Debaltseve [Debal'ceve]. v-19; DB III-4. City (1975 pop 37,500) in Donetske oblast. Debaltseve is an important railroad and highway junction in the central Donbas. It has railway-equipment and mining-equipment plants, an asphalt-concrete plant, railway-servicing plants, a food-processing plant, and a technical school of railway transport.

Debohorii-Mokrievych, Volodymyr [Debohorij-Mokrievyč], b 24 May 1848 in Chernihiv, d 2 November 1926 in Bulgaria. Populist revolutionary. In 1874 Debohorii-Mokrievych joined the Kievan Commune, and in the following year he attempted to instigate a peasant uprising in the Chernihiv region. He was arrested in Kiev

Volodymyr Debohorii-Mokrievych

in 1878 and sentenced to 15 years at hard labor. In 1880 he fled from Siberia and settled in Switzerland, from which he moved to Bulgaria in 1894. As an émigré he was greatly influenced by M. *Drahomanov. He lived in Kiev from 1917 to 1922 but did not engage in political activity. He wrote the following memoirs: *Vospominaniia* (Reminiscences, 1906); 'Iz spomyniv pro M. Drahomanova' (Some Memories of M. Drahomanov), *Za sto lit*, 1927, no. 1; and 'Vid buntivnytstva do teroryzmu' (From Rebellion to Terrorism), *Za sto lit*, 1930, nos 1–2.

Debryn, Mykola, b 9 September 1903 in Chornohuzy, Bukovyna, d 30 March 1981 in Rochester, New York. Religious leader and agronomist, archbishop of the Ukrainian Greek Orthodox church in Canada. Graduating from the University of Iași in 1930, Debryn worked as a government agronomist in Rumania from 1932 to 1940. After a short period in Germany he arrived in Canada in 1949. Upon completion of theological studies at St Andrew's College, Winnipeg, he was ordained into the priesthood of the Ukrainian Greek Orthodox church in Canada in 1959. Consecrated bishop (December 1975), he became auxiliary bishop of the Eastern eparchy (1976), bishop of Toronto and the Eastern eparchy (1977), and then archbishop (1980).

Decembrist movement. A secret revolutionary movement that evolved in the Russian Empire in the first quarter of the 19th century and culminated in an unsuccessful revolt in St Petersburg on 26 December 1825, from which the name 'Decembrist' is derived. The secret political organizations that eventually formed the Decembrist movement began to appear in the second decade of the 19th century, usually among military officers who had come into contact with Western European liberal-revolutionary ideas during the Napoleonic Wars. Centered in St Petersburg, Ukraine, and Georgia, they made preparations for an uprising and coup d'état in order to overthrow autocracy and abolish serfdom.

The first of these secret revolutionary societies was the *Union of Salvation, founded in St Petersburg in February 1816 by a group of officers led by A. and N. Muravev, Prince S. Trubetskoi, and P. Pestel. Among its 25–30 members were individuals of Ukrainian origin or having some connection with Ukraine: the brothers M. and S. *Muravev-Apostol, V. Volkhovsky, A. Poltoratsky, M. Novikov, and others. The aims of the society were

to abolish serfdom and to establish a constitutional monarchy.

The Union of Salvation was dissolved in the fall of 1817, and in its stead the *Union of Welfare was formed in St Petersburg at the beginning of 1818. In addition to the aims proclaimed by the former union, the goal of transforming the Russian Empire into a centralized republic was eventually added to the program. The Union of Welfare was headed by the Supreme Council, to which local councils, such as that in Tulchyn, Ukraine, were subordinated. The membership was much larger than that of the first union – almost 200. Its most prominent members were the Russians M. Orlov, N. Turgenev, P. Pestel, N. and A. Muravev, Prince S. Trubetskoi, Prince S. Volkonsky, M. Lunin, and the Ukrainians S. and M. Muravev-Apostol, S. Krasnokutsky, V. Lukashevych, O. Yakubovych, O. Myklashevsky, S. and O. Kapnist, P. Horlenko, A. Rodzianko, L. and V. Perovsky, N. Fylypovych, V. Davydov, and M. Novikov.

At the beginning of the 1820s these revolutionary societies were reorganized into the Northern Society in St Petersburg and the *Southern Society in Ukraine. Among the founders of the Northern Society were N. Muravev, N. Turgenev, M. Lunin, and Prince S. Trubetskoi. In 1824 K. *Ryleev became its leader. N. Muravev drafted a constitutional proposal according to which Russia was to be a constitutional, democratic monarchy with a federative structure and serfdom was to be abolished. Later, under the influence of the Southern Society, the Northern Society began to favor a republican form of government and a more centralized state.

The Southern Society was founded in March 1821 by the members of the Tulchyn council of the Union of Welfare. Many of the union's leading members joined the society, including P. Pestel, O. Yushnevsky, V. Davydov, Prince S. Volkonsky, S. and M. Muravev-Apostol, Prince O. Bariatynsky, and M. Bestuzhev-Riumin. Most of them were officers of the Russian army who were stationed in Ukraine or local landowners. Colonel P. Pestel headed the society and wrote its programmatic treatise, *Russkaia pravda* (Russian Justice). The goals of the Southern Society – the establishment of a centralized republic and the abolition of serfdom – were to be accomplished by an armed uprising. In 1823–5 the two societies discussed a common program and a merger that would allow them to act in concert against the tsarist government. Contact between the Southern Society and the Polish Patriotic Society was established in 1823 through M. Bestuzhev-Riumin.

A special place in the Decembrist movement in Ukraine was taken by the *Society of United Slavs. It was founded at the beginning of 1823 in Novohrad-Volynskyi by the brothers A. and P. Borysov, petty landowners from Slobidska Ukraine, who at the time were junior officers of the Russian army, and by a Volhynian nobleman, Yu. Liublynsky. By the fall of 1825 the society had 50 members, mostly young officers of the Russian army from Left-Bank and southern Ukraine, including I. Horbachevsky, Ya. Drahomanov, and I. Sukhyniv. Its program called for struggle against despotism and serfdom and a union of Slavic nations into a federated Slavic republic, with a democratic system and provisions for the national traditions of each nation. The society merged with the Southern Society in September 1825 and joined its Vasylykiv council. The members of the Society of United

Slavs took an active part in the revolt of the Chernihiv regiment.

A united action against the tsarist regime by the Southern and Northern societies was planned for 1826. However, Alexander I's death and the accession of a new tsar to the throne forced the leaders of both societies to move up the date of the revolt. The action of the revolutionary military units at the Senate Square in St Petersburg on 26 December 1825 and the uprising of the Chernihiv Regiment under the command of S. Muravev-Apostol in the Kiev region from 10 January to 15 January 1826 ended in failure. Over 3,000 individuals were arrested in connection with the revolt. The two Decembrist societies were suppressed, five of their leading members – P. Pestel, K. Ryleev, S. Muravev-Apostol, M. Bestuzhev-Riumin, and P. Kakhovsky – were hanged, and 121 others were deprived of all rights and sentenced to hard labor and exile in Siberia or to military duty in Caucasia. There they were joined by about 2,800 soldiers who had also taken part in the uprisings.

Although the Decembrist movement in Ukraine was part of an all-Russian movement, it had its own peculiar features. Decembrist ideas and trends in Ukraine were rooted deeply in Ukrainian history. Its ideas of national liberation were nourished by several centuries of struggle against subjugation by Poland and Russia. The ideological heritage of Ukrainian patriotic organizations, such as the *Novhorod-Siverskyi patriotic circle at the end of the 18th century and local political circles in the Poltava region, Slobidska Ukraine, southern Ukraine, and some on the Right Bank, created favorable precedents for the revolutionary movement and gave the political aspirations of the younger generation a national dimension. This distinguished the policies of the Ukrainian Decembrists from the centralistic tendencies of the Russian revolutionaries and directed their attention to the national movements of the first quarter of the 19th century. For this reason the importance and influence of Ukrainians in the general Decembrist movement were very significant.

The Russian Decembrist movement was indifferent to Ukrainian national interests. Oddly enough, ideas favorable to the Ukrainian liberation movement were formulated in the Northern Society (owing to the influence of some Ukrainian members), while the Southern Society in Ukraine defended staunchly the position of Russian republican centralism and completely ignored the rights and interests of the Ukrainian people. However, this position was countered by the other Decembrist formation in Ukraine, the Society of United Slavs, which, although it did not advocate Ukrainian independence, proposed a federation with equality for all Slavic nations. The *Little Russian Secret Society, headed by V. Lukashevych, went further, demanding an independent, sovereign Ukraine.

In this regard the following Ukrainian (mostly Left-Bank) centers and families of the Decembrist movement have a special significance: Sorochyntsi (the brothers S., M., and I. Muravev-Apostol), Obukhivka (the brothers S. and O. Kapnist, the sons of V. Kapnist), Ponurivka (O. Myklashevsky, A. von der Briggen), Mariinske (I. Shymkov and others). Members of the Ukrainian movement gathered regularly at their center in Kybyntsi near Myrhorod, on an estate of the Russian magnate and leader of the Ukrainian conservative opposition D. Tro-

shchynsky. Participation in the Decembrist organizations promoted an exchange of ideas and a convergence of views among the Ukrainians that later manifested itself in the articulation of national-political programs and plans. The Ukrainophile works of Ryleev, particularly *Ispoved' Nalyvaika* (Nalyvaiko's Confession) and *Voinarovskii*, were enthusiastically received by Ukrainian patriots and awakened Ukrainian national consciousness by evoking pride in Ukraine's heroic past and indignation over its subjugation. At this time **Istoriia Rusov* (History of the Rus' People), a kind of 'declaration of the rights of the Ukrainian nation' against the encroachments of Warsaw and Moscow, assumed its final form.

Ukrainian Decembrists had contacts with the secret Georgian Caucasian Society (1818–20) and with Polish revolutionary organizations, particularly the Patriotic Society, as well as the national Greek movement and its centers in southern Ukraine, and the national-revolutionary movement in Western Europe, particularly in France and Italy. The Ukrainian Decembrists had a significant influence on the future development of the Ukrainian liberation movement and paved the way for the ideas and period of T. Shevchenko, and the *Cyril and Methodius Brotherhood.

O. Ohloblyn

Decore, John [Dikur, Ivan], b 9 April 1909 in Andrew, Alberta. Lawyer, judge, and politician. Graduating from the University of Alberta in 1938, Decore practiced law in Edmonton and Vegreville from 1939 to 1965. From 1949 to 1957 he represented Vegreville constituency as a Liberal in the federal House of Commons. His influence was important in helping members of the *Division Galizien who were British prisoners of war to emigrate eventually to Canada. In 1950 he was parliamentary adviser to the Canadian delegation at the United Nations. In 1958 he was president of the Alberta Liberal Association. Decore was appointed Queen's Counsel in 1963, and in 1965 he became chief judge of the district court for northern Alberta; since 1979 he has been a justice of the Court of Queen's Bench of Alberta. Active in the Ukrainian community in Edmonton, Decore has served as president of the Ukrainian Professional and Business Club and of the Ukrainian Canadian Committee in that city and as a director of St. John's Institute.

Decore, Laurence (Dikur), b 28 June 1940 in Vegreville, Alberta. Lawyer and politician, son of J. Decore. Decore has served as first chairman of the Alberta Cultural Heritage Council (1973–5), president of Edmonton's Ukrainian Professional and Business Club (1973), president of the Ukrainian Canadian Professional and Business Federa-

tion (1979–81), and chairman of the Canadian Consultative Council on Multiculturalism (1980–3). From 1974 to 1983 he also served as an alderman in Edmonton. In 1983 he was elected mayor, receiving the largest plurality ever accorded a mayoralty candidate in Edmonton. In December 1983 he was awarded the Order of Canada for his work on behalf of multiculturalism since the early 1970s.

Dediulin, Oleksander [Dedjulin], b 3 August 1866 in Sribne, Poltava gubernia, d 16 October 1924 in Kharkiv. Microbiologist and veterinarian, organizer of veterinary services in Ukraine, professor at the Kharkiv Veterinary Institute (1906–24), founder and director (from 1921) of the Institute of Scientific and Applied Veterinary Medicine (now the Ukrainian Scientific Research Institute of Experimental Veterinary Medicine) in Kharkiv. Dediulin produced studies on general problems of veterinary medicine, the diagnosis and prevention of infectious diseases in animals, the development of measures to prevent disease, and the organization of veterinary services.

Dedko Dmytro [Ded'ko], ?–ca 1349. Galician boyar. After the death of Prince Yuri II (1340) Dedko ruled the Principality of Galicia as vicegerent of the Lithuanian prince Lubart. On his death Galicia was taken by King Casimir III of Poland.

Deer (*Cervus*; Ukrainian: *olen*). Genus of cloven-hoofed mammals, which are hunted for sport and commercial purposes (deer meat, hide, and antlers). In Ukraine the red deer (*C. elaphus*) is the prevalent species; its body length is approximately 220–250 cm; tail length, up to 16 cm; height (hooves to withers), 86–165 cm; weight, up to 500 kg. At one time deer were to be encountered throughout Ukraine; today their habitat is restricted to the Carpathians, the Caucasus, and the Crimea, as well as to a number of breeding grounds. In the Ukrainian SSR deer hunting is regulated by license. In the Askaniia-Nova and Black Sea nature reserves and in several areas of the forest-steppe two species of deer have become acclimatized: the sika deer (*C. nippon*), with a body length of 160–180 cm, height (hooves to withers) of 85–118 cm, and weight of up to 148 kg; and the fallow deer (*C. dama dama*), height of about 90 cm (hooves to withers).

Deineka, Ivan [Dejneka], b 5 July 1904 in Opishnia, Poltava gubernia, d 25 January 1970 in Odessa. Deineka was rector of medical institutes in Vinnytsia (1944–51) and Odessa (from 1951). He worked in and wrote on oncology, echinococcosis of the lungs, and heart and lung surgery.

Deisha-Sionytska, Mariia [Dejša-Sionyc'ka, Marija], b 3 November 1859 in Chernihiv, d 25 August 1932 in Koktebel, Crimea. Dramatic soprano. Deisha-Sionytska graduated from the St Petersburg Conservatory and later studied in Paris. She was a soloist at the opera theaters in St Petersburg (1883–91) and Moscow (1891–1908); in 1931–2 she taught at the Moscow Conservatory. In her appearances as a chamber soloist she championed Ukrainian music.

Dejna, Karol, b 1911. Polish linguist and Slavist, student of J. Janów, and professor at the University of Łódź. Besides many studies in Polish dialectology and

histories of the Polish language and Common Slavic, Dejna has written a book on the Ukrainian dialects of the Ternopil area (1957) and an outline of the phonemic system of Standard Ukrainian (1950).

Delaere, Achilles, b 17 April 1868 in Lendeledé, Belgium, d 12 July 1939 in Yorkton, Saskatchewan. Religious figure. Delaere, a Belgian Redemptorist (ordained 1896), was sent to Canada as a missionary to the Ukrainians in 1899. Initially at Brandon, Manitoba, he moved to Yorkton in 1904 and changed to the Byzantine-Ukrainian rite in 1906 to increase his acceptability to the Ukrainian immigrants. In 1912, alarmed by inroads by non-Catholic denominations, he urged Pius X to appoint a Ukrainian Catholic bishop for Canada. Delaere established a Redemptorist monastery in Yorkton in 1913 and, in cooperation with the Sisters Servants of Mary Immaculate and Brothers of the Christian Schools, directed religious, educational, and social work among Ukrainian Catholics in the Yorkton area for two decades. His missionary endeavors prompted Metropolitan A. Sheptytsky to found an Eastern-rite branch of the Congregation of the Most Holy Redeemer in Galicia (see *Redemptorists).

Delafiz, Demian (de la Flise), ?–1861. Ethnographer of French extraction, physician in Kiev gubernia. He collected data and statistics on the ethnography, folklore, botany, and topography of the Kiev region. His six albums, containing color illustrations of peasant life, are preserved in the manuscript division of the State Public Library of the Academy of Sciences of the Ukrainian SSR and in the Chernihiv Historical Museum. He wrote a memoir of the Decembrist revolt of the Chernihiv Regiment in 1825.

Yurii Delimarsky

Delimarsky, Yurii [Delimars'kyj, Juriij], b 6 May 1904 in Krasnopilka, Podilia gubernia. Electrochemist, full member of the Academy of Sciences of the Ukrainian SSR since 1957. Delimarsky worked in various scientific and educational institutions in Kiev; from 1960 to 1973 he was director of the Institute of General and Inorganic Chemistry of the Academy of Sciences of the Ukrainian SSR. His research studies are concerned with general chemistry and the electrochemistry of fused salts. Delimarsky developed the physical and chemical bases of the electrolysis of fused salts for the purposes of extracting and refining various metals; he discovered the phenomenon of the electrolytic transfer of metals from cathode to anode.

Yosyf Delkevych

Serhii Delvig

Delkevych, Yosyf [Del'kevyč, Josyf], 1822–1912. Church historian, canon of the Peremyshl eparchy, professor of church history at Lviv University from 1864. As rector of Lviv University in 1868–9 he, along with V. Kovalsky and A. Petrushevych, defended the rights of the Ukrainian language in the Galician Diet. He wrote *De Cruciatibus Eorumque Origine* and *Praelectiones ex Historia Ecclesiastica*.

Delone, Lev, b 11 May 1891 in St Petersburg, d 1 November 1969 in Kharkiv. Botanist, cytologist, geneticist, and selectionist. Delone was a professor at a number of institutions in Ukraine: from 1934 to 1948 he was on the staff of the Kharkiv Institute of Agriculture; in 1948 he joined the Institute of Genetics and Selection of the Academy of Sciences of the Ukrainian SSR. His publications consist of comparative studies of chromosome composition in groups of related species and works on general problems of plant cultivation and selection. He was the first Ukrainian scientist to study artificial mutagenesis in plants (wheat) and introduced ionizing radiation as a factor in mutagenesis.

Delvig, Serhii [Del'vig, Serhij], b 1866 in Moscow, d 1944 in Africa. Brigadier general in the Army of the Ukrainian National Republic (UNR), writer on military affairs, eminent artillery expert, artillery inspector of the Army of the UNR beginning in 1918. In June 1919 Delvig headed a mission to negotiate an armistice between the UNR and Poland; he was also head of an extraordinary Ukrainian military mission to Rumania in 1919 and remained in Rumania as an émigré.

Dembytsky, Teofil [Dembyc'kyj], 1845–1915. Galician community figure, lawyer in Kolomyia, child-welfare activist, contributor to Ukrainian cultural institutions. Dembytsky willed his estate, Beleluia, to the Shevchenko Scientific Society and made substantial contributions to other Ukrainian institutions.

Demchenko, Vasyl [Demčenko, Vasyl'], b 17 March 1831 in Poltava gubernia, d 9 May 1914. Jurist and journalist, specialist on inheritance law. He studied at Kiev University, where he later taught (from 1861). His works include *Istoricheskoie issledovanie o pokazaniakh svidetelei po russkomu pravu do Petra Velikogo* (Historical Enquiry on Witness Testimony in Russian Law up to Peter the Great, 1859) and *Sushchestvo nasledstva i prizvanie*

k nasledovaniiu po russkomu pravu (The Essence of Inheritance and the Initiating of Inheritance Procedure in Russian Law, 1877).

Demchuk, Petro [Demčuk], b 11 June 1900 in Horodenka, Galicia, d 30 January 1943. Marxist philosopher. Demchuk studied law at the University of Vienna. He returned to Ukraine in 1925, completing his graduate studies at the department of philosophy of the Institute of Marxism-Leninism in Kharkiv. He held the chair of philosophy at the *All-Ukrainian Association of Marxist-Leninist Scientific Research Institutes and taught at the Kharkiv Institute of Soviet Construction. Demchuk belonged to the school of M. *Skrypnyk. His works include a study of M. Ziber (1928) and articles on the history of philosophy in the journals *Prapor marksyzmu*, *Hart*, *Prolitfront*, and others. He was imprisoned during the Stalinist terror of the 1930s.

Demerdzhi Yaila [Demerdži Jajla]. Limestone massif in the main range of the Crimean Mountains, 1,360 m in height. Its relief resembles a plateau; the inclines are steep, and there are karstic phenomena.

Demetrykiewicz, Włodzimierz, b 5 October 1859 in Zolochiv, Galicia, d 13 April 1937 in Cracow. Full member of the Polish Academy of Sciences, Polish archeologist, professor at the University of Cracow, conservator of ancient artifacts. Demetrykiewicz conducted excavations of Neolithic burial sites and settlements near Drohobych, Peremyshl, and Terebovlia, studying cave monasteries, the statue of Svitovyt, and *stone *baba* figures.

De-Mets, Heorhii [De-Metc, Heorhij], b 21 May 1861 in Odessa, d 3 February 1947 in Kiev. Physicist. He graduated from Odessa University in 1885 and taught physics from 1891 to 1933 at Kiev University and, beginning in 1898, at the Kiev Polytechnical Institute. From 1934 to 1947 he directed the chair of physics at the Kiev Pedagogical Institute. De-Mets did experimental work on thermal phenomena and radioactivity. He developed a physics teaching course for secondary schools.

Demian, Luka [Dem'jan], b 6 June 1894 in Vyzhni Veretsky (now Verkhni Vorota) in Transcarpathia, d 16 May 1968 in Mukachiv. Writer and folklorist. As a young man he began to collect and publish folk songs. His own short stories began to appear in 1920; they included 'Chort na vesilliu' (The Devil at the Wedding, 1920), 'Vid'ma' (The Witch, 1924), 'Iz sela' (From the Village, 1943), 'Vesillia bez zhenykha' (The Wedding without the Groom, 1956), 'Zacharovana pidkova' (The Charmed Horseshoe, 1959), 'Zustrich' (The Meeting, 1961), and 'Opovidannia synikh Karpat' (The Story of the Blue Carpathians, 1964).

Demianchuk, Vasyl [Demjančuk, Vasyl'], b 13 January 1897 in Nadvirna, Galicia, d 28 November 1938. A Slavic linguist and an associate of the Academy of Sciences of the Ukrainian SSR. Demianchuk was active as a scholar from 1922. In 1928 he was expelled from the academy and disappeared during the Stalinist terror. His works deal with the historical phonology and morphology of the Ukrainian language (especially *Morfologhiia ukrains'kykh hramot xiv i pershoi polovyny xv v.* [The Morphology of

Ukrainian Charters of the 14th and First Half of the 15th Century], 1928), Ukrainian dialectology (including a bibliography for the years 1914–27), the history of Slavic philology, and problems of orthography. Because he was a philologist of great precision and scope of knowledge, Demianchuk's studies, even the minor ones, are still important.

Demography. Science dealing with the size, territorial distribution, and composition of human populations, the changes in these variables and their causes and consequences, population movements, the environment and its influence on the population, and the cultural and physical condition of the population. Today in Ukraine and the Soviet Union demography is viewed primarily as the study of the forces of production and is subservient to the state's policies in regard to resettlement, Russification, and the creation of a 'Soviet people.'

Demographic research in Ukraine began in the 19th century with studies of the territorial distribution of the Ukrainian people and was based on ethnographic and statistical materials. The first surveys of the distribution of Ukrainians, along with maps and other aids, appeared in the works of P. Šafařík (1842), P. Keppen (1851), P. Chubynsky (1878), and A. Rittikh (1864, 1875). The first ethnographic map in Ukrainian that encompassed all Ukrainian lands was prepared by H. Velychko (Lviv 1898).

The major sources of demographic information about Ukraine before the First World War were Austrian and Russian censuses. Their bias on the question of nationalities was analyzed and corrected by Ukrainian scholars such as the statistician O. *Rusov (1906, 1916) and the economist V. Porsh (1907), both of whom limited themselves to central and eastern Ukraine; and the geographer S. *Rudnytsky (1916, 1923) and the historian M. Korduba, who dealt with all of Ukraine (1918).

After the war, as a result of the creation of the *Central Statistical Administration of Ukraine in Kharkiv, demographic research in Ukraine attained an advanced level. During the short life of the administration (1920–9) a population analysis was carried out in 1926, and an impressive program of processing the results was realized with the publication of over 200 issues of the serials *Statystyka Ukraïny* (1922–30, 17 series), *Visnyk statystyky Ukraïny* (1928–30), and *Statystychna khronika*, and statistical yearbooks (1925–6, 1928–9). The abolition of this statistical agency dealt a heavy blow to Ukrainian demography and impeded its further development.

Important studies were conducted by the Demographic Institute of the All-Ukrainian Academy of Sciences, which was founded in 1919 and was one of the first such institutes in the world. Its research, which was co-ordinated by the academician M. *Ptukha and carried out by Yu. Korchak-Chepurkivsky, S. Tomylin, A. Khomenko, S. Ostapenko, P. Pustokhod, M. Avdiienko, M. Tratshevsky, and others, encompassed a wide range of subjects: the distribution, age, and national composition of the population (Khomenko); mortality, natural movement, and population increase (Ptukha); composition by age and aging (Korchak-Chepurkivsky); hygiene, health, and the physical condition of the population (Tomylin); birth (Tratshevsky); demographic peculiarities (Pustokhod); etc. The questions of the harmful influence of air pollution and urbanization on the population were first raised by

the institute. Fourteen volumes of *Pratsi Demohrafichnogo instytutu* were published by the institute in 1924–38, and they have not lost their importance to this day. In 1932 various restrictions were placed on the activities of the institute; in 1934 it was renamed the Institute of Demography and Sanitation Statistics, and in 1937–8 its activities were completely disrupted during the Yezhov terror. Ptukha and his associates were either exiled outside Ukraine, killed, or otherwise silenced.

In Russia the Commission for the Study of the Ethnic Composition of Russia's Population (Komissiiia po izucheniiu plemennogo sostava naseleniia Rossii) of the Academy of Sciences in Petrograd (1917–30) devoted some attention to demographic problems. It lacked a broad and clearly defined program and in 1930 was forced to abolish itself. It published the general *Etnograficheskaia karta Sibiri* (Ethnographic Map of Siberia, 1927, which included northeastern Ukraine), and the most valuable, final volume of V. Shibaeva's 30-volume *Etnicheskii sostav naseleniia evropeiskoi chasti sssr* (The Ethnic Composition of the Population of the European Part of the USSR, Leningrad 1930), which compares the censuses of 1897, 1920, and 1926.

In Western Ukraine and abroad demographic problems were investigated by the Shevchenko Scientific Society, which published *Studii z polia statystyky i ekonomichnykh nauk* (Studies in the Field of Statistics and Economic Sciences, 1909–19), the Ukrainian Free University in Prague, and the Ukrainian Husbandry Academy in 1922–32 in Poděbrady. At the Ukrainian Scientific Institute in Warsaw, which published a series of works by V. Sadovsky, T. Olesevych, and others, demography received more attention than at the other institutions.

V. *Kubijovyč, a geographer and author of *Atlas Ukraïny* (Atlas of Ukraine) and *Heohrafiia ukraïns'kykh i sumezhnykh zemel'* (Geography of Ukrainian and Neighboring Lands, Lviv 1937–8), which were based on Soviet, Polish, Czech, and Rumanian censuses and encompassed all ethnic Ukrainian territories, holds a special place in Ukrainian demography. He has written numerous articles, has prepared detailed ethnographic and demographic maps, and served as the co-editor of *Ukraïns'kyi statystychnyi richnyk* (The Ukrainian Statistical Yearbook, 1934–8).

For a long time after the Second World War demographic work in Soviet Ukraine was completely neglected because of Moscow's policy and the lack of accurate statistical data about the Ukrainian population (the 1937 census, which reflected actual conditions, was suppressed, while the official 1939 census did not reflect reality). From the 1930s even analyses of the 1926 census, such as A. Khomenko's *Heohrafichne rozmishchennia ukraïntsv v srsr* (The Geographic Distribution of Ukrainians in the USSR, Kharkiv 1932), were banned. It was only in 1958 that the Central Statistical Administration in Moscow compiled the reference book *Narody sssr* (The Peoples of the USSR) in preparing for the 1959 census. All current calculations of the national composition of the USSR population and of other demographic indicators of the 1930s and 1940s are based on this reference work.

In 1959 demography was reinstated with the creation of the Department of Demographic Statistics at the Institute of Economics of the Academy of Sciences of the Ukrainian SSR, which has promoted the publication of the selected works of M. Ptukha (1971), Yu. Korchak-Chepurkivsky (1970), S. Tomylin (1973), A. Merkov (1979), and A.

Khomenko (1980). Except for Ptukha's works, they have appeared in Russian translation. At the end of 1969 demographic research began appearing, first in Russian and then in Ukrainian, in the serials *Demograficheskie tetradi* and *Demografichni doslidzhennia*. Seven issues of the latter had appeared by 1979. Valuable demographic materials have appeared in *Ukrains'kyi istoryko-geohrafichnyi zbirnyk* (The Ukrainian Historical-Geographic Collection, 2 vols, Kiev 1971-2) and in the series *Ekonomichna heohrafiia* (Economic Geography). In the 1960s-1980s such demographic questions as ethnic processes (V. Naulko), settlement (N. Blazhko), urban agglomeration (D. Bohorad), changes in the socioeconomic structure (A. Perkovsky), family relations (L. Chuiko), reproduction and economic demography (A. Kvasha), the age structure (I. Kalyniuk), population dynamics and natural growth (V. Steshenko), the demographic development of the population from 1870 to 1970 (Ye. Rudnytsky), the urban population (Yu. Pitiurenko), and the rural population (V. Zahorodny and M. Zhembrovsky) have been studied in Ukraine and in the USSR. The research is subject to government policy; hence, all major works by Ukrainian specialists have been published in Russian in Moscow. (See also *Statistics.)

Demonology in Ukraine. With the institution of Christianity in Ukraine and the official proscription of paganism at the end of the 10th century, elements of the unified pagan religion disappeared rapidly, and the names of the 'higher' gods (*Perun, *Dazhboh, *Veles, *Stryboh, Khors, and others) were preserved only in literature. The 'lower' *mythology proved much more stable, however, and survived until recent times. This 'lower' mythology, involving ancestral-clan images and an animistic world view that populates nature with spirits, was older in origin than the pagan belief in 'higher' gods. It required neither special locations for the practice of the cult nor shamans (*volkhvy*). Religious functions of the ancestral cult were carried out by the family's head and its members. The institution of Christianity did not completely destroy the belief in the 'lower' mythology. Instead, mythological elements were combined with elements of Christianity, creating a 'dual faith.' Thus, the ancient rituals of the *folk calendar, having been disassociated from their seasonal origins, were combined with the Christian feasts - Christmas and Epiphany with the rituals and texts of the carols (*koliadky*) and Easter with the spring rituals. The god Perun was replaced by St Illia, and Veles by St Vlasii. The old verbal formulas often became intertwined with the texts of church prayers, especially in adjurations. These phenomena became widespread.

Oral folk tradition retained until recently a number of demonological figures: the *domovyk* (house demon); the *khovanets* ('hider'), who guards the home and helps the householders but can also do damage; the *dolia* (fate), the soul of an ancestor that must be specially honored during

certain ceremonies; the *pasichnyk* (bee-keeper), who protects bees; the *polovyk* (field demon), who lives in fields and takes on human or animal form; the *lisovyk* (forest demon), an evil spirit and grazer of the forest creatures, who can take on human form; and the *blud* (the wandering one) and the *mara* (specter), which are similar to the forest demons and cause one to lose one's way. There is also the Hutsul *chuhaistyr*, a forest giant who poses a danger to the *mavka* or *niavka* (wood nymph). The *vodianyk* (water dweller) lives in rivers, lakes, and wells and marries the *potopelnytsia* (drowned maiden). (The *vodianyk* is in some regions identified with the *potopelnyk* [drowned man].) A close cousin is the *bolotianyk* (swamp demon), who lures people into swamps. The *rusalka* (water nymph), who lives in rivers, forests, and fields, is an unbaptized child, girl, or woman who died a violent death; the older name of the *mavka* (wood nymph), the *bisytsia* (she-devil), was usually applied to the *potercha*, a dead, unbaptized child who sometimes takes on the form of a bird. The *bohynia* (goddess), *nichnytsia* (night demoness), *lisnytsia* (wood demoness), and *mamuna* (demoness) share the characteristics of the *rusalka* and *mavka*.

There was also a widespread belief in evil spirits or devils who had no special characteristics. These included the *nechysta syla* (the unclean spirit); *shcheznyk* (the vanisher); *didko*, *antypko*, and *antsybolot* (various names for the devil); the Hutsul *aridnyk* (etymology uncertain - a type of devil); and the *molfar* (shaman). The image of the devil was a result of the influence of Christian imagery (the devil, Satan) and gave rise to a multitude of tales in oral folklore. Similarly, there are many tales about the vampire (*upyr*) and the witch (*vidma*), that is, a woman who is associated with the evil spirit and who brings about drought and hail, steals milk from cows, and flies to Bald Mountain (*Lysa Hora*). This last belief originated in Germany (cf the German *Kahlenberg*). There was also the belief in the werewolf (*vovkulaka*), that is, a person who, of his own volition, temporarily became a wolf or was turned into a wolf by a spell cast on him by someone else. As early as the 5th century BC, Herodotus wrote that the Neuri (Ukrainian: *Nevry*), who lived in Ukraine, were regarded by their neighbors as werewolves. Popular folk fantasy closely linked the witch with the sorceress (*charivnytsia*), sorcerer (*charivnyk*, *znakhar*), and the female fortuneteller (*vorozhka*), who were considered to possess supernatural powers and the ability to influence nature and people (eg, to separate lovers, afflict people with disease [*prystrit*] by the effect of the so-called evil eye, turn away hailstorms). In isolated villages far from major centers belief in the supernatural powers of sorcerers and witches persisted until the end of the 19th century. In earlier times Ukrainian common law sometimes punished people who were suspected of using magic for evil purposes, although Ukraine has never known cruel trials or the burning of witches.

In contrast to that of the West, Ukrainian demonology contains almost no gnomes, dwarfs, trolls, etc (except among the Lemkos, whose house demons take on the form of little people such as the *hurbozh* and *hmytsiuk*).

Folk demonology is reflected in Ukrainian literature, as in the 18th-century passion drama *Slovo o zburenniu pekla* (Tale of the Destruction of Hell), in the works of T. Shevchenko ('Prychynna' [Bewitched Maiden], 'Rusalka' [Water Nymph]) and O. Storozhenko, in Lesia Ukrainka's *Lisova pisnia* (Forest Song), M. Kotsiubynsky's *Tini zabu-*

tykh predkiv (Shadows of Forgotten Ancestors), and N. Gogol's stories on Ukrainian themes.

I. Korovytsky

Demydchuk, Semen [Demydčuk], b 22 April 1884 in Buzke, Galicia, d 20 September 1965 in New York. Community leader, journalist. Demydchuk received his LL.D degree from Lviv University in 1914. In 1912 he visited the United States to solicit funds from Ukrainian immigrants for the *Ridna Shkola pedagogical society. He returned in 1914 as a delegate of the *General Ukrainian Council in Vienna and remained in the United States. He helped organize the first Ukrainian congress (*soim*) in the United States, which was held in New York on 30-31 October 1915. He remained active in community organizations promoting Ukrainian independence or aiding Ukrainian refugees and immigrants. As a journalist, Demydchuk wrote for the Lviv daily *Dilo* and worked as an editor for the American papers *Svoboda* and *Ameryka*. With L. Tsehelsky he published the weekly *Ukrains'kyi visnyk* in New York in 1927-8. In the 1920s he directed the Ukrainian Press and Information Bureau of the Ukrainian National Committee in New York. Demydchuk is the author of many articles on the question of Ukrainian independence and on Ukrainian immigration, of the collection of short stories *Pershi obrazky z Ameriky* (First Impressions of America), and of the treatise *Ucrainica in America* (1944, revised and serialized in *Ukrainian Weekly*, 1944-5). He was a member of the Shevchenko Scientific Society and, from the 1950s, chairman of the Commission for the Study of the History of Ukrainian Immigration to the United States of the Ukrainian Academy of Arts and Sciences in the us.

Demutsky, Danylo [Demuc'kyj], b 16 July 1893 in Okhmativ, Kiev gubernia, d 7 May 1954 in Kiev. Artistic photographer and film cameraman; son of P. *Demutsky. In 1925 he was awarded a gold medal for his photography at the International Exhibition of Applied Arts in Paris. That year Demutsky began work at the Odessa film studio of the All-Ukrainian Photo-Cinema Administration (vufku) and later at the Kiev vufku. From 1928 to 1932, working with O. *Dovzhenko, he filmed *Arsenal* (1929),

Zemlia (The Earth, 1930), and *Ivan* (1933) and created a school of poetic camera art. In the early 1930s Demutsky was exiled to Central Asia, where he was forbidden to work in film until 1943. After making several films at the Tashkent film studio, he returned to Ukraine in 1947 and at the Kiev Artistic Film Studio filmed *Podvyh rozvidnyka* (The Feat of a Scout, 1947), *U myrni dni* (In Days of Peace, 1950), and *Taras Shevchenko* (1951), the camera work of which received first prize at the Fourth International Film Festival at Karlovy Vary in 1951. His last film was *Kalynovyj hai* (The Viburnum Grove, 1953). A monograph by L. Kokhno on Demutsky's life and achievements appeared in Kiev in 1965.

Danylo Demutsky

Porfyr Demutsky

Demutsky, Porfyr [Demuc'kyj], b 22 March 1860 in Yanyshivka, Kiev gubernia, d 3 June 1927 in Kiev. Folklorist, composer, conductor, a medical doctor by profession. In 1892 he organized a choir in Okhmativ in the Kiev region and took it on tour throughout Ukraine. He collected and recorded more than 1,000 Ukrainian folk songs, giving special attention to folk polyphony. He began work in Kiev in 1918, joining the Ethnographic Commission of the Academy of Sciences of the Ukrainian SSR in 1921. His major collections were *Narodni ukrains'ki pisni v Kyivshchyni* (Ukrainian Folk Songs in the Kiev Region, 2 vols, 1905-7) and the posthumously published *Ukrains'ki narodni pisni. Bahatoholossia* (Ukrainian Folk Songs: Polyphony, 1954); he also wrote *Lira ta ii motyvy* (The Lyre and Its Motifs, Kiev 1903).

Dendrological park. A large park in which many species of local flora – trees and shrubs – are grown. Such parks serve as both research centers and tourist attractions. In Ukraine the major dendrological parks are Trostianets (established 1834, now in Chernihiv oblast), *Sofiivka (in Uman, 1796), *Oleksandriia (in Bila Tserkva, 1793), and Veseli Bokovenky (1893, now in Kirovohrad oblast).

Denikin, Anton, b 16 December 1872 near Warsaw, d 8 July 1947 in Ann Arbor, Michigan. The Russian general who, after L. Kornilov's death (13 April 1918), commanded the 'White' anti-Bolshevik 'armed forces of Southern Russia' consisting of the Volunteer Army and Cossack regiments from the Don and Kuban regions. Many Russians and 'Little Russians' in Ukraine were recruited in the last half of 1918 by an officers' network that covered all Ukraine and had close ties with reactionary Russian orga-

nizations (the United Center, the Kiev National Center, the Rus' Society, etc). When the Directory of the UNR took power, these officers, as well as many Hetman government officers and officials, fled to the Don region or to Odessa, where they joined Denikin's army. In May 1919 Denikin launched a major offensive from the Kuban northwest into Left-Bank Ukraine against the Bolshevik forces, which at the time were fighting the Army of the UNR and partisan forces led by M. Hryhoriiv, N. Makhno, and others. In July Denikin began his advance towards Moscow by way of Voronezh and Orel and also moved into Right-Bank Ukraine. The offensive was accompanied by intense agitation for 'one, indivisible Russia'; the destruction of Ukrainian cultural organizations, schools, books, and the press; terrorization of the population; and the exclusion from administrative posts of anyone formerly active in Ukrainian institutions or with pro-Ukrainian sympathies. Land and local power was returned to the gentry. As Denikin advanced, White regiments led by N. Bredov entered Kiev on 31 August 1919 and confronted UNR troops that were already there. An armed conflict nearly ensued. On 24 September 1919 the UNR declared war on Denikin's army, which lasted from September to December 1919.

Because the Ukrainian Galician Army was blockaded by the Allies, was decimated by typhus, and lacked supplies, its commanders signed an alliance with Denikin on 6 November 1919 in Ziatkivtsi near Uman. This treaty caused a political crisis and mass dissatisfaction in the Galician army, but it soon lost its validity because of the rapid retreat of the disintegrating White army along the whole front in December (the Whites left Kiev on 16 December). Denikin's defeat was the result of his policies, aimed at restoring tsarism, and his treatment of the population, particularly in the Kuban, which provoked the Kuban forces to abandon him. Denikin's rear forces had repeatedly been paralyzed by various forces in Ukraine from the beginning. In January and February 1920 the disorganized remnants of his army retreated from Ukraine to the Crimea. A leadership crisis led to Denikin's replacement on 4 April 1920 by P. *Wrangel. From that time Denikin lived in the West as an émigré.

Denmark (Danmark). A Scandinavian state governed by a constitutional monarchy. Its territory covers 44,430 sq km, and its 1983 population was 5,120,000. The capital is Copenhagen.

The ancestors of the Danes, the Normans, served in the Varangian retinue in Kiev in the 9th–10th century. In the 11th–12th century the Kievan princes had dynastic ties with the Danish court. The daughter of Yaroslav the Wise, Yelysaveta Yaroslavna, was married to the Danish king Sweyn II in 1067 (her second marriage). The wife of Volodymyr Monomakh, Gytha, spent some time at the

Danish court before she married. Prince Mstyslav I's two daughters married Danes: Malfrida was the second wife of King Eric Emune, and Ingeborg married Knud Lavard (1096–1131); Ingeborg's son, the famous King Valdemar I (1131–82) thus was related to the Monomakh family.

A number of Danes who took an interest in Eastern Europe informed the Danish public about Ukraine. The diplomat J. Just left a detailed account of his visit to Ukraine in 1711. The famous literary critic G. Brandes (1842–1927), who often visited Russia and Austria, was favorably disposed toward Ukrainians and maintained ties with I. Franko. The writer A.M. Benedicsten also wrote about Ukrainian affairs, but it was T. Lange, who lived in Ukraine at the beginning of the 20th century and translated the works of Marko Vovchok and Ukrainian folk songs into Danish, that displayed the keenest interest in Ukrainian culture.

At the end of the 19th and the beginning of the 20th century the Ukrainian co-operative movement in Galicia benefited from the experience of Danish co-operatives. In 1919 diplomatic ties were established between Ukraine and Denmark. The Directory of the Ukrainian National Republic sent a delegation headed by D. Levytsky to Copenhagen. A Danish consulate was opened in Kiev. Ukrainians began to emigrate to Denmark before 1914, largely on an individual basis. After the Second World War about 1,000 Ukrainians with their own Catholic clergy resided temporarily in Denmark; their parish priest, Rev M. Syvenky, is buried in Copenhagen. Today about 200 Ukrainians are scattered throughout Denmark; P. Balytsky is one of the more prominent community figures. At Copenhagen University H. *Malanchuk, a noted specialist in the philosophy of S. Kierkegaard, taught the Ukrainian language.

Translations of the work of some Danish writers, such as J.P. Jacobsen, H. Kirk, and H. Pontoppidan, have been published in Ukraine; some Ukrainian classics have been translated into Danish.

Dennytsia (Morning Star). Literary and scholarly journal published in 1880 in Stanyslaviv (now Ivano-Frankivske), under the editorship of I. *Verkhkratsky. Twenty four biweekly issues were published.

Denysenko, Filaret (secular name, Mykhailo), b 23 January 1929 in the village of Blahodatne, Donetsk oblast. Church figure in Soviet Ukraine, metropolitan of Kiev and Halych, patriarchal exarch in Ukraine of the Russian Orthodox church. Filaret studied at the Odessa Theological Seminary (1946–8) and the Moscow Theological Academy (1948–52). He became a hieromonk in 1951, and in 1958 rector of the Kiev Theological Seminary with the rank of archimandrite. In 1960 he became superior of the Cathedral Church of St Volodymyr in Kiev; he served as bishop exarch for Central Europe and as bishop of Vienna (1962–4), becoming vicar of the Moscow patriarchate and rector of the Moscow Theological Academy in 1964. In 1965 he became exarch of Ukraine and archbishop of Kiev, assuming the office of metropolitan in 1968. Filaret often carries out diplomatic missions on behalf of the Moscow patriarchate concerning the convocation of the All-Orthodox Council, the Christian Peace Conference, or the ecumenical movement.

Denysenko, Ivan, b 23 September 1910 in the village of Barvinkove, Kharkiv region. Monumentalist painter, portraitist, and illustrator. Denysenko received his artistic training at the Kiev and Kharkiv art institutes. In 1946–7 he studied at the Académie de la Grande Chaumière in Paris. He emigrated to Argentina in 1950 and to the United States in 1963. Denysenko has decorated the interior walls and the iconostases of churches in Argentina (cathedral in La Rioja), Brazil, the United States (in Troy, Detroit, Syracuse), and Canada. He has also done numerous portraits, historical paintings such as *Khmelnysky Approaching Lviv* and *The Christening of Ukraine*, as well as sculptures, graphic works, and book illustrations. Exhibits of his work have been held in Ukraine, Austria, and South and North America. Denysenko paints in the monumentalist style introduced by M. Boichuk, which integrates tradition with modernism. His works are usually signed I. Denys.

Denysiuk, Mykola [Denysjuk], b 23 December 1915 in Hvizdets, Kolomyia county, Galicia, d 27 July 1976 in Chicago. Publisher, cultural and community figure. Denysiuk worked for Ukrainske Vydavnytstvo publishers in Cracow during the Second World War. From 1949 to 1955 he owned a publishing house in Buenos Aires, editing and publishing the monthly journal *Ovyd* and a series of literary, theatrical, and historical publications. In 1957 the publishing concern was transferred to Chicago, where Denysiuk continued to publish *Ovyd*. The books issued by Denysiuk included the republication of the complete works of T. Shevchenko (14 vols) and B. Lepky's Mazepa trilogy (6 vols). After his death the publishing concern and a bookstore owned by Denysiuk were taken over by the religious publishing house Stavropigiia. Denysiuk was also active in Ukrainian Catholic life, especially in the lay movement for the creation of a Ukrainian Catholic patriarchate.

Derazhnia [Deražnja]. IV-8. Town smt (1978 pop 8,700), raion center in Khmelnytskyi oblast; situated in eastern Podilia on the Vovk River, a tributary of the Boh. The town was first mentioned in documents of the early 16th century. In 1798 it became a part of Liatychiv (Letychiv) county, Podilia gubernia. There is a food industry, a chemical plant, and a brick factory in the town.

Mykhailo Derehus

Derehus, Mykhailo, b 5 December 1904 in the village of Vesele in Kharkiv gubernia. Painter, graphic artist. Derehus graduated from the Kharkiv Art Institute and then

lectured there in 1932–41 and in 1944–50. Since 1958 he has been a corresponding member of the USSR Academy of Arts. Derehus, who matured in a period of experimentation in the 1920s, has tried various techniques and has dealt with different themes. He was criticized for his expressionistic lithographs in the 1936 edition of I. Kotliarevsky's *Eneida* (The Aeneid) and for the 'nationalism' of a series of his works dedicated to B. Khmelnytsky. Eventually, Derehus conformed to the officially approved way of treating the history of Ukraine and became one of the officials of the Union of Artists of Ukraine. The following paintings are among his best-known works: *The Rest* (1932), *The Trypilia Tragedy* (1935), the cycle *The Khmelnytsky Period* (1945), *Taras Bulba Leading the Host* (1955), the triptych *Duma about Cossack Holota* (1960), *The Idler* (1961), and the triptych *Stepes* (1977). Among his graphic works the following are well known: *Kateryna* (1936–8); the cycles *Along the Roads of Ukraine* (1940–1), *On the Paths of War* (1943), and *Ukrainian Folk Dumas and Historical Songs* (1947–58); illustrations to the works of I. Kotliarevsky, N. Gogol, Lesia Ukrainka (*Lisova pisnia* [Forest Song], 1950), Marko Vovchok (1958), and N. Rybak's *Pereiaslavs'ka rada* (The Council of Pereiaslav, 1948–53).

Verba, I. M. *Derehus. Oforty* (Kiev 1971)

Derevlianians (Derevliany, Drevliany). East Slavic tribe that inhabited Polisia and Right-Bank Ukrainian territory along the Prypiat, Teterev, Sluch, and Horyn rivers from the 6th to the 12th century AD. The Derevlianians' largest town and the center of their land was Iskorosten (Korosten). In 884 Prince Oleh of Kiev conquered the Derevlianians, but after his death in 912 they threw off Kiev's authority. Prince Ihor reconquered them in 914 but recognized the autonomy of the Derevlianian princes. In 945, when Ihor made a new attempt to collect tribute, the Derevlianians rose in revolt and killed him. A year later Princess Olha crushed the revolt, which was led by Prince Mal, and annulled their autonomy. The last mention of the Derevlianians in the chronicles occurs in an entry for the year 1136. The major occupations of the Derevlianians were agriculture, cattle and horse raising, and metalworking.

Derhachi [Derhač], known until 1943 as Derkachi. III-17. City (1976 pop 24,800), raion center in Kharkiv oblast; situated on the Lopan River, a tributary of the Donets. There is a turbocompressor plant and a clothes factory in the town.

Derkach, Heorhii [Derkač, Heorhij] (pseudonym of Liubymov), b 23 March 1846 in Katerynoslav, d 24 June 1900 in Tomsk, Siberia. Comic actor and entrepreneur of a Russian-Ukrainian troupe. At the end of the 1860s he toured Ukraine, Siberia, the Crimea and Caucasia, and Central Asia. In 1893–4 his troupe appeared in France (Paris, Bordeaux, Marseille). Some of Derkach's best performances were as Shelmenko in H. Kvitka-Osnovianenko's *Shel'menko denshchyk* (Shelmenko the Batman), Karas in S. Hulak-Artemovsky's *Zaporozhets' za Dunaieim* (Zaporozhian Cossack beyond the Danube), and Vyborny in I. Kotliarevsky's *Natalka Poltavka* (Natalka from Poltava).

Derkach, Hryhorii [Derkač, Hryhorij], b 26 March 1932 in the village of Vyshneve, Zaporizhia oblast, d 7 September 1969 in Kiev. Chemist, from 1967 corresponding member of the Academy of Sciences of the Ukrainian SSR. Derkach graduated in 1954 from the Dnipropetrovske Metallurgical Institute, and in 1957 he began to work at the Institute of Organic Chemistry of the Academy of Sciences of the Ukrainian SSR. His most important scientific research deals with the chemistry of organic isocyanates. He synthesized new kinds of organic derivatives of trivalent and pentavalent phosphorus.

Derkach, Vasyl [Derkač, Vasyl'], b 21 December 1894 in Korsun, Katerynoslav gubernia, d 25 May 1973 in Kharkiv. Microbiologist. Derkach became a professor at the Kharkiv Medical Institute in 1932, producing studies on chemical biotherapy, infectious diseases, and malignant tumors.

Derkachov (Derkach), Illia [Derkačov (Derkač), Illja], b 1834 in the Kherson region, d 8 November 1916. Pedagogue and children's writer. Derkachov taught in Ukraine in the 1860s and 1870s. He wrote manuals and books for children, including *Ukraïns'ka hramatka* (Ukrainian Grammar, 1861) for Ukrainian schools.

Derkul River. A left-bank tributary of the lower Donets, 160 km in length and with a basin area of 5,325 sq km. Its flow is even and languid. The river is not navigable. At its junction with the Donets the most easterly Paleolithic settlement of the *Mousterian culture in Ukraine was discovered by P. Yefymenko. Further excavations were conducted in 1930, 1933, and 1963.

