing largely disappeared in the Orthodox Church. It survived, however, in the Ukrainian Catholic Church (the so-called *samuilka* songs).

Church architecture determined the peculiar landscape of Christian *Rus'*-Ukraine. Church buildings in the original Ukrainian style were, however, systematically eliminated in tsarist Russia and destroyed in the USSR and Poland (see p. 546). Therefore, prototypes of the rural church architecture survived only in Western Ukraine, mostly in the Carpathian Mountains (see Architecture, pp. 531–2). A characteristic feature of this type of architecture is the three-domed church. Monasteries and cathedrals included majestic structures reflecting

various artistic styles. Typical for the Hetman period was the style of the so-called Kozak Baroque (seventeenth and eighteenth centuries), best represented in the architecture of the Kievan Cave Monastery. By the nineteenth century the local architectural traditions fell victim to the policies of the synod which insisted that churches be built according to Russian models.

## RELIGIOUS TOLERANCE

Although clergy frequently warned the faithful against other confessions and praised Orthodoxy, religious tolerance, nevertheless, prevailed in Kievan *Rus'*. Latin missionaries were freely admitted and enjoyed protection from the princes. Intermarriages of the princely families with the ruling families of the Catholic West were quite common. Ecumenical Christianity was propagated by Metropolitan Clement Smoliatych in the mid-twelfth century, and the work ascribed to him contained a chapter on the popes as saints. Catholic saints were commonly honored, as exemplified by the popular feast of the transfer of the relics of St. Nicholas from Myra, Lycia, to Italy, or by the use of such names as the Czech Ludmila. The Kievan princes also made generous donation to shrines in western Europe. Metropolitan Gregory Tsamblak attended the council of Constance in 1418 and spoke there in favor of the reconciliation of churches, and Metropolitan Isidore participated in the councils of Ferrara and Florence in 1439 and embraced union with Rome.

The oldest historical chronicles of *Rus'* written by Orthodox authors do not distinguish Orthodoxy from Catholicism. In recording the baptism of the Lithuanian prince Mendovg according to the Roman Catholic rite, the chroniclers do not identify the creed as alien. Elsewhere they refer without comment to the Hungarian princess Kinga as a saint. Similarly, the later Protestant influences did not alarm the local hierachy whose western education made them more familiar with the new religious currents. The sharp religious struggle between Orthodox and Uniates in the seventeenth century (*Rus'* against *Rus'*) was caused primarily by political considerations.

In general, religious tolerance in the Kievan metropolitanate was evident; ideas from the West were not considered heretical and infiltrated into the Orthodox ecclesiastical literature. The ecclesiastics of Orthodox Moscow did not understand this tolerance, and books published in the Kievan metropolitanate were burned, as happened in the case of the Instructional Gospel of Cyril Tranquillion in 1627. At that time, the Muscovite authorities prohibited the dissemination of books bearing the Lithuanian imprint, i.e., publications of the Kievan metropolitanate. The Orthodoxy of the Kievans was so suspect in Moscow that Ukrainians who were baptized by affusion were rebaptized there by immersion. This was a standard Muscovite practice for Catholics (in Kiev, chrismation was considered sufficient in such cases). Doubts about the "purity" of Orthodoxy in Kiev were occasionally voiced also by some other Orthodox churches. Thus Patriarch Dosifei of Jerusalem observed in 1686 that "though we recognize the Kozaks as Orthodox, they have many irregular customs." Reservations with respect to the "Ruthenian faith" were heard also from representatives of the Western Church. The Roman Catholic bishop of Cracow, Matthew, wrote as early as the twelfth century that "the Ruthenian people . . . preserve neither the rules of the Orthodox faith nor the principles of the true faith, . . . they do not want to become like the Latin or Greek Church . . . " Similarly, the Poles looked later for "heresies" in the Greek Catholic Church and reported to Rome its deviations from pure Catholicism although these deviations were in fact manifestations of the traditional tolerance and custom of this church.

This tolerance was reflected in the

durability of ancient pagan customs which were given Christian character by the Church. These customs manifested themselves in the so-called dual faith (*dvoieviria*—the coexistence in the popular customs of both pagan and Christian beliefs) the remnants of which survived until the radical social-economic reforms in the USSR and completely changed the rural way of life. Until then, village life was marked by numerous feasts combining religious observances with popular rites and customs, for example, the foremost feast of the Eastern Church, Easter, the celebration of which retained many survivals of pre-Christian folklore.

# III. Scholarship

## 1. SCHOLARSHIP IN UKRAINIAN LANDS TO 1850

### FROM THE PRINCELY ERA TO THE END OF THE FIFTEENTH CENTURY

The first manifestations of scientific thought—speculative reflection and research—began emerging with the spread of literacy in *Rus'*-Ukraine in the Princely era. The search for truth, for basic principles and laws of existence and communal order, is recorded in the oldest written sources of this era. At first, the predominant influence upon them was that of speculative thought imitating the various spheres of Byzantine intellectual life.

Theology, often with a philosophical tenor, dominated the scholarship of the time. The main source of theological and philosophical knowledge was translations of literature, especially the works of the eighth-century Byzantine writer John Damascene and the collections entitled *Pchela*. These writings acquainted their readers with the philosophical systems of antiquity, particularly that of Aristotle, and presented excerpts from the works of ancient writers, philosophers, and historians including Plato, Aeschylus, Sophocles, Menander, Euripides, Demosthenes, Socrates, Cato, and Epicurus. Elements of ancient philosophy are also apparent in such original theological writings as a letter from the mid-twelfth century [Vol. I, p. 986], written by Clement Smoliatych in answer to Khoma's accusation that he based his works on Homer, Aristotle, and Plato. At the same time, elements of native popular wisdom with its particular world outlook were already apparent in the collections of aphorisms, maxims, and parables circulated at this time. One original theological work was a commentary on the biblical history of the Old Testament to the time of King David. It appeared under the name *Tolkovaia paleia* (Annotated Chrestomathy), and was continued to a degree in *Slova sviatykh prorokiv* (Words of the Holy Prophets).

Though based on theology and philosophy, the scholarship of the time encompassed such other branches of knowledge as the natural sciences, history, geography, jurisprudence, mathematics, astronomy, and medicine in approximately the same measure as that of contemporary Byzantium and western European countries.

Important sources of knowledge concerning nature, especially the creation of the universe—cosmogony—were the translations of collected volumes and works such as *Shestodnev* (Hexaemeron), written by various authors including John Exarch of Bulgaria, *Nebesa* (The Heavens) by John Damascene, *Khrystiianskaia topografiia* (Christian Topography) by Cosmas Indicopleustes, and the works of Epiphanius of Cyprus, as well as various kinds of apocryphal works. The most widely circulated was the *Shestodnev* which, following the account in the Bible, describes the six days during which the world was created from earth, fire, water, and air. In the other works mentioned the authors discuss the general characteristics of the creation, as set out in contemporary cosmogony. Information about the animal world and to some extent about flora and mineralogy appeared in *Physiologos* (Physiologist), a quite popular collection in *Rus'*-Ukraine.

Historical literature consisted at first

FIGURE 70. A DRAWING FROM THE *Topography* OF COSMAS INDICOPLEUSTES (SIXTEENTH CENTURY), DEPICTING HIS VIEW OF THE UNIVERSE

of translations of the chronicles of Byzantine historians—John Malalas, author of an 18-volume history of the world from the time of the Egyptians to 563 A.D.; Georgius Hamartolos, author of a universal history chronicle from the beginning of the world to 842 A.D.; Nykyforus Gregory, author of *Ryms'ka Istoriia* (Roman History)—and collected volumes such as *Paleia. Istoriia Palestyny* (History of Palestine) by Josephus Flavius was also well known in translation. Historical knowledge gleaned from foreign sources eventually became the basis of original works. Local chronicles, which constitute the beginning of Ukrainian historical scholarship, can be composed from minute marginal notes on manuscripts, or separate sheets of parchment, concerning changes in the rule of the princes, and accounts of their testaments, wars, and treaties, or describing astronomical phenomena—an eclipse of the sun, the appearance of a comet—or dealing with plagues and other calamities [for details, Vol. I, pp. 559–60].

The sources for geographical knowledge were the works of the Kosmas Indikopleustes and the writings of Methodius of Patara, as well as the Byzantine chronicles. The scope of geographical information at the time encompassed Europe, the countries of the Near East, and northern Africa. With the appearance of native chronicles, descriptions of various countries of the world were included in the chronicled notes. Elements of geographic and economic description are evident also in the memoirs of *Rus'*-Ukrainian travellers. The geographic descriptions in the notes of Daniel, hegumen of Chernihiv, on his pilgrimage to the holy land (1106–7) are particularly accurate [Vol. I, p. 981].

At about the same time, jurisprudence was beginning to emerge as a separate field of study. Church law was being adapted from collections of church laws called *Nomocanons*, brought from Byzantium in the tenth century and later known as *Kormchie Knigi* (Rule Books), and supplemented by local laws. Elements of international law have been preserved in the tenth-century treaties between Byzantium and *Rus'*-Ukraine. The codification of legal standards adopted from Byzantium and developed locally resulted in the *Ruskaia Pravda* (*Rus'* Law)—the oldest Slavic legal codex. Its content and scope attest to long years of preparation and many comparative studies of Byzantine, western European, and traditional *Rus'*-Ukraine law (see p. 11).

The development of handicraft techniques, the building of martial power, and the development of trade during the Princely era proves that the scholars of the time were acquainted with the principles of mathematics, including four mathematical rules and fractions. Cal-

endar computations involved large numbers, reaching tens of millions. Land measurements were made with the help of some elements of geometry. Calendar calculations connected with ascertaining the "range of the moon" and "range of the sun" necessitated some knowledge of astronomical principles.

Although the treatment of disease was largely the concern of sorcerers at this time, the first principles of medical science can be found in the literature of the time.

Encyclopaedias containing information in various areas of knowledge were popular during the Princely era. In addition to *Shestodnev*, *Physiologos*, and *Paleia*, there were *Izbornyky Kniazia Sviatoslava* (The Chrestomathy of Prince Sviatoslav), dating from 1073 and 1076, the collections of aphorisms, maxims, and parables entitled *Pchela*, *Izmarahd*, and *Zlataia Tsip*, and *azbukovnyky*—a kind of encyclopaedic dictionary.

Respect for erudition and wisdom was not confined to ecclesiastical circles. Princes were equally interested in fostering learning and contributed to its development. The cathedral in the capital city of Kiev was dedicated to Sophia—Wisdom. Affiliated with the cathedral was the first public library. A second celebrated center of learning, also with a library, was established at the Kievan Cave Monastery, and similar centers arose at other monasteries and at the courts of princes. Among the clergy who devoted themselves to scholarship, Kievan metropolitans Hilarion and Clement Smoliatych gained the widest renown as "scholars and philosophers." Secular scholars included Prince Vsevolod (1030–93) who spoke five languages, his son Volodymyr Monomakh (died 1125), author of the famous pedagogical and political work *Pouchenie ditiam* (Instruction for Children), and the Volhynian Prince Volodymyr Vasylkovych (died 1288) whose interest lay in problems of philosophy.

The principal sources of knowledge were copies of Greek, Bulgarian, and Czech-Moravian texts until direct translation from Greek became common. This, in turn, gave access to Jewish and Arabic sources; knowledge of Latin writings and treatises was derived from Czech-Moravian translations. Translations not only enriched the factual knowledge of *Rus'* scholars, but also developed their critical appraisal, of information given in foreign sources. Knowledge acquired with the help of translations became in time the foundation of original native thought and creative genius.

The flowering of learning, begun in the Princely era, was arrested and its acquisition in large measure destroyed by the nomadic invasions, especially the Tatar invasion of 1240, as well as by internal squabbles and wars. Opportunities for further study remained only in individual monasteries in the central and eastern regions of Ukraine, and to a somewhat greater extent in the western lands under the protectorate of the Galician-Volhynian princes of the thirteenth and fourteenth centuries. During this time, Ukrainian scholars first began seeking contact with the cultural centers of western Europe. These contacts grew especially after Ukrainian lands came under the rule of Lithuania and Poland. As early as the late fourteenth century, a considerable number of young Ukrainians received their education at the Polish University in Cracow, as well as in Prague, Padua, Bologna, and other cities. Some of them even became professors in Western schools. Foremost among them was George Kotermak of Drohobych (1450?–94), master of the University of Cracow and doctor of the University of Padua, physician, mathematician, and astronomer, who

FIGURE 71. GEORGE DROHOBYCH

lectured at the University of Bologna (1478–82) and was a professor at the University of Cracow after 1488. The Kiev center of the Judaizers also played a part in the development of scholarship, particularly in philosophy and logic [Vol. I, p. 988].

## THE SIXTEENTH TO THE EIGHTEENTH CENTURIES

A new stage in the development of Ukrainian scholarship began in the second half of the fifteenth century. The fall of Constantinople (1453) put an end to the free flow of Byzantine cultural traditions and literary achievements to Ukraine. At the same time, it opened the way for the new currents of the Renaissance, the Reformation, and humanism. The main area for development of humanistic tendencies was Galicia (Lviv), while the Reformation gained ground in Ukrainian lands within the Lithuanian-Ruthenian state. The literary and philosophical works of Western humanists spread through Western Ukraine to eastern Ukraine, Belorussia, and Muscovy.

During the sixteenth and seventeenth centuries, Ukrainians continued to study abroad at Cracow and other western European universities, in Protestant schools in Germany (Wittenberg, Greifswald, Rostock, Leipzig, Halle, Breslau, Koenigsberg), at Polish Jesuit colleges, and at the Academy of Zamostia (Zamość) on the Polish-Ukrainian border which had been founded (1595) by Jan Zamojski and others. Some Ukrainians remained in the West to continue research, enriching Western culture and learning. These included Pavlo Rusyn from Krosno (Paulus Crosnensis Ruthenus), one of the first representatives of Polish-Hungarian humanism and a poet and professor at the University of Cracow, and Luke from *Rus'* (a native of the Sambir region), who lectured at Cracow and published the first universal handbook of epistolography (1522). Also of Ukrainian origin were the Polish political writer Stanisław Orzechowski (who signed his name Orichovius Ruthenus 1513–66), a Catholic priest and author of treatises in defense of Orthodoxy, as well as a treatise concerning baptism among Ukrainians, *Baptismus Ruthenorum*; the prominent Polish humanist poet and scholar from Lviv, Szymon Szymonowicz or Simonides Simon (1557–1629), author of *Sielanki*, a collection of poems on Ukrainian subjects and one of the organizers of the Academy of Zamostia.

Young scholars of Ukrainian descent who had been educated in Western colleges and universities became the organizers of Ukrainian intellectual centers. They took an active part in the work of the scholastic center in Ostrih in Volhynia, set up by Prince Constantine Ostrozky to prepare the publication of a bible. Not only Ukrainian scholars like Herasym Smotrytsky, Christopher Philalet (Broniovsky), Damian Nalyvaiko, and Klyryk Ostrozky participated in this work, but also many learned Greeks who came to Ukraine by way of Italy. This intellectual center, with its printing press and library, was reorganized in 1580 into the Ostrih Academy, the first university-level school in the whole of eastern Europe (see also p. 304). Through the efforts of this group more than 25 works were published at Ostrih. The school of the Assumption Brotherhood in Lviv became another important center of learning and education. Its first rector was Arsenius, a Greek, the Bishop of Elasson, and co-author of a grammar manual of the "Greek-Slavic" language under the title *Adelphotes.* A large group of scholars was active at the school including Laurence and Stephen Zyzanii, Cyril Stavrovetsky, Zachariah Kopystensky, and Pamvo Berynda. In the publications prepared by the Brotherhood, emphasis was placed on school textbooks (see p. 444).

Similar in orientation and important as a center of modern studies was the Kievan Brotherhood school, founded in 1615 by

the Kievan Ascension Brotherhood; its first rector was Job Boretsky. In 1638 this school was united with the school of Peter Mohyla to form the Kievan Mohyla College, which eventually became an academy. A large group of scholars gathered around this school and laid the foundations for various branches of Ukrainian science, including mathematics, geometry, and astronomy. In the development of various branches of learning, an important role was also played by a group of scholars at the Kievan Cave Monastery, led by archimandrite Yelisei Pletenetsky (1550–1624) and P. Mohyla.

The ideas of Western humanism, acquired from the West through Lviv and accepted in Ukraine, broadened the scope of scholarship, which had previously been limited to theology and philosophy. Theological studies became permeated with polemical literature, which required a thorough knowledge of ancient philosophy and literature. Therefore in the polemical treatises of Ukrainian humanists of the time, a thorough scholarly preparation is apparent.

Philological improvement was necessitated by increased interest in and study of translations and the native literary language, which was being deliberately brought ever closer to the vernacular on the one hand and to Church Slavonic on the other. Translations of works in varied fields of learning indicated the need for scientific terminology.

The numerous new printing presses produced, along with theological and polemical works, grammar manuals and dictionaries-lexicons (by P. Berynda, L. Zyzanii, M. Smotrytsky, and others). A concerted effort was undertaken to prepare a definitive edition of the Bible (Ostrih Bible, 1580–1). Theological treatises, philosophical and encyclopaedic in nature, were published: *Lithos, albo Kamień* (Stone) by P. Mohyla, *Zertsalo bohosloviia* (Mirror of Theology) by Cyril Tranquillion Stavrovetsky, and *Palinodiia* by Z. Kopystensky. The *Teraturgema* of Athanasius Kalnofoisky contains information concerning the topography of Kiev.

The foundations of the study of Ukrainian grammar, lexicology [see Vol. I, Language], and musicology (see music) were being established. The study of mathematics and astrology was initiated.

**The Kievan Mohyla Academy**

The development of Ukrainian scholarship in the seventeenth and eighteenth centuries was intimately related to the activity of the Kievan Mohyla Academy which was at that time the center of Ukrainian cultural and intellectual life. Founded by Metropolitan Peter Mohyla as a college in 1632, the school was transformed during the reign of Hetman Ivan Mazepa into a general education academy whose rights and title were finally approved in 1701. The intellectual influence of the Academy was felt not only in Ukraine and the neighboring countries (Russia, Moldavia, Valachia) but also in the Balkan countries and other distant lands. It maintained close relations with scholarly centers in central Europe where most of the Academy's professors had acquired their higher education. These scholars applied new ideas and new methods of research based on observations and comparisons taken from Ukrainian life. It was the Kievan Mohyla Academy which laid the foundations of the modern scientific disciplines in Ukraine and thus contributed much to the development of Ukrainian scholarship.

The new methods were noted first of all in the realm of theology and philosophy. The studies of Varlaam Yasynsky, Joasaph Krokovsky, Demetrius Tuptalo, Stephen Yavorsky, Ivan Maksymovych, Theophanes Prokopovych, and others contributed a great deal to the development of theology and philosophy in Ukraine during the seventeenth and eighteenth centuries.

Ukrainian theology attained the pin-

nacle of its development in the second half of the seventeenth and the first half of the eighteenth century. Two distinct schools of thought were evident at this time in Kiev—the first, pro-Western, favoring Catholicism, was represented by S. Yavorsky; the second, more liberal and inclined toward Protestantism, had T. Prokopovych as its spokesman. By the second half of the eighteenth century the philosophical system of Prokopovych, elaborated by him in a course entitled Introduction to Theology, had become the dominant school. Among Prokopovych's followers were Kievan theologians Samuel Myslavsky (1731–96) and Ireneus Falkovsky (1762–1823). Beginning in the eighteenth century, Ukrainian theology fell under the influence of the Russian "synodal" teaching.

The development of Ukrainian philosophical thought at the Mohyla Academy followed the mid-eighteenth-century transition from philosophical disciplines based on the ideas of medieval Aristotelianism, which included physics, mathematics, ethics, and logic (e.g., Short Course on Logic given by S. Yavorsky in 1693), to the more modern currents of philosophical thinking, found in the ideas of such philosophers as Descartes (George Shcherbatsky, Simon Todorsky), Hobbes, and Grotius (T. Prokopovych), as well as the German mystics and, later, the rationalists and idealists, especially Gottfried Leibnitz and Christian Wolff. The leading representative of the new trend in philosophy was David Nashchynsky (1721–93), a follower of Wolff who was professor and rector of the Academy in 1758–9.

The transition from chronicles to pragmatic history was accomplished under the influence of the Mohyla Academy (*Kroinyka* (Chronicle) of Theodosius Safonovych; *Synopsis*, attributed to Innocent Gizel; later, works of Samuel Velychko, Gregory Hrabianka, and others). The scholarly traditions of Ukrainian philology and literary study also originated at the Academy.

ΣΥΝΟΨΙΣЪ

FIGURE 72. TITLE PAGE OF THE *Synopsis* BY INNOCENT GIZEL (1680)

A whole line of distinguished scholars, who attained prominence in Ukrainian, Russian, and world scholarship, emerged from the Mohyla Academy. Among them were the following: Gregory Skovoroda (1722–94), who conceived an original philosophical system [Vol. I, pp. 955–6), and with Velychkivsky and Hamaliia formed a separate school of Ukrainian philosophy called the Mystic Trinity; Paisii Velychkivsky (1722–94), the translator of a Greek anthology of ascetic works *Dobroliubiie* (The Love of God) and author of several Ukrainian works on asceticism; Simon Hamaliia (1743–1822); philosophers Jacob Kozelsky (1742–*ca.*94) and Nicholas Motonys (1725–87); lawyer and philosopher Ivan Khmelnytsky (1742–94)); lawyer Volodymyr Zolotnytsky (1741–*ca.*96); philologists Gregory Kozytsky (1727–75) and Luke Sichkariv (1741–1809); historians Peter Symonovsky (*ca.* 1717–1809), George Konysky (1717–95), Gregory A. Poletyka (1725–84), Nicholas Bantysh-Kamensky (1737–1814), Basil Ruban

(1742–95); archaeologist and physician Andrew Italymsky (1743–1827); physicians Ivan Poletyka (1726–83), who later became professor at the Medical-Surgical Academy in Kiel, Germany, and Nestor Maksymovych-Ambodyk (1744–1812).

At the end of the seventeenth and in the first half of the eighteenth century prominent professors and graduates of the Mohyla Academy were working in Russia as rectors and professors at the Slavic-Greek-Latin Academy and at almost all the other theological seminaries in Russia. Many Ukrainian scholars, both professors and graduates of the Academy, resettled in other Slavic countries where they continued to be active academically.

Until the establishment of Kharkiv University in 1805, the Kievan Mohyla Academy was the only institution with university standing in all of Ukraine. Toward the end of the eighteenth century the Russian government, having eradicated the last vestiges of Ukrainian political independence, began imposing limitations on the rights, curricula, and material resources of the Academy. Proposals to reorganize the Academy into a university or to establish other universities in Baturyn or Chernihiv were rejected by the Russian government when put forward by Hetman Cyril Rozumovsky and other Ukrainian leaders during the last half of the eighteenth century. In 1786 the property of the Kievan Brotherhood monastery, which subsidized the Mohyla Academy, was secularized, thus making the Academy dependent on the annual appropriations of the Russian government. In 1817 the Kievan Mohyla Academy was finally closed, and two years later the Kievan Theological Academy was established on its premises.

## THE NINETEENTH CENTURY TO 1850

With the curtailment of scholarly and pedagogical activity at the Kievan Mohyla Academy and its gradual liquidation as a secular institution of higher learning, all scholarly activity in the Ukrainian lands under Russia was transferred to the universities, especially to those in Kharkiv (founded 1805) and Kiev (founded 1834) which subsequently became prominent centers of scholarship and academic study. Scholarly research was also being done at the Kievan Theological Academy (in philosophy, history, and philology as well as theology), at the Bezborodko Lycee in Nizhyn, at the Richelieu Lycee in Odessa, and at new scholarly institutions, notably the Odessa Society of History and Antiquities and the Kievan Archaeographical Commission. But a great many works, particularly in the realm of Ukrainian studies, were the result of individual effort by various scholars not always associated with the official centers of scholarship.

Many leading scholars of Ukrainian descent resettled in Russia, either voluntarily or under pressure of the Russian government. They went primarily to Moscow (where a university had been established in 1755) and to St. Petersburg (where an Academy of Sciences was founded in 1724). On the other hand, many foreign scholars (Germans, Poles, Russians) began to arrive in Ukraine.

The development of exact sciences, initiated by the physiocrats at the Kievan Academy, was continued on the Russian territories by Ukrainian scholars. Included in this group were: Ivan Prokopovych, physicist and mathematician; natural scientist Anthony Prokopovych-Antonsky (1762–1848) and his student, Michael Maksymovych (1804–73), who later returned to Ukraine; physicians Martin Terekhovsky (1740–96), Daniel Samoilovych (1743/4–1805), Joseph Kalynsky-Helita, 1792–1855), and Elias Buialsky (1789–1866); Daniel Kavunnyk-Vellansky (1774–1847), physiologist and philosopher who was a student of Schelling; Peter Lodii (1764–1829), philosopher, and Michael Baludiansky (1769–1847), lawyer, both natives of Transcarpathian Ukraine; and Roman

Tymkovsky, philologist, who was a professor at Moscow University (1785–1820).

FIGURE 73. PETER LODII

In the Ukrainian lands under Polish rule (Right-Bank Ukraine, Volhynia, and Galicia), scholarship remained at a rather low level during the seventeenth and eighteenth centuries. The leading intellectual and educational centers for these lands were the Kievan Mohyla Academy and the Lviv Jesuit College. At the beginning of the nineteenth century a Polish lycee was established in Kremianets (a *gymnasium* until 1819), thanks to the efforts of the noted historian and economist, Tadeusz Czacki. This lycee contributed extensively to the research of culture and flora in the Right-Bank Ukraine. In Galicia (annexed by Austria in 1772), Bukovina, and Transcarpathia, scholarship, frequently German, Polish, or Hungarian in form and content, developed under the influence of Vienna, one of the world's greatest cultural and intellectual centers [Vol. I, pp. 697–9]. A theological seminary (*Barbareum*) had functioned here since 1774 for Ukrainian Catholics of the Byzantine rite. In Galicia, intellectual centers formed at the Lviv Theological Seminary (Studium Ruthenum from 1783 on) and at the University of Lviv (founded in 1784), at which various Ukrainian professors lectured, including P. Lodii, who translated Christian Baumeister's ethics into Old Church Slavonic (Lviv, 1790). Lviv University became an important center of research in economic, natural, and exact sciences; the Ossolinski Polish National Institute (founded in 1817) emerged as yet another scholarly center. It maintained an extensive library and museum, and its scholars devoted a great deal of attention to Ukrainian studies. Research in various areas of Ukrainian study was conducted by Polish scholars who were members of the Cracow Scientific Society, which was founded in 1816 and subsequently transformed into the Polish Academy of Sciences.

In the first half of the nineteenth century, philosophical thought in Ukraine developed under the influence of German idealism advanced by such noted philosophers as Kant, Fichte, Schelling, and Hegel. The leading centers of philosophical study were the Universities of Kharkiv and Kiev. Lecturing at the former in 1806–16 were the German philosopher Johann Baptist Schad (1758–1816) and Andrew Dudrovych (1782–1830), a native of Transcarpathia. Working at the University of Kiev were outstanding professors who were followers of Hegel, Orest Novytsky (1806–84) and Sylvester Hohotsky (1813–89). By far the most outstanding and original philosopher of the mid-nineteenth century was Pamphilus Yurkevych (1827–74), professor at the Kievan Theological Seminary and later at the University of Moscow [Vol. I, pp. 956–8]. In Transcarpathia, the Reverend Basil Dovhovych (1783–1849), a Ukrainian Catholic priest of the Byzantine rite, was interested in Kant, Fichte, and Schelling and wrote a two-volume study on Kant. He also wrote several philosophical works in Hungarian and a Latin philosophical dictionary which was never published.

The great political events in Europe at the turn of the eighteenth century, as well as the ideas of nationalism, Romanticism, and the philosophy of natural right which called for political independence and free, unfettered development for every nation, had a strong impact on every sphere of life in Ukraine. A movement for the national renascence began to take shape with strong emphasis on the defense and diverse development of the spiritual and cultural heritage of the Ukrainian people. Leading the way in this national reawakening were intellec-

tual circles of the Ukrainian community, particularly the descendants of Ukrainian nobility, Kozak officers, and burghers, as well as the clergy of Galicia, Bukovina, and Transcarpathia. There was a great upsurge of interest in Ukraine's historical past, its language, customs, traditions, and everything that related to the Ukrainian people's cultural heritage. Ukrainian scholars became intensively preoccupied with history, ethnography, philology, and related disciplines.

Around 1750 Ukrainians had begun to collect and publish source material on Ukrainian history and the history of the Ukrainian church and culture; research was done in ethnography, geography, and economy. Basil Ruban, Theodore Tumansky (1757–1810), and Jacob Markovych (1776–1804) published a number of works in the area of Ukrainian studies. Dmytro Bantysh-Kamensky (1788–1850) published his five-volume *Istoriia Maloi Rossii* (History of Little Russia, 1822). Joseph Bodiansky (1808–77), a noted Slavist and historian, published in Moscow a maze of source material that was of great importance to Ukrainian historiography, including *Istoriia Rusov* (History of the *Rus'* People), *Litopys* (Chronicle) of Samovydets, and *Diiariiush* (Diary) of Nicholas Khanenko. *Istoriia Malorossii* (History of Little Russia), a five-volume work by ethnographer-historian Nicholas Markevych (1804–60), appeared in 1842–3. In Odessa, Apollon Skalkovsky (1808–98) worked on the history, economy, and statistical data of southern Ukraine. Of great importance was the work of Eugene Bolkhovitinov (1767–1837) relating to the history of the Ukrainian church, and of Michael Maksymovych on the history of Ukraine (and Ukrainian studies in general) during the Kiev period of his scholarly activity. These and other works of the late eighteenth and early nineteenth century initiated the development of modern Ukrainian history (especially in such fields as archaeography) and laid the groundwork for Ukrainian historiography [Vol. I, pp. 561–2].

FIGURE 74. JOSEPH BODIANSKY

In Galicia and Transcarpathia, there was a marked interest in the history of the Ukrainian church. Among the most prominent of those studying this subject were the Reverend Michael Harasevych (1763–1836), a priest from Galicia who wrote *Annales Ecclesiae Ruthenae*, a work that was rich in original source material, and in Transcarpathia, Ioannikii Bazylovych (1742–1821) and Michael Luchkai-Pop (1789–1843).

A broad program of studies in history and other Ukrainian disciplines, based on unity and independence of Ukrainian language in all Ukrainian ethnographic lands, was developed by the Congress of Ruthenian (Ukrainian) scholars (Sobor ruskykh uchenykh), held in Lviv in 1848 [Vol. I, p. 699]. The program was never put into effect, however, since the prominent scholars of the time who took part in the congress—historians Denis Zubrytsky (1787–1862), Anthony Petrushevych (1821–1913), and Isidore Sharanevych (1829–1901)—adhered to the conservative *yazychiie* and showed no desire to maintain close relations with Ukrainian scholarly and literary circles in eastern Ukraine. It was the younger, populist-oriented generation of Ukrainian scholars in Galicia who took the initial steps in this direction.

Concurrently with historical studies, research in various areas of ethnography was started under the influence of Romanticism, particularly the collection of oral literature and descriptions of native rituals and customs. The first publication in this field is the work of Gregory Kalynovsky, a native of Chernihiv who published in Petersburg in 1776, *Opisanie svadebnykh ukrainskikh prostonarodnykh*

*obriadov v Maloi Rossii i Slobodskoi Ukrainie* (Description of Ukrainian Popular Wedding Customs in Little Russia and Slobids'ka Ukraïna). Ukrainian folklorism began with the publication in Moscow in 1827 of *Malorossiiskiia pesni* (Little Russian Songs), collected by

Michael Maksymovych (1804–73), and of his other anthologies of Ukrainian folk songs (1834–49). Foreigners, equally enchanted with Romanticism, participated in the collection of Ukrainian ethnographical material: the Polish ethnographer Zorian Chodakowski-Dołęga (1784–1825); in Galicia Wacław of Olesko (1800–49), Żegota Pauli (1814–95), and others; the Georgian prince Nicholas Tsertelev (Tseretelli) who prepared a collection, *Opyt sobraniia starinnykh malorossiiskikh pesnei* (An Attempt at Collecting Ancient Little Russian Songs), published in St. Petersburg in 1819. The first publication in this field in Ukraine was six volumes of the collection *Zaporozhskaia starina* (Zaporozhian Antiquity), published from 1833 to 1838 in Kharkiv by the Ukrainian philologist and Slavist, Izmaïl Sreznevsky (1812–80). The first collection of songs from the entire Ukrainian territory was published by ethnographer Platon Lukashevych in 1836 under the title *Malorossiiskie i Chervononorusskie narodnye dumy i pesni* (The Little Russian and Red-Ruthenian Folk Dumas and Songs). [For other works in this field, Vol. I, pp. 269–71].

Ethnographic study also began to flourish in the 1830's under the influence of Slavophile ideas. The Kharkiv-Kiev school of romanticists contributed significantly to this development as did the famous Rus'ka Triitsia, the pioneers of Ukrainian national revival in Galicia [Vol. I, p. 1009].

Ukrainian philology, initiated with a grammar of the Ukrainian language (St. Petersburg, 1818) by Alexis Pavlovsky, at first was limited to collecting and publishing dictionary materials. Towards the end of the first half of the nineteenth century it gained importance through the works of M. Maksymovych, J. Bodiansky, I. Sreznevsky, and others. In Galicia, the authors of the first grammar handbooks and linguistic works were Joseph Levytsky, Ivan Vahylevych, and Jacob Holovatsky; in Transcarpathia, Michael Luchkai-Pop [Vol. I, pp. 430 ff.].

The materials collected and studied in the subjects discussed above up to the mid-nineteenth century were typically Ukrainian in their content and style and laid the foundation for all further development in the field of Ukrainian studies.

Juridical and economic studies also began to develop in the first half of the nineteenth century. Their centers were the Universities of Kharkiv and Kiev in the central and eastern regions of Ukraine, and the University of Lviv in

Galicia under Austria (see pp. 314–15 and 333).

Research in the area of natural and exact sciences in the first half of the nineteenth century was conducted in Ukraine by scholars and researchers from western Europe, particularly from Germany. Late in the eighteenth and early in the nineteenth centuries, research into the geography and geology, population, and flora and fauna of Ukraine was carried on by scholars (mostly of Russian descent) at the Russian Academy of Sciences. Centers in Ukraine for the study of its natural history were the University of Kharkiv, where a botanical garden already existed in 1805, and the Kremianets Lycee, which also had a botanical garden and distinguished professors, Germans and Poles, who carried on research into the natural history of Ukraine, especially its flora. For the most part zoology in Ukraine was also studied by foreigners—Karl Eichwald (1795–1876) and Karl Kessler (1815–81) [Vol. I, p. 39].

In mathematical science, Ukrainians contributed substantially to the development of research in the field. Working in educational centers outside Ukraine, in Kazan and St. Petersburg, Ukrainians gained worldwide renown through their findings, theories, and discoveries. Among these mathematicians were Nicholas Lobachevsky (1792–1856), creator of a new geometrical system of non-Euclidean geometry, Michael Ostrohradsky (1801–62), inventor of the so-called Ostrohradsky formula, and Victor Buniakovsky (1804–89).

FIGURE 76. MICHAEL OSTROHRADSKY

In the area of agricultural science, the fundamentals of scientific agronomy were established by Andrew Prokopovych (1756–1826), professor of the Kievan Mohyla Academy and later rector of Kharkiv College. Peter Prokopovych (1775–1850) was the founder and director of the first school of agriculture in Ukraine and Russia. The center of agricultural research at the time was the Imperial Society of Agriculture of Southern Russia, founded in 1828, which in its activity encompassed Bessarabia and the Katerynoslav and Kherson provinces.

The early beginnings of astronomy in Ukraine can also be traced to the first half of the nineteenth century. Its first centers were the astronomical observatories in Mykolaïv, established in 1821, and at the University of Kiev (1845).

The primary center for medical science in Ukraine at the beginning of the nineteenth century was a medical class at the Kievan Academy established in 1802, and the department of medicine at the University of Kharkiv, opened in 1805, and the Kiev University department of medicine established in 1841. Distinguished Ukrainian doctors also worked in medical-surgical schools, academies, and universities in St. Petersburg and Moscow.

*B. Krawciw, O. Ohloblyn*

## 2. SCHOLARSHIP IN THE CENTRAL AND EASTERN UKRAINIAN LANDS FROM 1850 TO 1917

The development of scholarship in Ukraine, as in other countries, was marked in this period by a progressive departure from Romanticism and an increased emphasis on emerging Positivism. Comparative, historical, and, later

sociological methods were employed in the conduct of scholarly research in the humanities. Theological and philosophical studies receded into the background; statistical economic studies came to the fore. Developments in the natural sciences and medicine were particularly pronounced and technical studies came to be emphasized. Universities, technical institutes, and other specialized institutions and societies became the centers of learning in Ukraine.

## INSTITUTIONS OF HIGHER LEARNING

During the latter half of the nineteenth century and at the beginning of the twentieth century, the principal centers of study in the humanities in the natural, medical, and agricultural sciences, and later in technical fields, were primarily the Universities of Kiev and Kharkiv, the University of Odessa (at first the Novorossiisky University, established in 1864), and, to a limited extent, the Kievan Theological Academy (established in 1819). As in the first half of the nineteenth century, learning and research at the universities of Ukraine were focused primarily on the formally established fields of the humanities: philosophy; history, archaeology, ethnography, and related historical disciplines; law; classical philology; literary history; linguistics; and pedagogy. Interest in socio-economic problems in the middle of the nineteenth century helped to promote the development of research in the statistical and political-economic fields, which was conducted by the departments of political economy and statistics at the universities.

Important, often vital, study and research were done by university scholars in many fields of natural sciences, such as geology and biology. The University of Kharkiv was primarily responsible for progress in the fields of physics, mathematics, and mechanics, not only in Ukraine, but in all of the Russian empire. Scholars at the Universities of Kiev and Odessa also contributed significantly to the work in these disciplines. The Kiev School of Algebra, headed by Dmytro Grave (1863–1939), influenced the development of research in related fields in Moscow, St. Petersburg, and Kazan. The first department of theoretical physics in Ukraine was established at the University of Kiev. Astronomical research progressed at a steady pace at all three of the universities, furthering the work of the university observatories at Kharkiv (founded 1808), and Kiev (founded 1845) and beginning research at the newly established (1871) observatory at the University of Odessa. The three universities were also the principal centers of learning in the field of chemistry. The universities of Ukraine also played an outstanding role in the development of medical studies. Scholars of these institutions contributed notably to medical research and learning and gained world recognition for their research in the fields of physiology, therapy, anatomy, histology, and hygiene. Work carried on by the Ukrainian universities was also instrumental to progress in agricultural studies, particularly in zootechny and veterinary medicine. The introduction of research in mechanical engineering at the universities during the latter half of the nineteenth century was particularly significant for the development of technical studies.

In the scholarly research work of the universities, principally in the area of the humanities, increasing emphasis was placed on Ukrainian studies. There was growing interest in Ukrainian history, first as part of general Russian history, but later focusing on specific periods and questions. The major center of these studies was the University of Kiev where the so-called "Kievan School" of Ukrainian historians developed, with Volodymyr Antonovych (1834–1908 [Vol. I, p. 564]) as its principal figure. Histor-

ians at the Universities of Kharkiv and Odessa, notably Dmytro Bahalii, also contributed to the work conducted on this area. Noteworthy studies on the history of the Ukrainian church were carried on at the Kievan Theological Academy.

In the second half of the nineteenth century, the center of research on the problems of Ukrainian linguistics and literature was the University of Kharkiv (principal figures Alexander Potebnia and his successors, especially Nicholas Sumtsov [Vol. I, p. 433]). By the early twentieth century the center had shifted to the University of Kiev. Ukrainian ethnography, folklore, and economics came to be studied in more depth. Much significant material on Ukrainian topics was included in the publications of the universities: *Izvestiia* (News) University of Kiev; *Zapysky* (Memoirs) of Kharkiv and Odessa universities; and *Trudy* (Works) of the Kievan Theological Academy.

In addition to the universities, institutions for technical studies were important in the development of natural and technical studies at the end of the nineteenth and the beginning of the twentieth centuries. Among the important schools were the Technological Institute of Kharkiv (established in 1885), the Higher School of Mining of Katerynoslav (established in 1899), and the Kievan Polytechnic Institute (established in 1898). Professors at these institutes conducted research primarily in the fields of metallurgy and of mechanical and electrical engineering and in many branches of mechanics. The practical application of these sciences to the machine-building, bridge-building, mining, and metallurgical industries, particularly in the Donets and Kryvyi Rih basins, also received scholarly attention. In the area of agricultural studies, the Kievan Polytechnic Institute and the Veterinary Institute of Kharkiv were especially active in conducting studies connected with animal husbandry.

## LEARNED SOCIETIES

Learned societies established at the universities were instrumental in furthering study and research in many academic disciplines, particularly those dealing with Ukrainian problems. The most active societies in the study of humanities were: the Historical Society of Nestor the Chronicler at the University of Kiev (established in 1873); the historical philological societies at the Universities of Kharkiv (1877–1919) and Odessa (1889–1917) and at the Prince Bezborodko Historical Philological Institute of Nizhyn (1894–1920); and the Kiev Juridical Society (1877–1916). The societies most concerned with research in natural sciences were the Society of Natural Scientists at the Universities of Kiev (1869), Kharkiv (1869), and Odessa (1870); in the area of exact sciences, the Mathematical Society of Kharkiv (established 1879), the Physical-Mathematical Society of Kiev (1890–1917), the Physics-Chemical societies of Kharkiv (1872–1915) and Kiev (1910–33), and the Kiev Medical Scientific Society (established 1840).

Research into Ukrainian geography, natural history, economics, statistics, and ethnography was conducted by the Komissiia dlia opisaniia gubernii Kievskogo shkol'nogo okruga (Commission for the Description of the *guberniyas* of the Kiev School District 1851–64). The scholarly activity of the Commission was connected with the University of Kiev, and included in its geographical scope both Right- and Left-Bank Ukraine.

Beginning with the 1860's, the principal center for Ukrainian studies was the government-established Vremennaia kommisiia dlia rozbora drevnikh aktov (Interim Commission for the Study of Ancient Documents, 1843–1917), founded in Kiev. The period of the Commission's greatest activity began in 1863 when V. Antonovych assumed the post of secretary and chief editor of publications; his term of office extended until 1880. The princi-

pal publications of the Commission were: four volumes of *Pamiatnyky* (Monuments, 1845–59), 35 volumes of *Arkhiv Yugo-Zapadnoi Rossii* (Archives of Southwestern Russia, 1859–1914), and the *Kozats'ki litopysy* (Kozak Chronicles). These works included sources and materials on the history of Ukraine from the fifteenth to the nineteenth centuries. Research and publication work of the Commission involved a large number of Ukrainian historians. In connection with this work, the Tsentral'nyi Arkhiv Davnikh Aktiv (Central Archive of Ancient Documents) was established in 1852 at the University of Kiev (see Archives and Archaeography, p. 403). The Odessa Society of History and Antiquities widened its sphere of activity (see p. 409). Local scholarly societies in many cities of Ukraine also contributed to the growing interest in Ukrainian subjects. Among these were the Historical-Archaeological Society of the Podilia Eparchy (founded in 1903 by Yukhym Sitsinsky, and having as its base the Committee of Kamianets Podilsky for the Historico-Statistical Census of the Podilia Eparchy) and the Society of Researchers of Kuban in Katerynoslav. Other centers of scholarly activity dealing with Ukrainian questions were the *guberniya* archival commissions including those on Tavria (established in 1887), Chernihiv (1896), Poltava (1903), and Katerynoslav (1903).

FIGURE 77. YUKHYM SITSINSKY

Research in the fields of the natural sciences, agriculture, and medicine was also carried on at specialized institutions and research stations. Among these were biological stations at Sevastopol (established 1871–2), in the Dnieper region (1909), in the Karadag region (1914), and in the northern Donets region. A microbiological (bacteriological) station was founded in Odessa in 1886, and similar stations followed in Kharkiv (1887) and Kiev (1896); the latter two were later reorganized as specialized research institutions. In 1913 a Sanitary-Bacteriological Institute was founded in Katerynoslav. To further research in the field of geophysics, the first observatory for the study of magnetism and meteorology in Ukraine was established in Odessa (1895). A radiometric laboratory, added to the observatory in 1911, pioneered in the study of the radioactivity of minerals, ores, water, and air. The Poltava Research Field (established in 1894) contributed significantly to the development of agricultural studies. The field served as a base for the creation of the Poltava Agricultural Research Station (1910), followed by the establishment of similar stations in Nosivka, Uman, Kharkiv, Kherson, Katerynoslav, and Odessa. The Kharkiv station (established 1909) contributed to progress in the study of genetics.

## THE ROLE OF THE ZEMSTVOS

The organs of local self-government in Ukraine played an important role in the development of scholarship, particularly in Poltava, Chernihiv, Kherson, and Tavria. The research work, conducted by scholarly institutions created by the *zemstvos*, dealt primarily with the natural and agricultural sciences (geography, geology, botany, agronomy). These centers also engaged in ethnographic research. The development of statistical economic and geographic studies on the specific regions of Ukraine owes much to the work of these institutions. The statistical and descriptive studies in the fields of demography and social economics conducted by Alexander Rusov (1847–1915) were supported by the *zemsvo* institutions. Rusov also trained a large group of young scholars, who

later became outstanding Ukrainian statisticians and economists (see p. 670).

Scholarly work on problems relating to Ukraine was also carried on in Ukraine by Russian institutions and societies of learning. Conducting research in history were the Archaeological Commission, the Russian Archaeological Society, and the Archaeological Society of Moscow; in the field of geography, economics, and statistics, the Russian Geographical Society; in geology, the Geological Committee of St. Petersburg (established 1882). The All-Russian Archaeological Congresses were of particular significance in the development of historical and archaeological studies, as well as museology and art criticism. Ukrainian scholars and researchers took an active part in these conferences, delivering lectures and papers. Six congresses were held in Ukrainian cities: Kiev (1874 and 1899), Odessa (1884), Kharkiv (1902), Katerynoslav (1905), and Chernihiv (1908).

## UKRAINIAN STUDIES IN ST. PETERSBURG AND MOSCOW

Studies of Ukrainian history and ethnology, as well as the publication of Ukrainian historical and literary documents, were conducted during the late nineteenth and early twentieth centuries by Russian scholarly institutions in St. Petersburg and Moscow. The St. Petersburg Archaeographic Commission (established 1834) carried on, with the active participation of Nicholas Kostomarov [Vol. I. p. 563], the publication of Ukrainian historical documents in the series *Akty otnosiashchiesia k istorii Zapadnoi Rossii* (Documents Relating to the History of Western Russia, 1846–53) and *Akty otnosiashchiesia k istorii Yuzhnoi i Zapadnoi Rossii* (Documents Relating to the History of Southern and Western Russia, 1863–92). Of great importance for Ukrainian historical research was the *Chteniia* (Readings) of the Obshchestvo Istorii i Drevnostei Rossiiskikh (Society for the Study of Russian History and Antiquities of Moscow). Through the efforts of the Society's secretary, Joseph Bodiansky (1808–77), a series of Ukrainian historical works, annals, chronicles, and papers were published during the middle years of the nineteenth century. (See Archives and Archaeography, p. 402.)

The development of Ukrainian studies in the latter half of the nineteenth century led to the establishment of centers for the study of strictly Ukrainian problems. The first attempt at organizing such a center was made by the journal *Osnova* (Foundation), published in St. Petersburg (1861–2). Although published outside the boundaries of Ukraine, its scholarly and literary activity grouped a number of outstanding scholars working in Ukrainian studies led by N. Kostomarov and Panteleimon Kulish. A number of Russian scholars working in Ukrainian studies also contributed to the journal. The editors of *Osnova* also maintained contact with the leaders of cultural and intellectual life in Galicia. Shortly after, an attempt was made by scholars and civic-minded individuals to create a center for Ukrainian studies in Ukraine. Using the Russian Geographical Society as a base, they founded the Pivdenno-Zakhidnyi Viddil Rosiis'koho Heohrafichnoho Tovarystva (Southwestern Branch of the Russian Geographical Society, 1873) in Kiev. Among its members were such noted scholars as historians Antonovych and Michael Drahomanov, anthropologist Theodore Vovk, economist and sociologist Nicholas Ziber, law historian Alexander Kistiakovsky, linguists Constantine Mykhalchuk and Paul Zhytetsky, statistician Alexander Rusov, ethnographers Paul Chubynsky and Ivan Rudchenko, and musicologist Nicholas Lysenko. A major achievement of the Society was an expedition led by P. Chubynsky and other ethnographers and statisticians to study the elements of material and non-material culture in Right-Bank Ukraine. A monumental, seven-volume publication, *Trudy etno-*

*graficheskо-statisticheskoi ekspeditsii v Zapadno-Russkii krai* (Works of the Ethnographic Statistical Expedition to the West Russian Lands, 1872–8), resulted from the research done by the expedition [Vol. I, p. 272]. The Society also published two volumes of *Zapiski* (Proceedings) as well as numerous monographs on topics in ethnography and folklore. Through the efforts of the Society, the Third Archaeological Congress was convened in Kiev in 1874. The Congress, attended by specialists in Ukrainian studies from all parts of Ukraine, was used by the scholarly community to demonstrate the progress made in this area. This demonstration visibly disturbed the Russian government and, with the proclamation of the Ems ukase in 1876, the Society was abolished.

The policy of Russification espoused by the Russian government forced Ukrainian scholars to transfer some of their activities to Galicia (see p. 249) and abroad, principally to Switzerland, where M. Drahomanov, N. Ziber, S. Podolynsky, and others continued their scholarly work. Another, more significant, intellectual center was formed around the publication of the monthly *Kievskaia Starina* (Kievan Antiquity), founded in 1882 and published in Kiev through the efforts of Ukrainian scholars and civic leaders. This publication, printed in Russian because of the prohibition on printing in Ukrainian, was until 1906 the principal journal of Ukrainian studies. It was known as the "Ukrainian philological-historical department" by contemporaries. In the twenty-five years of its existence, *Kievskaia Starina* (changed to *Ukraïna* [Ukraine] in 1907) published a large number of monographs, articles, and materials in various branches of Ukrainian studies: the political, social, and cultural history of the seventeenth and eighteenth centuries, the history of literature and art, archaeology, ethnography, economics, statistics. In addition to scholars from all the territories of Ukraine, Russian and Polish specialists in Ukrainian studies also contributed to the journal.

## THE UKRAINIAN SCIENTIFIC SOCIETY OF KIEV

Following the revolution of 1905 and the abolition of the restriction on printing in Ukrainian, conditions for the development of Ukrainian scholarship improved. Utilizing the organizational skill and experience of the Shevchenko Scientific Society in Lviv, a Ukrainian Scientific Society was established in Kiev in 1907 on the initiative of a group of Ukrainian scholars and civic leaders. The goal of the Society, as stated in its charter, was to "develop and popularize various branches of learning, using the Ukrainian language." The president of the society was Michael Hrushevsky. The activities of the Society were divided into sections: historical, philological, and mathematical-scientific. Later medical and technical sections were added; and sections were subdivided into commissions, for example, statistical-economic, linguistic, etc. The membership of the Society numbered 54 in 1907, 98 in 1912, 161 in 1916. Works of the members were published in the *Zapysky Ukraïns'koho Naukovoho Tovarystva* (Memoirs of the Ukrainian Scientific Society, 18 volumes, 1908–19), the *Zbirnyky pryrodnycho-tekhnichnoï sektsiï* (Collections of the Scientific and Technical Sections, 4 volumes, 1910–18), and in the *Zbirnyky medychnoï sektsiï* (Collections of the Medical Section, 5 volumes, 1910–22). Another organ of the Ukrainian Scientific Society was *Ukraïna*, a quarterly dealing with Ukrainian studies, which began publication in 1914.

The founders of the Ukrainian Scientific Society of Kiev regarded it as the core of the future Ukrainian Academy of Arts and Sciences.

# 3. SCHOLARSHIP IN WESTERN UKRAINIAN LANDS AND ABROAD (1850-1918)

## WESTERN UKRAINIAN LANDS

### Schools of Higher Learning

During the period 1850–1918, schools of higher learning, particularly the Universities of Lviv and Chernivtsi and the Lviv Polytechnic Institute (see p. 333), were the main centers of scholarly study and research in these areas. The research institutes and professors of these universities contributed greatly to the advancement of the humanities, Ukrainian studies, and the natural sciences, particularly the study of the history, ethnography, economy, and natural history of Galicia and Bukovina. The development of some aspects of Ukrainian studies, and especially the increase in the number of scholars and researchers, can be attributed in large measure to the activities of the chairs of Ukrainian language and literature at Lviv University (headed by Jacob Holovatsky, 1849–67, Omelian Ohonovsky, 1870–94, and Cyril Studynsky, from 1900) and the chair of Ukrainian history (directed by Michael Hrushevsky, 1894–1914). Similar work was done at the University of Chernivtsi by the chair of Ukrainian language and literature headed by Hnat Onyshkevych, 1877–83 and Stephen Smal-Stotsky, 1884–1919.

FIGURE 78. JACOB HOLOVATSKY

Also contributing to the development of some areas of Ukrainian studies was the activity at the University of Vienna, which numbered many Ukrainian scholars and researchers among its students. The University's publications included important works on the history, ethnography, and natural history of Galicia, Bukovina, and Transcarpathia.

But because of their non-Ukrainian character, these schools of higher learning were only of secondary importance in the development of Ukrainian scholarship and research. The Ruthenian National Institute "National Home" (Narodnyi Dim), founded in Lviv in 1849 with the aim of collecting historical and archaeological material and publishing scholarly works on history, ethnography, and philology, also failed to develop into a center of research. Its activity in the last decades of the nineteenth century and at the beginning of the twentieth century was limited to maintaining a library and archeological, historical, and natural history museums. Similarly, the Stavropygian Institute in Lviv (founded in 1788) also limited its activities to the maintenance of a museum and archives.

The level of Ukrainian scholarship in Western Ukraine at the beginning of the 1890's was low. There were relatively few Ukrainian scholars, and for the most part, they wrote in languages other than Ukrainian. In addition to the older Anthony Petrushevch and Isidore Sharanevych [Vol. I, p. 565b], noteworthy scholars included historian Julian Tselevych, church historian Bishop Julian Pelesh, and philologists Omelian Ohonovsky, Alexander Barvinsky, and later, Stephen Smal-Stotsky [Vol. I, pp. 432 and 961]. Ukrainian scholarship in Western Ukraine made some advances only during the last few years of the nineteenth century; this development was closely related with the activity of the Shevchenko Scientific Society and Professor Michael Hrushevsky.

The Shevchenko Scientific Society was a continuation of the Shevchenko Society,

a literary scholarly society founded in 1873 in Lviv, on the initiative and with the financial support of community leaders in the central and eastern Ukrainian lands. Both the establishment of

FIGURE 79. MICHAEL HRUSHEVSKY

this society and its transformation into a learned institution constituted a reaction against the increasing pressures of the tsarist regime in the central and eastern lands, including the Ems ukase (1876), limitations on Ukrainian language, literature, and scholarship, and in particular the ban on printing books in Ukrainian [Vol. I, p. 684a-b]. The reorganization of the Shevchenko Society, initiated by Volodymyr Antonovych and Alexander Konysky, was an attempt to create a free Ukrainian center of scholarship, one that would unite scholars and researchers from all the Ukrainian lands. A major role in the development of the scholarly work of the Society was played by Michael Hrushevsky, who left Kiev in 1894 to assume the chair of history at the University of Lviv [Vol. I, p. 566]. He succeeded Julian Tselevych and Alexander Barvinsky as president of the Society, and remained in this post from 1897 until 1913. He was also the director of the Society's Historical-Philosophical Section, and edited a number of publications of the Shevchenko Scientific Society, notably the *Zapysky* (Memoirs). Hrushevsky's closest associates were ethnographer Volodymyr Hnatiuk (1871–1926) [Vol. I, p. 275a] who served as secretary of the Society for many years and Ivan Franko (1856–1916), Western Ukraine's leading writer and scholar.

The Shevchenko Scientific Society, organized on the pattern of the Vienna Academy of Science, was divided into three sections: historical-philosophical, philological, and mathematical-naturalistic-medical. Within these sections, research commissions worked in specific scholarly fields and projects. In 1898 the membership of the Society was divided into full members and members. The original full members, as well as those later elected to full membership, included Ukrainian scholars from all Ukrainian lands and from abroad. After 1902 prominent scholars and researchers of other nationalities who were especially noted for their work in Ukrainian and Slavic studies were also elected as full members.

The Historical-Philosophical Section of the Shevchenko Scientific Society, headed by Michael Hrushevsky, developed into the most active division. Hrushevsky assembled a group of historians, for the most part his own students [Vol. I, p. 567b], and together they did the research and published a great deal of material relating to Ukrainian history. The monumental work, *Istoriia Ukraïny-Rusy* (History of Ukraine-*Rus'*), began to appear in 1898 in a series of Shevchenko Scientific Society editions published in Lviv. The publications of the section and its commissions also included: *Zbirnyk istorychno-filosofichnoï sektsiï* (Collection of the Historical-Philosophical Section, 1913, 14 volumes), *Ukraïns'ka istorychna biblioteka* (Ukrainian Histori-

cal Library), *Zherela do istorii Ukraïny-Rusy* (Sources on the History of Ukraine-Rus', 11 volumes), *Pravnycha biblioteka* (Legal Library, 4 volumes), and *Studii z polia suspil'nykh nauk i statystyky* (Studies in the Field of Social Sciences and Statistics, 5 volumes). The archaeographical, archaeological, legal, and statistical commissions assisted in the work of the Historical-Philosophical Section. Prominent economists, statisticians, and jurists worked in the latter two commissions, among them Stanyslav Dnistriansky, Constantine Levytsky, Michael Lozynsky, and Volodymyr Okhrymovych.

The Philological Section of the Shevchenko Scientific Society, headed by Ivan Franko, assembled the largest group of researchers—philologists, Slavists, literary historians, and ethnographers. Its members included not only Ukrainian scholars [Vol. I, Language, Literature, Ethnography], but also a number of famed Slavists of other nationalities, among them Vatroslav Jagič, Jan Baudoin de Courtenay, Alexander Pypin, Alexander Brückner, Olaf Broch, and Lubor Niederle. The publications of this section and its commissions (ethnographic, bibliographic, etc.) included *Zbirnyk filolohichnoï sektsii* (Collection of the Philological Section, 18 volumes), *Pamiatky ukraïns'koï movy i literatury* (Monuments of Ukrainian Language and Literature, 7 volumes), *Etnografichnyi Zbirnyk* (Ethnographic Collection, 40 volumes), *Materiialy do ukraïns'koï etnolohii* (Materials on Ukrainian Ethnology, 22 volumes), *Materiialy do ukraïns'koï bibliohrafii* (Materials on Ukrainian Bibliography, 3 volumes). Among works published in these editions were many significant contributions to the field of Slavic studies.

The Mathematical-Naturalistic Medical Section of the Shevchenko Scientific Society pioneered in the development of Ukrainian scientific research. Its directors, who also served as editors of its publications *Zbirnyk matematychno-pryrodopysno-likars'koï sektsii* (Collection of the Mathematical-Naturalistic-Medical Section) and *Zvidomlennia z zasidan' matematychno - pryrodopysno - likars'koï sektsii* (Minutes of the Meetings of the Mathematical-Naturalistic-Medical Section, in German), were zoologist and botanist Ivan Verkhratsky (1846-1919), a pioneer in the development of Ukrainian scientific terminology, and Volodymyr Levytsky (1872–1956), the mathematician and physicist. Other prominent members of the section were biochemist Ivan Horbachevsky (1854–1943) professor at the University of Prague and author of numerous works in the field of biological and medical chemistry; physicist Ivan Puliui (1845-1918), professor at the Prague Polytechnic Institute and one of the founders of radiology; geographer Stephen Rudnytsky (1877–1932), father of Ukrainian geography [Vol. I, p. 167a-b]; and Ivan Rakovsky (1874–1949), anthropologist and zoologist.

The most significant general publication of the Shevchenko Scientific Society was the *Zapysky NTSh* (Memoirs of the Shevchenko Scientific Society). In addition to the original works, surveys of intellectual life in Ukraine and in the world and reviews of important scholarly works appearing in Ukrainian and other languages were included in the *Zapysky*. Between 1892 and 1913, 110 volumes were published. The *Khronika NTSh* (Chronicle of the Shevchenko Scientific Society; in two editions, one German and one Ukrainian, 59 volumes each) continually published information about the scholarly work of the Society. Other publications of the Shevchenko Scientific Society included the literary-scientific journal *Zoria* (The Star, 1885–97); *Literaturno-Naukovyi Vistnyk* (Literary and Scientific Herald, 1898–1905; see The Press, p. 484); and *Chasopys' Pravnycha* (Legal Newsletter), begun in 1899 and renamed *Chasopys' Pravnycha i Ekonomichna* (Legal and Economic Newsletter) in 1900. Altogether, 461 scholarly works were published by the Shevchenko Scientific Society from 1892 to 1913, not

including literary journals and belles-lettres.

Scholarly research done by members of the Society was greatly facilitated by its library which in 1914 numbered 100,000 volumes, dealing mostly with Ukrainian subjects (see pp. 396–7) and also included a museum (see p. 411). The Society was financed by subsidies of the Austrian and provincial (Galician) governments, income from its own businesses (printing shops and bookstores), and contributions from its Ukrainian patrons (including Basil Symyrenko, Elizabeth Skoropadska-Myloradovych, Paul Pelekhyn, Eugene Chykalenko, and Constantine Pankivsky). The research work and publications of the society dealt with problems of all lands of Ukraine, although they concentrated on Galicia, Bukovina, and Transcarpathia. The Shevchenko Scientific Society exchanged publications with most of the academies and scholarly societies and institutions of the world. Members of the Shevchenko Scientific Society participated in international conferences and contributed to foreign scholarly publications. The Society continued its activity on a national scale even after Ukrainian scholarship was permitted to develop somewhat in Ukrainian lands under Russia, and after the Ukrainian Scientific Society was established in Kiev in 1907 (see p. 247). Up to the time of the creation of the Ukrainian Academy of Sciences in Kiev in 1918, the Shevchenko Scientific Society was universally recognized as the major center of Ukrainian scholarship in Ukraine.

**Other Scholarly Institutions**

The Church Museum in Lviv, renamed the National Museum (see p. 412) in 1908, was an important center of scholarly research in the field of Ukrainian art, in particular church art and bibliology. It was founded in 1905, on the initiative of Metropolitan Andrew Sheptytsky, with Hilarion Svientsitsky (1876–1956) as director. A rather limited amount of scholarly work was also conducted by Galician professional societies (all based in Lviv) such as the Ukrainian Technical Society (established 1908), which published *Tekhnichni Visti* (Technical News); the Association of Ukrainian Lawyers (established 1910), which published the *Pravnychyi Vistnyk* (Legal Herald); and the Ukrainian Medical Society (established 1912), which published the *Likars'kyi Vistnyk* (Medical Herald).

Among Polish scholarly institutions which devoted some space in their publications to Ukrainian studies were the Ossolinski National Institute in Lviv (see p. 396), the Polish Academy of Sciences in Cracow, the Polish Scientific Society in Lviv (established 1900), and the Copernicus Polish Naturalists Society in Lviv (founded 1875).

**Abroad (1850–1918)**

The same leading Ukrainian scholarly and civic groups of the central and eastern Ukrainian lands which helped organize a center of free Ukrainian studies in the western Ukrainian lands—particularly members of the Kievan Stara *Hromada* [Vol. I, pp. 682 et seq.]—also initiated efforts to establish such a center in western Europe. Their project was realized sooner than expected as a result of the proclamation of the Ems ukase. Restricted in their work by the ukase, some Ukrainian scholars—Michael Drahomanov, Theodore Vovk, Nicholas Ziber—were forced to emigrate. They settled in Geneva and began to publish a nonperiodical scholarly journal entitled *Hromada* (Community, 1878–82). Among contributors to this publication, in addition to those mentioned above, were sociologist Serhii Podolynsky and Galician publicist Michael Pavlyk. The Genevan group also published brochures in Ukrainian, Russian, and western European languages, designed to inform the European community on the Ukrainian problem. It established contact with foreign scholarly circles and societies.

The founder and most prominent member of the Genevan Hromada was Michael Drahomanov (1841–95). He induced younger Ukrainian scholars to undertake more thorough research into the past and present of Ukrainian life and exerted great influence on the formation of the political viewpoint of the contemporary young Ukrainian intelligentsia, [Vol. 1, pp. 685, 703]. After moving to Bulgaria, Drahomanov maintained his contact with scholarly circles in the West, particularly in Switzerland, France, and Italy. Associates of Drahomanov in Geneva were Nicholas Ziber (1841–88), one of the first Ukrainian theoretical economists of a Marxist bent (see p. 670), and initially Theodore Vovk (1847–1918)—prominent Ukrainian anthropologist, ethnographer, and archaeologist [Vol. I, p. 160b].

FIGURE 80. SOPHIA KOVALEVSKA

FIGURE 81. MAKSYM KOVALEVSKY

Many other Ukrainian scholars, deprived of the necessary working conditions in their own country, or persecuted because of their views, were forced at various times to emigrate from Ukraine. They continued their work abroad, attaining scholarly stature in the countries of their residence. Some maintained contact with Ukrainian scholarship; others returned home and resumed their scholarly work there. The majority, however, especially those who settled in Russia and Poland were lost to Ukrainian scholarship and their Ukrainian origins are seldom recognized—Michael Borys-kevych (1848–99), a professor at the Universities of Innsbruck and Gräz; mathematician Sophia Kovalevska (1849–89), the author of a number of works on the theory of function and mechanism and a professor at the University of Stockholm; Maxim Kovalevsky (1851–1916), lawyer, historian, and sociologist, and professor at the Universities of Oxford and Stockholm; Nobel-prize-winning biologist from Odessa, Elias Mechnykov (1845–1916), a pioneer in a number of modern biological sciences, and the organizer and director of a laboratory at the Pasteur Institute in Paris; historian Dmytro Petrushevsky (1863–1942), a noted expert on European medieval history and a professor at the Universities of Warsaw, St. Petersburg, Moscow, among others.

# 4. CENTRAL AND EASTERN LANDS AFTER 1917

## THE PERIOD OF UKRAINIAN STATEHOOD

Following severe repressions by the tsarist government at the outbreak of World War I, including a series of bans, prohibitions, and personal attacks (e.g., imprisonment and deportation of Michael Hrushevsky), Ukrainian scholarship did not experience a revival until the revolution of March 1917 and the rebirth of Ukrainian statehood. The Ukrainian

Scientific Society in Kiev became the hub of Ukrainian scholarly activities. Its scope broadened with the reorganization of the section of mathematics and natural sciences into three separate sections: natural sciences, technology, and medicine. The Society renewed the publication of its *Zapysky* (Memoirs), *Zbirnyky* (Collections), and the scholarly quarterly *Ukraïna,* and initiated the *Zbirnyk Tekhnichnoï Sektsiï UNT* (Symposium of the Technical Section of the Ukrainian Scientific Society). Scholars from other areas of Ukraine joined in the work of the Ukrainian Scientific Society, with increasing numbers active in the field of natural science and technology. The Society established a branch in Poltava.

The task of establishing new centers of scholarly research was assumed by the newly established government of Ukraine. The Ukrainian Academy of Fine Arts and the Academy of Pedagogics were founded late in 1917 in Kiev. New state universities were established in 1918 in Kiev and Kamianets Podilsky; a department of history and philology was opened in Poltava. Ukrainian was the language of instruction in all these institutions, and chairs of Ukrainian studies were founded in all the existing establishments of higher learning (see p. 342). The Ukrainian National Library, the State Archaeological Commission, the Ukrainian Geological Committee, and other scholarly institutions were established in the same year.

The most important event was the opening of the Ukrainian Academy of Sciences in the fall of 1918. Its charter was drafted by a special commission created by the Ministry of Education (headed by Nicholas Vasylenko). Pursuant to a decree promulgated by the Hetman government of Ukraine, the Academy, consisting of three departments, was opened on November 14, 1918. The following academicians were charter members: in the department of history and philology, Dmytro Bahalii, Ahatanhel Krymsky, Nicholas Petrov, and Stephen Smal-Stocky; in the department of physics and mathematics, Volodymyr Vernadsky, Nicholas Kashchenko, and Stephen Tymoshenko; in the department of socio-economic sciences, Michael Tuhan-Barnanovsky, Orest Levytsky, Volodymyr Kosynsky, and Theodore Taranovsky. V. Vernadsky was elected

FIGURE 83. VOLODYMYR VERNADSKY

FIGURE 84. AHATANHEL KRYMSKY

president of the Academy and A. Krymsky the permanent secretary. The following were elected chairmen of their respective departments: D. Bahalii, N. Kashchenko, O.Levytsky.

Scholarly activities also developed in other Ukrainian cities. In Kharkiv, it centered around D. Bahalii, an outstanding historian. The Kharkiv Technological Institute was the center of applied sciences, with mechanical and technical departments opened in 1918. Odessa was an active center of research in social and economic history of Ukraine and history of law (Michael Slabchenko, Eugene Zahorovsky, and Alexander Riabinin-Skliarevsky). Research in history, natural science, geography, and economics was conducted by Dmytro Yavornytsky and other scholars in Katerynoslav; the Institute of Medicine established there in 1916 was transformed into a university with four departments in 1918. Kamianets Podilsky, with its university organized by Ivan Ohiienko in 1918, was another important center. There were also centers of scholarly research in Poltava and Zhytomyr.

The relatively short period of Ukrainian statehood demonstrated the vast potential of Ukrainian scholarship when allowed to function and develop in freedom. The establishment of new scholarly institutions, indicating diversification of interests and research which ranged from the humanities to the socio-economic and technological fields, the greater variety of scholarly publications, and the initiation of Ukrainian terminology in the sciences—all this went hand in hand with intensive cultural activity which enveloped the country in the wake of its independence. Substantial contributions to Ukrainian learning were made by Ukrainian scholars who had been working in Russia before the revolution and now returned to Ukraine. The growing ranks of Ukrainian scholars delved into many fields of research, persevering in their work despite the war and the difficulties imposed by the Communists and other occupation armies (the Denikin troops, Polish armies) in 1919–20. This pioneering work in the organization of Ukrainian scholarship paved the way for continued progress in the decade that followed.

## IN THE UKRAINIAN SSR IN THE 1920's

The development of Ukrainian scholarship during the years of Ukrainian independence was partially arrested by the Communist invasion and subsequent establishment of the Soviet regime in Ukraine in 1920. The Academy of Pedagogics and the Ukrainian State University in Kiev were dissolved immediately, as was later the Ukrainian State University in Kamianets Podilsky. The Ukrainian Academy of Fine Arts was transformed into an Arts Institute in 1923. Leading Ukrainian scholars were persecuted and some were put to death (Volodymyr Naumenko and others). Many Ukrainian scholars emigrated to the West, establishing Ukrainian scholarly institutions abroad, particularly in Czechoslovakia (see pp. 280 ff.). Those who remained continued their work under incessant pressure of the Communist regime. Conditions were especially harsh during the period of war communism [Vol. I, p. 799b]. In addition to widespread terror, there was also suffering from shortages of food and housing and forcible Russification. Opportunities for publishing scholarly works were very limited. But the course of Ukrainian scholarship had been set in the earlier period of independence, and it could not be restricted by official attempts to impose "proletarian" or "socialist" dogma on it.

The ensuing period of the New Economic Policy (NEP) and subsequent years of relative liberalization were a short-lived stage in the growth of Ukrainian scholarship and of Ukrainian culture in general. The return of Ukrainians from abroad, led by Hrushevsky, also contributed greatly to the progress of Ukrainian scholarship during this period.

The structural forms of scholarly activity in the 1920's differed substantially from those before the revolution. In those years the universities were the main centers of scholarly research. Following their transformation into the Institutes of People's Education and other establishments of professional education (see Education, pp. 346 ff.), the emphasis was primarily on instruction with attendant diminution of pure research. However, a number of new research institutes emerged, especially in technology, agronomy, and medicine. The All-Ukrainian Academy of Sciences (VUAN) in Kiev became the leading center of Ukrainian scholarship. Along with it, a number of state research institutions began conducting research in applied fields along strictly defined lines. A number of local scholarly centers appeared outside of Kiev, usually attached to higher educational establishments, which employed thousands of research workers.

The purposes of Ukrainian scholarship also changed. There was no longer any

need to prove the separate origin and character of the Ukrainian people and their culture. Scholarly research was conducted on a national scale, with all Ukrainian scholars joining in the effort, as well as scholars of other nationalities who lived in Ukraine at the time. Despite restrictions of a political and ideological nature, which inhibited the development of the humanities and social sciences, research developed rapidly in all sectors, including the natural sciences, engineering, and medicine. Natural scientists and economists looked at Ukraine for the first time as a separate entity and not as a part of the Russian empire. Books in some fields of scholarship were written and published in Ukrainian for the first time, and in this respect the VUAN spearheaded the efforts to compile and publish terminological dictionaries.

The VUAN maintained continuous contacts with the Western world of learning during the 1920's. The academicians and scholarly workers of the VUAN took part in international conferences and made trips to the West. Foreign scholars in turn visited Ukraine, establishing personal and scholarly contacts. Ukrainian scholarly institutions also maintained contacts with Ukrainian centers of learning in Western Ukraine and abroad: works by academicians and other members of the VUAN were published in Western Ukrainian and émigré publications, and, conversely, the scholars of Lviv and those living abroad contributed to the publications issued by VUAN. During the 1925–9 period four Lviv scholars were elevated to the rank of academician in the VUAN.

**The Ukrainian Academy of Sciences**

Immediately upon their occupation of Kiev, the Communists proclaimed the decree of the People's Commissar of Education of the Ukrainian SSR (February 11, 1919), which established structural and financial guidelines for the Academy. Although this decree was of little practical significance, it served the Soviets as a means for advancing the unjustifiable claim of having established this highest scholarly institution of Ukraine.

During the period of war communism, the Academy conducted its work under extremely difficult conditions. In addition to physical hardship, the Academy's research workers were persecuted by the authorities for their scholarly work and opinions. Although the Council of People's Commissars of the Ukrainian SSR, by its decree of June 14, 1921, recognized the Academy as "the highest state scholarly institution" (designating it the All-Ukrainian Academy of Sciences, VUAN), this status did not improve the institution's material well-being. Payment of appropriations and salaries was delayed for months, and as a result of the inflation in the second half of 1921, the monthly salary of a permanent staff member of the Academy came down in real value to two prewar rubles (about one dollar). Appropriations for scholarly research and the publications of the VUAN were wholly inadequate.

After the monetary reform of 1922 the material conditions of the Academy's employees improved somewhat, although at this time the staff of VUAN was drastically reduced from 606 to 149 persons, and in 1923 to 118. Nevertheless, the work at VUAN went on, helped by non-staff employees (over 1,000 in 1921), most of whom worked without any remuneration. Publishing also improved after VUAN had been granted the rights to the printing shop of the Kievan Cave Monastery in 1922.

VUAN's research work intensified in 1924 with the return of M. Hrushevsky who delved into various areas of historical research. The permanent staff of the Academy was increased to 160. Publication multiplied: from 22 in 1923 to 35 in 1924, 52 in 1925, 75 in 1926, 88 in 1927, 90 in 1928, 136 in 1929, and 116 in 1930, excluding reprints and circulars. According to the charter of 1918, the Academy was divided into three departments. The

departments included academic chairs, numerous commissions, institutes, museums, libraries, which functioned as permanent institutions each under a director. The highest governing body was the assembly of members. The executive committee consisted of president, vice-president, and permanent secretary, whose duties included coordination of work in various scholarly institutions. The following were presidents of the Academy: V. Vernadsky, 1918–9; O.

FIGURE 85. VOLODYMYR LYPSKY

FIGURE 86. DANIEL ZABOLOTNYI

Levytsky, 1919–21; N. Vasylenko, 1921–2; Volodymyr Lypsky, 1922–8; Daniel Zabolotnyi, 1928–9; Alexander Bohomolets, 1930–46. Serhii Yefremov was vice-president from 1923 to 1929, and A. Krymsky was permanent secretary from 1918 to 1929.

There were two categories of membership—full and corresponding. Members of both categories could be included in the staff, that is, paid out of the budget of the Academy, or non-staff—working without pay and without permanent assignment. Academic chairs were the main link in the structure of the Academy. They were headed by academicians nominated by the departments and elected by secret ballot by the assembly of the full members; for the most part they were eminent specialists in a given field of learning. The chair, in addition to its head (or director), also included corresponding members and research workers of different ranks.

The first Historical and Philological Department of VUAN developed a particularly broad spectrum of research. It was aided by the annexation of the same sections of the Ukrainian Scientific Society, the Society of Nestor the Chronicler, the Kiev Archaeographic Commission, and other scholarly institutions which were merged into the VUAN after 1921. In 1927–8 the department included the following chairs: historical-philological (A. Krymsky), history of the Ukrainian language (Eugene Tymchenko), Ukrainian oral literature (Andrew Loboda), history of modern Ukrainian literature (S. Yefremov), old Ukrainian literature (Volodymyr Peretts), modern history of the Ukrainian nation (M. Hrushevsky), ancient Ukrainian history (D. Bahalii), historical geography (Alexander Hrushevsky), Byzantology (Theodore Myshchenko), history of Ukrainian art (Alexis Novytsky). The total number of staff academicians in the department was eight, non-staff, nine; members-directors, two; and corresponding members, five.

At the beginning of 1928 the department and its chairs included 39 commissions, institutes, committees, and museums. Work was conducted on the compilation of dictionaries of contemporary Ukrainian, a historical language dictionary, and a biographical dictionary of prominent Ukrainians. Two separate institutions for the study of non-Ukrainian cultures were working under A. Krymsky—the cabinet of Arabic and Iranian Philology and the Hebrew Historical and Archaeographic Commission. The institutions devoted to history and working under M. Hrushevsky developed a broad field of research. The quarterly (subsequently bimonthly) organ of the Historical Section *Ukraïna* (1924–30), edited by Hrushevsky, attracted a large group of historians [Vol. I, p. 569] and researchers in various fields of Ukrainian studies. Hrushevsky continued his work on the further volumes of his *Istoriia Ukraïny-Rusy* (History of Uk-

raine-*Rus'*) and *Istoriia ukraïns'koï literatury* (History of Ukrainian Literature). He was also editor of a number of serial publications of the Historical and Philological Department [Vol. I, p. 569] and of the Archaeographical Commission (see Archives, p. 405). The All-Ukrainian Archaeological Commission, organized in 1922 from the Archaeological Section of VUAN, did considerable work in scholarly research and publications, under the leadership of Theodore Schmit and Nicholas Biliashivsky, among others. In the field of Ukrainian philology, lexicography, and studies of literature (particularly the works of Shevchenko) major studies were produced by A. Krymsky, S. Yefremov, and their associates. Krymsky edited most of the issues of *Zapysky istorychno-filolohichnoho viddilu* (Memoirs of the Historical-Philological Department) and other publications sponsored by the Department. The commission for the compilation of a dictionary of contemporary Ukrainian published three volumes of the Russian-Ukrainian Dictionary (A to P) in 1924–8. The Institute of the Ukrainian Scientific Language (subsequently the Institute of Linguistics) compiled and published during the 1923–30 period 22 terminological dictionaries in various fields, particularly the natural and technological sciences and began publication of the Historical Dictionary of the Ukrainian Language, edited by E. Tymchenko. Substantial research activity was developed by the Ethnographic Commission under A. Loboda, which, in addition to a number of books and programs, published in 1925–30 nine volumes of *Etnohrafichnyi Visnyk* (Ethnographic Herald [Vol. I, p. 277]).

The Department of Physics and Mathematics consisted of scholars in anthropology, geography, geology, mathematics, physics, chemistry, medicine, and many fields of technology. Some worked within the framework of the VUAN institutions, but the majority were associated with institutions of higher learning and research institutes and stations all over Ukraine, which were not part of the VUAN system.

During 1927–8 this department of VUAN included the following chairs: mathematics (Dmytro Grave); mathematical physics (Nicholas Krylov); biology of agricultural plants (Eugene Votchal); experimental zoology (Ivan Schmalhausen); chemical technology (Volodymyr Shaposhnykov); Public Health (Ovksentii Korchak-Chepurkivsky); clinical medicine (Theophile Yanovsky). The total number of staff academicians in the Department of Physics and Mathematics at that time was 15; non-staff, 21; and corresponding members, nine. In 1927–8 the department included, in addition to the seven chairs,

FIGURE 87. VOLODYMYR SHAPOSHNYKOV

FIGURE 88. ALEXANDER FOMIN

19 different institutions. The Geological Society headed by academician Paul Tutkovsky and the Botanical Society under academician Alexander Fomin were also part of the department.

The Department of Physics and Mathematics published a great deal of material. In addition to several dozen works published in the series *Trudy fizyko-matematychnoho viddilu* (Works of the Physical Mathematical Department), it also published 15 issues of *Zapysky* (Memoirs 1923–30) and 32 issues of other serial publications, including *Ukraïns'skyi Botanichnyi Zhurnal* (Ukrainian Botanical Journal), *Ukraïns'kyi Zoolohichnyi Zhurnal* (Ukrainian Zoolog-

ical Journal), and *Antropolohiia* (Anthropology).

FIGURE 89. MICHAEL KRAVCHUK

FIGURE 90. CONSTANTINE SYMINSKY

Among the leading members and researchers of the department distinguished for their works, in addition to the cited directors of chairs and institutions, were the following: V. Vernadsky, director of the chair of mineralogy during the first years of VUAN, natural philosopher, and founder of biogeochemistry; D. Zabolotnyi, bacteriologist and author of research works on cholera and bubonic plague; African Kryshtofovych, botanist and geologist, student of Asia and plants in Ukraine; V. Lypsky, botanist; Nicholas Sharleman, zoologist; Michael Kravchuk, mathematician; Naum Akhiezer, aerodynamicist; Constantine Syminsky, applied mechanics; Volodymyr Kistiakovsky, physics and chemistry; P. Tutkovsky, geology. There were many other prominent scholars, some of whom subsequently gained world recognition in their chosen fields.

FIGURE 91. VOLODYMYR KISTIAKOVSKY

Like other departments of the VUAN, the Social-Economic Department maintained the following chairs in 1927–8, headed by full members of the Academy: history of West-Ruthenian and Ukrainian law (Nicholas Vasylenko), statistics (Michael Ptukha), economics of trade and commerce (Constantine Voblyi), philosophy of law (Alexander Hyliarov), national law (Onykii Malynovsky), banking and finance (Leonid Yasnopolsky), international law (Volodymyr Hrabar), civil law (Stanyslav Dnistriansky), national economy (Volodymyr Levytsky), and political economy (Serhii Solntsev).

In addition, the department's research work was conducted in the Demographic Institute (chairman M. Ptukha), commissions for the study of the history of western *Rus'* and Ukrainian law (N. Vasylenko), commission for the study of common law (O. Malynovsky), commission of Soviet law (Arnold Kryster, chairman since 1927), commission for the study of banking and finance (L. Yasnopolsky), commission for the study of the national economy (C. Voblyi), and seminars for civil law and economics.

Affiliated with the department were also scholarly societies of economists and jurists. Academician Alexis Hyliarov was active in the field of the philosophy of law. Of the above-named ten scholars, six were staff academicians and four were non-staff academicians. There were also two corresponding members.

The main achievement of this department of the VUAN was the development of studies on the history of Ukrainian law and research on the national economy of Ukraine, particularly in such fields as demography, statistics, and sociology. A large group of older and younger scholars worked jointly in these areas. The studies of members and co-workers of the department were published in *Zapysky sotsial'no-ekonomichnoho viddilu* (Memoirs of the Social-Economic Department) in six volumes between 1923 and 1927, and in the serial publications (*Pratsi*—Works) of the above-mentioned commissions, seminars, and the Demographic Institute. Some works were published in separate book form.

In addition to scholarly institutions operating under the jurisdiction of the departments, there were others under the direct supervision of VUAN's Presidium, e.g., the People's Library of Ukraine, Museum of the Arts (former Khanenko Museum), the Theodore Vovk Laboratories of Anthropology and Ethnology, and commissions in regional studies, productive forces, and bibliography. In 1928, the VUAN began publishing its own official organ—the bimonthly *Visti* (News) containing a chronicle of events and reports of activities.

Affiliated societies of VUAN existed in other cities as well. In some instances they actually constituted VUAN branches, which were subdivided into sections and commissions, and brought out their own publications. The most important was the Kharkiv Scientific Society with sections of technological, medical, and natural sciences; in addition to numerous separate studies, it published more than 70 issues of periodicals between 1926 and 1930 (including 26 issues of *Naukovo-Tekhnichnyi Visnyk* [Herald of Technological Science], 11 issues of *Ukraïns'kyi Medychnyi Arkhiv* [Ukrainian Medical Archive], and 9 issues of *Visnyk Pryrodoznavstva* [Herald of Natural Science]). Operating within the system of VUAN was the Commission of Regional Studies in Odessa, which published its *Visnyk* (Herald, 1924–30), and the Odessa Scientific Society with its *Zapysky* (Memoirs, 13 issues 1928–30). The following scholarly societies affiliated with VUAN should also be mentioned: Poltava, Katerynoslav (Dnipropetrovske), Kamianets Podilsky, Mykolaïv, Chernihiv, and Shepetivka. The Leningrad Society of Ukrainian History, Literature, and Language (under Academician V. Peretts) and regional study societies in Lubni and Nizhyn were also connected with the VUAN. A cabinet for the study of Podilia was working as part of the branch of the All-Ukrainian Library branch in Vinnytsia (it brought out 26 publications between 1924 and 1929).

On April 1, 1928, the scholarly research personnel of VUAN consisted of the following: 63 full members (including 34 non-staff), 16 corresponding members, and 323 research employees (including 212 non-staff).

**Other Scholarly Institutions**

Scholarly activities in Ukraine in the 1920's were not limited to the VUAN and the various institutions within its system, but also embraced higher educational establishments, scientific research institutes and chairs, museums and archives, central libraries, historical and natural reservations, scientific experimental stations, and other scholarly societies. Most of them were located in Kharkiv, then capital of the Ukrainian SSR, followed by Kiev, Odessa, Dnipropetrovske; lesser centers of scholarship existed in Poltava, Nizhyn, Chernihiv, Vinnytsia, Zhytomyr, Mykolaïv, Kherson, Simferopol in the Crimea, Krasnodar in Kuban, and elsewhere.

Although limited in activity after the reorganization in the 1920's, the establishments of higher learning continued to be centers of scholarly research, maintaining their own publications, particularly in some areas of Ukrainian studies. This was particularly true of the institutes of people's education which concentrated on humanities and natural sciences, the institutes of national economy, and agricultural, medical, technological, and art institutes. Scholarly research planned by the People's Commissariat of Education in 1921–2 was limited for a long time to classroom experiments.

Scientific research institutes were under the supervision of individual People's commissariats or the Council of People's Commissars of the Ukrainian SSR and were often limited to narrowly specialized fields. Scientific research chairs outside of the VUAN system were usually attached to higher educational establish-

ments and scientific institutes: few of them functioned independently. In the early 1930's, there were 26 such chairs in Kharkiv, 25 in Kiev, 13 in Odessa, 8 in Dnipropetrovske. Most of the scientific research institutes and chairs published their own proceedings and transactions.

The more important institutes and chairs in the field of the humanities were: in Kiev, the Scientific Research Chair of Ukrainian History (chairman M. Hrushevsky); in Kharkiv, the Scientific Research Chair of the History of Ukrainian Culture (headed by D. Bahalii, and later renamed the D. Bahalii Institute), the Shevchenko Institute of Ukrainian literature, and the Scientific Research Chair of World History (headed by Vladyslav Buzeskul); in Odessa, the Scientific Research Chair of Ukrainian history (chairman M. Slabchenko); and the Scientific Research chairs of Ukrainian Culture in Dnipropetrovske (chairman D. Yavornytsky), Nizhyn, and other cities. Oriental studies were concentrated in the All-Ukrainian Scientific Association of Oriental Studies in Kharkiv (1926–33), which published the journal *Skhidnyi Svit* (Oriental World, 1927–31). Other institutions active in scholarly work were: the Central Archives Administration in Kharkiv, with its organ *Arkhivna Sprava* (Archive Matters, see Archives, p. 405); the Ukrainian Institute of Bibliology in Kiev (see Book Publishing, p. 409); the Ukrainian Scientific Research Institute of Pedagogics in Kharkiv (see Education, pp. 296 ff.), and many others.

In the field of natural sciences, there were, in addition to the institutions within the Second Department of VUAN, higher educational establishments and chairs and the Society of Natural Scientists (in Kiev, Odessa, and other cities) which published their own works, the Ukrainian Geological Committee, the Ukrainian Committee for Conservation of Natural Monuments (Kharkiv), and the Ukrainian Scientific Research Institute of Geography and Cartography founded in Kharkiv in 1927 by Stephen Rudnytsky. During the brief period of its existence between 1919 and 1927, the Agricultural Scientific Committee of Ukraine located in Kharkiv did a great deal of research in agronomy, botanics, soil science, etc. Particularly active were the sections of Soil Studies under Gregory Makhiv, which published the first accurate *Mapa hruntiv Ukraïny* (Map of Soils of Ukraine) and of Botany under Alexander Yanta, which compiled *Botanichno-heografichna raionizatsiia Ukraïny* (Botanical-Geographical Regionalization of Ukraine, 1925) and began publication of *Flora Ukraïny*. Important work was also performed by the Ukrainian Meteorological Service founded in Kharkiv in 1921, and by the Askaniia Nova Reservation with its zoological and botanical gardens and experimental stations.

Research in regional studies was conducted in the 1920's by the Ukrainian Committee of Regional Studies in Kharkiv and a series of local organizations which published their findings.

Several dozen scientific research chairs and institutes were active in the field of the exact and technological sciences. The most important among them were scientific research chairs of physics in Kiev and Kharkiv, and of chemistry and applied mechanics in Odessa; the Institute of Applied Chemistry (1925), the Ukrainian Scientific Research Institute of Machines and Machine-Building (1928), the Ukrainian Physico-Technological Institute (1929), and the Scientific Research Institute of Experimental Aerodynamics (1929)—all in Kharkiv; the Institute of Technological Mechanics (1922) and the Ukrainian Scientific Research Institute of the Sugar Industry (1926) in Kiev; and the Central Gravimetric Observatory (1926) in Poltava.

The following medical institutes were engaged in scientific research: the All-Ukrainian State Roentgen-Radiological and Oncological Institute (1920), the Ukrainian State Psychoneurological Institute (1921); the Ukrainian State Institute of Pathology and Labor Hygiene (1923), the Ukrainian State Institute of

Clinical Psychiatry and Social Mental Health (1926)—all in Kharkiv; the T. Yanovsky Institute of Tuberculosis (1922), the Ukrainian Biochemical Research Institute (1925), and the Kiev State Psychoneurological Institute (1927)—all in Kiev; the State Institute of Skin and Venereal Disease (1917), the Ivanov Scientific Research Institute of Tuberculosis (1921), and the All-Ukrainian Institute of Balneology and Spas (1929)—all in Odessa.

Research work conducted by the Central Statistical Bureau of the Ukrainian SSR in Kharkiv was significant from both the theoretical and the practical standpoint. It published statistical material and a series of major studies, including *Statystyka Ukraïny* (Statistics of Ukraine).

Major centers of research in Kuban were: the Kuban-Black Sea Scientific Research Institute (founded in 1917 as a scholarly society and reorganized as an institute in 1920), the Kuban Scientific Museum (founded in 1879 and operating independently since 1917), and the Kuban Agricultural Institute (founded in 1922)—all in Krasnodar.

The Ukrainian Institute of Marxism, founded in Kharkiv in 1922, occupied a rather unique place in Ukrainian scholarship. It was headed by Matthew Yavorsky and embraced historians and economists of the Marxist persuasion.

## SUPPRESSION OF UKRAINIAN SCHOLARSHIP IN THE 1930's

The promising development of Ukrainian scholarship was forcibly arrested by the Soviet regime in the early 1930's. With the change in Soviet nationality policy, which manifested itself in the curtailment of Ukrainization and the onset of intensive Russification [Vol. I, p. 818 ff.], the Communist regime waged an all-out assault on Ukrainian culture and scholarship, and the intellectual elite. The wave of repressions was designed to coincide with the preparations for the Five-Year Plan of industrialization and collectivization, and the attempt to enlist scholarly institutions of the Ukrainian SSR in promulgating the plan. The wave of terror was caused partly by the inability of the Soviet regime to take over the existing Ukrainian scholarly institutions from within (especially the VUAN) and thus subordinate them to the Russian centers of learning in Moscow and Leningrad.

The first blows were directed at the VUAN as the leading center of Ukrainian scholarship. Even before the assault, in 1927, the election of regular members of VUAN was made contingent upon the approval of the People's Commissar of Education of the Ukrainian SSR. Orders were issued in 1928 to change the structure of the leading organs of VUAN: instead of the assembly of full members, the council of VUAN, which convened several times a year, became its supreme governing body. Membership in the council was opened not only to regular members but also to representatives of the People's Commissariat of Education,

FIGURE 92. ALEXANDER BOHOMOLETS

FIGURE 93. OVKSENTII KORCHAK-CHEPURKIVSKY

corresponding members, and younger scholarly workers (with an advisory vote). As a result of this reorganization, the Presidium of VUAN was made up of government supported candidates: Daniel Zabolotnyi, president (succeeded by Alexander Bohomolets in 1930); Constantine Voblyi, vice-president; and Ovksentii Korchak-Chepurkivsky, permanent secretary, after the re-election of A.

Krymsky to this position was rejected by the government. In 1929, pursuant to a new resolution of the Council of People's Commissars of the Ukrainian SSR, the 34 newly elected academicians included not only eminent scholars, but also party members and persons who had little or nothing to do with scholarship (e.g., People's Commissar of Education Nicholas Skrypnyk, Simon Semkovsky, Alexander Shlikhter, and Hlib Kryzhanivsky). The next step was to fill a number of important positions in the administration of VUAN with party members. Thus, M. Yavorsky became secretary of the Historical-Philological Department, while A. Shlikhter (chairman) and Volodymyr Yurynets (secretary) took over the Social-Economic Department.

Along with these measures, the Soviet regime attacked the VUAN with direct police action and administrative repression. In the summer of 1929, arrests were made among Ukrainian scholars, who were accused of membership in the Association for the Liberation of Ukraine (SVU [Vol. I, pp. 505b, 818b]). A number of them were convicted after trial, and some (S. Yefremov, Joseph Hermaize, Andrew Nikovsky, and Volodymyr Durdukivsky, for example) were executed in prisons and concentration camps. Many Ukrainian scholars were discharged from work at the VUAN and other scholarly institutions, and some, to save their lives, left Ukraine. By mid-1930, the Historical-Philological Department was merged with the Social-Economic (retaining this name as its title), under A. Shlikhter. This move paralyzed the research work of the Historical-Philological Department. The Department of Physics and Mathematics, now the First Department of VUAN, was the most active. Headed by Academician Alexander Fomin, this department conducted its scholarly activities in accord with the purposes of the first Five-Year Plan and party directives.

The Ukrainian Institute of Marxism, later renamed the Institute of Marxism-Leninism, for the training of Communist scholarly personnel played an important part in bringing the VUAN under the control of the regime and reorganizing it to conform with Communist ideology. In 1931, the departments of this institute—historical, economic, and philosophical-sociological—along with other institutions of the same type, were reorganized into the All-Ukrainian Association of Marxist-Leninist Institutes (VUAMLIN), under A. Shlikhter as chairman and sponsored by the Central Committee of the Communist Party (Bolshevik) of Ukraine. Scholars, employees, and graduates of these institutes carried out the dissolution of the principal centers of Ukrainian scholarship and reorganized them according to the party program. They helped the regime in purging scholars, particularly censoring published studies, and eliminating works which did not follow the party line. The quality of the scholarly and general publications of these Marxist institutions was rather poor.

The suppression of Ukrainian scholarly achievements continued in spite of the changes in the VUAN brought about by the reconstruction needs of the Ukrainian SSR's national economy. During 1931–3, most of the institutes of history headed by M. Hrushevsky were abolished and the reorganization of other departments and institutions of VUAN continued. The All-Ukrainian Archaeological Committee was eliminated in 1933 and replaced by the Section of History of Material Culture. The drive against Ukrainian scholarship intensified with Moscow's appointment of Paul Postyshev to the post of Secretary of the Central Committee of the CP Ukraine in late 1933. Academicians S. Rudnytsky and V. Yurynets were arrested and expelled from VUAN in January 1934; western Ukrainian Academicians M. Vozniak, F. Kolessa, C. Studynsky, and B. Shchurat were also expelled as "enemies of the toiling masses of Ukraine." The VUAN was again reorganized in

November 1934; the Department of Social Sciences was abolished and the Department of Physics and Mathematics was divided into the Mathematical-Natural Sciences Department and the Technological Department. The individual departments lost almost all of their significance. The Academy actually became an association of institutes (numbering 21 at the time, and headed mostly by party members). The Presidium of the Academy was an executive board in name only, the real executive power was vested in the Academy's Party Center, established in 1930.

Also in 1934, the VUAN was transferred from the jurisdiction of the People's Commissariat of Education to the Council of People's Commissars of the Ukrainian SSR, but without the privilege of a people's commissariat similar to that reserved for the Academy of Sciences of the USSR. The research programs of the Academy and its institutes were subject to approval by the Council of People's Commissars, which made scientific research contingent upon production and a number of practical projects planned in various fields of the national economy. The predominance of applied sciences in the activity of VUAN in 1934 was also evident from the fact that promotions to the rank of academician were primarily made from among candidates in the mathematical, natural, and technological sciences.

In 1935, without any vote or resolution, the letter "V" disappeared from the title of the Academy: instead of "Vseukraïns'ka" (All-Ukrainian), it was now called "Ukraïns'ka Akademiia Nauk" (Ukrainian Academy of Sciences—UAN). Even this designation was changed by the resolution of the Council of People's Commissars of the Ukrainian SSR of February 1936 to Akademiia Nauk Ukraïns'koï RSR (Academy of Sciences of the Ukrainian SSR). This version was meant to imply that the highest scholarly institution of Ukraine had been changed from a national to a territorial institution. The same resolution also approved a new charter for the Academy, again with three departments: Social Sciences, Mathematical and Natural (divided in 1938 into Physical-Mathematical and Biological), and Technological. Institutes continued as the centers of scholarly research, and the assembly of full members was the supreme governing body. The activities of the Academy were coordinated to conform with those of similar institutions of the Academy of Sciences of the USSR.

This reorganization still failed to provide a firm foundation for the activities of the Academy of Sciences of the Ukrainian SSR and its institutes, which were being continuously restructured and their personnel changed as a result of the purges. A number of scientific research institutes, which had not been a part of its system before, were placed under the supervision of the Academy. At the beginning of 1939, the number of members and institutions in the Academy were as follows: First Department of Physical-Chemical and Mathematical Sciences—19 full members and 21 corresponding members; institutes of mathematics, physics, chemistry, physical chemistry, chemical technology, and geological sciences; Second Department of Biological Sciences—16 full and 24 corresponding members; institutes of biochemistry, zoology, botany, microbiology and epidemiology, clinical physiology; a hydrobiological station and the Karadah biological station; Third Department of Technological Sciences—12 full and 16 corresponding members; institutes of construction mechanics, electric welding, mining engineering, and hydrology; Fourth Department of Social Sciences—13 full and 7 corresponding members; institutes of linguistics, the Shevchenko Institute of Ukrainian Literature, Ukrainian folklore, history of Ukraine, archaeology, economics, and the cabinet for the study of Jewish literature, language, and folklore. The council for the study of productive resources of the

Ukrainian SSR, and the library of the Academy functioned independently.

The All-Ukrainian Association of Marxist-Leninist Institutes was abolished in 1936 and most of its scholars were purged.

In addition to VUAN, numerous other scholarly centers were reorganized or abolished in the mid-1930's, particularly those engaged in Ukrainian studies. This was followed by the discontinuance of scholarly societies and the closing of most research institutes in the humanities. All VUAN institutions of history were abolished in 1933. The institutions of the former Third Department of Social-Economic Sciences received the same treatment: following their liquidation, only the Institute of Demography and Health Statistics began operating again in 1934, and among the institutes of literature, only the Institute of the Study of Shevchenko's Work remained. The universities were reactivated in 1934, replacing the former institutes of public education, but all areas of Ukrainian studies were excluded from their scholarly activities. Both in the publications of VUAN (whose number dropped to 160 titles in 1934, mostly in the field of natural and applied sciences) and of the universities, the Russian language began to predominate.

Governmental scientific research institutes grew in importance. In the early 1930's, such institutes were maintained not only by the People's Commissariat of Education, but also by other commissariats and government bureaus. They were assigned the task of developing specific branches of the national economy, and their number reached 323 by 1940 (including scientific research institutes of the Academy of Sciences of the Ukrainian SSR).

The quality and quantity of scholarly production could not remain unaffected by the terror and purges in the USSR, particularly the intraparty purges of the 1934–7 period. According to incomplete reports, the number of Ukrainian victims among high-ranking scholars of history, archaeology, law, ethnography, and literature was at least 150.

Because of the political pressure on scholarship, history had to be rewritten according to Marxist doctrine. The Ukrainian past had to be presented as closely associated with Russia. Periods of the Ukrainian people's struggle against Russia were completely omitted from historical accounts, while the war of Ukrainian liberation was denigrated. Books hostile to party ideology were banned, and classical works were published in excised or doctored editions, with strong emphasis on Russian influence on all aspects of Ukrainian development. Research into Old Ukrainian literature was restricted almost entirely to Moscow. Linguistics propagated the affinity of the Russian and Ukrainian languages. Philosophy was reduced to a recitation of dialectical and historical materialism, everything else being branded "bourgeois pseudo-science." Studies of law and jurisprudence were discontinued; economics and even the pure sciences were required to adhere to Marxist-Leninist theory, all works being heavily interlaced with quotations from Marx, Lenin, and Stalin.

Only the applied sciences were recognized by the authorities as being of paramount importance for the national economy, particularly industrialization and armaments, e.g., the research of Academician Eugene Paton, who developed a new method of rapid electric welding at the Institute of Electric Welding; the research of Academicians Maxim Luhovtsev, Nicholas Dobrokhotov, and corresponding member Ivan Frantsevych, who solved complex problems of production of high

FIGURE 94. EUGENE PATON

quality metals and increased output of open-hearth furnaces; the experiments of Academician Alexander Brodsky, who worked out a general theory of isotopes and was the first scholar in the USSR to produce heavy water.

In view of the Communist party's control and continued harassment, broad conceptual theories in either the natural or the social sciences could not be produced. Many branches of science, such as pedology, reflexology, and even anthropology, were pronounced "bourgeois" and "pseudo," and hence unworthy of attention and research.

This period also witnessed a marked decline in the quantity and quality of publications brought out by the VUAN (UAN) and other scholarly institutions. Out of 311 titles planned for publication by the UAN Press in 1934, there were 206 in the exact and applied sciences, but only 93 in the humanities (including 19 highly slanted studies on linguistics, 8 on the history of Ukrainian material culture, and 20 on problems of Jewish "proletarian literature"). Only 34.4 per cent of the total planned quota was actually published within the year, whereas in the applied sciences 70 per cent of the quota was filled. Not one work on Ukrainian literature appeared in 1934.

Matters did not improve in publishing during the following years. Nothing was published in such fields as philosophy, history of Ukraine, archaeology, literary criticism, ethnography, law, education, and psychology. In connection with the observance of the one hundred and twenty-fifth anniversary of the birth of Taras Shevchenko, a five-volume collection of his works appeared in 1939, as well as two volumes of a planned ten-volume edition. Several books on the creative heritage of Shevchenko were also published. Only two works of economic surveys came out—*Radians'ka Ukraïna za 20 rokiv* (Twenty Years of Soviet Ukraine, 1938) and *Sotsiialistychne sil's'ke hospodarstvo Radians'koï Ukraïny* (Socialist Agriculture of Soviet Ukraine, 1939).

**1939–44**

With the occupation of western Ukrainian territories by the Soviet armed forces in September 1939, western Ukrainian scholars joined in the activities of the Academy of Sciences of the Ukrainian SSR and the Ukrainianized higher educational establishments. The Shevchenko Scientific Society was abolished and its facilities, along with those of other scholarly centres in Lviv, were integrated into the Academy (see p. 280).

The German-Soviet war brought great changes. The libraries and archives suffered considerable losses during the fighting and German occupation. At the start of hostilities, the Soviet government evacuated the Academy of Sciences and some of the scientific research institutes, as well as a majority of Ukrainian scholars (nearly all academicians), but most of the facilities were left in Ukraine. A majority of the institutes and the Presidium of the Academy were transferred to Ufa, where they engaged exclusively in defense research. The Institute of Electric Welding completed the important work of introducing automatic welding into the defense industry of the USSR. The military situation compelled the leadership of the Communist party and the regime to make some concessions to Ukrainian scholarship. While still residing in Ufa, the Ukrainian scholars A. Biletsky, L. Bulakhovsky, and M. Rylsky published several works on literature and linguistics; others brought out the first volume of the history of the Ukrainian SSR which had been ready before the outbreak of war. However, when hostilities subsided, the Communist authorities reverted to their former practice of persecuting and trying to exterminate Ukrainian scholarship and culture.

It was almost impossible to engage in any scholarly activity during the German occupation [Vol. I, pp. 882–3]. Some

Ukrainian scholars perished under the Nazi terror; others lived in poverty, unable to pursue their research.

In the fall of 1943, the Academy of Sciences of the Ukrainian SSR was transferred from Ufa to Moscow, and in February, 1944, initial steps were taken to bring it back to Kiev. However, some of the Academy's most prized possessions (books, manuscripts, etc.), transferred during the war deep into the Soviet Union, were never returned. This was also true of the facilities which the German occupation authorities shipped to Germany.

*B. Krawciw, A. Ohloblyn*

# 5. THE UKRAINIAN SSR, 1945–66

## GENERAL CHARACTERISTICS

The immediate postwar years witnessed the imposition of the official policy on all institutions of higher learning, particularly those dealing with history and the social sciences. The CPSU enunciated its nationality policy as being based on the "unbreakable friendship among the nations of the USSR" and the "great role" of the Russian people in the development of the cultures of all non-Russian peoples incorporated in the Russian empire. Scholarly works on the history of Ukraine, literature, art, economics, etc., published in the period of a relative thaw during the war, were withdrawn from circulation or rewritten. The scholars of the Ukrainian SSR were compelled to divert their research to isolated problems or periods of Ukrainian history and culture, or to present historical facts in a distorted light, adhering to the official line on "the common development of the Ukrainian and Russian peoples." This tendency is particularly marked in work on Ukrainian history, ethnography, and literature, published on the occasion of the three-hundredth anniversary of the "union of Ukraine with Russia" (1654–1954).

This official course, aimed at Russification and the merging of Ukrainian with Russian culture, continued during the subsequent years of liberalization, particularly in 1957 when, on the occasion of the fortieth anniversary of the establishment of Communist rule in Ukraine, a number of extensive works were published on the history of Ukrainian literature, scholarship, architecture, and art. At this time the Academy of Sciences of the Ukrainian SSR had also successfully solved a number of highly complex problems in the development of the national economy. Despite an increase in scholarly publications in the Ukrainian language and the establishment of a number of scholarly journals between 1955 and 1958, including *Ukraïns'kyi Istorychnyi Zhurnal* (Ukrainian Historical Journal), *Narodna Tvorchist' ta Etnohrafiia* (Folk Creativeness and Ethnography), *Radians'ke Literaturoznavstvo* (Soviet Literary Studies), *Ekonomika Radians'koï Ukraïny* (Soviet Ukrainian Economy), *Radians'ke Pravo* (Soviet Law), *Ukraïns'kyi Fizychnyi Zhurnal* (Ukrainian Journal of Physics), *Fiziolohichnyi Zhurnal* (Journal of Physiology), and *Avtomatyka* (Automation), Ukrainian scholarly production was insignificant compared with that in the Russian language. Thus, in the 1950's and 1960's a scant 3.9 per cent of all scholarly books published in the USSR were in Ukrainian, comprising only 2.9 per cent of the total number of copies printed, although, according to the 1959 census, Ukrainians constituted 17.8 per cent of the USSR's population.

The majority of scholarly publications in the Ukrainian SSR are published in Russian, particularly those concerned

with the natural and technological sciences, as well as most serial publications. For example, in 1964, out of a total of 136 scholarly transactions, proceedings, reports, and bulletins of the Academy of Sciences of the Ukrainian SSR, higher educational establishments, and scientific research institutes, 101 were in Russian, 33 in Ukrainian, and 2 in Russian and Ukrainian.

The distribution of scholarly personnel is also aimed at the merging of national cultures and Russification. Ukrainian scholars are transferred to the Russian SFSR and to other Soviet republics. Out of a total of 46,657 scholarly workers employed in the Ukrainian SSR in 1960, only 22,523 (48.3 per cent) were Ukrainians. At the same time, 13,097 Ukrainian scholars were working in other republics, where they used the Russian language exclusively and were not listed as Ukrainians.

In spite of various restrictions on the development of learning in the Ukrainian SSR, particularly in the field of the social sciences, scholars are engaged in large-scale research and have many achievements to their credit, especially in the natural and applied sciences. The Academy of Sciences of the Ukrainian SSR and other research institutions in Ukraine maintain some contacts with learned institutions and scholars in many parts of the world. Personal contacts are quite limited, but there is an exchange of scholarly publications. Scholars of the Ukrainian SSR participate in conferences abroad as members of the USSR delegation and as such represent Soviet scholarship. Their contacts are closer with the countries of the "peoples' democracies." Thus, between 1957 and 1963 the Academy of Sciences of the Ukrainian SSR had 200 Rumanian scholars as guests, whereas only 40 Ukrainian scholars visited Rumania in the same period.

FIGURE 95. ACADEMY OF SCIENCES OF THE UKRAINIAN SSR

The principal centers of scholarly activity in the postwar period were the Academy of Sciences of the Ukrainian SSR and higher educational establishments, particularly universities and numerous scientific research institutes.

## THE ACADEMY OF SCIENCES OF THE UKRAINIAN SSR

The activities of the Academy during the early postwar period were determined by the need for reconstructing the national economy and strengthening communism. These were the reasons for the continual reorganizations and changes in the structural system of the Academy, its planning and direction of scholarly pursuits, particularly in the years 1945–6 and 1956.

Following its return from evacuation to Kiev in 1944, the Academy began operations in four departments: social sciences, consisting of seven scientific research institutes; physico-chemical and mathematical sciences in nine institutes; biological sciences in eight institutes, and technology in seven institutes. Remaining under the Presidium's jurisdiction were: library, publishing, commission on the history of the Great Patriotic War, and several other institutions.

In 1946, following the death of the Academy's president, Alexander Bohomolets, Alexander Palladin was elected to succeed him; in 1962, Borys Paton was elected president.

During 1945–6 an independent Department of Agricultural Sciences was established within the Academy. In 1956, this department was emancipated as the

FIGURE 96. ALEXANDER PALLADIN

Ukrainian Academy of Agricultural Sciences. A number of new institutes were set up, including the Institute of Engineering in 1948, while many others were reorganized; for example, the Institute of Ukrainian History became the Institute of History (1951). In Lviv, in 1951, the scientific research institutes which had been in existence since 1940 were reorganized into the following institutes: social sciences (placed under the jurisdiction of Lviv University in 1963), geology, mining, agrobiology, mechanical engineering and automation. The Council on the Study of Productive Potentials of the Ukrainian SSR extended its scope of activities in the 1950's. Some changes in the structure of the Academy were made in 1956, expanding it to five departments: social sciences with 15 scientific research institutes; physico-mathematical sciences – 7 institutes; chemical and geological sciences–7 institutes; biological sciences–15 institutes; and technological sciences–12 institutes.

In the early 1960's, in connection with the measures undertaken for the realization of the Seven-Year Plan and the nationality policy of the CPSU within the framework of the resolutions of the twenty-second Party Congress, 44 scientific councils were established in the Ukrainian SSR to coordinate scholarly work in the natural and social sciences. They were placed under the supervision of the Coordinating Council of the Academy's Presidium. The Academy was again reorganized in 1963 and placed under the supervision of Moscow. As early as April 1963, the CC CPSU and the Council of Ministers of the USSR passed a resolution "On Measures for the Improvement of the Activities of the Academy of Sciences of the USSR and of the Activities of the Academies of Sciences of the Union Republics." According to the resolution, new charters were drafted both for the Academy of Sciences of the USSR and for the academies of sciences of the Union republics. They provided that general supervision and control of scientific research work on important problems of natural and social sciences conducted by institutions of the academies of sciences of the Union republics, higher education establishments, and other scientific research institutes be concentrated in the Academy of Sciences of the USSR. Thus, the academies of sciences of the republics were actually relegated to mere branches of the Academy of Sciences of the USSR. The respective councils of ministers of each republic provide added supervision.

A new structure was proposed and adopted for the Academy of Sciences of the Ukrainian SSR at its annual meeting in June, 1963. Like the Academy of Sciences of the USSR, it is composed of three sections: physico-technical and mathematical sciences (departments: mathematics, mechanics, and cybernetics, physico-technical problems and structure of materials, physics, sciences of earth and space–a total of 19 scientific research institutes); chemico-technical and biological sciences (departments of chemistry and chemical technology, biochemistry, biophysics, physiology, and general biology–a total of 13 scientific research institutes); and social sciences (departments of literature, language, and art; economics; history; philosophy; and law–a total of 7 scientific research institutes, and the section of constitutional law). In addition, the respective sections and their departments have experimental laboratories, biological stations, observatories, museums, libraries, etc. In 1964, the Academy of Sciences of the Ukrainian SSR numbered 71 scientific institutions, as compared with 54 in 1962. Without

disturbing the basic structure of the Academy as established in 1963, its range of activities expanded in the following years with the establishment of a branch of geography in 1964, the Lviv

FIGURE 97. INSTITUTE OF TECHNICAL THERMO-PHYSICS, ACADEMY OF SCIENCES OF THE UKRAINIAN SSR IN KIEV

affiliate of the Institute of Economics, and finally in 1965 the Donetske Scientific Center comprising four research institutes. The total number of institutes within the system of the Academy was 59 in 1965.

The chief governing body for the internal management of the Academy is the general meeting of full members (academicians) and corresponding members; between general meetings the Presidium rules. The coordination of its scientific research with that of the USSR is channelled through one of the vice-presidents of the Academy of Sciences of the USSR (the president of the Academy of Sciences of the Ukrainian SSR is a member of the Presidium of the Academy of Sciences of the USSR). In replenishing its personnel, the Academy is completely dependent on Moscow: during discussions of the qualifications of candidates for academicians, corresponding members, and directors of scientific research institutes, the recommendations of the Academy of Sciences of the USSR are always taken into account. There were 99 full members in the Academy in 1965 and 128 corresponding members.

For a brief period there were two branch academies in the Ukrainian SSR: the Ukrainian Academy of Agricultural Sciences and the Academy of Building and Architecture. The Ukrainian Academy of Agricultural Sciences (UASHN) was founded in December, 1956, with Peter Vlasiuk as its president. The UASHN had five departments and 21 research institutes with a large network of experimental stations and a central agricultural library. In 1961 it had 22 full members and 22 corresponding members, and its 79 institutions had 2,070 research workers. The Academy has its own press and published *Dopovidi UASHN* (Transactions of the UASHN) and *Visnyk sil's'ko-hospodars'koï nauky* (Herald of Agricultural Science). The UASHN was disbanded in 1962, and its scientific research institutes were transferred to the Ministry of Agriculture of the Ukrainian SSR. This reorganization made the Ukrainian agricultural research institutes more dependent on the central organs of the USSR, inasmuch as the Ministry of Agriculture of the Ukrainian SSR is a Union-Republic ministry. This move was accompanied by a considerable broadening of the activities of the All-Union Academy of Agricultural Sciences.

The Academy of Building and Architecture (ABIA) was organized in November, 1956, from the earlier Academy of Architecture of the Ukrainian SSR (founded in 1944) and several branch institutes. Its task was to determine guidelines for the development of building techniques, conducting experiments in construction and architecture, and training scholarly personnel. In 1962 the ABIA had 26 scientific research institutes, a library of about one million volumes, and a museum of architecture, and acted as curator of the Cathedral of Saint Sophia in Kiev, a national historical monument. There were 30 academicians and 1,925 research workers in the

Academy. In 1963 the Academy was abolished and most of its research institutes were placed under the jurisdiction of the State Building Bureau of the USSR, with a few under the State Building Bureau of the Ukrainian SSR.