Derman Monastery

Derman Monastery. Established in the 15th century near Dubno by Prince K.I. Ostrozky. In 1602 his son, K.K. *Ostrozky, granted the monastery a statute of communal life, making I. Boryskovych hegumen, and endowed it with a press, which was directed by D. Nalyvaiko. Among the more important publications of the press were *Oktoikh, syrigh Osmohlasnyk* (Octoechos, or Book of the Eight Modes, 1603–4) and polemical works such as 'Lyst Meletiiia ... patriarkha aleksandriis'koho do ... Ipatiiia Potiia' (The Letter of Meletii ... the Patriarch of Alexandria to ... Ipatii Potii, 1605) and 'Diialoh ... o pravoslavnoi ... viri' (Dialogue ... on the Orthodox ... Faith, 1605). The monastery's archive and book collection contained valuable materials from the 15th to 17th century. The Derman Monastery had two branch monasteries. It was governed

by archimandrites (from 1627 to 1631 by Archbishop M. Smotrytsky), and later by archpriests. The Uniate Basilian monastic order had control of the monastery from 1628 to 1840, when it was returned to the Orthodox church. In 1914 there were only 16 monks at the monastery. Until 1920 a religion teachers' seminary was in operation in Derman; later an eparchial girls' school was opened, which was eventually converted into a private Ukrainian gymnasium. The Derman Monastery was closed by the Soviet authorities.

Derzhavets (governor) (also *namisnyk-derzhavets* [vice-governor]; later *starosta-derzhavets* [county head]). Local administrative official in the Grand Duchy of Lithuania. The *derzhavets* fulfilled public administrative and judicial functions as well as private ones (administration of princes' estates). His jurisdiction extended to an area the size of the later *starostvo* (county), also known as *derzhava* (state). The *derzhavets* was subordinate to the *voivode. The term *derzhavets* was also applied to members of the Cossack general and regimental staffs who held landed property because of their rank; it was later extended to all large landowners.

Derzhavna varta. See National Guard.

Volodymyr Derzhavyn

Derzhavyn, Volodymyr [Deržavyn], b 1899 in St Petersburg, d 1964 in Augsburg, Germany. Literary scholar and critic who worked also in general and comparative linguistics, classical philology, and Oriental studies. In 1940 Derzhavyn became a professor at the University of Kharkiv and in 1946 a professor at the Ukrainian Free University in Munich. He was a full member of the Shevchenko Scientific Society. He studied the poetics of Western European and Ukrainian neo-classicism and the so-called Prague school from the viewpoint of pure estheticism, and translated classical Latin and Greek, German, French, and English poetry. Among his works are the following articles: 'Liryka i humor u Shevchenkovomu Zhurnali' (Lyricism and Humor in Shevchenko's Journal), *Shevchenko* (collection, 1928); 'O russkom literaturnom iazyke G.F. Kvitki-Osnovianenko' (On the Russian Literary Language of H.F. Kvitka-Osnovianenko), *Kvitka-Osnovianenko* (collection, 1929); 'Problema kliasytysyizmu ta systematyky literaturnykh styliv' (The Problem of Classicism and Systematics of Literary Styles), *MUR II* (collection, 1946); 'Poeziia M. Zerova i ukrains'kyi kliasytysizm' (The Poetry of M. Zerov and Ukrainian Classicism) in M. Zerov's *Sonnetarium* (1948); *Gelb und Blau. Moderne ukrainische Dichtung in*

Auswahl (1948). Derzhavyn's literary wit and intellectual acerbity have been captured in a posthumous collection, *Aforyzmy* (Aphorisms, 1966).

Desheva Knyzhka (Inexpensive Book). Publishing firm in Lviv in 1935–9, also known as the Publishing Center for Assisting Mass Education. Among its publications were popular historical and political brochures of the Desheva Knyzhka series, issued every two weeks (1935–9) in runs of 9,000–15,000; the monthly **Samoosvitnyk* (1935–9; after issue 9, a semimonthly) in a run of 18,000–22,000; the monthly *Molodniak* (1937–9); the political paper *Het' z bol'shevyzomom* (1938), edited by I. Mitringa; the drama series *Nova stsena* (1937–8), edited by V. Kovalchuk; the monthly *Mali druzi* (1936–7); and the almanacs *Kalendari molodoho ukrainitsia*. The publisher was V. Kunanets; the editor was R. Paladiichuk.

Desiatskyi or **desiatnyk**. An office of local government in Ukraine during the Princely era. The *desiatskyi* was in charge of a *desiatka* (a group of either ten men or ten households), the smallest military-administrative unit, and his functions were mainly those of a policeman. The name *desiatskyi* was still used in the Lithuanian-Ruthenian period to designate an assistant village bailiff. In tsarist Russia a *desiatskyi* was the lowest officer in the village commune. In the Ukrainian Galician Army a *desiatnyk* was a non-commissioned officer of the second rank.

Desiatyna. See Tithe.

Desiatynna Church. See Tithes, Church of the.

Desiatynshchyks. Peasants in southern Ukraine who rented land from large landowners during the late-18th and 19th century in return for one-tenth of the harvest. Both the landowners and the Russian government were interested in the rapid colonization of southern Ukraine; accordingly, they leased land for a comparatively low rent in kind. The transfer to peasants of ownership of the land worked by them (by means of redemption payments) was accomplished only in the final decades before the First World War.

Desman (*Desmana moschata*; Ukrainian: *khokhulia*). Oldest insectivorous mammal in Ukraine. It has a body length of up to 23 cm (35 cm including the tail) and a weight of up to 500 g. The desman is prized for its fur. Its habitat in Ukraine is the Donets-Don basin. It is protected as a rare species.

Desna River. A left-bank tributary of the upper Boh River, with a length of 81 km and a basin area of 1,400 sq km.

Desna River. The longest tributary of the Dnieper River, joining it on the left side 6 km above Kiev. Its length is 1,130 km (591 of which lie within the Ukrainian SSR), and its basin covers 88,900 sq km. The Desna originates in the Smolensk region and flows through a low and swampy valley past Briansk, where the right bank rises considerably. After its confluence with the Seim, the river abruptly widens, splitting into numerous branches. The right bank declines again below Chernihiv, and below

Oster the Desna continues its course through a low, muddy plain until it reaches the Dnieper. In Ukraine the width of the river ranges from 60 to 250 m; its average depth is 3 m. The mean annual discharge at its mouth is 360 cu m/sec. The Desna freezes over from early December to early April. Its main tributaries on the right bank are the **Sudost* and **Snov*, and on the left bank, the **Seim* and **Oster*. The river is navigable from Novhorod-Siverskyi to its mouth (535 km). On the Desna are located several cities: Oster, Chernihiv, Novhorod-Siverskyi, Trubchevsk, Briansk, and Zhukovka.

Desniak, Oleksa [Desnjak] (real surname: Rudenko), b 27 March 1909 in Bondarivka in the Chernihiv region, d 25 May 1942. Writer and journalist. Until 1938 Desniak worked on the Chernihiv paper *Bil'shovyk*. In 1940–1 he was head of the Lviv branch of the Writers' Union of Ukraine and editor of the journal *Literatura i mystetstvo*. He died at the German-Soviet front near Kharkiv. Desniak is known for his popular novels on the civil war in Ukraine: *Desnu pereishly batal'iony* (The Battalions Crossed the Desna, 1937) and *Polk Tymofii Cherniaka* (Tymofii Cherniak's Regiment, 1938); and on the civil war in Kazakhstan: *Turhais'kyi sokil* (The Turhai Falcon, 1940). His *Udai-rika* (The Udai River, 1938) deals with life on a collective farm. Besides novels he wrote a number of short stories, sketches, and articles about the heroes of the civil war and the Second World War. A collection of his works was published in two volumes in 1955.

Desniak, Vasyl [Desnjak] (pseudonym of Vasylenko), b 1897 in the Kiev region. Marxist critic and Soviet publicist active in the 1920s and 1930s. Desniak was a member of the Communist Party (Bolshevik) of Ukraine. He was a writer and editor of several journals and newspapers in Kiev and Kharkiv. In the early 1930s he was the editor of the journal *Krytyka*. He wrote articles on Marxist methodology in literature and on Lesia Ukrainka, V. Vynnychenko, O. Kobylanska, and other authors. He was exiled in the 1930s; his fate is unknown.

Desnians'ka pravda (Truth of the Desna). Oblast newspaper, organ of the Chernihiv oblast committee and city committee of the Communist Party of Ukraine and of the local soviets of workers' deputies. It began publication in August 1917 as a Russian-language periodical, appearing initially as *Golos truda*, and later under various titles. Since 1925 it has been published in Ukrainian, first as *Chervonyi stiah*, from 1932 as *Bil'shovyk*, and since 1944 under its current title. The newspaper appears five times a week.

Desnytsky, Semen [Desnyc'kyj], b ca 1740 in Nizhen; d 15 June 1789 in Moscow. A jurist, philosopher, and man of the Enlightenment. Desnytsky studied at Moscow University and received his doctorate in 1767 in Glasgow, Scotland. From 1767 to 1787 he was professor of law at Moscow University. He argued the need for reform in the Russian political and judicial systems. Desnytsky's sociological and legal views were progressive for his time: he saw private ownership as an advanced form of historical development and trade as an advanced stage of economic activity. Desnytsky was the author of a commentary on English laws (3 vols, 1786–9). His works were published in *Izbrannye proizvedeniia russkikh myslitelei vtoroi pol. xviii*

v. (Collected Works of Russian Thinkers of the Second Half of the 18th Century, 1952).

Detroit. Metropolis in the northern state of Michigan in the USA, center of the American automobile industry. In 1980 the population of Detroit proper was 1,203,339, while that of the metropolitan area was 4,227,762, including about 25,000 Ukrainians. The first Ukrainian family known to have settled in Detroit arrived in 1895. Large numbers of Ukrainians settled in Detroit in the early 1900s, in the 1920s, and after 1949. Most Ukrainians worked in the automobile plants and lived until recently in Hamtramck, which was settled mostly by Poles. The first Ukrainian church in Detroit – now the Orthodox Cathedral of the Holy Protectress – was built in 1901. Two more Orthodox churches exist in the city. There are two Ukrainian Catholic churches: St John's Church (1907) and the Church of the Immaculate Conception in Hamtramck (1914, relocated and rebuilt 1942–50). Both parishes have day schools, and the latter also maintains a high school (est 1959). Three parishes were established in the suburbs after the Second World War; St Josaphat's in Warren (1958), which now has a large Ukrainian community, is the most important of these. There are also two Carpatho-Ruthenian Byzantine-Catholic churches, one Ukrainian Baptist church, and one Reformed Evangelical church.

Detroit is an important center of Ukrainian social and cultural life in the Midwest. Before the First World War Ukrainians had their own socialist and workers' organizations and newspapers. M. Sichynsky, the editor of the newspaper *Robitnyk*, lived in Detroit. In the interwar period the Ukrainian Hetmanite organization of the USA was also active there. The postwar immigrants founded many new political organizations in Detroit. In 1980 there were about 30 Ukrainian associations and institutions in the city, the more important of which were the Ukrainian American Center (founded in 1929); the Ukrainian League of Michigan (established in 1930); the Ukrainian National Home (1937); the Ukrainian Cultural Club; the Ukrainian Cultural Center; two credit unions – Self-Reliance and Buduchnist; as well as a number of insurance firms, women's organizations, veterans' and professional associations, and youth organizations. Three summer camps – Dibrova, Kyiv, and the resort of the parish of the Immaculate Conception – provide recreational and educational facilities. Since the 1950s Detroit has been the home of the Shevchenko Bandurist Chorus, the Trembita Choir, the eko Art Gallery, and the Ukrainian National Archive-Museum. The weeklies *Ukraïns'kyi prometei* (1951–9) and *Ukraïns'ki visti* (1978–) and the monthlies *Ditroïts'ki novyny* (1967–) and *Lys Mykyta* (a magazine of humor and satire, 1951–) have been published there. Since 1975 the editorial office of *Likars'kyi visnyk* has been located in Detroit.

Some of the memorable events in the life of Detroit's Ukrainian community were the large exhibit of Ukrainian émigré art in 1960 at Wayne State University, in which 77 artists took part and which included four concerts of Ukrainian music, and the two visits by Archbishop Major Y. Slipy in 1968 and 1973. M. Beck, a Ukrainian, was president of the municipal council for many years. The Orthodox archbishop V. Malets resided in Detroit. The painters E. Kozak and M. Dmytrenko and the pianist B. Maksymovych work there.

Detsyk (also known as Datsko Vasylovych) [Decyk, (Dacko Vasyľ'ovyč)]. Cossack leader, colonel of the Ovruch Regiment. Detsyk participated in the anti-Polish rebellion of 1664–5 and strove to have Right-Bank and Left-Bank Ukraine united. He started the rebellion in Polisia, capturing Chornobyl, Dymier, Byshiv, Motovylyvka, and Khvastiv from the Poles. Detsyk's attempt to organize a revolt against Hetman I. Briukhovetsky in 1666 proved unsuccessful. He was arrested in Pereiaslav and taken to Moscow. From there he was sent into exile in Siberia.

Volodymyr Detsykevych

Detsykevych, Volodymyr [Decykevych], 1865–1946. Galician civic leader, chief of the Galician department at the Ministry of Internal Affairs in Vienna from 1906 to 1916. In 1916–18 he was the vice-president of the vicegerency in Lviv, and on 1 November 1918 the last Austrian vicegerent of Galicia, General K. Huyn, transferred his powers to Detsykevych. In 1928–38 he was a representative from the Ukrainian National Democratic Alliance to the Polish senate. In 1921–5 he headed the Board of Trustees of Higher Ukrainian Schools in Lviv and served as professor of administrative law at the Lviv (Underground) Ukrainian University. In 1927–32 he was president of the Society of Friends of Education and in 1930–9 the head of the trustees of the Ukrainian National Museum (now the Lviv State Museum of Ukrainian Art).

Deutsche Arbeitsfront (DAF). See German Labor Front.

Deutsche-Ukrainische Zeitung. Semiofficial organ of the Reichskommissariat Ukraine, published between 1942 and 1944 in Lutske, initially with short notices in Ukrainian, but later strictly in German.

Deutsch-Gabel (now Jablonné v Podještědí). Town in northern Czechoslovakia. Between May 1919 and October 1921 Deutsch-Gabel was the largest internment camp in Czechoslovakia for soldiers of the Ukrainian Galician Army (the *Mountain Brigade and some units of the *Sambir Brigade). The internees formed a separate Ukrainian Brigade of about 80 officers and 5,000 soldiers, commanded at first by Col A. Varyvoda and later, from October 1920, by Gen V. Kurmanovych. Military discipline and training were maintained. The internees were

provided with a demanding cultural-educational program that included various courses: gymnasium (100 graduates), seminary (15 graduates), commercial (39 graduates), trades, and co-operative training. A library, an archive, choirs, a drama group, and a marching band were established. At the end of 1920 the internees began to publish the semimonthly *Ukraïns'kyi strilets*. In October 1921 the brigade was disbanded, and its cadres were transferred to *Josefov.

Deutsch-Ukrainische Gesellschaft. See German-Ukrainian Society.

Devdiuk, Vasyl [Devdjuk, Vasyl'], b 16 June 1873 in Kosiv, Galicia, d there 3 May 1951. Folk artist, master of braziery, wood carving, woodburning, incrustation in wood, and engraving on metal. He studied with the masters Yu. Shkrybliak and N. Dudchak. Devdiuk was the first to introduce intarsia, employing multicolored wood and incrustation with metal, mother-of-pearl, and pearl. From 1905 to 1918 Devdiuk taught at the school of wood carving in Vyzhnytsia. His work is preserved in museums in Lviv, Kosiv, and Kolomyia.

Devheniive diianiie (The Deeds of Digenis). A long colorful narrative about the deeds and loves of Digenis Akritas that was translated into Old Church Slavonic in the Princely era and had an influence on the development of Kievan Rus' literature. The translation was done, according to scholars, not later than the 12th–13th century directly from a 10th-century Greek text of a Byzantine epic about the wars between the Greeks and the Saracens that was subsequently lost. The oldest known complete version dates back to the early 16th century and was found in the same collection as the epic *Slovo o polku Ihorevi* (Tale of Ihor's Campaign), which perished in a fire in 1812. Three translations that remain are incomplete.

Devrome, Christine Tatiana (birth name: Baran), b 1 April 1942 in Peremyshliany, Galicia. Community leader. A career and educational counselor, Devrome was a member of the board of governors of the University of Saskatchewan, Saskatoon (1976–9) and its first chairwoman (1979–82). She was the executive director of the Saskatchewan Council of the Ukrainian Canadian Committee (1979–81) and the first woman president of the Ukrainian Professional and Business Club in Saskatoon (1977–8). She is a board member of the Canadian Foundation for Ukrainian Studies and of the Canadian Human Rights Foundation.

Dezsó, László, b 26 October 1927 in Buda, Hungary. Hungarian Slavist, linguist. Dezsó graduated from Budapest University and has served as a professor at Debrecen University since 1972. His works deal with the history of the Ukrainian language and Transcarpathian dialectology. They include *A Kárpátaljai hivatalos írásbeliség emlékei: úrbéeri feljegyzések* (Monuments of Official Writing in Transcarpathia: Serf Records, 1965) and *Ocherki po istorii zakarpatskikh govovorov* (Essays on the History of Transcarpathian Dialects, 1967). He has also published materials for a dictionary of Transcarpathian literature in the 16th–17th centuries (1965).

Diachenko, Dmytro [Djačenko], b 14 August 1887 in Tahanrih, d 21 May 1942. Architect, graduate of the Civil Engineering Institute in St Petersburg (1915). Diachenko was a co-founder, professor, and first rector of the Institute of Architecture in Kiev (1918–22). Then he held prominent positions in other schools and planning agencies. Diachenko designed and built schools in the Poltava region, a hospital in Lubni (1914–15), the Historical-Archeological Museum in Kamianets-Podilskyi (1915), the complex of the Academy of Agricultural Sciences of the Ukrainian SSR in Holosiievo (1923–30), the main building of the Civic Engineering Institute in Kiev (1936–7), and other buildings. He edited and published an album of typical projects entitled *Budova sela* (Construction of Villages, 1926, 1930). Diachenko propagated a Ukrainian architectural style based on the baroque and on folk motifs. In the 1930s there was wide public discussion of this style, and Diachenko was accused of being a reactionary. He was repressed during the Stalin terror and died in exile in Siberia.

Diachenko, Mykyta [Djačenko], b 26 September 1809 in Yachnyky, Poltava gubernia, d 21 April 1877 in Kiev. Mathematician. Diachenko graduated from Kharkiv University in 1829 and in 1832 began to lecture there. In 1839 he was appointed professor at Kiev University. His main works deal with mathematical analysis and its applications.

Diachuk, Wasyl [Djačuk, Vasyl'], b 8 October 1929 in Vegreville, Alberta. Politician. A trustee on the Edmonton Separate (Catholic) School Board from 1962 to 1971, Diachuk was elected to the Alberta legislature in 1971, representing the constituency of Edmonton Beverly for the Progressive Conservative party. After serving as deputy speaker, in 1979 he was appointed minister responsible for workers' health, safety, and compensation. Diachuk has been active in St Basil's Ukrainian Catholic parish and the Ukrainian Professional and Business Club in Edmonton.

Diadchenko, Hryhorii [Djadčenko, Hryhorij], b 7 October 1869 in Kyrylivka, Kiev gubernia, d there 25 May 1921. Painter. Diadchenko graduated from the Kiev Drawing School of M. Murashko in 1889 and joined its staff. In 1889–94 he studied at the St Petersburg Academy of Arts. His realistic works incorporated elements of impressionism. He painted Ukrainian landscapes, such as *Meeting of Sunbeams*, *Evening on the Dnieper*, *Kiev: View of Podil*, and the series *Village of Kyrylivka*; and psychological portraits, including *F. Krasysky* (1884), *Head of a Little Girl* (1892), *Herasym the Lirnyk* (1885), and *F. Balavensky* (1907). Diadchenko's work is preserved in the museums of Kiev, Lviv, Poltava, and Kharkiv.

Diadchenko, Maryna [Djadčenko], b 13 August 1911 in Kiev. Geologist and mineralogist. Diadchenko worked in the Ukrainian Geological Administration in 1936–41, and since 1943 in the Institute of Geological Sciences of the Academy of Sciences of the Ukrainian SSR. Her principal works deal with the mineralogy of sedimentary deposits and the distribution and composition of titanium and rare-metal deposits.

Diadiusha, Serhii [Djadjuša, Serhij], b 26 August 1870, d 23 May 1933 in Kalisz, Poland. Staff commander of the Russian Imperial Sixth Army until the Russian Revolution; lieutenant general in the Army of the UNR. In the UNR army Diadiusha was commander of the Volhynian Corps, then of the Kherson Group, and lieutenant commander of the general staff.

Diadychenko, Vadym [Djadyčenko], b 30 May 1909 in Chernihiv. Historian, research associate of the Institute of History of the Academy of Sciences of the Ukrainian SSR, and, since 1948, chairman of its department of feudal history. In 1962 he became a professor of the history of Ukraine at Kiev University. He has published works on the Mazepa period, particularly on S. Palii. He is the author of *Narysy suspil'no-politychnoho ustroiu Livoberezhnoi Ukrainy kintsia XVI–pochatku XVIII st.* (Studies of the Sociopolitical Structure of Left-Bank Ukraine at the End of the 17th and the Beginning of the 18th Century, 1959). He also co-authored *Dopomizhni istorychni dystsypliny* (Auxiliary Historical Disciplines, 1963) and *Istoriia selianstva URSR* (A History of the Peasantry of the Ukrainian SSR, 1967), and co-edited *Istoriia Ukrain'skoi RSR* (History of the Ukrainian SSR, vol 1, 1953).

Vasyl Diadnyuk, *Prince Roman of Galicia*, tempera, 1933

Diadnyuk, Vasyl [Djadynjuk, Vasyl'], b 1 January 1900 in Luchyntsi, Podilia gubernia, d 21 January 1944 in Vienna. Painter specializing in portraits, graphic work, and iconography. Diadnyuk studied at the O. Novakivsky School of Art in Lviv. He was commissioned by Metropolitan A. Sheptytsky to copy portraits of Ukrainian church hierarchs of the 17th and 18th century at the Basilian monastery in Vilnius, and later in Rome and Florence. In 1931–2 he painted series of historical portraits of the Princely and Cossack eras (now in the J. Makohin Collection at the Ukrainian Institute of America in New York). He also decorated churches in a modernized Byzantine style: in particular, he completed murals begun by P. Kholodny, Sr, in the Dormition Church in Lviv. His work was exhibited in Paris, Lviv, and Warsaw.

Diak. See Precentor.

Diakiv, Osyp. See Hornovy, Osyp.

Diakiv, Petro [Djakiv], b 17 October 1879 in Nakvasa, Brody county, Galicia, d ? Stage designer of the Ruska Besida theater in Lviv in 1906–9 and of M. Sadovsky's

theater in Kiev in 1909–12, where he designed the sets for M. Lysenko's *Eneida* (The Aeneid) and I. Franko's *Ukradene shchastia* (Stolen Happiness).

Diakivs'ki vidomosti (Precentors' News; originally called *Diakiv'ski visti*). A monthly magazine of the Precentors' Mutual-Aid Society in Lviv. It was published in Lviv from 1923 to 1939 under the editorship of R. Kryshchalsky (1923–5) and Ya. Kharyna (1926–39).

Diaklo. A tax or rent paid in money or farm products (grain, cattle, food) that was required of the peasant subjects of the Grand Duchy of Lithuania for the upkeep of the princely court. Beginning in the 16th century *diaklo* was paid to landowners as well.

Dialecticisms (phonetic, morphological, syntactic, and lexical). These found their way into nearly every text written during the Old and Middle Ukrainian periods, but only to a limited extent, because writers of those days generally strove to reproduce a language close to Church Slavonic. Dialecticisms were used freely only in such genres as interludes, facetious songs, and the like. In the 18th century, with the elimination of Church Slavonic from secular literature, writing proceeded essentially in local dialects – for example, those of the Poltava region (I. Kotliarevsky), the Kharkiv region (H. Kvitka, who emphasized by his choice of a pen name – Osnovianenko – that he wrote in the dialect of Osnova, a suburb of Kharkiv), the Dniester region (M. Shashkevych), and the Boiko region (M. Ustyianovych). This situation changed with the work of T. Shevchenko, who introduced the notion of an all-Ukrainian standard language. However, since there were no Ukrainian schools in Russian-ruled Ukraine and no large Ukrainian-speaking urban centers, the standard was loose in practice, and some dialecticisms, especially syntactic and lexical, are found in the writings of almost every writer up to the 1920s: Chernihivian (P. Kulish, P. Tychyna), Volhynian (Lesia Ukrainka), Poltavian (P. Myrny), Kharkovian (A. Teslenko, M. Khvylovy), south Kievan (I. Nechui-Levytsky), Podilian (S. Rudansky), Boiko (I. Franko), Donets (V. Sosiura), steppe (V. Vynnychenko), etc. This contributed to the enrichment of the vocabulary but was disadvantageous for the integrity of the standard language. The situation changed radically with the spread of education in Ukrainian after 1905, and especially after 1917, and also with the extension of Standard Ukrainian to the Western Ukrainian regions after 1945. Since that time dialecticisms have been used only occasionally, as a deliberate literary device of stylization. The stylistic approach was used for the first time in *Tini zabutykh predkiv* by M. Kotsiubynsky (1911) and in *Kaminna dusha* by H. Khotkevych (1911). Both stylize the Hutsul dialect.

G.Y. Shevelov

Dialectology. Active interest in and studies of Ukrainian dialects began in the early 19th century, during the period of romanticism and increasing interest in folk culture. Searching for a national language 'uncorrupted' by literary influence, the Romanticists (O. *Pavlovsky, M. *Luchkai, M. *Maksymovych, I. *Vahylevych, Ya. *Holovatsky, and others) turned to dialects, without taking into account the extremely localized nature of the material. In the second half of the 19th century the

neogrammarian school of linguistics, which based itself on the positivist world view, began to compare dialectal data with old literary documents to establish the genesis of dialects and languages (K. *Mykhalchuk, Ye. *Tymchenko). O. *Potebnia, O. *Ohonovsky, and others took a position between the romantics and the neogrammarians. The phonetic school, to a certain extent an offspring of the neogrammarian school, went to an extreme in the studies of O. Broch, O. Kurylo, and M. Yohansen: the slightest variants, often individual differences in pronunciation, were noted down. Such zeal for utterly exact phonetic transcription prevailed after the First World War, particularly among Western Ukrainian and Polish investigators of Ukrainian dialects.

Linguistic geography, founded by J. Gilliéron at the end of the 19th century, which denied the very notion of dialect as a unity and concentrated attention on the spatial distribution of words and word forms, found no followers among linguists who studied Ukrainian dialects, but it stimulated the mapping of dialectal phenomena and the preparation of dialect atlases. The first work of this type was P. *Buzuk's dialect geography of the Poltava region (1929). Cartographically, the most important works of later years were those by I. *Pankevych (on Transcarpathia, 1938), K. *Dejna (on the Ternopil region, 1957), V. *Vashchenko (on the Poltava region, 1957), Z. Stieber (on the Lemko region, 1956–64), Y. *Dzendzelivsky (on Transcarpathia, 1958–60), and S. *Bernshtein with others (on the Carpathian region, 1967). An all-Ukrainian atlas under the general guidance of F. *Zhylyko, conceived in three volumes, remains unpublished in the archives of the Institute of Linguistics of the Academy of Sciences of the Ukrainian SSR in Kiev and of the Institute of Social Sciences in Lviv (work on two volumes was completed between 1948 and 1969; work on the third was stopped in 1973).

The demand for the complex study of dialects as closed systems, prompted by the structuralist trend in linguistics (O. *Syniavsky, 1929), found almost no followers in Ukraine before 1940 because structuralism was proscribed in the USSR. In the 1930s and 1940s Soviet Ukrainian dialectologists were afraid to study archaic dialects and devoted most of their efforts to a dilettante enumeration of the influences (often only alleged) of the standard language on dialects (V. Danilov, I. Omelianenko, L. *Rak, and others). After the Second World War, however, structuralism made its way into Ukrainian dialectology – for example, in the studies of F. Zhylyko, T. Nazarova, and, most consistently and conspicuously, L. Kalnyn (*Opyt modelirovaniia systemy ukrainskogo dialektynogo iazyka* [An Attempt at Modeling a System for the Ukrainian Dialectal Language], 1973).

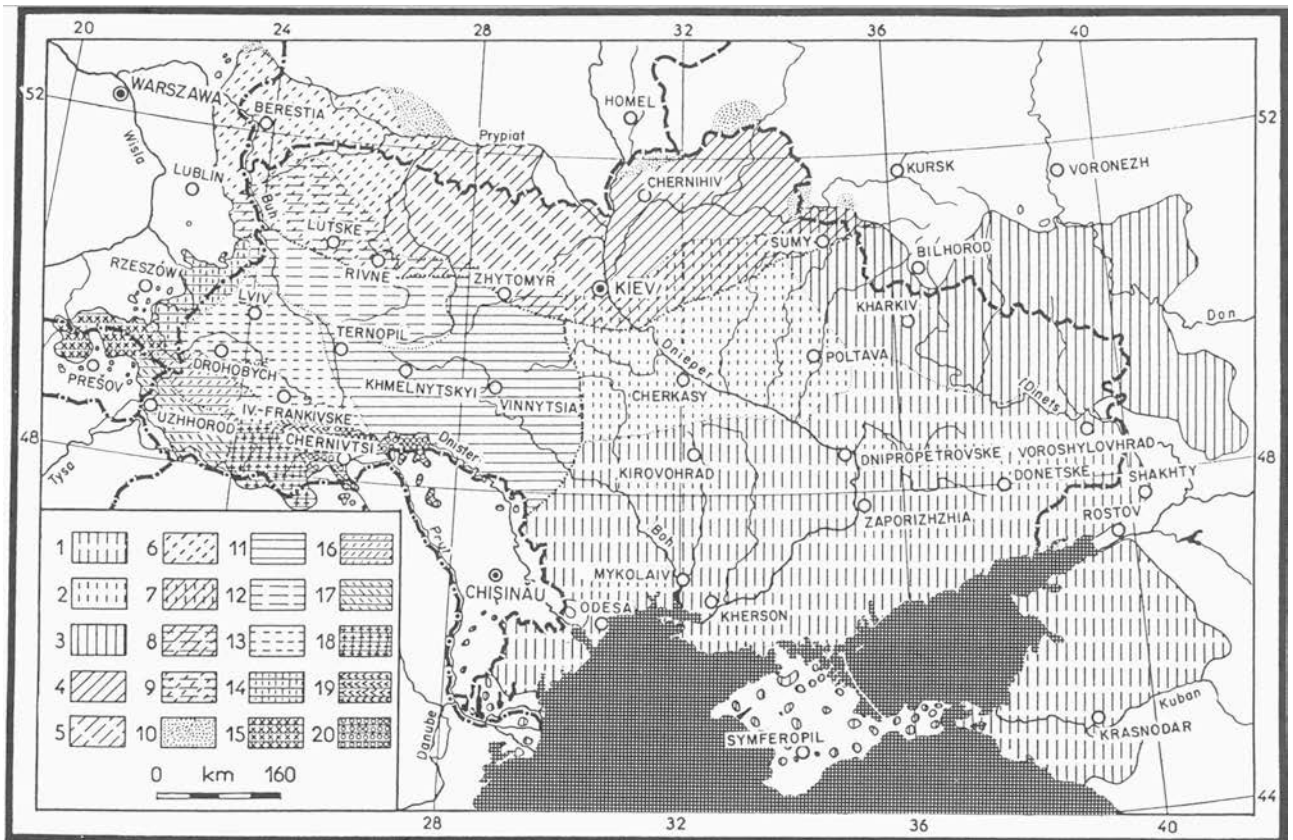

Starting in the late 19th century, the study of dialects gradually became concentrated in the departments of Ukrainian and/or Slavic philology at the universities of Lviv, Cracow, Lublin, Prague, and Kiev, and in national and local scientific institutions such as the Philological Section and the Ethnographic Commission of the Shevchenko Scientific Society, the Ukrainian Scientific Society in Kiev, the dialectological commission of the second division of the Russian Academy of Sciences (later the Moscow Institute of Slavic Studies), the dialectological commission of the All-Ukrainian Academy of Sciences, and eventually the Institute of Linguistics of the Academy of Sciences of the Ukrainian SSR.

The accumulation of data made possible attempts at the synthetic classification of Ukrainian dialects and the tracing of their historical roots. The first attempt of major significance was made by K. Mykhalchuk as early as 1877. His proposed classification of Ukrainian dialects into northern, southwestern, and southeastern (with further subdivisions) was disputed by A. *Sobolevsky (1892), N. *Durnovo (1915), and I. *Zilynsky (1916). After certain modifications it was successfully defended and developed by V. *Hantsov (1924) and subsequently accepted by Zilynsky (1933). It is generally accepted today. Virtually all questionnaires for collecting dialectal data were compiled on the basis of this classification, including those of Mykhalchuk and A. *Krymsky, and Mykhalchuk and Ye. Tymchenko, 1909; O. Syniavsky 1924, 1927; Tymchenko, 1925; M. *Nakonechny, 1941; and B. *Larin, 1948, 1949. The last was used as the basis for the all-Ukrainian atlas prepared in Kiev and Lviv.

By now hundreds of studies have been written on individual dialects, dialect groups, and particular features of various dialects. Some of them can be singled out as works of a synthetic character: those of P. Buzuk and V. Vashchenko on the Poltava region; of V. Hantsov, O. Kurylo, F. Zhylyko, and T. Nazarova on Polisia; of K. Dejna on Podilia; of J. Janów and B. *Kobyliansky on the Hutsul region; of I. Pankevych and Y. Dzendzelivsky on Transcarpathia; of M. *Pshapiurska and W. *Kuraszkiewicz on Podlachia and the Sian region. Besides traditional studies in phonology and word inflection, pioneering works in dialectal word formation (Ya. Zakrevska, 1976) and syntax (S. *Bevzenko et al.) have appeared. Among dialectal dictionaries the most important are those of Polisia by P. Lysenko (1974) and of the Boiko region by M. Onyshkevych (published only in parts in various symposiums). The most important general surveys of Ukrainian dialects are F. Zhylyko's *Narysy z dialektolohii ukrains'koi movy* (Essays on the Dialectology of the Ukrainian Language, 1955; 2nd edn, 1966) and Y. Dzendzelivsky's *Konspekt lektzii z kursu ukrains'koi dialektolohii* (Conspectus of Lectures for the Course in Ukrainian Dialectology, 1965, 1966). T. Nazarova edited *Hovory ukrain'skoi movy: Zbirnyk tekstiv* (Dialects of the Ukrainian Language: A Collection of Texts, 1977).

Dialects. Nowadays classified into two basic groups – the northern (Polisian) and the southern – between which there extends a wide belt of ‘transitional’ dialects, southern dialects on northern foundations (that is, historically northern dialects that were assimilated by southern dialects). The northern boundary of this transitional belt runs along the line Włodawa–Kamin Koshyrskyi–Stepan–Kiev–Nizhen–Hlukhiv; the southern, along the line Hrubeszów–Zhytomyr–Pereiaslav–Lubni–Romen–Sumy. The fundamental difference between the northern and southern dialectal groups lies in the role of accentuation in

the transmutation of the old vowels *ě*, *o*, and *e* to the *i* sound (*did* from *dědъ* [old man]; *dim* from *domъ* [house]; *lid* from *ledъ* [ice]). In the south this change occurred independently of the accent (*lis* – *lisý* [forest]; *dim* – *dimký*); in the north it took place only under the accent (*li's* – *lesý*; *müst*, *muost* – *mostki* [bridge]). The same applies to the vowel *a* from the Common Slavic *ę* (in the northern group, when accented – *'a*, *ja*: *z'at'* [son-in-law]; when unaccented – *e*: *zeti* [pl]). The northern dialectal group is subdivided into the following dialects: the east Polisian (east of the Dnieper), the central Polisian (between the Dnieper and the Horyn rivers), the west Polisian (between the Horyn River and the Buh and Lisna rivers), and the Podlachian. The main differences among them are the varying developments of diphthongs in place of *ě*, *o*, *e*; the appearance of *akan'e* in east Polisian and *džekan'e* and partially *ukan'e* in central Polisian; and/or morphological similarities with the southwestern dialects (in west Polisian). (See *Polisian dialects.)

The southern group of dialects is divided into two subgroups: the more uniform *southeastern dialects (central Dnieper, Slobidska Ukrainian, and steppe) and the *southwestern dialects, which are highly differentiated (the approximate boundary between the two is the line Khvastiv-Uman-Balta). The southwestern group is composed of the following dialects: *South Volhynian, *Podilian, *Dniester, *Sian, *Bukovyna-Pokutia, *Hutsul, *Boiko, *Middle Transcarpathian, and *Lemko. The differences among them lie in the preservation of a number of archaisms in the phonetic and word-inflection patterns of the final three (Carpathian) dialects, and in a number of phonetic and morphological innovations in the others. The development of various lexical and phraseological peculiarities in the Carpathian dialects was influenced by the conditions of mountain life, by ancient tribal differences, and by various foreign-language admixtures (Rumanian, Slovak, Hungarian, Polish, etc).

Historically, Ukrainian linguistic territory covered two groups of dialects: the northern and the southern. Their boundaries underwent considerable changes as a result of various migrations of the population: there were periodic waves of migration of the steppe inhabitants to the northwest in their flight from the nomadic Pecheneg, Cuman, and Tatar tribes (10th–13th century and 15th century) and their subsequent resettlement in the southeast (14th century, and 16th–19th century); smaller movements of colonization took place in Podlachia (to the north, 13th century), in the Carpathians (over the mountains to the west, 14th–15th century), in Transcarpathia (the Lemkos to the southeast, 18th century; the Hutsuls to the south, 17th–19th century).

After the Ukrainian literary language stabilized in the 19th century, the use of dialects came to characterize primarily the peasantry. But in the course of the 20th century, with the influence of the church, education, the press, and radio, elements of the literary language began, and continued increasingly, to penetrate even the language of the peasants. This process is most rapid in the areas of phonetics and morphology, slower in syntax and vocabulary; geographically, it is more rapid in suburban and industrial regions, especially among those groups of speakers who most frequently spend time outside the village (youth, men). The opposite influence – of dialects on the standard language – which was substantial as late as the 19th century, has become, since the 1930s–1940s, insignificant.

Systematic study of Ukrainian dialects in their entirety on a truly scholarly foundation was first undertaken by K. *Mykhalchuk, sometimes called 'the father of Ukrainian dialectology' (1877). This work was carried on by A. *Sobolevsky (1892), N. *Durnovo (Moscow Dialectological Commission, 1915), I. *Zilynsky (1916, 1933, and, posthumously, 1975), V. *Hantsov (1924), F. *Zhylko (1955), Y. *Dzendzelivsky (1965–6), and T. *Nazarova (1977). Mykhalchuk's tripartition of the Ukrainian dialects (see *Dialectology) was disputed by Sobolevsky and Durnovo, but, with minor specifications and modifications suggested by Hantsov, I. *Pankevych, and Zilynsky, it prevailed and is now generally accepted.

Since the early 20th century the collection of dialectal data has been performed on the basis of broadly discussed and published questionnaires, of which the most important were those of Mykhalchuk and A. *Krymsky (in Russian) and Mykhalchuk and Ye. *Tymchenko (in

Ukrainian, both 1909), O. *Syniavsky (1924, 1927), Tymchenko (1925), M. *Nakonechny (1941), and B. *Larin (1948, 1949).

In the area of compilation of dialectal atlases, some regional atlases were pioneering: Z. Stieber's *Atlas językowy dawnej Lemkowszczyzny* (Linguistic Atlas of the Ancient Lemko Region, 8 issues, 1956–64) and Y. Dzendzelivsky's *Linhwistychnyi atlas ukraïnskykh narodnykh hovoriv Zakarpats'koï oblasti URSR* (Linguistic Atlas of Ukrainian Folk Dialects of Transcarpathia Oblast, Ukrainian SSR, lexical only, 2 parts, 1958–60). The atlas of Ukrainian dialects in eastern Slovakia by V. Latta remains in manuscript, as does the three-volume all-Ukrainian atlas edited by F. Zhylko and completed by the early 1970s.

The compilation of dialectal dictionaries is underdeveloped in Ukrainian dialectology, as is, to an even greater extent, the publication of such dictionaries. The most important have been P. Lysenko's *Slovník polis'kykh hovoriv* (Dictionary of Polisian Dialects) and M. Onyshkevych's *Slovar' boikovskogo dialekta* (Dictionary of the Boiko Dialect; only letters **в** and **к** have been published [1966, 1972]). A Hutsul dictionary by J. Janów and a Transcarpathian one by I. Pankevych remain entirely in manuscript. There is no general dialectal dictionary, nor is one in preparation.

The methodology of dialectal studies and descriptions has changed substantially during the last century. From the early, impressionistic approach (eg, in descriptions by I. *Verkhratsky), dialectologists switched to a concentration on exhaustiveness and precision in phonetic description (eg, in works by O. *Broch, I. Zilynsky, and M. *Yohansen), which was typical of the 1930s and 1940s. The phonemic and structural approach manifested most clearly in studies by F. Zhylko and L. Kalnyn (1973). The linguistic-geographic school is most outspokenly represented in the studies of P. Buzuk, V. Vashchenko (both on the Poltava region), and I. Pankevych (1938, for Transcarpathia). Particularly original and influential in Ukrainian dialectology was what may be called the genetic school, which combined attention to features of a given dialect, elements of linguistic geography, and utilization of dialectal material in an attempt at the historical reconstruction of the origin of given dialects and the Ukrainian language as a whole. The founders of this trend were V. Hantsov and O. Kurylo; it was later joined by I. Zilynsky, W. Kuraszkiewicz, T. Nazarova, and others.

G.Y. Shevelov

Diatliv, Pavlo [Djatliv], b 13 February 1880 in Starodub, Chernihiv gubernia, d 1933. Community figure, journalist. Diatliv was a member of the Revolutionary Ukrainian party and later of the Ukrainian Social Democratic Workers' party. In 1907 he edited the illegal newspaper *Sotsial-Demokrat* in Poltava. In 1908 he emigrated to Austria. During the First World War he worked with the *Union for the Liberation of Ukraine (1914–17). Diatliv later transferred his allegiance to the Bolshevik cause and worked with a Communist publishing house in Vienna, returning to Ukraine in 1925. Arrested in the 1930s, he perished in prison.

Dibrova, Oleksii, b 25 February 1904 in Tupyshiv, Horodnia county, Chernihiv gubernia, d 21 January 1973 in Kiev. Geographer, lecturer in economic geography in the schools and institutes of higher education in Kiev. In

1959 he became a professor at Kiev University and director of its Geographic Research Institute. He is the author of various works on the economic geography of Ukraine, among them the textbooks *Heohrafiia URSR* (The Geography of the Ukrainian SSR, 1954) and *Ukrainskaia SSR* (The Ukrainian SSR, 1954).

Dictatorship of the Western Province of the Ukrainian National Republic. An emergency form of government headed by a dictator. Because of a critical situation in the *Western Province of the Ukrainian National Republic, the Ukrainian National Rada and the State Secretariat of the Western Province appointed Ye. *Petrushevych dictator on 9 June 1919, giving him 'the authority to exercise full military and civil power.' Petrushevych formed the Government of Plenipotentiaries (*Uriad Holovnouповnovazhenykh*) and the Military Chancellery. The appointed plenipotentiaries were S. Holubovych (internal affairs), S. Vytvytsky (foreign affairs), I. Myron (transport), and K. Dolezhal (director of the Military Chancellery). These appointments continued after the government's evacuation to Vienna in November 1919. On 25 July 1920 Petrushevych reorganized the government of the Western Province, forming four departments, each to be headed by a plenipotentiary. Besides these, the Military Chancellery and the Presidium Chancellery continued to function. On 1 August 1920 Petrushevych appointed the following officials to the government: S. Vytvytsky (foreign affairs), V. Singalevych (finance, trade, and industry), K. Levytsky (press and propaganda), O. Haninchak (internal affairs, judiciary, education, lands, post and telegraph, roads, and public works), Ya. Selezinka (director of the Military Chancellery), and L. Petrushevych (director of the Presidium Chancellery). During 1921 some plenipotentiaries were changed: K. Levytsky took over foreign affairs, O. Nazaruk took charge of press and propaganda, and R. Perfetsky became responsible for internal affairs. The dictatorship was dissolved in exile when the *Conference of Ambassadors decided in March 1923 that eastern Galicia should be incorporated into Poland.

Dictionaries. See Lexicography.

Didactic gospels (*uchytelni yevanheliia*). Collections of sermons for the whole year (usually beginning with the Sunday of the Pharisee Publican), based on the parables of the Gospels. The collections were usually handwritten. Their prototype was the Church Slavonic didactic gospel of Bishop Constantine of Preslav (894), based in turn on Greek excerpts from the Fathers of the Church. In Old Ukraine didactic gospels were less popular than anthologies, prologues, saints' lives, and other religious literature. Only the Church Slavonic translations (by 1407) of the didactic gospels of two Constantinople patriarchs – Callistus (1350–3, 1354–63) and Philotheus (1353–4, 1364–79) – gained some popularity and went through two printings (in Zabludiv, northern Podlachia, 1568–9, and in Krylos, near Halych, 1606). The patron of the Zabludiv edition, Hetman H. Khotkevych, wanted it 'translated into the common language to make it comprehensible to the common people,' but he was dissuaded from this by 'wise men,' for 'to translate old sayings into new language is not an insignificant mistake' (from the preface to the Zabludiv edition). This didactic gospel was

soon translated into vernacular Ukrainian, however, and was published in Vevis (Yeveie), near Vilnius, in 1616 (2nd edn, Kiev 1637), because its Church Slavonic text 'was useful only to the few who knew the Slavonic tongue,' and for this reason the readers often turned 'to the infectious learning published in heretical words and characters for the flocks' (from the preface).

The development of the didactic gospels in the 16th–18th century was marked by the strong influence of these 'heretical' sources, particularly by the postil of the Polish Calvinist M. *Rej (1557) and then by his opponent, the Polish Catholic J. Wujek (1573). The ban on Rej's work in Poland (1604) did not put an end to its success among Ukrainian readers, who were attracted by his simple, lively style and concern for the common folk. Of over 100 surviving didactic gospels from the 16th–18th century, more than 30 show signs of Rej's influence. The rest of the material was derived from Church Slavonic sources, including local ones such as *Cyril of Turiv, and was sometimes left untranslated. The Polish postils were modeled on the *Sermones* (1537) and *Homiliarum Centuria Prima* (1541) of J. Faber, the bishop of Vienna, who introduced a simple Latin style and practical examples into his sermons, and on the *Postillae* (1555) of the Dutch Dominican J. Ferus. The Ukrainian didactic gospels made use of the apocrypha (as did Wujek, but not Rej).

The translations of chapters from the Gospels into the ordinary language of the 16th–18th century are particularly important for the history of the Ukrainian language. (At that time neither the Orthodox nor the Uniate church allowed the use of a complete translation of the four Gospels.) Besides the didactic gospels already mentioned, the better-known didactic gospels were those from Trostianets (ca 1560) of Rev Andrii of Yaroslav (Lviv, 1585); from Skotarske – Svaliava (Transcarpathia, 1588, against Evangelicals); of Pochaiv Monastery (16th century); from Berezhnyi (Transcarpathia, 16th century); from Katerynoslav (1592); from Yazlovets (end of the 16th century); from Tryhiria (beginning of the 17th century); from Oravchuk, near Skole (beginning of the 17th century); the so-called *Ievanheliie vykladnoie* (Chovhany, near Zhydachiv, 1603); of I. Biloborodsky (Piatyhory, 1603); of K. *Stavrovetsky (printed in Rakhmaniv in Volhynia, 1619 and in Univ in the Peremyshl region, 1696, 1697); of Rev Lavrentii of PISOCHNA (1634); of Tymofii of VISOCHANY (Sianik region, 1635); of Rev I. Kapyshevsky (Ortutova, 1640) and from Ladomyrovo (17th century) (the last two came from the Prešov region and were copied from a common original); from Yasynykyv (Transcarpathia, of Galican origin, 1640); from Naditychi (1645); of Ya. Fliuka (mid-17th century); from Danylove (not later than 1646, anti-Protestant and anti-Catholic); of Rev Yavorsky and S. Rykhvalsky (Rykhvalt, 1666); of S. Plaviansky (1668); of Rev S. Tymofiiievych (Reshetylivka, 1670); of F. Dulyshkovych (1673); from Niahiv (17th century, with Protestant influences); from Uhlia ('Kliuch,' end of the 17th century); from Kaniv (late 17th century); of P. Kolochavsky (1737); of I. Pryslopsky (Kaminna, near Grybów, 18th century). The Krekhiv Apostol (late 16th century) is close to the didactic gospels. In the 18th century the didactic gospels were suppressed in Russian-ruled Ukraine because of the Russification policy. They were supplanted in Polish-ruled Ukraine shortly after because of Polonization and the decline of the Orthodox church. In 1789 the Uniate Basilian Fathers in Pochaiv began to publish collections of sermons for the

whole year (on new Polish models), which in their 'vernacular language' were reminiscent of the old didactic gospels. Many didactic gospels were preserved in Lviv at the libraries of the Shevchenko Scientific Society, the National Museum, and the People's Home (collection of A. Petrushevych), and in Peremyshl at the library of the Greek Catholic eparchy.

Didkovsky, Valentyn [Didkovs'kyj], b 6 February 1914 in the village of Kodnia, Volhynia gubernia. Geologist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1973. After graduating from Kiev University in 1938, Didkovsky began working in the Institute of Geological Sciences of the Academy of Sciences of the Ukrainian SSR and in 1971-7 was the institute's director. Didkovsky has written fundamental works on the stratigraphy of Paleogene and Neogene deposits in Ukraine. He has also studied the potential petroleum reserves of the Dnieper-Donets Depression.

Didur, Adam, b 24 December 1873 in Volia Senkova, Lisko county, Galicia, d 7 January 1946 in Katowice, Poland. Polish opera singer (bass) of Ukrainian descent. From 1895 to 1899 he was a soloist at La Scala, Milan; from 1908 to 1929 he sang with the Metropolitan Opera, New York. For a time during the 1930s he taught singing at the Music Institute of the Lysenko Music Society in Lviv. Among his students were I. Malaniuk, I. Pryima, T. Teren-Yuskiv, and Ye. Zarytska.

Didyk, Tamara, b 17 September 1935 in Lanivtsi, Kremianets county, Volhynia. Lyric and dramatic soprano. Didyk graduated from the Lviv Conservatory in 1960, becoming a soloist at the Lviv Opera and Ballet Theater. Her roles include Natalka in M. Lysenko's *Natalka Poltavka*, Oksana in S. Hulak-Artemovskiy's *Zaporozhets' za Dunaiem* (Zaporozhian Cossack beyond the Danube), Myroslava in B. Liatoshynskiy's *Zoloty obruch* (Golden Hoop), Halia in V. Kyreiko's *Nazar Stodolia*, and Yolante and Tatiana in P. Tchaikovsky's *Yolanthe and Eugene Onegin*.

Diet (Soim; Polish: Sejm). Legislative assembly of a national or provincial stature. The following states, which

included some part of Ukrainian territory, had a diet: the Grand Duchy of Lithuania, the Polish Commonwealth, Austria-Hungary, the Republic of Poland (1921-39), and Carpatho-Ukraine (1939).

In the Grand Duchy of Lithuania the Great Diet (Soim Velykyi Valnyi) as a central representative and estate institution was well established by the end of the 15th century, although it did not attain its final form as the body representing the nobility's interests until the Second Lithuanian Statute of 1566. Its powers were limited by the powers of the *Council of Lords and of the grand duke, and its main role was to approve legislation and state taxes.

After the Union of Lublin in 1569, the Great Diet of Lithuania and the Diet of Poland, which had existed since the 14th century, merged into one diet, the Sejm, for the whole Commonwealth of Poland and Lithuania. This diet became the highest legislative body. It consisted of the king, the senate, and the chamber of deputies, which had the decisive voice. The deputies to the chamber were elected at local *dietines of the nobility. The Sejm's adoption of the principle of unanimity, which eventually gave a single deputy the right to overrule the decision of the entire diet (liberum veto), led to a paralysis of the Polish diet and state in the 18th century. The ordinary diet convened biannually for six weeks in alternating cities - twice in Warsaw and then once in Hrodna. There also existed extraordinary diets: convocational diets (during an interregnum), elective diets (for electing a new king), coronational diets (in Cracow), and emergency diets (called by the king).

With the introduction of autonomy in the crown lands of Austria, provincial diets were established in Galicia and Bukovyna in 1861, and they functioned until 1918. Jurisdiction over educational, economic, and other affairs was transferred to them from the parliament in Vienna. Because of the *curial electoral system, the Ukrainian deputies had little influence in the provincial diets.

According to the constitution of 1921, the Polish chamber of deputies in the parliament was to be known as the Sejm (Diet). Its wide range of powers was reduced while the Senate's powers were increased after J. Pilsudski's coup d'état in May 1926 and again by the constitution of 1935. (See also *Parliament, *Diet of Carpatho-Ukraine.)

V. Markus

Diet, provincial (*kraiovyi soim*). Unicameral legislative body of an autonomous crown land in Austria-Hungary. Provincial diets were established in Lviv, Galicia and Chernivtsi, Bukovyna in 1861. Their legislative power was restricted to certain specified areas such as the provincial administration, budget, cultural affairs, public and vocational education, local economic affairs, social security, and health. The laws passed by the diets had to be approved by the emperor. The powers that were not mentioned in the provincial constitutions were reserved for the central parliament in Vienna.

Members of the Galician and Bukovynian diets were elected for six years according to the *curial electoral system. In Galicia the curiae of the large landowners, of the chambers of commerce and manufacture, and of the cities chose their representatives by direct vote, while the curia of rural communities elected merely electors, who then decided which candidates would sit in the diet.

Ukrainians voted only in the rural curia, but even here the indirect voting system and election abuses by the Poles deprived the Ukrainian population of its fair representation in the Galician Diet. The first Galician Diet (1861–7) had the largest number of Ukrainian deputies (49 or about one-third of the diet), but the number soon fell drastically to about 10 members and rose only in the last diet (1913–14) to 30 members. Although the rural curia had the largest number of representatives in the diet, it did not have an absolute majority. Counting the representatives of all four curiae, the Poles were always assured of a majority in the Galician Diet. They were led by deputies of the landowning nobility, who were hostile to Ukrainian interests. Besides elected members, the provincial diets also had non-elective, ex officio members, such as archbishops, bishops, and university rectors. The marshal and vice-marshal of the diet were appointed by the crown. The vice-marshal of the Galician Diet was usually a Ukrainian – most often the metropolitan of Lviv. The official language of the Galician Diet was Polish, but Ukrainian members had the right to make oral and written representations in Ukrainian. In Bukovyna the official language was German.

The executive (*kraiovyi vydil*) of the provincial diet consisted of the marshal and six diet members (including one Ukrainian), who were elected to serve for six years by the diet. The executive implemented the decisions of the diet, drafted legislative proposals, oversaw the activities of the lower agencies of self-government, and ruled on issues that fell within the jurisdiction of community and county councils. The provincial budget was approved annually by the diet.

Diet of Carpatho-Ukraine (Soim Karpatskoi Ukrainy). The legislative body of autonomous Transcarpathia that was elected on 12 February 1939 and consisted of 32 representatives (29 Ukrainians and 3 deputies of the national minorities) from a single list of candidates presented by the *Ukrainian National Alliance. According to the Treaty of Saint-Germain, the general statute of Subcarpathian Ruthenia (1919), and the Czechoslovak constitution of 1920, a separate Transcarpathian diet was to have been formed immediately after the incorporation of Transcarpathia into Czechoslovakia. But the Diet of Carpatho-Ukraine was established only by the constitutional act of 22 November 1938, which extended the autonomy of the territory and defined the powers of the diet. The diet sat for only one session, on 15 March 1939 in Khust, at which it approved the proclamation of *Carpatho-Ukraine's sovereignty by the premier, Rev A. *Voloshyn, on 14 March 1939, adopted a constitution, elected the president (Rev. A. Voloshyn) of the new state, and confirmed a new government under the leadership of Premier Yu. Revai. A. Shtefan was elected president of the diet, and F. Revai and S. Rosokha were elected vice-presidents. When Hungarian forces occupied Carpatho-Ukraine, the presidium of the diet was forced to emigrate.

Dietine (*soimyky*; Polish: *sejmik*). Agency of territorial self-government by the nobility in Poland from the late 14th century, and local assembly of the Lithuanian and Ruthenian nobility in the Grand Duchy of Lithuania from 1564. Dietines convened in each county at first irregularly, but during the 16th century they became a legally recognized institution with a definite sphere of competence. The Lithuanian Statute of 1566 provided that four weeks before the convening of the Great *Diet, the nobility (*shliakhtha*) in every court district (*sudovyi povit*) should meet to discuss national and local affairs and needs, to elect two deputies to the Great Diet, and to instruct them. The dietines also chose four candidates for each of the offices of judge, assistant judge, and secretary of the provincial land court (*zemskyyi sud*), from whom the grand duke appointed the three court officials. They also convened to receive the diet deputies' reports and to confer during an interregnum. In the 17th and 18th century the administrative role of the dietines increased with the decline of the central Polish government.

Digest of the Soviet Ukrainian Press. A monthly press digest of the Prolog Research Corporation in New York, established in 1956. It contained articles and excerpts from the Soviet Ukrainian press translated into English. The digest's editor was M. Prokop. The *Digest* ceased publication in 1976.

Dihtiari. III-13. Town smt (1978 pop 2,200) in Sribne raion, Chernihiv oblast. Dihtiari is one of the oldest centers of Ukrainian folk kilim weaving; it is noted for its artistic pileless carpets, woven *plakhtha* cloth, belts, decorative towels (*rushnyky*), and varieties of *embroidery (*merzshka* [cut and drawn work], *nastyluvannia* [embroidering in satin stitch]), etc). It is the site of a vocational school that specializes in handicrafts. Production assumed a commercial character in the 1890s; today, one of the largest co-operatives of the Ukrainian Arts and Crafts Association is located in the town.

Diariush. The name given a diary in Ukraine in the 17th–18th century. One of the oldest diaries was the 'Diariush albo spisok diev pravdyvykh ... (Diary or Chronicle of True Events ...)' by the hegumen of Berestia, A. Fylypovych, which covers the period 1638–48. The diary of B. Khmelnytsky's secretary, S. Zorka, has not survived, but parts of it were incorporated into the chronicle of S. *Velychko and other works by writers of the 18th century. Several diaries from the 18th century have been preserved. M. Khanenko's private 'Dnevnyk' (Diary, entries for 1727–53 and excerpts from other years have been published); Ya. Markovych's 'Dnevni zapysky' (Daily Notations), which are rich in details about daily life (entries for 1717–40 have been published); P. Apostol's diary for 1725–7 written in French; P. Orlyk's travel journal written in Latin (entries for 1720–32 have been published in part). Besides these personal diaries, the General Military Chancellery under Hetman I. Skoropadsky and D. Apostol kept official daily records. Of these, the diaries of M. Khanenko (for 1722), of P. Borzakovsky and of Ladynsky (for 1722–3), and others have been published. Many diaries of this period still remain unpublished.

Diliatyn [Diljatyn], formerly known as Deliatyn. v-5. Town smt (1977 pop 8,200) in Nadvirna raion, Ivano-Frankivske oblast, situated on the Prut River. There are lumber and food-processing complexes and a woodworking factory in the town. Until 1939 it was the site of a salt refinery and salt baths.

Dilo (The Deed). A leading Galician newspaper, the oldest and for many years the only Ukrainian daily. *Dilo* was published in Lviv from 1880 to 1939. At first it was a semiweekly (1880–2), then a triweekly (1883–7), and finally (from 1888) a daily paper. Its publication was interrupted during Russia's occupation of Galicia (1914–15) and during Poland's control of Lviv after the retreat of the Ukrainian forces (29 November 1918 to 1920). During the first interruption *Dilo* was published as a weekly for a brief period in Vienna. In 1920–3 its name and editors were changed in order to avoid suppression. In 1920 its name was changed to *Ukrains'ka dumka* and *Hromads'ka dumka* and was edited by F. Fedortsiv. In 1921 it was called *Ukrains'kyi visnyk* and *Hromads'kyi visnyk*. Its editor was M. Strutynsky. In 1922 (as *Svoboda*) and 1923 (as *Hromads'kyi visnyk* and from September again as *Dilo*) it was edited by O. Kuzma. After the outbreak of the Second World War on 1 September 1939, three more issues were published. When the Red Army entered Lviv, *Dilo* was closed down.

The need to shape Galician *populism into a political force, especially after the defeat in the 1879 elections to the Austrian parliament and failures to reach an understanding with the Old Ruthenians of the *Ruthenian Council, gave rise to *Dilo*. The initiative came from a group of populists led by V. *Barvinsky and Yu. *Romanchuk. The new periodical was called *Dilo* to contrast it with the Russophile *Slovo*: its purpose was to strive by deed (*dilo*), not by word (*slovo*), for a better future for the people. Its first editor was V. Barvinsky. The paper received significant financial support from the Dilo association, which was established for this purpose by a few dozen members, headed by Rev S. Kachala, each of whom contributed 50 guilders.

Dilo, title pages from 1880, 1888, 1914, 1918

The first issue of *Dilo* appeared on 14 January 1880 (NS; 1 January 1889, OS). In a few years the paper justified its title: it became popular and gradually took away the readers of *Slovo*, which ceased publication in 1887. The editors of *Dilo* were V. Barvinsky (1880–3); A. Horbachevsky (1883–4); I. Belei (1884–1902), with K. Kakhnykevych as associate editor until 1901; V. Okhrymovych (1902), who introduced the phonetic orthography into the paper; Ye. Levytsky (1902–6); V. Okhrymovych

(1907); L. Tsehelsky (1908); Ya. Vesolovsky (1908), with O. Borkovsky as associate editor (1896–1911); V. Kushnir (1912); V. Paneiko (1912–18), with the actual editing in 1914–15 being done in Vienna by V. Budzynovsky; D. Levytsky (1923–5); V. Okhrymovych and F. Fedortsiv (1925–7); and V. Mudry (1927–39), whose work from 1936 was delegated to an editorial board consisting of I. Kedryn-Rudnytsky, I. Nimchuk, and V. Kuzmovych. The longstanding members of the editorial board V. Budzynovsky, O. Kuzma, and M. Lozynsky often replaced the main editors. The administrators were D. Hladylovych (who was instrumental in the paper's becoming a daily), K. Pankivsky, O. Yarema, I. Zarytsky (1893–1907), Rev D. Lopatynsky (1910–39), and K. Bilynsky (1934–9).

By 1937–9 *Dilo* had expanded to 10 pages per day and 16 pages on Saturday. The editorial office employed 10 full-time workers. The paper had a wide network of correspondents at home and abroad, as well as experts in various fields of knowledge and culture. *Dilo* trained many journalists who continued to pursue their profession in the West.

In 1908 *Dilo* acquired a press. In 1881–1906 *Dilo* published intermittently the series Biblioteka Naiznamenytshykh Povistei (Library of the Best Short Novels, 74 vols), and in 1936–9 Biblioteka Dila (Library of Dilo, 48 vols). The *Dilo* association issued weeklies at various times: the literary weekly *Nedilia* (1911–12), the sports weekly *Zmah*, the satirical *Zyz* (1924–33), and the literary-artistic weekly *Nazustrich* (1934–9).

From its inception *Dilo* propagated the ideology of the populist camp, then from 1899 the ideology of the National Democratic party, then of the Labor party (1919–23), and from 1925 the program of the *Ukrainian National Democratic Alliance. Yet *Dilo* was not an official organ of these parties. It often criticized the practical policies of party leaders. As a national paper with its own independent viewpoint, *Dilo* often offered its pages to representatives of various parties. Almost every notable public figure or writer in Western Ukraine contributed to the paper. *Dilo* played an important role in the national life of Galicia and of the northwestern regions (Volhynia, Podlachia, Polisia, the Kholm region) in the interwar period. It shaped national democratic opinion and, more than any other newspaper, reflected the events that occurred in all Ukrainian territories. It remains one of the best sources of the history of Ukrainian political thought and life.

I. Kedryn-Rudnytsky

Dimarov, Anatol, b 17 May 1922 in Myrhorod, Poltava gubernia. Writer and journalist. In 1943 he worked first on a provincial paper in Volhynia and then on *Radians'ka Ukraina*. Later he became an editor with the Lviv oblast publishing house and chief editor with the publishing house Radianskyi Pysmennyk. Among his published works are several collections of short stories: *Na Volyns'kii zemli* (On Volhynian Land, 1951) and *Volyns'ki lehendy* (Volhynian Legends, 1956); many novels: *Ioho sim'ia* (His Family, 1956), *Syn kapitana* (The Captain's Son,

1958), *Idol* (The Idol, 1961), *Na poruky* (On Bail, 1972), *Na koni i pid konem* (On a Horse and under a Horse, 1973), *Bil' i hniiv* (The Pain and the Anger, 1974–80), *Postrily Uliany Kashchuk* (The Shots of Ulyana Kashchuk, 1975); and fairy tales. His novel on Soviet prison camps, which was begun under the influence of A. Solzhenitsyn's *One Day in the Life of Ivan Denisovich*, has appeared only in fragments.

Diminutives. Words formed by the addition of special suffixes indicating smallness of size or bearing endearing or ironic connotations. The Ukrainian language contains diminutive nouns (*ručēčka*, *horščyk*, *horen'ko*, adjectives (*bilesen'kyj*), adverbs (*blyzen'ko*, *otamečky*), and less frequently pronouns (*vsen'kyj*) and infinitives (*spatn'ky*, *spatci*). Such suffixes bestow a diminutive connotation on a word if the original word without the connotation is still in use; otherwise the diminutive suffix loses its special connotation (eg, *poduška*). Diminutive forms often appear in folk songs, particularly in lyrical songs, and in the language used in speaking to small children. Diminutives were introduced into the literary language by the romantic writers, who imitated folksongs. They were rarely used by realist writers and were not used at all by classicist writers.

Dindo, Zhosefina, b 11 December 1902 in Warsaw, d 18 May 1953 in Kiev. Sculptor and pedagogue. She graduated from the Kharkiv Art Institute, where she attended B. Kratko's classes, in 1926. Eventually she became a lecturer and professor at the Kiev State Art Institute. Dindo specialized in monumental and decorative sculpture, doing bas-reliefs for the Peasant Sanatorium in Odessa (1928) and decorations for the Pioneer Park in Kiev (1935). She executed many thematic sculptures: *A Peasant Woman*, *Shepherdess*, *Maid*, *Reaper*, *Milkmaid*, *The Homeless*, *The Cry*, *The Prayer*, etc. Among her small forms are *Girl with a Goose*, *Rain*, and *Dishwasher*. Most of her work was in plaster and wood. In 1938–41 Dindo was politically persecuted.

Diocese. See Eparchy.

Diplomacy. External political activity of a state government, conducted by special agencies of state administration for external relations: the ministry of foreign affairs and the diplomatic missions. In its narrower meaning diplomacy comprises the organization and personnel of a state's external-affairs service. The right to send and receive diplomatic representatives (the so-called active and passive right of legation) is possessed only by sovereign states. States that have limited external rights – vassal states, states under a protectorate, or state that are members of federative unions – partake of this right only in a limited way. According to international law, only recognized (*de jure*) states have the right to send and receive official representatives of the rank of ambassador, envoy, resident minister, or *chargé d'affaires*. States that are not recognized exchange semiofficial representatives, who are usually called chiefs of the diplomatic mission, diplomatic agents, or commissioners. Diplomatic representatives enjoy immunity from the jurisdiction of the receiving state and special privileges, which can also be granted as a courtesy by the host government to semiofficial representatives. The political standing of a semiofficial representative depends on the status of

his/her country (the degree of political stability, the state's prospects for maintaining its independence), the interest or lack of interest of the host government in maintaining friendly relations with the state, the personality of the representative, and other factors.

In Kievan Rus' there was no separate foreign service or diplomatic personnel; external relations were the exclusive jurisdiction of the prince, who relied on merchants and clergy for contacts with foreign rulers. For matters of greater importance special missions (sometimes headed by the prince himself) visited the courts of foreign rulers; delegations from foreign leaders were in turn received in Kiev or in the capital of the Galician-Volhynia principality. Princely relatives also had an important role to play in external affairs. International agreements and alliances were often consolidated by dynastic ties (eg, the Rus' princes Volodymyr the Great, Yaroslav the Wise, Volodymyr Monomakh, Danylo Romanovych, and others were related by marriage to the royal houses of Europe and Byzantium).

Chronicle accounts of the time give the names of several people who were charged with commissions for external matters by the princes. Under Volodymyr the Great and Yaroslav the Wise such duties were entrusted to the boyar Dobrynia and his son Kostiantyn Putiata, the voivode Vyshata, the boyar Ivan Tvorylovych, and others. Among the most prominent of the various foreign envoys at the Kievan court were: Bishop Adalbert (961–2); Reinbern; Bruno of Querfurt (1007); the envoys of the French king Henry I, Gautier of Meaux and Roger of Chalons-sur-Marne (1049); the papal legate G. da Pian del Carpini (1245 and 1247); and the envoy of the French king Louis IX, W. van Ruysbroeck (1253). Particularly close relations were maintained with the Byzantine court, Bulgaria, Hungary, the Holy Roman Empire, Poland and Mazovia, France, Sweden, and the Vatican. Envoys in medieval times, including those in Ukraine, enjoyed considerable privileges. They and their entourage were entitled to special honors; a complex ritual of receiving envoys existed, and their persons and property were considered inviolable.

The Zaporozhian Sich (see *Zaporizhia) became a factor in international relations in Eastern Europe in the 16th and 17th centuries. It received delegations from foreign governments, mainly those interested in including the Zaporozhian army in anti-Turkish coalitions.

Wider diplomatic activity was conducted by the Hetman state under B. Khmelnytsky. Although external relations were conducted in the name of the hetman and Khmelnytsky himself took an active role in the formation of foreign policy, the direct administration of external affairs was the responsibility of the *general chancellor. Foreign delegations often stayed in Chyhyryn, the Hetman's capital, and Ukrainian delegations traveled to foreign capitals. Among the more prominent of those who served as Khmelnytsky's envoys were his son Tymish; the colonels I. Bohun, P. Teteria, H. Lisnytsky, A. Zhdanovych, D. Bratkovsky, and F. Dzhallii; and the Kievan voivode A. Kysil. Prominent Cossacks who later took part in diplomatic activity were Yu. Nemyrych, I. Kovalevsky, I. Mazepa (as general chancellor under Hetman P. Doroshenko), P. Orlyk, A. Voinarovsky, and I. Martynovych. All were members of either the gentry (*shliakhka*) or the Cossack *starshyna*.

A number of foreign envoys who spent time in Ukraine,

among them E. Lassota von Steblau, G. Welling, and J. Baluse, left interesting descriptions of manners, customs, and the life and surroundings of Ukrainian hetmans.

The reborn Ukrainian state of 1917–20 was faced with creating a new network of diplomatic representations. Several stages can be delineated in the history of this process. The first republican government, that of the *Central Rada, established relations with the Allied powers, receiving, in December 1917, representatives from Britain, France, and Rumania; the first was titled 'representative of Great Britain,' the second was called 'commissioner of the French Republic.' The UNR government sent its own delegation to the peace negotiations at Brest-Litovsk; in accordance with the Peace Treaty of *Brest-Litovsk, the UNR established diplomatic relations with the Central Powers, exchanged representatives with Germany, Austria-Hungary, and Turkey, and sent a representative to Rumania. As a result Britain and France broke off relations with the UNR government.

The *Hetman government expanded diplomatic relations, sending Ukrainian representatives to 10 states and receiving 11 foreign representatives in Kiev. The envoys who had been sent to Germany, Austria-Hungary, and Turkey by the Central Rada were replaced, and diplomatic representations were established in Bulgaria, the Don Republic, and Poland (the latter position was not filled). The Hetman government sent diplomatic missions to Finland, Switzerland, Rumania, the Kuban, and Sweden (for the Scandinavian countries). A separate delegation was formed to conduct peace negotiations with the Russian Soviet Republic, which took place in Kiev from May to October 1918. The Soviet delegation was led by Kh. Rakovsky and D. Manuisky, who at the same time performed the functions of acting Soviet diplomatic representatives to the Ukrainian state.

Towards the end of the hetman's rule two diplomatic missions were formed with the intention of sending them to the Allied powers: M. Mohyliansky headed a delegation to France, and I. Korostovets headed a delegation to Britain and the United States; however, the hetman fell before these delegations reached their destinations.

Under the Hetman government the following states had diplomatic representations in Kiev: Germany and Austria-Hungary (headed by ambassadors); Bulgaria, Turkey, Poland, the Don Republic (headed by envoys, special legates, and plenipotentiary ministers); Azerbaidzhan (headed by a commissioner of the Azerbaidzhan Republic), Georgia, Finland, the Kuban, and Rumania.

The second republican government, the *Directory of the UNR, soon abandoned the capital city and was forced by military events to change frequently its seat of government; hence, it was not able to receive foreign diplomats. It did, however, send a delegation to the Paris Peace Conference, which was, at the same time, a semiofficial diplomatic representation of the UNR to France. The government also sent diplomatic missions to Great Britain, the United States, Italy, Greece, Belgium and Holland, Denmark, and the Holy See, and legations to Rumania, Estonia, Latvia and Lithuania, Georgia (having responsibility for Azerbaidzhan, the Kuban, northern Caucasia), Czechoslovakia, and Hungary. A UNR diplomatic delegation was stationed in Warsaw with the aim of conducting negotiations and concluding a treaty. The legations and missions that had been created by the Hetman government continued to function, but in most of

them personnel changes were made by the Directory. After Argentina recognized the UNR government in 1921, the UNR sent a representative to head a diplomatic mission there, but he was never able to perform his duties. During the period of the Directory, Ukraine had a total of 11 diplomatic legations (in Germany, Austria, Hungary, Turkey, Bulgaria, Rumania, Czechoslovakia, Estonia, Latvia, Finland, and Georgia); these Ukrainian envoys were listed as members of the diplomatic corps and enjoyed all diplomatic privileges established by international law. In other countries the status of Ukrainian envoys was only semiofficial, or they were merely tolerated. The basic aim of the diplomatic missions and special delegations of the UNR was to obtain official recognition for Ukraine and procure assistance for it in its war against Poland and Russia. They also provided information and publications about Ukraine and carried out consular functions. In countries where Ukrainian prisoners of war were interned, the envoys organized their repatriation: special military-medical missions to deal with military prisoners of war existed as part of the diplomatic missions in Berlin, Vienna, and Rome. The short history of diplomacy of the UNR also included irregular conferences of envoys and heads of missions, the most important of which took place in Karlovy Vary, Czechoslovakia, in 1919 and in Vienna in 1920.

The *Western Ukrainian National Republic (ZUNR) maintained its own external relations, even after its union with the UNR. Diplomatic representations of the ZUNR government existed in Austria (recognized as a legation), Germany, Hungary, Czechoslovakia, Italy, and Yugoslavia. Special missions were sent to countries where there were large numbers of immigrants from Galicia – Canada, the United States, and Brazil – but these were not recognized as official diplomatic representations. In June 1919 the ZUNR government sent a special delegation to the Paris Peace Conference to represent the interests of Western Ukraine. Parallel Ukrainian missions and delegations co-operated among themselves, although at times there was competition and misunderstanding.

After Ukraine lost its independence some foreign governments broke off relations with Ukrainian diplomatic representatives and recognized the government of the Ukrainian SSR, to which they handed over the buildings that had housed the Ukrainian missions, as well as other government property. In other countries the Ukrainian missions had to close down because the UNR government in exile lacked the financial means to maintain them.

Although the Ukrainian SSR government had until 1923 full international status and concluded many international agreements, it had permanent diplomatic representations only in Warsaw, Vienna, Berlin, and Prague. Their purpose was to counter the activity of the UNR government in exile and to organize the repatriation of émigrés. Efforts to establish legations in the Baltic states were not successful. The official representative of the Ukrainian SSR government in Moscow was not an exclusively diplomatic agent; he was also a special official of the USSR government. Poland maintained an accredited representative in Kharkiv. Some diplomatic functions (trade, matters of repatriation) were performed in the Ukrainian SSR by temporary missions and by the consulates of Austria, Germany, Czechoslovakia, and the

Baltic states. In 1944 Ukraine's right to exchange legations was restored but has not been used: in 1947 and 1950 Moscow rejected a British proposal for diplomatic exchange between London and Kiev. The Ukrainian SSR has a permanent representation only at the United Nations in New York and Geneva and at UNESCO in Paris.

With rare exception (I. Korostovets) there were no Ukrainians among the higher-ranking Russian or Austrian imperial diplomats prior to the First World War; hence, the development of Ukrainian diplomacy in the years 1918–20 was a very difficult task. The policy of the Hetman government – to attract to responsible positions people who were competent but not necessarily nationally conscious – was applied very cautiously in the field of diplomacy. Nevertheless, many envoys did not justify the trust placed in them by the government (Gen M. Sukovkin in Istanbul, Baron F. von Shtaingel [Steinheil] in Berlin). There were few people among the nationally conscious Ukrainians who were sufficiently familiar with international problems, or experienced in diplomatic and informational activity abroad. Ukrainians lacked an influential émigré community and international contacts. The disproportion in resources between Ukrainian diplomacy and Russian or Polish diplomacy, as well as the unfavorable international situation at the time, ruled out for Ukraine any lasting successes in the diplomatic field. Furthermore, the Ukrainian diplomatic corps was too large in relation to the available human and financial resources, or to the needs of the state. In general, the principal achievement of modern Ukrainian diplomacy was to popularize the Ukrainian national cause throughout the world. (See also *Consular service.)

Heads of Ukrainian legations and missions 1918–23 (envoys, plenipotentiary ministers, *chargés d'affaires*, and unofficial representatives), representing the Central Rada (CR), Hetman government (H), Directory (D), Western Ukrainian National Republic (ZUNR), and the Ukrainian SSR (Ukr SSR).

Peace delegation of the Central Rada at Brest-Litovsk: V. Holubovych (head), O. Sevriuk (head during a later stage of negotiations), M. Liubynsky, M. Levytsky, M. Poloz

Delegation of Ukraine at the peace conference with the RSFSR in Kiev: S. Shelukhyn (head), I. Kistiakovsky (deputy head), P. Stebnytsky (deputy head from August 1918), A. Slavinsky, O. Eikhelman, Kh. Baranovsky, M. Lynnychenko, A. Svitsyn

Delegation of the UNR to the Paris Peace Conference: H. Sydorenko (head), M. Tyshkevych (head from August 1919), V. Paneiko (deputy head), A. Margolin, O. Shulhyn, M. Lozynsky, A. Halip, S. Tomashivsky. From 1921 the delegation was a diplomatic mission in France, headed by O. Shulhyn.

Delegation of the ZUNR at the Paris Peace Conference: V. Paneiko (head), S. Tomashivsky, M. Lozynsky, and D. Vitovsky – extraordinary delegates for matters of Ukrainian-Polish armistice. At the beginning of 1921 the delegation was made into a diplomatic mission of the ZUNR, headed by S. Vytvytsky.

The following were the heads of legations and missions accredited to Ukrainian governments: from Austria-Hungary: J. Forgách (CR); from Azerbaidzhan: G. Sadykov (H); from Bulgaria: I. Shishmanov (H); from the Don Republic: A. Cheriachukin (H); from Finland: H. Gummerus (H); from France: G. Tabouis (CR); from Georgia: V. Tevzaya (H); from Germany: A. Mumm von Schwarzenstein (CR, H); from Great Britain: J.P. Bagge (CR); from Kuban: V. Tkachov (H); from Poland: S. Wańkiewicz (H), Hempel (Ukr SSR), L. Berenson (Ukr SSR); from Rumania: General Coanda (CR), Conțescu (H); from Turkey: A. Mukhtar-Bey (H).

Directory of Subcarpathian Ruthenia (Dyrektoriia Pidkarpatskoi Rusy). The first executive body of autonomous Transcarpathia within the boundaries of the Czechoslovak Republic. On 17 December 1919 the Prague government appointed the following people to the Directory: Yu. Brashchaiko (trade), A. Voloshyn (culture and education), Yu. Hadzhega (church affairs), Ye. Puza (internal affairs), and O. Toronsky (finance). Yu. Zhatkovych was president of the Directory. The Directory functioned until April 1920.

Directory of the Ukrainian National Republic (Dyrektoriia UNR). The temporary, revolutionary, state authority created by the *Ukrainian National Union on 14 November 1918 for directing the overthrow of Hetman P. *Skoropadsky. The uprising against the hetman was hastened by his declaration of a 'federative union' with the future non-Bolshevik Russia on that day. At the beginning the Directory was headed by V. *Vynnychenko (representative of the Ukrainian Social Democratic Workers' party), and included the following members: Supreme Otaman S. *Petliura (Ukrainian Social Democratic Workers' party and delegate of the Sich Riflemen), F. *Shvets (representing the Peasant Association), O. *Andriievsky (Ukrainian Party of Socialists-Independents), and A. *Makarenko (non-partisan member, delegate of the railway workers). The Directory formed a temporary government – the Executive Council for State Affairs (Rada Zaviduiuchykh Derzhavnykh Spravamy). The uprising led to P. Skoropadsky's abdication in favor of his council of ministers, which, in turn, yielded power to the Directory. A new government – the *Council of National Ministers of the UNR – was established by the Directory's decree of 26 December 1918 and was chaired by V. Chekhivsky. The Directory abolished many of the Hetman government's laws and institutions and restored the legislation of the *Central Rada. The most important of these laws dealt with land distribution, the establishment of Ukrainian as the official language, the autocephaly of the Orthodox church, and the convening of the *Labor Congress. The Labor Congress met on 23–8 January 1919, and the Directory submitted its powers to the congress – the legislature of the UNR. In view of the state of war, the Labor Congress empowered the Directory to act as the 'supreme power and enact laws that are necessary for the defense of the Republic' and invested the Council of National Ministers with executive power. The ministers were appointed by the Directory and were responsible to it between sessions of the Labor Congress. At the end of March Ye. *Petrushevych, the president of the Ukrainian National Rada of the Western Oblast of the Ukrainian National Republic, joined the Directory, in accordance with a resolution of the Labor Congress, but he did not actually participate in the Directory's work and eventually resigned from it.

On 5 February 1919 the Directory moved from Kiev to Vinnytsia. Henceforth it frequently changed residence, depending on events at the front. To win the support of the Entente in the war against the Bolsheviks, V. Vynnychenko resigned from the Directory, and S. Petliura became its head on 11 February. At the same time a new government, without the socialists, was formed and headed by S. Ostapenko. When the talks with the Entente collapsed, a new socialist cabinet was formed by B. Martos in Rivne on 9 April 1919. At the end of August it was replaced by I. Mazepa's cabinet. O. Andriievsky left the Directory in connection with Otaman V. Oskilko's uprising.

Only three members remained in the Directory. Their powers were not clearly delineated. Besides carrying out their representative and legislative functions, they sometimes interfered in the affairs of the executive branch and provoked conflicts with the Council of Ministers.

At a meeting of the Directory and the Council of Ministers on 15 November 1919 at Kamianets-Poditskyi it was decided that A. Makarenko and F. Shvets would go abroad on state business and that in their absence 'the supreme authority in the affairs of the Republic [is] invested in the head of the Directory and the Supreme Otaman S. Petliura, who in the name of the Directory will confirm all laws and decrees adopted by the Council of National Ministers.' On 21 May 1920 the government of the republic issued an order (confirmed by Petliura) recalling the two members of the Directory – Makarenko and Shvets. Their failure to return was considered as a resignation from the Directory. Thus, the Directory ceased to be a collective body. All its powers passed to S. Petliura.

The 'Law on the Temporary Supreme Authority and the Legislative System of the Ukrainian National Republic,' passed on 12 November 1920, gave constitutional sanction to the new one-man Directory as the supreme power of the republic. According to this law, if the head of the Directory became incapable of carrying out his functions, the supreme power would pass to the head of the State People's Council (Derzhavna Narodna Rada). Before this council convened, the supreme power would be entrusted to a college consisting of the head of the cabinet, the chief justice of the Supreme Court, and a representative of the political parties. Until this college was summoned, the head of the Council of National Ministers would replace the head of the directory. After Petliura's death on 25 May 1926 supreme power was assumed in accordance with this law by the head of the Council of Ministers in exile at the time, A. *Livytsky.

Displaced persons (DP's). Designation for various categories of the approximately six million persons who, during and after the Second World War, found themselves away from their homeland in Germany, Austria, and Italy. Most of them were labor conscripts, war prisoners, concentration camp prisoners, refugees, and other victims of war. The term 'displaced person' was applied initially to citizens of German-occupied countries; after 1945–6, when most of them had returned to their homelands, it was applied only to those refugees who refused to return to their countries, particularly those that were Communist-dominated.

In the narrower sense the term 'displaced person' was used to refer to the forcibly deported, while anyone who fled the advancing Soviet troops for political or other reasons was called a refugee. In practice, however, the two terms were used interchangeably. The legal designation 'stateless person' was also sometimes applied to those who refused to return to their homelands. In 1946, after the *repatriation of most displaced persons, about 1.2 million remained in Germany and Austria, including over 200,000 Ukrainians. They lived mostly in *displaced persons camps in the three occupation zones of West Germany and Austria. About 80 camps were predominantly Ukrainian; other Ukrainian refugees lived in mixed camps, and 25–30 percent lived outside the camps.

International supervision of displaced persons was governed by a treaty signed by 44 states in Washington on 9 November 1943. Aid to the refugees was provided first by the *United Nations Relief and Rehabilitation Administration (UNRRA). Together with the occupational administration of Germany and Austria, UNRRA was primarily concerned with returning displaced persons to the countries of their origin. In 1947 UNRRA wound up its operations, and the *International Refugee Organization (IRO) took charge of resettling the refugees. By 1952, when its activities ceased, IRO had resettled over 600,000 refugees from Europe to lands in the New World. The United States admitted the largest number of refugees, suspending the established immigration quota for East Europeans by the laws of 1948 and 1950 and the Refugee Relief Act of 1953.

The Intergovernmental Committee on Refugees (ICR), which was set up in 1938 to replace the Nansen Office and which functioned until 1947, provided legal protection and resettlement for the so-called Nansenites (émigrés from former Russia after the First World War). After the IRO ceased its activities, the Intergovernmental Committee for European Migration (ICEM), an agency independent of the UN and headquartered in Geneva, took charge of refugee resettlement. In 1951 the office of the UN High Commissioner for Refugees (UNHCR) was established in Geneva; it assumed some of the responsibilities of the former IRO, among them the legal protection of the refugees who remained in West European countries.

Most of the displaced persons emigrated across the Atlantic in 1947–52. The majority of those who stayed behind in Austria and Germany were either ill or too old

to meet the requirements of immigration laws. These people needed continuing aid. Some stayed because they did not want to leave Europe. Most of them received asylum and found employment in various European countries while retaining their refugee status. Since most of them did not become naturalized citizens they came under the Geneva Convention on Refugees of 28 July 1951.

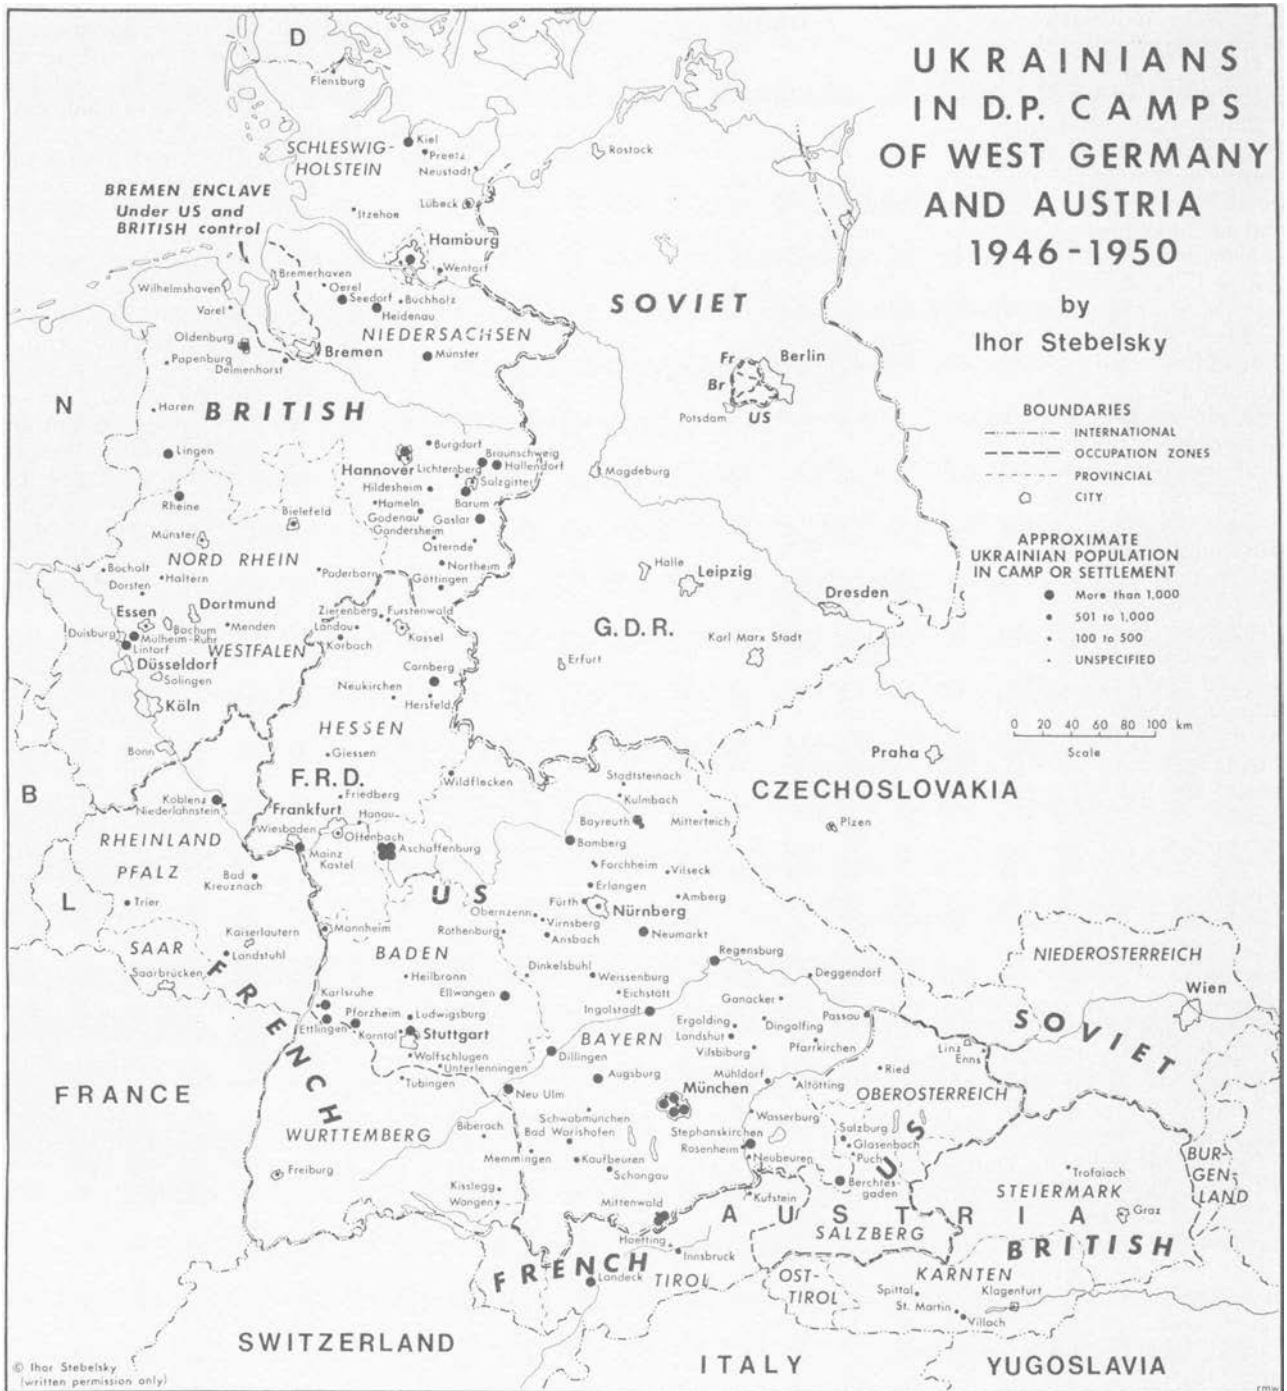

Ukrainian institutions that aided the displaced persons were the *United Ukrainian American Relief Committee, the *Ukrainian Catholic Relief Committee, and the *Ukrainian Canadian Relief Fund. (See also *Emigration.)

V. Markus

Displaced persons camps. Concentrations of *displaced persons in West Germany and Austria, which in 1945 were occupied by American, British, and French forces. In 1947 the camps held 1.6 million people (mainly from eastern and southeastern Europe), among them about 200,000 Ukrainians. The camps consisted of requisitioned military compounds, war-labor settlements, schools, etc. Until 1945 the camps were the responsibility of the Supreme Headquarters of the Allied Expeditionary Forces (SHAEF), which delegated this responsibility to DP Branch G-5, which was in charge of civilian affairs. Then the camps came under the authority of the various occupation armies, with the Combined Displaced Persons Executive (CDPX), which consisted of American, British, and French representatives as well as delegates from the International Refugee Organization in Geneva, co-ordinating the camps' activities. The occupation authorities placed the task of administering and supplying the DP camps on the shoulders of the UN relief organizations: the *United Nations Relief and Rehabilitation Administration (UNRRA) from 1945 to August 1947, and then the *International Refugee Organization (IRO). After most DP's had been resettled, the rest were absorbed by the German and Austrian economy, and the institutions of these countries became responsible for them (legal care became the responsibility of the UN High Commissioner for Refugees). The number of DP camps constantly diminished, going from 493 in 1946 to 223 in 1950. In 1956–8 the camps ceased to exist; their inhabitants were transferred to newly built settlements or to private housing.

Ukrainian refugees in 1946 were interned in 125 camps and in 1949 in 110 camps (about 80 of these were predominantly or fully Ukrainian). The largest Ukrainian DP camps (2,000–5,000 people) were in the American zone, near Munich (Karlsfeld, Werner-Kaserne), Augsburg (Somme-Kaserne), Mittenwald (Jäger-Kaserne), Regensburg (Ganghofer-Siedlung), Aschaffenburg, Berchtesgaden (Orlyk), Bayreuth, Neu-Ulm, Leipheim, and Dillingen. In the British zone there were large Ukrainian camps near Hanover and Haidenau, and in the French zone, near Stuttgart and Salzburg, Austria.

As early as 1945 Ukrainian camps established their own local agencies of self-government, parallel to the UNRRA or IRO-run administration of the camps. Beginning only in 1947 (de jure in 1948, with the directive of IRO headquarters in Geneva issued on 15 June 1948) did the camp's own agencies participate in the running of the camps. In administrative matters they were subordinate to the IRO agencies and in civic matters to the *Central Representation of the Ukrainian Emigration in Germany. An active civic, political, cultural, educational, religious, economic,

literary, and artistic life developed in the camps during their brief existence. This is evident from the statistics: in 1948, for example, 102 elementary schools, 35 gymnasiums, 12 other secondary schools, and 43 trade schools functioned in the camps; as well, 232 periodicals and 818 books were published.

V. Maruniak

Dissident movement. The dissident movement came into existence in the USSR after the death of J. Stalin. It protests against violations of the law by organs of the

state and demands civil and national rights and adherence to the constitutions of the USSR and the Union republics. In Ukraine, as in other republics of the USSR where national oppression is keenly felt, the dissident movement represents a struggle against the violation of the republic's rights of sovereignty by the central government and the Party, a resistance to colonization by foreign elements and to the resettlement of Ukrainians outside Ukraine, and a protest against the destruction of cultural monuments, the falsification of history, and generally against the policies of *Russification. For many dissi-

dents, the movement also represents a struggle for political rights.

Dissent was expressed during the period of de-Stalinization in the struggle for freedom of intellectual creativity. O. *Dovzhenko, who in 1955 demanded the 'expansion of the creative boundaries of socialist realism,' may be considered the movement's instigator. In Ukraine de-Stalinization saw the emergence in the 1960s of young and talented prose writers, poets, and literary critics known as the *Shestydesiatnyky* (the Sixtiers). They included L. Kostenko, V. Symonenko, I. Drach, V. Korotych, M. Vinhranovsky, V. Shevchuk, I. Dziuba, I. Svitlychny, Ye. Sverstiuk, and later V. Stus, M. Osadchy, and Ihor and Iryna Kalynets. These writers were joined in the creative resurgence of the 1960s by such scholars, publicists, philosophers, and artists as V. Chornovil, V. Moroz, A. Horska, O. Zalyvakha, and M. Lukash. As harbingers of the idea of creative freedom, these individuals became the symbols of the Ukrainian national renaissance.

One of the first outward manifestations of the dissident movement in Ukraine took place at the Conference on Culture and Language at the University of Kiev in February 1963, where it was demanded that Ukrainian be instituted as an official language of the Ukrainian SSR and that the rights of Ukrainians as a national minority be restored in the RSFSR. The conference became, in fact, a national demonstration of about 1,000 people, challenging the policy of Russification. On 4 September 1965 a protest against arrests in Ukraine was held in the Ukraina theater in Kiev. The gathering was addressed by I. Dziuba, who in December of that year sent an open letter protesting the repressions to P. Shelest, the first secretary of the CC of the CPSU, and to V. Shcherbytsky, the chairman of the Council of Ministers of the Ukrainian SSR. Dziuba enclosed with his letter the manuscript of his book *Internatsionalizm chy rusyfikatsiia?* (Internationalism or Russification?), which was later distributed as a samvydav document and smuggled to the West. A petition in defense of arrested individuals was signed in the autumn of 1965 by leading Ukrainian cultural figures, including M. Stelmakh, A. Malyshko, H. and P. Maiboroda, O. Antonov, S. Paradzhanov, V. Kyreiko, L. Kostenko, I. Drach, and L. Serpilin.

The movement for the rebirth of Ukrainian culture had in fact begun by 1958-9, with a protest (involving M. Rylsky, M. Bazhan, and others) against the new education law that promoted the increased Russification of schools in Ukraine (see *Education). Protests continued for several years, not only in opposition to the persecution of dissidents, but also in defense of the national and political rights of the Ukrainian people. The movement gained mass support. In April 1968, 139 citizens of Kiev appealed to L. Brezhnev, M. Pidhorny, and A. Kosygin in protest against the wave of arrests and the restriction of Ukrainian language and cultural rights. In 1968 also, more than 300 individuals in Dnipropetrovske signed the 'Letter from Creative Youth' protesting the Russification of their city. This received some coverage in the local press. The residents of the city of Vyshhorod in Kiev oblast protested to the CC of the CPSU against the abuse of power by local authorities.

Other, broader expressions of dissent included the yearly demonstrations on the anniversary of the transfer of T. Shevchenko's body to Ukraine (May), which were regularly dispersed by the KGB. On this occasion in 1967 a

clash developed between the demonstrators and the KGB, in reaction to which 64 citizens of Kiev sent a letter of protest to Brezhnev, Shelest, and I. Holovchenko, the minister for the protection of public order. Demonstrations of several hundred participants took place in Lviv in April 1966 during the trial of the brothers B. and M. Horyn and others, and in Kiev in November 1970 during the funeral of A. Horska. In 1968, on the 51st anniversary of the October Revolution, V. Makukh set fire to himself on Khreshchatyk Boulevard in Kiev, shouting the slogans 'Rid Ukraine of the colonizers' and 'Long live free Ukraine.' In 1969, also in protest against the oppression of Ukraine, M. Bereslavsky attempted self-immolation near the University of Kiev.

Workers' strikes and protests belong to the broader manifestations of the Ukrainian dissident movement. In 1963 a workers' strike took place in Kryvyi Rih in protest against increased food prices and food shortages. In Odessa dock workers refused to load butter for export to Cuba. Strikes occurred in 1969 at the hydroelectric station in the village of Berizka; in 1972 in Dnipropetrovske protests took place against the influx of Russians into the factories; in June 1972 in Dniprodzerzhynske several thousand people were involved in a bloody confrontation with the police and the armed forces while protesting the harsh conduct of the authorities; and in 1973 a strike took place at the automotive plant in Kiev. In 1977-8 a group (primarily of Donetsk workers) led by V. Klebanov formed an independent trade union and put forth demands for socioeconomic improvements. In 1977, 25 Donbas workers filed a complaint to the Belgrade conference reviewing the Helsinki accords about the disregard for workers' rights in the USSR. L. Siry, a Ukrainian worker in Odessa, wrote letters to various prominent figures in the West, appealing for aid to emigrate because of the economic hardships suffered by his family.

In addition to these spontaneous outbursts, dissent had begun to be expressed in an organized form as early as the late 1950s. At intervals during and after the Second World War, the movement became organized through its connection with the Ukrainian nationalist underground and partisan struggles (OUN and UPA). In late 1959 a group of Ukrainian jurists led by L. Lukianenko drafted a program for the Ukrainian Workers' and Peasants' Union, the aim of which was to undertake legal action for the secession of the Ukrainian SSR from the USSR. The draft program stated that its ideal was 'an independent Ukraine with a highly developed socialist political system.' In January 1961 Lukianenko was sentenced to death, but the verdict was commuted to 15 years' incarceration. The other accused (I. Kandyba, S. Virun, O. Libovych, V. Lutskiv, I. Borovnytsky, V. Kipysh) received sentences ranging from 10 to 15 years' imprisonment.

Between 1957 and 1967 several small, illegal groups were active in Western Ukraine: the United Party for the Liberation of Ukraine, the Ukrainian National Committee, and the Ukrainian National Front. The latter group published new editions of several OUN publications and 15 issues of the journal *Volia i bat'kivshchyna* between 1965 and 1967. Members of all of these groups were also imprisoned, and the Lviv court sentenced two members of the Ukrainian National Committee, I. Koval and B. Hrytsyna, to death. The trials of the above-mentioned group members took place in camera. The political trials of

1966 were partially open; however, the 1973 trial of the five organizers of the Union of the Ukrainian Youth of Galicia in Ivano-Frankivske took place entirely in camera.

A separate aspect of the dissident movement is the struggle for freedom of religion, in which Ukrainian Catholic, Orthodox, and various Protestant groups are involved. This struggle is characterized both by wider public campaigns than are conducted by political groups and by the involvement of semilegal organizations. It expresses itself primarily in the form of petitions and protests against the violation of freedom of conscience and religious persuasion. Neither N. Khrushchev's anti-religion campaign (1959–64), during which half of Ukraine's Orthodox churches (almost 7,000 in 1959 alone) were closed, nor other repressive measures taken by the regime succeeded in obliterating the Ukrainian Orthodox church. Rev V. Romaniuk, who was sentenced in 1972 to a 10-year term, was particularly active in sending petitions and appeals to church and secular leaders in the USSR and in the West. The Baptist minister and leader G. Vins, who was incarcerated in Yakutia (released in 1979, he has emigrated to the United States), was engaged in similar activity. The monks of the Kievan Cave Monastery, which was closed in 1961, petitioned L. Brezhnev in 1977 to reopen the monastery. The efforts of the state authorities to close the Pochaiv Monastery in 1974 were frustrated by the solidarity of the monks and the religious community's opposition. Although the Ukrainian Catholic church was abolished in 1946, several bishops and 300–350 priests (who work as laborers or clerks) are still covertly active in the western regions of Ukraine. According to the Soviet press, over 2,000 breviaries and religious books have been published in Lviv since 1969. In 1968–9 the KGB conducted mass arrests among the clergy of the Ukrainian Catholic church and sentenced Archbishop V. Velychkovsky to three years' imprisonment. In 1973 Rev V. Prokopiv was arrested for having led a delegation of the faithful to Moscow to demand the official reinstatement of the Ukrainian Catholic church. In 1982 the Committee for the Defense of the Ukrainian Catholic Church was created by Y. Terelia. Among Protestants dissent is most evident on the part of groups functioning outside the officially recognized church and independent of the All-Union Council of Evangelical Christian Baptists (known as *Iniitsiatyvyky*), and by sects such as the Pentecostals, Adventists, and Jehovah's Witnesses. Several of these groups (eg, the Pentecostals of Voroshylovhrad, Donetske, and Kherson oblasts and Ukrainian Pentecostals living in Siberia) have sought permission to emigrate from the USSR.