The dissolution of these academies was prompted by the Soviet regime's policy of centralization and an attempt to concentrate all branch academies exclusively in Moscow, where, in addition to the Academy of Sciences of the USSR, there are the following academies: medical sciences, art, social sciences, agricultural sciences, and the Academy of Pedagogical Sciences of the Russian SFSR, the only such institution in the entire USSR (renamed Academy of Pedagogical Sciences of the USSR in 1966).

## HIGHER EDUCATION ESTABLISHMENTS

Beginning in the 1930's the universities regained their status after being called Institutes of People's Education, and became important centers of scholarly research in Ukraine, especially in the natural and applied sciences. Included were the universities of Kiev, Odessa, Kharkiv, and Dnipropetrovske, and those of Lviv and Chernivtsi (added in 1939–40), the newly established University of Uzhhorod in 1945, and Donetske in 1965. Scholarly research is conducted not only in departments, but also in special laboratories and research institutes. As of January 1, 1965, the Ministry of Higher and Special Secondary Education had supervision over 7 scientific research institutes, 192 research laboratories handling related problems (including 31 in the chemical sciences, 23 in machine building, 20 in instrument and radio-electronics, 12 in electric power, and 20 in biological sciences). Scholarly research work is directed towards both the training of highly qualified experts and the development, improvement, and application of new production processes in the national economy.

A major part of scholarly research is performed by the higher educational establishments in conjunction with economic institutions. Thus, in 1961, the advanced engineering institutions and universities completed 2,149 subjects under contract, and in 1960–1 industry introduced 700 inventions and suggestions for improving efficiency developed by Ukrainian establishments of higher learning.

An important role is played by the scholarly publications of these establishments, particularly by those of the Kiev and Lviv universities and some educational and technical institutes. They publish scientific transactions, newsletters, specialized symposia, monographs, textbooks, etc.

## GOVERNMENT RESEARCH INSTITUTES

After World War II, scientific research institutes assumed greater importance both within the system of the Academy of Sciences of the Ukrainian SSR and higher educational establishments and within the Council of Ministers and its departments. The largest network of research institutes is now maintained by the Union and Union-Republic ministries. They are under the direct or indirect jurisdiction of Moscow, and their research personnel is appointed by the central authorities which give priority to Russians.

These institutions are engaged in research on new and more efficient production methods in industry, agriculture, construction, and transportation. There were 217 scientific research institutes and affiliates operating in the Ukrainian SSR in 1964, 116 of which are pursuing industrial research; 17 in metallurgy. The most important institutes are the following: ferrous metallurgy in Dnipropetrovske (theoretical research in the metallurgy of cast iron and steel, study of metals, thermal processing, mechanization and automation of metallurgical processes, publishing of *Nauchnye trudy*

FIGURE 98. MINING INSTITUTE IN DNIPROPETROVSKE

[Scientific Transactions, in Russian] and monographs); the Ukrainian Scientific Research Institute of Metals in Kharkiv (the chief institute in the Soviet Union in the field of dies, whose main research aims are the development of new methods of preparing raw material for smelting cast iron and steel, putting in operation new large and highly productive metallurgical plants, and creating new brands of high-strength low-alloy steels); the All-Union Scientific Research Institute of the Tube Industry of the USSR in Dnipropetrovske (the principal research institution of the pipe industry of the USSR, whose purposes are the development and improvement of technological processes of producing tubes made of ferrous metals and alloys); the Ukrainian Scientific Research Institute of Metals (this institute and the tube institute are both under the State Committee for Ferrous and Non-ferrous Metallurgy of the Gosplan, USSR).

There are 23 institutes working for the chemical industry, of which the most important are: Institute of Fundamental Chemistry in Kharkiv (the main institution in the USSR dealing with problems of potassium production, technology of production of adsorbents and absorbents of mineral origin); the State Scientific and Design Institute of Nitrogen Production and Products of Organic Synthesis in Dnipropetrovske, with affiliates in Lysychanske and Siverskodonetske; and the State Scientific Research Institute of the Petroleum and Petrochemical Industry in Kiev. There are 12 scientific research institutes and affiliates in the coal and mining industry. The most important are: Scientific Research Institute of Coal in Donetske (active in devising new and improving existing methods of coal extraction); the All-Union Scientific Research Institute of Organization and Mechanization of Mine Construction in Kharkiv; the Institute of Underground Coal Mining in Luhanske (studies problems of hydraulic construction and transportation of coal); and the M. Fedorov Institute of Mining Engineering and Mining Cybernetics in Donetske (conducts studies of theoretical principles of mining, application of cybernetics and computer techniques to production management, and engineering and economic problems of the mining industry). The important institutes in machine-building are: Scientific Research and Design-Technological Institute of Machine-Building in Kramatorske (design of new equipment for heavy machine building, research of new technological processes, methods of comprehensive mechanization and automation of parts and assembly shops of machine-building enterprises): the Ukrainian Scientific Research Institute of Plant Design and Instrument Production in Odessa (new types of plants, particularly high precision) and the scientific research institutes on general machine-building in Poltava, Kiev, Kharkiv, and Chernihiv. Scientific research in the electrotechnical industry is being conducted by six

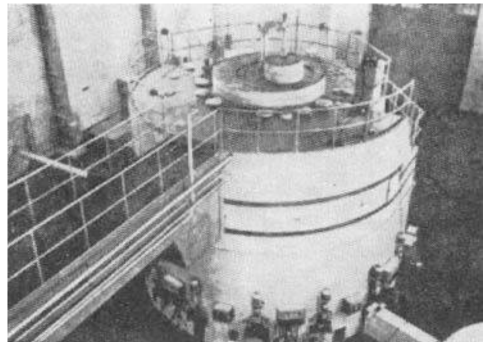

FIGURE 99. NUCLEAR REACTOR OF THE PHYSICS INSTITUTE, ACADEMY OF SCIENCES OF THE UKRAINIAN SSR

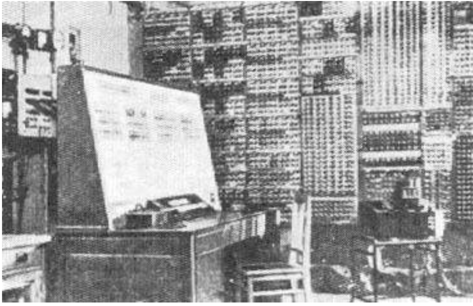

FIGURE 100. ELECTRONIC COMPUTER, FIRST IN THE USSR, BUILT BY THE INSTITUTE OF ELECTROTECHNOLOGY, ACADEMY OF SCIENCES OF THE UKRAINIAN SSR

scientific research institutes and two affiliates, including the All-Union Scientific Research Institute of Heavy Electric Machine-Building in Kharkiv and the Institute of Transformer Design in Zaporizhia. Light industry has six scientific research institutes in operation (including the institute of leather foot-wear, textile industry, processing of artificial and synthetic fibers—all in Kiev) and 12 in the food and fisheries industries (among these, the Institute of Sugar Refining in Kiev is of All-Union importance).

The agricultural sciences in Ukraine had at their disposal in 1964 a total of 27 research institutes (including seven All-Union), 90 experimental stations, 40 experimental planting areas, research points, laboratories, etc. scattered across the Ukrainian SSR. Operating in the area of land tillage and planting are: All-Union Scientific Research Institute of Selection and Genetics in Odessa, Ukrainian Scientific Research Institute of Land Tillage in Kiev, Ukrainian Scientific Research Institute of Vegetables and Potatoes in Kharkiv, Ukrainian Scientific Research Institute of Irrigation in Kherson, Ukrainian Scientific Research Institute of Animal Husbandry of the Steppe Regions Askaniia Nova in the Kherson area, Scientific Research Institute of the Forest Steppe and Polisia in Kharkiv, Ukrainian Scientific Research Institute of Poultry in Berky near Kharkiv, and Scientific Research Institute of Hog Raising in Poltava. The All-Union Scientific Research Institute of Sugar Beets in Kiev is part of the All-Union Academy of Agricultural Sciences in Moscow. The Ukrainian Scientific Research Institute of Orchards in Kiev and the V. Tairov Ukrainian Scientific Research Institute of Viti- and Viniculture in Odessa are engaged in obtaining new high-yield strains of berries and grapes. Other institutes worthy of mention are: The Maharach All-Union Institute of Viti- and Viniculture in Yalta, and of Legume Cultures in Hlukhiv; the Experimental Station of the All-Union Scientific Research Institute of Edible and Aromatic Oil Cultures in the Chernihiv area; and the All-Union Scientific Research Station for Potato Cancer Study in the Chernivtsi area. The Ukrainian Scientific Research Institute of Mechanization and Electrification of Agriculture is working on improving and developing mechanization processes in farm production. The Ukrainian Scientific Research Institute of the Economy and Organization of Agriculture in Kiev is investigating problems of distribution and specialization in agriculture.

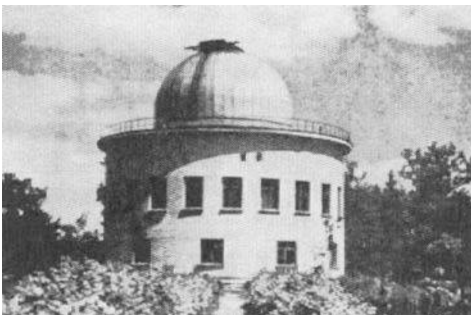

FIGURE 101. DOME OF THE 70-CM. REFLECTOR AT THE MAIN ASTRONOMICAL OBSERVATORY OF THE ACADEMY OF SCIENCES OF THE UKRAINIAN SSR

Problems of industrial construction, transportation facilities, renewal of old and design of new cities and villages in Ukraine are the responsibility of 17 scientific research institutes (1964). The main institutes in this specialty are located in Kiev (Building Construction, Design Institute, State Institute of Urban

Planning) and in Kharkiv (Building Construction and Design of Industrial Buildings).

Research on the problems of the mineral resources of Ukraine are studied at the Kiev Scientific Research Institute of Geological Prospecting and the Simferopol Scientific Research Institute of Mineral Resources, among others.

Scientific research in theoretical and clinical medicine was conducted in 48 government scientific research institutions in 1964, the most important of which were the N. Strazhesko Institute of Clinical Medicine, the F. Yanovsky Institute of Tuberculosis and Thoracic Surgery, and the institutes of Communicable Diseases, Geriatrics, and Experimental Pathology—all in Kiev (the latter two form part of the scientific research institutes of the Academy of Medical Sciences of the USSR). Many other governmental institutes in theoretical and clinical medicine are located in Kiev, Lviv, Kharkiv, Dnipropetrovske, Donetske, Kryvyi Rih, and Odessa.

Atmospheric phenomena, meteorology, and hydrology are studied at the Ukrainian Scientific Research Institute of Hydrometeorology in Kiev.

FIGURE 102. INSTITUTE OF HYDROMECHANICS, ACADEMY OF SCIENCES OF THE UKRAINIAN SSR

Problems in education and psychology are researched at the Scientific Research Institute of Pedagogy of the Ukrainian SSR and the Scientific Research Institute of Psychology within the system of the Ministry of Education of the Ukrainian SSR (see also p. 297).

## LEARNED SOCIETIES

Learned societies in the Ukrainian SSR are also engaged in scholarly research. Since 1945 all the principal learned societies in the Ukrainian SSR have been acting as branches of the corresponding All-Union societies. The natural science societies are: botanical, microbiological, entomological, physiological, biochemical, and hydrobiological. Others are: the Geographic Society of the Ukrainian SSR; Ukrainian affiliates of the All-Union mineralogical, paleontological, and Mendeleiev chemical; and 28 medical societies (all affiliates of the corresponding All-Union societies). The Society for Dissemination of Political and Scientific Knowledge founded in 1947 and renamed the *Znannia* (Knowledge) Society of the Ukrainian SSR in 1963, is also an affiliate of the All-Union society, as is the Society of Inventors and Efficiency Experts. The activities of the following societies are confined to the Ukrainian SSR: the Pedagogical Society of the Ukrainian SSR; the Ukrainian Society for Conservation of Nature and Development of Natural Wealth; and the Ukrainian Republic Society of Parasitologists (with nine affiliates). Only very few local learned societies are free to act without the supervision of All-Union and Republic centers: the Lviv Geological Society, the Kharkiv Mathematical Society, the Odessa Archaeological Society, and the *oblast* societies of regional studies.

In the Ukrainian SSR there is also a separate network of scientific-technical societies and voluntary mass organizations which unite scientific and engineering workers, agricultural experts, and the so-called production shock-workers. The purpose of these societies is to discover and utilize the reserves of the national economy, propagate the achievements of science and engineering, and introduce efficiency methods in production. In Ukraine, these societies operate within the All-Union network attached to trade

union organizations. As of January 1, 1965, there were 21 such societies in the Ukrainian SSR in different fields of industry and agriculture. The societies' membership varies from 5,000 to 60,000, and they engage principally in conferences, discussions, competitions, seminars, and field trips.

## COORDINATION OF SCIENTIFIC RESEARCH, TRAINING OF SCIENTIFIC PERSONNEL

Coordination of all scholarly research in the Ukrainian SSR is in the hands of the State Committee for Coordination of Scientific Research attached to the Council of Ministers. This committee, however, is merely an executive branch acting on orders from Moscow, particularly since 1963 when the overall supervision of scholarly activity in the republics was entrusted to the Academy of Sciences of the USSR and 1966 when the Ministry of Education of the Ukrainian SSR was transformed into a Union-Republic ministry.

Training of scholarly personnel is accomplished through postgraduate study (*aspirantura*). Studies are conducted on both a personal attendance and a correspondence basis without relinquishing employment).

The increase of scientific personnel in the Ukrainian SSR is shown below (the totals include other categories which are not relevant here).

In 15 years, the total number of scholarly personnel in the Ukrainian SSR increased more than fourfold. Still, by population ratio, the Ukrainian SSR is far behind the Russian SFSR, the figures per 10,000 people being 21 to 37. In the entire USSR, the ratio is as follows: for each 10,000 Ukrainians there are 17.5 scholarly workers and for each 10,000 Russians, 35.5.

## SCHOLARSHIP POLICY AND ITS RESULTS

In spite of all the difficulties and limitations imposed on Ukrainian scholarship in the Ukrainian SSR, its scholars are achieving significant success in various fields of the learned disciplines. One of their achievements was the publication of *Ukraïns'ka Radians'ka Entsyklopediia* (Ukrainian Soviet Encyclopedia) in 17 volumes (1959–65) and the *Ukraïns'kyi Radians'kyi Entsyklopedychnyi Slovnyk* (Ukrainian Soviet Encyclopedic Dictionary) brought up to date and published in three volumes in 1966–8.

Philosophy is limited to problems of historical materialism and questions relating to the natural sciences. Recently more attention is being paid to esthetics and research on the history of philosophical thought, as evidenced by the publication of works of Gregory Skovoroda (in two volumes, 1961), studies on the philosophical and social-political views of Taras Shevchenko and Ivan Franko, and the collection *Narys istoriï filosofiï na Ukraïni* (Outline of History of Philosophy in Ukraine, 1966).

The main area of research and publication in history has been the period of the October revolution and the establishment of Soviet rule, coupled with the history of the Communist party of the Soviet Union and of the Communist party of Ukraine. The only general textbook is still the two-volume *Istoriia Ukraïns'koï RSR* (History of the Ukrai-

| Total | 1950 | 1960 | 1965 |
|---|---|---|---|
| | 22,363 | 46,657 | 93,984 |
| Including higher educational establishments | 14,474 | 24,661 | 39,229 |
| Including Ph.D.'s | 907 | 1,343 | 1,885 |
| Including Ph.D. candidates | 6,118 | 13,622 | 19,291 |

nian SSR, third revised edition of 1967). The second important area of research has been the Kozak period. In addition to documents on the revolutionary war of 1648–54 published in Russian in three volumes in 1954 and one volume in 1965, important works on this subject were produced by Ivan Krypiakevych and Volodymyr Holobutsky [Vol. I, p. 572].

FIGURE 103. IVAN KRYPIAKEVYCH

The only works on the history of the Princely period have been the studies of I. Shekera, published in 1963–7, dealing with the international relations of Kievan *Rus'* in the seventh through the ninth centuries. Other noteworthy works are the two-volume *Istoriia Kyieva* (History of Kiev) published in 1959–61 and *Istoriia ukraïns'koï kul'tury* by Michael Marchenko (1961).

Archaeological research was conducted on a large scale. In addition to several dozen monographs on various cultures and excavations, the works of Ukrainian archaeologists were released in series publications of the Institute of Archaeology of the Academy of Sciences of the Ukrainian SSR (*Arkheolohiia*, I–XX, 1947–66), *Kratkie soobshcheniia instituta arkheologii AN URSR* (Brief Reports of the Institute of Archaeology of the Academy of Sciences of the Ukrainian SSR, 1–12, 1947–63); *Arkheolohichni pamiatky* (Archaelogical Monuments, I–XIII, 1949–63).

Publication of symposia *Istorychni dzherela ta ïkh vykorystannia* (Historical Sources and their Utilization, I–II, 1964–7) constituted a return to the almost completely neglected historical disciplines in the 1930–50 period.

The most important studies on the history of economics in Ukraine were produced by Ivan Hurzhii: *Rozvytok tovarnoho vyrobnytstva i torhivli na Ukraïni* (Development of the National Economy of the Ukrainian SSR), and *Istoriia selianstva URSR* (History of the Peasantry of the Ukrainian SSR), in two volumes each (1967). Publication of interdepartmental scholarly symposia was started in 1966 with *Ekonomichna heohrafiia* (Economic Geography). In statistics, in addition to the annuals *Narodne hospodarstvo URSR* (National Economy of the Ukrainian SSR), valuable studies were produced by Michael Ptukha (*d.* 1961, see also p. 678).

Among the few works that appeared in the field of law, the most important was *Istoriia derzhavy i prava URSR 1917–1960* (History of State and Law of the Ukrainian SSR 1917–1960), published in 1961 and revised and republished in two volumes in 1967.

Research in linguistics made substantial progress in this period. In addition to a number of monographs by Leonid Bulakhovsky, O. Bezpalko, Lukia Humetska, Paul Pliushch, and L. Khudash, important serial publications were: *Pam'iatky ukraïns'koï movy* (Monuments of the Ukrainian Language), including *Leksykon Slovenoros'kyi Pamvy Beryndy* (Slavic-*Rus'* Lexicon of Pamva Berynda, 1961), *Leksys Lavrentiia Zyzaniia i synonima slovenorosskaia* (Lexis of Lavrentii Zyzanii and Synonyms of Slavonic-Ruthenian, 1964), *Ukraïns'ki hramoty XV st.* (Ukrainian Documents of the fifteenth century), *Slovnyk ukraïns'koï movy* (Dictionary of Ukrainian Language) by Paul Biletsky-Nosenko (1966). Studies of the old Slavonic language are still being neglected. The only work in this area was the textbook of M. Stanivsky published in Lviv in 1964. Very little also was being done in comparative linguistics and classical languages; works in the latter field were published only in some issues of the serial publication of Lviv University particularly in *Inozemna filolohiia* (Foreign Philology). The journal *Movoznavstvo* (Linguistics), published non-periodically until 1967, has now become a bimonthly in the field of

general linguistics. Research in structural-mathematical linguistics lags behind that in Russia.

Research in dialectology, onomastics, and toponymics has also been revived in recent years. In lexicography, the publication of the six-volume *Ukraïns'ko-rosiis'kyi slovnyk* (Ukrainian-Russian Dictionary, 1953–63) and of a number of terminological dictionaries since 1959 were of considerable importance. In addition to some monographs, *Leksykohrafichnyi biuleten'* (Lexicographic Bulletin) continued publication, and a symposium *Leksykolohiia i leksykohrafiia* (Lexicology and Lexicography) appeared.

The principal textbook in the history of Ukrainian literature remains the two-volume *Istoriia ukraïns'koï literatury* (History of Ukrainian Literature) published in 1954–7; an 8-volume edition of this history began to appear in 1967. Other important works are : *Materiialy do vyvchennia istoriï ukraïns'koï literatury* (Materials for the Study of History of Ukrainian Literature, 5 vols., 1959–63); the bio- and bibliographic dictionary *Ukraïns'ki pys'mennyky* (Ukrainian Writers, 5 vols., 1960–5); and a symposia series of critical essays *Ukraïns'ki radians'ki pys'mennyky* (Ukrainian Soviet Writers, Vols. I–IV, 1954–64). The following Ukrainian classical works have been published: Ivan Franko (20 vols., 1950–6), Taras Shevchenko (6 vols., 1963–4), Lesia Ukrainka (10 vols., 1963–5), Marko Vovchok (7 vols., 1964–7), and Ivan Nechui-Levytsky (10 vols., 1965–7). Except for the *Khrestomatiia davn'ioï ukraïns'koï literatury* (Reader in old Ukrainian Literature) by A. Biletsky, 1949, republished in 1967, and the symposium *Slovo o polku Ihorevi ta yoho poetychni pereklady i perespivy* (The Tale of Ihor's Armament and its Poetic Translations and Renditions, 1967), there were no other important works on the history of Ukrainian literature of the Princely period.

The Institute of Art, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR, which has published the journal *Narodna tvorchist' ta etnohrafiia* (Folk Art and Ethnography) since 1957, is the centre for work and research studies in ethnography and folklore. Some serial publications in this field have come out in Kiev and Lviv [Vol. I, 278–9], as have important publications in the series *Ukraïns'ka narodna tvorchist'* (Ukrainian Folk Art), including *Istorychni pisni* (Historical Songs), *Koliadky ta shchedrivky* (Christmas and Epiphany Carols), *Zahadky* (Riddles), and *Ihry ta pisni* (Games and Songs). Vsevolod Naulko published studies on the ethnic composition of the population of the Ukrainian SSR.

Research in numerous fields of art has flourished in recent years. In addition to a number of monographs and albums on the history of Ukrainian architecture (see p. 551), the more important publications on the history of painting were *Taras Shevchenko: mystets'ka spadshchyna* (Taras Shevchenko: Art Heritage, 4 vols., 1961–63), and particularly the six-volume *Istoriia ukraïns'koho mystetstva* (History of Ukrainian Art) begun in 1966, and the collection *Narysy z istoriï ukraïns'koho mystetstva* (Essays on the History of Ukrainian Art, 1966). Journals published in this field are: *Mystetstvo* (Art, 1954) and *Ukraïns'ke Mystetstvoznavstvo* (Studies of Ukrainian Art, 1957). The applied arts are represented by the serial publication *Ukraïns'ke narodne mystetstvo* (Ukrainian Folk Art), the individual items in the series being: *Tkanyny ta vyshyvky* (Weavings and Embroideries, 1960), *Vbrannia* (Clothing, 1961); *Riz'blennia ta khudozhnii metal* (Carving and Artistic Ironwork, 1962), *Zhyvopys* (Painting, 1967), etc.; as well as an album of the works of Olena Kulchytska, and studies of Borys Butnyk-Siversky.

There is as yet no separate musical periodical in the Ukrainian SSR and it was only in 1966 that the collections *Ukrainskoe muzikovedenie* (Ukrainian

Music Studies) began to appear in Russian. Important works in this field include *Narysy istorii ukraïns'koï radians'koï muzyky* (Outline of History of Ukrainian Music, I–II, 1964).

The history of Ukrainian drama is treated in the collection *Ukraïns'kyi dramatychnyi teatr* (The Ukrainian Drama Theater), the second volume of which appeared in 1959, and the first in 1967.

There are no scholarly research works whatever in such branches of the humanities as ancient history, Byzantology, church history, military history. Some areas of the social sciences, for example, Oriental studies which flourished in the 1920's and classical philology, are largely neglected, with only limited progress in recent years.

Publication in the realm of natural sciences was even more limited. Among important geographical studies are Alexander Dibrova's works, the series *Oblasti Ukraïns'koï RSR* (Provinces of the Ukrainian SSR), as well as *Istoriia mist i sil* (History of Cities and Villages) in 26 volumes started in 1966, and a number of atlases [Vol. I, p. 51b]. In geology, Volodymyr Bondarchuk's *Heolohichna budova URSR* (Geological Structure of the Ukrainian SSR) represents a serious scholarly contribution in the field.

There has been a revival of the research in anthropology in recent years, resulting in three issues of *Materiialy z antropolohii Ukraïny* (Materials on the Anthropology of Ukraine, 1960–4) and the work of V. Diadychenko *Antropolohichnyi sklad ukraïns'koho narodu* (Anthropological Composition of the Ukrainian People, 1965).

Zoology and botanical studies were well represented by the multivolume publications *Fauna Ukrainy* (started in 1956), *Flora URSR* (12 vols., started in 1935), *Flora Krymu* (Crimean Flora, 4 vols., started in 1927), *Vyznachnyk prisnovodnykh vodorostei* (Handbook of Fresh-Water Plants, 12 vols.), and the one-volume *Atlas komakh Ukrainy* (Atlas of Insects of Ukraine, 1962).

The scholars of the Ukrainian SSR are noted for their achievements in the applied technical and natural sciences, particularly astronomy and astrophysics, mathematics, cybernetics, nuclear physics, thermo-physics and thermo-energetics, aircraft engineering, rocketry, aero- and hydrodynamics, study of metals and materials (new synthetic materials), chemistry of polymers, geophysics, oceanography, and radio-electronics. The research achievements of scholars of the Ukrainian SSR in some of these fields are generally recognized as being the first in the USSR and in the world.

Substantial research was done on the history of natural, medical, and applied sciences. A great deal of material in these fields is contained in collections such as *Istoriia kyïvs'koho universytetu* (History of Kiev University, 1954); in separate chapters of the symposium *Rozvytok nauky v Ukraïns'kii RSR za 40 rokiv* (Forty Years of Science Development in the Ukrainian SSR, 1957); *Narysy z istorii fiziolohii na Ukraïni* (Outline of History of Physiology in Ukraine, 1959); the four-volume *Istoriia otechestvennoi matematiki* (History of Domestic Mathematics in Russian) started in 1966; and individual monographs on the history of medicine, etc. Materials and development problems of the natural and applied sciences are treated in the serial publication *Narysy z istorii tekhniky ta pryrodoznavstva* (Essays on the History of Technology and Natural Sciences, of which nine issues had appeared by 1967).

A new study, which deals with learning as a whole, has emerged recently in Ukraine. The first general work in this field was G. M. Dobrov's *Nauka o nauke* (Learning about Learning), published in Russian in 1966.

*I. Bakalo*

# 6. IN WESTERN UKRAINE AND IN THE EMIGRATION, 1919–45

## IN WESTERN UKRAINIAN LANDS TO 1944

In the period between the two world wars, the University of Lviv remained the main center of scholarly research in Galicia. All Ukrainian chairs at the University were abolished (see p. 377), except that of Ukrainian language which was held by a Polish scholar. The principal centers of scholarly research work continued to be the Lviv polytechnic and other institutions of higher learning, as well as a number of Polish scientific institutions and societies in Lviv, which for the most part were already in existence before 1914 (see p. 251). The Podilian Regional Studies Society (established 1925) worked in the field of regional studies, as did the Volhynian division of the Polish Union of Grammar School Teachers, which published *Rocznik Wołyński* (Volhynian Yearbook) in 1930–9. Among the Polish scholarly institutions in Poland proper which conducted some research in Ukrainian studies were the Polish Academy of Sciences and the Slavic studium at Jagiello University in Cracow, the Polish Eastern Institute and the Institute of National Research in Warsaw.

The main center of Ukrainian scholarship in the western Ukrainian lands remained the Shevchenko Scientific Society. Conditions, compared with those in previous periods, deteriorated: the number of scholars decreased because of emigration abroad or to the central and eastern Ukrainian lands, economic circumstances became more difficult (state subsidies were discontinued), and Polish authorities obstructed the work of the Society. At the same time, owing to the establishment of the All-Ukrainian Academy of Sciences in Kiev and a number of Ukrainian scholarly institutions abroad, the Shevchenko Scientific Society ceased to fulfill its functions as the scholarly center for all Ukrainian lands. However, it maintained close ties with all these institutions, and in the 1920's acted to some extent as a western Ukrainian branch of the All-Ukrainian Academy of Sciences. This relationship was changed by the suppression of the Academy in 1930–33, at which time the Shevchenko Scientific Society again became the primary representative of free Ukrainian scholarship. Despite the above-mentioned obstacles, the activity of the Society broadened to encompass new and increasingly specialized fields. A number of new commissions were formed particularly in the field of the natural sciences. The library grew considerably and in 1939 numbered over 250,000 volumes (see Libraries, p. 396). The museum of the Society was also extended, the prewar ethnographic-historical museum was joined by the natural history museum and the museum of historical monuments (see Museums, p. 000). A reservation in the Gorgan Mountains and museums in other western Ukrainian lands were also under the jurisdiction of the Shevchenko Scientific Society. Younger scholars worked beside older members of the Society in its individual sections and commissions. In addition to historians Myron Korduba, Ivan Krevetsky, Ivan Krypiakevych, Omelian Terletsky, Stephen Tomashivsky, and Nicholas Chubaty, there were Nicholas Andrusiak, Elias Vytanovych, Roman Zubyk, Volodymyr Zalozetsky, and Rev. Josaphat Skruten, archaeologists Yaroslav Pasternak (excavations of Old Halych) and Markian Smishko; in

the field of law, economics, and social studies, Constantine Levytsky and Volodymyr Starosolsky were joined by Carl Kobersky, Julian Pavlykovsky, and Eugene Khraplyvy. In the Philological Section (see p. 250) the ranks of recognized scholars such as Michael Vozniak, Volodymyr Doroshenko, Ivan Zilynsky (study of dialects), Filaret Kolessa (ethnography, musicology), Hilarion Svientsitsky, Basil Simovych, Cyril Studynsky,

FIGURE 104. BASIL SHCHURAT

FIGURE 105. CYRIL STUDYNSKY

Basil Shchurat were supplemented by Eugene Pelensky and Jaroslaw Rudnyckyj. The activity of the Mathematical-Naturalistic-Medical Section was also broadened. In the fields of mathematics, physics, and chemistry, Volodymyr Levytsky was joined by Eugene Vertyporokh, Myron Zarytsky, Andrew Lastovetsky, Basil Milianchuk, and Zenon Khraplyvyi. Among the younger researchers in the biological sciences were Volodymyr Brygider, Volodymyr Lazorko, Nicholas Melnyk, Olha Mryts, Alexander Tysovsky; in geography and geology, Volodymyr Kubijovyč, Nicholas Kulytsky, George Poliansky, and Ivan Teslia; in the technical sciences, Ivan Feshchenko-Chopivsky among others. Presidents of the Shevchenko Scientific Society in the 1920's and 1930's were Basil Shchurat, Cyril Studynsky, Volodymyr Levytsky, and Ivan Rakovsky. Because of limited finances, the publishing activity of the Society decreased. In addition to the *Zapysky* (Memoirs), it published only a few of the former series of its sections and commissions, although some new ones appeared (among them *Zbirnyk Fiziohrafichnoï Komisiï* [Collection of the Physiographical Commission], and *Sitzungsberichte*). The Shevchenko Scientific Society also published journals dealing with Ukrainian studies: *Stara Ukraïna* (Old Ukraine, 1924–5) and *Siohoschasne i mynule* (The Present and the Past, 1939). Altogether, in the years 1914–39, the Society published 173 volumes of scholarly works, including 44 volumes of *Zapysky*. Other institutions also carried on research and publishing. Among these was the National Museum in Lviv, directed by I. Svientsitsky (see p. 412), and a number of new institutions such as the Ukrainian Theological Scholarly Society (founded in 1923; published a quarterly *Bohosloviia* [Theology] and *Pratsi* [Works]) and the Greek-Catholic Theological Academy (see p. 378). The Order of Saint Basil the Great started publishing its *Zapysky* (Analecta) in 1924; the Prosvita (Enlightenment) society published a series of popular educational works entitled *Uchitesia, braty moï* (Learn, My Brothers); the museum society *Boikivshchyna* in Sambir began publishing *Litopys Boikivschyny* (Chronicle of the Boikian Region) in 1931; teachers' associations such as *Uchytels'ka Hromada* (Teachers Community) and *Vzaïmna Pomich Ukraïns'kykh Uchyteliv* (Ukrainian Teachers' Mutual Aid Society) published periodical journals and research works on pedagogy and the history of education and schools; the Audit Union of Cooperatives (see p. 984) published an economic journal, *Kooperatyvna Respublika* (Cooperative Republic); a valuable journal in the field of agriculture was *Ukraïns'kyi Agronomichnyi Visnyk* (Ukrainian Agronomic Herald; 1934–8, edited by E. Khraplyvyi). Medical, legal, and technical societies continued their activity. The publications of general Ukrainian significance appearing at the time were: *Ukraïns'ka Zahal'na*

*Entsyklopediia* (General Ukrainian Encyclopedia), in three volumes, edited by I. Rakovsky; *Atlas Ukraïny ta sumezhnykh kraïn* (Atlas of Ukraine and Neighboring Countries), and *Heohrafiia Ukraïny* (Geography of Ukraine), prepared by V. Kubijovyč and associates.

After the occupation of Western Ukraine, Soviet authorities disbanded the Shevchenko Scientific Society (January 14, 1940) and merged it with the Lviv branch of the Academy of Sciences of the Ukrainian SSR. Other Ukrainian scientific centers were reorganized, and often Ukrainian and Polish institutions were joined together. Many Ukrainian scholars at this time had the opportunity to pursue their professions either in institutions of the Academy of Sciences of the Ukrainian SSR or in Ukrainianized institutions of higher learning. Eventually their number decreased. Some were arrested and imprisoned or executed by the Soviet authorities (Constantine Levytsky, Volodymyr Starosolsky, Carl Kobersky, Maksym Muzyka, and Roman Zubyk), while others, among them the president of the Shevchenko Scientific Society, I. Rakovsky, emigrated to the West.

During the German occupation of Galicia, the authorities did not allow the Shevchenko Scientific Society to reopen, and its work was done secretly. The Association of Scholars of the Ukrainian Central Committee and the Ukrainian Publishing House in Cracow were lesser centers of scholarship. In the winter of 1943–4, as a result of the war, a large number of Ukrainian scholars from central and eastern Ukrainian lands came to Lviv, and there participated in cultural and scholarly activity. After the renewed occupation of western Ukrainian lands by the Soviets, these scholars, together with numerous others from Lviv, emigrated to the West (see below).

Transcarpathia was also the scene of significant scholarly endeavor, due in large measure to Ukrainian scholars who had emigrated to Czechoslovakia. Prosvita (Enlightenment), established in Uzhhorod in 1920, had published 14 volumes of *Naukovyi Zbirnyk* (Scholarly Collection) by 1939; the Uzhhorod Pedagogical Society of Subcarpathian *Rus'* (founded 1924) published a monthly, *Pidkarpats'ka Rus'* (Subcarpathian *Rus'*) devoted to regional studies and pedagogy; a regional ethnographic society existed in Mukachiv. Research on various aspects of Transcarpathia was also carried on by Czech scholars. Among the scholars of Transcarpathia the following deserve mention: Reverend Augustine Voloshyn, Reverend Basil Hadzhega (historian), Volodymyr Birchak (specialist in literature), Ivan Pankevych (linguist), V. Kubijovyč (anthropogeographer), Alexander Mytsiuk (4 volumes of *Narysy sotsial'no-ekonomichnoï istoriï Zakarpattia* [Outline of the Socio-economic history of Transcarpathia]), Eugene Perfetsky (historian), Stephen Rudnytsky (physical geographer), and Volodymyr Sichynsky (art, regional historian). Non-Ukrainian scholars in this area of study were the Russian historian Alexei Petrov, Czech economist Drahnyj, and geographer Jiří Kral.

Ukrainian scholarship in Bukovina at the time of the Rumanian occupation all but died out.

## ABROAD, 1919–45

After the struggle for liberation in 1917–20, many Ukrainian scholars from all Ukrainian lands emigrated for political reasons [Vol. I, p. 859 ff.]. This made possible the creation of Ukrainian scholarly centers abroad. They sprang up first in Vienna (for a short time only), and then in Czechoslovakia (primarily in Prague), Warsaw, and Berlin. Ukrainian scholars abroad sought to develop Ukrainian scholarship under the free but difficult conditions of refugee life. They lacked the necessary tools for their work and could not make use of Ukrainian archival, museum, and library resources. Ukrainian scholars and scientific centers

abroad maintained a lively contact with their foreign counterparts and with scholarly centers in Ukraine, notably with the All-Ukrainian Academy of Sciences in the 1920's and the Shevchenko Scientific Society in Lviv until 1939.

The first center of Ukrainian scholarly activity abroad was Vienna. The Ukrainian Sociological Institute, initiated and directed by M. Hrushevsky, was founded there in 1919. In 1919–25 the Institute published, in Ukrainian and French, a number of scholarly works on sociology, the nation theory, the history of the Ukrainian revolution, and related subjects. The publishing house of *Dniprosoiuz* in Vienna published the historical works of M. Hrushevsky and Viacheslav Lypynsky in 1919–21. Much valuable scholarly material was included in the collections *Khliborobs'ka Ukraïna* (Farmers' Ukraine).

**In Czechoslovakia**

Conditions in Czechoslovakia were especially favorable for Ukrainian scholarship owing to the good will and material support of Czech scholarly and official circles, beginning with the president of the Czechoslovak Republic, the prominent scholar Thomas Masaryk. The hub of Ukrainian study was Prague, one of the outstanding European centers of scholarship, particularly in the area of Slavic studies. The most productive years of the Prague group were 1922–8.

FIGURE 106. FACULTY OF THE UKRAINIAN FREE UNIVERSITY IN PRAGUE, 1926

Ukrainian scientific life at the end of 1921 was concentrated chiefly at the Ukrainian Free University (see p. 385). Professors gathered there carried on their scholarly studies while initiating the establishment of Ukrainian scientific institutions in Czechoslovakia and other European countries. While in Prague, the Ukrainian Free University educated numerous young scholars and researchers. On its staff were prominent former and current professors of various Russian, Austrian, and Czech universities, full members of the Shevchenko Scientific Society and the All-Ukrainian Academy of Sciences and of other foreign scientific and academic institutions. Many of them were simultaneously professors at other schools of higher learning. Long-time rectors of the Ukrainian Free University were philologists Alexander Kolessa and Stephen Smal-Stotsky and chemist Ivan Horbachevsky. Among the other rectors and professors were: historians and archaeologists Basil Bidnov, Ivan Borkovsky, Dmytro Doroshenko, Alexander Lototsky, Simon Narizhnyi, Alexander Shulhyn, Vadym Shcherbakivsky; philologists Agenor Artymovych, Leonid Biletsky; art historian Dmytro Antonovych; geographer Stephen Rudnytsky; philosophers Ivan Mirchuk, Dmytro Chyzhevsky; jurists Stanyslav Dnistriansky, Otto Eichelman, Rostyslav Lashchenko, Michael Lozynsky, Constantine Losky, Volodymyr Starosolsky, Serhii Shelukhyn, Andrew Yakovliv; economists Alexander Mytsiuk, Volodymyr Tymoshenko, and Theodore Shcherbyna. They published scholarly works and textbooks in Ukrainian and other languages. The Ukrainian Free University also published several volumes of scholarly collections and reports of its activity.

A second center of higher learning and scholarship was the Ukrainian Academy of Technology and Husbandry in Poděbrady, Czechoslovakia, established in 1922 and reorganized in 1935 into the Ukrainian Technical and Husbandry In-

stitute (see pp. 385–6). Professors at this institution, other than those who at the same time were professors at the Ukrainian Free University, included: economists and sociologists Serhii Barodaievsky, Olgerd Bochkovsky, Nicholas Dobrylovsky, Borys Martos, Constantine Matsiievych, Valentine Sadovsky, and Lev Shramchenko; among professors of natural and agricultural sciences and forestry, Victor Domanytsky, Borys Ivanytsky, Nicholas Kosiura, George Rusov, Volodymyr Cherediïv; professors of mathematics, physics, chemistry and technical sciences, Nicholas Vikul, Leonid Hrabyna, Serhii Komaretsky, and Leonid Florov; and finally historian Maxim Slavinsky and doctor-hygienist Borys Matiushenko.

The Ukrainian Academy of Technology and Husbandry published three volumes of *Zapysky UHA* (Memoirs of the Ukrainian Academy), and the Ukrainian Technical and Husbandry Institute published *Visti UTHI* (News of the Ukrainian Technical and Husbandry Institute). Both institutions published textbooks and a number of works devoted to the natural history and economy of Ukraine among other things. Several scholarly societies operated within the framework of this institution; the Society of Economists, which published *Ukraïns'kyi Ekonomist* (Ukrainian Economist), the Agronomic Society, the Union of Agricultural Technicians, the Society of Members of Cooperatives.

A third Ukrainian institution of higher learning in Czechoslovakia was the Drahomanov Pedagogical Institute in Prague (see p. 386), founded in 1923. Professors and lecturers of this institute participated in two scholarly societies connected with it—the G. Skovoroda Philological-Pedagogical Society, renamed [illegible] Pedagogical Society in 1924, and the Mathematical-Natural Sciences Society (from 1928). The publishing house of the Institute, *Siiach* (Sower), issued a total of 44 textbooks and scholarly works. The scholarly organ of the Institute was *Pratsi* (Works; 3 volumes in 1929–33). Among the professors of this institute, other than those also connected with the Ukrainian Free University and the Academy of Technology and Husbandry, were philologist Basil Simovych, professors of pedagogy Sophia Rusova and Yakym Yarema, musicologists Nestor Nyzhankivsky, Theodore Steshko, and Theodore Yakymenko.

Of the various Ukrainian scholarly societies and organizations in Czechoslovakia, particularly noteworthy is the Historico-Philological Society in Prague, founded in 1923 at the Ukrainian Free University. In 1932 it had 57 full members and was devoted primarily to Ukrainian studies; prior to 1941 the society published four volumes of works.

The Ukrainian Institute of Sociology in Prague was also important. It was organized in 1924 by Mykyta Shapoval as an extension of the Ukrainian Sociological Institute in Vienna which published a journal, *Suspil'stvo* (Society) and works on sociology. Some scholarly work was undertaken by the Museum of the Struggle of Ukraine for Liberation (see p. 422); the Ukrainian Military Historical Society; Ukrainian Society of Bibliophiles, which from 1927 published the journal *Knyholiub* (Bibliophile) (see p. 431); Ukrainian Law Society in Czechoslovakia, which published several works; and Society of Ukrainian Physicians from 1922, which published the journal *Ukraïns'kyi Medychnyi Vistnyk* (Ukrainian Medical Review, 1923–5).

In order to coordinate Ukrainian scholarship and centers of research and study, the Ukrainian Free University initiated the establishment of the Ukrainian Academic Committee in 1924. This body united Ukrainian institutions of higher learning and scientific societies in Czechoslovakia, the Shevchenko Scientific Society in Lviv, and the Ukrainian Scientific Institute in Berlin. It participated in international conferences, maintained contact with the International Commission for Intellectual Cooperatic with the League of Nations (until 1934),

and organized two scientific conferences in Prague (1926 and 1932).

The Ukrainian Historical Research Cabinet was a separate Czech-Ukrainian institution, founded in 1931 for the purpose of doing research in the field of Ukrainian history. The Slavic Institute in Prague also furthered Ukrainian studies and Ukrainian scholars participated in its activity. Some of them were professors and lecturers at Karl University, where Alexander Kolessa held the chair of Ukrainian language and literature, and lectured in other Czech institutions of higher learning.

Ukrainian scholars who had emigrated to Czechoslovakia participated in large numbers in various international scientific conferences and congresses held in Prague and abroad. They also contributed to the growth of scholarly and cultural activity in Transcarpathia.

At the end of the 1920's Ukrainian institutions of learning and scholarship in Czechoslovakia deteriorated as a result of declining economic conditions [Vol. I, p. 866a]. A number of Ukrainian scholars resettled in Galicia (in the mid-1920s many of them had moved to Soviet Ukraine to continue their scientific activity), others found work in Ukrainian scientific institutes in Warsaw and Berlin. During World War II Ukrainian institutions of higher learning in Czechoslovakia experienced a temporary renaissance caused by the influx of Ukrainian refugees from central and eastern Ukrainian lands. However, after the occupation of Czechoslovakia by the Soviet army, Ukrainian scientific institutions in that country ceased to exist.

**In Other European Countries**

Warsaw became an important center of Ukrainian scholarship in Poland proper. The Ukrainian Scientific Institute was founded there in 1930; until 1938 its director was A. Lototsky, later A. Yakovliv; its general secretary was Roman Smal-Stocky; among its permanent members were economist Eugene Glovinsky and Shevchenko scholar Paul Zaitsev.

FIGURE 107. ALEXANDER LOTOTSKY

FIGURE 108. IVAN MIRCHUK

During the short period of its existence the Institute developed a more comprehensive publishing program than any other Ukrainian scholarly institution in Western Ukraine or abroad. It published nearly fifty volumes of scholarly works in various fields of Ukrainian studies, some of which dealt with the economic, social, and cultural conditions in Ukrainian lands under Soviet rule. In addition, thirteen volumes of a complete scholarly edition of Shevchenko were published. Ukrainian publishing activity in Warsaw was also carried on by the Ukrainian Society of Military History established in Kalish in 1926, which published its own series of symposia, *Za Derzhavnist'* (For Statehood). The popular scientific journals of Ivan Ohiienko (*Ridna Mova* [Native Language] and *Nasha Kul'tura* [Our Culture]) were also printed in Warsaw.

In addition to their activity in Ukrainian scholarly institutions and publishing houses established in Warsaw, Ukrainian scholars worked in Polish schools, particularly as lecturers in the theological and philological departments of Warsaw University. Ukrainian professors lectured on Ukrainian literature, history, language, and geography at Jagiello University in Cracow; the chair of metallurgy at the Mining Academy in Cracow was headed by Ivan Feshchenko-Chopivsky, the founder of the Polish school of metallurgy. Ukrainians also worked in universities and higher schools in such other Polish cities as Wilno and Pulavy.

After the occupation of Warsaw by the Germans in 1939, the Ukrainian Scientific Institute ceased to exist and its valuable library was destroyed during the war. Other Ukrainian centers of scholarship in Poland met a similar fate.

In Germany, an active center of Ukrainian scholarly life in the years 1926–45 was the Ukrainian Scientific Institute established by Hetman Paul Skoropadsky, initially under the direction of Dmytro Doroshenko and later Ivan Mirchuk. Since it had over a dozen Ukrainian scholars and excellent library facilities, the Institute was able to maintain contact with German scholarly circles and organize lectures and courses in Ukrainian studies. It assembled a large library. Scholars connected with the Institute included Zenon Kuzelia, Roman Dyminsky, Borys Krupnytsky, Volodymyr Zalozetsky, and Michael Antonovych. The publishing activity of the Institute was somewhat limited: it published several volumes of its Notes (*Abhandlungen D.U.W.I.*), Reports (*Mitteilungen*), Material on Ukrainian Studies (*Beiträge zur Ukrainekunde*), *Visti* (News), and Ukrainian Cultural Reports (*Ukrainische Kulturberichte*). A valuable source of material on Ukraine was *Handbuch der Ukraine* (Handbook of Ukraine, 1942). As a result of the war and particularly of the Soviet occupation of Berlin, the Ukrainian Scientific Institute ceased to exist.

In France, the Simon Petliura Library, established in 1929, was a center of Ukrainian scholarly life. The Germans confiscated and destroyed it during their occupation. The Parisian society *Cercle d'Etudes Ukrainiennes* played a role in Ukrainian-French scholarly relations. Ukrainian scholars active in France were historians Elias Borshchak, who conducted research in the field of French-Ukrainian relations, and Alexander Shulhyn, whose field was world history.

*B. Krawciw, V. Kubijovyč*

# 7. ABROAD, 1945–67

## IN WESTERN EUROPE, 1945–9

At the end of World War II, West Germany (Bavaria) and, to a lesser extent, Austria became the main areas of Ukrainian scholarly activity. Nearly three hundred Ukrainian scholars from all parts of Ukraine settled in these countries, mainly in displaced persons camps. They included scholars from former seats of learning in Prague, Warsaw, and Berlin which had been disbanded after the war. Late in 1945, the Ukrainian Free University resumed its activities in Regensburg (subsequently transferred to Munich), as did the Ukrainian Technical and Husbandry Institute (see Education, p. 388). The Ukrainian Free Academy of Sciences was founded in Augsburg at this time (with Dmytro Doroshenko as its first president), along with a museum, archives, and press. Through the efforts of Volodymyr Kubijovyč, the Shevchenko Scientific Society resumed its activities in Munich in March 1947. (Ivan Rakovsky, who had been the last president of the Society in Lviv, was the president, followed by Zenon Kuzelia). The Society was active in three sections (see p. 249) and had a newly established Encyclopedic Institute and an Institute of National Research.

FIGURE 109. IVAN RAKOVSKY

In spite of difficult postwar conditions, lack of library facilities and laboratories, limited publishing possibilities, and the transitory condition of Ukrainian scholars in Germany and Austria, the above-named institutions initiated scholarly and publishing activities. In 1947, the Ukrainian Free University resumed publication of the *Naukovyi Zbirnyk UVU* (Scholarly Symposium of UFU), and of the *Naukovi Zapysky* (Scientific Notes). The Ukrainian Technical and Husbandry Institute began publishing the series *Naukovi Zapysky* (Scientific Notes) in 1948. Both institutions published several dozen university courses in various fields of learning. The Ukrainian Free Academy of Sciences began publishing *Litopys UVAN* (Chronicle of the UVAN), in addition to several historical works, in 1946 and the series *Slavistica* (Slavistics) in 1948. The Shevchenko Scientific Society resumed its *Zapysky* (Memoirs, four volumes in 1948–9), published two issues of the journal of Ukrainian studies *Siochochasne i Mynule* (The Present and the Past, 1948–9), and began *Entsyklopediia Ukraïnoznavstva* (Encyclopedia of Ukrainian Studies) and *Biblioteka Ukraïnoznavstva* (Library of Ukrainian Studies) in 1949.

In France, Elias Borshchak began publishing the journal of Ukrainian studies, *Ukraïna* (1949–53). In Italy, the Order of Saint Basil the Great in Rome became the center of scholarly research and publishing, mainly in the field of Ukrainian church history, with the resumption of *Zapysky ChSVV* (Analecta OSBM) in 1948 and the series *Pratsi* (Opera) begun in 1949.

In 1947, scholarly research was also initiated in countries outside of Europe. A branch of the Shevchenko Scientific Society was established in New York (president Nicholas Chubaty, subsequently Roman Smal-Stotsky) and the Canadian Shevchenko Scientific Society in Toronto (president Eugene Vertyporokh). The Ukrainian Free Academy of Sciences began functioning in Winnipeg in 1949 (president Leonid Biletsky, later Jaroslaw Rudnyćkyj).

Works published during this five-year period were limited primarily to the following branches of Ukrainian studies: history of Ukraine and Ukrainian law, church history, literature, and linguistics.

**1950–67**

The majority of Ukrainian scholars emigrated to the United States and Canada; some went to South America and Australia during the mass resettlement of Ukrainian refugees from Germany and Austria. These scholars either joined existing scholarly centers, or founded new institutions.

A branch of the Shevchenko Scientific Society, in addition to those in the United States and Canada, was established in Australia in 1950 (president Eugene Julian Pelensky, subsequently Ivan Rybchyn). All these branches ultimately became separate legal units with common sections and a supervisory coordinating body, the Supreme Council of the Shevchenko Scientific Societies (president R. Smal-Stotsky, General Secretary V. Kubijovyč, now E. Vertyporokh). A joint venture of all these societies are the serial publication *Zapysky NTSh* (Memoirs), 22 volumes of which were published between 1950 and 1966, *Biblioteka Ukraïnozavstva* in 15 volumes (1951–65), and *Proceedings* of individual sections, (9 volumes, 1951–66).

The European branch of the Shevchenko Scientific Society, with its library, archives, and files, was transferred from Munich to Sarcelles (France) in 1951 and engaged in the broad work of publishing the Encyclopedia of Ukrainian Studies, under the editorship of V. Kubijovyč and with the collaboration of a wide circle of scholars from all countries of Ukrainian settlement in the free world. Having completed the Encyclopedia of Ukrainian Studies in article form (three volumes in 1952), it began an alphabetical encyclopedia (four volumes published by 1966), and in 1963 the

two-volume English-language *Ukraine: A Concise Encyclopaedia.* In addition to joint serial publications, the Shevchenko Scientific Society in the United States publishes a series *Dopovidi* (Papers, 23 issues to the end of 1965), and the Canadian Shevchenko Scientific Society *Zbirnyky Materiialiv* (Symposia of Materials) of its scholarly conferences (seven volumes to the end of 1966).

The Ecclesiastic Archaeographic Commission, activated in Munich in 1945 as part of the office of the apostolic visitator of Germany (chairman, Rev. Josaphat Skruten, subsequently Ivan Mirchuk), published five papers between 1950 and 1953 as parts of the symposium *Teoriia Tretioho Rymu* (Theory of the Third Rome).

In the United States, under the sponsorship of the Ukrainian National Association, several dozens of works were published in English on different aspects of Ukrainian studies, primarily history, including the above-mentioned *Ukraine: A Concise Encyclopaedia* (Vol. I, 1963). A number of scholarly works on Ukrainian studies also came from the press of the Organization for the Defense of Four Freedoms for Ukraine in New York, *Dniprova Khvylia* (Dnipro Wave) in Munich, and the Ukrainian Publishing House in Paris.

The Ukrainian Academy of Arts and Sciences in the U.S., founded in New York in 1950 through the efforts of Michael Vetukhiv (subsequently headed by George Shevelov and Alexander Archimovich), became an active scholarly and publishing center. Its museum, archives, and library were transferred from Augsburg (Germany) to New York. In addition to the English-language *Annals*, begun in 1951 (10 volumes in 19 issues to the end of 1966), the Academy published 2 volumes of *Naukovyi Zbirnyk* (Scholarly Symposium), 10 annual volumes of *Shevchenko*, and a number of individual monographs and symposia on various aspects of Ukrainian studies.

FIGURE 110. MICHAEL VETUKHIV

Continuing their earlier educational pursuits, the Ukrainian Free University engaged in scholarly publication on a substantially large scale in Munich, and by the end of 1966 had 8 volumes in the series *Naukovi Zapysky* and the Ukrainian Technical and Husbandry Institute published, between 1961 and 1966, 10 volumes in the series *Naukovi Zapysky UTHI* (Scholarly Transactions of the UTHI).

The Order of Saint Basil the Great in Rome continued its *Zapysky ChSVV*, the series *Pratsi*, edited by Father Athanasius Welykyj, and the special series *Dokumenty z ryms'kykh arkhiviv* (Documenta from the Roman Archives), 39 volumes of which were published between 1953 and 1966. Publishing activity on a large scale is also carried on by the Saint Clement Ukrainian Catholic University in Rome, founded by Josyf Cardinal Slipyj in 1963, which has published several dozen volumes of documents and treatises on the history of the Ukrainian Church and theology. The Ukrainian Theological Society, re-established by Cardinal Slipyj in Rome, has published its organ *Bohosloviia* (Theology) since 1965.

Other scholarly, publication, and research centers worthy of mention in the United States are: the Scholarly Theological Institute of the Ukrainian Orthodox Church in the United States of America, founded on the initiative of Archbishop Mstyslav Skrypnyk in 1952 (director Basil Zavitnevych), the Prologue Research and Publishing Association in New York (since 1952), the V. Lypynsky East-European Research Institute in Philadelphia (1963), the Archives Committee of the Ukrainian Sich Riflemen *Chervona Kalyna* (1963), and the Ukrainian Historical Society founded in 1964 (president Alexander Ohloblyn) with its journal *Ukraïns'kyi Istoryk*

(Ukrainian Historian, edited by Lubomyr Vynar). The following are active in Canada: Ukrainian Scholarly Theological Society (1947) under the leadership of Metropolitan Hilarion Ohienko; the center of the Redemptorist Order with its journal *Logos* in Yorkton, Saskatchewan; the Institute of Research of Volhynia (1951, under Volodymyr Borovsky) which published *Litopys Volyni* (Chronicle of Volhynia, eight symposia to the end of 1966); and the Ukrainian Military-Historical Institute in Toronto (1961, under Michael Sadovsky). Legal, medical, and technological sciences are represented in part by journals and symposia published by professional associations of Ukrainian lawyers, physicians, veterinarians, and engineers (for more detailed data, see Ukrainians Abroad, pp. 1147–8, 1185–7).

By their nature, all these centers constitute associations of scholars and researchers in many fields of learning, as well as institutions which publish or help to publish scholarly works of members of these associations. There are no Ukrainian scholarly institutions in the Western world subsidized by state budgets with adequate research facilities and financial security for scholars, as was the case of the Ukrainian scientific institutes in Berlin and Warsaw and Ukrainian educational establishments in Prague.

A certain number of Ukrainian scholars work in American and West European institutes of Soviet studies, e.g., the Institute for the Study of the USSR founded in Munich in 1950 or the West German institutes for the study of East Europe. The works of Ukrainian researchers associated with the Institute for the Study of the USSR deal primarily with present conditions in the Ukrainian SSR; they were published in Ukrainian in the series *Ukraïns'kyi Zbirnyk* (Ukrainian Symposium) in 16 volumes (1950–8) and in English in the series *Ukrainian Review* in 8 volumes, 1950–8). The Home of Ukrainian Learning, founded by the German authorities in 1962 in Munich under the name *Arbeits- und Foerderungsgemeinschaft der Ukrainischen Wissenschaften*, aids the development of Ukrainian scholarship abroad; it publishes its reports under the title *Mitteilungen*.

Only some of the large number of scholars who emigrated in the early 1950's have been able to pursue their work at American or Canadian establishments of higher learning. Most of them are old and their ranks are getting thinner year by year. Within the last ten years there has been a marked increase in young Ukrainian scholars, graduates of American and Canadian universities. Some are active in special fields of scholarly research, including the natural sciences. Limited by their specific pursuits they show interest in Ukrainian studies, and some have already produced valuable works.

The research of Ukrainian scholarly centers and individual scholars abroad is basically limited to the humanities and social sciences, with emphasis on Ukrainian studies. Ukrainian émigré scholars see as their main task the pursuit of research in Ukrainian studies which are either neglected in the Ukrainian SSR or deliberately distorted for political reasons.

Despite organizational and financial difficulties, a number of valuable works have been published abroad during this period, some even exerting considerable influence on the development of scientific thought in the Ukrainian SSR. The most meticulous work undertaken in both the article and the alphabetical sections is the Encyclopedia of Ukrainian Studies published by the Shevchenko Scientific Society. It encompasses all Ukrainian studies, and nearly all Ukrainian scholars in the Western world are engaged in this work. *Ukraïns'ka mala entsyklopediia* (Ukrainian Small Encyclopedia) was published by Eugene Onatsky in 1957–66.

The majority of works published from 1950 to 1966 deal with Ukrainian history. A number of important scholarly works

cover such branches of history as historiography and archaeology and such periods of Ukrainian history as the Princely period, the liberation struggle, and recent history (between the two world wars and during World War II). The largest group of publications in this field consists of works on the history of the Kozak-Hetman period of the seventeenth and eighteenth centuries, including numerous monographs on the 1654 Treaty of Pereiaslav and Hetman Ivan Mazepa. There is an abundance of memoir literature on the Ukrainian struggle for liberation and the World War II period. Some important works were republished, e.g., *Istoriia Ukraïny-Rusy* (History of Ukraine-*Rus'*) by M. Hrushevsky in 10 volumes, the historical works of Dmytro Doroshenko, Viacheslav Lypynsky and Ivan Krypiakevych [Vol. 1, pp. 571–3].

The second largest group of scholarly publications is comprised of treatises and materials on church history, particularly the history of Christianity in Ukraine and of the Ukrainian Orthodox Church, as well as various studies in theology (see Church Historiography, pp. 120 ff.).

Several dozen publications in Ukrainian, English, German, French, and other languages on present conditions in the Ukrainian SSR have appeared. Included are numerous studies on problems of the economy of the Ukrainian SSR (see National Economy, pp. 680–1).

Numerous works and symposia have been published on the history of culture, science, and education, particularly accounts of the Soviet destruction of Ukrainian scholarship in the 1930's.

A number of symposia and monographs deal with regional studies of Ukraine (Bukovina, Volhynia, the Peremyshl Area, and Uhniv). Studies were also begun on the history of Ukrainian settlements abroad, particularly in Canada and Australia.

The study of literature constituted a fairly large part of scholarly production in the 1950–66 period. Most of the works and symposia in this group were devoted to biographical and analytical studies of the classicists of Ukrainian literature (Taras Shevchenko, Ivan Franko, Markian Shashkevych). Some studies dealt with the history of old Ukrainian literature, including historical accounts describing the attacks on Ukrainian literature in the Ukrainian SSR in the 1930's, and studies on contemporary literary processes in the Ukrainian SSR (for more detail on émigré literature, see Vol. I, pp. 972–3). Of major significance were the republication of *Istoriia ukraïns'koï literatury* (History of Ukrainian Literature, five volumes) by M. Hrushevsky, and literary studies of Nicholas Plevako and Nicholas Zerov.

Linguistics was limited basically to works on the history of the Ukrainian language and, to some extent, grammar. In the field of lexicography, the publication of the etymological dictionary of the Ukrainian language and of a dictionary of Shevchenko's usage can be considered as significant developments.

Various branches of law (see pp. 7–8), political science, and international relations are represented by a number of important works.

There were several dozen works and monographs published on the fine arts in this period (see Arts, p. 529), primarily on painting, architecture, music (see p. 578), and drama (see pp. 614–15).

Individual works were published in the 1950–66 period on geography, demography, ethnography, education, psychology, and ethnopsychology. Ukrainian scholars also produced works in Oriental studies, Byzantology, and sociology, which appeared mostly in foreign languages in American, Ukrainian, and other scholarly publications.

Scholarly research in the natural, medical, and technological sciences was rather limited. The works of Ukrainian scholars in the numerous branches of these sciences appeared in American, British, Spanish, and German scientific publications. In some instances they were published as books in these languages.

The scholarly and literary production

of Ukrainians abroad has not yet been bibliographically recorded. Thus far, only some serial publications of regional significance have made their appearance, e.g., the serial *Ucrainica Canadiana* published by the Ukrainian Free Academy of Sciences in Canada, and index publications of book production for individual years. An extensive publication program is planned in connection with the newly established (1968) Chair of Ukrainian Studies at Harvard University.

# IV. Education and Schools

## 1. HISTORY OF PEDAGOGICAL THOUGHT AND PRESENT STATE OF RESEARCH

### BEFORE THE NINETEENTH CENTURY

Definite pedagogical concepts, i.e. ideas on raising and educating children are known to have existed in Kievan *Rus'* as early as the tenth century. These opinions found subsequent expression in *Pouchenie Volodymyra Monomakha ditiam* (Instruction) of Prince Volodymyr Monomakh to his children in 1096 and in later collections of moral and religious teachings, particularly translated works such as St. John Chrysostom's *O Voskromlenii detii* (On Educating Children).

After a long gap caused by the Tatar invasion, centers of education shifted to the religious brotherhood schools in Lviv, Lutsk, Ostrih, and later Kiev (see pp. 304–5). An important role in the development of educational thought and didactics in the sixteenth and early seventeenth centuries was played by church leaders, teachers, and writers. The polemicist Ivan Vyshensky [Vol. I, pp. 993–4], a defender of the traditional church religious education and opponent of the inclusion of philosophy in the curricula of brotherhood schools, expounded the principles of instruction in his symposium *Knyzhka Ioanna mnikha Vyshenskoho* (Book of Ioann the Monk Vyshensky) *ca.* 1598. Actively engaged in spreading education among the masses was Job Boretsky, rector of the Lviv brotherhood school (1604) and later of the Kiev brotherhood which he helped to establish in 1615–16; he was the author of a preface to the symposium *O vospytanii chad* (On the Education of Children), 1609, which extolled the benefits of education. The need for teaching children from the earliest possible age and the tasks of teachers were expounded by a leader of the Lviv brotherhood and teacher of the brotherhood schools in Lviv and Vilnius, Cyril Tranquillion Stavrovetsky, author of the symposium of moral and religious teachings, *Perlo mnohotsennoe* (Priceless Pearl, 1646), which included a chapter "Acquiring Talents." Textbooks authored by Lavrentii Zyzanii Tustanovsky (see Vol. I, pp. 430a, 441b) and Meletius Smotrytsky [Vol. I, pp. 430–1 ff.] contributed to the development of teaching at that time.

FIGURE 111. MELETIUS SMOTRYTSKY

The Kievan Mohyla Collegium (transformed into an academy in 1701) was the center of pedagogical study in Ukraine during the second half of the seventeenth and throughout the eighteenth centuries. Its professors and graduates played an important part in the development of pedagogics and didactics in the institutions of higher education of both Ukraine and Muscovy. Noteworthy among them were: Yoanikii Galiatovsky [Vol. I, pp. 997a–8b], author of the symposium *Kliuch razumeniia* (Key to Understanding, 1659), whose treatise on education defined the tasks of teachers and the purposes of teaching; and Simeon Polotsky, one of the founders of the

Slavic-Greek-Latin Collegium in Moscow, who, in his *Obed dushevnyi* and *Vecheria dushevnaia* (Spiritual Dinner and Spiritual Supper) emphasized the importance of education and learning and supported the principle of visual methods of instruction. The educational ideas of Gregory Skovoroda [Vol. I, pp. 755b–6a] had a considerable influence on the development of pedagogics in the second half of the eighteenth century. In his works Skovoroda proposed the principle of the development of man's natural abilities and the idea of education adapted to natural characteristics. He demanded that education be made available to all classes of society, including women.

## CENTRAL AND EASTERN LANDS IN THE NINETEENTH AND EARLY TWENTIETH CENTURIES

The universities of Kharkiv and Kiev, founded in the first half of the nineteenth century did not initially play a major role in the development of pedagogics and didactics. The first history of the Kievan Mohyla Academy published at this time (1843) was by Makarius Bulgakov, a Russian theologian and professor at the Petersburg Theological Seminary.

Educational ideas and research into the history of schools and education on a broader scale did not begin until the second half of the nineteenth century. The chair of education established at Kiev University in 1850 was occupied in 1851 by Sylvester Hohotsky, philosopher and author of works on the theory and history of education. Theoretical works and textbooks of the following Ukrainians played an important part in the development of pedagogical thought in the second half of the nineteenth century: Theodore Bemer, a protagonist of humanism, visual and purposeful instruction; Nicholas Levytsky, expert in the methodology of elementary education; and, most important, the Russian pedagogue of Ukrainian descent, Constantine Ushynsky (active in Russia), who favored methods of instruction based on scientific psychology and physiology.

FIGURE 112. CONSTANTINE USHYNSKY

The Russian physician and educator, Nicholas Pirogov, exerted considerable influence on the development of pedagogical ideas during this period. Active in Ukraine, he advanced the idea of a uniform system of general education and devised a scheme of graduated schools. Another important figure was Baron Nicholas Korf, organizer of *Zemstvo* schools in Ukraine.

Elias Derkach (Derkachev), a Ukrainian educator and author of books for children, followed Ushynsky's teachings in Ukraine. He also authored more than fifty textbooks. Towards the end of the nineteenth century problems of education, particularly in the public sector, were being tackled by Christine Alchevska (method of adult education), Tymothy Lubenets (preschool education), and Sophia Rusova (popular education).

Research on the history of education and schools in Ukraine was also started in the second half of the nineteenth century. Developments from the beginning of the tenth century to the end of the fourteenth were described by Nicholas Lavrovsky, professor at Kharkiv University (1855–75) and director of the Nizhyn Institute of History and Philology from 1875 to 1882, and by Anthony Paventsky, a scholar in Lviv. The history of the Kievan Mohyla Academy was researched by the following Kiev scholars: Victor Askochensky, M. Linchevsky, Michael Maksymovych, V. Serebrennikov, Nicholas Petrov, and the Polish his-

torian Aleksander Jabłonowski. Authors writing on Ukrainian schools of the seventeenth and eighteenth centuries were Alexander Lazarevsky, Michael Vladimirsky-Budanov, and the Russian scholar Peter Pekarsky. Works on the history of Kiev University were written by V. Shulhyn, M. Vladimirsky-Budanov, Volodymyr Ikonnikov, and on Kharkiv University by Dmytro Bahalii. V. Herbel wrote about the Prince Alexander Bezborodko Lyceum in Nizhyn. The general history of schools in Ukraine of the nineteenth century is described in the works of N. Aristov, I. Barsov, E. Schmidt, and in the three-volume publication, *Sbornik materialov dlia istorii prosveshcheniia v Rossii* (Collection of Material for the History of Education in Russia, 1893–8). The history of pedagogics is treated in the work of Michael Demkov, published in Petersburg in 1897. Michael Drahomanov and Borys Hrinchenko wrote about the elementary schools of this period. The journal *Kievskaia Starina* (the Kievian Antiquity) devoted considerable space to the history of education, as did the Petersburg journal, *Zhurnal Ministerstva Narodnogo Prosveshcheniia* (Journal of the Ministry of Public Education), started in 1834, and other Russian educational journals of the period.

The chairs of education at Kiev, Kharkiv, and Odessa universities became increasingly active in the early twentieth century under the influence of modern trends and methods of education initiated in the West. Stephen Ananïn, director of education at Kiev University and author of numerous treatises on education, was the chief exponent of these trends and methods. The Museum of Education founded in Kiev at this time became an important center of educational research.

The development of Ukrainian pedagogical thought was limited during this period (particularly following the revolution of 1905) to problems of public education, i.e., elementary schools conducted in the Ukrainian language. In addition to those of T. Lubenets and S. Rusova, theoretical works on this subject were written by B. Hrinchenko, Viacheslav Prokopovych, Stephen Siropolko, Michael Chalyi, Jacob Chepiha, Spyrydon Cherkasenko, and Gregory Sherstiuk. After 1910, the publishing house Ukraïns'kyi Uchytel (Ukrainian Teacher) became the leading center of educational research, publishing the first pedagogical journal in Ukraine under Russia, the Ukrainian-language *Svitlo* (Light), 1910–4, edited by G. Sherstiuk.

The most complete history of education from the earliest times was written by Michael Hrushevsky in the first volumes of his *Istoriia Ukraïny-Rusy* (History of Ukraine-*Rus'*). C. Kharlampovych wrote a broad analytical study of the history of education from its beginnings to the mid-eighteenth century. The works of Volodymyr Peretts and I. Filevsky dealt with the pre-Mongolian period. The history of the Kievan Mohyla Academy was treated by Stephen Golubev, Dmytro Vyshnevsky,

FIGURE 113.
NICHOLAS PETROV

FIGURE 114.
VLADYSLAV BUZESKUL

and Nicholas Petrov. The history of Kharkiv University was researched by Vladyslav Buzeskul as well as by D. Bahalii. I. Pavlovsky and S. Rozhdestvensky wrote on public education in Ukraine in the eighteenth and nineteenth centuries, and S. Farvorovsky dealt with education in the Kuban region.

## WESTERN LANDS BEFORE 1918

The first major work in western Ukrainian educational literature was Alexander Dukhnovych's *Narodnaia pedagogiia v pol'zu uchilishch i uchitelei sel'skikh, chast' I, pedagogiia obshchaia* (Public Pedagogy for the Use of Village Schools and Teachers, Part I, General Pedagogy) published in 1857 in Lviv. Towards the end of the nineteenth and in the early twentieth century, research into the history of education was pursued by Ostap Makarushka, Basil Biletsky, Ivan Demianchuk, Constantine Malytska, Ivan Yushchyshyn, and others. Professors and lecturers at Lviv University also did some research in this field.

An important contribution to the development of education, particularly in the field of cultural enlightenment, was made by the Prosvita society, founded in 1867, and by the Shevchenko Scientific Society, founded in 1873, originally for educational purposes. After 1881 theory of education and practice became the exclusive concern of the Ruthenian (subsequently Ukrainian) Pedagogical Society and its semimonthly publication, *Uchytel'* (Teacher, 1889–1914). Another organization preoccupied with educational questions was the Vzaïmna Pomich Ukraïns'koho Vchytel'stva (Mutual Aid Society of Ukrainian Teachers) founded in 1905, which, in addition to professional matters, paid considerable attention to problems of theory and history of education, particularly in its journal *Uchytel's'ke Slovo* (The Teacher's Word, Lviv, 1912). The association of teachers of secondary schools of Galicia and Bukovina Uchytel's'ka Hromada (Teachers' Community), founded in Lviv in 1908, published textbooks and the journal *Nasha Shkola* (Our School, 1909–18), with Hrushevsky as its first editor.

The Ukraïns'ka Shkola (Ukrainian School) society was the principal educational center in Bukovina. Scholars of the University of Chernivtsi also did research on the problems of history and theory of education. In Transcarpathia, a journal, *Uchytel'* (Teacher), started publication in 1867. It was the first educational periodical in Ukraine. The Rev. Augustine Voloshyn began his pedagogical activity in Transcarpathia in 1900.

FIGURE 115. FIRST PAGE OF THE JOURNAL *Uchytel'* (TEACHER, FIRST ISSUE, 1889)

The scope of works on educational history in Western Ukraine was quite limited. Ambrose Krylovsky, a Kiev historian of Galician origin, published a history of the Lviv Stavropygian Brotherhood in 1904. Substantial material on the history of education in Galicia was compiled in *Materiialy do kul'turnoï istoriï Halyts'koï Rusy XVIII i XIX viku* (Material on the Cultural History of Galician *Rus'* of the Eighteenth and Nineteenth Centuries), edited by Ivan Franko (1902). The Lviv Theological Seminary at the time of Markian Shashkevych was

described by Cyril Studynsky. The Polish historian F. Jaworski wrote the history of Lviv University. The works of Stephen Baran and of the Polish researchers A. Baranowski and J. Buzek deal with the history of schools in Galicia in the nineteenth and early twentieth century. Eugene Dmytriv wrote about educational matters in Bukovina.

## THE PERIOD OF UKRAINIAN STATEHOOD

Large-scale development of Ukrainian schools following the March revolution of 1917 also contributed to a revival of Ukrainian pedagogical thought. With the spontaneous organization of elementary, secondary, and higher education, work was started on drafting plans and programs for a uniform system of education in Ukraine (the so-called Yedyna trudova shkola (unified labor school), see p. 344). The Society of School Education, founded in 1917, drafted a plan for a uniform school system, which was adopted at the Second All-Ukrainian Teachers' Convention in August 1917 and became the basis of a plan being prepared by a number of committees under the supervision of the General Secretariat of Education of the Central Rada, later by the Ministry of Education of the Ukrainian National Republic (Ivan Steshenko, Peter Kholodnyi, Volodymyr Naumenko). Taking part in the implementation of the system and in the preparation of theoretical and practical norms of education were S. Rusova, Volodymyr Durdukivsky, Jacob Chepiha-Zelenkevych, Gregory Ivanytsia, S. Siropolko, and Alexander Muzychenko. The journal *Vil'na Ukraïns'ka Shkola* (Free Ukrainian School), published from 1917 to 1919 under S. Cherkasenko and subsequently Alexander Doroshkevych, dealt exclusively with the problems of education and organization of schools.

The Ukrainian Academy of Education, founded in Kiev in 1917, became the center of research in education and training of teacher personnel. Work in this field was also continued at the existing universities, particularly in Kiev, under the direction of S. Ananïn, author of *Lektsiï z istoriï pedahohiky* (Lectures on the History of Pedagogics), published in 1918–19.

Papers read at the first and second All-Ukrainian teachers conventions on the history of education and pedagogical thought were published in the press. No other important works on education were published during the 1917–19 period in any part of Ukraine.

## THE UKRAINIAN SSR, 1919–32

The years immediately following the Soviet occupation of Ukraine were marked by an intensive search for new norms and educational methods and by efforts to devise a school system compatible with the needs and priorities of the new political order.

The ideas and program of the unified system of education, national in content, but partially adapted to the new social order imposed by the Communist system were implemented by educators and pedagogues united in the pedagogical section of the Ukrainian Scientific Society in Kiev and, after 1921, in the Scientific Pedagogical Committee of the Historical-Philosophical Section of the All-Ukrainian Academy of Sciences, with Ovksentii Korchak-Chepurkivsky acting as chairman of the committee, Alexander Doroshkevych as scientific secretary, and Volodymyr Durdukivsky as acting director. A section on history of education formed part of the committee, headed by Stephen Posternak. The committee published one volume of *Pratsi* (Works). Scientific research on education was conducted by the Scientific Pedagogical Society which was also attached to the All-Ukrainian Academy of Sciences. In addition to prominent educators from the committee, the membership of this

society consisted of a large group of educators and pedagogues, including Alexander Astriab, Basil Doha, and Gregory Ivanytsia. The idea of a unified labor school system was promoted by Theophil Lubenets, professor of education at the Kiev Institute of Public Education, and Victor Rodnikov. In Odessa, adherents of this trend included Michael Hordiievsky, author of *Pedahohika prahmatyzmu* (Pedagogics of Pragmatism, published in 1924), Artemii Hotalov-Hotlib, and V. Chudnovtsev, all members of the pedagogical section of the Odessa Scientific Society attached to the All-Ukrainian Academy of Sciences.

Among advocates of Western educational ideas such as a liberal comprehensive system of education, experimental pedagogy, and reflexology were: J. Chepiha-Zelenkevych, advocate of liberal education; Jacob Mamontov, follower of the method of esthetic education; Alexander Muzychenko, advocate of individualistic methods and a comprehensive system; Adrian Volodymyrsky, adherent of the "school of natural development" and theory of reflexology (director of the Kiev Experimental Pedological Station founded in 1923); B. Manjos, author of the monograph *Dydaktyka* (Didactics, 1930) and a believer in the American methodology of teaching, particularly reflexology. Before education in the Ukrainian SSR was modernized, this movement was centered in the Laboratory of Reflexology and Experimental education of the Physical-Mathematical Department of the All-Ukrainian Academy of Sciences, headed by Alexander Skovoroda-Zachyniaiev in Kiev, the editorial offices of the journal *Ukraïns'kyi Visnyk Refleksolohiï ta Eksperymental'noï Pedahohiky* (Ukrainian Herald of Reflexology and Experimental Pedagogy) published in Kharkiv from 1925 to 1930, and the Odessa Experimental Pedological Station established in 1923.

The government set a different course in the development of education in the 1920's through the People's Commissariat of Education of the Ukrainian SSR, in an effort to reshape education and training on the principles of Marxism-Leninism (see pp. 344 ff.). This trend was quite different from the prevailing unified system in the Russian SRSR in that it stressed social education and professional training. Its principles were worked out mainly by the heads of the People's Commissariat of Public Education, Gregory Hrynko, Jan Riappo, Alexander Shumsky, Nicholas Skrypnyk, and Volodymyr Zatonsky. The system of social education and its accompanying reforms were developed and propagated by such educators as Andrew Zilberstein, editor of the journal *Shiliakh Osvity* (Pathway of Education) published by the People's Commissariat of Public Education (1921-34), Nicholas Hryhoriev, and Sava Chavdarov.

The Ukrainian Scientific Research Institute of Education in Kharkiv (established in 1926) with a branch in Kiev and eight divisions, including a laboratory and a library, was the official center of scientific research in educational theory and practice. In addition to the monthly *Osvita v Kapitalistychnykh Kraïnakh* (Education in Capitalist Countries) published by the Institute, the following organs of educational ideas were published in the 1920's: *Narodna Osvita* (Public Education, 1919); *Proletars'ka Osvita* (Proletarian Education, 1920–1); *Shliakh Osvity* (1923–31); and the newspaper *Narodnyi Uchytel'* (Public School Teacher, 1925–30). The chairs of education in the principal institutes of public education also engaged in systematic educational research during this period, for example, the chair of education in Odessa established in 1927, and museums of education in Kiev (1929) and in Chernihiv.

Most of the centers and journals active in the 1920's were silenced in the early 1930's and many leaders, including proponents of the unified school system and free education were subjected to persecution. The system of social education was radically reorganized. One of its founders, N. Skrypnyk, committed sui-

cide, and G. Hrynko and V. Zatonsky were executed in 1938.

Much research into the history of Ukrainian education was carried out in the 1920's. Treatises by Alexander Savych and Theodore Titov explored the history of the brotherhood schools and higher education from the beginning of the sixteenth century to the end of the eighteenth. Nicholas Petrov and Lev Mylovydov researched the history of the Kievan Mohyla Academy; Nicholas Vasylenko wrote about the Lyceum in Kremianets and the Kiev University in the nineteenth century. Alexander Nazarevsky, Dmytro Krakhovetsky, and V. Durdukivsky worked on the history of education in that century; and Stephen Posternak wrote about the educational movement of 1917–19. G. Hrynko and J. Riappo produced theoretical and historical works on the organization of education and the system of social education in the 1920's. Professional education of this period was the specialty of Jacob Zvihalsky, Michael Ivanov, and Nicholas Hrunsky. Works on the history of education were produced by A. Hotalov-Hotlib, J. Mamontov, and Gregory Zhurakivsky and for the 1917–27 period by M. Hordiievsky.

## THE UKRAINIAN SSR, 1933–66

Following the liquidation of the study centers and the repression of educators whose views were not acceptable to the Soviet regime, their ideas and methods were denounced in a number of resolutions of the Communist Party Central Committee and the Soviet government (see pp. 351 ff.). Since the second half of the 1930's the development of education in the Ukrainian SSR has been based exclusively on Marxist principles, in harmony with the theories of labor and collective education formulated by the Soviet educator of Ukrainian descent, Anthony Makarenko, and further developed in Ukraine by Nicholas Dadenko, and S. Chavdarov.

The main center of research into the history of education, schools, and educational systems is the Scientific Research Institute of Education of the Ukrainian SSR, reorganized and transferred from Kharkiv to Kiev in 1934. It publishes *Naukovi zapysky* (Scientific Notes) in a number of series including historical and pedagogical. The Scientific Research Institute of Psychology, founded in Kiev in 1935 under the supervision of the Ministry of Education of the Ukrainian SSR, is a parallel institution. This institute also publishes a *Naukovi zapysky*, studies problems of teaching and education, and coordinates the activities of psychological laboratories in Kiev, Odessa, Kharkiv, and Lviv. The chairs of education at the universities and teachers' institutes also engage in educational research. The Republic Scientific-Pedagogical Society and the pedagogical section of the *Znannia* (Knowledge) society are active in the popularization of educational knowledge. There is no supervisory scholarly institution in the Ukrainian SSR. A Ukrainian academy of pedagogical sciences was proposed in the late 1920's, but never came into being. The only such institution in the USSR is the Academy of Pedagogical Sciences of the USSR in Moscow, founded in 1966 as the successor to the Academy of Pedagogical Sciences of the Russian SFSR (1943).

FIGURE 116. ANTHONY MAKARENKO

Scholarly works on education are published in *Naukovi zapysky* of the institutes already mentioned in the journal of general education, *Radians'ka Shkola* (Soviet School, 1945); and in the newspaper *Radians'ka Osvita* (Soviet Education, 1940). In addition, there are the methodological publications: *Doshkil'ne Vykhovannia* (Preschool Education,

1951), and *Ukraïns'ka Mova i Literatura v Shkoli* (Ukrainian Language and Literature in Schools) established in 1963 from a merger of two other journals. All are published by the Ministry of Education of the Ukrainian SSR. Problems of instruction in geography are discussed in the non-periodical publication *Heohrafiia v Shkoli* (Geography in Schools), which started in 1948, and some aspects of history teaching in *Ukraïns'kyi Istorychnyi Zhurnal* (Ukrainian Historical Journal).

In methodology, most attention is given to the teaching of Ukrainian and Russian language and literature. The leading authors in this field are: Tetiana Buhaiko, S. Chavdarov, Serhii Dudkin, V. Masalsky, Alexander Mazurkevych, and Peter Volynsky. Theoretical research in other fields has not been accorded so much attention: mathematical method (A. Astriab), physics (Alexander Babenko, Gregory De-Metz), zoology (Volodymyr Artobolevsky), geography (Alexander Dibrova), history (Ivan Krypiakevych). The following scholars have been working on various problems of methodology and Communist education: Nicholas Dadenkov, A. Hotalov-Hotlib, Stephen Lytvynov, Nicholas Hryshchenko, S. Chavdarov, and Basil Sukhomlynsky.

Most of these scholars are still preoccupied with the history of education under Soviet rule. Others working in this field are V. Hryshchenko, Alexander Dzeveryn, Theodore Naumenko, M. Nizhynsky, and Liubov Shevchenko. The education of the Princely period is treated as part of general history and the history of culture (Michael Marchenko). Works of Eugene Medynsky, T. Naumenko, and Yaroslav Isaievych deal with the history of brotherhood schools of the sixteenth and seventeenth centuries. K. Lazarenko has written a history of Lviv University while the history of Kiev University was published in a separate symposium in 1959. N. Dadenkov, M. Konstantynov, and V. Smyrnov have produced works on the general history of education. The bibliography of Soviet historical-pedagogical literature of the 1918–57 period has been compiled in the Russian Index by A. Piskunov. Considerable material on the history of education in Ukraine is offered in the Russian *Pedagogicheskaia Entsiklopediia* (Pedagogical Encyclopedia), Moscow, 1964–7.

## WESTERN UKRAINE, 1918–39

Educational efforts in Ukrainian lands under Poland were spearheaded by the Ridna Shkola (Native School) society with its journal of the same name. Professional organizations of teachers were also active in this field: Vzaïmna Pomich Ukraïs'koho Vchytel'stva (Mutual Aid Society of Ukrainian Teachers) which published the methodological monthly, *Uchytel's'ke Slovo*, subsequently changed to the *Shliakh Vykhovannia i Navchannia* (Pathway of Education and Teaching), 1927, the book series *Pedahohichno-metodychna biblioteka* (Pedagogical-Methodological Library), and sponsored an educational consulting bureau; and *Uchytel's'ka Hromada* (Teachers' Community) which published textbooks and the journals *Svitlo* (Light, 1921–2), *Uchytel'* (Teacher, 1923–4), and *Ukraïns'ka Shkola* (Ukrainian School, 1925–39).

Teaching methods in various fields were studied by Yaroslav Bilenkyi and Nicholas Matviichuk (Ukrainian language), Bohdan Zaklynsky (oral and written methodology), Ivan Levytsky (music), and Savyna Sydorovych (handicrafts).

I. Krypiakevych wrote on the history of education through the sixteenth, seventeenth, and eighteenth centuries in his general works *Istoriia Ukraïny* (History of Ukraine), *Istoriia kul'tury* (History of Culture), and in a number of articles. Works in Polish published on this subject in Lviv were authored by C. Kharlampovych and Alojzy Wańczura.

Ambrose Androkhovych, Ivan Fylypchak, among others, wrote on Ukrainian education in Austria, and the Rev. Josyf Slipyj wrote on the education of clergy and on the history of the theological academy in Lviv. Eugene Hrytsak produced a study of the development of schools and elementary education under the Soviet system. A study on the underground Ukrainian university in Lviv was written by Basil Mudryi. The works of Y. Bilenky, Ivan Herasymovych, and Lev Yasinchuk treated the development of Ukrainian private schools, and those of S. Persky (Stephen Shakh) adult education. The Polish author S. Lehnert wrote about schools in Galicia in the 1920's. The general history of education was the subject of the works of Ostap Makarushka, Basil Levytsky, B. Zaklynsky, and the Polish scholar Stanisław Kot.

During World War II the work of the Mutual Aid Society of Ukrainian Teachers was continued in Cracow and Lviv by the Uchytel's'ke Ob'iednannia Pratsi (Teachers' Labor Association) attached to the Ukrainian Central Committee [Vol. I, pp. 875a, 887b], which published the journal *Ukraïns'ka Shkola* (Ukrainian School, 1942–4).

## ABROAD AFTER 1918

During the period between the two world wars, the Drahomanov Ukrainian High Pedagogical Institute and the Ukrainian Pedagogical Society, both in Prague, played an important part in the development of Ukrainian educational ideas and in research on the history of education. The former published *Naukovi zbirnyky* (Scholarly Symposia) and textbooks under the firm Siiach (The Sower). S. Siropolko, a professor at the Institute, authored *Istoriia osvity na Ukraïni* (History of Education in Ukraine) published in Lviv in 1937 and considered the best study in its field, a descriptive work, *Narodna osvita na Soviets'kii Ukraïni* (Public Education in Soviet Ukraine, Warsaw, 1934), and a number of articles on education in Ukraine and in the countries of Ukrainian settlement. Schools and education in Ukraine were also the subject of writings by Basil Bidnov. Volodymyr Doroshenko and Zenon Kuzela wrote a survey of education in the early twentieth century. The Ukrainian Pedagogical Society in Prague published treatises of Basil Simovych on schools in Bukovina, Julius Husnai in Transcarpathia, and Maria Omelchenko in Kuban. The history of Ukrainian education abroad has been partly expounded in the general work of Simon Narizhny, *Ukraïns'ka emihratsiia* (Ukrainian Emigration, 1942). S. Rusova was also an eminent member of the Prague center of educational research.

FIGURE 117. STEPHEN SIROPOLKO

Among the post-World War II émigrés in Germany, Professor Gregory Vashchenko of the Institute of People's Education in Poltava and later of the Ukrainian Free University in Munich, worked on the theory and history of education and produced several works in these fields. The journal *Ukraïns'ka Shkola* (Ukrainian School, 1947–8) was devoted to practical problems of education. Ivan Krylov wrote on the system of education in Ukraine in the 1917–30 period. The publications on the Ukrainian Free University, the Ukrainian Technical Husbandry Academy, and the Ukrainian Technical Husbandry Institute contain a mass of material on higher education abroad in the 1920's and 1930's.

On the North American continent, the Educational Council of the Ukrainian Congress Committee of America in the United States and the Association of Ukrainian Educators in Canada deal

with problems of education, including methodology and the publication of textbooks. The organizations mentioned above and the Association of Ukrainian Organizations in Australia established a special committee in 1965 to draft a project of the Ukrainian educational system in the free world. The committee is headed by Zenon Zelenyi and Cecilia Paliïv.

Educational journals such as *Zhyttia i Shkola* (Life and School) and *Uchytel's'ke Slovo* (Teacher's Word), published privately by Basil Lutsiv, have been appearing in the U.S. and Canada since 1956. The quarterly *Plastovyi Shliakh* (The Plast Pathway), revived in 1966, is devoted to problems of Ukrainian Scout life and education.

## 2. TO THE END OF THE EIGHTEENTH CENTURY

### TO THE MID-SIXTEENTH CENTURY

#### Before Adoption of Christianity

It is probable that several systems of writing existed in Ukraine-*Rus'* even before the adoption of Christianity (988). Old-Ukrainian, Byzantine, and Arabic sources mention *Cherty y rezy* (dashes and slashes) with the help of which the Slavs counted and notated, a bible and psalter found in Khersones (Korsun) in the Crimea written *rus'skimy pis'meny* (in *Rus'* characters), and a written language of the *Rus'* people. The existence of a written language is further indicated by various, as yet undeciphered, inscriptions on archaeological finds.

#### After Adoption of Christianity

The adoption of Christianity at the end of the tenth century heralded the beginning of literature, both original and in translated form (from Byzantium and Bulgaria). This was made possible by the adoption of a Slavic alphabet (the so-called *Kyrylytsia*) created at the end of the ninth century by students of SS. Cyril and Methodius, and the wider use of Church Slavonic, a language understood at the time by southern and eastern Slavs. After 863, Cyril and Methodius translated the basic liturgical books from Greek into Church Slavonic, which then became the major language in southern and eastern Slavic lands. In western Slavic lands, Latin became the church and official language. Literature in Church Slavonic provided the primary source of education for the higher classes of Kievan *Rus'* society. Not only liturgical books were used for this purpose, but also sermons and teachings of the church

fathers, the "Lives" of martyrs and ascetics, historical stories and chronicles, and works on nature—*Fisiolog, Shestodnev,* etc. Later, original works on various subjects also became textbooks, particularly the first pedagogical work in old Ukrainian literature, *Pouchenie* (Instruction) or *Hramotytsia* by Prince Volodymyr Monomakh (*ca.* 1117 [Vol. I, p. 981]).

The first schools in Kievan *Rus'* appeared at the time of the introduction of Christianity. Numerous questions concerning the emergence of schools have not yet been resolved, but it is known that in Ukraine education and a school system, like literature, were adopted from Byzantium on the pattern of Bulgarian examples. Nestor's chronicle of the year 988 records that Prince Volodymyr the Great decreed that children of prominent persons be assembled for "book learning." In this same chronicle it is said of Yaroslav the Wise that he appointed priests to churches and ordered them to teach the people, paying them for this from the princely treasury. Concerning Yaroslav, the (first) Sophia chronicle of the year 1030 notes that in Novgorod "he gathered 300 children of nobles and priests to be taught from books." On the basis of these chronicles it is possible to accept as fact the existence of schools in Kievan *Rus'*: higher schools, probably boarding schools, at the courts of princes for the children of prominent people (*boyars* (nobles) and knights), and lower schools in monasteries and churches for townspeople (merchants and craftsmen). Among the princes, individual tutoring was the usual method of education. Instructed by teachers from among the nobility, the sons and daughters of the Kiev, Chernihiv, and other princes studied philosophy, rhetoric, and grammar, and learned several languages (Vsevolod, son of Yaroslav, knew five languages).

The main goal of education, apart from "strengthening the faith," was to train priests, sextons, singing masters, and officials for the princely chancery and administration. Teachers were priests, at first Greeks and Bulgarians, later local men. Children began their schooling at seven to nine years of age. The first year was spent in learning the alphabet and the rudiments of reading and writing, possibly with the help of primers. In the second year the students were taught the fundamentals of arithmetic and calendar calculation. Later they studied the sacred writings—*Psaltyr* (Psalter), *Apostol* (Epistle), *Evanheliie* (Gospel), and *Chasoslov* (Prayerbook) —thus acquiring the rudiments of faith and morals as well as basic education. Singing was also taught in the schools. The mastery of rhetoric and the Greek language, which was necessary in diplomatic and trade relations with Byzantium and other countries, completed formal education. Students and adults acquired a knowledge of history, geography, and the natural sciences through the careful reading of books.

FIGURE 118. KIEVAN CAVE MONASTERY (engraving, eleventh century)

Teaching at the time was based on the precepts of St. John Chrysostom, presented in his *O voskrmlenii detii* (On Bringing up Children). The textbook on grammar was a translation of John Damascene's *O osmekh chastekh slova* (On the Eight Parts of a Word).

Initially, education in schools organized by the princes was of a more secular nature, and its primary goal was to prepare noble youths for state and higher church offices. After it came under the jurisdiction of ecclesiastical circles, education became increasingly one-sided, being limited to the acquisition of reading and writing skills, using for the most part liturgical books, most often the Psalms. The education of secular persons (primarily burghers and craftsmen) usually ended in the lower schools. Only candidates for the clergy or children of princes and nobles received supplementary education. Kiev, Novgorod, Polotsk, Chernihiv, Volodymyr Volynsky, and Halych were the major centers of learning.

**From the Mongolian Invasion to the Mid-Sixteenth Century**

After the Mongolian invasion in 1240, education in the central and eastern lands of Ukraine deteriorated. Halych and Volodymyr Volynsky, the capitals of the Galician-Volhynian principality, became the main cultural centers, with schools operated on the pattern of those at Kiev.

Nevertheless, Mongolian rule did not completely arrest the development of schooling in central and eastern Ukrainian lands. Schools continued to exist in monasteries and churches, their system of instruction being similar to that of the Old Ukrainian schools of the eleventh and twelfth centuries.

With the annexation of Galicia to Poland in 1387 and Volhynia to Lithuania, Galicia was increasingly influenced by Western culture with Latin as the language of instruction, while Volhynia transmitted its culture, language, educational system, and teaching methods to the Grand Duchy of Lithuania.

Teachers were, as previously, priests and sextons—formerly called *didaskaly*, then *maistry*, *ustavnyky*, and *bakalary*. They taught children irrespective of financial and social standing, including those of craftsmen and peasants, in schools housed in monasteries and churches, or at the houses of well-to-do persons. Liturgical books continued to serve as textbooks (*abetsedarii*, the ABC's). In church schools the curriculum consisted of the alphabet, taught from primers, the reading of liturgical texts, and the study of the basic principles of arithmetic. The transition from the primer to *Chasoslov*, *Psaltyr*, and other liturgical texts corresponded to the transfer from one grade to another, and was marked by appropriate ceremonies. Subjects of study, in addition to reading, included church singing and writing, at first in the manner of the Old Ukrainian *ustav* (large calligraphic writing) and later, cursive writing. Monastic schools were considered secondary schools, to which pupils from parochial schools came for the completion of their studies. The program of studies in the monastery schools included Greek, grammar, and rhetoric, and in some places mathematics and music (singing).

Instruction in schools in all Ukrainian lands was in "the language of *Rus'*", i.e., in Church Slavonic with many elements of the Ukrainian language of the time. Secondary schools with this as the language of instruction existed at the end of the fifteenth and the beginning of the sixteenth centuries in Zabludiv, Ostrih, Volodymyr Volynsky, Kholm, Lviv, Uhniv, and Kiev (St. Michael monastery). In the western lands, Latin had been taught in addition to Greek since the thirteenth century, since it was the language required for diplomatic and trade relations. Centers of formal education were Ostrih, Lviv, Kholm, and Kiev.

There were no institutions of higher learning in Ukraine until the last quarter

of the sixteenth century. Children of Ukrainian magnates, nobles, and wealthier burghers received their higher education at Western universities: in Cracow (established in 1364), Prague (established in 1348), Padua, Bologna, and other cities. Separate boarding schools existed in Cracow (from 1409) and Prague (the so-called Lithuanian Collegium, founded in 1397).

## FROM THE MID-SIXTEENTH TO THE MID-SEVENTEENTH CENTURIES

### Catholic and Protestant Schools

Schools in Ukraine until the middle of the sixteenth century and even in later decades continued to be religious in nature, limited by the traditional methods and curriculum established under Byzantine influence in the eleventh and twelfth centuries. This situation coupled with the influence of new cultural currents of humanism, renaissance, and modern Western methods of teaching, led Ukrainian youth (mainly nobles and wealthier burghers), including those of Orthodox faith to seek education in Catholic cathedral schools at Lviv, Kiev, and Lutsk.

In addition to Latin, Greek, and Polish these schools taught various subjects which were included in the system of the seven liberal arts (*septem artes liberales*). The Jesuits became increasingly active, particularly after the Union of Lublin in 1569, and Jesuit schools appeared in Ukraine, notably the Jesuit college in Vilna (1570), which in 1579 attained the status of an academy and became one of the major educational centers for Ukrainian and Belorussian youth. The Jesuits opened many other schools in various regions of Ukraine: for example, in Yaroslav (1575), Peremyshl, Lviv, Lutsk (1608), Ostrih, Kamianets Podilsky (1610), Vinnytsia, Bar, Pinsk, and Kiev (1647), in all 23 colleges in Ukrainian lands. Education in these schools was conducted in the Catholic spirit, occasionally bordering on the fanatical, but applying new methods of teaching, in contrast with the old scholastic method. The program of subjects in these schools was divided into two groups, lower (*studia inferiora*) and higher (*studia superiora*). The first group, or gymnasium, was composed of five grades, whereas the higher group consisted of three-year philosophical and four-year theological courses (in Ukrainian lands only in Pinsk). A separate place among Polish Catholic schools was occupied by the Academy of Zamość (Zamostia), founded in 1595 by the Polish Chancellor, Jan Zamojski. It consisted of eight grades, with students divided into five groups according to nationality. Many Ukrainians studied at this academy, including such future prominent Ukrainian teachers and organizers of Ukrainian schooling as Kasiian Sakovych, later rector of the Kievan brotherhood school (1620–4), Sylvester Kosiv, professor at the Kievan Mohyla Collegium, and Isaiah Trofymovych-Kozlovsky, rector of the Kievan Mohyla Collegium.

With the spread of Protestant ideas and the Reformation in Ukraine, adherents of these movements from among Ukrainian magnates and nobles began to establish their own schools. The most prominent of these was the Calvinist school in Panivtsi in Podilia. Socinian schools existed in Kyselyn (near Volodymyr Volynsky), Khmelnyk, Hoshcha, Berestechko; Arian schools were established at some Arian settlements in Volhynia. In all these Protestant schools the language of instruction, depending on local conditions, was German, Latin, or Polish. The curriculum and structure were based on the ideas of the German humanist Philipp Melanchthon and the Strasbourg pedagogue Johannes Sturm. The schools were called gymnasiums and the program of studies consisted of three grades of grammar (*infima*, *media*, *suprema* or *syntactica*) and two grades of poetics and rhetoric. They were attended primarily by the children of

nobles and burghers, and like the Catholic schools, were a medium for the denationalization of Ukrainian youth.

### Revival of Ukrainian Schools

In order to counteract the influence of Catholic and Protestant schools and to neutralize the spread of their influence on Ukrainian society, wealthier individuals and groups began establishing Ukrainian Orthodox schools in the last decades of the sixteenth century. Contributing to the establishment of these schools was the publishing and translating activity of a Belorussian doctor and printer, Francis Skoryna (see Book Publishing, p. 441) and of Prince Andrew Kurbsky, a refugee from Muscovy, who in the 1560's and 70's initiated in Volhynia a movement to protect the Church Slavonic language and literature from Polish influences. Orthodox schools were founded in Smotrych in Podilia (1579) and Kholm (1582), organized on the pattern of Catholic (Jesuit) and Protestant gymnasiums, and having as their goal the education of priests, teachers, writers, etc. Owing to the efforts of Prince Constantine Ostrozky, such schools were also opened in Turiv (1572), Volodymyr Volynsky (1577), and Slutsk (1580). Of the schools founded by Prince Ostrozky, the most important was the Ostrih school, which opened around 1580 and was called by contemporaries an academy because of its prominence. The faculty of the Ostrih school was composed of Ukrainian and Greek scholars and pedagogues who taught the Slavic-*Rus'*, Greek, Latin, and Polish languages, as well as grammar, dialectics, rhetoric, philosophy, and other subjects. They raised the level of education in this school to that of the contemporary Catholic and Protestant schools. By including in its curriculum the study of theology and philosophy, the Ostrih school went beyond the "seven liberal arts" adopted by secondary schools of the West and Poland in the Middle Ages. Its teachers and writers took an active part in translating the Bible, and in editing other works published by the Ostrih press (see Book Publishing, p. 443). Herasym Smotrytsky, an eminent scholar of the late sixteenth century [Vol. I, p. 993a], was rector of the Ostrih school, which continued to function until the death of its founder (1608). Its graduates included many prominent Ukrainian cultural and political leaders. Bishop Theodosius Lazovsky established a Greek-Slavic school in Volodymyr Volynsky on the pattern of the Ostrih school, drawing some teachers from Ostrih.

### Brotherhood Schools

Educational institutions on a secondary school level established in the 1570's by the brotherhoods were even more important. These were religious organizations resembling guilds [Vol. I, p. 629] in whose statutes (1542, 1544, and 1586)

FIGURE 119. TITLE PAGE OF THE BOOK OF RULES OF THE ASSUMPTION BROTHERHOOD SCHOOL IN LVIV, 1587

various tasks were enumerated, including the establishment of schools and printing houses. In this respect they were greatly aided by Orthodox magnates and nobles. The first of these brotherhood schools was opened in Lviv in 1586 by the Assumption (later Stavropygian) Brotherhood. This school sought to provide a national and religious education for youth from all strata of society; there was no fee for the poor, but the rich were obliged to pay tuition.

Following the example of the Lviv brotherhood school, other cities, in the closing decades of the sixteenth century, began to establish similar schools: Peremyshl (1592), Halych, Rohatyn, Dubno (1604), Kholm, Zamość (1606), Lublin, Berestia, Kiev (1615), Vinnytsia, Kamianets Podilsky, Lutsk (1620), Volodymyr Volynsky, Medzhybizh (1621), Kremianets, and many others. In Lithuania, a brotherhood school was established in Vilna (1587), and in Belorussia in Minsk and Mohyliv.

The internal structure of brotherhood schools, their program, and general methods of instruction were regulated by separate school statutes, as exemplified by *Poriadok Shkil'nyi* (School Order) and *Prav Shkoly Hreko-Slovians'koï Luts'koï artykuly* (Articles of Rights of the Greek-Slavic school in Lutsk), borrowed by the Lutsk brotherhood in 1620–4 from the Lviv school. The first document set forth the principles for organizing a school, while the articles summarized regulations for students and designated the rights and obligations of teachers. Admission to a school was contingent upon a separate agreement between the school and the parents. The pupil himself, with the advice of the rector, could choose his subjects of study. Students were admitted regardless of their social standing. In the school they were differentiated only by their degree of proficiency. The curriculum of the brotherhood schools was divided into three sections: in the first, students studied letters and syllables; in the second they learned to read and memorize texts; in the third they were taught to explain and independently analyze texts. The program of studies corresponded to the requirements of secondary education of the time: in addition to Church Slavonic, Greek, Latin, and later Polish, it included dialectics, poetics, rhetoric, homiletics, and in the afternoons, religion, arithmetic, and music (singing).

There were also numerous primary schools, for the most part parochial, in all sections of Ukraine during the seventeenth century. In the central and eastern lands they were supported by church communities, and in the western lands by church brotherhoods. In some cities there were as many as three or four schools. The teachers in these schools were called baccalaureates. Typical of the time were itinerant teachers—sextons, who traveled not only from school to school, but very often from one area of Ukraine to another.

Education in brotherhood and other schools was based on the pedagogical ideas expressed in the works of leading educators and writers such as Ivan Vyshensky, Cyril Stavrovetsky, and Simeon Polotsky.

Many primers and grammars were published to serve as textbooks [Vol. I, p. 492 ff.]. Even before the establishment of the Lviv brotherhood school, Ivan Fedorovych printed in 1574 his *Bukvar* (Primer), the first handbook of its kind in Ukraine, Belorussia, and Muscovy. The first grammar of Slavonic language was published in Vilna in 1586, followed in Lviv by a grammar of the Greek-Slavonic language, *Adelfotes* (1591); then *Nauka ku chytaniiu i rozumeniiu pysma slovenskoho* (The Study of Reading and Understanding Slavonic Writing) and *Hrammatika Slovenska* (Slavonic Grammar) both by Lavrentii Zyzanii-Tustanovsky published in Vilna (1696), and the most notable of them, *Hrammatiky slovenskiia pravylnoe syntahma* (A Grammar of Proper Slavonic Syntax,

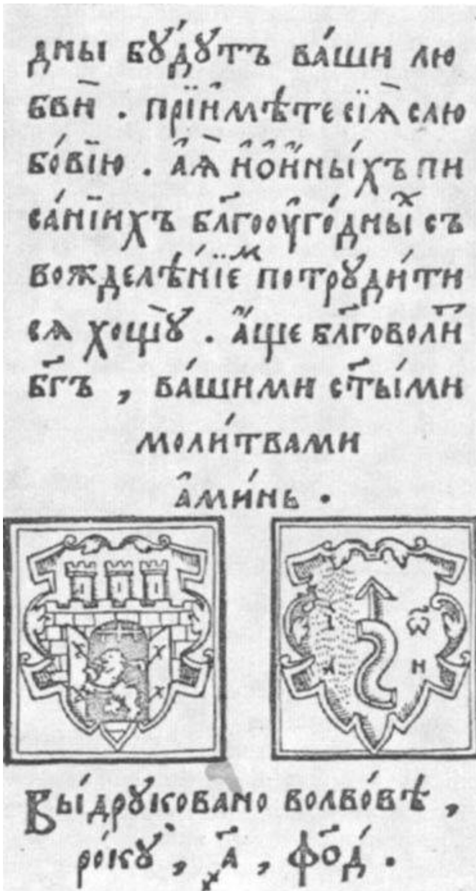

FIGURE 120. COLOPHON OF IVAN FEDOROVYCH'S PRIMER (1574)

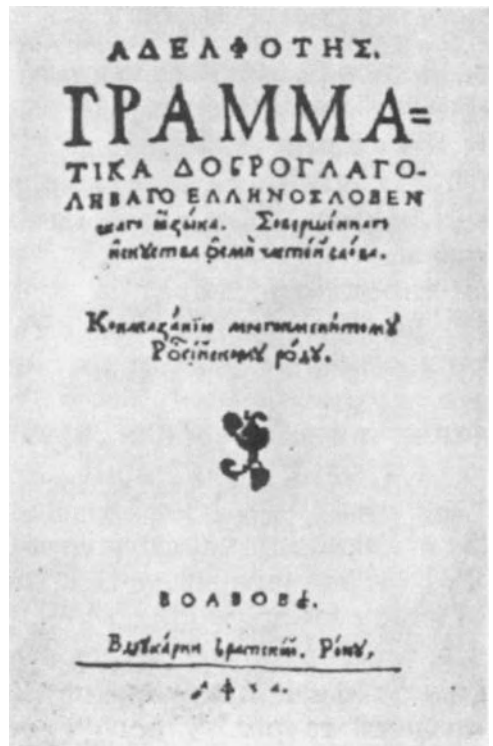

FIGURE 121. TITLE PAGE OF *Adelfotes*, LVIV, 1591

1619) by M. Smotrytsky, published in Evie in the Vilna region and later republished in Muscovy, Wallachia, and other countries.

Brotherhood schools contributed to the spread of religious and national consciousness and the development of Ukrainian (and Belorussian) culture, particularly through the publication of textbooks. The eminent Czech pedagogue Jan Amos Komensky based his *Didactica Magna* (Great Didactics) largely on the practice of brotherhood schools. These schools retained their importance until the latter half of the seventeenth century.

Printing houses established by the brotherhoods, notably that in Lviv, played an important role in the development of schools and education. During the seventeenth and the first quarter of the eighteenth centuries, the Lviv printing press produced 34,237 copies of primers, 500 grammar handbooks, 200 copies of a pedagogical text, *O vospytanii chad* (On the Education of children), 1602, as well as other books required by schools. The Kievan Cave Monastery's printing press also published a number of school textbooks.

**Kievan Mohyla Collegium**

Over the years the Kievan brotherhood school established in 1615 by the Brotherhood of the Annunciation became the most prominent. Its growth was due to the protection rendered by the Kozak Host and the material support of church hierarchs, Job Boretsky and Peter Mohyla. In program and internal structure it was somewhat similar to Polish Catho-

lic, especially Jesuit, schools. As in other brotherhood schools, not only Orthodox, but Catholic theology as well was taught to counter the influence of Polish Catholicism and the Union. In 1632 Metropolitan Peter Mohyla created the

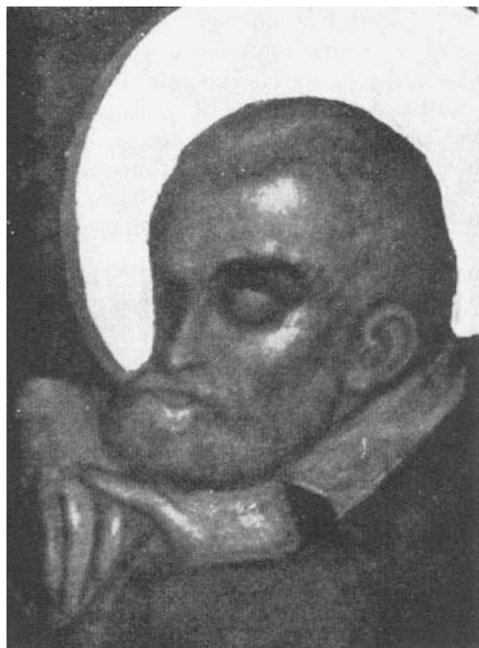

FIGURE 122. PETER MOHYLA (from a fresco at the Church of the Transfiguration in the Berestiv part of Kiev, 1644)

Kievan Mohyla Collegium using the Annunciation Brotherhood's school and the school at the Kievan Cave Monastery as its basis. The metropolitan enticed prominent teachers and scholars to the collegium, safeguarded its rights by securing a charter from King Władysław IV in 1635 and its financial basis by donating several estates to the Annunciation monastery which supported the school. Despite the fact that the school had the official status of a secondary school, the Kievan Mohyla Collegium, with its West European educational system and formal level of instruction, was equivalent to an academy, and was considered as such. As in other West European and Polish schools of the time, Latin was the language of instruction (except in catechism and Slavic grammar). Students also studied Ukrainian, Greek, and Polish. Lectures in the seven liberal arts, namely grammar, rhetoric, poetics, philosophy, mathematics, astronomy, and music were on a high level.

The Mohyla school did not aim to elevate scholarship or develop theology and philosophy. Its main objective was to prepare youth for everyday, practical life, provide it with a classical education, the ability to express and defend its views, and prepare educated priests, teachers, speakers, and writers-polemicists.

In terms of its curriculum the Kievan Collegium was divided into seven grades. It was supervised by a rector, usually

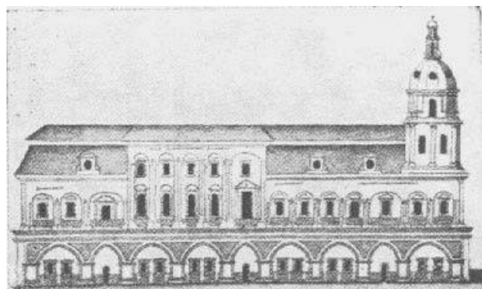

FIGURE 123. BUILDING OF THE KIEVAN MOHYLA ACADEMY (engraving, eighteenth century)

elected to this post, assisted by a prefect. Members of all strata of society received their education here: clergy, nobles, Kozak officers and burghers, as well as the *pospolyti* or common people, including regular Kozaks, artisans, and peasants. Besides Ukrainians, the students included Russians, Rumanians, Bulgarians, Serbs, and even Greeks and Arabs, thus elevating the Collegium to an educational center for the whole Orthodox world. Following its example and with the aid of Kievan professors and teachers, a Slavic-Greek-Latin academy was established in Moscow in 1682. In the first half of the eighteenth century over 20 theological seminaries were founded in various Muscovite and Sibe-

rian towns. In the 1640's Peter Mohyla established a branch of the Kievan Collegium in Vinnytsia, which eventually was transferred to Hoshcha in Volhynia, where it continued to operate until the end of the seventeenth century.

## FROM THE LATE SEVENTEENTH TO THE NINETEENTH CENTURY

### General Characteristics

The existence of a wide network of brotherhood schools in western Ukrainian lands during the first half of the seventeenth century and their expansion to central and eastern lands, climaxed by the founding of the Kievan Mohyla Collegium, contributed greatly to the development of Ukrainian (and Belorussian) culture and the crystallization of religious and national feelings on the part of the Ukrainian people. This was subsequently reflected in the national and political renascence of Ukraine which led to the struggle for independence and statehood.

In the second half of the seventeenth century, after Ukraine had been divided into Right Bank and Left Bank (1667), brotherhood schools in the western lands (incorporated into the Polish state) began to decline. The center of the educational movement was transferred to Left-Bank Ukraine, and at first gained great momentum under the protection of the Kozak Hetman state. Moscow arrested this development, however, by suppressing all manifestations of independent political and cultural life in Ukraine.

In 1689 the Kievan Mohyla Collegium introduced theology into its curriculum and became an institution of higher learning, and was officially designated an academy in 1701 by a charter from the tsar. The academy enjoyed its period of greatest development during the rule of Hetman Ivan Mazepa, and later under the protection of Kievan Metropolitan Raphael Zaborovsky. Its internal structure and methods of instruction remained the same as when it was a collegium. With the introduction of the study of theology, a full program of studies at the academy required twelve years. This term was divided into eight grades, with the highest being philosophy (two years) and theology (at least four years). First in importance among the languages taught in the eighteenth century was Latin, then Church Slavonic, Greek, Old Hebrew, and Polish (the last on a par with Latin not only in lectures, but also in the academy's publications). Ukrainian began to gain wider use in the seventeenth century as a language of

FIGURE 124. KIEVAN MOHYLA ACADEMY, SOME OF ITS STUDENTS, AND RECTOR J. KROKOVSKY (engraving, first half of the eighteenth century)

instruction. It was generally used in academic life, and sometimes even in academic publications. Under pressure from Moscow in 1765, Russian became the language of instruction in all subjects. In the middle of the eighteenth century, German and French were introduced as optional subjects. In the second half of the eighteenth century, geodesy and construction of fortifications were included in the curriculum. Vocal and instrumental music and painting were all taught at the academy. Its general method of education up to the mid-eighteenth century was scholastic. Lectures in philosophy were based on Aristotle, later on Christian Baumeister's philosophical system.