Jewish dissidents in Ukraine struggle primarily for the right of Jews to emigrate. Some Jewish dissidents (eg, S. Gluzman) co-operate with the Ukrainian dissidents.

One form through which dissent in Ukraine is expressed is samvydav (samizdat) literature. The first known document of Ukrainian samvydav is the 'Open Letter to the United Nations and the Human Rights Commission of the UN' from 13 Ukrainian political prisoners in the Mordovian camps in 1955. Samvydav documents written in the early 1960s and subsequent years include the uncensored poems and diary of V. Symonenko; a pamphlet entitled 'On the Occasion of Pogruzhalsky's Trial,' protesting the mysterious burning of the Academy of Sciences library in Kiev in May 1964; the 1964 'Appeal to the Communists of the World,' signed by the 'Communists of Ukraine'; the

political essays of V. Moroz, especially his 'Report from the Beria Reserve'; *The Chornovil Papers* by V. Chornovil, documenting the trials of Ukrainian intellectuals in 1966; M. Osadchy's prison memoirs, *Bil'mo* (Cataract); transcripts of political trials (eg, a transcript of the 1966 trial of M. Ozerny by the literary editor of *Radians'ka Ukraina*, P. Skochok); and hundreds of petitions and letters of protest from political prisoners. The first issue of **Ukrains'kyi visnyk*, a chronicle of Ukrainian dissent, appeared in 1970, and eight issues were published by 1973.

Dissident activities in Ukraine constantly elicit repressive measures on the part of the regime. The first extensive wave of arrests and trials took place in 1965–6 and involved I. Hel, B. and M. Horyn, P. Zalyvakha, D. Ivashchenko, S. Karavansky, M. Masiutko, V. Moroz, V. Osadchy, and others. The second wave occurred between January and April 1972, when V. Chornovil, Ye. Sverstiuk, I. Svitlychny, N. Svitlychna, I. Dziuba, M. Osadchy, V. Stus, S. Shabatura, I. Kalynets, I. Stasiv-Kalynets, O. Serhienko, N. Strokata, Rev V. Romaniuk, Yu. Shukhevych, and others were arrested. They were tried for 'anti-Soviet agitation and propaganda.' The verdicts were harsher than those of the 1960s.

At the same time repression was exercised in the form of dismissal from employment, expulsion from school, and eviction from apartments. At Lviv University 23 students were expelled and 27 lecturers were fired. Several of them, including Z. Popadiuk and Ya. Mykytka, were also arrested, ostensibly for publishing the samvydav journal *Postup*.

The state's offensive against the dissident movement from 1972 on has not been limited to the leading figures of the movement but has extended to members of the Ukrainian intelligentsia who were minimally involved with the movement and, later, to members of the Party cadres. In May 1972 P. Shelest, the first secretary of the Central Committee of the CPU, was dismissed from his post. In 1973 a purge of the institutes of archeology, history, literature, and philosophy of the Academy of Sciences of the Ukrainian SSR was conducted. As a result, some of the associates of the academy, including M. Braichevsky, O. Apanovych, and F. Shevchenko, were dismissed; others, including V. Lisovy, Ye. Proniuk, and Yu. Badzo, were arrested and sentenced.

The arrests and imprisonments did not succeed in stifling dissent in Ukraine. With a very few exceptions (I. Dziuba, Z. Franko, Z. Selenenko, M. Kholodny), the KGB did not succeed in forcing the leading figures in the movement to renounce their views. A new stage in the development of the dissident movement began with the 9 November 1976 creation of the *Ukrainian Helsinki Group, originally headed by the writer M. Rudenko, with the assistance of the former general P. Hryhorenko. The Helsinki group elucidated its position in numerous documents, especially in 'Dekliaratsiia' (Declaration) and 'Memorandum No. 1.' During 1977 and 1978 five members of the group (M. Rudenko, O. Tykhy, M. Matusevych, M. Marynovych, L. Lukianenko) were sentenced to prison terms ranging from 12 to 15 years. The group was, however, replenished with new members, including P. and B. Sichko, V. Striltsiv, V. Kalynychenko, and political prisoners still in the camps.

According to samvydav documents, several thousand people are involved in the Ukrainian dissident movement (the Ukrainian Helsinki Group's 'Memorandum

No. 1' states that 60–70 percent of the political prisoners in the USSR are Ukrainians.) Predominant among them are members of the professional intelligentsia and students, but workers and peasants are also represented. The individuals involved are generally young or middle-aged. The major base for the Ukrainian dissident movement is central Ukraine, in particular Kiev. This area produced the movement's most prominent figures (I. Dziuba, I. Svitlychny, Ye. Sverstiuk, V. Chornovil, V. Lisovy, V. Stus, L. Lukianenko, M. Rudenko), who were responsible for formulating its political demands. In relation to their populations the western regions of Ukraine are also strongly represented in the movement.

The political position of the dissident movement is based on the notions of humanism, democracy, and individual and national freedom. The human individual and his/her dignity and right to develop freely regardless of political and ideological convictions, religion, or nationality is central in dissident thought. Most leaders of the Ukrainian dissident movement demand an independent Ukrainian state. According to some this goal is to be achieved by restructuring the USSR, so as to guarantee genuine self-determination for Union republics; according to others this is possible only through secession from the USSR. The dissidents respect the rights of other nationalities in Ukraine and condemn imperialism and chauvinism. In the same spirit Ukrainian political prisoners have established friendly relations with leading dissident figures of other nations and national minorities, including many Russians. At the same time, *Ukraïns'kyi visnyk* rejected the claim of the editorial board of the Russian **Chronicle of Current Events* to speak for Ukrainians and other non-Russian peoples of the USSR.

Tactically, the Ukrainian dissident movement believes in legal and constitutional means of struggle; however, radical views are also spreading. Particularly important are the efforts of leading dissidents to involve the masses in an active defense of national interests (cf 'Pozytsiï ukraïns'kykh politychnykh v'iazniv' [The Positions of Ukrainian Political Prisoners] by V. Romaniuk and O. Tykhy, 1977).

Ukrainian samvydav documents are widely distributed in the West in foreign languages. These and the co-operation of Ukrainian political prisoners with prisoners of other nationalities have engendered a receptive attitude in Western progressive circles to the political positions of the Ukrainian dissident movement. L. Pliushch, P. Hryhorenko, V. Moroz, N. Svitlychna, S. Karavansky, N. Strokota, and V. Malynkovich have, especially since their arrival in the West, contributed significantly to the dissemination of the ideas of the Ukrainian dissident movement.

Many prominent Western figures, including H. Böll, G. Grass, G. Myrdall, N. Mailer, N. Chomsky, and L. Bernstein, have signed petitions to Soviet authorities in defense of Ukrainian prisoners of conscience.

M. Prokop

Ditskyi. In Kievan Rus', a member of one of the junior ranks of the prince's **druzhyna*. *Ditski* carried out the prince's administrative orders and served as auxiliary officials in the judicial system. In the Lithuanian-Ruthenian period a *ditskyi* was a full-time court officer. He brought the accused before the court and executed sentences that were related to property crimes. He also helped in collecting taxes. Under the influence of Polish law the *ditskyi* was replaced by the *voznii* when county courts were introduced in 1566.

Ditynets. Central section of a walled town in Kievan Rus', surrounded by an enclosure of wood and stone. Usually it covered an area of several hectares (approximately 9 ha in Kiev). The *ditynets* contained the courts of princes and boyars, cathedrals, churches, and barracks; it was surrounded by artisans' and merchants' quarters.

Diuvernuia, Aleksandr (Djuvernuia), b 1840, d 16 March 1886. Russian philologist, Slavist, and professor at the University of Moscow. He devoted several works to Old Ukrainian records, such as the **Arkhangel'sk Gospel* and the **Izbornik Sviatoslava* of 1073. His *Materialy dlia slovaria drevnerusskogo iazyka* (Materials for a Dictionary of the Old Rus' Language (1894), which was published posthumously, includes words from Old Ukrainian texts.

Division Galizien (14 Waffen-Grenadier-Division der SS, Galizische Nr 1), later the 1st Ukrainian Division of the Ukrainian National Army (1 Division der Ukrainischen National-Armee). Ukrainian military formation in the German armed forces during the Second World War. The division was organized as part of a program of

creating foreign (eg, Estonian, Latvian) formations of the Waffen ss to fight on the Soviet front. The organizer of the division was the German governor of Galicia, O. von Wächter, and its formation was announced on 28 April 1943. The head of the Ukrainian Central Committee in Cracow, V. Kubijovyč, supported the division's formation, regarding it as a Ukrainian armed force and hoping to influence its character and organization as the core of a future national army. During the preliminary negotiations the Germans gave assurances that the division would fight only against the Red Army, allowed Ukrainian chaplains to serve with the division, undertook to train Ukrainian officer cadres, and released a number of Ukrainian political prisoners. A military administration was created to conduct recruitment, assist the families of volunteers, and organized cultural and educational activities for the soldiers. There were more than 80,000 candidates for the division, of which 42,000 enlisted and 27,000 were called up; only about half were accepted.

The division consisted of three infantry regiments, one artillery regiment, and a regiment of training reserves; three battalions of fusiliers, sappers, and field reserves; communications and antiaircraft artillery detachments; and auxiliary units, including a field hospital. There were 15,000–18,000 soldiers in all. The division command (all senior-rank officers) and technical corps consisted entirely of Germans, which created friction, especially because the German authorities considered the Ukrainians merely 'Galicians.'

In the summer of 1944 the division saw action at the front; while attached to the XIII Army Corps, it was surrounded and destroyed at the Battle of *Brody during the Soviet offensive. It was regrouped, replenished with reserves and new recruits, and transferred to a location near the town of Žilina in Slovakia (October 1944–January 1945); later, following a march to Slovenia, it was deployed near the town of Maribor. Although an order was received there from Hitler to disarm the division, it was sent to fill gaps on the Austrian front (Feldbach–Bad Gleichenberg). In March 1945 the German government announced the formation of the Ukrainian National Army under the command of General P. *Shandruk, who joined the division in April. Under his auspices the division was formally attached to the Ukrainian National Army as its First Division. On 25 April 1945 the division's troops swore a new oath of loyalty to the Ukrainian people. During Germany's capitulation most of the troops (some 10,000) surrendered to the British; the commanding officer, Gen F. Freitag, shot himself. Command of the division in captivity was taken over by General M. *Krat. After the prisoners of war had been transferred from Italy (where they had spent almost two years in POW camps) to Britain, they worked as contract laborers and were later released. Most of them then emigrated to North America. The *Brotherhood of Former Soldiers of the First Ukrainian Division of the Ukrainian National Army was established in 1950.

Divochka, Onysyfor [Divočka]. Metropolitan of Kiev in 1579–89. Divochka defended the interests of the Orthodox church before the Polish kings Stefan Batory and Sigismund III. He was consecrated in violation of canon law (he has been married twice), and he permitted gross infringements of church law. Because of complaints from the laity in 1585, on 21 July 1589 Patriarch Jeremiah of Constantinople divested him of his office.

Divorce. A legally defined method of dissolving a marriage while both partners are living (see *Civil law). Until 1926 the Ukrainian SSR did not have its own family code but used the Russian SFSR code of 1918. Under this code there were no legal restrictions on divorce: a declaration by one of the marriage partners sufficed to dissolve a marriage. No court hearings were held; the divorce merely had to be registered at the civil registry (ZAHS). In 1926 this practice was confirmed by the Code of Laws Concerning the Family, Care, Marriage, and Acts of Civil Status of the Ukrainian SSR. Disagreements over the custody of children or alimony were referred to the courts for settlement. In order to cut down on the number of divorces, a USSR law of 1936 introduced (1) a high fee for the registration of a divorce and (2) the requirement that both parties appear at the registry office to register the divorce. A divorce was marked on one's passport. On 15 September 1945 the Presidium of the Supreme Soviet of the Ukrainian SSR issued a decree based on a previous USSR decree making court action mandatory for divorce. The party petitioning the court had to present the reasons for divorce, provide witnesses, and pay a fee of 100 rubles. The new family code of the Ukrainian SSR of 1969 simplified the divorce procedure. In cases of mutual agreement and no dependent children the dissolution of marriage is effected at the civil registry. The same simple procedure applies to cases in which one of the parties is incarcerated for at least three years. The courts intervene only when there is a disagreement over the division of property or about alimony.

In 1972–3 the divorce co-efficient in the Ukrainian SSR was 2.9 per 1,000 inhabitants. By 1978 it had risen to 3.7. This statistic is incomplete, for it does not cover those cases of separation that have not been registered formally.

Divovych [Divovyč] (also known as Dzivovych). Cosack family of the Starodub Regiment in the 18th century. Semen Divovych graduated from the Kievan Mohyla Academy and St Petersburg University and served as an interpreter and translator in the General Military Chancellery in Hlukhiv and as the archivist of the Little Russian General Archives. In 1762 he wrote the long historical poem 'Razgovor Velikorossii s Malorossiei' (The Conversation of Great Russia with Little Russia, published in *Kievskaiia starina*, 1882, nos 2 and 7), in which he depicted Ukraine's history, formulated clearly the idea of Ukrainian national rights, and protested Russia's centralist policy in Hetman Ukraine. The poem was studied by M. Petrov, P. Zhytetsky, and M. Vozniak. Semen's brother, Oleksa, was captain of Pochep (1763–9) and continued H. Pokas's *Opisanie o Maloi Rossii* (Description of Little Russia).

Dlozhevsky, Serhii [Dloževs'kyj, Serhij], b 1889 in Kamianets-Podilskyi, d 23 October 1930. Classical philologist and archeologist; professor at the University of Kiev, and, subsequently, the University of Odessa and the Institute of People's Education, director of the Historical and Archeological Museum; and member of the Odessa Scientific Society of the Ukrainian Academy of Sciences. Dlozhevsky studied Roman history and Greek and Roman culture, especially in southern Ukraine; he took part in the archeological excavation of *Olbia. He produced works on classical archeology and epigraphy and on Ukrainian linguistics.

Długosz, Jan, b 1415, d 19 May 1480 in Cracow. Polish chronicler, diplomat, and canon who resided in Cracow. Długosz wrote the 12-volume chronicle *Annales seu cronicae inclity Regni Poloniae opera* (1455–80), making use of various Eastern European archives and chronicles. This work contains important information on the Ukrainian lands.

Leon Dmochowski

Dmochowski, Leon [Dmoxovs'kyi, Lev], b 1 July 1909 in Ternopil, d 26 August 1981 in Houston, Texas. Medical doctor and leading specialist in cancer research. Dmochowski studied medicine at the universities of Lviv and Warsaw prior to the Second World War and in Leeds, England. He worked with the Imperial Cancer Research Fund in London (1939–46) and lectured at the School of Medicine at the University of Leeds (1949–54). In 1954 he established himself in the USA, where he was first a visiting professor and later a professor at the University of Texas School of Medicine and also at other medical institutions, as well as head of the department of virology and cancer research at M.D. Anderson Hospital and Tumor Institute in Houston. Dmochowski wrote over 450 articles on immunology, the serology of tumors, endocrinology, genetics, virology, and the use of the electron microscope in the treatment of cancer cells and viruses. He was the first to prove the presence of both characteristic viral particles in mammary cancer in mice (in 1953) and morphologically similar viruses in human breast cancer (in 1968). He was a fellow or honorary member of many medical societies and academies and the recipient of several awards for his cancer research.

Dmowski, Roman, b 9 August 1864 in Kamionek near Warsaw, d 2 January 1939 in Drozdowo, Poland. Polish politician, one of the founders and leaders of the National Democratic party. Dmowski was a deputy to the Second

and Third Russian State Duma and head of the Duma's Polish Club. From 1917 to 1919 he was head of the Polish National Committee in Paris, signing the Treaty of Versailles as Poland's representative in 1919. In 1923 he was Poland's foreign minister. He opposed Ukrainian independence and favored the partition of Ukraine between Poland and the USSR, a view to which he gave brutal expression in his book *Świat powojenny i Polska* (The Post-war World and Poland, 1932).

Dmyterko, Hanna, b 9 February 1893 in Pidberiztsi, Lviv county, d 3 April 1981 in Edison, New Jersey. A non-commissioned officer in the Ukrainian Sich Riflemen and later in the Ukrainian Galician Army. In 1914–5 she took an active part in the battles near Lysovychi and by the Strypa River. After the Second World War she emigrated to the United States and remained active in various community organizations, most notably the Ukrainian youth organization Plast.

Dmyterko, Liubomyr, b 18 March 1911 in Vynnyky, Drohobych county, Galicia. Poet, prose writer, playwright, critic, a leading member and spokesman of the Writers' Union of Ukraine. In 1919 Dmyterko moved with his parents from Galicia to Kamianets-Podilskyi. There he studied at the Institute of People's Education. In 1928 his writings began to appear in the local paper, *Chervoonyi kordon*. From 1930 he worked as an editor at a Kiev film studio, and in 1962 he became the editor of the journal *Vitchyzna*. Since 1930 he has published 28 collections of poetry, including *Tovtry* (1931), *Moloda zemlia* (The Young Earth, 1935), *Knyha borot'by* (The Book of Struggle, 1939), *Na poli boiu* (On the Battlefield, 1944), *Hariachyi sukhodil* (The Hot Dryland, 1947), *Zoria na obrii* (Star on the Horizon, 1957), and *Krylatyi kin'* (The Winged Horse, 1974). His plays include *Heneral Vatutin* (General Vatutin, 1948), *Naviky razom* (Together Forever, 1950, 1957) and *Divocha dolia* (Girls' Fate, 1960). He has also published stories, novellas, and the novels *Rozluka* (Separation, 1957), the trilogy *Mist cherez prirvu* (Bridge across the Gorge, 1969), and *Ostanni kilometry* (The Last Kilometers, 1972). Two volumes of his *Vybrani tvory* (Selected Works) were published in 1971. He has also written essays, critical articles, magazine articles, and so on. In his writings Dmyterko conforms strictly to the official Communist party line. He is notorious for his vehement denunciations of the *Shestydesiatnyky and of dissidents and for his critical attacks on departures from socialist realism.

I. Koshelivets

Dmytrenko, Ihor, b 24 July 1928 in Kharkiv. Physicist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1976. Dmytrenko graduated from the Kharkiv Polytechnical Institute in 1952 and since 1953 has worked at the Physical-Technical Institute of Low Temperatures of the Academy of Sciences of the Ukrainian SSR. He has done basic research in the physics of low temperatures, the electronic properties of metals, and superconductors.

Dmytrenko, Mykhailo, b 9 November 1908 in the town of Lohvytsia, Poltava gubernia. Portrait painter, monumentalist, graphic artist. Dmytrenko graduated from the *Kiev State Art Institute in 1930 and worked

Mykhailo Dmytrenko

there as F. Krychevsky's assistant. In 1939 he moved to Lviv and became chairman of the Organizing Committee of the Artists of Western Ukraine. In 1944–50 he lived in Munich and in 1951 immigrated to Canada. He settled eventually in Detroit. In North America Dmytrenko has specialized in church painting. He painted the Orthodox Cathedral of St Volodymyr in Toronto, the Catholic Church of the Immaculate Conception in Detroit, and St Constantine's Church in Minneapolis (1975–6). He also executed the mosaics of St George's Church in New York and the stained-glass windows of the Roman Catholic Church of St Columba in Youngstown, Ohio. He has painted over 500 portraits. Among his graphic book illustrations are the illustrations in T. Osmachka's *Poet* and V. Barka's *Bilyi svit* (The White World).

In painting Dmytrenko cultivates the multicolored impressionism of the circle consisting of F. and V. Krychevsky and M. Burachek. In graphics he continues the tradition of the pure line of Yu. Narbut's school, and in monumental painting he shows an inclination towards the expressive forms of the Ukrainian baroque. Dmytrenko's works have appeared in numerous group and individual exhibits in Ukraine, Germany, Canada, and the United States.

S. Hordynsky

Dmytrenko, Petro, b 14 July 1909 in the village of Mostyshche (now Petrivske), Chernihiv gubernia. Agricultural chemist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1964. Dmytrenko graduated in 1932 from the Kiev Agricultural Engineering Institute of the Sugar Industry. Since 1934 he has been an associate of various research institutes of agricultural geography, soil science, and crop cultivation. Dmytrenko has published studies on plant nutrition and on the climatic, soil, and agrotechnical conditions affecting the use of the fertilizers that have been systematically employed in various agricultural zones of the Ukrainian SSR.

Dmytriiev, Mykola [Dmytrijev], b 9 April 1886 in the village of Ulianivka, Kharkiv gubernia, d 8 November 1957 in Kharkiv. Geographer, professor at the Kharkiv Institute of Geography and Cartography and, from 1922, at Kharkiv University. He wrote works in geomorphology, including *Geograficheskoe polozenie i orografii Ukrainy* (The Geographical Location and Orography of Ukraine, 1927) and *Rel'ief USSR* (The Relief of the Ukrainian SSR, 1936).

Dmytriuk, Vasyl [Dmytrijuk, Vasyl'], b 1 January 1890 in Kostoploty, Podlachia, d 11 November 1973 in Buffalo, New York. Community figure in Podlachia and the Berestia region, physician. In 1917–18 Dmytriuk was a physician with the Haidamaka Battalion of Slobidska Ukraine in the UNR Army. In 1918 he was the representative of the UNR health ministry in the northwestern territories. From 1920 to 1923 he headed the Brest branch of the Prosvita society. He was a deputy to the Polish Sejm from 1922 to 1927. In 1950 he immigrated to the United States. He worked as a hospital physician in Buffalo from 1954.

Dmytriv, Nestor, b 1863 in Galicia, d 1925 in the United States. Ukrainian Catholic priest, member of the *American Circle. Dmytriv attended the Lviv Theological Seminary and was a priest in various parishes in Galicia before emigrating to the United States in 1895. There he was appointed parish priest in Mount Carmel, Pennsylvania. He was elected president of the Ruthenian National Association (now Ukrainian National Association) for 1895–6 and edited the daily *Svoboda* (1896–7). He was also a founder of the Ruthenian Greek Catholic Teachers' Association. On O. Oleskiv's recommendation Dmytriv was appointed immigration agent with the Canadian Department of the Interior in 1897; this enabled him to travel across Canada and administer to the practical and spiritual needs of the new Ukrainian settlers. At that time he was the first and only Catholic priest of the Ukrainian rite in Canada. His numerous articles describing his experiences in Canada appeared regularly in *Svoboda*, and a selection of them were published as a book, *Kanadiis'ka Rus'* (Canadian Ruthenia, 1897). He returned to the United States in 1898.

Dmytro. Kiev voivode of Prince *Danylo Romanovych of Halych. In 1240 he stubbornly defended Kiev against the Tatars. After the fall of the city Dmytro was spared by Batu Khan for his courage.

Dmytruk, Ihor, b 11 February 1938 in Kaminka Strumilova, Galicia. Constructivist painter. Dmytruk has lived in Canada since 1949. He has had many individual and group shows in university towns in Canada and at the Ukrainian Institute of Modern Art in Chicago (1974). Dmytruk is a painter of hard-edged forms and lines who has turned to drawing as his fundamental means of artistic expression. Dmytruk's work is to be found in public collections in Canada (the art galleries of Edmonton and Hamilton) and in university collections.

Dmytryk, Edward, b 4 September 1908 in Grand Forks, British Columbia. Film director and editor of Ukrainian descent. In 1923 Dmytryk moved to the United States and in the 1930s he began work in the film industry in Hollywood as a film editor and later a film director. His first film was *The Hawk* (1935). During the war he produced a strongly antifascist film, *Hitler's Children* (1943), and later he directed the films *Murder My Sweet* and *Cornered*. His most successful film was *Crossfire*, in which the problem of anti-Semitism is raised. In 1947 Dmytryk, along with other Hollywood figures, was investigated by the House Un-American Activities Committee. From 1948 to 1951 he resided in England, where he directed a film dealing with social issues, *Give Us This Day*. In 1951 he was cleared and

resumed work in the United States, directing several well-known films; among them *The Sniper*, *The Caine Mutiny*, and *Broken Lance*. Dmytryk has directed over 50 films. His autobiography, *It's a Hell of a Life But Not a Bad Living*, was published in 1979.

Dmytryshyn, Basil [Dmytryśyn, Vasył'], b 14 January 1925 in Barvinok, Korosno county, Galicia. Historian. Dmytryshyn emigrated to the United States in 1947 and studied at the University of Arkansas and the University of California at Berkeley. In 1956 he was appointed a professor at Portland State University. His major publications are *Moscow and the Ukraine, 1918–1953* (New York 1956) and *USSR: A Concise History* (2nd edn, New York 1971); he has edited the sourcebooks *Medieval Russia* (New York 1967) and *Imperial Russia* (New York 1967) and published articles in American and Canadian historical journals and journals of Slavic studies.

Dnewnyk Ruskij (*Dnevnyk Ruskii*) (The Ruthenian Daily). A weekly published from 30 August to 25 October 1848 in Lviv by the political committee known as the *Ruthenian Congress to counteract the publications of the *Supreme Ruthenian Council. The paper was supported by several Polish circles. Nine issues were published altogether, the first five and the last issue appearing in the Latin alphabet and the others in the Cyrillic alphabet. The editor was I. *Vahylevych. Besides the Ruthenian Congress's program and proclamations, *Dnewnyk Ruskij* published articles on political and social problems, such as F. Harasevych's 'Slovo o Rusi i її stanovyshchi politychnim' (A Discourse on Rus' and Its Political Situation) and I. Vahylevych's 'Vidky vzialysia pany i lany' (Whence Came the Lords and Fields) and 'Zamitky o ruskoi literaturi' (Comments on Ruthenian Literature). H. Yablonsky's and I. Zhendzanovsky's poems, V. Shutsky's novelette, Vahylevych's humorous sketches, and advice for farmers were among the items that appeared in the newspaper.

Dnieper Aluminum Plant (Dniprovskiy aliuminiievyy zavod im. S. Kirova or DAZ). The only aluminum plant in the Ukrainian SSR, located in Zaporizhia. Its construction began in 1930, and production began in 1933. Basically it produces casting aluminum, rolled aluminum, aluminas, and aluminum alloys. Before the war DAZ was the largest aluminum producer in the USSR and Europe. It produced 75 percent of the Union's aluminum and 100 percent of its crystalline silicon and silumin in 1940. Destroyed in 1941–3, the plant was rebuilt in 1945 and modernized. In 1977 it had the following departments: electrolysis, aluminas, crystalline silicon, and iron powder. It is the sole plant in the world producing aluminum alloys electrothermally.

Dnieper Cascade of Hydroelectric Stations (Dniprovskiy kaskad HES). A series of six hydroelectric stations on the Dnieper River. The projected potential of these stations is about 3.8 million kilowatts. The average annual production is 9.8 billion kilowatt-hours. The energy potential of the Dnieper began to be tapped when the *Dnieper Hydroelectric Station was built in 1927–32 (352,000 kW) according to the plan of the State Commission for the Electrification of Russia (GOELRO). In 1950–6 the Kakhivka Hydroelectric Station (352,000 kW) was built,

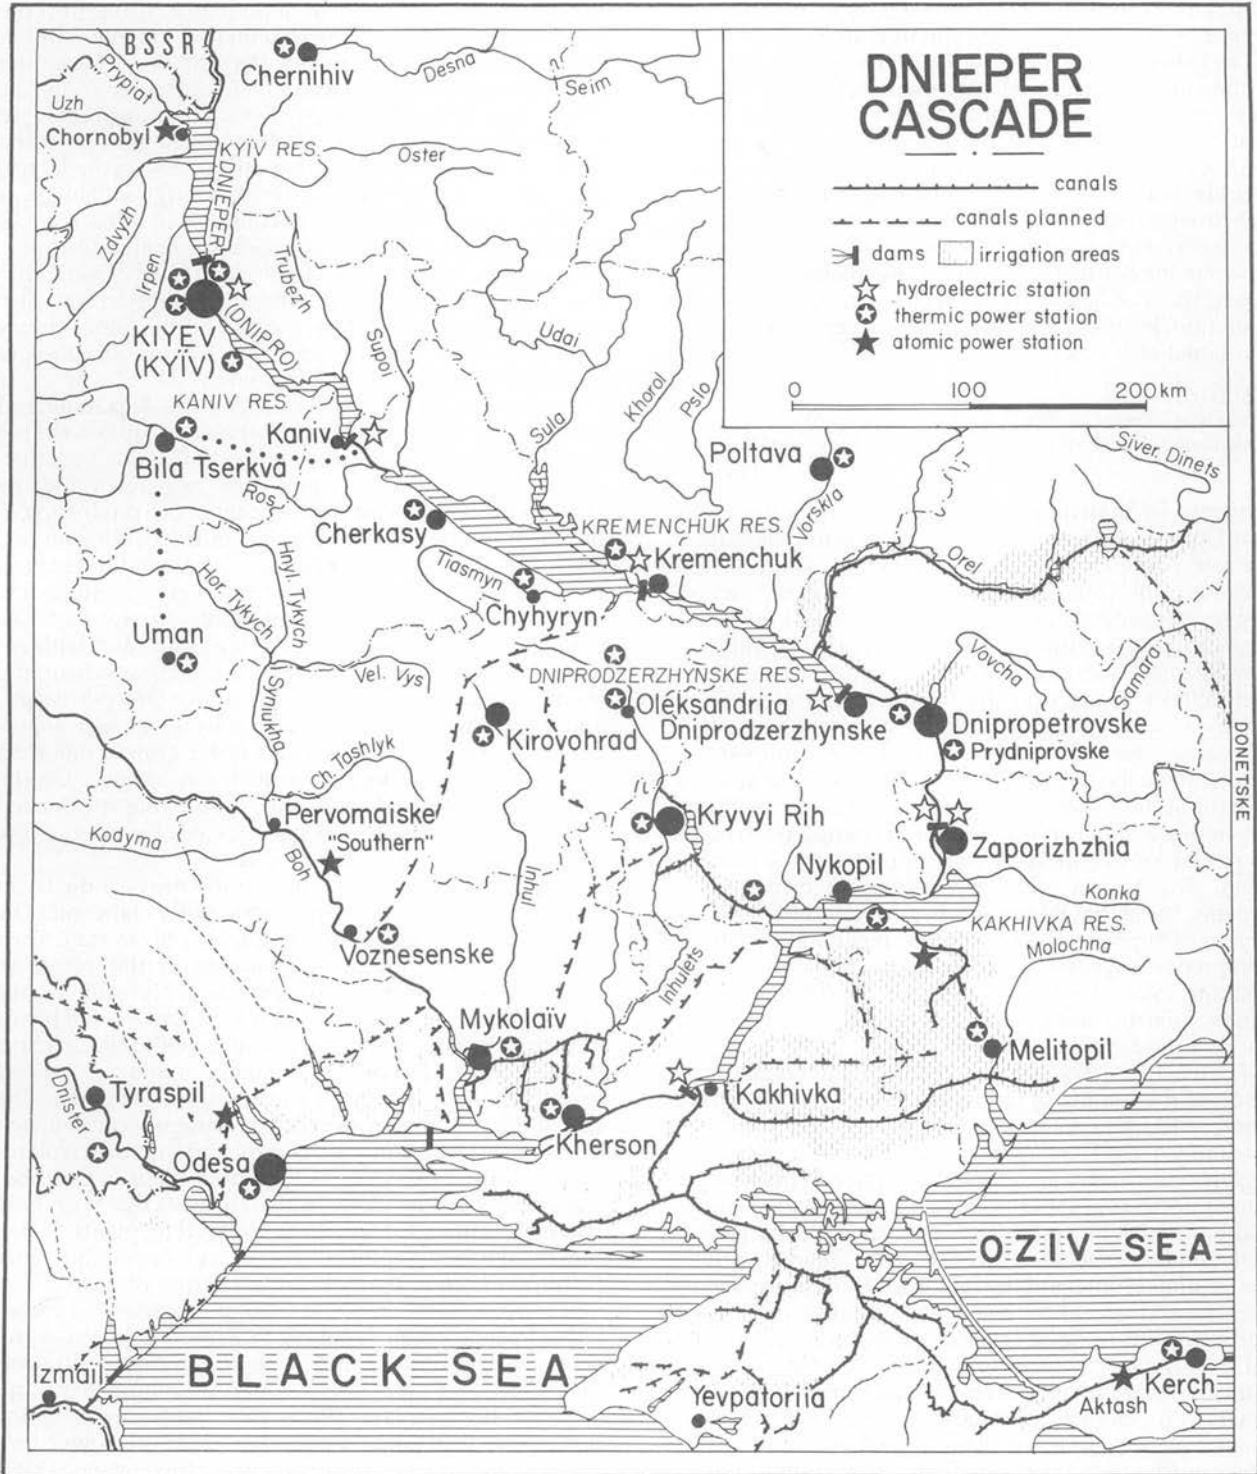

followed by the Kremenchuk Station (625,000 kW) in 1960, the Dniprodzerzhynske Station (325,000 kW) in 1956–64, the Kiev Station (586,000 kW) in 1968, and the Kaniv Station (444,000 kW) in 1963–75. In 1969 construction of the Dnieper Hydroelectric Station – 2 (Dni-prohes-2), with a potential of 828,000 kW, began. Eight smaller hydroelectric stations are planned for the future on the upper stretch of the Dnieper in Belorussia and Russia. All the stations of the cascade belong to a single energy network for the European part of the Soviet Union. The large reservoirs that have been constructed as part of the Dnieper Cascade are used for regulating the water level of the Dnieper, irrigating the arid regions of southern Ukraine, and improving the water supply in the industrial regions along the Dnieper and in the Donets Basin. At the same time a deep-water route along the Dnieper from the Black Sea to the mouth of the Prypiat River has been created.

The Dnieper Hydroelectric Station (Dni-prohes)

Dnieper Hydroelectric Station (Dni-prohes im. V.I. Lenina or Dniprelstan–Dniprovska elektrostantsiia). The largest hydroelectric station in Ukraine and, before the construction of the Volga stations, the largest in Europe. The station is located on the right bank of the Dnieper River above the city of Zaporizhia (and above the island of Khortytsia, below the last rapids). The earliest plans for a hydroelectric station date back to 1905, but plans for a dam to inundate the Dnieper rapids and make the whole length of the river navigable had been made in the 19th century. One of the designs for a station was proposed by a Ukrainian engineer, Mohylko. In the Soviet period I. Aleksandrov's plan was accepted. The Dni-prohes was among the first 10 hydroelectric stations planned by the State Commission for the Electrification of Russia (GOELRO). Its construction by the Dniprobud trust began in 1927, and its potential was to be 558,000 kW. By 1932 the first five of its nine generators were in operation. American specialists under the direction of Col H. Cooper took part in the construction. All the building machines and the first electrical equipment were imported from the United States.

A reinforced-concrete dam 760 m long and 60 m high raised the water level of the Dnieper 37.8 m and inundated the *Dnieper Rapids, making the river navigable year-round. A three-chamber lock almost 2 km long on the left bank of the Dnieper enabled boats to bypass the dam. An enormous reservoir formed above the dam, filling the narrow valley of the Dnieper as far as Dnipropetrovske.

This artificial lake, known as Lenin Lake, is almost 140 km long, 1.5 km wide at its upper end and 3 km wide at its lower end, and reaches a depth of up to 60 m. The lake covers an area of 320 sq km and contains almost 1.5 billion cubic meters of water.

Until the war the Dnieper Station worked up to its designed capacity, except during the summer and autumn months, when the low water level in the reservoir

drastically reduced the production of electric power (only two out of the nine generators were in operation and even those operated at a reduced capacity).

In 1941 the retreating Soviet forces blew up the dam and evacuated or destroyed the electrical machines and equipment. The Germans partly rebuilt the station but destroyed it again when they began to retreat in 1943. In 1944-7 three aggregated were rebuilt, and the rest were

rebuilt in the 1950s. In 1979 nine aggregates with a total capacity of 1,312,000 kW were in operation.

The Dnieper Station does not meet the energy demands of the Dnieper region. Hence, even before the war the Dnieper Energy Ring (Prydniprovskoe enerhokiltse), which includes the Dniprodzerzhynske and Kryvyi Rih thermo-electric stations and electric stations belonging to plants, was created. After the war the Dnieper energy system was integrated with the Donets system to form the Southern energy system. The uncertain balance of electric power in the Southern system was overcome only in 1955 when the Kakhivka Hydroelectric Station went into operation. In 1969 the construction of Dniiprohes-2 and an additional lock was begun.

Dnieper Industrial Region (also known as the Industrial Dnieper Region [Promyslove Prydniprovnia] and in the late 1920s as Zaporizhia). After the *Donets Basin (Donbas), the Dnieper Industrial Region is the second-largest concentration of heavy industry in Ukraine. It is located in the central part of the steppe (in Dnipropetrovske and Zaporizhia oblasts, and part of Kirovohrad and Poltava oblasts), at the bend of the Dnieper, and covers 16,900 sq km and has a population of about 3,250,000. The industry of the region is grouped into several heavily populated centers, which contain 90 percent of the region's population. The population density in these centers is 600 per sq km, compared to barely 40 per sq km in the large agricultural areas separating them. The largest and most important center is the Dnieper Industrial Region proper, which consists of the city of *Dnipropetrovske and its neighboring cities – *Dniprodzerzhynske, *Novomoskovske, and *Verkhnodniprovskoe. Another center, the city of *Zaporizhia and its suburbs, and the smallest center, *Nykopil, lie on the Dnieper River.

The industrial development of the Dnieper region is the result of the mining of large deposits in the *Kryvyi Rih Iron-ore Basin and the *Nykopil Manganese Basin, the proximity of the Donbas and its huge deposits of coal, the region's convenient geographical location at the intersection of north-south and east-west transportation routes, and the availability of industrial water, river transportation, and hydroelectric power from the Dnieper. Among the natural resources of the region are building materials, refractory clays, and clayey soil. Lignite deposits at Verkhnodniprovskoe have not been exploited as yet.

Development before 1914. Until 1880 the Dnieper Industrial Region and the rest of Katerynoslav gubernia, to which it belonged, formed an agricultural region. Its small towns – Katerynoslav (now Dnipropetrovske), Oleksandrivske (now Zaporizhia), and Novomoskovske – were commercial-administrative centers. The development of the region was connected with the construction of a number of railway lines: Oleksandrivske–Moscow (1873), Oleksandrivske–Crimea (1875), and the Donetske (1879), First Catherine (1884), and Second Catherine (1902) lines, which connected the Donbas with the Kryvyi Rih region and its iron ore.

At Katerynoslav and neighboring Kamianske (now Dniprodzerzhynske), where the railway lines crossed

the Dnieper, the metallurgical industry, using iron ore from Kryvyi Rih (120 km away) and coal from the Donbas (150 km away), sprang up. In 1887 the huge Alexander Metallurgical Plant of the Briansk Company (now the Petrovsky plant in Dnipropetrovske) began operating in Katerynoslav. In 1889 a pipe factory, then a steel plant and a wire and nail factory, were built. In 1887–9 the largest plant of the region – the Dnieper Metallurgical Plant (now the Dzerzhinsky Plant) – was constructed in Kamianske by the South Dnieper Metallurgical Company. Owing to its proximity to the large metallurgical plants of Katerynoslav and Kamianske, industry in Oleksandrivske also developed rapidly, and by the end of the 19th century Oleksandrivske had become the leading supplier of agricultural machinery in Ukraine.

On the eve of the First World War the Alexander and Dnieper plants produced together almost 830,000 t of pig iron annually. This was 26.7 percent of Ukraine's production (the Dnieper region produced 29 percent and the Donbas 58.7 percent) and 18 percent of the production in the Russian Empire. The Dnieper Industrial Region had the highest production of pig iron, steel, and rolled steel in the Russian Empire. Part of the region's production was used domestically, but much of it was exported. The region's metal-working industry (agricultural machinery in Katerynoslav and Oleksandrivske, etc), woodworking industry (using lumber from the upper Dnieper Basin), and food industry (mainly milling) were of lesser importance. Mining at Nykopil had a faster growth rate than did the entire metallurgical industry in Ukraine. On the eve of the First World War the Nykopil Basin extracted about one-fifth (90,000 t in 1900, 276,000 t in 1912) of the manganese in the Russian Empire.

1914–41. During the revolution the heavy industry of the Dnieper Industrial Region came to a standstill. The Petrovsky Plant began operating again only in 1923. Then operations were gradually resumed at the plants in Dniprodzerzhynske, Zaporizhia, and Nykopil. In the 1930s the economic base of the region consisted of heavy industry. Besides ore mining and metallurgy, machine building grew rapidly. Manganese mining expanded greatly: in 1940, 1,000,000 t of ore were extracted. The metallurgical industry expanded through reconstruction (the Petrovsky, Lenin, Liebknecht, and Comintern plants in Dnipropetrovske, the Dzerzhinsky plant in Dniprodzerzhynske) and new construction in areas that previously had no metallurgy: Nykopil (a pipe-rolling plant), Novomoskovske (a sheet-metal plant), and Zaporizhia (after Dnipropetrovske, the next largest center of ferrous and non-ferrous metallurgy). In 1932–6 a number of metallurgical plants began operating in Zaporizhia: the Dniprospsststal electro-metallurgical plant, the Zaporizhstal ferrous metallurgy plant, the Dnieper Aluminum Plant, and a coke-chemical plant. Since 1932 the industry of the region has benefited from cheap electrical power provided by the Dnieper Hydroelectric Station (560,000 kW). In 1940 the region produced 2,072,00 t of pig iron (24.4 percent of Ukraine's total) and 3,024,000 t of steel (35.1 percent of Ukraine's total).

Among the large plants constructed by 1941 were the following: the Krasin Automobile and Tractor Plant, a railway-signals plant, a transport-machinery plant, all in Dnipropetrovske or Zaporizhia. Construction of an airplane plant was begun. The Artem Papermaking-Machinery Plant in Dnipropetrovske, the Pravda Rail-

way-Car Plant in Dniprodzerzhynske, an airplane-engine plant, and the Komunar Agricultural-Machinery Plant (now Automobile Plant) in Zaporizhia were greatly expanded. Large repair plants for railway locomotives and railway cars were built. A large woodworking complex, Detalbud, which did some work for the defense industry, was opened. The armaments plant in Pavlohrad grew into the largest plant of its kind in Ukraine. New chemical industries were set up in the region: carbonate, chemical, and oxygen plants in Zaporizhia, coke and nitrogen plants near Dniprodzerzhynske. The food industry and light industry developed slowly. The need for more electric power led to the construction of thermoelectric stations in Dniprodzerzhynske (96,000 kW) and Kryvyi Rih (120,000 kW).

Since 1941. During the Second World War the Dnieper Industrial Region was devastated. Much of its machinery was transferred to the east; hardly any of it was returned after the war. Industrial reconstruction was completed in 1948-50. The Dzerzhinsky plant became the largest metallurgical plant in the region. Before the war it had produced over 1 million t of pig iron a year; by 1949 its production exceeded this by 44 percent. It also produced 37 percent more steel than before the war. In 1947-9 the Zaporizhstal plant, the Dnieper plant (the only aluminum plant in the region), and the Dniprosprotsstal plant were fully rebuilt. The magnesium plant in Zaporizhia was modernized, and it began to produce titanium alloys. In 1955, 2.4 times as much manganese concentrate was extracted from the Nykopil Manganese Basin as had been extracted in 1940. Agricultural-machine building expanded greatly, but light industry and the food industry continued to lag behind heavy industry and did not meet the needs of the population.

In the last 20 years no new metallurgical enterprises have been created in the Dnieper Industrial Region, because of the Soviet policy of establishing heavy-industry centers beyond the Urals. Ferrous and non-ferrous metallurgy were developed through the expansion of existing plants at the expense of modernization. But other branches of industry have developed. These include machine building, energy, transportation, agriculture, factory construction, and passenger-automobile production (since 1959 the Komunar plant in Zaporizhia has been producing the Zaporozhets car). A number of new plants producing various types of equipment and precision tools were established in Dnipropetrovske, Zaporizhia, and Dniprodzerzhynske in the 1960s. In Nykopil a ferrous-alloys plant and chemical plants have been built. In the last two decades light industry, the food industry, and the construction industry have grown rapidly. Their products satisfy not only local needs but are exported outside the region.

The energy supply of the region improved greatly with the discovery of natural gas at Pereshchepyne, the

TABLE 1
Population of the Dnieper Industrial Region

Year	Total population	Population per sq km	Urban population	% of total	Rural population
1926	1,090,000	64	540,000	49.5	550,000
1979	3,250,000	191	2,810,000	86.5	440,000

construction of the Pereshchepyne-Dnipropetrovske (1966) and Shebelynka-Dnipropetrovske (1957) gas pipelines, the building of several electric-power stations (including the Dniprodzerzhynske Hydroelectric Station and the Dnieper State Regional Electric Station), and the exploitation of coal gas.

Population. At the end of the 19th century (1897) the population of the Dnieper Industrial Region was about 700,000 (estimate), 27 percent of which (186,000) lived in towns such as Katerynoslav (120,000), Oleksandrivske (19,000), Nykopil (17,000), Kamianske (17,000), and Novomoskovske (13,000). In the 1860s these towns had barely 40,000 inhabitants (12 percent of the region's population). The population was 950,000 in 1914 (estimate), 1,100,000 in 1926, and 3,250,000 in 1978. Thus, in 52 years the population tripled. A comparison of the population in the region between 1926 and 1979 is given in table 1.

The most rapid population increase occurred in the 1930s. This is evident from the increase in the number of people in towns of over 50,000: 347,000 in 1926, 1,027,000 in 1939, 1,464,000 in 1959, 1,979,000 in 1970, and 2,373,000 in 1978. In 1926 31.8 percent of the population lived in these cities; in 1970, 70.7 percent did. The population increased most during the first three five-year plans (1927-39), when the average annual increase was 8 percent. It fell in the 1960s to 2.7 percent and in 1970-8 to 1.3 percent.

Since the end of the 19th century the region has had population influxes from other parts of Ukraine and Russia. Since 1950 the population of the region has increased more rapidly than that of the Donbas, and the populations of Dnipropetrovske, Dniprodzerzhynske, and Zaporizhia have grown more rapidly than that of any other Ukrainian city except Kiev.

The population is not evenly distributed throughout the region but is concentrated in the industrial centers. The population distribution in 1979 is given in table 2 (the 1926 figures are in parentheses).

The main cities in the Dnipropetrovske center are Dnipropetrovske (1983 pop 1,128,000), Dniprodzerzhynske (1983 pop 265,000), and Novomoskovske (1980 pop 71,000). The Zaporizhia center has only one city, Zaporizhia (1983 pop 835,000). The Nykopil center embraces Nykopil (1983 pop 152,000), Marhanets (1980 pop 51,000), and Ordzhonikidze (1979 pop 51,000).

The changes in the populations of the largest cities are given in table 3.

TABLE 2
Population distribution, 1979

Center	Area (sq km)	Total population		Urban population		Rural population (1,000s)
		in 1,000s	per sq km	in 1,000s	% of total	
Dnipropetrovske	5,500	1,730 (570)	315 (57)	1,580 (300)	91 (53)	150 (270)
Zaporizhia	1,500	860 (120)	573 (80)	820 (60)	95 (50)	40 (60)
Nykopil	1,970	320 (90)	162 (46)	270 (20)	84 (22)	50 (70)

TABLE 3
Populations of largest cities, 1860–1979 (in 1,000s)

City	1860	1897	1926	1939	1959	1970	1979
Dnipropetrovske (Katerynoslav)	19	120	233	501	690	904	1,066
Zaporizhia (Oleksandrivske)	4	19	52	290	449	658	781

National composition of the population (percentages)

Nationality	1897	1926	1959	1970
Ukrainians	77	77	72	69
Russians	11	12	23	27
Jews	6	8	3	2
Germans	4	1	–	–
Others	2	2	2	2

TABLE 5
Ethnic composition of major cities, 1926 and 1959

City	% Ukrainians		% Russians		% Jews	
	1926	1959	1926	1959	1926	1959
Dnipropetrovske	36	59	32	29	27	8
Zaporizhia	47	61	26	33	21	4
Dniprodzerzhynske	73	70	17	24	4	2
Nykopil	67	68	12	27	19	3

National composition. Prior to industrialization, almost 90 percent of the region's population consisted of Ukrainians, if one excludes the cities, particularly Katerynoslav, which had a mixed population of Ukrainians, Russians, Jews, and some Germans. Industrialization stimulated the in-migration of Russians: insignificant at first, it increased in the 1930s and still continues to increase. During the First World War and the revolution the number of Germans decreased, and during the Second World War the Jewish population decreased. These changes are represented in table 4, which shows the national composition (based on estimates).

The national composition of the population of the major cities in 1926 and 1959 is given in table 5.

Dnieper Lignite Coal Basin (Dniprovskiyi burovuhilnyi basin or Dniprobass). The largest lignite coal basin in Ukraine, the Dniprobass lies in the central part of the Ukrainian SSR. It extends from the northwest to the southeast, mostly on the right bank of the Dnieper River

and within the boundaries of the Ukrainian Crystalline Shield. The Dniprobass covers an area of almost 150,000 sq km. The coal reserves are connected with the Paleogene and Neogene deposits of the Cenozoic era. Over 120 fields in the Dniprobass have been located. Coal seams lie at depths of 10–170 m in one to three layers, which are 4–5 m and in some places even 25 m thick. The coal has a high ash content (15–45 percent) and a carbon content of 60–70 percent. Its heat value is 1,800–2,000 kcal/kg. On heating, it yields 54–71 percent volatile content, 3–12 percent bitumen, and 10–18 percent tar.

The Dniprobass was first mined in the second half of the 19th century. Today 90 percent of the coal is mined in open pits. Only the fields at Korostyshiv, Yurkivka, Semenivka-Oleksandrivka, Bandurivka, Balakhivka, and Mykhailivka, in Kirovohrad and Dnipropetrovske oblasts, are mined. The coal is used exclusively for local needs: 80 percent is used in the form of fuel briquettes in various branches of the economy; 26 percent is used in the form of dust in thermoelectric stations; and 4 percent is used as raw material in the chemical industry. Over 11 million t are mined annually.

Dnieper Line (Dniprovska liniia). System of border fortifications built by the Russian government during the Russo-Turkish War (1768–74) for protection against Tatar incursions. It replaced the old fortifications of the so-called Bilhorod and Ukrainian border line (in the Poltava and Kharkiv regions), which lost significance with the southward extension of the borders. The Dnieper Line extended 180 km beyond the Dnieper River, from the fortress of Oleksandrivske (today the city of Zaporizhia) to the fortress of St Peter (later Berdianske) on the Sea of Azov. The small garrisons along the line were manned by Cossacks. Having played a strategic role during the Russo-Turkish War, the Dnieper Line was abandoned after the annexation of the Crimea to the Russian Empire (1783).

Dnieper Lowland. An extensive plain occupying most of Left-Bank Ukraine between the *Dnieper River in the west and southwest and the *Central Upland in the northeast. In the southeast it is bounded by the *Ukrainian Crystalline Shield along the Samara River and by the *Donets Ridge. The boundary between the Dnieper Lowland and the Central Upland runs approximately through Kharkiv, Sumy, Putyvl, Hlukhiv, and Seredyna-Buda. The southwestern boundary with the Dnieper Upland is a natural one, while the northwestern boundary with the Polisia Lowland is fluid. The northern part of the Dnieper Lowland, which lies within the forest belt (south of the Kiev-Nizhen-Hlukhiv line), is usually considered to be a part of eastern (or Chernihiv) Polisia. The lowland is about 600 km long, about 250 km wide in the north, and 150 km wide in the south. It encompasses Poltava and Chernihiv oblasts and parts of Kiev, Sumy, Kharkiv, Cherkasy and Dnipropetrovske oblasts, covering an area of over 100,000 sq km; excluding the part in Polisia, it covers 75,000 sq km.

The lowland lies within the *Dnieper-Donets Trough, and this determines its orographic characteristics. The Precambrian foundation of the trough is 8–10 km below the surface and contains large sedimentary deposits from the Paleozoic to the Cenozoic period. Chalk strata (in the north and southeast) up to 600 m deep and Paleogene strata (mainly sand and clay) 250–300 m deep come to the surface in the river valleys. The lowland became dry land at the end of the Paleogene period. The Dnieper Valley and its left-bank tributaries already existed at the time. Erosion has greatly affected the relief of the lowland; it is now covered with a layer of Anthropogene deposits that lie unevenly on the washed-out Paleogene strata.

The lowland was covered by a glacier during the Dnieper or Riss glaciation, which extended south to the mouth of the Orel River, east just beyond the Psol River, and north to the watershed between the Psol and the Sula rivers. Climatic changes before, during, and after this age left their mark on the landscape of the lowland. The glaciers left many ground and terminal moraines, with irregular hills. They also left sand and gravel plains formed by the glacial meltwaters, which receded with difficulty, because the Dnieper had to penetrate through the rising Crystalline Shield. The ice waters flowed along depressions on the edge of the glacier. Loess deposits formed before, during, and after the glaciation. Because of climatic changes and alternations between accumulation and erosion, the loess lies in several layers separated by ancient (concealed) chernozem soils. A series of terraces were formed. The southern part of the lowland is covered with loess and has an eroded, gullied topography. The northern part is not covered with loess and has a glacial topography. But the line separating these two types of landscape is not as distinct in the lowland as it is in the *Dnieper Upland: in Polisia the lowland contains many loess islands with an eroded landscape, while the Dnieper Valley has a typical Polisian landscape for a considerable distance south.

Although the Quaternary layers of the lowland reach a thickness of 50 m, and even 100 m in places, the preglacial features of the relief have remained basically unchanged. The surface of the lowland slopes southwest towards the axis of the Dnieper-Donets Trough. Its highest elevation (in the northeast) is over 200 m, and its lowest – where the Samara joins the Dnieper – is 40 m. The tributaries of the Dnieper – the Desna, Sula, Psol, Vorskla, Orel, Samara, and other smaller rivers – flow towards the southwest. Only the most southeastern part of the lowland slopes towards and has waters flowing into the Donets River.

The lowland in the forest-steppe belt has two basic regions: the Dnieper Terraced Plain (sometimes called the Dnieper-Desna Terraced Plain) in the southwest, with a lower elevation, and the Poltava Plain in the northeast, with a higher elevation.

The Dnieper Terraced Plain is the broad valley of the Dnieper. It stretches northeast as far as the line running through Hlukhiv, Pryluka, Pyriatyn, Khorol, and the mouth of the Samara River. Up to 130 km wide in the north, it narrows to 20 km in the south. The plain has almost no forest and consists of several wide terraces: alluvial, wooded, and loess.

The alluvial terrace is prominent and extends the full length of the Dnieper. It is 4–5 m high, several kilometers wide, and 15–20 m thick. The terrace is covered with

lakes, swamps, meadows, and bush, but rarely with forest. It is usually inundated by the Dnieper during floods. Since the construction of the Dnieper dams, most of this terrace has been under water.

The second, wooded terrace rises to 10–15 m above the Dnieper riverbed and is up to 10 km wide. Consisting of sands, it was once covered by pine forests. Today it is mostly deforested and partly covered with friable sand and dunes.

The higher part of the Dnieper Terraced Plain (two to four terraces) rises above the lower terraces at a sharp incline of 20–25 m and is covered with loess. These terraces are 90 km wide in the north and 20 km wide in the south. They constitute a sedimentary plain, which is divided by a few wide, swampy tributaries of the Dnieper. The valley of the Trubizh River (where the Dnieper flowed in the Riss period) forms a wide depression in the landscape. A few isolated hills – Khotskyi Horb (151 m), Pyvykha (169 m), Kalytva (145 m) – are relicts of the terminal moraine of the Dnieper glacier.

The Poltava Plain rises distinctly above the Dnieper Terraced Plain along a line running through Ichnia, Pyriatyn, Khorol, and Novomoskovske and above the Desna Terraced Plain along a line running from Ichnia to the Sula-Seim watershed. It rises gradually towards the northeast, where at 200–220 m it becomes the Central Upland. The entire plain is covered with thick layers of loess, which in the west overlie a glacial base and in the east lie directly on Tertiary deposits, which are exposed only in river valleys. The surface of the Poltava Plain is cut by the left-bank tributaries of the Dnieper, which form asymmetrical valleys 70–80 m deep and 10–12 km wide. The right banks of the rivers are high and steep, gouged by short but deep ravines with landslips, and covered often with bush and forest. Their left banks rise gently, usually in three to four terraces. Gullies of the left banks branch out onto the surfaces of watersheds and form deep, short furrows. The gullies on the right banks leave long, shallow furrows in the watersheds, giving them an undulating character.

The typical gully and ravine landscape that prevails in the Poltava Plain can be attributed mainly to the soft loess foundation. The plain is divided unequally: the right banks of the Sula, Khorol, Vorskla, and the middle Psol valleys are cut most prominently. Some variety on the watershed plains is provided by glacial (dead) valleys, which dissect the watersheds and connect the main river valleys of the Poltava Plain. *Pody* (saucerlike depressions) are widespread in the south. The central section contains hills caused by the movement of saline masses; for example, Zolotukha Mountain near Romny and Vysachky Hill in Poltava oblast. Burial mounds (usually 6–8 m high), often arranged in long rows, dot the landscape and are relicts of ancient civilizations. Three basic relief forms are found in the northern, Polisian zone of the lowland: alluvial plains and terraced valleys, moraine and sandy outwash plains, and dissected loess plains.

The southern part of the Polisian zone is a continuation of the Dnieper Terraced Plain. Besides a low outwash terrace, there are two quite extensive higher terraces, covered mostly with sand (not loess). Farther north the three types of relief mentioned above exist side by side. Alluvial plains and terraced plains extend along the Dnieper, Desna, Snov, and other rivers. Moraine and

sandy outwash plains lie on the watersheds. Loess islands, marked by gullies, are widespread here; they include the Liubech–Chernihiv, Berezna–Sosnytsia, Novhorod-Siverskyi, and other islands. An important role in forming the present surface was played by the old, sedimentary valleys. The largest among them is the Zamhlai Valley, which at one time contained the waters of the Dnieper. Now it is a large, swampy depression (8,330 ha in area).

The northeastern part of the lowland, which is sometimes called Novhorod-Siverskyi Polisia, passes into the Central Upland. Here chalk layers covered with thin Tertiary and Anthropogene deposits rise to the surface. The rivers cut into the chalk layers, forming many ravines and gullies, or a karstic relief. The right bank of the Desna near Novhorod-Siverskyi is particularly picturesque.

The climate of the lowland is temperate-continental. The continental character is intensified in the southeastern direction with increasing annual-temperature ranges and higher summer temperatures. The average annual temperature is 6° to 7.5°C, the average January temperature –6° to –7.5°C, and the average July temperature 18.5° to 21°C. The difference between the coldest and warmest months increases from 25°C in the northwest to 28°C in the southeast. The annual rainfall diminishes from 600 mm in the north to 450 mm in the southeast. Seventy-five percent of the rainfall comes in the warmer half of the year.

In the forest-steppe section of the lowland chernozem soils predominate. Deep chernozems, poor humus, and chernozem-meadow soils are widespread. Along the steep right river banks are found degraded chernozems and gray forest podzolized soils. In the northern part of the lowland bog-podzol soils predominate, but gray and light gray podzol soils (usually on a loess foundation) and peat-bog soils are also common.

Two-thirds of the lowland lies within the forest-steppe belt. Only about 6 percent of the area is covered with forests, mostly oak forests with some linden and pine forests on sandy terraces. The grassy, colored, broad-leaved steppe is completely under cultivation. The southernmost part of the lowland enters the fescue–feathergrass steppe belt. In the part of the lowland that lies in Polisia, now barely 17 percent of the area is covered with forest. The forests are partly deciduous (oak, birch, ash, alder, etc) and partly coniferous (pine). Much of the land is covered with dry and water meadows. Sedges, reeds, and cattails grow in the swamps.

(For the population and economy of the Dnieper Lowland, see *Poltava oblast and *Chernihiv oblast.)

Dnieper Metallurgical Plant (Dniprovskiyi metalurhiynyi zavod im. F.E. Dzerzhynskoho). Located in Dniprodzerzhynske (formerly Kamianske), this is the largest metallurgical plant in Ukraine. It was built with foreign capital in 1887–9 by the South Russian Dnieper Metallurgical Company. By the First World War it was the largest metallurgical plant in the Russian Empire. In 1913 the plant produced over 499,000 t of pig iron, 368,000 t of steel, and 299,000 t of rolled steel. Following the revolution it resumed operations in 1925, after undergoing reconstruction until 1924. The plant was expanded in the 1930s, evacuated in 1941, and again reconstructed and modernized after the war. By 1949 it was producing 44 percent more pig iron and 37 percent more steel than before the war. After a new blast furnace (no. 12) was put into operation, the plant began to smelt more iron than was produced annually in all of the Russian Empire before 1917–4.2 million t. Its basic output consists of agglomerated ores, pig iron, steel, rolled steel, pipes, rails, plates, and axles. In 1958 the plant became the first plant in the world to apply the technology of oxygen-enriched forced air and natural gas to the smelting of refined pig iron.

The Dnieper Rapids

Dnieper Rapids. The Dnieper Rapids ceased to exist when they were inundated for 90 km between the towns of Dnipropetrovske and Zaporizhia when the *Dnieper Hydroelectric Station was built in 1932. This section of the river, lying in the Ukrainian Crystalline Shield, was strewn with submerged and emerging cliffs, rocks, and boulders. Cliffs and rocks that cut a part of the current are called barriers (*zabory*), while those that cut across the whole river are known as rapids (*porohy*). The rapids, nine in number, lay within a 70 km stretch from Lotsmanska Kamianka, which is 15 km below Dnipropetrovske, to the village of Kichkas (now inundated).

There were thirty barriers, six of which were located farther upriver between Kremenchuk and Dnipropetrovske. Over this 70 km stretch the riverbed dropped in elevation by 35.5 m, or 0.47 m/km. The decline was minimal between the rapids, while at the rapids it sometimes reached 1 percent fall and the current velocity reached 6 m/sec. The order of the rapids and larger barriers was the following: the Kodatskyi or Starokodatskyi Rapid with four falls, the Voloshynova Barrier, the small Surskyi Rapid, the Lokhanskyi Rapid with three falls, the Strilcha Barrier, the Zvonetskyi (or Dzvонetskyi)

DNIEPER RAPIDS IN 1928

Rapid, the Tiahynska Barrier, the Nenasytets Rapid or Did Rapid (the largest) with seven falls, the Voronova and Kryva barriers, the Vovnyzkyi (Vovnih, Vnuk) Rapid, and three smaller rapids – Budylo, Lyshnii, and Vilnyi or Hadiuchyi.

The rapids and barriers made continuous navigation on the Dnieper impossible. They divided the navigable river into two sections: one above and the other below the rapids (see *Dnieper River). Hence, in the 18th century when the whole Dnieper came under Russian control, attempts were begun to regulate the Dnieper at the stretch of rapids. The first projects in 1785 by Col N. Faleev and in 1795–1807 by de Bolan did not achieve any important results. In 1843–54 canals were constructed on the left bank around all the rapids, and the most dangerous cliffs in the barriers were removed. But the canals were narrow and shallow; hence, instead of this new route many boats continued to take the old route (the 'Cossack route') through the natural gaps in the rapids and barriers along the right bank. Steamboats could not navigate this stretch of the Dnieper. Rowboats and sailboats navigated the rapids only when the water level was high. At low water only rafts got through the rapids, and they could travel only downstream with the current. Only the inundation of the rapids made navigation between Dnipropetrovske and Zaporizhia possible.

The Dnieper Rapids were mentioned by ancient Greek writers of the 1st century AD. The first accurate description of them was given in the mid-10th century by Constantine VII Porphyrogenitus in his *De administrando Imperio*. The rapids were a great hindrance to transportation along the *Varangian route. They had to be circumvented by land. The steppe nomads, particularly the Pechenegs, ambushed the caravans of Rus' merchants at the rapids. Prince Sviatoslav Ihorevych died in battle with the Pechenegs near Khortytsia Island in 972. On this island in the 16th century the *Zaporozhian (literally: 'beyond the rapids') Sich was erected.

Dnieper River (Dnipro; *Βορυσθένης*) [Borysthene] in ancient Greek; Danapris in Latin of the 4th century). The largest river in Ukraine and the third largest in Europe (after the Volga and the Danube). From the dawn of history the Dnieper has been closely bound up with the life of the Ukrainian people. It is the 'holy river' of Ukraine. Its length is 2,285 km, of which 485 km lie within the Russian SFSR, 595 km within the Belorussian SSR, and 1,095 km within the Ukrainian SSR. The Dnieper Basin covers 504,000 sq km, of which 289,000 sq km are within the Ukrainian SSR (48 percent of its area). The basin occupies 42 percent of Soviet Ukrainian territory and 36 percent of Ukrainian ethnic territory.

The Dnieper flows south through the center of Ukraine and bisects its natural zones – forest, forest-steppe, and steppe – interconnecting them and connecting them with the Black Sea. Of the long-settled principal areas of Ukraine, only Galicia, western Volhynia, and Transcarpathia lie beyond the basin of the Dnieper. Travel is easy from the Dnieper basin to basins northwest of it – the Vistula, Neman, and Dvina – but difficult to other basins, such as the basins of the Dniester, Boh, Volga,

and Don. Easy communications between the Dnieper, Prypiat, and Buh by means of the Vistula facilitated the expansion of Poland into Ukraine. The Dnieper's role as a unifying force and gateway to the sea was, however, weakened by a 70 km stretch of rapids in the steppe belt. In spite of this obstacle, the Dnieper was the main axis of the first Ukrainian state – Kievan Rus'. The nucleus of a second state – the Zaporozhian Sich – arose on the Dnieper. The river is the artery of Ukraine, its main highway, and its source of hydroelectric power.

The Dnieper River near Dnipropetrovske

Physical geography. The Dnieper is a typical river of the plains, sloping gently and flowing slowly. The water level varies considerably, and the riverbed is unstable. There are many shallow parts, but relatively few turns. The rapids, which today are submerged, are a peculiar feature of the Dnieper. The river's general southerly flow can be broken up into several sections: from its source to Orsha (Vitsebsk oblast) the Dnieper flows southwest, then south to Kiev, then southeast to Dnipropetrovske, then south for 90 km as far as Zaporizhia, and finally southwest to the estuary. Thus, the Dnieper forms a large open bow to the east, doubling the route from central Ukraine to the Black Sea (to 950 km, although Kiev is only 450 km from the sea in a straight line).

The river can be divided into three sections: the upper Dnieper from the source to Kiev (1,333 km, of which 255 km are within Ukraine); the middle, from Kiev to Zaporizhia (536 km), including the above-mentioned stretch of rapids; and the lower, from Zaporizhia to the sea (331 km).

The source of the Dnieper lies in the northwest part of the Central Upland – in the Valdai Upland, at an elevation of 220 m, among turf swamps. Down to the town of Dorogobuzh (Smolensk oblast) the Dnieper is a small river, no more than 30 m wide, flowing through a forested plateau. Below Dorogobuzh to Orsha the river becomes wider – 40–120 m – and navigable, even by steamship when the water is high. Above Orsha the river cuts into Devonian limestone, forming small rapids known as the Kobeliatskie Rapids. Below Orsha near Rahachou (Hemel oblast), the Dnieper enters the Polisia Lowland, and from the town of Loev it flows through Ukrainian territory. From here on the river basin widens considerably, because the largest tributaries are in this section. On Belorussian territory the Biarezina (613 km long; basin area, 24,530 sq km) joins the Dnieper from the left, and the Sozh (648 km long; basin area, 41,400 sq km) joins it from the right. On Ukrainian territory the Prypiat (748 km and

114,300 sq km) and the Desna (1,126 km and 88,900 sq km) flow into the Dnieper. The Teteriv (385 km) and Irpin (162 km) are small tributaries within Ukraine. After the Dnieper receives these rivers, its basin expands to 328,000 sq km (near Kiev), its width reaches 700 m, and its depth approaches 8 m. The rate of water flow at Orsha is 45 cu m/sec; at Rahachou it is 108 cu m/sec; and at Kiev it increases to 1,380 cu m/sec. The basin of the upper Dnieper has the densest river network (0.3 km/sq km) and the most rainfall (550–650 mm per year). It is the most forested (25 percent) and swampy section of the Dnieper.

The construction of the *Dnieper Cascade of Hydroelectric Stations and reservoirs from the mouth of the Prypiat to the town of Kakhivka (the Kiev, Kaniv, Kremenchuk, Dniprodzerzhynske, Kakhivka reservoirs, and Lenin Lake) has led to great changes in the riverbed. The natural riverbed has been preserved only along short sections of the Dnieper: above the mouth of the Prypiat, above Kiev, below Kaniv and Dniprodzerzhynske, and below Kakhivka.

From Kiev to Dnipropetrovske the Dnieper flows along the boundary between the *Dnieper Upland and the *Dnieper Lowland. The river valley is asymmetrical here: the right bank rises to 100–150 m above the river, is deeply dissected by valleys and gullies, and is covered with forest. It forms a picturesque mountain landscape. Kiev lies in these 'Dnieper Mountains.' Below Kiev, in the *Kaniv Hills, is located T. Shevchenko's grave. The left bank of the river is low, sandy, and often covered by pine forest. It rises towards the east in broad terraces. The river valley is wide – 6–10 km, and at Pereiaslav and Cherkasy, 15–18 km – while the river is 200–1,200 m wide. Below Cherkasy the Dnieper splits into sidestreams and creates islands. Its depth varies frequently, from 1.5 to 12 m. The tributaries that empty into the middle Dnieper are smaller than those in the upper Dnieper and carry much less water. The tributaries on the right side – Stuhna (68 km), Ros (346 km), and Tiasmyn (194 km) – flow in short, narrow beds carved in granite. The tributaries on the left originate usually in the Central Upland and cross the whole Dnieper Lowland. They are longer and wider, with low banks and terraces. The rivers are the Trubizh (113 km), Supii (130 km), Sula (310 km), Psol (692 km), Vorskla (425 km), and Samara (311 km). They do not greatly increase the water volume of the Dnieper.

The slope of the Dnieper between Kiev and the mouth of the Tiasmyn is very gentle – 6 cm/km. It becomes steeper where the Dnieper enters the Ukrainian Crystalline Shield. The river dissects the massif for 90 km between Dnipropetrovske and Zaporizhia. Originally it flowed through a narrow, deep (100 m), chiseled valley and formed a typical granite landscape. The riverbed narrowed here to 300–800 m, and at the village of Kichkas near Zaporizhia it contracted to 175 m. Here the renowned *Dnieper Rapids rested on a firm, granite foundation. There were 9 rapids and 60 small barriers. The slope of the river reached 50 cm/km, and the current sometimes attained a velocity of 6 m/sec. When a dam was built on the Dnieper above Zaporizhia in 1932, the rapids were submerged under Lenin Lake, and the landscape changed completely.

The middle stretch of the Dnieper lies in the forest-steppe (to Kremenchuk) and steppe belts. The rainfall (400 mm near Zaporizhia) is less here than in the upper Dnieper (550 mm in the north). The forest covers scarcely

5 percent of the surface. The tributaries are small; hence, the Dnieper's water volume does not increase in this part of its course.

Below Zaporizhia the Dnieper enters the steppe belt, the dry (300–400 mm of rainfall) Black Sea Lowland. Near Kichkas the Dnieper split into two branches, which encircled a large, steep, granite island – *Khortytzia – on which the Zaporozhian Sich once stood. The valley here was 4 km wide. Farther on the valley widened to 20 km before the Kakhivka Reservoir was built, and the river divided into many branches as it flowed through the muddy flatland, which became flooded in the spring and during heavy summer rains. This floodplain was covered by islands of deciduous forests, wet meadows, lakes, and swamps, which were overgrown with reeds and bulrushes. The largest floodplains – the *Velykyi Luh (20 km wide by 60 km long) – stretched from the Dnieper to its left-bank tributary the Konka and were separated from the broad Bazavluk floodplains by a narrow stretch of floodplains near Nykopol. Then the Dnieper again became narrow (floodplain 3–7 km wide, whereas it is 10 km wide at the Dnieper's mouth). Both banks were high down to Kakhivka, and then the left bank became low. The Dnieper Valley above Kakhivka changed after a second large dam was constructed on the Dnieper near Kakhivka, and the large Kakhivka Reservoir (2,155 sq km) was created. It inundated all the floodplains.

The final stretch of the Dnieper begins below Kakhivka, 106 km above the Dnieper Estuary. Here the water flows on thick (up to 70 m) alluvial deposits, which resulted from the depression of the coastal strip of the Black Sea Lowland in the Quaternary period. This depression also led to the inundation of the Dnieper's mouth (and the mouths of other rivers) and the formation of lagoons and marshy floodplains along the coast. From Kherson (32 km from the estuary) onward the Dnieper splits into branches and forms a large delta (350 sq km) with numerous islands and lakes. Two-thirds of the delta is floodplain, and one-third is water. The Dnieper empties into the *Dnieper-Boh Estuary through several shallow mouths, the main ones being Zburiv, Kizylmyk, and Bokach or Rvach. The dredging of the Bokach mouth has made Kherson accessible to sea vessels. The tributaries of the lower Dnieper are small steppe rivers: the Konka (140 km), Bazavluk (150 km), Bilozerka (88 km), and the larger Inhulets (550 km). The slope of the lower Dnieper is 45 mm/km. The current's velocity depends on the slope and water level. At the rapids the current reached 5 m/sec and more, while it is almost unnoticeable in the low Dnieper. The upper and middle Dnieper has a velocity of about 1.5 m/sec.

Water regime. The Dnieper Basin receives on the average 235 cu km of precipitation per year. Scarcely 52 cu km (22 percent) of this gets to the sea; the rest evaporates. About 75 percent of the precipitation evaporates in the basin of the upper Dnieper, 87 percent in the basin of the middle Dnieper, and over 90 percent in the basin of the lower Dnieper. Snow is the principal source of the Dnieper's water; groundwaters are second in importance; and rainfall comes third. In the upper Dnieper about 50 percent of the water comes from snow, 25 percent from rainfall, and 25 percent from groundwaters. Farther downriver the proportion of rainwater decreases while the proportion of meltwaters and especially groundwaters increases (33 percent in the middle and 42 percent in the lower Dnieper). Thus, the highest proportion of

water (55–57 percent of the annual volume) is received in the spring (March to May), and the lowest proportion (12 percent) in the winter, when ground waters are the main source. Of the annual volume 17–21 percent comes in summer (June to August) and 12–14 percent in the fall (September to November). The divergence from these average figures can be quite large; for example, the springtime water volume at Kiev varies from year to year from 46 to 78 percent of the annual volume. Most of the water that flows into the sea is supplied by the upper Dnieper above Kiev; the upper Dnieper with the Biarezina and Sozh provides 35 percent; the Prypiat, 26 percent; and the Desna, 21 percent. Thus, the water regime of the Dnieper is determined in the basin of the upper Dnieper and is not enriched downstream. At Kiev the average flow rate is 1,380 cu m/sec (at Loiv on the border above the Desna and Prypiat it is 590; in Belorussia above the Biarezina it is scarcely 210), and it increases slowly to 1,480 cu m/sec at Kremenchuk and 1,670 cu m/sec at the estuary. The highest flow rate comes in spring: 7,000 cu m/sec is the average rate at Kiev. During the great flood in the spring of 1931, the flow at Kiev was 23,100 cu m/sec. The difference between the winter and spring water level depends on the area of the basin and on the morphology of the riverbed and valley. In Belorussia it varies from 2 m to 8 m. In Ukraine it varies from 2 m to 5 m.

In winter the Dnieper freezes over, usually after a 20-day spell of subzero temperature. The average freezing and thawing dates for Kiev are 17 December and 24 March; for Cherkasy, 23 December and 22 March; for Zaporizhia, 5 January and 9 March; for Kherson, 3 January and 3 March. The ice regime is not stable: sometimes the Dnieper freezes for short intervals, and sometimes it does not freeze at all. Ice jams and floods resulting from them are rare because the freezing moves southward and the thawing northward.

The Dnieper is not particularly turbid. The water becomes less turbid as it flows downstream; for example, the average amount of suspended silt near Mahiliou is 82 g/cu m of water; near Kiev, 42.5 g/cu m; near Verkhnodniprovske, 27.5 g/cu m (because of the reservoir); near Kherson, 13 g/cu m.

The waters of the Dnieper have a moderate mineral content that varies with location and season. At Kiev the mineral concentration is 70–100 mg/L in summer and 250–350 mg/L in winter. From Kiev to the estuary the concentration does not change.

The water regime of the Dnieper has undergone significant changes because of the new reservoirs. The river has turned into a series of artificial lakes separated by dams and man-made falls from the natural segments of the river. Canals with locks run alongside these segments. The reservoirs have stabilized the regime of the Dnieper: the low-water level of summer and winter has risen remarkably. The duration of ice on the river has been shortened below the dams: for example, the Dni-prohes dam causes earlier thawing on a 30 km stretch of the river.

The Dnieper in the past. The Dnieper was known as the Borysthenes to the ancient Greeks and Romans (Herodotus first used the name in the 5th century BC). Its lower part below the rapids was already used then as a water route. But it became an important route in medieval times, when it became part of the *Varangian route between the Baltic Sea and Byzantium across the Black

Sea. Kiev, the Rus' capital, stood on the Dnieper at the confluence of important water routes. All the important Rus' towns (except those of the Principality of Galicia-Volhynia) were located on the Dnieper or in its vicinity, and on its large tributaries. The capitals of principalities – Chernihiv, Pereiaslav, Turiv, Smolensk – were built on the Dnieper, as were other towns, such as Liubech, Vyshhorod, Tropol, Zarub, Kaniv, Rodnia, and Oleshia. After nomadic tribes occupied the steppes in the 10th century, the Kievan state put most of its energy into retaining control of the Dnieper route, its sole link with the sea. In the 11th century the outposts of the Kievan state – Khortytsia Island and the port of Oleshia – were situated far beyond the regions that were firmly controlled by the princes. As the nomads gained strength and the Kievan state declined, the Dnieper route became less accessible and, by the end of the 12th century, the Dniester route began to usurp its role. The Tatar conquest put an end to the Dnieper's usefulness as a route and to the importance of the towns along the river. Control of the Dnieper by the Lithuanian grand duke Vytautas in the early 15th century was short-lived.

The Dnieper regained its importance in the 16th–17th century, particularly two sections of it. The *Zaporozhian Sich arose on the lower Dnieper, far in the steppes, and became the nucleus of the second Ukrainian state. The Sich changed locations but remained in the region of the Dnieper floodplains. The river became the Cossack route to the Black Sea. The swamps and floodplains protected the Sich from the Tatars and Turkish galleys. During the hetmancy of B. Khmelnytsky, the Dnieper became the principal river of the Cossack state. In the Period of Ruin, when the Hetman state split into left-bank and a right-bank state governed by different hetmans, the struggle for unification involved continual crossings of the Dnieper (particularly during the campaigns of P. Teteria, I. Briukhovetsky, and P. Doroshenko in the 1660s). The Dnieper from Loiv to Kremenchuk (except in the Kiev vicinity) became the boundary between the Polish and Russian spheres of influence up to 1793. The upper Dnieper and its right-bank tributaries, especially the Prypiat and Desna, were important communications routes in the Lithuanian-Polish state. The transportation of forest products was directed west and northwest to the Vistula and Neman rivers and the Baltic Sea. In the 18th century, when the importance of river transportation became primary, canals were built to link the Dnieper with other rivers: in 1767–83 the Ogiński Canal linked the Dnieper with the Neman Basin; in 1775 the *Dnieper-Buh (Royal) Canal, linking the Dnieper and the Vistula via the Mukhavets (a tributary of the Buh) and the Pyna (a tributary of the Prypiat), was begun. Both canals were built on private initiative to transport the forest resources of Polisia to the Baltic ports of Gdańsk and Klaipeda. In Belorussia the Biarezina Canal was built in 1797–1805 to connect the Dnieper with the western Dvina.

The Dnieper in the 19th–20th century. By the end of the 18th century the whole Dnieper came under the control of the Russian Empire, and this affected its status as a water route. Projects were begun to regulate the river and to eliminate the rapids in order to have a continuous route. But these projects and the canal construction of 1843–54 were of no great importance (see *Dnieper Rapids) and ceased altogether in the second half of the century, when all efforts turned to railroad construction.

The Dnieper continued to be divided into two segments by the rapids. Until the middle of the 19th century wood was transported on the Dnieper by means of rafts, and grain by wooden boats. Steamships appeared on the river in 1857 (the first attempts were made in 1823). In the 20th century regulatory works were resumed to eliminate natural obstructions to shipping: the instability of the riverbed, variations in the water level, branching, shallows, etc. At the beginning of the century the riverbed near Kiev was stabilized, and the river above Katerynoslav was cleared of barriers. This deepened the river by 0.8 m north of Kiev, 1 m from Kiev south to the rapids, and 4.2 m below Kakhivka. A port was built in Kiev, and many harbors were improved. Projects to submerge the rapids, to build hydroelectric stations, and to connect the Dnieper with the Dvina by canals navigable by steamship (Kherson-Riga route), the Dnieper with the Vistula (Kiev-Gdansk route), and the Dnieper with the Donets were not realized because of the First World War. Nor was the department of water resources of the new Ukrainian state capable of realizing them. In spite of inadequate attempts at regulation, the importance of the Dnieper as a transportation route increased before the First World War, as the accompanying table illustrates.

Transportation on the Dnieper, 1884 and 1912

	Steamboats		Other boats	
	1884	1912	1884	1912
Dnieper above rapids	74	265	959	1,447
Dnieper below rapids and lower Boh	65	141	766	1,119
Total	139	406	1,725	2,566

In this period the average value of the cargo transported on the Dnieper in a year increased from 162 million rubles in 1888–92 to 270 million in 1908–12. In 1912, 2,260,000 t of cargo (5 percent of all river cargo in Russia and 2 percent of all cargo in Russia-dominated Ukraine) and 2.4 million passengers were transported. Above the rapids the main cargo was lumber, which was transported to the steppes (in Cherkasy, Kremenchuk, and Katerynoslav it was loaded on trains). Below the rapids grain was the main cargo.

From 1917 on, transportation on the Dnieper declined drastically: in 1924 there were only 24 steamboats and 131 other boats on the river, and only 300,000 t of cargo and 1.7 million passengers were transported. Harbors were in ruins, and channels were neglected for years. Gradually the movement of cargo increased: it amounted to 752,000 t in 1928, 2,018,000 t in 1930, and 2,296,000 t in 1932 (the figures cover the Dnieper Basin within the 1938 boundaries of the Ukrainian SSR).

The Great Dnieper. The further development of the Dnieper waterway was connected with implementation of a series of proposals that fell under the heading of the Great Dnieper and were worked out at the beginning of the 20th century. The plans called for a number of co-ordinated measures: the upgrading of existing transport facilities; the utilization of secondary and tertiary tributaries; the construction of canals to neighboring waterways, supplying industry and agriculture with hydroelectricity; and the expansion of irrigation works. A continuous deep-water route with numerous locks and a

constant water level was to be built, along with a series of hydroelectric stations. Excess water in the north was to be used in the dry south. The slope of the river was to be utilized for the production of hydroelectric power. Concurrently, Polisia was to be drained, and the southern Dnieper steppe was to be irrigated. The first stage of the plan was realized in 1927–32 when the *Dnieper Hydroelectric Station was built near Zaporizhia. The rapids were submerged, and a hydroelectric station of 558,000 kW capacity was erected. With this construction the continuous waterway was completed, and the amount of freight on the Dnieper increased markedly: from 2,960,000 t in 1932 to 5.8 million in 1935 and almost 10 million in 1940 (in the whole Dnieper Basin within the 1938 boundaries of the Ukrainian SSR) or 2.5 percent of the total freight of the Ukrainian SSR. The Soviet government, however, did not realize the succeeding stages of the Great Dnieper project, such as the irrigation of the southern Dnieper steppe, and did not make proper use of the river's hydroenergy.

The second stage of the Great Dnieper project began after the destruction of the Dniprohes during the Second World War and its reconstruction (1948), which increased its production of hydroelectric power to 750,000 kW. In 1950–6, a second hydroelectric station – the Kakhivka station – was built. It provided electric power for the lower Dnieper area, irrigation for southern Ukraine and the northern Crimea, and a deep waterway from the Black Sea to Zaporizhia. The Kremenchuk Hydroelectric Station was built in 1954–60, the Kiev station in 1960–4, the Dniprodzerzhynske station in 1956–64, and in 1963–75 the Kaniv station completed the Dnieper Cascade of Hydroelectric Stations. Reservoirs were formed as the cascade was built: the Kiev Reservoir (922 sq km), Kaniv Reservoir (675 sq km), Kremenchuk Reservoir (2,250 sq km), Dniprodzerzhynske Reservoir (567 sq km), Lenin Lake (420 sq km), Kakhivka Reservoir (2,155 sq km). The *Dnieper–Kryvyi Rih Canal was built in 1957–61 to supply the inhabitants and industry of the Kryvyi Rih region with water. The Dnieper–Donbas Canal was begun in 1979.

Projects to connect the Dnieper with other rivers (the Don, Volga, Vistula, Neman, Dvina, and Neva) have not proceeded beyond the planning stage.

Present economy. The Dnieper is the main river network of Ukraine. Half of Ukraine's waterways belong to this system. Almost 65 percent of shipping (75 percent when the Desna and Prypiat are included) and 80–90 percent of passengers are carried by the Dnieper. In 1977, over 30 million t of cargo were shipped by the Dnieper. With economic changes and the completion of a continuous waterway, the nature of shipping changed. Before the revolution lumber constituted 55 percent of the cargo and grain 27 percent. In 1940 these products accounted for only 32 percent and 14 percent of the total shipping. Today the main commodities are building materials and cement, anthracite coal, iron, and manganese ore; grain, petroleum products, and metals are also transported. Lumber shipping is insignificant. Railway lines intersect at the main Dnieper ports. Kiev is the most important port, handling half of the shipping of the Dnieper Basin. It is the gateway to the water routes (north and south along the Dnieper and its large tributaries – Prypiat, Desna, and Sozh) and a large shipping transfer center. By tonnage, the second most important port is Kherson, which is both a river and a sea port. By number of

passengers, Kherson is in first place (6.2 million compared to Kiev's 4.2 million in 1970). Dnipropetrovske is an important port for the Donets Basin and its coal. The port of Zaporizhia exports coal and iron ore. Other important ports are Cherkasy, Kremenchuk, Dniprodzerzhynske, and Nykopol.

Since the completion of the Kaniv Reservoir, the Dnieper has been accessible to sea vessels of 3.65 m draft. Larger ships use the ports on the Danube, Black Sea, the Sea of Azov, and even on the Mediterranean Sea. Diesel-propelled cargo carriers predominate among the vessels on the Dnieper and have a displacement of 600, 1,800, and 2,000 t. Large diesel-electric vessels, comfortable passenger carriers (diesel and hydrofoil), and tugboats navigate the river. Transport is controlled by the Dnieper Steamship Authority.

The Dnieper cascade of Hydroelectric Stations has a generating capacity of over 3.7 million kW and an average annual production of about 10 billion kW-h.

The water of the Dnieper is used by consumers and by industry, which is especially concentrated in Kiev, Dnipropetrovske, and Zaporizhia. Because of canals Dnieper water is used in the Kryvyi Rih region and will be used in the Donbas and Kharkiv and the irrigation systems of southern Ukraine (Inhulets, Krasnoznamianske, etc) and the northern Crimea.

The Dnieper is rich in fish. Almost 80 percent of the river catch in the Ukrainian SSR – about 70 million t in 1969 – comes from the Dnieper. Since the construction of the reservoirs, many types of river fish have disappeared from the Dnieper and have been replaced by lake species. The main commercial fish are bream, perch, carp, sheat, tench, and pike. Fish farms and the artificial introduction of valuable species into the reservoirs should increase the catch.

The reservoirs have brought some economic losses: almost 9,000 sq km of useful land (2 percent of the land of the Ukrainian SSR) have been submerged. Water surface area has increased and so has evaporation. The landscape has changed. Sewage enters the Dnieper, often without proper treatment. Pollution is great and increasing because of population growth and industrial development.

Dnieper Upland. The central part of a chain of uplands in Ukraine lying between the Boh and the Dnieper

ivers. It extends from the northwest to the southeast and is the Dnieper section of the *Ukrainian Crystalline Shield. In the north the Dnieper Upland borders on the lowland of Polisia; in the south, on the Black Sea Lowland; in the west, on the uplands of Podilia (along the Boh) and Volhynia (along the Teteriv); in the east, on the Dnieper Lowland (along the Dnieper). The *Zaporozhian Ridge (sometimes called the Zaporozhian Interior Plateau), which is the lowest part of the Ukrainian Crystalline Shield and lies on both sides of the Dnieper Rapids, is a southeastern continuation of the Dnieper Upland and connects it with the *Azov Upland. The Dnieper Upland covers about 80,000 sq km. It coincides with the central part of the forest-steppe belt and the adjacent steppe belt.

The crystalline formations of the Dnieper Upland are covered with relatively thin layers of sedimentary, low-resistance deposits of the Paleogene and Neogene periods (mainly in the south and southwest): sand, limestone, clay, soft chalk. During the Dnieper glaciation the northeast section of the upland was under a glacier that reached south to the Pohrebyshche-Kamiianka-Verkhnodniprovske line. The glacial layers that remained cover the loess and loesslike loam of the upland to a depth of up to 20 m. Only river bottoms and recently formed terraces are covered with alluvial layers.

Because sedimentary layers (especially in the northwest) are thin, the surface of the Dnieper Upland is very similar to the relief of crystalline formations, except that it is more level. The absolute height of the upland varies between 180 m and 300 m. It is highest (322 m) in the northwest part and lowest in the southeast part. Its slope is irregular: higher areas alternate with lower ones.

The Dnieper Upland, like the other uplands of Ukraine, was uplifted at the end of the Pliocene age and during the Pleistocene age. This brought about a rejuvenation of the plateau that the Dnieper Upland formed at the end of the Pliocene. The lower sections of rivers, particularly of the large rivers and their tributaries, cut into the rock. Yet most of the upland, and especially its higher western part, is flat plain or undulating plain with a few wide valleys and gullies. As one approaches the Boh and the Dnieper, the watersheds become narrower, the valleys become deeper, and the gullies and ravines become more numerous. Here the tributaries of the Boh and the Dnieper cut up to 100 m into the crystalline foundation and appear as narrow slits. Sandbars and small rapids are often found in the rivers. Thus, a contrast is created between the monotonous, level landscape of the watersheds and the picturesque landscape of the valleys. The contrast is greatest in the precipitous Dnieper Valley. Many valleys of the Dnieper Upland have a distinct terrace system of usually three or four terraces. Spillways, which once carried the meltwaters of the Dnieper glacier, are widespread in the territory that was once covered with ice, and south of it the spillways attain a depth of 15–40 m and dissect the watersheds between the sources of rivers, which flow in opposite directions where there were once entire valleys. Spillways are most numerous beyond the Ros and in the upper regions of the Tiasmyn and Inhulets rivers. Low hills formed by the uplifting of crystalline strata, which in the southwest reach the surface at certain points, and *podly* (saucerlike depressions) in the south provide some variation on the plateaus between the valleys.

The most picturesque part of the Dnieper Upland is the

high, steep right bank of the Dnieper River. For almost 500 km (from Kiev to Dnipropetrovske) the height of the bank is 80–150 m above the riverbed and the Dnieper Lowland. This escarpment is marked by erosion and dissected by valleys and gullies. Strata of different eras come to the surface. The beauty is enhanced by forest and bush. The formation of this steep bank was influenced by tectonic processes – the eastern break in the Ukrainian Crystalline Shield. Its tectonic structure in the Kaniv area is complex. The most impressive parts of the Dnieper banks are the *Kiev Hills (174 m high) and the *Kaniv Hills (243 m high).

The climate of the Dnieper Upland is temperate-continental, approaching a steppe climate in the south. The climate becomes more continental the farther southeast one goes. The average annual temperature increases in the southward direction from 7° to 8°C; the average July temperature, from 18.5° to 21°C; and the average January temperature, from –5° to –6°C. The number of days per annum with an average temperature above 0°C increases from 245 in the northwest to 255 in the south, and the number of days with a temperature above 10°C from 155 to 170. The annual rainfall increases from 400 mm in the south to 600 mm in the north. The norm is 450–550 mm, 300–450 mm in warm seasons.

The Dnieper Upland is dissected by two large rivers – the Dnieper and the Boh – and their tributaries. The main tributaries of the Dnieper are the Teteriv, Irpin, Ros, Tiasmyn, and Inhulets; the main tributaries of the Boh are the Dokhna, Sob, Sonytsia, Syniukha, and Inhul. Besides the large, man-made water reservoirs on the Dnieper, there are many small, usually man-made, ponds in the upland.

The soils of the Dnieper Upland are mainly chernozems: typical poor-humus, typical medium-humus, and ordinary medium-humus soils. Some of the chernozems have become degraded under the influence of the forests to podzolized and leached chernozems and gray forest soils. In the central part of the upland (south of the Ros) the soils vary mosaically.

Almost 80 percent of the Dnieper Upland consisted at one time of forest-steppe with oak and elm forests, and of a fescue–feather-grass colored steppe in the southern part. Today forests cover about 10 percent of the upland. Seventy percent of the land is cultivated. Meadows and pasture cover 10 percent.

The Dnieper Upland included parts of the following historical-geographical regions: the Kiev region, Podilia, Volhynia, and southern Ukraine. Today it includes parts of the following oblasts: Zhytomyr, Kiev, Vinnytsia, Cherkasy, Kirovohrad, and Dnipropetrovske.

The Dnieper Upland, together with Galicia and Podilia, was, until the early 1930s, one of the most populated regions of Ukraine. In 1932 the forest-steppe part of the upland had almost 90 inhabitants per sq km. In 1970 there were approximately 91 inhabitants per sq km in an area that included Kiev but not the *Dnieper Industrial Region. Excluding Kiev, the area had a density of 70 people per sq km (46 in rural areas). The rural population density of the forest-steppe regions varied from 40 to 60 people per sq km, and in the steppe regions it varied from 20 to 40. The cities (excluding Kiev) contain 34 percent of the population (53 percent if Kiev is included). In 1981 there were about 70 urban centers (not counting the Dnieper Industrial Region) in the Dnieper Upland, and 10

of them had populations of over 50,000: Kiev, 2,248,000; Dniprodzerzhynske, 257,000; Kirovohrad, 246,000; Zhytomyr, 254,000; Cherkasy, 242,000; Kremenchuk, 215,000; Bila Tserkva, 162,000; Berdychiv, 82,000; Uman, 81,000; and Smila, 64,000.

According to the 1970 census, 91 percent of the population in the upland (excluding Kiev) was Ukrainian, 5 percent Russian, and 4 percent other.

Almost half of the population is engaged in agriculture. The Dnieper Upland belongs to the grain-cultivation belt. Sugar beets are cultivated in the forest-steppe region, and sunflowers are grown mostly in the south. Forty-eight percent of the cultivated land is devoted to grain growing (wheat, 24 percent; corn, 8 percent); 15 percent is devoted to industrial crops (sugar beets, 10 percent; sunflowers, 3 percent); 8 percent is devoted to potatoes, vegetables, and melons; 7 percent is devoted to legumes; and 29 percent is devoted to fodder crops.

The main industry of the upland (excluding Kiev and the Dnieper Industrial Region) is the food industry, with food products constituting about 50 percent of the total industrial output. Sugar manufacturing is the main industry, followed by machine building (mostly agricultural machines) and metallurgy (15 percent), light industry (10 percent), and building materials (5 percent). Kirovohrad oblast possesses the largest deposits of lignite coal in Ukraine. The energy supply is based on local lignite and on imported anthracite coal and natural gas. Electricity is supplied by hydroelectric stations in Kremenchuk, Kaniv, and other places, and by thermoelectric stations in Kirovohrad and elsewhere, which run on lignite.

Dnieper-Boh Estuary or Dnieper Estuary. Bay created by the flooding of the mouths of the Dnieper and Boh rivers by the Black Sea, from which it is separated by the

Kinburn Spit. It is 55 km long, 4–12 km wide, and 1–2.3 m deep. The water is brackish; the estuary freezes for two months.

Dnieper-Buh Canal (formerly Royal Canal). A canal in Polisia that connects the Dnieper and the Vistula river systems by way of the Pyna, a tributary of the Prypiat, and the Mukhavets, a tributary of the Buh. The Dnieper-Buh Canal lies on Ukrainian ethnic territory within the Belorussian SSR. It was built in 1775–6 and was widened in 1846–8. Water was drawn from the Bile and Orikhove lakes. The canal was navigable only in the spring and fall, when the water level reached 1.5 m. The canal was rebuilt in 1940–1 and again in 1945–6, at which point it was deepened and the number of locks was reduced from 22 to 10. Lumber, grain, anthracite, petroleum products, iron ore from Kryvyi Rih, and building materials are shipped through the canal.

DNIEPER-DONBAS CANAL

1. Completed canal
2. Part of canal under construction
3. Donets-Donbas canal
4. Projected extension of canal to Donetske and aqueduct to Kharkiv
5. Irrigated areas
6. Krasnopavlivka and Krasnopavlivka Reservoir

Dnieper-Donbas Canal. Canal under construction in order to bring water from the Dnieper to the Donbas and the city of Kharkiv. Construction of the canal began in 1969. It was planned to take place in two stages: the first (now complete) from the Dniprodzerzhynske Reservoir on the Dnieper along the floodplains of the Orel River to the Krasnopavlivka Reservoir and on to the Donets River near Izium; the second from the Krasnopavlivka Reservoir to the city of Donetske. The first section, which is 263 km long, has a capacity of more than 120 cu m/sec and an annual output of some 3 billion cu m. Water from the Dniprodzerzhynske Reservoir is carried at a height of 65 m. Dnieper water is also used for irrigation; 165,000 ha of agricultural land were irrigated in 1979.

Dnieper-Donets Trough. A synclinal geological structure that lies between two crystalline massifs – the Voronezh Massif in the northwest and the Ukrainian Crystalline Shield in the southwest. In the northwest the trough extends to the middle Prypiat River, in the southeast to the Donets Ridge. The Dnieper-Donets Trough merges with the Dnieper and Polisia lowlands. Its width is 80–150 km. The trough was formed by a stepped settling of the crystalline foundation, which consists of thick sedimentary strata from various periods (Devonian, Carboniferous, Permian, Triassic, Jurassic, Cretaceous, Paleogene, Neogene, Anthropogene). The lowest part of the trough, which is located in the Poltava-Chutove-Krasnohrad region, is known as the Dnieper Trench. The thickness of the sedimentary complex is 11 km. The Dnieper-Donets Trough began to form in the Devonian period, and the process continued to the beginning of the Paleogene.

The Dnieper-Donets Trough is the most important oil and gas-producing area in Ukraine. Its mineral resources include rock salt, gypsum (in the Devonian and Permian strata), phosphorites, various building materials, and anthracite coal.

DNIEPER-KRYVYI RIH CANAL

Dnieper-Kryvyi Rih Canal. Canal located in Dnipropetrovske oblast, built in 1957–61 to provide water for the industrial region of Kryvyi Rih. Water for the canal is collected at the *Kakhivka Reservoir by pumping stations that raise the water a height of 80 m; it is then brought to the Southern Reservoir (with a capacity of 57.3 cu m), which is linked by canal with the Saksahan River. The main canal is 41.3 km in length and has a capacity of 41 cu m/sec. The complex of hydraulic installations includes four pumping stations, a dam at the Southern Reservoir, and a filtering station. Water from the Dnieper-Kryvyi Rih Canal is also used to irrigate adjoining land (26,000 ha in 1977). When reconstruction of the canal is complete, its annual yield will increase from 500,000 to 1 billion cu m.

Dnieper-Teteriv Game Preserve (Dniprovsko-teteryvske zapovidno-myslyvske hospodarstvo). Located in the northern Kiev region, the preserve lies within Kievan Polisia. It was established in 1967 for the purposes of integrated forest and wildlife management and protection and regeneration of game species. The preserve covers an area of 37,900 ha, of which 21,200 ha are forests (pine, oak, birch, aspen, etc), 9,300 ha consist of water resources (a part of the Kiev Reservoir and the Teteriv River), and 7,400 ha form a protective zone. The elk, red deer, roe deer, European wild boar, and common hare are the main terrestrial game species; others include the fox, raccoon, dog, marten, otter, polecat, beaver, and the muskrat, which has been acclimatized. The chief bird species include the black grouse, dabbling duck, and tern. Some rare birds, such as the black stork and the white-tailed fish eagle, nest at the reserve.

Dniester dialects. The major dialectal group of Galicia. Phonetically the Dniester dialects are characterized by the following: (1) the change of *a* into *elje* (when unstressed, to *y/i/jy/ji*: *pjitá* – Standard Ukrainian: *p'jata* [heel]); (2) the pronunciation, in some places, of the sequence *aw* as *ow* (*prówda* [truth]); (3) the sporadically lowered pronunciation of the sequence *ir* to *yr* (*s'yрка* [sulfur]); (4) the dorsal pronunciation of *t'*, *d'* as *k'*, *g'* (*k'isk'ýj* – Standard Ukrainian: *t'azhkyj* [heavy]); (5) the palatalization of *k*, *g*, *x* before *e*, *y* (*tak'é* [such] neuter); (6) the pronunciation of postvocalic *l* at the end of syllables as *ω* (*hówka* [needle]); (7) the lack of consonant lengthening in nouns of the type *vis'il'ý* – Standard Ukrainian: *vesillja* (wedding); (8) the loss of *-j* after *i* in the dative singular of pronouns and adjectives (*ti dóbri pány* – Standard Ukrainian: *tij dóbrij pani* [to this good lady]).

In morphology the Dniester dialects have the following main peculiarities: (1) the endings *-ox*, *-om*, *-yma* in nouns of the soft declension in the locative, dative, and instrumental plural (*v kon'ox*, *dúšox*, *pol'óx*; *kón'om* ~ *-im*; *pol'óm* ~ *-ým* – [in horses, in souls, in fields, etc]); (2) the preservation of the nominative-accusative dual of feminine and neuter nouns (*dvi ruc'i* [two hands], *syl'i* [forces]); (3) the loss of the soft declension in the adjective (*sýnyj* [blue], *trétyj* [third]; but *píwtryk'i* – Standard Ukrainian: *pivtretja* [two and a half]); (4) enclitic forms of the personal pronoun (not only *my*, *mi*, *ty*, *k'i*, *sy*, *s'i*, but also *ho* in place of *joho*, *mu* in place of *jomu*, *ji* in place of *jij* ~ *jiji*); (5) the verbal forms *mo(x)čý* (to be able), *pyčý* (to bake), *xódy* (he walks), *varýt* (he cooks), *byrés'i* (he begins, undertakes), *xódym*, *xóg'it* (we, they walk), *varút*, *-rjýt* (they cook), *pysówim*, *-is*, *pysówbym*, *-ys* (I wrote, I would write), with endings which, like the postfix *-sja*, can be separated from the verb in the sentence; (6) peculiarities of stress (in verbs, only the root or final syllable is stressed: *pýšu*, *-yš* [I, you write], *varú*, *-rjús* [I, you cook]) and of vocabulary (Polonisms, Germanisms).

Northwest of Lviv the Dniester dialects form the Batiuk dialects, a group that represents a transition to the Sian dialects and that is characterized not only by the raised pronunciation of the unstressed *e* to *y/i*, but also by the pronunciation of the unstressed *o* as *u*. South of the Dniester there is a group of dialects, forming a transition to the Pokutian dialects, that is characterized by the following: the palatalization of dentals preceding *i* formed from the old *o*; the change in the group *st'* to *s'k'* rather than *s'c'* – *s'k'ina* (wall); the use of a future tense of the

type *буду ходыты* rather than *буду ходýω, -yla* (I will walk), as elsewhere. In the northeast the influence of the south Volhynian dialects is evident in the dispalatalization of *r'* and in the prothetic *h* (and not *v, j*) before word-initial vowels: *horáty* (to plow), *hýndyk* (turkey).