New pedagogical methods developed

in the West affected the academy very little. Attempts to modernize teaching and to introduce the natural sciences and mathematics into the curriculum, initiated by Theophan Prokopovych at the beginning of the eighteenth century, produced no result and came to an end with his resettlement in St. Petersburg.

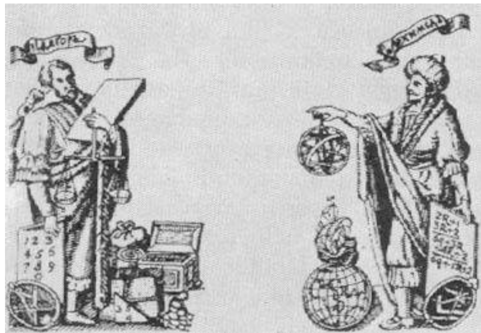

FIGURE 125. PYTHAGORAS AND ARCHIMEDES ON THE TITLE PAGE OF LEONTII MAHNYTSKY'S MATHEMATICS TEXTBOOK (1703)

The internal life of the academy, i.e., the deportment of students and the privileges and responsibilities of teachers, were regulated by special instructions, of which the *Instruktsiia* of 1763 prepared by rector Samuel Myslavsky is an example. Those enrolled in the first six grades were called pupils, while those attending classes in philosophy and theology were classed as students. The seating arrangement in classes was according to scholastic achievement. Examinations were held twice a year, in December and June.

FIGURE 126. KIEVAN STUDENTS (eighteenth century)

At the beginning of the eighteenth century, there were over 2,000 students at the academy. This number gradually decreased: there were 1,100 students in 1715; 1,112 in 1744 (380 clerical and 722 secular students); 1,160 in 1784 (388 clerical and 777 secular); 898 in 1799 (554 clerical); and 1,158 in 1811 (1,029 clerical). Among the rectors and professors of the Academy were such prominent seventeenth and eighteenth century Ukrainian educators, scholars and writers as Sylvester Kosiv, Innocent Gizel, Lazar Baranovych, Joannikii Galiatovsky, Varlaam Yasynsky, Stephen Yavorsky, Theophan Prokopovych, George Konysky, George Shcherbatsky, and David Nashchynsky (see Scholarship, pp. 236–7). Many prominent scholars and civic and church leaders were graduates of the Kievan Academy: hetmans Ivan Vyhovsky, Ivan Mazepa, and Philip Orlyk; St. Demetrius Tuptalo; philosopher Gregory Skovoroda; the chancellor of Catherine II, Prince Alexander Bezborodko; the director of the Moscow archives of the College of Foreign Affairs Nicholas Bantysh-Kamensky. The Kievan Academy provided professors for the Slavic-Greek-Latin academy in Moscow, for the universities of St. Petersburg and Moscow and later for the St. Petersburg Academy of Science, as well as rectors and professors for numerous Russian theological seminaries and high schools of the eighteenth century. Many of the higher Russian clergy in the first half of the eighteenth century were graduates of the academy. The Russian government rejected proposals submitted by Ukrainian political leaders in the latter half of the century to transform the academy into a university, or at least to establish faculties of mathematics or medicine (a medical class was established in 1802). When the estates of the Annunciation monastery, which supported the academy, were

secularized, the school became dependent on annual government appropriations, which were never adequate. It gradually began to lose its character as an institution of general education, and in 1817 the academy was closed. Its place was taken over by the Kievan Theological Academy in 1819.

**From the Latter Half of the Seventeenth to the End of the Eighteenth Century**

Several schools modelled on the Kievan Mohyla Academy came into existence in Left-Bank Ukraine and Slobids'ka Ukraïna in the second half of the seventeenth and during the eighteenth centuries. The most important was the school transferred by Lazar Baranovych from Novhorod Siversky to Chernihiv in 1689, which in 1700 became a college (six grades) offering all courses (including rhetoric) except philosophy and theology. In 1736 there were 253 students in this school, in 1743–4 there were 267. Of the latter number, 107 were the children of clergymen, 33 of Kozak officers, 49 of lower rank Kozaks, 19 of burghers, 27 of peasants, and 29 of secular emigrants from Ukrainian lands under Poland. In 1776 the school became a theological seminary, and retained this status until 1917.

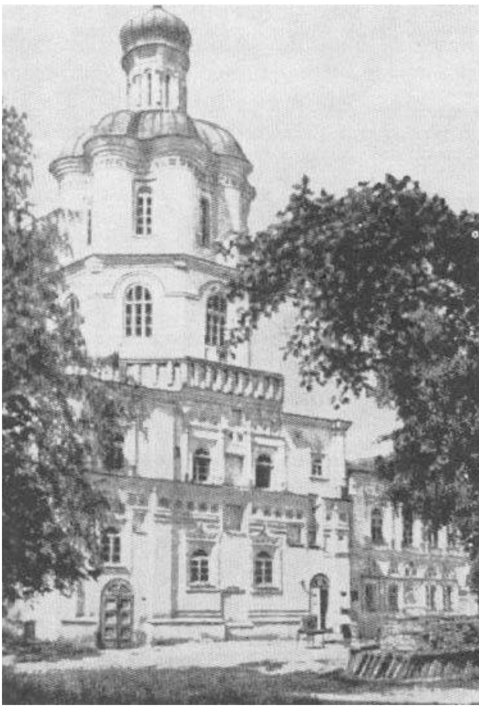

FIGURE 127. BUILDING HOUSING THE CHERNIHIV COLLEGE IN THE EIGHTEENTH CENTURY

The church reform initiated by Peter I in Ukraine (as well as in Muscovy) and the proclamation of the *Dukhovnyi Reglament* (Spiritual Regulation), which called for the establishment of new schools to prepare candidates for priesthood, led to the founding of secondary schools in Kharkiv, Pereiaslav, and Poltava (some of which were branches of the Kievan Mohyla Academy). The Kharkiv Collegium was the main cultural-educational center in Slobids'ka Ukraïna at the beginning of the nineteenth century. It was opened in 1727, introduced the study of theology in 1734, and in 1768 initiated classes in French, German, mathematics, geometry, drawing, engineering, artillery, and geodesy. There were 267 students in the upper grades of the Kharkiv Collegium in 1785. Of that number, 120 belonged to the nobility and 50 were sons of the clergy. Gregory Skovoroda lectured in philosophy in this school. The collegium lost its prominence with the founding of the University of Kharkiv in 1805.

Noteworthy among other secondary schools was the Pereiaslav college, opened in 1738 thanks to the efforts of Bishop Arsenius Berlo, which initiated the study of theology in 1778 (and continued as a theological seminary until 1862). There were theological seminaries also in Poltava (founded in 1779, later transferred to Katerynoslav) and in Novhorod Siversky (1785–1795).

Each of these schools was dependent on its local bishop, who cared for its material welfare and the quality of its teachers, and resolved questions of education and instruction. Although called theological seminaries, these schools did not limit their programs to the prepara-

tion of future priests, but were general educational institutions for persons in all walks of life. Their existence was for the most part brief; after the confiscation of monastery lands, some seminaries relying on government support gradually ceased their activity; others supported by their eparchies operated for a longer time. Their importance began to wane, especially after the Russian government of Catherine II commenced the establishment of schools in some cities (Kiev, Katerynoslav, Novhorod Siversky). These government schools corresponded to the lower grades of later gymnasiums, and deprived collegiums and seminaries of their basic supply of pupils. Simultaneously, official Russian schools for the privileged classes began to appear as part of Catherine's policy of centralization. These schools were open to the nobility and clergy but closed to other segments of the population.

Several professional schools were in operation in the eighteenth century: the Medical-Surgical Academy in Elysavethrad, an agricultural school in Mykolaïv, a music school in Katerynoslav, and one for the study of voice in Hlukhiv. Only the school of the Church of the Intercession at the Zaporozhian Sich (until its destruction on the orders of Catherine II), was Ukrainian in spirit. One of its two divisions educated future sextons, cantors, and deacons, while in the other, orphans of Kozaks or children saved by the Kozaks were taught writing, singing, and the use of arms.

### Elementary Schools

Parochial schools were widespread in Left-Bank Ukraine during the eighteenth century; usually they were located in separate houses next to the church, and were conducted by sextons. In some smaller towns and on homesteads children studied under itinerant sextons. Pupils who wished to become teachers were called *molodyky* and lived in the school. A partial picture of the development of parochial schools, basically elementary schools, is provided by statistics found in the books of seven of the ten *polks* (regiments) of the Hetman state for the years 1740–7. In the area encompassed by these seven regiments there were 866 schools for the 1,099 settlements covered by the statistics. In Slobids'ka Ukraïna, according to partial data provided by the 1732 census, there were 129 parochial schools in which children of all classes of society were educated.

The network of schools and the level of education in the Hetman state were far better than those in Poland, and incomparably superior to those in Muscovy. Various sources substantiate the high level of education in Hetman Ukraine. The memoirs of foreign travelers cite the fact that not only men but also many peasant women in Ukraine were proficient in reading and writing. In the eighteenth century, every large settlement in the Hetman state and Slobids'ka Ukraïna had its own school.

With the introduction of serfdom, the revocation of Kozak freedoms, and increased Russification, the number of these schools decreased sharply. The tsarist government's policy of centralization almost completely destroyed the elementary school system. In 1768, for example, there had been 134 schools in the territory of the later Chernihiv, Horodnia, and Sosnytsia counties (i.e., one school per 746 persons), but one hundred years later, in 1875, there were only 52 schools in the same territory (i.e. one for 6,750 persons). Even worse was the situation in the entire Chernihiv *guberniya*, where in 1860 there were 70 schools, or one per 17,143 persons.

### In Ukrainian Lands in the Polish Republic

In Right-Bank Ukraine, in Volhynia and Galicia, Orthodox brotherhood schools began to disappear in the second half of the seventeenth century as the number of Orthodox nobility decreased and the burghers lost their influence. For

a time, Jesuit schools continued in the cities, but towards the end of the seventeenth century they began to decline. They were replaced by Piarist schools (run by the Order of St. Piarius) in Lviv, Zolochiv, Mezhyrich, and other cities, especially after the reform in 1754 led by Stanisław Konarsky, a noted Piarist educator. Basilian (Order of St. Basil the Great) schools were organized, beginning in 1617; the "Ruthenian" language was introduced into their teaching program, but otherwise their educational activities were conducted in a Roman Catholic spirit. Basilian schools were patterned in some cases on the Orthodox brotherhood schools. More Basilian schools were opened in the eighteenth century, some endowed by Polish magnates, e.g., Stanisław Lubomirski in Sharhorod (*ca.* 1749) and Stanislaw Potocki in Uman. There were Basilian schools also in Volodymyr Volynsky, Buchach (these two were the best-known), Hoshcha, and Liubar. The educational activity of the Order of St. Basil expanded after the dissolution of the Jesuit order and when in 1781 the Polish Educational Commission (the first ministry of public education in Europe) granted the Basilians some former Jesuit schools.

Compared with the secondary schools organized by the Piarist and Basilian orders in western Ukrainian lands and Right-Bank Ukraine, elementary education in these territories was on a very low level. Elementary schooling was limited to parochial or sextons' schools with outdated methods of instruction and a thoroughly church-oriented curriculum. The Polish Educational Commission, interested in promoting the growth of secondary schools primarily for the education of nobles' and burghers' children in a patriotic Polish spirit, decreed in 1789 that all Ruthenian church schools be closed. But the school system established by the commission was itself short-lived. Many of the secondary schools created or supported by it were closed with the partition of Poland, and all remaining schools ceased to function after the Polish uprising of 1831 was crushed.

# 3. IN UKRAINIAN LANDS IN THE RUSSIAN EMPIRE IN THE NINETEENTH AND TWENTIETH CENTURIES

Education in central and eastern Ukraine was directly dependent on the internal conditions prevailing in the Russian empire. Reforms instituted in Russia in the 1860's brought many changes. Thus this survey of the history of schools and education in that part of Ukraine occupied by Russia is divided into two periods, before and after 1860.

## GENERAL CHARACTERISTICS 1800–60

The abolition of the hetmanate, introduction of serfdom and increasing Russification contributed to the decline of schools and education in Ukraine under the Russians. The Russian government implemented a special policy towards higher education in Ukraine, which had shown marked progress in the eighteenth century: it transformed institutions of higher learning into theological schools (the Kievan Mohyla Academy became a theological academy, collegiums became seminaries), and new schools were exclusively Russian (except those in Right-Bank Ukraine, before 1831). In all Russia, there was but one official organizational school system, regulated by the Ministry of Education formed in 1802, and from 1803 incorporating the Head Administration of schools (whose director was a Ukrainian from the Kharkiv region, Basil Karazyn). Ukrainian *guberniyas* (provinces), with respect to education, were included in two districts: the Vilna district (later Kievan) to which the Volhynian, Kievan, and Podilian *guberniyas* belonged, and the Kharkiv district, which included the remaining *guberniyas*. In 1818, the Kiev *guberniya* was

allocated to the Kharkiv school district; in 1832 the Kievan school district, and later the Odessa district were formed from the Right-Bank *guberniyas*. Beginning in 1804, schools in *guberniya* seats were transformed into four-year gymnasiums supervised by a university. In each *guberniya* and county seat, two-year county schools (*uiezdnyie uchilishcha*) were formed, under the supervision of the gymnasium principals; in smaller towns and villages one-year primary parochial schools (at the church or on the pastor's estate) were set up, under the supervision of the director of the appropriate county school. The whole process of educational development proceeded from the top: ministry, university, county, and parochial schools.

On the Right Bank, the school system in its reorganized state, was almost exclusively under Polish influence until 1830. The school district of Vilna was headed by a Pole, Prince Adam Czartoryski; in Right-Bank Ukraine, the school superintendent, a prominent Polish educator Thaddeus Czacki, organized schools and carried on educational activity. In 1819 a Polish lyceum was established in Kremianets (from 1804 until 1819, it had been a gymnasium), and a Basilian gymnasium was opened in Uman. All teaching was in Polish; in the first Russian gymnasium founded in 1812 in Kiev, the second official language was originally Polish. Only after the Polish uprising of 1831 did the Polish schools in Right-Bank Ukraine change their language of instruction to Russian. Despite the fact that schools in eastern and southern Ukraine at the time were officially foreign as to subject and language, for many years they were centers of learning benefiting the Ukrainian population also. The majority of teachers and professors in the first decades of the nineteenth century were local people, educated in Old-Ukrainian schools.

In the school system of the first half of the nineteenth century the government maintained a policy of class education: gymnasiums were designated exclusively for the children of the higher officials, seminaries for children of the clergy, district schools for children of the lower nobility, officers, wealthier burghers, and merchants, and parochial schools for townsfolk, craftsmen, and peasants. Tuition fees in the gymnasiums were so high that lower classes could not aspire to enter these schools. The general state of education in the first half of the nineteenth century was very poor, as can be readily seen from government statistics for the year 1856 (below).

### Schools of Higher Learning

The first university in Ukrainian territory under Russia was founded in 1805 through the efforts of B. Karazyn in Kharkiv, with departments of philology, philosophy, physics and mathematics, and medicine. In 1820 it had 201 students; in 1825, 346; in 1835, 263. The University of Kharkiv, established during a liberal period of Russian politics, became an important Ukrainian cultural center. The literary and scholarly activity

| *Guberniyas* | Elementary, secondary, and higher schools | Total no. of students | Students per 100 population |
|---|---|---|---|
| Volhynia | 76 | 3,558 | 0.23 |
| Podilia | 143 | 4,432 | 0.25 |
| Kiev | 142 | 9,114 | 0.50 |
| Kherson | 168 | 8,704 | 0.80 |
| Katerynoslav | 161 | 9,652 | 0.92 |
| Tavria | 169 | 8,867 | 1.34 |
| Kharkiv | 128 | 7,227 | 0.48 |
| Poltava | 160 | 8,766 | 0.44 |
| Chernihiv | 173 | 8,867 | 0.54 |
| TOTAL | 1,320 | 67,129 | 0.53 |

of such men as Peter Hulak - Artemovsky, Gregory Kvitka, Ambrose Metlynsky, Ismaïl Sreznevsky, Nicholas Kostomarov, came to light in the first decade of its history. With the cooperation of professors of the University of Kharkiv, and with its backing, the first Ukrainian journals, almanacs, and newspapers began to appear: *Ukrainskii Vestnik* (Ukrainian Herald, 1816); *Ukrainskii Domovod* (The Ukrainian Housekeeper, 1817); *Kharkovskie Izvestia* (Kharkiv News, 1820–22); *Ukrainskii Zhurnal* (Ukrainian Journal, 1824), with a section called *Malorossiiskaia Starina* (Little Russian Antiquity).

FIGURE 128. BASIL KARAZYN

The second university in Ukraine was that of St. Volodymyr in Kiev, founded in 1834 on the basis of the Kremianets lyceum, which had been closed in 1831. At that time this university was reserved for the Polish nobility of Right-Bank Ukraine. Its first rector was the famed Ukrainian scholar Michael Maksymovych [Vol. I, p. 562]. At the outset, this university had two faculties, philosophy and law; later, in 1841, a medical faculty was established. In the early years, there were 62 students (57 from the nobility, 3 from the clergy, and 2 burghers). By 1844 there were 403 students and in 1854, 746. In time, Ukrainians and Russians came to predominate. Professors originally were mostly Poles and Germans, while Ukrainians and Russians formed an insignificant minority. In 1843–61, the university was administered by professors of German origin.

FIGURE 129. KIEV UNIVERSITY (MIDDLE OF THE NINETEENTH CENTURY)

The University of Kharkiv's statute of 1804 ensured nominal academic freedom. Nevertheless, the statute of 1835 abolished this freedom, and the administration, although elective, was made dependent on the Ministry of Education. The power of the council of professors was curtailed; professors and students came under the constant supervision of civil and school authorities. The underlying philosophy of the educational program was "Orthodoxy, autocracy, nationality" (meaning, of course, the Russian nationality).

Another school at university level was the Kievan Theological Academy, established in 1819 to replace the Kievan Mohyla Academy.

Lyceums also provided a general higher education. The most important of these was the Prince Alexander Bezborodko Nizhynsky Lyceum, founded in 1825, which lasted until 1832 as a gymnasium of higher studies with a nine-year course of studies and rights equal to those of universities. Until 1840 this school remained a physicomathematical lyceum, and later became a juridical one. In 1875–6 it was reorganized into the

FIGURE 130. NIZHYN LYCEUM (SECOND HALF OF THE NINETEENTH CENTURY)

Historico-Philological Institute. Other lyceums were the aforementioned Kremianetsky, and Richelieu's in Odessa, opened in 1817 and after 1837 having the characteristics of an institution of higher learning, comprising departments of physics, mathematics, and law, and an institute of Eastern languages.

**Secondary Schools**

The principal secondary schools were the gymnasiums. According to the statute of 1804, studies in gymnasiums consisted of four grades and included Latin, mathematics, history, geography, statistics, philosophy, natural science, political economy, technology, German and French, art, and drawing. By 1817, the course of studies in gymnasiums was expanded to seven grades and religion ("God's Law"), Russian, Greek, and calligraphy were introduced as formal subjects. Tuition in the gymnasiums was excellent. In 1825, there were eight in Ukraine, with 1,440 students.

Secondary schools included cadet corps (in Kiev and Poltava) and finishing institutes for daughters of the nobility (after 1818 in Kharkiv and Poltava, later in Odessa, Kiev, and other cities), where French, music, and dancing were among the subjects taught. Children of the nobility, especially girls, were also educated in boarding schools, which were opened in the first decades of the nineteenth century in all Ukrainian cities, for the most part by French and German colonists. Beginning in 1826, boarding schools were obliged to follow a program prepared for them by the Ministry of Education.

**Elementary Schools**

The government-established schools, whether public or parochial, were for the native Ukrainian population foreign and unsatisfactory with respect to both program and language of instruction. Therefore, Ukrainians, especially those in the villages, preferred to have their children taught in non-official deacons' schools, or simply by deacons; this form of education was simple, often limited to grammar, writing, and the reading of the *Chasoslov* and *Psaltyr*. There were more pupils than in the government schools. In general, the number of schools on the territory of the former Hetman state was considerably smaller than it had been 100 years earlier (see p. 311). Illiteracy also increased.

In the 1830's and 1840's, the Ministry of National Estates attempted to organize schools for peasant serfs on these estates and urged landowners to organize similar schools, but neither plan met with success. The majority of landowners preferred their peasants to remain uneducated, if not illiterate. In some villages, the more progressive landowners instituted schools and shelters for peasant children, but these were exceptions to the rule. "Lancaster schools," following the teaching methods of Joseph Lancaster, an English educator, were established in Ukraine in 1820–40 on the estates of some landowners and in some towns, but were not successful. The biggest of the Lancaster schools was that for military orphans in Kiev, established 1820, which later served as a model for schools in Mohyliv and Kherson.

In the mid-nineteenth century a movement for the promulgation of education among the people, especially the peasants, arose in Ukraine. Some of the requirements had been outlined in the program of the Brotherhood of SS. Cyril and Methodius [Vol. I, p. 675–6] which considered education one of the means of achieving equality and dignity in relations among people. A memorandum of Basil Bilozersky, a member of the brotherhood, speaks of the need to establish peasant schools "in the name of the love of humanity and mass education." In the late 1850's, nationally conscious Ukrainian students in Kiev opened three Sunday schools and one daily school; eventually, attempts were made to organize similar schools in other cities—Poltava, Chernihiv, Kharkiv. The aboli-

tion of serfdom in 1861 made possible a broader base for educational endeavor.

## GENERAL CHARACTERISTICS 1860–1917

Some apparent liberalism in the reign of Alexander II, the abolition of serfdom in 1861 and the introduction of autonomy for *zemstvos* in 1864, permitted a broader base for educational work and the spread of schooling in Ukraine [Vol. I, p. 695b]. But the quick growth of Ukrainian nationalism was curtailed by the Russian government, especially by its 1863 ban on publishing Ukrainian popular manuals and books and the interdiction on Ukrainian literature as a whole (Ems ukase of 1876 [Vol. I, p. 684]). This ukase was particularly effective in the Kievan school district, which along with the University of Kiev was distinguished until the revolution of 1917 by a spirit of Russian nationalism and active opposition to the elements of Ukrainian culture. The activity of *zemstvos*, which undertook elementary and even some professional education, did not spread in Right-Bank *guberniyas* until 1911.

The cultural and educational movement was revived in Ukraine at the beginning of the twentieth century, especially after the revolution of 1905 and the repeal of the prohibition on Ukrainian publishing. However, its growth was impeded by the reactionary trends that prevailed in Russia in 1907. The final blow to the Ukrainian national movement was World War I. It completely destroyed the manifestations of Ukrainian national life in both Russia and the western Ukrainian lands—Galicia and Bukovina—which were occupied by Russian troops [Vol. I, p. 689].

According to the elementary school statute of 1864, elementary schools in Russia were subordinate either to the Ministry of Education (one- and two-grade schools) or to the synod (the so-called reading and writing schools [*shkoly hramoty*], three-year parochial, and Sunday Russian schools). Instruction in all these schools followed a program prepared by the Ministry of Education and the synod, exclusively in Russian, despite the demands of leading contemporary educators, such as C. Ushynsky, and Ukrainian circles. A new slightly changed elementary school statute was published in 1874. *Zemstvos*, community groups, and private individuals were allowed to organize elementary schools, but only upon receiving permission from the school authorities and under their control. According to the statute, the goal of elementary schools was "to strengthen religious and moral concepts and disseminate elementary useful knowledge." All teaching was to be carried on in Russian.

After the reform of land institutions, *zemstvos* [Vol. I, p. 678b) began to establish elementary schools (three-year schools, in the 1890's four-year schools, and from 1910 even some seven-year schools) and support them financially. In addition, they opened teachers' seminaries (with a three-year course of studies), organized summer courses and conferences for teachers, cared for school buildings, spread the concept of universal education, supported schools (84 per cent; the Ministry of Education gave 12 per cent and the clergy 2 per cent), and organized public nurseries for children during the summer agricultural season. In 1910, *zemstvos* worked out a project for universal elementary education, although this was not realized. The *zemstvos* did not have jurisdiction over the program of teaching employed in the schools or the appointment of teachers. In both the provincial and district school councils they had only two representatives. These councils were supervisory in character; direct administrative functions were centered in organs of the Ministry of Education and the synod.

Schools organized by *zemstvos*, or with their guidance and support, were widespread in the late nineteenth and early

twentieth centuries, but only in Left-Bank Ukraine and in the south. The statistics are shown below (the starred number is approximate):

| No. of schools | | | No. of students | No. of teachers |
|---|---|---|---|---|
| 1877 | 1898 | 1909–10 | 1909–10 | 1909–10 |
| 1,600* | 3,117 | 4,700 | 460,000 | 8,458 |

The government sought to limit *zemstvo* supported elementary education by denying it larger appropriations and annulling decrees passed by the *zemstvos*. Parochial schools, with their limited program of study, had greater support. The program of a one-form church-parochial school included reading, writing, arithmetic (up to fractions), and catechism. In the teaching process, elements of natural science, geography, and history were brought in. The first three years of a two-form school were equivalent to a one-form school; the fourth and fifth years of study constituted the second grade. In the upper classes children studied grammar, arithmetic (fractions), geometry, Russian geography and history, and natural science. Included in the curriculum were painting and elementary design, gymnastics and military drills. One-form schools in villages were coeducational, whereas in cities and towns they were often separate for boys and girls (as were the two-form schools).

Former district schools were renamed "higher beginning schools" by law in 1912, with a four-year course of study. After completing the course in such schools students could transfer to the fifth grade of a secondary school. These higher beginning schools, for the most part coeducational, began to appear in smaller towns and larger villages also. During 1912–14, municipal schools too were transformed into higher beginning schools. Before the 1917 revolution, there were 312 such schools in Ukraine (not counting those in the Tavria *guberniya*).

Despite the educational activity of *zemstvos* and the government, the number of elementary schools in Ukraine was low. Although constantly increasing, it was not commensurate with the size of the population. In 1856, pupils attending elementary schools in Ukrainian lands under Russia constituted approximately 0.4 per cent of the population, in 1875 approximately 1.1 per cent, and in 1915 the number had increased to 5.5 per cent. In 1915, there were about 19,340 elementary schools in Ukraine, in which 1,663,000 children studied. And until the revolution of 1917, only 60 per cent of school-age children attended schools. The main reason for this was the lack of compulsory universal education and the inadequate number of schools. The most distressing conditions prevailed in Right Bank-Ukraine: *zemstvo* schools did not open there until the second decade of the twentieth century. In the villages of the Kiev *guberniya*, as late as the year 1908, only 136,382 out of 344,920 school-age children attended school. The remaining 60.5 per cent had no opportunity to study.

A number of outstanding pedagogues took part in the organization and operation of the schools. Compared with secondary schools, elementary schools (especially *zemstvo* schools) had greater freedom and possibilities for growth. Action to develop elementary schooling with Ukrainian as the language of instruction was carried on by Ukrainian communities, with the notable participation of student societies and underground groups of students from the universities, theological seminaries, and secondary schools. Simultaneously these groups strove to educate themselves, mainly in the area of Ukrainian studies.

In the insufficient number of schools that did exist, success was greatly hampered by the use of Russian in teaching. *Zemstvos*, provincial boards, town councils, agricultural committees, universities, prominent Russian educators, congresses of elementary school teachers, and mem-

bers of the State Duma all raised their voices on behalf of the introduction of Ukrainian as the language of instruction. In some cases, their demands included the secondary schools (gymnasiums and theological seminaries): after 1905 their chief concern was for the introduction of courses in Ukrainian studies. However, all these voices were raised in vain. The schools remained Russian—foreign to the Ukrainian population, not only in language but also in content. For this reason, children learned little, and after finishing school they not infrequently reverted to illiteracy. The percentage of literate people was therefore low [Vol. I, pp. 1766, 177a]. It was however, higher in those districts where *zemstvos* had been formed (19.9 as compared with 16.9 per cent, according to 1897 statistics).

**Preschool Education**

Preschool education also owed its development largely to *zemstvos*. In the 1890's they began opening kindergartens in cities, and nurseries in villages for the children of peasants during the busy summer agricultural season. The provincial *zemstvo* of Poltava began to establish such kindergartens and nurseries in 1897, and by 1902 there were 151. In Kiev, starting in 1890, and later in other cities, Froebelian societies began to organize and to open their own kindergartens. So-called public kindergartens were established by charitable societies in conjunction with *zemstvos*. Since the teaching was in Russian, many parents established private kindergartens for their own children and those of close friends. One of the prominent workers in the field of preschool education was Sophia Rusova, the founder of the first private kindergarten in Kiev, and later in Chernihiv. Teachers for preschool children were trained at the Pedagogical Froebelian Institute and at Froebelian courses in Kiev and Kharkiv.

FIGURE 131. SOPHIA RUSOVA

In addition to the aforementioned leaders of education (see p. 292), the members of the Ukrainian community who contributed most to the development of the school system, particularly of elementary and preschool education in the late nineteenth and early twentieth centuries, were teachers and authors of pedagogical works and handbooks; among these were Stephen Siropolko, Michael Chalyi, Viacheslav Prokopovych, Jacob Chepiha, and Spyrydon Cherkasenko. The participation of Ukrainian pedagogues in the First All-Russian Convention on Elementary Education (December 23, 1913–January 3, 1914) contributed to the introduction of Ukrainian as the language of instruction in schools. The publication of children's journals and literature (see Book Publishing, pp. 452 and 486–7) was of great importance in the extension of elementary education. The publishing houses Lan (Meadow), Chas (Time), Ukraïns'kyi Uchytel' (Ukrainian Teacher), and Ridnyi Krai (Native Land) published textbooks and educational material such as children's readers.

**Teachers' Schools**

Pedagogical schools for training teachers were closely related with the development of public elementary schools. The first such school, the Provisional Pedagogical School, was founded in Kiev in 1862; later, in order to prepare teachers for municipal, county, and higher elementary schools, three-year, and later four-year, teachers' institutes were opened. Teachers' seminaries, also three-year and then four-year institutes, trained teachers for elementary schools. The Ministry of Education controlled these schools (the only *zemstvo* seminary in Chernihiv was closed in 1878, under pressure from the Ministry).

Teachers' seminaries, the first of which

opened in 1869 in Kiev, accepted students from 15 years of age whose knowledge was equivalent at least to a two-form school education (determined by examinations). Before the war, many entered the seminary after completing higher beginning schools. Seminaries like gymnasiums, had a program of general education, but the courses did not include foreign languages or trigonometry, thus disqualifying seminary students from possibly entering university. Pedagogical training was on a high level (pedagogy, didactics, methodology of various disciplines, music and singing). By the beginning of 1917, there were 33 teachers' seminaries in Ukraine; in addition to the seminaries, two-year teachers' courses which accepted students with four grades of gymnasium or higher schools, were available. These courses also graduated well-trained teachers. For the training of parochial school teachers, so-called second-class teachers' schools accepted students for a three-year course after they had finished a one-form school, and offered a program lower than the fourth grade of a gymnasium. There were also, but in smaller numbers, parochial teachers' schools with a four-year course and a program similar to that of teachers' seminaries. Such schools were supervised by the synod.

Teachers' institutes, the first of which was established in Hlukhiv in 1874, were attended mostly by elementary school teachers. The program in teachers' institutes was somewhat more advanced than in secondary schools, but did not include instruction in foreign languages. Final examinations were not given, again to disqualify the students for university entrance. In 1917, before the outbreak of the revolution, there were eight teachers' institutes in Ukraine.

In the majority of teachers' schools, no matter what official department they came under, the spirit was intrinsically Ukrainian and nationalistic. This is explained by the fact that the students were, for the most part, youths closely bound with the Ukrainian village, which clung tenaciously to its own language and national traditions. The Ukrainian spirit in teachers' schools became especially apparent after 1905. Journals published by seminarians and students of parochial teachers' schools printed essays and stories in Ukrainian, students conversed in Ukrainian, and cultivated Ukrainian songs. The methodological training of future teachers in teachers' seminaries and institutes ranked fairly high. "Model schools" were conducted which gave future teachers systematically acquired teaching practice closely bound with theoretical lectures in pedagogy and special methods.

**Secondary Schools**

Secondary schools remained socially stratified after the reforms of the 60's and continued so until the end of the nineteenth century when this factor began to change. In Ukraine, according to the statute of 1864, secondary schools were classed as "gymnasiums," teaching two classical languages; "eight-year gymnasiums," teaching only Latin (in almost every district center city); and "realgymnasiums," where no classical languages were taught. The latter were changed into "real schools" (with a six-year course and an additional seventh grade for candidates to higher technical schools).

In the 1890's, a new type of school—the eight-year commercial school—was established.

The teaching methods of the majority of secondary schools were formalistic, with antiquated ideas designed to instill absolute subservience to the Russian state. Policelike control maintained by the authorities in secondary schools stifled all signs of free thinking and national consciousness on the part of students and persecuted the more liberal teachers.

A special type of secondary school was the Paul Galagan Collegium in Kiev (established 1870). Its four-grade program corresponded to the four highest

grades of a gymnasium. Eminent Ukrainian scholars and educators were directors and professors of this collegium.

Secondary schools for girls, in addition to the already mentioned finishing institutes for daughters of noble families, were gymnasiums with seven basic classes (teaching no classical languages) and an eighth pedagogical class which prepared the students for teaching in elementary schools. For a time, progymnasiums with four and five grades were in operation. There were also state and private gymnasiums.

Sons of clergymen could attend four-year theological schools in preparation for entrance into a theological seminary; there were 39 such schools before the 1917 revolution. There were also six-year theological seminaries, the first years of which corresponded to the program of gymnasiums (1917–19). Girls attended eparchial schools which also corresponded to the gymnasiums.

Military schools and Cadet Corps fell in the class of general secondary schools.

The number of gymnasiums, especially for girls, increased greatly at the beginning of the twentieth century. In 1912 there were 46 for boys in the Kievan school district, with a total of 17,600 pupils (of this number barely 21.3 per cent were children of peasants and Kozaks), 95 for girls (including progymnasiums) with 27,082 pupils, and 14 real schools with 4,313 pupils. The official tone of all these schools was Russian; only the private gymnasiums of V. Naumenko and Kovalchuk in Odessa preserved a Ukrainian spirit. The theological seminaries displayed considerably more Ukrainian spirit.

**Professional Schools**

In the second half of the nineteenth century, specialized (professional) schools increased in Ukraine. They were organized by, and subordinate to, various departments. In the 1870's, *zemstvos* organized a number of agricultural and trade schools, for the most part as divisions of their elementary schools. In the Poltava region, the N. Gogol professional art school in Myrhorod and a weaving school-workshop in Dehtiari were well-known.

Most professional schools were under the jurisdiction of the Ministry of Education (the teachers' seminaries and institutes, as already mentioned), the Ministry of Agrarian affairs (agricultural schools), the Ministry of Finance (commercial schools), the Ministry of Trade and Industry (trade schools), the Ministry of Internal Affairs (medical assistants' and veterinary schools), etc. The Holy Synod had theological schools, seminaries and academies, and eparchial schools for girls. In the secondary professional schools, the course of study generally lasted four years and the program was equal to four grades of a gymnasium (without foreign languages). Not counting teachers' and theological schools, there were 93 specialized secondary schools in Ukraine at the beginning of 1917. Of this number, 66 were commercial, 6 agricultural, 10 technical, and 11 art. At the same time, there were 471 elementary professional schools: 255 trade, 54 agricultural, 144 industrial-technical, 21 business, 16 medical assistants' and midwives', and 11 art.

Advanced professional schools are discussed below.

**Institutions of Higher Learning**

Universities had gained partial autonomy under the statute of 1863, but from 1864 to 1905 were completely subordinate to the Ministry of Education, under a new university statute prompted by the pressure of the revolution. The already existing universities in Ukraine (in Kharkiv and Kiev) were joined by the so-called Novorosiisky (New Russian) university in Odessa (founded in 1865). At the outset, the University of Odessa was composed of three departments, physicomathematical, naturalistic, and juridical. In 1900 a medical faculty was added. Some 3,000 students studied at

FIGURE 132. ODESSA UNIVERSITY (contemporary photo)

this university. It was not until World War I (1916) that a fourth university was established in Ukraine, in Katerynoslav. In 1913, there were 79 professors, 81 lecturers, and 5,000 students at the University of Kiev; in 1907–8, 144 professors and lecturers, and 4,295 students at the University of Kharkiv; in 1915, 72 professors, 183 lecturers, and 1,796 students at Odessa.

The universities were important centers of learning, serving as organizational focal points for learned societies and publishing various works (see also Scholarship). Among the eminent scholars and professors at the University of Kiev were Volodymyr Antonovych, Michael Drahomanov, Alexander Kistiakovsky, Nicholas Kostomarov, Volodymyr Peretts, and Andrew Loboda. At the University of Kharkiv the following were active: Alexander Potebnia, Nicholas Sumtsov, Dmytro Bahalii, Michael Chubynsky, Dmytro Ovsianiko-Kulikovsky, and Leo Hirshman. The world-famous physiologist Elias Mechnikov, the economist Alexander Postnikov, and the historian Alexander Markevych were among the professors at the University of Odessa.

Ukrainian students at the beginning of the twentieth century formed societies and clubs composed of people from the same district. Their activity was cultural-auxiliary in nature, but in some cases their framework was utilized by student activists to promote political action or to establish underground student societies. The first such Ukrainian student organization was founded in 1895 in Kiev (early presidents were Basil Domanytsky, Basil Sovachiv, Andrew Livytsky). The most active group, established in 1897 and headed by Dmytro Antonovych, was in Kharkiv. After the revolution of 1905, nine student organizations had been formed in the central and eastern Ukrainian lands by 1908; they operated, for the most part, in secret, and had some 1,000 members. By 1913 their number had increased to 22. Their activity was limited to self-education and cultural educational work. Some groups, headed by nationally conscious professors, studied various aspects of Ukrainian subjects. Partly through the influence of these students, all three universities in 1907 initiated Ukrainian-language lectures in Ukrainian studies. (In Kiev, Andrew Loboda lectured on modern Ukrainian literature and Volodymyr Peretts on ancient literature; in Kharkiv, Nicholas Sumtsov lectured on Ukrainian folklore, Michael Khalansky on the history of the Ukrainian language, and Dmytro Bahalii on the history of Ukraine; at the University of Odessa, Alexander Hrushevsky taught Ukrainian history.) The Ministry of Education, however, soon put a stop to these lectures.

The Kievan Theological Academy was an institution of higher learning, with an enrollment of approximately 200 students. It was also an important center of scholarly endeavor.

Women were allowed to attend the universities only during a short period in 1905–9. Instead, in 1905–6, after the

1905 revolution, a number of higher women's courses were instituted in Kiev (they had existed in 1878–98 at the University); in 1914 they were renamed St. Olha Women's Institute in Kharkiv and Odessa, and private courses of Mme. Zhekulina in Kiev. The courses took four years and were divided into physicomathematical, historicophilological, juridical, and in some places economic and medical. In 1912 over 4,000 women students attended these courses. Several higher professional schools for women also were established.

In the last decade of the nineteenth century, the first advanced technical schools were opened in Ukraine. The Technological Institute in Kharkiv (1884), the Polytechnic Institute in Kiev (1898), the Higher School of Mining in Katerynoslav (1889; renamed the Institute of Mining in 1912). In 1851, a veterinary school was founded in Kharkiv, which in 1871 was reconstituted as the Kharkiv Veterinary Institute. The number of advanced professional schools increased. In 1915 there were 19 in Ukraine under Russia, four universities, three women's medical institutes (in Kharkiv, Kiev, Odessa), Froebelian pedagogical courses in Kharkiv, a pedagogical Froebelian Institute in Kiev, a historicophilological institute in Nizhyn, two commercial institutes in Kiev and Kharkiv respectively, an institute of technology in Kharkiv, an institute of mining in Katerynoslav, and a veterinary institute in Kharkiv, as well as two conservatories (one in Kiev and one in Odessa).

## EDUCATIONAL AND CULTURAL MOVEMENT

### Before 1900

Enlightenment and education could be fostered only after the abolition of serfdom. To fill the needs of popular education and schools, a publishing house was established in St. Petersburg through the efforts of Panteleimon Kulish and Nicholas Kostomarov. It published school textbooks and popular books for the masses. Many students and youth from the nobility or intelligentsia left their universities in order to dedicate themselves to the dissemination of education among the nation's populace. Demands for the introduction of Ukrainian as the teaching language in schools, were widely heard.

All these attempts at innovation were cut short by the Russian government and the chauvinistic Russian reaction in the 1860's and 1870's, in particular by the 1863 ukase of Minister of the Interior Peter Valuev which forbade the printing of textbooks and other books in Ukrainian. In 1873 all Ukrainian literary activity was prohibited. In order to spread education and literacy among the people at least in Russian, Ukrainians active in civic and educational life began utilizing Russian institutions and societies. Owing to their efforts, "societies of literacy" sprang up in Kharkiv and Kiev. The one founded in Kharkiv in 1891 concentrated mainly on the publishing of popular literature. Of the 95 books published in its first decade, only 5 per cent were in Ukrainian. In general, the activity of this group had no impact on the Ukrainian peasantry. More successful, especially in popularizing Ukrainian literature, was the Kievan Society of Literacy. The "National Home" built by this society in Kiev became the locus for a Ukrainian theater, Ukrainian lectures, and later for the Prosvita (Enlightenment) society which was the root cause for the disbanding by the Russian government in 1907 of the Society of Literacy.

The Russian government not only suppressed education outside the school system, but completely disregarded it. The fact that in 1909 the government treasury alloted a mere 50,000 rubles for the purposes of extrascholastic education in all Russia serves as proof of this lack of concern. As for extrascholastic educational activity in Ukraine, the Russian government did everything possible to prevent it from increasing in scope and potency. The so-called Sunday schools for youth and adults, initiated by Ukrainian

students in 1859 in Kiev and from there carried over to other cities and villages (in 1859–60 there were 68 such schools in Ukraine), were shut down in 1862. In 1864 they were permitted to operate on a new, government approved basis. The Sunday school established in Kharkiv in 1862 by Ukrainian educator Christine Alchevska was forced to operate clandestinely until its official opening in 1870. In the 1870's *zemstvos* and eventually ecclesiastical circles took over the organization of Sunday schools; in 1891 the clergy officially received this privilege by a governmental ukase.

Popular readings, initiated in Poltava (1861) by Alexander Stronin and Dmytro Pylchykiv, were also discontinued by the Russian government. These popular lectures given in Russian to reach wider circles of the population, were soon suppressed by the government. In the 1870's they resumed their activity on "a new basis" in *guberniya* centers. The Kharkiv Society of Literacy organized a special committee for the planning of popular lectures, of which 94 were given in 1897 alone to an audience of 18,400 persons, with the formation of *zemstvos*, public lectures were brought to the villages also. The Alexandria *zemstvo*, for example, organized 854 lectures for 164,000 listeners in the six years beginning in 1888. These lectures were held in Russian, and each one required separate permission from the administration.

Public libraries, a part of city life since the 1830's, and popular libraries, opened by *zemstvos* in villages and smaller towns somewhat later, played a prominent role in the growth of extrascholastic education. However, their development was limited by official rules of May 15, 1890, which decreed that free public libraries could be opened only with gubernatorial permission, and that the books acquired were to follow a catalogue approved by the Learned Committee of the Ministry of Education. Publishing houses furthered extrascholastic education in Ukraine by printing popular books. This was especially the case of the publishing youth group started in 1895 (later the publishing firm Vik [Age]), and the philanthropic society for the publication of generally useful and inexpensive books founded in St. Petersburg in 1898. Ukrainian theatrical troupes and amateur groups also served to enlighten the public.

### 1900–17

The Ukrainian cultural and educational movement gained renewed vigor at the beginning of the twentieth century. An energetic battle was waged to gain freedom for Ukrainian language and education. Ukrainians started to establish their own publishing houses, educational societies (which following the example of Galicia (see pp. 336–7) they called Prosvita), and to publish textbooks for schools and popular literature for the people. The first Prosvita group was organized in Katerynoslav at the end of 1905; thereafter "societies for enlightenment" were founded in Odessa, Zhytomyr, Kamianets Podilsky, Kiev, Chernihiv, Mykolaïv, Melitopol, Hrubeshiv, and Katerynodar. In the Poltava and Kharkiv region, Prosvita was banned by the government. In Kiev, Kamianets, Chernihiv, Katerynoslav, and Katerynodar the society organized branches in district towns and villages, but only the Katerynoslav Prosvita was successful in developing effective activity in the villages, where its branches and reading rooms were housed in buildings constructed by the peasants themselves.

The revolution of 1905 and a consequent change in the Ministry of Education's rules concerning public and popular libraries removing the restrictions previously placed on their establishment and acquisitions caused the number of libraries to increase significantly. In the Kharkiv *guberniya*, there were 684 public libraries in 1911 (each with an average of 795 books), in the Chernihiv *guberniya* in 1915 there were 393 libraries (with 597 books on the average), and in the Kiev *guberniya* in 1912 there were 322 libraries (with an average of

438 books each). In these libraries Ukrainian books accounted for 3–6 per cent of the total. Prosvita societies also energetically undertook the organization of public libraries. Some of these societies developed a broad publishing activity, e.g., the Kievan Prosvita, which in the four years of its existence published 34 books amounting to 163,760 copies.

In addition to the Kiev Prosvita, numerous private and group publishing houses were active, printing material primarily of a cultural-educational nature. There were seventeen such publishing houses in the central and eastern Ukrainian lands in 1909, thirteen of them in Kiev (see Book Publishing, p. 452). Publishing increased significantly in the years immediately after the revolution of 1905, when the tsarist régime became somewhat more liberal.

In addition to Prosvita, a number of Ukrainian clubs, which also carried out cultural and educational tasks, were founded. These clubs presented Ukrainian lectures, concerts, and theatrical performances, and appeared in Kiev, Poltava, Odessa, Kharkiv, and other Ukrainian cities, as well as in localities outside Ukraine where large groups of Ukrainians had settled (e.g. St. Petersburg, Moscow, Warsaw, Riga). The same tasks were fulfilled by student groups and societies formed at various institutions of higher learning.

A very important factor in the spread of national consciousness, education, and culture was the growth of village theaters, and later of professional theater groups. Numerous amateur peasant theatrical groups, choirs, and dance groups were organized towards the end of the 1890's under the leadership of the local intelligentsia and students. Tolerated by the administration, they became centers of cultural and educational life in the villages. Traveling theatrical ensembles were also significant, and in the 1900's permanent Ukrainian theaters appeared in Kiev and other cities.

Ukrainian national rallies also played an important part in the growth of national consciousness. These rallies were held at the beginning of the twentieth century on such occasions as the unveiling of I. Kotliarevsky's monument in Poltava in 1903, the jubilee celebrations of Ivan Nechui-Levytsky and Nicholas Lysenko in Kiev in 1904, and Kievan demonstrations against the prohibition of the hundredth anniversary celebration of Shevchenko's birth in 1914. The funerals of M. Starytsky in 1904, B. Hrinchenko in 1910, N. Lysenko in 1912, and Lesia Ukraïnka in 1913 turned into massive national rallies.

The general reaction which gripped Russia in 1907 somewhat curtailed the growth of the Ukrainian cultural-educational movement. Many Prosvita groups were disbanded: in Kiev in 1910, then in Chernihiv, and later in other cities.

Immediately before the revolution of 1917, in the first years of World War I, all Prosvita groups as well as other Ukrainian societies and publishing houses were disbanded. In western Ukrainian lands occupied by Russian troops and in Bukovina, Prosvita and other cultural-educational societies and institutions were forced to discontinue their work.

### Schools and Extrascholastic Education in Kuban

There were three types of schools in Kuban in the nineteenth and twentieth centuries: Kozak schools, *Inohorodni* schools (the name designating more recent residents of Kuban who were outside the closed Kozak society), and church schools. The first were supported by Kozak funds (supervised by school councils), and tuition for Kozak children was free (non-Kozaks were obliged to pay). The children of Kozaks also received free books and supplies. All these schools used Russian as the language of instruction. Until 1905, secondary and advanced schools were located only in cities; Kozak villages had higher elementary schools (up to the fifth grade). A girls' institute and a realgymnasium in Katerynodar were limited to the children of Kozak officers, while children of regu-

lar Kozaks could study only in a medical assistants' school or a teachers' seminary. In 1909 there were 1,148 elementary and 14 municipal schools in Kuban (according to the statute of 1872), as well as 459 parochial schools. After 1905, the number of secondary schools grew considerably (in 1911 there were 11 gymnasiums, 7 progymnasiums, and 4 real schools). In general, elementary and secondary schools in Kuban had higher standards than those in central and eastern lands.

The Kozak upper class became Russified in Kuban [Vol. I, p. 789b] and a Ukrainian cultural and educational movement arose in the 1860's because of influences from central and eastern Ukraine (popularization of Ukrainian literature, Shevchenko cult). It declined, during the reactionary period, and regained momentum only in the last decade of the nineteenth century, when students in Kuban again came into contact with Ukrainian student groups. However, the activity of this movement was limited to the celebration of Shevchenko's anniversary and the propagation of Ukrainian books (the circle of S. Erastov). Of great importance were the productions of Ukrainian theatrical troupes which visited Kuban, beginning in the 1890's (M. Sadovsky), chiefly in Katerynodar. With the outbreak of the revolution of 1905, Ukrainian cultural and educational work began in earnest. Prosvita was established in Katerynodar with the right to open branches in Kozak towns and villages. However, the activities of Prosvita were later discontinued (1907) and national life in Kuban remained dormant until the revolution of 1917.

# 4. UKRAINIAN LANDS UNDER AUSTRIA-HUNGARY

The annexation of Ukrainian lands by Austria produced more favorable conditions for the development of Ukrainian schools and education. This was mainly a result of the spirit of enlightenment prevailing in Austria, its closer ties with Western culture, and the establishment of democratic institutions in Austria in the second half of the nineteenth century.

The history of Ukrainian schools and education in Ukrainian lands under Austria and Hungary, like the general history of the Ukrainian people inhabiting these territories, was one of continuous struggle against Germanization, and particularly Polonization, Magyarization, and Rumanization. Internally, it was a struggle of two opposing trends—Ukrainophilism and Russophilism. The forms were different in each of the three lands included in Austria-Hungary, namely, Galicia, Bukovina, and Transcarpathia.

## EDUCATION IN GALICIA

### Before 1860

When Galicia was annexed by Austria, its schools and education were at a low level of development [Vol. I, p. 698]. Except for the school of the Stavropygia Brotherhood (founded in 1585), there were only a few scattered elementary schools, the so-called *diakivky* (schools conducted by sextons), where Ukrainian children learned the fundamentals of reading and writing. There were only two Ukrainian secondary schools operated by the Basilian Fathers. The annexation by Austria and subsequent contacts with Vienna had a beneficial effect on education in Galicia. A number of schools were built and the methods of teaching were modernized—a favorable development in spite of the partial Germanization. The Polish circles which sought to Polonize Ukrainians by means of curricula and teaching posed a greater danger to Ukrainian education. The struggle for Ukrainian education against Polish influences lasted throughout the nineteenth century and the first decades of the twentieth.

**Elementary schools.** The educational reform of 1777, introduced in Galicia as well as in Austria on the order of Maria Theresa, provided for the establishment of the following types of elementary public schools: (1) normal, only in Lviv (this school also offered a special course in teacher training; (2) main, staffed by three to four teachers, in each district, in larger cities, or monasteries; (3) *triviums* (schools of the most primary educational level) in smaller cities and villages.

Control was in the hands of the land school commission. District schools were supervised by deans and in smaller towns and villages by local priests. The language of instruction was German. At the same time, Bishop Peter Biliansky of Lviv ordered the clergy and the sextons to teach the fundamentals of reading and writing. The language of the first textbooks (reader in 1776, primer in 1790) for these schools was called Slavonic Ruthenian. It was an artificial language with Old Church Slavonic vocabulary and syntax.

The educational reforms of Joseph II were even more extensive. The money obtained from the disappropriation of monastic estates was channeled into a special school fund. Joseph II ordered the establishment of compulsory public schools in all localities with 90–100 children of school age (1781). Supervision and maintenance was entrusted to those who had the right of assigning parishes to priests (most frequently Polish landlords, very rarely the Department of State Treasury). By the decree of 1781, four-grade main schools and German-

type *triviums* were organized in cities and towns. Simultaneously, Bishops P. Biliansky and Maximillian Ryllo ordered the establishment of parish kindergartens in the cities. The number of Ukrainian parochial schools gradually increased. In 1787, Ukrainian became the official language of the land.

However, at the turn of the nineteenth century, limitations were imposed on Ukrainian schools under pressure from influential Polish circles. In 1792, only two hours of instruction in the Ukrainian language were allowed per week. Ukrainian Greek-Catholic clergy (Byzantine rite) were barred from giving religious instruction in public schools, thus forcing Ukrainian children to attend Roman Catholic churches. Supervision of schools was in the hands of Roman Catholic consistories and priests. Compulsory education, instituted by Joseph II, was abolished in 1812. Despite the fact that a decree, issued in 1812, provided for the instruction of rural youth in their native tongue, the Roman Catholic clergy, which retained control and supervision, tried to bar the use of the Ukrainian language in the schools. Before 1817, there were no Ukrainian lower elementary schools (*triviums*) in Galicia.

In this period, Bishops Michael Levytsky (later metropolitan of Galicia), Ivan Snihurovych of Peremyshl, and Canon Ivan Mohylnytsky, were active in educational affairs. As a result of their memoranda, the imperial government issued an edict on April 25, 1818, which provided for the following: children of the Greek Catholic (Byzantine rite) denomination were to be given religious instruction in the Ukrainian language; in schools attended by Greek Catholic (Byzantine rite) children, Ukrainian was to be the language of instruction and Polish was to be taught as a subject; in communities with a mixed population, Polish was to be the language of instruction, except for the teaching of religion, and Ukrainian was to be taught as a subject; Ukrainian schools were to be supervised by the Catholic clergy of the Byzantine rite; in schools attended by children of both rites, supervision was to be determined on the basis of majority rule. In reality, however, supervision of main schools and *triviums* remained in the hands of Roman Catholic consistories and only parochial (sexton) schools were supervised by the Greek Catholic (Byzantine rite) consistories. A clerical society, established in Peremyshl in 1816 for the purpose of organizing and promoting Ukrainian schools, was never active. In 1816, the Peremyshl Greek Catholic consistory founded an institute for sextons and published a series of textbooks for Ukrainian schools in the Slavonic Ruthenian language.

In 1821, there were 2,629 parishes and 1,226 schools in Galicia; of these, 834 were parochial schools, attended by 11 per cent of all school-age children; the total number of teachers was 1,255 (one per 32 pupils). By 1843, the number of schools had increased to 2,132, of which 81 were German, 921 Ukrainian parochial, 190 Polish, 1 Hungarian, 1 Armenian, and 938 with Ukrainian, German, and Polish as the languages of instruction. The Catholic clergy of the Byzantine rite controlled only fifty *triviums* and one main school operated by the Basilian Fathers in Lavriv.

The level of instruction in parochial schools was very low. They were open mostly in winter, and instruction was given by persons without proper training, usually sextons.

**Secondary schools.** In place of old schools conducted by the clergy, the government organized five state gymnasiums, designed primarily for the children of the nobility and government officials. Few Ukrainians could afford to send their children to these schools despite the fact that beginning in 1784, Ukrainian parents who wanted their children to enter the priesthood had to enroll them in gymnasiums, since admission to theological seminaries was made contingent upon the completion of

secondary education. Children of wealthy burghers also attended gymnasiums, but those of the villagers were not permitted with the exception of those who had permission from their landlords and exemption from the corvée.

Originally, gymnasiums consisted of five grades, but in 1818, were extended to six grades. At first the language of instruction was Latin supplemented by German; later German supplemented by Polish. Subjects taught were religion (also Byzantine-rite Catholic, taught until 1848 by Roman Catholic priests), Latin, Greek, German, Polish, Ukrainian, history, geography, mathematics, and natural science. German influences were evident in all phases of education.

Conditions improved in 1848. On the demand of the Holovna Rus'ka Rada (Supreme Ruthenian Council [Vol. I, p. 699]), the newly established Ministry of Education in Vienna promised to introduce the Ukrainian language in public elementary and secondary schools in Galicia. In 1849, land boards of education, consisting of specialists and administrative officials and serving as advisory bodies to the Ministry of Education, were established. With the adoption of the constitution [Vol. I, p. 700], the schools of Galicia became increasingly Ukrainian in character. At the same time, gymnasiums were expanded to eight grades by the addition of two courses in philosophy, and matriculation examinations were introduced. German was retained "temporarily" as the language of instruction. The Ukrainian language was accepted only as a required subject, even though there were enough teachers to conduct all classes in the language. First Ukrainian textbooks appeared, (a Ukrainian reader for secondary schools by Basil Kovalsky, 1852) and a special commission was established in 1859 for the preparation of secondary school textbooks.

Following the concordat between Pius IX and Francis Joseph I of August 18, 1855, the supervision of schools was handed over to the consistories. School supervisors were appointed by the emperor on the recommendation of bishops. A special educational department in charge of all schools was to be established at the vice-regency office in Lviv. On the initiative of the Greek Catholic consistory, Ukrainian communities began organizing schools on a mass scale, and in the 1860's they even surpassed the Poles. But schools could not be fully nationalized because of the strong Germanization that followed the abolition of the constitution in Austria (1849). On August 21, 1856, compulsory teaching of the Ukrainian language in the secondary schools of eastern Galicia was abolished, whereas the German language was retained not only in secondary schools but in urban elementary public schools as well. In the meantime, the Poles opened their first gymnasium in Lviv (1858), thus in effect heralding the onset of the Polonization of secondary schools in eastern Galicia.

In the field of higher education, the following establishments functioned in Galicia: the University of Lviv, founded in 1784 by Emperor Joseph II, with Latin as the language of instruction; a scholarly institute, the Studium Ruthenum, with Ukrainian as the language of instruction, which was attached to the Lviv university from 1787 to 1809; in 1805 this university was changed by the Austrian government into a lyceum, but in 1817 it was restored to its former status (named after Emperor Franz I), this time with German as the language of instruction. The struggle for the introduction of the Ukrainian and Polish languages at the University of Lviv began in 1849. The chair of Ukrainian language and literature (Jacob Holovatsky) was established in the same year, and soon similar chairs were opened at the theological faculty. Candidates for the Catholic priesthood of the Byzantine rite studied at the Barbareum, a theological seminary founded at the Church of St. Barbara in Vienna in 1774 and operative until 1784; at the

Studium Ruthenum; at the Greek Catholic theological seminary in Lviv (from 1783); and at the theological department of the University of Lviv.

### Second Half of the Nineteenth Century and Early Part of the Twentieth

**Structure and administration.** Changes affecting Ukrainian schools and education in Galicia in the 1860's were the result of the restoration of the constitution in 1861, the establishment of a new system of government whereby Galicia was granted autonomy, and the Austro-Polish agreement of 1867 with the subsequent transfer of power and control to the Poles [Vol. I, pp. 700–1].

By the Austrian law of May 25, 1869, the schools were separated from the church, and control over them was handed over to the land, county, and local boards of education. The internal structure of public and professional education, as well as the composition and scope of the supervisory organs, was determined by the laws of each land. Control over secondary and advanced schools remained in the hands of the central government in Vienna. In Galicia, the Land Board of Education was established on June 22, 1867. On the same date the law on the language of instruction was adopted and approved by the emperor, despite vigorous opposition from Ukrainian deputies in the diet. According to this law, the language of instruction in schools was to be determined by community councils; if part of the student body spoke a language different from that in which instruction was given, that language was to be taught as a compulsory subject. In secondary schools, Polish replaced German as the language of instruction. The Ukrainian language was taught as a subject on a provisional-compulsory basis (those who registered had to study it). Ukrainian as the language of instruction was allowed only in the lower grades of the Academic Gymnasium in Lviv (expanded in 1874 to include all grades). In addition, there were German-language gymnasiums in Lviv and Brody. Any changes involving expansion of the Ukrainian language, such as the establishment of separate Ukrainian secondary schools or parallel classes with Ukrainian as the language of instruction, could be made only with the express consent of the Galician diet. This consent was based on reports submitted by the county boards which were virtually opposed to any change.

The Land Board of Education for Galicia, in Lviv, was composed of four Poles and one Ukrainian. It employed a variety of means to effect the Polonization of schools. Ukrainians also constituted a minority in district school boards. The administration of schools was almost entirely in Polish hands. Repressive measures applied to Ukrainian schools prompted constant appeals, complaints, interpellations, and outright battles in the Galician diet and the Austrian parliament, particularly in connection with attempts to secure a greater number of Ukrainian gymnasiums and institutions of higher learning.

Six-year compulsory education was introduced throughout the land, with the program divided into elementary, secondary, teachers' seminaries, professional, and higher education.

**Elementary schools.** Organization of elementary schools was determined by the Land Board of Education law of 1863, with some subsequent changes on the basis of the law of 1893. Schools were divided into rural, small-town, and urban, with varied programs of instruction. The number of grades in a school ranged from one to seven, depending on the number of pupils. The three upper classes of the seven-grade school were called *vydilovi shkoly* (resembling American junior high schools). However, permission to open upper-grade schools in Ukrainian villages was granted only reluctantly by the Land Board of Education. Consequently, Ukrainian village schools were limited almost exclusively to one or

two grades. All Ukrainian schools, starting with the second grade, taught the Polish language. German was begun in the third grade. The Ukrainian population was adequately supplied with lower-grade schools only; there were only a few four-grade schools and two private junior high schools for girls. Teachers in Ukrainian schools were mostly Ukrainians. Along with the gradual development of national consciousness, the quality of Ukrainian teachers also improved as they endeavored to make the elementary schools more Ukrainian in content. In spite of the introduction of compulsory education, there was a shortage of schools, particularly in mountainous areas. Consequently, 30 per cent of the population nine years of age and over was illiterate.

In the years immediately preceding World War I, there were approximately 3,560 elementary schools in eastern Galicia, including the Lemkian region; of these, 2,510 (71 per cent) were Ukrainian. Total enrolment was approximately 670,000; of these, 440,000 attended Ukrainian elementary schools. Ninety-seven per cent of children of Ukrainian nationality were enrolled in Ukrainian schools and only 3 per cent attended Polish schools. On the other hand, Ukrainian schools were attended by both Polish and Jewish children.

**Secondary schools.** These schools were classified as follows: gymnasiums, with two classical languages, Latin and Greek; realgymnasiums (not numerous), with Latin only; and so-called realschulen, without classical languages. The course of studies was eight years (in realschulen, seven years). Requirements for admission to secondary schools were: completion of a four-grade elementary school and successful passage of an entrance examination. Upon graduation from the gymnasium, a student could enter any school of higher learning. Graduates of the realschule could also enter schools of higher education with the exception of universities.

It took Ukrainians years of hard struggle to establish each new Ukrainian gymnasium in Galicia. Prior to World War I, there were only six such public gymnasiums—one each in Lviv (with a branch), Peremyshl, Kolomyia, Ternopil, Stanyslaviv—and parallel classes (separate classes for Ukrainian students, with instruction in the Ukrainian language) in Polish gymnasiums in Berezhany and Stryi. At the same time, Poles had 29 gymnasiums and 11 realschulen, and Germans one gymnasium in Lviv. The harsh policy towards Ukrainians can be illustrated by the disproportionate relationship of gymnasiums to the population; one Polish gymnasium for every 60,400 Poles, one Ukrainian gymnasium for 546,000 Ukrainians.

**Training of teachers.** Teachers' seminaries began to appear in Austria in 1869, and in 1874 they were given accreditation as schools with a four-year course of study. Separate teachers' preparatory schools functioned until 1854 (five in eastern Galicia). The teachers' seminaries in eastern Galicia were bilingual in character, i.e., instruction was in Polish and Ukrainian (in western Galicia, in Polish only). There were ten public teachers' seminaries in eastern Galicia, seven for men and three for women.

**Vocational schools.** At that time, Ukrainians of Galicia showed little interest in vocational schools. There were practically no public vocational schools with Ukrainian as the language of instruction, and only one private trade school of secondary level operated by the Prosvita (Enlightenment) society in Lviv. There was also a private agricultural school of lower rank in Mylovanie.

Professional education organized by the Galician Land Board was also poorly developed. There were only a few schools at the secondary level (e.g. commercial art and trade schools in Lviv) and a few more of lower rank (primarily vocational schools). Polish was the language of instruction.

**Preschool education.** Interest in preschool education began to appear at the end of the nineteenth century. Natalia Kobrynska (1851–1920), a noted poetess and pioneer of the women's movement, provided the initiative when she spoke on the subject at a women's meeting in Stryi in 1891. The first children's nursery (*zakhoronka*) under the supervision of the Sister Servants of God was organized in 1892 by the Rev. Cyril Siletsky. A number of others were soon opened. From 1900 on, preschool education was promoted and sponsored by the society Rus'ka Zakhoronka (Ruthenian Nursery, later Ukrainian Nursery), which opened its first nursery in Lviv in 1902, as well as by other organizations such as the Sisters of the Order of St. Basil the Great and the Sister Servants of God, and by individual priests. Instructional supervision was handled by the executive board of the Ukrainian Pedagogical Society. In addition, this society, often with the assistance of other groups, organized kindergartens during the summer work period in the villages.

**Private schools.** Once it became apparent that all efforts to secure expansion of Ukrainian public schools at the higher level were practically useless, the Ukrainian community began to organize private schools, mainly gymnasiums, teachers' seminaries, and, on a smaller scale, elementary schools. Private schools were organized by the Ukrainian Pedagogical Society (before 1912, Ruthenian Pedagogical Society) which in 1926 adopted the name Ridna Shkola (Native School). Also prominent in these efforts, especially in the organization of secondary schools, was the Land Educational Association (from 1910), composed of representatives of central organizations and political parties, headed by Michael Hrushevsky and Ivan Kyveliuk.

Before the outbreak of World War I, the number of private elementary schools increased to 16, that of secondary schools and teachers' seminaries to 13. This included eight gymnasiums with 1,930 students (1911–12) and two teachers' seminaries functioning under the auspices of the Land Educational Association, a girls' gymnasium in Lviv and a teachers' seminary in Yavoriv operated by the Sisters of the Order of St. Basil the Great, and a girls' lyceum, turned into a gymnasium in 1918, operated in Peremyshl by a private society called the Ukrainian Institute.

**Educational organizations and publishing houses.** Despite apparent shortcomings in providing a sufficient number of native schools for the Ukrainian population, particularly elementary schools with upper grades and secondary schools, Galicia, with the exception of Bukovina, was the only part of Ukraine where Ukrainian youth had an opportunity to study in Ukrainian schools. Gradually, these schools became more Ukrainian in both form and content. Particularly commendable in this respect were the efforts of the patriotic and dedicated teachers who were organized in two groups, Vzaïmna Pomich Ukraïns'koho Uchytel'stva (Mutual Aid Society of Ukrainian Teachers), founded in 1905 and consisting of elementary school teachers (710 members in 1914), and Uchytel's'ka Hromada (Teachers' Society), founded in 1908 for teachers of secondary and higher schools.

The journals published by these and other teachers' organizations were organs of pedagogical and methodological thought (see p. 294). Many prominent Galician pedagogues worked on problems concerning the theory and history of teaching, didactics, and methodology. Among them were Theodore Bilenkyi, Basil Biletsky, Volodymyra Vilshanetska, Michael Halushchynsky, Ivan Demianchuk, Ivan Kazanivsky, Stephen Kovaliv, Ostap Makarushka, Constantina Malytska, and Ivan Yushchyshyn. Galician teachers played a prominent role in the growth of educational youth organizations. Often they were the initiators and counselors of self-educating youth groups and cooperated in the activity of illegal

student organizations (e.g., Moloda Ukraïna (Young Ukraine) in 1900–3 and later groups. On the initiative of teachers (Alexander Tysovsky, Ivan Chmola, and Peter Franko) the self-educating youth organization Plast was established in Galicia in 1911–12. Patterned on the scout movement, this organization included both boys and girls, offering a broad program of instruction and sports (camping, hiking, exercises).

**Institutions of higher learning.** Ukrainians were least successful in their efforts to secure institutions of higher learning. Before 1867, the University of Lviv was a German-language institution. An extended struggle soon developed, particularly in the Galician diet, over the national character of the university. By an imperial decree of July 7, 1871, professorial chairs in the future were to be awarded only to those scholars who were proficient in either the Ukrainian or Polish language. Although this order ostensibly acknowledged the bilingual character of the university, in reality the institution was rapidly Polonized. In 1879, Polish was introduced as the administrative language of the university and the tenure of Ukrainian lecturers (docents) was made extremely difficult. Before the outbreak of World War I, the University of Lviv consisted of four departments: theology, philosophy, law, and medicine (established in 1894). Student enrollment was approximately 5,000 (1,000 in 1870). Faculty members numbered 80, only 8 of whom, plus 4 docents, were Ukrainians. The position of Ukrainians was even weaker at the two other institutions of higher learning in Lviv—the Polytechnic (1872) and the Academy of Veterinary Science (1897; after 1881, School of Veterinary Science), and at the Land Agricultural Academy of Dubliany.

The efforts to secure equality for Ukrainians at the University of Lviv expanded towards the end of the nineteenth century into an all-out struggle for the establishment of a separate Ukrainian university. One of the basic demands of Galician Ukrainians in their struggle for political rights, it assumed national significance for all Ukrainians as a struggle to establish what at that time would be the only Ukrainian university in existence. Led primarily by the Ukrainian students (non-Ukrainian students were at best passive, at worst opposed to the establishment of such a university), this struggle found its way to the Galician diet and to the parliament in Vienna. In Lviv it erupted into violence on several occasions (fights between Ukrainian and Polish students, withdrawal of Ukrainian students from the university in 1901, a demonstration in 1907, the killing of Adam Kotsko, imprisonment of Ukrainian students, etc.). In 1912, the Austrian authorities finally acceded to the establishment of a separate Ukrainian university (not sooner than 1916), but the outbreak of World War I prevented this project from ever being realized.

While Galicia and Bukovina were being incorporated into Austria, many students attended schools of higher education in Vienna, Graz, Leoben (Mining Academy), and Prague.

**Student Organizations.** Students of various institutions of higher learning and theological seminaries took an active part in the cultural, educational, and political life of Galicia. The Society of Student-Theologians (Lviv, 1830) and the Sich organization (1861–3) were essentially self-educational societies. The activity of Ukrainian student organizations in the last quarter of the nineteenth century—Akademichna Besida [Academic Club], Akademicheskii Kruzhok [Academic Circle], Akademichne Bratstvo [Academic Fraternity], Vatra [Campfire], Akademichna Hromada [Academic Community])—was strongly affected by the prevailing political conflict between the Populist and the Russophile trends [Vol. I, p. 701 ff.]. The activity of the clandestinely functioning Moloda Ukraïna (Young Ukraine)

1900–2 student groups was essentially political in character. Founded by the editorial board of the journal *Moloda Ukraïna*, this organization was composed of both university and gymnasium students. After the 1902 withdrawal of Ukrainian students from the Lviv university and other developments in the struggle for a Ukrainian university, Ukrainian students became increasingly active at other universities in Austria-Hungary (Cracow, Vienna, Graz, Innsbruck). The Ukrainian Student Union (Ukraïns'kyi Students'kyi Soiuz) came into being in 1909 at the first student congress held in Lviv. The Union's press organ was the journal *Shliakhy* (Pathways) founded in 1913. The Union also embraced county student sections whose primary task was to conduct cultural and educational activity in the countryside.

World War I disrupted the development of Ukrainian education, particularly in the elementary schools (many buildings were partially destroyed and scores of teachers were drafted into the army). During the Russian occupation, Ukrainian schools ceased to operate. On the other hand, a number of Ukrainian elementary schools, secondary and seminary courses were organized by émigrés in Vienna and in refugee camps in Austria (Gmünd) and elsewhere.

## EDUCATIONAL AND CULTURAL MOVEMENT IN GALICIA

### Before 1860

As a result of the new system of education, closer relations with the cultural centers of the West, and the influx of new currents and ideas in the early nineteenth century, the level of education of the Ukrainian leading class, the clergy, improved steadily. In turn, the masses became more enlightened, although in Galicia the new trends took root very slowly.

The only cultural-educational organization functioning in the first half of the nineteenth century was the Stavropygian Institute, changed by the Austrian government in 1788 from the Lviv Stavropygian Brotherhood, which was well known for its work in the field of education. The activity of the Institute was limited to the printing of school textbooks and the operation of one school and dormitory. Equally limited was the work of the Society of Galician-Greek-Catholic Priests, established in 1816 in Peremyshl by Bishop Michael Levytsky and his assistant, Canon Ivan Mohylnytsky, with the aim of spreading education among the priests and people. The majority of Ukrainian intelligentsia of the 1830's, Polonized and conservative in outlook, did not pay much attention to questions of education. The efforts of a small group of Ukrainian intellectuals led by the "Ruthenian Trinity" [Vol. I, p. 1009a], to achieve greater rights for Ukrainian education, was not successful. The most important and agitating issue of the time was the so-called "alphabet war" which involved attempts to introduce the Polish alphabet into the Ukrainian written language (Joseph Lozynsky, 1834). Plans to publish newspapers were disrupted by disagreement as to the language in which they were to be printed—the vernacular or Old Church Slavonic.

The question of Ukrainian education assumed greater importance with the establishment of the Supreme Ruthenian Council in 1848. The Halyts'ko-Rus'ka Matytsia (Galician Ruthenian Matytsia) was founded in Lviv in 1848 (first president Rev. Michael Kuzemsky) on the pattern of similar Slavic societies to undertake the promotion of education among the masses. The question of a literary language for Galician Ukrainians was resolved by the Council of Ruthenian Ukrainian Intellectuals (Sobor Rus'kykh Uchenykh) in favor of the vernacular. Other significant developments of this period were the appearance of the weekly *Zoria Halyts'ka* (Galician Star) and the founding of a national home in

Lviv, which was to become the cultural center of Galician Ukrainians. Reading rooms were also established (in Kolomyia in 1848, at the Lviv Theological Seminary in 1850).

The cultural-educational movement which emerged in Galicia in the late 1840's experienced a marked decline in subsequent years. The Supreme Ruthenian Council ceased to exist (1851) and the Galician-Ruthenian Matytsia failed to develop any meaningful program of activity. Among the Ukrainian intelligentsia, the conservative trend, with its insistence on limiting the education to parochial schools, became dominant. The issue which again aroused Galician Ukrainians was the second "alphabet war" (1859). The dispute arose when the Austrian government, persuaded by the governor-general of Galicia, Count Agenor Goluchowski, tried to introduce the Polish alphabet into Ukrainian schools. The plan met with vigorous opposition and was defeated by a united effort of the Ukrainian intelligentsia.

**1860–90**

In the 1860's, the cultural-educational life of Ukrainians in Galicia was revitalized under the influence of the Populists [Vol. I, p. 701 ff.], who opposed the older generation of conservatives, who were more than ever committed to Russophile tenets. The Ukrainians of Galicia were sharply divided between the two camps. The Russophiles controlled the Stavropygian Institute, the National Home, the Galician-Ruthenian Matytsia (all showing little interest in educational affairs), and the paper *Slovo* (The Word). Originally a cultural-educational movement, the Populists developed into a political force, gaining the support of the young (including theology students), who began organizing Hromady (communities) in secondary schools. Encouraged by this support, the Populists began to publish a number of journals: *Vechernytsi* (Evening Gatherings, 1862), *Meta* (The Goal, 1863), *Nyva* (The Field, 1865), and *Rusalka* (The Nymph, 1866). However, the publication of the periodicals was gradually discontinued because the small number in the Populist movement at that time could not provide sufficient funds.

The only Populist-oriented organization was the social club Rus'ka Besida (Ruthenian Club), founded in 1861, which became Ukrainian in 1870, until the Prosvita (Enlightenment) society was founded in 1868 by the Populists on the initiative of Rev. Stephen Kachala. This society was to become a central organization of all nationally conscious Ukrainians for the advancement of culture and education. The first general meeting of the Prosvita society took place on December 8, 1868, and the first president-elect was Anatole Vakhnianyn. Its bylaws and regulations were designed to have a scholarly educational character, but according to the amended bylaws, introduced as early as 1870, the Prosvita society was to confine its activity to the promotion of education among the Ukrainian masses, while all matters pertaining to Ukrainian scholarship and literature were assumed by the Shevchenko Society (established in 1873 and changed to the Shevchenko Scientific Society in 1893).

FIGURE 133. STEPHEN KACHALA

In the 1870's, branches of the Prosvita society began to appear in smaller cities and towns and establishing reading-rooms in many villages. The headquarters of this network was in Lviv. It began publishing its own organ, *Pys'mo z Prosvity* (Letter from Prosvita) in 1877, popular and scholarly books in the 1860's, and textbooks for use in secondary schools. The Russophiles did not belong to Prosvita. In 1874, they founded in Kolomyia a rival group, Obshchestvo

im. Kachkovskoho (Kachkovsky Society), which was transferred to Lviv in 1876. With functions similar to those of Prosvita, it also published popular books and established reading rooms in villages. The Russophiles and the Populists, however, belonged to other community groups, particularly to those in the countryside such as the so-called Besida clubs. A significant achievement of the 1860's was the establishment of a Ukrainian folk theater attached to Rus'ka Besida (see Theater). The division of Galician Ukrainians into two camps weakened the already rather disorganized forces. Still, the ranks of Ukrainian intelligentsia continued to increase steadily, and they were no longer Polonized. The Populists gradually gained more supporters among them.

A marked differentiation in the organized cultural life began to appear in the 1880's. Educational activities which had been conducted by Prosvita and various political groups were concentrated in the Rus'ke Pedahohichne Tovarystvo (Ruthenian Pedagogical Society). Beginning in 1891, the Prosvita society extended the scope of its activity into the economic field, organizing stores, community warehouses, agricultural and commercial cooperatives, and savings and loan banks. Further growth in this area necessitated the establishment of separate economic organizations, such as Sil's'kyi Hospodar (Village Farmer) and Kraiovyi Reviziinyi Soiuz (Land Audit Union) [Vol. I, p. 706].

The organizational-educational life of Galician Ukrainians in the last quarter of the nineteenth century was marked by a series of significant cultural events: the transfer of the remains of Markian Shashkevych to Lviv (1893), the fiftieth anniversary observance of the abolition of the corvée (1898), the centennial celebration of the publication of Ivan Kotliarevsky's *Eneïda*, and the twenty-fifth anniversary of Ivan Franko's literary activity (1898). These events contributed substantially to the intensification and development of Ukrainian endeavors in the realm of education.

### The Twentieth Century

The progress achieved in the late nineteenth century provided the basis for the further growth of organized cultural life. The Prosvita society remained the leading organization; special courses for the illiterate were offered in 1907; activities in publication and economic organization were revived; the first Ukrainian cultural economic congress of the Prosvita society was held in Lviv on February 1 and 2, 1909, with 768 educational and economic leaders participating; 2,000 new reading rooms, 430 Prosvita buildings, a number of national homes housing Prosvita reading rooms, and other Ukrainian institutions were established in the period 1900–14. The growth of the Prosvita society from the year of its establishment until 1914 is shown in Table I.

FIGURE 134. BUILDING OF PROSVITA IN LVIV

In 1914, 75 per cent of all Ukrainian populated centers in Galicia had Prosvita reading rooms, 15 per cent had their own buildings, and the membership in the Prosvita society included approximately 20 per cent of all Ukrainian males. Dur-

TABLE I

| Year | Branches | Reading rooms | Members in thousands: Central organ. | Members in thousands: Reading rooms | Libraries | Publications: Books | Publications: Copies in thousands | Bldgs. |
|---|---|---|---|---|---|---|---|---|
| 1869 | — | — | — | — | — | 4 | 20 | — |
| 1875 | 1 | — | — | — | — | 6 | 83 | — |
| 1880 | 3 | — | 1.5 | 0.2 | — | 6 | 23 | — |
| 1890 | 4 | — | 4.8 | 27 | — | 8 | 50 | — |
| 1895 | 10 | 233 | 7.9 | 42 | 843 | 9 | 45 | 34 |
| 1900 | 20 | 924 | 13.4 | 76 | 1,243 | 9 | 83 | 75 |
| 1905 | 34 | 1550 | 19.0 | 100 | 1,753 | 8 | 120 | 118 |
| 1910 | 64 | 2376 | — | 114 | 2,290 | 16 | 111 | 310 |
| 1914 | 77 | 2944 | 36.4 | 197 | 2,664 | 16 | 120 | 504 |

ing the fifteen years preceding World War I, the Prosvita society published close to 1.5 million books, designed primarily for mass education of the peasantry.

Other organizations contributing to the progress of education were the already mentioned teachers' groups, Mutual Aid Society of Ukrainian Teachers and the Teachers' Association, the Ukrainian Pedagogical Society (later, Ridna Shkola), the Sokil and Sich athletic associations, and students' and women's organizations.

Intensive development of press and publications, including those specifically aimed at the general public, contributed in large measure to the improvement of mass education. Whereas in 1875 there were only 62 new non-periodical publications in Galicia, by 1894 this number had increased to 177, and by 1913 to 362, thus constituting more than half of all Ukrainian publications in the world (see Book Publishing and Press, p. 455). Children's literature formed a significant part of all publications (readers, magazines, etc.) contributing to the education of Ukrainian youth.

*I. Herasymovych, O. Terletsky*

## EDUCATION IN BUKOVINA

During the period of Moldavian rule, schools and education in Bukovina were at an exceedingly low level [Vol. I, p. 707]. Only elementary schools, operated by monasteries for low-ranking clergy, were available. This situation improved but slightly with the annexation of Bukovina by Austria. Following its incorporation into Galicia, the two Ukrainian lands shared the same fate (1787–1849). German schools appeared in the cities. At the same time, the Austrian government opened German-language secondary schools (first gymnasium in Chernivtsi, 1808), as well as Rumanian-language theological schools, first established in 1827.

### Schools

Conditions changed substantially following Bukovina's separation from Galicia in 1849, and even more during the 1860's as a result of the restoration of the constitution in Austria, the subsequent Ukrainian autonomy, and the national revival among Ukrainians of Bukovina [Vol. I, pp. 708 ff.]. This period was marked by a rapid development of Ukrainian schools and extracurricular educational activities, although the growth of public schools in Bukovina did not become apparent until 1869, when the government took over control of all schools. There were 116 schools as early as 1870 and 165 in 1896, of which 131 were purely Ukrainian and 34 were mainly Ukrainian-German and Ukrainian-Rumanian. The schools were attended by nearly 20,000 children. The

school development progressed in proportion to the general advancement of Ukrainians as a political force in Bukovina. One of the major gains of that period was the appointment of Omelian Popovych to the Land Board of Education for Ukrainian Schools as administrator. Thanks to his efforts, there were 216 Ukrainian and 8 mixed schools in 1910–11, with 40,000 pupils and 800 Ukrainian teachers compared to 177 Rumanian, 82 German, 12 Polish, and 5 Hungarian schools. Of all Ukrainian lands, Bukovina had the most adequate supply of elementary schools, mainly because supervision of these schools was in their own hands. Practically all Ukrainian children attended Ukrainian schools, and only three per cent did not attend.

FIGURE 135. OMELIAN POPOVYCH

**Urban schools** were originally German because of the Jewish population in the cities. Separate classes for national groups (grades 1–2) were opened in Chernivtsi in the 1890's, but with the establishment of the Ukrainian School Administration in 1906 they were reorganized into Ukrainian schools (four in Chernivtsi). There were also boys' and girls' elementary schools in Chernivtsi, subsidized by the Greek Orthodox religious fund, with Ukrainian and Rumanian as the languages of instruction.

**Secondary schools** were originally German (starting in 1851 the Ukrainian language was taught at the Chernivtsi gymnasium, and after 1872 religious instruction for Orthodox Ukrainians was also given in Ukrainian; religious instruction in Ukrainian for Greek-Catholics had been introduced earlier). It was not until 1896 that a lower Ukrainian-German gymnasium was opened in Chernivtsi. In 1905 it was changed into a higher gymnasium. In addition, there was one Ukrainian-German gymnasium in Kitsman (1904), a Ukrainian gymnasium in Vyzhnytsia (1908), and a private real-gymnasium in Vashkivtsi. Total enrollment in secondary schools prior to World War I was 1,200 students.

A teachers' seminary for men, established in 1871 and expanded in 1872 by the addition of a women's division, was also German. Since there were no coeducational schools in Bukovina, a special two-year preparatory course was opened for students intending to enroll in teachers' seminaries; later, several subjects were taught in the spoken languages of the land. Three equivalent Ukrainian, German, and Rumanian departments were established in the men's division of the teachers' seminary in 1910. In the meantime, the society Ridna Shkola (Native School) in Chernivtsi opened a private Ukrainian teachers' seminary for women in 1907.

**The University of Chernivtsi** was established in 1875 with German as the language of instruction, but a chair of Ukrainian language and literature (headed by Ignatius Onyshkevych and later by Stephen Smal-Stotsky). Two additional Ukrainian chairs were established in the department of theology.

**Extracurricular Activities**

The educational and cultural movement in Bukovina began in the 1860's, when the first attempts were made to organize reading rooms in the villages and to stimulate activity among urban dwellers and the intelligentsia. Most important in this movement was the Rus'ka Besida (Ruthenian Club) society, founded in 1869 on the initiative of the Orthodox bishop (later metropolitan), Eugene Hakman. At that time, Rus'ka Besida was the only organization defending the rights and interests of the Ukrainian people from abuses by Rumanians and Germans. Moreover, it prompted the establishment of other organiza-

tions, such as the Urban Reading Room (1880), National Home (1884), and Theatrical Society. Initially hampered by the conflict between the Populists and the Russophiles, the society intensified and broadened the scope of its activities when the Populists assumed control (1884). Before 1889, Rus'ka Besida was basically a social club, but it then assumed in Bukovina the functions and interests of the Lviv Prosvita society. Prior to World War I, it had 908 members in Chernivtsi, 9 additional branches in the countryside, and 190 reading rooms, with a total membership of approximately 13,000.

The first Ukrainian newspaper in Bukovina, titled *Bukovyna*, was published in 1885 through the efforts of Rus'ka Besida. Its editor was Joseph George Fed'kovych. Other publications, including popular books, began to appear under the auspices of the society, which also promoted economic activities later assumed by independent economic organizations.

Because of this wider range of activities, individual sections of Rus'ka Besida found it necessary to establish independent cultural and educational societies. Some of the more important were: the Rus'ka Shkola (Ruthenian [Ukrainian] School), 1887, which promoted educational activities, organized lectures and courses, published textbooks and a pedagogical journal of the same name (1888–1900); Mishchans'ka Chytal'nia (Urban Reading Room), 1880, in Chernivtsi; Zhinocha Hromada (Women's Society), 1906; Tovarystvo Pravoslavnykh Rusynok (Society of Ruthenian Orthodox Women), 1908; and Sich athletic associations.

Student organizations in Bukovina were also active in the cultural-educational field. Organized in some cases on the pattern of German student corporations (*Burschenschaften*), student societies such as Soiuz (Union, after 1875), Bukovyna (1888), Zaporozhe (1898), Moloda Ukraïna (Young Ukraine, 1900), Sich (1902) contributed greatly to the educational life of Bukovina. At the same time they helped to increase the knowledge of Ukrainian studies among their members.

Much attention was given to the observance of national occasions and events, such as the jubilee anniversary of J. G. Fedkovych (1886) and Sydir Vorobkevych (1887), the centennial of Kotliarevsky's *Eneïda* (1898), the twenty-fifth jubilee anniversary of the activity of O. Popovych (1900), a jubilee celebration in honor of Nicholas Lysenko (1904), and a festive reception in honor of Ivan Franko (1913).

*N. Haras, V. Simovych*

## EDUCATION IN TRANSCARPATHIA

### Before 1860

At the turn of the nineteenth century, schools and education in Transcarpathia were maintained at a relatively high level largely owing to the activity of Bishop Andrew Bachynsky (1772–1809) [Vol. I, p. 1002b], who succeeded in rallying most of the Carpatho-Ukrainian intelligentsia. In 1841, a theological seminary was founded in Uzhhorod, which was attended by nearly 100 students. There was a theological Greek Catholic seminary in Priashiv also. The Greek Catholic clergy were granted the same rights and privileges as the Roman Catholic clergy, and this resulted in the improvement of their social standing and material well-being. In 1793, 300 schools were maintained by church societies. In comparison with other Ukrainian lands, Transcarpathia was far ahead in the field of education. Consequently, this region produced a number of outstanding civic and political leaders. The fundamentals of reading, writing, arithmetic, and, in some schools, Latin, philosophy, and the Hungarian language (after 1844) were taught in Ukrainian.

After the suppression of the Hungarian revolution (1849), the number of elementary schools increased and the Ukrainian language was introduced as a compulsory subject in the Uzhhorod gymnasium.

**1860–1918**

Following the establishment of the Austro-Hungarian monarchy, these generally favorable conditions changed in the 1860's. As a result of increasing pressure by the Hungarians, the cultural life of Transcarpathia declined [Vol. I, p. 713]. Despite the fact that state law No. 38 (1868) granted national minorities the right to maintain their own schools, paragraph 80 of the same law provided for the establishment of Hungarian public schools whenever and wherever such schools would serve Hungarian national interests. Originally, Ukrainian was permitted as a separate subject in public schools, but Hungarian was introduced as the language of instruction. Since Ukrainian schools were financed by church parishes, the peasants did not object to the introduction of public schools for which no direct payment was required. In 1881, there were still 353 schools with Ukrainian and 265 with Hungarian as the language of instruction. But two years later the number of Ukrainian schools fell to 282, while that of Hungarian schools increased to 313. This trend continued (88 Ukrainian schools in 1899) until 1906 when only 23 Ukrainian schools were left in Transcarpathia.

The education law of 1907 (proposed by the Hungarian Minister Albert G. Apponyi) abolished all non-Hungarian schools, thus leaving only 107 Ukrainian-Hungarian parochial schools which provided only religious instruction and the teaching of Old Church Slavonic in the Ukrainian language. But even these schools were gradually eliminated until in 1918 their number was reduced to 34.

In 1917–18, there were 100 kindergartens in Transcarpathia, 517 elementary schools, 8 elementary schools with higher grades, 3 gymnasiums, 3 teachers' seminaries, 2 commercial schools, 1 agricultural school, 1 school of ceramics, 1 institute for the deaf and dumb, 2 theological seminaries, and 1 lyceum of jurisprudence. The language of instruction in all of these schools was Hungarian. The teaching of Ukrainian was allowed in 34 parochial schools and 2 gymnasiums and teachers' seminaries, but only as an elective subject. In theological seminaries instruction was given in Hungarian, Latin, and Ukrainian. As a result of this educational policy, the level of illiteracy in Transcarpathia reached 60 per cent, and 26,000 children did not attend school at all.

# 5. THE PERIOD OF UKRAINIAN STATEHOOD

## UKRAINIAN NATIONAL REPUBLIC (UNR)

Immediately after the outbreak of the revolution in March 1917, Ukrainians set out to develop their own schools and a system of education. To a large degree, the groundwork had already been prepared by Ukrainian educators and cultural leaders of the earlier period. The Galician Ukrainians also played an important part in the educational development of central and eastern Ukraine. They found themselves in these areas as prisoners of war, hostages, or deportees arrested by the Russian authorities. Many of them were employed as teachers, editors, and journalists. It was the General Secretariat of Education, headed by Ivan Steshenko, which began to organize Ukrainian schools. At the same time, the Society of School Education was established for the purpose of providing Ukrainian textbooks and preparing the first congress of Ukrainian teachers (August 1917). The first Ukrainian gymnasium (the T. Shevchenko gymnasium) was established in Kiev in March 1917, followed soon afterwards by the S.S. Cyril and Methodius Gymnasium. The General Secretariat of Education opened new Ukrainian elementary schools of lower rank and introduced Ukrainian as the language of instruction in elementary schools of the middle and higher ranks. Secondary schools also were established (gymnasiums, realschulen, commercial schools). To facilitate the organizational work, the three existing school districts, Kiev, Kharkiv, and Odessa (the latter two in 1918), were changed into commissariats in 1917. The process of de-Russification of schools was intensified, and in 1917–18 numerous courses of Ukrainian studies were made available for teachers of secondary schools, conducted by such well-known scholars as M. Hrushevsky, Sophia Rusova, Nicholas Vasylenko, Volodymyr Naumenko, and Teoktyst Sushytsky. Since there was now an adequate supply of teachers, five gymnasiums were opened in Kiev alone, with an additional 80 in the cities and villages throughout Ukraine. The *zemstvos* and local self-government agencies demanded that new Ukrainian secondary schools be established as soon as possible. A major role in this development was played by the curators of school districts, particularly by the Kiev district curator N. Vasylenko and later V. Naumenko. Great care was given to the preparation of textbooks for Ukrainian schools. In spite of continued military operations, books were published in large numbers (up to 300,000 copies) in 1917—a supply that was, however, far from sufficient for the entire territory. In only a few months in 1918, close to two million textbooks for elementary and secondary schools were published by the Ministry of Education, which had established a special fund for this purpose.

Work on the curriculum of the unified labor school was started late in 1917 by a special commission with appropriate subcommissions and sections created by the Ministry of Education of the Ukrainian National Republic. The commission's policy and plan of work were outlined at the Second All-Ukrainian Teachers Congress and approved by the Directory in Kiev late in 1918. The program of the unified labor school set the term of studies at twelve years, consisting of three levels: (1) junior basic school (grades 1–4, (2) senior basic school (grades 5–8), (3) collegium (grades 1–12). This program applied only to general education schools. Vocational education was not included although vocation-

al schools could be established on each of the three levels: lower school on the first level, secondary school on the second level, and several types of schools on the third level (collegiums with two, one, or no classical languages included in the curriculum). The general principles determining the educational content of elementary and secondary schools were as follows: (1) national character of schools; (2) realization of the ideal of unified education, i.e., all students should be afforded an opportunity to complete all levels of education according to their abilities; (3) cultivation and fostering of individual activity, initiative, and creative abilities; (4) initiative on the part of pedagogical boards in the organization of the educational process. In addition, the principles of aesthetics were to be applied in the process of teaching and education. The war, however, did not permit complete realization of the unified education program. It should be noted that the programs of all Ukrainian governments were similar in principle, and, therefore, subsequent changes in the form of government did not have an adverse effect on the development of the Ukrainian educational system.

In the years 1917–18, the education and training of teachers in Ukraine was conducted in the Ukrainian language. This applied to university departments of education, the Ukrainian Academy of Pedagogy in Kiev (established in 1917), numerous accelerated teachers' training courses, and regular teachers' institutes and seminaries.

On October 5, 1918, the Ukrainian University of Kiev, which was founded in 1917 in addition to St. Volodymyr University established in 1834, was turned into the first state university with departments of history and philology, physics and mathematics, law, and medicine. An academy of fine arts was also established in Kiev. The University of Kamianets Podilsky was opened on October 22, 1918 (departments of history and philology, law, theology, and, later, agriculture). The College of History and Philology also conducted courses in Poltava. A new university was opened in Katerynoslav, but it was Russian in character. Chairs of Ukrainian language, history, arts, and the history of Ukrainian law were opened at the older universities of Kiev, Kharkiv, and Odessa.

Despite the turmoil brought on by the war, Ukrainian cultural life rose to new heights in the years 1917–18. A vast number of Ukrainian newspapers of various types appeared and new publishing houses sprang up (see Book Publishing and Press, p. 457). Publication of textbooks was particularly well developed. Numerous private publishing houses, on the receipt of free loans from the government, published hundreds of thousands of books. Because of an overload of work at home resulting from the heavy demand, books had to be printed in Vienna and Berlin. The Prosvita society developed a network of branches throughout the entire country. On November 14, 1918, the Ukrainian Academy of Sciences was founded in Kiev (see Scholarship), as were the National State Library, National State Archives, and other institutions of research and education (see Libraries, Archives, pp. 393, 404).

## WESTERN UKRAINIAN NATIONAL REPUBLIC

During the brief life of the Western Ukrainian National Republic the reconstruction of education in Galicia was in the hands of the State Secretariat of Education. Basically, the Austrian system of education and program of teaching were retained, although some adjustments were made to adapt the system to the existing political conditions. County boards of education were formed in February 1919. Instruction in elementary schools with a majority of Ukrainian children was given in the Ukrainian language. Polish schools in the cities were made coeducational, some with Polish

as the language of instruction and others with Ukrainian. By a law passed on February 10, 1919, Ukrainian private schools were nationalized. In accordance with parental demands, Polish was replaced by Hebrew as the language of instruction in the Baron Hirsch Jewish School. In all non-Ukrainian schools, the Ukrainian language was made a compulsory subject. Some secondary schools in the cities became Ukrainian, others retained their Polish character. Gradual Ukrainianization was customary in localities where there was only one Polish public school. The establishment of Polish private schools was permitted by the government, with the provision that the Ukrainian language be included in the curriculum as a compulsory subject. The conditions of war on the territory of the Republic did not interrupt instruction in the majority of schools. Ukrainian secondary public schools totaled 30 (20 gymnasiums, 3 realschulen, 7 teachers' seminaries).

*L. Biletsky, I. Herasymovych*

## KUBAN

After the revolution of 1917, secondary and higher schools were opened in Kuban through private initiative. The Kuban Land Council began to formulate a program of education for the entire region, but because of the war accomplished little. Schools remained Russian in character, and only in elementary schools of lower rank was Ukrainian introduced as the language of instruction, mainly through the efforts of the local intelligentsia. In 1919, Ukrainian gymnasiums were opened in Katerynodar (through the efforts of Ivan Rotar) and, later, in the Okhtyrska *Stanytsia* (organized and financed by the local community). The teachers' seminary was Ukrainianized, and Ukrainian subjects were made available for elementary school teachers. In 1919, the following schools functioned in Kuban: 1,391 elementary schools of lower rank, 151 secondary schools, 2 secondary agricultural schools, 1 secondary technical school, 1 teachers' institute, 5 teachers' seminaries (two Ukrainian), 124 vocational schools, 1 pedagogical institute, 1 school of polytechnics.

# 6. THE UKRAINIAN SSR

## THE 1920's

National renaissance in the central and eastern parts of Ukraine, which had begun after the revolution of March 1917, was interrupted by the war imposed upon the Ukrainian National Republic by Soviet Russia [Vol. I, pp. 756b]. The draft project of a system of general education known as the "unified labor school" could not be realized under these circumstances. While the war lasted, prerevolutionary educational methods and goals remained essentially unchanged. The financial support of Ukrainian schools—inasmuch as it could not be obtained from regular government sources—came from the citizens, particularly from consumer cooperatives, which established at their own expense a

union for Ukrainian culture to direct Ukrainian schools.

Prior to 1920, the Bolshevik leadership in Ukraine was guided in its educational policies by the declaration and the constitution of the Unified Labor School (yedyna trudova shkola) publicized by the Central Executive Committee of the Russian SFSR on October 18, 1918. Tuition was abolished in all schools and universities, and free education in one's native tongue was proclaimed as the right of all who had worker or peasant backgrounds. All schools were to be co-educational. The decree on the separation of Church and State (January 19, 1919), also banned the teaching of religion in schools. Teachers and professors suspected of anti-Soviet leanings were dismissed from their jobs. The new goals of education were formulated by the Russian Communist party (Bolsheviks) as follows: "During the period of the dictatorship of the proletariat, which is the period of the formation of conditions for the realization of a full-fledged Communist society, the school system must not only serve as a general conduit of Communist principles, but must also be an instrument of the proletariat's educational influence over the semi-proletarian and non-proletarian masses."

The Communist party's philosophy thus became supreme in all educational pursuits. The tasks of re-educating the old and of educating a new generation in loyalty to communism motivated Ukrainian Bolsheviks to adopt a policy of thorough Ukrainization of the school system. In their view, Communist indoctrination could reach and be understood by the masses only if it were conducted in their native tongue. This viewpoint prevailed at the Seventh Conference of the Communist Party of Ukraine (April 4–10, 1923), and became part of the official resolutions adopted by the central committee of the CPU on June 22, 1923, and of the decree of the Ukrainian SSR's Council of People's Commissars of July 27, 1923, both of which proclaimed the desirability of Ukrainizing all schools and providing practical measures for accelerated training of new pedagogical cadres fluent in the Ukrainian language. Special obligatory language courses were set up for those teachers and professors who could not lecture in Ukrainian. This act angered Russian chauvinists both in the Communist party and out of it. They vehemently opposed Ukrainization and blocked it by all possible means.

A significant event in the development of Soviet Ukrainian education was the First All-Ukrainian Teachers' Congress held at Kharkiv in January 1924. This congress voiced support for the policy of Ukrainization. On July 6, 1927, the government of the Ukrainian SSR adopted its final decree on Ukrainization: among other things, it provided that the positions of teachers in Ukrainian public schools and those of lecturers and professors in higher educational establishment could only be occupied by individuals fluent in Ukrainian. At the same time, however, schools of all types, conducted in the languages of Ukraine's national minorities, were also set up; there were numerous schools using Yiddish, Russian, German, Polish, Rumanian, Belorussian, Bulgarian, and Greek. Similarly, starting with the 1927–8 school year, more than 300 Ukrainian schools were established for the Ukrainian minorities in Russia, Kazakhstan, and other republics of the Soviet Union.

### New School System

Early in 1920, Gregory Hrynko, the people's commissar of education, proposed a new educational system for the Ukrainian SSR, which was officially adopted in August 1920. One of its peculiar features was its marked difference from the system concurrently established in the RSFSR. Hrynko's system consisted of the following institutions: (1) pre-school child care establishments, mostly kindergartens, for 4 to 8 year-olds; (2) the so-called labor schools for social edu-

cation—general education seven-grade schools for 8 to 15 year-olds; (3) professional higher education comprising (a) secondary professional two- to three-year schools for vocational training of skilled workers; (b) the so-called tekhnikums (technical schools)—three-year intermediate specialized schools graduating technicians and instructors for "labor" schools; (c) institutes—four-year professional schools preparing qualified specialists; and (d) academies–two-year schools of advanced study for institute graduates. By 1921, however, Hrynko's system was slightly altered to reflect the proposals of his deputy, Yan Riappo. Scientific research was excluded from the educational system. Tekhnikums, as well as institutes, were to be institutions of higher learning. The length of studies in tekhnikums was to be 3–4 years; in the institutes, 4–5 years. Tekhnikums graduated specialists of narrow interest, the institutes, specialists in administration and management. Professional schools were to be establishments of both professional and general education within the scope of the secondary "real" schools. The new educational system provided for both a thorough political indoctrination and specialized professionalism.

**Preschool Education**

The preschool child-care establishments of the 1920's were largely designed to instill the basic ideas of communism. For this purpose, various ultramodernistic experiments were conducted, some of them quite bizarre. Children were taught to engage in productive work from the earliest age; they were to act and behave in accordance with strict disciplinary programs in one situation and be absolutely free in another. However, such establishments were rare. By the end of the 1920's there were only 643 kindergartens in the Ukrainian SSR, not counting those which were opened temporarily during the summer months. All instruction in the kindergartens was given in Ukrainian.

**The Labor School**

The seven-grade labor school in Hrynko's scheme was the basic general-purpose school designed to provide what was called "social" education. It included, in addition to general literary subjects, some polytechnic and vocational training, and indoctrination in socialist ideas, working-class consciousness, and political action. The seven-grade school was divided into two subdivisions: the lower (grades I–IV), also called "elementary school," and the higher (grades V–VII), also called "incomplete secondary school." A decree of October 1925 made elementary four-grade education mandatory for all children. However, this could not be easily implemented because of a serious shortage of teachers and school buildings. In 1923–4, government expenditures on education per capita amounted to only 0.90 rubles in the Ukrainian SSR, whereas in the RSFSR the amount was 1.20 rubles. It was not until 1925–9 that a crash program of school construction was begun in the Ukrainian SSR; government investments increased 8.18 times (in the USSR as a whole, only 4.7). Nevertheless, in this period nearly one-third of all children of school age, mostly in the countryside, still failed to complete the four-grade school. There was official discrimination against children of well-to-do peasants, shopkeepers, and clergy: these pupils, unlike others, had to pay tuition. In 1928 there were 122,598 tuition-paying pupils in the Ukrainian SSR, or about 5 per cent of the total. The prerevolutionary pattern of boys attending school outnumbering girls prevailed in the rural areas as late as 1928 (a 61:39 per cent ratio), while in urban areas the disproportion was negligible (52:48).

Beginning with the school year 1930–1, a decree of CC CPSU of July 25, 1930, established compulsory elementary education (4 grades) in the countryside and incomplete-secondary education (7 grades) in the urban areas. By this time,

almost all children of school age attended. Towards the end of the 1920's a degree of specialization was introduced into the seven-grade schools. In urban areas, some industrial subjects were taught in addition to the usual basic subjects, while in rural areas some agricultural subjects were introduced. Since 1929–30, Grade VIII has been added in some urban seven-grade schools.

The statistics in Table II apply to general education schools in this period: The total number of children attending schools in 1927–8 divided percentage-wise among national schools with the given language of instruction is shown in Table III.

From among all children of Ukrainian nationality 93.9 per cent attended Ukrainian schools, 3.2 per cent mixed Ukrainian-Russian schools, 2.4 per cent Russian schools, and 0.5 per cent other schools. This was, of course, an impressive result of the Ukrainization policy.

TABLE II

| | Number of schools | | | |
|---|---|---|---|---|
| School year | Total number | Elementary | Incomplete secondary | Secondary (more than 7 grades) |
| 1914–15 | 19,568 | 18,775 | 341 | 452 |
| 1928–9 | 20,446 | 17,488 | 2,660 | — |
| 1932–3 | 21,697 | 13,354 | 8,011 | 261 |

| | Number of pupils (in thousands) | | | |
|---|---|---|---|---|
| School year | Total number | Elementary | Incomplete secondary | Secondary (more than 7 grades) |
| 1914–15 | 1,678 | 1,493 | 44 | 141 |
| 1928–9 | 2,554 | 1,586 | 954 | — |
| 1932–3 | 4,481 | 1,329 | 2,920 | 224 |

| | Number of teachers | | | |
|---|---|---|---|---|
| School year | Total number | Elementary | Incomplete secondary | Secondary (more than 7 grades) |
| 1914–15 | 46,739 | 34,419 | 2,730 | 9,590 |
| 1928–9 | 75,380 | 39,488 | 35,043 | — |
| 1932–3 | 126,443 | 32,686 | 85,776 | 7,387 |

TABLE III

| | Type of school | | |
|---|---|---|---|
| Language of instruction | Elementary (%) | Incomplete secondary (%) | All schools combined (%) |
| Ukrainian | 85.4 | 66.0 | 78.0 |
| Russian | 7.3 | 13.3 | 9.0 |
| Ukrainian-Russian (mixed) | 1.3 | 11.1 | 5.3 |
| Yiddish | 1.4 | 5.1 | 2.9 |
| German | 1.6 | 1.0 | 1.3 |
| Polish | 1.4 | 0.5 | 0.9 |
| Others | 1.6 | 3.0 | 2.6 |
| TOTAL | 100.0 | 100.0 | 100.0 |

In the following years, the percentage of all pupils in the Ukrainian SSR attending Ukrainian schools increased from 78.0 in 1927, to 81.0 in 1929, and 88.5 in 1933, when the peak of Ukrainization was reached.

**Professional and Higher Education**

The transformation of higher education into a system of professional education began in April 1921, with the establishment of the Chief Ukrainian Administration of Professional Education within the People's Commissariat of Education of the Ukrainian SSR. Professional schools were based on the seven-grade schools and were designed for children from 15 to 18 years of age. To accommodate the needs of the national economy for a skilled labor force, professional schools had different types of specialization: industrial, agricultural, business, transportation, medical, art, etc. In 1929, there were 680 professional schools, of which 250 were agricultural, 157 industrial, 103 handicraft.

Most professional schools charged tuition fees (79 per cent of all schools in 1928), but children of poor workers and peasants were exempt.

Vocational training of skilled industrial workers was conducted by the schools of Factory and Plant Training (Fabrychno-Zavods'ke Uchenytstvo). These schools were first established in 1920 with a three-year course of study. The FZU schools furnished both technical training and general education at the level of grades V–VII. After 1930, most students in the FZU schools were graduates of the seven-grade schools, and consequently their period of training was reduced to 1½–2 years. At the end of 1928, there were 265 FZU schools with an enrollment of 49,500 students.

In the system of professional education, tekhnikums initially played a leading role. They were defined as institutions of higher learning designed to train specialists of narrow interest, capable of doing practical work, viz., that of a technical engineer or practicing agronomist. In July 1928, however, by a decision of the CC CPSU all technical education in the USSR was unified. In Ukraine, as in Russia, tekhnikums were reduced to the status of secondary professional schools, their present classification. In 1927–8 the number of tekhnikums and other secondary professional schools in the Ukrainian SSR was 158, with an enrollment of 31,176 students.

FIGURE 136. UNIVERSITY OF KHARKIV (in 1920's)

Ukraine's universities were also transformed into higher professional schools, i.e. specialized institutes, despite the fact that in the RSFSR and other Soviet republics the universities remained intact. The medical schools of Ukraine's universities were changed to medical institutes and women's medical institutes were merged with them. Law schools of the universities were joined with socio-economic institutes, which replaced the former commercial institutes. The departments of historical and philological, as well as physical and mathematical, sciences of the universities, the women's courses of higher studies, and the teachers' seminaries in *oblast* cities were transformed into the so-called institutes of people's education (INO), whose main task was to prepare teachers for the upper grades of the seven-grade schools of general education. The INO's consisted of three departments: (1) social education, which prepared teachers for public schools and kindergartens;

(2) professional education, which produced teachers for tekhnikums and other secondary professional schools; and (3) political education, which prepared propagandists for political agitation among the masses. INO's were situated in Kharkiv, Kiev, Odessa, Dniepropetrovske, Mykolaïv, Kherson, Kamianets Podilsky, Nizhyn, Poltava, Chernihiv, Zhytomyr, and Luhanske. Early in the 1930's, however, the INO's were subdivided and reorganized into separate institutes of people's education, of social education, and of professional education. Thus the former departments became independent INO's.

In 1930, there were 42 institutes, of which 13 were pedagogical, 5 specializing in the arts, 5 medical, 1 specializing in transportation, 4 socio-economic, 5 industrial engineering, and 9 agricultural. Women comprised 28 per cent of the total enrollment of 40,890 students; Ukrainians by nationality numbered about 23,000 or approximately 56 per cent of the total student body.

Within this system of higher education, there were also various short-term professional courses for industrial and agricultural workers designed to augment their technical knowledge or skills, night tekhnikums, and night secondary professional schools. In order to train politically reliable professional personnel, the government of the Ukrainian SSR established in March 1921 special workers' faculties (*robfaks*)—two-year, general education schools for adults attached to the institutes of higher education and to some tekhnikums. The "workers' faculties" enjoyed various privileges. Their students were selected only upon the recommendation of the Communist party, Communist Youth League (Komsomol), trade unions, and the committees of poor peasants. In 1921, 40 per cent of *robfak* students were industrial workers, and 20 per cent of the students belonged to the Communist party and the Komsomol; by 1929, these percentages increased to 63 and 57, respectively.

Table IV illustrates the general state of professional education in the Ukrainian SSR in the academic year 1929–30.

The proportion of Ukrainian students in professional education establishments in 1929–30 was 53.1 per cent, compared with 20.0 per cent Russians and 22.5 per cent Jews. At the same time, Ukrainians in the Ukrainian SSR represented more than 80 per cent of the total population, Russians 9.2 per cent, and Jews 5.4 per cent. This indicates that, despite official policy, Ukrainization in the field of higher education was far from complete. The main reason for this was that the percentage of Russians and Jews was much larger in the urban population than in the total population and that students in professional schools came mostly from urban centers. On the other hand, Ukrainian students predominated in agricultural, pedagogical, medical, and art schools—a pattern of distribution which continued well into the 1930's and 1940's.

Among institute students in 1929–30,

TABLE IV

| Type of school | Number of schools | Number of students | Language of instruction of all schools (%) | | | | |
|---|---|---|---|---|---|---|---|
| | | | Ukrainian | Russian | Mixed Ukrainian Russian | Yiddish | Other |
| Institutes | 42 | 40,890 | 28.9 | 2.6 | 63.2 | 0.0 | 5.3 |
| Tekhnikums | 109 | 26,778 | 36.5 | 14.3 | 42.9 | 2.4 | 3.9 |
| Workers' faculties | 78 | 14,553 | 60.4 | 22.9 | 14.6 | 0.0 | 2.1 |
| Professional schools | 680 | 88,409 | 59.1 | 7.1 | 24.6 | 4.1 | 5.1 |
| Professional courses | 377 | 37,202 | 40.5 | 45.0 | 12.5 | 0.7 | 1.3 |
| Factory and plant schools | 197 | 29,167 | 17.6 | 32.7 | 48.3 | 1.4 | 0.0 |

workers and their children comprised 35.7 per cent of the total enrollment, and those of peasant background 25.6 per cent. In tekhnikums these percentages were 42.3 and 37.4, respectively.

**Educational Methods**

During the 1920's and early 1930's all kinds of methods used abroad or discussed in world pedagogical literature were experimented with and adapted to Communist purposes (e.g., method of complete words, complex system, projects method, the Dalton plan, and team work and study). In grade schools, polytechnic principles were tried out; in higher education, collective methods of studying and doing research in teams and brigades were tested. These experiments were disappointing, however, and most of them were subsequently discarded. Experimentation, along with other factors, had an adverse effect on higher education. The course of study in technical institutes had been prolonged in some cases to more than six years. Of the total number of students accepted by these institutes only 6 per cent graduated (1928). On the eve of industrialization, this situation created acute shortages of engineers and other technicians.

**Administration**

The entire educational system was thoroughly centralized; no single unit had autonomy. At the top, there was the People's Commissariat of Education of the Ukrainian SSR, supervising all schools, tekhnikums, and institutes through its official inspectors and instructors. Higher education was included in the centralization. In accordance with the statute of 1922, the Chief Ukrainian Administration of Professional Education appointed the rectors (presidents) in establishments of higher education, while the CC CPU appointed political commissars. The position of political commissar did not, however, last long. By 1926–7 more than 90 per cent of all rectors belonged to the Communist party; hence, they could carry out the party line without supervision. In their turn, rectors appointed the deans of faculties, with the approval of the Chief Administration.

**Extracurricular and Communal Activities**

The Prosvita (Enlightenment) societies (852 branches in October 1918 and 4,322 in June 1921), which took care of all extracurricular activities during the period of independence, were later abolished by the Bolsheviks as "nationalistic" and "bourgeois." The new policy for communal extracurricular education was laid down by the Fifth All-Ukrainian Congress of Soviets (March 3, 1921). It called for the nationalization of the press, radio, and all other communications media, for the establishment of libraries, social and sports clubs for adults, and summer camps for children, all of which should actively engage in Communist propaganda and indoctrination. A special Commission for the Elimination of Illiteracy (Liknep) was established in 1921, and a Ukrainian SSR government decree made it mandatory that all individuals between the ages of 8 and 50 learn to read and write in Ukrainian or any other language of their choice. As the following statistics indicate, the success of this difficult task was gradual (Table V).

TABLE V

PERCENT OF ILLITERATES FROM 9 TO 49 YEARS OLD

| Year | Both sexes | Men | Women |
|---|---|---|---|
| 1926 | 36.4 | 18.9 | 52.8 |
| 1939 | 11.8 | 6.1 | 17.1 |
| 1959 | 0.9 | 0.4 | 1.2 |

Data for 1939 do not include western Ukrainian lands, but those for 1959 do. Illiteracy was higher in the villages than in the cities. In rural areas, in 1939, the illiterates numbered 8.1 per cent among men and 21.5 per cent among women; in 1959, these figures were reduced to 0.5 and 1.1 per cent, respectively.

**Evaluation**

The system of education adopted at the beginning of the 1920's prevailed, with some changes and improvements, until 1932–3. In quantitative terms, the new system compared favorably with that before 1917. However, in terms of quality, the Soviet education was incomparably different and in some respects clearly inferior. In comparison with the pre-1917 gymnasium, the new system did not provide a complete secondary education. Classical education was sharply reduced in scope: the study of Greek and Latin was eliminated, the humanities were reduced to rather primitive instruction in Marxist-Leninist philosophy and rudimentary political economy. The study of history and literature was made Procrustean as a result of an oversimplified sociological interpretation. Of the foreign languages, only German and occasionally French were studied, and the quality of instruction was extremely poor. On the positive side, some gains and improvements could be noticed in the study of mathematics and the natural sciences, which gradually became the dominant subjects. The history of Ukraine and of Ukrainian literature and culture (but in sociological, "class" interpretation) also became important new subjects in secondary and higher education. In spite of quantitative and, on the average, successful development, the quality of the new Soviet education was inferior to the best that had been achieved before the revolution and abroad.