The Dniester dialects emerged as a result of the spread of the Bukovyna-Pokutian and Sian phonetic developments to the western group of Podilian dialects during the 14th–16th century. The Lviv area is surrounded by the Dniester dialects; they significantly influenced the Galician variant of the Ukrainian literary language, which arose in that cultural center.

Dniester Estuary. Flooded mouth of the Dniester River, separated from the Black Sea by the narrow, sandy Buhaz Spit. The estuary is 40 km long, up to 12 km wide, and 1.5–5 m deep. It freezes in winter. Its southern portion is navigable. The towns of Bilhorod and Ovidiopil are situated on the banks of the Dniester Estuary.

Dniester Lowland. The northwestern part of Subcarpathia, lying along the upper Dniester River between the Stryvhor River in the west and the mouth of the Svicha River in the east. This is a Zandrian-alluvial plain with an elevation of 260–300 m. The extensive swamps, particularly in the western part (the Sambir Swamp is 35 km long) are the result of the slight gradient of the Dniester (0.5 m/10 km). Although some countermeasures have been taken, floods are frequent. Hence, there is relatively little cultivated land (30 percent, in the western part) and forest (7 percent) but much pasture and hayfield (56 percent). The population density is about 60 people per square kilometer. The villages are built on the higher terraces. The cities and towns – Sambir, Drohobych, Stryi, Rudky, Komarno, and Mykolaiv – are located near the borders of the plain. (See also *Subcarpathia.)

Dniester (Dnister) River. The second-largest river in Ukraine. It is 1,360 km long, and its basin covers 72,100 sq km. At one time the Dniester flowed only through Ukrainian territory. But after the ancestors of the Rumanians settled the lands east of the Carpathian Mountains (beginning at the end of the 14th century) and after Bessarabia was Rumanianized, the Dniester from Mohyliv to its mouth (about one-third of its length) marked the

The Dniester River

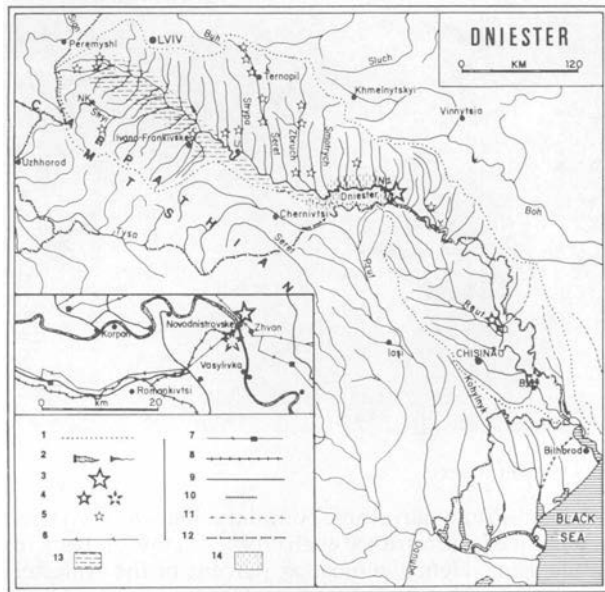

Ukrainian-Rumanian ethnic boundary. Below Rybnytisia, Rumanian ethnic territory even crosses to the left bank of the Dniester. Hence, almost 25 percent of the Dniester Basin lies outside Ukrainian ethnic territories and beyond the borders of the Ukrainian SSR.

The Dniester is the main river in Galicia. For this reason Galicia is sometimes called Naddnistrjanshchyna (Land by the Dniester). The historical and ethnographical significance of the Dniester as the symbol of the Principality of Galicia-Volhynia outlived its economic and political importance. This is the source of the piety towards the river that is found in the romantics of Western Ukraine – M. Shashkevych and Yu. Fedkovych. This also explains frequent references to the river in the names of Galician institutions and organizations.

Geographic description. The Dniester originates on the slopes of Mount Rozluch in the Middle Beskyds of the Carpathian Mountains, close to the village of Vovche, at an elevation of about 900 m. The river can be divided into an upper part, from the source to Nyzhnyv; a middle part, to Tyraspil; and a lower part. The upper Dniester is a rushing mountain stream for about 50 km, running northwest first and then northeast. This section of the river

slopes steeply, and the current is swift – 4 m/sec and more. It carries a lot of rocks. Near Staryi Sambir the Dniester leaves the mountains and 10 km farther on enters the muddy Dniester Plateau. It runs along the plateau to the mouth of the Svicha River. This section of the Dniester has a gentler slope. Its bed consists of alluvium and divides into branches, forming numerous islands. From the Svicha River the left bank of the Dniester begins to rise. At Nyzhniv both banks come to the water's edge, and the river enters the Podilia Gorge. The longest tributaries are in the upper stretch of the Dniester: the Bystrytsia (72 km) with the Tysmenytsia, the Stryi (230 km) with the Opir, the Svicha (107 km) with the Mizunka and Sukil, the Limnytsia (122 km) with the Chechva, the Solotvynska Bystrytsia (80 km), and the Nadvirnian-

ska Bystrytsia (110 km), all on the right side. The left-side tributaries are the Stryvior (93 km), Vereshytsia (92 km), Shchyrets, Zubria, Bibrka, Svir, and Hnyla Lypa (80 km).

The riverbed of the middle Dniester is deep, narrow, and winding. Its average width is 160–200 m, the minimum being 60 m and the maximum 400 m. The slope of the river and the current velocity are uneven. They are greatest near Yampil, where the Dniester penetrates the Ukrainian Crystalline Shield and forms rapids. The average slope from the mouth of the Zbruch to the town of Mohyliv is 30 cm/km, and the current velocity does not exceed 1 m/sec. From Mohyliv to Dubosari the Dniester is almost without Bessarabian tributaries on the right side (there are only the Reut, Ikel, Byk, and Botna). Left-bank tributaries, like the Dniester itself, flow through gorges; they include the Zolota Lypa (140 km), Koropets, Strypa (170 km), Dzhuryn, Seret (250 km), Zbruch (245 km), Smotrych (169 km), Ushytsia (112 km), Kalius, Liadava, Murakhva (162 km), Rusava, Yahorlyk (173 km), and Kuchurhan (123 km). Thus, the Dniester Basin is asymmetrical. Below the town of Dubosari the Dniester Valley widens to 8 km and below Tyraspil to 16 km as it enters the Black Sea Lowland. Twenty kilometers below Tyraspil lies a broad stretch (up to 20 km) of marshland covered with cattails and brush. The breadth of the riverbed here is 100–240 m; it becomes narrower at the mouth. The Dniester flows into the *Dniester Estuary, which is separated from the sea by a spit with two gaps. The slope of the lower river hardly reaches 4 cm/km and is only 2 cm/km at the mouth. The current velocity is minimal.

The water level of the Dniester varies considerably. In spring the melting snows cause it to rise. Summer downpours in the upper and middle parts of the river basin have the strongest effects in the upper stretch. Summer floods are often catastrophic. The lowest and most stable water level occurs in the fall and winter. The greatest variation in the water level is observed in the middle stretch of the river, which lies in gorges (up to 10 m deep). The average discharge at the mouth of the Dniester is 360 cu m/sec, or 11 cu km/yr. The discharge is greatest in the spring. Only 15–20 percent of the discharge occurs in winter. The Dniester is usually frozen over from the end of January to mid-March.

Water route. The Dniester was called Tyras by the ancient Greeks, who built Tyra at its mouth. The Dniester then formed part of the main route from the Baltic to the Black Sea (along the Oder, Vistula, Sian, and Dniester). The lands beyond the middle Dniester were among the earliest settled parts of Ukraine. Greek and then Roman (after Dacia's annexation) commercial, cultural, and even political influence penetrated through the Dniester deep into Ukrainian territory. During the period of migrations these influences ceased, and for a long time the Dniester lost its importance.

When the Dniester Basin was settled by Ukrainian tribes and became part of Kievan Rus', the Dniester became the second subordinate economic and political axis after the Dnieper. It was the axis of the Principality of Galicia-Volhynia, which expanded south along the Dniester and Prut and which encompassed Ponyzia on the middle Dniester. Halych, the capital of the principality, was located on the Dniester, as were towns such as Onut, Vasylyv, Ushytsia, and Bakota. After the Tatar invasions in the 13th century the Dniester route declined in importance, and the Buh became the economic axis of the

Galicia-Volhynia principality. The Dniester acquired a new importance when the Tatars were forced out of Poniția by Lithuanian and Rus' princes in the mid-14th century. Galicia was already under the control of Poland at the time. The right bank of the middle and lower Dniester was annexed by the new state of Moldavia at the end of the 14th century. A number of towns along the Dniester gained importance: Bilhorod was built at the mouth, Genoese trade centers were established above Bendery. Besides the Dniester route, the land route of Lviv-Suceava-Iași-Bendery-Khadzhybei (Odessa today) – Ochakiv was of major importance. When Moldavia fell under Turkish rule (beginning of the 16th century), the Dniester route lost its importance. For three centuries the river served as a border between Poland and Turkey from Chervonohrad to Yahorlyk. The towns on its right bank – Akkerman (Bilhorod), Bendery, Soroky, Khotyn – became Turkish fortresses.

After the partitioning of Poland and the annexation of Bessarabia by Russia (1812), the basin of the upper Dniester became part of Austria, and the rest of its basin belonged to Russia. Because water routes were becoming less important, owing to unfavorable conditions (in the case of the Dniester: water scarcity, numerous windings, gorges, rapids), and because the Dniester Basin was divided between two states that did not seriously plan to regulate the river, the Dniester never regained its importance as a trade route. Shipping on the Russian stretch of the Dniester began in 1843, but basic work on the waterway was done only in 1884–94. After this the Dniester became accessible to steamboats; yet it continued to be of minor commercial importance. Until 1917 steamboats traveled down to the sea from Mohyliv-Podilskyi, although the river is navigable by steamboat from Halych (for 800 km). Logging was more important than shipping on the Dniester. In general, shipping on the Dniester did not reach even 5 percent of that on the Dnieper.

During the Ukrainian struggle for independence the Dniester became the border between Ukraine and Rumania, although the Ukrainian government did not recognize Rumania's occupation of Bessarabia. In June 1919 the Dniester covered the left flank of the advancing Ukrainian Galician Army after the breakthrough at Chortkiv. Between the world wars the Dniester served as the Soviet-Rumanian boundary, and shipping on it ceased.

Today shipping on the Dniester is underused. The river's hydroenergy is unused except for the Dubosari Hydroelectric Station, built in 1954–5, in Moldavia. Today steamships navigate the river up to Soroky. The bulk of the shipping consists of building materials and lumber. The main ports are Mohyliv, Soroky, Bendery, and Tyraspil. The Dniester could easily be connected by canals with the Sian and the Vistula (such projects were proposed under Austrian rule), which would increase its importance. The Dniester is used as a source of water for consumption and irrigation. Its fish resources are small; only perch, carp, bream, whitefish, sturgeon, and pike are of commercial value.

Dnipro (Dnieper). A literary-artistic and popular-political monthly published in Kiev, the journal of the Central Committee of the Communist Youth League of Ukraine. It has been published since 1944, continuing the tradition of the Komsomol journals *Molodniak* (1927–37) and *Molodyi Bil'shovyk* (1937–41). *Dnipro* serves the literary young people of Komsomol age, but it also prints the works of older writers. In the second half of the 1950s and at the beginning of the 1960s *Dnipro* to some extent served as an avant-garde journal in Ukrainian literature. The most talented *Shestydesiatnyky published their works in it, as did established writers, many of whom sympathized with the cultural opposition (B. Antonenko-Davydovych, O. Dovzhenko, and others). Since then, with a printing of over 70,000, *Dnipro* has been the most popular literary journal in Ukraine, easily outstripping all the journals of the Writers' Union of Ukraine. O. Pidsukha and Yu. Mushketyk were the editors of *Dnipro* for many years. From 1973 to 1979 V. Brovchenko was editor. He was succeeded by V. Kolomiets.

Dnipro (Dnieper). Illustrated biweekly magazine, organ of the Ukrainian Orthodox Church in the USA. *Dnipro* was published from 1922 to 1950, at first in Chicago (1922–6), in 1927 as a monthly entitled *Stiach*, and subsequently in Philadelphia (1928–50). The editor of *Dnipro* was Rev P. Bilon. In 1950 the magazine was replaced by the monthly **Ukrains'ke pravoslavne slovo*, which is now published in South Bound Brook, New Jersey.

Dnipro (Dnieper). Calendar-almanac published in Lviv from 1923 to 1939 by the *Ukrainian Society of Aid to Emigrants from Eastern Ukraine. It was edited by L. Biletsky and V. Zavadsky (1923) and by V. Doroshenko (1924–39). Among the contributors were D. Dontsov, D. Doroshenko, F. Dudko, K. Hrynevych, O. Lototsky, I. and Yu. Lypa, Ye. Malaniuk, I. Mazepa, S. Siropolko, M. Vorony, and A. Zhuk. Many historical articles and memoirs appeared in the almanac.

Dniprodzerzhynske or **Dniprodzerzhynsk** [Dniprodzerzhyn's'ke]. v-15. City (1983 pop 265,000) in Dnipropetrovske oblast, situated on the right bank of the Dnieper. Until 1936 it was called Kamianske. Today Dniprodzerzhynske is a port and an important industrial center. The city was first mentioned in 1750. Dniprodzerzhynske owes its development to the metallurgical plant that was built there in 1887–9, the largest plant of its kind in the Russian Empire. The plant was built in Kamianske because of its geographic-economic location: it was linked by railroad to the coal mines of the Donbas and the iron-ore mines of Kryvyi Rih, and it was close to a large river route. In 1917 the town became a city, and in 1936 it assumed its present name. Its population grew rapidly: it was 18,000 in 1898, 35,000 in 1910, 34,000 (of which 54.3 percent was Ukrainian, 29 percent Russian, 16.7 percent other) in 1926, 148,000 in 1939, 194,000 (71 percent Ukrainian, 23 percent Russian) in 1959, 227,000 in 1970. The main branches of industry in Dniprodzerzhynske are metallurgy, machine building, coke chemicals, and building materials; as well there is light industry and a food industry. The main enterprises are the *Dnieper Metallurgical Plant, the Ordzhonikidze Coke-Chemical Plant, a chemicals complex, a railway-coach plant, a boiler equipment and turbine plant, a reinforced-concrete plant, and

a cement plant. In 1965 the Dniprodzerzhynske Hydroelectric Station, with a capacity of 352,000 kW, was built. The city has an industrial (engineering) institute, seven *tekhnikums*, a medical school, a teachers' school, a drama theater, an amateur bandura choir, a dance ensemble called Dnipro, and a museum of local history.

Dniprodzerzhynske Reservoir. A water reservoir on the lower Dnieper, built in 1963–5. The reservoir is 114 km in length and 5 km in width on the average (8 km maximum). It covers an area of 567 sq km and has an average depth of 15 m. Its water volume is 2.45 billion cu m. The reservoir freezes over in winter. Its water is used for generating hydroelectric power, transportation, fish farming, and human consumption. The ports of Kremenchuk and the Dnieper Mineral Enrichment Complex in Komsomolske are located on the reservoir. The Dniprodzerzhynske Hydroelectric Station, built in 1956–65, is also located on the reservoir. Its capacity is about 350,000 kW, and its average annual production is 1.3 billion kW·h.

Dniprohes. See Dnieper Hydroelectric Station.

Dnipropetrovske or Dnipropetrovsk [Dnipropetrov's'ke]. v-15. City (1983 pop 1,128,000), located in the northern part of the steppe belt on the Dnieper River (its main section is on the higher right bank) above the former rapids, at the juncture of the Dnieper river route with the Donbas–Kryvyi Rih railroad. Until 1926 called Katerynoslav, this is the third-largest city in Ukraine. Dnipropetrovske is one of the largest metallurgical and machine-building centers in Ukraine. It is a railroad center, river port, airport, an important cultural center, and the capital of Dnipropetrovske oblast.

History. Katerynoslav was founded in 1776 by Prince G. *Potemkin, the colonizer of southern Ukraine, at the site of the Cossack village of Polovtsia, built by the Cossack Hloba. The town was named after the Russian empress Catherine II. Development proceeded according to a general plan proposed by architects I. Starov in 1790 and V. Geste in 1817. The town was to be the main center for the whole southern part of the Russian Empire, but after Potemkin's death in 1791, Katerynoslav declined, and by Paul I's decree was renamed Novorossiisk in 1797 (a name it retained until 1802). In 1802 the town became a gubernial center. In 1804 the Poltava seminary was moved to Katerynoslav, and a year later the first gymnasium was opened. In 1847 the first town theater was built. Until 1870 Katerynoslav remained a small commercial and administrative center of an agricultural steppe gubernia. In 1861 the town's population was 19,000. The town developed around a central artery, the Catherine Prospect, which extended along the Dnieper River. One- and two-story buildings were erected fairly chaotically. Katerynoslav's economic importance depended on the Dnieper's navigability above the rapids: the town served as a reloading port for the grain, lumber, and wool trades.

The intensive development of Katerynoslav began in the 1870s, when a railroad line was built linking the town with Sevastopil and Kharkiv. In 1883 the Catherine railroad line (called the Dnieper line today) connected the new industrial centers of the Donets Basin and Kryvyi Rih. Since then the city has been at the crossroads of the river route, by which grain and lumber are transported,

and the railroad line, which carries iron ore and coal. It quickly became the main center of the metallurgical industry in Ukraine. In 1887 the enormous Alexander Metallurgical Plant of the Briansk Company (today the Petrovsky plant) was opened. In 1889 a pipe-making plant (today the Lenin plant) was built. Following this, other metallurgical and metal-working companies were set up. By 1913 there were 358 enterprises in Katerynoslav. The metallurgical and metal-working industries accounted for two-thirds of the town's production. As industry developed, the population increased rapidly. The town had 47,000 inhabitants in 1887, 121,000 in 1897, 218,500 in 1912. Most of the labor force was brought in from Russia. Almost 40 percent of the population was Jewish. By 1914 Katerynoslav was the fourth-largest city in Ukraine after Odessa, Kiev, and Kharkiv. In the 19th century the classical style of architecture (eg, G. Potemkin's palace, built by I. Starov in 1787–9, and the cathedral, built by A. Zakharov in 1830–5) was replaced by an eclectic style (the town council and various business buildings). As the central town, which stretches in one direction for several kilometers, was built up, the Catherine Prospect became a continuous corridor of stone. Katerynoslav expanded at the end of the 19th and the beginning of the 20th century, mainly at the cost of the suburbs (Kaidaky, Mandrykovka, Diiievka, etc), where commercial buildings alternated with one-story homes. As the city grew, it expanded onto the left bank of the Dnieper at the turn of the century and was connected by three bridges (the first one having been built in 1884).

Ukrainian national-cultural life developed slowly in the young Russified town. In the 1860s and 1870s Katerynoslav was visited briefly by O. Konysky, M. Komar, and H. Zaliubovsky, who collected ethnographic materials in the area. In the 1880s cultural activities became somewhat intensified through the efforts of a small circle of Ukrainians associated with the weekly *Step'*. The weekly began to be published in 1885 in Russian, but it sometimes contained Ukrainian material. The circle was headed by the poet and ethnographer I. Manzhura, who in 1884–93 alternated his residence between Katerynoslav and the village of Manuilivka. In almost every year during the 1890s the city hosted touring Ukrainian theatrical troupes, with such famous actors as M. Kropyvnytsky, P. Saksahansky, M. Sadovsky, and M. Zankovetska. In 1911 the Winter Theater was built to accommodate such troupes. In the 1900s national-cultural work increased significantly: at the end of 1905 one of the most active Prosvita societies in Russian-dominated Ukraine was established in Katerynoslav. This society soon organized a network of branches in the villages, and it withstood the pressures of the local civic administration in the years of reaction (1908–13). After the outbreak of the First World War, the society continued to function under the cover of the Ukrainian branch of the Russian Scholarly Society. New repressions following the trial of the Katerynoslav group of Social Democrats put an end to the society's activities in 1915. In 1909–13 the biweekly *Dniprovi khvyli* came out under D. Doroshenko's editorship. In this period the most active members of the Ukrainian intelligentsia were D. Doroshenko, A. Syniavsky, V. Bidnov, D. Yavornytsky, A. Kashchenko, and M. Bohuslavsky. N. Doroshenko attempted to organize a Ukrainian workers' theater. In 1915, despite strict police surveillance, a Ukrainian group of Social Democrats became very active

among the Ukrainian workers of Katerynoslav, who were mostly under the influence of Russian Social Democratic propaganda. The group's members were arrested and exiled to Siberia.

With the outbreak of the 1917 Revolution the Ukrainian community in Katerynoslav became more active. Among its leaders were I. Truba, V. Bidnov, L. Bidnova, Ye. Vyrovny, I. Mazepa, P. Fedenko, and S. and O. Yefremov. The work of the Prosvita society was renewed, education began to be Ukrainianized, and one of the first Ukrainian gymnasiums was established in 1917. Through Ye. Vyrovny's efforts, the *Ukrainske Vydavnytstvo* publishers grew into an important firm. In the autumn of 1917 the Haidamaka Garrison (*Kurin*) was organized at the initiative of Col M. Omelianovych-Pavlenko, I. Truba, and S. and O. Yefremov. The brothers H. and M. Horobets formed units of the Free Cossacks from local workers and peasants to fight the Bolsheviks. Because of strong Bolshevik propaganda among the workers, many of whom were not Ukrainian, Katerynoslav had become one of the strongholds of the Bolsheviks in Ukraine. E. Kvirng was the local party leader. During the fighting of 1917–20 Katerynoslav changed hands many times. The proximity of N. Makhno's anarchist forces complicated matters even more. In 1919 Makhno captured the city and plundered it several times.

The civil war, the frequent changes of government, the destruction of commercial firms, War Communism, Bolshevik requisitions, and the famine contributed to the

Dnipropetrovske; Komsomol Square

decline of the city. In 1923 it had barely 123,000 inhabitants. Only in late 1925 was some of the industry (92 large enterprises) rebuilt. The Petrovsky Plant, the Lenin Plant, and the Comintern Plant were in operation. In 1926 Katerynoslav was amalgamated with the town of Amurnyzhnedniprovskiy on the Dnieper's left bank and renamed Dnipropetrovske. Compared to the prewar figures, the proportion of Ukrainians in Dnipropetrovske increased, and the proportion of Russians and Jews declined (according to the 1926 census, of the 232,900 inhabitants 35.9 percent were Ukrainians, 31.5 percent were Russians, and 26.7 percent were Jews). In the 1930s new plants were built: the Dnipropetrovske Plant of Metallurgical Equipment (1932–4), the coke-chemical division of the Petrovsky Plant (today the Kalinin Coke-Chemical Plant), and others. In 1932 Dnipropetrovske accounted for 20 percent of the pig iron and almost 25 percent of the steel and rolled steel produced in Ukraine. By 1939 the population had risen to 501,000.

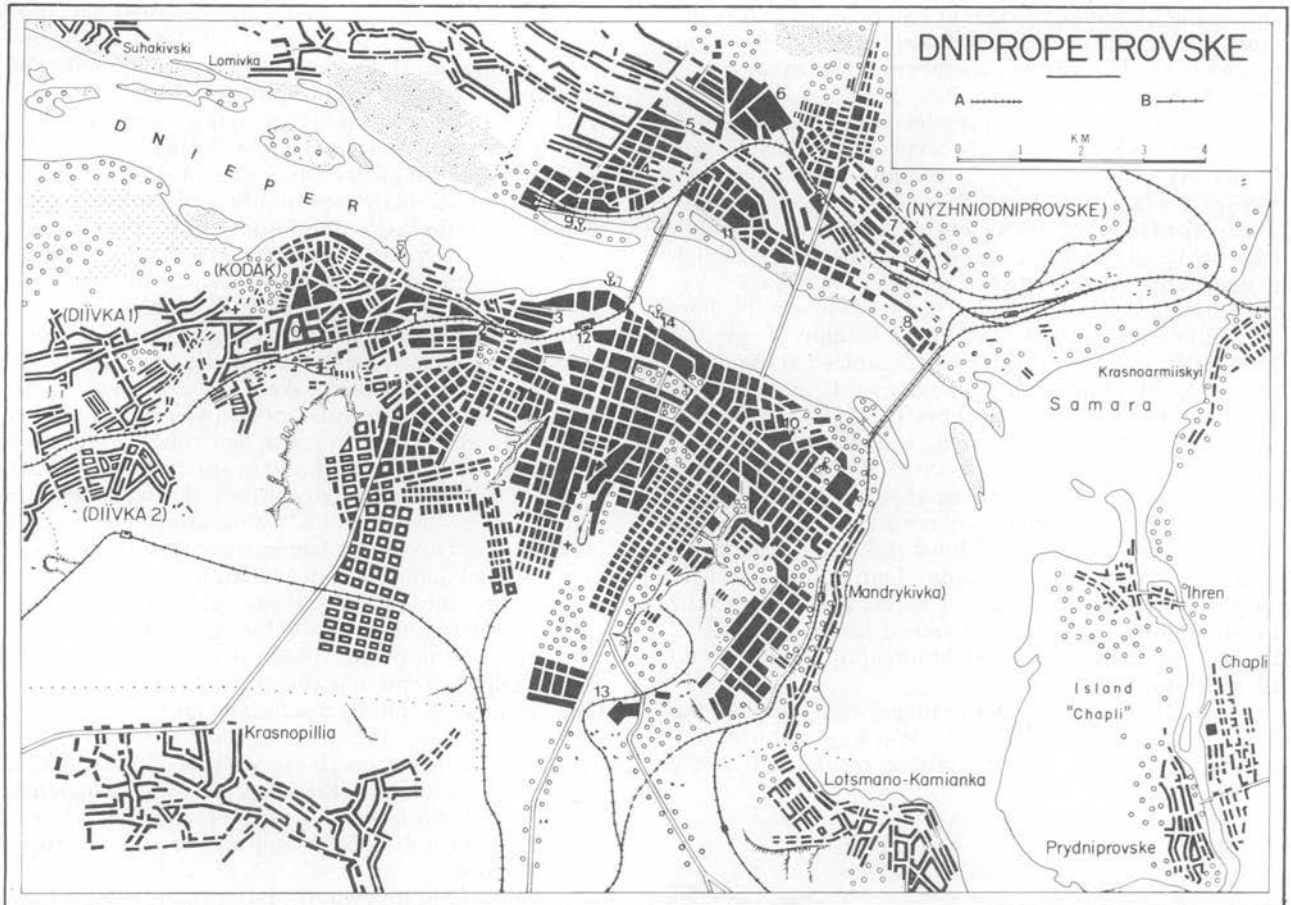

In the period of Ukrainization the schools, institutions of higher education, and scholarly life in general were Ukrainized. The number of Ukrainian newspapers increased. More and more Ukrainian books were publish-

ed. The Dnipropetrovske Scientific Society of the Ukrainian Academy of Sciences co-ordinated scholarly activities from 1925 on. D. Yavornytzky, V. Parkhomenko, Yu. Korshun, P. Yefremov, M. Zlotnykov, M. Brechkevych, and I. Stepaniv were its most prominent members. But by 1929 the terror that was sparked by the show trial of the *Union for the Liberation of Ukraine claimed its first victims in the scholarly community, and at the beginning of the 1930s the Scientific Society ceased its activity. Literary creativity could not develop to its full potential, although it continued to exist within such Soviet organizations as Pluh and the All-Ukrainian Union of Proletarian Writers. The journal *Zoria* came out briefly. In the 1930s prominent writers were arrested and deported.

During the Second World War Dnipropetrovske, which was one of the main centers of anti-German resistance, sustained extensive destruction, particularly in 1941 with the retreat of the Red Army and in 1943 with the German retreat. Damages to the city during the war were estimated at three billion rubles. By 1943 its population was only 280,000. During the German occupation the Ukrainian National Committee, headed by B. Andriievsky, was active in the cultural and educational field.

In 1943 the reconstruction of the city's economy began. At the beginning of the 1950s the automobile industry was established, and new plants producing communications equipment, mining machinery, and other materials were built. In 1956 the city's population exceeded 1939 figures, reaching 575,000; by 1959 it was 690,000. According to the 1959 census, Ukrainians constituted 59 percent of the population, Russians 29 percent, and Jews 8 percent. In 1970 the population was 904,000. In 1979 it was 1,066,000.

Economy. Dnipropetrovske is one of the largest industrial centers of Ukraine. Its development is based on enormous energy resources: the Dnieper and Dniprodzerzhynske hydroelectric stations, the Kryvyi Rih Regional Electric Station, Donbas coal, Shebelynka natural gas, and iron ore from the Kryvyi Rih region. In 1976 there were over 200 industrial enterprises in Dnipropetrovske: 111 of them were devoted to ferrous and non-ferrous metallurgy, 18 to machine building, 41 to various metal products, 5 to chemicals, and 18 to light industry. Today the main industries of the city are metallurgy, machine building, chemicals, and building materials. The largest and oldest plant is the Dnipropetrovske Metallurgical Plant. Some divisions of this plant eventually became separate firms. The more important firms of the metallurgical industry are the Lenin Pipe Plant, the Comintern Plant (rolled steel), and the Liebknecht Pipe Plant. The key plants of the machine-building industry are a metallurgical equipment plant, the Babushkin Metal-Construction Plant, the Artem Heavy-Paper-Manufacturing-Machine-Building Complex, machine-tool plants, the Svitlofor Plant (railway signals and equipment), the Kirov Steam-Engine and Coach Repair Plant, the Voroshylov Combine Plant, an electric-coach plant, and the Red Profintern Plant (wire and nails). The chemical industry consists of the Kalinin Coke-Chemical Plant, the Lomonosov Paint and Lacquer Plant, the Plastmas Plastics Plant, and a tire plant. Building materials are produced by a silicates plant (fire-resistant materials and cement). There are a number of woodworking, light-industry, and food-industry enterprises. Dnipropetrovske exports industrial products to over 50 foreign countries.

A. Multiple-track railway B. Single-track railway

0. Babushkin Plant of Metal Structures, Budivelnyk, cement plant, combine plant
1. Lenin Pipe Plant
2. Petrovsky Metallurgical Plant

4. Komintern Metallurgical Complex (three plants)
5. Marx Metallurgical Plant
6. Railway-car building plant
7. Liebknecht Pipe Plant

8. Artem Machine-Building Plant
9. Main port
10. Boat repair plant
11. University
12. Main Railway Station
13. Heavy-Presses Plant and Metal-Structures Plant No. 2
14. Construction-machinery plant, radio plant

Dnipropetrovske is an important transportation center. Here the Donbas-Kryvyi Rih and the Kharkiv-Kherson railroad lines intersect with the Dnieper River route. The city has 12 freight stations and three passenger stations. Its river port is one of the largest on the Dnieper and consists of four sections. Dnipropetrovske has airline communications with the main cities of Ukraine and the Soviet Union.

Education and culture. In 1976 Dnipropetrovske had 54 scientific-research and engineering-design institutes, most of which were connected with heavy industry. Among them were the Scientific Research Institute of Ferrous Metallurgy and the Automation Institute of the Academy of Sciences of the Ukrainian SSR, both transferred from Kiev; the Institute of Physical Chemistry; the Scientific Research Institute of Pipes; the Institute of the Coke Industry; the Institute of Epidemiology, Microbiology, and Hygiene; and the Scientific Research Insti-

tute of Corn. There were eight institutions of higher education with 54,000 students in 1976, among them Dnipropetrovske University, the Dnipropetrovske Mining Institute, the Institute of Railway-Transport Engineers, the Institute of Civil Engineering, and the pedagogical, medical, and agricultural institutes. In 1978 there were 167 schools of general education and 30 tekhnikum. The city has a philharmonic orchestra, a circus, and four theaters—the Ukrainian Music and Drama Theater (1927), the Gorky Theater of Russian Drama (1847), the Opera and Ballet Theater (1974), and a puppet theater. Its most important museums are the Yavornytsky Historical Museum (1905), the Art Museum (1914), and the university's Zoological Museum. The city boasts 473 libraries holding 21.6 million items. Among them are the state public library, the university library, the mining institute library, and the technological library of the Petrovsky plant. The oblast archives hold documents dating back to the 18th

century. A local branch of the Writers' Union of Ukraine publishes the literary almanac *Vohni Prydniprov'ia*. There is also a local branch of the Artists' Union of Ukraine. A publishing house exists in Dnipropetrovske, and three oblast papers are published there: *Dneprovskaia pravda* in Russian and *Molodyi Leninets'* and *Zoria* in Ukrainian. Since 1958 the city has had its own television station.

Character of the city and environs. Dnipropetrovske is situated on the banks of the Dnieper and is bisected by the river. On the right bank stands the city center, the oldest part of the city. It occupies a large area, stretching for 5 km from the southwest to the southeast and bounded on one side by the Dnieper and on the other by Pushkin Prospect. The main axis of the city center and the city as a whole is Marx Prospect (formerly Catherine Prospect), which begins near the Pryvokzalna (Station) Square in the western, lower part and runs uphill for 4 km to October Field. The prospect is 50–80 m wide and is lined with ancient acacia trees. The main administrative and public buildings stand on the prospect; these include the university, the Shevchenko Theater, the Gorky Theater, the puppet theater, the philharmonic hall, and cinemas. The oldest section of the city lies on the eastern edge of the city center and was to be the city center according to the development plan of 1790. Here stands the Cathedral of the Transfiguration, built in 1830–5 by the architect A. Zakharov. On the slopes of the riverbanks lies Shevchenko City Park and the former Potemkin palace (now the Student Palace). The main industrial section of the city lies west of Pryvokzalna Square along the river and the railroad. The main plants are found here (the Petrovsky plant, the Comintern plant, the metallurgical equipment plant, etc), as well as the loading terminals and shipping docks. The southern part of the city is the newest industrial and residential area. In 1969–71 a large residential development of 9- to 20-story apartment buildings went up. The Amur-Nyzhnodniprovskiy raion, which is of great economic importance, lies on the left bank of the Dnieper. Ferrous-metallurgical, machine-building, and equipment-making plants, the Nyzhnodniprovskiy Station, and a shipping port are found there. North of this raion the large Novomoskovskiy residential development was built in 1961–6.

Dnipropetrovske is one of the greenest cities in Ukraine. There are 12 parks and other green areas, covering an area of 1,330 ha. Among them is Chkalov Park, with a children's railroad and a pond, Shevchenko Park, and Kirov Park.

The main means of urban transportation are the street-car (1898), trolley bus (1947), and bus.

M. Hlobenko, V. Kubijovyč

Dnipropetrovske Agricultural Institute (Dnipropetrovskiy silskohospodarskyi instytut). A postsecondary school established in 1934 within the school system supervised by the USSR Ministry of Agriculture. The institute has faculties of agronomy, economics, zoo-engi-

neering, hydro amelioration, and agricultural mechanization; a correspondence school; and an upgrading school. In 1980 the enrollment was about 4,500, and the library contained over 300,000 items. The institute has a graduate school and publishes scientific works.

Dnipropetrovske Art Museum (Dnipropetrovskiy khudozhnii muzei). Museum established in 1906 as a result of the initiative of the Katerynoslav Scientific Society and the donations of artists, art collectors, the St Petersburg Academy of Arts, the Katerynoslav Historical Museum, and other institutions. The museum was opened in 1914 and renovated in 1923. Some art objects belonging to the gubernial historical museum and to nationalized private collections were transferred to it. The museum contains works of visual art and of decorative-applied art. Its collections are organized into three departments: (1) Ukrainian and Russian art of the 17th–18th century (icons, folk paintings, portraits), (2) 19th–20th-century art, and (3) Soviet art. The most valuable works in the museum's collection are the portraits by D. Levytsky, V. Borovykovsky, O. Venetsiianov, and N. Ge; the landscapes by K. Trutovsky, I. Aivazovsky, K. Makovsky, I. Repin, I. Shyshkin, K. Kostandi, I. Levitan, K. Kryzhytsky, S. Vasylovsky, M. Pymonenko, and M. Samokysh; and the sculptures of V. Beklemishev, E. Lansere, and others. From the Soviet period the museum has some works by M. Hlushchenko, V. Kasiian, I. Znoba, M. Bozhii, and many Russian artists.

Dnipropetrovske Combine Plant (Dnipropetrovskiy kombainovyi zavod im. K. Voroshylova). An enterprise of the machine-building industry in Dnipropetrovske. The plant was formed out of several small enterprises built at the end of the 19th century. Until 1917 it manufactured railway-car wheels, dynamo cores, steel parts for ships, boilers, etc. In the Soviet period it has produced farm machinery, particularly tillers and orchard cultivators, beet harvesters, potato harvesters, beet-gathering combines, and automotive loaders.

Dnipropetrovske Historical Museum (Dnipropetrovskiy istorychnyi muzei im. D. Yavornytskoho). Founded by D. *Yavornytsky, who served as its director in 1905–33, the museum encompasses the collections of the Museum of Antiquities of Katerynoslav Gubernia, of Yavornytsky himself, and of O. *Pol (over 5,000 objects), after whom the museum was named until 1940. The museum also contains archeological objects excavated by expeditions prior to the 12th Archeological Conference in 1905, objects displayed at the gubernial agricultural and industrial fair in 1910, historical objects from Katerynoslav, Kherson, and Poltava gubernias, and archeological articles found in the vicinity of the Dnieper Hydroelectric Station. The Dnipropetrovske Museum has 12 departments. The archeological department is particularly rich. The museum has a large collection of stone *baba* figures, a particularly rich collection of objects from the Cossack period, and a sizable ethnographic and numismatic collection. Valuable hand-written books from the early 15th century and archival materials pertaining to the history of the Dnipropetrovske region have been preserved here. In 1975 the diorama 'The Battle for the Dnieper' was opened. The department of the history of religion and atheism, which is housed in the former Cathedral of the Trans-

figuration, belongs to the museum. In 1979 the Dnipropetrovske Historical Museum possessed over 100,000 artifacts. The museum building, which was designed by Yavornytsky, was reconstructed in 1968–77. A guidebook to the museum was published in 1971.

Dnipropetrovske Institute of Civil Engineering (Dnipropetrovskiy inzhenerno-budivelnyi instytut). An institution of higher learning under the jurisdiction of the Ministry of Higher and Secondary Special Education of the Ukrainian SSR, the institute was founded in 1930. It has faculties of industrial and civil construction, architecture, agricultural construction, building structures, mechanics, construction technology, and general technology; a night school; and a correspondence school. In 1980 the enrollment was over 7,500. The library contains over 650,000 items.

Dnipropetrovske Institute of Railway-Transport Engineers (Dnipropetrovskiy instytut inzheneriv zaliznychnoho transportu). Institution of higher learning in Dnipropetrovske, established in 1930 to succeed the Dnipropetrovske Transport Polytechnic and the Faculty of Highway Engineering at the Kiev Polytechnical Institute. The institute trains specialists in railway construction, use, and economics. It has 10 faculties, a preparatory department, a graduate program, and a library with 700,000 items. In 1979 its enrollment was 7,300.

Dnipropetrovske Medical Institute (Dnipropetrovskiy medychnyi instytut). An institution of higher learning established in 1916 to succeed the medical faculty of the School of Higher Courses for Women. The institute has five faculties: therapeutics, pediatrics, hygiene, stomatology, and the upgrading of physicians. It also has a graduate program. In 1979 the school had 6,000 students, a library with over 570,000 items, and an anatomical and a biological museum. It publishes collections of scientific papers.

Dnipropetrovske Metallurgical Equipment Plant (Dnipropetrovskiy zavod metalurhiinoho ustatkuvannia). A large plant of the heavy-machine-building industry, located in Dnipropetrovske. It was constructed at the site of the former Chaudoire Plant (built in 1910) from 1931 to 1935. The basic products of the plant are equipment for large blast furnaces and steel foundries, powerful rotary dumpers, loading machines for blast furnaces, stripping machines, pig iron, steel, and slag movers, and tubing for subways and mining shafts.

Dnipropetrovske Metallurgical Plant (Dnipropetrovskiy metalurhiynyi zavod im. H. Petrovskoho). A plant of the ferrous-metallurgical industry, founded in 1885 in Katerynoslav (now Dnipropetrovske) by the Briansk Joint Stock Company and known as the Alexander South Russian Metallurgical Plant. Production at the plant began in 1887 and consisted mainly of rails, steel, rolled steel, and pig iron. In 1913 this was the second-largest metallurgical plant in the Russian Empire and produced over 400,000 t of pig iron. After the revolution the plant remained idle until 1923. By 1940 the production of pig iron surpassed 750,000 t. A third foundry, with two 100 t Martin open-hearth furnaces, was added to the plant. Before wartime evacuation in 1941 all the main

metallurgical shops, cranes, and buildings were destroyed. The plant was rebuilt beginning in October 1943. In 1952 production surpassed the prewar level. In 1956 the plant was the first metallurgical plant in the Soviet Union to introduce the L-D process of steelmaking, in which oxygen is blown from above into molten pig iron. Natural gas was introduced in the blast furnaces in 1957. The manufacture of tube metal in converters and the use of synthetic slag in the manufacture of steel have been mastered at the plant.

Dnipropetrovske Mining Institute (Dnipropetrovskiy hirnychiy instytut im. Artema). The oldest mining school in Ukraine, it was established in 1899 as the Katerynoslav Higher Mining School and became the Mining Institute in 1912. In 1930 some departments of the school became independent institutions – the Metallurgical Institute and the Chemical-Technology Institute. The Mining Institute has six faculties: mining, geological prospecting, mine-shaft building, machine building and mechanical, electrotechnical, and general technical (in Oleksandriia). It also has a correspondence school, an evening school, and a graduate program. In 1979 the institute's enrollment was 7,200, and its faculty numbered about 500. Since 1905 the institute has published *Izvestiia Dnepropetrovskogo gornogo instituta* in Russian, as well as various textbooks and collections of scientific research.

Dnipropetrovske oblast. An administrative region in southwestern Ukraine lying in the middle and lower basin of the Dnieper River. The oblast was formed on 27 February 1932. Its area is 31,900 sq km, and its 1983 population was 3,746,600. It is divided into 20 raions, 233 rural soviets, 19 cities, and 53 towns (smt). The oblast's capital is *Dnipropetrovske.

Physical geography. Most of Dnipropetrovske oblast lies within the Ukrainian Crystalline Shield. Its western section is part of the Dnieper Upland, which merges towards the east with the Zaporozhian Ridge on both banks of the Dnieper and slopes in the southwest towards the Black Sea Lowland. In the southeast it borders on the Azov Upland. Its most picturesque part is the Dnieper Valley, where the Dnieper cut into the Crystalline Shield and formed the now-submerged Dnieper Rapids. Dnipropetrovske oblast is rich in mineral resources, containing large deposits of iron ore (in the Kryvyi Rih Basin), manganese ore (in the Nykopol Manganese-ore Basin), anthracite coal (in the east), natural gas and oil (in the northeast), lignite coal, and building materials.

The climate of the oblast is temperate-continental. In the southern part it is relatively dry. The usual temperature in July is 22° to 23°C, and in January –5° to –6.5°C. The average annual temperature is 8° to 9°C. The average annual precipitation is 400–500 mm. The growing season is 200–210 days long.

The main river of the oblast, the Dnieper, bisects it from the northwest to the southeast and forms the Dniprodzerzhynske Reservoir and Lenin Lake. The right-bank tributaries of the Dnieper that run through the oblast are the Mokra Sura, Bazavluk, and Inhulets; the left-bank tributaries are the Orel and Samara. The small rivers become very shallow in the summer. Besides the Dnieper, only the lower Samara is navigable.

The soils are ordinary southern and chestnut cherno-

zems. In the river valleys peat-meadow soils and sandy soils are also found. All of the oblast lies in the steppe belt. Forests and brush cover only 2.6 percent of its area.

In the 16th–18th century the territories of the present Dnipropetrovske oblast belonged to the Zaporozhian Sich and to the Cossack Hetman state. From 1802 they were part of Katerynoslav gubernia.

Population. The average population density is 118 per sq km (1981 figures). The density is highest along the Dnieper, in the Kryvyi Rih region, and along the routes connecting the Donbas and Kryvyi Rih. In the countryside the density is 30–40 per sq km. The proportion of the urban population is constantly increasing. It was 52.8 percent in 1940, 70.9 percent in 1960, 76.2 percent in 1970, and 82.2 percent in 1983. The population of the oblast has grown as follows: from 2,311,000 in 1940 to 2,274,000 in 1950, 2,770,000 in 1960, 3,343,000 in 1970, and 3,645,000 in 1978. The natural population growth in 1975 was 5.4 per 1,000 (the average for the Ukrainian SSR was 5.1), but the actual population growth is higher – one of the highest in Ukraine. The largest cities in the oblast in 1983 were Dnipropetrovske (1,128,000 inhabitants), Kryvyi Rih (674,000), Dniprodzerzhynske (265,000), Nykopol (153,000), Pavlohrad (115,000), Novomoskovske (72,000), Zhovti Vody (56,000), and Marhanets (52,000).

The most industrialized areas contain large urban clusters. The largest are Dnipropetrovske–Dniprodzerzhynske (1,400,000) and Kryvyi Rih (900,000).

In 1979 the population was composed of the following nationalities (with 1959 figures in parentheses): Ukrainian, 72.8 percent (77.7); Russian, 22.9 percent (17.2); Jewish, 1.7 percent (2.7); Belorussian, 1.3 percent (1.3).

Industry. Dnipropetrovske oblast is one of the leading industrial areas of Ukraine and the USSR. It produces 26 percent of the electric power, 37 percent of the pig iron, 43 percent of the rolled steel, 95 percent of the iron ore, and 100 percent of the manganese ore produced in Ukraine. Its industrial products are exported to 70 countries. Industry is concentrated in three main centers: in Dnipropetrovske–Dniprodzerzhynske (ferrous metallurgy, machine building, chemicals, and coke chemicals); in the Kryvyi Rih region (mining, metallurgy, chemicals, machine building, and building materials); and in the southern region, around Nykopol (manganese mining, machine building, food, and building materials). In the east a new coal-mining and machine-building industrial center is being built at Pavlohrad. Industry in the oblast is based on the large local deposits of iron ore in Kryvyi Rih raion and manganese ore in Nykopol raion (one of the largest deposits in the world – 1.1 billion t), and on deposits (five billion t) of coal near Pavlohrad, as well as coal shipped in from the Donbas. Iron-ore and manganese mining, which are highly developed, supply the raw materials for the ferrous metallurgy of the oblast and of the whole industrial south. Iron and manganese ore are also exported. In the 1950s coal mining was developed in the eastern part of the oblast (the western Donbas). About 20 percent of the oblast's industrial workers were occupied in mining in 1970 and accounted for 14 percent of the industrial production. The production of building materials is also well developed.

Dnipropetrovske oblast has a solid energy base: the Dniprodzerzhynske Hydroelectric Station, the *Dnieper Hydroelectric Station, the state regional electric stations (Dnieper, Dniprodzerzhynske, Kryvyi Rih 1 and II),

natural gas from Shebelynka (carried by the Shebelynka–Dnipropetrovske pipeline, built in 1957) and from Pereshchepyne in the oblast (a pipeline built in 1966 connects it to Dnipropetrovske), coke gases, and oil (in Pereshchepyne raion).

Ferrous metallurgy is the most important branch of industry. In 1970 it accounted for 50 percent of the industrial production of the oblast. It is followed by machine building, light industry, and the food industry. In 1970 Dnipropetrovske oblast produced 15.7 million t of pig iron, 16.8 million t of steel, and 14.3 million t of rolled steel. The largest ferrous-metallurgical plants are the Lenin Plant in Kryvyi Rih (established in 1887–9), the Petrovsky Plant in Dnipropetrovske (1885), the Dzerzhinsky Dnieper Plant in Dniprodzerzhynske (1887–9), the Lenin Pipe Plant in Dnipropetrovske (1889), the Liebknecht Nyzhnodniprovskiyi Pipe Plant in Dnipropetrovske (1909), the 50th Anniversary of the Great October Socialist Revolution Southern Pipe Plant in Nykopol (1935), and the 50th Anniversary of Soviet Ukraine Pipe Plant in Novomoskovske (1935). Non-ferrous metallurgy is represented by the Verkhnodniprovsk Mining-Metallurgical Complex in Vilnohirske. Large machine-building and metal-working industries are based on the ferrous-metallurgy industry. They produce metallurgical and mining equipment, structural metal products (Dnipropetrovske, Kryvyi Rih, Marhanets), manufacturing equipment (Dnipropetrovske), electric and transport equipment (Dnipropetrovske, Dniprodzerzhynske), agricultural machinery (Dnipropetrovske, Pavlohrad, Nykopol), and transportation and road-building equipment (Nykopol, Verkhnodniprovsk). Equipment and machines for the woodworking, paper, and chemical industries are manufactured in Dnipropetrovske. The main chemical plants are the coke-chemical plants in Dnipropetrovske, Dniprodzerzhynske, and Kryvyi Rih; the nitrogen plant in Dniprodzerzhynske; and the tire, lacquer-paint, and plastics plants in Dnipropetrovske.

The construction-materials firms are located mostly in Dnipropetrovske, Dniprodzerzhynske, Nykopol, and Pavlohrad. Fifty percent of the production of fire-resistant materials is concentrated in metallurgical plants. Various branches of the food industry (flour milling, vegetable and animal oils, macaroni, meat, dairy products, and brewing) are concentrated for the most part in Dnipropetrovske and Dniprodzerzhynske. In Kryvyi Rih, Nykopol, Marhanets, Novomoskovske, and Synelnykove are found clothes factories, knitting factories, and shoe factories. A paper plant is located in Dnipropetrovske.

Agriculture. Dnipropetrovske oblast is a region of intensive grain growing, animal husbandry, and dairying. Agriculture occupied 80.5 percent of the oblast's land (in 1970). Of the land, 68.2 percent was tilled, 0.7 percent was hayfields, 9.4 percent was pasture, and 2.2 percent was orchards and berry patches. The total area under cultivation was 2,048,000 ha (in 1970), of which 1,045,000 ha (51 percent) were devoted to grains, 280,600 ha (13.7 percent) to industrial crops, 108,500 ha (5.3 percent) to potatoes, melons, and fruit, and 591,900 ha (28.9 percent) to feed crops. The main grains are winter wheat (550,900 ha), spring barley (257,100 ha), and seed corn (103,500 ha). Buckwheat and millet are also grown. Sunflowers are the largest industrial crop (235,900 ha), followed by sugar beets, soya beans, and hemp. Farms specializing in fruits

and milk are located near the large industrial centers. Fruit growing, berry growing, and grape growing are well developed in the Kryvyi Rih, Tsarychanka, and Sofiivka raions. There are 102,000 ha of field and 8,700 ha of orchard irrigated by the waters of the Kakhivka and Dnipropetrovske reservoirs and the Dnieper-Kryvyi Rih Canal.

The average productivity of the grain cultures in 1970-5 was 24.3 centners per ha. The productivity of winter wheat was 26.9 centners per ha, sugar beets 211.8 centners per ha, and sunflowers 16.3 centners per ha. In 1976 there were 1,344,200 head of cattle, of which 509,500 were cows. There were 1,190,300 hogs and 606,700 sheep and goats. The most common breeds of cattle are the Red Steppe and Gray Ukrainian; of hogs, the Great White and Ukrainian Steppe White; and of sheep, the Sokilske and the White Fine-Wool Askanian.

Transportation. Dnipropetrovske oblast has a dense network of railway lines, 1,550 km long. The main lines, which connect the Dnieper Industrial Region with the Donbas, are the Kryvyi Rih-Piatykhatsky-Dnipropetrovske-Krasnoarmiske line and the Dolynska-Nykopil-Zaporizhia-Donbas line. The other lines are the Znamianka-Khvastiv, Kharkiv-Dnipropetrovske-Kherson, and Kharkiv-Synelnykove-Symferopil. The largest railway junctions are Dnipropetrovske, Nyzhnodniprovske-Verkhivtseve, Kryvyi Rih, Apostolove, and Synelnykove. The oblast has 7,800 km of roads, of which 6,600 km are hard-surfaced. The main highways are the Moscow-Symferopil, Kiev-Donetske, and Kharkiv-Dnipropetrovske highways. The Dnieper River is an important transportation route. The largest ports are at Dnipropetrovske, Dniprodzerzhynske, and Nykopil. Two gas pipelines run through the oblast: the Shebelynka-Dnipropetrovske-Kryvyi Rih line (1957), from which, eventually, branches were built to Pavlohrad, Novomoskvske, Dniprodzerzhynske-Verkhnodniprovske, and Zaporizhia; and the Pereshchepyne-Dnipropetrovske line (1966). The larger oblast cities have airline communications with each other and with the main cities of Ukraine and the USSR.

Dnipropetrovske oblast is a 'closed' region; foreign tourists are not admitted there.

V. Kubijovyč

Dnipropetrovske Pipe Plant (Dnipropetrovskyi truboproskatnyi zavod im. V. Lenina). A metallurgical enterprise established in 1889 by a French and Belgian stock company. The plant produced steel, rolled steel, and pipes. In the interwar period new shops were added to the plant, and after the 1950s the technology of production was modernized. Today the plant produces electrically welded, bimetallic, steel pipes.

Dnipropetrovske Ukrainian Music and Drama Theater (Dnipropetrovskyi ukrainskyi muzychno-dramatychnyi teatr im. T. Shevchenka). The theater was formed in Dnipropetrovske in 1927 out of the Shevchenko

Kiev Ukrainian Drama Theater, which had been moved to Dnipropetrovske. Its repertoire consists of Ukrainian and world drama classics as well as popular plays of the Soviet period. The theater's best-known director was I. Kobrynsky. Its famous actors include Z. Khrukalova, A. Khoroshun, and S. Stankevych. V. Borysovets and L. Skrypysia have won recognition as stage designers.

Dnipropetrovske Ukrainian Opera and Ballet Theater (Dnipropetrovskyi ukrainskyi teatr opery ta baletu). In 1932-41 Dnipropetrovske had an opera and ballet theater, formed from the First Traveling Opera of Poltava (est 1928). In 1941 the actors of the Dnipropetrovske theater were transferred to the Donetske, Kharkiv, and Odessa theaters. The opera and ballet theater was restored in Dnipropetrovske in 1974. The repertoire of the present theater consists of world-famous foreign, Russian, and Ukrainian operas, ballet classics, and Soviet ballets. The theater's opera directors are P. Surzhyna and N. Poludennyi. Its principal conductor is P. Varyvoda, the choirmaster general is V. Kiose, and its chief stage designer is A. Arefiev. Among the stars of its ballet troupe of 70 dancers are Z. Zinchenko, A. Petrina, L. Yelynska, N. Voitenko, and T. Omelchenko.

Dnipropetrovske University

Dnipropetrovske University (Dnipropetrovskyi derzhavnyi universytet im. 300-richchia voz'ziednannia Ukrainy z Rosieiu). The university was established in 1918 as an offspring of the school Higher Courses for Women, founded in 1916. In 1920 the faculty of medicine became a separate institute of medicine, while the other three faculties became part of the Dnipropetrovske Institute of People's Education. In 1933 the university was re-established, and in 1954 it received its current name. It now has ten faculties: mechanics and mathematics, physics, physico-technical, radiophysics, chemistry, biology, economics, history, philology, and a correspondence school; an evening school; institutes of geology and biology; five laboratories; a botanical garden; and a zoological and a

historical museum. In 1978 the faculty numbered 305 professors and lecturers and the enrollment was 12,700. There is a graduate program. The library contains 300,000 items. The university has published *Naukovi zapysky* since 1937, as well as textbooks and pedagogical literature.

Dniprorudne. VI-15. City (1965 pop 7,300) in Vasylivka raion, Zaporizhia oblast; freight port on the Kakhivka Reservoir. Dniprorudne was founded in 1961 with the development of the Bilozerka Iron Ore Region. The town has a major iron smelting complex (est 1969) and a reinforced-concrete plant.

Dniprosoiuz. A central union of consumer co-operatives founded in May 1917 in Kiev. This was the most important central co-operative union in Ukraine during the period of independence. By the end of 1918 Dniprosoiuz represented almost 80,000 co-operatives and 80 county and regional unions. It sold haberdashery, manufactured goods, and other merchandise and organized several factories and a printing press. Over 2,000 people were employed in the industrial concerns owned by Dniprosoiuz. Besides its commercial departments, Dniprosoiuz had an accounting-training, a statistical-economic, a cultural-educational, a legal, and an insurance department. It had branches in the larger cities such as Odessa (the largest branch) and Stanyslaviv (from February 1919) and a mission in Vienna. It was Ukraine's main representative agent in foreign trade. Dniprosoiuz published a large number of Ukrainian books, particularly textbooks, and a periodical, *Kooperatsiina zoria*. It organized libraries, reading rooms, and drama groups. In 1920 the Soviets abolished Dniprosoiuz and replaced it with the *All-Ukrainian Association of Consumer Co-operative Organizations in Kharkiv. During its existence Dniprosoiuz was headed by D. Koliukh.

Dniprova Chaika

Ivan Dniprovsky

Dniprova Chaika [Dniprova Čajka] (pseudonym of Liudmyla Berezyna; married name, Vasylevska), b 20 October 1861 in Karlivka, Kherson gubernia, d 13 March 1927 in Hermanivka (now Krasne Druhe), Kiev oblast. Writer. Dniprova Chaika began her literary career in 1884, publishing her work in almanacs and newspapers, including *Pravda*, *Zoria*, and *Literaturno-naukovyi vistnyk*. In 1905 she was arrested for her writings. She wrote realist stories, influenced to some extent by populist ideas, on the life of the peasantry and intelligentsia; these

include 'Chudnyi' (The Eccentric, 1904), 'Khrestonos' (Crusader, 1896), and 'Vol'terianets' (The Voltairean, 1908). Other works, especially the cycle 'Mors'ki maliunky' (Seascapes, 1900), 'Shpaky' (The Starlings, 1901), 'Plavni horiat' (The Marshes Are Aflame, 1902), and 'Samotsvity' (Precious Stones), are lyrical prose studies and symbolist miniatures that belong to Ukrainian modernism. She also wrote poetry and libretti for the children's operas of M. Lysenko: *Pan Kots'kyi* (Sir Catsky), and *Zyma i vesna abo Snihova kralia* (Winter and Spring or the Snow Queen). Together with S. Rusova and A. Hrabenko, she wrote the libretto for *Koza-Dereza* (Billy-Goat's Bluff). Her selected works, edited and with an introduction by M. Ivchenko, were issued in one volume in 1929 by the Chas publishing house, and in two volumes in 1931 by Rukh publishers.

Dniprovi khvyli (Dnieper Waves). Illustrated weekly published at the initiative of M. Bohuslavsky in Katerynoslav from 1910 to 1914. The editors were D. Doroshenko (1910–13) and V. Bidnov (1914). Besides information on current events, *Dniprovi khvyli* published literary and historical articles. Among its contributors were D. Yavorivsky, L. Bidnova, and I. Truba.

Dniprovske [Dniprovs'ke]. v-15. Town smt (1977 pop 6,500) in Verkhnodniprovske raion, Dnipropetrovske oblast. The town is located on the high right bank of the Dniprodzerzhynske Reservoir. There is a starch-molasses processing complex and a pig-iron foundry in the town. Dniprovske was built in 1951.

Dniprovsky, Ivan [Dniprovs'kyj] (pen name of I. Shevchenko), b 9 March 1895 in Kalanchak, Tavriia gubernia, d 1 December 1934 in Yalta. Writer, member of the literary organizations *Hart, *VAPLITE, and *Prolitfront. He was a close adherent of M. *Khvylovy. Dniprovsky made his literary debut as a poet, publishing the epic poem *Donbas* (1922), the collection *Pluh* (Plow, 1924), and other volumes. He later gained recognition with his stories and the dramas *Liubov i dym* (Love and Smoke, 1925) and *Iablunevyi polon* (Apple-Blossom Captivity, 1928), which drew harsh criticism when staged at the Berezil theater. His stories about the First World War and the revolution, written in a strongly expressionist style, were published in the collections *Zarady nei* (For Her Sake, 1928, 1929) and *Atsel'dama* (1932). They were proscribed immediately after Dniprovsky's death, along with the rest of his work, as hostile to the official Soviet line in literature. Dniprovsky was partially rehabilitated in 1956.

Dnister. A Ukrainian co-operative bank with limited liability located in Lviv. It was set up in 1895 to aid members by investing their savings and granting them loans. By 31 March 1933 it had over 10,000 members, assets of 967,858 Polish zlotys, a cash flow of 3,645,271 zlotys, and 3,017,237 zlotys in loans. The bank was closed in 1939 by the Soviet authorities.

Dnister. The oldest and largest Ukrainian insurance company in Galicia. It was established in 1892 in Lviv to provide mutual protection from fire, theft, and burglary. The founders were K. Levytsky, V. Nahirny, S. Fedak, D. Savchak, and T. Berezhnysky. The directors of Dnister

The building of the Dnister Insurance Company in Lviv

were Ya. Kulachkovsky (1892–1909), S. Fedak (1909–20), and Ya. Koltoniuk (1920–44). In 1929 Dnister had 1,200 agents and 95,630 members. Its assets amounted to 1,972,000 Polish zlotys, and its reserve fund was 520,000 zlotys. Dnister's further growth was arrested by economic crises, the government's restriction of its area of activity to Galicia, and particularly the loss of its fire-insurance concession in 1935. Dnister retained only the right to insure movable property. In 1927 the company had 14,500 policies in this department, amounting to 19,406,721 zlotys, and 1,325 policies against theft and burglary, worth 4,005,094 zlotys. Dnister was closed down in 1939 by the Soviet authorities.

Dnistrianka (Maid of the Dniester). An almanac published in Lviv in 1876 by the younger contributors to **Druh*. It contained, among others, contributions by Marko Vorchok, I. Franko, I. Beley, M. Pavlyk, and translations of works by E. Zola and F.-B. Harte.

Dnistriansky, Stanyslav [Dnistrians'kyj], b 13 November 1870 in Ternopil, d 5 May 1935 in Uzhhorod. Prominent jurist in Galicia, professor of civil law at the universities of Lviv and Prague, rector of the Ukrainian Free University (1922–3), of which he was one of the founders, member of the All-Ukrainian Academy of Sciences, and full member of the Shevchenko Scientific Society. Dnistriansky edited *Chasopys' pravnycha* and *Pravnychyj visnyk*. He served as president of the Society of Ukrainian Lawyers in Lviv and, in 1907–16, as a deputy of the National Democratic party to the Vienna parliament. During this period he presided over a civil-law-reform commission. He wrote numerous works in Ukrainian, German, and Czech on civil law, particularly on obligation, ownership, and the general science of law. His main works were *Das Wesen des Werklieferungsvertrages im österreichischen Rechte*, *Die Aufträge zugunsten Dritter*, *Avstrijs'ke pravo obligatsiine* (Austrian Contract Law, 1901), *Zvychnie pravo ta sotsial'ni zv'iazky* (Customary Law and Social Relations), *Tsyvil'ne pravo* (Civil Law), and *Zahal'na nauka prava i polityky* (The General Science of Law and Politics, 1923). He contributed to the development of Ukrainian legal terminology and prepared

a draft of the constitution of the Western Ukrainian National Republic. Dnistriansky belonged to the sociological school of law and tried to weaken legal positivism by emphasizing the social character of norms and the natural principles of law. He constructed his own interpretation of legal freedom, which was later adopted by Austrian civil jurists.

V. Markus

Dobosh, Andrii [Doboš, Andrij], b 4 November 1911 in Novosad, Prešov region, Slovakia. Painter, graphic artist. Dobosh studied painting with V. Erdeli and Y. Bokshai in Uzhhorod and at the Academy of Art in Prague. His work consists mostly of oil paintings in a postimpressionist style; his subjects are usually mountain landscapes. Since 1963 Dobosh has worked as a graphic artist, objective compositions becoming dominant in his work. He has exhibited in Czechoslovakia and the United States.

Dobrianka [Dobrjanka]. 1-12. Town smt (1970 pop 4,900) in Ripky raion in northern Chernihiv oblast. Its industry consists of a furniture factory, a clothes factory, and peat cutting.

Stanyslav Dnistriansky

Adolf Dobriansky

Dobriansky, Adolf [Dobrjans'kyj, Adol'f], b 18 December 1817 in Rudlov, Prešov region, Slovakia, d 13 March 1901 in Innsbruck, Austria. Prominent Transcarpathian political leader, jurist, mining engineer. In 1840 Dobriansky accepted a government post in Pest. An active defender of the rights of the non-Magyar peoples, he participated in the Slavic Congress in Prague in 1848 and in the **Supreme Ruthenian Council* in Lviv. He prepared a plan for a separate, self-governing region consisting of all Ukrainian territories within the Austrian Empire. In 1849 Dobriansky served as an Austrian civil commissioner with the Russian army, which helped the Austrians to suppress the Hungarian uprising. He presented to the Austrian emperor a project for the division of Hungary into national districts, entitled 'A Memorandum by Hungarian Ruthenians' and dated 19 October 1849. The project was approved, and Dobriansky was appointed vicegerent of the Ruthenian district in Hungary. He served in Uzhhorod, Košice, and Buda from October 1849 to 1860, a period in which Transcarpathia experienced a cultural renaissance. With the adoption of the 1860 constitution and the stronger influence of the Magyars in government,

Dobriansky lost the position of vicegerent. He continued, however, to defend the rights of Transcarpathia's Ukrainians and was thrice elected to the Hungarian diet. His proposals to the diet were turned down by the Magyar majority, particularly because he stood for cultural ties with Russia. In 1862–76 he served as president of St John's Society in Prešov, and in 1866–76 of the Society of St Basil the Great in Uzhhorod. In 1867–71 he edited the Russophile newspaper *Svet*. When his political influence declined, Dobriansky moved to his estate in Chertizhne, Prešov region, but did not cease his activities. In 1881 he moved to Lviv and became entangled in a treason trial in which the main defendant was his daughter, O. *Hrabar. After being acquitted, he moved to Warsaw and then settled in Austria.

Among Dobriansky's journalistic works in Russian, German, and Hungarian the more important ones are *Proekt politicheskoi programmy dlia Rusi avstriiskoi* (A Draft Political Program for Austrian Ruthenia, 1849), *O zapadnykh granitsakh Podkarpatskoi Rusi* (On the Western Boundaries of Subcarpathian Ruthenia), *Program zur Durchführung der nationalen Autonomie in Österreich* (1885), and *Les Slaves d'Autriche et les Magyars*. Ukrainian populists in Galicia were critical of Dobriansky's views and his pro-Russian activity.

V. Markus

Dobriansky, Andrii [Dobrians'kyj, Andriij], b 2 September 1930 in Lviv. Bass-baritone singer. Dobriansky immigrated to the United States in 1949 and obtained his artistic education in New York, studying drama with L. Donath and singing with G. Dubrowsky and J. S. Drobner. He sang with various opera companies in the United States before joining the Metropolitan Opera in 1969. His roles have included Don Magnifico in G. Rossini's *La Cenerentola*, Zuniga in G. Bizet's *Carmen*, Boris Godunov in M. Mussorgsky's opera of the same name, and Wotan in R. Wagner's *Die Walküre*. In the Ukrainian repertoire, Dobriansky's roles have included Mykyta in P. Pecheniha-Uhlytsky's *Vid'ma* (The Witch) and Prince Yaroslav the Wise and the Cardinal of Paris in A. Rudnytsky's *Anna Yaroslavna*. Dobriansky has been a soloist with the Dumka Chorus of New York for many years.

Dobriansky, Antin [Dobrians'kyj], 1810–77. Galician church writer, Greek Catholic priest in Valiava, Peremyshl county. He wrote an Old Slavonic grammar, numerous historical articles, and sermons. His *Istoriia episkopov trekh soedinennykh eparkhii, peremyshl'skoi, samborskoi i sianotskoi, ot naidavnishykh vremen do 1794* (History of the Bishops of Three United Eparchies, Peremyshl, Sambir, and Sianok, from Earliest Times to 1794, 1893) was published posthumously.

Dobriansky, Lew [Dobrians'kyj, Lev], b 9 November 1918 in New York. Economist, Ukrainian-American com-

Lew Dobriansky

munity and political figure. Dobriansky studied at New York University and Fordham University; he has taught at Georgetown University in Washington since 1948, serving as director of the university's Institute of Comparative Political and Economic Systems from 1970. He has taught at the National War College (1957–8). Since 1949 he has been the president of the *Ukrainian Congress Committee of America, with particular responsibility for its activities outside the Ukrainian community. As a government adviser, Dobriansky has had many contacts with congressmen and the State Department. He has been active in American conservative and Republican organizations, as well as in international anti-Communist organizations, taking part in many international conferences and congressional hearings. His publications include *The Free Trade Ideal* (1945), *Veblenism: A New Critique* (1957), *The Vulnerable Russians* (1967), *The USA and the Soviet Myth* (1971), and over 500 articles. Dobriansky has given many radio and television interviews and commentaries in the United States. In 1982 he was appointed United States ambassador to the Bahamas.

Dobriansky, Viktor [Dobrians'kyj], b 1816 in the village of Rudlov in the Prešov region, d 12 June 1860 in Prešov. Brother of Adolf *Dobriansky; Greek Catholic clergyman and pedagogue. In 1848–52 Dobriansky served as a school inspector in Uzhhorod and a school trustee in Košice. Dobriansky tried to have the Ruthenian (Ukrainian) language introduced into the schools in Transcarpathia.

Dobriansky-Demkovich, Mykhailo [Dobrians'kyj-Demkovič, Myxajlo], b 7 November 1907 in the village of Lahodiv, Peremyshliany county, Galicia. Journalist, civic leader. In 1933–9 Dobriansky-Demkovich served as a co-editor of the monthly *Dzvony* and the weeklies *Meta* and *Khrystos nasha syl'a*. He was a member of the presidium of the Ukrainian Central Committee in Cracow. In 1945 he emigrated to Germany and then Britain. In Munich he edited the journal *Problemy* (1947–8) and in London the weekly *Ukrains'ka dumka* (1949–50). In 1956–72 he served as director of the Ukrainian broadcast of Radio Liberty in Munich. Since 1972 he has been a regular contributor to *Nash holos* and *Ukrains'ki visti*. He has represented the Ukrainian National Democratic Alliance in the Ukrainian National Council. Dobriansky-Demkovich is the author of *Ukrains'ko-pol's'ki stosunki v XIX storichchi* (Ukrainian-Polish Relations in the 19th Century, 1969).

Dobroliubov, Nikolai [Dobroljubov, Nikolaj], b 5 February 1836, d 29 November 1861 in Nizhnii Novgorod, Russia. Russian revolutionary publicist and critic, described in official Soviet publications as a revolutionary democrat. Together with N. Chernyshevsky he was one of the leading associates of the journal *Sovremennik*. He wrote a number of articles on Ukrainian subjects, among them 'Kobzar' Tarasa Shevchenko' (Taras Shevchenko's *Kobzar*, 1860), which gives a favorable, although superficial, evaluation of Shevchenko as a 'poet of the people.' He also wrote articles on Marko Vovchok and on Ukrainian folk songs. The thesis that Dobroliubov influenced Shevchenko, which is widespread among Soviet scholars of Ukrainian literature, has no basis in fact.

Dobromyl [Dobromyl']. IV-3. Town (1969 pop 5,400) in Staryi Sambir raion, Lviv oblast, located on the Vyrva River near the Carpathian foothills south of Peremyshl. The town is first mentioned in historical documents in 1374. In 1566 it was granted Magdeburg law. During the 16th and 17th centuries Dobromyl had a flourishing salt industry. At the beginning of the 17th century the Herburt family, who owned the town, founded a press there. From the beginning of the 19th century until 1939 Dobromyl was a county town. In 1705 a Basilian monastery was built there. Today the town has a food industry of local importance. Among its historical monuments are the ruins of the Herburt family's castle from the early 17th century and the former Basilian monastery, built in the rococo style.

Dobroniha (Dobrohniiieva), ?-1087. Baptized Mariia, daughter of Volodymyr the Great and sister of Yaroslav the Wise. In 1043 (according to Ukrainian chronicles; Polish sources give 1039) she married the Polish king Casimir I the Restorer.

Dobropillia. V-18; DB III-2. City (1970 pop 30,000) in the southwestern Donbas, a raion center in Donetske oblast. It was formed in 1953 from several populated centers. There are nine coal mines, a large coal enrichment plant, and a reinforced-concrete plant in Dobropillia.

Dobroserdov, Dimitrii, b 1876 in Samara, Russia, d 1 August 1936 in Odessa. Chemist. In 1912-23 Dobroserdov served as professor of inorganic chemistry at the Polytechnical Institute in Kiev and was then appointed professor at Odessa University. He studied crystallohydrates. In 1907 he investigated the dielectrical properties of organic bonds and solutions. His findings appear in many reference books and are fundamental in the study of dielectric substances.

Dobrotvir. III-5. Town smt (1970 pop 3,200) in Kamianka-Buzka raion of Lviv oblast. The town lies in the Buh Depression on the banks of the Buh River. It was founded in 1950 during the construction of the Dobrotvir Thermoelectric Station (DRES).

Dobrovolska, Olimpiia [Dobrovol's'ka, Olimpija], b 12 August 1895 in Odessa. Actress skilled in various types of roles, pedagogue, play director; wife of Y. *Hirniak. Dobrovolska played in the Molodyi Teatr theater in 1917-19, the Franko Theater (now the Kiev Ukrainian Drama Theater) and its theater-studio in 1920-2, the Berezhil

theater in Kiev and Kharkiv in 1922-37, and the Lviv Opera Theater in 1942-4. She emigrated to Austria, then Germany and the United States, where she and her husband directed a theater studio in 1945-61. She appeared in various roles and successfully directed Lesia Ukrainka's *Lisova pisnia* (The Forest Song) and *Orgiia* (Orgy) and H. Ibsen's *Ghosts*.

Olimpiia Dobrovolska

Anatolii Dobrovolsky

Dobrovolsky, Anatolii [Dobrovol's'kyi, Anatolij], b 19 May 1910 in Buky, Volhynia gubernia. Architect and full member of the Academy of Construction and Architecture of the Ukrainian SSR and of the USSR. Dobrovolsky was a lecturer at the Kiev Civil Engineering Institute and the Kiev State Art Institute, and since 1965 he has been a professor at these institutes. In 1950-5 he was the principal architect of Kiev: he co-directed the reconstruction and development of Khreshchatyk Boulevard and the neighboring districts and codesigned many large buildings, such as the Institute of Physics of the Academy of Sciences of the Ukrainian SSR (1955), the cinema Ukraina (1959), the subway station Khreshchatyk (1960), the hotel Moskva (1961), and Boryspil Airport (1965). In his buildings Dobrovolsky uses many-colored glazed tiles with Ukrainian kilim motifs.

Viktor Dobrovolsky

Dobrovolsky, Viktor [Dobrovol's'kyj], b 23 January 1906 in Odessa. Stage actor specializing in heroic roles, trained in the Odessa school by V. Vasylyko and L. Hakkenbush. He began to appear on the stage of the Odessa People's Theater in 1922. He joined the Odessa Ukrainian Drama Theater in 1926 and the Kharkiv Red

Factory Theater in 1928. He worked at the Donetske Drama Theater from 1933 to 1939, when he transferred to the Kiev Ukrainian Drama Theater. He worked there until 1964 and then joined the Kiev Russian Drama Theater. His main roles have been Hurman in I. Franko's *Ukradene shchastia* (Stolen Happiness), Horodnychy in N. Gogol's *Revizor* (The Inspector General), and various roles in plays by W. Shakespeare, O. Korniichuk, M. Gorky, and others. He has also appeared in many films. His most notable screen role was B. Khmelnytsky in *Trysta rokov tomu* (300 Years Ago). Monographs on Dobrovolsky have been published by Yu. Boboshko (1964) and I. Ovrutsky (1976).

Dobrudja (Rumanian: Dobrogea). A region of 23,260 sq km with a population of 815,000 (in 1930), lying between the lower Danube and the Black Sea. The northern and central part, with an area of 15,580 sq km and a population of 777,600 (in 1971), belong to Rumania, while the southern, smaller part (Tolbukhin district) belongs to Bulgaria. Dobrudja has been settled by various peoples. In 1930 Rumanians constituted 44 percent of the population; Bulgarians, 23 percent; Turks, 19 percent; Ukrainians, 2.8 percent; Tatars, 2.7 percent; Russians, 2.2 percent; the rest was composed of Gypsies, Greeks, Jews, and Gagauzy. About 30,000 Ukrainians live in Tulcea county in the northern part of Rumanian Dobrudja.

In the 1st century BC Dobrudja became part of the Roman Empire and then of the Byzantine Empire. In the 7th–14th century it was part of Bulgaria, and in the 11th–12th century, along with the rest of Bulgaria, it belonged to Byzantium. For a brief period it was annexed by Wallachia, and then from 1411 to 1878 it belonged to Turkey. Since 1878 northern Dobrudja has been settled mostly by Rumanians and has belonged to Rumania, while southern Dobrudja, except for the period 1913–40, has belonged to Bulgaria.

In the 10th century Dobrudja was captured by the Kievan prince Sviatoslav. Pereiaslavets (Malki Preslav or Preslavets), on the Danube, was his favorite city. In 1159 Ivan Rostyslavych Berladnyk captured the area for a brief time. Beginning in the 12th century, Galician fishermen and traders settled at the mouth of the Danube. After the destruction of the Zaporozhian Sich in 1775, some of its Cossacks fled to the Danube delta and established the *Danubian Sich at Dunavets (Dunavațul). During the Russo-Turkish War the Danubian otaman Y. *Hladky and his Cossacks joined the Russian side in 1828, and only a remnant of the Cossacks was left in Dobrudja. Their numbers increased as peasants fled across the Danube from Ukraine to avoid serfdom and conscription, particularly in 1830–40. During the Russo-Turkish War of 1877–8 some of the Danubian Ukrainians returned to Ukraine.

The Ukrainians of Dobrudja today inhabit the main delta of the Danube in Tulcea county. They constitute almost 40 percent of the county's population. Beside them, in separate settlements, live the Russians – the Nekrasovtsy (descendants of refugees of K. Bulavin's rebellion in the 18th century) and the Old Believers (Lipovans). According to the Rumanian census of 1899, there were 13,700 Ukrainians in Dobrudja and 12,500 Russians. According to Bulgarian sources of 1918, there were 21,500 Ukrainians and 18,500 Russians. The Rumanian census of 1930 gives 23,000 Ukrainians and 18,000 Russians-Lipovans. The main centers of Ukrainian settle-

UKRAINIAN SETTLEMENTS IN DOBRUDJA

1. Border between Dobrudja and Wallachia
 2. Territory settled mostly by Ukrainians
- Localities inhabited by Ukrainians are underlined.

ment in Dobrudja are Kilia Stara (Chilia Veche, 2,000), Murighiol (930), Telița (940), Letia (Letea, 845), Nyzhnii Dunavets (Dunavățul de Jos, 680), Verkhonii Dunavets (374), Carorman (800), Baspunar (670), Hamcharka (Hamcearca, 460), Chukurova (Ciucurova, 320), Gaeferca Rusa (190), Sfintu Gheorghe (540), Pardina (Pardina, 540), Sulina (Sulyn), and Tulcea (see map). There are about 1,000 Ukrainians in the main city of Dobrudja – Constanta.

The Ukrainians of Dobrudja are mostly fishermen and farmers. They live separately from the Russians and have preserved their Ukrainian language; they call themselves Rusnaks. In 1880–2. F. Vovk did some educational work among them. In the 1930s Ukrainians from the Akkerman region and the Ukrainian theater from Chernivtsi visited Dobudja.

After the Second World War the Rumanian authorities permitted some cultural activity among the Ukrainians in Dobrudja in the 1950s. The school reform of 1948 introduced the Ukrainian language into the elementary schools of Dobrudja. In Tulcea a parallel Rumanian-Ukrainian teachers' college was set up, and in 1957 it graduated 54 teachers. In the 1960s all the concessions that the Ukrainians had won in education were abolished.

Dobryi pastyr (The Good Pastor). A quarterly for pastoral, scholarly, and cultural affairs, financed by the parishes of Stanyslaviv and Peremyshl and published in Stanyslaviv in 1931–9. The editors were Rev O. Halushchynsky (1931–6) and then Rev. I. Lub.

Dobrylo Gospel. A manuscript of 270 folios copied in 1164 from the Church Slavonic original by the deacon Dobrylo, probably in Kiev. This is the earliest text in which the so-called new *ě* appears in place of *e* before the weak *ь*. The manuscript is unpublished; however, excerpts of it have appeared in *Kievskie universitetskie izvestiia* (1885). It is preserved in the Lenin Library in Moscow.

Mykola Dobrylovsky

Dobrylovsky, Mykola [Dobrylovs'kyj], b 1888, d 1971 in Pereiaslav. Economist specializing in finance, professor at the Ukrainian Husbandry Academy and at the Ukrainian Technical and Husbandry Institute in Poděbrady, Czechoslovakia in the 1930s. He produced works on the theory of the national economy and finance, as well as university books, including *Derzhavnyi kredyt* (State Credit, 1928) and *Finansy Ukrainy* (Finances of Ukraine, 1928–9). In 1945 he was sentenced to a long term of exile in Siberia.

Dobrynia. Adviser and voivode of the grand prince of Kiev, Volodymyr Sviatoslavych; brother of the wife of Prince Sviatoslav Malusha. Dobrynia was the guardian of the young Volodymyr Sviatoslavych at Novgorod until 970 and later became voivode of the city. In 985 he took part in Volodymyr Sviatoslavych's campaign against Bulgaria and assisted him in propagating Christianity in Rus'.

Doha, Vasyl, 1885–? Pedagogue, research associate of the Scientific-Pedagogical Committee of the All-Ukrainian Academy of Sciences, author of school textbooks and articles on methodology, particularly on the methodology of teaching the Ukrainian language. Doha was found guilty at the show trial of the Union for the Liberation of Ukraine in 1930. His subsequent fate is unknown.

Dojaček, Frank, b 29 February 1880 in Vlašim, Czechoslovakia, d 20 April 1951, in Winnipeg, Manitoba. Publisher of Czech origin. Dojaček emigrated to Canada in 1903. In 1905 he began to sell Ukrainian-language books and by 1906 had opened the Ruthenian Bookstore in Winnipeg, Manitoba, the first such Ukrainian

establishment in Canada. A subsequent publisher of Ukrainian books, reprints, and newspapers, he purchased **Kanadiis'kyi farmer* in 1913, which, except for a brief period (1927–32), he and his sons have published since, along with German- and Croatian-language newspapers and other materials.

Dokuchaev, Vasilii [DokučaeV, Vasilij], b 1 March 1846 in Miliukovo, in the Smolensk region, d 8 November 1903 in St Petersburg. Prominent Russian naturalist and agrogeologist, known for his soil classification scheme and his development of an ecosystem theory for soil. His published doctoral dissertation, *Russkii chernozem* (Russian Chernozem, 1883), is regarded as the foundation of modern genetic soil science and introduced the word 'chernozem' into international soil terminology. In 1888–94 Dokuchaev studied the soils and geological conditions of the Poltava region and produced his 16-volume *Materialy k otsenke zemel' Poltavskoi gubernii* (Materials for the Assessment of the Soils of Poltava Gubernia, 1889–94). After the famine of 1891–2 he outlined a plan for combating drought in his *Nashi stepi prezhde i teper'* (Our Steppes Then and Now, 1892). In 1892–3 he led a special expedition to investigate drought and recommended a system of irrigation and protective forest belts as countermeasures against soil erosion. The findings were published in *Trudy ekspeditsii, snariazhernoi Lesnym departamentom pod rukovodstvom professora Dokuchaeva* (Transactions of the Expedition Commissioned by the Forestry Department under the Direction of Professor Dokuchaev, 18 vols, 1894–8). Today several Soviet research centers are named after him, including the Kharkiv Agricultural Institute.

Dokuchaievske [Dokučajevs'ke]. VI-18; DB IV-3. City (1975 pop 24,200) in Volnovakha raion, Donetsk oblast. Until 1954 it was called Olenivski Kariery. The city was founded in 1898 when a Russian-Belgian firm began to mine fluorspar for the metallurgical plants of the Donbas and Dnieper regions. The city has a fluorspar-dolomite plant, a reinforced-concrete plant, and mining and trade tekhnikums.

Dold-Mykhailyk, Yurii [Dol'd-Myxajlyk, Jurij], b 17 March 1903 in Butenky, Poltava gubernia, d 18 May 1966 in Kiev. Writer and journalist. He joined the staff of *Komunist* (Kharkiv) in 1929, and after the war he was on the staff of *Radians'ka Ukraina*. He began to publish in 1925 and published the following collections of short stories and sketches: *Mizh dvoma bat'kivshchynamy* (Between Two Fatherlands, 1930), *Kolhospi liudy* (Collective-Farm People, 1931), *Zhinochi portrety* (Portraits of Women, 1934), *Step prahne* (The Steppe Yearns, 1951), and *Portret materi* (A Portrait of Mother, 1954). He also wrote several novels – *Stepovyky* (Steppe-Dwellers, 1949), *I odyu u poli voiu* (And One Warrior in the Field, 1956), *U chornykh lytsariv* (With the Black Knights, 1964) – and plays – *Boryslavs'ka trahediia* (The Boryslav Tragedy, 1954) and others.

Dołęga-Chodakowski, Zorian (pen name of Czarnocki, Adam), b 4 June 1784 near Niasvizh in Belorussia, d 17 November 1825 in Tver gubernia. Polish ethnographer and archeologist. During his travels, particularly in Ukraine in 1814–19, he compiled a register of fortified

settlements and kurhans in Galicia, Volhynia, and Podilia and collected over 2,000 folk songs, of which almost 1,400 were Ukrainian. The published material collected by Dołęga-Chodakowski includes historical songs that appeared in the collections of M. Maksymovych, W. Zaleski, V. Hnatiuk, and others. The book *Ukrains'ki narodni pisni v zapysakh Zoriana Dolenhy-Khodakovs' koho* (Ukrainian Folk Songs Taken Down by Zorian Dołęga-Chodakowski) was published only in 1974 in Kiev. Almost half of the songs collected by Dołęga-Chodakowski are ritual and historical songs. They are a valuable source for folklore studies, ethnography, history, literary scholarship, and linguistic studies of the 18th-century vernacular. Dołęga-Chodakowski presented his basic ideas on culture in *O Stowiańszczyźnie przed chrześcijaństwem* (On Slavdom before Christianity, 1818; published separately, 1835), and *Proiekt uchenogo puteshestviia po Rossii dlia obiasneniia drevnei slavianskoi istorii* (A Project for a Scholarly Expedition through Russia to Elucidate Ancient Slavic History, 1820).

Dolengo, Mykhailo (pseudonym of M. Klokov), b 31 July 1896 in Lebedyn, Kharkiv gubernia. Poet and critic, botanist by profession. He began to write in 1915 and was a member of the editorial boards of the journals *Hart* and *Krasnoe slovo* in Kharkiv. He published several poetry collections: *Ob'iektyuna liryka* (Objective Lyrics, 1922), *Vybrani poezii* (Selected Poems, 1927), *Uzmin'* (The Deep, 1928), *Zroslo na kameni* (It Grew Up on Rock, 1929), *Pid hariachym nebom* (Under the Hot Sky, 1937), *Tsiliushche zillia* (Curative Herbs, 1945), *Rozdumy* (Reflections, 1961). Among his literary studies are *Krytychni etudy* (Critical Studies, 1924) and *Tvorchist' Volodymyra Sosiury* (The Work of Volodymyr Sosiura, 1931). As a botanist, Klokov is known for being the co-author of *Vyznachnyk roslin URSR* (Field Guide to Plants of the Ukrainian SSR, 1950) and co-editor of the series *Flora URSR*.

Dolenko, Hryhorii, b 8 March 1917 in Haivka in Kherson gubernia. Geologist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1964. After graduating from Kharkiv University, he worked as a geologist in various institutions. In 1952 he joined the Institute of the Geology and Geochemistry of Combustible Minerals at the Academy of Sciences of the Ukrainian SSR and in 1963 became director of the institute. Dolenko works on the theoretical problems of oil and gas geology and studies the oil and gas potentialities of the Ukrainian SSR.

Dolenko, Volodymyr, b 24 April 1889 in Mechebylove, Kharkiv gubernia, d 7 August 1971 in Neu-Ulm, West Germany. Jurist, civic and political leader. Dolenko was active in Kharkiv's Ukrainian Hromada from 1908. In 1920-4 he was involved in clandestine Orthodox political groups. Arrested in 1926 for his activities, he was imprisoned in Soviet labor camps until 1941. In 1941-3 Dolenko built a covert Ukrainian network that had some success in controlling Kharkiv during the German occupation and presided over the Ukrainian Civic Committee. After emigrating to Germany, he worked closely with the UNR government in exile and was active in the conciliatory wing of the Ukrainian Autocephalous Orthodox church. He was instrumental in establishing the *Ukrainian National-State Union and the Peasant party-Union of the

Lands of Pan-Ukraine, both of which he headed. In 1954 he became a member of the Ukrainian National Council and vice-president of its presidium. His life is documented in Yu. Semenko (ed), *Pam'iaty V.A. Dolenka* (In Memory of V.A. Dolenko, Munich 1975).

Mariia Dolnytska

Dolnytska, Mariia [Dol'nyc'ka, Marija], b 1 January 1895 in Lviv, d 27 October 1974 in Vienna. Enamelist and painter; daughter of A. *Dolnytsky. In 1911 she enrolled in the State Art and Industrial School in Vienna and later opened her own enameling workshop. In 1921-5 she lived in the United States. Until 1925 Dolnytska also painted, mostly portraits in pastels and watercolors. Her enamels were cloisonné in combination with painting. She invented a number of technical improvements and produced several hundred miniatures and single enamels of a diverse nature: on religious themes in the Ukrainian Byzantine style and on classical mythological themes and contemporary Ukrainian folk motifs. She also decorated with enamels church objects such as chalices, crosses, and gospel books. Dolnytska's work was displayed at international exhibits in Austria, Switzerland, Sweden, Germany, Italy, France, and England. She had four personal exhibits in the United States and one in Prague, in 1936-7. Dolnytska revived Ukrainian enameling and for a long time was the sole master in this field. A monograph on her was published in English and Ukrainian by W. Popowycz in 1979.

Dolnytsky, Antin [Dol'nyc'kyj], 1853-1954. Galician civic figure, judge of the supreme court in Vienna for many years. In 1875-6 Dolnytsky headed the *Academic Circle student society in Lviv and edited its journal, *Druh*. Owing to his efforts, the Russophile tendencies in the society were overcome. He wrote a short novel, *Na potemky* (In the Dark), under the pseudonym A. Pereplys, and popular brochures and articles on legal issues.

Dolnytsky, Isydor [Dol'nyc'kyj], b 21 March 1870 in Zalistsi Stari, Brody county, Galicia, d 1924 in Lviv. Ukrainian Catholic priest. In 1875-77 he was chaplain at St Athanasius College in Rome, and in 1877-1924 chaplain and instructor at the Greek Catholic Theological Seminary in Lviv. He wrote the texts for many church services, which he imbued with poetic forms reminiscent of the early church liturgies. These included *Typik Tserkve rus'ko-katolicheskii* (Typicon of the Ruthenian Catholic Church, 1899), *O sviashchennykh obriadakh Hreko-katolyts'koi Tserkvy* (On the Sacred Rites of the Greek Catholic

Church, 6 edns, 1900), and *Akafisty do Naisolodchoho Sertsia Khrystovoho* (Acatrists to the Most Sweet Heart of Christ). He also published *Irmolohion* and *Hlasopisnets'* (Hymn Book, 1894).

Dolnytsky, Zenon [Dol'nyc'kyj], b 11 July 1896 in Hlyniany, Lviv county, d 20 April 1976 in Garches, France. Opera singer (baritone), pedagogue. Dolnytsky performed at European opera theaters, including La Scala in Milan. In Ukraine he worked as a soloist of the Lviv Opera in 1942–4. His wide repertoire included parts from G. Verdi's *Un ballo in maschera* (Renato), *Il trovatore* (Conte di Luna), *Otello* (Iago), *La traviata* (Germont), *Aida* (Amonasro); G. Puccini's *Tosca* (Scarpia) and *La fanciulla del west* (Sheriff); G. Bizet's *Carmen* (Escamillo); C. Gounod's *Faust* (Mephistopheles); and P. Tchaikovsky's *Queen of Spades* (Count Tomsy and Prince Yeletsky). In the 1950s he taught singing at the S. Rachmaninoff Conservatory in Paris.

Dolobsk council of princes. A conference of princes that took place in 1103 near Dolobsk Lake opposite Kiev. The council was attended by the Kievan prince Sviatopolk Iziaslavych and the Pereiaslav prince Volodymyr Monomakh, who were accompanied by their armed retinues. The council discussed a joint campaign against the Cumans. Volodymyr Monomakh persuaded the others that an immediate campaign was imperative. The joint campaign, in which the united armies of the Rus' princes crushed the Cumans, took place in 1103.

Dolomite. Sedimentary deposit and mineral, usually of marine origin, a form of limestone that contains calcium and magnesium carbonate. In Ukraine dolomite is found mostly among the Paleozoic deposits in the Donets Basin, the Tertiary deposits in the Black Sea Lowland, the Silurian deposits in Podilia, and the Precambrian deposits in the Kryvyi Rih and Boh regions. Dolomite is an important supplementary raw material in metallurgy and, therefore, it is mined primarily in the Donets Basin. The principal dolomite deposits are found near Mykytivka, Yama, and Novotroitske in the Donbas.

Dolphin (Ukrainian: *del'fin*). Sea mammal of the whale family Delphinidae. The most prevalent species found in the Black Sea is the common or the Black Sea dolphin (*Delphinus delphis*), which is up to 2.5 m in length and feeds mostly on small fish. In both the Black and the Azov seas are found also the common porpoise (*Phocoena phocoena*), which is 1.5 m long, and the rarer black dolphin or black pig (*Tursiops tursio*), which is up to 2.5 m long. Dolphins are a valuable hunted species whose fat is melted into oil. Before the Second World War 700,000 to 1,000,000 dolphins were estimated to inhabit the Black Sea, and about 200,000 were killed annually (60,000–80,000 by the Turks alone). Now their numbers have fallen to 200,000, and since 1966 hunting them has been prohibited by the Soviet government.

Dolud, Andrii, b 15 October 1888 in Ielysavethrad, Kherson gubernia, d 6 September 1976 in Curitiba, Brazil. Colonel in the UNR army. Dolud was active in the Ukrainian Social Democratic Workers' party and a member of the Ukrainian Central Rada. In 1918–19 he commanded the Gonta Cossack Battalion in the battles for

Lviv. He was chief of the general staff of the Army of the UNR during the winter campaign of 1920 and commanded the Fifth Kherson Division of Riflemen.

Zenon Dolnytsky

Pavlo Dolyna

Dolyna, Pavlo (Popykov), b 12 November 1888 in Kiev, d 15 September 1955 in Kiev. Actor, stage and film director. From 1918 to 1927 he was a close collaborator of L. Kurbas in the Molodyi Teatr, Kiev Drama, and Berezil theater companies. From 1925 to 1929 he was a director in Odessa with the All-Ukrainian Photo-Cinema Administration; from 1929 to 1940, with the Kiev Artistic Film Studio; and from 1941 to 1943, with the studio Tekhfilm in Kiev and Tashkent. His films include *Buria* (Storm, 1928), *Chorni dni* (Black Days, 1930), *Sviato Uniri* (A Feast for Unira, 1932), and several popular educational and technical films. From 1947 to 1955 he was the director of the Kiev Museum of Theater Arts. He wrote the play *Tsari* (Tsars), based on the poem by T. Shevchenko, and several screen plays.

Dolyna. v-5. City (1970 pop 14,000) in Galician Subcarpathia, at the foot of the Gorgany; a raion center in Ivano-Frankivske oblast. Dolyna has been known for its salt mines since the 14th century. In 1525 it received Magdeburg law. In 1857 it became a county town. Since the 1950s Dolyna has been the center of the Dolyna oil field, and the petroleum-gas industry has been the main industry of the town. It has a gas-benzene plant, which began production in 1966; a reinforced-concrete-products plant; a salt factory; and a brick factory. It also has a food industry. An oil pipeline connects Dolyna and Drohobych, and a gas pipeline connects Dolyna with Ivano-Frankivske and Chernivtsi.

Dolyna oil field. One of the largest petroleum fields in Ukraine, located in Dolyna raion, Ivano-Frankivske oblast, in Subcarpathia. The field was discovered in 1949, and the first well began production in 1950. It covers an area of 32 sq km. The petroleum is found in sandstone of the Paleogene period at a depth of 1,600–3,000 m. The thickness of individual petroleum beds varies from a few meters to 120 m. The oil contains 6.1–10.1 percent paraffin and 17.0–23.8 percent tar, but practically no sulfur.

Dolynska [Dolyns'ka]. v-13. City (1970 pop 13,900), raion center in Kirovohrod oblast. Dolynska was founded in 1873 during the construction of the Kharkiv-Mykolaiv railway line. The city is a railway junction and has a brick plant, a reinforced-concrete plant, and a food industry.

Prayer by Luka Dolynsky
(pastel, 18th century)

Dolynsky, Luka [Dolyns'kyj], b ca 1745 in Bila Tserkva, d 10 March 1824 in Lviv. Painter. Dolynsky studied with Yu. Radyvylovsky in Lviv in 1770–1 and at the Vienna Academy of Arts (1775–7). In 1777 he settled permanently in Lviv, where he worked as a church artist and portraitist. He painted the interior of St George's Cathedral (1770–1 and 1777), decorating the iconostasis and the side altars. In the 1780s and 1790s he decorated various churches in Lviv, including the Church of the Holy Spirit, the Church of SS Peter and Paul, and the Church of the Holy Friday, and churches in nearby villages. In 1807 and 1810 he painted and gilded the Dormition Cathedral in Pochaiv, and in 1820–1 the iconostasis and murals in St Onuphrius's Church in Lviv. Dolynsky painted portraits of Prince Lev of Galicia (1770–1), Maria Theresa and Joseph II (1775–7), Metropolitan F. Volodkovich, and others. In combining classical and original Ukrainian stylistic features, he departed from the Lviv guild tradition of icon painting.

Domaniial jurisdiction. During the Middle Ages this term referred to the plenitude of rights enjoyed by landowners vis-à-vis tenants on domanial lands. In residual form these rights survived until the abolition of serfdom. The principal rights of the lord (Latin: *dominus*) were the receipt of payment in money, in kind, or in labor, and the administration of justice to his subjects. This private court, from which there was no appeal, was the origin of the domanial court, which developed as a form of public administration of justice executed by the lord. Domanial jurisdiction prevailed in Ukraine under the rule of Poland and the Grand Duchy of Lithuania. The revolt of B. Khmelnytsky did away with domanial jurisdiction, but it was revived towards the end of the 17th and at the beginning of the 18th century in the Hetman state, at first in relation to peasants on monastic property, then to peasants on land owned by Cossack soldiers and officers. Under Austrian rule domanial jurisdiction was applied to peasants on domanial lands in Galicia beginning in 1722 and in Bukovyna from 1774. Taxes paid by lords on domanial lands were considerably less than those on peasant property. Domanial jurisdiction was limited under Joseph II towards the end of the 18th century and finally abolished in 1848 (see *Serfdom).

V. Markus

Domanivka. VI-11. Town smt (1970 pop 5,400) and raion center in Mykolaiv oblast. The industry in Domanivka consists of food production and a tile-and-brick plant.

Domanytsky, Vasyl [Domanyc'kyj, Vasył'], b 19 March 1877 in Kolodyste, Kiev gubernia, d 11 September 1910 in Arcachon, France. Historian, literary scholar, publicist, popularizer, public and political figure. He worked for various journals: *Kievskaiia starina* (as editor's secretary for many years), *Literaturno-naukovyi visnyk*, *Zapysky NTSh*. He was one of the founders and the acting editor of Vik Publishers. He was a member of the Society of Ukrainian Progressives. Having studied under V. Antonovych, Domanytsky conducted archeological expeditions in the Zvenyhorod region. He wrote several books: *Kozachchyna na perelomi 16–17 st.* (Cossackdom at the Turn of the 16th Century), *Pisnia pro Nechaia* (The Song about Nechai), *Baliada pro bondarivnu* (The Ballad about the Cooper's Daughter), *Pioner ukrains'koi etnografii Z. Dolenga-Khodakovs'kyi* (The Pioneer of Ukrainian Ethnography Z. Dołęga-Chodakowski), *Krytychnyi rozhljad nad tekstem 'Kobzaria'* (A Critical Examination of the Text of *Kobzar*, 1907), *Avtorstvo M. Vovchka* (The Authorship of M. Vovchok, 1908; a refutation of P. Kulish's rejection of Marko Vovchok's authorship of *Narodni opovidannia* [Folk Stories]). Domanytsky was the editor of the first complete edition of Shevchenko's *Kobzar* (1907). He edited *Ridna sprava: Dums'ki visti*, the paper of the Ukrainian faction in the Second Russian State Duma. His numerous articles on political and community topics appeared in *Hromads'ka dumka*, *Rada*, *Nova hromada*, and other periodicals. He wrote some popular brochures about Galicia and Bukovyna and edited the popular *Istoriia Ukrainy* (History of Ukraine) by M. Arkas. He was one of the first organizers of a consumers' co-operative in the Kiev region and author of popular pamphlets on questions connected with the co-operatives, among them *Tovarys'ki kramnytsi* (Society Stores, 1904), *Pro sil's'ku kooperatsiiu* (On Village Co-operatives, 1904), and *Iak khaziainuiut' seliany v chuzhykh kraiaikh* (How Peasants Prosper in Other Countries, 1908). For his public work he was exiled to the far north. Eventually, his sentence was changed to three-year's exile outside the country.

Vasyl Domanytsky

Viktor Domanytsky

Domanytsky, Viktor [Domanyc'kyj], b 6 January 1893 in Kiev gubernia, d 24 March 1962 in Minneapolis, Minnesota. Brother of Vasyl *Domanytsky; agronomist, sociologist, co-operative organizer, and community figure. He emigrated from Ukraine in 1922, living in Czechoslovakia, Germany, and the United States. He was a professor at the Ukrainian Husbandry Academy (later the Ukrainian Technical and Husbandry Institute) in

Poděbrady (which he reorganized in 1945 in Munich, serving for two years as rector) and at the Ukrainian Free University in Prague. Domanytsky was a full member of the Shevchenko Scientific Society. His major works are *Problema orhanizatsii staloho hospodarstva v stepu* (The Problem of Organizing a Permanent Economy in the Steppe, 1927), *Metodyka suspil'noi agronomichnoi pratsi v tsaryni pasichnytstva* (The Methodology of Community Agronomic Work in the Area of Apiculture, 1935), and *Zasady ukrains'koho urbanizmu* (The Principles of Ukrainian Urbanism, 1940). He also published scientific articles and popular books on plant cultivation.

Domashovets, Volodymyr [Domašovec'], b 1 March 1926 in Zabiria, Rava Ruska county, Galicia. Baptist pastor, religious activist. Domashovets studied theology in Switzerland and Britain in 1953–6 and then in the United States. He was president of the Ukrainian Evangelical Baptist Convention in the United States in 1977–80 and since 1975 has been the secretary general of the All-Ukrainian Evangelical Baptist Fellowship. Domashovets has been the editor of the journals *Vira i nauka* since 1952 and of *Pislanets' pravdy* since 1975.

Dombchevsky, Roman [Dombčevs'kyj], b 25 May 1884 in the village of Yaseniv Horishnyi, Kosiv county, Galicia, d 1952. Galician civil leader, lawyer, publicist, active member of the Ukrainian Social Democratic party. During the First World War he was active in the Union for the Liberation of Ukraine (in the POW camps of Knittelfeld and Freistadt) and in 1918–22 was a member of the diplomatic mission of the UNR in Prague. He worked as a lawyer in Mykolaiv on the Dniester and in Stryi. He wrote *Za prava ukrains'koi movy* (In Defense of the Rights of the Ukrainian Language, 1936). He was arrested by the Soviets in September 1939 and sentenced in April 1940 in Odessa to eight years in labor camps.