## THE 1930's

Beginning with the 1930–1 school year, the educational system of the Ukrainian SSR went through significant reforms corresponding to the contemporary changes in the entire socioeconomic and political structure (collectivization of agriculture, industrialization, etc., [Vol. I, pp. 816 ff.]). As a result of the decision of the CC CPSU concerning compulsory elementary education (July 1930) and the decree of the USSR government on the mandatory seven-grade education in the cities (August 1930), the entire school system underwent considerable expansion. Secondly, because of the rapid expansion in the employment of females and other dependents, the number of preschool child-care establishments had to be increased. Whereas in the 1920's the preschool system was still in a nascent state, by 1938 there were already 3,384 full-time kindergartens for children from three to seven (there were 172,200 children in the Ukrainian SSR) and 7,461 part-time recreational establishments for children of the appropriate age in the preschool and extracurricular establishments. The percentage in the cities was somewhat larger than in the countryside.

The total number of elementary and secondary schools increased in 1928–38 from 20,446 to 22,396. Within these totals, the number of junior secondary (seven-grade) and secondary (ten-grade) schools grew much faster than that of the elementary (four-grade) schools, especially in country districts. There the number of seven-grade schools increased from 2,660 in 1928 to 8,180 in 1938; the number of ten-grade schools in the countryside in 1938 was 1,519, none in 1928. Expenditures on elementary and secondary education in the Ukrainian SSR grew at a slower pace than in the RSFSR or the USSR as a whole.

Rapid growth was also experienced by the higher educational system: in 1928 there were 39 institutes with 33,800 students; in 1938, 129 and 124,400, respectively. This was achieved mainly by breaking up the old institutes into independent but more specialized units and by transforming tekhnikums into institutes. Especially rapid expansion took place in 1930–2. The number of students in the institutes and tekhnikums increased from 60,700 in 1929 to 266,400 in 1932 and to 296,800 in 1938. In the course of the first two five-year plans (1928–37)

schools of the Ukrainian SSR graduated 41,551 engineers, or 31.5 per cent of the USSR total. Such rapid expansion created great shortages of educational facilities, textbooks, and qualified instructors, resulting in the deterioration of higher education. The erratic experimentation and groping for shortcuts in education of this period also contributed to the decline in its quality.

An even more intensive unification and centralization of the educational system in the entire USSR were now evident. The decision to move in this direction was reached in 1930 at the All-Union party conference devoted to problems of education, and was finally acted upon by the CC CPSU in August 1932. The unification of the educational systems of Soviet republics was motivated by the need to exchange trained personnel. Pursuant to the new course aimed at centralization, the Ukrainian Commissariat of Education began to lose its power and significance. Until that time, it had controlled all educational establishments in the Ukrainian SSR and while under the leadership of G. Hrynko, Alexander Shumsky, and Nicholas Skrypnyk it actually directed the development of the whole Ukrainian national culture therein and was in fact a bulwark of defense against Moscow's Russifying pressures.

With the establishment of a number of specialized but centralized Union people's commissariats for various sectors of the national economy in Moscow in July 1930, all higher and secondary professional educational establishments preparing specialists for these sectors were removed from under the control of the Ukrainian Commissariat of Education and placed directly under the new commissariats in Moscow. In September 1932 a committee for higher technical education was established by the government of the USSR in Moscow, and in May 1936 it was transformed into a new committee for higher education of the USSR. A parallel committee, subordinated to the latter, was also established in Kiev by the government of the Ukrainian SSR. All institutions of higher education, with the exception of military and party schools, were transferred to the jurisdiction of the new committee. Thus, as a result of these reforms, the power of the People's Commissariat of Education of the Ukrainian SSR was reduced to the control of primary and secondary schools, preschool child-care establishments, and some tekhnikums. (It remained in this position until 1966 when it lost its autonomous republican status and was transformed into a union-republican ministry of double subordination.) The centralization of the administration of higher education and especially the unification of its programs and methods of instruction were also discussed and recommended by the First All-Union Conference on Higher Education held in Moscow, March 15–17, 1938. Both J. Stalin and V. Molotov made important policy pronouncements at this conference which heralded final unification of all higher education in the Soviet Union and complete loss of autonomy by Ukraine in this field.

**Beginnings of Russification**

The official Ukrainization policy ended for all practical purposes in mid-1933 after N. Skrypnyk's suicide. The de-Ukrainization of the institutes and other seats of higher learning, that is, their transfer back to Russian as the language of instruction, began gradually with the transfer of jurisdiction to the appropriate economic commissariats in Moscow, although it is true that even under Skrypnyk the Ukrainization of higher education in the Ukrainian SSR probably never surpassed 50 per cent in terms of total lectures given (exact figures are not known). The number of students of Ukrainian descent declined from the maximum of 62.8 per cent in 1930 to 57.6 per cent in 1932, and to 54.2 per cent in 1938.

The de-Ukrainization of the school

system was especially marked at the secondary school level. In 1933, an all-time maximum of 88.5 per cent of children of school age attended schools with Ukrainian as the language of instruction. This was a somewhat larger percentage than that of pupils of Ukrainian nationality in the total number of school children in the Ukrainian SSR (85.1 per cent). Russian chauvinists used this discrepancy to openly accuse Skrypnyk of allegedly forcing Ukrainization upon the Russians. After Skrypnyk's downfall the enrollment of pupils in the Ukrainian-language schools began to dwindle; it was 83.0 per cent in 1936, 78.2 per cent in 1938, and 79.0 per cent in 1940. (The last figure includes Western Ukraine.) This decline was due in part to the influx of Russians into the Ukrainian SSR to replace Ukrainian personnel who perished in the purges. In some industrial cities of the Donbas also, Ukrainian schools became Russian by administrative decrees. In 1938 the percentage of pupils attending Russian-language schools in the Ukrainian SSR increased to 14.2 per cent (from 9.0 per cent in 1928).

Especially hard hit were Ukrainian schools in Kuban and the rest of the RSFSR. They were all summarily closed at the start of the 1932–3 school year. Brutal police force was used against the students and numerous arrests were made at the Krasnodar Ukrainian Pedagogical Institute and the pedagogical tekhnikum at Poltavska *Stanytsia* in the Kuban region in November 1932. Since that time, with the sole exception of the two war years (see p. 356), Ukrainians living in the USSR but outside the Ukrainian SSR have been totally deprived of education in Ukrainian schools, and their language is not even taught as a subject in local Russian schools.

Attempts at Russification became pronounced also in changes introduced into the school curricula and textbooks. The teaching of Ukraine's history and culture as separate subjects in secondary schools of the Ukrainian SSR, even in accordance with the Marxist-Leninist principles, ceased in the 1934–5 school year (to be partially revived, after prolonged demands, in 1961–2). Instead, historical interpretation of the tsarist empire in a positive light was introduced in all schools, following the 1934 instructions of Stalin, Kirov, and Zhdanov. During 1938–58 the teaching of history in all Soviet schools turned into an outright glorification of Russian imperialism and chauvinism. Then, by a secret decision of the CC CPSU of March 13, 1938 (not publicly revealed until 1955) "Concerning the Study of the Russian Language in Schools of the National Republics of the USSR," compulsory study of Russian in schools of all levels was decreed for the first time. The government of the Ukrainian SSR and the CC CPU, in their turn, issued a joint decree on April 24, 1938, prescribing that the study of Russian on a compulsory basis begin in all Ukrainian elementary schools in grade II and in all seven-grade schools in grade III. (Ukrainian was made a compulsory subject in all Russian schools of the Ukrainian SSR at the same time.) At the XIV CPU Congress in June 1938, Nikita Khrushchev denounced "sabotage" in the study of Russian at the tekhnikums and higher educational institutions of the Ukrainian SSR, and the congress resolved to foster their Russification.

Large numbers of Ukrainian educators perished in the purges of the terror of the 1930's. They were replaced by new personnel, teachers and professors who were afraid to lecture in Ukrainian. No one dared any longer to demand it from them. Thus, even without overt governmental decrees, higher educational institutions and secondary schools in the urban centers of the Ukrainian SSR gradually changed from Ukrainian to Russian as the language of instruction.

In the school year 1940–1, there were 18,634 Ukrainian schools in the Ukrainian SSR (excluding Western Ukraine), 2,362 Russian, 53 Moldavian, 19 Yiddish, 13 Uzbek, and a few others. Compared with the early 1930's, when the peak in the Ukrainization of schools had been

reached, there was a decline not only in the number of Ukrainian schools, but also in that of Yiddish, German, and Polish schools, which succumbed to the policy of Russification. By 1940, Ukrainian as the language of instruction remained in no more than 44 per cent of all institutions of higher learning.

**Social Discrimination**

Unlike national discrimination, social discrimination in education became especially acute in the late 1920's and early 1930's. Children of "class enemies" (well-to-do peasants, merchants, clergy, members of the armed forces of the Ukrainian National Republic, and the émigrés) could acquire secondary education only with great difficulty. They were officially barred from pursuing higher education. In the course of the collectivization of agriculture, any peasant who in the slightest way opposed collective farming was officially pronounced a *kurkul* (rich peasant) and his children were expelled from school. In the course of the political terror of the 1930's, children of the imprisoned "enemies of the people" were automatically expelled from the higher educational institutions (though not from secondary schools). In addition to this politically motivated discrimination, there was an official discriminatory policy in accepting students to institutions of higher learning, with preference given to workers over peasants. Beginning in 1928, the official rule was that no less than 65 per cent of those entering these institutions must be of the workers' class. In practice, however, this percentage was never attained (maximum was 63.0 per cent in 1933). The children of salaried employees gradually pushed the workers' children out. The children of peasants were openly discriminated against until 1938, when the classification of students by social origin was formally abolished.

Towards the end of the 1930's, secondary and higher education, along with party membership, became the main avenue of social advancement. Competition for admission to the institutions of higher learning increased in intensity, especially after the abolition of the classification of students by social class origin. To withstand the pressure, the USSR government in October 1940 restored tuition in grades VIII–X of the secondary schools and in tekhnikums and higher educational institutions. Annual fees ranged between 150 and 200 rubles in secondary schools and tekhnikums, and 300 to 500 in institutions of higher learning. These fees were approximately equal to the monthly wage of a worker and an employee. At the same time, scholarships in higher educational institutions were limited to outstanding students, with marks not less than one-third "excellent" and none below "good." Since there were no scholarships in secondary schools, children of lower-income families had a relatively small chance of attaining higher education. These policies continued unchanged until 1956.

**Changes in the School System**

After a number of experiments, the system of education in the Ukrainian SSR has since 1936 been virtually identical with that of the rest of the USSR. General education was subdivided into three levels: (1) elementary school i.e. grades I–IV; (2) junior or incomplete secondary school comprising grades I–VII; and (3) complete secondary school with grades I–X. Children were admitted to school at the age of eight. Elementary education was compulsory in rural areas and incomplete secondary in urban areas; this was general by the end of the 1930's.

Graduates from the incomplete secondary schools had the right to bid for admission either to grades VIII–X of the complete secondary school or to professional secondary schools and tekhnikums. Graduation from the ten-grade school gave the right to compete for admission to institutions of higher learning. However, as late as 1937, no more than 50.4 per cent of all those accepted by non-military higher educational institutions

of the Ukrainian SSR were regular secondary school graduates. The rest were industrial and party workers and those who had secured permits to study under the discriminatory quota system.

Since the general level of literacy and Communist indoctrination increased considerably towards the end of the 1930's, the above-mentioned "workers' faculties" were gradually eliminated and finally abolished in 1940. Some secondary night schools for adults remained, but their quality was extremely poor. The institutes of social education were transformed in 1933–5 into four-year pedagogical institutes preparing teachers for secondary schools and tekhnikums. Two-year teachers' institutes prepared teachers for elementary and incomplete secondary schools.

The few institutes of professional education that remained under the Ukrainian Commissariat of Education were merged and became universities in 1933. Four state universities were thus established: in Kiev, Kharkiv, Odessa, and Dnipropetrovske. Their task was to train instructors for the scientific research institutes, tekhnikums, and selected secondary schools.

**Vocational Education**

The main sources of skilled labor for the rapidly growing industry during the 1930's were the tekhnikums and the FZU schools, which drew their students from the graduates of the seven-grade schools. The tekhnikums (mostly three-year schools) were highly specialized institutions subordinate to the appropriate industrial commissariat. There were mechanical, mining, transportation, agricultural, banking, medical, veterinary, and numerous other types of tekhnikums.

With the approach of war, however, the supply of labor from the tekhnikums was insufficient, and the FZU schools were inefficient and rather irregular in instruction. Accordingly, on October 2, 1940, a new institution was established by decree: the State Labor Reserves of the USSR. Almost all vocational training schools below the level of tekhnikum were placed under the jurisdiction of this institution; they were radically reorganized and centralized. New labor reserve schools were based on compulsory drafting of young men and women in the 14 to 17 age group. Each collective farm was to send two youths per 100 adult members to these schools each year; in urban communities, all secondary school pupils of the required age whose marks were below "good" were subject to the draft. Training in labor reserve schools lasted from one-half to two years, depending on the type of the school. After graduation, students were obliged to work in places to which they were assigned by the Ministry of Labor Reserves in Moscow. They did not complete their formal general education, and they could not change jobs without permission. The compulsory aspects of labor reserve schools were not eased until after 1950. In March 1955 the draft was abolished altogether. Instead, new methods combining pressure and incentives known as "organized solicitation" (*orhnabir*) were introduced to lure young people into vocational training. In July 1959, the whole system of vocational training was transferred to the jurisdiction of a state committee of the Ukrainian SSR Council of Ministers, which is directed in its work by a corresponding committee in the Council of Ministers of the USSR. The labor reserve schools were transformed into urban and rural professional-technical schools (*uchylyshcha*) with one to three years of study.

**Educational Methods**

In its resolution of October 5, 1931, the CC CPSU condemned all previous experiments in education based on the utopian assumption of the "withering away" of the school as an institution. A gradual return to the old time-tested methods of education followed in subsequent years. First the subject system was firmly re-established and rigorous

examinations were reintroduced. In 1935 each type of school began to operate according to unified programs of instruction and standardized textbooks, screened and approved by the appropriate government commissariats. As a result, the quality of education improved considerably, especially in the mathematical, natural, and technological sciences. The humanities and social sciences continued to lag behind world standards for obvious political reasons. There was also a marked qualitative difference between urban and rural schools; the latter were usually small, underequipped, and underfinanced.

Communist indoctrination permeated all lectures in secondary schools in the 1930's. Even in biology and mathematics classes, ideological postulates of the CPSU and Stalin's personal pronouncements had to be evoked time and again. In the humanities and history, xenophobia was fostered; mistrust and suspicion of everything "foreign" and "capitalist" was emphasized. The extracurricular activities were channeled through the Young Pioneers organization and the Komsomol. Most of the pupils in grades IV–VI had to belong to the "pioneers"; those in grades VII–X were selected for membership in the Komsomol. Throughout the 1930's members of these organizations were systematically indoctrinated in Communist hero worship, vigilance against alleged spies and saboteurs, denunciation of every one who looked politically suspicious or disloyal, including one's own parents, neighbors, and friends. Such psychoneurotic behavior was openly conditioned by assorted rewards and punishments, with publicity an added inducement.

An innovation in the curriculum in the middle of the 1930's was the introduction of physical education as a compulsory subject in grades V–X and in all establishments of higher education. In the course of time, physical education acquired clearly militaristic features and by 1939–40 students were being taught sharpshooting, throwing hand grenades, etc. for two hours each week.

Higher education became further centralized after 1930, when the rectors of the institutes were replaced by directors who were made personally responsible for the conduct of their schools. Institute directors were appointed by the corresponding people's commissariats. Rectors remained only in the universities. The deans of faculties were also appointed by the corresponding people's commissariats. Autonomy and academic freedom of any kind were not recognized as far as higher educational institutions were concerned. The educational processes in the latter were methodologically the same as in the secondary schools: instructors had to teach in strict accordance with the course programs and textbooks approved by the appropriate people's commissariats. Almost simultaneously all over the Soviet Union a course of the same title was taught in the same way and according to the same textbook. All final examinations, called "state examinations," have been prepared by the USSR Committee for Higher Education since 1936. There were no elective courses, and the attendance at the institutes was as strictly disciplined as in the secondary schools. There was no student self-government. No student organizations were allowed to function, with the exception of a few sports organizations. All extracurricular activities were conducted and supervised by the Komsomol.

This educational system was also imposed on the occupied western Ukrainian territories in 1939–40. As a result of the annexation of Western Ukraine, the number of universities increased by two: one at Lviv and one at Chernivtsi.

*I. Bakalo*

## FROM 1941 TO 1958

The retreat of the Communists from Ukraine in the wake of the German attack in 1941 generated genuine expecta-

tions among Ukrainians that education would now improve qualitatively and be allowed to develop freely. Indeed, in the first few months of German military occupation, the school system at all levels (including universities) was partially restored by the spontaneous action of the local population, aided in some cases by political émigrés returning from exile in Western Europe. However, the German civilian administration soon shattered all hope. Most of those Ukrainians who initiated the reopening of schools and higher educational establishments were confined in jails and concentration camps, and some of them were shot by the Nazis [Vol. I, pp. 880b–882a]. All schools above the four-grade level were closed immediately and their pupils were permitted to enroll only in the vocational training schools. Beginning in March 1942, some as young as fourteen were drafted for forced labor in Germany. During the war and the occupation, many school buildings (7,616) were demolished or burned to the ground (for schools in Western Ukraine under the Germans, see p. 388).

In order to placate the Ukrainians evacuated to the eastern parts of the USSR, the Moscow government opened some schools in these areas with Ukrainian as the language of instruction and placed them under the jurisdiction of the People's Commissariat of Education of the Ukrainian SSR in exile. During 1942 and 1943, there were 71 such schools and individual Ukrainian classes in the RSFSR, with a total of 7,810 pupils; there were also 64 Ukrainian schools and classes in Kazakhstan, a few in Uzbekistan and other eastern republics.

Thirty-two of the higher educational institutions evacuated to the eastern regions of the USSR continued to function as separate establishments (including the United Ukrainian State University at Kzyl-Orda, Kazakhstan, which united Kiev and Kharkiv universities). Seventeen others were attached to local institutions in the RSFSR and the central Asian republics. However, after the return of these institutions to Ukraine, Ukrainian education in the RSFSR and other Soviet republics was discontinued in 1944.

Upon the return of the Soviets to Ukraine, reconstruction of the school system proceeded rapidly along prewar lines. Because of the shortage of state funds, the population was called upon to rebuild many schools at their own expense. By 1950 the government had built 982 new schools, the population 741, and the collective farms 1,662. Some 26,000 school buildings were also repaired by the people. School absenteeism and drop-outs, which amounted to almost 400,000 or 7 per cent of the total number of pupils in 1947–8, were gradually eliminated. There were plans for the attainment of general seven-grade education by 1950, but the goal came close to being reached only in the urban areas. Enrollment in grades VIII–X increased from 8.4 per cent of the total number of pupils in 1940–1 (4.0 per cent in 1950–1) to 13.8 per cent in 1958–9. The number of complete secondary schools increased from 3,223 to 6,667 between 1950 and 1958.

During this difficult postwar period, a large proportion of young people passed the regular school age without completing a normal education. For them night schools were organized by the government decrees of September 1943 and August 1944. Urban night schools are called Schools for Workers' Youth, and those in rural areas, Schools for Peasant Youth. There were 876 urban schools in 1950–1 with 158,200 students, and as many as 2,070 with 654,000 students in 1964–5; in rural areas there were 4,020 and 3,536 schools, respectively, with 128,400 and 179,300 students, respectively. The growth of these schools in modern times reflects the difficult social position of young people, who must work during the day to earn their living. Some 77 per cent of students in these schools were enrolled in grades IX–XI in 1964–5,

which means that they were striving to obtain secondary education (there were also, in 1964–5, 445 night schools for adults with an enrollment of 428,600, some 70 per cent of them in grades IX–XI).

As before the war, tekhnikums continued to lead among the secondary professional institutions. There were 532 secondary professional schools with 164,100 students in 1946, and 588 with 351,100 students in 1959. Night and correspondence secondary professional schools represented a new postwar development with enrollments of 13.8 and 24.7 per cent of the total number of students, respectively, in 1958.

In terms of student enrollment, the system of higher education attained the prewar level by 1950–1. The number of higher educational institutions decreased, however, from 173 in 1940–1 to 160 in 1950–1, and 140 in 1958–9 (enrollment

FIGURE 137. A BUILDING OF THE IVAN FRANKO UNIVERSITY IN LVIV

was 196,800, 201,500, and 381,100, respectively). Many similar institutes were merged and consolidated. One new university—in Uzhhorod—was established in 1945, thus increasing the total in the Ukrainian SSR to seven. As in the case of secondary professional education, night and correspondence departments in the institutes and universities grew in importance. Of the total number of students in 1958–9, 7.3 per cent were enrolled in night and 37 per cent in correspondence departments. These were students who worked during the day. Only 55.7 per cent were able to attend day classes.

The period 1946–53 was characterized by an unusually intensive, officially sponsored propaganda campaign of Russian chauvinism in the USSR, associated with the activities of the second secretary of the CC CPSU, Andrew Zhdanov, in Moscow, and the first secretaries of the CC CPU, N. Khrushchev, Lazar Kaganovich, and Leonid Melnikov in Ukraine [Vol. I, pp. 896–8, 904–5]. All things Russian, especially culture and language, were pronounced "superior" to everything non-Russian not only inside the USSR but the world over.

There was a severe teacher shortage, especially in the upper grades of the secondary schools and in institutions of higher learning. In 1946, only 72 per cent of the prewar teachers were still available. There was also an acute shortage of textbooks, especially for Ukrainian schools. Stalin's overt glorification of the "great Russian people" facilitated and pushed Russification of the schools in Ukraine. The percentage of pupils studying in Russian schools increased from 14 per cent in 1938–9 (i.e., when Western Ukraine was not part of the Ukrainian SSR) to 17.6 per cent in 1950–1 (i.e., including Western Ukraine, but without the Crimea), and to 24.8–26.3 per cent in 1955–6 (with the Crimea, where Russian schools predominate). (The variance in the 1955–6 data is due to confusing official reporting on the types of schools included in the totals. Some statistics include the "schools for workers and peasant youth," others do not.) In addition to 2,836 Russian schools in 1950–1, there were also 319 Moldavian (Rumanian), Hungarian, and Polish schools, whereas all of the 231 Jewish schools which had functioned mostly

in Western Ukraine, in 1940–1 were abolished.

Statistics on the degree of Russification in the higher and special educational institutions have not been published. It can be assumed that the number increased considerably, especially after the 1946 centralization of decision-making powers in Moscow. In March 1946, the USSR Ministry of Higher Education was created in Moscow. As a result, all universities, polytechnical, engineering, agricultural, and economic-financial institutes in Ukraine were placed under its jurisdiction. The Kiev government retained jurisdiction only over the pedagogical, medical, and art institutes. Moscow seems to have discriminated against higher education in Ukraine in this period: while the total student enrollment here only increased from 196,775 to 201,544 between 1940–1 and 1950–1 (in the RSFSR, from 478,077 to 796,744), the number of applicants for admission was 63 per cent greater than the number admitted in 1950–1, in spite of the fact that the admission quota was actually exceeded by more than 35 per cent. The low quality of instruction in Ukraine was evident from the fact that more than 60 per cent of the faculty had neither degrees nor professorial rank. In January 1955, the Ministry of Higher Education was reestablished in the government of the Ukrainian SSR, but its powers were greatly curtailed.

**Sovietization of Western Ukraine**

The incorporation of Western Ukraine constituted a difficult problem for the Soviet regime in the postwar period, not only because of the activities of the anti-Soviet guerrillas (the Ukrainian Insurgent Army [Vol. I, pp. 900–3]), but also because the Soviet way of life was entirely alien to the local population. The school system was assigned the specific task of re-educating, if not the old, then at least the young generation. However, the school system itself needed revamping first. According to official statistics, as many as two-thirds of all the teachers in Western Ukraine employed in the 1945–6 school year did not qualify under accepted Soviet standards. They had to undergo a thought reform, as it were, to purge themselves of the philosophy of pre-Soviet education and of their nationalistic and religious beliefs. The teachers were required to attend special courses and pass various examinations. But, even after such thorough retraining, many of them were dismissed or retired after a few years, and in their place—to expand the school system as a whole—35,399 new teachers were brought into Western Ukraine from the east between 1945–6 and 1950–1. In the meantime, the children's attendance at school was poor, as was the quality of instruction. The percentage of Ukrainian-language schools increased between 1940–1 and 1946–7 from 86 to 93.3 per cent (excluding the Transcarpathian *oblast*). The exchange of population between Poland and the Ukrainian SSR reduced the number of Polish schools in the area, while the need to placate Ukrainian nationalists and to reeducate their children contributed to this increase.

In higher education, instead of the less than a dozen institutions before 1939 most of which Ukrainians were not allowed to attend, 22 were created after 1945, most of which initially offered courses in Ukrainian. However, during 1949–52 these, too, were staffed chiefly with Russians and Russian became the language of instruction. During a brief period of the post-Stalin "thaw," L. Melnikov was censured and dismissed for fostering Russification of the educational system in Western Ukraine [Vol. I, pp. 905–7].

Of practical consequence was the Soviet government's successful campaign to eliminate illiteracy among the adults in western Ukraine. This campaign, started in 1948, aimed only at adults who were under 50 years of age. By 1954 illiteracy in this age group was largely

eliminated by means of compulsory attendance of night schools and special courses. The number of those affected was about 750,000.

## FROM 1959 TO 1969

Towards the end of the 1950's, pressures to reform the existing school system were strongly expressed in various ways in the USSR. Only 35–40 per cent of the graduates of the fast-growing system of secondary education could be absorbed by the existing establishments of higher education. The remaining graduates were neither willing nor prepared to enter productive employment in factories and on farms. Under Stalin, secondary schools tended more and more towards the standards of the tsarist gymnasiums. Formal polytechnical education prepared students for advanced studies, but failed to teach them the realities of life and a practical attitude towards work. Nor did it furnish them with any useful skills or profession.

FIGURE 138. KIEVAN POLYTECHNICAL INSTITUTE

### The 1959 School Reform

On April 17, 1959, the Supreme Soviet of the Ukrainian SSR passed the law "On Strengthening the Ties between School and Life, and on Further Developing the System of Public Education," which was based on a similar federal law passed by the USSR Supreme Soviet in December 1958. On the basis of this law, the seven-year incomplete secondary (grades I–VII) and the ten-year complete secondary (grades I–X) schools were to be transformed into eight-year and eleven-year "general education labor-polytechnical schools with production training." Universal compulsory education was to be extended through grade VIII (fulfilled in 1960–1). Complete secondary education, grades IX–XI, was to be obtained in either the new eleven-year schools, evening schools for workers and peasant youth, or secondary specialized schools and tekhnikums, all providing access to higher education. The added year, however, was to be allotted to several semester courses (two days per week) teaching the fundamentals of industrial and/or agricultural production techniques either in schools or in factories and on farms. The graduates of such an extended secondary education were supposed to acquire industrial or agricultural skills in such courses and to be able to work productively upon graduation.

The law also provided that up to 80 per cent of students completing secondary education should work for not less than two years in some productive employment before entering institutions of higher learning. Their admittance would be based not only upon their performance at the entrance examinations, but also upon the recommendations of the Communist party, trade union, and/or the factory management for which they had worked. The remaining 20 per cent of the graduates, to be admitted directly from the secondary to higher schools, would be the most talented students, generally in scientific and technological fields.

The reform was almost completely abandoned after a trial of several years. Grade XI in the secondary schools was abolished in August 1964 because it was found to be too burdensome for the pupils. Vocational training in industrial and agricultural jobs was made voluntary and elective largely because it did not produce the expected results. Even those few pupils who were trained in the fac-

tories as part of their secondary school curriculum failed to acquire the necessary skills, while those who were required to learn the skill in school laboratories showed no progress at all.

In 1966–7 the prerequisite of two-year employment before admission to higher education was also declared no longer obligatory (but desirable), thus giving preference for admission to those candidates who did not work. Emphasis on extension and correspondence education was also officially admitted to be wrong, and schools were instructed to foster and develop regular daytime, full-time education. Two important elements of the 1959 reform remained intact, however: universal compulsory education was extended to eight years, instead of seven; and tuition fees in secondary schools, tekhnikums, and higher education establishments were not reinstated.

The 1959 school reform law provided for the first time that Ukrainian language and literature need no longer be a compulsory subject in the Russian schools of the Ukrainian SSR. It left the decision to the parents. Thus Ukrainian was no longer an obligatory language of the republic. On the other hand, there was no question as to whether or not Russian language and literature should be a voluntary, elective subject in Ukrainian schools. In the public debate preceding the passing of the law, many leading Ukrainians (among them the poet Maksym Rylsky) spoke in favor of preserving both languages as compulsory subjects in all schools, but with Khrushchev's aid the Russian chauvinist line won out. At the same time, a propaganda campaign was launched by the Communist party insisting that the Ukrainians had two mother tongues—Ukrainian and Russian.

In this atmosphere the pressure for the Russification of schools increased. Presumably, parents and local government councils were free to decide in which language the newly constructed schools should be conducted. In the school system administered by the Ministry of Education of the Ukrainian SSR, the proportion of schools conducted in Ukrainian declined from 85.3 per cent in 1955–6 to 81.1 per cent in 1967–8. The proportion of Russian schools probably increased accordingly. Protests and demands for Ukrainian schools were qualified as "Ukrainian bourgeois nationalism," and sometimes brought punishment.

The proportion of pupils now attending Ukrainian schools must be considerably smaller than the proportion of Ukrainian schools, because schools outside the system of the Ukrainian SSR's Ministry of Education as well as most complete secondary and workers' youth schools in urban centers are probably conducted in Russian, while schools in Ukrainian are for the most part the incomplete secondary type located in rural areas. However, official statistics on this subject have not been released since 1956.

Of much greater practical consequence than the danger of Russification is the qualitative discrimination against Ukrainian schools. Since they predominate in rural areas and in small towns, their finances are meager, and the quality of their teachers, laboratories, and equipment is poor. It is very difficult for their graduates to compete for admission to schools of higher education, which are conducted for the most part in Russian and are open to candidates from the entire Soviet Union, even to those from abroad. As a rule, Moscow and other Russian universities administer their entrance examinations a month or so earlier than those in the Ukrainian SSR. Russian students not admitted to Moscow University have ample time to apply to Kiev University and other Ukrainian institutions of higher learning. Since most of them come from urban centers and relatively better financed secondary schools, they often outscore Ukrainian candidates arriving from villages and small towns. Statistics on the nationality of advanced students in the Ukrainian SSR are very

scarce. The last set published in detail and referring to the year 1955–6, showed that in the day-session courses Ukrainians made up only 61.5 per cent of all registered students (in science and technology-oriented institutions only 51.8 per cent). Russian students made up 29 and 36.3 per cent, respectively, Jews 6.2 and 8.4 per cent, respectively.

In 1938, Ukrainians made up 54.2 per cent of the total student enrollment in the Ukrainian SSR; in 1960–1, the percentage was 67.1, while their proportion in the Ukrainian SSR's population in 1959 was 76.8 per cent. In the USSR as a whole the percentage of Ukrainian among students was 14.5 per cent in 1960–1, their proportion in the population 17.8 per cent.

Since local government in the USSR lacks taxing powers, schools are financed from the centralized state budget allotted in strictly limited quotas to the local school boards.

**Preschool Child Care**

The facilities on this level consist of crèches and nurseries for children from a few months to three years of age, and nursery schools and kindergartens for those up to six years of age. Most of these establishments operate on a full-day schedule of nine to twelve hours; some are boarding schools operating five or six days a week. Parents are required to pay about one-third of the actual cost of maintenance; the balance is covered by the enterprise operating the nursery—usually the factory, plant, or collective farm in which the parents are employed. Some nurseries are also maintained by the trade unions, local educational authorities, cooperatives, etc. In 1966, there were 10,612 establishments of this type in the Ukrainian SSR, with 1,086,500 children in attendance; of these, 6,979 with 925,200 children were located in the urban centers, the rest in rural areas. During the summer, however, the number and size of the rural establishments usually increase. Guidance and instruction in these establishments are directed by the Ukrainian SSR's Ministry of Education. Development of the spoken language, singing, drawing, and learning various Communist slogans and poems by heart are stressed. Most urban nurseries are conducted in Russian. The ministry's periodical for preschool-age children, the illustrated magazine *Maliatko* (The Baby), appears in Ukrainian.

**Elementary and Secondary Schools**

Schools at this level consist of (1) regular day schools, some with alternating shifts, which subdivide into three categories: (a) complete secondary or ten-year schools (grades I–X), (b) incomplete secondary or eight-year schools (grades I–VIII), and (c) elementary or four-year schools (grades I–IV); (2) night-shift secondary schools for (a) workers and (b) peasant youth, each lasting three-years (grades IX–X); (3) boarding eight- and ten-year schools; (4) special secondary ten-year schools for (a) military and naval cadets, (b) training in foreign languages and/or specialized sciences and arts, and (c) defective children. Basic statistics for these schools are shown in Table VI. (It can not be ascertained whether these statistics include military cadet schools. Schools for workers and peasant youth are not included.) The distribution of students by grades in the above table in 1964–5 was as follows: in urban areas, grades I–IV—42.75 per cent, grades V–VIII—41.6 per cent, grades IX–XI—15.65 per cent; in rural areas, grades I–IV—46.7 per cent, grades V–VIII—44.56 per cent, grades IX–XI—8.73 per cent. (Grade XI, although abolished, had a graduating class in 1964–5.)

Boarding schools were started in 1956. There were 545 in 1964–5 with 221,000 pupils. For the most part, they resemble private schools in the West: they charge tuition; children stay in them through the whole semester; they are very often located in resort environments. Demand for them is very high, but the supply is

TABLE VI

| School year | Number of schools: Total number | Elementary | Incomplete secondary | Secondary | For defectives |
|---|---|---|---|---|---|
| 1950–1 | 31,055 | 14,776 | 12,951 | 3,223 | 105 |
| 1958–9 | 30,705 | 12,990 | 10,880 | 6,667 | 168 |
| 1967–8 | 29,267 | 10,487 | 11,517 | 6,930 | 333 |

| School year | Number of pupils (in thousands): Total number | Elementary | Incomplete secondary | Secondary | For defectives |
|---|---|---|---|---|---|
| 1950–1 | 6,841.9 | 981.3 | 3,715.3 | 2,127.1 | 18.2 |
| 1958–9 | 5,573.9 | 543.1 | 1,766.8 | 3,244.4 | 19.6 |
| 1967–8 | 7,495.5 | 422.9 | 2,704.3 | 4,313.1 | 55.2 |

| School year | Number of teachers (in thousands): Total number | Elementary | Incomplete secondary | Secondary | For defectives |
|---|---|---|---|---|---|
| 1950–1 | 283.5 | 36.2 | 157.3 | 88.5 | 1.5 |
| 1958–9 | 362.1 | 28.3 | 125.9 | 205.0 | 2.9 |
| 1967–8 | 447.7 | 22.6 | 178.6 | 239.9 | 6.6 |

TABLE VII

| School year | Number of schools: Total | Workers' youth | Peasant youth | Adults |
|---|---|---|---|---|
| 1950–1 | 4,906 | 876 | 4,020 | 10 |
| 1958–9 | 3,761 | 1,483 | 2,238 | 40 |
| 1967–8 | 3,591 | 1,823 | 1,263 | 505 |

| School year | Number of students (in thousands): Total | Workers' youth | Peasant youth | Adults |
|---|---|---|---|---|
| 1950–1 | 291.8 | 158.2 | 128.4 | 5.2 |
| 1958–9 | 361.0 | 272.1 | 71.2 | 17.7 |
| 1967–8 | 1,026.9 | 522.3 | 70.0 | 434.6 |

strictly limited. In 1960, semi-boarding schools, called "schools with a prolonged day," were introduced in some cities. Their students remain in school all day, study, play, and prepare their homework there, and go home only in the evening. However, because of lack of space, equipment and personnel, the organization of these schools has not been very successful; they have often become only second-shift classes in the same buildings. There were approximately 200 special secondary schools conducted partly or wholly in foreign languages (English, German, French, Chinese) to train language specialists at an early age. Other special schools were designed for bright youngsters, talented in mathematics, physics, chemistry, biology, or various arts. One such physico-mathematical preparatory school is attached to the Kiev state university.

The night-shift secondary schools for workers' and peasant youth and for adults are characterized by the data in Table VII.

**Curriculum, Theory, and Methods**

The basic curriculum in Soviet Ukrainian schools, with 24 periods a week in elementary and 30 to 34 periods in secondary schools, is standardized and demanding. The programs are essentially the same throughout the country, with variations deliberately minimized. All final examinations are prepared by the Ministry of Education. All textbooks must be published with the ministry's explicit approval. Mathematics, the heart and soul of Soviet education, is studied for ten years, physics and a foreign language (German, English, or French—in this order of frequency) for six, and chemistry for four. In addition, there is a heavy load of the Ukrainian and Russian languages and literatures, USSR and Ukrainian SSR history, geography, biology, some astronomy, sociology, music, art, mechanical drawing, and physical education. In 1968, military training was added to the curriculum as a compulsory one-year subject.

Soviet educational theory emphasizes learning and knowledge rather than the development of capacity for independent, creative thought. The curriculum is compulsory. In 1966–7, for the first time, pupils in grades IX and X were allowed four hours of elective courses. Nevertheless, the Soviet school is well known for its ability to inspire love of learning in youngsters. The main reason seems to be its deliberate preference and incentive for erudition, voracious reading, and exclusive sports such as chess. On the other hand, the written word is neglected in the Soviet school. Long hours are allocated to the fine points of grammar, but little time is spent on composition.

The urge to learn fostered in the schools is reinforced by their constant appeal to the parents. If the pupil's efforts lag, the parents are called to the school by the principal or his assistants and lectured. Parents as a group meet periodically with their children's teachers. The progress and failures of pupils are openly discussed and parents are criticized in such assemblies. Students failing the examinations are left for the second and even third year in the same grade. They pass—or else! Drop-outs are persuaded by all means to return to school, sometimes even by prosecuting the parents in court.

The school system also generates pressure on teachers for maximum performance. Each school principal has sweeping powers of hiring and dismissal, limited only by the veto of the teacher's trade union. In spite of their high status in Soviet Ukrainian society, teachers' salaries are very low—about $80–100 per month, or about five times less than the salary of a university professor (before 1966, a teacher's salary was 20–25 per cent lower). Basic classroom teaching requires eighteen hours a week, plus long hours of overtime for extra pay. Conditions in rural schools are considerably worse than in urban schools.

Seventy per cent of the total teaching body of the Ukrainian SSR were women in 1964–5.

**Vocational and Semi-Professional Schools and Tekhnikums**

There are three types of school in this category. The lowest type—skilled-labor training schools, called *uchylyshcha*—accept graduates of the eight-year school, and train them for two–three years in the cities and one–two years in the country in vocational and technical skills such as operating a lathe, driving a truck or tractor, baking bread, cutting garments, taking care of calves and pigs. Regular tekhnikums, which are in the second category, accept graduates of the eight-year school and train them for two–four years in somewhat more complicated professions (electrician, hospital nurse, linotypist, laboratory technician). Secondary professional schools are tekhnikums of the advanced category. They accept graduates of the ten-year school and train them for approximately two years to become elementary school teachers, computer programmers, labora-

FIGURE 139. POLYTECHNICAL INSTITUTE IN KHARKIV

tory technicians, or bank clerks. Tekhnikums and vocational training schools are operated, administered, and financed by the numerous ministries having jurisdiction over a particular segment of the economy or public service. However, all their programs, teaching methods and aids, curricula, and enrollment plans are determined and controlled by the Ministry of Higher and Specialized Secondary Education.

In 1967–8, there were 740 such tekhnikums and schools in the Ukrainian SSR with 755,700 students enrolled, compared to 588 and 351,100, respectively, in 1958–9. Only 50 per cent of the total number of students studied full time in day sessions; the other half were night-school and correspondence students. The student body was divided into the following specialized categories: various industries and construction, 45.3 per cent; agriculture and forestry, 15.20 per cent; commerce, business, government, and law, 13.35 per cent; health services and sports, 9.57 per cent; transportation and communications, 9.24 per cent; education and library service, 4.8 per cent; applied arts, 2.59 per cent.

**Professional Military and Party Education**

In accordance with the new Military Draft Law of October 12, 1967, obligatory predraft military education has been introduced in all general secondary, professional, and vocational training schools. Comprising the principles of military science, tactics, logistics, and civil defense, it starts in the ninth grade and lasts for two years. All male students 17 years of age and over are required to attend classes, which are conducted by professional instructors appointed by the USSR Ministry of Defense. Furthermore, upon graduation from the secondary schools and other educational institutions, all males 18 years of age and over are obliged under the law to serve in the armed forces (two years in the army and air force, three years in the navy). Students in the higher educational establishments are either deferred until graduation or attend parallel schools for noncommissioned officers. The avoidance of draft is severely punished in the USSR as a criminal offense against the State.

Military education in the Ukrainian SSR is available in three types of schools. There are special secondary schools named after General Suvorov and Admiral Nakhimov (both Russian imperial heros) for boys entering officer careers in ground, air, and naval forces. For all practical purposes, these schools are equivalent to the regular ten-year school, although there is no first grade and a considerable part of the curriculum is devoted to special military subjects and intensive physical and military training. These schools are known as "schools of closed access" (*zakryti shkoly*). Theoretically entrance to them is restricted to the descendants of members of the Soviet armed forces killed-in-action, but practically and predominantly they are for sons of the Soviet military élite. All classes are conducted in Russian.

The second type of military school is the semi-professional military tekhnikum which prepares company-level commissioned officers and admits graduates from the eight-year schools. Security police also operate a network of schools at this level.

The third type, called *uchylyshcha*, provide training regarded as fully equivalent to higher education. At least nine such military schools were known to exist in Ukraine in 1966, specializing in the preparation of officers for various branches of the armed forces (tank, artillery, rockets, navy, fighter aviation, engineering and communications). Military academies, however, are all located in Russia.

The Communist party operates a network of schools of its own. Graduates do not obtain ranking degrees but are eligible for important positions in the management of enterprises and institutions and in government. These schools also graduate personnel for the Party's own apparatus, as well as numerous professional propagandists. The highest Party schools are located in Moscow; the Ukrainian CP has in Kiev a party school preparing second-echelon cadres.

**Higher Education**

The system of higher education is made up at present of three types of institutions: (1) universities, (2) specialized institutes, and (3) the so-called *aspirantura* at the universities and scholarly research centers, such as the institutes of the Academy of Sciences. There were eight universities in Ukraine in 1964–5, with 77,000 students (the eighth was the University of Donetske, established in 1964). With several colleges and scores of departments, these universities do not differ essentially from similar institutions abroad. The course of study lasts on the average five-and-a-half years (in some departments five, in others six). Upon graduation, however, diplomas or certificates, not degrees, are granted. The first degree—that of a "candidate" in one of the sciences or arts, an approximate equivalent of the British M.A. and/or American and German Ph.D.—can be earned only after the additional postgraduate study at the *aspirantura* for approximately three years in day sessions and four years while working at a job, and successful defense of a dissertation. For the highest Soviet degree—that of "doctor" of some science —no study at school is required. Since this is a scholarly degree, equivalent to a British doctorate, and usually qualitatively higher than a Ph.D., it requires high-quality, original, and independent research and publication of a number of studies, papers, and monographs. A doctoral student is allowed a year or two of fully paid vacation from his job. The degree is granted in recognition of a contribution to learning. There were only 23 institutions in the Ukrainian SSR in 1959 with the right to grant doctorates and "candidate" degrees, and 37 others which could grant the "candidate" degree only.

Ultimate control over the granting of titles of docents and professors as well as the degrees of candidates and doctors in Ukraine is vested, according to the USSR law of August 20, 1956, in the Supreme Accreditation Commission—the notorious VAK (Vsesoiuznaia Attestatsionnaia Komissiia)—of the USSR Ministry of Higher and Specialized Secondary Education. Ukrainian institutions may formally elect faculty members to their ranks and may grant academic degrees, but the VAK in Moscow has the ultimate right of approval.

The institutes as a rule are much more specialized than the universities. There were 124 of them in the Ukrainian SSR in 1964–5, with about 566,800 students. Some of them, such as the polytechnical institutes, have many different departments; others may specialize narrowly on some sector of the national economy (e.g., transportation), public service (e.g., law), or field of science (e.g. ophthalmology). There are no similar

establishments in the West to which they can be compared. Only the medical institutes may resemble the medical colleges in the West. The engineering colleges of the western world usually offer more instruction in social sciences and humanities than do the Soviet engineering institutes, which specialize strictly in technology, science, or art.

The institutes in Ukraine train professional specialists in all fields. They graduate engineers of various types, physicians, economists, agronomists, business executives, biologists, movie directors, newspaper editors, theater actors, a wide range of teachers, etc. Persons who have successfully completed the required span of training (usually four to six years) must either pass state accrediting examinations or defend a thesis or a research project before a specially appointed board (sometimes both). If successful, they receive a diploma or certificate of accreditation in the specified profession. This gives them the right to work in this field.

Higher educational establishments in the Ukrainian SSR offer either regular programs of training or extension-correspondence training. Regular programs are offered either in day sessions or in the evenings. The total student body in 1967–8 in the Ukrainian SSR by programs follows: in regular day sessions, 41.42 per cent; in regular evening sessions, 15.72 per cent; in extension-correspondence divisions, 42.86 per cent. The corresponding percentages for 1958–9 were 55.71, 7.21, and 37.08 per cent.

The goal of Soviet higher education is usually defined in various authoritative statements (e.g., in the 1959 school reform law) as follows: "Training of highly qualified specialists, educated in the fundamentals of Marxism-Leninism, mastering the latest achievements of domestic and foreign science and technology, capable not only of utilizing contemporary technology but creating the technology of the future." There is little doubt that the goal is being achieved in the training of highly qualified technological specialists and scientists. Soviet Ukrainian schools train good engineers and medical specialists, biology and mathematics teachers. In the case of the social sciences, philosophy, humanities, and arts, the situation is radically different. Both general knowledge and methodological training are very poor. These disciplines are distorted and manipulated to maintain strict accordance with the current ideological policies and pronouncements of the Communist party. Students are prevented from learning facts which might be unpleasant for the Party. They are taught history and other subjects in which whole chapters are deliberately excluded, and sometimes skillfully falsified to a greater or lesser degree. Access to historical archives and to non-Soviet source material is limited to select individuals, working perhaps for a postgraduate degree. Libraries as a rule contain some closed stacks and files. The prospective user must fill in appropriate permission forms for entry.

The goal of educating all Soviet specialists in the fundamentals of Marxism-Leninism is important. Indeed, in the total of curriculum hours in all fields of higher education, from 10 to 15 per cent of the time is devoted to compulsory courses in Communist ideology. At present, in all the higher educational institutions in Ukraine there are four compulsory courses in this field, viz., history of the Communist party of the Soviet Union, Marxist-Leninist Philosophy, political economy, and the principles of scientific communism. In addition, some institutions offer as electives the principles of scientific atheism, ethics, and esthetics. (In tekhnikums, some 10 per cent of the curriculum time is taken up by obligatory courses of this kind.)

The methods employed in higher education in the Ukrainian SSR are basically similar to those employed in secondary education, already discussed. They guide the student to the maximization of knowledge and to the minimization of

independent or creative thinking. Curricula are standard and compulsory. The ten elective courses have been offered only since 1966. Instruction covers 34 weeks in a calendar year and consists for the most part of lectures or laboratory work. Seminars and discussions are held but are used considerably less than in the West. There are textbooks for almost all courses and all levels; free reading lists are given only in the *aspirantura*. Textbooks are highly standardized and published with the explicit approval of some ministry or university faculty; very seldom do they express the author's distinctive point of view. Examinations are held at the end of the spring and winter terms. Almost all engineering and technical institutes, not to mention the medical and pedagogical, require the students to take study-practice assignments of from two to six weeks at a factory or other establishment in his field of specialization.

A modern innovation, programmed teaching methods, began to spread through the Ukrainian SSR in 1965. By 1966, there were 13 establishments with teaching machines to aid instruction in some courses. Ukraine was producing its own machines of the Lastivka (Swallow) type, and, presumably, led the USSR in their application. Instruction by TV was also introduced at the universities of Kiev and Donetske in 1966. However, plant and equipment in most Ukrainian higher educational establishments was obsolete and overcrowded at that time. The university libraries and institute laboratories especially were poorly equipped.

**Planning of Admissions and the Allocation of Graduates**

Enrollment quotas for each profession and each educational establishment in the Ukrainian SSR, as throughout the USSR, are determined by the national economic plans drawn up by the state planning commissions of the Ukrainian SSR and the USSR, and handed down to the institutions by the respective ministries of higher and specialized secondary education. They are further determined and limited by appropriations from the state budget to the given institution. The applicants are free to choose their future professions and their place of study, but their choice is limited by the enrollment quota for the given profession at the given institution. Usually the number of applications is considerably larger than the facilities available.

The distribution of students according to specialization was as follows in 1967–8: various industries and construction, 41.87 per cent; education, 28.04 per cent; agriculture and forestry, 8.81 per cent; transportation and communications, 7.41 per cent; business, economics, and law, 6.89 per cent; health services, 5.63 per cent; arts and cinematography, 0.77 per cent; sports, 0.52 per cent; others, 0.06 per cent. The distribution of students admitted in 1967 to higher educational institutions of the Ukraine SSR according to nationality was as follows: Ukrainians, 61.0 per cent; Russians, 32.0 per cent; Jews, 3.8 per cent; others, 3.2 per cent. Thirty per cent of all those admitted came from parts of the USSR outside the Ukraine SSR.

Some categories of applicants enjoy special privileges. As of 1967, all demobilized and retired officers and even soldiers who re-enlisted for additional service in the armed forces and the security police and had an incomplete higher education could be admitted to higher educational establishments in unlimited numbers and without the entrance examinations. Other applicants without any higher education had to take the entrance examination, but upon passing it satisfactorily were to be admitted without competitive comparisons with other applicants.

The distribution of graduates of the higher educational institutions is also planned. According to a decree of the USSR government of May 22, 1948, all

individuals who complete higher studies are assigned to appropriate jobs by the Ministry of Higher and Specialized Secondary Education of the USSR. Before being assigned they are given one chance to choose the job from the choices offered by the ministry. If they fail to choose voluntarily, they are assigned to a job and are obliged to take it. Whether in a chosen or an assigned job, the graduate must remain for three consecutive years, whereupon he may transfer to any other job of his own choosing. The official explanation of this policy is that, since the graduate learned at the government's expense; it is his duty to work for the government for at least three years. In practice this allocation policy is used to send the graduates to unattractive jobs and areas (Siberia, the north, etc.). It is also used to intermix the nationalities, for example, Ukrainians are sent to Russia or Kazakhstan, Russians are sent to work in Ukraine.

The compulsory allocation policy applies also to the tekhnikum and other specialized secondary school graduates. Since 1955, the government of the Ukrainian SSR has acquired the right to allocate on its own the graduates of tekhnikums and higher educational institutions which are subject to the Ukrainian Ministry of Higher and Specialized Secondary Education, with only a certain percentage of the total to be allocated outside the Ukrainian SSR by decision of the ministry in Moscow. However, since almost a half of all higher and specialized secondary educational institutions in the Ukrainian SSR are directly under the USSR Ministry of Higher and Specialized Secondary Education, it is Moscow which places graduates all over the USSR.

**Students and Faculty**

The student body in higher education has been growing rapidly in recent years (see Table VIII). Soviet Ukrainian sources claim that, per each 10,000 of the population, Ukraine has now three times more students in higher education than France, West Germany, or Italy. This may be true in part, although the exact comparability of the Soviet and West European statistics has not yet been demonstrated. On the other hand, the number of students in the RSFSR (per 10,000 of population) is one-fourth larger than in the Ukrainian SSR.

TABLE VIII

| | Total number of registered students | Number of newly admitted students | Number of graduates |
|---|---|---|---|
| 1958–9 | 381,117 | 76,394 | 55,866 |
| 1960–1 | 481,748 | 100,461 | 67,034 |
| 1964–5 | 643,803 | 144,943 | 66,053 |
| 1967–8 | 766,850 | 153,022 | 92,800 |

Only about half of all students in the Ukrainian SSR live in dormitories, the supply of which is inadequate. From 85 to 90 per cent of all students receive scholarships during their course of study. Some of the scholarships are provided by the factories and collective farms which sponsored the student and to which he is obliged to return after graduation. Most students, however, receive their scholarships from the government. The funds are allocated from the state budget to each educational institution and distributed on the spot by a special committee of the student trade union, dominated by Komsomol members. The scholarships are awarded for each semester. Scholarship students are required to pass examinations with "good" or "excellent" marks, to be active in public and political affairs, and to need financial assistance. The average scholarship is, however, quite small—about 30–35 rubles a month ($27–32). (The stipends of the industrial establishments are slightly higher than those of the government, and amount to about 40 rubles a month.) For those who do not live in dormitories the scholarship must also cover rent; for all others it pays for food, clothing, recreation, and books. The Komsomol has the right to raise and lower the scholarship amounts.

The social and political activities of students in the Ukrainian SSR are strictly limited. They are permitted to belong to professional societies and poetry clubs, but there are no fraternities and no legal political discussion clubs except the Komsomol, and the student trade union controlled by it. Student self-government in the Western sense is non-existent. Nevertheless, during the 1960's many Ukrainian students took part in a number of spontaneous demonstrations with political overtones in Kiev, Lviv, Odessa, and other cities. Arrests of students for Ukrainian "nationalism" and similar "sins" increased in frequency towards the end of the 1960's.

The faculty of Soviet Ukrainian establishments of higher learning has five ranks (approximate equivalent to the U.S. ranks in parentheses): professor (full professor), docent (associate professor), assistant (assistant professor), senior lecturer (instructor), and lecturer. Faculty vacancies are filled through competition, which is announced in the press. Candidates for a vacancy in the Ukrainian SSR may come from any part of the USSR. Voting by the faculty members is secret. Since 1965, members of the faculty have acquired right of tenure for the first time in many years. Before that (from 1953), all staff positions were considered vacant every five years, and competitions and elections followed.

Salaries of faculty members are fixed by the government. Compared with those of the rest of the society, they are high. A senior lecturer may receive $133 a month as the base rate; a docent, $255. The salary of any member who obtains a "candidate" degree is automatically doubled. Faculty members are permitted and even encouraged to solicit research and consulting jobs with industry and other outside employers.

The social status of faculty members in the Ukrainian SSR is of the highest order and most prestigious. Relations between faculty and students are formal and conservative compared to those in the West. The teaching load of the faculty is heavy. As a rule, assistants and senior lecturers teach up to 20–24 hours a week and have classes of over 100 students.

**Extracurricular Activities**

Political education is conducted by means of agitation and propaganda in cultural institutions, the cinema, and the press.

Development of these institutions is illustrated in Table IX below.

The cultural-educational institutions, even more than the establishments of professional education, are used by the Communist party to implement the policy of Russification. Thus, the supply of Ukrainian language books and publications is wholly inadequate to satisfy the needs of the Ukrainian population

# 7. EDUCATION IN WESTERN UKRAINE IN 1919–44 AND ABROAD

## UKRAINIAN LANDS UNDER POLAND

### General Characteristics of the School System

In Ukrainian lands occupied by Poland in 1919, school and educational conditions varied from area to area: in Galicia [Vol. I, p. 835, ff.], Ukrainian schools were relatively well organized and the Ukrainian community exerted considerable influence on the form and content of education. In the northwestern lands (Volhynia, the Kholm region, Podlachia, and Polisia), which were formerly under Russian occupation, the level of education, especially the elementary, was quite low, Ukrainian schools were non-existent, and the Ukrainian community had no voice in educational matters.

Conditions in the northwestern lands changed during World War I. Some Ukrainian schools were opened in the territories occupied by the central powers and during the brief period of Ukrainian statehood. The organization of Ukrainian schools was begun during the German-Austrian occupation in 1916–18 by the Ukrainian Sich Riflemen (Ukraïns'ki Sichovi Stril'tsi) in Volhynia, and by the Union for the Liberation of Ukraine in Podlachia and Polisia. The teaching personnel of these schools consisted of the members of the Syniozhupannyky units taken prisoner by the German armies, and the local intelligentsia. A number of schools appeared during the period of Ukrainian statehood. Between the winter of 1916 and the autumn of 1918 there were approximately 250 Ukrainian schools in the northwestern lands occupied by the Austrians. In order to provide teachers for these schools, the Commissariat of Education for the Kholm region, Podlachia, and Polisia, headed by Karpo Dmytriuk, organized special training courses in Berestia.

When Galicia and the northwestern lands were occupied, the Polish government found an extensive network of Ukrainian schools: 2,500 elementary schools in Galicia (1914 statistics); 500 elementary schools in the northwestern lands, mainly in Volhynia; and approximately 25 secondary schools. The policy of the Polish government was aimed at full centralization and Polonization of the schools under its jurisdiction. Towards this end, school administrations were centralized and community influence eliminated; Polish was introduced as the language of instruction; the use of Ukrainian was curtailed, and Ukrainian teachers were replaced by Polish. The entire history of Ukrainian education in the lands occupied by Poland presents a continuous struggle for the preservation of Ukrainian content.

The Polish assault had several phases. In the early 1920's, the government centralized the school administrative system, removed all community group and organization influence, and developed a network of Polish schools; it did not attempt to encroach upon the existing network of Ukrainian schools. In the mid-1920's, Ukrainian schools were changed into bilingual schools. Finally, in the 1930's, a new system of education was introduced: schools in Ukrainian territories were staffed by Polish teachers and full-scale Polonization of Ukrainian schools was implemented by force.

### Educational System

During the first years of occupation, the Polish government retained the Austrian system of education in Galicia, with the Lviv Land Board of Education at the top of the organizational structure.

A unified system of education and administration was introduced in Poland in 1921. For administrative purposes the country was divided into school districts (*okruhas*) or curatoriums, whereby Ukrainian lands were included in the following curatoriums: Lviv (three eastern Galician *voievodstvos* (provinces), Volhynia, and Polisia; westernmost areas were included in the curatoriums of Cracow (western part of the Lemkian region), Lublin (Kholm region and Podlachia), and Bialystok (Bilsk area). The Land Board of Education in Lviv was abolished. The Ministry of Education and Religious Denominations was in charge of the entire educational system in Poland, while curatoriums were second-ranking school-governing organs from which community representatives were excluded. The former county boards of education were retained in Galicia. However, they lost their significance with the transfer of actual power to the administrative powers (school superintendents). In 1933, the county boards of education were abolished and replaced by larger school circuits with district superintendents (one for several counties). The term of compulsory education in Poland was set at six years.

The school law of March 11, 1932, changed the entire educational system in Poland. Compulsory education in elementary schools was extended to seven years (7–14 years of age). Elementary education was subdivided into three levels: (1) grades 1–4, (2) grades 5–6, (3) grade 7. Supplementary education was provided for young people up to 18 years of age. Admission to secondary schools, general or vocational, was dependent upon completion of the second level of elementary education.

The same law provided for a significant change in secondary education. Four-year gymnasiums were established (corresponding to 3–6 grades of the pre-reform gymnasium). Additional two-year general education secondary schools and professional lyceums, which admitted students upon graduation from gymnasiums, were also set up. Special emphasis was placed on physical and political education, and in Polish schools, on the military training of young men and women.

**School Network**

The Polish government developed an extensive network of schools, particularly in the northwestern lands where the level of education prior to World War I was very low. The increase in the number of elementary schools is shown in Table X and in schools of various types in Table XI.

The number of students increased, as did the percentage of children of school age in attendance. In the Ukrainian lands under Poland during the school year 1937–8, 85 out of 100 children between seven and thirteen years of age attended schools. For the whole of Poland the ratio was 90 out of 100.

The percentage of literates ten years old and over increased from 50.5 per cent in 1921 to 64.7 per cent in 1931. The increase was especially substantial in the northwestern lands. Nevertheless, one third of the total population was illiterate. It should be noted that a large part of those classified as literate could barely write their name.

| TOTAL | 6.8 | 1,262.2 | 42.7 | 10.4 | 21.5 | 22.0 | 1.0 |

[1]All three *voievodstvos*, including the ethnically Polish part.
[2]All parts of Polisia, including those in Belorussia.

**Elementary schools** in Ukrainian lands, particularly in the northwestern regions, were mainly of the first level, with one or two teachers. Schools of the second level, with three to four teachers, and third level, with five or more teachers were considerably less in number.

Of the total number of schools, in Galicia 13.5 per cent were of the highest level, in the northwestern lands, 8.5 per cent (in all of Poland, 16.0 per cent). The percentage of second level schools was 19.5 in Galicia and 15.0 in the northwestern lands (17.0 in all of Poland). The percentage of schools of the lowest level was 67.0 in Galicia and 76.5 in the northwestern lands (67.0 in all of Poland).

Schools did not have enough teachers. In 1937–8, there were 57 children for every elementary school teacher (35 in England, 30 in Belgium, 32 in Bavaria). There was also a shortage of school buildings, and those available were usually in poor condition.

**Secondary schools** developed more slowly. In the school year 1937–8, the number of students attending gymnasiums and lyceums in Ukrainian lands under Polish occupation was approximately 45,000. Attendance at pedagogical schools did not exceed 1,000. The network of professional schools, with a total enrollment of approximately 20,000 students, was not sufficiently developed. The number of Ukrainian students attending these schools was negligible because the transition from rural elementary to professional and secondary schools was difficult. Moreover, the poverty of the Ukrainian population and the Polonizing methods in education had a depressing effect on school attendance.

**Polonization of Ukrainian Schools**

During the early years of Polish occupation, as already mentioned, the language of instruction in the existing Ukrainian schools was not changed to Polish. Instead, the government proceeded with the intensive development of Polish schools. Some changes occurred as a result of the school law of 1924 (*lex Grabski*) which was passed in spite of the objections of the Ukrainian parliamentary representation. According to this law, Ukrainian and Polish schools were unified and changed into bilingual schools. The language of instruction in the Lviv school district and in Volhynia and Polisia was to be determined by a referendum submitted to the parents of school children, provided that the population census of a given community

showed at least 25 per cent Ukrainians and that parents (or guardians) presented a notarized petition on behalf of at least 40 school children of Ukrainian nationality. In the first such school referendum conducted in 1925, Ukrainian parents in Galicia alone submitted nearly 100,000 petitions on behalf of 130,000 children of school age, and in the second referendum in 1932 nearly 250,000 petitions on behalf of 350,000 children. Abuses such as tampering with statistics of the referendum, illegal decisions of the boards of education which were subject to numerous interpolations and debates in the diet (*Sejm*) and the senate, and appeals to the League of Nations resulted in the transformation of almost all Ukrainian schools in Galicia and Volhynia into Polish or bilingual schools. Changes in the number of Ukrainian schools in Galicia within the boundaries of the three *voievodstvos* (which accounts for the difference in statistics as given above) are shown in Table XII. It should be noted that in all Polish elementary schools located on the ethnically Ukrainian territory of Galicia, the Ukrainian language was taught as a subject.

In northwestern lands the situation was even worse. There were 22 Ukrainian elementary schools in Polisia in 1922–3, all of which were closed in the following year. Bilingual schools were not established here, and the Ukrainian language was not even taught as a subject. On the basis of the school law of 1924, the teaching of the Ukrainian language was banned in the schools of Podlachia and the Kholm region.

In Volhynia, the number of schools with Ukrainian as the language of instruction decreased from 443 in 1922–3 to eight in 1937–8, while at the same time the number of schools where teaching was in Polish increased from 546 to 1,559, those with both languages of instruction from 89 to 520, and others from 80 to 100. It should be noted that in 853 of the 1,559 schools which were neither Ukrainian nor bilingual Ukrainian was taught as a subject.

It can be estimated that towards the end of the 1930's for every 100 Ukrainian children in Poland barely 7 per cent attended Ukrainian schools, about 45 per cent attended bilingual schools, and the remaining 48 per cent attended Polish schools in which approximately half of them had the opportunity to study the Ukrainian language.

The bilingual schools were actually Polish in character. Instruction was given mostly in Polish and the teachers were almost invariably Poles who often had no knowledge of Ukrainian. In general, it was the Polish teaching force that spearheaded the campaign of Polonization. They stood at the helm of the Polish organizations, particularly the infamous *Strzelec* (Sharpshooter group) [Vol. I, p. 846b]. They looked with hate and contempt at everything Ukrainian. Thus, from the pedagogical point of view, the teachers could exert no influence on the children. The teacher-pupil relationship was one of complete alienation and outright animosity.

At the same time, Ukrainian teachers were being transferred *en masse to* western Polish regions or dismissed. The

TABLE XII

| Schools | School year 1911–12 | 1921–2 | 1927–8 | 1937–9 |
|---|---|---|---|---|
| Ukrainian | 2,420 | 2,426 | 745 | 352 |
| Polish | 1,590 | 2,247 | 2,325 | 2,127 |
| Bilingual | — | — | 1,635 | 2,485 |
| Others | 20 | 16 | 77 | 197 |
| TOTAL | 4,030 | 4,689 | 4,782 | 5,161 |

young graduates of teachers' seminaries could obtain employment only in Poland proper, and in the 1930's the influx of new Ukrainian teachers was stopped.

In Podlachia, Polisia, and the Kholm region, even Orthodox religious instruction given by priests was to be in the Polish language.

Conditions in the secondary schools were slightly different. Initial attempts to introduce bilingualism were discontinued. However, the teaching of Polish history, geography, related subjects concerning Poland, and military training were introduced in Ukrainian gymnasiums, and were taught by teachers of Polish nationality.

Ukrainian state-operated secondary and professional schools were to be found only in Galicia. In Volhynia, Ukrainians had only three private gymnasiums.

Table XIII shows the number of secondary schools of various types and their division into Polish and Ukrainian in 1937–8 (private schools in parentheses).

TABLE XIII

| | 1937–8 | |
|---|---|---|
| Type of school | Total | Ukrainian |
| Gymnasiums | 138 | 24 (19) |
| Lyceums | 127 | 21 (16) |
| Pedagogical | 15 | 1 (1) |
| Professional | 91 | 5 (4) |

Ukrainian gymnasiums and lyceums were attended in 1937–8 by nearly 6,000 students, slightly more than half of all Ukrainians attending secondary schools. Only 600 students attended Ukrainian professional schools.

As shown in the table above, the majority of Ukrainian secondary and professional schools were privately operated. The only public gymnasiums were those which functioned during the period of Austrian rule, although in 1930 the Ministry of Education closed the Ukrainian gymnasium in Ternopil. In the category of professional schools there was only one Ukrainian public institution, the agricultural lyceum in Chernytsia. All Ukrainian secondary schools were strictly controlled by the school authorities. In each several Poles were employed in various capacities. There was almost a perennial shortage of textbooks, instructional programming was inadequate, and permission to open private schools was difficult to obtain.

### Struggle for Ukrainian Schools

The efforts of Ukrainians were directed not only towards the preservation of Ukrainian content in public schools, but also towards the development of their own private schools and the education of youth in pre-school and extracurricular programs.

In 1920, leadership in matters pertaining to Ukrainian schools and education was assumed by the Ukrainian Pedagogical Society (after 1926, Ridna Shkola (Native School)). The activity of the Native School society was limited to Galicia, since the Polish government barred it from expanding into the northwestern Ukrainian lands. In 1938, the society had 2,077 branches with a total membership of 104,000 (in 1914, only 59 branches and 5,000 members). It financed a number of schools, courses, and dormitories, published pedagogical periodicals (biweekly *Ridna Shkola* starting in 1932), and organized conferences and exhibits. The society's funds were obtained from the voluntary contributions of Ukrainians.

As compared to the pre-war period, Ukrainian private schools expanded both in number and in quality. In 1937–8, there were 41 elementary schools with 6,400 students, all in Galicia, except for one in Berestia and another in Rivne. Apart from several schools maintained by the Sisters of the Order of St. Basil the Great, all these schools were operated by the Native School society. One third of all Ukrainian private elementary schools consisted of seven grades (third level schools) and were located in the cities, especially in Lviv. Since permis-

sion to open new schools was extremely difficult to obtain, Ukrainian parents frequently opened so-called group lessons, and from 1932 on, they took advantage of the right to conduct "home tutoring." Yet even in Galicia, attendance in Ukrainian private elementary schools did not exceed two per cent of all Ukrainian children.

FIGURE 140. TITLE PAGE OF THE JOURNAL *Ridna Shkola*

Ukrainian private secondary schools were much better developed. The number of private schools increased from 9 in the mid-1920's to 13 in 1931–2, and eventually to 22 gymnasiums and 16 lyceums in 1939, with approximately 4,000 students or nearly 40 per cent of all Ukrainians attending secondary schools.

The activity of Ukrainian private schools was constantly impeded by both school and administrative authorities. From 1932 the procedure for establishing and conducting private schools and the selection of teachers was highly complex, and thus the authorities closed some schools and dismissed a number of teachers. Only a few Ukrainian private schools were granted official recognition by the Ministry of Education. Graduates of non-recognized private schools were screened by specially appointed boards of examiners before their diplomas could be fully accredited.

In the 1920's, Ukrainians in Galicia for the first time recognized the importance of private vocational schools of lower and secondary levels. Ukrainian private vocational schools conducted by the Native School society were for the most part commercial. There were also some trade schools and a number of agricultural schools. The Land Audit Union of Cooperatives operated a three-year cooperative lyceum. The Native School society also conducted 65 vocational and general educational courses in various localities throughout the land, and established an advisory guidance committee to assist students in the selection of schools suited to their interests and abilities. But Ukrainian schools constituted only seven per cent of all vocational schools in Galicia.

In the early 1930's there were eight teachers' seminaries and courses in Galicia, but with the passage of the new reform law all were closed. In 1934, the Sisters of the Order of St. Basil the Great opened a seminary in Lviv for training teachers of the preschool level.

Ukrainian private preschool education was widely developed. Particularly well organized were seasonal kindergartens for the summer work season. In 1937–8, there were 16 permanent children's nurseries in Galicia attended by approximately 500 children, and close to 700 seasonal kindergartens.

The struggle in education extended into the spiritual training of youth. The government strove to impose Polish educational values on Ukrainian schools, disregarding the Ukrainian spiritual heritage, culture, and history. Ukrainians opposed these efforts most vehemently. The negative influence of the Polish teachers was counteracted in Ukrainian homes

and churches and by the Ukrainian environment. Children's publications also played an important part in the preservation of Ukrainian mental and spiritual values, for example, *Svit Dytyny* (Child's World), *Nash Pryiatel'* (Our Friend), *Dzvinochok* (Bell), *Ranok* (Dawn), and hundreds of children's books published by the Native School society and the publishing houses of M. Taranko and I. Tyktor. This literature reached Ukrainian children in areas where Ukrainian schools were not permitted by the Polish authorities. The Ridna Shkola society succeeded in organizing 700 children's libraries totaling 40,000 books in Galicia.

A significant positive influence was exerted by youth organizations on education in the 1920's and 1930's. The Ukrainian Scout organization Plast grew rapidly after 1920, including not only teenagers and older youths, but also children from seven to 12 years of age. Units of Plast were established in all large cities and villages in Galicia, and to a lesser extent in Volhynia. The rapid growth of Plast (6,000 members in 1929–30) was halted when the Polish administration outlawed its activity in 1930. The education of young people then continued under the auspices of such newly formed organizations as the Commission for Educational Campgrounds and Hiking and Youth of Ridna Shkola. Ideological-sports organizations also promoted education: Kameniari (Stone Cutters), Obnova (Rebirth), Orly (Eagles), which, like Plast, published separate journals and newspapers for youth. Cultural-educational activity among peasant youth was carried on by sports organizations such as Sokil, Sich, and, after 1925, Luh.

As in the pre-World War I period (see p. 332), there were two Ukrainian teachers' organizations, the Mutual Aid Society of Ukrainian Teachers, which, in 1938, had 44 branches with a membership of 1,160 elementary school teachers, and the Teachers Association with 14 branches and 420 members.

**Schools of Higher Learning**

After the occupation of Lviv, the Polish government abolished all Ukrainian chairs and teaching appointments at the university. In accordance with the order of August 14, 1919, the university admitted only persons who had served in the Polish army. The Shevchenko Scientific Society, the Mohyla Society of Ukrainian Scientific Instruction, and the Stavropygian Institute then organized university courses for Ukrainians. In 1920, however, the government banned these courses, and they had to be continued in secret. Consisting of philosophy, law, and medicine, they became in July, 1921, the underground Ukrainian university patterned on West European schools of higher learning. The first rector of the university was Basil Shchurat, followed by Marian Panchyshyn and Eugene Danyliak, the last rector. In 1921, this university had 54 chairs and 1,260 students, and in the academic year 1922–3, 65 chairs and 1,500 students. The medical faculty offered only two years of theoretical studies, thus forcing the students to continue their education abroad. Credits acquired were recognized by universities in other countries. The Curatorium of Ukrainian Schools of Higher Learning, headed by Volodymyr Detsykevych, was in charge of all Ukrainian establishments of higher education in Lviv.

Teachers and students of the Ukrainian underground university were constantly persecuted by the Polish authorities. Numerous protests, including a memorandum to the League of Nations in 1922, as well as efforts to legalize the university did not bring any positive results. On the other hand, by a law of September 26, 1922, on provincial self-government [Vol. I, p. 834], the Polish regime was obligated (articles 24 and 25 of the law) to establish a Ukrainian state university by 1924 at the latest. This legal obligation was never carried out by the Polish government. Following the decision of the Council of Ambassadors

on the incorporation of Galicia into the Polish state (1923), and as a result of constant Polish pressures, the university discontinued its activity in mid-1925.

The Ukrainian Higher School of Polytechnics, founded at the beginning of the 1921–2 academic year, operated on a much smaller scale. Lacking proper facilities and equipment, this institution offered only one year of technical studies, after which the students pursued their education abroad, mostly in Danzig. Victor Luchkiv was rector of the school, which was attended by 64 students in the academic year 1922–3. It was closed in 1925.

The Catholic (Byzantine rite) Theological Academy of Lviv was the only legal Ukrainian institution of higher learning in Poland. It was founded by Metropolitan Andrew Sheptytsky in 1928 on the basis of the already existing Ukrainian Catholic (Byzantine rite) Theological Seminary in Lviv. Organized on the pattern of Western Catholic universities, the Academy had two faculties, theological and philosophical. Several non-theological subjects were included in the curriculum. The course of study was five years and during the period 1934–9, attendance was 350–400 students. It had 30 professors and lecturers, and the number of graduates per year was 50–65. The rector of the Academy was the Rev. Josyf Slipyj, who later rose to the rank of metropolitan, and more recently, cardinal. There were also Ukrainian Catholic theological seminaries in Peremyshl and Stanyslaviv and a faculty of Orthodox theological studies at the University of Warsaw, with Polish as the language of instruction, and an Orthodox theological seminary in Kremianets.

In the first half of the 1920's large numbers of Ukrainian youth from Galicia and Volhynia studied at various Ukrainian schools of higher education in Czechoslovakia (Ukrainian Free University, Ukrainian Technology and Husbandry Academy, Drahomanov Higher Pedagogical Institute: see p. 282), at Czechoslovakian higher schools (mainly in Prague), in Vienna, Berlin and Danzig. Before 1925 Ukrainians boycotted all Polish schools of higher education. But, as a result of the discontinuation of underground Ukrainian schools of higher learning in Lviv, difficulties in obtaining accreditation in Poland for studies completed abroad coupled with financial difficulties forced Ukrainian youth to study in Polish schools. However, a percentage limit was placed on enrollment of Ukrainians in Polish institutions of higher learning, especially in medical and technical departments. Many Ukrainian students attended universities, in addition to that at Lviv, and colleges in Warsaw, Cracow, Poznań, and Wilno.

It should be noted that chairs of Ukrainian language and literature were established at the University of Cracow, and a chair of Ukrainian history in Warsaw.

During the academic year 1937–8, there were approximately 3,000 Ukrainian students, or 6 per cent of all students in Poland. Of these students, approximately 800 studied theology, 650 law and the social sciences, more than 500 humanities, approximately 400 technology, and over 200 each medicine and commerce.

Ukrainian student organizations played a significant role in organizing and maintaining Ukrainian underground schools of higher learning in the early 1920's. After Polish authorities disbanded the Ukrainian Student Union and Academic Society, which had been renewed after the National War of Liberation, the Professional Organization of Ukrainian Students (Proforus) became the new center for students. It was headed by a Ukrainian national student council, which encompassed ten regional student councils and five district ones. After the closing of Ukrainian schools of higher learning in 1925, organized student life was channeled in newly formed or revitalized general and professional stu-

dent associations such as Students'ka Hromada (Student Society), Medychna Hromada (Medical Society), Osnova (Foundation; society of engineers), and Vatra (Bonfire, society of veterinarians). In March 1931, student organizations of Lviv and other university cities in Poland united into the Union of Ukrainian Student Organizations Under Poland (first president Volodymyr Yaniv). The 65 district sections which comprised the Union carried on a lively cultural-educational activity: lectures, discussions, exhibits, and concerts.

**Extracurricular Education**

The programs of extracurricular education varied in Galicia and in the northwestern lands because of differences in their histories (there had been no Ukrainian educational organizations in the northwestern lands during the tsarist period) and as a result of restrictions imposed upon Galician educational and cultural societies, which were barred from extending their activities to the northwestern lands.

The Prosvita society continued to lead in promoting educational work in Galicia (see p. 336). But World War I and the early period of Polish occupation almost completely destroyed the achievements of previous years. For example, the number of reading rooms operated by the Prosvita society decreased from 2,944 in 1914 to 50 in 1920. Eventually, however, the trend turned upward, as shown in Table XIV.

The activity of the Prosvita society broadened and became more varied. After 1924, however, the Prosvita society concentrated solely on educational matters. The cultural-educational work centered around the society's reading rooms. It organized numerous courses, directed educational work in individual localities, and established choirs and theatrical groups which staged plays in cities and villages. After the war the Prosvita society spread into cities and towns and took a special interest in the nationally backward areas of Galicia (e.g., special committee on the Lemkian region created by the central organization). The publication activity of the society was renewed. In addition to *Pys'mo z Prosvity* (Letter from Prosvita) which was renamed *Narodna Prosvita* (National Prosvita) and books, the society began to publish *Amators'kyi Teatr* (Amateur Theater), and a monthly magazine *Zhyttia i Znannia* (Life and Knowledge) after 1927. But from the organizational point of view, the achievements were undeniably great: with the exception of some mountainous areas and localities where the Polish authorities dissolved local branches and reading rooms, each Ukrainian village had its own Prosvita reading room and library. The Prosvita society, like other Ukrainian organizations of the time, employed an increasing number of professional workers, particularly educational instructors in its branches.

Another educational organization, the Skala (Rock) society, founded and headed by Bishop Gregory Khomyshyn, worked in the Stanyslaviv area. Its reading rooms were usually headed by local priests. The number of branches of the Russophile Kachkovsky Society (mainly

TABLE XIV

| | | | Members (in M's) | | | | | |
|---|---|---|---|---|---|---|---|---|
| Year | Branches | Reading rooms | Central organ. | Central rooms | Libraries | Books | Copies (in M's) | Bldgs |
| 1914 | 77 | 2,944 | 36.4 | 197 | 2,664 | 16 | 150 | 504 |
| 1920 | 8 | 50 | 0.5 | 25 | 10 | 8 | 35 | 45 |
| 1925 | 81 | 2,020 | 6.9 | 121 | 978 | 10 | 48 | 395 |
| 1930 | 87 | 2,630 | 14.8 | 206 | 2,215 | 24 | 95 | 914 |
| 1935 | 83 | 3,071 | 31.1 | 275 | 2,915 | 16 | 129 | 1,301 |

in the Lemkian region) decreased considerably from that of the prewar years.

Other institutions and professional organizations such as Ridna Shkola, Soiuz Ukraïnok (Union of Ukrainian Women), the Teachers Association, the Mutual Aid Society of Ukrainian Teachers, the Mohyla Society of Ukrainian Scientific Instruction, the Lysenko Musical Society, the Zoria (Star) artisans' society, Burghers brotherhoods in Lviv and elsewhere, the Vidrodzhennia (Rebirth) anti-alcoholic society, student groups, former Besida societies and social clubs engaged in extracurricular educational activity. A certain amount of educational work was also accomplished by athletic associations, particularly the Sokil, Luh, and Kameniari groups (see Physical Culture, pp. 1038 ff.).

In the northwestern lands, the Ukrainian educational movement did not begin until the period of German-Austrian occupation. The Union for the Liberation of Ukraine (Soiuz Vyzvolennia Ukraïny) was particularly active in Podlachia. This organization provided the initiative for the establishment of the Prosvita society in Berestia and the Ukraïns'ka Hromada (Ukrainian Community) in Bila. The latter published a weekly and an almanac, *Ridne Slovo* (Native Word). A unit of the Ukrainian Sich Riflemen organized cultural and educational activities in Volhynia (Volodymyr Volynsky). In the early 1920's, cultural-educational life in the northwestern lands accelerated, mainly as a result of the growing sense of Ukrainian national consciousness among the masses, but also because of the return of 40,000 Ukrainians evacuated by the Russian armies in 1915.

In 1920 a Prosvita society was formed in Lutsk. By 1932 it had 134 branches. Its activities covered a broad field—cultural-educational, economic, and charity. Two Prosvita society congresses were held in Lutsk in 1921–2, at which it was resolved to create the Volyns'ka Prosvita (the Volhynian Prosvita) for the entire region of Volhynia. The Polish authorities, however, refused to legalize the organization. Similar Prosvita activity was promoted in Kremianets (April, 1917), Ostrih (1918), Dubno (1920), Rivne, Volodymyr Volynsky, and Kovel. As a result of intensified Polish pressure [Vol. I, p. 843 ff.), all these branches of the Prosvita society were closed in the years 1928–32, but their work was continued by the Ukrainian national homes, cooperatives, bookstores, reading rooms, and branches of the Association of Ukrainian Women, various clubs and groups. Despite constant harassment by the Polish government, all cultural-educational organizations of the northwestern lands maintained close ties with Galicia.

Diversified activity in the field of cultural-educational work in Podlachia and the Kholm region was pursued by the Ridna Khata (Native Home) society, founded in Kholm in 1918. It succeeded in establishing some 300 branches and continued its activity through the 1920's until its dissolution by the Polish government, which suppressed all cultural endeavors of the Ukrainian population.

A similar fate befell the Ukrainian movement in Polisia. The Berestia Prosvita center, which had developed a network of wide-ranging activities over the entire area, was closed by the Polish authorities.

An upsurge in publishing and the increasing strength of the Ukrainian press contributed a great deal to the growth of education in the Ukrainian lands under Polish occupation. Books and newspapers began to be produced on a mass scale to supplement and even replace the work of educational organizations, especially in the northwestern lands. The number of press organs increased in Galicia from 70 in 1913 to nearly 100 in 1937, and that of non-periodical publications from 360 to more than 400. The circulation showed a much greater increase. Numerous publications were of a general educational character (those from the publishing houses of I. Tyktor and

Samoosvitnyk), including children's literature (see Book Publishing and Press).

In their educational efforts, Ukrainian organizations met with strong competition from Polish groups such as the Polish national homes, the Strzelec organization, and public school societies, all government supported.

## TRANSCARPATHIA 1919–39

Incorporation of Transcarpathia into the democratic and culturally developed state of Czechoslovakia resulted in significant advances in schools and education.

### Schools

Soon after Czechoslovakia's occupation of Transcarpathia, compulsory education for children up to 14 years of age was introduced throughout the country. Courses for illiterates were opened and schools of all types were rapidly developed. The status of education in Transcarpathia within the boundaries of the so-called Pidkarpats'ka Rus' (Subcarpathian Ruthenia), that is, exclusive of eastern Slovakia, is shown in Table XV below.

In comparison with the pre-war years, the number of elementary schools increased from 525 to 861, that of gymnasiums from 3 to 11, and teachers seminaries from 3 to 5. The number of students more than doubled. In 1938, Ukrainian elementary schools were attended by 113,000 pupils. There was a large increase in the number of schools of higher rank, mainly the so-called citizens' (*horozhans'ki*) or burgher schools, that is, elementary schools of higher rank, vocational schools, and gymnasiums. The number of elementary schools with Ukrainian as the language of instruction increased from 34 in 1916 to almost 400 in 1921–2 and 492 in 1938. The unusually high number of Czechoslovakian schools can be explained by the fact that they were attended by Jews. In general, the Ukrainian population of Transcarpathia was adequately provided with native schools. But there was only one school of higher learning, a Ukrainian Catholic (Byzantine rite) theological seminary in Uzhhorod.

In the Priashiv area (eastern Slovakia),

TABLE XV

| Language of instruction | Kindergartens | | Elementary schools | | Citizens' schools | |
|---|---|---|---|---|---|---|
| | 1931–2 | 1938 | 1931–2 | 1938 | 1931–2 | 1938 |

| Other | — | 2 | — | — | 3 | 3 |
| TOTAL | 8 | 11 | 4 | 5 | 160 | 179 |

there were 113 elementary schools (including two citizen's schools) with Ukrainian as the language of instruction, a teachers' seminary, three agricultural public schools, and a Ukrainian Catholic (Byzantine rite) theological seminary in Priashiv. There were also 253 Ukrainian Catholic parochial schools with Slovakian as the language of instruction. In Slovakia, 57 per cent of Ukrainian children attended Ukrainian schools, 27 per cent attended Ukrainian Catholic parochial schools with Slovakian as the language of instruction (Ukrainian language taught as a subject), and 16 per cent attended public schools with Slovakian as the language of instruction.

The problem of language presented one of the greatest difficulties in the development of education. The Czechoslovakian government favored the so-called Ruthenian trend (neither Russian nor Ukrainian). Hungarian and Polish propaganda, the Russian émigrés, and some Czechoslovak circles supported and financed the Russophile trend. Both of these anti-national movements gained considerable ground in the 1920's. But in the prevailing climate of freedom, the initial apathy and indifference of the population gradually disappeared, and after 1931 the Ukrainian movement in the schools dominated. The level of education was quite good. The older teachers, educated in Hungarian schools, had good professional and administrative training. Ukrainian language and studies were taught mostly by specialists from Galicia and central Ukrainian lands. Young aspiring teachers could acquire professional knowledge at the two teachers' seminaries in Uzhhorod, and potential secondary school teachers could pursue their studies at the University of Prague, which had a chair of Ukrainian language and literature.

The question of language was usually decided by school principals and superintendents in elementary schools. All schools, except vocational were under the jurisdiction of the Educational Administration in Uzhhorod. The position of the chairman, as well as that of the land school superintendent, was always occupied by a Czech. Elementary schools were subdivided into 13 school districts, each headed by a school superintendent. There were four Ukrainian, four Russian, three Ruthenian, and two Czechoslovakian superintendents.

On October 28, 1938, the Ukrainian government headed by the Rev. Augustine Voloshyn transformed the Educational Administration into the Ministry of Education. Augustine Stefan, director of the Trade Academy, was appointed head of the ministry. After the German-Italian arbitration of Vienna [Vol. I, p. 854a] all Uzhhorod, Mukachiv, and Berehiv secondary schools were evacuated to larger villages. The Ministry of Education in Khust reduced the number of Czechoslovakian elementary schools to 20, citizens' schools to 3 and gymnasiums to 1. All Jewish children were transferred to Ukrainian schools, and the number of Hungarian schools fell to 30 as a result of the cession of territories populated by Hungarians.

FIGURE 141. AUGUSTINE STEFAN

An important part in the cultural revival of Carpatho-Ukraine was played by the Ukrainian Teachers' Society founded in 1929, which published two newspapers, *Uchytel's'kyi Holos* (Teachers' Voice) and *Nasha Shkola* (Our School).

### Extracurricular Education

Prosvita was the first cultural society in Transcarpathia (1920) to organize reading rooms (167), amateur stage plays, national choirs and orchestras, a museum and a library. It published books for the general reading public, a

children's magazine *Pchilka* (Bee), and *Naukovyi Zbirnyk* (Scholarly Symposium). The Pedagogical Society of Subcarpathian Ruthenia, founded in 1924, concerned itself with purely educational matters and the publication of textbooks. It also published the newspaper *Pidkarpats'ka Rus'* (Subcarpathian Ruthenia), *Rus'ka Shkil'na Matytsia* (Ruthenian School *Matytsia*) dealt with matters of schooling. The Russophile trend was represented by the Obshchestvo im. Aleksandra Dukhnovycha (Alexander Dukhnovych Society, 1923) which was engaged in activities similar to those of the Prosvita society and published a monthly *Karpats'kyi Svit* (Carpathian World), 1928.

The Ukrainian cultural movement was totally suppressed by the Hungarian government which occupied Transcarpathia in 1939. The Soviet educational system was introduced in 1945.

Ukrainian youth organizations exercised considerable influence on education in Transcarpathia. Primary among them was Plast, which from 1920 formally carried on a broad program of activities within the framework of the Czech Scout organization. The Union of Carpathian Ruthenian Students concerned itself with many areas of cultural and educational life.

*A. Stefan*

## UKRAINIAN LANDS UNDER RUMANIA

Bukovina, which in prewar years had had the most advanced educational system of all Ukrainian lands, experienced its worst period under Rumanian occupation, especially as regards the teaching of the Ukrainian language.

### Schools

Abolition of Ukrainian schools began early in 1919 with the transfer of Ukrainian teachers from the northern part of Bukovina and the transformation of 38 Ukrainian schools (5,500 pupils) into Rumanian schools. On the basis of official Rumanian statistics, there were still 255 Ukrainian schools in Bukovina in 1922–3, compared to 391 Rumanian, 47 German, 27 Jewish, 23 Polish, and 2 Hungarian. But Rumanian as the language of instruction was already being partially introduced in Ukrainian schools. The state of siege imposed on the Ukrainian part of Bukovina in 1919 prevented Ukrainians from protesting against the Rumanianization of schools, which was said to be conducted "with the express consent of the people." Before 1924, Ukrainians were still officially considered a national minority with the right to maintain their own schools (constitutional provisions of December 1, 1919, and March 29, 1923). However, the law of July 26, 1924, classified Ukrainians as "Rumanians who had forgotten their native tongue." Beginning on October 1, 1925, Rumanianization of schools was intensified and by 1927 the process was complete (all teachers were required to pass a state board examination on their knowledge of Rumanian).

It was not until the abolition of the state of siege in November 1928 that Ukrainians resumed the struggle for reinstatement of Ukrainian elementary schools. Between July 20, 1928, and January 3, 1929, a number of popular meetings demanding restitution of the Ukrainian language in schools (94 communities collected nearly 10,000 signatures), were held throughout the Ukrainian part of Bukovina. This action spread into Bessarabia which enjoyed educational autonomy in 1920–7 and had 120 Ukrainian schools. But, in response to this action, the government merely issued a law (December 31, 1929) permitting eight periods of instruction in Ukrainian (six regular periods and two of Orthodox religious instruction) in the lower grades of schools with a majority of Ukrainian children and six periods (four regular and two for religion) in the higher grades. These periods were included in the school curriculum in 1931,

and two special superintendents of Ukrainian language studies were appointed. But even these small gains were nullified by the liberal government which assumed power in 1934. The Ukrainian language was taught secretly by Ukrainian teachers in a few remote villages. At the same time, Ukrainian secondary and vocational schools were also closed.

**Extracurricular Education**

Cultural-educational activity in Bukovina was also suppressed by the Rumanian government. Of the 590 societies active before World War I, only 14 remained. The Ruthenian Society (Rus'ka Besida), the oldest and the most active Ukrainian organization, barely survived the confiscation of its assets and closing of its reading rooms by the government. Its work was assumed in part by the National Home, financed by the Fedkovych dormitory with some 210 members, and the Ukrainian School (Ukraïns'ka Shkola), with 435 members. The latter group published several textbooks, conducted Ukrainian language courses during summer vacations (abolished by the government in 1934), and published the children's magazine *Ukraïns'ka Lastivka* (Ukrainian Swallow); it was barred by the government from opening any branches. Some cultural-educational activity was also conducted by other prewar (see p. 339) and newly organized societies and by the local Ukrainian intelligentsia who organized theatrical groups, village choirs, and Ukrainian language courses. All these efforts came to an end with the Soviet occupation.

## 8. ABROAD FROM 1919 TO THE 1950's

During World War I, in the years 1915–18, the Union for the Liberation of Ukraine [Vol. I, p. 714] organized cultural and educational activities among Ukrainian prisoners of war interned in Austria (Freistadt) and Germany (Rastatt, Salzwedel, and Wetzlar). This work, as well as formal instruction, was conducted by teachers from among the prisoners of war or by Ukrainians living in Austria who were members of the Union for the Liberation of Ukraine. Hundreds of active, nationally conscious Ukrainians were produced by these schools.

### BETWEEN WORLD WARS I AND II

Cultural and educational life among Ukrainian political refugees after World War I was well developed [Vol. I, pp.

859 ff.]. Various courses and schools were organized in the internment camps of the Ukrainian Galician Army in Czechoslovakia and the army of the Ukrainian National Republic in Poland. Ukrainian officers conducted secondary school courses in Deutschgabel (Nemecke Jablonne) in 1920–3, Liberets in 1920–1, and Josefov in 1921–4; there were also several reading and writing schools and the like. Similar schools and courses were organized in the internment camps in Poland. A school for Ukrainian youth (1921–4) and a gymnasium were opened in the Kalisz internment camp.

A realgymnasium, opened in Prague, was transferred to Řevnice in 1925 and later to Modřany near Prague. Elementary schools, or at least supplementary schools for children of Ukrainian refugees, functioned in Poland, Czechoslovakia, Germany, and France. A board of examiners for secondary school students, appointed by the government of the Ukrainian National Republic, operated in Berlin in 1921–6.

The Ukrainian institutions of higher learning in Czechoslovakia were especially important—the Ukrainian Free University in Prague, the Ukrainian Academy of Technology and Husbandry in Poděbrady, and the Drahomanov Pedagogical Institute in Prague. These schools were the result of the influx of a vast number of Ukrainian refugee students and teachers, and the favorable attitude and even material assistance of the Czechoslovak government [Vol. I, pp. 865 ff.]. For some time, these educational establishments were the only Ukrainian schools of higher learning in the world. They produced hundreds of professional specialists and contributed to the general development of Ukrainian scholarship (see Scholarship pp. 280–3). Like all other areas of Ukrainian refugee life, the Ukrainian schools of higher learning attained the peak of their activity in the mid-1920's. They curtailed their activity in the 1930's because of financial difficulties, a decrease in the number of students, and the departure of a number of professors.

FIGURE 142. CASTLE IN PODĚBRADY, CZECHOSLOVAKIA, WHICH HOUSED THE UKRAINIAN ACADEMY OF TECHNOLOGY AND HUSBANDRY IN THE 1920's

The Ukrainian Free University was founded in Vienna in 1920 through the efforts of the Union of Ukrainian Writers and Journalists. It was transferred to Prague in 1921. The university consisted of departments of philosophy and of law and social sciences. In Prague it was organized on the pattern of the King Karl Czechoslovakian State University, with which it maintained close relations. Its average number of students during the first ten years was 385 (226 in the department of philosophy, 164 in the department of law). The highest enrollment (874 students) was reached in the 1922–3 academic year; later, the number of students decreased considerably. While in Prague, the faculty of the Ukrainian Free University totalled 80 professors, assistant professors, and lecturers. By 1939, the university had conferred 109 doctoral degrees.

The Ukrainian Academy of Technology and Husbandry was founded in Poděbrady in 1922 on the initiative of the Committee of the Ukrainian Community (Ukrains'kyi Hromads'kyi Komitet) in Prague. It was a higher polytechnical school consisting of three departments—agronomy and forestry, economics and cooperatives, and engineering. The academy was under the direct

jurisdiction of the Czechoslovakian Ministry of Agriculture. During the ten years of its existence, 800 students were graduated; peak attendance was reached in the 1926–7 academic year, when 613 students registered. In 1935, the Czechoslovak government abolished the academy, and in its place the Ukrainian Technical and Husbandry Institute was established with a faculty consisting of professors and lecturers formerly at the Ukrainian Academy of Technology and Husbandry, which continued to function as a technical correspondence school (10,000 students, mostly from western Ukrainian lands). The maximum number of professors, assistant professors, and lecturers at the two schools was 70. By 1935, the Ukrainian Academy of

FIGURE 143. MEMBERS OF THE FACULTY OF THE UKRAINIAN ACADEMY OF TECHNOLOGY AND HUSBANDRY IN PODĚBRADY (1930)

Technology had granted 565 degrees in engineering. Its students were Ukrainians from all areas of the country, mostly soldiers engaged in the war for liberation. Some of them eventually returned to the western Ukrainian lands and made important contributions to the improvement of economic conditions (especially in the field of agronomy and the cooperative movement).

The Drahomanov Ukrainian Pedagogical Institute, which functioned in Prague from 1923–33, was a four-year higher school of pedagogy whose main objectives were the training of Ukrainian secondary school teachers and the organization of Ukrainian schools and educational activities. It consisted of three departments: history and literature, mathematics and natural sciences, music and education. The Institute graduated 116 students; 86 received degrees in secondary school education and 30 were granted doctoral degrees.

These three schools of higher learning also played an important part as centers for advanced scholarship and research. Each school issued its own scholarly publications (see Scholarship, p. 282).

The Ukrainian School of Plastic Art was organized in Prague in 1922 on the pattern of an academy of fine arts, with a four-year course of study. Graduates of this school were granted the degree of Master of Fine Arts.

The maintenance and development of Ukrainian schools of higher learning abroad was assisted by student organizations. The oldest of these was Sitch (founded 1868) in Vienna. After the Ukrainian Free University was transferred to Prague and other Ukrainian universities had been founded in Czechoslovakia, the Third Ukrainian All-Student Congress was held in that city in 1922. As a result of this congress, based in Prague from 1922 until 1934, and in Vienna from 1934 until 1935, the Central Union of Ukrainian Students which united student organizations both abroad and in Western Ukraine was formed. In 1923, the Central Union represented 15 member organizations with 4,650 members. It was active also in the international arena, participating in 1921–37 in 28 international student congresses and contributing significantly to the recognition and popularization of Ukrainian schools of higher learning in Ukraine and abroad.

## AFTER WORLD WAR II

As a result of the presence of a large number of Ukrainian refugees in various camps in Germany and Austria [Vol. I, pp. 911 ff.], Ukrainian schools and cul-

tural-educational organizations developed rapidly. (However, they declined just as quickly with the resettlement of the refugees in other parts of the world.) Schools, courses, educational societies, theaters, and choruses began to appear in refugee camps and centers for Ukrainian emigrants. The émigré press and publishing activities also grew rapidly (see Scholarship, Theater, Book Publishing and Press).

The great number of youth, the availability of teachers, and the relatively favorable material conditions all contributed to the development of schools, although the shortage of textbooks and equipment and the lack of uniform programs of teaching and of supervisory personnel had an adverse effect on education. The number of schools in Germany at the height of their development (1947–8) is shown in Table XVI.

TABLE XVI

| Type | Schools | Students | Teachers |
|---|---|---|---|
| Preschool level | 72 | 3,835 | 170 |
| Elementary | 104 | 4,966 | 488 |
| Secondary | 36 | 3,814 | 533 |
| Professional schools and courses | 26 | 1,163 | 137 |

In 1947–8, there were 29 Ukrainian gymnasiums in Germany and Austria, 80 elementary schools (8 in Austria), 8 secondary professional schools (mainly commercial), 140 professional courses of various types, 50 courses in foreign languages, 30 courses for illiterates, and 9 kindergartens. The ratio of teachers to students (one teacher for 8–10 students) was relatively high.

The Ukrainian Free University and the Ukrainian Technical and Husbandry Institute resumed their active work in Germany. Several new schools of higher education were opened, e.g., the Ukrainian Higher School of Economics, the Ukrainian Orthodox Theological Academy, and the Ukrainian Catholic (Byzantine rite) Theological Seminary. All were in Munich, which became the center of Ukrainian refugee life. As in Czechoslovakia, Ukrainian schools of higher learning developed because of the concentration of a great number of refugee students and teachers. However, these schools, unlike those in the previous period of Ukrainian emigration, suffered from inadequate facilities (e.g. libraries with a sufficient number of publications on Ukrainian subjects), comparatively low faculty salaries, and

FIGURE 144. FACULTY AND STUDENTS OF THE DEPARTMENT OF LAW AND SOCIAL-ECONOMIC SCIENCES OF THE UKRAINIAN FREE UNIVERSITY IN MUNICH (1948)

the dispersion of refugees. Thus, after a brief period of rapid development, especially in 1946–7, students and professors began to leave for resettlement in other places, mainly the United States and Canada. Only two schools of higher learning continued to function in Munich —the Ukrainian Free University and the Ukrainian Technical and Husbandry Institute (part of its faculty founded the Ukrainian Technical Institute in New York City). In 1951, after its transfer to Kulemborg, Holland, the Ukrainian Catholic Theological Seminary closed. The Institute of Correspondence Studies, established in 1948 at the Ukrainian Free University, lasted for only a few years. The Ukrainian Technical and Husbandry Institute and the Ukrainian Free University are still active, concentrating primarily on research and publishing.

With the reopening of Ukrainian schools of higher learning in Germany, the Central Union of Ukrainian Students again became a living force. It was reinstituted formally in June 1947 at the Fourth Student Congress and by the end of that year represented 2,721 students of 31 student organizations in 10 nations.

Since the resettlement of Ukrainian refugees from Germany and Austria, the educational activity of the remaining Ukrainians, as well as of those living in other countries, has been limited to local needs: pre-school education, schools of Ukrainian studies, and many Ukrainian full-time (mainly parochial) elementary schools in the United States (and in Rome, the Ukrainian Papal Seminary) in which instruction in Ukrainian is limited to two subjects (religion and Ukrainian language).

Many Ukrainian students attended German schools of higher learning. In 1947–8, 1,893 Ukrainians studied in Germany, 495 in Austria, 15 in France, 26 in Belgium, 35 in Italy, 29 in Spain, 10 in Switzerland, 5 in Holland (see Ukrainians Abroad).

# 9. THE PERIOD OF WORLD WAR II

## GENERAL REMARKS

Fundamental changes in the field of education occurred in western Ukrainian lands as a result of World War II.

Initial changes were precipitated by the Soviet occupation of almost all these lands in 1939 and 1940 (Bukovina and Bessarabia). The Soviet system of education was introduced in the occupied lands, and schools of all levels were thoroughly Ukrainianized. Schools with Polish as the language of instruction were retained for the Polish population. Established institutions of higher learning in Lviv were partially Ukrainianized and several new ones were opened. The University of Lviv was renamed Ivan Franko University. Only in the Ukrainian part of Polisia, incorporated into the Belorussian SSR, were Belorussian schools introduced contrary to the desires of the population, and despite numerous petitions.

## IN THE GENERAL-GOUVERNEMENT

Conditions were completely different in the westernmost areas of Ukraine, which were occupied by the Germans in September 1939 and incorporated into the so-called *Generalgouvernement* [Vol. I, pp. 874 ff.]. After the German occupation in 1941, incorporation of Galicia into the *Generalgouvernement*, and the creation of the so-called Reichskommissariat Ukraine, the conditions in western Ukrainian lands included in the *Generalgouvernement* differed from those prevailing in the eastern and central lands. Whereas in the western lands some cultural activity was permitted, in the central and eastern territories Ukrainian schools and education were totally suppressed [Vol. I, pp. 879 ff.].

The German authorities allowed some cultural and educational activity in the *Generalgouvernement*, although they maintained strict control and supervision. Ukrainian groups were limited to auxiliary functions (preschool education, dormitories, scholarships), although in some cases they were permitted to participate directly in educational affairs. Former societies and organizations were dissolved and all activity was concentrated in the Ukrainian Central Committee and its sections [Vol. I, p. 887]. The committee maintained a separate section in charge of educational matters and a section on cultural affairs in charge of educational activity outside the schools. The Ukrainian Teachers Labor Union which had to some extent replaced the two former professional teachers' organizations, was closely associated with the Ukrainian Central Committee. Textbooks were published by the Ukrainian Publishing House. A teachers' journal, *Ukraïns'ka Shkola* (Ukrainian School), also appeared. It should be noted that the large network of Ukrainian elementary and particularly vocational schools existing at this time was unprecedented in the entire history of western Ukrainian lands.

The German government was interested primarily in skilled farmers, craftsmen, and laborers to supply the military needs of the Reich. The regime, therefore, concentrated on the development of professional and elementary schools (the latter solely to provide general education for further specialization in professional schools). It also assisted in the establishment of kindergartens for utilitarian reasons, namely, to increase the productive output of the children's parents. Permission to open gymnasiums and the so-called professional public courses was actually a political concession to Ukrainians, and attempts were soon made to eliminate these schools.

### Kindergartens

The Ukrainian Central Committee financed kindergartens and conducted courses to train women as instructors (three courses attended by 100 women) and kindergarten teachers (160 courses attended by 4,500 women). In the summer of 1943, there were 2,696 seasonal kindergartens (770 during Polish occupation) attended by 114,100 children, and 241 permanent kindergartens with 13,900 (in 1937, 16 kindergartens with 500 children). Thus, 70 per cent of all populated centers had kindergartens attended by 60 per cent of the children.

### Elementary Schools

In the fall of 1939, Ukrainians residing in the areas west of the rivers Sian and Buh organized their own elementary schools. The teaching staffs consisted of specialists in various professions, all of them refugees from the territories occupied by the Bolsheviks. The Polish government gave permission to open Ukrainian public schools if there were at least 40 Ukrainian children of school age in attendance. In Polish schools attended by at least 20 Ukrainian children the Ukrainian language was taught as a sub-

ject, or permission could be secured to open a private school. The ratio of teachers to pupils was 1:70. In June, 1941, there were 911 Ukrainian schools (5 of them private) with 91,300 pupils and 894 teachers, 483 of whom lacked the necessary professional qualifications.

In 1942–3, with Galicia included, there were 4,173 Ukrainian schools with 601,000 pupils and 8,711 teachers in the *Generalgouvernement*, as compared to 2,510 prior to World War I and 453 schools with 57,600 pupils prior to World War II.

**Gymnasiums**

Through the efforts of the Ukrainian Central Committee, the German authorities granted permission to open gymnasiums in Yaroslav and Kholm in 1940–1, and 10 gymnasiums in Galicia in 1941–2. In June 1942, there were 12 gymnasiums, with 90 regular and 72 parallel classes attended by 7,020 students (4,880 boys and 2,140 girls) and a professional staff of 256 teachers. Upon liquidation of parallel classes by the German authorities in 1942–3, the number of students decreased to 5,700 (in 1932, there were 21 Ukrainian gymnasiums and 18 lyceums with an enrollment of nearly 5,000 students).

**Teachers Seminaries**

Seminaries were first opened in Krynytsia in 1940–1 and several more were established in the following years. During the school year 1943–4, there were 9 teachers seminaries attended by 2,320 students (900 boys and 1,420 girls)–355 women attended seminaries for kindergarten instructors. The total number of teachers was 114 (during the Polish occupation, there was only one seminary for kindergarten teachers).

**Professional Schools**

These schools were exceptionally well developed. The status of professional education in June 1943 was as follows: 172 general-compulsory schools with 62,621 students (one day per week for studies, five days for vocational training); 22 one-year secondary schools with 1,186 students; 2 professional schools with 142 students; commercial-trade schools: 4 vocational-compulsory schools with 170 students; 34 three-year secondary schools with 7,768 students; 7 one-year professional schools with 460 students. Of the commercial-craft schools for boys there were 19 vocational-compulsory schools with 1,488 students; 28 secondary schools with 4,037 students; 6 professional schools with 1,046 students; of the commercial-craft schools for girls there were 2 vocational-compulsory schools with 117 students; 31 secondary schools with 2,501 students, 3 vocational schools with 221 students. The total number of professional schools was 330, with 81,885 students and 1,828 teachers (during the Polish occupation, there were less than 20 Ukrainian professional schools).

**Public Professional Courses**

These courses were actually schools of higher education for both Ukrainians and Poles, with German as the language of instruction. In 1941–2, there were departments of medicine, veterinary science, pharmaceutical science, technology, agronomy, and forestry (1942–3). The purpose of the courses was to train highly qualified specialists in the fields listed. In 1942–3, they were attended by 1,776 Ukrainian students (in 1932, about 300) and 600 Polish students. The teaching staff was made up of Ukrainian, Polish, and German professors. Close to 1,000 Ukrainian students were enrolled at institutions of higher learning in Germany and Czechoslovakia. Approximately one-half of all Ukrainian students received scholarships from the Commission to Assist Ukrainian Students (Komisiia Dopomohy Ukrains'komu Studentstvu) established in 1940 at the Ukrainian Central Committee.

**Other Education**

The Central Committee's section on cultural work and its subsections in the district and county relief committees concentrated on mass education projects. The former Prosvita reading rooms (Ridna Khata society in Podlachia and the Kholm area) were replaced by Ukrainian educational societies. Cultural educational activities were hampered by the limited publication of books, the frequent destruction of libraries by the Bolsheviks, unstable conditions as a result of the war (especially the mass recruitment of youth for work in Germany), and strict controls by the occupation authorities.

The Central Committee's section on cultural work established two organizations, the Institute of National Education and the Institute of Folk Arts, which provided social, educational, and cultural programs for the individual branches of the Ukrainian Educational Society consisting of popular lectures, material for amateur theatrical groups, and choruses. Several correspondence courses were conducted, as well as a series of contests for choruses and theatrical groups, first on the district level and later on the provincial level (all-provincial contest of choruses in July, 1943).

The Ukrainian Educational Society established almost 4,000 branches. The society's cultural and educational work in the westernmost areas was particularly important since it contributed in large measure to the development of national consciousness among the Ukrainian people.

The Ukrainian Publishing House, which promoted the advancement of education inside and outside the schools, was primarily concerned with school needs, youth, and the masses of Ukrainian peasantry (see Book Publishing).

*P. Isaïw*

# V. Libraries, Archives, Museums

## 1. LIBRARIES

### TO THE END OF THE EIGHTEENTH CENTURY

The existence of libraries in Ukraine was noted in chronicles as early as the eleventh century. The first library of which historical note was taken was founded by Prince Yaroslav the Wise as part of Saint Sophia's Cathedral built in Kiev in 1037. Prince Sviatoslav, son of Yaroslav (1027–76), was renowned to have "filled his chambers with books"; manuscript books were also collected by other Princes—Nicholas Sviatosha in Chernihiv, Volodymyr Vasylkovych in Volyn, and the boyars. Their collections, bequeathed or donated to churches and monasteries, became the nuclei of church and monastery libraries. The oldest was the library of the Kievan Cave Monastery, founded around 1050 and burned in 1718. Some of these libraries grew in size and survived even the Tatar invasions.

Priceless collections of manuscripts and, later, of printed books were being established by the church brotherhoods [Vol. 1, p. 629] which began to appear in parts of western Ukraine in the fifteenth century. The most prominent was the library of the Stavropygian Brotherhood in Lviv, which survived until 1939. With the growth of higher education, libraries were being established at the Greek-Slavonic School in Ostrih, the Mohyla Academy in Kiev, and in other cities. There is evidence that there were numerous libraries in the seventeenth and eighteenth centuries, owned by high church dignitaries: Peter Mohyla, Lazar Baranovych, Ioannikii Galiatovsky, Stephen Yavorsky, Daniel Tuptalo, Theophan Prokopovych, Feofilakt Lopatynsky, as well as many priests and monks, for example, Basil Boiarsky, Jacob Susha, Yeronim Striletsky, Augustine Slavynsky, and others. There were also private libraries owned by Kozak officers and nobles (Nicholas Khanenko, Jacob Markovych, the Kochubei and Myloradovych families, Cyril Rozumovsky, Alexander Bezborodko, Gregory Poletyka, Alexander Rigelman, and others). The wealthy merchants also had their own libraries (Sylvester and Ivan Kulabka, Simon and Stephen Lashkevych, and others).

### FROM 1800 TO 1917 IN CENTRAL AND EASTERN UKRAINE

The Kievan Mohyla Academy, reorganized in 1819 as the Kievan Theological Seminary, and the colleges in Kharkiv and other cities laid the groundwork for the establishment of libraries in the true sense of the term—for the use of teachers and students. Such libraries were attached to the universities: Kharkiv (library comprised 250,000 volumes by 1917); Kiev (library developed from the nucleus of the Kremianets Lyceum Library and grew to over 500,000 volumes by 1913); Odessa (library began with the collection of the Richelieu Lyceum and grew to 314,000 volumes by 1915). There were also large libraries connected with the Kiev Theological Seminary, the Kiev Polytechnical Institute, and other higher educational establishments in Kiev and other cities. During the nineteenth century, many valuable libraries appeared in secondary schools.

Also during this period, special libraries began to appear for scholarly

research. Libraries were maintained by archive committees in *guberniya* capitals and by scientific societies, for example,

FIGURE 145. ODESSA PUBLIC LIBRARY

the Odessa Historical Society, the Nestor-Chronicler Society in Kiev, the Society for the Study of the Kuban-Black Sea Area in Katerynodar, the Society for the Study of Volhynia in Zhytomyr, and in scholarly associations attached to universities, archaeological and art museums. Public libraries were being established in the large cities, some of which had valuable collections of scholarly significance, as for example: the Odessa Public Library, the oldest and largest public library in Ukraine (founded in 1839, with 60,000 volumes in 1890 and 162,000 in 1911); the Kiev City Library, founded in 1866, with a rich Ukrainian division established by Michael Yuzefovich (56,000 volumes in 1917); the Kherson City Library (1872); the Chernihiv City Library (1877); the Kharkiv Community Library, founded in 1886 by Nicholas Sumtsov, Dmytro Bahalii, and others (160,000 volumes in 1911); the Katerynoslav Community Library (1887). There were also city libraries in Poltava, Kamianets Podilsky, and Zhytomyr. After the revolution of 1905, some of these libraries established separate divisions for books printed in Ukrainian. The general public enjoyed the benefits of libraries organized by the *zemstvos* and civic clubs in provincial and county seats.

The first completely Ukrainian libraries came into existence in the central and eastern parts of Ukraine only after the revolution of 1905, attached to Prosvita societies (for example, in Kiev) and Ukrainian Clubs. Their activities were curtailed following the dissolution of these societies by the Russian government in 1912. The foundation of the first Ukrainian scholarly library was laid by Michael Hrushevsky in the Ukrainian Scientific Society in Kiev in 1907.

## THE PERIOD OF UKRAINIAN STATEHOOD

Following the March 1917 revolution and the reestablishment of Ukrainian statehood under the Central Rada, steps were taken to establish a large Ukrainian National Library as early as 1917. The government of Hetman Paul Skoropadsky issued an act on August 2, 1918 establishing the National Library of the Ukrainian State in Kiev. This library was organized under a provisional committee appointed by the government which included Ukrainian scholars and civic leaders. During the Bolshevik occupation of Ukraine, the committee changed the name of the library to the All-People's Library of Ukraine on May 2, 1919. In spite of numerous difficulties due to the war and changes of the political regime, the library grew in size, mainly through donations and the nationalization of private libraries. In August 1919 the library had 40,000 volumes, by the middle of 1920, 500,000, and in June 1921, one million volumes.

The revolution of 1917–18 and the Ukrainian-Russian war of 1918–21 had an adverse effect on many libraries in Ukraine, particularly in locations remote from Kiev where, as a result of the revolutionary chaos and frequent indifference of the Ukrainians themselves, many valuable book collections, both privately owned and in institutions, were simply

lost. Great havoc was wrought on the libraries of monasteries, churches, and landowners, often with the acquiescence and even participation of the Bolshevik authorities. Many libraries were lost as a result of direct orders issued by the Council of People's Commissars in Moscow to seize libraries and bookstores and to transfer the libraries of all institutions, societies, and civic organizations "under the protection and filing" of the People's Commissariat of Education of the Russian SFSR.

The existence and survival of libraries and collections during this period must be credited to the efforts of Ukrainian scholars and educators, who often risked their lives to salvage books which were being dispersed or savagely destroyed. The first decree of the Council of People's Commissars of the Ukrainian SSR with regard to historical and cultural monuments was issued on April 1, 1919 and referred merely to their transfer, including libraries, to the care of the People's Commissariat of Education. Libraries were dealt with in greater detail in the decree of the All-Ukrainian Central Executive Committee, issued in November 1922, on "the Establishment of a Unified System of Libraries" under the Supreme Political-Educational Committee and on the maintenance of academic (scientific) libraries by the People's Commissariat of Education. Later the same year, in accordance with the Code of Public Education of the Ukrainian SSR, the libraries, which were heretofore public, were declared state libraries: the Ivan Franko Library in Kiev, the Odessa Library, the Volodymyr Korolenko Central Library in Kharkiv, the October Revolution Library in Katerynoslav, and the Central Public Library in Kherson. In addition, the following libraries were established from different nationalized book collections: Central Children's Library in Mykolaïv; The Morris Vinchevsky Central Jewish Library in Kiev; The Mendele Moicher-Sforim Jewish Academic Library in Odessa; and the Polish State Central Library established in Kiev in 1924. In addition to the above-named central libraries, there was also a network of the so-called "mass" or local libraries—city, *raion*, and village libraries, whose main purpose was to disseminate "political education among the workers of the Ukrainian SSR."

## FROM 1920 TO THE PRESENT

The largest library in Ukraine during this period was the above-named All-People's Library of Ukraine, which grew in size from large book collections of the dispersed or reorganized libraries. In 1923 this library obtained the entire collection of the Kiev Theological Academy (more than 150,000 volumes), in 1925 the libraries of Saint Sophia Cathedral and of the Kiev monasteries (52,000 volumes), and in 1927 the bulk of the library of the Kiev University (nearly 500,000 volumes). The All-People's Library of Ukraine had a branch in

FIGURE 146. ALL-PEOPLE'S LIBRARY OF UKRAINE IN KIEV (1920's)

Vinnytsia, established on the base of the Scientific Library of Podilia, founded in 1920. In 1932 the library had 2,503,500 books in Kiev and 125,000 in Vinnytsia, and the following additional items: 118,100 manuscripts, 88,100 music scores, 36,700 maps, and 1,852,500 newspapers and leaflets. Following the reorganization of the All-Ukrainian Academy of Sciences by the Soviet authorities into the Academy of Sciences of the Ukrainian SSR, the All-People's Library was consolidated with the libraries of the departments, chairs, commissions, and

institutions of the academy into a single Library of the Academy of Sciences of the Ukrainian SSR, which had a collection of 7,097,000 volumes on January 1, 1936, and was the largest library in the world at the time. In the late 1920's the Library maintained a special Scientific Research Committee of Library Science and Bibliography, which published professional symposia and journals, as well as individual library textbooks. Through the efforts of the library and the Ukrainian Scientific Research Institute of Bibliology established in Kiev in 1923, the First All-Ukrainian Conference of Library Workers met in 1923, and the First-All-Ukrainian Conference of Scientific Libraries and Bibliographic Institutions in 1925. A convention of librarians was held in 1926, which reviewed the activities of city, *raion*, and village libraries during the 1921–5 period.

Except for the All-People's Library of Ukraine, the academic (former university) libraries, and the five largest libraries enumerated above (Kiev, Kharkiv, Odessa, Katerynoslav, and Kherson) which were financed out of the state budget, all other libraries were placed on the budgets of local administrative and community organs, which contributed to a marked deterioration of their activities. The network of local libraries developed right after the revolution. As of November 1, 1921 this network consisted of 4,211 libraries; it dropped to 3,067 in 1922, but then rose again to 5,154 on January 1, 1924.

As a result of the reorganization of higher learning in 1920 and the substitution of Institutes of Public Education for the universities, their basic book collections were turned over to the All-People's Library or to local scholarly libraries, leaving with the Institutes of Public Education only scientific and educational textbooks for the students and faculty. The Odessa State Library thus became the second largest library in Ukraine, with 2,300,000 volumes as of January 1, 1932. The Kharkiv Central Library had 300,000 volumes. Among the lesser libraries of this period, the following were important: The Nizhyn Institute of Public Education Library (163,000 volumes), Central Scientific Library in Poltava (150,000 volumes), Central Library of the Crimean South Coast in Yalta (100,000 volumes), the Mining Institute Library in Dnipropetrovske (134,000 volumes); Kamianets' Podilsky Institute of Public Education (100,000 volumes); Zhytomyr Pedagogical Institute (200,000 volumes); the Poltava State Museum (100,000 volumes); the Central Museum of the All-Ukrainian Cooperative Council in Kiev (90,000 volumes), and others.

Further reorganization of tertiary education involved the rebuilding of several university libraries. This was accomplished not only by returning their own former book collections to the universities but also by merging other libraries with the university libraries. By 1935 the Kharkiv University Library had 740,000 volumes, Kiev University –700,000, Odessa University–1,250,000, and Dnipropetrovske University–131,000 volumes. As a result of the abolition of a number of Institutes of Public Education in smaller cities, their book collections were transferred to the Library of the Academy of Sciences of the Ukrainian SSR (for example, the Nizhyn Institute of Public Education Library) or merged with other local libraries.

In KUBAN the city of Krasnodar was a major library center where, in addition to the libraries of three institutions of higher learning and two museum libraries, the following libraries were active until 1932: Krasnodar Institute of Public Education–50,000 volumes, the Kuban Medical Institute–21,000 volumes, and the Kuban-Black Sea Scientific Research Institute–18,000 volumes.

The development of libraries in the Ukrainian SSR and the Kuban region, and progress in other sectors of science and culture, were hampered by the repressions and reforms of the Soviet regime in the period 1934–7. A "purge" of book collections, which began in the late 1920's, was intensified, and all books

which were in any way unfavorable to Communist ideology and the Soviet order were removed from libraries, and either destroyed or transferred to collections of prohibited books. Scores of library directors and workers were discharged, being accused of "nationalist deviation," and a large number were imprisoned or exiled. Some librarians went into hiding and later took positions in "safer" cities, such as Moscow, Leningrad, and other cities of the Russian SFSR.

This reorganization and continued repression affected adversely the number of mass libraries: of the 25,808 village and town libraries which were in operation at the beginning of 1934, only 11,139 remained by the end of the year. Ukrainian libraries suffered great losses during the German-Soviet war 1941–5. Hundreds of libraries perished as a result of the hurried and chaotic evacuation of Ukraine by the Soviet authorities, and even more were destroyed by military action and the German occupation (1941–4). Some 700,000 books were shipped to Germany from the Library of the Academy of Sciences of the Ukrainian SSR, as well as almost the entire Communist Party Library (former City Library) of Kiev. The special collections of the Korolenko Library in Kharkiv were shipped to Germany, and the University Library was also seriously depleted. Out of 22,295 mass libraries in Ukraine in 1940 (including western Ukraine) with total holdings of 36,728,000 volumes, only 4,844 libraries were left in 1945 with 8,663,000 volumes.

## FROM 1800 TO 1945 IN WESTERN UKRAINIAN LANDS

Large collections of *Ucrainica*, including old prints, manuscripts and material in German, Polish, and other languages, were kept in state and city, as well as Polish public and private libraries in Galicia. The most important among these libraries were, as of 1936: University Library, founded in 1784 (339,420 volumes), the Ossolinski National Institute, founded in 1817 (297,460 volumes and 6,270 manuscripts), Polytechnical Institute Library, founded in 1844 (83,450 volumes), Count Victor Baworowski Foundation Library, founded in 1856 (55,000 volumes), City Library, founded in 1917 (20,000 volumes)—all in the city of Lviv. An important depository of Jewish history in Galicia was the Jewish Religious Community Library founded in Lviv in 1901 (17,000 volumes).

The first Ukrainian Library in Lviv was the National Home Library. Founded in 1849, it ultimately came under the control of the so-called Russophiles [Vol. I, pp. 700–1). At its opening to the general public late in the nineteenth century, the library had 100,000 volumes, and by 1924, about 120,000 volumes. The library also had a large collection of old manuscripts and documents (more than 5000), a collection of maps, and so on. The most valuable was the book and manuscript collection of the Galician historian and leader, Anthony Petrushevych.

The Library of the Shevchenko Scientific Society ultimately became the most important and the largest Ukrainian library in Galicia. Founded in 1894 and supplemented with Ukrainian publications and *Ucrainica* in foreign languages, the library grew to 70,000 volumes in 1914 and to 207,900 volumes on the eve of World War II (as of January 1, 1939), with an additional 2,250 geographic and historical charts and maps and more than 1,500 catalogued manuscripts. Until 1917 this library was the largest and most orderly collection of *Ucrainica* and Ukrainian publications of nineteenth and twentieth centuries both at home and abroad, with complete sets of Ukrainian newspapers of that period, as well as a sizeable collection of old books of the sixteenth, seventeenth, and eighteenth centuries and manuscripts of the fourteenth through the twentieth centuries. The library also kept archive materials

FIGURE 147. INSIDE THE LIBRARY OF THE SHEVCHENKO SCIENTIFIC SOCIETY IN LVIV

of Ukrainian societies, organizations, institutions, and editorial offices, and material and documents on the history of the Ukrainian armed forces.

Other important Ukrainian libraries in Lviv were: the National Museum Library with a large collection of old books (about 2,400 in 1920), old manuscripts (more than 1,600 items), archival material (more than 5,000 items), and a collection of books on the history of Ukrainian and world art (about 20,000 volumes); the Prosvita Society Library (20,000 volumes in 1937); State Academic Gymnasium Library (19,200 volumes in 1932); and the library of the Greek-Catholic Theological Academy (founded in 1783, with 8,500 volumes in 1936). Valuable book and manuscript collections were maintained by the monasteries of Saint Basil the Great. The largest among the order's libraries were, as of 1936: Lviv library (42,000 volumes), Krekhiv (over 15,000 volumes including a large number of old books and manuscripts), and Buchach (15,000 volumes). The Ukrainian Catholic (Byzantine rite) Diocese of Peremyshl had a library (and archives) founded early in the nineteenth century.

The network of the Prosvita Society and of the Michael Kachkovsky Society (founded in 1874) had cultural and educational libraries all over the country. They were usually attached to reading-rooms. The Prosvita Society, for example, had 3,208 reading-rooms early in 1939 with 2,997 libraries.

In BUKOVINA, the largest library of *Ucrainica* was the Chernivtsi University Library (420,140 volumes in 1936). The Ruska Besida Society, founded in 1869, had a network of cultural-educational libraries attached to reading-rooms. There were 150 of them in 1914. All were disbanded following the Rumanian occupation of Bukovina in 1919.

In TRANSCARPATHIA, in addition to the Library and Archives of the Basilian Fathers at Chernecha Hora founded in 1720 (8000 volumes in 1932) and the Library of the Ukrainian Greek Catholic Diocese founded in 1775 (more than 15,000 volumes in 1931), there was a small but valuable Library of the Prosvita Society founded in 1921 (8,000 volumes in 1936). This society also had a network of reading-room libraries (235 in 1935).

Following the Soviet occupation of Galicia and Volhynia in 1939 and of Bukovina in 1940, all the existing public and scholarly libraries were nationalized and reorganized. Out of the collections of the libraries of the Shevchenko Scientific Society, the National Home, Ossolinski, Baworowski, Dzieduszycki and seventy-nine other state, public, and private libraries, the Soviet authorities opened the Branch Library of the Academy of Sciences of the Ukrainian SSR in Lviv in December 1939. Only the

Lviv University Library was left as a separate institution. The remaining libraries in Lviv and other cities of Galicia and Volhynia were reorganized into a network of *oblast* and city libraries with departments of children's literature. The libraries of the Prosvita Society and of other institutions in the towns and villages were reorganized into mass libraries. In 1940 there were 2,189 such libraries in Galicia and Volhynia, which is fewer than the libraries of the Prosvita alone in 1939.

In 1941–2 the German occupation authorities transformed the Branch Library of the Academy of Sciences of the Ukrainian SSR into the Lviv State Library (Lemberger Staatsbibliothek). The retreating German forces took with them to Germany in 1944 a great part of the book collections of the former libraries of the Shevchenko Scientific Society and the National Home, particularly *incunabula* and old Ukrainian books, many of which were not returned after the war.

## THE 1946–66 PERIOD IN THE UKRAINIAN SSR

A gradual restoration of the damaged and destroyed libraries of Ukraine began with the end of hostilities. The Academy of Sciences of the Ukrainian SSR recovered its old books and manuscripts which had been evacuated to Ufa in 1941, as well as part of the book collections sent to Germany. In connection with the restoration of the network of mass libraries, the academy's library was made responsible for the methodical supervision of their activities, and in 1948 it was renamed the State Public Library of the Ukrainian SSR. In May 1964 this library suffered a serious damage when, as a result of arson committed by a Russian employee, Pogruzhalsky, about 600,000 items were lost in a fire, mainly publications and manuscripts of the late nineteenth and early twentieth centuries. Soon thereafter, early in 1965, the library was again renamed: the Central Scientific Library of the Academy of Sciences of the Ukrainian SSR. As of January 1, 1965 this library had about 7,000,000 books and 7,000,000 newspapers and other printed matter. It is the largest library in the Ukrainian SSR, fourth in the entire USSR, and fifth largest in the world. Its department of old prints had 300,000 books in 1959, including 522 *incunabula*, and the manuscript department had 270,000 items in 1965. The Lviv Library of the Academy of Sciences of the Ukrainian SSR of 1939 was renamed the Scientific Library and, as of January 1965, it had an inventory of 4,000,000 items.

Central libraries in Kiev and other cities were also revived. The Republic Library of the Communist Party, formed from the former Kiev Public Library (founded in 1866), became a scientific research institution in library science and bibliography. Its building and collections, amounting to 440,000 items in 1941, were destroyed during the war but as of January 1, 1965 it had two million books. The State Historical Library of the Ukrainian SSR in Kiev, founded in 1939 as a special scholarly research library on problems of history, had part of its collection of 500,000 volumes in 1941 destroyed and pillaged. It renewed its activities in 1952 and by 1964 its collections comprised 519,800 volumes, including 6,250 old books. The Republic Medical Science Library founded in 1932, which was burned during the war, grew to 250,000 volumes by 1959 and 520,000 by 1965. The restored Gorky State Scientific Library in Odessa (formerly City Public Library, founded in 1830), had 2,700,000 items as of January 1, 1965, including priceless collections of manuscripts of the twelfth through the fifteenth centuries, *incunabula*, and old prints. The largest among the central scientific libraries in Kharkiv is the V. Korolenko State Scientific Library (former Kharkiv Community Library, founded in 1886). After recovering from its war losses, it grew to 3,600,000 items as of January 1, 1965 (compared with

2,300,000 in 1941). It is also a scientific research institution in library science and bibliography. The Kharkiv State Medical Science Library (formerly Library of the Kharkiv Medical Society) which was partially burned in 1941, held 600,000 items on January 1, 1963. The Central Agricultural Science Library in Kharkiv, founded in 1921, had 327,600 items in January 1965. In addition to the above, other important libraries are to be found in universities and other higher educational establishments.

There is also a separate network of technical and engineering science libraries in the Ukrainian SSR attached to different institutions and enterprises. There were 3,346 such libraries in 1957. The largest among them are: the Central Scientific Technical Library in Kharkiv, with more than 600,000 volumes in January 1965, and the Scientific Technical Library in Kiev (restored after being destroyed during the war), which now has 387,000 volumes.

The network of mass libraries under the jurisdiction of the Ministry of Culture of the Ukrainian SSR comprises trade union libraries, collective farm libraries, and others. There were 29,235 such libraries in 1965 with an inventory of 228,722,000 volumes. The public which is not within reach of any library is served by tens of thousands of mobile libraries (bookmobiles). The growth of mass libraries is shown in Table I, which lists under (a) the number of libraries, and under (b) the number of books and journals at their disposal (in thousands). The distribution of mass libraries according to type and administrative supervision in 1965, is shown in Table II.

In the Ukrainian SSR, the training of librarians is conducted by library schools, institutes, and courses, as well as library science departments in institutions of higher learning. In the early 1930's the main training center for mass libraries (political education libraries) was the Kharkiv All-Ukrainian Institute of Communist Education with a separate department of library science. This department served as a base for the establishment of the Kharkiv Institute of Library Science in 1935, but its activities were interrupted by the war. It was restored in 1947 as part of the Gregory Skovoroda Pedagogical Institute in Kharkiv. This

TABLE I

| | 1950 | | 1958 | | 1965 | |
|---|---|---|---|---|---|---|
| | a | b | a | b | a | b |
| Total number of libraries | 34,913 | 42,945 | 33,985 | 170,593 | 29,235 | 228,723 |

| Libraries under other administrative bureaus | 991 | 8,960 |

institute, now renamed the Institute of Culture, has three departments: library science, cultural education, and general education. During the 1962–3 academic year the institute had a faculty of 118 and an enrollment of 2,611 (including correspondence students). Secondary education in library science is provided by departments of library science of Technical Institutes of Communist Education, which numbered twenty-three in 1957. Practical professional training of library workers, including library scientists, is provided in post-graduate courses given by the large libraries of the Ukrainian SSR, such as the Academy of Sciences Library in Kiev, Scientific Library in Lviv, and the Central Libraries of Kharkiv and Odessa.

## ABROAD

Ukrainian libraries abroad have come into existence through the efforts of emigrants and Ukrainian political exiles. The oldest of them is the Library (and Archives) of the Greek-Catholic Diocese for Ukrainian emigrants in Bačka and Srem in Križevci (Yugoslavia). The diocese was established in 1777.

The largest Ukrainian libraries were founded by Ukrainian émigrés in Czechoslovakia: Ukrainian Free University Library (established 1922) with 10,000 volumes in 1938; the Ukrainian Academy of Technology and Husbandry Library in Poděbrady (established in 1922) with 29,260 volumes in 1931; Michael Drahomanov Ukrainian Higher Institute of Education in Prague (established in 1923) with 11,000 volumes in 1936; Museum of the Ukrainian Liberation Struggle Library (established in 1925) with over 10,000 volumes in 1936, and thirty-five separate collections kept in the museum, as well as a priceless collection of the Ukrainian press from all over the world (more than 1,000 complete sets); Library of the Ukrainian Historical Chamber in the Foreign Ministry of Czechoslovakia (founded in 1931, with 17,000 volumes in 1936). With the dispersal of the Ukrainian Academy of Technology and Husbandry in 1931, its library collections were taken over by the Czechoslovak government institutions. Other Ukrainian libraries in Czechoslovakia were liquidated as a result of the war. There was an important library of the Ukrainian Scientific Institute in Berlin (founded in 1926, with 31,600 volumes in 1937) and of a similar institute in Warsaw (founded in 1930, with over 6000 volumes in 1936 and a valuable archive of M. Drahomanov). Both were destroyed in the war. The Simon Petliura Library in Paris, founded in 1929, with more than 15,000 volumes in 1936, was shipped to Germany by the German occupation army and perished without a trace.

After World War II new libraries were established by Ukrainian scholarly institutions and societies, the most important being: Library of the Basilian Fathers in Rome, Ukrainian Free University Library and the Shevchenko Scientific Society Library in Munich, the latter transferred to Sarcelles (France) with 13,000 volumes in 1967; Museum and Archives of the Ukrainian Free Academy of Arts and Sciences, originally in Augsburg, Germany, and since 1950 in New York, with over 13,000 volumes in 1965. After the bulk of Ukrainian émigrés had settled in the United States, Canada, and other countries of the free world, Ukrainian libraries were established as part of institutions founded by them, or as separate units, often associated with archives and museums [p. 407, also, Ukrainians Abroad, pp. 1148–9, 1187].

Many Ukrainian publications and material dealing with Ukraine are kept in numerous libraries all over the world. The greatest number is in the central libraries of the USSR: the Lenin Library of the USSR in Moscow, the Saltikov-Shchedrin Library in Moscow, and the Libraries of the Academy of Sciences of the USSR in Moscow and Leningrad. Valuable book collections on Ukrainian history and Ukrainian culture can be found in the libraries of Warsaw, Cra-

cow, Prague (Slavic Library and University Library), Vienna (the Austrian State Library is very important in this respect, since up to 1918 it received a copy of every Ukrainian publication printed in Austria, and the Vienna University Library), Helsinki (National Library), Paris (National Library), Munich (State Library), Berlin, Gotha, Kiel, London (British Museum Library), Rome (Vatican Library), and others.

The following libraries in the United States have a wealth of Ukrainian literature: the Library of Congress, New York Public Library, Columbia and Harvard University Libraries, Batelle Memorial Library (Columbus, Ohio). Since 1945, Stanford University in Palo Alto (California) has had a separate Ukrainian Library (as part of the Hoover Library). In Canada, libraries for Ukrainian studies have been established at the universities of Manitoba, Edmonton, Toronto, and others.

In 1961–2 associations of Ukrainian librarians were established in the United States and Canada, with a membership of about 200, employed professionally by American and Canadian public, university, and other libraries.

# 2. ARCHIVES AND ARCHAEOGRAPHY

## TO THE END OF THE EIGHTEENTH CENTURY

Written sources from the eleventh to the fourteenth centuries indicate that important historical documents, chronicles, and similar materials were preserved in church vestment closets and in treasury-rooms of monasteries and princely courts. From the fourteenth to

the seventeenth centuries archives were to be found in the castles of independent princes, in the residences of Lithuanian and Polish provincial governors (*voievody*), and later in town courts, magistrates' offices, and on the estates of magnates and nobles.

The archive of the Kozak Host, established in Terekhtemyriv in the first half of the seventeenth century, and the Ukrainian state archive of Bohdan Khmelnytsky and his successors in Chyhyryn, were largely destroyed. What remained of them became, together with the archives of Left Bank hetmans, the core of a state archive in Baturyn at the time of hetmans Samoilovych and Mazepa. After the destruction of this hetman capital by Muscovite armies in 1708, a state archive was organized in Hlukhiv, the new capital of the Kozak Hetman state. This archive was called General'naia Malorossiiskaia Arkhiva (General Little Russian Archive), and in it were collected all the papers of the Hetman government and the existing governmental offices—General Military Offices, General Military Court, Little Russian College, and so on. In addition to this main state archive, smaller archives existed at regimental and company army offices, as well as at town magistrates' courts and town halls. Churches, monasteries, and some private individuals also collected archives. Archival materials which were saved from the great Hlukhiv fires of 1748 and 1784 were eventually transferred to Chernihiv, where they remained until the latter half of the nineteenth century. In the late seventeenth century new official archives began to be organized by central and later by provincial Russian government organs. Important documents were also preserved in the archives of the Kievan metropolitans and in the Kievan Mohyla Academy. During the seventeenth and eighteenth centuries many archival collections and documentary material relating to the history of Ukraine were transferred to Poland or Muscovy, where they were incorporated in the state archives of those countries. From 1772 many historical documents bearing on the history of Galicia, Transcarpathia, and Bukovina were deposited in the state archives in Vienna.

The seventeenth and eighteenth centuries also saw the beginnings of Ukrainian archaeography—the research and publication of archival materials. Among the materials thus studied were collections of deeds, charters, diplomatic documents (the collection of falsified "articles" of Bohdan Khmelnytsky, dated 1654, and of George Khmelnytsky, dated 1659, published in Kiev in 1660). The first archaeographic works began to appear in Russia in the second half of the eighteenth century, written particularly by the Ukrainians Basil Ruban and Theodore Tumansky; they included the publication of chronicles, and collections of historical documents from Russian (state) and Ukrainian (private) archives. In Galicia and Transcarpathia also the first publications of documents, for the most part relating to the history of the church, began appearing in the second half of the eighteenth century.

## THE NINETEENTH AND EARLY TWENTIETH CENTURIES

### Central and Eastern Lands

The publication of Ukrainian historical materials in the nineteenth century was connected with the work of Russian archives and institutions of learning, particularly the Archaeographic Commission, established in St. Petersburg in 1834. Owing to the efforts of this commission, the *Polnoie Sobraniie russkikh lietopisei* (Complete Collection of Russian Chronicles, I–XXX, 1841–1965) was published, as well as *Akty, otnosiashchiesia k istorii zapadnoi Rossii* (Documents Relating to the History of Western Russia, I–V, 1846–53), containing documents on the history of Ukraine, Belorussia, and Lithuania from 1340–1699, and *Akty, otnosiashchiesia k istorii yuzh-*

*noi i zapadnoi Rossii* (Documents Relating to the History of Southern and Western Russia, I–XV, 1863–92), edited by Nicholas Kostomarov and Hennadii Karpov. Ukrainian historian and philologist Joseph Bodiansky was active in the field of archaeography in Moscow, publishing such Kozak chronicles as *Litopys Samovydtsia* (Chronicle of an Eyewitness) and *Istoriia Rusov* (History of the *Rus'* People).

Scientific archaeography and the organization of scholarly archives began in Ukraine in the mid-nineteenth century. In 1843 an archaeographic commission was set up in Kiev under the name Interim Commission for the Study of Ancient Documents, and in 1862 a Central Archive of Ancient Documents was established at Kiev University, in which registers, charters, and other documents from town, *zemstvo*, and magistrate courts of Right-Bank Ukraine of the sixteenth to the eighteenth centuries were collected.

The Kiev Archaeographic Commission was active in publishing historical source material and collections of documents, in particular a series under the title *Pamiatniki* (Monuments, I–IV, 1845–59), the chronicles of Velychko (1848–64), Hrabianka (1853), Samovydets (1878), and others, as well as an important series, *Arkhiv yugo-zapadnoi Rossii* (Archives of Southwestern Russia, 35 vols., 1859–1914). In 1888 an Historical Archive was created at Kharkiv University for the preservation of archives of government offices of Left-Bank Ukraine and the archives of Slobids'ka Ukraïna of the seventeenth to the eighteenth centuries. In addition to those named above, archives existed at *guberniya* offices, containing important material relating to the history of the eighteenth and nineteenth centuries. Such archives in Kiev had documents on the history of the Haidamak uprising, the Decembrist movement, the Polish uprisings of 1831 and 1863, the archive of the Kievan Mezhyhiria factory, and the like. The archive of the Zaporozhian Sich (eighteenth century) was situated in Odessa. Archives were also maintained by consistories, monasteries, and organizations of nobles and townspeople, as well as public and private institutions and individuals.

At the end of the nineteenth and the beginning of the twentieth centuries Learned Archival Commissions were established in some *guberniya* cities in Ukraine (Simferopol, 1887; Chernihiv, 1896; Poltava, 1903; Katerynoslav, 1903). These were official organizations whose duties included the protection and research of monuments of antiquity and art, and especially the care of archives. These commissions published their *Trudy* (Works; in Chernihiv, Poltava), *Izvestiia* (News; in Tavria), and *Letopis'* (Chronicle; in Katerynoslav), with archaeographical material and scholarly research studies. Other archival commissions existed in Kiev, Kherson, and Kholm, but were not involved in publishing.

**Western Ukrainian Lands**

The most important archives in Galicia were: the State Archive in Lviv, founded at the end of the eighteenth century, housing documents of state offices of the kingdoms of Galicia and Lodomeria; the District Archive, established in Lviv in 1784, containing legal documents of the fifteenth to the eighteenth centuries; the Archive of the City of Lviv, opened in 1891. The most valuable archaeographical publications were *Akta grodzkie i ziemskie* (Town and Land Documents), a collection of documents and materials of the Lviv district archive of the Bernardine monks (25 volumes, 1868–1935). Much material pertaining to the history of Galicia, Volhynia, and other parts of Ukraine was preserved in the archives of Polish dioceses, monasteries, magnates, landlords, and scholars.

In Galicia, the Archaeographic Commission of the Shevchenko Scientific

Society carried on important activity, particularly in publishing the series *Zherela do istorii Ukraïny-Rusy* (Sources on the History of *Rus'*-Ukraine; 11 volumes, 1895–1919) compiled by Michael Hrushevsky, with documents of the sixteenth to the eighteenth centuries, as well as the series *Pamiatky ukraïns'ko-rus'koï movy i literatury* (Monuments of *Rus'*-Ukrainian Language and Literature; 7 volumes, 1896–1913), and *Ukraïns'ko-Rus'kyi arkhiv* (Ukrainian-*Rus'* Archive; 14 volumes, 1905–1923). Denis Zubrytsky and Anthony Petrushevych also published some important historical material in Galicia.

## THE PERIOD OF UKRAINIAN STATEHOOD

With the emergence of a Ukrainian state in 1917, national archives began to be organized in Ukraine. In Kiev in 1918 a separate Archival-Library Division, under the direction of Vadym Modzalevsky, was created as part of the Supreme Administration of Art Matters and National Culture. Modzalevsky proposed a plan to open in Kiev a national archive both for the preservation of documents of great scholarly value and general national importance and the housing of archives of former and future government offices of Ukraine as a sovereign state, but the events of the time prevented him from realizing these plans. On the initiative of the Archival Division, remnants of the Ukrainian documentary heritage began to be salvaged and collected either in newly established archives or in the archives of former *guberniya* governments. The two existing central archives (in Kiev for Right-Bank Ukraine and in Kharkiv for Left-Bank Ukraine) were supplemented by *guberniya* archives, and some new archives were set up in large localities.

Archives of Ukrainian offices and governmental institutions existing at the time of the rebirth of Ukrainian statehood (1917–20) were partially evacuated and preserved in Lviv, Warsaw, and other cities outside Ukraine. Archives of the Central Rada and of the Directorate of the Ukrainian National Republic, some of which had remained in Kiev and Kamianets Podilsky, were later transferred to Moscow.

### 1920's–30's

**Ukrainian SSR**

Soviet authorities in Ukraine at first did not pay much attention to archives, which were in large measure destroyed during the revolution and the war, and occasionally even hindered attempts by Ukrainian scholars and community leaders to save the repositories. In January 1919 an Archival Division was created at the All-Ukrainian Committee for the Preservation of Monuments of Antiquity and Art (VUOKOPSM). In March 1920 a Special All-Ukrainian Archival Commission was established at the All-Ukrainian Revolutionary Committee (Vseukrevkom), not so much for the "protection of archival materials valuable in a scholarly sense," but rather to "sort out and utilize all archival material of no specific and historical value"—a need aroused by a severe paper shortage. Archives outside of Kharkiv and Kiev remained for the most part uncared for, without funds for their maintenance and management. In some localities they were even destroyed; in many cities archival materials were despoiled or put up for sale. The archives of various institutions and private individuals were greatly depleted. A decree of the Council of People's Commissars of April 20, 1920 concerning the nationalization and centralization of archival matters in the Ukrainian SSR did nothing to improve the situation.

All further policies of the Soviet regime concerning archives were at first directed at securing and eventually centralizing matters under the control of governmental and party organs. The Archival Division of the All-Ukrainian Committee for the Preservation of Monu-

ments of Antiquity and Art was reorganized in November 1922 and became the Main Administration of Archives (Holovarkh) within the People's Commissariat of Education. In January 1923 a Central Archival Administration of the Ukrainian SSR (Ukrtsentrarkhiv) was created within the All-Ukrainian Central Executive Committee (VUTsVK) of the Ukrainian SSR (eventually it was placed under the jurisdiction of the Council of People's Commissars of the Ukrainian SSR). Subordinate to the Central archival Administration were Central Historical Archives in Kharkiv and Kiev and the Central Archive of the Revolution in Kharkiv; its *guberniya* (later regional, *oblast*) organs had jurisdiction over *guberniya* historical archives with departments devoted to the history of the revolution. In 1925 the so-called Sole State Archival Fundamental Stock of the Ukrainian SSR was created. The first head of the Archival Administration of the Ukrainian SSR was academician Dmytro Bahalii, shortly to be followed by a succession of various administrators drawn from the party apparatus.

Between 1925 and 1931 the Central Archival Administration published its organ *Arkhivna Sprava* (Archival Matters, with a supplement *Chervonyi Arkhiv* [Red Archive]); in 1939 this journal was reorganized into *Radians'kyi Arkhiv* (Soviet Archive) and in 1932 into *Arkhiv Radians'koï Ukraïny* (Archive of Soviet Ukraine). There also appeared separate works and textbooks on archival studies (by Victor Romanovsky for example), and instructions in the more technical aspects of archival work.

The center for archaeographic work at this time was the Archaeographical Commission of the All-Ukrainian Academy of Sciences, founded in 1922 as an extension of the Kiev Archaeographical Commission. It issued an irregular series under the title *Ukraïns'kyi Arkhiv* (Ukrainian Archive) and *Ukraïns'kyi Arkheohrafichnyi Zbirnyk* (Ukrainian Archaeographic Symposium), as well as other archaeographic publications (*Litopys* [Chronicle] of Velychko, *Opys Novhorodsivers'koho Namisnytstva 1779–1781* [Description of Novgorod-Siversky Administration, 1779–1781], *Materiialy do Istoriï Kartohrafiï Ukraïny* [Materials to the History of Ukrainian Cartography]).

Subordinated to the Central Archival Administration in Kharkiv, according to statistical data of 1932, were: six central archives (historical, revolutionary, ancient documents, state, labor, and Hebrew culture), two in Kiev (historical and ancient documents), six regional historical archives in larger cities, 27 state historical and 20 municipal archives in smaller cities. In addition, the Main Archive of the Autonomous Republic of Moldavia fell under its jurisdiction. A total of 15,600 archival stocks were deposited in all the archives supervised by the administration. The most important archives at this time were: the Kiev Central Archive of Ancient Documents (from 1852), in which reposed 5,886 registers from the sixteenth to the eighteenth centuries, as well as 498,000 deeds and documents of the fourteenth to the eighteenth centuries; the Volodymyr Antonovych Kievan Central Historical Archive

FIGURE 148. ANTONOVYCH CENTRAL HISTORICAL ARCHIVE IN KIEV

(in the 1920's); the Kharkiv Central Historical Archive; and the Odessa Regional Historical Archive.

The repression of Ukrainian scholarship and culture, begun by the Soviet

regime in the early 1930's, severely impeded the progress of archival work in the Ukrainian SSR. Many archivists were arrested and many died in prisons and concentration camps. In 1933 the publication of the archival journal stopped completely. The Archaeographic Commission of the Ukrainian Academy of Sciences was disbanded, as was the Archaeographic Commission formed in 1928 at the Ukrainian Central Archive. The reorganization of the archival system was climaxed in 1938 with the subordination of all archives exclusively to the People's Commissariat of Internal Affairs (NKVS) of the Ukrainian SSR, thus placing it in fact in the hands of the NKVD (People's Commissariat of Internal Affairs) of the USSR in Moscow. Archives were made inaccessible except for trusted party members, and the publication of documents virtually stopped.

Archival matters were similarly reorganized in Kuban. The State Archive of the Krasnodar region (with two branches, in Novorossiisk and Armavir), the successor of the former Kuban Military Archive of the Black Sea and Kuban Kozak Hosts (1787–1917), became the main archive of the area. In Maikop there exists a regional archive of the Adigei Autonomous Region.

**Western Ukrainian Lands**

In western Ukrainian lands under Poland, the main archives before 1939 were the above-mentioned regional and city archives in Lviv. Numerous archival materials were preserved in municipal archives in the larger cities of Galicia and Volhynia and especially in private Polish archives. Materials relating to the history of Transcarpathia reposed in the Regional Archive in Uzhhorod, as well as in state archives in Budapest and Prague. Work on Ukrainian archives in Galicia during the period between the two World Wars progressed very slowly. Archival materials of importance in the field of Ukrainian studies were to be found in the archives of the Stavropygian Institute, the Shevchenko Scientific Society, the Greek-Catholic Metropolitan Consistory in Lviv, the Greek-Catholic Chancery in Peremyshl, the Basilian Fathers in Krekhiv, and also in such private archives as those of the Fedorovych family in Vikno and the Sheptytsky family in Prylbychi. After the Soviet occupation of western Ukrainian lands, all archives there were nationalized and reorganized in accordance with the compulsory system prevailing in the USSR.

## AFTER 1940

During the German occupation, all archival matters were placed under the jurisdiction of German authorities. The activity of Ukrainian archivists was limited to salvaging and reassembling archives dispersed and destroyed by the Soviet occupation and the ravages of war. The retreating Soviet troops carried away all secret and important historical archival collections and burned all classified material. The Germans during their retreat in 1943, took the most valuable materials from the Kievan Archive of Ancient Documents, especially those dealing with the Magdeburg Law, and burned the university building which housed the archive, thus destroying most of the remaining material. There is no exact information as to the restitution of archival materials taken to Russia or Germany from Ukraine during the war.

After the war, work on archives in the Ukrainian SSR remained for a time at a complete stand-still. Some activity resumed in 1947, with the renewal of publication of an archival journal, the *Naukovo-informatsiinyi biuleten' arkhivnoho Upravlinnia URSR* (Scientific-Informative Bulletin of the Archival Administration of the Ukrainian SSR, renamed *Arkhivy Ukraïny* [Archives of Ukraine] in 1965). Archives which had escaped destruction during the war suffered from lack of satisfactory housing and competent workers. On January 1, 1949 almost half of all the documentary

material in state archives of the Ukrainian SSR was in complete disorder. Publication of archival materials was wholly dependent on the demands of official and party politics. The organization and scientific and methodical management and control of all archives in Ukraine has been exclusively in the hands of the Archival Administration of the Ministry of the Interior Affairs of the Ukrainian SSR (from 1959 under the Council of Ministers of the Ukrainian SSR). In 1958 under its jurisdiction fell: five central republican state archives—the October Revolution and Socialist Construction of the Ukrainian SSR Archive in Kharkiv, Historical Archive of the Ukrainian SSR in Kiev, with a branch in Kharkiv, Historical Archive of the Ukrainian SSR in Lviv, and the Archive of Photo-, Phono-, and Cinematographic Documents in Kiev. Branches of the Archival Administration, active in twenty-five Executive Committees of *Oblast* Councils of Workers' Deputies have jurisdiction over: 25 *Oblast* archives with eight branches, 622 *raion* archives, and 83 municipal state archives. Regional committees of the CPU have their party archives, the focal point of which is the Party Archive of the Institute of History of the Party Central Committee of the Communist Party of Ukraine.

Since 1957 there has been some improvement in the archaeographic output of archives in the Ukrainian SSR. Catalogues of some of the larger archives were published in 1959–62, and the publication of archival materials of the fifteenth to the eighteenth centuries—deed registers, charters, and other documents—also gradually began.

## Abroad

During the war, the Museum of the Ukraine's Struggle for Liberation in Prague (see p. 422) became the central archive abroad, but after 1945 its archival collections were taken to the Soviet Union. Archival materials of the S. Petliura Library in Paris were taken to Germany and vanished there. In 1945 the Ukrainian Free Academy of Sciences began the organization of a central archive, first in Augsburg, later in New York. Since the late 1940's, Ukrainian archives have come into existence, usually connected with libraries or museums, in various cities of the United States, Canada, and Europe (see Ukrainians Abroad, pp. 1148–9, 1187, 1248). An archive of the Greek-Catholic Diocese in Križevci, Yugoslavia, established in the late eighteenth century, continues to exist.

# 3. MUSEUMS, CULTURAL AND HISTORICAL LANDMARKS

## TO THE END OF THE EIGHTEENTH CENTURY

Ukrainian museums began simply as collections and preservations of cultural monuments and natural landmarks at the time of the emerging statehood of *Rus'*-Ukraine and the adoption of Christianity. Vestment closets and libraries of the St. Sophia Cathedral in Kiev (eleventh century), the Kievan Cave Monastery, the Mykhailivsky Monastery, the Spaso-Preobrazhensky Cathedral of Chernihiv, as well as the treasuries of the great Kievan, Galician-Volhynian, and independent princes, were the first depositories of valuable historical material and art pieces. Attacks on Kiev by princes from the northern lands (particularly the sacking of Kiev by Andrew Boholiubsky, Prince of Rostov-Suzdal, in 1169), and later the Mongol-Tatar invasions in the thirteenth and fourteenth centuries, destroyed the oldest existing collections of Ukrainian museum pieces. Only individual items, now mostly outside of Ukraine, escaped destruction.

A flowering of national life during the Kozak period (the Hetman state) from the sixteenth to the eighteenth centuries spurred the collection of painting, goldsmithery, ceramics, and other examples of art. Manuscripts, early editions, incunabulas, engravings, and the like, were collected on the estates of Kozak officers and the wealthier merchants, as well as in monasteries and churches.

Valuable collections were established in the palaces of Ukrainian hetmans, notably that of Ivan Mazepa who was a famed patron of the arts and of scholarship. Despite the fact that hetman-instituted collections in Chyhyryn and Baturyn were destroyed by the Russians in 1678 and in 1708, many historical monuments and art objects have been preserved from that period, known as Ukrainian Baroque. Interest in relics of Ukrainian antiquity and art, and collections of them, developed notably in the eighteenth century among the educated Ukrainian officers (Poletyka, Myklashevsky, Skoropadsky, Apostol, Lyzohub, Rozumovsky, Kapnist, Khanenko, Sudiienko, and many other families), as well as among Russian nobles in Ukraine (Alexander Rigelman among others.) Large monasteries, for instance the Kievan Cave Monastery, the Mykhailivsky Monastery in Kiev, Troïtsky Monastery in Chernihiv, and monasteries in Kharkiv and Poltava, had very valuable collections of museum pieces.

## THE NINETEENTH AND EARLY TWENTIETH CENTURIES

### Central and Eastern Lands

Organized museology in the central and eastern Ukrainian lands began in the first half of the nineteenth century in conjunction with the literary and cultural revival. In the absence of an independent Ukrainian state, initiative in establishing museums rested with various civic organizations, organs of urban and rural self-government and private patrons. As a result of intensified archaeological excavations and research, the first museums in Ukraine consisted of collections of archaeological objects. The oldest of these museums was the Archaeological Museum in Theodosia (Feodosiia) in the Crimea, founded in 1811. (It has been renamed the Museum of Regional Studies and now has only local significance.) Scientifically, the most prominent museum with the most valuable collections was the historical-archaeological museum in Odessa,

founded in 1825 as the Odessa City Museum of Antiquities, which from 1858 until its nationalization in 1920 belonged to the Odessa Society of History and Antiquities. Founded almost simultaneously, in 1826, was the Museum of Antiquity in Kerch. Another museum of archaeological findings was the Museum of Antiquities of Kiev University, the first museum in Kiev, founded in 1837 through the efforts of the Committee for Collecting Monuments of Antiquity. A parallel institution at the University was the Numismatic Cabinet (Müntz Kabinett), founded in 1834 on the basis of the numismatic collections of the Lyceum of Kremianets, later also the Lyceum of Vilnius, the Basilian school in Uman, and schools in Lutsk and Pochaïv.

In the nineteenth century, collectors and patrons in the main cultural centers of Ukraine worked at founding museum collections of various kinds. This private initiative was supported by local self-government organs. Thus up to the revolution of 1917, a number of museums were established, not only of an historical-archaeological character but also in art, natural history, and regional studies.

The Historical-Archaeological Museums were the most numerous and had the largest and most valuable collections. In addition to the archaeological museums mentioned above, others came into existence in the last quarter of the nineteenth century. For the most part, they had a broader historical range. Owing to the efforts of the Church-Archaeological Society of the Kievan Theological Academy, the Museum of Church Antiquities was opened in 1878 with more than 20,000 items on display. In 1898 the Museum of the Taurian Archival Commission was founded in Symferopol in the Crimea, with archaeological, art, ethnographic, and natural history divisions. Through the efforts of archaeologist Victor Hoshkevych, a City of Museum of Antiquities was founded in Kherson in 1890, with valuable collections of antique objects and Kozak weapons. The Podilian Eparchial Historical-Statistical Committee was instrumental in establishing a Historical-Archaeological Museum in Kamianets Podilsky in 1890, which was headed by Yukhym Sitsinsky. A museum of the same type was established in 1891 in Poltava, with archaeological, ethnographic, and natural history departments, and with a separate art gallery. A storehouse of local antiquities, later renamed the Khersones Archaeological Museum and Excavations Field, was founded in 1892 near Sevastopol in the Crimea, on the site of the ancient city of Khersones.

FIGURE 149. KHERSONES ARCHAEOLOGICAL MUSEUM AND EXCAVATIONS FIELD

The Museum of Ukrainian Antiquity in Chernihiv, founded in 1896 by Basil Tarnovsky, was subsidized by the provincial *zemstvo* from 1898 in a building constructed especially for it. In addition to a collection of Kozak and Hetman antiquity of the seventeenth and eighteenth centuries, this museum contained a collection of manuscripts and drawings by Taras Shevchenko, and material on the life and work of Ukrainian writers of the nineteenth century. The idea to establish a national museum of Ukraine in Kiev evolved as early as 1884, and was initiated with the collection of funds and museum articles in 1888. It was realized in 1899 with the establishment of the City Industrial Arts and Science Museum. The official opening of the museum building, financed by the Tereshchenko family and the government, took place in

December 1904. The sections of the museums were: archaeological, historical, numismatic, industrial arts, and fine arts. Material exhibited in the museum was important not only to the history of the Ukrainian people, but also to that of other nationalities, particularly the Poles and Jews in Ukraine.

Of the Historical-Archaeological Museums that came into being at the beginning of the twentieth century (up to 1917), the more important ones are: the Historical-Archaeological Museum in Katerynoslav, established in 1902–5 under the direction of Dmytro Yavornytsky from the merger of the Katerynoslav City Museum (established as the General Museum in 1849) and the Alexander Pol Museum of Archaeological - Natural History; the Museum of Antiquity and Art in Hlukhiv (founded in 1903), with its valuable collections of porcelain; the Archaeological Museum, established at Kharkiv University in 1904; in Chernihiv, a museum of the Learned Archival Commission, founded in 1908; the Archaeological Museum in Mykolaïv, established in 1913 from the valuable collections of Borys Farmakovsky.

FIGURE 150. DMYTRO YAVORNYTSKY

FIGURE 151. HISTORICAL-ARCHAEOLOGICAL MUSEUM IN KATERYNOSLAV (NOW DNIPROPETROVSKE)

Along with historical-archaeological museums, museums of art began to appear in Ukraine in the nineteenth century. First in this category was the art museum of Kharkiv, begun in 1804 with collections of the Kharkiv University and opened in 1886 as the City Museum of Art. The collection of western and eastern art assembled by B. and V. Khanenko in 1870 was museum-like in character. An art museum was founded in Theodosia in the Crimea in 1880, based on the painting collection of Ivan Aivazovsky, the seascape painter. After it had been acquired by the city, the museum was renamed the Aivazovsky Picture Gallery. In 1891 Nicholas Tereshchenko started a collection of ancient and contemporary Ukrainian and Russian art. In 1899 the City Museum of Fine Arts was established in Odessa (in 1917 renamed the National Art Museum). At the beginning of the nineteenth century art museums were opened in Sevastopol (where the panoramic "Defense of Sevastopol" was unveiled in 1905), in Yalta in 1913, and in Katerynoslav and Mykolaïv in 1914.

FIGURE 152. ARCHAEOLOGICAL MUSEUM IN MYKOLAÏV

A few regional studies museums began to appear towards the end of the nineteenth century. They include: the Volhynian Museum, established in Zhytomyr in 1864, which in 1895 became the property of the Society of Researchers of Volhynia and in 1914 began functioning

as an independent institution, and the Museum of the Black Sea Fleet, founded in 1869 in Sevastopol. The first regional studies museum to be called thus was the Museum of Regional Studies in Yalta, founded in 1891. In the 1910's, regional studies museums were established in Derhachi in the Kharkiv region (founded in 1910 by biologist B. Mykolaïv), in Ostrih (founded in 1911 by the Ukrainian Orthodox Brotherhood), and in Oster in the Chernihiv region (1911).

Among natural science museums were the following: the Natural-Historical Museum in Kherson (established in 1897 as an Entomological Cabinet), the Museum of Living Nature (Aquarium) in Mykolaïv (founded in 1898 on the basis of a collection of M. Leontovych), and the Mykola Pyrohiv Pedagogical Museum in Kherson (established 1912).

In KUBAN, the Kuban Historical-Scientific Museum was established in Katerynodar in 1897 by the local Statistical Commission. The exhibits included material dealing with the history of Ukrainian colonization and local ethnography, archaeology, and nature. Novorossiisk had a Natural Museum founded in 1894, renamed in 1916 the Museum of Natural History of the Black Sea Coast of the Caucasus. A regional studies museum also existed, established in Armavir in 1904. There were more than a dozen eparchial and church archaeological museums founded by individual bishops (for example, Filaret Humilevsky, archbishop of Chernihiv), eparchial consistories, and church brotherhoods (in Kiev, Chernihiv, Kharkiv, Poltava, Kamianets Podilsky, Zhytomyr, Lutsk, Volodymyr Volynsky, and other cities.)

At the time when Ukrainian civic organizations and private individuals were working to open museums in Ukraine, Russian government officials sought to remove from Ukraine the more valuable museum pieces and collections (particularly of archaeological findings) to museums in Russian territory. In this manner, fine collections of Ukrainian material were established in the Hermitage (especially Scythian gold treasures and relics of ancient art), in the Russian-Historical Museum in St. Petersburg (ethnographic collection), in the Historical Museum in Moscow, in the Armory Chamber in the Kremlin, and in the Artillery Museum in St. Petersburg (notably the collection of N. Brandenburg).

**Western Lands**

In western Ukrainian lands within Austria-Hungary, the most valuable Ukrainian material was initially found in state and private Polish museums. The largest and most significant among them were the Museum of the Lubomirski princes, existing since 1823 at the Ossolinski National Institute, and the Dzieduszycki Museum in Lviv, founded in 1845 with a wealth of material pertaining to the archaeology, ethnography, and nature of Ukraine. Equally prominent were the Lviv Museum of Art Crafts, established in 1873, the Historical Museum of the City of Lviv (established in 1892), and the King Jan III National Museum in Lviv (founded in 1908), exhibiting portraits and weapons. The first valuable Ukrainian museum collection in Lviv was founded in the 1870's and this became the basis for two museums—the archaeological-historical museum and the museum of natural history, both opened at the National Home in 1902. In addition, many societies collected relics of Ukrainian antiquity: the Lviv Prosvita Society began its collection in 1868, the Stavropygian Institute, in 1888 (owing to the efforts of Isidore Sharanevych), and also the Shevchenko Scientific Society. In 1895 Michael Hrushevsky, with the cooperation of Theodore Vovk, Ivan Franko, and Volodymyr Hnatiuk, founded the museum of the Shevchenko Scientific Society, which was later divided into the archaeological-ethnographic section and

a natural science section. Metropolitan Andrew Sheptytsky established a church museum in Lviv in 1905, directed by Hilarion Svientsitsky. It was reorganized into the National Museum in 1908, and

FIGURE 153. NATIONAL MUSEUM IN LVIV (NOW STATE MUSEUM OF PICTORIAL ART)

in 1911 it acquired a separate building to house its collections of manuscripts and early editions, ikons, portraits, exhibits of applied and national art, archaeology, and numismatics. In Peremyshl there was an art gallery in the Greek-Catholic bishop's palace and a Museum of the Greek-Catholic Diocese. A Museum of the Theological Seminary existed in Stanyslaviv. Valuable Ukrainian collections were found also in the Pokutia Museum in Kolomyia (with an outstanding Hutsul exhibit), in the Podilian Museum in Ternopil (established 1906), and in the Peremyshl Museum (1909). Many Ukrainian historical and art objects could be found in private Polish collections, as for example those of Zdzislaw Tarnowski in Dykiv, Maria Tarnowska in Sniatynka, in the castle of the Sanguszko princely family in Pidhirtsi, and in the collections of the Pawlikowski family, Leon Pininski, and Rudolph Mękicki in Lviv. Other valuable collections were housed in the museums of scholarly institutions and universities, such as Lviv University, the Lviv Polytechnical School, and the Academy of Veterinary Science.

In BUKOVINA, collections of Ukrainian studies materials were found in the Bukovina Regional Museum and in the museums of the Chernivtsi University (established in 1776–7). In addition, a Ukrainian ethnographic museum collection was established at the National Home in Chernivtsi.

Museum collections in TRANSCARPATHIA were housed in monasteries on Chernecha Hora near Mukachiv and in Krasnyi Brid near Laborets. A Regional Studies Museum existed in Bardiïv from 1906.

## FROM 1917 TO THE PRESENT

### Central and Eastern Lands in 1917–32

The revolution of 1917 and the struggle for independence by the Ukrainian people intensified the development of museums in central and eastern Ukrainian lands. After the nationalization of landed property, those private collections which had escaped the ravages of the war and revolution were transferred to museums, or became the nucleus of newly founded museums. Large private collections, as well as museum treasures and church and monastery collections, were also nationalized and, if not destroyed or despoiled, turned over to museums. The network of museums in Ukraine was broadened and their scope expanded through the initiative of Ukrainian scholars and civic leaders, along with a general upsurge of cultural life in the 1920's. This was often accompanied by obstacles and prohibitions imposed by the Soviet authorities.

The more important historical-archaeological museums in the larger cities of Ukraine were reorganized and given a more national Ukrainian character, both in the nature of exhibits and in name. The Kiev City Museum of Industrial Arts was renamed the first State Museum in 1919, and in 1924 it received the title Shevchenko All-Ukrainian Historical Museum. At the same time its collections were significantly extended. In 1920, in Kharkiv, the Gregory Skovoroda Museum of Slobids'ka Ukraïna (eventually

FIGURE 154. SHEVCHENKO ALL-UKRAINIAN HISTORICAL MUSEUM IN KIEV

renamed the All-Ukrainian Historical Museum) was founded on the basis of ethnographic collections of the former Kharkiv Historical-Philosophical Society and the historical collections of the City Art Museum and the Museum of Church History. After nationalization in 1920, the City Museum of Antiquities in Odessa was reorganized as the Ukrainian Historical Museum. The first All-Ukrainian Museum of Hebrew Culture, named in honor of Mendele Moikher Sforim, was established in Odessa in 1917, with exhibits relating to the history of Jews in Ukraine. The Chernihiv State Museum was opened in 1923 with exhibits formerly in the V. Tarnovsky Chernihiv Museum, the museum of the Archival

FIGURE 155. CHERNIHIV STATE MUSEUM

Commission, and three other local museums. In Bakhchisarai in the Crimea, the former palace of the Khan (built in 1503) and the Khan's mosque (built 1740) were transformed into the Bakhchisarai State Court-Museum. A Museum of the Kuban and the North-Caucasus Foreland Regions was established in Krasnodar in 1923. A peculiar historical museum of the new type was the Artem All-Ukrainian Social Museum, established in Kharkiv in 1922 for the purpose of studying the social and economic development of Ukraine.

At the same time, new art museums were being opened, mainly built around art collections that had been nationalized or transferred to institutions of learning and museums. A collection of Western European art, donated by Mrs. Bohdan Khanenko to the All-Ukrainian Academy of Sciences in 1919, was set up as the Museum of Art of the All-Ukrainian Academy of Sciences in 1920. The Poltava Picture Gallery was separated from

FIGURE 156. POLTAVA PICTURE GALLERY

the Poltava Historical-Archaeological Museum in 1919. In the same year, a Museum of Arts came into being in Nykopil in the Kryvyi Rih region. A Museum of Ukrainian Art (in 1927 renamed the State Art-Historical Museum) was created in Kharkiv in 1920 on the basis of the collections of Kharkiv University's Museum of Fine Arts and Antiquities, the City Art Museum, and other art collections. Nationalized collections of western and eastern art were used to make up the Gallery of Ancient Pictorial Art, established in Odessa in 1920. The collection of the Kharytonenko family

was formed into a Museum of Ancient and Modern Art, founded in Volodymyrivka (near Bohodukhiv) in 1920. In November, 1922, the Kiev Picture Gallery was established, mainly from collections of Ukrainian and Russian paintings begun by art patron Nicholas Tereshchenko.

At this time, a number of museums came into being at scholarly institutions, particularly at the All-Ukrainian Academy of Sciences. A Museum (later Cabinet) of Anthropology and Ethnology, named in honor of Theodore Vovk, was established at the academy in 1919–21; a Museum of Prominent Ukrainians (eventually limited to Ukrainians active in the fields of scholarship and art) was founded at the Historical-Philological Section, while botanical (1921), zoological (1919), and geological (1921) museums were opened by the Physical-Mathematical Section. Under the direction of Peter Rulin, the Ukrainian Theatrical Museum was opened at the All-Ukrainian Academy of Sciences in 1923.

The collections and treasures of the Kievan Cave Monastery were organized into a Lavra Museum in 1923, which was transformed in 1927 into a state cultural-historical landmark—the All-Ukrainian Museum Town. It was extended to cover the complete territory of the Cave Monastery (twenty *desiatynas*), and included seventy-two buildings. A complex of museums, libraries, archives, and similar institutions was housed here. Museums found within this complex were the Museum of Lavra History, Portrait Gallery (1925), Museum of Paintings (from 1925), Ukrainian Museum of Sewing and Weaving (from 1925), Museum of Ukrainian Writing and Printing (from 1925), Ukrainian Museum of Metal Sculpture (from 1926), Museum of Comparative Cultural History (from 1927), Ukrainian Numismatic Museum of the Ukrainian Academy of Sciences (from 1927), Casting Museum (from 1927), Ukrainian Museum of Architecture (from 1927), Ukrainian Theatrical Museum (from 1928), Ukrainian Ethnographic Museum (from 1928), Museum of Archaeology of the Ukrainian Academy of Sciences, Museum of Ukrainians Prominent in Scholarship and Art, the Paul Pototsky Museum of Ukrainian Antiquity (from 1926). The T. Vovk Cabinet of Anthropology and Ethnology was housed here also. Centralization of Ukrainian art and historic treasures, promoted by enthusiasts of Ukrainian museum science, offered the sole means of saving the ancient architectural complex of the Kievan Cave Monastery and its valuable historical possessions from the constant attempts of Soviet authorities to confiscate museum pieces and use them for their own economic-political purposes. Despite all efforts, a number of the most valuable museum pieces were none the less expropriated and sold at antique auctions in Europe and the Americas.

Several other church and monastery museums were permitted to remain open in the first years after the Bolshevik Revolution, among them the Church-Archaeological Museum of the Kievan Theological Academy, the Volhynian Eparchial Museum in Zhytomyr, museums of the Berestovo-Spasivsky, Vydubetsky, Kyrylivsky, and Troïtsky monasteries in Kiev, the Church Museum in Kharkiv, and many others. All were abolished in the early 1930's.

Rather typical of the time were so-called museums of the revolution, generally subsidized by the Communist regime for the purpose of explaining and propagandizing the history of Communism and the revolutionary movement. Such "museums of the revolution" arose in Kharkiv (1922), Odessa (1922), Mykolaïv (1923), Dnipropetrovske (1923), Kiev (1925), Zaporizhia (1927), and other cities. All these museums were to have been eclipsed by a projected All-Ukrainian Central Museum of the Revolution (1932), but in connection with the general reorganization of the late 1930's,

they were successively closed and their collections transferred to existing or newly created state historical museums.

In the livelier cultural and community activity of the first post-revolutionary years, many specialized technical and professional museums were founded by various institutions, societies, and bureaus. Prominent among them were the All-Ukrainian Central Cooperative Museum of the All-Ukrainian Cooperative Council, begun as early as 1913, established in Kharkiv in 1923, and eventually transferred to Kiev; the All-Ukrainian Commerce Museum (1926); and the Pedagogical Museum (1929)—all in Kiev; the All-Ukrainian Agricultural Museum (1924) in Kharkiv; the M. Frunze Armed Forces Historical Museum (1921), All-Ukrainian Import-Export Museum (1927), Odessa Museum of the Merchant Marine and Ports (1928)—all in Odessa; and the Dniprelstan Museum in Zaporizhia. In addition, numerous museums were operated by educational institutions (universities, institutes, and other schools of higher learning).

The fastest growing network was that of district and *raion* regional studies museums, whose exhibits and collections reflected the nature of the given territory and the history of its inhabitants from earliest times to the present. Of the many regional and natural museums (fifty-seven) established after the revolution, the more important ones were: the Historical-Ethnographic District Museums (later renamed the Podilia *Oblast* Industrial Arts and Scientific Museum), founded in Vinnytsia in 1917; the Taras Shevchenko Scientific Historical-Pedagogical Museum in Cherkasy, founded in 1918; the Lebedyn *Raion* Art-Historical Museums (later the T. Shevchenko National Museum), founded in Lebedyn in the Sumy region; the regional museum in Pereiaslav, from 1919; and from 1920, museums in Lokhvytsia (Skovoroda Museum), Luhanske (Donbas Social Museum), Romny, and Sumy (Art-

FIGURE 157. DONBAS SOCIAL MUSEUM IN LUHANSKE (NOW REGIONAL STUDIES MUSEUM)

Historical Museum); from 1921, in Okhtyrka; from 1922, in Zvenyhorodka (*Raion* Shevchenko Historical Museum, later renamed Ethnographic-Historical Museum); from 1923, in Korsun in the Cherkasy region; from 1924, in Bila Tserkva (District Geological-Archaeological-Ethnographic Museum, with collections from Countess Maria Branytska's castles in Aleksandria).

After 1917 the first historical-literary and memorial museums were established in the Ukrainian SSR. In 1920 a Drahomanov Museum was established in Hadiach (in Michael Drahomanov's former home), in 1926, in Vinnytsia, a Michael Kotsiubynsky House-Museum was opened (in the house in which he was born), a Shevchenko House Museum was opened in Kiev in 1927 (in the building in which Shevchenko had lived), a House-Museum of Volodymyr

FIGURE 158. SHEVCHENKO HOUSE MUSEUM IN KIEV

Korolenko was opened in Poltava in 1927, while a Memorial Museum and Picture Gallery of Shevchenko's works were established in Kharkiv in the late 1920's (later transferred to Kiev) at the Shevchenko Institute of Literature. A Nicholas Hohol (Gogol) Museum was opened in Sorochyntsi in the Poltava region in 1929. Organization of an All-Ukrainian Central Literary Museum was begun in Kharkiv in the early 1930's, while the House-Museum of Anton Chekhov, founded as early as 1904 in Yalta, continued.

In the years 1917–32, there were 136 museums in the Ukrainian SSR, 16 of them in the Crimea. Of this number, 27 were historical museums, 7 "museums of the revolution," 23 fine arts museums, 8 literary-historical and memorial museums, 57 regional and natural history museums, 13 urban and local museums. In addition, there were 84 museums devoted to individual professions, 45 of them maintained by various institutions and societies, and 39 by schools. Almost all of these museums printed good catalogues of their exhibits, and some of the state museums even published respectable scholarly works. Especially fine publications were issued by the All-Ukrainian Institute Museum in Kiev, the Lavra Museum Town, Odessa Historico-Archaeological Museum, Museum of Slobids'ka Ukraïna, Odessa State Art Museum, Chernihiv State Museum, Izium Regional Studies Museum. State museums in Kiev, Kharkiv, Odessa, Poltava, Katerynoslav, and Zhytomyr initiated postgraduate courses to prepare youth who had completed higher education for further scholarship. These museums had cadres of excellently qualified scholars in such fields as archaeology, art criticism, ethnography, and natural study.

The administrative-historical, regional studies, memorial-literary, and some other museums functioned under the control of the People's Commissariat of Education. The art museums (including theater museums) and some landmarks were controlled by the Arts Administration of the People's Commissars of the Ukrainian SSR. During these years, limits were placed on museum exhibits of religious articles or monuments of the Ukrainian national liberation movement. Elements of "socialist struggle" were overemphasized, especially those referring to the workers' movements and the activity of the Communist party. However, there was as yet no constant interference with the internal functioning of museums, which were for the most part left in the care of professional museologists.

### 1933–9

Beginning in 1933, Ukrainian museums suffered some heavy blows. The majority of museologists were arrested and sent either to distant concentration camps or out of Ukraine; many were executed. The basis for these attacks was usually accusation of "Ukrainian bourgeois nationalism." A number of museums, especially regional and district museums, were discontinued, which often meant the destruction of valuable exhibits. The Department of Agitation and Propaganda of the Central Committee of the Communist Party (of Bolsheviks) of Ukraine appointed party members with little education to be directors of museums, and these began a planned "reorganization" of museums, which amounted to utter destruction. In the Kievan Cave Monastery the existing Museum Town, including museums of art, church, and monastic antiquities, was abolished in 1934. It was replaced by a Central Anti-Religious Museum for the dissemination of anti-religious propaganda. The most valuable objects (ancient gold and silver articles, works of art) were sold abroad in order to secure funds for "socialist construction." Some museums were deprived of their buildings to fill agricultural needs, and the articles were transferred to inferior quarters (as in the Chernihiv State Museum), or thrown into cellars as useless trash

(for example, the Ukrainian Museum of Architecture and the Agricultural Museum in Kiev). The campaign against Ukrainian museums was accompanied by flagrantly barbaric destruction of monuments of Ukrainian culture not stored in museums (the Mykhailivsky monastery, the Cathedral of St. Nicholas, built by Mazepa in Kiev, a seventeenth century Kozak church in Kharkiv, and many others). Members of the Committee to Protect Historical Monuments were arrested when they tried to protest against these activities.

By the mid-1930's, virtually all of the museums of the Ukrainian SSR had lost their true character as depositories of valuable cultural and historical material. A resurgence of museology in the late 1930's was characterized by the exclusion of Ukrainian materials from museums. This was especially evident in the Lenin museums (Kiev, Lviv after the war), which became mere copies of the Lenin museums in Russia, as well as in the "Museums of the Revolution." Museums of art exhibited Ukrainian objects only together with Russian art, with a heavy preponderance of the latter. Among museum employees only a very few were Ukrainians.

Of the 120 museums in the Ukrainian SSR exclusive of the Crimea in the years 1917–32, only 79 remained under the jurisdiction of the People's Commissariat of Education of the Ukrainian SSR after the reorganization ordered by the Council of People's Commissars on March 7, 1939. Of this number, 13 were "Museums of the Revolution"; 6, historical museums; 46, regional studies museums; 7, literary-memorial museums (including the T. Shevchenko grave landmark in Kaniv); 3, anti-religious museums; and 1 museum of Hebrew culture in Odessa. Sixteen museums of art (including the St. Sophia landmark in Kiev) functioned within the system of the Art Administration of the Council of People's Commissars, bringing the total of museums in Ukraine to 95.

It is necessary to mention those museums outside of the Ukrainian SSR in the Soviet Union which preserved valuable collections of Ukrainian material. In addition to the Ukrainian Museum in Krasnodar (Kuban region), others included the Don Region Museum in Novocherkask, the church-historical museum in Starocherkask (1921), Museum of the Taman (1922), Temriuk District Museum of Regional Studies and Natural History (1920), North-Caucasus Regional Museum in Stavropol, and Maikop Regional Museum.

**Western Ukrainian Lands in 1918–45**

In western Ukrainian lands, after the destruction of the war years, museums were rebuilt through the efforts of energetic individuals. The Museum of the Shevchenko Scientific Society continued to operate in Lviv, as did the National Museum, and the National Home and Stavropygian Institute museums. The Shevchenko Scientific Society Museum was reorganized in 1918 to form the Cultural-Historical Museum (directed by Yaroslav Pasternak), the Natural History Museum (reorganized in 1927 by George Poliansky), and the Museum of Historical War Monuments (founded in 1937 by the Shevchenko Scientific Society, the Moloda Hromada Association, and the Ukrainian Society of Aid to Invalids), with a separate subdivision of Plast youth organization memorabilia.

Without any external financial support, interesting regional studies museums were opened, among them the Hutsul'shchyna Museum in Kolomyia (1926), under the leadership of Volodymyr Kobrynsky; the Boikivshchyna Museum in Sambir (1927), owing to the work of Volodymyr Kobilnyk, Volodymyr Hurkevych, and Anthony Kniazhynsky; the Lemkivshchyna Museum in Sianik (1931), on the initiative of Leo Gets and others; the Sokal'shchyna Museum in Sokal (1937), through the efforts of B. Chaikovsky; also the Stryvihor Museum in Peremyshl, Verkhovyna Museum in

FIGURE 159. DEPARTMENT OF FOLK WEAR IN THE LEMKIVSHCHYNA MUSEUM IN SIANIK

Stryi, Ukrainian Podilian Museum in Ternopil (1932), Ukrainian Museum in Chortkiv (1932), and Yavorivshchyna Museum in Yavoriv. These museums amassed large exhibits in the fields of ethnography, church art, archaeology, documents, and the like, concentrating on regional elements. They became centers of regional studies, and some published scholarly works, notably *Litopys Boikivshchyny* (Boikian Region Chronicle), a collection published intermittently by the Sambir Museum.

### 1939–45

After the occupation of Galicia and Volhynia, and later Bukovina, by Soviet armies in 1939–41, all existing museums, both Polish and Ukrainian, private and community, were nationalized and reorganized according to the system prevalent in the USSR. In some places they were merged with the existing state and city museums. In accordance with the decision of the Council of People's Commissars on May 8, 1940, state *oblast* or city historical museums were established on the territory of Western Ukraine, in Lviv, Volodymyr Volynsky, Drohobych, Kremianets, Dubno, Ostrih, and Stanyslaviv. *Oblast* and city ethnographic museums were opened in Lviv, Yavoriv, Peremyshl, and Sambir; a museum of industrial arts and a picture gallery was founded in Lviv. State district or city museums of regional studies were opened in Sokal, Lutsk, Stryi, Ternopil, Rivne, Kolomyia, Rohatyn, Chernivtsi, and Bilhorod Dnistrovsky. In addition, a literary-memorial Ivan Franko Museum was created in Lviv, as well as a Lviv Branch of the V. I. Lenin Central Museum. Part of the collections of the museum and archive located in the Ossolinski National Institute was given over to Poland, where it served as the basis for a new institution of the same name in Wrocław.

The extent of the destruction of museums in Ukraine in 1941–5 as a result of the war is shown by official Soviet statistics. In 1940, there was a total of 174 museums in the Ukrainian SSR, including the Crimea and western Ukrainian lands. At the end of 1945, only 119 museums remained. Ten museums survived in Kiev out of 15 in 1940; in the Crimean *oblast*, 15 out of 24; in the Vinnytsia *oblast*, 3 out of 6; in the Odessa *oblast*, 7 out of 11; in the Poltava *oblast*, 7 out of 10; and in the Kharkiv *oblast*, 7 out of 12.

### 1945–65

After the war, work on Ukrainian museums in the Ukrainian SSR was resumed, and by 1950 their number had increased from 119 to 137. Newly established museums, for the most part named after events or figures of the "great Fatherland War," or the wars of the preceding century, included the State Museum of the Korsun-Shevchenkivsky Battle (1945), the Battle of Poltava State Museum (Poltava, 1949), Museum of the Great Fatherland War in Sevastopol (1950), the State Historical Museum Marking the 300th Anniversary of the Union of Ukraine with Russia (Pereiaslav, 1954). According to official directives, the main function of museums is "the propagation of political and scientific knowledge among the members of the working class." In this respect, the "historical-revolutionary" and "political-educational" museums are of special importance. Consequently, the collections and exhibits of all museums, including

the historical-archaeological and fine arts museums, are organized to serve that purpose.

The number of museums and their division according to type is shown in Table III. The total number of visitors in museums rose from 3,943,000 in 1950 to 7,890,000 in 1960, and 11,120,000 in 1964.

TABLE III

| | 1950 | 1964 |
|---|---|---|
| Historical-revolutionary | 2 | 2 |
| Historical | 21 | 22 |
| Memorial | 25 | 27 |
| Regional Studies | 58 | 51 |
| Natural History | 9 | 1 |
| Art | 22 | 27 |
| TOTAL | 137 | 130 |

Among the most prominent historical museums in the Ukrainian SSR are the Kievan State Historical Museum (until 1934 known as the Shevchenko All-Ukrainian Museum); the Kharkiv Museum (founded in 1920 out of two former museums and, until 1933, called the All-Ukrainian Historical Museum); the Dnipropetrovske Museum (formerly the Regional Historico-Archaeological Museum); the Chernihiv Museum (created in 1925 out of two local historical museums); and the Lviv Museum (organized in 1940 on the basis of collections from the Museum of the Shevchenko Scientific Society, the Lviv Historical Museum, and other Lviv museums). The oldest historical-archaeological museums in the Ukrainian SSR are in Odessa (until 1933 the All-Ukrainian Historical Museum), in Kerch, Khersones (established at the site of Khersones excavations), Bakhchisarai (founded in 1920 on the basis of the Palace-Museum and the Archaeological Museum Pecherni Mista [Cave Cities]). Historical-cultural landmarks can also be classified among the historical museums, including the Kievan Cave Monastery, the Cathedral of St. Sophia and the St. Cyril Church in Kiev, Olvia in the Mykolaïv *oblast*, and a castle with an historical museum in Kamianets Podilsky.

Museums of fine arts and art galleries in the Ukrainian SSR are distinguished by the wealth of their collections. Of the 27 such museums existing in 1964, outstanding were: three Kievan State Art Museums—the Museum of Ukrainian Art

FIGURE 160. KIEVAN STATE MUSEUM OF UKRAINIAN ART

(1936), the Museum of Eastern and Western Art (formerly Khanenko Museum), and the Museum of Russian Art (formerly Nicholas Tereshchenko Museum); the Kharkiv State Museum of Pictorial Art (established on the basis of collections assembled by Kharkiv University, begun in 1804, and the City Art Museum); the Lviv State Museum of Pictorial Art (formerly the National Museum); the Lviv State Gallery (established in 1940 from Ukrainian and Polish museum art collections); the Poltava State Art Museum (founded in 1918 from the collections of Nicholas Yaroshenko and others); the Odessa State Gallery; and the Odessa State Museum of Western and Eastern Art (established 1945 on the basis of the former Gallery of Ancient Painting). Picture Galleries are found in Theodosia (the Ivan Aivazovsky Gallery founded in 1880), in Simferopol (founded 1920 as the Crimean Gallery), in Sevastopol (established 1927 on the basis of the Yalta Art

FIGURE 161. ODESSA STATE MUSEUM OF WESTERN AND EASTERN ART

Museum), and other places. A special place among art museums is occupied by the Kievan State Museum of Theatrical Art of the Ukrainian SSR, founded in 1923 on the initiative of the "Berezil'" Theater, and the Museum of Architecture at the Academy of Building and Architecture of the Ukrainian SSR in Kiev, established in 1946.

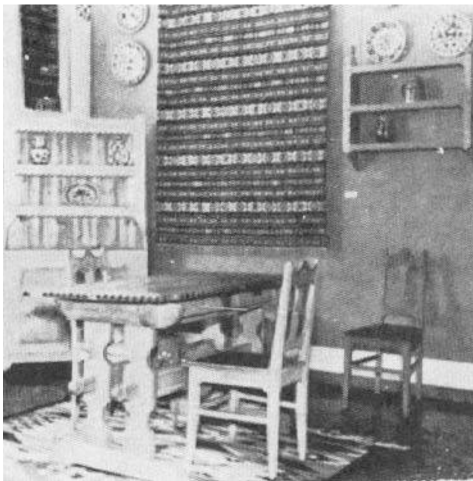

FIGURE 162. WOOD-CARVING DEPARTMENT IN THE STATE MUSEUM OF UKRAINIAN DECORATIVE FOLK ARTS IN KIEV

Ethnographic museums, which constitute a separate group of art museums, are found only in Galicia. These are the Ukrainian State Museum of Ethnography and Industrial Art (established in 1951 from the collections of the Ethnographic Museum of the Shevchenko Scientific Society and the Lviv Museum of Industrial Art) and the Museum of National Creativity in Kolomyia (formerly Hutsul'shchyna Museum). A separate museum in this group is the State Museum of Ukrainian Decorative Folk Arts recently opened in Kiev.

Among branch museums of the Ukrainian SSR, museums of natural history constitute a relatively large group. There were 23 such museums in 1964, including one independent and 22 supported by institutions of higher learning. The oldest and best-endowed among them is the Lviv Natural History Museum of the Academy of Sciences of the Ukrainian SSR, established from the collections of the Dzieduszycki Museum and the Natural Museum of the Shevchenko Scientific Society. The largest of such museums is the Central Scientific Museum of Natural History of the Academy of Sciences of the Ukrainian SSR in Kiev. In addition, there are botanical, zoological,

FIGURE 163. THE CENTRAL SCIENTIFIC MUSEUM OF NATURAL HISTORY OF THE ACADEMY OF SCIENCES OF THE UKRAINIAN SSR IN KIEV

mineralogical, paleontological, and other museums established for the most part in the nineteenth century. These are also attached to universities and other institutions of higher learning.

The literary-memorial museums represent a large and diversified group in the Ukrainian SSR. There were 27 such museums in 1964. They are connected with the life and work of Ukrainian writers and artists, for example T. Shevchenko

(in addition to those mentioned above, a Shevchenko Literary-Memorial Museum was established in Cherkasy in 1939), Ivan Franko (in Lviv from 1949, in Nahuievychi from 1946), Michael Kotsiubynsky (in Chernihiv from 1935),

FIGURE 164. MICHAEL KOTSIUBYNSKY HOUSE MUSEUM IN VINNYTSIA

Lesia Ukraïnka (in Kolodiazhne from 1957), Ivan Kotliarevsky (in Poltava from 1950), Basil Stefanyk (in Rusiv from 1940), Marko Cheremshyna (in Sniatyn from 1949), Olha Kobylianska (in Chernivtsi from 1944), George Fedkovych (in Chernivtsi from 1945). Similar literary-memorial museums exist outside of the Ukrainian SSR, as for example Shevchenko's Museum in Fort Shevchenko (in the Khazakh SSR), Marko Vovchok's in Nalchyk (in the Caucasian Foreland), Lesia Ukraïnka's in Surami (in the Georgian SSR).

The most prevalent type in the Ukrainian SSR is the regional studies museum. They were established for the most part on the basis of various regional collections or even museums whose number had decreased considerably in comparison with the 1920's. The most important among them are those in Poltava (1891), Zhytomyr (formerly the Volhynian Scholarly Museum founded in 1864), Simferopol (1889), Mykolaïv (from 1913, and Konotop (from 1923). Regional museums operated by regional historical studies groups in various rural areas also come in this category. There were 200 such "museums" in 1959, and by 1964 their number had grown to about 1,000.

Of the total 130 museums in the Ukrainian SSR, 11 are in Kiev, 7 in Lviv, 6 in Poltava, 14 in the Crimea. All museums in the Ukrainian SSR are under

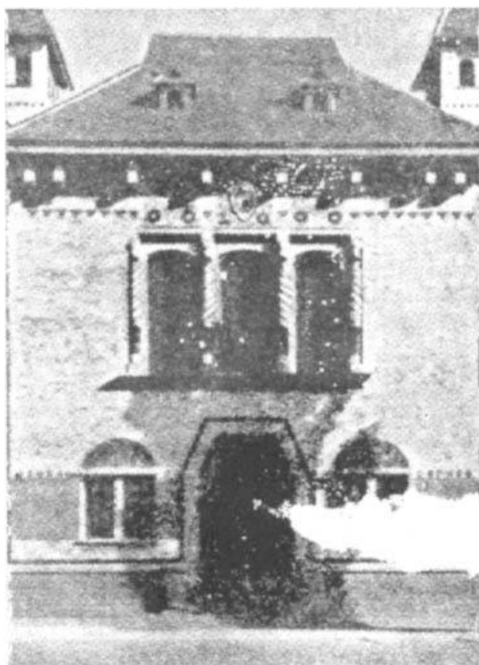

FIGURE 165. ENTRANCE TO THE REGIONAL STUDIES MUSEUM IN POLTAVA

the jurisdiction of the Administration of Museums and Preservation of Cultural Landmarks, an organ of the Ministry of Culture of the Ukrainian SSR.

In the KUBAN region, there are historical-regional studies and art museums in Krasnodar, and regional studies museums in smaller cities. Ukrainian regional studies museums exist also outside of the Ukrainian SSR, for example, Horlytsi, in the Lemkian region (currently part of Poland), and in Svydnyk (Priashiv region, Czechoslovakia).

### Beyond the Borders of Ukrainian Territory

Outside of Ukrainian territory, a great deal of Ukrainian material can be found

in foreign museums. The most important of these are the Museum of Anthropology and Ethnography in Leningrad, the National Museum of Antiquities in Bucharest, the Museum in Suceava, the Hungarian National Museum in Budapest, the National Museum, the Czartoryski Museum, the Ethnographic Museum, and the Anthropological Museum—all in Cracow, the National Museum in Warsaw with its iconographic section, the Ethnographic Museum (1896) with a very valuable Ukrainian section, and the Museum of Natural History in Vienna.

To preserve articles, documents, and other materials connected with the Ukrainian national liberation movement and the activity of émigré centers of various Ukrainian organizations and institutions, a Museum of Ukraine's Struggle for Liberation was established in Prague in 1925. Its directors were Dmytro Antonovych and Simon Narizhnyi. The museum, consisting of four sections (diplomatic, military, émigré, and miscellaneous), amassed a collection of unique importance. It also carried on publishing activity (*Visti* [News], bibliographic publications, and the like). It existed until 1945. After the building that housed it had been partially destroyed during the war, the Czech administration dissolved the museum. Its archival materials were taken to Moscow, and other collections were transferred to the Slavic Library in Prague.

The library and museum collections of the Simon Petliura Library, established in Paris in May, 1929 were transported to Germany by the German authorities in 1941, and disappeared without trace. After World War II a number of small Ukrainian archives-museums appeared in the West, usually connected with libraries. Among such depositories are the Archive-Museum of the Ukrainian Free Academy of Arts and Sciences, founded in 1945 in Augsburg, Germany, others in the USA and in Canada (see Ukrainians Abroad, pp. 1148–9, 1187).

## HISTORICAL ARCHAEOLOGICAL LANDMARKS AND THE PRESERVATION OF HISTORICAL AND CULTURAL MONUMENTS

The care of cultural and historical monuments outside of museums was closely connected with the development of museums in Ukraine. Before the revolution, there were no laws regulating the care of historical monuments. Ancient buildings and archaeological stations were sporadically overseen by the so-called *guberniya* learned archival commissions, which supervised the upkeep of both museum pieces and archival material. An enormous amount of historical material which was not stored in museums was destroyed during the revolutionary events of 1917–20. Especially hard hit were the palaces of nobles (for example, the Palace of Alexander Rigelman in the village of Andriïvka, Chernihiv district, the palace in Kachanivka, Skoropadsky's palace in the Sokyryntsi village. These were often built in the Ukrainian baroque and empire styles, and housed immense quantities of antiques and art objects. After the revolution, valuable historical monuments not housed in museums came under the care of museum sections in the departments of national education, museums themselves, and the Archaeological Committee of the All-Ukrainian Academy of Sciences. Still, the efforts lacked systematization.

The efforts of the Soviet government in this area were sporadic and largely inadequate. In 1920, the excavation site of the former city of Olvia was pronounced an archaeological-historical reservation, and in 1925 T. Shevchenko's grave in Kaniv, with the surrounding territory, became a State Historical-Cultural Landmark. Only in June of 1926, following demands from Ukrainians active in scholarly and cultural fields, did the All-Ukrainian Central Executive Committee issue a resolution concerning the protection of historic

monuments and natural landmarks in the Ukrainian SSR. According to this resolution, the territory of the Republic was divided into four inspectorships of

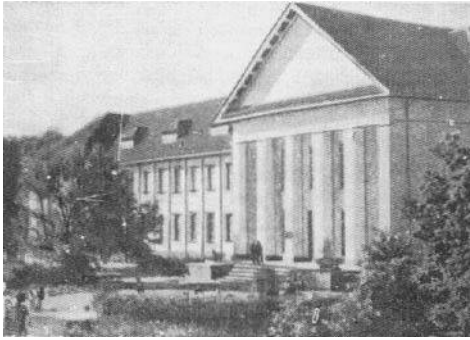

FIGURE 166. KANIV STATE MONUMENT MUSEUM "T. SHEVCHENKO'S GRAVE"

the preservation of cultural and natural landmarks (Kiev, Kharkiv, Dnipropetrovske, and Odessa), all of the landmarks were registered, assigned to categories according to Republican and local importance, placed under protection, and the most prominent among them proclaimed state landmarks.

Landmarks were divided into two categories: historical-cultural and natural. The former group included, in addition to Olvia and T. Shevchenko's grave, the Kievan Cave Monastery All-Ukrainian Museum Town founded in 1926, the St. Cyril Church in Kiev (1929), Spas-Preobrazhensky Monastery in Novhorod Siversky (1929), the castle of the Ostrih princes in Starokonstiantyniv (1929). At the end of the 1920's, the following were also proclaimed historical-cultural landmarks: the Spaso-Preobrazhensky and the SS. Borys and Hlib Cathedrals, the Piatnytska Church, and the Yeletsky and Troïtsko-Illinsky monasteries in Chernihiv, the Carmelite Monastery and the seventeenth-century synagogue in Berdychiv (officially known as a Landmark of Hebrew Material Culture), the estate of the Tarnovsky family in Kachanivka in the Chernihiv region, the site of the ancient town of Usativ near Odessa, Perokop in the Crimea. Monuments of Republican importance were proclaimed to be the Cathedral of St. Sophia in Kiev, Brotherhood Monastery in the Podilia region, Mazepa's building in Chernihiv, the wooden Kozak church of St. Catherine, the Bernardine cloister in Vinnytsia, the archaeological remains on the island of Berezan, the Kozak monastery of the Intercession in Kharkiv, the site of an ancient town in Donets.

The body which administered the protection of museum material was the Ukrainian Committee for the Protection of Cultural Monuments, attached to the People's Commissariat of Education of the Ukrainian SSR, which published the journal *Zbirnyk okhorony pamiatnykiv kul'tury na Ukraïni* (Collection of Works on the Preservation of Cultural Monuments in Ukraine). A National Commission for the Preservation of Monuments of Material Culture and Nature was active in Kiev (from 1926), directed by Theodore Ernst, Nicholas Sharleman, and Basil Bazylevych. This commission was connected with the Ukrainian Academy of Sciences and had sixteen representatives in various cities of Ukraine. In the Kuban region and the Crimea, the regulations, procedures, and supervising organs were those of the Russian SFSR. In many respects, the arrangements here were similar to those prevailing in the Ukrainian SSR.

In the 1930's, the protection of historical and cultural monuments was wholly neglected. The Committee for the Protection and Preservation of Historical-Cultural, Architectural, and Archaeological Monuments of the Ukrainian SSR, created by a resolution of the Council of People's Commissars on August 31, 1940, and administered by the People's Commissariat of Education, remained dormant both prior and during the war. It was not until December 1966 that a Ukrainian Society for the Protection of Historical and Cultural Monuments was formed in the wake of recurring protests

from localities where numerous architectural monuments were being destroyed. The activity of the Society is limited mostly to the protection of monuments of the revolutionary period, the civil war, and the period of Communist construction.

# 4. RESERVATIONS AND CONSERVATION

## BEFORE 1920

Conservation efforts in the Ukrainian lands before 1920 were sporadic (for example, measures to preserve forests and protect wildlife in the Hetman state). Legal means of forest conservation were introduced only in the second half of the nineteenth century, but these were inadequate, particularly in those Ukrainian lands which were part of the Russian empire (see Forestry, p. 896). The first reservations were established through private efforts: the Askaniia Nova reservation was founded in the Kherson steppe by its owner, E. Falzfein (1883), a German colonist. Strict conservation of forests and wildlife was enforced in tsarist forests in the mountains of the Crimea and the Bilovezha Forest between Polisia and Podlachia.

FIGURE 167. RESERVATION CHAPLI, ASKANIIA NOVA

## 1920 TO 1940

The campaign for conservation and nature reserves became more efficiently organized only in the early 1920's, when a Ukrainian Committee for Conservation of Natural Landmarks was formed as

part of the People's Commissariat of Education, and the All-Ukrainian Academy of Sciences also applied itself to the task of conservation. On June 17, 1926, the All-Ukrainian Central Executive Committee and the Council of People's Commissars of the Ukrainian SSR issued a resolution "Concerning Landmarks of Culture and Nature," which dealt with the organization of reservations. The largest number of preserves and reservations was instituted in the 1920's. In 1919 the Askaniia steppe was proclaimed a state reservation, as was Koncha Zaspa, a water-meadow of the Dnieper River near Kiev. Also established were the Crimean reservation (in 1920), the State Shevchenko Forest-Steppe reservation in Kaniv (in 1924; later joined with the T. Shevchenko grave landmark), the Caucasian reservation (1924), Hola Prystan' (Bare Harbor) on the Dnieper River, state seashore reservations on the Black Sea and the Sea of Azov (1927), and Sofiïvka, the Uman state reservation (1929). Also proclaimed to be nature reserves of republican importance were the Provalsky steppe in the Donbas, the Kamiani Mohyly (Stone Graves) near Mariupil in the Azov Upland, the Starobilsky virgin steppe, the Korosten beaver preserve. In 1928, the Council of People's Commissars of the Ukrainian SSR approved the project for a large reservation, the "Dnieper Lowlands." Many illustrated booklets were published about the more important reservations in the Ukrainian SSR. The governing organ responsible for the protection of nature landmarks was the Ukrainian Committee of Nature Conservation at the People's Commissariat of Education of the Ukrainian SSR, which published a journal, *Okhorona pamiatok pryrody na Ukraïni* (The Protection of Nature Landmarks in Ukraine, Kharkiv, 1927–28).

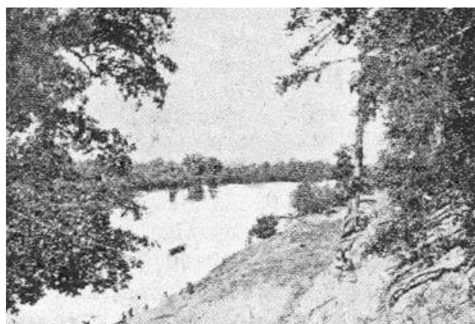

FIGURE 168. LAKE KONCHA IN THE RESERVATION KONCHA ZASPA

The persecution of Ukrainian culture in the 1930's arrested for a time efforts to improve conservation and establish reserves. The area set aside for reservations was decreased and they came increasingly under the control of Moscow.

In Western Ukrainian lands, particularly in Galicia, a number of smaller reservations was established in the period between the two world wars. In the Carpathian Mountains, they included the Metropolitan Andrew Sheptytsky cedar reserve on the Yaitse Mountain in the Central Gorgans and the Chornohora reserve in the upper Prut basin in the vicinity of Hoverlia. In Subcarpathia, a yew reserve was established in Kniazhdvor, near Kolomyia. Remnants of steppe flora in Podilia and gypsum caves in Bilche Zolote and Kryvche near Borshchiv also came under the conservation program.

## FROM 1940 TO THE PRESENT

Conservation efforts in Ukraine were discontinued during the war (1941–5) and for some time after the war. Carpathian forests suffered most as a result of ruthless exploitation by Soviet authorities after 1945 (in the central Gorgans alone, 1,470 hectares of stony ridges were created). A decree of the government of the Ukrainian SSR in 1946, ordering the regulation of state reservations, did not appreciably remedy the situation; neither did the creation of a Ukrainian Society for Conservation and

the Development of Natural Resources. At the present time, conservation of nature in the Ukrainian SSR is carried out according to laws passed in 1958 and 1960, and supplemented in 1964.

Included in the conservation program are reservations and hunting preserves (zapovidno-myslyvs'ki hospodarstva), small reserve strips, smaller landmarks, dendrological parks, and botanical gardens. There also exist some so-called zakaznyky or game preserves (strips in which no hunting is allowed for a number of years), and some hunting lodges. A number of rare plants and animals were placed under conservation (beaver, steppe marmot, muscrat, swans, eagles, owls, and so on).

The area of reservations in the Ukrainian SSR in 1960 constituted 80,000 ha., which barely accounts for 0.13 per cent of all territory (compared with 0.5 per cent in the European sections of the Soviet Union, 0.4 per cent in Poland, 1.1 per cent in Czechoslovakia, 4 per cent in Great Britain). According to plans, reserved land was to be increased to almost 160,000 ha. (0.26 per cent), but there is little chance that these plans will be realized.

The greatest number of reservations is found in the steppe belt and along the seacoast. In the steppe region, there is a small reservation called the Striletsky Steppe (525 ha., established in 1948); others are found in southeastern Slobids'ka Ukraïna and the Khomutiv Steppe (1,028 ha., from 1956) in the Azov Lowland—both with remnants of virgin, colored fescue-feather grass steppe—and the rocky steppe Kamiani Mohyly (356 ha., established in 1927) in the Azov Upland. These reservations and the Mykhailiv Virginland in the forest-steppe were joined in 1961 into the Ukrainian State Steppe Reservation of the Academy of Sciences of the Ukrainian SSR, and became the center for scientific research of the Botanical Institute. Askaniia Nova (38,500 ha., mostly virgin steppeland), formerly a large steppe reservation, is today a small reserve strip (500 ha.) and is the center for the Michael Ivanov Ukrainian Scientific Research Institute for acclimatization and hybridization of animals.

FIGURE 169. BIRDS ON THE ORLIV ISLAND AT THE BLACK SEA RESERVATION

On the seacoast lie the Black Sea reservation (9,420 ha. of land and 24,700 ha. of water south of the mouth of the Dnieper, founded in 1927) and the Azov-Syvash reservation (6,850 ha.) in dry coastal steppe with its characteristic coastal vegetation. Their main function is the protection of birds during migrations, winterings, and nestings. The latter is now a hunting preserve.

In the forest-steppe belt of Slobids'ka Ukraïna there is, as mentioned above, a small reserve—the Mykhailiv Virginland (200 ha.). A large reservation near Kaniv has not been conserved.

There are no reservations in the forest belt of the Ukrainian SSR, but the oldest reservation, Bilovezha Forest, lies on the border between Ukrainian, Belorussian, and Polish ethnographic territory, which today belongs to the Belorussian SSR and Poland (74,200 ha. and 5,030 ha. respectively). This reservation is primarily a hunting preserve, protecting the European bison, deer, wild boar, and elk.

In the mountain areas are the Crimean and the Caucasus reservations located on the edges of the Ukrainian ethnographic territory. The Crimean Reservation (from 1920; 30,200 ha.) is located in the central, most elevated part of the

Crimean mountains, with the special function of protecting the great forest massif, which serves both as protection against floods and a water reservoir, and its rich fauna—deer, chamois, acclimatized moufflon. In 1927, it was changed into the Crimean hunting preserve. A proposed Carpathian reservation, which was to embrace the highest forest massif in the Carpathian Mountains, was never realized (although large reservations exist in the Polish, Slovakian, and Rumanian sections). There are, however, small preserves and reserve strips in Uholka and Chornohora. Some reserves, which existed until 1939, have been destroyed.

# VI. Book Publishing and the Press

## 1. SURVEY OF BIBLIOLOGICAL RESEARCH

### CENTRAL AND EASTERN UKRAINE

Bibliology, as a separate scientific discipline dealing with the theory and history of book publishing and periodicals, did not develop in Ukraine until the late nineteenth century. However, early in that century a number of Ukrainians (scholars of St. Petersburg and Moscow who were natives of Ukraine and graduates of Ukrainian schools of higher learning) played an important role in the development of Russian bibliology. The first theoretician of bibliology in Russia was Basil Anastasevych (1775–1845), born in Kiev, graduate of the Kievan Mohyla Academy, author of many bibliographical guides,—articles in which he stressed the need for the compilation of bibliographies of magazine articles and called for the establishment of a bibliographical society. Another outstanding scholar who played an important part in the development of Russian bibliology was Peter Keppen (1793–1864), a native of Kharkiv and graduate of Kharkiv University, geographer, statistician, and bibliographer. Paul Yarkovsky, librarian of the Kremianets lyceum and later of Kiev University, was the first theoretician of bibliology in Ukraine. As early as 1809–32, he offered a course on bibliology in Kremianets, in which he treated various problems related to the discipline.

Ukrainian research in this field began in the second half of the nineteenth century. Dmytro Bahalii, Stephen Golubiev, Volodymyr Ikonnikov, Michael Hrushevsky, and Volodymyr Peretts, were involved in the treatment, discussion, and solutions of bibliological questions.

Since there were no Ukrainian bibliological publications, articles in this area of study were published in scientific periodical publications of the late nineteenth and early twentieth centuries. Scholars from Ukraine also participated in the work of the Russian Bibliological Society in St. Petersburg which functioned from 1899 to 1930. In 1910–14, the journal *Iskusstvo i pechatnoe delo* (Art and Printing) appeared in Kiev; it contained valuable information on bibliology. The Odessa Bibliographical Society, founded at Novorossiisk University in 1911, devoted much of its attention to the problems of bibliography. It published its own *Izvestiia* (News, 1911–16) which carried many articles on bibliology.

Works on the history of Ukrainian book publishing, written by Ukrainian and Russian scholars active in Ukraine in the early twentieth century, represented significant contributions to the development of Ukrainian bibliology. Among these scholars were: Theodore Titov, an authority on the history of the Ukrainian church; Ivan Kamanin, historian, archivist, author of descriptions of the manuscripts in the collections of the St. Sophia Cathedral in Kiev (1906), Nestor the Chronicler Society (1908), and the St. Volodymyr University Library (1910); Serhii Maslov, author of studies on incunabula (1910) and the library of Stephen Yavorsky (1914).

Ukrainian bibliology did not develop into a distinct branch of science with its own institutions and publications until after the March revolution of 1917, which led to the establishment of the Ukrainian independent state. The peri-

odical *Knyhar* (Bookseller, 1917–20, 31 issues), published in Kiev by the Chas (Time) Publishing House and edited originally by Basil Koroliv-Staryi and later by Nicholas Zerov, became the first Ukrainian organ of bibliology. In addition to bibliographical reviews, it contained articles on the theory of bibliography (S. Kondra, A. Bem), history of book publishing (Serhii Panochini), distribution of books, and related subjects. *Holos Druku* (Voice of Printing), published in 1921 by the All-Ukrainian State Publishing House in Kharkiv (only one issue appeared), was similar in content, as were the subsequent periodicals *Knyha* (Book, 1923–6) and *Nova Knyha* (New Book, 1924–5). All were chiefly bibliographical in character.

Systematic scientific research was initiated by the Ukrainian Scientific Research Institute of Bibliology (UNIK) founded in Kiev in October 1922 and headed by George Mezhenko (pseudonym of George Ivanov-Mezhenko). It was under his editorship that the scientific journal *Bibliolohichni Visti* (Bibliological News) appeared in 1923, first as a non-periodical publication and later (1926) as a quarterly. The Institute also published four volumes of *Trudy UNIK* (Transactions, 1923–30) and seven separate historico-bibliographical works. The Ukrainian Bibliological Society (founded in 1928) began functioning in Kiev along with UNIK.

Among scholars whose works appeared in the publications of UNIK in 1923–30 were: Volodymyr Peretts, Yukhym Sitsinsky, Paul Popov, Constantine Koperzhynsky, Serhii Maslov, Victor Romanovsky, Volodymyr Barvinok, Hrytsko Tysiachenko (pseudonym of Gregory Salyvon), and Ivan Krypiakevych. Articles on the art design of Ukrainian books were written by Nicholas Makarenko, Philip Klymenko, Peter Kurinnyi, and Daniel Shcherbakivsky.

This rapidly growing research and publishing activity in the realm of bibliological science declined sharply after

FIGURE 170. PAUL POPOV

FIGURE 171. SERHII MASLOV

1930 in the wake of repressions initiated by the Bolshevik régime against Ukrainian scholarly institutions, publishing houses, and individual scholars. Publication of *Bibliolohichni Visti* was discontinued late in 1930 because of "alienation from concrete tasks of the building of socialism and because of nationalist deviations." The Ukrainian Scientific Research Institute of Bibliology was reorganized into a Cabinet of Marxist-Leninist Bibliology in May 1931. G. Mezhenko, director of the Institute and editor of *Bibliolohichni Visti*, was dismissed from his posts and, like many other researchers, was compelled to move to Leningrad. V. Barvinok, B. Ihnatiienko, and P. Klymenko were persecuted. D. Shcherbakivsky committed suicide in 1927.

FIGURE 172. GEORGE MEZHENKO

In 1936, the Institute of Bibliology was reorganized, this time into the Scientific-Methodological Cabinet of Library Science and Mass Bibliography attached to the library administration of the People's Commissariat of Education of the Ukrainian SSR. After several more reorganizations, the remnant of the original institution was transformed into the Scientific-Methodological Division of Library Science and Bibliography at the republic

CPSU Library. The Kiev Bibliological Society and other similar groups throughout Soviet Ukraine were abolished along with UNIK.

Research on the history of Ukrainian book publishing was discontinued, with limited work being carried on at the Academy of Sciences of the USSR. Of Ukrainian scholars, only Gregory Koliada, who was deported to Stalingrad in the Uzbek SSR, was active in this area of research in the 1950's.

Works of the following Ukrainian bibliologists appeared in the symposia entitled *Kniga* (17 issues up to 1968), published since 1959 in Moscow by the All-Union Book Chamber: G. Mezhenko, G. Koliada, I. Kahanov, O. Molodchikov, Y. Isaievych, and Y. Dashkevych. Studies of these and other scholars on the history of Ukrainian book printing were published in the two-volume work *40 let russkogo knigopechataniia* (Forty Years of Russian Book Printing, Moscow, 1964); these works were translated into Ukrainian and published under the title *Knyha i drukarstvo na Ukraïni* (Books and Printing in Ukraine, Kiev, 1964). More intensive research in this area did not begin in the Ukrainian SSR until the late 1950's when studies by Y. Zapasko and I. Kahanov appeared. The Book Chamber of the Ukrainian SSR published a collection of articles on the history of book printing in Ukraine under the title *Ukraïns'ka knyha* (Ukrainian Book) in 1965.

The main centers of research at the present time are: the Academy of Sciences of the Ukrainian SSR in Kiev, the Book Chamber of the Ukrainian SSR and the Institute of Culture in Kharkiv, and the I. Fedoriv Ukrainian Polygraphic Institute in Lviv. As yet, there is no periodical publication in bibliology in Ukraine.

## WESTERN UKRAINE AND ABROAD

During the nineteenth century, bibliological research in Galicia, Bukovina, and Transcarpathia was concerned almost entirely with the recording and description of published books and periodicals, i.e., with bibliography (see p. 431) and the history of book publishing. Among the more significant contributions in the latter category were the works of historian Denis Zubrytsky and Anthony Petrushevych.

In the early twentieth century, the following were engaged in bibliological studies and research: Ivan Franko, Ivan Levytsky, Hilarion Svientsitsky, Ivan Krevetsky, Michael Vozniak, I. Krypiakevych, Ivan Ohiienko, and Nicholas Holubets. The Lviv National Museum founded in 1905 was the main center of bibliological research. The results of these studies are to be found in a series of bibliographical and bibliological works produced by H. Svientsitsky, especially his *Pochatky knyhopechatania na zemliakh Ukraïny* (Origins of Book Printing in the Lands of Ukraine, Lviv, 1924), and in *Prykrasy rukopysiv XV–XVII vv. Stavropihiis'koho museiu u L'vovi* (Ornamentation of Manuscripts from the Fifteenth to Seventeenth Centuries of the Stavropygian Museum in Lviv, 1923) by Modest Sosenko. It was on the basis of research conducted in the National Museum and other libraries and museums that I. Ohiienko published the *Istoriia ukraïns'koho drukarstva* (History of Ukrainian Printing, Lviv, 1925).

Another center of bibliological studies was the Shevchenko Scientific Society in Lviv, with its library and Bibliographical Commission, renamed after World War I Bibliological Commission. In 1937–9, through the efforts of the Bibliological Commission in cooperation with the Ukrainian Society of Bibliophiles, the monthly *Ukraïns'ka Knyha* (Ukrainian Book), was published in Lviv under the editorship of Eugene Julian Pelensky (1906–56). Substantial contributions to bibliological research were made by the journals: *Knyzhka* (Book, 1921–3), which appeared in Stanyslaviv under the editorship of Ivan Chepyha; *Ukraïns'ke Kny-*

*hoznavstvo* (Ukrainian Bibliology), published by a group of bibliologists at the Ukrainian Academy of Technology and Husbandry in Poděbrady, Czechoslovakia; and the non-periodical bibliological and bibliographical journal *Knyholiub* (Booklover, 1927–32), published by the Ukrainian Society of Bibliophiles in Prague, under the editorship of Stephen Siropolko. Bibliologist Lev Bykovsky (*b.* 1895) did outstanding work on the theory of bibliology, e.g., in *Ukraïns'ke knyhoznavstvo* (Ukrainian Bibliology, 1922), *Zamitky pro knyhoznavstvo ta knyhovzhyvannia* (Remarks on Bibliology and Utilization of Books, 1923), and other titles published abroad.

During World War II, as a result of Soviet and later German occupation, bibliological research in Lviv was discontinued. Published abroad by E. J. Pelensky were *Ukraïns'ka Knyha* (two issues) and several issues of *Ukraïns'ka Knyhoznavcha Biblioteka* (Ukrainian Bibliological Library), both in Cracow in 1939–44. In the United States, substantial research on early book printing in Ukraine has been done by Lubomyr Wynar.

# 2. BIBLIOGRAPHY

## BEGINNINGS OF UKRAINIAN BIBLIOGRAPHY

The pattern of development of Ukrainian bibliography was similar to that of western Europe, at times based on the lists of books approved by church and library catalogues. The first such "index of legitimate and apocryphal books" could be found in the *Izbornyk* (Chronicle) of 1073, titled "Books Which Should Be Read and Apocryphal Books Which Should Not Be Read." Actually this was a translation adapted to the prevailing conditions of the Slavic world. Brief bibliographical notes appear in the chronicles as early as the Princely period. The most interesting among them is the reference to the libraries of St. Sophia Cathedral in Kiev (1041) and Prince Volodymyr Vasylkovych. In listing the books donated by the prince to various churches (noted under the year 1289), the chronicler called him "a great booklover and philosopher." Many more book catalogues of various libraries, particularly those of the monasteries, have been preserved, e.g., those of the Slutsk monastery (fifteenth century), Suprasl monastery (sixteenth century), and the

Lviv Stavropygia (1619). The catalogues of the Kiev Academy (seventeenth and eighteenth centuries) and those of private libraries (especially of Ukrainian bishops and Kozak officers) have also been preserved. With the introduction of printing, the published price catalogues assumed important bibliographical significance (those of the Lviv Stavropygia, the Kievan Cave Monastery, Chernihiv, for example, in the seventeenth and eighteenth centuries).

The first serious attempt at compiling a bibliographical index of Ukrainian and east European books was *Ohlavleniie knyh, kto ikh slozhyl* (Contents of Books and Who Compiled Them) of the late seventeenth century, arranged presumably by Epiphanii Slavynetsky, who is considered the father of Ukrainian bibliographical science.

## DEVELOPMENT IN THE EIGHTEENTH AND NINETEENTH CENTURIES

As in general bibliology, Ukrainians played a significant part in the development of Russian bibliography. The first Russian bibliographer was Nicholas Bantysh-Kamensky (1737–1814), a Ukrainian from Nizhyn, who compiled the index "Denotitia librorum Rossicorum systematice expositorum" published in Moscow in 1776 in *Burgii elementa oratoria.* This index included publications of the third quarter of the eighteenth century, which appeared in the Russian empire in Russian and other languages. Bantysh-Kamensky also compiled a file of publications of the late seventeenth to the early nineteenth centuries (until 1805), which was published in part in 1894 in the journal *Knigovedenie* (Bibliology). Another Ukrainian who played an outstanding part in the development of Russian bibliography was B. Anastasevych of Kiev, who compiled the first index of periodical literature in Russia (1707–1820) and a bibliographical list of all lay writers from Rurik up to the early nineteenth century (both published in 1822). Equally prominent among Russian bibliographers of the first half of the nineteenth century was P. Keppen of Kharkiv, a geographer and statistician, the editor of the first bibliographical journal in Russia, *Bibliograficheskie listy* (Bibliographical lists, St. Petersburg, 1825–6), in which he published his bibliographical compilation "Spisok Pervopechatnym Slovenskim Knigam" (List of Incunabular Slavonic Books) and an article entitled "O sostavlenii slovaria Khar'kovskikh pisatelei" (On the Compilation of an Index of the Kharkiv Writers, 1828). These works may be said to have marked the beginning of Ukrainian bibliography.

Ukrainian book publishing of the fifteenth to the seventeenth centuries was also included in the index of incunabula, collected and published by the Russian bibliographers Basil Sopikov (1765–1818), Ivan Karataiev (1817–86), and Vukol Undolsky (1815–64). Important supplements to these indexes were provided by Jacob Holovatsky's (1814–88) *Dopolnenie k ocherku slaviano-russkoi bibliografii V.M. Undol'skago* (Supplement to the Slavic-Russian Bibliography of V. M. Undolsky, St. Petersburg, 1874) and Hilarion Svientsitsky's *Katalog knig tserkovno-slovianskoi pechati* (Catalogue of Books by the Church-Slavic Press, Zhovkva, 1908).

A prominent Ukrainian bibliographer of the first half of the nineteenth century was Michael Maksymovych (1804–73), a natural scientist, philosopher, historian, author of the bibliographical survey *Knizhnaia starina yuzhno-russkaia* (South Russian Book Antiquity, 1849). Others who published bibliographical works in the first half of the nineteenth century, mainly in the newspaper *Chernigovskie Gubernskie Vedomosti* (Chernihiv Provincial News), were Alexander Lazarevsky (1834–1902), historian and author of the first bibliographical index of Ukrainian studies titled *Opyt ukazatelia istochnikov dlia izucheniia Malorossiiskogo*

*Kraia* (An Attempt at Compilation of an Index of Sources for the Study of the Little Russian Land, 1853) and other works, and historian Gregory Mylorадovych (1839–1905), author of "Ukazanie

FIGURE 173. ALEXANDER LAZAREVSKY

FIGURE 174. MICHAEL KOMAROV

biograficheskikh svedenii o zamechatel'nikh liudiakh Malorossii" (Index of Biographical Information about Prominent Persons of Little Russia, 1858–9) and "Inostrannye Sochineniia o Malorossii" (Foreign Works on Little Russia, 1859). Also active in the field of bibliography was Alexander Kotliarevsky (1837–81), a historian, archaeologist, ethnographer, and author of articles on the functions of bibliography, who also compiled a bibliography on archaeology (1866) and a bibliographical index on the history of literature. The first bibliography on the history of Ukraine, *Opyt russkoi istoriografii* (Survey of Russian Historiography), was produced by Volodymyr Ikonnikov (1841–1923) and published in two volumes (four books) in Kiev in 1891–1908. Information on Ukraine was also included in the works of such famous Russian bibliographers as Vladimir Mezhov (1830–94), author of bibliographical book indexes and articles concerning Ukraine, published both separately and in the periodical *Osnova* (Foundation) in 1861–2; Nicholas Lisovsky (1854–1920), leading Russian bibliologist and bibliographer who compiled the most thorough index of Russian periodical literature (including Ukrainian publications), *Russkaia periodicheskaia pechat'* (Russian Periodical Publications, four editions, St. Petersburg, 1895–1915).

The first scholar to work exclusively on Ukrainian bibliography was Michael Komarov (1844–1913), author of the most thorough bibliographical compilations of Ukrainian literature, *Bibliograficheskii ukazatel' novoi ukrainskoi literatury 1798–1888* (Bibliographical Index of New Ukrainian Literature 1798–1888, Kiev, 1883), and *Ukrainskaia dramaturgiia; Sbornik bibliograficheskikh posobii do istorii ukrainskoi dramy i teatra ukrainskogo (1815–1906)* (Ukrainian Dramaturgy; Collection of Bibliographical Sources on the History of Ukrainian Drama and Ukrainian Theater [1815–1906], Odessa, 1906), republished with emendations and supplements under the title *Do ukraïns'koï dramaturhiï* (On Ukrainian Dramaturgy, Odessa, 1912). Komarov also compiled bibliographies of the works of individual writers and prominent figures in the arts and literature, such as Ivan Kotliarevsky, Taras Shevchenko, and Nicholas Lysenko.

In Western Ukraine, the work on bibliographies of books published in Galicia and other Ukrainian lands under Austrian jurisdiction were centered mainly in the library of the Ukrainian National Home in Lviv. The leading bibliographers here were Jacob Holovatsky, author of "Bibliografiia Galitsko-Russkaia s 1772 do 1848" (Galician-Ruthenian Bibliography from 1772 to 1848, Lviv, 1863), published in the newspaper *Halychanyn* (The Galician) and, particularly, Ivan Levytsky (1850–1913), author of a series of general bibliographical works of Western Ukraine from 1772 to 1893: *Halyts'ko-rus'ka bibliohrafiia za roky 1772–1800* (Galician-Ruthenian Bibliography for

FIGURE 175. IVAN LEVYTSKY

the Years 1772–1800, Lviv, 1903); *Halytsko-Ruskaia bibliohrafiia XIX st. z uzhliadneniem ruskykh izdanii, poiavyvshykhsia v Uhorshchyni i Bukovyni za rr. 1800–1886*, (Galician-Ruthenian Bibliography of the Nineteenth Century Including Ruthenian Publications Appearing in Hungary and Bukovina for the Period 1880–1886, Lviv, 1888–1895), and "Ukraïns'ka bibliohrafiia Avstro-Uhorshchyny za roky 1887–1900" (Ukrainian Bibliography of Austro-Hungary for the Years 1887–1900), actually up to 1893 only, published in *Materiialy do ukraïns'koï bibliohrafiï* (Materials on Ukrainian Bibliography, Vols. I–III, Lviv, 1909–11).

Contemporary literary and scholarly journals devoted much space to Ukrainian bibliography of the nineteenth century. Such periodicals as *Osnova* (Foundation), *Kievskaia Starina* (Kievan Antiquity), *Zapysky* (Memoirs) of the Shevchenko Scientific Society, *Zhytie i Slovo* (Life and World), *Pravda* (Truth), *Zoria* (Star), and *Literaturno-Naukovyi Vistnyk* (Literary and Scientific Herald) published a number of bibliographical lists and surveys of Ukrainian book publishing. The only bibliographical journal in Ukraine was the Russian language *Bogoslovskii Bibliograficheskii Listok* (Theological Bibliographical Leaflet, 1883–94).

A number of important works in biobibliography and bibliography of regional studies also appeared in the nineteenth century. In 1836, historian Dmytro Bantysh-Kamensky (1788–1850), son of Nicholas Bantysh-Kamensky, published in Moscow the *Slovar' dostopamiatnykh liudei russkoi zemli* (Dictionary of Prominent Persons of the Russian Land) and in St. Petersburg a separate supplement to this work in 1847. In 1855–6, the Russian bibliographer Gregory Gennadi (1826–80) published "Ukazanie biograficheskikh svedenii o zamiechatel'nykh liudiakh Malorossii (Index of Biographical Information about Prominent Persons of Little Russia) in *Chernigovskie Gubernskie Vedomosti.* "Biografii znamenitykh kievlian" (Biographies of Prominent Kievans) was published in 1857 and 1858 in the symposium *Pamiatnaia knizhka Kievskoi gubernii* (Commemorative Book of the Kiev *Guberniya*) edited by N. Chernyshev. P. Bodiansky published "Biograficheskii ukazatel' urozhentsev Poltavskoi gubernii" (Bibliographical Index of the Natives of the Poltava *Guberniya*) in the symposium *Pamiatnaia knizhka Poltavskoi gubernii za 1865 god* (Commemorative Book of the Poltava *Guberniya* for the Year 1865). "Biograficheskii ukazatel' zamechatel'nykh urozhentsev i deiatelei Khar'kovskoi gubernii" (Bibliographical Index of Prominent Natives and Leaders of the Kharkiv *Guberniya*, Kharkiv, 1883) was published in the *Kharkovskii Kalendar na 1884 god* (Kharkiv Almanac for the Year 1884). This index appeared with supplements in the 1885 and 1886 editions of the almanac also. In addition, a number of biobibliographical indexes of professors and instructors of the Kiev, Kharkiv, and Novorossiisky (Odessa) universities were published in various years, as were other guides to prominent leaders of Ukrainian descent.

Guidebooks on the bibliography of regional studies were published by G. Gennadi (on the Crimea, 1855–6), Zinaida Penkina (on Polisia, 1883), Ivan Ustinov (on the Kharkiv area, 1886), A. Leonov (on the Kherson area, 1890), Alexander Markevych (on the Crimea and Tavria, 1804–1902), Eugene Felitsyn and Bazil Shamrai (on Kuban, 1899–1916).

In Western Ukraine, I. Levytsky worked on the compilation of an extensive biobibliographical index (approximately 2,000 biographies) titled *Prykarpatskaia Rus' v XIX v. v biohrafiiakh* (Nineteenth-century Carpathian Ruthenia in Biographies). However, only four issues of this index appeared (up to and including the letter "B").

## EARLY TWENTIETH CENTURY

In addition to M. Komarov and I. Levytsky, others preoccupied with the compilation of bibliographical indexes in the early twentieth century were Borys Hrinchenko (1863–1910), author of *Literatura ukrainskogo fol'klora 1777–1900* (Literature of Ukrainian Folklore, Chernihiv, 1901), the first bibliographical index in this field, and Dmytro Doroshenko (1882–1951), author of a bibliographical index of Ukrainian studies, titled *Ukazatel' istochnikov dlia oznakomleniia s Yuzhnoi Rus'iu* (Index of Sources for Familiarization with Southern *Rus'*, St. Petersburg, 1904), the second edition of which appeared in Prague in 1925 under the title *Pokazhchyk novoï ukraïns'koï literatury v Rosiï za 1798–1897 rr.* (Index of New Ukrainian Literature in Russia for the years 1798–1897). Serhii Yefremov's (1876–1937) index, "Biblioteka po Ukrainovedeniiu" (Library of Ukrainian Studies), appeared in 1917 in the magazine *Ukrainskaia Zhizn'* (Ukrainian Life).

The establishment of the first bibliographical institutions in eastern and Western Ukraine also dates back to the early twentieth century. A separate bibliographical commission was organized within the Shevchenko Scientific Society in Lviv in 1909. Headed by I. Levytsky, its main function was the compilation of a full bibliography of Ukrainian publications. It published *Materiialy do ukraïns'ko-rus'koï* (later, *ukraïns'koï*) *bibliohrafiï* (Materials on Ukrainian-Ruthenian [later, Ukrainian] Bibliography, three volumes in 1909–11, additional three volumes in 1918–39) which included works of I. Levytsky, Volodymyr Doroshenko, and E. J. Pelensky. In 1910, on the initiative of M. Hrushevsky, a bibliographical bureau was created within the commission, headed by V. Doroshenko (1879–1963), to compile Ukrainian bibliography from 1911 on, to continue I. Levytsky's bibliographical work for the years 1900–10, and to catalogue all foreign language publications on Ukraine. In 1912, a commission was established at the Kiev Agronomical Society for the purpose of reviewing the popular literature on agriculture.

Among biobibliographical works published in the early twentieth century, the index *Koryfeï ukraïns'koï stseny* (Coryphaei of the Ukrainian Stage, Kiev, 1901) is of considerable importance in the history of the Ukrainian theater. "Biograficheskii slovar' professorov i prepodavatelei Khar'kovskogo Universiteta (1805–1905) (Biographical Index of Professors and Lecturers of Kharkiv University, 1805–1905), published in a series of monographs on the individual departments of this university (1905–8) and compiled by Dmytro Bahalii and other bibliographers, also represented a significant contribution to the history of Ukrainian scholarship. Of equal importance was the *Kratkii biograficheskii slovar' uchenykh i pisatelei poltavskoi gubernii s poloviny XVIII v.* (Brief Biographical Index of Scholars and Writers of the Poltava *Guberniya* from the Mid-Eighteenth Century, Poltava, 1912, with supplements in 1913 and 1914).

Important regional biographical works were produced by Paul Tutkovsky (on Polisia, 1910), P. Draganov (on Bessarabia, 1912), Alexander Prusiewicz (on Podilia, 1912–14).

## AFTER 1917

After the March revolution of 1917 and the subsequent establishment of the Ukrainian independent state, great progress was made in bibliographic work in Ukraine. The journal *Knyhar* (Bookseller) published in Kiev became the focal point of all bibliographical pursuits.

It was during the immediate post-revolutionary period that the first attempts were made at institutionalizing bibliography in Ukraine. On July 1, 1918, the Administration in Charge of Publica-

tion was created within the Ministry of Internal Affairs of the Ukrainian Hetman State, with the specific functions of maintaining a general record of all book publishing and compilation of bibliographical indexes. The Administration functioned also during the period of the Ukrainian National Republic (1918–19) and for a short time during the Soviet occupation under the name Central Administration in Charge of Publication. By a law of January 24, 1919, adopted by the Council of People's Ministers of the Ukrainian National Republic, the Supreme Book Chamber was created to maintain records of all published books and their systematization. The chamber began functioning during the Soviet occupation on the basis of a law of June 7, 1919. It was composed of four departments, bibliography, records, book stock, and library, and had branches in Vinnytsia, Kamianets Podilsky, and Katerynoslav.

As a result of the political events towards the end of 1919, the work of the Supreme Book Chamber was temporarily discontinued. During the Soviet occupation it was subjected to various changes and was later reorganized into the Central Bibliographical Department of the All-Ukrainian State Publishing House with headquarters in Kharkiv. In June, 1922, this department was again transformed into the Ukrainian Book Chamber attached to the State Publishing House of Ukraine and later to the Chief Administration of Literary Affairs in the Ukrainian SSR (Ukrholovlit). After 1930, following the persecution of Ukrainian scholarship, the chamber was reorganized into the State Bibliographical Institute. In 1938 it was renamed the Book Chamber of the Ukrainian SSR by a joint order (June 27, 1938) of the Central Executive Committee and the Council of People's Commissars of the Ukrainian SSR and is still functioning under this name.

In addition to the Supreme Book Chamber in Kiev, the following bibliographical institutions were established: the Library and Bibliographical Bureau (1919) attached to the Agricultural Scientific Committee of Ukraine in Kharkiv; a commission for the description of publications of the sixteenth through the eighteenth centuries (1925) attached to the Ukrainian Academy of Sciences in Kiev; the Ukrainian Bibliographical Society in Odessa (1925); and the Bibliographical Commission of the Ukrainian Academy of Sciences (1926). Research in bibliography was conducted by the Scientific Research Commission of the All-Ukrainian National Library, the Ukrainian Scientific Institute of Bibliology in Kiev, the Scientific Research Department on the History of Ukrainian Culture in Kharkiv headed by D. Bahalii, and the Central Scientific Library in Odessa. In Kuban, a bibliographical section was created in 1917 within the Council of Study and Research of the Kuban Land in Katerynodar which functioned until 1923, and the Institute of Bibliology established in 1919, also in Katerynodar.

The following bibliographical journals, in addition to *Knyhar*, devoted a great deal of space to the treatment of theoretical and practical questions of bibliography, and recorded all current book and periodical publications: *Knyzhnyi Vistnyk* (Book Herald, Kiev, 1919) published by the National Library of Ukraine; *Holos Druku* (Voice of Printing, Kharkiv, 1921) published by the Central Bibliographical Department of the All-Ukrainian State Publishing House; *Knyha* (Book, Kharkiv, 1923–4) published by Knyhospilka and edited by Serhii Pylypenko; *Nova Knyha* (New Book, Kharkiv, 1924–5) published by Chervonyi Shliakh (Red Pathway) and edited by S. Pylypenko and Hordii Kotsiuba; and *Litopys Ukraïns'koho Druku* (Chronicle of Ukrainian Publication, from 1924), the organ of the Ukrainian Book Chamber for recording all Ukrainian printed publications. Bibliographical reviews of works in various branches

of scholarship appeared also in the scholarly journal *Ukraïna* (Kiev, 1924–31) edited by M. Hrushevsky. Problems of bibliography were treated in such publications as *Zhurnal Bibliotekoznavstva ta Bibliohrafiï* (Journal of Library Science and Bibliography, Kiev, 1927–30), *Bibliotechnyi Zbirnyk* (Library Symposium) of the National Library of Ukraine, particularly its third issue titled "Bibliohrafiia na Ukraïni" (Bibliography in Ukraine, Kiev, 1927); *Ukraïns'ka Bibliohrafiia* (Ukrainian Bibliography, No. 1, Kiev, 1928) published by the Bibliographical Commission of the All-Ukrainian Academy of Sciences; *Zapysky Ukraïns'koho Bibliohrafichnoho Tovarystva v Odesi* (Transactions of the Ukrainian Bibliographical Society in Odessa, 1928–30), *Materiialy do ukraïns'koï istorychnoï bibliohrafiï* (Materials on Ukrainian Historical Bibliography, 1929–30), a publication of the chair of History of Ukrainian Culture in Kharkiv; *Tekhniko-bibliograficheskii biulleten'* (Technical Bibliography Bulletin, 1925–8) published by the All-Ukrainian Association of Engineers in Kharkiv.

All of the above-mentioned bibliographical institutions and publications were either abolished or discontinued during the early 1930's by the Soviet régime.

Before 1930, the following men were preoccupied with bibliographical research and the compilation of bibliographical indexes and surveys: George Mezhenko, Anthony Prykhodko, George Kovalevsky, Lev Kohan, Michael Yasynsky, Victor Romanovsky, Constantine Koperzhynsky, Sergei Rubinstein, Saul Borovyi, Nicholas Saharda, Michael Hodkevych, Bartholomew Ihnatiienko. Almost all of them suffered persecution and were forced to leave Ukraine and seek employment in other republics.

Some of the more significant bibliographical indexes were compiled and published in the twenties by: Paul Tutkovsky (1858–1930), *Materiialy dlia sil's'ko-hospodars'koï bibliohrafiï Ukraïny* (Materials for Agricultural Bibliography of Ukraine, Kiev, 1924) and *Materiialy dlia bibliohrafiï mapoznavstva Ukraïny* (Materials for the Bibliography of Cartography of Ukraine, Part I, Kiev, 1924); Alexander Andriievsky (1869–1930), *Bibliohrafiia literatury z ukraïns'koho fol'kloru* (Bibliography of Literature on Ukrainian Folklore, Kiev, 1930); Alexander Leites (*b.* 1901) and Nicholas Yashek (*b.* 1883), *Desiat' rokiv ukraïns'koï literatury, 1917–1927* (Ten Years of Ukrainian Literature, 1917–27, State Publishing House of Ukraine, 1928); B. Ihnatiienko (*b.* 1892), *Bibliohrafiia ukraïns'koï presy za sto lit 1816–1916* (Bibliography of Ukrainian Press in One Hundred Years, 1816–1916, Kiev, 1930); Theodore Maksymenko (*b.* 1897), *Materiialy do kraieznavchoï bibliohrafiï Ukraïny, 1847–1929* (Materials on the Bibliography of Regional Studies of Ukraine, 1847–1929, published in 1930); M. Yasynsky (*b.* 1889), author of works on the history of Ukrainian bibliography and first indexes of Ukrainian bibliographies (before 1924 and for the years 1926–8).

In addition, a number of more or less extensive bibliographies appeared in the twenties with the publication of literary and scholarly works and studies on the creative productions of leading Ukrainian literary figures.

In Kuban, Borys Horodetsky (1876–1941) made several outstanding contributions to bibliography, among them *Bibliografiia kubanskogo kraia* (Bibliography of the Kuban Land, I–IV, Katerynodar, 1918–19).

Ukrainians, as well as Russians born in Ukraine, played a leading role in the development of Soviet Russian bibliography. Bohdan Bodnarsky (born in 1874 in Radyvyliv, Volhynia) was the founder and long-time editor of the leading Russian bibliographical journal, *Bibliograficheskie Izvestiia* (Bibliographical News, 1913–25, 1929). He was also the first director of the Russian Book Chamber (1920–1) and author of numerous works

on the theory and history of bibliography and library science. It was through his efforts that the decimal bibliographical classification was adopted in Russia as early as 1909. Nicholas Matsuiev (born in 1894 in the village of Blystiv, Chernihiv area) also contributed significantly to Russian literary science bibliography. Employed in various libraries of Ukraine from 1917 to 1923, Matsuiev began his monumental multi-volume work *Khudozhestvennaia literatura russkaia i perevodnaia* (Russian and Translated Art Literature) while still in Ukraine. Started in 1926, this work includes Ukrainian literary productions translated into or reviewed in Russian.

In Polish-occupied Galicia after World War I, bibliographical research slowed down considerably. The Shevchenko Society's Bibliographical Commission managed to publish only three volumes of *Materiialy do ukraïns'koï bibliohrafiï* (Materials on Ukrainian Bibliography) including two issues of "Spys Tvoriv Ivana Franka" (List of Works by Ivan Franko) compiled by V. Doroshenko. The journal *Knyzhka* (Book, Stanyslaviv, 1921–3) devoted much space to the problems of bibliography. In a special supplement the journal carried the "All-Ukrainian Bibliography" compiled by Ivan Kalynovych (1885–1927), author of a bibliography of historical works published in *Materiialy do ukraïns'koï bibliohrafiï* and many indexes in various branches of knowledge. The journal *Ukraïns'ka Knyha* (Ukrainian Book) also devoted space to contemporary western Ukrainian bibliography. A significant achievement of western Ukrainian bibliographical research was the publication of E. J. Pelensky's *Bibliohrafiia ukraïns'koï bibliohrafiï* (Bibliography of Ukrainian Bibliography, 1934), which contained a list of 2,393 published works. A vast bibliography on the Ukrainian press was compiled and published by Arkadii Zhyvotko (1890–1948), who worked in Prague. Bibliographies of works dealing with Ukrainian subjects as well as books published abroad were recorded in the émigré bibliological journals (see p. 431). After the Soviet occupation of western Ukrainian lands, bibliographical work in Lviv was discontinued, and such outstanding bibliographers as V. Doroshenko and E. J. Pelensky emigrated to the West.

FIGURE 177. ARKADII ZHYVOTKO

## IN THE UKRAINIAN SSR, 1932–66

After the dispersal of Ukrainian bibliographical institutions, publications, and bibliographers, systematic work in this field was not revived until the late 1930's. It was concentrated mainly in the State Bibliographical Institute, which was again renamed in 1938 the Book Chamber of the Ukrainian SSR. The organ of this institution, *Litopys Ukraïns'koho Druku* (Chronicle of Ukrainian Printing), published since 1924 and containing catalogue cards as well as other supplements (e.g., "Bulletin of the Ukrainian Book Chamber," "Supplements for Publications Beyond the Borders of the Ukrainian SSR," "Press," and "Statistics on Book Production of the Ukrainian SSR") appeared periodically through 1930 only. In 1931–4, it appeared in the form of yearbooks under the title *Litopys druku URSR* (Chronicle of Printing of the Ukrainian SSR). Separate publications began appearing in 1935: *Litopys Knyh* (Chronicle of Books from 1935, almost every month), *Litopys Retsenzii* (Chronicle of Reviews, from 1936), *Litopys Zhurnal'nykh Stattei* (Chron-

icles of Magazine Articles, biweekly from 1936), *Litopys Hazetnykh Stattei* (Chronicles of Newspaper Articles, bimonthly from 1937), *Litopys Obrazotvorchoho Mystetstva* (Chronicle of Fine Arts, from 1937), *Litopys Muzychnoï Literatury* (Chronicle of Musical Literature, from 1954). *Litopys Periodychnykh Vydan' USSR za Rik 1934* (Chronicle of Periodical Publications of the Ukrainian SSR for the Year 1934) started as a yearly compilation in 1934 but was not published again. *Litopys druku URSR* was renewed in 1946.

The main centers of bibliographical research in the Ukrainian SSR at the present time are: the Book Chamber of the Ukrainian SSR in Kharkiv, subordinate to the Ministry of Culture of the Ukrainian SSR; the Central Scientific Library of the Academy of Sciences of the Ukrainian SSR in Kiev; and the V. Korolenko Scientific Library in Kharkiv. A number of bibliographical indexes published in 1957–66 have been compiled by research workers engaged in these institutions: *Khudozhnia literatura vydana na Ukraïni za 40 rokiv, 1917–1957* (Art Literature Published in Ukraine during the Forty Years from 1917 to 1957, Part I, Kharkiv, 1958); *Fizychna heohrafiia URSR* (Physical Geography of the Ukrainian SSR, Kiev, 1960); *Knigi grazhdanskoi pechati XVIII veka* (Books Printed in *Grazhdanka* Type in the Eighteenth Century, Kiev, 1956) and *Knigi pervoi chetverti XIX veka* (Books of the First Quarter of the Nineteenth Century, Kiev, 1961); *Ukraïns'ka matematychna bibliohrafiia 1917–60* (Ukrainian Mathematical Bibliography, 1917–60, Kiev, 1963). The five-volume biobibliographical index *Ukraïns'ki pys'mennyky* (Ukrainian Writers, Kiev, 1960–5) was published by the State Publishing House of Art Literature. A number of bibliographical indexes on the creativity of Ukrainian writers, both contemporary and classical, also appeared in 1957–66, among them, *T. H. Shevchenko—bibliohrafiia literatury pro zhyttia i tvorchist'* (T. H. Shevchenko—Bibliography of Literature Dealing with His Life and Work, 2 Vols., Kiev, 1963) and *Ivan Franko—bibliohrafiia literatury* (Ivan Franko—Bibliography of literature, Kiev, 1966).

Individual areas of Ukrainian studies are treated in Russian-language indexes published by the Academy of Sciences of the USSR: biobibliography in I. M. Kaufman's *Russkie biograficheskie i biobibliograficheskie slovari* (Russian Biographical and Biobibliographical Dictionaries, Moscow, 1956); archaeology in the bibliography *Sovetskaia arkheologicheskaia literatura 1941–1957* (Soviet Archaeological Literature 1941–57, Moscow-Leningrad, 1957) and a similar index for the years 1918–40 published in 1965; ancient history and history of literature in L. P. Dmitrieva's *Bibliografiia russkogo letopisaniia* (Bibliography of Russian Chronicle Writing, Moscow, 1962) and I. U. Budovnits' *Slovar' russkoi, ukrainskoi, belorusskoi pismennosti i literatury* (Dictionary of Russian, Ukrainian, Belorussian Writing and Literature, Moscow, 1962); linguistics in the seventh volume of the index *Bibliograficheskii ukazatel' literatury po russkomu yazykoznaniiu s 1825 po 1880 god* (Bibliographical Index of Literature on Russian Linguistics from 1825 to 1880, Moscow, 1958) and in the bibliographical index of linguistic literature published in the Soviet Union from 1918 to 1960, *Slavianskoe yazykoznanie* (Slavic Linguistics, I–II, Moscow, 1963), in which the section on Ukrainian literature has been prepared by A. S. Salomashenko.

## ABROAD SINCE 1945

Ukrainian bibliographers continued their work abroad under adverse conditions, deprived of access to libraries and archives in Ukraine, and out of touch with publishing activity in their native land. Since the scope of their activities was thus limited, they concentrated on describing and cataloguing Ukrainian

publications appearing abroad and foreign language publications which dealt with Ukraine and its people. Bibliographical work was centered in the bibliological sections of the Shevchenko Scientific Society and the Ukrainian Academy of Art and Sciences in the United States and Canada. Its foremost representative was Volodymyr Doroshenko (1879–1963), the author of "Pokazhchyk Vydan' Shevchenkovykh Tvoriv" (Index of Editions of Shevchenko's Works). Appearing as the sixteenth volume of *Povne vydannia tvoriv Taras Shevchenka* (Complete Edition of Works by Taras Shevchenko, Warsaw-Lviv, 1939), the index contained entries up to and including 1938. The supplemented edition of this index (up to 1960) was published in 1961 in Chicago as the fourteenth volume of *Povne vydannia tvoriv T. Shevchenka* (Mykola Denysiuk Publishing House, Chicago, U.S.A.). Doroshenko also compiled a number of indexes of Ukrainian periodical literature published abroad from various newspapers, journals, and symposia. The Bibliological Commission of the Ukrainian Academy of Art and Sciences in the United States, headed by Doroshenko, started work on a catalogue of contemporary Ukrainian publications abroad and published an index, *Richnyk ukraïns'koï bibliohrafiï 1957* (Annals of Ukrainian Bibliography 1957, New York, 1960), compiled by Osyp Danko and Myroslav Labunka. As a separate edition of its *Annals* (New York, 1957), the Ukrainian Academy of Art and Sciences in the U.S. published Dmytro Doroshenko's *A Survey of Ukrainian Historiography* with the supplement *Ukrainian Historiography 1917–1956* by Alexander Ohloblyn. The Ukrainian Free Academy of Sciences in Canada has been publishing yearly two bibliographical indexes, *Slavica Canadiana* (since 1950) compiled by Jaroslaw Rudnyckyj, and *Ucrainica Canadiana* (since 1953). The monthly *Biblos*, a journal devoted to bibliography and book reviews, has been appearing in New York since 1955 under the editorship of Nicholas Sydor-Chartoryisky.

A series of bibliographical indexes compiled by Leonid Bachynsky (*b.* 1896) was published by the Ukrainian Museum in Cleveland (e.g., works on Shevchenko published in the U.S. and Canada, Ukrainian publications printed in Cleveland, etc.).

A number of Ukrainian bibliographers in the United States and Canada are engaged in research on and compilation of bibliographies of foreign language publications dealing with Ukraine: George Fedynsky, Lubomyr Wynar, Ivan Luchkiv, George Gerych, Roman Weres, Dmytro Shtohryn, Alexander Sokolyshyn, Andrew Fessenko, Peter Goy, Andrew Gregorovich, and Alexander Fedynsky.

# 3. THE BEGINNINGS OF PRINTING

## SZWAJPOLT FIOL'S PRINTING IN CRACOW

The history of early Ukrainian printing begins with the publication of the first books printed in *kyrylytsia*, the Cyrillic alphabet, in Cracow. These earliest printed books are connected with the name of a Cracow artisan and inventor, Szwajpolt (Schweitpold) Fiol (or Viol, Veyl, Feyl), (*ca.* 1460–1525), a German from Neustadt in Franconia, but a citizen of Cracow since 1479. Probably on the order of Ukrainian Orthodox hierarchs, possibly the Lviv Brotherhood of the Assumption, Szwajpolt established a printing shop in Cracow in the early 1480's and printed five books in the "Ruthenian language" (*ruthenae literae libri*). These books were *Osmohlasnyk* or *Octoechos*, *Chasoslovets* (prayer book), *Triod' postna* (Lenten Triodia) and *Triod' tsvitna* (Palm Sunday Triodia), and a *Psaltyr* (Book of Psalms). The Cyrillic-Ruthenian type (*rewsische Schrift der Buchstaben*) in which these books were printed was prepared for Fiol by Rudolph Borsdorff, a German from Braunschweig, who in 1485 studied astronomy at the University of Cracow. Numerous Ukrainianisms—words and phrases taken from everyday spoken Ukrainian—evident in the texts of these editions, lends support to the belief that Ukrainians, of whom there were many in Cracow at the time, participated in editing and correcting the books.

In 1491, soon after publishing *Osmohlasnyk* and *Chasoslovets*, persecution by the Catholic Inquisition in Cracow forced Szwajpolt Fiol to stop printing church books for Orthodox Ukrainians. Arrested for the propagation of "heretical ideas" and for insubordination to the church authorities, he was freed in March, 1492. The editions of his "Ruthenian books" already printed but not yet in circulation were probably burned.

## BELORUSSIAN-UKRAINIAN PRINTING

After Szwajpolt Fiol, the printer of Church Slavonic books in Cyrillic type destined for circulation not only in Belorussia-Lithuania but also in Ukrainian territory and other Slavic countries, was the Belorussian monk Francis Skoryna (*ca.* 1490–1540), born in Polotsk (Franciscus Scorina de Poloczko Ruthenus), a doctor of medicine from the University of Padua (1512), a humanist and printer. Skoryna established a printing shop in Prague and printed a *Psaltyr* (Book of Psalms, 1517). In 1518–19 he published twenty-two books of the Bible in separate editions "fully translated into the Ruthenian tongue." With the help of Wilno burghers, Skoryna moved his printing

FIGURE 178. TITLE PAGE OF FRANCIS SKORYNA'S *Bibliia Ruska*

presses from Prague to Wilno, where he published his *Apostol* (Book of the Apostles) in 1525, and eventually an undated prayer book—*Malaia podorozhnaia knyzhytsia* (Small Portable Book).

The printing-publishing activity of Belorussian Simeon Budnyi (*ca.* 1595) is also a factor in the growth of Belorussian-Ukrainian printing. Budnyi was a student at the University of Cracow, a Calvinist and eventually a Socinian, and the works he printed in Nesvizh-*Kathekhizys dlia prostykh liudei yazyka russkoho* (Catechism for Common Ruthenian-speaking People, 1562) and *O opravdanii hrishnoho chelovika pered Bohom* (On a Sinner's Justification Before God, 1562), helped the spread of Protestantism in Ukraine. To answer the needs of Ukrainian churches, brotherhoods, and schools, some "traveling printing shops" became active in Ukrainian-Belorussian territory. The most important of these was the itinerant printing shop of Basil Tiapynsky, publisher of an *Evanheliie* (Gospel) printed in Church Slavonic with a parallel Belorussian-Ukrainian text. The publishing activity of the printing press founded in 1567–8 at the expense of Lithuanian Hetman Gregory Khodkevych in Zabludov (northern Podlachia) was also related to Belorussian-Ukrainian book production. Here two refugees from Muscovy, Ivan Fedorov and Peter Mstyslavets, in 1568–9 printed *Evanheliie uchytel'noie* (The Teaching Gospel) and in 1589–70 *Psaltyr z Chasoslovtsem* (The Book of Common Prayer) which some scholars consider the first Ukrainian printed books.

## IVAN FEDOROVYCH AND HIS ACTIVITY IN UKRAINE

The undeniable and generally acknowledged beginnings of Ukrainian printing are associated with Lviv, and with the name of printer Ivan Fedorov. Having printed an *Apostol* (Book of the Apostles) in Moscow in 1564, the printers—Moscovite Ivan Fedorov and

FIGURE 179. ST. LUKE, WOODCUT FROM I. FEDOROVYCH'S *Apostol*, LVIV, 1574

Belorussian Peter Mstyslavets—were forced to flee by the enraged Muscovite clergy. At first they found shelter and the opportunity to practice their printing trade in Zabludov. After four years there they separated: Peter Mstyslavets went to Wilno and Ivan Fedorov, who in Zabludov had changed his surname to Fedorovych, to Lviv where in 1573 he established the first permanent printing shop in Ukrainian territory. The first edition prepared by this shop was an *Apostol* (Book of the Apostles) in 1574, the first book produced by Ukrainian printing presses. This same year, an eighty-page primer was printed in Fedorovych's shop, the first printed school handbook for beginners in writing and grammar in Ukraine and other east Slavic lands.

Finding himself in financial difficulties after printing these two books, Ivan Fedorovych was forced to give up his

FIGURE 180. COLOPHON FROM IVAN FEDOROVYCH'S *Apostol*, LVIV, 1575

FIGURE 181. FIRST PAGE OF THE OSTRIH BIBLE, 1581

Lviv printing shop and the books already printed to pay his debts. In 1575 he accepted a position offered him by Prince Constantine Ostrozky as bailiff of a monastery in Derman, near Ostrih in Volhynia. Probably in 1575, Fedorovych moved to Ostrih and there founded a new printing shop financed by Prince Ostrozky. After lengthy preparation, especially careful editing by a group of Ostrih scholars with the cooperation of Fedorovych himself, an edition of the Bible was completed in 1581. This monumental printing work was preceded by publication of *Psaltyr i novyi zavit* (Book of Psalms and New Testament) in 1580. After these accomplishments Ivan Fedorovych returned to Lviv and attempted unsuccessfully to buy back his former printing shop. He died in Lviv in December 1583.

The printing shop he founded and developed in Ostrih continued to publish new books even after its founder's departure. In the years 1582–1600 it published over twenty volumes.

## 4. BOOK PRINTING IN THE SEVENTEENTH AND EIGHTEENTH CENTURIES

At the time when book printing was introduced into Ukraine and its neighboring lands—Poland, Belorussia, and Muscovy—the printers were also the publishers of the books released by their shops. The founders, owners, and managers of printing shops did not merely supervise the technical format of the books printed by them, but also searched for appropriate texts, edited them, and added their own foreword or postscript to the edition.

### PRINTING IN LVIV

The first Ukrainian publishing house, communal in character, was that operated by the Brotherhood of the Assumption—later the Stavropygia Brotherhood—in Lviv. Its publishing activity began in 1591 and lasted almost 350 years (until 1939). The printing shop of the Brotherhood, established in 1586 partly from I. Fedorovych's printing press, was both a printing shop and a publishing-editing center; it published numerous liturgical and theological-polemical texts as well as school textbooks. Among its early achievements was *Hramatyka dobrohlaholyvoho ellynoslovenskaho yazyka* (A Grammar of the Correct Greek-Slavic Language) printed under the name *Adel'fotes* and published in 1591.

Thirteen of the editions published by this press in the first twenty-five years of its activity (1591–1616) have been preserved—for the most part educational texts and schoolbooks. In the production of succeeding decades of the seventeenth century, similar texts were published, as were panegyrics and works representing the dramatic and poetic literature of the time. During the years 1630–48, the Brotherhood published eleven liturgical books whose texts had been thoroughly prepared. This shop's production in the years 1650–1750 was predominantly liturgical and included a major number of reprints of earlier publications. In this period, the Brotherhood also published ten primers (*hramatychky*, or "little grammar books") for school use of which seven have been preserved. The printings of these primers increased from 600 copies in 1662 to 5,900–7,000 copies in 1698–1720. The total of the *hramatychky* published over fifty-eight years was 24,900 copies.

Among the Brotherhood's publications in the second half of the eighteenth century the most significant are: an illustrated book on moral theology entitled *Ifika Iieropolitika* (1760) and *Bohosloviia Nravouchytel'naia* (Moral Theology, in two editions, 1752 and 1760). In the next twelve years the publishing activity of the Brotherhood declined somewhat, but with the annexation of Galicia by Austria in 1772 their printing shop took on fresh vigor; new editions of textbooks and first works of a secular character were published: a philosophical textbook by Christian Baumeister translated by P. Lodii, panegyrics, etc.

Private and bishop-owned publishing-

printing houses also existed in Lviv in the seventeenth and eighteenth centuries. Most prominent among those privately owned was that of Michael Sliozka, which published forty-two different works in the years 1638–67. Three books were published in 1645–6 in the printing shop of Bishop Arsenii Zheliborsky, later transferred to Univ; in 1687–8 two books —*Metryka* and *Psaltyr*—came from the press of Lviv bishop Joseph Shumliansky which was later acquired by the Stavropygia Brotherhood. Bishop Shumliansky also established a printing press in St. George's church in Lviv which published only one book, the *Irmolohion* (Music for Liturgy) in 1700—the first example of Ukrainian printed music notes.

Lviv publications were to be found in all Ukrainian lands: Galicia, Right-Bank Ukraine, Left-Bank Ukraine, Transcarpathia, and Bukovina. They were circulated in Belorussia, Muscovy (Russia), Wallachia, Moldavia, Bulgaria, and Serbia. Printers from Lviv were co-founders of printing shops in Moldavia and Wallachia. Ivan Kunotovych worked in Dovhopole (Kimpolung) and Basil Stavnytsky in Jassy.

There were also Armenian and Polish printing houses in Lviv. The Armenian printing establishment there published three books in Armenian in the years 1616–18, *Psaltyr* (Psalter), *Molytvoslov* (Prayer Book), and *Likuval'nyk* (Medicine Book). Polish printing began in Lviv in 1578 in the royal itinerant printing press of G. Szarfenberger. The first permanent Polish printing press was that of the Jesuits in Lviv in 1642–1773. Private Polish printing shops were operated by P. Holczewski in 1738–51 and J. Szlichten and his heirs, 1755–85. For the most part, these shops published religious literature and panegyrics and some literary or scholarly works in Polish and Latin.

After the annexation of Galicia by Austria in 1772, Anthony Piller established a printing shop in Lviv which his heirs continued to operate. In the closing decades of the eighteenth and throughout the nineteenth century, this press published books in German, Latin, Ukrainian, and Polish.

## ITINERANT PRINTING-PUBLISHING SHOPS

In addition to the permanent printing establishments found generally in the larger towns, itinerant printing shops also played a part throughout the first half of the seventeenth century. Included in their number were shops organized by Bishop Gedeon Balaban in Stratyn near Rohatyn, which published two books in 1604–7, and in Krylos near Halych, where the Krylos- or Halych-*Uchytel'noie Evanheliie* (Teaching Gospel) was printed in 1604. The equipment of the Stratyn printing house was later moved

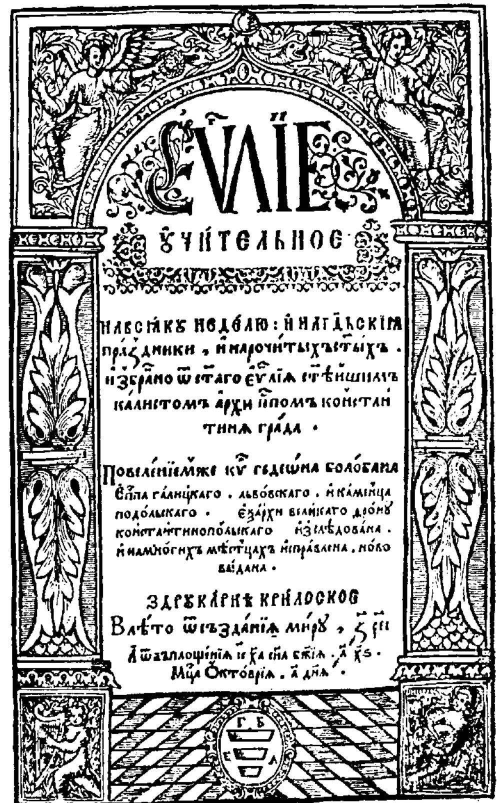

FIGURE 182. TITLE PAGE OF *Uchytel'noie Evanheliie*, KRYLOS, 1606

by Y. Pletenetsky to Kiev, where it formed the nucleus of a printing house of the Kievan Cave Monastery. A printing press in Rokhmaniv in Volhynia (near Kremianets) transferred from Pochaïv in 1619 printed two books: *Uchytel'noie Evanheliie* (Teaching Gospel) and *Zertsalo bohosloviia* (Mirror of Theology), both through the efforts of Cyril Tranquillion Stavrovetsky, who eventually moved this shop to Chernihiv and there in 1646 printed *Perlo mnohotsennoie* (Pearl of Inestimable Value). The printing press established by hieromonk Paul Domzhyva-Liutkovych-Telytsia and hierodeacon Sylvester in Uhertsi in the Sambir region was itinerant in the full sense of the term. In the years 1617–25, this press moved to Minsk, and from there to the village of Chetvertyn near Lutsk. After the death of the founders, it was given to the Lutsk Brotherhood. Itinerant printing presses were also active in Univ (transferred from Lviv), in Kremianets (from 1636), and in Kostiantyniv (until 1688).

FIGURE 183. TITLE PAGE OF *Chasoslov*, KIEV, 1616

## BOOK PRINTING IN KIEV

Once its printing shop was established and supplemented with the furnishings of the Stratyn printing house by the archimandrite of the Cave Monastery, Yelysei Pletenetsky, the Kievan Cave Monastery became the leading publishing house in Kiev. The first editions to be published by it (1616–19) were: *Chasoslov* a panegyric honoring Pletenetsky), *Vizerunok tsnot* (Ornament of Virtues), and *Anfolohion Mineia prazdnychna* (Holiday *Mineia*). It is estimated that in its first fifteen years this printing press produced about forty books. An important publication of this period was Pamvo Berynda's *Leksykon slavenoroskii* (Slavic-Ruthenian Lexicon, 1627), the first Ukrainian dictionary.

The further development of book printing in Kiev took place under the leadership of Peter Mohyla 1596–1647, who became metropolitan of Kiev in 1632 and for more than twenty years directed publishing activity in Ukraine. Under Peter Mohyla collections of verse and panegyrics, in addition to liturgical books, theological tracts, and polemical literature, were published. Important works of the time were *Ekzegezis* and *Paterykon* (1638) by Sylvester Kosiv, *Teraturgema* (1638) by Athanasius Kalnofoisky, *Lithos* (1644) and the huge 1,760-page *Evkholohion al'bo Molytoslov* (Prayer Book, 1646) by Peter Mohyla. Peter Mohyla established a separate press at the Cave Monastery for the printing of Polish books, of which the first was *Panegyric* (Eulogy) published in 1633. During the wars of Khmelnytsky, the Cave printing press, under archimandrite Joseph Tryzna (1647–56), published very little, limiting itself mostly to reprints. Production increased under archimandrite Innocent Gizel (1656–83)

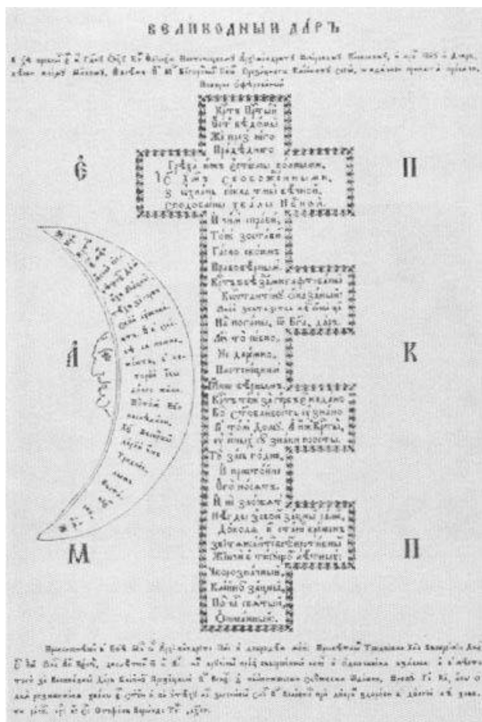

FIGURE 184. VERSES OF PRINTER, STEPHEN BERYNDA, DEDICATED TO YELYSEI PLETENETSKY, IN THE FORM OF THE LATTER'S COAT OF ARMS (1623)

FIGURE 185. ENGRAVING FROM THE KIEVAN *Pateryk*, 1631

when such works as *Kliuch Razuminiia* (Key to Understanding, 1659) were published, reprinted many times, and translated into Russian and Rumanian; among other works printed was the widely known Kievan Cave *Pateryk* (Patericon, 1661). An especially important work printed initially in 1674 and then reprinted some thirty times was *Synopsis*—the first textbook of the history of *Rus'*-Ukraine.

At the end of the seventeenth and the beginning of the eighteenth centuries, the Cave Monastery printing shop was active in a wide range of subjects; special attention was paid to the artistic appearance of the volumes, and the whole project was under the guidance of the master engravers of the time. Many liturgical books, school textbooks, calendars, and odd jobs for the civilian Muscovite authority in Ukraine were handled. As a result of the publication in January 1718 of *Mynolohion* or *Misiatseslov* (Book of Saints), the printing shop was persecuted and cheated by the Muscovite government and suffered ecclesiastical censorship for affirming the Kievan Cave Monastery's dependence on the patriarch of Constantinople instead of the patriarch of Moscow. Within a very short time (the same year) the Cave printing shop, the Monastery's main church, its library, archives, and workshop mysteriously caught fire and burned down.

From 1718 to 1720 the Cave Monastery printing shop was inactive. It began work again in 1721, but was prohibited from publishing books other than liturgical reprints. Even these could be printed only "after an examination and

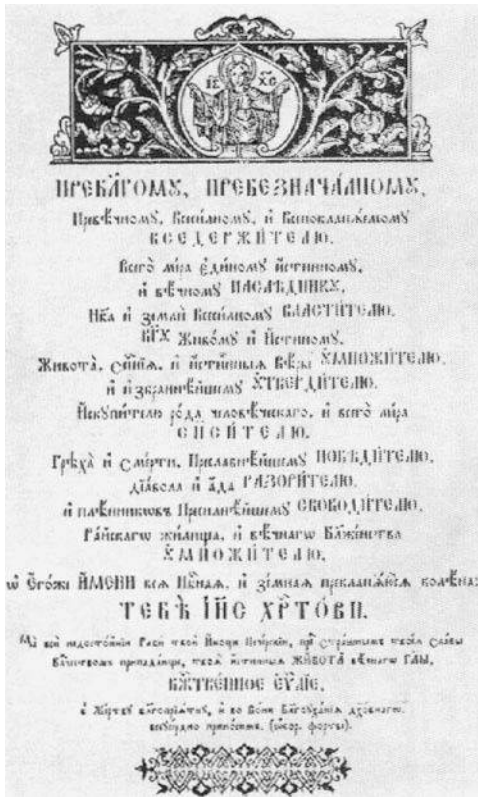

FIGURE 186. SECOND PAGE OF THE GOSPEL FROM 1707

comparison with Great Russian liturgical texts, so that there should be no difference in text or dialect between them." Copies of *Misiatseslov* which had been preserved since 1718 were confiscated. The Moscow Most Holy Synod undertook the control and censorship of all Kievan publishing. The Kievan Cave Monastery and its archimandrites were suppressed, circumscribed, and fined for even suspected deviations from the synod's decrees. Consequently the publishing program began to decline rapidly: once a publishing center, it became merely a printing establishment for various odd jobs. Even the reprinting of its own old editions was transferred to Moscow.

The books printed at the Cave Monastery were circulated in Rumania, Bulgaria, Serbia, Albania, and other south Slav countries, as well as in Belorussia and Muscovy. A paper factory operated by the monastery supplied the needs of its printing press.

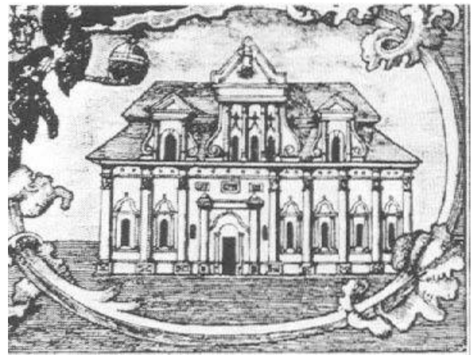

FIGURE 187. THE BUILDING OF THE KIEVAN CAVE MONASTERY'S PRINTING HOUSE (ENGRAVING, EIGHTEENTH CENTURY)

In 1620, two private printing shops in Kiev were also under the jurisdiction of the Kievan metropolitanate. The owner of the first was Timothy Verbytsky, who succeeded in publishing only one *Chasoslov* in two editions (1625 and 1626) before moving to Moldavia where he continued to print books. Verbytsky's shop was bought by Spyrydon Sobol, who in 1628–30 published four books in a total of seven editions. In 1778 and 1792, Kievan burghers Jacob Serbyn and George Denbrowsky attempted to operate small private printing shops producing a variety of engraved texts and pictures, but the Cave Monastery put an end to these ventures. For a long time it also objected to a proposal to establish a printing press using the civil alphabet to meet the needs of the Kievan Mohyla Academy. Finally this was accomplished at the old Kievan Cave Monastery printing shop in 1787 through the efforts of Metropolitan Samuel Myslavsky, who in 1786 assumed authority over both the Kievan metropolitanate and the Kievan Cave Monastery. From

that time, the Cave printing shop turned out books mostly in Russian, handbooks and texts in various fields of knowledge, and translations from other languages to fill the needs of schools. During its entire operating period it published over 250 books.

## BOOK PRODUCTION IN POCHAÏV, CHERNIHIV, AND OTHER UKRAINIAN CITIES

A permanent printing shop, founded by the archimandrite of Pochaïv Monastery, Theodosius Lubenetsky-Rudnytsky, Bishop of Lutsk, was established in the monastery at Pochaïv around 1630. Upon receiving a royal charter in 1632, it began to operate officially. In its publishing-printing activity, the printing shop had to meet the competition of the much older and stronger printing establishment of the Lviv Brotherhood of the Assumption, which fiercely defended its sole right to print books for all Ukrainian lands under Poland. The Pochaïv printing press was concerned for the most part with theological and church books, and to a lesser degree with polemical works and school textbooks. From 1618–1800, this press produced 187 books.

In Left-Bank Ukraine, the most prominent printing establishment was that founded by Lazarus Baranovych, writer and ecclesiastical dignitary, in Novhorod Siversky. After Baranovych became archbishop in Chernihiv in 1657, the printing press was transferred to that city where it began printing in 1659. The number of books published during its existence in Novhorod Siversky is thought from the evidence to be twenty. In Chernihiv, more than forty different books, of which thirty-eight are known, were printed in its first twenty years there. The best contemporary masters of engraving worked on the decorative format of the books.

In the first decade of the eighteenth century, translations from Latin, including poems of a secular nature, were among the books printed by the Chernihiv press. After *Bohomyslie* (Theology) by the Protestant writer Johann Gerhardt was printed, the Moscow Holy Synod began an investigation of the printing shop, as a result of which Gerhardt's book was banned. New works could be printed only after approval by the synod. The printing shop, however, did not obey this decree, and consequently suffered renewed persecution—inspections and confiscation of books, printing instruments, engravings, and ornaments. These pressures on the part of the synod and the government caused the Chernihiv printing shop to lose its technical and artistic individuality.

## PRINTING IN THE *HRAZHDANKA* TYPE IN UKRAINE

By destroying Ukrainian subject matter and style, especially in Kiev and Chernihiv, Moscow prevented the development of civil printing in Ukraine as well, i.e. publications printed in the *hrazhdanka* introduced at the beginning of the eighteenth century and more secular in character and usage.

A ukase of Peter I introduced *hrazhdanka*, a new, supposedly Russian print in 1710. The new lettering was suggested and worked out on the basis of the type used on the title pages of works published by the Lviv Stavropygia Brotherhood. It was reminiscent of the antique type found also on some "popular" drawings or engravings widely circulated in Ukraine in the seventeenth and eighteenth centuries.

In Ukraine, the *hrazhdanka* came into use with the establishment of a new administrative division of Moscow. The first civil printing house appeared in 1764 in Yelysavethrad in the Novorossiiskaia *guberniya*. This printing press was eventually transferred to Kremenchuk and then to Kherson, where it ceased to exist. In Kremenchuk and other Ukrainian cities, as well as in Ben-

dery and Jassy, the itinerant printing press of General Field Marshal Gregory Potiomkin was sporadically active in the years 1788–93. Later it settled in Katerynoslav. After the liquidation of the hetmanate in Ukraine and the revival of the "Little Russian College" in Hlukhiv, a printing shop to meet its needs was established in 1764. The first civil printing shop in Kharkiv was opened in 1793 to serve the *guberniya* administration. Civil printing shops existed in Chernihiv, Berdychiv, Mykolaïv, Kamianets Podilsky, and Zhytomyr, as well as in the cities mentioned and Kiev. Not all were publishing centers or establishments: some did only printing jobs for administrative offices and occasionally filled private orders. The production of the civil printing press of the Kievan Mohyla Academy was more impressive; a new civil printing press was established in Kiev by the *guberniya* authorities in 1791. No material in Ukrainian was printed.

The first Ukrainian book printed in civil Ukrainian type was published in 1798, not in Ukraine but in St. Petersburg. This was Ivan Kotliarevsky's *Eneida* (Aeneid), and its appearance marked a turning point in the history of Ukrainian literature.

# 5. NINETEENTH AND EARLY TWENTIETH CENTURIES

## EASTERN AND CENTRAL LANDS BEFORE 1917

After the publication of *Eneida* [Vol. I, p.1003] literary works in Ukrainian could be published without difficulty, but towards the middle of the nineteenth century the Russian administration put a stop to the further development of Ukrainian publishing. From 1798, the year Kotliarevsky's *Eneida* appeared, until 1840, 44 Ukrainian books were published in the Russian empire, 7 of them in Ukraine. From 1841 to the 1905 revolution, 1,250 Ukrainian books were published in Russia (919 in Ukraine), and from 1905 to 1917, 1,920 books (1,595 in Ukraine). In the 118-year (1790–1916) history of modern Ukrainian publishing within the territory of tsarist Russia, 3,214 books were published (2,531 in Ukraine).

*Eneida* was first published in St. Petersburg by Maksym Parpura, a wealthy landlord from the Chernihiv area. The first Ukrainian book printed in Ukraine in the nineteenth century was a story by Peter Hulak-Artemovsky, *Solopii ta Khivria* (Solopii and Khivria, 1819), in Kharkiv in the 1840's. Books appeared in the 1840's in Kiev, Chernihiv, Poltava, and Odessa, although the

major publishing centers at the time were Moscow and Petersburg. It was in the latter city that T. Shevchenko's *Kobzar* and other works appeared in 1840, as well as works of other Ukrainian writers. Ukrainian works were for the most part published by patrons of individual authors.

The dissolution of the SS. Cyril and Methodius Brotherhood [Vol. I, pp. 675a–6b] put an end to all Ukrainian publishing until the death of Tsar Nicholas I. After the Crimean War, which had weakened the imperial régime, the Ukrainian printed word regained its vigor. A Ukrainian press emerged and various books were published (textbooks, religious books, and collections of verse). An important book series of the 1860's was *Sil's'ka Biblioteka* (Village Library) edited in St. Petersburg in 1860–2 in the printing shop of Panteleimon Kulish and aimed at the literate peasants. This printing press issued thirty-nine booklets including the works of T. Shevchenko, P. Kulish, Hanna Barvinok, Marko Vovchok, and Alexis Storozhenko. At the same time, Alexander Konysky printed a series of primers in St. Petersburg.

The first private publishing houses were opened in Ukraine during the populist period [Vol. I, p. 677] by F. Piskunov in Kiev and Rozpopov in Odessa.

However, the restrictions of tsarist censorship (Valuev's edict [Vol. I, p. 684]) directed primarily against popular literature for children and books designed for mass consumption placed insurmountable obstacles in the way of book publishing. It is true that the early 1870's brought some slackening of controls and several Ukrainian books were published in Kiev. But this was only a short interlude. A secret tsarist ukase of June 18, 1876 (issued in Ems [Vol. I, p. 684]) prohibited Ukrainian printing in the Russian empire. As a result, Ukrainian writers in central and eastern Ukraine published their works in Western Ukraine or abroad. Lviv became the main publishing center at this time, with the Prosvita (Enlightenment) and Shevchenko Scientific societies (see p. 249) spearheading the efforts.

The prohibition of 1876 led to the establishment of the first émigré publishing houses: Michael Drahomanov's and Serhii Podolynsky's in Geneva and Vienna, respectively.

The reign of Tsar Alexander III (1881–94) was a harsh period for Ukrainian publishing. In central Ukraine, censorship did not permit even the most innocent of works to appear in print. Manuscripts had to be sent to the Central Office of Printing in St. Petersburg, where they remained for years. If they were published at all, it was in an unrecognizable form. The years 1881–3 saw a brief period of liberalization, and during this time Ukrainian books or booklets appeared, chiefly in Kiev, published by Luke Ilnytsky and S. Smolynsky.

After the death of Alexander III, some restrictions were abolished and the number of Ukrainian books increased immediately. In 1900, the censors began to allow the publication of fiction and popular literature. In place of the suppressed journals, various almanacs and collections of fiction were published. Despite continued restrictions, the first major publishing houses were established at this time, e.g., those of Borys Hrinchenko, Olena Pchilka, and Michael Starytsky. Hrinchenko's publishing house (supported by Ihor Cherevatenko) in Chernihiv (1894–1902) became a self-sustaining commercial establishment and published some 50 books, each with a run of 5,000–10,000 copies. Hrinchenko's example was followed by the publishing house Vik (Age), established in Kiev in 1896 through the efforts of Alexander Lototsky, Serhii Yefremov, Theodore Matushevsky, Basil Domanytsky, Volodymyr Durdukivsky, and Viacheslav Prokopovych. By 1918, Vik had published 140 titles in 560,000 copies. It gained fame especially for its reprints of Ukrainian classics which had become a biblio-

graphic rarity and the publication of the valuable three-volume *Antolohiia ukraïns'koï literatury* (Anthology of Ukrainian Literature) drawn from all lands of Ukraine.

At this time, the Hromada associations of Kiev (under the auspices of the printing shop – bookstore Kievskaia Starina [Kievan Antiquity]) and Odessa [Vol. I, p. 682–5] turned to publishing. The Societies of Literacy in both Kiev and Kharkiv and the group of Ignatius (Hnat) Khotkevych (1901) in Kharkiv all became involved in publishing. In St. Petersburg the Philanthropic Society for Publishing Useful and Inexpensive Books (1898–1918) founded by General Nicholas Fedorovsky and Daniel Mordovets published eighty popular Ukrainian books in excess of one million copies.

The Revolutionary Ukrainian party [Vol. I, p. 686] printed the first Ukrainian socialist brochures (1900–5) and circulated them throughout Ukraine (a total of forty-eight titles).

The revolution of 1905 and the subsequent lifting of restrictions on Ukrainian printing contributed to a rapid rise in publishing activity. In 1909 there were already 17 Ukrainian publishing houses; a total of 34 publishing houses were established in the years 1894–1914, with the hub of publishing activity located in Kiev. The largest publishing house was Chas (Time) founded by a group of writers (Basil Koroliv, Modest Levytsky, Makarii Synytsky) in Kiev in 1908. In its first year, *Chas* published 32 books, with a total of 160,000 copies. In 1909 it printed 50,000 copies of a popular biography of Taras Shevchenko, and in subsequent years continued to publish Shevchenko's works. Other publishing houses which opened after the revolution of 1905 were: Krynytsia (The Well), which in 1912–14 published the works of Shevchenko, Drahomanov, and other writers, and an inexpensive series; it continued to operate even after the revolution of 1917 until it was closed in 1920 by the

FIGURE 188. TITLE PAGE OF THE HISTORY OF UKRAINE-*Rus'* BY N. ARKAS, KIEV, 1908

Bolsheviks; Oleksa Kovalenko's Ranok (Morning) which published some 40,000 copies of books and pamphlets, including anthologies and collections of verse; Ukraïns'kyi Uchytel' (Ukrainian Teacher), operated by Gregory Sherstiuk and Spyrydon Cherkasenko, which in 1907–8 published 16 titles in a total of 60,000 copies; Dzvin (The Bell), the publishing association formed by V. Vynnychenko, George Tyshchenko, and Levko Yurkevych in 1907 which published an anthology and, in 1913–14, a journal; Lan (The Meadow), operated by Michael and Alexander Hrushevsky, which during 1909–14 published popular literature for children and youth, with George Siryi as editor; Eugene Vyrovyi's Ukrainian Publishing House in Katerynoslav; Dnister (headed by V. Sochynsky) in Kamianets Podilsky, 1911–20, which published cooperative literature and school textbooks. Among the

smaller publishing houses were Shliakh (The Way), Zoria (The Star), Den' (The Day), Nasha Kooperatsiia (Our Cooperatives), and Nashym Ditiam (For Our Children).

Cultural educational organizations and societies, such as the Katerynoslav and the Kiev Prosvita, undertook large-scale publishing activity at this time. In 1906–8, the Kiev Prosvita printed 150,000 copies of popular semi-scholarly works. Also in Kiev, the Ukrainian Publishing Association (from 1907) published the *Literaturno-Naukovyi Vistnyk* (Literary-Scholarly Herald) and other books. In addition, cooperatives, *zemstvos*, bookstores, and private individuals were engaged in publishing. Gregory Markevych ran the Ukrainian Bookstore, which had its own printing shop in Poltava; Eugene Cherepovsky in Kiev published twenty-four books during 1906–8 including the anthology *Dosvitni vohni* (Fires At Dawn), five volumes of the works of Ivan Nechui-Levytsky, and textbooks, totaling some 100,000 copies. Also active in this field were Basil and S. Kulzhenko, M. Ohloblyn, the Polish publisher Leon Idzikowski, who published Ukrainian music literature, in Kiev; Eugene Fesenko in Odessa; and Valentine Yakovlenko in St. Petersburg. Ukrainian books were also published in Katerynodar in Kuban. Occasionally, Russian publishing houses brought out Ukrainian books: Ivan Sytin, Posrednik (Middleman) in Moscow, T. Gubanov, F. Yohanson-Idzikowski in Kiev, Editor in Vilnius, etc. Among books published at the time, works of literature had by far the largest representation (nearly 50 per cent), followed by books on music and other popular subjects.

The main publishing center at the beginning of the twentieth century was Kiev, followed by Poltava, Katerynoslav, and Katerynodar in Kuban. Kharkiv lost its importance in this field. Because of lenient censorship requirements, St. Petersburg became an important publishing center. The following statistics indicate the extent to which the publishing movement was dependent on the policies of the Russian government. From the beginning of modern Ukrainian writing to the dissolution of the SS. Cyril and Methodius Brotherhood in 1847 approximately 100 titles appeared in Ukrainian. In 1847, not one Ukrainian book was published; in 1848–3; 1849–2; 1850–1; and then in 1857–12; 1860–24; 1861–33; 1862–41; 1863–15 (Valuev's edict); 1864–11; 1865–5; 1870–5; 1875–30; 1877–2 (ukase of 1876); 1880–none; 1881–3–75. Thereafter, until the mid-1890's, the number of Ukrainian books declined sharply; in 1896–23 and in 1913–264. The number of copies printed in the first half of the nineteenth century was usually small. The average number of P. Kulish's *Sil's'ka Biblioteka* (Village Library) was 3,000 copies. Later editions ran from 2,000 to 5,000 copies, with the exception of Shevchenko's poems which were printed in greater numbers.

## IN WESTERN UKRAINIAN LANDS BEFORE WORLD WAR I

Although there were no official restrictions on printing in Galicia, publishing houses were not established until the 1830's and 1840's, and with a great deal of difficulty at that. Their establishment and activity were closely related to the Ukrainian national renaissance.

After some sporadic attempts, a collection, *Rusalka Dnistrovaia* (The Nymph of the Dniester) was published in Pest in 1837 [Vol. I, p. 699]. The Galician-Ruthenian Matytsia was founded in 1848 for the purpose of publishing books for the masses, and by 1885 it had issued over eighty books, mainly textbooks and popular literature. As a result of Russophile reaction [Vol. I, p. 700], publishing suffered a setback in the 1850's. With the founding of Prosvita in 1868 and the Shevchenko Literary Society in 1873, publishing activity was renewed on a large scale. Prosvita began publishing books in 1877. The Michael Kachkovsky

ECCLESIÆ RUTHENÆ,

LEOPOLI

FIGURE 189. TITLE PAGE OF M. HARASEVYCH'S HISTORY OF THE UKRAINIAN CHURCH, LVIV, 1862

Society (founded in 1874) was also active in publishing and served mainly Russophile circles.

Newspapers (*Pravda* [Truth, 1867], *Hazeta Shkil'na* [School Newspaper, 1875], *Bat'kivshchyna* [Fatherland, 1879], *Dilo* [The Deed, 1880]), and various societies were active in publishing. Included in the latter group was the Ruthenian Pedagogical Society, which started by publishing books for children, then the journal *Uchytel'* (Teacher, from 1889). The Kraievyi, Reviziinyi Soiuz (Audit Union of Cooperatives), Sil's'kyi Hospodar (Village Farmer), the Order of St. Basil the Great (from 1895), and political parties, etc. eventually turned to publishing.

Various western Ukrainian publishing houses which began in the 1860's (Xenofont Klymkovych's *Rus'ka Chytal'nia* [Ruthenian Reading Room, 1864]) and in the 1870's (Hnat Onyshkevych's *Rus'ka Biblioteka* [Ruthenian Library, 1877–8, 3 volumes], *Dribna Biblioteka* [Small Library, 1878–81, edited by I. Franko, 14 books]), continued to grow. Those that emerged in the 1880's survived longer: the Library of Outstanding Fiction (1881–1906), a supplement of *Dilo*, published 74 books; the Scholarly Library (1887–8) continued as the Literary-Scientific Library (1889–92) headed by I, Franko; the Ruthenian Historical Library, founded by Alexander Barvinsky in Ternopil in 1894 and transferred to the Shevchenko Scientific Society, published 24 books in 1883–1904; the Ruthenian-Ukrainian Library, headed by Eugene Olesnytsky in 1884–6; the Small Library, managed by Constantine Pankivsky 1894–7; the Universal Library of Denis Lukianovych, 1895–9; Michael Yatskiv's National Library, 1900; Modern Library, founded by Theodore Fedortsiv and subsequently managed by the publishing house Novi Shliakhy (New Pathways) published some 50 books in 1912–23. These and other publishers paved the way for broader development, although not all of them survived. Jacob Orenstein's Zahal'na Biblioteka (1903–32, 230 books) was very successful, as was the Zahal'na Bi-

ПЕРШИЙ ВІНОК

FIGURE 190. TITLE PAGE OF THE WOMEN'S ALMANAC *Pershyi Vinok*, LVIV, 1887

blioteka of Dmytro Nykolyshyn (1914–33).

Most of the publishing houses were privately owned, although individual societies or associations were also active. The largest of them was the Ukraïns'ko-Rus'ka Vydavnycha Spilka (Ukrainian-Ruthenian Publishing Association) headed by M. Hrushevsky, I. Franko, and Volodymyr Hnatiuk; beginning in 1899 it published 310 volumes of fiction and scholarly works, and from 1905 edited the *Literaturno-Naukovyi Vistnyk* (Literary-Scientific Herald). A similar publishing program was followed by the Society of Friends of Ukrainian Scholarship, Literature, and Theater, founded by M. Hrushevsky in 1904. The Shevchenko Scientific Society and Prosvita were both very productive. The former published a series called the Ukrainian-Ruthenian Library containing poetry, prose, and drama as well as periodical literature in many fields of scholarship; its general production reached some 1,200 publications, including copies of scholarly works (see Scholarship). The Prosvita society published a series of Ukrainian classics under the name *Rus'ka Pys'mennist'* (Ruthenian Literature, 1904–22) edited by Julian Romanchuk—27 volumes and 172,000 copies in all—plus many works of fiction and popular literature. In its first fifty years, from 1868–1918, Prosvita published 348 popular books—calendars, handbooks, etc., totaling 2,941,115 copies.

The Ivan Kotliarevsky Society and the Ukrainian Students' Union also published books sporadically. Music sheets were published by the Lysenko Music Society, the Boian and the Bandurist societies in Lviv and Stanyslaviv, and by private individuals.

Textbooks for elementary and secondary schools were published by the official Publishing House of School Books, which used the Shevchenko Scientific Society's printing press. Prosvita and the Ukrainian Pedagogical Society, which was granted official permission to print textbooks for secondary schools, also contributed in this field.

The publishing houses (Ivan Naumovych and Michael Bilous in Kolomyia) of the Russophile movement printed books in almost pure vernacular (although eventually it became adulterated with *yazychiie* [dialect]) until just before World War I when they began using Russian.

Ukrainian books were published by foreign speculators who circulated cheap literature on a mass scale (e.g. dream books, prophecies). A German publishing house in Winterberg published a variety of calendars in the languages of the Austro-Hungarian empire for the Galician-Bukovinian book market: *Pryiatel' Zhovnira* (The Soldier's Friend), *Khliborob* (The Farmer), *Mariis'kyi* (Marian) calendar, etc.

From the 1860's to the end of 1890's (until the establishment of the Ukrainian Publishing Association), eleven book publishers were active in East Galicia, including nine in Lviv. On the eve of World War I there were twenty-four publishing houses in Lviv alone, not counting Russophile and foreign publishers.

In 1875, a total of 62 titles were published in East Galicia (42 in Lviv, 17 in Kolomyia, 3 in Peremyshl); in 1894 the total rose to 177 books (136 in Lviv, 21 in Kolomyia, 7 in Peremyshl, 6 in Stanyslaviv, 5 in Ternopil, 1 each in Berezhany and Stryi); 1913—362 (238 in Lviv, 37 in Zhovkva, 28 in Kolomyia, 20 in Peremyshl, 19 in Stanislaviv, 4 in Ternopil, 3 in Stryi, and 1 each in 13 other cities).

The number of copies printed was relatively small and the books sold slowly since buyers were mainly in Galicia and Bukovina. The market in the Ukrainian lands under Russia was inaccessible because of censorship, and after 1905 because of customs difficulties.

Book publishing in BUKOVINA was started in 1869 by the Rus'ka Besida (Ruthenian Club), which eventually fol-

lowed the pattern set by the Lviv Prosvita. It began by publishing popular literature for mass consumption through its monthly editions in the Library for Youth, Peasants, and Townsfolk series (in 1885–96, 120 books were published). An Orthodox almanac was also published each year. By 1918 production totaled 270 titles. The society Rus'ka Shkola (Ruthenian School, founded in 1887) published text and non-text books (by 1914, it had printed 40 books). Almanacs were published by the Soiuz society (1875–1903, 1905–22).

Ukrainian student societies in Bukovina published their own book series, e.g., Moloda Ukraïna and Sich, publisher Lev Kohut (*Kreitsarova Biblioteka* [Penny Library]). The political society Rus'ka Rada (Ruthenian Council) also brought out several books. In 1911–13, the central office of Ukrainian Cooperatives in Bukovina, Selians'ka Kasa (Peasant Bank), produced newspapers and books dealing with the cooperative movement. Joseph Bezpalko's establishment concentrated on social-democratic literature and publications for youth, edited by Basil Simovych. Books printed in Galicia were widely circulated throughout Bukovina.

In the 1890's and the 1900's, many writers and scholars from central and eastern parts of Ukraine especially those constrained by Russian censorship published their works in Bukovina. Bukovinian printing presses also handled the material of organizations banned by the Russians, e.g., the Revolutionary Ukrainian party (RUP).

In CARPATHO-UKRAINE, publishing activity was initiated by Alexander Dukhnovych [Vol. I. p. 711], who in 1850 established the Priashiv Literary Institute, which published three almanacs. The Society of St.Basil the Great (1864–1902) published textbooks for schools.

The popular national movement did not reach Carpatho-Ukraine until the 1890's. This was largely due to the efforts of the Rev. Augustine Voloshyn (editor of the newspapers *Nauka* [Scholarship] and *Selo* [The Village], and schoolbooks). Among the publishing houses active at the time were those of the Basilian Fathers and of G. Feldeshii, which printed calendars and booklets, primarily religious in character.

The pattern of book publishing in Carpatho-Ukraine prior to World War I can be seen from the following figures: in 1875, 4 books (3 in Uzhhorod); in 1894, 3 (2 in Uzhhorod); in 1913, 22 (20 in Uzhhorod).

Altogether, a total of 5,593 books, 870 books Ukrainian, were published in 1913 on the territory which comprises the Ukrainian SSR today.

## DURING WORLD WAR I

With the outbreak of war in 1914, Ukrainian publishing came under increasingly stronger restrictions. Only a few periodicals outside the Kievan military district were allowed to appear. Illegal hectographic publications and newspapers (see Press) circulated in spite of the restrictions. The publishing house of the Union for the Liberation of Ukraine (1914–18) abroad (in Vienna) and illegal publishing houses run by Ukrainian political parties (the Ukrainian Social Democratic Revolutionary party in Kiev, the Ukrainian Social Democratic party in Petrograd), nevertheless, managed to distribute their publications. Through the efforts of the Union for the Liberation of Ukraine, which published books on current political problems in various languages, mainly German, as well as the literary works and Ukrainian studies by such writers as M. Hrushevsky, Stephen Rudnytsky, Myron Korduba, Longin Tsehelsky, the following were founded: the Franko Publishing Society in Freistadt (1916), the Hrinchenko Publishing Society in Wetzlar (1916), Ukraïns'kyi Rukh (Ukrainian Movement) in Rastatt (1917), and the Kulish Publishing Society in Saltzwedel (1917).

In addition to newspapers, these publishing houses printed books, some of which were widely circulated, e.g. B. Simovych's *Hramatyka ukraïns'koï movy* (Grammar of the Ukrainian Language) and the German-Ukrainian dictionary of P. Lysetsky.

Prominent in Vienna in 1915–16 was the publishing house of the Ukrainian Party of Social Revolutionaries (Nicholas Zalizniak, publisher). It brought out socialist brochures and popular books of Michael Drahomanov. Some publishing activity was carried on under the auspices of the Ukrainian Cultural Council, the General Ukrainian Council, and the National-Democratic party in Galicia; the Ukrainian National Democrats in Bukovina published calendars. Ukrainian Parliamentary Representation in Vienna published several informative pamphlets in Ukrainian.

Ukrainian publishing houses flourished again after the Russian retreat from Galicia and Bukovina.

In Carpatho-Ukraine, the Hungarian government placed obstacles in the way of Ukrainian publishing; it prohibited printing in the Cyrillic alphabet and ordered that Ukrainian publications must appear in Hungarian-Latin type.

## THE YEARS OF UKRAINIAN STATEHOOD, 1917–20

After the 1917 revolution, Ukrainian publishing houses increased in quality and quantity. In 1917 there were 78 publishing houses, in 1918, 104. In addition to those of private publishers (Adrian Kushchenko, Kreveniuk, Eugene Cherepovsky), many houses were owned by Prosvita and various community and cooperative societies. In the central and eastern lands of Ukraine there were about thirty publishing centers. Despite the fact that the circulation of printed material reached thousands of copies, the demand for Ukrainian books could not be satisfied. Ukrainian publications became more varied in content (scholarly works began to appear in vast numbers). However, the occupation of Ukraine by White Russian and Bolshevik armies arrested the growth of Ukrainian publishing.

Publishing was at its peak in 1918. Among the older publishing houses intensely active at the time were: Chas, Vik, Dzvin, Krynytsia; more recent ones were Vernyhora, Serp i Molot (Hammer and Sickle), and from August 1918 Knyhospilka (the Ukrainian Cooperative Publishing Union) which adopted the methods of prominent European publishers. Other publishing houses were: in Kiev—Vseuvyto (All-Ukrainian Pedagogical Publishing Society) and Ukraïns'ka Shkola (Ukrainian School), Dniprosoiuz, and Drukar (The Printer), established in Petrograd in 1917 and later transferred to Kiev; in Kharkiv—Soiuz (Union); in Cherkasy—Siiach (The Sower); in Smila—Promin' (The Ray); in Vovcha—Rukh (The Movement), later brought to Kharkiv; in Odessa—Narodnyi Stiah (The National Banner), Ivan Lypa, publisher, and Selians'ka Samoosvita (Peasant Self-Education); in Poltava—the Pedagogical Bureau of the National Council and Union of Consumer Societies.

Most of the publishing houses were in Kiev (nearly forty); Katerynoslav had six and Odessa five. The Kuban Central Union of Small Credit Institutions supervised publishing matters in Katerynodar. Outside Ukraine, a Ukrainian publishing association was established in the Far East in Harbin. The most serious barriers to book publishing were the great scarcity of paper and the lack of adequate communication. Many books, especially textbooks, were printed outside Ukraine (in Austria and Germany). Ukrainian titles published in Ukraine numbered 747 in 1917, 1,084 in 1918, 665 in 1919.

In the Western Ukrainian National Republic, book publishing suffered because of the war. After the Ukrainian Galician army crossed the Zbruch river, its Press and Information Headquarters

published the *Strilets'* (Rifleman) series in 1919 in Kamianets Podilsky, edited by Joseph Nazaruk and Ivan Krevetsky. Twenty issues appeared.

Among publications printed in Kamianets Podilsky (the seat of the UNR government in 1919–20) were those of the ministries of the UNR government, particularly Press and Propaganda and Military, of the Podilian Provincial National Board, and of private publishing firms such as Dnister, Horytsvit (Lychnis), Satyra i humor (Satire and Humor).

The publishing house Buduchchyna (The Future) was active in Ostrih. Finally, the armies of the Ukrainian National Republic and the Ukrainian Galician Army published propaganda brochures such as *Biblioteka Kozaka* (The Kozak's Library) series in the various towns in which they were quartered.

# 6. BOOK PUBLISHING 1919–66

## BETWEEN TWO WORLD WARS

### Ukraine under Soviet Occupation

The establishment of Soviet rule in Ukraine was accompanied by the gradual liquidation of private Ukrainian and Russian publishing houses and the replacement of their output with Bolshevik publications, mostly in Russian, e.g., *Proletarii* (The Proletarian) in Kharkiv, *Golos Sotsial-Demokrata* (Voice of the Social-Democrat) in Kiev, and *Zvezda* (Star) in Katerynoslav. In May 1919, the All-Ukrainian Central Executive Committee issued the decree on the "Unification of all Individual Soviet Publishing Houses into the All-Ukrainian Publishing House" (abbreviated Vsevydav). All printing equipment and paper stock was turned over to this central publishing house and its eighteen branches in Ukraine. All current publishing houses

were ordered to register in Vsevydav and were then given paper stock and permission to print. Vsevydav also had a monopoly on distribution of all printed matter. By a decree of August 18, 1920, it was renamed Vseukraïns'ke Derzhavne Vydavnytstvo (All-Ukrainian State Publishing House) and in 1922, Derzhavne Vydavnytstvo Ukraïny (State Publishing House of Ukraine [DVU]). Other publishing establishments besides DVU were Komunist Newspaper Publishing House, established in 1920; Molodoi Rabochyi (Young Worker)—the Komsomol Publishing House; Shliakh Osvity (The Pathway of Education) Publishing House of the People's Commissariat of Education; Yurvydav (Legal Publications) of the People's Commissariat of Justice. In 1923 the Kharkiv publishing house Proletarii was limited to publishing socioeconomic literature. In addition to the above, there was also the VUAN (All-Ukrainian Academy of Sciences) Publishing House, and the newly established or re-established during the NEP period Rukh (Movement, 1921), Knyhospilka (Book Company, 1923), Chas (Time), and the privately owned Slovo (Word), Siaivo (Brightness), and Drukar (Printer). The total number of registered publishing houses in 1922–3 was 49, of which 23 were state owned, 10 cooperative, 4 Party, 5 trade-union, and 7 private.

Despite persistent efforts of the Soviet authorities to monopolize the entire book production in Ukraine, it kept growing throughout the late 1920's (see Table I). From 1925–6 on, the number of books published in Ukrainian exceeded those in Russian in the Ukrainian SSR although the number of Russian titles was still the higher. Ukrainian books gained first place in 1927–8. In 1931 Ukrainian book production reached 80 per cent in titles and 84.5 per cent in copies of all books printed in the Ukrainian SSR.

The DVU was the most important publishing house in the late 1920's. It printed a large number of books in Ukrainian, particularly textbooks and literature, including series of Ukrainian classics, numerous translations from west European languages, and specialized and technical literature. DVU also published several dozen periodicals, among them literary and art magazines. The VUAN publishing house list grew rapidly, particularly in scientific publications, and 380 scholarly works were produced between 1918 and 1928.

FIGURE 191. BUILDING OF THE KIEVAN CAVE MONASTERY PRINTING HOUSE IN THE 1920's

Another house noted for its book production was Knyhospilka (Book Publishing Company), a publishing and book distributing organization which had been active in 1918–20. After renewing its activities in Kiev in 1923, it opened branches in Kharkiv and Odessa. Knyhospilka printed more Ukrainian literature than any other Ukrainian publishing house (Russian and other books about 10 per cent), particularly a valuable series of Ukrainian classics under the title *Literaturna Biblioteka* (Literary Library), a series of translations *Svitova Literatura* (World Literature), music, textbooks, handbooks, books on science, and art, and books for children and young people. After its reorganization in 1930 as a distributing firm, Knyhospilka was renamed Vukoopknyha (All-Ukrainian Book Cooperative) and its publishing activities were discontinued. Knyhospilka published 3,096 titles for a total of 40 million copies.

The official Party publishing house Chervonyi Shliakh (Red Pathway) played a fairly important part. It was established in 1924 as a merger of six smaller enterprises – Shliakh Osvity, Znannia, Hart (Firmness), Kosmos, and two others. The publishing house Radians'kyi Selianyn (Soviet Peasant) was established by the People's Commissariat of Education in Kharkiv in 1924 to compete with Knyhospilka in the production of popular literature. The trade union publishing house Ukraïns'kyi Robitnyk (Ukrainian Worker), founded in 1924, published books and periodicals on the labor movement and labor safety, as well as literature for workers' libraries and a series of Ukrainian authors and translations. Publishing houses in specialized fields were operated by such government agencies as the People's Commissariat of Public Health (Naukova Dumka [Scientific Thought, established in 1922]), People's Commissariat of Justice (1923), Ukrainian Scientific Institute of Library Science (1922), for example.

FIGURE 192. M. KOTSIUBYNSKY'S WORKS, KIEV, 1927 (cover design by L. Lozovsky)

Some publishing houses were still able to operate as private enterprises in the 1920's; One of these was Rukh (Movement), a prominent publishing firm founded in Kharkiv in 1921, which printed the works of pre-revolutionary Ukrainian writers exclusively in Ukrainian and such series as *Bibliotechka Ukraïns'koï Literatury* (Pocket Library of Ukrainian Literature), *Frankivs'ka Biblioteka* (Franko Library), *Teatral'na Biblioteka* (Theater Library), *Iliustrovana Biblioteka dlia Ditei* (Illustrated Library for Children), etc. The Soviet régime put Rukh out of business in 1933. Similar work, mostly in literature, was performed by the Slovo (Word) Publishing House of neoclassicists in Kiev (1923) and by the prerevolution publishing house Siaivo which was reestablished in Kiev.

As Moscow's attack on Ukrainian literature and science mounted, publishing in the Ukrainian SSR was reorganized. DVU was dissolved in 1930 along with other publishing houses and replaced by Derzhavne Vydavnyche Obiednannia Ukraïny (DVOU, State Publishing Union of Ukraine) operated by the People's Commissariat of Education and combining ten former publishing houses. Production of industrial and technical literature was concentrated in Derzhavne Obiednannia Naukovo - Tekhnichnykh Vydavnytstv Ukraïny (DONTVU, State Union of Scientific and Technical Publishing Houses of Ukraine) under the Ukrainian SSR's Council of National Economy. After further reorganization in 1932, the following publishing houses were released from the union and set up as separate organizations: Partvydav (Party Publishing House of Political Literature), Derzhtekhvydav (State Publishing House of Technical Literature), Sil'hospvydav (Agricultural Publications), and the publishing house of military literature Na Varti (On Guard) which was placed under the jurisdiction of the Red Army. In the course of the continuing struggle against "nationalist deviations," the decree of the Council of Commissars of the Ukrainian SSR of March 21, 1934, dissolved the DVOU, but in addition to the above named political and technical publishing houses, sanctioned the following: Literatura i Mystetstvo (LiM, Literature and Art), Ditvydav (Children's Publishing House), Vydavnytstvo AN URSR (Publishing House of the Academy of Sciences of the Ukrainian RSR), and Radians'ka Shkola (Soviet Education). Ditvydav carried on the work of the former publishing house of children's and youth literature Molodyi Bilshovyk (Young Bolshevik) Litera-

FIGURE 193. PUBLICATIONS OF THE ALL-UKRAINIAN ACADEMY OF SCIENCES IN THE 1920's

tura i Mystetstvo was again reorganized in 1935 into two separate units: Derzhlitvydav (State Publishing House of Literature) and Mystetstvo (Art).

The constant reorganizations of publishing enterprises which accompanied the persecutions (arrests, deportations, and executions) began to affect both the quality and the quantity of book production as early as 1932, particularly in literature, art, and science, and led to the reduction of publications in Ukrainian, as shown in Tables I and II.

As indicated in the Tables, the decline of book publishing in the Ukrainian SSR started as early as 1934 in conjunction with the assault of the Communist régime on Ukrainian culture. At the same time Russian books increased at the expense of Ukrainian publications. In 1939 books printed in Ukrainian dropped to 31 per cent of the 1931 figure, and their percentage of the total from 80 to 43. The percentage of Ukrainian books published during this period in the USSR was much lower than the percentage of the

TABLE I

DEVELOPMENT OF BOOK PRODUCTION IN CENTRAL AND EASTERN UKRAINE 1918–39

| Number of titles | 1918 | 1921 | 1923 | 1924–5 | 1928 | 1931 | 1934 | 1939 |
|---|---|---|---|---|---|---|---|---|
| All languages | 1,526 | 667 | 2,461 | 4,508 | 5,695 | 8,086 | 4,711 | 3,369 |
| Ukrainian | 1,084 | 214 | 385 | 1,813 | 3,220 | 6,455 | 2,750 | 1,895 |
| Ukrainian (% of all books) | 71 | 3 | 16 | 40 | 57 | 80 | 58 | 43 |

TABLE II

BOOK PRODUCTION ACCORDING TO LANGUAGE IN THE UKRAINIAN SSR 1928 AND 1934

| | 1928 | | 1934 | |
|---|---|---|---|---|
| Language | Number of titles | Copies (thousands) | Number of titles | Copies (thousands) |
| Ukrainian | 3,201 | 27,018 | 2,750 | 55,285 |
| Russian | 2,216 | 10,360 | 1,459 | 17,197 |
| Yiddish | 96 | 331 | 147 | 693 |
| Polish | 50 | 174 | 60 | 329 |
| Bulgarian | 38 | 72 | 63 | 98 |
| German | 77 | 364 | 82 | 792 |
| Moldavian | 8 | 12 | 118 | 434 |
| Others | 9 | 5 | 32 | 68 |
| TOTAL | 5,695 | 38,336 | 4,711 | 74,996 |

Ukrainian population (16.5 per cent of the USSR total): 1928–9.3 per cent, 1931–11.7 per cent, and 1939–only 4.3 per cent. While Ukrainian books were being relegated to a minor role, a swelling tide of Russian books printed in the Russian SFSR flooded Ukraine (see Tables III and IV).

The tables indicate that beginning in the second decade of the 1920's the emphasis shifted from literature and the humanities to the social and political sciences (mostly in the form of mass propaganda) and to matters of production and engineering. The number of books devoted to the study of Ukraine dropped steadily. Biased in content, they followed the official line of "friendship among nations" and the primacy of the Russian people and their culture.

### Western Ukrainian Lands

World War II and the Ukrainian-Polish war of 1918–19 had an adverse effect on the development of cultural life in Galicia, including book production. The unfavorable political conditions of Polish occupation, administrative pressure, and censorship, blocked the development of a Ukrainian publishing movement. The greatest difficulties arose in Volhynia: it was almost impossible to publish anything in the Kholm and Podlachia regions.

TABLE III

BOOK PRODUCTION IN THE UKRAINIAN SSR ACCORDING TO SUBJECT AND PURPOSE

| | 1928 | | 1934 | | 1928 | | 1934 | |
|---|---|---|---|---|---|---|---|---|
| Groups | Titles | Per cent | Titles | Per cent | Folios (thousands) | Per cent | Folios (thousands) | Per cent |

| Others | 3,450 | 9.0 | 618 | 0.8 |
| TOTALS | 38,336 | 100 | 74,996 | 100 |

In spite of all obstacles and difficulties, book production in Galicia became richer and more varied. The number of Ukrainian publishing houses, including specialized types, increased and there was a marked rise in titles and number of copies printed.

In the production of scholarly books (see Scholarship, pp. 278 ff.), the Shevchenko Scientific Society led the field (as it did prior to 1914), followed by the Ukrainian National Museum in Lviv and the newly established Catholic Theological Academy (see p. 279) and the Theological Scientific Society. A number of scientific works were published by the Prosvita society in a separate series of popular books under the name *Uchitesia braty moï* (Study my Brethren).

The Ukrainian Publishing Institute established in 1937 by Basil Mykytchuk, Basil Vytvytsky, and Ihor Fediv, among others, published the *Atlias Ukraïny* (Atlas of Ukraine) and *Heohrafiia ukraïns'kykh i sumezhnykh zemel'* (Geography of Ukrainian and Neighboring Countries) by Volodymyr Kubiiovych. Through the efforts and sponsorship of individuals, including B. Mykytchuk, the Ridna Shkola (Our School) Cooperative Society published the first *Zahal'na ukraïns'ka entsyklopediia–Knyha Znannia* (General Ukrainian Encyclopedia–Book of Knowledge), with Ivan Rakovsky as chief editor. A number of scientific works, as well as the scholarly journal *Zapysky ChSVV* (Transactions of the Order of Saint Basil the Great), were published by the Basilian Fathers' press in Zhovkva, which specialized in popular religious literature.

The Ukrainian Pedagogical Society (subsequently Ridna Shkola) published a number of works on the theory and history of education. It concentrated on textbooks and literature for youth. Other publishers in this field were Uchytel'ska Hromada (Teachers' Association), Vzaïmna Pomich Ukraïns'koho Uchytel'stva (Ukrainian Teachers' Mutual Aid Society), and Nicholas Matviichuk's Nova Ukraïns'ka Shkola (New Ukrainian School), a private enterprise (see Education pp. 298–9).

FIGURE 194. POEMS OF IVAN FRANKO, *Iz dniv shurby*, LVIV, 1922 (cover design by P. Kovzhun)

The publishing house Chervona Kalyna (est. 1919) specialized in publishing memoirs and other works from the period of the Ukrainian struggle for liberation. A number of large popular historical works were published by Ivan Tyktor: *Velyka istoriia Ukraïny* (Great History of Ukraine), *istoriia ukraïns'koho viis'ka* (History of the Ukrainian Armed Forces), *Istoriia ukraïns'koï kul'tury* (History of Ukrainian Culture), and *Vsesvitnia istoriia* (World History), all edited by I. Krypiakevych.

Literary works were also published by the daily newspaper *Dilo*, which continued to turn out original and translated belles-lettres in the series *Biblioteka Dila* (*Dilo* Library) Khortytsia, an association of émigrés from central and eastern Ukraine, and such private publishing houses as Rusalka (Mermaid, Gregory Hanuliak), Izmarahd (Emerald, Michael Matchak), and Dobra Knyzhka (Good Book, Nicholas Mokh) were also engaged in this work.

Ukrainian cooperative and economic institutions were also involved in publishing: Revizyinyi Soiuz Ukraïns'kykh Kooperatyv (Auditing Union of Ukrainian Cooperatives), Maslosoiuz (Dairy Union), and the Sil's'kyi Hospodar (Village Farmer) society which published popular trade books on economic subjects.

Sociopolitical literature was published by the political parties: Ukrainian National-Democratic Union (UNDO); the Ukrainian Socialist-Radical party, whose newspaper *Hromads'kyi Holos* (Voice of the Community) published a book series *Samoosvita* (Self-Education), the Front of National Unity, the Ukrainian Catholic party (the book series of the newspaper *Nova Zoria* [New Star, edited by Joseph Nazaruk]). Private publishers issued *Knyhozbirnia Vistnyka* (Herald Book Collection, Dmytro Dontsov) and *Desheva Knyzhka* (Low-Priced Book, Roman Paladiichuk). The publications of the Ukrainian Military Organization (UVO) and of the Organization of Ukrainian Nationalists (OUN) were printed abroad or clandestinely at home, and were aimed primarily at Western Ukraine. Communist literature was published by the Communist Party of Western Ukraine (KPZU) and its legal publishing houses, Nova Kul'tura (New Culture), subsequently renamed Kul'tura (Culture), and Vikna (Windows) under Basil Bobynsky.

FIGURE 195. BOOK COVER OF MARKO CHEREMSHYNA'S WORKS, VOL. I, LVIV, 1937 (design by N. Butovych)

In order to counter the influence of Polish education on Ukrainian youth, literature for children and young people was developed on a large scale. Prominent in this field were: the Shevchenko Scientific Society Bookshop, publishing a series *Dlia Shkoly i Domu* (For School and Home); the Ukrainian Pedagogical Society Ridna Shkola, and I. Tyktor Publishing House (the *Ranok* [Morning] series), the Marian Youth Society, and some smaller publishing enterprises. The best work in this field came from Michael Taranko whose firm published not only periodicals for children and youth (see The Press, p. 501) but also the series *Dytiacha Biblioteka* (Children's Library) and *Biblioteka Molodoï Ukraïny* (Library of Young Ukraine).

Popular literature on a variety of subjects for mass circulation, particularly in the countryside, was published by the Prosvita society, the Michael Kachkovsky Society, the I. Tyktor Publishing firm, all in Lviv and Kolomyia, and Ridnyi Kolos (Our Awn of Grain) in Lutsk.

Table V shows the figures for Ukrainian book production in Poland during the 1924–37 period:

TABLE V

UKRAINIAN BOOK PRODUCTION IN POLAND 1924–37

| Year | Number of titles | Copies printed (in thousands) |
|---|---|---|
| 1924 | 195 | 478,0 |
| 1926 | 207 | 545,5 |
| 1928 | 229 | 914.1 |
| 1932 | 187 | 510.9 |
| 1936 | 305 | 722.5 |
| 1937 | 448 | 1,362.2 |

According to subject matter, popular and popular science publications were in first place, with 738,900 out of a total

of 1,362,200 books printed in 1937, and belles-lettres in second place with 468,800, followed by reference- and textbooks (122,400 including 72,400 on linguistics) and scholarly works (40,200). Production of Ukrainian books in all of Poland constituted 5.6 per cent of all titles and 4.7 per cent of the number of copies printed.

The city of Lviv occupied first place in Ukrainian publishing, with about 75 per cent of all Ukrainian printed material in Poland. Just as prior to 1914, other cities followed far behind: Zhovkva, Stanyslaviv, Kolomyia, Peremyshl, Ternopil, and Kholm, Kremianets, and Lutsk in the northwestern area.

Ukrainian books published in Poland in 1937 constituted 22 per cent of all Ukrainian books produced in the Ukrainian SSR.

Following the occupation of Bukovina by Rumania in 1918, all cultural, educational, and particularly publishing activities declined as a result of severe censorship and the government policy of "one Rumania." During the 1921–8 period, only 39 books were published, totaling 200 printed sheets. George Hlynka's Publishing Company which brought out six books, and Samostiina Dumka (Independent Thought) Publishing House, which came out with about a dozen books of belles-lettres and memoirs were the most active. The center of Ukrainian publishing in Bukovina was the city of Chernivtsi.

Carpatho-Ukraine, which became part of Czechoslovakia following the disintegration of Austria-Hungary, offered the best opportunities for the development of Ukrainian cultural and educational activities. The Prosvita society, founded here in 1920, played a leading role in publishing a number of popular publications and fourteen yearbooks of the *Naukovyi Zbirnyk* (Scientific Symposium). Many textbooks and literary works for young people were published by the Teachers' Association in Mukachiv and by the Pedagogical Society of Transcarpathian *Rus'* (Ukraine) between 1924 and 1936. Textbooks for schools were also supplied by the school board in Uzhhorod and the State Publishing House in Prague. The Nash Ridnyi Krai (Our Native Land) Publishing House in Tiachevo published a youth monthly and a belles-lettres series for children from 1922 to 1938. The Pchilka (Bee) Publishing House, founded by Paul Kukurudza (originally as part of the Uzhhorod Prosvita), published children's books, plays, and books on nature study and bee-keeping. The Plast publishing house Vatra (Campfire), founded by Leonid Bachynsky, published the series *Plastova Biblioteka* (The Plast Library, 1924–30). The Library of the Labor Academy in Uzhhorod published popular books for workers. For apiarists, there was a series called "Library of News for Bee-Keepers." Some agricultural books were published by the Bureau of Land Redistribution. Other important book series were: the drama series *Nova Stsena* (New Stage) and *Knyzhky Rusyna* (Books of the Ruthenian) edited by a Czech, F. Tlohe. The Basilian Fathers published popular religious literature. The Russophile trend was represented by the popular publications of the Alexander Dukhnovych Society in Uzhhorod. The number of Ukrainian books published in Carpatho-Ukraine reached several hundred titles, including the so-called Carpatho-Ruthenian publications, which were printed in Ukrainian but with some local peculiarities incorporated. The total number of titles published in Carpatho-Ukraine before 1939 was over one thousand. Uzhhorod was the main publishing center, followed by Mukachiv, Sevliush, Berehovo, Tiachevo, and Priashiv. During the period of Ukrainian statehood there was no time to develop book publishing, only newspapers and magazines.

**Ukrainian Publications Abroad**

Ukrainian political émigrés who left their homeland following its occupation

by the Bolsheviks, Poland, and Rumania and settled in other European countries made an important contribution to the publishing of Ukrainian books. A start was made in Austria, specifically in Vienna where numerous printing shops equipped with Ukrainian type were established. Newspapers, journals (see Press, pp. 503–4), and a considerable number of books were published.

During this period, the Kiev publishing houses Vernyhora, Dzvin, and Chas printed their books in Vienna. They established contacts with the Austrian printers as early as 1918 and published many textbooks and works on Ukrainian history. Only a small part of the printed material could be sent to Ukraine, the rest was distributed among Ukrainians abroad. The publishing houses Chaika (Gull) and Zemlia (Earth) founded by Anthony Krushelnytsky published several dozen titles of original and translated literature as well as a few dozen textbooks. The missions and legations of the Directory of the Ukrainian National Republic and later the Government-in-Exile of the Ukrainian National Republic published political literature and information books.

A number of scholarly treatises, mainly on sociology and history, including works by M. Hrushevsky, Michael Lozynsky, Volodymyr Starosolsky, and Paul Khrystiuk, were published by the Ukrainian Institute of Sociology in Vienna (see Scholarship, p. 281). Other émigré publishing houses active during this period in Vienna were: Volia (Freedom) Journal Library of Victor Pisniachevsky; Nasha Volia (Our Freedom) of Nicholas Levytsky; library of the organ of the foreign branch of the Ukrainian Communist party Nova Doba (New Era, edited by Volodymyr Vynnychenko and Volodymyr Levynsky), and the Ukrainian Social-Revolutionary party's publishing house Boritesia-Poborete (Fight and You Shall Win), founded by M. Hrushevsky.

Ukrainian publication in Czechoslovakia began in 1923–4. The main centers

FIGURE 196. BOOK COVER OF TARAS SHEVCHENKO'S WORKS I–V, BERLIN, 1919–20

were Prague and Poděbrady, where textbooks of Ukrainian higher educational establishment were being published (see p. 282). The Ukraïns'kyi Hromads'kyi Vydavnychyi Fond (Ukrainian Community Publishing Fund) developed a lively publishing program. There were also such privately owned publishing houses as Vsesvit (Universe) of Basil Koroliv, Dniprovi Porohy (Dnipro Cascades) of Eugene Vyrovyi, and Proboiem (Fighting Wedge) of Stephen Rosokha—all in Prague. During the 1920–30 period, there were 143 active Ukrainian publishing houses in Czechoslovakia, with a total output of 734 book titles.

Emigré publications in Germany were concentrated in Berlin and Leipzig. *Ukraïns'kyi Prapor* (Ukrainian Banner), *Ukraïns'ka Molod'* (Ukrainian Youth, 1923), *Khliborobs'ka Ukraïna* (Farmer's Ukraine) of the Hetman party, and others were active in Berlin. The Ukrains'ke Slovo (Ukrainian Word) Publishing House was very productive, and between 1921 and 1924 brought out over fifty works from the Ukrainian classics, plus new editions of the dictionaries of Borys Hrinchenko and Michael Umanets. The Ukrainian Scientific Institute founded in 1926 (see p. 284) was also prominent in the field of publishing. Jacob

Orenstein, a Ukrainian publisher of Jewish origin, started publishing under the name Ukraïns'ka Nakladnia (Ukrainian Press) in Leipzig in 1918. He continued the *Zahal'na Biblioteka* (General Library) series which was begun before World War I, and, in addition, published several dozen volumes of both original and translated literature including the three-volume and five-volume editions of the works of T. Shevchenko. Orenstein also published sheet music and musical literature. Books published by E. Vyrovyi under the name Ukrainian Publishing house of Katerynoslav were printed in Leipzig.

Publishing flourished under Ukrainian émigrés in Poland, particularly in Kalisz and Warsaw. The publishing house of the Ukrainian Military History Society, headed by Colonel Michael Sadovsky,

FIGURE 197. BOOK COVER OF TARAS SHEVCHENKO'S WORKS, VOL. XI, WARSAW, 1935

published symposia on the history of the liberation struggle under the title *Za Derzhavnist'* (For Statehood) and a number of individual works on the same subject. Between 1930 and 1935 the Ukrainian Scientific Institute in Warsaw published 47 volumes of treatises and materials, and 11 volumes of a 16-volume complete edition of the works of Shevchenko, edited by Paul Zaitsev. The Ukrainian Economic Bureau published four volumes of the Ukrainian Statistical Yearbook. The *Ridna Mova* (Native Language) and *Nasha Kul'tura* (Our Culture) periodical publications founded by Ivan Ohiienko published books on linguistics and the history of culture. The Ukrainian Central Committee in Warsaw, which represented the interests of Ukrainian political émigrés in Poland, operated a publishing house Visti (News). The publishing houses Variah (Varangian) and My (We) both produced a number of literary and journalistic works.

Ukrainian publishing also developed in Paris, France, where several newspapers and a number of scholarly works were published.

Some Ukrainian books were also published in Switzerland (publications of the Ukrainian-Swiss Chamber, Eugene Bachynsky, and Michael Yeremiïv) and in Finland (publications of Bohdan Kentrzhynsky).

## DURING WORLD WAR II

### Ukrainian Territories

World War II damaged Ukrainian book production even more than World War I. During the first Soviet occupation (1939–41) all publishing houses of the western Ukrainian lands were abolished. Books ready for printing, printed stock, and partly printed books, along with many valuable manuscripts, were destroyed. The publishing houses established by the Communists printed mostly fiction.

A more serious publishing movement developed only in the part of western Ukrainian lands within the so-called *Generalgouvernement*. Late in 1939, by permission of the German authorities, the Ukrainian Publishing House (Ukraïns'ke Vydavnytstvo) was established in Cracow, in close association with the Ukrainian Central Committee [Vol. I, p. 875]. The Ukrainian Publishing House had the exclusive right to publish Ukrainian newspapers, journals, and books

within the *Generalgouvernement.* During its early stages (up to the summer of 1941), it provided publications for the Ukrainians of the Kholm, Podlachia, Lemkian, and Sian areas, which had previously had very few publications, and thus contributed to the development of Ukrainian national life in these border areas [Vol. I, pp. 874–6]. In 1940 the Ukrainian Publishing House brought out 106 books with a total printing of 435,000 copies (including 161,000 copies of textbooks).

Following the annexation of Galicia to the *Generalgouvernement* [Vol. I, p. 887], the Ukrainian Publishing House opened a branch in Lviv. Despite strict German censorship, it published 420 books totaling 3.2 million copies during 1940–4. The average annual book production in 1941 and 1943 was higher than in Ukraine under Poland before the war. In addition to periodicals (see Press, p. 505), the Ukrainian Publishing House printed textbooks (mainly for public schools), books for children and youth, popular literature (historical and professional), and belles-lettres, including reprints of the works of authors executed by the Communists during the purges of the 1930's and new works by I. Bahrianyi, B. Lepkyi, T. Osmachka, and B. Chaplenko. The output of scholarly works was small because of German restrictions.

As the struggle of the Ukrainian Insurgent Army in Ukraine under the USSR and Poland spread, the OUN and UPA also engaged in wide publishing and propaganda activities. During the period from 1945 to 1950, 21 periodicals, 60 books and pamphlets, and 103 other printed items appeared from the clandestinely operated presses.

Matters were much worse outside Galicia. At first, after the flight of the Communists, new Ukrainian publishing firms appeared in the cities of eastern and central Ukraine. But the German civilian administration ruthlessly blocked all these attempts and the Gestapo often executed both publishers and editors. Such was the fate of Olena Teliha, Ivan Rohach, and Orest Chemerynsky, who attempted to establish a Ukrainian publishing house in Kiev and bring out the Ukrainian national newspaper, *Ukraïns'ke Slovo* (Ukrainian Word). A Ukrainian publishing firm started by I. Tyktor and Ulas Samchuk in Rivne was thwarted. Other publishing attempts met with a similar fate. No Ukrainian books with the exception of a few chance printings, mostly collections of poetry, were published in central and eastern Ukraine during the German occupation. Germans and Communists both destroyed many printing shops; a number of printed or nearly completed books were lost.

**Abroad**

During the war, only two Ukrainian firms were permitted to publish in Germany: the Ukrainian National Alliance (UNO), which published its newspaper from 1936 together with a series of books, and *Ukraïns'ka Diisnist'* (Ukrainian Reality), the organ of the Hetman movement. There were several German publishing firms which printed books and periodicals in Ukrainian: the Holos (Voice) Publishing House, established by Bohdan Krawciw and subsequently nationalized, in Berlin; Fremdsprachendienst (Foreign Language Service) and W. Graefe in Berlin; Herrose and O. Harrasowitz in Leipzig; and Osteuropaeisches Wirtschaftsinstitut in Koenigsberg.

In German-occupied Czechoslovakia, several Ukrainian publishing houses were quite active in the early stages of occupation: Proboiem of S. Rosokha, Kolos (Awn) of Ivan Roman, and that of George Tyshchenko-Siryi. The first two were closed down by the German authorities in 1944. The Ukrainian Free University, the Ukrainian Technical and Husbandry Institute, and the Historical-Philological Society continued publishing some scholarly works and symposia in Prague during the war.

## THE POST-WORLD WAR II PERIOD

### In Ukraine

Following the second Soviet occupation of 1944–45 and subsequent incorporation of all Ukrainian lands in the USSR, all book publishing (see Table VI) was concentrated in official state publishing houses, reorganized or established in the late 1930's.

Only after the death of Stalin was there a temporary increase in the number of Ukrainian books published (in comparison with Russian). Since 1960, however, the number of Russian books published in the Ukrainian SSR has been growing and the number of Ukrainian books declining, as indicated by Table VII.

The total printing of books published in the Ukrainian SSR (in millions of copies) is shown in Table VIII.

For purposes of comparison, the total printing of Ukrainian books was about 30 million copies in 1928 and 56 million in 1934. Simultaneously with the increase of the total printing, there was also an increase of the average printing of each title published in the Ukrainian SSR from 11,600 in 1940 to 18,800 in 1950, with a subsequent gradual drop to 17,600 in 1958.

During the period from 1918 to 1966, a total of 17,343 titles of Ukrainian literature was published in the USSR, with a total printing of 434,430 million copies. Out of 761 literary books and pamphlets (29,436 thousand copies) published in the Ukrainian SSR in 1966, 482 (70 per cent) were in Ukrainian. For purposes of comparison it should be noted that during the same year 3,182 works of Russian literature were published in the USSR, with 275.3 million copies, i.e., twelve times the total of Ukrainian belles-lettres (22.3 million), although according to official statistics the number of Russians in the USSR is only three times the number of Ukrainians.

On the basis of subject-matter figures

TABLE VI

Development of Book Production in the Ukrainian SSR (within current boundaries)

| Titles | 1940 | 1946 | 1950 | 1955 | 1958 | 1960 | 1965 |
|---|---|---|---|---|---|---|---|
| All languages | 4,836 | 2,151 | 4,136 | 4,821 | 6,618 | 7,889 | 7,251 |
| Ukrainian | 4,012 | 1,311 | 1,865 | 2,378 | 3,975 | 3,844 | 2,998 |
| In proportion to all others | 41.5 | 61 | 45 | 49 | 60 | 49.8 | 41.4 |

TABLE VII

Comparison in Numbers of Ukrainian and Russian Books Published in Ukrainian SSR

| Titles | 1960 | 1961 | 1962 | 1963 | 1964 | 1965 |
|---|---|---|---|---|---|---|
| Ukrainian | 3,844 | 4,041 | 3,824 | 3,321 | 3,261 | 2,998 |
| Russian | 3,893 | 4,416 | 4,284 | 4,094 | | 4,023 |
| Other languages | 152 | 252 | 198 | 174 | | 4,230 |
| Dictionaries | | 9 | 7 | 10 | | |

TABLE VIII

| | 1940 | 1950 | 1958 | 1960 | 1965 |
|---|---|---|---|---|---|
| All languages | 51.4 | 77.6 | 116.2 | 113.1 | 110.7 |
| Ukrainian | 41.3 | 62.2 | 88.4 | 79.0 | 77.5 |
| Ukrainian in proportion to others | 80.4 | 80.2 | 76.0 | 70.0 | 70.0 |

for 1966 alone (see Table IX), there is an evident disproportion of political, social, and economic literature—941 books or 12.6 per cent of all titles (7,486). These were mostly propaganda pamphlets (reports of Party conventions, Party and government resolutions, antireligious publications, etc.). The majority of books on natural science, mathematics, engineering, medicine, etc. were printed in Russian. The works of Ukrainian classic literature published in the Ukrainian SSR are mostly "selected works," frequently distorted and with conspicuous omissions of those which the party deems unfavorable to communism. Propaganda literature includes the works of modern Soviet writers, which often come out in large editions. Translations of Western literature are very limited in the Ukrainian SSR.

During forty-five years of Soviet rule (1918–63) the number of books and brochures published in the Ukrainian SSR was 210,000 in 2,821,500,000 copies. The USSR total during the same period was 1,825,800 in 27,500,000,000 copies.

| Literature (excl. children) | 576 | 12,846 | 179,293 |
| Children's books | 242 | 18,054 | 88,932 |
| Official documentation | 59 | 76 | 142 |
| Cyclopedic literature | 520 | 4,393 | 30,404 |
| TOTAL BOOK PRODUCTION | 7,486 | 109,732 | 1,065,115 |

the Ukrainian SSR totaled thirty in 1966, each with an assigned field of activity.

Social and political literature is published by Politvydav Ukraïny (Political Literature Publishing House of Ukraine); science by Naukova Dumka (Scientific Thought); classics of Ukrainian, Soviet, and foreign literature by Dnipro; books for young people by Molod' (Youth); children's books by Veselka (Rainbow); new works by Soviet Ukrainian authors by Radians'kyi Pys'mennyk (Soviet Writer); agricultural subjects by Urozhai (Harvest); educational by Radians'ka Shkola (Soviet School); engineering by Tekhnika; construction by Budivel'nyk (Builder); medicine by Zdorov'ia (Health); art by Mystetstvo (Art); music by Muzychna Ukraïna (Musical Ukraine). Works on national economy, fiction by local authors, etc. are published by the following houses: Kameniari (Stonecutters) in Lviv; Promin' (Ray) in Dnipropetrovske; Donbas in Donetske; Krym (Crimea) in Symferopol; Maiak (Lighthouse) in Odessa;

FIGURE 199. BOOK COVER OF B. S. BUTNYK-SIVERSKY'S MONOGRAPH *Ukrains'ke radians'ke narodne mystetsvo, Kiev, 1966*

Prapor (Banner) in Kharkiv; Karpaty (Carpathians) in Uzhhorod; the Republic newspaper and journal publishing house Radians'ka Ukraïna (Soviet Ukraine). The state universities of Kiev, Lviv, Kharkiv, etc. also publish books.

The main center of book production in the Ukrainian SSR is Kiev, where 4,441 titles out of a total of 7,486 were published in 1966, i.e., 59.3 per cent of all books published in the Ukrainian SSR, and 95,290 copies printed out of a production of 109,732 thousand for Ukrainians. Following Kiev in importance are: Kharkiv, 952 titles; Lviv, 506; Donetske, 367; Dnipropetrovske, 297; Odessa, 293; Crimea, 180; and Transcarpathia, 138. Kharkiv lost the importance it had in the 1920's as a center of book publishing, especially Ukrainian. In the western lands, such former publishing centers as Zhovkva and Kolomyia ceased to function, while Uzhhorod expanded in this field. Chernihiv and Chernivtsi declined as publishing centers to a low of 11 and 32 titles, respectively.

Several Ukrainian publishing houses operate in the satellite countries, where Ukrainians live in more or less compact settlements. The Ruske Slovo publishing house in Kerestur, Yugoslavia, publishes a newspaper, two magazines, and books. Similar in nature is the Ukrainian Social-Cultural Society in Warsaw, which publishes a newspaper and books for Ukrainians in Poland. In Rumania, there is a Ukrainian newspaper and book publishing enterprise, Novyi Vik (New Age). Most active is the Ukrainian branch of the Slovak Publishing House of Fine Literature in Bratislava, which has already published several dozen books on different subjects for the Ukrainians of the Priashiv region.

**Abroad**

After World War II, Ukrainian book publishing flourished for a short time in Germany and Austria, and on a lesser scale in France, Great Britain, Belgium, Switzerland, and Italy. A total of 2,104 books were published in these countries between 1945 and 1950, including 96 in foreign languages. Out of this number, 577 were on social and political subjects; 557 on literature and the study of literature; 295 on religion; 172 on history and geography; 135 on pure and applied

science; and 93 on linguistics. After most of the refugees moved overseas, the main Ukrainian publishing centers outside the Ukrainian SSR were: the United States (New York, Philadelphia, Chicago), Canada (Toronto, Winnipeg, Edmonton, Yorkton), Argentina (Buenos Aires), to a lesser extent Brazil (Prudentopolis and Curitiba), and Australia. Ukrainian publishing houses continue to operate in Germany (Munich, Neu Ulm), Italy (Rome), France (Sarcelles), and Great Britain (London). Most of the publishing houses in Europe and South America distribute their publications among Ukrainians in the United States and Canada.

There is no accurate count on Ukrainian book production abroad after 1950; data are available only for some countries and for some years. *Richnyk ukrains'koi bibliografiï 1957* (Yearbook of Ukrainian Bibliography, 1957) reported that the number of Ukrainian books printed that year outside the USSR, Czechoslovakia, Poland, and Rumania was 275 titles. The number of books and brochures printed in Ukrainian in Canada in 1953–67 was 1385.

The number of Ukrainian publishing houses abroad is quite large. However, they are all financially weak, treating a variety of subjects for a variety of people with differing interests. In the publication of scholarly works, the Shevchenko Scientific Society is most active both in Europe and the United States, the Ukrainian Academy of Arts and Sciences in the United States and Canada, the Order of Saint Basil the Great and the Ukrainian Catholic University in Rome, the Molode Zhyttia (Young Life) publishers of the *Entsyklopediia ukraïnoznavstva* (Encyclopedia of Ukrainian Studies) and other scholarly publications, the publishing enterprises of the Ukrainian Free University and the Ukrainian Technical and Husbandry Institute in Munich, the Orthodox scholarly societies in Winnipeg and in Bound Brook, N.J. English-language publications on Ukrainian subjects (including *Ukraine: A Concise Encyclopaedia*) are published by the Ukrainian National Association and its Svoboda Press in Jersey City, N.J. German-language publications are coming from the Ukraine publishing house in Munich. Political literature and some belles-lettres are published by the Prolog Research and Publishing Association (New York), the Ukrainian Publishing House in Munich, the Publishing House of the Organization of the Defense of Four Freedoms of Ukraine in New York, the First Ukrainian Printing Co. in Paris; historical books by Chervona Kalyna in New York and the Ukrainian Military Institute in Toronto; and religious books by Dobra Knyzhka (Good Book) in Toronto and the Order of Saint Basil the Great in different countries of both North and South America. The following specialize in fiction and other types of writing: Nicholas Denysiuk in Chicago, Dniprova Khvylia (Dnipro Wave), and Suchasnist' (Present Time) in Munich, Julian Serediak in Buenos Aires (Argentina), Homin Ukraïny (Echo of Ukraine) in Toronto. Original and translated literature is published by the Na hori (On Top) publishing house in Munich. Children's books are published by Yevshan-Zillia. Various newspaper publishers and bookstores also publish books.

# 7. THE SALE AND DISTRIBUTION OF BOOKS

## TO THE END OF THE EIGHTEENTH CENTURY

Book distribution in Ukraine began at the same time as book printing. At first, the printers themselves took care of the distribution and sale of the books they printed, e.g., Ivan Fedorovych in Lviv and Ostrih at the end of the sixteenth century and Michael Sliozka in Lviv in the seventeenth century. Later, church brotherhoods and monasteries which operated printing shops undertook the distribution of books. They were sold at fairs and markets or by itinerant salesmen who traveled from town to town and from village to village.

The first bookstore was established by the Lviv Brotherhood of the Assumption (later Stavropygian Brotherhood). During the seventeenth and the first half of the eighteenth centuries it sold books throughout Ukraine, including Bukovina, Transcarpathia, and even Left-Bank Ukraine, where the Brotherhood was permitted to sell books by a special edict of Peter I. In the eighteenth century the bookstore of the Kievan Cave Monastery, located in Podil (the lower part of the city), enjoyed a monopoly on the sale of books throughout the Kiev region and Left-Bank Ukraine. Its representatives covered the larger markets of Kiev and other cities and exported books to Moldavia, Wallachia, Serbia, and even Muscovy, to the Caucasus and Siberia. In the second half of the eighteenth century, despite specific prohibitions, individual Kievan printers carried on trade in books (Jacob Serbyn and Yehor Dembrovsky, among others). At the end of the eighteenth century, Russian publisher and bookdealer Nicholas Novikov promoted the sale of his books, printed in *hrazhdanka*, in Kharkiv, Kiev, Poltava, Hlukhiv, and Nizhyn. A project suggested in 1779–80 by the learned Ukrainian statistician and editor-publisher of Russian journals, Theodore Tumansky, regarding the establishment of an academic bookstore in Hlukhiv was not realized.

## NINETEENTH AND EARLY TWENTIETH CENTURIES

The establishment of bookstores in central and eastern Ukraine began in Odessa; at the beginning of the nineteenth century, there were three book

stores in that city, two of them founded by foreign dealers and one by a Russian. By 1846 there were six bookstores in Odessa. A prominent role in distributing Ukrainian books was played by the publishers of the *Osnova* (Foundation) journal in St. Petersburg (1861–2), and by seminarians who organized the sale of books in the bazaars and markets of many Ukrainian cities. At this time, the first bookstores were also founded in Kiev, which had nearly twenty by the 1870's. Most of them dealt in Russian books; a few carried Ukrainian books. At about the same time, the first store selling Ukrainian books was opened in Kiev by the company of Mykyta Levchenko and Luke Ilnytsky. The Kievan bookstore of Seminsky, specializing in Ukrainian material, also began operating. When L. Ilnytsky's bookshop was forced to close in 1885, the Ukrainian bookstore and publishing house of S. Homolynsky replaced it in 1886. A truly Ukrainian bookstore was opened in Kiev around 1884 under the auspices of Kievskaia Starina (Kievan Antiquity), founded through the efforts of the Kiev *Hromada* (Community). Some bookstores in Odessa, Kiev, and Chernihiv dealt in Ukrainian books at the end of the nineteenth and the beginning of the twentieth centuries, especially the Polish bookstore of Leon Idzikowski in Kiev, which specialized in Ukrainian song and music literature.

After 1905, the sale of Ukrainian books increased. The bookstore of Kievskaia Starina was reorganized in 1907 and renamed the Ukrainian Bookstore. Bookshops with the same name arose eventually in such cities as Poltava (operated by Gregory Markevych), Zhytomyr, Odessa (run by Ivan Lutsenko), and Kremenchuk. Also in 1907, the publishing house Chas (Time) and the publishers of *Literaturno-Naukovyi Vistnyk* (Literary-Scientific Herald) established bookstores in Kiev. The latter was actually founded by George Tyshchenko as a branch of the Lviv Bookstore of the Shevchenko Scientific Society, similar to other Ukrainian bookstores opened by him in Kharkiv (1909) and Katerynodar in Kuban (1911). The Bookstore of the Literary-Scientific Herald was the main storehouse of Ukrainian publications printed in central Ukraine and in Galicia.

In western Ukrainian lands the oldest bookshop, at the Stavropygian Institute in Lviv, dated from the late sixteenth century. It dealt primarily in church books, religious pictures, and school textbooks, and from the second half of the nineteenth century in books of Russophile publishers. The Prosvita (Enlightenment) society's participation in bookselling started in the 1870's with their first bookstore in Lviv. Eventually the bookstore of the Shevchenko Scientific Society became the center for Ukrainian books sold throughout Galicia and Bukovina, and in the central and eastern Ukrainian lands. In the Galician provinces, there were bookstores in some smaller cities, including Peremyshl, Stanyslaviv, and Kolomyia (operated by Jacob Orenstein and Michael Bilous).

In Bukovina the sale of books was conducted by the bookselling section of Selians'ka Kasa (Farmers Bank) in Chernivtsi and by local foreign-owned bookstores.

### 1917–65

After the March revolution of 1917, Ukrainian book trade flourished. Dozens of Ukrainian community and private bookshops arose in Kiev and other larger and smaller Ukrainian cities. This growth was arrested by the Soviet occupation. Following the prohibition of private sale of books in May 1920, all bookstores were nationalized. The dissemination of all printed matter was placed under the jurisdiction of the Vsevydav (All-Ukrainian Publishing House), the official organ of the All-Ukrainian Central Executive Committee. During the NEP period [Vol. 1, p. 814b–15a], the sale of books was again permitted, and many private and community bookstores were

established. Simultaneously, the Derzhavne Vydavnytstvo Ukraïny (State Publishing House of Ukraine), formerly Vsevydav (All-Ukrainian Publishing House), organized a network of book warehouses and stores. The Kievan Knyhospilka (Book Union), closed in 1920, reopened as a book center in 1921. With a main office in Kharkiv and branches in Kiev and Odessa, it developed a wide network of bookstores (over 6,000), including in its book-trade system 75 per cent of all regional consumer unions. In addition, the All-Ukrainian Actionary Society Selo-Knyha (Village-Book) was active for a time in the distribution of books. After the abolition of NEP, private bookstores were again prohibited and the activity of community and cooperative bookselling organizations was limited.

Following the reorganization of the State Publishing House of Ukraine into the State Publishing Association of Ukraine (DVOU) in 1930, the sale and general distribution of all books was centralized in a single state agency, Ukrknyhotsentr (Ukrainian Book Center). Yet another reorganization of the book business took place in March 1934 when DVOU was liquidated, the activities of Ukrknyhotsentr were cancelled, and Ukrknyhotorhivlia (Ukrainian Book Trade) was created as an office of the Council of People's Commissars of the Ukrainian SSR. In 1938 this institution was reorganized as Ukrknyhokul'ttorh (Ukrainian Cultural Book Market) at the Ukrpolihraftrest (Ukrainian Polygraphic Trust). In November 1943, Ukrknyhokul'ttorh was made subordinate to the bureau responsible for matters dealing with printing and publishing attached to the Council of People's Commissars of the Ukrainian SSR. After reorganizations of this department in 1949 and again in 1953, supervision of the sale of books was transferred to the Ministry of Culture of the Ukrainian SSR, and Ukrknyhokul'ttorh was changed into Ukrknyhotorh (Ukrainian Bookselling). Eventually this institution was reorganized into a Republican Association of Book Trade, Ukrknyha (Ukrainian Book). In 1956 the sale of books in *raion* centers and villages was placed under the jurisdiction of the cooperative organization Ukoopspilka (Ukrainian Co-op Association). In addition to Ukrknyha and Ukoopspilka, the all-union book-trading center Soiuzdruk (Union Printing) and individual all-union book-selling organizations, such as Voienknyha (Military Book), were involved in selling books in Ukraine. In 1956 there was a total of 1,097 bookstores and 2,785 book stalls in the Ukrainian SSR. The number of stores increased to 2,375 in 1962, and the number of book stalls rose to 5,891. The sale of books in the Ukrknyha system brought in 48,200,000 karbovantsi in 1964, in the Ukoopspilka system 23,400,000, and in Soiuzdruk 16,400,000. Libraries in the Ukrainian SSR are systematically supplied with books by *raion* library distributors. Ukrainian books are supplied to Soviet bookstores abroad by the book bureau of the Ukrainian SSR, Ukrknyhotorh, through Mezhdunarodnaia kniga (International Book) in Moscow.

In western Ukrainian lands the main book-trading organization before September 1939 was the bookstore of the Shevchenko Scientific Society in Lviv, with its five branches in other cities of Galicia and Volhynia. In addition, Lviv had the bookstore of Ridna Shkola (Native School) and several private stores owned by Isidore Hromnytsky, Michael Taranko, and Michael Matchak (Izmarahd-Beryl), among others. There were also bookstores in some of the smaller cities of Galicia and Volhynia. Individual publishers (I. Tyktor, Chervona Kalyna, Basilian Fathers, Desheva Knyzhka [Low-Priced Book], etc.) as well as publishing institutions (RSUK, Audit Union of Ukrainian Cooperatives, Sil's'kyi Hospodar [Village Farmer]) employed the widely accepted system of using salesmen to sell their books and publications.

In Carpatho-Ukraine there were small

bookstores in Uzhhorod, Mukachiv, Khust, and other cities. Czech bookstores also sold Ukrainian books (e.g. Unio in Uzhhorod). In 1935–8, George Tyshchenko founded Ukrainian bookstores in Mukachiv, Uzhhorod, and Perechyn. After the Hungarian occupation of Carpatho-Ukraine in 1939, the activity of Ukrainian bookstores was curtailed. In 1945, Transcarpathis was included in the bookselling network of the Ukrainian SSR.

### ABROAD

The first Ukrainian bookstores outside the borders of Ukraine were founded in the United States and Canada before 1914 and served Ukrainian immigrants. Rus'ka Knyharnia (Ruthenian Bookstore) in Scranton, Pa., and Sichovyi Bazar (Sich Bazaar), later Surma (The Bugle) in New York, were among the first Ukrainian bookstores in America. One of the oldest bookstores in Canada was founded in 1910 by Michael Ferbei in Edmonton (since 1915 the Ukrainian Bookstore, run by Dmytro Ferbei). During World War I, the bureau of the Union for the Liberation of Ukraine in Vienna undertook the distribution of books. It supported libraries in prisoner of war camps in Rastatt, Wetzlar, Salzwedel, and Freistadt. In this same period the bookstore of Theodore Savula was established in Vienna, and J. Orenstein was a prominent bookdealer in Berlin.

After World War I, other Ukrainian bookstores were established in Prague, (S. Lavriv, G. Tyshchenko), in Berlin (Andrew Serbinenko), in Paris, and in other western cities.

During World War II, the Ukrainian Publishing House (in Cracow and Lviv) became very active in bookselling, with a network of stores at branch offices of the Ukrainian Central Committee throughout the country. In 1945–9 a number of private Ukrainian bookstores were established in Germany (Munich, Augsburg, Regensburg, Hanover), reaching a total of eight in 1948, all united under the book-trade division of Knyhotsentr (Book Center). After the resettlement of refugees in the United States, Canada, and other countries, a wide network of Ukrainian bookstores evolved in the United States (25 bookstores in 1964) and Canada. There are separate Ukrainian bookstores in the various countries in which Ukrainians settled in Western Europe, South America, and Australia.

## 8. THE PRESS

### GENERAL CHARACTERISTICS

The origin and development of the Ukrainian press were affected by the incorporation of Ukrainian lands in several countries, first in Russia and Austria-Hungary, then in the USSR, Poland, Rumania, and Czechoslovakia, and finally in the USSR only. Consequently, the development of the Ukrainian press shows differences not only in the regional character of the newspapers and magazines published under various conditions of political occupation but

also in their content, which corresponded to the social and political order in the given country, and finally in the cultural and educational development and national consciousness of the given reader group. The Ukrainian press was not merely a means of disseminating information. It was also an important factor of national and political education, playing a leading role in informing the Ukrainian people who were deprived of their own schools. The development of the Ukrainian press and its various adaptations are closely associated with the development of political thought and the growth of Ukrainian activities in differing spheres of cultural and economic life.

Established by the efforts of Ukrainians themselves, without adequate financing and in the absence of any large private or state publishing houses, constantly in difficulties and subject to censorship and even administrative restrictions, the Ukrainian press grew in number of publications, content, and number of copies printed. Gradually it encompassed all facets of national life. It mirrored the struggle among various shades of opinion, ideas, and political trends and increasingly gained prestige and influence among the Ukrainian people. The attempts of governmental circles of the occupying powers to undermine this prestige by means of a subsidized press in the Ukrainian language proved a dismal failure.

The development of the independent Ukrainian press suffered a setback in the central and eastern Ukrainian regions following their conquest by the Communists in the early 1920's, and in the western Ukrainian regions in 1939. Newspapers and journals published by the Communist régime, although numerous and varied, are primarily organs of the Communist party and government and of institutions under their control. Opportunities for free development are open only to the Ukrainian press in the free countries of the world.

## BEGINNINGS OF THE UKRAINIAN PRESS

Even before any Ukrainian newspapers emerged in Ukraine, a number of Ukrainian cultural leaders of the eighteenth century settled in St. Petersburg and Moscow and engaged in publishing. They also contributed to Russian periodicals which treated Ukrainian themes and were distributed in the Ukrainian lands of the Russian empire. The eminent Ukrainian writer and subsequently Ukrainian and Russian church leader Theophan Prokopovych [Vol. I, p. 1002a] contributed to one of the oldest Russian newspapers *Sankt-Peterburgskie Vedomosti* (St. Petersburg News). A Ukrainian from Chernihiv, Hippolytus Bohdanovych, was the chief editor of this newspaper for a time. The Ukrainian historians Basil Ruban and Theodore Tumansky played an important part in the development of Russian journalism. They devoted much space to Ukrainian history in their publications.

The first newspapers to come out in Ukrainian territories were in the official languages of Russia or Austria-Hungary. The first one published was the weekly *Gazette de Léopol* published in French by Chevalier Ossoudi in Lviv in 1776. The first daily newspaper in Galicia was the *Lemberger Zeitung* in German and later in Polish as *Gazeta Lwowska*, edited by the historian and Greek Catholic church leader Michael Harasevych; between 1890 and 1914 and again in 1918 it carried a Ukrainian supplement called *Narodna Chasopys'* (The People's Newspaper). The first newspapers in Ukrainian under Russian rule were the Russian-language *Khar'kovskii Yezhene-*

FIGURE 200. TITLE PAGE OF THE *Gazette de Léopol*, LVIV, 1776

*del'nik* (The Kharkiv Weekly) started in 1812, the French-language *Méssègere de la Russie Méridionale* (South Russian Messenger) begun in Odessa in 1820 and changed to the Russian *Vestnik Yuzhnoi Rossii* (South Russian Herald) in 1821, the first daily in eastern Ukraine *Odesskii Vestnik* (Odessa Herald) published from 1827 to 1893, and *Kievskie Ob'iavleniia* (The Kiev Advertiser). All these newspapers, as well as the *Gubernskie Vedomosti* (Provincial News) which began publication in all the provincial capitals in 1838, were far removed from Ukrainian problems, being mostly carriers of official news. Somewhat later, the *Gubernskie Vedomosti* published in Chernihiv and Kamianets Podilsky began to show an interest in Ukrainian history and geography. The Kharkiv weekly *Kharkovskie Izvestiia* (Kharkiv News) published by Andrew Verbytsky (1817–23) was to a certain degree Ukrainian in character, printing some articles in Ukrainian. The first newspaper in Transcarpathia was the Hungarian-language *Ungvari Ertisitö* (1845–9), and the first newspaper in Bukovina was *Bucovina* published in Rumanian and German in Chernivtsi (1848–50).

The beginnings of Romanticism and of the Ukrainian cultural and national renaissance marked an attempt to publish magazines of a local nature. This attempt was associated with the cultural center established at Kharkiv University [Vol. I, p. 673 and Vol. II, p. 315]. The literary scientific journal *Ukrainskii Vestnik* had a circulation of 350 to 500 copies in Kharkiv from 1816 to 1819. Yevhraf Filomatytsky, Rozumnyk Honorsky, Alexander Sklabovsky, Gregory Kvitka-Osnovianenko, and Peter Hulak-Artemovsky were instrumental in publishing it. The magazine published articles in Russian on Ukrainian historical subjects, and poems and special columns in Ukrainian. The magazine was suspended by the Russian censors in 1820 and subsequently reestablished as *Ukrainskii Zhurnal* (Ukrainian Journal, 1824–5). *Khar'kovskii Demokrit,* published in Kharkiv in 1816 and edited by Basil Maslovych, was devoted to literature and satire.

The reigns of Nicholas I in Russia and Franz I and Ferdinand I in Austria were unfavorable to the Ukrainian press which was limited to non-periodicals, mainly literary almanacs, bilingual, but with the Ukrainian language predominant. The following periodicals appeared in Ukraine under Russia: *Ukrainskii Almanakh,* published by Ivan Roskovshenko and Izmail Sreznevsky (1831); *Utrennaia Zvezda* (Morning Star, two volumes, 1833), initiated by Kvitka-Osnovianenko; *Zaporozhskaia Starina* (Zaporozhian Antiquity, 1833–8) and *Ukrainskii Sbornik* (Ukrainian Symposium, 1838–41) by Sreznevsky; *Kievlianin* (The Kievite) by Michael Maksymovych (three volumes

FIGURE 201. ALMANAC *Snip,* KHARKIV, 1841

FIGURE 202. ALMANAC *Molodyk,* KHARKIV, 1843

published in Kiev in 1840–1) and in Moscow in 1850; *Lastivka* (The Swallow, 1841) of Eugene Hrebinka; *Snip* (The Sheaf, 1841) by Alexander Korsun; *Molodyk* (The Youngster, four volumes, 1842–4) by Ivan Betsky; *Yuzhnyi Russkii Sbornik* (South Russian Symposium) 1848, by Ambrose Metlynsky; *Khata* (The Home, 1860) by P. Kulish (1860). In Galicia, Markian Shashkevych, Ivan Vahylevych, and Jacob Holovatsky published the almanac *Rusalka Dnistrovaia* (Nymph of the Dniester, Budapest, 1837) and J. Holovatsky two issues of *Vinok Rusynam na obzhynky* (Harvest Wreath for the Ruthenians, 1846–7). The

ideology of Ukrainian romantic populism was fairly clearly formulated in these almanacs. In the Transcarpathian city of Priashiv, an almanac *Pozdravleniie Rusynov* (Greetings from Ruthenians) came out in three editions between 1850 and 1852.

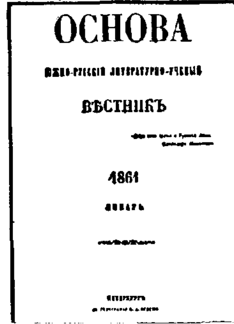
Conditions changed in Austria following the revolution of 1848. The first Ukrainian weekly, *Zoria Halytska* (Galician Star, 1848) was the organ of the Supreme Ruthenian Council in Lviv [Vol. I, p. 699]. Edited by Anthony Paventsky, it came out in 4,000 copies. The very first issue printed a declaration of Ukrainian separatism and national unity (May 15, 1848). *Zoria Halytska* outlived the pro-Polish *Dnevnyk Ruskyi* (Ruthenian Daily) founded in 1849, under the editorship of Ivan Vahylevych, but following the reactionary trend after 1848 it was taken over by the Russophiles

ЗОРѦ ГАЛИЦКА

Число 1

FIGURE 203. TITLE PAGE OF THE NEWSPAPER *Zoria Halytska*, LVIV, 1848

in 1850. It confined itself to literary subjects, and eventually ceased publication in 1857. The *Halycho-Ruskii Vistnyk* (Galician-Ruthenian Herald) founded by Nicholas Ustyianovych in 1849 had a longer life. Transferred from Lviv to Vienna under Ivan Holovatsky, its editor from 1866 was George Vyslobotsky. Its significance diminished, particularly after 1850, when it became the semi-official *Vistnyk dlia Rusynov Avstriiskoi Derzhavy* (Herald for the Ruthenians of the Austrian State). The life of the Russophile newspapers *Novyny* (News) and *Pchola* (The Bee) published by the Rev. Ivan Hushalevych in 1849 was short. Official newspapers were published by the government: *Tserkovnaia Gazeta* (Church Gazette) in Budapest for Transcarpathia (1856–8) and *Vistnyk Zakoniv* (Law Herald) in Vienna (1854–8, 1872–1918). The first magazine for women in Ukraine was *Lada* (1853), published by Severyn Shekhovych.



ОСНОВА

ВѢСТНИКЪ

1861

FIGURE 204. THE MONTHLY *Osnova*, ST. PETERSBURG, 1861

## THE 1860's THROUGH THE 1880's

The monthly *Osnova* (Foundation, 1861–2), founded in St. Petersburg on the initiative of Panteleimon Kulish and edited by Basil Bilozersky [Vol. I, p. 681b], had a decisive effect on the development of Ukrainian national consciousness and the crystallization of Ukrainian ideology in the second half of the nineteenth century. In addition to providing a series of excellent literary works, the journal provided a broad treatment of the Ukrainian national movement in literary and critical articles by P. Kulish, historical studies by Nicholas Kostomarov, socioeconomic essays by Thaddeus Rylsky, bibliographical reviews and comments, etc. *Osnova* was highly regarded by both Ukrainians and foreigners. Its program was continued on a smaller scale by *Chernigovskii Listok* (The Chernihiv Newsletter) founded in Chernihiv by Leonid Hlibiv (1861–3).

Under the new Austrian constitution, the Ukrainian press had a chance of freer development in Galicia, the short-lived journals published by the populists between 1862 and 1865 were directly

FIGURE 205A. THE WEEKLY *Pravda*, LVIV, 1870

FIGURE 205B. THE MONTHLY *Pravda*, LVIV, 1894

affected by the views of *Osnova*. These journals were: *Vechernytsi* (Social Evening), *Meta* (Goal), *Nyva* (Field), and *Rusalka* (Nymph), among others. *Pravda* published by the same group in Lviv had a longer life (1867–80, and 1884). It was a literary and civic journal edited in turn by Anatole Vakhnianyn, Omelian Ohonovsky, and Volodymyr Barvinsky, which gradually assumed national importance. Besides the newspapers of the populists, there were Russophile periodicals, the most important of which was *Slovo* (Word) published between 1861 and 1887, edited by Bohdan Didytsky. It initially came out twice a week; later three times. The popular scientific and literary magazine *Nauka* (Scholarship) was founded and edited by Ivan Naumovych (1872–1902). In addition to the periodicals mentioned above, in the western Ukrainian territories there were newspapers and magazines devoted to problems of agriculture, industry, and commerce: *Nediliа* (Sunday), *Hospodar* (The Husbandman); the educational *Uchytel'* (Teacher) and *Gazeta Shkol'na* (School Gazette); the satirical *Strakhopud* (Scarecrow) and *Kropylo* (Sprinkler.)

The first Ukrainian newspaper published in Bukovina was *Bukovyns'ka Zoria* (Bukovinian Star, 1870–1) published by Ivan Hlibovytsky in Chernivtsi.

Simultaneously with the publication of *Pravda* in Lviv, attempts were made to establish a Ukrainian press in Kiev, if not Ukrainian in language, then at least Ukrainian in spirit. In 1874, George Tsvitkovsky became the editor of the newspaper *Kievskii Telegraf* (The Kiev Telegraph, 1859–76). The editor was closely associated with Kyïvs'ka Hromada [Vol. I, p. 683]. Under his supervision the newspaper became the organ of Hromada, with such contributors as Volodymyr Antonovych, Michael Drahomanov, Paul Zhytetsky, Paul Chubynsky, Alexander Rusov, and Theodore Vovk. Attacks by the reactionary newspaper *Kievlianin* (1864–1920) led to the closing of *Kievskii Telegraf* in 1875. The prohibition of any Ukrainian printing in the Russian empire was decreed in 1876 (the Ems ukase [Vol. I, p. 684]). Belles-lettres only, which had to be printed in Russian orthography, were excepted. It became necessary to revert to the publication of almanacs: *Luna* (Echo, Kiev, 1881), *Rada* (Council, Kiev, 1883–4), *Nyva* (Field, Odessa, 1885), *Step* (Steppe, Kherson-Petersburg, 1886) and *Skladka* (Collection, four volumes, Kharkiv-Petersburg, 1887–97).

The monthly journal *Kievskaia Starina* (Kievan Antiquity, 1882–1907) became a true spokesman for Ukrainian culture. It was sponsored by Basil Semyrenko and Basil Tarnovsky, Jr. and edited by Theophan Lebedyntsev (1882–8), Alexander Dashkevych (1888–9), Alexander Lazarevsky (1890–1), Eugene Kyvlytsky (1891–2), and Volodymyr Naumenko (1892–1906). Starting with Lazarevsky, *Kievskaia Starina* became the organ of *Hromada* and a scholarly journal of Ukrainian studies (see Scholarship, p. 247). The last volume of *Kievskaia Starina* came out in 1907 under the name *Ukraïna*. During its last ten years this journal devoted much space to literary

FIGURE 206. TITLE PAGE OF THE MONTHLY *Kievskaia Starina*, KIEV, 1882–1906

works in Ukrainian and to journal articles.

During this period, a number of Russian newspapers were favorably disposed towards the Ukrainian problem and some had Ukrainians on their editorial staffs: *Yuzhnyi Krai* (The Southland, 1881–1918), *Volyn'* (1882–early 1900's), and *Kuban'* (1882–5).

## FROM 1880 TO 1906

The development of the Ukrainian press at this time was exclusively confined to Western Ukraine and foreign countries. The principal Galician and émigré newspapers and magazines partially fulfilled the role of nationwide Ukrainian press organs. In the struggle with the Russophile trend and its press, the populist press began to gain the upper hand. In addition to the popular rural newspaper *Bat'kivshchyna* (Homeland, 1879–96) founded by Julian Romanchuk and the Lviv *Pravda* (1888–98) which was revived by a pro-Polish faction sponsored by Alexander Konysky and edited by Alexander Barvinsky, *Dilo* (Deed) became the most prestigious and influential newspaper after 1880. First appearing semiweekly, then every other day, it became a daily in 1887 and survived with some interruptions until 1939. Volodymyr Barvinsky was its founder and editor until 1883. From that year until 1914 its editors were: Ivan Belei, Eugene Levytsky, Longin Tsehel-

FIGURE 207. MASTHEADS OF THE NEWSPAPER *Dilo*, LVIV, 1880–1939

FIGURE 208. MASTHEADS OF THE NEWSPAPER *Svoboda*, LVIV, 1897–1939

sky, Yaroslav Vesolovsky, Volodymyr Kushnir, and Basil Paneiko. *Dilo* printed contributions by authors from all parts of Ukraine. It was close to the populist movement headed by Omelian Ohonovsky and later became associated with the Ukrainian National Democratic party, whose official organ was the weekly *Svoboda* (Liberty, 1897–1939) read mainly by the rural population.

In Bukovina, the newspaper resembling *Dilo* in form and content was *Bukovyna*, published semimonthly in Chernivtsi (1885–1918). Joseph Fedkovych was its first editor, followed by Omelian Popovych who worked closely with Stephen Smal-Stocky. Changing subsequently into a weekly and finally a daily, it reached its peak under the editorship of Joseph Makovei. *Rus'ka Rada* (Ruthenian Council, 1898–1908) of Chernivtsi

was similar to the Lviv *Svoboda*. There were also Russophile newspapers such as *Pravoslavna Bukovyna* (Orthodox Bukovina, 1893–1903) and the weekly *Bukovinski Vedomosti* (Bukovinian News, 1895–1909).

The leading newspaper in Transcarpathia to follow the national trend was the semimonthly and later weekly *Nauka* (Scholarship, 1897–1914) published in Uzhhorod. A popular newspaper in Transcarpathia was *Nedelia* (Sunday) published in Budapest. A pro-Hungarian attitude was promoted by the Russophile *Karpat* (Carpathians, 1873–86) published by M. Homychkov and *Lystok* (Leaf, 1885–1903) published by Eugene Fentsyk.

In the late 1870's, when the populists split into moderates and socialists, attempts were made, mainly through the efforts of M. Drahomanov [Vol. I. p. 703b] to establish socialist newspapers and journals. The forums of Drahomanov's and socialist ideas were: *Druh* (Friend, 1874–7) published in collaboration with Ivan Franko and Michael Pavlyk, which gradually abandoned its Russophile position; *Hromads'kyi Druh* (Civic Friend, 1877), a monthly edited by Franko and Pavlyk, which continued in the form of an almanac under the title *Dzvin* (Bell) and *Molot* (Hammer, 1878–9), and the journals *Svit* (World, 1881–2) edited by I. Belei, and *Tovarysh* (Comrade, 1888) edited by Franko. At the same time, in order to disseminate his ideas which bordered on socialism, Drahomanov founded the journal *Hromada* (Community, 1878–82) in Geneva (Switzerland) in cooperation with M. Pavlyk and Serhii Podolynsky. This journal had considerable influence on the development of Ukrainian political thought in all Ukraine, contributing to the crystallization of both the socialist-radical and the national-democratic trends. All these for the most part short-lived publishing efforts culminated in the establishment of a strictly political newspaper, the official organ of the Ruthenian-Ukrainian Radical Party (founded in 1890), *Narod* (The People, 1889-95) edited by I. Franko and M. Pavlyk. It subsequently continued as the weekly (later semiweekly) *Hromads'kyi Holos* (Community Voice, 1895–1939) edited by Viacheslav Budzynovsky, I. Franko, and M. Pavlyk, to mention only some. In 1897, *Hromads'kyi Holos* merged with the Chernivtsi weekly *Pratsia* (Labor). The rural newspaper *Khliborob* (Farmer, 1891–3) published in Lviv and Kolomyia and the shortlived *Radykal* (1895–6) edited by V. Budzynovsky were also allied with the Radical party.

A more outspoken socialist press appeared in Galicia and Bukovina in the 1900's, mainly through the efforts of the Ukrainian socialist parties in the central and eastern Ukrainian territories. The Ukrainian Social Democratic Party, founded in Lviv in 1899 [Vol. I, p. 704b], published its organ *Volia* (Freedom, 1900–7) in Lviv. Sponsored by Basil Simovych and Lev Kohut, the publication of the Revolutionary Ukrainian party (RUP [Vol. I, p. 686a]) *Haslo* (Password, 1902–3) was published in Chernivtsi, but its editors, headed by Dmytro Antonovych, remained in Kiev. Later, the RUP organ *Pratsia* (Labor) was published in Lviv (1904–5).

The labor newspapers with a socialist outlook were: the Polish language *Praca* (Labor, 1878–83) published in Lviv with the collaboration of I. Franko and the semimonthly *Robitnyk* (Worker, 1897) printed in Latin script, the voice of the Marxist group of Nicholas Hankevych and Julian Bachynsky.

In addition to the Lviv *Pravda*, which spoke for the moderate conservatives in the 1888–98 period and which had as contributors prominent writers from eastern Ukraine, there was also the clerically oriented organ of the Christian Social Party, *Ruslan* (1897–1914) edited by Alexander Barvinsky.

The Catholic press was represented by papers for the clergy such as *Ruskii Sion* (Ruthenian Zion, 1871–85) and *Dush-*

*pastyr* (Shepherd of Souls, 1887–98); the civic-religious semimonthly *Nyva* (Field, 1904–14 and 1916–39), and for laymen the journals *Poslannyk* (Emissary, 1889–1911) and *Misionar* (Missionary, 1897–1944).

РУСЛАН

РУСЛАН

FIGURE 209. MASTHEADS OF THE NEWSPAPER *Ruslan*, LVIV, 1897–1914

The student press made its appearance with *Moloda Ukraïna* (Young Ukraine) published in Lviv in 1900–1 and revived in 1905 and 1910. The editors of this socialist-oriented monthly, which advocated an independent Ukraine, enjoyed great prestige among young people and maintained contacts with students in central and eastern Ukraine, were: Longin Tsehelsky, Volodymyr Starosolsky, Volodymyr Temnytsky, and Stephen Baran.

Problems of the national economy, particularly of agriculture, were discussed by such periodicals as *Hospodar i promyshlennost* (Husbandman and Industry, 1879–87), *Providnyk Ril'nychykh Kruzhkiv* (Farm Club Members' Guide, 1886–1914), *Hospodar* (Husbandman, 1898–1913), and *Ekonomist* (1904–14) published by the National Cooperative Association.

The publications of the Prosvita society were in a special category [Vol. I, p. 702]: *Pys'mo z Prosvity* (Letter from *Prosvita*, 1877–9) edited by Omelian Partytsky and Anatole Vakhnianyn, the semimonthly *Chytal'nia* (Reading Room, 1893–4), and again *Pys'mo z Prosvity* (1907–16); there was also a Russophile semimonthly *Beseda* (Talk, 1887–98).

Journals of satire and humor were: the Russophile *Strakhopud* (Scarecrow, 1880–1905), and the populist *Zerkalo* (Mirror, 1882–93 intermittently and 1906–8), and *Nove Zerkalo* (New Mirror, 1884–5).

Literary and scholarly journals constituted a large and important group of periodicals during this period. They engaged as contributors many writers, publicists, and scholars from central and eastern Ukraine, thus assuming an all-Ukrainian character and contributing to the development of Ukrainian literature and scholarship.

Initially, literary activities were concentrated around *Zoria* (Star) published in Lviv by Omelian Partytsky (1880–97). After the establishment of closer contacts with writers of central and eastern Ukraine in 1883, and its acquisition by the Shevchenko Scientific Society in 1885, *Zoria* became a general journal representative of Ukrainian literature in the 1890's particularly under the editorship of Volodymyr Levytsky (pseud. Vasyl Lukych).

*Zoria*'s conservative orientation and somewhat limited range of ideas and subjects compelled the writers and scholars with radical and socialist ideas to organize a separate magazine, the monthly *Zhytie i Slovo* (Life and Words, 1894–7) published and edited by I. Franko. Since it paid considerable attention to the problems of scholarship and politics as well as to literature, and gathered as contributors prominent writers and scholars from all parts of Ukraine, *Zhytie i Slovo* won recognition and respect among the west European slavists.

РОЧНИКЪ ШЕСТЫЙ

1885.

FIGURE 210. TITLE PAGE OF THE JOURNAL *Zoria*, LVIV, 1880–97

Both *Zoria* and *Zhytie i Slovo* ceased publication in 1897 as part of the efforts of Michael Hrushevsky to establish a single literary-scientific journal uniting all Ukrainian literary trends and leading

critics and scholars from all Ukrainian territories. This journal, *Literaturno-Naukovyi Vistnyk* (Literary-Scientific Herald) began publication in 1898 and played a leading role in Ukrainian literary development until 1919. Besides

FIGURE 211. TITLE PAGE OF THE *Literaturno-Naukovyi Vistnyk*, LVIV-KIEV, 1898–1919

Franko, who was actually editor-in-chief, its editorial board included M. Hrushevsky, Alexander Borkovsky, Joseph Makovei, and Volodymyr Hnatiuk. The journal had 800 subscribers in its very first year. Its contents were rich and varied, including literature, criticism, politics, and economics. In many respects it formulated the general trends of public opinion.

Among scientific publications, after *Naukovyi Sbornik Halytsko-Ruskoi Matytsi* (1865–8), the leading scholarly journal in all Ukraine was the periodical *Zapysky Naukovoho Tovarystva im. Shevchenka* (Memoirs of the Shevchenko Scientific Society, see scholarship p. 249), which appeared in 1892. A legal periodical *Chasopys' Pravnycha* (Law Journal, 1889–1900) was published and edited by Constantine Levytsky (publication was taken over by the Shevchenko Scientific Society in 1893). It was continued as *Chasopys' Pravnycha i Ekonomichna* (Journal of Law and Economics, 1900–12) under the editorship of Stanyslav Dnistriansky.

The central and eastern territories of Ukraine had no Ukrainian-language press between 1880 and 1905. Some Russian-language journals partially filled the gap particularly *Kievskaia Starina*, and some newspapers published in Kiev and other cities which employed Ukrainians. There were also Galician, Bukovinian, and foreign (Geneva) periodicals which found their way into central and eastern Ukraine with great difficulty. Following the relaxation of censorship in the early 1900's, it was possible to publish a series of non-periodic symposia *Khvylia za khvyleiu* (Wave After Wave, 1900), *Z-nad khmar i dolyn* (From Clouds and Dales, 1902), *Dubove lystia* (Oak Leaves), *Literaturnyi zbirnyk pamiati O. Konys'koho* (O. Konysky Literary Symposium, 1903), *Na vichnu pamiat' Kotliarevs'komu* (In Perpetual Memory of Kotliarevsky, 1904), among others.

In order to inform the West about Ukrainian affairs, Roman Sembratovych published and edited the German-language periodicals *X-Strahlen* (X-Rays) and *Ruthenische Rundschau* (Ruthenian Review) in Vienna (1903–5).

### 1906–14

The Russian revolution of 1905 swept away the prohibitions against Ukrainian publications and removed censorship, thus creating opportunities for the establishment and development of a Ukrainian press in central and eastern Ukraine.

The first newspaper in the Ukrainian language was published by Volodymyr Shemet in Lubny without the permission of the authorities and closed after five issues; it was a rural weekly called *Khliborob* (Farmer)–5,000 copies printed. The weekly *Ridnyi Krai* (Native Land) began publication in Poltava with the permission of the authorities pursuant to the provisional rules for periodicals of November 24, 1905. It was edited by Olena Pchilka and was later

transferred to Kiev. The daily *Hromads'ka Dumka* (Community Thought) began publication in Kiev on December 31, 1905, on the initiative and with the financing of Eugene Chykalenko, Basil Symyrenko, and Volodymyr Leontovych, and edited by Theodore Matushevsky. However, publication was suspended by the authorities in August 1906 and it was replaced by the new daily *Rada* (Council) which continued from September 15, 1906 until August 1914 and was the leading Ukrainian newspaper providing broad coverage of Ukrainian life throughout the world. *Rada* was financed by E. Chykalenko, its publisher and editor-in-chief, and was cosponsored by B. Symyrenko and Leonid Zhebuniov. T. Matushevsky was also editor of *Rada*, as was Andrew Nikovsky from 1913. Among its contributors were Simon Petliura, Basil Koroliv-Staryi, and Dmytro Doroshenko. In spite of interference with distribution and censorship on the part of the Russian administration, *Rada* won an ever-increasing popularity and by 1914 had 4,000 subscribers.

ХЛІБОРОБ.

FIGURE 212. NEWSPAPER *Khliborob*, LUBNY, 1905

ГРОМАДСЬКА ДУМКА

ГРОМАДСЬКА ДУМКА

FIGURE 213. MASTHEADS OF THE NEWSPAPER *Hromads'ka Dumka*, KIEV, 1905–6

There were also many provincial newspapers published in various cities outside of Kiev, e.g. *Desna* in Chernihiv (1906) and *Poltavshchyna* in Poltava (1904–6). Most of them were short-lived. They lacked financial backing and suffered administrative restrictions and censorship. More permanent were the rural *Svitova Zirnytsia* (World Lightning, 1906–14) published by Joachim Voloshynovsky in Mohyliv and in the village of Penkivtsi (after 1911 in Kiev) and the illustrated weekly *Dniprovi Khvyli* (Waves of the Dnieper, 1910–13), in Katerynoslav, edited by Dmytro Doroshenko and later by Basil Bidnov. The rural weekly *Selo* (Village, 1909–11) founded through the efforts of M. Hrushevsky won wide popularity, but its publication was suspended after 18 months because of administrative pressure. Its replacement was *Zasiv* (Seeding, 1912), followed by *Maiak* (Lighthouse) 1913–14).

РАДА

РАДА

FIGURE 214. MASTHEADS OF THE NEWSPAPER *Rada*, KIEV, 1906–14

The political press was represented by the social-democratic weekly *Slovo* (Word, 1907–9) published in Kiev under the editorial board of S. Petliura, Nicholas Porsh, Valentine Sadovsky, and Yakym Mikhura. Other parties, mostly socialist, published their organs in Galicia and Bukovina.

Several literary, scholarly, and professional journals were also established in this period. The monthly *Nova Hromada* (New Community) edited by Borys Hrinchenko and Volodymyr Leontovych appeared in Kiev in 1906, but it lasted only to the end of the year, because *Literaturno-Naukovyi Vistnyk* was transferred from Lviv to Kiev. Publication of the *LNV* (starting in 1907 in Kiev) made

FIGURE 215. PUBLISHERS, EDITORS, AND CONTRIBUTORS OF THE NEWSPAPER *Rada* IN KIEV, 1914 (Seated, in the front row, from the left: I. Soletsky, I. Malych, E. Chykalenko, A. Nikovsky, S. Yefremov, and O. Kuzmynsky.)

it possible to bring together a staff of prominent writers and publicists, thus adding to the prestige and importance of this leading journal. Nevertheless, with a change in the literary process and the emergence of new literary trends, another literary journal was established in Kiev, *Ukraïns'ka Khata* (Ukrainian Home, 1909–14). With Paul Bohatsky and Mykyta Shapoval as its editors, this journal became the forum for new ideas. It opposed the traditional Ukrainophilism and conservative populism, engaging in sharp polemics with *Rada*. The following journals began publication in Kiev in 1913: the literary monthly of Marxist leanings *Dzvin* (Bell) edited by Volodymyr Levynsky and the art monthly *Siaivo* (Radiance) under Paul Kovzhun. Both ceased publication with the outbreak of World War I. The first professional educational journal, *Svitlo* (Light) edited by Gregory Sherstiuk was published in Kiev between 1910 and 1914.

As a supplement to the newspaper *Ridnyi Krai* (Native Land) the monthly *Moloda Ukraïna* (Young Ukraine) edited by Olena Pchilka was published between 1906 and 1914.

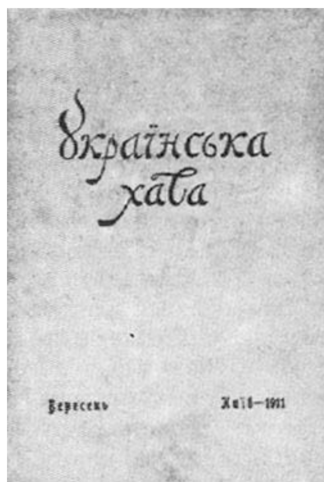

FIGURE 216. TITLE PAGE OF THE MAGAZINE *Ukraïns'ka Khata*, KIEV, 1909–14

The agricultural press of this period was represented by the newspapers *Rillia* (Plowed Land) and *Nasha Kooperatsiia* (Our Cooperatives) in Kiev, and *Ukraïns'ke Bdzhil'nytstvo* (Ukrainian Apiculture) in St. Petersburg.

In Lviv, the earlier National Democratic newspapers *Dilo* and *Svoboda* continued publication, as did the conservative clerical *Ruslan*, the radical *Hromads'kyi Holos*, the Russophile *Halychanyn* (the Galician 1893–1913), *Russkaia Rada* (Russian Council, 1871–1912), and *Russkoie Slovo* (Russian Word, 1890–1913). The Ukrainian newspapers displaying a nationalist trend were joined in 1912 by the popular daily *Nove Slovo* (New Word). There were several other rather insignificant weekly newspapers in Lviv and in the provincial towns. The majority of Ukrainian newspapers were engaged in an anti-Polish campaign. They furnished information about Ukrainian life in general but devoted much space to current political events (the struggle for reform of the election law of the Galician Diet and the Austrian Parliament, land reform, etc.).

Party publications of importance in this period included: the organ of the Ukrainian National Party *Samostiina Ukraïna* (Independent Ukraine, 1905); the social-democratic weekly first published in Chernivtsi and later in Lviv, *Zemlia i Volia* (Land and Freedom, 1907–13) edited by Volodymyr Levynsky; the Chernivtsi socialist monthly *Borot'ba* (Struggle, 1908–11) edited by Joseph Bezpalko; and the organ of the Radical Party *Hromadianyn* (Citizen, 1909–11). The magazine for high-school students, *Zhytie* (Life, 1912–14), was also politically oriented.

New literary and art magazines were joining *Literaturno-Naukovyi Vistnyk* in Lviv. Founded by followers of modernist trends they included the monthly *Rus'ka Khata* (Ruthenian Home, 1905) edited by Roman Sembratovych and continued by Viacheslav Budzynovsky as *Svitlo* (Light, 1906–8). Resembling the latter were the shortlived *Svit* (World, 1906–7) and *Buduchnist'* (Future, 1909–10). The first Ukrainian art magazine *Artystychnyi Vistnyk* (Art Herald) was published in Lviv during the years 1905–7 and edited by Ivan Trush. A literary-art magazine (*Iliustrovana Ukraïna* (Illustrated Ukraine, 1912–13) was published and edited by Ivan Krypiakevych.

Professional journals which continued publication in Lviv were: *Uchytel'* (Teacher, see Education, p. 294), and as a publication of Uchytel's'ka Hromada (Teachers Association) *Nasha Shkola* (Our School) 1909–15; the legal profession published its journal *Pravnychyi Vistnyk* (Law Herald), and the medical profession founded its periodical *Zdorovlia* (Health, 1912–14). Women's publications which had been represented only by almanacs were now enriched by the appearance of the newspaper *Meta* (Goal) edited by Daria Starosolska. Sports newspapers also appeared: *Visti z Zaporozha* (News from Zaporozhe, 1910–14) as a supplement to the Lviv *Narodne Slovo* (National Word) and *Sokil's'ki Visti* (Sokil News, 1912–14) as a separate newspaper published in Lviv. The children's magazine *Dzvinok* (Bell, 1890–1914) edited by Catherine Hrynevych and Constantina Malytska won wide popularity.

ДЗВІНОК

FIGURE 217. TITLE PAGE OF THE CHILDREN'S MAGAZINE *Dzvinok*, LVIV, 1890–1914

Outside Ukraine, a magazine *Ukrainskii Vestnik* (Ukrainian Herald), edited by Maxim Slavinsky, was published in Russian in St. Petersburg. Founded in 1906, it was shut down by the Russian authorities after 14 issues. A Ukrainian monthly journal in Russian, *Ukrainskaia Zhizn'* (Ukrainian Life), published in Moscow by S. Petliura had a longer career. *Ukrainische Rundschau* was published in German by Volodymyr Kushnir in Vienna as a continuation of *Ruthenische Revue*.

Overseas, in the United States, Canada, and South America, the Ukrainian

immigrant press was developing in quantity and quality. The organ of the Ruthenian (subsequently Ukrainian) National Association, *Svoboda*, founded in 1893, continued publishing as a weekly. Taking a clearly nationalist position, *Svoboda* provided broad news coverage of Ukrainian activities at home and abroad, promoted the establishment of Ukrainian national organizations, and combated pro-Russian and pro-Polish trends. Additional Ukrainian newspapers were established in the United States in the late 1900's: the organs of the Ukrainian Workingmen's Association *Shershen'* (Hornet, 1910–11) and *Narodna Volya* (People's Will, since 1911); the weekly of the Providence Association of Ukrainian Catholics, *Ameryka* (founded in 1912); and several more shortlived newspapers and magazines published by Ukrainian organizations and individual publishers. A Ukrainian-language newspaper of the Canadian Liberal party, *Kanadiiskyi Farmer* (Canadian Farmer) began publication in 1903, followed by a similar, but shortlived paper of the Conservative party, *Slovo* (Word, 1904–5). The first Ukrainian independent newspaper was the Winnipeg *Ukraïns'kyi Holos* (Ukrainian Voice), founded in 1910. Other newspapers with differing points of view were published in Canada between 1907 and 1914 (see Ukrainians Abroad, pp. 1178 ff.). The first Ukrainian newspaper in Brazil, *Zoria* (Star), was started by the Prosvita society in Curitiba (1907–10). In 1913, the Basilian Fathers founded the newspaper *Pratsia* (Labor) in Prudentopolis.

In 1913, out of a total of 141 Ukrainian periodicals published throughout the world, only 19 originated in the Russian empire, whereas 234 were Polish, 13 Jewish, and 21 Armenian. In Ukraine alone 226 Russian periodicals were published in 1913. Ukrainian periodicals in Austria-Hungary numbered 80, of which 66 came out in Galicia, 8 in Bukovina, 2 in Transcarpathia, and 4 outside Ukrainian territories (Vienna, Budapest).

The figures below indicate the number of Ukrainian periodicals published throughout the world.

| | 1848 | 1861 | 1881 | 1890 | 1900 | 1906 | 1913 |
|---|---|---|---|---|---|---|---|
| Whole world | 2 | 4 | 28 | 33 | 40 | 97 | 141 |
| Russian empire | — | 1 | — | 1 | 1 | 17 | 19 |

The first Ukrainian news agency, the Information Committee in Lviv, came into being in 1912. It was founded by Roman Zalozetsky and Andrew Zhuk mainly for the purpose of informing the outside world about Ukraine.

In spite of the constant growth of the Ukrainian press at home and abroad, the quality of the newspapers in this period was not high: there were only three dailies, very few weeklies, and the editors were for the most part without professional training. A majority of the periodicals were financially unstable: there were no private benefactors, no state or municipal subsidies, and very little advertising revenue. The number of readers was limited, especially under Russia, where the Russian press held first place.

## WORLD WAR I (1914–18)

The onset of World War I was catastrophic for the Ukrainian press. The Russian authorities discontinued *Rada*, *Maiak*, *Ukraïns'ka Khata*, and all other papers and magazines on the second day of the war. The ukase of 1876 was reinvoked on January 3, 1915, and all Ukrainian publications with the exception of the newspaper *Ridnyi Krai* which had to use Russian type, were prohibited within the Kiev military district. A literary monthly, *Osnova*, organized by Andrew Nikovsky in Odessa was shut down after three issues. Other newspapers in various cities of Ukraine which began legal pub-

lication in 1915 and 1916 met a similar fate. The only surviving Ukrainian organ was *Ukrainskaia Zhizn'* in Moscow (see above) edited by S. Petliura and Alexander Salikovsky. Under these circumstances, the political parties had to resort to such clandestine publications as *Borot'ba* (Struggle) of the social revolutionaries in 1915 and *Vil'na Dumka* (Free Thought) of the radical democrats.

The occupation of Galicia and Bukovina by Russian armed forces caused a complete dissolution of the Ukrainian press. Only Russophile and Polish publications were allowed to appear. Following the retreat of the Russians from Lviv in June 1915, the Ukrainian press staged a comeback in Galicia. Theodore Fedortsiv, Stephen Charnetsky, and Longin Tsehelsky published *Nove Slovo* (New Word), called *Ukraïns'ke Slovo* (Ukrainian Word) from 1915 to 1918. Fedortsiv and Dmytro Dontsov revived the semimonthly *Shliakhy* (Pathways) which had been a student organ in 1913 and 1914, and now (until 1918) became the spokesman for the Ukrainian Sich Riflemen. Mimeographed issues of the Sich Riflemen came out at the front lines. Newspapers published by the Austrian government for Ukrainian soldiers serving in the Austrian Army were used partly for promoting Ukrainian ideas: *Vidrodzhennia Ukraïny* (Rebirth of Ukraine, 1918) edited by Ivan Nimchuk; and *Nedilia* (Sunday, 1916–18) published in Russian for Russian prisoners of war and edited by Ivan Krevetsky.

The Ukrainian newspapers *Dilo*, *Svoboda*, and *Bukovyna* were transferred to Vienna during the war and played an important part in Ukrainian journalism, as did the anti-Russian newspaper *Vistnyk Soiuzu Vyzvolennia Ukraïny* (Herald of the Union for the Liberation of Ukraine, 1914–18) edited by Volodymyr Doroshenko, A. Zhuk, and Michael Vozniak. In addition to these newspapers, *Vistnyk Derzhavnykh Zakoniv* (Herald of State Laws) was published in Ukrainian in Vienna, as well as two newspapers for Ukrainian soldiers and noncommissioned officers in the Austrian armed forces. During the years 1915–18, a series of newspapers was published for Ukrainians who were Russian prisoners of war in Austria and Germany. These papers were mostly educational and included *Prosvitnyi Lystok* (Educational Letter) and *Rozvaha* (Entertainment) in Freistadt, *Rozsvit* (Dawn) in Rastadt, *Hromads'ka Dumka* (Community Thought) in Wetzlar, and *Vil'ne Slovo* (Free Word) and *Selianyn* (Peasant) in Salzwedel.

A number of Ukrainian periodicals in other languages were circulated to disseminate information about Ukraine and the Ukrainian cause. The foreign-language bulletins of the Union for the Liberation of Ukraine were published in Vienna and Berlin, *La Revue Ukrainienne* (The Ukrainian Review) in Lausanne in French (1915–16), and *The Ukraine* in English, also in Lausanne. In Budapest, in addition to the official *Negyilya* (Sunday) printed in Hungarian script, there was the Hungarian-language *Ukrania* (1916) edited by Hiiador Strypsky.

## WAR OF LIBERATION (1917–20)

The revolutions in Russia and later in Austria-Hungary and the establishment of Ukrainian statehood created favorable conditions for the development of a Ukrainian press. Its influence, however, diminished because of continued military action, economic chaos, lack of paper, and inadequate transportation and communications. Several dailies came into being in Kiev in March and April 1917: *Nova Rada* (New Council), edited by A. Nikovsky was actually a continuation of *Rada* and was closely allied to the Ukrainian Socialist-Federalist party; *Robitnycha Hazeta* (Worker's Gazette) edited by Volodymyr Vynnychenko was the organ of the Ukrainian Social-Democratic Workers party; *Narodna Volia* (People's Will) represented the Peasant

Union; *Borot'ba* (Struggle) edited by Nicholas Shrah was the organ of the Ukrainian party of Socialist-Revolutionaries (subsequently it was taken over by the party's left wing, the so-called Borotbists). Additional dailies in Kiev were *Hromads'ke Slovo* (Community Word) published by A. Salikovsky and *Promin'* (Ray) by Valentine Sadovsky. In 1918 Kiev had a non-partisan democratic daily *Vidrodzhennia* (Rebirth) edited by P. Haienko, and in 1918 and 1919 a semi-official organ of the Directory of the Ukrainian National Republic, *Trybuna* (Tribune) edited by A. Salikovsky. There were also the Russian-language *Kievlianin* (The Kievan) and other Russian, Jewish, and Polish newspapers.

Ukrainian newspapers were also published in provincial centers and in many county seats. These papers were predominantly partisan, reflecting the political division of Ukrainian society. Thus, for example, the Social Democrats had the following papers: *Robitnyk* (Worker) in Kharkiv, *Holos Robitnyka* (Voice of the Worker) in Katerynoslav, *Vil'nyi Holos* (Free Voice) in Poltava, *Borot'ba* (Struggle) in Kamianets Podilsky. The Social Revolutionaries published: *Rukh* (Movement) in Kharkiv, *Sotsiialist-Revoliutsioner* (The Socialist Revolutionary) in Poltava, *Zemlia i Volia* (Land and Freedom) in Katerynoslav. The Autonomists-Federalists published *Vil'na Ukraïna* (Free Ukraine) in Uman. The *Samostiinyky* Socialists briefly published *Samostiinyk* (The Independent) in Kiev (1919) and later the daily *Ukraïna*.

The Peasant Union, the Prosvita society, the cooperative associations, and the so-called people's councils (former *zemstvos*) organized a great number of newspapers in provincial and county seats outside Kiev in 1917 and 1918.

Literature, science, and art were represented by the following publications: *Nashe Mynule* (Our Past) edited by Paul Zaitsev, *Knyhar* (Bookseller, 1917–20) edited by Basil Koroliv-Staryi and later Nicholas Zerov, *Teatral'ni Visti* (Theater News, 1917), and *Mystetstvo* (Art, 1919–20) edited by Michael Semenko and Ignatius Mykhailychenko. In addition to the revived *Literaturno-Naukovyi Vistnyk* in Kiev, there were the *Universal'nyi Zhurnal* (Universal Journal) and the monthly *Shliakh* (Pathway) which appeared in Moscow in 1917 and was transferred to Kiev in 1918, where it continued in the tradition of *Ukraïns'ka Khata*. The Symbolists were represented by the almanac *Muzahet*. Humor and satire had their outlets in *Gedz* (Gadfly), *Repiakh* (Burdock), and *Budiak* (Thistle), the most successful, edited by Serhii Panochini.

Among specialized and professional journals were: in education, *Vil'na Ukraïns'ka Shkola* (Free Ukrainian School, a continuation of *Svitlo*) in Kiev, *Osvita* (Education) in Kamianets Podilsky, and *Pedahohichnyi Zhurnal* (Pedagogical Journal) in Poltava; for students and children, *Sterno* (Stubble), *Kameniari* (Stonecutters), and *Voloshky* (Cornflowers) in Kiev, and *Yunak* (Youth) in Pereiaslav. Other journals were: *Zhinochyi Vistnyk* (Women's Herald), *Ukraïns'ka Viis'kova Sprava* (Ukrainian Military Affairs), *Ukraïns'ki Medychni Visti* (Ukrainian Medical News), *Zakon i Pravo* (Law and Justice), and *Vistnyk Hromads'koï Ahronomiï* (Herald of Community Agronomy), most of them published in Kiev.

A number of official publications appeared in Kiev during the period of Ukrainian statehood under the Central Rada, the Hetmanate, and the Directory: *Visti z Ukraïns'koï Tsentral'noï Rady* (News of the Ukrainian Central Rada), later *Vistnyk Heneral'noho Sekretariiatu Ukraïns'koï Narodnoï Respubliky* (Herald of the General Secretariat of the Ukrainian National Republic), and journals of various ministries and bureaus. Under the Hetman state, the monthly *Viis'kovo-Naukovyi Vistnyk* (Military Science Herald, 1918) was published in Kiev. After the Directory abandoned

Kiev, some of its publications came out in Vinnytsia and Kamianets Podilsky.

When the government administration moved to Podilia, a number of newspapers sprang up: *Nova Ukraïna* (New Ukraine), *Respublikans'ki Visti* (News of the Republic), *Zhyttia Podillia* (Podilian Life), *Trudovyi Shliakh* (The Path of Labor), and *Nash Shliakh* (Our Pathway). Military newspapers of the Army of UNR and of the Ukrainian Galician Army, such as *Strilets'* (Rifleman), were published in Kamianets Podilsky and elsewhere.

In the western Ukrainian lands which were included in the territory of the Western Ukrainian National Republic, following the Polish occupation of Lviv in November 1918, the city of Stanyslaviv became the center of publishing. The following appeared there: *Svoboda* (Liberty), the organ of the National Committee; *Narod* (People), the organ of the Ukrainian Radical party; *Respublika*, *Nove Zhyttia* (New Life), *Volia* (Freedom), and others.

Altogether, whereas only 19 periodicals appeared during the period of the Russian occupation in 1913 (10 in 1916), in 1917 there were 98; in 1918, 174; and in 1919, 144 (excluding Western Ukraine). Of 50 newspapers in Galicia in 1918 and 1919, 15 were published in Stanyslaviv.

More than a dozen Communist Russian-language newspapers were published in Ukraine 1917–18. The most important were: *Proletarii* (The Proletarian) in Kharkiv, *Proletarskaia Mysl'* (Proletarian Thought) in Kiev, and *Zvezda* (The Star) in Katerynoslav. The only Communist paper in Ukrainian at that time was the shortlived *Vistnyk Ukraïns'koi Narodnoï Respubliky* (Herald of the Ukrainian People's Republic). It lasted from late December 1917 to March 1918 in Kharkiv as the organ of the Central Executive Committee of the Soviet of Workers', Soldiers' and Peasants' Deputies of Ukraine.

Many Ukrainian newspapers and journals began appearing in 1917 in other parts of the Russian empire, notably in the Subcaucasus and Siberia, and in the Far East—e.g., *Ukraïns'ka Amurs'ka Sprava* (The Ukrainian Amur Cause) in Blagoveshchensk on the Amur River, *Zasiv* (Sowing) in Kharbin, and *Ukraïnets'* (The Ukrainian) in Vladyvostok.

The growth of the Ukrainian press during the War of Liberation was much greater than that in any other field of cultural endeavor (education, scholarship, and even book publishing). Despite a shortage of paper, newspapers came out in large editions. The chaos in transportation and communications provided the impetus for numerous newspapers and journals in the provinces. From 1917 until 1919 newspapers appeared fairly regularly. In 1919, however, because of political and military events, newspapers were often forced to change their publishing locale and to suspend printing. Functioning primarily as a source of information, the Ukrainian press of this period was also an important factor in forming political opinion, particularly in the countryside, and it replaced not only books but even schools.

The Ministry of Propaganda of the Ukrainian National Republic, along with the Ukrainian Telegraph Agency established in 1918 under the supervision of the Ministry of Internal Affairs and headed by Dmytro Dontsov (during the Directory by Volodymyr Kalynovych), played an important part in the development of the press. *Vistnyk Zakordonnoï Presy* (Herald of the Foreign Press) was published in Kiev in 1918.

A number of press bureaus were active in 1918–20. These bureaus were attached to the Ukrainian legations in Berlin, Paris, London, Rome, Washington, Prague, Copenhagen, and Vienna, where there was also a Western Ukraine press agency. All published information bulletins. The Ukrainian governments also sponsored individual foreign-language journals: *Die Ukraine* in Berlin (1918), *Ukrainische Blätter* (Ukrainian Letters)

in Vienna (1918), *L'Ukraine* in French in Lausanne (1919), *France et Ukraine* in Paris (1920), *La Voce dell Ukraina* in Rome (1919); and newspapers in Greek published in Athens and in Bulgarian in Sophia (1919–20).

## UNDER SOVIET OCCUPATION (1919–45)

The first attempts to publish Communist newspapers in Ukrainian were made in 1919: the Kiev *Bil'shovyk* (The Bolshevik) and *Selians'ka Bidnota* (The Rural Poor); and *Halyts'kyi Komunist* (The Galician Communist) for propaganda in Galicia. In 1921 *Visti TsK KP (b) U* (News of the Central Committee of the Communist Party [Bolsheviks] of Ukraine) began publication in Kharkiv. Other important Communist newspapers and journals were: *Komunist* founded in 1918 in Moscow and published in Kharkiv from 1919 through 1921 and a magazine under the same title (1920–1), *Proletarskaia Pravda* (Proletarian Truth) in Kiev, and numerous other Russian-language publications. Upon establishing their control over Ukraine, the Communists gradually discontinued all non-Communist publications in 1919–20. A temporary respite was granted only to the Ukrainian Communist party [Vol. I, p. 801–2], which collaborated with the Bolsheviks. They continued the publication of *Borot'ba* (Struggle) in 1920 edited by Basil Ellanskyi (pseud. Vasyl Ellan-Blakytnyi), *Chervonyi Prapor* (Red Banner) in Kiev and later in Kharkiv, *Chervonyi Shliakh* (Red Pathway) in Kamianets Podilsky, among others. Altogether, in 1920, there were 151 newspapers and journals published in Russian in Communist-occupied Ukraine and only 82 in Ukrainian. By 1922 there was no non-Communist press in Ukraine and only 69 Ukrainian-language publications.

With the introduction of Ukrainization [Vol. I, p. 809b–811b] a new stage, which lasted from 1923 to 1931, began in the development of the press in the Ukrainian SSR. A majority of newspapers and journals even outside Kiev and Kharkiv (e.g., in Odessa and Katerynoslav) began to publish in the Ukrainian language, often under a new title. The appointment of Basil Ellanskyi as editor-in-chief of *Visti VUTsVK* (News of the All-Ukrainian Executive Committee), published with the supplement *Kul'tura i Pobut* (Culture and the Mode of Life) which printed the polemics of Nicholas Khvylovyi, and of Gregory Hrynko as editor of the literary-political monthly *Chervonyi Shliakh* (1923–36), which replaced the previous *Shliakhy Mystetstva* (Pathways of Art), resulted in a new life for these publications. Their staffs were increased, and a number of Ukrainian cultural leaders who had remained in Ukraine were gradually absorbed. The subsequent editors of these publications, Eugene Kasianenko of *Visti* and Alexander Shumsky of *Chervonyi Shliakh*, continued this policy.

During this period the literary rather than the political press played the leading role. The latter was completely centralized and served to spread party propaganda. Ukrainian cultural leaders could express themselves in the daily press on a very limited scale, and on the back pages at that (e.g., the columns of Ostap Vyshnia and George Gedz, and the reviews of Constantine Burevii and V. Khmuryi, to mention a few). The daily press was often the forum for the criticism and condemnation of literary journals for their "nationalist" deviations (articles by Andrew Richytsky, F. Taran, and Andrew Khvylia). The newspapers of this period with the largest number of readers were the official party dailies *Komunist* (in Ukrainian after 1928) and *Visti VUTsVK*. Among the prominent provincial publications were *Proletars'ka Pravda* and *Bil'shovyk* in Kiev, *Kharkovskii Proletar* in Kharkiv, and *Chornomors'ka Komuna* (Black Sea Commune)

in Odessa. There was a special newspaper for youth, *Komsomolets' Ukraïny* (The Young Communist of Ukraine).

Newspapers for the peasants with their own distinctive character appeared during this period, for example, *Selians'ka Pravda* (Peasants' Truth, 1921–5) edited by Serhii Pylypenko, which was later merged with the mass circulation paper *Radians'ke Selo* (Soviet Village, 1924–33). These newspapers were adapted to the conditions of the Ukrainian countryside, dealt with its culture and needs, and published a large amount of agricultural news. In general, the Ukrainian newspapers at this time were not yet simple copies of their Russian counterparts. This was to come later. The press devoted some space to Ukrainian themes, both in the Ukrainian SSR and in the western Ukrainian areas. However, their selection of material usually followed the party line.

Party control over the literary and art journals was also quite firm, although the régime did not succeed in taking them over completely. Even *Chervonyi Shliakh* sometimes voiced veiled opposition. A monthly, *Zhyttia i Revolutsiia* (Life and Revolution), was published in Kiev between 1925 and 1934 (edited by Alexander Doroshkevych and later by Ivan Lakyza). It was the least Communist-oriented of all publications and recruited contributors from many groups, including the Ukrainian MARS group and the Neoclassicists [Vol. I, p. 1046 ff.]. It also devoted some space to the cultivation of Ukrainian traditions and cultural ties with the West. Khvylovyi's group published the bimonthly *Vaplite*, beginning in 1926 [Vol. I, p. 1048] and forced to close in 1927. Since a bold tone in literature and journalism was no longer possible, publishers resorted to the language of fables in the monthly *Literaturnyi Yarmarok* (Literary Bazaar, 1928–30, 12 issues) edited by Khvylovyi. *Vaplite* and *Literaturnyi Yarmarok* exerted considerable influence on the development of Ukrainian journalism and public opinion. Ukrainian groups who had joined the Communists revised their position and came out with sharp, albeit veiled, criticism of the political régime, exposing its Russian imperialist nature. Critical articles pointed to possible ways of maintaining Ukrainian traditions in art and literature, and a Western, rather than a pro-Moscow orientation was emphasized.

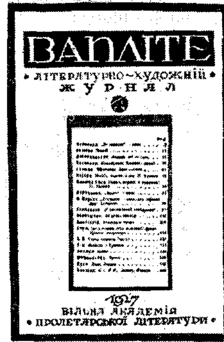

FIGURE 218. TITLE PAGE OF THE MAGAZINE *Vaplite*, KHARKIV, 1927

The Ukrainian Futurists, organized in the Association of Communist Culture (*Komunkul'tivtsi*), published *Gong Komunkul'ta* (Gong of the Communist Culture) in 1924 and the monthly *Nova Generatsiia* (New Generation, 1927–30) edited by Michael Semenko. The Association of Revolutionary Peasant Writers (Pluh, The Plow) published its journal *Pluzhanyn* (Plowman, 1925–7), subsequently renamed *Pluh* (1925–33). For most of its publishing life the editor of *Pluh* was Serhii Pylypenko. Emigré writers from Western Ukraine published *Zakhidnia Ukraïna* (Western Ukraine) edited by Basil Atamaniuk and Dmytro Zahul, among others (four volumes published, 1927–9; and as a monthly, 1930–3). The Constructive Dynamists (leftist writers close to the Futurists) were organized in the *Avangard* group and published a bulletin, *Biuleten' Avangardu* (Bulletin of the Avant-garde), edited by Valerian Polishchuk (three issues, 1928–9). The most prestigious forum of literature, art, criticism, and political opinion was the monthly *Chervonyi Shliakh* published in Kharkiv between 1922 and 1936 which united writers of all persuasions. Among more popular publications were: *Universal'nyi Zhurnal* (Universal

Journal, 1928–9); the semimonthly *Selian-s'kyi Zhurnal* (Peasants' Journal, 1929–31); the monthly of the Association of the Proletarian Literary Front, *Prolitfront* (1930); the literary monthly for agricultural workers *Traktor* (Tractor); the semimonthly of the All-Ukrainian Association of Proletarian Writers *Literaturnyi Pryzov* (Literary Call, 1931–2)—all published in Kharkiv. The Association also published the most important Russian-language literary journal *Krasnoe Slovo* (Red Word, 1927–32), changed to *Litstroi* (Literary Endeavor) in 1933, and to *Sovetskaia Literatura* (Soviet Literature) in 1934. In addition to the monthly *Zhyttia i Revolutsiia* the following were published in Kiev: the journal of the Central Committee of the Young Communist League of Ukraine *Molodniak* (Youth, 1927–37) and the literary art magazine *Nova Hromada* (New Community, 1923–9) edited by Alexis Varavva. As a supplement to the Odessa *Chornomors'ka Komuna*, there was a literary journal *Shkval* (Squall, 1924–33) and the literary, art, and critical *Metalevi Dni* (Metal Days, 1930–3). The latter two merged into *Literaturnyi Zhovten'* (Literary October, 1934–5). Literary magazines published in other cities were: *Chervonyi Krai* (Red Land, 1927–8) in Vinnytsia; the monthly *Zoria* (Star, 1925–34) in Dnipropetrovske, renamed *Shturm* (Attack, 1935–7); the monthly *Tempy* (Tempos, 1931) in Zaporizhia; the monthly *Kryvbas* (1931–3) in Kryvyi Rih; the monthly *Stapeli* (Slips, 1931–2) in Mykolaïv; and *Zaboi* (Coalface, 1923–32), renamed *Literaturnyi Donbas* (Literary Donbas) in 1933.

There were very few magazines and symposia dealing with literary criticism and study. The bibliographical journals *Knyha* (Book, 1923–4) and *Nova Knyha* (New Book, 1924–5) performed some critical function and also recorded current book production. In the late 1920's there were the bimonthly of literary studies *Literaturnyi Arkhiv* (Literary Archive, 1930–1) published by the Shevchenko Institute of Literature, and the Marxist journal of literary criticism *Krytyka* (Criticism, 1928) renamed *Za Markso-Lenins'ku Krytyku* (For Marxist-Leninist Criticism) in 1932 and *Literaturna Krytyka* (Literary Criticism) in 1935. (Bibliographical publications are listed in greater detail in the subchapters Survey of Bibliological Research and Bibliography.)

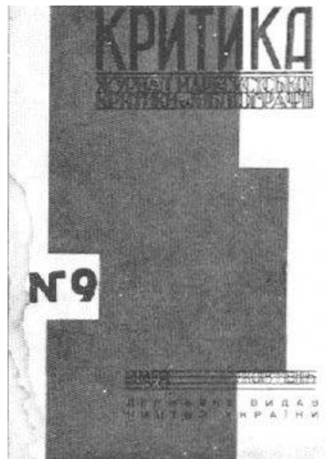

FIGURE 219. TITLE PAGE OF THE JOURNAL *Krytyka*, KHARKIV, 1928–32

Scholarly journals gained great popularity in the 1920's and early 1930's. They were published mostly by the institutions of the Ukrainian Academy of Sciences in Kiev. The most important was the quarterly (later bimonthly) *Ukraïna* (1924–33) devoted to Ukrainian studies and edited in 1924–31 by Academician M. Hrushevsky.

Art magazines included: *Shliakhy Mystetstva* (Paths of Art, 1921–3), *Nove Mystetstvo* (New Art, 1925–6), and the semimonthly *Mystets'ka Trybuna* (Art Tribune, 1930–1), all published in Kharkiv; the popular art magazine *Radians'ke Mystetstvo* (Soviet Art, 1928–32), and *Maliarstvo i Skul'ptura* (Painting and Sculpture), the organ of the Union of Soviet Artists and Sculptors of the Ukrainian SSR. Musical journals were repre-

sented by the bimonthly *Muzyka* (Kiev, 1923–5 and Kharkiv 1927); the popular journal *Muzyka Masam* (Music for the Masses, Kharkiv, 1923–30), renamed *Muzyka Mas* (Music of the Masses). Since 1933 *Radians'ka Muzyka* (Soviet Music) has been the journal of the Union of Soviet Composers of Ukraine. Theatrical journals were: the weekly *Teatr-Muzyka-Kino* (Theater, Music, Cinema, 1925–7); *Sils'kyi Teatr* (Village Theater, 1926–30), subsequently renamed *Masovyi Teatr* (Theater of the Masses, published until 1933); and the monthly *Radians'kyi Teatr* (Soviet Theater, 1929–31, under the editorship of Dmytro Hrudyna), which was the voice of the Bureau of Art of the Council of People's Commissars of the Ukrainian SSR (1936–41). The semimonthly *Kino* (Cinema) was published between 1925 and 1933 by *Ukrainfilm* in Kharkiv and was revitalized in 1935 under the title *Radians'ke Kino* (Soviet Cinema) as the bulletin of the All-Ukrainian Bureau of Photography and Cinema.

During this period the following popular science illustrated magazines circulated widely: *Hlobus* (The Globe, Kiev, 1923–35); the organ of the People's Commissariat of Education of the Ukrainian SSR, *Znannia* (Knowledge, 1923–35); and the Kharkiv illustrated semimonthly *Vsesvit* (The Universe, 1925–34), which merged with the popular illustrated magazine *Dekada* (Decade) in December 1933. The Kharkiv magazine for collective farm youth, *Molodyi Bil'shovyk* (Young Bolshevik, 1925–33), was also in the popular science field. For women there were *Komunarka Ukraïny* (The Communist Woman of Ukraine, Kharkiv, 1920–34) and *Selianka Ukraïny* (Farm Woman of Ukraine), founded in August 1924 and renamed *Kolhospnytsia Ukraïny* (The Collective Farm Woman of Ukraine) in 1931.

There were numerous publications for children in the Ukrainian SSR in the 1920's. Among the more important were: *Chervoni Kvity* (Red Flowers, 1923–31, Kharkiv); the organ of the Central Committee of the Young Communist League of Ukraine, *Pioneriia* (Pioneers), which merged with *Vesela Bryhada* (The Gay Brigade) in 1937. *Pioneriia* had been a magazine of extracurricular education in 1931–7. The monthly for small children, *Zhovtenia* (Baby Bird, 1928–41), was transferred from Kharkiv to Kiev in 1929 and merged with the magazine *Tuk-Tuk* (Knock-Knock, 1929–35); there was also a magazine for "activist children," *Na roboti* (At Work, 1930–33).

Among satirical magazines the semimonthly *Chervonyi Perets'* (Red Pepper, Kharkiv, 1927–34) lasted for a fairly long time.

The activity of Ukrainian cultural and political forces, although headed by Marxists-Communists, became a threat and a thorn to the Soviet régime in its policy of denationalization. Simultaneously with the attack upon Ukrainian scholarship and culture, a dissolution of Ukrainian scholarly and literary newspapers and magazines was initiated. Following a thorough purge of scholarly institutions and editorial offices, Party members, often non-professional dilettantes in journalism and literature, were appointed as chief editors. Nearly all magazines and periodical publications which had appeared up to 1933–4 were discontinued. Ukrainian magazines published in the USSR beyond the borders of Ukraine, e.g., *Chervona Hazeta* (Red Gazette) in Rostov, *Novym Shliakhom* (On the New Pathway) in Krasnodar, *Sotsiialistychna Perebudova* (Socialist Reconstruction) in the far east were banned and closed down.

Following the critical years of mass purges (1933–7), only a very small number of magazines and symposia were left. Most of the journals and serial publications of the Ukrainian Academy of Sciences were suspended, as a number of literary, art, popular science, and other magazines, including even the official magazine of humor and satire *Chervonyi Perets'*. Many other magazines

suspended publication at the outbreak of the German-Soviet war in June 1941.

The mid-1930's marked the beginning of the current completely centralized press. The network of newspapers grew to extraordinary proportions (county newspapers, factory mass newspapers, and organs of the political departments of motor tractor stations and state farms), the total number reaching 1,120 in 1940, 6,143,000 copies. The newspapers, however, give little information on Ukrainian life; and international news, since it is subject to strict censorship, is very limited. There are two levels of censorship, one by the so-called Glavlit (Main Administration of Literature) and one by the Party, exercised by chief editors who are all Party members. Newspapers devote most of their space to propaganda centering on increased labor productivity, love for Russia, and adulation of the Communist party leaders.

Most of these newspapers were in the form of periodical leaflets. About 80 per cent of them were printed in Ukrainian (1930, 85 per cent; 1933, 84.9 per cent; 1934, 80 per cent) and 20 per cent in other languages, including Russian (1933, 10 per cent; 1934, 15.8 per cent; 1940, over 22 per cent). *Komunist* and *Visti* (News) had the largest circulation (about 305,000 and 375,000 copies, respectively). In the mid-1930's the circulation figures for all newspapers were between 3.75 and 5 million. More than fifty newspapers were published in Kiev, Kharkiv, and Odessa.

The Communist party is in charge of all journalistic training and education in Ukraine. The first school of journalism was organized at the Artem Communist University in Kharkiv, which in 1929 had an enrollment of 74 per cent Ukrainians, 16 per cent Jews, 8 per cent Russians, and 2 per cent others. A separate Communist Institute of Journalism was established in 1930, which also engaged in the study of the history, theory, and practice of journalism.

In addition to periodicals in Ukrainian and Russian, many newspapers and magazines were published during this period in the Ukrainian SSR in Polish, Hebrew, and other languages. Most of them were suspended during the persecutions and purges of the late 1930's. The number of Russian-language newspapers and magazines increased in 1938: the republic-wide *Pravda Ukrainy*, *Stalinskoe Plemia* (The Stalinist Tribe), *Yunyi Pioner* (Young Pioneer), and *oblast* papers in Kharkiv, Odessa, Dnipropetrovske, Mykolaïv, Zaporizhia, and other cities.

Following the occupation of Galicia, Volhynia, and subsequently Bukovina by the Soviet armed forces in 1939, all Ukrainian publications (political, literary, and even professional) were discontinued. The daily *Vil'na Ukraïna* (Free Ukraine) was started in Lviv in 1939 and the magazine *Literatura i Mystetstvo* (Literature and Art) in 1940. The newspaper *Radians'ka Bukovyna* (Soviet Bukovina) and the magazine *Vil'na Bukovyna* (Free Bukovina) began publishing in Bukovina in 1940. An additional fifteen *oblast* and forty-nine *raion* newspapers also appeared. In central and eastern Ukrainian lands a series of scholarly and literary journals sprang up.

All the newspapers and magazines, including prewar publications which had been reorganized or renamed after the purges of 1933–7, were suspended as a result of the war between Germany and the USSR in June 1941. Such publications were *Literaturnyi Zhurnal* (Literary Journal, 1936–41), which was a continuation of *Chervonyi Shliakh*, *Narodna Tvorchist'* (People's Creativity, 1939–41), which replaced *Ukraïns'kyi Fol'klor* (Ukrainian Folklore, 1937–8), and the magazine *Molodyi Bil'shovyk* (Young Bolshevik 1937), reorganized from *Molodniak* (1927–37).

## THE PRESS IN WESTERN UKRAINE 1918–39

With the occupation of western Ukrainian lands, the Polish authorities prohibited publication of *Dilo*, which, however, continued under the titles of *Ukraïn-*

*s'ka Dumka* (Ukrainian Thought), *Hromads'ka Dumka* (Community Thought), *Ukraïns'kyi Vistnyk* (Ukrainian Herald), and *Svoboda* (Liberty). Its former title was resumed only in 1923. *Dilo* was the leading Ukrainian daily newspaper in Poland. After 1925 it became the organ of the Ukrainian National Democratic Union (UNDO). Between 1923 and 1936 its chief editors were: Dmytro Levytsky, Volodymyr Okhrymovych, Theodore Fedortsiv, and Basil Mudryi. After 1936 *Dilo* was edited by an editorial board consisting of Ivan Kedryn-Rudnytsky, Volodymyr Kuzmovych, and Ivan Nimchuk.

FIGURE 220. EDITORS OF THE DAILY *Dilo*, LVIV, 1926 (B. Mudryi, T. Fedortsiv, R. Kupchynsky, M. Rudnytsky, and I. Kedryn-Rudnytsky)

Ukrainian newspapers under Poland were subject to prohibitions, censorship, seizures, imprisonment of editors, etc. The position of the Ukrainian press was particularly difficult in the northwestern Ukrainian territories—Volhynia and Kholm. In addition to business, religious, and educational publications, some political newspapers were published in this area in 1920, for example, *Hromada* (Community) in Lutsk, with Michael Cherkasky as editor from 1920. *Hromada* became the organ of UNDO in 1925 and continued under the title *Ukraïns'ka Hromada* (Ukrainian Community) with Serhii Vyshnivsky as editor from 1926 to 1929. *Nashe Zhyttia* (Our Life) was published and edited by the brothers Anthony and Paul Vasynchuk in Kholm from 1921 to 1928. These publications were so financially weak that their survival was limited. The newspaper *Ukraïns'ka Nyva* (Ukrainian Meadow) was subsidized by the Polish authorities and was consequently more stable; published in Warsaw (1926–8), it was later transferred to Lutsk. There were also some Communist-oriented Ukrainian weeklies, e.g., *Nove Zhyttia* (New Life, 1928–9) published in Kholm. The more important Ukrainian journals in Volhynia were: the journal of the cooperative associations *Nova Skyba* (New Furrow, in Lutsk, 1933), the Orthodox religious *Na Varti* (On Guard, 1925–6, in Volodymyr Volynsky), and *Tserkva i Narid* (Church and People, 1935). The position of the Ukrainian press became difficult in Volhynia in the 1930's and it ceased publication completely in the Kholm and Polisia areas.

Conditions were more favorable, although equally restrictive, in Galicia. All the main political groups had their press organs. The newspaper *Vpered* (Forward), published between 1918 and 1922, while *Dilo* was under suspension, by the Ukrainian Social Democratic party under the editorship of Lev Hankevych and Porphyrii Buniak, was a national newspaper. This political party also published *Zemlia i Volia* (Land and Freedom, 1919–24) which in 1923 was taken over by the Shumsky group (Stephen Volynets) and limited itself to party matters. The Ukrainian National Democratic Union published the weekly *Svoboda* [Vol. I, p. 838] and the Socialist Radicals continued their weekly *Hromads'kyi Holos* (Community Voice, edited by Ostap Pavliv and Matthew Stachiw) and began publication of the journals *Proty Khvyl'* (Against the Waves, 1921–9) and *Zhyve Slovo* (The Living Word, 1939). The nationalist press was represented by the semimonthly *Zahrava* (Glow, 1923–4) edited by Dmytro Dontsov in Lviv, the weekly *Ukraïns'kyi Holos* (Ukrainian Voice) in Peremyshl, previously Hetman in tone, and edited by Zenon Pelensky (1929–32); also the Lviv weeklies *Nash Klych* (Our

Call, 1933), *Visti* (News, 1934), *Holos Natsiï* (Voice of the Nation, 1936), and *Holos* (Voice, 1938–9); the last-named

FIGURE 221. MASTHEADS OF THE WEEKLY *Ukraïns'kyi Holos*, PEREMYSHL, 1922–32

group was actually one paper which had to change titles and editors (Volodymyr Yaniv, Osyp Boidunyk, Bohdan Krawciw) as a result of restrictions and arrests. Other nationalist papers were *Ridnyi Grunt* (Native Soil, 1935), *Frontom* (Onward, 1936), and *Avangard* (Avant garde, 1937–8) in Kolomyia. The Front of National Unity founded by Dmytro Paliïv [Vol. I, p. 847] published the daily *Ukraïns'ki Visti* (Ukrainian News, 1933–9) edited by its founder with the assistance of Nicholas Shlemkevych, the weekly *Bat'kivshchyna* (Fatherland), and the quarterly *Peremoha* (Victory), all moderately nationalistic. Catholic political newspapers of

FIGURE 222. MASTHEADS OF THE WEEKLY *Nova Zoria*, LVIV, 1926–39

conservative-Hetman trend were the organs of the Ukrainian Catholic National party, later Ukrainian Catholic Organization [Vol. I, p. 839a], *Nova Zoria* (New Star) published twice a week in Lviv (1926–39) and edited by Roman Haiduk and Alexander Mokh. The weekly *Meta* (Goal, 1931–9) represented a more liberal Catholic outlook; its editors were Volodymyr Kuzmovych and Nicholas Hnatyshak; the Ukrainian Greek-Catholic diocese in Peremyshl published the weekly *Beskyd* (1928–33). The adherents of the Hetman movement started publication of the monthly *Khliborobs'kyi Shliakh* (The Farmer's Pathway). A pro-Polish conciliatory viewpoint was represented by *Ridnyi Krai* (Homeland, 1920–3), published by Sydir Tverdokhlib and Michael Yatskiv. The pro-Soviet and Communist press was quite strong in the 1920's, with the newspapers *Nasha Zemlia* (Our Land), *Sel'-Rob* (Peasant Worker), and the clandestine *Volia Naroda* (People's Will), edited by Cyril Valnytsky appearing between 1927 and 1932. There were also the Russophile *Zemlia i Volia* and the moribund *Russkii Golos* (Russian Voice) printed in a patois of mixed Russian, Ukrainian, and Old Slavonic.

FIGURE 223. MASTHEAD OF THE WEEKLY *Meta*, LVIV, 1931–9

Among strictly INFORMATIVE NEWSPAPERS not associated with any political party or movement were: the family weekly *Nedilia* (Sunday, 1926–39) edited by Roman Holian; the shortlived *Chas* (Time, 1931–2) edited by Nicholas Holubets; and particularly the newspapers and magazines published by Ivan Tyktor's first western Ukrainian newspaper chain *Ukraïns'ka Presa* (Ukrainian Press). This chain included: the daily *Novyi Chas* (New Time) edited by Dmytro Paliïv and Myron Konovalets among others; the farmer's weekly *Narodna Sprava* (The People's Cause); the

illustrated semiweekly *Nash Prapor* (Our Banner) edited by Gregory Stetsiuk and Basil Kachmar. All these papers came out between 1928 and 1939. A semimonthly *Nash Lemko* (Our Lemko, 1934–9) edited by Julian Tarnovych was

FIGURE 224. MASTHEADS OF THE NEWSPAPER *Novyi Chas*, LVIV, 1928–39

also published by this chain. The Tyktor publishing concern, founded on business principles (advertising and subscriptions), strove to please its readers by offering interesting materials and premiums and prizes of all kinds. Its circulation was good and it began publishing magazines as well: *Dzvinochok* (Bell, 1931–9) edited by Yura Shkrumeliak, the popular *Ukraïns'ka Iliustratsiia* (Ukrainian Illustration, 1934), and the satirical *Komar* (Mosquito, 1935–9) edited by Edward Kozak.

Women's newspapers and magazines were similar to the publications of *Ukraïns'ka Presa*. Those close to the UNDO party were *Zhinocha Dolia* (Woman's Lot, 1925–39) published and edited by Olena Kysilevska; the organ of the League of Ukrainian Women, *Zhinka* (Woman, 1935–9) edited by Milena Rudnytska and Olena Sheparovych; *Zhinochyi Holos* (Woman's Voice 1936–9) siding with the Radical party and edited by Frances Stachiw. The magazine *Nova Khata* (New Home, 1925–39) was concerned with home life and was edited by Maria Hromnytska and Lidia Burachynska.

LITERARY, ART, and SCHOLARLY publications reached a high level of development in Galicia. The first literary magazine to appear after World War I was *Mytusa* (1922) edited by Basil Bobynsky, Roman Kupchynsky, and Paul Kovzhun, which favored east Ukrainian modernist trends. The *Literaturno-Naukovyi Vistnyk* (Literary-Scientific Herald), which was reestablished in 1922 and edited by Dmytro Dontsov, initially united all the outstanding literary forces of Western Ukraine and among émigrés, and even printed works by writers from the Ukrainian SSR. Subsequently, it assumed a narrower nationalistic position and after being renamed *Vistnyk* (Herald) in 1933 it became the spokesman of nationalism as propounded by D. Dontsov. This magazine exerted considerable influence on the Ukrainian youth of that period in Western Ukraine and abroad. The magazines *Dazhboh* (1933–5) edited by Eugene Pelensky and B. Krawciw, *Obrïi* (Horizons, 1936–7), and *Naperedodni* (On the Eve, 1937–8) edited by B. Krawciw were close nationalist allies of *Vistnyk*. The Catholic monthly *Dzvony* (Bells, 1931–9) edited by Peter Isaïv was a serious literary magazine. The semimonthly *Nazustrich* (Encounter, 1934–9) was an important illustrated literary-art magazine edited by Basil Simovych, Michael Rudnytsky, and Osyp Bodnarovych. Magazines of the Marxist trend were: the literary-political monthly *Nova Kul'tura* (New Culture, 1923–6, continued as *Kul'tura* 1927–31) edited by Stephen Rudyk, which began opposing the Stalinist policy in Ukraine in 1928; and the monthly of literature, art, and criticism, *Vikna* (Windows, 1928–32) edited by Basil Bobynsky. The short-lived pro-Soviet orientation in Western Ukraine was represented by the monthlies *Novi Shliakhy* (New Pathways, 1929–32) and *Krytyka* (Criticism, 1933) published and edited by Anthony Krushelnytsky.

Among the art journals worthy of mention are: *Ukraïns'ke Mystetstvo* (Ukrainian Art, 1926) edited by Nicholas Holubets; *Mystetstvo* (Art, 1932–7), the

organ of the Association of Independent Ukrainian Artists edited by P. Kovzhun; *Ukraïns'ka Muzyka* (Ukrainian Music, 1935–8); and the journal of photography, *Svitlo i Tin'* (Light and Shadow, 1932–6).

FIGURE 225. TITLE PAGE OF THE JOURNAL *Stara Ukraïna*, LVIV, 1924–5

Most important of a large number of scholarly journals were: the quarterly of theology and church history *Bohosloviia* (Theology, 1923–39) edited by the Rev. Josef Slipyj (now Cardinal); a monthly of history and history of culture, *Stara Ukraïna* (Old Ukraine, 1924–5) edited by Ivan Krevetsky; the philological journal *Slovo* (Word, 1936–9) edited by Constantine Chekhovych; and the journal of Ukrainian studies published by the Shevchenko Scientific Society, *Siohochasne i Mynule* (The Present and the Past, 1939) edited by Ivan Rakovsky and Basil Simovych. *Zhyttia i Pravo* (Life and Law, 1928–39) was a quarterly of juridical science edited by Constantine Levytsky (for other scholarly periodicals, see Scholarship, p. 278). An important popular science journal, devoted to Ukrainian military affairs and, particularly, to the liberation struggle, was the monthly *Litopys Chervonoï Kalyny* (Chronicle of the Guelder-Rose, 1929–39) edited by Lev Lepky and Basil Sofroniv-Levytsky. The important popular science periodicals were: the monthly *Zhyttia i Znannia* (Life and Knowledge, 1927–39) published by the Prosvita society and edited by Michael Halushchynsky, Ivan Bryk, and Basil Simovych; the geographical magazine *Nasha Bat'kivshchyna* (Our Homeland, 1937–9) edited by Stephen Shchurat; and the non-periodical *Litopys Boikivshchyny* (Chronicle of the Boikian Region, 1931–9) edited by Volodymyr Hurkevych.

The RELIGIOUS PRESS also flourished. In addition to the Orthodox papers in Volhynia, the following were published in Galicia; the quarterly *Dobryi Pastyr*

FIGURE 226. COVER OF THE MAGAZINE *Litopys Chervonoï Kalyny*, LVIV, 1929–39

FIGURE 227. TITLE PAGE OF THE MONTHLY *Zhyttia i Znannia*, LVIV, 1927–39

(The Good Shepherd, 1930–9) in Stanyslaviv; *Katolyts'ka Aktsiia* (Catholic Action, 1935–7) in Lviv; the monthly of the Order of Saint Basil the Great, *Misionar* (Missionary) founded in 1897 in Zhovkva; and the very popular (circulation 85,000) *Khrystos Nasha Syla* (Christ is Our Strength).

ECONOMIC AND COOPERATIVE publications were also popular in western Ukrainian lands. The Audit Union of Ukrainian Cooperatives published: the monthly *Hospodars'ko-Kooperatyvnyi Chasopys* (Economic-Cooperative Newspaper, 1921–44); the scientific-ideological journal of the Ukrainian cooperative movement, *Kooperatyvna Respublika* (Cooperative Republic, 1928–39) edited by Carl Kobersky; and the mass-circulation monthly *Kooperatyvna Rodyna* (1934–9) edited by Ostap Lutsky and Roman Kupchynsky. The Union of Dairy Cooperatives published the monthly *Kooperatyvne Molocharstvo* (Cooperative Dairy Farming, 1926–39). *Ukraïns'kyi Agronomichnyi Visnyk* (Ukrainian Agronomical Herald, 1934–7) edited by Eugene Khraplyvyi was the most important farm journal. There were also trade journals and publications of professional groups.

Several EDUCATIONAL NEWSPAPERS were also published: *Svitlo* (Light), *Uchytel's'ke Slovo* (Teacher's Word), and the journal of methodology, *Shliakh Vykhovannia i Navchannia* (The Road of Education and Training) (for further details see Education). The Ridna Shkola society published a semimonthly under the same title (Native School, 1932–9). Adult education was encouraged by the reestablished *Pys'mo z Prosvity* (Letter from Prosvita) in 1921, and the subsequent *Narodna Osvita* (National Education) edited by Volodymyr Doroshenko, which was transformed into an educational monthly in 1936.

CHILDREN'S PUBLICATIONS, extremely widespread and popular at this time, often took the place of Ukrainian schools which were restricted in their activities. The most important children's magazines were: *Svit Dytyny* (Child's World, 1919–39) published by Michael Taranko; *Moloda Ukraïna* (Young Ukraine, 1923–6) for an older age group, *Dzvinochok*

FIGURE 228. MASTHEAD OF THE CHILDREN'S MAGAZINE *Svit Dytyny*, LVIV, 1919–39

(Bell), the Catholic *Nash Pryiatel'* (Our Friend, 1922–39); the Plast group had its *Molode Zhyttia* (Young Life, 1921–30) and, following the dissolution of the Ukrainian scout organization, the semimonthly *Vohni* (Fires, 1931–9).

The STUDENT PRESS was also subject to the new differentiation of opinion and politics. The Association of Ukrainian Nationalist Youth published a monthly called *Smoloskypy* (Torches, 1927–8). Catholic youth was represented by a monthly, *Postup* (Progress, 1921–7), and later the magazines *Ukraïns'ke Yunatstvo* (Ukrainian Youth) and *Lytsarstvo Prechystoï Divy Mariï* (Knights of the Blessed Virgin Mary). The radical youth journal was the monthly *Kameniari* (Stone Cutters, 1932–9). With the ascendance of the nationalist movement, the central organs of professional student organizations began to spread nationalist ideology, e.g., *Students'kyi Shliakh* (Student's Pathway, 1931–4) and after its closing by the Polish authorities *Students'kyi Visnyk* (Student's Herald, 1938), both published in Lviv.

Most significant among SPORTS PUBLICATIONS were: *Visti z Luhu* (News from the Luh, 1925), *Sokil's'ki Visti* (News from the Sokil, 1928), the weekly *Hotovi* (Prepared, 1934–5), all in Lviv, and the weekly *Zmah* (Match, 1938–9) in Peremyshl.

The total number of Ukrainian periodicals appearing in Ukrainian lands under Poland was 143 in 1936, more than half of them magazines.

Despite adverse political conditions in Poland at this time, the Ukrainian press improved considerably, growing stronger financially and in popularity with its readers. A marked variety of both political opinion and subject-matter was evident. Some newspapers and magazines reached relatively high circulation figures. The number of dailies increased from one to three. Weeklies were the most widespread, gaining the largest number of readers in rural areas. In contrast with the numerous Polish papers (the dailies *Gazeta Lwowska*, *Wiek Nowy* [New Age], and *Gazeta Poranna* [Morning Gazette], which were sensational in style) and the Jewish daily *Chwila* (Moment), the Ukrainian press was characterized by idealism and patriotism on the one hand and inadequate news coverage on the other. This shortcoming was a direct result of two factors—lack of a Ukrainian press agency and shortage of professionally trained newspapermen. A noteworthy event of this period was the establishment of the Association of Writers and Journalists in Lviv.

Conditions were very unfavorable in Ukrainian lands under Rumania. The only Ukrainian daily in BUKOVINA was *Chas* (Time, 1928–40), published by Theodosius Hlynsky and edited by Lev Kohut. The first political party newspapers were published in Chernivtsi: *Hromada* (Community, Social-Democratic, 1921) edited by Serhii Kaniuk; *Robitnyk* (Worker, 1921), replaced by the pro-Soviet *Borot'ba* (Struggle, 1925–8); and later *Nove Zhyttia* (New Life, 1931). Nationalist ideas were propounded by *Samostiinist'* (Independence, 1934–7). Other shortlived newspapers published in Chernivtsi were the weeklies *Zoria* (Star), *Zemlia* (Land), and *Ridnyi Krai* (Native Land); the latter appeared from 1926 to 1930 and was edited by L. Kohut. Among the journals the most important was the literary monthly with nationalist leanings *Samostiina Dumka* (Independent Thought, 1931–7) edited by Sylvester Nykorovych, which had a wide circle of contributors mainly from abroad and Transcarpathia. There were also the student journal *Promin'* (Ray, 1921–3) and *Lastivka* (Swallow, 1938–9) for children. Ukrainian periodicals in Bukovina totaled 10 in 1936. The Rumanian press predominated; Bessarabia had no Ukrainian periodicals.

The democratic government of Czechoslovakia did not oppose development of the Ukrainian press in TRANSCARPATHIA. Overcoming the gap in national consciousness, the Ukrainian press of this region gradually became stronger and more influential, displacing periodicals with Russophile leanings. By 1936 Ukrainian periodicals numbered twenty-three. The leading newspaper was the weekly *Nauka* (Scholarship) reestablished by the Rev. Augustine Voloshyn in 1919, renamed *Svoboda* (Liberty) in 1922 and published as a weekly and semimonthly. It became a daily in 1938 under the name *Nova Svoboda* (New Liberty, 1938–9) as the voice of the Ukrainian National Alliance, and gained considerable popularity under the editorship of Spyrydon Dovhal and later Basil Grendzha-Donsky. Other important papers were: *Rusyn* (1920–3) in Uzhhorod under Theodore Zhatkovych; the organ of the Ruthenian Peasant party *Rus'ka Nyva* (Ruthenian Meadow, 1920–4) edited by Michael Brashchaiko; the representative of the Ukrainian Social Democratic party, *Narod* (People, 1920–2), renamed *Vpered* (Forward, 1922–38), edited by Stephen Klochurak and later by S. Dovhal; the organ of the Republican-Peasant party, *Zemlia i Volia* (Land and Freedom, 1934–8), *Ukraïns'ke Slovo* (Ukrainian Word, 1932–8); and the nationalist *Nastup* (Attack) edited by Stephen Rosokha. The dailies, *Russkii Vestnik* (Ruthenian Herald) and *Karpatorusskii Golos* (Carpatho-Ruthenian

Voice), and the weekly *Russkaia Zemlia* (Ruthenian Land) continued publication, as did several lesser Russophile and Magyarophile periodicals.

Among the fairly numerous literary, educational, cultural, and youth magazines, the most important were: the literary monthly *Nasha Zemlia* (Our Land, 1927–8) edited by B. Grendzha-Donsky; the geographic *Pidkarpats'ka Rus'* (Carpathian *Rus'*, 1924–6); the educational *Uchytel'* (Teacher, 1920–36) and *Uchytel'skyi Holos* (Teacher's Voice, 1930–8); the educational-economic *Svitlo* (Light, 1933–8); the religious *Blahovisnyk* (Blessed Messenger, 1921–39) in Uzhhorod and Khust, later transferred to Priashiv; and the children's *Pchilka* (Little Bee, 1923–34) and *Nash Ridnyi Krai* (Our Native Land, 1922–38).

During Carpatho-Ukraine's independence in 1938–9, there were fourteen Ukrainian periodicals, three Russian, and one Czech-Ukrainian.

## UKRAINIAN PRESS ABROAD (1920–45)

The development of the Ukrainian press in Europe outside Ukraine was connected directly with the great wave of emigration following the War of National Liberation. At first leaflets were printed mostly on duplicating machines and distributed among refugees living in camps. Soon, however, printed newspapers and magazines published by political parties and organizations began to appear.

With unlimited freedom, but under the difficult conditions of émigré life and lacking funds, the Ukrainian press abroad was widely dispersed and shortlived. But it still managed to exert considerable influence on developments and events in occupied Ukraine, penetrating the borders by legal and illegal means.

The organ of the Ukrainian National party, *Nove Slovo* (New Word) edited by Zenon Kuzelia was published in Berlin for a short time in 1920. In January 1921, Kuzelia became editor of *Ukraïns'ke Slovo* (Ukrainian Word), a weekly of Hetman leanings which came out as a daily in 1923 with Dmytro Doroshenko as co-editor. The *Ukraïns'ke Slovo* publishers also sponsored a weekly *Litopys Polityky, Pys'menstva i Mystetstva* (Chronicle of Politics, Literature, and Art, 1923–4) edited by Stephen Tomashivsky. The Hetman movement's organ was the non-periodic symposium,

FIGURE 229. MASTHEADS OF THE NEWSPAPER *Ukraïns'kyi Prapor*, VIENNA-BERLIN, 1919–31

*Khliborobs'ka Ukraïna* (Farmer's Ukraine, 1920–5) published in Vienna under the editorship of Viacheslav Lypynsky. The newspaper *Ukraïns'kyi Prapor* (Ukrainian Banner) was founded in Vienna in 1919 and transferred to Berlin in 1923, where it continued publication until 1931; it presented the views of the government of the Western Ukrainian National Republic [Vol. I, p. 868a]. The foreign sector of the Ukrainian Communist party published the newspaper *Nova Doba* (New Era) in Vienna (1920–1) edited by Volodymyr Vynnychenko and Volodymyr Levynsky. Michael Hrushevsky published the nonperiodical organ of the Ukrainian Socialist Revolutionary party, *Boritesia-Poborete* (Fight and You Shall Win) in Vienna (1920–2). *Sotsiialistychna Dumka* (Socialist Thought, 1922–3) was published in Prague to promote the Ukrainian Socialist Democratic Workers party.

An important social-political and cultural magazine was the non-political weekly *Volia* (Freedom, 1919–21) published in Vienna under the editorship of

Victor Pisniachevsky and with contributors from all political groups. In Warsaw, Eugene Lukasevych (with some help from the government of the UNR) published the daily *Ukraïns'ka Trybuna* (Ukrainian Tribune, 1921–3) with Alexander Salikovsky as editor. Its circulation was wide among Ukrainians in Poland, where Ukrainian newspapers were faced with difficulties.

Between 1920 and 1930, publications for covert distribution in Ukraine also came out abroad. The underground newspaper of the Ukrainian Military Organization (UVO), *Surma* (The Bugle, 1927–39), was published in Lithuania and subsequently in Germany. The ideological publication of the Organization of Ukrainian Nationalists (OUN), *Rozbudova Natsiï* (Development of the Nation, 1928–38), was based in Prague and edited by Volodymyr Martynets. The Communists published the organ of KPZU (Communist Party of Western Ukraine) *Nasha Pravda* (Our Truth), in Vienna in 1921 and in Czechoslovakia after 1934.

Ukrainian periodicals also came out in other European countries, the largest number being published in France. Simon Petliura, who was living in Paris, initiated the semi-official newspaper of the UNR, the weekly *Tryzub* (Trident, 1925–39). The semimonthly (later weekly) *Ukraïns'ki Visti* (Ukrainian News, 1926–9) and the nationalist weekly *Ukraïns'ke Slovo* (Ukrainian Word, 1932 to date) edited by Alexander Boikiv were also published in Paris.

The shortlived émigré literary journals such as *Na Perelomi* (At the Turning Point) edited by Alexander Oles (1920) and *Vyzvolennia* (Liberation, 1923) published in Vienna included the most prominent and richest in content, *Nova Ukraïna* (New Ukraine, 1922–8) published in Prague as a journal of politics, literature, and art and edited by Mykyta Shapoval and Volodymyr Vynnychenko among others. In addition to a number of scholarly periodicals and series publications (see Scholarship, p. 282) published in Czechoslovakia, there were the student journals *Ukraïns'kyi Student* (Ukrainian Student, 1920–4) and *Students'kyi Vistnyk* (Student Herald, 1923–31), which provided some space for literary works.

The publications printed in Poland, particularly in Warsaw and Kalisz for Ukrainian readers in Galicia, Volhynia, and abroad were of special significance. In addition to the already mentioned daily *Ukraïns'ka Trybuna*, a bimonthly magazine of literature and art, *My* (We), came out in Warsaw between 1933 and 1939, with Ivan Dubytsky as editor. Mention must also be made of the monthlies published and edited by Ivan Ohiienko: the scientific-literary *Nasha Kul'tura* (Our Culture, 1935–7) and the philological *Ridna Mova* (Native Language, 1935–9). Military matters were the subject of the magazine *Tabor* (Camp, 1923–38) published in Kalisz and later in Warsaw under the editorship of Gen. Victor Kushch.

Ukrainian political, civic, and scholarly organizations also published a number of periodicals in foreign languages. Reports and transactions of the Ukrainian Scientific Institute were published in German in Berlin (1927–39, see Scholarship, p. 284). *L'Ukraine Nouvelle* (1928–9) was published in French in Paris, *Investigator* in English in London in the 1920's, and *Natio* in Warsaw in English, French, German, and Polish (1926–7). During this period the first Ukrainian press agencies came into being abroad to serve Ukrainian and other newspapers. *Osteuropaeische Korresspondenz* appeared in Berlin (1926–30) twice a month under Z. Kuzela and the nationalist *Ukraïns'ka Presova Sluzhba* (Ukrainian Press Service) under Volodymyr Stakhiv in the late 1930's: *Ukraïns'ka Korespondentsiia* (Ukrainian Correspondence, 1930–1) was published in Prague in Ukrainian and Czech. Similar publications came out in Switzerland (*Ofinor*) and France.

Newspapers published by the Cossack émigrés, such as *Kubans'kyi Krai* (Land of Kuban, 1929–33), *Kubans'ki Dumky* (Kuban Thoughts, 1928), and other publications printed in Ukrainian and Russian also constitute a part of the Ukrainian press.

The total number of émigré periodicals was 55 in 1936, of which 6 were newspapers and 49 magazines, with an additional 2 in Asia. By 1939 the number had dropped to 37.

## UKRAINIAN PRESS IN WORLD WAR II (1939–45)

Following the occupation of Western Ukraine by the Soviet armed forces, the only remaining legal Ukrainian national press was in the *Generalgouvernement* and abroad. The Ukrainian Publishing House in Cracow published two editions

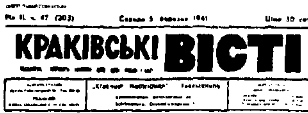

FIGURE 230. MASTHEAD OF THE NEWSPAPER *Krakivs'ki Visti*, CRACOW, 1940–45

of *Krakivs'ki Visti* (Cracow News, 1940–5), a daily and a weekly, edited by Michael Khomiak, with a circulation of 18,000–26,000 copies. The same publishing enterprise brought out the weekly *Kholms'ka Zemlia* (Kholm Land, 1942–4) under Stephen Baran. These newspapers were distributed mainly in the Ukrainian territories within the *Generalgouvernement*, the Lemkian, Sian, Kholm, and Podlachia regions, and after the expansion of the *Generalgouvernement* in 1941, in Galicia as well. Starting in Cracow and later moving to Lviv, the Ukrainian Publishing House printed a magazine for young people, *Doroha* (The Road, 1940–4), a story magazine *Vechirnia Hodyna* (Evening Hour, monthly, 1942–4), the literary monthly *Nashi Dni* (Our Days, 1942–4) edited by Maria Strutynska, with a circulation of 18,000, and a magazine for children *Yuni Dni* (Young Days), edited by Bohdan Hoshovsky. The German authorities published *Ukraïns'ki Visti* (Ukrainian News),

FIGURE 231. MASTHEAD OF THE MAGAZINE *Nashi Dni*, LVIV, 1942–4

renamed *L'vivs'ki Visti* (Lviv News, 1941–4) under Osyp Bodnarovych. These newspapers were not allowed to circulate beyond the border of the *Generalgouvernement*.

The early phase of the German occupation of Ukraine's central and eastern lands in 1941 saw a great upsurge in publishing activity. Ukrainian newspapers began to appear in virtually every provincial and county seat. Started and edited by Ukrainians, they were strongly nationalist in content, expressing the Ukrainian people's desire for political independence. With the establishment of the *Reichskommissariat Ukraine* and the transfer of power to civilian authorities, the Ukrainian newspapers were either shut down or turned into press bulletins of the provincial and county commissars (*Gebiets- und Kreiskommissaren*). This was the fate of the strongly nationalist Kiev daily *Ukraïns'ke Slovo* (The Ukrainian Word) and the literary magazine *Litavry*. After the arrest and execution of the editors Ivan Rohach, Olena Teliha, Ivan Irliavsky, and many others in February 1942, *Ukraïns'ke Slovo* was renamed *Nove Ukraïns'ke Slovo* and changed into a pro-German organ under the editorship of Constantine Shtepa, a Russophile. The initially independent newspaper *Volyn'* (1941–4) published in Rivne under the editorship of Ulas Samchuk (1941–2) was also discontinued. Greater freedom of publication was allowed in areas close to the battlefront. Kharkiv, for example, had the pro-Ukrai-

FIGURE 232. MASTHEADS OF THE UKRAINIAN NEWSPAPERS PUBLISHED DURING THE GERMAN OCCUPATION OF UKRAINE IN 1941–3

nian *Nova Ukraïna* edited by Victor Tsarynnyk and the literary magazine *Ukraïns'kyi Zasiv* (Ukrainian Sowing, 1942–3) edited by Victor Domontovych.

There was no Ukrainian press in the Rumanian occupation zone, only Rumanian and Russian newspapers.

Most of the Ukrainian newspapers and magazines published abroad were discontinued during the war (1939–45). The Germans suspended publication of all Ukrainian periodicals within their zones of occupation, including Warsaw and Paris. The periodicals published in Berlin and Prague were banned in the *Generalgouvernement* and *Reichskommissariat* Ukraine. The papers were: the nationalist organ of the Ukrainian National Alliance, *Ukraïns'kyi Vistnyk* (Ukrainian Herald, 1938–45), published in Berlin under Volodymyr Yaniv and Volodymyr Marunchak and the Hetman-oriented *Ukraïns'ka Diisnist'* (Ukrainian Reality, 1940–6) in Berlin and later in Prague under Ivan Kalynovych. The nationalist journal *Proboiem* (The Flying Wedge) edited by S. Rosokha continued publication in Prague until it was closed down by the Germans in 1943.

The employment of millions of Ukrainians in factories, farms, and prisoner-of-war camps compelled the German authorities to provide Ukrainian newspapers. This was the motive for the Ukrainian newspaper *Holos* (Voice) edited by B. Krawciw in Berlin (1940–5) which reached a circulation of 250,000 in 1944. The publishers of *Holos* also printed a weekly for workers from the eastern part of Ukraine, *Ukraïnets'* (1941–4), edited by Andrew Lutsiv, and for workers in the *Generalgouvernement, Visti* (News, 1942–4) edited by Gregory Stetsiuk. The Germans published the following as well: a newspaper for miners in the Ruhr, *Na Shakhti* (In the Shaft, 1942–4) edited by B. Krawciw; a weekly for farm workers, *Zemlia* (Land, 1942–5) in Plauen, edited by Sylvester Nykolyshyn; the magazine *Dozvillia* (Leisure, 1943–4) in Berlin and later in Plauen under Spyrydon Dovhal; a newspaper for prisoners of war, *Nova Doba* (New Era), edited by Hennadii Kotorovych; newspapers for units of the Ukrainian Free Armed Forces and of the Ukrainian National Army, *Ukraïns'kyi Dobrovolets'* (Ukrainian Volunteer); and *Za Ukraïnu* (For Ukraine).

The only truly free Ukrainian press during this period consisted of clandestine publications of the Organization of Ukrainian Nationalists, particularly the official organ of OUN, *Ideia i Chyn* (Idea and Deed), and publications of the Ukrainian Insurgent Army (UPA) and of the Ukrainian Supreme Liberation Council (UHVR).

Between 1945 and 1950 there were twenty-one underground nationalist periodicals published in Ukraine. These included political and military journals,

(УГВР)

FIGURE 233. TITLE PAGES OF THE UNDERGROUND BULLETIN *Biuro Informatsiï UHVR*, 1944–5

magazines for young people, and the satirical *Ukraïns'kyi Perets'* (Ukrainian Pepper).

Some newspapers which had been published in the Ukrainian SSR prior to June 1941, such as *Radians'ka Ukraïna* (Soviet Ukraine), *Pravda Ukraïny*, *Literatura i Mystetstvo* (Literature and Art), which replaced the earlier *Literaturna Ukraïna* (Literary Ukraine), and some magazines were allowed to continue during the German occupation of Ukraine in Ufa (Bashkir ASSR), to which the Academy of Sciences of the Ukrainian SSR from Kiev and some publishing houses such as Radians'kyi Pys'mennyk (The Soviet Writer) had been evacuated. The magazine *Ukraïna* was published in Moscow during the war. A number of Soviet underground and guerrilla papers and bulletins were distributed in German-occupied Ukraine during the war.

## THE PRESS IN THE UKRAINIAN SSR AFTER 1945

The development of the press in the Ukrainian SSR during the postwar period continued along the lines laid down in 1938, tending towards complete centralization and unification. In spite of a short period of comparative liberalization during the first years after the war and a similar but longer period after the death of Stalin, which manifested itself in a greater variety of form and content in periodicals, and even a change from purely Communist to more patriotic or professional titles, the press in the Ukrainian SSR (just as in the entire USSR) has been reduced to a puppet of the Communist party. In accordance with the established line, the press is the tool of the Party in the building of communism, and its main purpose is to combine the functions of propagandist, agitator, and organizer. Usually limited in size to four pages, Soviet newspapers are not allowed to give their readers objective information about world or even local events. They merely report statements of official agencies, which are scrupulously selected, censored, and written in the proper Communist spirit. Moulding of public opinion is limited to the publication of official pronouncements and resolutions, or the reprinting of articles issued by the central organs of the Party and government. Generally, Soviet newspapers do not carry paid advertisements.

All newspapers and magazines in the Ukrainian SSR are official publications of the Central Committee of the CP of Ukraine, or the Council of Ministers of the Ukrainian SSR, or the Central Committee of the Communist Youth League (*Komsomol*), individual ministries, trade unions, or other state or public organizations. The press is under the supervision of the Department of Propaganda and Agitation of the Central Committee of the KPU and the Press Committee of the Council of Ministers of the Ukrainian SSR. Editors-in-chief act as censors; they are appointed exclusively from Party ranks and are trained at special journalism seminars.

Newspapers form the largest and the most important group of periodical publications in the Ukrainian SSR. They are divided into Republic, *oblast*, city, *raion*, local, and collective farm papers and are printed in Ukrainian, Russian, and other languages. Local editions of central Russian newspapers are reprinted in the Ukrainian SSR.

The present state of newspaper publication in the Ukrainian SSR is illustrated by the data contained in Tables X and XI.

Table X does not include the so-called collective farm newspapers, of which there were 2,074 in 1960, 1,662 in 1962 and 1,269 in 1965.

TABLE X

TOTAL NUMBER OF NEWSPAPERS PUBLISHED IN THE UKRAINIAN SSR (EXCLUDING COLLECTIVE FARM PUBLICATIONS) ACCORDING TO LANGUAGE (1950–65)

| Year | All newspapers | Ukrainian | Russian | Others |
|---|---|---|---|---|
| 1950 | 1,192 | 972 | ? | ? |
| 1960 | 1,206 | 814 | 378 | 14 |
| 1962 | 934 | 580 | 345 | 9 |
| 1965 | 1,104 | 742 | 353 | 9 |

TABLE XI

NEWSPAPERS PUBLISHED IN 1965 SHOWING GROUPS AND CIRCULATION FIGURES

| Group | Number of newspapers | Copies printed (thousands) | Average printing of one newspaper (thousands) | Annual circulation (millions) | % |
|---|---|---|---|---|---|
| Republic | 16 | 5,391 | 270 | 782.5 | 37.7 |
| *Oblast* | 56 | 2,971 | 53.6 | 659.1 | 31.3 |
| City | 75 | 1,113 | 16.9 | 236.2 | 11.7 |
| *Raion* | 361 | 2,371 | 6.7 | 339.9 | 16.4 |
| Local | 596 | 765 | 1.6 | 45.9 | 2.2 |
| Collective farm | 1,269 | 910 | 0.7 | 13.7 | 0.7 |

In terms of content, the Republic newspapers are either general-political or trade (for individual trades and professions). Among the sixteen Republic newspapers published in the Ukrainian SSR there is not a single daily. The only such newspaper in the entire USSR is *Pravda* of Moscow. Five newspapers come out six times a week (300 issues a year); two, five times a week (256 issues a year); six, twice or three times a week; and three are weeklies. The total printing is less than 5.5 million copies, approximately equal to the single edition of an average All-Union daily newspaper. The average circulation of a Republic daily in the Ukrainian SSR is 270,000 copies. Nearly every Republic newspaper published in the Ukrainian SSR in Ukrainian has a parallel in Russian.

The more important Republic newspapers are: the general political organ of the Communist Party, the Supreme Soviet, and the Council of Ministers of the Ukrainian SSR *Radians'ka Ukraïna* (new title given in 1943 to the former *Komunist*), with its counterpart *Pravda Ukrainy* (this title replaced *Sovetskaia Ukraina* in 1944); the organ of the Central Committee KPU, *Robitnycha Hazeta* (Workers' Gazette) and the Russian-language *Rabochaia Gazeta* (both founded in 1957); the newspaper for agricultural workers *Sil's'ki Visti* (Village News) with a Russian counterpart, formerly titled *Kolhospne Selo* (Collective Farm Village); the organ of the Central Committee of the Komsomol of Ukraine, *Molod' Ukraïny* (Youth of Ukraine, changed in 1943 from *Komsomolets'*

FIGURE 234. MASTHEADS OF THE NEWSPAPERS *Radians'ka Ukraïna* AND *Molod' Ukraïny*

*Ukraïny*), with its Russian counterpart *Komsomol'skoe Znamia* (Komsomol Banner, founded in 1938). Professional newspapers are: the organ of the Union of Writers of Ukraine, *Literaturna Ukraïna* (Literary Ukraine, renamed in 1962

FIGURE 235. MASTHEADS OF THE LITERARY NEWSPAPER *Literaturna Ukraïna*, PUBLISHED IN KIEV SINCE 1927

from *Literaturna Hazeta*); the organ of the Ministry of Culture, *Kul'tura i Zhyttia* (Culture and Life, called *Radians'ka Kul'tura* until 1955); and the organ of the Ukrainian SSR's Ministry of Education, *Radians'ka Osvita* (Soviet Education, founded in 1940). There are also the following weeklies: *Zirka* (Star), founded in 1943, and *Yunyi Leninets'* (Young Leninist, founded in 1944), both *Komsomol* organs; *Sportyvna Hazeta* (Sports Gazette), founded in 1949, and originally named *Radians'kyi Sport* (Soviet Sports).

The latest circulation figures for most of the Ukrainian Republic newspapers are unknown. Only the following are available: in 1966 *Radians'ka Ukraïna* printed 485,000 copies per issue, *Pravda Ukrainy* 440,000, *Molod' Ukraïny* 440,000; the Komsomol *Zirka* had a circulation of 2,200,000 early in 1967, *Yunyi Leninets'* 1,100,000; *Literaturna Hazeta* 40,000, and *Radians'ka Osvita* 100,000.

The *oblast* newspapers, which numbered fifty-six in 1965, are mostly general political organs of the *oblast* and city Soviets of Workers' Deputies, the KPU, and the Komsomol. They resemble the Republic newspapers in form and content, but put more emphasis on local affairs. None can be sent abroad. Most *oblast* newspapers come out five times a week. Their circulation averaged 53,600 copies per newspaper in 1965. Nearly all Ukrainian *oblast* newspapers as listed have parallel Russian editions: *Sotsiialistychna Kharkivshchyna* (The Socialist Kharkiv Region, founded in 1934, originally named *Kharkivs'kyi Proletar* [Kharkiv Proletarian]) and *Krasnoe Znamia* (Red Banner, founded in 1938); *Zoria* (Star) and *Dneprovskaia Pravda* in Dnipropetrovske; in Odessa *Chornomors'ka Komuna* (Black Sea Commune, founded in 1929) and *Znamia Kommunizma* (Banner of Communism); in Lviv *Vil'na Ukraïna* (Free Ukraine, 1939) and *L'vovskaia Pravda* (1946); in Uzhhorod *Zakarpats'ka Pravda* (and its Russian counterpart); in Simferopol in the Crimea two *Pravdas*, *Kryms'ka Pravda* (1959) and *Krimskaia Pravda* (1942). The circulation of *Vil'na Ukraïna* in 1967 was 145,000, with the same figure for *Chornomors'ka Komuna* and the Russian language *Znamia Kommunizma*.

In 1966 there were seventy-five city newspapers. These papers are more locally oriented than the *oblast* papers, limiting their news reports to a given city. The average circulation of a city newspaper is 16,900 copies. The largest city newspaper *Vechirnii Kyïv* (The Evening Kiev) founded in 1951; it appears six times a week and in 1965 had a circulation of 150,000. It also serves as the official organ of the Kiev City Committee of the KPU and the City Soviet of Workers' Deputies. The city newspapers in some cities act as the mouthpieces of these councils and committees. In others, it is the *oblast* and *raion* newspapers which serve that purpose.

*Raion* newspapers, numbering 361 in 1965, are published in each *raion* seat. In some localities two papers are published. They appear in Ukrainian, Russian, Hungarian, Moldavian, and other languages and have an average circulation of 6,700 copies. Published twice or three times a week, they usually consist of two pages, carrying chiefly bulletins of city and *raion* Party committees.

Local newspapers (596 in 1965) are published weekly by factories, students, and other groups. Usually multigraphed

and posted on walls, they are not registered in the *Letopis periodicheskikh izdanii* SSSR (Chronicle of Periodical Publications in the USSR).

Collective farm newspapers are similar to the local papers in both form and content. They generally appear as bulletins of collective farm management, sometimes illustrated and containing poems and jokes. Long intervals, usually a month, elapse between issues. In relation to the entire USSR, the largest number is published in the Ukrainian SSR, 1,269 as against 65 in all other republics together. No records are kept of these newspapers in chronicles or registers of periodicals. The ratio of daily and annual circulation figures of Ukrainian to Russian newspapers is indicative of the state of newspaper publishing in the Ukrainian SSR. Table XII shows the daily and annual circulation figures for the period between 1955 and 1965.

The daily printing of Ukrainian newspapers in the Ukrainian SSR amounted to 72 per cent in 1965 and the annual to 71 per cent while the Russian percentages were 28 and 29, respectively. The Ukrainian population of the Ukrainian SSR, according to the 1959 census, was 76.8 per cent whereas the Russians constituted only 16.9 per cent. The discrimination becomes even more apparent when a comparison is drawn between circulation figures for the Ukrainian and the Russian language press in the entire USSR. Thus the daily printing of all newspapers in the USSR was 101,461,000 copies in 1965, of which 80,115,000 were in Russian and only 9,088,000 in Ukrainian, a ratio of 77 to 8.8 per cent. The annual printing for the same year totaled 23,013,000,000 copies, of which 19,299,000,000 (83.5 per cent) were in Russian and 1,465,600,000 (6.4 per cent) in Ukrainian. The population ratio for the entire USSR, on the other hand, was 54.9 per cent Russian and 17.7 per cent Ukrainian. Outside the Ukrainian SSR, i.e. in the Russian SFSR and other republics where there were 5.1 million Ukrainians according to the census of 1959 (the actual figure is 10 to 12 million [Vol. I, p. 244a]), not a single Ukrainian newspaper or magazine is being published at the present time.

The Russian-language press is distributed widely in the Ukrainian SSR. It is printed from matrices in Kiev, Kharkiv, and other cities. In 1962, when the total number of newspapers published in the Ukrainian SSR was 107 with a daily circulation of 12,847,000 copies, the Russian-language newspapers had an additional circulation of ten million copies.

The geographic distribution of newspapers published in Ukrainian (including collective farm papers) is more or less even over the whole area. However, a different picture emerges when the daily circulation figures are considered. The Kiev region accounts for 50 per cent of the daily printing, Donetske with 4.4 per cent, Lviv and Odessa 3.8 per cent each, Dnipropetrovske 3.1 per cent, Luhanske 3 per cent, and all other *oblasts* combined 31.9 per cent.

Journals, or magazines, make up the second group of periodicals published in the Ukrainian SSR. This group includes, as do figures for the entire USSR, not only journals as such, but typically Communist publications as well, the so-called notebooks for agitators, bulletins, reports, and transactions of scholarly and other institutions, and even non-periodical publications, i.e., serial editions. Journals, like newspapers, are organs or publications of the Communist party, trade unions, government agencies, scholarly institutions, and other public organizations.

The number of journals and other periodicals is shown in Table XIII (figures for the Ukrainian SSR, 1955–65).

The figures for Russian journals and other publications include periodicals in other languages, of which there were only two in 1962.

The annual printing of journals and other publications (including serial editions) and distribution figures (according to language) are shown in Table XIV.

Journals, other periodicals, and serial editions published in the Ukrainian SSR in 1965 constituted 4.4 per cent of the USSR total (journals alone 4.8 per cent). The percentage of Russian-language publications for the same year was 91.2 and 92.3 per cent, respectively.

Out of the total of 78 journals in the Ukrainian SSR in 1965, there were 1 weekly, 3 semimonthlies, 45 monthlies (including 3 published 8 to 10 times a year), 21 bimonthlies, and 8 quarterlies. Other publications included: 3 weeklies, 5 semimonthlies, 3 monthlies, 3 bimonthlies, 3 semi-annuals, and the remaining 159 published non-periodically.

Political, social, and economic journals enjoyed the most important and widest circulation, with an annual printing of 32,041,000 copies in 1965. The leading publication in this category is the monthly *Komunist Ukraïny* (Communist of Ukraine), the theoretical and political journal of the Central Committee of the KPU (called *Bil'shovyk Ukraïny* [Bolshevik of Ukraine] before 1952), which had a circulation of 113,400 copies in January 1967. It has a Russian counterpart *Kommunist Uk-*

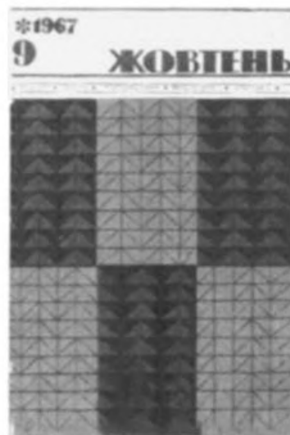

FIGURE 238. TITLE PAGE OF THE MONTHLY *Zhovten'* PUBLISHED IN LVIV SINCE 1950

*raïny*. Another publication in the same category is the Ukrainian and Russian semimonthly *Bloknot Ahitatora* (Agitator's Notebook) published by the ideological department of the Central Committee of the KPU.

Another large group of journals consists of literary and sociopolitical magazines. The printing for 1965 was 24,021,000 copies, or 31 per cent of all journals and periodicals. The mass circulation journal in this category (210,000 copies in January 1967) is the illustrated weekly *Ukraïna* founded in 1941 and published by the *Radians'ka Ukraïna* Publishing House. This periodical is similar to the Moscow *Ogoniok* (Flame), which has a circulation of 2 million copies.

The Union of Writers of Ukraine publishes the monthly *Vitchyzna* (Homeland), which was called *Ukraïns'ka Literatura* until 1946 and now has a circulation of 18,369 (January 1967). The Union also publishes the Russian-language *Raduga* (Rainbow), so renamed in March 1963 as the successor to *Sovetskaia Ukraina* (1951–63), with a circulation of 19,531 copies. *Vsesvit* (Universe) began publication in 1958 as a monthly devoted to art and literature abroad. Edited by Alexander Poltoratsky, it has a circulation of 47,045 copies. All of the above periodicals are published in Kiev. *Prapor* (Banner), the 1955 successor to the almanac *Kharkiv*, is published in Kharkiv with a circulation of 12,300, and *Zhovten'* (October), succeeding *Radians'kyi Zhovten'* (Soviet October) in February 1951 in Lviv, has a circulation of 15,400. Literary-art and sociopolitical monthlies of the Central Committee of Komsomol have higher circulation figures: *Ranok* (Morning), which was called *Zmina* (Change) until 1966, has a circulation of 60,000, and is similar to the All-Union *Smena* (Change) published in Moscow with a circulation of 1,100,000. *Dnipro* (until 1944 *Molodyi Bil'shovyk* [Young Bolshevik]) has a circulation of 60,000 and resembles the Moscow *Yunost'* (Youth) with a circulation of 2 million; both *Zmina* and *Dnipro* are published in Kiev. Periodicals, non-periodicals, and almanacs are published by *oblast* chapters of the Union of Writers of Ukraine.

The third large group of periodicals and serial editions consists of publications in various branches of science—the

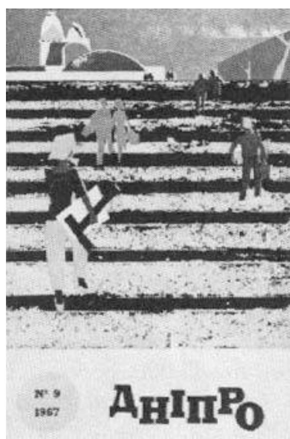

FIGURE 239. TITLE PAGE OF THE MAGAZINE *Dnipro*, PUBLISHED IN KIEV SINCE 1944

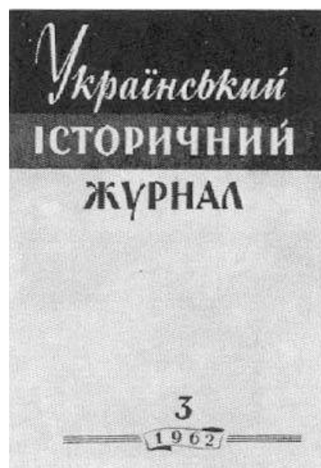

FIGURE 240. TITLE PAGE OF THE JOURNAL *Ukraïns'kyi Istorychnyi Zhurnal*, PUBLISHED IN KIEV SINCE 1957

natural sciences, mathematics, engineering, industry, transportation, and communications. They total 105 with an annual printing of 10,874,000 copies. Most important in this category is a series of journals of the Academy of Sciences of the Ukrainian SSR, published mostly in Russian: *Avtomaticheskaia Svarka* (Automatic Welding), *Gidrobiologicheskii Zhurnal* (Hydrobiological Journal), *Kibernetika* (Cybernetics), *Poroshkovaia Metallurgiia* (Powder Metallurgy), *Prikladnaia Mekhanika* (Applied Mechanics), *Ukrainskii Matematicheskii Zhurnal* (Ukrainian Mathematical Journal), *Ukrainskii Fizicheskii Zhurnal* (Ukrainian Journal of Physics), (see Scholarship, p. 266). Nearly all of the twenty-two journals in the field of medicine, public health, etc. are also printed in Russian, e.g., *Vrachebnoe Delo* (Medical Matters) and *Klinicheskaia Khirurgiia* (Clinical Surgery).

The fourth group is composed of journals and serial publications in the social sciences and humanities, including politics, linguistics, literature, education, and culture. Their total number is thirty-four with an annual circulation of 3,595,000 copies (in 1965). This group is comprised mainly of journals published by the Academy of Sciences of the Ukrainian SSR and its institutes, in some instances co-sponsored by the Ministries of Education and Culture. Most of them were founded during the de-Stalinization period of 1957–8: monthlies *Ukraïns'kyi Istorychnyi Zhurnal* (Ukrainian Historical Journal), *Radians'ke Literaturoznavstvo* (Soviet Literary Studies), *Radians'ke Pravo* (Soviet Law), and *Ekonomika Radians'koï Ukraïny* (Economics of Soviet Ukraine); and bimonthlies *Narodna Tvorchist' ta Etnohrafiia* (Folk Art and Ethnography) and *Movoznavstvo* (Linguistics), the latter started in 1967. With the exception of *Radians'ke Pravo*, which had a circulation of 24,612 in January 1967, they appear in editions of 2,000 to 8,000 copies. This group also includes *Radians'ka Shkola* (Soviet School, so renamed in 1945 as the successor to the journal *Komunistychna Osvita* [Communist Education]), circulation 29,650 copies in 1967, and journals treating the methodology of education, such as the monthlies *Doshkil'ne Vykhovannia* (Preschool Education) and *Ukraïns'ka Mova i Literatura v Shkoli* (Ukrainian Language and Literature in Schools), which was started in 1963 after a merger of

two periodicals and now has a circulation of 45,700 copies. Since 1965 a general popular science monthly *Nauka i Suspil'stvo* (Science and Society) has

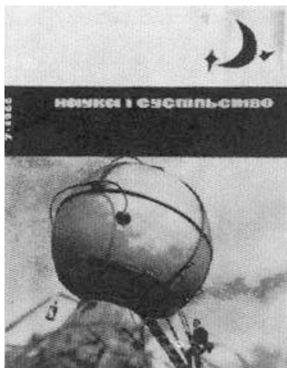

FIGURE 241. TITLE PAGE OF THE MAGAZINE *Nauka i Suspil'stvo*, PUBLISHED IN KIEV SINCE 1951

appeared as the successor to *Nauka i Zhyttia* (Science and Life) with a circulation of 45,000 copies. The journal of atheism *Liudyna i Svit* (Man and the World) was originally established in 1960 under the title *Voiovnychyi Ateist* (The Militant Atheist); it has a circulation of 25,000 copies.

The fifth group consists of agricultural periodicals and publications, totaling 26, with an annual circulation of 1,355,000 copies (in 1965). Most important are: *Visnyk Sil's'ko-Hospodars'koï Nauky*

FIGURE 242. MASTHEAD OF THE SATIRICAL MAGAZINE *Perets'*, PUBLISHED IN KIEV SINCE 1941

(Herald of Agricultural Science) published by the Ukrainian Academy of Agricultural Science, and the monthlies *Sil's'ke Budivnytstvo* (Rural Construction), *Tvarynnytstvo Ukraïny* (Ukrainian Animal Husbandry), and *Khliborob Ukraïny* (Ukrainian Farmer).

The leading art journal was the bimonthly *Mystetstvo* (Art) founded in 1954 (circulation 19,200) with a supplement *Novyny Kinoekranu* (News of the Screen).

The only magazine of humor and satire in the Ukrainian SSR is *Perets'* (Pepper) founded in 1941 and selling 1,100,000 copies per issue. There is also one sports magazine, *Start* (renamed in 1965 and succeeding *Fizkul'tura i Sport* [Physical Culture and Sports]) with a circulation of 45,000 copies. The only women's magazine, *Radians'ka Zhinka* (Soviet Woman), was established in 1946 and had a circulation of 1,130,000 copies, as of January 1967.

In 1965 there were nine magazines for children and youth including *Barvinok* (Periwinkle, 1945) printing 370,000 copies in 1967, with a Russian-language counterpart of the same title; *Pioneriia* (Pioneering) in Ukrainian and Russian since 1950, and *Maliatko* (Toddler) for children of preschool age. All are published by the Central Committee of the Komsomol.

Millions of Ukrainians serving in the Soviet armed forces (about 20 per cent of the total) are not provided with any periodical reading matter in Ukrainian.

Table XV illustrates the distribution of journals, periodicals, and series editions and the percentage ratio of this group of publications in the Ukrainian SSR to that in the Russian SFSR.

The statistics indicate that journals in the Ukrainian SSR are poor not only in quantity, but also in quality, since 41.4 per cent serve only as propaganda. This group in the Russian SFSR (including central publications) constitutes 24 per cent. There are very few publications in the natural sciences and mathematics (35, mostly in Russian) compared with 386 in the Russian SFSR. The ratio of medical journals is extremely low, the Ukrainian SSR having 0.6 per cent (nearly all in Russian) compared with 3.0 per cent of all publications in the Russian SFSR. The discrepancy is even

TABLE XV

| Subject-Matter | Number | Annual printing (thousands) | Annual printing (%) UkSSR | Annual printing (%) RSFSR |
|---|---|---|---|---|
| Political and socio-economic | 28 | 32,041 | 41.4 | 24.0 |
| Military | — | — | — | 2.6 |
| Natural sciences, mathematics | 35 | 121 | 0.2 | 3.1 |
| Engineering, industry, transportation, communications, etc. | 70 | 10,753 | 13.1 | 15.5 |
| Agriculture | 26 | 1,355 | 1.8 | 2.6 |
| Commerce and food distribution | 2 | 5 | 0.1 | 0.4 |
| Public health and medicine | 22 | 477 | 0.6 | 3.0 |
| Physical culture, sports | 1 | 578 | 0.8 | 6.0 |
| Culture, education, scholarship | 21 | 3,564 | 4.6 | 3.3 |
| Linguistics, literary studies | 3 | 31 | 0.1 | 0.1 |
| Art-Literature | 17 | 24,021 | 31.0 | 26.5 |
| Art | 5 | 3,513 | 4.6 | 5.8 |
| Atheism, religion | 2 | 1,026 | 1.3 | 0.2 |
| Printing, libraries, bibliography | 16 | 188 | 0.3 | 0.8 |
| Miscellaneous | 8 | 37 | 0.1 | 6.1 |
| TOTALS | 256 | 77,710 | 100.0 | 100.0 |
| Children | 5 | 8,472 | 10.9 | 6.0 |
| Youth | 4 | 2,788 | 3.7 | 7.1 |
| Women | 1 | 10,220 | 12.0 | 11.0 |

more evident in sports—one journal in the Ukrainian SSR (0.8 per cent) compared with 27 in the Russian SFSR (6.0 per cent). The Ukrainian SSR surpasses the Russian SFSR only in atheistic periodicals (1.3 per cent of the total to 0.2 per cent) and in the ratio of art-literature journals (31 per cent against 26.5 per cent). The ratio of annual printings of periodicals for children and youth in Ukraine is very low (four of the nine publications for children in the Ukrainian SSR are printed in Russian). As regards youth journals, the annual figure for the Russian SFSR is 7.1 per cent of the total but only 3.7 per cent for the Ukrainian SSR.

Russification of Ukraine is proceeding with the aid of locally published Russian periodicals and serial editions, particularly in the field of science, as well as by mass distribution of central Russian publications throughout the Ukrainian SSR. The circulation of these Russian publications exceeds the total circulation of all periodical publications printed in the Ukrainian SSR. Other Soviet republics, in which more than ten million Ukrainians live, mostly as a result of forced resettlement [Vol. I, p. 244], do not have a single journal in the Ukrainian language.

The geographic distribution of journals, periodicals, and serial editions in the Ukrainian SSR is very sporadic. Of the total of 256 publications, 206 (76 per cent) are published in Kiev. The Kharkiv area has 32 (15.5 per cent), Lviv 12 (5.5 per cent), and others 6 per cent. In magazine publication the situation is even worse: 76 out of a total of 78 were published in Kiev in 1965.

## UKRAINIAN EMIGRATION AFTER WORLD WAR II

The Ukrainian émigré press, mainly in Germany and Austria but also in France, Belgium, and England, was the only free expression of Ukrainian thought during the postwar years. New Ukrainian publications free from German control began appearing in 1945, but the prevailing conditions were far from favorable for the development of the Ukrainian press: first, there were no Ukrainian printing shops; secondly, as a

result of the military occupation of Germany and Austria, the authorities restricted the publication of new press organs by requiring a license. Thus the first newspapers—the nationalist-oriented *Chas* (Time, Fürth, 1945–9) edited by

FIGURE 243. UKRAINIAN NEWSPAPERS IN WEST GERMANY AFTER WORLD WAR II

Roman Ilnytsky and the socialist-oriented *Nashe Zhyttia* (Our Life, Augsburg, 1945–8) edited by Paul Kotovych—appeared either in mimeographed form (with the exception of the Regensburg *Slovo* [Word] edited by S. Dovhal) or in the Latin alphabet (e.g., *Nedilia* [Sunday], Schweinfurt, later Aschaffenburg, 1945 and on, edited by H. Kotorovych). It was only later that these and other newspapers began appearing in the customary printed form. Among them were: *Ukraïnski Visti* (Ukrainian News, Ulm, from 1945) edited by Ivan Bahrianyi; *Ukraïns'ka Trybuna* (Ukrainian Tribune, Munich, 1946–9); *Khrystiians'kyi Shliakh* (Christian Pathway, Mittenwald, 1946–7) edited by Ivan Nimchuk; *Khrystians'kyi Holos* (Christian Voice, Munich, from 1949) edited first by Roman Danylevych and later by Myron Konovalets; *Ukraïns'kyi Samostiinyk* (Ukrainian Independent, Munich, Munich, from 1950) edited by Constantine Kononenko and Stephen Lenkavsky.

At the same time a number of literary-artistic journals sprang up: collections of MUR (*Mystets'kyi Ukraïns'kyi Rukh* [Ukrainian Artistic Movement], Munich, Regensburg, 1946–7) edited by Yurii Sherekh; *Ridne Slovo* (Native Word, Munich, 1945–6) edited by Theodore Kurpita; *Ukraïns'ke Mystetstvo* (Ukrainian Art, Munich, 1947) edited by Michael Dmyterko; *Arka* (Arc, Munich,

FIGURE 244. UKRAINIAN MAGAZINES IN WEST GERMANY AND AUSTRIA AFTER WORLD WAR II

1947–8) edited first by Victor Domontovych (V. Petrov) and later by Yurii Sherekh; *Litavry* (Kettle Drums, Salzburg, 1946–7) edited first by Yurii Klen and later by Bohdan Romanenchuk. Women's journals were represented by *Hromadianka* (Female Citizen, Munich, 1947–50) edited first by Liudmyla Ivchenko and later by Maria Dontsov. *Ïzhak-Komar* (Hedgehog-Mosquito, Munich 1947–9) was a journal of humor and satire edited by Theodore Kurpita. In other categories, the following appeared: the illustrated magazines *Pu-Hu* (Augsburg, 1947–9), *Zhyttia* (Life, Munich, 1949), the non-periodical scientific-literary journal *Ukraïna i Svit* (Ukraine and the World) edited by Elias Sapiha, *My i Svit* (We and the World, Mitten-

wald, from 1950); the scientific journal *Siohochasne i Mynule* (The Present and the Past, Munich, from 1948) edited by Z. Kuzelia; the student magazine *Studentskyi Visnyk* (Student Herald, Munich, from 1947); *Molode Zhyttia* (Young Life, 1946–9), a magazine for the Plast youth edited by B. Krawciw, *Avanhard* (Avant-Garde, Munich), the organ of the Ukrainian Youth Association [SUM]; *Do Zbroï* (To Arms, from 1948), a journal of Ukrainian military-political thought; *Surma* (Bugle) and *Vyzvol'na Polityka* (Liberation Politics), both published by the Organization of Ukrainian Nationalists (OUN); *Orlyk* (Little Eagle, Berchtesgaden, 1946–8) edited by Thomas Lapychak; the workers' newspaper *Vpered* (Forward, from 1949); and many others, particularly religious, professional, and popular science magazines. By 1950, a total of 275 more or less continuous periodical publications were operative in Germany and Austria.

The resettlement of Ukrainian refugees from Germany and Austria sharply reduced the number of émigré publications in these countries. At the end of 1950, there were only fourteen Ukrainian publications (seven newspapers) in Germany and Austria. However, this was more than offset by a vast increase in publishing activity in the countries of new settlement: Ukrainian newspapers, mainly weeklies, were founded in England (*Ukraïns'ka Dumka* [Ukrainian Thought], London), Australia (*Vil'na Dumka* [Free Thought]), France (*Ukraïns'ke Slovo* [Ukrainian Word], *Ukraïnets'-Chas* [Ukrainian-Time], *Hromada* [Community], and others, in Paris), Belgium, the United States of America, Canada, and Argentina. These publications represented all segments of Ukrainian political thinking and reflected the cultural life of the emigrant. Literary-artistic and scientific trends were not so well represented, although two publications deserve mention: *Zapysky Chyna sv. Vasyliia V.* (Notes of the Order of St. Basil the Great) and the non-periodical magazine of Ukrainian studies, *Ukraïna* (1949–53) published in Paris under the editorship of Elias Borshchak.

Following the early stages of adjustment and stabilization of Ukrainian emigrants in the countries of Europe and in Australia after 1950, the volume of periodical publication began to increase gradually. A number of new newspapers and magazines were established: the political weekly *Suchasna Ukraïna* (Contemporary Ukraine, from 1951), the organ of the foreign representation of the Ukrainian Supreme Liberation Council (ZP UHVR), which appeared in western Germany until 1961 under the editorship of Volodymyr Stakhiv; the newspaper *Ukraïns'ka Literaturna Hazeta* (Ukrainian Literary Gazette) established in 1955 and associated with *Suchasna Ukraïna*, edited by Ivan Koshelivets and, in the early stages, by George

Dyvnych-Lavrinenko (in 1961, these newspapers combined into a literary-artistic and social monthly *Suchasnist'* (Our Times) edited by Ivan Koshelivets); the nationalist monthly *Shliakh Peremohy* (Pathway of Victory, Munich, from 1954), the organ of the Foreign Branch of the OUN, edited by S. Lenkavsky and Daniel Chaikovsky, in conjunction with the *Ukraïnets'-Chas*, which had appeared in Paris under the editorship of Borys Vitoshynsky. The weekly *Ukraïns'kyi Samostiinyk* was changed in 1957 into a monthly under the editorship of Lev Rebet. The newspaper *Ukraïnets' v Australii* (Ukrainian in Australia) began appearing in Australia in 1956. Journals published at that time were: the non-periodical youth journal *Feniks* (Phoenix, Munich, from 1951); the literary-scientific and social monthly *Vyzvol'nyi Shliakh* (Liberation Path, London, from 1953); the children's magazine *Yuni Druzi* (Youthful Friends, London); the scholarly publications *Naukovi Zapysky UVU* (Scientific Notes of the Ukrainian Free University), *Naukovi Zapysky UTHI* (Scientific Notes of the Ukrainian Technical Husbandry Institute), and *Pratsi Ukraïns'koho Bohoslovs'koho Tovarystva* (Works of the Ukrainian Theological Society, from 1961).

In 1961–2, a total of 75 periodicals appeared in various countries of Europe and in Australia, including 7 newspapers, 22 journals, 5 scientific journals and collections, 29 bulletins, and 12 other publications. These periodic publications are shown in Table XVI by country.*

Of the publications appearing in England, two were published in English; in Argentina, one in Spanish; in Germany, one in English and one in German; in France, four in French.

# 9. RADIO AND TELEVISION

## RADIO

Throughout the Ukrainian SSR as well as the Soviet Union and other Communist countries, radio exists only to serve the state. Apart from its function as a news service, it is used for educational purposes, particularly for political indoctrination and the propagation of ideas necessary for the "building of communism." In the selection of topics and in their technical presentation, all programs are geared to the objectives of Soviet internal and external policy. The state censorship committee Golovlit and organs of the State Security Committee (KGB) are in charge of all programming. Radio, together with the post office, the telegraph, and the telephone is subordinate to the Soviet Ministry of Communications and to the respective committees of the councils of ministers of the USSR and the Ukrainian SSR.

### The Development of Radio Broadcasting in Central and Eastern Ukraine before 1945

Radio was used in Ukraine for radiotelegraphic communication as early as 1902. However, radio broadcasting as such had its beginnings in 1924 when, four years after powerful radio stations went into operation in Moscow, Leningrad, and Kazan, radio transmission, using low-power transmitters, was started in Kharkiv. The first powerful

broadcasting stations were built in Kharkiv and Kiev in 1925 by the Moscow Shareholders Society for Radio Communication. Radio stations were also set up in Odessa, Dnipropetrovske, Donetske, and other cities. The station built in Kharkiv in 1927 was the fourth most powerful in the Soviet Union. Until just before the war (1941), the most powerful station in the Ukrainian SSR, which was used partially for broadcasting propaganda overseas, was located in Kiev. The radio network, began in 1928, was developed by building relay centers or hubs and relay lines and connecting them to loudspeakers. The method which is common throughout the world was seldom used and radios utilizing this method were produced in very small numbers, generally only for official and Party use. The objective of the régime was to prevent the population from listening to foreign broadcasts.

The number of ordinary radios began to increase towards the end of 1930. By this time methods of jamming foreign broadcasts had been perfected, and the radio factory in Odessa was producing sets which could pick up Soviet broadcasts only. In 1940 there were 1,047,000 relaying stations or centers in the Ukrainian SSR, of which 137,200 were in rural areas. At the same time there were only 255,400 radio sets.

From 1928 to 1930, the construction of radio stations and broadcasting were under the jurisdiction of the People's Commissariat of Postal and Telegraphic Communication of the USSR. In August of 1930, by decree of the Council of People's Commissars of the Ukrainian SSR, an All-Ukrainian radio administration was set up under the above-mentioned commissariat with jurisdiction over the radio center in the Moldavian Autonomous SSR and local radio centers. In 1932, the name of the All-Ukrainian Radio Administration was changed to the All-Ukrainian Committee of Radio Networks and Broadcasting under the jurisdiction of the Council of People's Commissars of the Ukrainian SSR, and in 1938 to the Ukrainian Radio Committee. In 1930 the Radio Society of the Ukrainian SSR, comprising local organizations of radio fans and supporters, was set up. Also active in the 1930's was the Committee to Assist Radio Construction and Radio Amateurs, under the Central Committee of the Komsomol of Ukraine. Questions concerning radio technology and broadcasting were dealt with in a magazine called *Radio* (1930–41).

With regard to radio programs, the Ukrainian SSR was within reach of broadcasts emanating from Radio Moscow and other powerful stations in the Russian SFSR. Programs of Ukrainian radio stations were limited in time, content, and sophistication. In the late 1920's and early 1930's, more than 70 per cent of all broadcasts were political (political education and agitation). The program of the Kharkiv radio station, in addition to "radio gazettes"—labor, agricultural, Party, Komsomol, Pioneer, and some newscasts in Yiddish and Esperanto—consisted of lectures, debates, late news, and reports from meetings and conferences. Only three to four hours out of a total of eighteen were devoted to broadcasts concerned with the arts. In the second half of the 1930's music and drama were included in the programs of the Ukrainian radio stations. There were separate programs for children and young people. Approximately 30–40 per cent of the available time was scheduled for mandatory broadcasts emanating from Moscow in Russian, including twelve news broadcasts for every twenty-four-hour period. During World War II, when the majority of radio stations in the Ukrainian SSR were destroyed, the population of Ukraine received broadcasts originating with the German occupation forces or Radio Moscow and Soviet army stations. From 1941 to 1944 Ukrainian-language programs were broadcast by Shevchenko

Radio Station in Saratov, to which some of the installations from the Ukrainian SSR had been evacuated.

**In the Ukrainian SSR from 1945 to 1966**

Since the end of the war all matters pertaining to radio broadcasting have been handled by the Radio of the Ukrainian Republic, a government agency under the jurisdiction of the Ukrainian Radio Committee, renamed in the mid-1950's the Committee of Radio and Television Broadcasting under the Council of Ministers of the Ukrainian SSR. Since February 1957 this committee has been broadcasting daily under the heading "Kiev Speaks."

At the beginning of 1965 there were more than fifty powerful long, middle, short, and ultra-short wave radio stations in the Ukrainian SSR.

Tables XVII–XX compare radio broadcasting in the Ukrainian SSR with that of the Soviet Union.

It is evident from the above figures that the relaying system of transmitting radio programs by means of wires connected to loudspeakers is still the prevalent method in the Ukrainian SSR. The recent decrease in the number of relaying stations is due for the most part to the discontinuance of smaller centers. Most of the sets used in the Ukrainian SSR are produced outside the Republic.

Because of the increasing number of radio-wave radio sets (the common type) and radiophonographs, the production of loudspeakers, although still greater than that of radios, has declined in recent years. The number of ether-wave radio sets among the rural population is still quite limited.

Whereas in the United States there were 172 million radio sets in households and 55 million in automobiles in 1965 (1.2 sets per person), in the Ukrainian SSR there was only one set per 6.9 persons in the country as a whole and one set per 14.4 persons in rural areas.

Radio broadcasting in the Ukrainian SSR has grown markedly since the 1930's. At the beginning of 1965, the Republic's radio stations had a total broadcast time of thirty hours for every twenty-four-hour period. In addition to ten late news broadcasts beamed by Kiev Radio in a period of twenty-four hours, the programs of Ukrainian stations include lessons, discussions, consultations, general education, literature, and music. There are also programs for children and young people, as well as broadcasts in Ukrainian and in various foreign languages which are beamed abroad. The people are not able to listen to all the programs broadcast by the Ukrainian SSR stations. Broadcasting is divided into three programs. The first

TABLE XVII

RELAYING STATIONS

| | 1950 | 1960 | 1965 |
|---|---|---|---|
| Ukrainian SSR | 3,055 | 5,870 | 5,464 |
| Rural areas | 1,910 | 3,655 | 3,168 |
| USSR | 18,919 | 39,003 | 34,206 |

TABLE XVIII

RELAYING POINTS (in thousands)

| | 1950 | 1960 | 1965 |
|---|---|---|---|
| Ukrainian SSR | 1,482 | 7,203 | 8,356 |
| Rural areas | 334 | 4,419 | 4,850 |
| USSR | 9,685 | 30,837 | 35,638 |

TABLE XIX

RADIO RECEIVING SETS (in thousands)

| | 1950 | 1960 | 1965 |
|---|---|---|---|
| Ukrainian SSR | 528 | 4,431 | 6,571 |
| Rural areas | 158 | 1,101 | 1,535 |
| USSR | 3,643 | 27,811 | 32,228 |

TABLE XX

PRODUCTION OF RADIOS, RADIOPHONOGRAPHS, AND LOUDSPEAKERS IN THE UKRAINIAN SSR (in thousands)

| | 1950 | 1960 | 1965 |
|---|---|---|---|
| Radios and radiophonographs | 85 | 231 | 553 |
| Loudspeakers | 165 | 899 | 700 |

program is transmitted by the relay stations and thus reaches the masses of the people. The second and third programs can only be picked up on ether wave radio sets. Topics dealing with local, Party, and agricultural life constitute 20–25 per cent of the first program's time; the rest is devoted to broadcasts from Moscow. The second and third programs focus attention on general Ukrainian affairs, including literature and art.

There are no Ukrainian magazines dealing with radio. Since 1958 the Kiev Polytechnic Institute has published a magazine called *Radiotekhnika* (Radio Technology) in Russian (published bimonthly with a total printing of 3,500–5,000) which is an organ of the Soviet Ministry of Higher Education.

Radio ham groups in the Ukrainian SSR work within the Soviet Society of Volunteers for Cooperation with the Army, Navy, and Air Force. In 1961 there were 220 independent clubs with a total membership of 24,000 radio hams. There are more than 2,500 radio ham stations in the Ukrainian SSR.

**In Western Ukraine from 1918 to 1945, and Abroad since 1945**

In Western Ukraine under Polish occupation radio broadcasting was included in the general system of communications, and radio listeners had to register and pay a monthly fee at the post office. It was not until the 1930's that separate Ukrainian-language programs were started by the Lviv state radio. Broadcasting was sporadic and time (15 to 30 minutes) and content were limited. Religious services were broadcast from Ukrainian churches on Sundays and important holidays.

During the 1930's, Ukrainian programs were included in Czechoslovak broadcasts for the people of Transcarpathia. A fifteen-minute program in the Ukrainian language was presented five days a week. During the period of Carpatho-Ukraine's independence, Ukrainian language broadcasts were transmitted from Banska Bystrytsia in Slovakia. In January-March of 1939, a short wave radio station operated in Khust.

During World War II (1939–1941) Ukrainian language broadcasts were transmitted by the Soviets from Lviv, Stanyslaviv, and Ternopil. During the German occupation of Western Ukraine (1941–1944) only one German station broadcast from Lviv, presenting thirty-minute Ukrainian-language programs three times a week.

Outside Ukraine, radio broadcasting in the Ukrainian language is carried on daily by the Voice of America from Washington, the Voice of Canada from Ottawa, and the privately operated Radio Liberty from Munich. Ukrainian programs are also broadcast by stations in Italy, Spain, and Argentina. American and Canadian radio stations in major centers of Ukrainian settlement carry many Ukrainian programs.

## TELEVISION

The first television broadcasts utilizing the electron tube (with the image distributed into 500 "lines" with a frequency of 50 frames per second) were started by a group of radio hams in Kharkiv early in 1951. In November of the same year, five years after regular television broadcasting was begun in Moscow (with a distribution of 625 "lines" and a frequency of 25 frames per second), a television broadcasting center using the same system went into operation in Kiev. In 1965, of the 121 television broadcasting centers in the USSR, there were 12 powerful stations in the Ukrainian SSR (Kiev, Kharkiv, Luhanske, Donetske, Dnipropetrovske, Zaporizhia, Mykolaïv, Kherson, Odessa, Lviv, Symferopol, and Chernivtsi), 8 powerful transmitters, 4 micro-television centers, and some 75 low-power transmitters. In every twenty-four-hour period, from seven to ten hours are devoted to Ukrainian programs. All programs are

in black and white since color television is still in the planning stages. Residents of Kiev and Donetske only have access to more than one channel. The Kiev and other television centers relay Russian broadcasts from Moscow and Leningrad.

Television and radio form part of the communications system and are under the jurisdiction of the Union and Union-Republic Ministries of Communications. Television programs are supervised by State Committees for Radio and Television of the Councils of Ministers of the USSR and of the Ukrainian SSR.

The production of television sets in the Ukrainian SSR was started in 1951. Sets are made by plants in Lviv, Dnipropetrovske, and Kharkiv. The number of sets produced in 1954 was 1,700, rising to 519,000 in 1965. Most of the television sets used in the Ukrainian SSR are made outside in the RSFSR and other Soviet republics.

The number of television sets now being used by the people of the USSR and Ukrainian SSR (in thousands) is shown below:

| | 1958 | 1960 | 1965 |
|---|---|---|---|
| USSR | 2,539 | 4,788 | 15,693 |
| Ukrainian SSR | 322 | 745 | 2,979 |
| of this, in Rural areas | 7.6 | 27.7 | 673 |

In the United States in 1965 there were 80 million television sets in a population of 195 million (including 5 million color sets), i.e., one set for every 2.4 persons. During the same year the Ukrainian SSR had 2,797,000 sets for 45 million people, or one set for every 16.1 persons. There were 673,000 television sets for 22 million rural inhabitants, or roughly one television set for every 32.8 persons.

*B. Krawciw*

# VII. The Arts

## 1. UKRAINIAN ART RESEARCH

### THE BEGINNINGS

In Ukraine the history and theory of art and research in the various branches of art are relatively recent fields of study and came into being in the middle of the nineteenth century, although descriptions of Ukrainian monuments appeared far earlier. Because of the political situation in Ukraine, the first historians of Ukrainian art were mostly the representatives of the ruling states—Russian, Polish, and German—and even the works of Ukrainian scholars were often written in those languages. Originally, art did not appear as an independent discipline but in connection with archaeology, religion, history, and ethnography. In the indexes of the *Kievskaia Starina* (1882–1906) are listed over a hundred articles on such various subjects as old Ukrainian portraits, the Kievan Academy and its pupils, drawings by Ukrainian masters, Greek Muses in Ukrainian representation, Kozak churches, ancient engravings, iconography, and archaeology, by such Ukrainian scholars as Volodymyr Antonovych, Theophanes Lebedyntsev, Nicholas Petrov, Basil Horlenko, Alexander Lazarevsky, Andrew Loboda, Nicholas Biliashivsky, Dmytro Bahalii, and Nicholas Sumtsov. Numerous similar articles appeared in diocesan almanacs and scholarly journals, especially in the *Trudy* (Works) of the archaeological congresses (the first in Moscow in 1869, then in Kiev, 1874 and 1889, Odessa, 1884, Kharkiv, 1902, Katerynoslav, 1905, Chernihiv, 1908). Because of the enthusiasm for the Kozak period, the Princely period (tenth to fourteenth centuries) suffered some neglect, and the fundamental studies into the art of that period were made by Russian scholars (Dimitr Ainalov, Peter Lashkariev, Ivan Tolstoi, Adrian Prakhov, Egor Redin, Nikodim Kondakov, and others) who considered it part of early Russian art.

### THE TWENTIETH CENTURY

Systematic Ukrainian art research began to develop in the beginning of the twentieth century with the scholarly activities of such historians and theoreticians as Nicholas Makarenko, Vadym Modzalevsky, Ipolit Morhylevsky, Alexander Novytsky, Gregory Pavlutsky, Nicholas Petrov, Hilarion Svientsitsky, Yukhym Sitsinsky, Constantine Shyrotsky, Theodore Shmit, Vadym and Daniel

FIGURE 246. ALEXANDER NOVYTSKY

FIGURE 247. THEODORE SHMIT

Shcherbakivsky, George Lukomsky, and Basil Krychevsky, among others. The historian Michael Hrushevsky wrote a penetrating history of Ukrainian art up to the sixteenth century. The centers of Ukrainian art research were the Kiev and Kharkiv universities, the Church-Archaeological Society, the Kiev Theo-

logical Academy, the Ukrainian Scientific Society in Kiev, and various historical museums in Odessa, Poltava, Chernihiv, and Lviv. The importance of this research lies in defining Ukrainian art as a separate entity and in tracing its origins to ancient Ukrainian tradition[illegible] [illegible]d folk art forms.

These national traits of Ukrainian artistic discipline were predominant in the years of struggle for independence (1917–20) and in the 1920's. From 1917 on, synthesizing, compendious works on Ukrainian art began to appear: *Ukrainskoe iskusstvo* (Ukrainian Art) by Vadym Modzalevsky, *Starovynne mystetstvo na Ukraïni* (Ancient Art in Ukraine) and *Kyïv* (Kiev) by Constantine Shyrotsky, *Khrestomatiia istoriï ukraïns'koho mystetstva* (Chrestomathy of the History of Ukrainian Art) by Alexander Doroshkevych and Theodore Ernst, *Mystetstvo staroï Rusy-Ukraïny* (The Art of Ancient *Rus'*-Ukraine) by T. Shmit, Nicholas Makarenko's study on ancient Kievan art, Stephen Taranushenko's studies on peasant secular and church architecture (1922–3), the history of Ukrainian ornament by Gregory Pavlutsky (1927), and the history of Ukrainian painting of the seventeenth to twentieth centuries and a monograph on George Narbut (1926) by T. Ernst.

These studies may serve as a cross-section of critical and historical works on Ukrainian art in the 1920's. Until the early 1930's Ukrainian art research centered at the Ukrainian Academy of Sciences in Kiev (chair of art history), at the universities and art institutes, and at museums and national monuments. There appeared various collections devoted to history, archaeology, and art as well as several art reviews. A typical publication at that time, edited by the authoritative Ukrainian scholars, was *Ukraïns'kyi Muzei* (Ukrainian Museum, Kiev, 1927), a review of the Ukrainian culture of the past. Devoid of propaganda, this publication soon became a cause for the indictment of the art historians for their alleged "bourgeois nationalism" and their work on it subjected them to many years of concentration camps and even to loss of life. A series of individual art monographs was published in 1929–32 by the Rukh publishing house in Kharkiv, then the capital of Soviet Ukraine. Although they were edited from a Marxist viewpoint, they were soon classified as "Nationalistic."

In WESTERN UKRAINE, until 1918 under Austrian and later under Polish rule, most active in this field was the Ukrainian National Museum in Lviv under the direction of Hilarion Svientsitsky (1876–1956). He was the author of works dealing with the beginning of book printing in the Ukrainian lands (1924) and two well-illustrated collections of Galician icons of the fifteenth and sixteenth centuries. Under his initiative the museum published works on various subjects: several volumes of manuscript illuminations, drawings of ancient wooden churches in Ukraine, *Ukraïns'kyi kylym* (Ukrainian Rug) by Volodymyr Peshchansky, studies on Ukrainian wooden churches and iconostases by Michael Dragan, and various papers on ancient architecture by Volodymyr Sichynsky, one of the most active and versatile art historians in Western Ukraine. Sichynsky wrote also many retrospective studies on Ukrainian art in foreign publications such as the Czech *Umění Slovanů*, the German *Gutenberg-Jahrbuch*, and the polish *Grafika*. Metropolitan Andrew Sheptytsky, the founder and sponsor of the National Museum of Lviv, himself took an active interest in art development, sponsored important art publications, and personally taught art history in the Lviv Art School.

FIGURE 248. VOLODYMYR SICHYNSKY

Prominent also among art historians and critics was Nicholas Holubets (1892–1942) whose specialty was Galician art. He wrote a comprehensive outline of Ukrainian art in the *Istoriia ukraïns'koï kul'tury* (History of Ukrainian Culture, Lviv, 1937). Dmytro Antonovych (1877–1945) compiled a shortened course of Ukrainian art in Prague (1923), which he later amplified several times. Volodymyr Zalozetsky (1896–1959), a Byzantine scholar of European renown, wrote about Gothic and Baroque architecture in Carpatho-Ukraine, and on the relation of ancient Ukrainian architecture to that of Byzantium. His works were mostly in German and were published abroad. Before World War II he held the chair of art history at the Ukrainian Theological Academy in Lviv, directed by Rev. Josyf Slipyj, the present Cardinal. Yaroslav Konstantynovych in his *Iconostasis* (Lviv, 1939) demonstrated the development of the Ukrainian altar screen. New tendencies in art were propagated in Lviv by a group of modern artists who in 1932–6 published the almanac *Mystetstvo* (Art) edited by Paul Kovzhun.

FIGURE 249. DMYTRO ANTONOVYCH

## UNDER SOVIET PRESSURE

In the 1930's art scholars and critics in eastern Ukraine fell under official Soviet pressure. Although this pressure was felt in the entire Soviet Union, it took the distinctly severe form of complete destruction of true art and art scholarship in Ukraine. According to the 1953 edition of the Great Soviet Encyclopedia (Vol. XVIII, p. 514), the founders of Soviet art discipline were Lenin, Stalin, Kalinin, Molotov, Kirov, Zhdanov, Malenkov, Voroshilov, and Kaganovich. It is of no importance here that in time some of these men fell into disfavor; the fact remains that some of them did control Ukrainian art. For example, this same encyclopedia in its 1939 edition states, "Stalin charted the course of Ukrainian art once and for all." After the liquidation of all Ukrainian art organizations on April 23, 1932, a veritable persecution of all forms of Ukrainian art was set in motion. Prominent Ukrainian artists and critics were labeled "fascists, nationalists, and spies." Nicholas Skrypnyk, Minister of Education of the Ukrainian SSR, became the victim of particularly virulent attacks. Although his platform was Marxist, he nevertheless endeavored to preserve the national traits of Ukrainian art; but seeing the bankruptcy of the Soviet national policy he took his own life in 1933. His views on art were collected in the fifth volume of his *Statti i promovy* (Papers and Speeches, Kharkiv, 1930–1). The theoretician Ivan Vrona (b. 1897), party director of the Kiev Institute of Art (the former Academy), was imprisoned for his defense of formal topics in art and the right of Ukrainian artists to study and learn from Western art.

Socialist realism became the only permissible form of art. The wave of arrests disrupted work in the museums where the true scholars and experts were replaced by official appointees who were often illiterates. Professor Nicholas Makarenko, former associate of the Leningrad Hermitage, was arrested and liquidated for sending a letter to Stalin protesting the destruction of historical monuments of the eleventh and twelfth centuries in Kiev. By the second half of the 1930's not one outstanding active scholar of art remained in Ukraine. It is the irony of history that the most ardent destroyers of Ukrainian art, the Party Secretary of Ukraine, Pavel Postyshev, and the Marxist theoreticians Volodymyr Zatonsky and Andrew Khvyla, were soon liquidated in wholesale repressions in the Ukrainian SSR.

## FROM 1945

After World War II the situation improved somewhat. A significant factor was the pressure of public opinion among the Ukrainian masses, who, at a time of general decolonization in Asia and Africa, began to demand their rights more and more insistently. The death of Stalin and the subsequent thaw brought further changes for the better. Art publications began to appear again, usually dealing, however, with folk art, an impersonal and thus safe topic. But the scholars and critics could not be replaced at once; only a few survived the terror and returned from concentration camps, among them Taranushenko and Vrona.

In the 1950's and 1960's art publication was centralized in the Academy of Sciences and its institutes. The Art Institute in Kiev was directed by the engraver Basil Kassian, and the eminent poet Maksym Rylsky became director of the Institute of Ethnography, which after his death in 1965 was named after him. An important publication of the latter Institute is a four-volume collection of the paintings and drawings of Taras Shevchenko. The State Museum of Ethnography and Crafts in Lviv published good monographs on folk art: for example, *Narodnyi odiah zakhidnykh oblastei URSR* (Folk Costumes of western *oblasts* of the Ukrainian SSR) by Olena Kulchytska, as well as works on woodcarving, weaving, embroidery, and pottery. The Institute of Architecture published a study of folk creativeness in the architecture of the peasant house by Victor Samoilovych (1961) and a two-volume, richly illustrated history of Ukrainian architecture by a group of authors (1957). The State Publishing House of Art and Music Literature issued monographs on Ukrainian peasant art: embroidery, costume, decorative wall painting, and so on. The Archeological Institute published in 1959 *Narysy starodavnioï Ukraïns'koï RSR* (The Outline of Ancient History of the Ukrainian SSR), in which prehistoric art and the art of the Princely period were finally included in Ukrainian history. From 1954 on the Art Institute of the Academy has issued *Materiialy z etnohrafiï ta mystetstvoznavstva* (Materials on Ethnography and the Study of Art) where too often valuable material is mixed with shallow propaganda.

It is characteristic that for long there was no complete history of Ukrainian art in the Ukrainian SSR because the Communist party feared that the knowledge of ancient Ukrainian culture might revive nationalist feelings among the masses. Even the first history of Soviet Ukrainian art was written by two Russian authors, Valentina Kuriltseva and Nina Yavorskaia, and published also in Russian in Moscow (1957). Only then, on the basis of this political preparation, was a similar history written by P. Hovdia allowed to be printed in the Ukrainian SSR. But it is also true that serious Russian scholars in Moscow had more freedom to deal with such subjects as the old religious art which is still viewed with great suspicion by the party functionaries in Ukraine. Thus, important works on Ukrainian art were published in Moscow and Leningrad, among them *Mozaiki Sofii Kievskoi* (The Mosaics of St. Sophia, 1960) and *Mikhailovskie mozaiki* (St. Michael's Mosaics, 1966) by Victor Lazarev and *Ukrainskoe iskusstvo* (Ukrainian Art, 1963) by Gregory Logvin who prepared also a volume on art in Chernihiv and other northern Ukrainian cities (1966). There is no doubt that these works gave the green light to the six-volume history of Ukrainian art compiled by the Ukrainian Academy of Sciences in Kiev on the occasion of the fiftieth anniversary of the Soviet Revolution in 1967.

Published under the direction of Nicholas Bazhan and featuring the articles of the most prominent Soviet Ukrainian art scholars (among them also previously repressed ones) this history

gives a valuable review of ancient Ukrainian art. It is nevertheless marred by numerous distortions, omissions, and naive political propaganda.

Very popular in the Ukrainian SSR are the album types of monographs composed of separate reproductions of works of noted artists together with social-realist creations of Soviet propaganda. Among these albums the following merit mention: an album of color reproductions, *Ukraïns'ke mystetstvo* (Ukrainian Art, with the exception of the Kievan period, eleventh to fourteenth centuries), an album of Ukrainian Soviet art; and albums dedicated to important Ukrainian art collections—the Kievan Museum of Art, the Art Gallery of Kharkiv, and the Lviv Museum of Ukrainian Art. A monograph on the Cathedral of St. Sophia in Kiev by Nicholas Kresalnyi (1960) was published with the obvious purpose of counterbalancing a similar edition by Oleksa Povstenko published in New York in 1954. There is an almost complete lack of material on the Ukrainian icons published in Ukraine; in Moscow have been published several albums of Russian iconography, which included among others the mosaics of Kiev, although the mosaic art was unknown on Muscovian territory during the Princely period. Among rare and very recent (1966) exceptions are a study by Vira Svientsitska of the seventeenth-century painter Ivan Rutkovych, and a publication of the Ukrainian Academy of Sciences on medieval frescoes in Crimea by Oleh Dombrovsky.

Already a sizable number of individual art monographs have been published in the Ukrainian SSR. In particular, much was written about Shevchenko on the occasion of the one hundred and fiftieth anniversary of his birth (1964) and the hundredth anniversary of his death (1961). There are also publications on artists who formerly were regarded as "enemies of the people," for example, Platon Biletsky's book on the master of Ukrainian graphic art, George Narbut. Nothing positive has been written in the Ukrainian SSR about Ukrainian artists abroad; Alexander Archipenko was mentioned only after his death. There is only one art magazine—the official and very conservative bimonthly *Mystetstvo* (Art).

## ABROAD

Works on Ukrainian art outside the Ukrainian SSR are still relatively few because of the lack of direct contact with original material and sources. After the war, Ukraïns'ka Spilka Obrazotvorchykh Mysttsiv (Union of Ukrainian Artists) in Munich published several art books and in 1947 the almanac *Ukraïns'ke Mystetstvo* (Ukrainian Art). Among recent publications in the United States and Canada are: *The Cathedral of St. Sophia in Kiev* by O. Povstenko (1954), *Arkheolohiia Ukraïny* (Archaeology of Ukraine) by Yaroslav Pasternak (1961), *Istoriia ukraïns'koho mystetstva* (History of Ukrainian Art) by V. Sichynsky (1956), *Fifty Creative Years* by A. Archipenko (1960), *Alexis Gritchenko, sa vie, son oeuvre* (Paris, 1964), a monograph on Taras Shevchenko by Ivan Keivan, and shorter studies and monographs on Serhii Lytvynenko, Nicholas Butovych, Peter Mehyk, Myroslav Radysh, Jacques Hnizdovsky, and M. Osinchuk. The Philadelphia branch of the Ukrainian Artists Association in the United States publishes the journal *Notatky z mystetstva* (Ukrainian Art Digest) in which longer art studies are also printed, such as Damian Horniatkevych's article about the Ukrainian medieval frescoes in Poland.

A small encyclopedia, *Ukrainian Arts*, was published by the Ukrainian Youth League of North America in 1955. Of particular interest are the catalogues of Ukrainian art exhibitions which give a brief but broad review of Ukrainian art abroad.

# 2. ARCHITECTURE

## WOODEN ARCHITECTURE

### Early Periods

The earliest wooden constructions in Ukraine, known from archaeological excavations, have already been mentioned in the chapter about the Neolithic age [Vol. I, pp. 532–6]. Wooden structures of the periods closer to our time are known to us from the descriptions of Greek, Roman, and Arabic authors; however, their architectural forms can only be surmised. We have a far clearer picture of the architecture of the Princely period, although because of the instability of the material no buildings have been preserved. However, taking into consideration the oldest preserved wooden structures—churches and belfry towers reaching as far back as the beginning of the sixteenth century—a relatively close reconstruction can be made of the wooden architecture, the churches, fortresses, and palaces of that period. We know also that in the Princely period there were professional architects and city planners (*hradnyky* and *ohorodnyky*) who built cities and fortifications mostly of wood, as stone was not available everywhere. Even in Kiev in the sixteenth century a castle with fifteen towers was erected in wood. There were also *mostnyky*—the bridge and road builders—and a bridge over the Dnieper River was erected in 1115.

Very little is known about artistic features of these ancient constructions; they can be only deduced from the oldest preserved specimens of wooden architecture and old drawings. But it is certain that the architectural forms were very persistent and were subjected to

few changes during the centuries. Even at the beginning of our century folk builders in Ukraine erected wooden churches basically of the same form as four centuries ago, and by similar methods, often without a single nail.

Thus, it is not an exaggeration to assert that the preserved specimens of wooden architecture of the sixteenth and seventeenth centuries are similar to the structures of the Princely period, and even to the pre-Christian ones. There is no doubt that at the time of the introduction of Christianity in the Kievan Realm at the end of the first millenium there already existed highly developed local forms of wooden architecture, otherwise it would be difficult to explain all the peculiar changes to which the Byzantine style was subjected on Ukrainian territory. The Tale of Bygone Years mentions that, after the Christianization of the Kievans, Prince Volodymyr gave orders "to hew out the churches and to install them on the sites where the idols stood." The event took place before the coming of the Greeks, who constructed the first stone church in Kiev, and indicates that indigenous building techniques in wood already existed in pre-Christian Ukraine.

**Church construction.** Wooden churches are known to have existed on the territory of Ukraine as early as the beginning of the tenth century. Nothing is known about their appearance beyond the fact that their roofs were pyramidal in form. Of course, the adoption of Christianity gave rise to large-scale construction of wooden churches in Ukraine. Thus, according to the chroniclers, in 1016 there were four hundred churches in Kiev alone (it is possible that many of them were small, single-frame wooden structures). It is known that in 1124 close to six hundred churches were destroyed in Kiev as a result of a fire.

History furnishes only fragmentary and scattered information on the character of the early Ukrainian wooden church architecture. The available sources attest to a highly developed building technique as early as the tenth and eleventh centuries, acquired, no doubt, in the construction of pre-Christian cult structures. Unfortunately, there is no information on the architectural features of these structures among eastern Slavs.

Thus as early as 988–9, at the time of the official introduction of Christianity, a huge oak wood church of St. Sophia with thirteen tops (cupolas) was built in Novgorod, then part of the Kievan Realm. In 1026, the architect (*hradnyk*) Myronih built the large SS. Borys and Hlib church in Vyshhorod. Made of wooden logs, this edifice had five tops and was "colored and embellished in all beauty." The construction of the church took only several months. In 1072, the masterbuilder Zhdan-Mykola also built there a wooden frame church with one top. Miniature drawings on manuscripts of this period as well as documents of the fourteenth and fifteenth centuries indicate that churches with three and five tops were most popular at the time.

The basic features of the Ukrainian folk wood architecture, and particularly the elements of wooden church architecture which have survived until the present day, developed during the Princely period. Such peculiarities as did evolve in the course of subsequent centuries were rather regional in character, owing their appearance and development to differences in tribal traditions, climatic conditions, and available construction material as well as the changing political and economic conditions.

### The Sixteenth to Nineteenth Centuries

Ukrainian folk architecture of wooden churches acquired a number of characteristic features, such as the organic relationship between external appearance and internal construction (for example, absence of false exterior cupolas and the corresponding absence of the ceiling inside, whereby the space of the cupolas blends with that of the interior structure), subordination of individual parts to the general ensemble, composition of

shell with emphasis on the structure's silhouette, absence of an accentuated façade which would be the main attraction, and instead an architectural composition that can be viewed from any vantage point. These characteristics had a profound effect on the Ukrainian stone church construction from the eleventh and twelfth centuries on.

In addition, Ukrainian wooden churches and belfries (as a rule, the latter were built apart from the church but next to it) frequently show a concentral inclination of the walls, not necessarily caused by structural considerations, which creates an illusion of a much greater height, particularly when viewed from the inside. Among other features worthy of mention are the so-called *opasannia*–covered arcades or galleries supported by posts–and *piddashshia* –wide eaves supported by brackets or consoles around the church or the belfry. Closely related to them are arcades and wide porches attached to the façades of residential and public buildings.

There are three distinct geographical areas which have evolved certain local features of the Ukrainian folk architecture, particularly in the realm of church construction.

The first area embraces the mountainous regions and slopes of Western Ukraine, stretching from Transcarpathia to western Podilia and Bukovina. There the architectural style was characterized by a wealth and diversity of art forms and creative technical methods, while preserving many of the archaic features. The churches were 15–18 meters (50–60 feet) in height (to the top of the cross), which in comparison to the dimensions of the plan made them rather thickset in appearance. The horizontal lines were frequently accentuated by several tiers of recesses (*zalomy*) in the upper part of the structure and wide application of arcades, eaves, galleries, and porches.

The second area includes the marshlands and wooded parts of Volhynia and the northern Kiev region. There, the churches are also small in size. The art forms and building technique are rather limited and archaic.

The third area embraces the *Slobozhanshchyna* (Chernihiv, northern Poltava, and Kharkiv regions), southern Volhynia, eastern Podilia, southern Kiev, and Poltava regions, and the steppe to the south and southeast of these regions. Intensive building activity in these areas during the seventeenth and eighteenth centuries, notably in the south and southeastern steppe regions, contributed markedly to the development of diverse architectural forms and building techniques. Characteristic of the churches were their relatively large dimensions – up to 30–36 meters (100–118 feet) in height – with a rather tall base frame, which often comprised half the total height, thus making the structures tall and steep in appearance. The tops, mostly octagonal, had several tiers of high recesses. Base frames were also frequently octagonal in plan, thus increasing the structure's capacity with the same length of wooden beams used.

**Basic types of churches.** The single-frame church is the simplest type with regard to plan and construction. Neither the single-frame church nor the two-frame church, representing the second stage in the development of the structural plan, has been preserved to our time. The type most popular in Ukraine was the three-frame church, with the central frame slightly larger than the two adjacent ones. The addition of two more frames transformed this plan into a cross-like five-frame structure which was also quite popular in Ukraine. The addition of two tower-like frames on the western (entrance) side resulted in a rare type of a seven-frame church. Four smaller frames, added to the cross-like frame around the central unit, produced a nine-frame structural plan.

Roof finishing plays an important part in the general appearance of Ukrainian wooden churches. In some cases, mostly in Bukovina, three-frame churches were

(1–5) plans of wooden churches with three, five, and nine frames; (6) common type of belfry, Potylych, 1731; (7) belfry with a dome, Yavoriv, seventeenth century; (8) Boikian church, Turka, 1700; (9) Church of St. George, Drohobych, *ca.* 1600; (10) five-domed church, Romny, 1764; (11) synagogue in Yavoriv, eighteenth century; (12) interior of the Halahan house, Lebedyntsi, 1884; (13–14) carved door frames; (15) iron door hinges, Potylych, sixteenth century; (16) detail of a gallery; (17–18) gallery ballustrades; (19) twin windows, Halahan house; (20) carved columns; (21–23) carved beams; (24) "sunflower" usually placed on top of domes and belfries; (25) iron cross. (Drawings by V. Sichynsky.)

covered with solid (or divided) domeless roofs with crosses only (Assumption Church in Chernivtsi built in 1713). More frequently, one top was erected over the central frame, and the adjacent frames were covered with plain roofs (Annunciation Cathedral in Kovel, 1505; also, a church in Pidlisky Village, Drohobych region, 1655, and others). Most popular in Ukraine was the three-frame church with three tops, one to each frame (Krekhiv, 1658). Five-frame churches were often built with but one top over the central frame, the adjacent frames being covered with two- or three-sloped roofs (St. Nicholas Church in Lebedyn, Sumy region, built in the early eighteenth century). There were also churches with three tops placed side by side over the main axis of the structure (St. Nicholas Church in Vinnytsia, 1746), and churches with five tops (Assumption Church in Yaryshiv, Vinnytsia region, 1786). The five-top type was particularly popular in the central and eastern lands of Ukraine.

The best known specimen of a seven-frame structure was the church in Berezna, Chernihiv region, by the folk master-builder Panas Sheludko, erected in 1761. Two tower-like frames, erected at the main entrance and connected by a wooden arch, spanned the full height of the central frame. They corresponded to the flanking towers of the western façade of the eleventh-century stone churches in Kiev and Chernihiv. The church had seven tops. One of the tallest churches in Ukraine (approximately 38 meters or 125 feet in height) it was built of pine beams, the thickness of the walls not exceeding 16 centimeters (6¼ inches). Another seven-frame church was built in the village of Novi Mlyny near Chernihiv. Both these churches were destroyed by the Soviets.

Nine-frame churches have five tops spanning the principal frames (church in Romen, Poltava region, 1764, later moved to Poltava; also St. Nicholas Cathedral of the Medvediv Monastery near Chyhyryn, Kiev region, 1785). Holy Trinity Church in Novomoskovske (for-

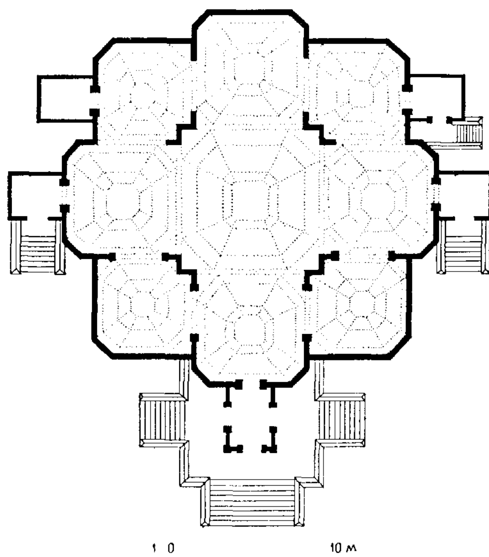

FIGURE 252. GROUND PLAN OF THE HOLY TRINITY CHURCH IN NOVOSELYTSIA (NOVOMOSKOVSKE), 1733–81 (Plate I, 7)

mer Novoselytsia, Dnipropetrovske region), built in 1773, has nine tops. It is technically one of the most complex structures: approximately 37 meters (103 feet) in height, the church is built as one solid framework without any kind of iron fastenings. It was designed and erected by the folk master-builder Yakym Pohrebniak, who also built several other churches in the Kharkiv region.

The construction of tops (cupolas) of the Ukrainian wooden churches was extremely diverse and frequently of great excellence in technical execution. The simplest and, presumably, the oldest method of erecting cupolas consisted of superimposing a relatively short rectangular truncated pyramid over the rectangular frame topping the main structure. A subsequent step in the development of this basic type was the addition of the so-called *zalom* (recess) formed by the combination of another smaller frame with a second truncated pyramid placed over it. A cupola can contain several such tiers of recesses, for example, churches of the Boikian type with as many as five tiers (Matkiv Village) and occasionally even six Mokhnate Village). One of the finest examples of this type is the pagoda-like church of Kryvka Village, 1763, transferred to Lviv in 1930.

The rectangular truncated pyramid is frequently joined to the smaller octagonal frame at the first (or second) recess from the bottom. All subsequent recesses are octagonal in form. Developed by Ukrainian folk architects long before the outset of the sixteenth century, this structural technique continues to enrich the builder's scope of artistic expression and gives the structure a richly picturesque effect. Usually, only octagonal recesses were placed over octagonal base frames. A round or faceted decorative head, shaped like a helmet or a pear, was frequently placed atop the upper pyramid.

The so-called Lemkian churches on both sides of the Carpathians constitute a separate group. The influence of the architecture of the neighboring peoples is apparent. The belfry was built as a composite part of the church. Shaped like a high tower, the belfry was placed over the western frame (opposite the altar), although structurally it was not a part of that frame. In contrast to the restrained symmetrical composition of Ukrainian churches, the Lemkian churches create a dynamic impression reminiscent of the Gothic style of architecture.

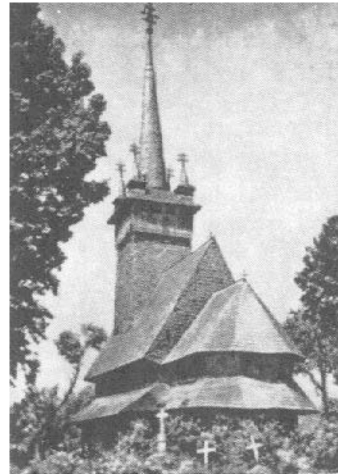

FIGURE 253. CHURCH IN STEBLIVKA, TRANSCARPATHIA, 1784

These churches always consisted of three frames. The vaulting was either concealed in the roof (church in Steblivka, 1784) or else consisted of two tops with several recesses, in addition to the belfry. Quite often, the churches of this type have a decorative Baroque-style head topped with a cross (church in Mukachiv, 1777).

**Belfries.** The architecture of many sixteenth- and seventeenth-century wooden belfries reflects their essentially military value as defensive and observation towers. Certain structural characteristics of the early defensive works, such as machicolations and loop-holes, were retained in the form of decorative features long after they had outlived their prac-

tical application. The belfries were normally carcass-like structures, often placed over a frame, particularly if the ground story was designed to serve as a storeroom for supplies. Galleries and decorative machicolations were erected

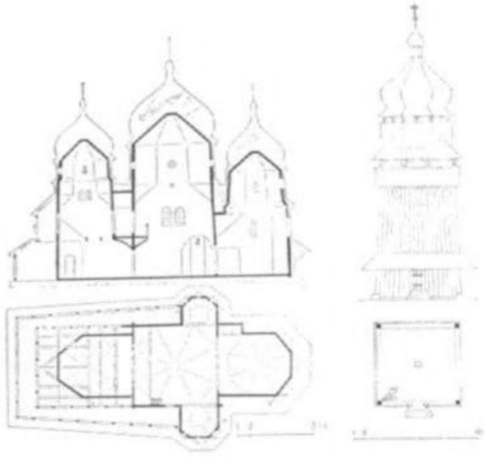

FIGURE 254. CROSS-SECTION AND GROUND PLAN OF THE ST. GEORGE CHURCH AND BELFRY IN DROHOBYCH, SEVENTEENTH CENTURY

on the framework of the structure, as in the belfry of St. George Church in Drohobych, built *ca.* 1600. The lower parts of the structure contained loopholes for firearms (Krekhiv Monastery and others). In some cases the belfry had a gateway flanked by small loopholes (Potylych, built in 1593). As a rule, the framework of the structure was covered with wooden slabs and shingles. In the eighteenth century, solid-framed belfries with uncovered framework were being erected in Volhynia and in the Kiev region.

Other architectural features of the belfries, as well as their dimensions, corresponded in general to those of the churches they belonged to. Arcades, eaves, rectangular and octagonal pyramidal roofs or faceted tops were widely used. The tops in the seventeenth and eighteenth centuries were sometimes built in Baroque style, as in Yavoriv.

Wooden belfries were often erected near stone churches; for example, St. Sophia Cathedral in Kiev had a belfry built in the first half of the seventeenth century, and it is known that Assumption Church in the Cave Monastery in the twelfth century also had such a belfry.

The churches and the belfries were usually built of hewed wooden beams placed horizontally. This was a characteristic feature of the Ukrainian architecture. As construction material, oak, beech, cedar, fir, and pine were used. The exterior of the walls was either left uncovered or covered with shingles, or, as in Volhynia, Podilia, and areas further to the east, with vertical wooden slabs. The tops were usually covered with shingles, sometimes with wooden slabs, and in the east (nineteenth century) with sheet iron. The columns and the consoles of the arcades, the entrance doors, the edges of the rafters, and interior structural details such as beams, girders, and catches, were often embellished with decorative carving. The iconostasis, an indispensable part of the churches of the Eastern rite, was also profusely ornamented with carvings.

**Other building.** The art of wooden architecture was not limited to the churches. Synagogues also were built according to the same architectural methods, although they had their own forms, common to the Jewish religious structures in Ukraine, Poland, Belorussia, and Lithuania. However, the builders were always Gentiles: Jewish art historians were unable to find a single Jewish builder, although there were Jewish painters. Thus, numerous synagogues in Ukraine possessed all the features of Ukrainian wooden architecture, but they were closer to the civil than to church structures. They were embellished with open entrance-halls, porches, sculptured columns, and so on, and were usually decorated inside with painted ornaments and symbols. One of the oldest such structures was in Zabludiv, dating from the sixteenth century. Others worthy of mention were in Yabloniv, 1659, Pechenizhyn, Hvozdets, Roz-

dil, Zhydachiv, Felshtyn, Khodoriv, Kaminka Strumilova—all in Galicia; in Yaryshiv, Ostropil, Mykhalkiv, Lantskorun—all in Podilia; and in Volhynia —in Lutsk.

After the two world wars that raged in Ukraine not many of the wooden buildings are preserved. Up to 1914 there were entire towns built of wood, such as Potylych in Galicia. Wooden small-town inns were frequent in Galicia, Podilia, and Volhynia, and some of them still exist. Here local folk traditions were often influenced by the stone architecture, Renaissance and Baroque, but these influences usually affected the general plans of the buildings, the structural and decorative features remaining unchanged. These features were taken over by the modern professional architects and already at the beginning of our century Ivan Levynsky, Basil Nahirnyi, Alexander Lushpynsky, Serhii Tymoshenko, and others started to adapt the methods of traditional folk building to new requirements. They built churches, schools, sanatoriums, villas, railroad stations, and so on in this style, often combining wood with masonry. This architectural movement was noticeable especially in the Carpathian region, which was rich in wood and in locally skilled builders. Today this modernized folk architecture is widely employed, and it blends well with the Ukrainian landscape and with older preserved structures. Because of its closer affinity to Ukrainian tradition, this modern wooden architecture has a more distinctly national character than the more cosmopolitan stone-iron-glass buildings of our time.

*V. Pavlovsky*

## STONE ARCHITECTURE

### The Princely Era

The people of *Rus'*-Ukraine were familiar with stone building, and particularly with Greco-Roman architectural forms, long before the introduction of Christianity. Many Greek colonies were situated on the northern shores of the Black Sea, like Olbia (not far from modern Odessa), or Khersonesus and other cities in the Crimea. Cultural centers with rich Hellenic tradition, they were intermediaries between *Rus'*-Ukraine and the Hellenic world. Stone was their natural building material both for housing and for civic buildings and temples. Crimea fell into the orbit of Christianity very early, and by the tenth century all basic types of Byzantine churches were represented there: the Greek-cross form, basilica, rotunda with apses, and single-nave chapel. A local variety of a cross-shaped plan, with a central dome and additions resembling a three-nave basilica, developed there in the eighth and ninth centuries; an example is the still existing tenth-century church of St. John the Baptist in Kerch.

Thus, as a result of lively and diverse relations with the cities of the northern Black Sea and the Sea of Azov area and also with the Bulgarian kingdom on the Danube, the people of *Rus'*-Ukraine became acquainted quite early with Roman and Byzantine building techniques. The most typical technique employed in Crimea was *opus mixtum*, alternating layers of squared stones and bricks, held together by a mixture of mortar and powdered bricks. The latter addition gave a rosy color to the whole of the masonry. This type of construction also became the typical building technique of the Kievan *Rus'*, as Greek builders were invited to work in the Kievan Realm with the introduction of Christianity there.

The earliest allusion to stone building found in the Chronicle dates back to the year 945 A.D. It refers to a stone princely palace in Kiev which was probably erected at an earlier date than that of the recording.

Three palace buildings whose groundwork has been found in Kiev, in the so-called Volodymyr's *Horod* (city), date back to the second half of the tenth century. The rubble of which the foun-

dations were made rested on a thick layer of mortar, mixed with powdered bricks, inside of which was a framework of several wooden beams; between the beams a great number of small wooden stakes were driven deep into the subsoil. This unique method was also used in the construction of the Church of the Tithes (Desiatynna), as well as in the construction of other churches in Kiev at the end of the tenth and during the eleventh centuries.

Another known civil stone structure of the time was the so-called Gate of Batyi, a tower with a gate in the ramparts surrounding Volodymyr's City in Kiev. Approximately fifty years younger than Batyi's Gate is the Golden Gate, a defensive tower with a "triumphal entrance" and a church above it, built in the Kiev ramparts during the reign of Yaroslav the Wise in 1037. The remains of the Golden Gate, which was constructed of *opus mixtum* with recessed plinth, have been preserved to the present day.

With the official acceptance of Christianity in 988, the Kievan *Rus'* erupted with artistic activity, and new stone architecture, more durable than wood, came into full bloom.

According to medieval beliefs, especially in Byzantium, God was the Ruler of Heaven, and the ruling King or the Great Prince was His representative on the earth. Rulers built sumptuous cathedrals and churches as visual images of the heavenly and the earthly authority.

After the introduction of Christianity into the Kievan *Rus'*, Prince Volodymyr the Great followed this practice. He engaged craftsmen from Greece, probably from Byzantium, for the construction of the Church of the Tithes, which was the first stone church built in Kiev (989–96). Not only Greek, but also local builders and craftsmen participated in this undertaking. The structure of the church had a number of features not at all characteristic of Byzantine architecture, for example, numerous secondary cupolas, cluster type columns, and recessed plinth in the walls. These features are apparent in other churches of the eleventh-century Kievan *Rus'*, and, as such, they can be said to have reflected the already developed local building tastes and traditions.

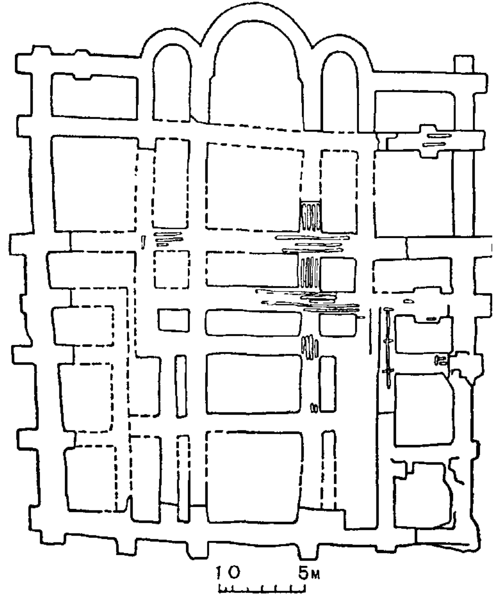

FIGURE 255. GROUND PLAN OF THE CHURCH OF THE TITHES (DESIATYNNA) IN KIEV, 989–96

The Church of the Tithes was originally a six-column structure (85 × 52.5 feet, 26 × 16 meters) with three naves and three apses, a central cupola, and a number of smaller cupolas. Later additions of side galleries and an extension on the western side have made its plan so complex that its original form has not been definitely ascertained. The walls of this church, as well as of later churches of the same period, consisted of flat brick on thick layers of mortar with inlaid clay vessels which served as sound amplifiers. On the outside, the walls were covered, in part, by rosy mortar painted in red and yellow. The window openings were covered with frames of square pieces of glass, each one prepared separately. Some parts of the roof were tiled.

The interior of the Church of the Tithes was richly decorated. The altar floor was of colored marble and colored glass plates. The rest of the floor was made of painted and glazed ceramics. The walls and the columns had carved marble panels and cornices of marble and schist. The walls were also decorated with frescoes and mosaics and the columns had carved marble capitals. The architecture of the Desiatynna Church, which was destroyed by the Tatars in 1240, was emulated by other churches built in the eleventh century in Kiev, Vyshhorod, Chernihiv, Pereiaslav, and other cities. The model which was most popular in the eleventh and early twelfth centuries was based on the cross-domed plan, with three naves, three apses, and six columns, four of which supported the central dome.

A worthy successor of the Church of the Tithes, the St. Sophia Cathedral in Kiev, which was started in 1037 and completed by the end of the 1040's, is characterized by a far more developed and complex plan. The most important church in Ukraine measuring 119 × 180 feet (36.3 × 54.9 meters), St. Sophia is a five-nave, five-apse, twelve-column structure, with one large central cupola and twelve smaller ones; two towers, with winding stairs leading up to the choir gallery and open arcades on three sides, were added later. The arcades, generally used in wood architecture in Ukraine, were also frequently added to medieval stone churches. In the interior, the decor of the St. Sophia Cathedral is quite similar to that of the Desiatynna Church. As usual, the external contours of the church structure corresponded to its inner spaces and the exterior arrangement of the wall panels was, in most cases, determined by the logic of the construction. Although, during its more than eleven centuries of existence, the Cathedral of St. Sophia was often rebuilt and its present exterior appearance is Baroque, it has well-preserved ancient features, including its world-famous mosaic and fresco decorations of the interior. This church, built by the Great Prince Yaroslav the Wise, remains a palladium of the Ukrainian people. Transformed into a museum, it escaped anticipated destruction by the Soviet regime in 1934 and in 1941.

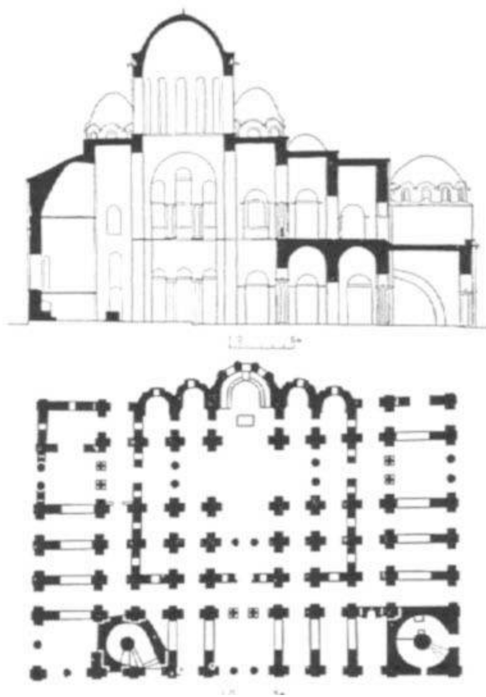

FIGURE 256. CROSS-SECTION AND GROUND PLAN OF THE ST. SOPHIA CATHEDRAL IN KIEV, 1037, DESIGN BY M. KRESALNYI, V. VOLKOV, AND G. ASEEV (Plate III, 1)

Other eleventh-century churches of Kiev built in a style similar to that of the Church of the Tithes were the Church of St. Irene and the Church of St. Demetrius Monastery (neither preserved), the Church of the Assumption in the Kievan Cave Monastery, 1073–8 (destroyed by a Soviet time-mine in 1941), the preserved Church of Our Savior in Berestiv, 1113–25, and the remains of a church whose groundwork was unearthed on the premises of the Art Institute. The following important churches were built in the twelfth century: the no longer existing Church of Our Lady of Piro-

PLATE IV. GOTHIC AND RENAISSANCE ARCHITECTURE

(1) Castle in Khotyn on the Dniester, thirteenth century (rebuilt in fifteenth–sixteenth century). (2) Fortress Church in Sutkivtsi (1467). (3) Holy Trinity Church in Mezhyrich, fifteenth–seventeenth century. (4) Church of the Assumption in Lviv, by P. Romano, P. Barbon, and A. Prykhylnyi (1598–1631); belfry 1573–78. (5) The Black House in Lviv, sixteenth century. (6) Campian Chapel in Lviv, by P. Romano, end of the sixteenth century. (7) Boim Chapel in Lviv (1609–11). (8) Castle and Church of the Epiphany in Ostrih, Volhynia, fourteenth–sixteenth century.

hoshcha (the Defender of Walls), St. Cyril's Church in Kiev, and the Church of the Assumption in Kaniv, 1144, both quite well preserved. Here belong also important churches in Chernihiv: the

FIGURE 257. CATHEDRAL OF THE ASSUMPTION OF THE YELETSKY MONASTERY IN CHERNIHIV, MID-TWELFTH CENTURY

SS. Borys and Hlib Cathedral, the Cathedral of Annunciation, 1186 (ruined), and the Assumption Cathedral of the Yeletsky Monastery. The Apostles' Church in Bilhorod and the church of an unknown saint in Pereiaslav were not preserved. The Cathedral of the Assumption in Volodymyr Volynsky, 1160, although it still exists today, is heavily restored.

The addition of a narthex (vestibule) to the plan of the Church of the Tithes resulted in a three-nave, three-apse, and six- or eight-column church. Churches built according to this plan were the Cathedral of the Savior in Chernihiv in 1036, the Church of St. Michael the Archangel of the Vydubychi Monastery in Kiev (1070–88), and the grandiose SS. Borys and Hlib Cathedral in Vyshhorod (late eleventh century), known only from chronicles and excavations. The magnificent golden-roofed St. Michael's Cathedral in Kiev, built in 1108, belonged to this group. It was torn down by the Soviet regime during the anti-religious campaign in Ukraine.

In the eleventh century some five-nave churches were built, with three apses and six columns. To this group belonged the church of an unknown saint, the foundation of which was discovered in the courtyard of St. Sophia Cathedral in Kiev, St. George's Church in Kiev, and St. Michael's Cathedral in Pereiaslav (1089).

Churches erected in the twelfth and thirteenth centuries, after the break-up of the Kievan Realm into smaller principalities, were smaller in size and their architectural ornamentation consisted mainly of frescoes, carved stone, and majolica plates. Construction of churches became simpler in style. A number of them were built with single naves (e.g., some churches in Pereislav and the Church of Elias the Prophet in Cherni-

FIGURE 258. THE HOLY FRIDAY (*Piatnyts'ka*) CHURCH IN CHERNIHIV, LATE TWELFTH CENTURY

hiv). Among three-nave, three-apse churches, with four columns were the Holy Trinity Church of the Cave Monastery and the Church of St. Basil (Three Saints) in Kiev, the small church of the Monastery in Zarub, the Holy Friday Church in Chernihiv, and the Church of St. Basil in Ovruch. In the western lands of Ukraine, round churches were occasionally built in this period: for example, a church-rotunda in the village of Poberezhzhia near Halych; in the village of Horiany near Uzhhorod, with apses embedded in the thickness of the walls; in Volodymyr Volynsky, and elsewhere.

At this time, individual schools of architecture developed in the largest political centers of Ukraine: the lands of Chernihiv, Pereiaslav, Kiev, Volhynia, and Galicia. Influences of the Romanesque style began to appear in the western parts of Ukraine, for example, in the manner of handling façades, portals, and capitals of columns and in the use of stained glass and painted sculptures in stone (for example, in Kholm). A fine example of Byzantino-Romanesque style is the relatively well-preserved Church of St. Panteleimon in Halych from the second part of the twelfth century. Romanesque influences were also apparent in some churches of Chernihiv, along with eastern influences brought in from the Caucasus.

House building in Ukraine in the eleventh to the thirteenth centuries was of wood, even as regards princely palaces, although exceptions could be found. For example, the chronicles mention a grand palace of white stone in Halych, built during the first half of the twelfth century, the groundwork of which has yet to be investigated.

The high level of development of stone church buildings in Ukraine during the Princely period had a considerable influence on the architecture of the neighboring countries: Belorussia, Poland, and the lands of Novgorod and Vladimir-Suzdal. Among architects of the Princely period, the chronicles mention the names of Mylonih, who built in Kiev and presumably in Chernihiv, Ovruch, Bilhorod, and other cities (about the end of the twelfth and the beginning of the thirteenth centuries), the builder and sculptor Avdii of Kholm (thirteenth century), and Oleshko in Volhynia (thirteenth century).

**Transitional Period (End of the Thirteenth to the Sixteenth Centuries)**

After the invasion of the Tatars, who in 1238–41 seized most of the Ruthenian territory, political and cultural life was preserved only in the west, that is, in the Galician-Volhynian state. The ruling princes began erecting defensive stone castles with high walls and towers, as, for example, in Kholm (in 1231), Volodymyr Volynsky, Kremianets, and a number of other locations. Many castles of that period were eventually destroyed; others remain with later reconstructions, for example, the castles in Lutsk, the huge Akkerman (Bilhorod Dnistrovsky) castle at the mouth of the Dniester, in Khotyn on the Dniester River, and in Khust in Transcarpathia. Also built at this time were separate defensive towers of wood on high stone foundations; later, massive stone towers, like those in Horodno and Berestia (Brest-Litovsk), were constructed. Fully or partially, the following towers have been preserved until the present time: two rectangular towers in Bilavyne and Stolpie, and another rebuilt into a church, all near Kholm; a round tower, the Bila Vezha, built 1271–89, 95 feet (29 meters) in height, in Kamianets Lytovsky.

In the construction of these towers, square bricks rather than plinth were already being used. The structures had no architectural decoration, with the exception of the *porebryk*, traditionally used in the Kievan *Rus'*: a decorative laying of bricks placed on edge.

Defensive castles and fortresses constituted the largest stone structures of the Lithuanian-Polish period (fourteenth to sixteenth centuries); Ruthenian, Lith-

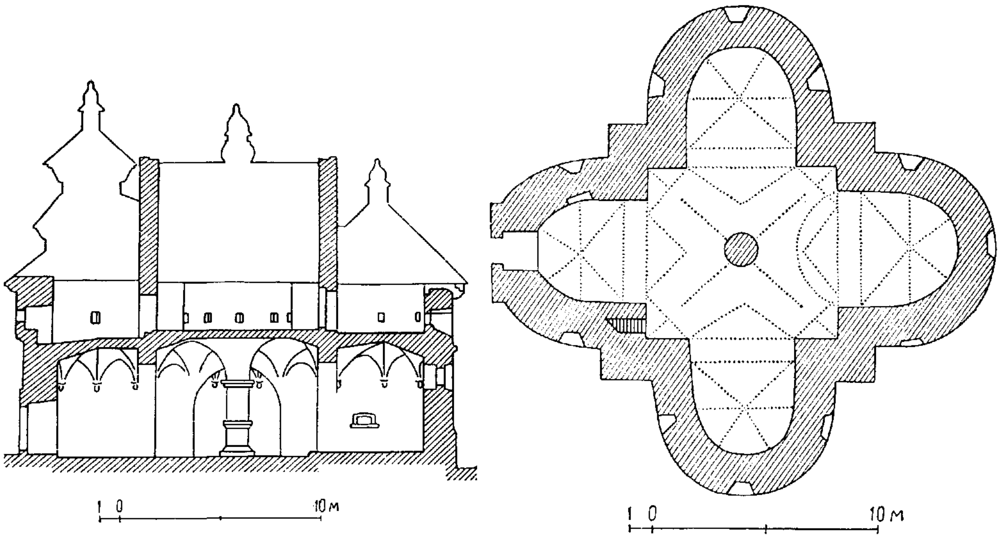

FIGURE 259. CROSS-SECTION AND FIRST FLOOR PLAN OF THE FORTRESS-CHURCH IN SUTKIVTSI, LATE FIFTEENTH CENTURY

uanian, and Polish princes either erected new defensive castles or rebuilt the ones existing throughout their domains. The architecture of such structures in the fourteenth and fifteenth centuries was frequently marked by Gothic influences, although the building technique was essentially a continuation of the traditions of the eleventh to the thirteenth centuries. Among the fourteenth- and fifteenth-century castles in various states of preservation are those built in Buchach, Klevan, Lutsk, Mezhybizh, Mukachiv, and Terebovlia. The castles of Dubno, Ostrih, Kamianets Podilsky, Sataniv, Sutkivtsi, and Zinkiv belong to the fifteenth and sixteenth centuries.

In these times, churches were frequently adapted to defensive purposes or built in such a manner as to provide shelter and to be able to stand a siege. The best-known examples are the Church of St. Mary the Protectress in Sutkivtsi (1476), the Church of the Annunciation in Zymne (1495), and churches in Rohatyn and Ostrih. They had thick walls, loop-holes, machicolate parapets, towers, and other similar defensive devices.

In church architecture, the Roman Catholic churches of that time simply imitated Gothic styles, as, for example, the cathedrals in Lviv (1360) and in Peremyshl (1460), and churches in Drohobych (fourteenth century), Vyzhniany (1400), Nyzhankovychi (fifteenth century), and a number of others built later. Orthodox churches frequently retained plans and dimensions established during the Princely period (same height of naves in three-nave churches, cupolas, and the like), but often in combination with elements of the Gothic style (pointed portals and arches, star-shaped vaulting, counterbalancing buttresses, upward extended windows). Examples are the Armenian cathedral in Lviv (1363), the Church of the Nativity of Christ in Halych (late fourteenth century), and the Church of the Holy Trinity in Mezhyrichia (middle of the fifteenth century).

Old engravings of the cities of Western Ukraine (Lviv, Peremyshl) indicate that, at the beginning of the sixteenth century, their general appearance was Gothic in character, with tall façades and spires. However, the Gothic style, whose influences came mostly from Silesia and Czechia, did not have time to penetrate

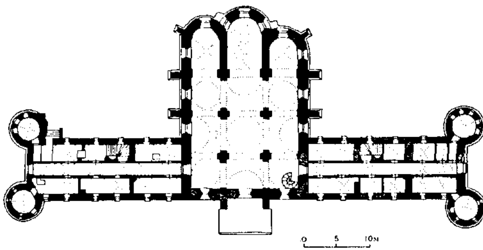

FIGURE 260. GENERAL PLAN OF THE HOLY TRINITY MONASTERY IN MEZHYRICHIA, FIFTEENTH CENTURY (Plate IV, 3)

deep into eastern Ukraine, for by the time building began to revive in these areas, the Renaissance had already replaced the Gothic period. To this transitional period belong the early sixteenth-century synagogues in Lviv and in Sataniv, near the Zbruch River.

New Byzantine influences from neighboring Moldavia in the fifteenth to sixteenth centuries stimulated the building of churches with three conchae, as, for example, the churches in Kamianets Podilsky, Khotyn, Zinkiv, Putnia, Seret, as well as the St. Onuphrius Church in Lavriv and the Holy Trinity Church in Derman. The side conchae in the Ukrainian churches, unlike those in Moldavian churches, were smaller than the central concha and, like the narthex, were not separated from the core of the structure.

At the same time, an original type of stone church developed, usually erected by local builders engaged by parishioners or church brotherhoods. In its plan, this type of church was an elaboration of the single-nave, columnless edifice of the twelfth and thirteenth centuries, with traces of influence of traditional Ukrainian wooden church architecture. It was a structure usually divided in both plan and space into three, sometimes two, parts with vaulting. In the oldest churches of this type—St. Demetrius Church (fourteenth century) and the Church of St. Mary Protectress (fifteenth century), both in Lutsk, and a church in Luzhany near Chernivtsi (fifteenth century)—the division into three parts was only hinted at. Soon, the central part—the nave—became wider than the other two, while the narthex was found to be frequently superseded by a defensive tower. Among churches of this type were the Church of the Holy Trinity in Zinkiv (Podilia region, 1521), the Church of the Ascension in Vyshnivets (1530), and, in its original appearance, the Church of the Assumption in Mezhybizh (early sixteenth century). In most cases, they were built without cupolas, which did not come into use on a large scale in this type of church until the middle of the sixteenth century, when each of the three parts of the edifice was topped with a cupola. As a result, in silhouette form, these churches began to resemble the Ukrainian wooden churches.

**The Renaissance style** was introduced in Ukraine quite early by Italian and Swiss architects employed by magnates, rich burghers, and church brotherhoods. These visiting architects tried to reconcile the architectural forms of the Renaissance with the strongly entrenched Ukrainian traditions of building, an effort which was even more apparent in the creative work of the Ukrainian builders of the time. It was revealed in the construction of covered galleries and arcades around the buildings, in the working of door and window sills and supports, in the composition of volumes, in the positioning of spherical church domes on drums, and so forth.

In the sixteenth century, Lviv was the center of cultural and economic life in Ukraine. Vast Renaissance construction was started here soon after the fire which destroyed the Gothic city in 1527. The most interesting examples which have been preserved to date are the house of Hepner (1570), the "Black building" (1577) built by the Ukrainianized Swiss-Italian Peter Krasovsky, and the house of Korniakt (1580) built by an Italian, Peter Barbon. A new Church of the Assumption was constructed on the site of the old one ruined by fire. This church is a complex of structures which include the church proper (known also as *Vo-*

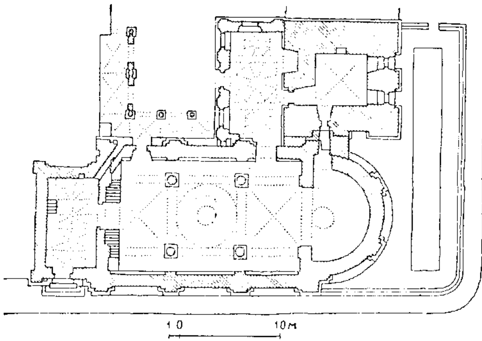

FIGURE 261. GENERAL PLAN OF THE ASSUMPTION CHURCH IN LVIV, 1578–1631 (Plate IV, 4)

*los'ka* Church), erected from 1598 to 1631 after the design of Paul Rymlianyn (Romano); the belfry ("The Tower of Korniakt"), one of the finest in Eastern Europe, the creation of Peter Barbon and built between 1573 and 1578; and the Chapel of Three Saints, built by P. Krasovsky in 1578. The church and the chapel conform to the established Ukrainian type of three-domed church. Built in Lviv in the early seventeenth century also were the burial chapel of the Boim family, probably built by the German architect Scholtz in 1617, and the burial chapel of the Kampian family, completed ca. 1619, by P. Rymlianyn, both in the complex of the Roman Catholic cathedral; as well as the Church of the Roman Catholic Order of St. Bernard (1600–30) by P. Rymlianyn and the local architect Ambrose Prykhylnyi.

A number of castles were built or rebuilt in the second half of the sixteenth and the first half of the seventeenth centuries under the influence of the Renaissance: in Lviv, Peremyshl, Stare Selo, Pidhirtsi, Korets, Ostrih, Olyka, Starokonstantyniv, Zaslav, Berezhany, and other cities of Galicia, Volhynia, and Podilia. This style left its imprint on the building of monasteries (for example, in Univ and Volodymyr Volynsky), of synagogues (in Husiatyn and Lutsk), and of many other public and private buildings.

At the beginning of the seventeenth century, stone construction was revived, after a long interval, in the Dnieper region and areas east of it, especially in Kiev, Pereiaslav, and Chernihiv. It was limited, at first, to reconstruction of church ruins from the eleventh to the thirteenth centuries. This construction contained some traces of the late Renaissance influence, although adjustments had to be made to the local architectural tastes. In adapting traditional forms of wooden church construction to stone structures, Ukrainian architects began replacing the semi-spherical domes of Byzantine origin with tower-like "tops" or pinnacles, formed by superimposing truncated pyramids and many-sided prisms over the cut-outs in the vaulting. As in wooden churches, the space of these pinnacles continued into the space of the basic structure.

FIGURE 262. CASTLE IN STARE SELO NEAR LVIV, SIXTEENTH CENTURY

Many churches of this type were finished in the Baroque style toward the end of the seventeenth century.

*V. Pavlovsky*

**The Baroque Period**

The seventeenth and eighteenth centuries can be said to represent the golden age in the development of Ukrainian art. Not since the Princely period had Ukrainian art experienced such flowering and growth. It was at this time of national struggle that the original style of Ukrainian or Kozak Baroque developed. The center of art life again shifted to the

Dnieper area. The Kozak leaders, particularly Hetman Ivan Mazepa, donated large sums for cultural and educational purposes. In spite of intensification of Western European art influences, original forms developed on the basis of the established traditions of Ukrainian art.

The early beginnings of Baroque can be traced to the first half of the seventeenth century in the buildings of Lviv (the Holy Friday Church) and of the Kiev region (Church of St. Elijah in Subotiv by Hetman Khmelnytsky in 1653, and others), which show singular transitional characteristics. But the real flourishing of Ukrainian Baroque does not begin until the second half of the seventeenth century. Among structures with a predominance of Western influences (as a result of combination of the former Ukrainian three-nave church with the Western European basilica) were: the Holy Trinity Church in Chernihiv (1679), the church in Berezhany, the cathedral of the Mharsky Monastery near Lubni (1684), and two superb edifices built by Hetman Mazepa in Kiev, the St. Nicholas Cathedral (1696), in the Pecherske section of the city, and the Bohoiavlenska Church (1695) in the Podil section. The last two churches were destroyed by the Soviet regime. A number of old reconstructed edifices were of the same type: in Kiev, the St. Sophia Cathedral (1691–1705), the main Church of the Assumption in the Cave Monastery (1695 and 1722), St. Michael's Monastery, and St. Michael's Church of the Vydubetsky Monastery. These structures are characterized by a unique form of domes with pinnacles in addition to fanciful pediments and lavish details.

Another type of structure was based on more original models of the Ukrainian wooden churches with a central plan. These were three-domed and five-domed edifices. Some of the best-known examples of tripartite and three-domed structures are the Cathedral of St. Mary Protectress in Kharkiv (1689), two churches of the Kievan Cave Monastery, the cathedral in Romny, and smaller edifices in Sumy, Bohodukhiv, and Slovianske. The five-domed structures of cross-like plan represent the highest achievement in terms of artistic expression and purity of form: the Church of the Savior in the Berestiv section of Kiev, reconstructed (1638–43) by Metropolitan Peter Mohyla; the church founded by Adam Kysil in Nyskynychi, Volhynia (1653); and a church in Liutenka, in the Poltava region. Other beautiful examples of Ukrainian Baroque are the Church of All Saints (1696), the Church of the Resurrection, and the Church of SS. Peter and Paul, all in the Kievan Cave Monastery, and the Church of St. George in the Vydubetsky Monastery, Kiev; there were examples also in Chernihiv, Pryluky, Poltava, Sorochyntsi, Baturyn, and Izium. Nine-part structures with five domes represented a subsequent development in architecture: the Holy Trinity Church of the Hustyn Monastery, built (1672–4) by Hetman Ivan Samoilovych; the Church of Transfiguration in Pryluky (1716); and the cathedral in Nizhyn.

The architecture of eighteenth-century Kiev was fashioned to a large degree by Ivan Barsky (1713–85), who combined the traditions of the Mazepa period with the influences of Rococo. Some of his creations in Kiev were "Samson's fountain," the gate and the church of the St. Cyril Monastery, the belfry of the SS. Peter and Paul Monastery, and the Church of Saint Mary Protectress in Podil. Other leading Ukrainian architects of the period were Stephen Kovnir and Theodore Starchenko, and foreign architects included Adam Zernikav, Johann Baptist, and others.

In the building of castles, palaces, primarily in western Ukrainian lands (Zbarazh, Berezhany, Pidhirtsi, Bar), and Roman Catholic churches (Lviv, Peremyshl, Kamianets Podilsky), the Western European features of the Baroque were more apparent. Jewish synagogues erected by Ukrainian builders

(in Sharhorod and Zhovkva toward the end of the seventeenth century, Ternopil in 1672) were much more similar in style to the Ukrainian Baroque. Valuable creations of this style in the realm of civil construction were: the military chancery in Chernihiv from the Mazepa period; the residential buildings of Jacob Lyzohub in Sedniv, and of Hetman Daniel Apostol in Sorochyntsi; the extensively reconstructed house of Basil Kochubei in Baturyn; the so-called Polubotok building in Pidusivka near Chernihiv; smaller structures in Kozelets and Nizhyn; the "Treasury" in Lubny; the "Galagan Arsenal" in Pryluky. Among the most beautiful creations of the Ukrainian Baroque were: service buildings of the Kievan Cave Monastery designed by the architect S. Kovnir in the first half of the eighteenth century; the house of the Kievan Metropolitan and the Metropolitan Zaborovsky gate (1746), both near St. Sophia Cathedral in Kiev; and, especially, the interesting surface decorations in the main church of the Kievan Cave Monastery, dating from the period of its reconstruction in 1722–29, by the architect T. Starchenko, which represent a mixture of the original Baroque and local folk motif (the church was destroyed in 1941).

The highly developed culture of the Ukrainian Baroque exerted a great deal of influence on the neighboring countries. Particularly in Muscovy, where many Ukrainian architects, including Starchenko and Ivan Zarudnyi, were engaged, a number of structures were erected in the Ukrainian Baroque. Especially notable was the impact of the single-, three-, and five-domed Ukrainian wooden church types; their influence could be noticed in many Russian churches of Moscow, Vladimir, Uglich, and elsewhere.

Because of political circumstances beginning with the middle of the eighteenth century, building declined in Ukraine. Still a number of monumental structures were erected in the Rococo style, which already contained transitional forms of Classicism; the belfries of St. Michael's Monastery and St. Sophia Cathedral in Kiev, completed in 1748; buildings designed by the architect Johann Gotfried J. Schaedel in Kiev (reconstruction of the Academy, 1736–40), the famous belfry of the Cave Monastery, 1736–40; the picturesque St. Andrew's Church, 1744–67, and a royal palace by the architect

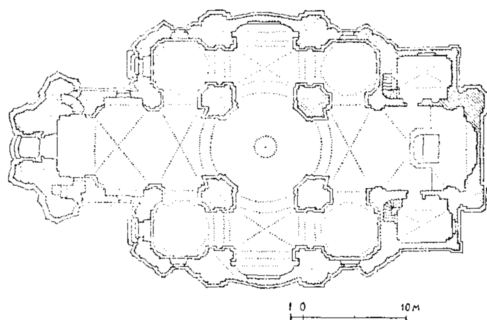

FIGURE 263. GROUND PLAN OF ST. GEORGE'S CATHEDRAL IN LVIV, 1744–70 (Plate V, 2)

FIGURE 264. CITY HALL IN BUCHACH, 1751, BUILT BY B. MERDERER-MERETINI

Bartholomeo-Francesco Rastrelli in Kiev, 1700–71; the Church of St. Mary the Protectress in Podil, Kiev, 1722; the famous St. George's Cathedral in Lviv, 1744–64, and the city hall in Buchach, 1730, by the architect Bernard Merderer-Meretini; the cathedral in Kozelets, 1752–63, and the main church in Pochaïv, 1771–91, built by H. Hoffman. In adapting to Ukrainian local traditions, the Rococo style rendered a central type of plane, while the Roman Catholic churches, for example, the Dominican church in Lviv, 1749–64, in Ternopil, and a church in Kholm, were elliptic in plan. All these churches have distinct Western European features, but at the same time they conform to age-old Ukrainian building traditions.

**Architecture of the Nineteenth Century**

Classicism, known in Ukraine as early as the first half of the eighteenth century (buildings in Vyshnivka, Volhynia, in 1730; in Lviv, particularly the museum of the Lubomirski family; in Kamianets Podilsky and Sataniv), attained the height of its development in the grand palaces of Cyril Rozumovsky, the last Ukrainian Hetman, in Pochep (1796, designed by J.-B. M. de Lamothe-Vallin and built by the Ukrainian architect Aleksii Yanovsky), in Yahotyn (project by Meneles), in Hlukhiv (Andrew Kvasov), and, the best example, in Baturyn (1799, project of the British architect Charles Cameron). Other outstanding buildings of the period were the palace of Zavadovsky in Lialychi, built in 1794 after the plans of the architect Giacomo Quarenghi, a theatre in Odessa by Thomas de Thomon, and the Kiev University, 1837–43, by Vincent Beretti. In church construction of the late eighteenth century, Ukrainian traditional forms were largely retained in combination with elements of the style of Louis XVI, for example, buildings founded by C. Rozumovsky, and some churches in the Poltava region.

Early in the nineteenth century, the Empire style replaced Classicism in Ukraine, where it evolved certain original forms, particularly in the construction of large provincial buildings. Outstanding architects of this period were Peter Yaroslavsky (buildings in Kharkiv and the Kherson region) and Andrew Melensky in Kiev (constructed the Fair Building, developed the Podil and Lypky sections, and designed the monument to Kiev self-government in the form of a classic column).

The greatest number of churches in the Empire style have been preserved in the Kharkiv and Poltava areas (Khorol, Romny, Lubny, Pyriatyn, Pryluky), most of them with central plans characteristic of Ukrainian construction. Fine examples of this style are the cathedral in Khorol of 1800, and the interesting belfry of the Kharkiv cathedral (Constantine Ton, 1844). Urban construction also developed at this time, particularly the erection of city halls in Kharkiv, Poltava, Kiev, Lviv, Chernivtsi, and Kamianets Podilsky, signifying the last efforts of self-government in Ukrainian cities.

After the abolition of autonomy in Ukraine and the later ban on construction of churches in the Ukrainian style (Russian edict of 1801), free and unfettered creations were replaced by new structures erected according to stereotype projects sent from St. Petersburg and Moscow. Examples are buildings of government institutions in Kiev, Poltava, Odessa, and other cities of southern Ukraine, as well as huge temples in Odessa, Kherson, and Kremenchuk. Also quite popular at the time was the rotunda model with classical columns (churches of Podilia, St. Nicholas Church on the Mound of Askold in Kiev built in 1810 by the architect A. Melensky, and the church in Hoshiv in Galicia). The Ukrainian national style survived longer in western Ukrainian lands (for example, the cathedral in Chernivtsi built in the 1850's).

As in the rest of Europe, urban hous-

ing and public construction developed according to an eclectic diversity of styles. Among the various trends, the so-called Vienna Neo-Renaissance became particularly widespread, without regard to political boundaries. This style left its imprint on all major cities of Ukraine: Kiev, Odessa, Kharkiv, Lviv, Chernivtsi, Peremyshl, and Kherson. Among the most typical structures were city theaters in Kiev, Lviv, and Odessa, and other public buildings.

Russian domination of the economic and cultural life of Ukraine in the nineteenth century and the persecution of the guild system (guilds were finally abolished in 1900) led to the decline of the traditional art of building evolved during the Baroque period. Meanwhile, no suitable replacement was provided by the Russian regime, which did not open any modern technical or artisan schools in Ukraine. Ukrainian youth, compelled to study in Russia, brought back alien trends and influences. In the second half of the nineteenth century, a nationalist trend appeared in Russia, which eventually gave rise to various offshoots of the "Russian" and "Byzantine-Russian" style. The latter were particularly fostered in the church construction of Ukraine.

It was at this time that the government undertook a series of "restorations" of valuable monuments of Ukrainian architecture from the Princely period. This involved erecting insignificant and architecturally valueless structures, supposedly in the Byzantine style, from or on the remains of ancient ruins (St. Volodymyr's Church in Kherson, the new Church of the Tithes in Kiev, the cathedral in Volodymyr Volynsky, and others). Among the best-known new structures were St. Volodymyr's Cathedral in Kiev, St. Alexander's Church in Kamianets Podilsky (destroyed by the Soviets in 1934), and the Cathedral of the Annunciation in Kharkiv. The so-called "Vienna Secession" and French "Modernism" appeared briefly late in the nineteenth and early twentieth centuries. Among larger structures built in these styles, with application of modern technical methods, were the railroad stations in Zhmerynka (by Valerian Rykov), Lviv (by Ivan Levynsky) and Kharkiv (George Zaune), and to some extent buildings erected by Paul Alioshyn.

*Volodymyr Sichynsky*

## NATIONAL TRAITS IN ARCHITECTURE

In 1854, Gregory Galagan built a wooden home on his estate in the village of Lebedyntsi, Poltava region, in which the architect Eugene Chervinsky combined the most characteristic features of the Ukrainian folk architecture of the seventeenth and eighteenth centuries. This was the first attempt at reviving the ancient and already forgotten traditions of Ukrainian folk art. Studies of the Ukrainian traditional art, particularly folk architecture, began toward the end of the nineteenth century, in the wake of a general growth of Ukrainian national consciousness. In 1902–6, the architect I. Kuznetsov, engaged by Bishop Parthenii Levytsky, erected a nine-domed stone church in the village of Plishivtsi, Poltava area, which was modeled after a wooden church built in 1773 in Novomoskovsk. In 1902–3, the architect Basil Krychevsky started a new era in Ukrainian architecture by designing a project of the Provincial Zemstvo (Land Administration building in Poltava, 1903–6). Much as the architects of the sixteenth and seventeenth centuries had done, Krychevsky utilized in his design, forms and elements of the folk art of wooden construction for a creative synthesis of new forms in stone-work, thus giving rise to the modern Ukrainian style of architecture. Later, Krychevsky designed a number of other structures in the same style: residential buildings, a national home in Lokhvytsia (1904), a school in Kiev (1910), public elementary

schools for the Chernihiv area (1912), a hospital in Vinnytsia (1913), a city library in Lebedyn (1914), and, jointly with his assistant, the architect Peter Kostyrko, a museum near Taras Shevchenko's memorial grave (1933–8).

Krychevsky's style was emulated by other architects and artists: Eugene Serdiuk (Ivan Kotliarevsky School in Poltava, 1904–8); Constantine Moshchenko (popular auditoriums, schools, buildings of village cooperative unions, etc.); the painter Opanas Slastion (three elementary public schools for Lokhvytsia county, Poltava region, 1911, and buildings for agricultural societies in the villages of Velyki Sorochyntsi and Khomutets, Poltava region), and others.

Among younger architects who also adopted this style were: Constantine Zhukiv (projects of the Art School in Kharkiv, 1912, the Popular Auditorium in Vovchansk, 1913), Alexander Trokal, Victor Trotsenko, and F. Shumov; and, in the Ukrainian lands under Austria, Leo Levynsky, Alexander Lushpynsky, and Basil Nahirnyi, who utilized particularly the features of the Carpathian folk architecture. In the Ukrainian lands under Russia, the administration of Kaniv county, Kiev area, decided in 1913 that all *zemstvo* schools be built in the Ukrainian style; this was followed by the Katerynoslav city administration, which also decided to build a stone church in this style.

Russian architects also became interested in the new trend. One of the projects for the Kiev railroad station designed by the architect Vladimir Shchuko was conceived in the Ukrainian style (1921–3).

In 1912–13, some Russian architects and students of art (George Lukomsky among others) tried to prove that it was the Kozak Baroque which constituted the true Ukrainian style, and began propagating it on a large scale, particularly in Kiev. The result was the work of Paul Alioshyn (seven-story apartment building, 1912–14), G. Lukomsky (project of a printing school, 1913), Theodore Lidval and V. Shchuko (projects of the Kiev railroad station, submitted for competition in 1913), as well as Shchuko's project of the Kiev Land Administration building (1913), and others. These trends were developed further by the younger Ukrainian architects completing their studies in Russia, who in their projects began combining elements of Ukrainian folk architecture with those of the Baroque style.

Serhii Tymoshenko adhered to this view in designing buildings, including office and railroad service buildings, in Kharkiv, Kiev, and other cities (1912–14). Dmytro Diachenko, the leading protagonist of this trend, who started out by combining elements of folk architecture with those of the Baroque (hospital in the town of Lubni, Poltava region, museum in Kamianets Padilsky, 1913, village schools in the Kiev region), later reverted solely to the Baroque style (project of the façade of a four-story apartment building for scholars in Kiev, 1926; entire complex of buildings of the Agricultural Academy and Forestry Institute in Kiev, (1926–30); and others). Later, S. Tymoshenko, Volodymyr Sichynsky, Roman Hrytsai, and other architects attempted to find a creative synthesis of the elements of wooden folk architecture and the Baroque style, at times combining them with elements of Byzantine architecture, especially in church construction throughout Western Ukraine.

In 1924, in Soviet Ukraine, the Kiev Institute of Architecture, founded in 1918 during the period of Ukrainian independence, became a department of the Kiev Art Institute and during the 1920's and 1930's graduated a number of young Ukrainian architects who were also preoccupied with further developing the genuine Ukrainian national features at a time when this was not yet forbidden by Soviet authorities. Such architects as Peter Holovchenko, Renata Kramer, Constantine Kunytsia, Eugene

Nakonechnyi, Alexander Povstenko, and Peter Yurchenko designed, in this style, buildings for workers' settlements, collective farm clubs and theaters, stores, administrative buildings, local museums, provincial hotels, sanatoriums, and resorts. This was more difficult in larger cities, where application of the modern Ukrainian style was limited to smaller structures, or to mere utilization of traditional ornamentation for interior decoration of public buildings. After World War II, there was a tendency to blend Ukrainian features with other architectural styles. There appeared classical buildings richly decorated with Ukrainian traditional ornamentation, which was frequently misplaced and taken from sources totally incompatible with both the material and the form of the building (e.g., embroideries). Such structures are now also considered to have been erected in the "Ukrainian style."

## ARCHITECTURAL TRENDS IN UKRAINE UNDER THE SOVIET REGIME

In the 1920's, the functional-constructive style, popular in the West, became widely accepted in Ukraine. Among the best-known structures fashioned in this style were the grandiose complex of buildings of the State Commerce and Projects in Kharkiv (architects Serhii Serafimov, Samuel Kravets, and Mordechai Felger); the Main Post Office in Kharkiv (architect Arkadii Mordvinov, 1927–9); the Kiev District Power Plant (architect M. Parusnikov and others); the filming pavilion of the Kiev Film Studio (architect Valerian Rykov, 1926–8); a shoe factory in Kiev (1929); the Kiev Railroad Station with a pediment of slightly Baroque contour (architect Alexander Verbytsky, 1928–32); administrative buildings of the Dnieper Hydroelectric Station (brothers Alexander and Victor Vesnin from Moscow). Among structures outside of Soviet Ukraine before 1939, the buildings of the State Medical Insurance, the dormitories of the School of Polytechnics in Lviv, and the city hall in Stanyslaviv deserve to be mentioned. The architect V. Sichynsky built an interesting church in Mykhailivtsi in the Ukrainian-populated eastern Slovakia, subordinating Byzantine elements to the new functional forms in steel and concrete.

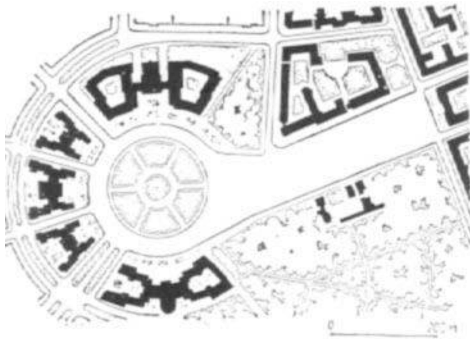

FIGURE 265. GROUND PLAN OF THE DZERZHYNSKY SQUARE IN KHARKIV

In the Ukrainian SSR with the influx of contemporary trends, control over architectural planning was centralized in two newly established organs in 1932. Along with others, the Association of Modern Ukrainian Architects was liquidated by the Soviet regime in 1932, under the pretext of promoting "nationalistic tendencies" in architecture, and the Ukrainian architects were put under the control of the All-Union Association of Soviet Architects with headquarters in Moscow (1932) and the All-Union Academy of Architecture (1933). The functional constructive style was prohibited. Instead, these institutions fostered, in Ukraine and other non-Russian republics, the officially accepted style, which consisted of a pompous mixture of Classicism, Renaissance, and the Empire style, with occasional additions of Constructivism and Baroque, in undisguised pretentiousness to grandeur and monumentalism. This was to have been the highest expression of social-realistic art and the only one officially sanctioned in the USSR. Among the most typical structures fashioned in this style in Kiev were

the building of the Council of Ministers, originally intended to be the seat of NKVD (architects Ivan Fomin and Paul Abrosimov of Moscow, erected in 1935–7); the building of the Supreme Soviet of the Ukrainian SSR (architect Volodymyr Zabolotnyi, 1936–9), the building of the Central Committee of the Communist Party of Ukraine (architect Joseph Langbard of Leningrad, 1936–9); the Staff Building of the Ukrainian Military District (at the present time, Central Committee of Ukraine, architect Serhii Hryhoriïv, 1938–40); a number of administrative buildings, schools, stadiums in Kiev and other cities, huge sanatoriums, for example, in Odessa and Mariupil (or Zhdanov).

Inclination toward eclecticism in the planning of large buildings was particularly in evidence after World War II in the course of reconstruction of entire areas in central parts of large cities such as Kiev and Kharkiv. The reconstruction was supervised by the Architectural Planning Administration of the Ukrainian SSR which was completely subordinated to the Committee on Architecture (created in 1943) attached to the Council of People's Commissars of the USSR in Moscow. All controls over reconstruction were centralized in this committee, which imposed on Ukrainian cities a style that gave them a totally alien appearance, combining incompatible architectural styles.