Dombrovsky, Avhustyn [Dombrovs'kyj], b 1880, d ? Elementary school teacher in Galicia. During the period of the Western Ukrainian National Republic, Dombrovsky was a deputy to the Ukrainian National Rada. Dombrovsky wrote *Ukrains'kyi bukvar* (Ukrainian Primer) and *Bukvar dlia nepys'mennykh* (Primer for Illiterates), as well as articles on pedagogy. In 1929–30 he edited *Uchytel's'ke slovo* in Lviv. He was deported by the Soviet authorities in 1940.

Dombrovsky, Teofil [Dombrovs'kyj], b ?, d ca 1861. An actor and entrepreneur in the 1840s and 1850s. Dombrovsky performed with the L. Mlotkovsky troupe in Kharkiv (1840–3) and Orel (1843–5), with the Alexander Theater in St Petersburg (1846–7), and with the Malyy Teatr theater in Moscow (1851–3). He was generally cast in Ukrainian character roles. In 1853 he organized his own troupe, which performed in Chernihiv and Kursk. Dombrovsky often played comic roles in the plays of I. Kotliarevsky and H. Kvitka-Osnovianenko.

Dometsky, Havrylo [Domec'kyj], d ca 1710 in Kiev. Theologian and churchman, graduate of the Kievan Mohyla Collegium. In 1679–91 Dometsky was the archimandrite of the Simonov Monastery in Moscow. In 1691 he was exiled to the north for deviating from Muscovite church traditions. Later he became archimandrite of the

Yuriev Monastery in Novgorod. Condemned again in 1708, he was pardoned and returned to Kiev. From the 1670s he wrote theological, usually ascetic, treatises: *Put' k vechnosti* (The Path to Eternity, 1784), *Kinovion, ili izobrazhenie evangel'skogo i inocheskogo zhitiia* (The Monastery, or a Description of Evangelical and Monastic Life), *Sad ili vertograd dukhovnyi* (The Spiritual Garden or Orchard), and *Vozrazheniia na knigu Ostena* (A Reply to Osten's Book). All except the first work were published only in this century. Dometsky wrote in the vernacular about theological questions.

Klymentii Dominchen

Dominchen, Klymentii [Dominčen, Klymentij], b 8 December 1907 in Studena, Podilia gubernia. Composer. Dominchen graduated from the Lysenko Music and Drama School in Kiev in 1931 and worked as a conductor in Odessa, Luhanske, Mykolaiv, and elsewhere. From 1945 to 1951 he was a conductor for Ukrainian radio. His works include the ballets *Snihuron'ka* (The Snow Maiden, 1965) and *Pro shcho spivala trembita* (What the Trembita Sang About, 1970) and the ensemble piece *Balet na l'odu* (Ballet on Ice); the vocal-symphonic oratorio *Trud i myr* (Work and Peace, 1959); the cantata *Hei, nesy's' nash spiv, nad morem* (Soar over the Sea, Our Song, 1950); two symphonies; the symphonic poems *Vitchyzna* (Fatherland, 1946), *Heroi 'Potemkina'* (Heroes of the Potemkin, 1955), and *Karnaval* (Carnival, 1958); and other overtures, suites, choral works, compositions for folk-instrument orchestras, and songs for solo voice.

Dominican order. A Roman Catholic monastic order – the Order of Friars Preachers – founded by St Dominic in 1215. It defended orthodoxy in the Catholic church and used the inquisition to suppress heresies. About 1230 some Dominicans visited Kiev (among them, St Hyacinthus). From 1595 to 1601 a Ruthenian province, distinct from the Polish and the Lithuanian provinces, existed on Ukrainian territory. I. Potii, among others, advocated its establishment. There were many Dominican monasteries in Ukraine – in Bar, Brody, Bohorodchany, Buchach, Vinnytsia, Halych, Zhovkva, Zaslav, Kiev, Kolomyia, Kodak, Konstantyniv, Letychiv, Liubar, Lviv, Ovruch, Pynske, Rohatyn, Sniatyn, Ternopil, Terebovlia, Yavoriv, Yazlivets, Yaroslav, and elsewhere. The desire of many Ukrainians in the Dominican order to establish separate Ukrainian monasteries met with little success and usually resulted in transfers of such Ukrainians to monasteries in Polish territory. The Ruthenian province of the order was abolished in the 17th century, and many Dominicans joined other orders.

Don Cossacks. See Don Region.

Don region (Donschyna). A historical-geographical region, the former territory of the Don Cossacks – the oblast (domain) of the Don Host. It is located in the basin of the lower and middle Don River. In 1914 the territory had an area of 164,600 sq km and a population of 3.9 million. Its southwestern part falls within Ukrainian ethnic territory. The non-Ukrainian part of the Don region borders on Ukrainian ethnic territory for 1,100 km, from Novokhopersk (Voronezh oblast) in the north to Azov in the south. Today a small western part of the Don region belongs to the Ukrainian SSR and is divided between Donetsk and Voroshylovhrad oblasts. The rest of the region belongs to the RSFSR and is within Rostov and Volgograd oblasts.

The region consists of lowland plains with a weakly developed relief and somewhat more elevated and divided ridges. Most of the region is part of the Lower Don Lowland, which is separated from the Middle Donets Lowland in the north by the East Donets Ridge. The most elevated and divided area of the Don region is in the southwest and forms part of the Donets Ridge. The climate is continental: the temperature in July is 22° to 24°C, and in January –5° to –9°C. The annual precipitation is 250–350 mm. The whole region is covered by steppe – narrow-leaved, fescue–feather-grass steppes in the west and dry-grass steppes in the east. This is an agricultural region, producing mainly wheat, corn, and barley. It has a low population density (15–40 people per sq km), except in the southwest (the eastern Donbas). Because of coal deposits and the accessibility of the sea, heavy industry has developed here. The largest cities of the Don region – Rostov, Novocherkassk (former capital of the Don Cossacks), Shakhty, Novoshakhtinsk, Kamensk-Shakhtinskii, Tahanrih, and Azov – are located in the southwest.

Nationalities. The nationalities question here is quite complex, owing to centuries of colonization. Most of the original population consisted of Don Cossacks, who settled all of the northern and middle part of the Don and a narrow corridor in the lower Don that today separates the main Ukrainian ethnic territory from the Ukrainian-populated Kuban region and areas of eastern Subcaucasia. From this corridor extends another one, westward along the Donets River and beyond Voroshylovhrad, running through the territory of the Ukrainian SSR. It should be pointed out that pure Russian is used only in the upper Don, in the basins of the Koper and Medveditsa rivers. The Don Cossacks, who lived along the middle Don up to the Tsimla River, particularly in the northwest, speak a language that is influenced by Ukrainian. The language and ethnography of the inhabitants of the Lower Don also bear strong traces of Ukrainian. Ukrainian linguistic influence is even greater in the Donets dialect and in the mixed dialects on the borders of Subcaucasia.

The western part of the Don region was colonized independently of the Don Cossacks by the Zaporozhian Cossacks and Ukrainian peasants. Ukrainian migration into this territory was particularly vigorous after the abolition of serfdom; it then spread south into the sparsely settled regions adjacent to the Kuban and the eastern Subcaucasian steppes. Russian peasants settled here in smaller numbers. The cities, especially Rostov,

and the Donbas attracted workers, mostly Russians. Besides Ukrainians and Russians, the Don region was settled also by Germans, Armenians, Jews, and Greeks, who gravitated towards the cities. The steppes in the southeast were inhabited by the Kalmyks. The non-Cossack population of the Don region was called *inohorodni* (Russian: *inogorodnye* [those from other towns]). Colonization increased the proportion of the *inohorodni*: they constituted 44 percent of the population in 1886, 50.5 percent in 1895, and 60 percent in 1910 (ie, a majority of the population).

On the basis of official statistics published in 1897, Ukrainians constituted a majority (61.7 percent) in Tahanrih county and a large minority in Donetsk county (38.9 percent), Rostov county (33.6 percent), Salsk county (29.3 percent), and Novocherkassk county (18.9 percent). The Ukrainian ethnic territory in the Don region consisted of three parts: (1) the northern part between the Donets and the Don rivers in the basin of the Kalitva River, containing the towns of Millerove, Chortkove, and Morozivske and separated by a non-Ukrainian strip of settlement along the Donets; (2) the southwestern part of the Tahanrih area; and (3) the lands north of the Manych and Sal rivers and adjacent to Subcaucasia. After the Bolsheviks occupied the Don region, the Tahanrih area and parts of Donetsk and Cherkassk counties were annexed to the Ukrainian SSR. In 1925 most of these territories were again separated from Ukraine; hence, only small border areas of the Don region remain in the Ukrainian SSR today. The part of the region that was settled by Ukrainians but belongs to the Russian SFSR has an area of 23,800 sq km and had a population in 1926 of 778,000, 76.8 percent of which was Ukrainian (81.9 percent of the rural population and 33.9 percent of the urban population). This population had a low level of national consciousness and easily became Russified, particularly in the towns and industrial areas, after its separation from the Ukrainian SSR.

The national composition of the Don region has changed considerably since the 1920s and early 1930s. The proportion of Ukrainians has declined rapidly because Ukrainians lack national rights within the Russian SFSR and have become linguistically and nationally Russified. The cities attract large numbers of Russians from the Russian heartland, and Cossack consciousness is waning. The present national composition of the Don region is unknown, because the Soviet census deals only with whole oblasts and is inaccurate. The national and linguistic statistics are manipulated to prove that the Ukrainian-Russian border coincides with the ethnic boundary.

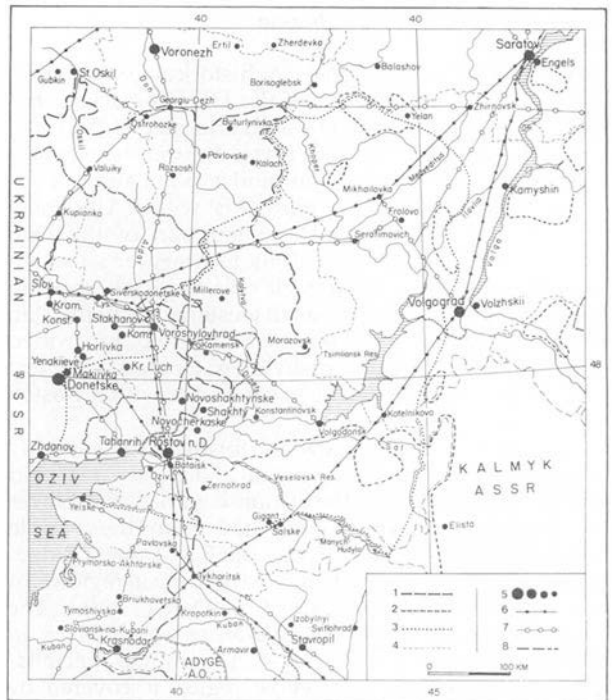

History. At the beginning of the historical period the Don region belonged to the *Khazar Khaganate. In the 10th–11th century the Slavs, who had penetrated previously to the lower Don, began to settle the southern part of the region. In 965 Prince Sviatoslav conquered the southwestern part of the Khazar state and captured the fortress and city of Sarkel on the Don. A principality administered from *Tmutorokan at the mouth of the Kuban River was set up. Bila Vezha on the Don was its main manufacturing and trading center, and Rusiia at the mouth of the Don was its main port. At the same time the Rus' princes' struggle with the nomadic Turkic tribes that continually moved in from the east began. In the 12th century the *Cumans cut off the Tmutorokan principality

from the Kievan state, and most of the principality's Slavic population returned to Rus'. Yet a significant portion of the population remained on the lands beyond the Don and on the Azov coast. Under conditions of constant warfare with the Turkic invaders, this population organized itself into seminomadic, armed bands, known in the 12th–13th century as the *brodnyky* (wanderers). Most historians consider the *brodnyky* to be the precursors of the *Cossacks, who appeared in the 15th century in southern Ukraine, in the Don region, and on the south-eastern frontiers of Muscovy. The early Cossacks were light cavalymen who offered their services to neighboring rulers. The Don Cossacks served the Moscow princes and then the tsars and constituted Muscovy's southern line of defense against the Turks, Tatars, Circassians, and others. The Don Cossacks came from the indigenous population of the region and from the free settlers from Muscovy and Ukraine who belonged to various estates and were seeking new homes, mostly for social reasons.

Like the Zaporozhian Cossacks, the Don Cossacks (also called *dontsi*) organized their own military-social order of a republican type. It was known as the Great Don Host (Vsevelyke Viisko Donske). The supreme authority rested with the Great Military Circle (Velykyi Viiskovyi Kruh), which decided the most important questions, such as war, peace, alliance, and election of the otaman and officers. At first the Muscovite tsars recognized the separate order and privileges of the Don Cossacks, and in return the Cossacks fought on the side of the tsars in a number of wars. But throughout the 17th century Muscovy tried to restrict Cossack autonomy in various ways. In 1671 the Great Don Host lost its independence and swore allegiance to the Russian tsar. In the 17th–18th century the Don Cossacks often rebelled to defend their privileges (S. Razin, K. Bulavin, E. Pugachov).

The Russian tsars continued to curtail the autonomy of the Don Cossacks in the 18th century. After K. Bulavin's unsuccessful rebellion in 1707–8, which was motivated by social and national oppression, Peter I abolished the elections of the otaman. The Cossacks had lost the right to conduct their own foreign relations even before then. In 1721 the Host became subject to the Russian Military Collegium. The Military Circle slowly lost its influence and was summoned only for ceremonial functions: the issuing of the tsar's edicts, the distribution of rewards, etc. Real power rested with the Military Chancellery, which decided on all matters. The reform of 1775 set up a military-civil administration patterned on the gubernial administration. At the end of the 18th century serfdom was introduced in the Don region. The Cossack officers became part of the Russian gentry, and the peasants became their serfs. The free Cossacks were formed into a military estate, which constituted an important part of the Russian army, mainly its cavalry. In the mid-19th century the Don Cossacks provided 80 cavalry regiments, each Cossack supplying his own arms and horse.

The Russian authorities were alert to the slightest signs of Don separatism. In 1773 the Don otaman S. Efremov, a member of the Efremov otaman 'dynasty,' was accused of separatist tendencies and anti-Russian ties with the *gortsy* (Caucasian mountain peoples), Tatars, and Zaporozhian Cossacks. He was arrested and taken to St Petersburg. He was later rehabilitated; but the Russian authorities continued to fear an autonomist movement in the region and

punished its supporters very severely. In 1792 a Cossack rebellion led by F. Sukhorukov and I. Rubtsov broke out and was suppressed by the government. In 1800 the brothers E. and P. Gruzinov (Georgians by origin), who were decorated officers of the Russian Guard but also Don patriots, were publicly tortured to death in Cherkassk on Paul I's orders. Their associates were put to death for 'treason against the fatherland' and their plans to liberate the Don region from Russia.

After the 1917 revolution the autonomist movement became widespread in the Don region. The traditional Cossack order was revived, and a regional (krai) government headed by General A. Kaledin was set up; it did not recognize the Soviet government and proclaimed itself the supreme power. From 1917 to 1920 a war between Soviet Russia and the anti-Bolshevik forces took place in the region. In May 1918, after the region was cleared of the Bolsheviks, the constitution of the Great Don Host was adopted. The Don Cossack army became the main anti-Bolshevik force. In opposition to the independence movement among the Cossack rank and file, the officers (the otamans P. Krasnov and A. Bogaevsky, the head of the Great Military Circle V. Kharlamov, etc) worked

towards reinstating a unified Russian state. They tried to win the Kuban population over. A. Denikin's Volunteer Army got its main support against the Bolsheviks from the Don Cossacks and the Don regional government.

Even after the defeat of the White forces, the region continued to give rise to anti-Soviet unrest and rebellions. The Soviet government abolished Don autonomy, stripped many Cossacks of their civil rights, and restricted their numbers in the military (until 1937). Like the population of Ukraine, the region's population strongly resisted collectivization; it, too, sustained great losses during the famine of 1932–3. Several Soviet cavalry formations that were called Cossack fought in the Second World War. The Germans organized separate units of Don Cossacks from prisoners of war and used them to fight the Soviet armies. After Germany's surrender the Allies handed over 2,750 officers and about 15,000 captured Don Cossacks to the Soviets.

The Soviet government is destroying the sociocultural distinctiveness and autonomy of the Cossack population, in accordance with the resolution of the All-Russian Worker-Cossack Congress that was held in Moscow in 1920: 'The Cossacks are not at all a separate people or nation, but constitute an inseparable part of the Russian people.'

There is a Cossack independence movement abroad, supported mainly by Don Cossack émigrés.

Relations between the Don region and Ukraine. The Cossack democracies of the Don region and Ukraine, because of their proximity, similar structure, and frequently common interests, maintained close relations from their inception until the 18th century. The Don and Zaporozhian Cossacks exchanged correspondence and envoys, provided mutual military support, and fought campaigns together. Don inhabitants often resettled in the Zaporizhia, and even more Zaporozhians migrated to the Don. As separate states, the Don domain and Zaporizhia conducted their own diplomatic relations with neighboring countries. Muscovy took a keen interest in the affairs of the two Cossack states, particularly in the relations between them. Many documents prove that these relations were good. In 1632 Muscovy received a report that the Don and Zaporozhian Cossacks had signed a mutual-defense treaty. In 1649 and 1650 Hetman B. Khmelnytsky sent letters to the Don Host. In 1668 Hetman I. Briukhovetsky wrote the Don Cossacks: 'Do not be tempted by the deceitful rewards of Muscovy. I warn you: as soon as it suppresses us, it will start planning the conquest of the Don region and Zaporizhia.' The Zaporozhian otaman I. Sirko wrote similar letters. In a letter to the tsar in 1685 the Don Cossacks declared their longstanding alliance and friendship with the Zaporozhian Cossacks. One of the letters sent from the Don Host to the Zaporizhia in 1707 states: 'The Don and Zaporozhian Cossacks consulted with each other and pledged their souls to stand united and to care for one another as friends.'

The close ties between the Don and the Ukrainian Cossacks were reflected in many military campaigns. Each spring a force of 1,000–2,000 Zaporozhian Cossacks arrived at the Don and set out with the Don Cossacks on a sea campaign against the Crimea or Turkey. The Don Host and the Zaporozhian Host both played an important role in the campaigns against Muscovy at the beginning of the 17th century and in the struggle for the tsar's throne:

the Second False Dimitrii was supported by 15,000 Don Cossacks and 30,000 Zaporozhian Cossacks. Mikhail Romanov was elected tsar in 1613 mainly through the influence of the Cossacks. In 1637 the Don and Zaporozhian Cossacks transferred their military camps to the Azov region.

The Hetman state was compelled to help in suppressing K. Bulavin's rebellion, which the Zaporozhians supported. But both I. Mazepa and P. Orlyk counted on support from the Don Cossacks in planning an East European coalition against Moscow. From the beginning of the 18th century, after its defeat of Bulavin and Mazepa, Moscow adopted more decisive policies against the Cossacks. It tried to arouse inner strife by increasing the privileges of the Cossack officers and by aggravating any conflicts of interest between the Don and Zaporozhian Cossacks. The struggle for the Bakhmut salt mines ended with Peter I's sending his army and the Slobidska Ukrainian Cossack regiments against the Don Cossacks and destroying almost half their settlements. Thereafter, the Donets Basin with its saltworks was granted to the Slobidska Ukrainian Izium Regiment and the lands up to the Aidar River were granted to the Ostrohozke Regiment. In the mid-18th century the Don and Zaporozhian Cossacks fought over the Azov coast and fishing grounds. During I. Gonta's and M. Zalizniak's rebellion, Catherine II sent Don regiments into Right-Bank Ukraine to crush the Haidamaka rebels, and in 1775 she used Don regiments to destroy the Zaporozhian Sich. Thus, Moscow succeeded in dividing the Don and Ukrainian Cossacks and even turning them against each other in order to destroy them and to expand the Russian Empire. At the beginning of the 20th century the tsarist regime used Don Cossacks to suppress peasant uprisings or revolutionary outbursts in the towns of Ukraine in order to create enmity between the Ukrainian and Don peoples.

A new relationship between Ukraine and the Don region developed after the Revolution of 1917, when both countries set up their own independent states. Relations were generally friendly. In December 1917 the government of the Ukrainian Central Rada permitted Cossack units to return home from the front through Ukraine to strengthen A. Kaledin's anti-Bolshevik forces. The Rada's sympathetic attitude to the Don liberation movement provoked an ultimatum from the Soviet Russian government and led to the Ukrainian-Russian war. Normal diplomatic relations between Ukraine and the Don were established in 1918, after both countries were cleared of Bolshevik troops. In May 1918, after both countries were cleared of Bolshevik troops. In May 1918 a special envoy from Otaman P. Krasnov asked Hetman P. Skoropadsky to recognize the Don's independence and to establish treaties with it. On 7 August 1918 the Ukrainian-Don Agreement was signed, providing mutual recognition and defining the border between the two countries. The border followed the former administrative boundaries between the Katerynoslav, Kharkiv, and Voronezh gubernias on one side and the Don Host oblast on the other. Hence, the western part of the Don region and part of the Donbas, which were inhabited mostly by Ukrainians, remained part of the Don state. The claims of the Don government to Starobilske county and the city of Luhanske were not satisfied. The Ukrainian minority in the Don was given national-cultural rights. Other agreements between the two countries were signed as well. Trade began between

the Don and Ukraine. The Ukrainian government sold ammunition and arms to the Don Cossacks. M. Slavinsky and then Gen K. Seredyn acted as Ukraine's diplomatic representatives in the region, while Gen A. Cheriachukin, who held the title 'Otaman of the Winter Settlement' (stanytsia) was the Don envoy in Kiev. Under the Directory, relations between the Don and Ukraine became tenuous: the only common action was a request for aid in February 1919 from Ukraine, the Don, the Kuban, and Belorussia to the Allied Command in Odessa. In 1919–20 the two countries and their governments went their separate ways: Ukraine tried to defend its independence alone, while the Don became the stronghold of the White Russian movement.

Ukrainian colonies in the Don region. Ukrainians began to settle in the Don region in the 16th century, before the Don Cossacks migrated from the upper to the lower Don. The name of the Don capital – Cherkassk (now Novocherkassk), that is, the Cherkasian (Ukrainian Cossack) town – attests to this fact. According to oral tradition, the town was first a fishing settlement built by Ukrainians. A document of the Polish king Stefan Batory mentions that the Zaporozhian Cossacks had winter homesteads in the Don region by the early 16th century. Many Zaporozhians settled permanently in the region in groups or individually during the 17th century. Eventually Ukrainian peasants also began to migrate into the chernozem Don steppes, which were almost uncultivated by the Don Cossacks. In the 17th–18th century the newcomers from Ukraine were admitted as voting members to the Don Military Circle.

In-migration from Ukraine worried the Russian authorities, and they tried to stop it. In 1736 and 1740 Moscow issued orders prohibiting 'Little Russians' from living in Cossack stanytsias. In 1763 all *cherkasy*, that is, arrivals from Ukraine, were ordered enumerated. They turned up in 232 localities. Some of them belonged to landlords. According to the census of 1782, the landlords owned 26,579 peasants, of whom 96 percent were Ukrainian. There were also 7,456 Ukrainian steppe homesteads attached to stanytsias. According to the 1811 census, the Don landlords controlled 76,856 peasants. Most of the Ukrainians living in the stanytsias (*stanichnye malorosiiany*) were admitted to Cossack ranks and formed four Don stanytsias. Two Cossack regiments, consisting of former *stanichnye malorosiiany*, formed one stanytsia. Some stanytsias of the 'Don Cossacks' of Ukrainian origin were incorporated into the Don Host.

A new decree by the tsar in 1816 prohibited Don landowners from bringing in peasants from Ukraine. After 1861 the migration of Ukrainian peasants to the Don region increased considerably. The Selianska Kasa and other peasant associations were formed to buy the lands of large landholders. The Ukrainians were occupied almost exclusively with farming, with the exception of those who settled on the coast, who engaged in fishing. As a result of in-migration the number of outsiders, including Ukrainians, in the Don region increased greatly.

Ukrainian culture in the Don region. Ukrainian influence in the Don region was strongest in the 18th–19th century. The principal agent of Ukrainian culture was the Orthodox church, with the Kievan Cave Monastery as its center. The Ukrainian influence is apparent in church architecture. Many churches of the time were built in the Ukrainian baroque style – among them, the Cathedral of

the Assumption in the Cherkassk stanytsia, the wooden church in Pokrovska *sloboda*, St Demetrius's Church in Rostov, and St Nicholas's Church and the Church of the Trinity in Tahanrih – as were the residences of the Don Cossack officers. In the 19th century there were over 30 baroque stone buildings in Starocherkasskaia. Liturgical books, iconostases, vestments, and church utensils were either imported from Ukraine or else manufactured according to the Ukrainian patterns. From the mid-19th century the effort to Russify the church in the Don increased, and church books and articles made in Kiev were replaced by imports from Moscow.

In the 17th–18th century the Don otamans and officers came to Kiev on pilgrimages and made large donations to the Cave Monastery. Otaman S. Efremov, for example, presented the monastery with a large church luster and was rewarded with a portrait in the cathedral and a panegyric in his honor composed by the monks.

Ukrainians who settled in the Don region brought with them their material culture, which was reflected in their houses and home furnishings, farm tools, farm buildings, fencing, well pulleys, dammed ponds, etc. Until the beginning of this century Ukrainians in the region dressed in Ukrainian folk costumes. Ceramics, woven coverlets, and decorative weavings and towels were imported almost exclusively from Ukraine. The Ukrainian language, songs, customs, and folkways survived for a long time in the Don region.

The culture of the Ukrainian settlers was reflected to a large extent in the culture of the Don Cossacks. A dwelling in a Cossack settlement was called a *kurin*, originally a term for a Zaporozhian unit. Men's clothes, particularly the uniforms of officers, were entirely Ukrainian until the end of the 18th century, as were the insignia and symbols of authority (the *bunchuk* [standard with a horsetail top] and *bulava* [mace]) and the military ranks (otaman, colonel, captain, deputy captain, flag bearer). There was a considerable Ukrainian influence on the Cossack language. The most distinctive of the Don dialects – the Lower Don dialect – is based on Ukrainian with an admixture of the Nogai Tatar language. Many Ukrainianisms are used throughout the Don region.

The Ukrainian national movement in the Don region. Tahanrih and Donets counties, which contained the largest Ukrainian populations, were the centers of the Ukrainian national movement. In 1905 peasant unrest spread throughout the region. An organization, remarkable for the time, was formed – the All-Russian Peasant Union – in which the three Mazurenko brothers, who were Ukrainian, played a prominent role. About 200,000 Ukrainian peasants joined the union. Public meetings called by the Mazurenkos in the larger villages and districts demanded among other things the right 'to speak, write, and read in one's native tongue: for us, the Little Russian tongue.' Organizers of the All-Ukrainian Peasant Congress in 1905 counted the region as one of the six territories with a Ukrainian minority and made provisions for its representation. The rural districts that wanted to 'join Ukraine' were to send delegates to the congress. The congress did not take place, because the key organizers were arrested.

In 1905 a Ukrainian Hromada was set up in Tahanrih. A drama group survived for ten years and staged many Ukrainian plays.

During the Revolution of 1917 Ukrainian patriots, mostly teachers, toured the villages to propagate the idea

of Ukrainian statehood. In 1918 the Ukrainian Ministry of Foreign Affairs subsidized Ukrainian organizations and publications in the Don. When the Soviet regime became established in the Don region in the 1920s, Ukrainization was partly introduced, primarily in public education. In Tahanrih Ukrainian instructors worked in the department of people's education and in the union of school workers. In the mid-1930s the Ukrainization campaign was stopped. The almost complete absence of an urban intelligentsia accounted for the low level of national consciousness among the Ukrainians of the Don region. Today the Ukrainian population of the Don region and the Russian SFSR as a whole is deprived of minimal cultural rights, and Russification has advanced rapidly, particularly in the cities.

Don River. The ancient Greek name of the river was Tanais; its Ukrainian name is Din. The fourth-largest river in Europe, the Don flows into the Sea of Azov. Its length is 1,970 km, and its basin covers an area of 442,000 sq km. The Don flows through Ukrainian ethnic territory for only 250 km, between Lisky and Kazan Station. This is a part of the Voronizh region and the extreme southeastern corner of the lands settled by Ukrainians. The Don's largest tributary is the *Donets, which flows through Ukraine for almost its entire length. The left-bank tributaries of the lower Don are the Sal and Manyč, which flow through the partly Ukrainian-settled Don region and eastern Subcaucasia. In general, about 100,000 sq km of the Don Basin are populated by Ukrainians.

Donbas. See Donets Basin.

Donbas/Donbass. A literary, artistic, and political bimonthly journal published in Donetske since 1968 by the Writers' Union of Ukraine. The journal appears in both Ukrainian and Russian. Its first editor in chief was V. Sokolov; since 1974 it has been edited by A. Kravchenko. The current journal was preceded by **Zaboi* (1923–32), renamed **Literaturnyi Donbas* in 1932 and published in Russian (1933–9). After an interruption of six years (1940–5) a literary and artistic almanac entitled *Literaturnyi Donbass* was published in 1946–57 (34 vols). In 1958 the name was changed to *Donbas/Donbass*, and in 1968 the

almanac once more became a journal. The journal publishes mostly works by writers of the Donbas region, who devote special attention to the life of miners and steelworkers in their writings. It also contains literary criticism and a survey of local cultural events. Over the years contributors have included such authors as P. Baidybura, K. Herasymenko, M. Rud, D. Semeniuk, P. Chebalin, A. Klochchia, D. Tkach, and a number of writers who were executed (H. Bahliuk and B. Pavlivsky) or repressed (V. Ivaniv-Kramatorsky, M. Sobolenko, F. Kovalevsky, Yu. Zapadynsky, and I. Tkachenko) during the Stalinist campaign against Ukrainian culture in the 1930s. In 1980 the journal's circulation was over 20,000.

Donchenko, Oles [Dončenko, Oles'], b 19 August 1902 in the village of Velyki Sorochyntsi, Poltava gubernia, d 24 April 1954 in Lubni. Writer, one of the founders of the Molodniak literary association and then a member of Prolifront and the All-Ukrainian Association of Proletarian Writers. His poems were first published in 1918. From 1932 he wrote Stalinist prose. Donchenko's publications include many collections of poetry, mostly for children; plays such as *Komsomol's'ka hlushyna* (Komsomol Backwater, 1927), *Maskarad* (Masquerade, 1929), and *Kreiser Burevisnyk* (The Cruiser *Burevisnyk*, 1932); and over 50 books of stories and novels. A part of his legacy has been collected in his *Tvory* (Works, 4 vols, 1956–7).

Donchyk, Vitalii [Dončyk, Vitalij], b 15 April 1932 in Kremenčuk, Poltava oblast. Komsomol leader and literary critic. He graduated from Kiev University in 1956 and worked in the Komsomol and as an editor of *Literaturna Ukraina*. After completing his graduate studies in 1965, he became a research associate of the Institute of Literature of the Academy of Sciences of the Ukrainian SSR. He began publishing in 1956. During the post-Stalin thaw he supported the Party line and opposed the revival of Ukrainian literature begun by the **Shestydesiatnyky* (the 'Sixtiers'). Donchyk's literary criticism consists of *Chas i ioho oblychchia* (Time and Its Image, 1967), *Hrani suchasnoi prozy* (The Parameters of Contemporary Prose, 1970), *Petro Panch* (1971), *Khudozhnia literatura i radians'kyi sposib zhyttia* (Creative Literature and the Soviet Way of Life, 1977), *Humanizm tvorennia* (The Humanism of Creation, 1980), and other works.

Mykhailo Donets

Donets, Mykhailo [Donec', Myxajlo], b 23 January 1883 in Kiev, d 10 September 1941 in Kiev. Renowned opera singer (bass) and theatrical figure. From 1905 to 1913 he sang with the S. Zimin Opera Company in

Moscow, later becoming a soloist with the Opera of the Ukrainian Soviet Republic in Kiev (1919). From 1923 to 1927 he was a soloist and active organizer of Ukrainian opera in Kharkiv. After 1927 he worked in Kiev without interruption. He was shot by the Soviet authorities in 1941 for refusing to evacuate before the German advance.

Donets combined a powerful voice with theatrical talent. In the Ukrainian heroic repertoire, he created the monumental roles of Taras Bulba in M. Lysenko's opera of the same name, Zakhar Berkut in B. Liatoszynsky's *Zolotyj obruch* (Golden Hoop), and Karas in S. Hulak-Artemovsky's *Zaporozhets' za Dunaiem* (Zaporozhian Cossack beyond the Danube). His roles in world repertoire included Coppélius, Dapertutto, and Miracle in J. Offenbach's *Tales of Hoffman*, Don Basilio in G. Rossini's *Barber of Seville*, Lothario in A. Thomas's *Mignon*, and Nicalantha in L. Delibes's *Lakmé*. He taught at the Kiev Conservatory. His recollections of the theater were published in *Vechirni Kyiv* in 1936.

Donets Basin (also known as the Donets Coal Basin, Donbas, or Donets region). The most important fuel source and industrial region of Ukraine and of all Eastern Europe, the location of highly developed coal, ferrous-metallurgy, machine-building, chemical, and construction industries, enormous energy resources, diversified agriculture, and a dense transportation network. The Donbas lies in southeastern Ukraine and partly in the western RSFSR, between the middle and lower Donets River in the north and the northeast and the Azov Upland and Azov Lowland in the south. The basin extends through *Donetske and *Voroshyl'ovhrad oblasts in the Ukrainian SSR and part of Rostov oblast in the RSFSR. It covers an area of 23,000 sq km.

The Donets Basin or Old Donbas is a territory where the strata of the productive Carboniferous period come to the surface or are overlaid with thin strata of later deposits. In the 1950s coal deposits were discovered in eastern Dnipropetrovske oblast (western Donbas) and north, south, and east of the Old Donbas, where the strata of the productive Carboniferous are covered with strata of later geological deposits, 500–600 m and more thick. These coal regions, called the New Donbas, along with the Old Donbas constitute the Great Donbas (Velykyi Donbas), which extends for 650 km from east to west and 70–170 km from north to south. The area of the Great

EASTERN DONBAS IN 1924

1. Border of the Ukrainian SSR
2. Border introduced in 1925
3. Boundaries of okruhas
4. Boundaries of raions
5. Ukrainian ethnic boundary and islands

Donbas is 60,000 sq km, of which over 40,000 lie in Ukraine and the remainder in the RSFSR. The smaller, eastern part of the Donbas lying within the boundaries of the RSFSR is populated by Ukrainians. The Donbas Industrial Region has expanded in a westerly and northerly direction, and since 1975 has been expanding in a southerly direction as well. Its future merger with the *Dnieper Industrial Region in the west, the Kharkiv Industrial Region in the northwest, and the Zhdanov Industrial Region in the south is probable. The territory of Donetske and Voroshyl'ovhrad oblasts (53,200 sq km) is often included in the Donbas, although it consists of purely agricultural regions north of the Donets River and the Azov coastal region. This article will deal only with the Old Donbas.

The geographical location of the Donbas facilitates industrial growth: it lies only 120–150 km from the sea, 350–450 km from the Kryvyi Rih Iron-ore Basin, 300–350 km from the Kerch Iron-ore Basin, 300–350 km from the Nykopol Manganese-ore Basin, and close to the largest consumers of coal – the metallurgical, energy, and other industrial centers. A dense network of railways and highways connects the Donbas with the main centers of Ukraine and Eastern Europe.

Physical geography. The Donbas is an undulating, monotonous plain with a maximum elevation of 369 m. The plain is frequently dissected by gullies and depressions 100 m and more in depth. The most picturesque part is the high bank of the Donets River. The Donets Basin is built of thick Carboniferous strata. More recent geological deposits of the Permian, Triassic, Jurassic, and Cretaceous periods appear only at the periphery. The present Donbas went through several foldings from the Upper Carboniferous to the Paleogene periods, followed by leveling and the advance of the sea. The most recent post-Tertiary uplifting caused accelerated erosion and the present dissected relief. The Donbas gets more precipitation than the adjacent regions and hence constitutes a

Landscape of the Donets Basin

forest-steppe island within the steppe belt (see *Donets Ridge).

The original landscape of the basin has been changed considerably by humans, more than any other part of Ukraine or of Eastern Europe. It bears the typical features of human civilization, from ancient burial mounds to modern industrial structures, mines, pyramidal coal piles, factories with their high smokestacks, and densely populated districts, cities, and other urban settlements, with their workers' districts. The land is crisscrossed by high power lines, a dense network of railways and paved highways, and trolley tracks. The original river system has changed: river valleys and gullies are often sites of reservoirs, a canal network supplies cities with water, depressions caused by the collapse of old mines have given rise to ponds. The ancient steppe came under cultivation for the most part in the first half of the 19th century, and the rest began to be cultivated in the Soviet period. Much arable land, however, is occupied by industrial and residential buildings. In the Soviet period the small wooded valleys and larger forests along the Donets have been partly destroyed and replaced by cultivated woods and parks. Two man-made landscapes intersect in the Donbas: the agricultural landscape with its grain fields and scattered villages and the industrial-urban landscape, which expands constantly by encroaching on the former.

Ecological damage is a major problem in the Donbas. The inhabitants and industry suffer the consequences of river pollution by the chemical industry and the shortage of clean water. The air here is more polluted than in any other industrial or urban region in Ukraine.

Mineral resources. The Donbas is rich in hard coal (particularly anthracites), rock salt, lignite, marls, limestones, clay and other building materials, mercury, and various ores.

The Donbas has one of the largest coal deposits in the world. The proved reserves of class A, B, and C coal are 55.6 billion t (in 1977), or 20 percent of the USSR reserves. The Ukrainian Donbas contains close to 48.1 billion t.

Hard-coal deposits reach depths of 1,800 m. Almost 330 coal seams have been discovered, most of them 0.3–1.5 m thick. Only the 210 top and middle seams, which lie up to 1,500 m beneath the surface, are thick enough to be worked economically, and only 65 seams are being mined today. The number of commercially exploited seams is declining in the east and north. In the Old Donbas coal is

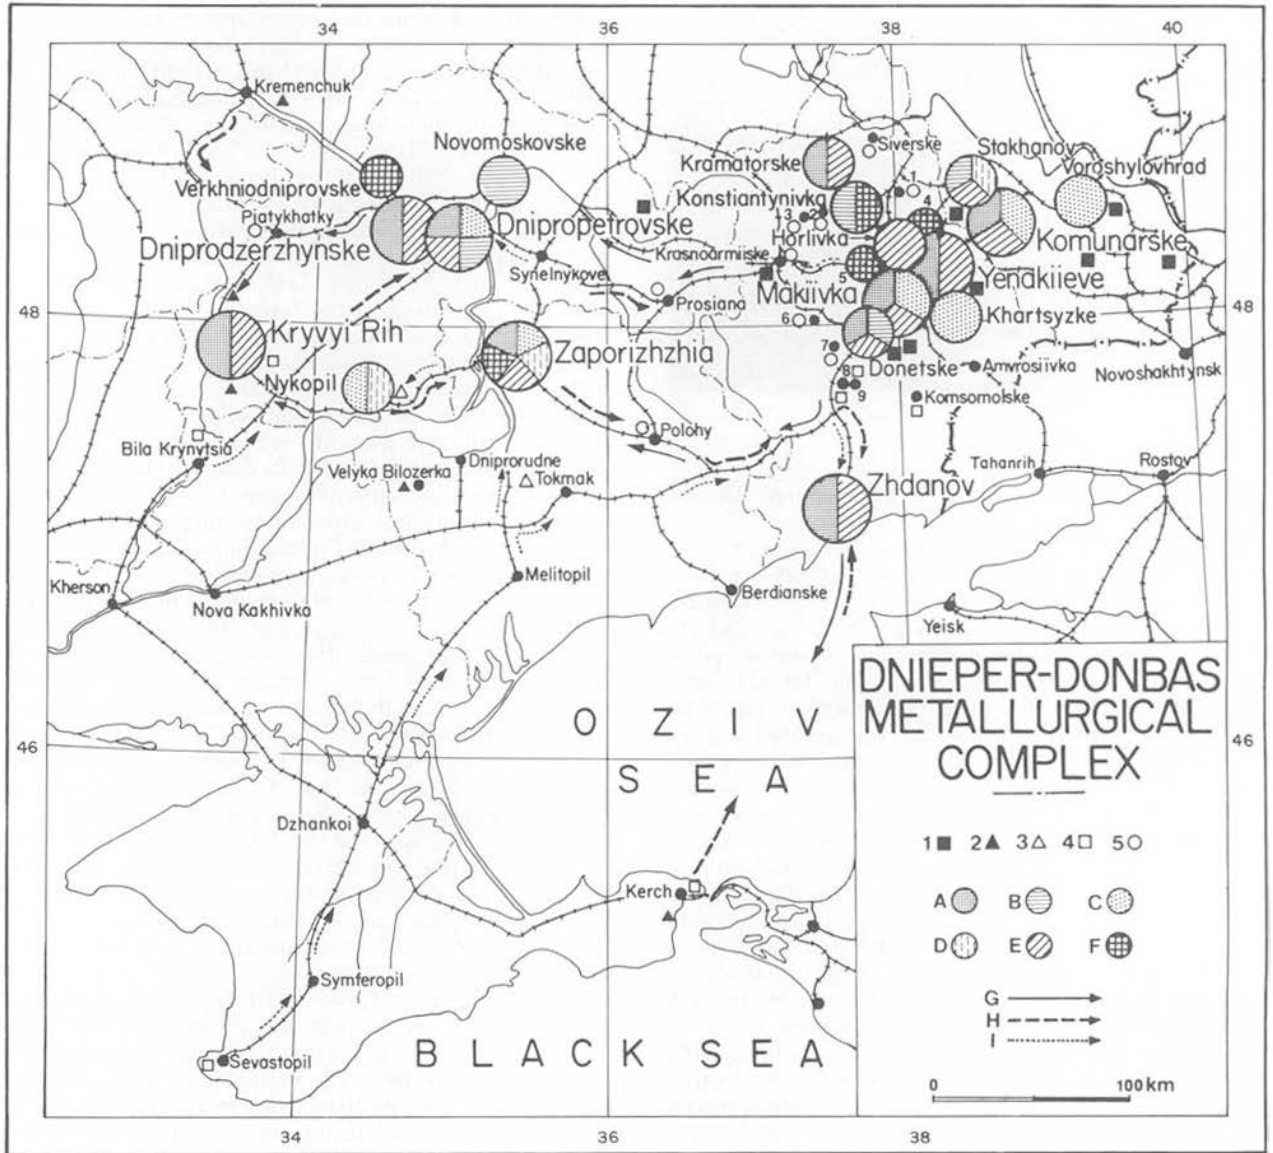

extracted to a depth of 1,000–1,200 m, but plans have been made to dig shafts to a depth of 1,500 m.

Various kinds of coal are found in the Donbas. In the central and southwest districts coking coal, which is the best fuel for metallurgy, occurs. It accounts for 26.5 percent of the coal deposits in the Ukrainian Donbas and 10 percent of the coal in the Russian part. In the northwestern part lies a belt of subbituminous, long-burning coal, which comprises 38 percent of the coal deposits and is used mainly in the chemical industry and partly for coking and fuel. Anthracites (30 percent of the deposits) are found in the central, eastern, and southeastern regions. They are used mostly as high-quality, energy-producing fuel, not for coking. The heating value of long-burning coal is 5,600–7,850 kcal/kg, and of anthracite, 7,600–8,800 kcal/kg. Donbas coal generally has a high ash (up to 30 percent) and sulfur (1.5–3.5 percent) content, which interferes with coking. The thinness of many seams makes them unexploitable.

Of the other useful minerals, the huge deposits of rock salt in the northwestern Donbas in the Bakhmutka Valley (Artemivske with proved reserves of 5.4 billion t and Slovianske with reserves of 3.5 billion), and the Kalmiius-Torets valleys are of the greatest value. Near Mykytivka are deposits of quicksilver ore—cinnabar, which are largely exhausted now. Mercury ores have been discovered recently in the vicinity of Slovianske and Druzhkivka. Various ores such as zinc and lead, with an admixture of copper, silver, and gold, are found in the central Donbas in the region of Naholnyi Ridge but have not yet been exploited. From the 18th century to the beginning of the 20th the small deposits of poor iron ores (brown ores and siderites) were worked in the northwestern Donbas and near Artemivske. In the northwestern Donbas near Slovianske lignite has been discovered, and in the north natural gas is found. Both resources remain unexploited.

Building materials are common throughout the Donbas: limestones, dolomite, gypsum, refractory clays, marls, quartz sands, sandstones (particularly gray and black for paving streets), quartzites, chalk, slates, and pottery clay. Some of these are also used in the metallurgical industry. Limestones are used in the chemical and metallurgical industries; the main deposits are at Olenivka (Dokuchaievskoe) and Karakuba (Rozdolne). Large marl deposits at Amvrosiivka and in the southern Donbas and smaller deposits along the Luhanka River are the basis of the cement industry. Rich deposits of refractory clays are located in the central Donbas, Chasiv Yar being the best-known deposit. Gypsum is found alongside rock salt in the Bakhmutka Valley, chalk along the Donets River, colored clays in Slovianske raion, ocher deposits near Izium, kaolin near Volnovakha in the southwest, and quarried stone in Artemivske.

History of the Donbas. The northern part of the Donbas, lying along the Donets River, belonged in the 11th–13th centuries to the Pereiaslav principality's sphere of influence. The Donets was an important route from the Sea of Azov to the Chernihiv and Pereiaslav principalities. The salt lakes near Slovianske were already being exploited at that time. Like all of southern Ukraine, the territory of the Donbas was controlled by nomadic hordes such as the Pechenegs, Cumans, and Tatars and was never permanently settled. The first permanent settlements were established by the Don Cossacks. The en-

croachments of Muscovy into Slobidska Ukraine had an important influence on the settlement of the Donbas. In the second half of the 17th century fortified military outposts – Tor (later Slovianske) and Bakhmut (later Artemivske) – were established on the frontier with the Ottoman Empire. The salt deposits also attracted settlers. In the mid-18th century both banks of the Donets were settled with Serbs. Two Serbian regiments were organized, and the land was called *Sloviano-Serbia. But the Serbs did not turn out to be good colonizers. Some of them left the new settlements, and the Russian government again began to settle Ukrainians in the region. At the time the Donbas was part of the territory controlled by the Zaporozhian Sich (southwestern part), the Don Cossack Host (southeastern part), and Slobidska Ukraine (northern part). After the destruction of the Sich and the expansion of the Russian Empire to the Black and Azov seas, the larger, western part of the Donbas was incorporated into the Katerynoslav vicegerency, later known as Katerynoslav gubernia (Bakhmut and Slovianoserbske, or Luhanske, counties), while the smaller, eastern part belonged to the territory of the Don Cossack Host (part of Tahanrih and Donets counties). This administrative-territorial division remained in force until 1917 (see *Don region).

The Donbas's small population began to increase at the end of the 18th century. Ukrainian settlers predominated, but in the east, particularly along the Donets, there were also Russian settlers. As in other parts of steppe Ukraine, animal husbandry was initially the main occupation. By the 1830s it had become commercial grain growing. The little coal mining that went on, to supply the Luhanske metallurgical plant (opened in 1795 and eventually closed) with fuel, had an insignificant impact on the environment. Without a transportation system and industrial consumers, coal mining remained unimportant: only 40,000 t were produced in 1796–1806. The industry began to grow beginning only in the 1830s in response to the needs of the imperial navy, the cities on the Sea of Azov, the Petrovsky metallurgical plant near Yenakiiieve (1859–64), and the Lysychanske metallurgical plant (1866–70).

1870–1917. The industrial development of the Donbas began in the 1870s when railroads linking it with central Russia and the sea were constructed, and particularly when the first Catherine Railroad (1884, now known as the Dnieper Railroad) and the second Catherine Railroad (1902), which linked the Donbas to the Kryvyi Rih Iron-ore Basin, were built. The demand for coal grew, not only from the railways, but also from the metallurgical industry that arose in the Donbas using the iron ore from Kryvyi Rih. The investment of foreign capital was an important factor in the industrialization of the Donbas. French, British, German, Belgian, and Russian capitalists owned almost all the metallurgical plants and mines of the Donbas. The trusts that operated in the Donbas were mostly foreign-owned and included *Produgol (1904), which controlled 75 percent of the coal produced in the Donbas (in 1910), and *Prodamet (1902), which controlled 18 metallurgical enterprises. By 1871 the Donbas coal industry had the highest production of anthracite in the Russian Empire (249,600 t or 36 percent of the total). By 1913 production had increased to 25.3 million t or 87 percent, of which 22.8 million t were mined in the Ukrainian part of the Donbas. The level of mechanization

in the existing 1,200 mines was low (only 0.5 percent of the coal was mined mechanically). The main consumers of the coal were the railways (28.4 percent in 1914) and the metallurgical plants (21.8 percent). Seventy percent of the coal was used locally.

The ferrous-metallurgy industry developed rapidly in the Donbas. By 1900 it outproduced the largest metal producer of the Russian Empire – the Urals – and became the principal coal and metallurgical base of the Russian Empire. The first modern metallurgical plant was the Yuzivka plant (now the Donetske Metallurgical Plant), built by the Welsh industrialist J. Hughes in 1872. Other plants were built: Sulin (now Krasnyi Sulin) in 1872 in the eastern Donbas, Druzhkivka in 1894, Alchevske (now Komunarske) in 1895, Donetsko-Yurievskiy in 1896, Vilkhivka in 1896, Petrivske in 1897, Kramatorske in 1897, Kostiantynivka in 1897, Makiivka in 1899, and Kadiivka (now Stakhanov) in 1899. These 10 plants produced 1,726,000 t of pig iron in 1913, or 50 percent of the Donbas production (38 percent of the empire's production).

INDUSTRY OF THE DONETS REGION IN 1913

1. Coal mining
2. Ferrous metallurgy
3. Mining and chemicals production
4. Silicate and ceramics industry
5. Machine-building
6. Non-ferrous metallurgy
7. Railway lines
- L. Lomuvatka (near Alchevske)

Non-ferrous metallurgy was confined to a single mercury plant built in 1886 to exploit the Mykytivka deposit (within the city limits of Horlivka). Machine building was poorly developed: there were heavy-machinery plants in Luhanske (1896) and Horlivka (1895). The chemical industry was in an embryonic stage, consisting mostly of coke plants, which did not process the by-products of coking, but also of chemical plants in Kostiantynivka (1897) and Rubizhne (1905). The Lysychanske and Slovianske (1913) soda plants produced 70 percent of the soda of the Russian Empire.

Rapid industrial growth alternated with decline during the economic crises of 1873–5, 1881–2, and mainly after 1900. Economic instability caused fluctuations in employment: the number of miners fell from 82,400 in 1900 to

58,000 in 1902, but by 1913 it had increased to 168,000. An industrial boom in the Donbas increased the demand for labor, which was not difficult to meet given the overpopulation in the agricultural regions of Ukraine and Russia. Most of the Donbas workers came from Russia rather than Ukraine, particularly from the industrial heartland and the Central Chernozem region. As a result of this in-migration, the Donbas became the most Russified part of Ukraine.

The workers' living and working conditions were very difficult. Hence, strikes occurred from time to time, only to be put down by the police and the army. A wave of strikes swept through the Donbas during the 1905 Revolution. In January 1905 the workers of Horlivka staged an armed uprising, which was brutally crushed.

The Ukrainian national movement had little impact in the Donbas. In the 1900s, in addition to the Russian revolutionary press, some Ukrainian publications reached the Donbas. There were also self-organized workers' groups and Prosvita societies in the region. Some of the Ukrainian intelligentsia who worked there (eg, S. Cherkasenko and M. Cherniavsky) helped to raise the national consciousness of the workers. L. Yurkevych tried unsuccessfully to publish a Ukrainian paper for the workers of Katerynoslav gubernia. Donbas themes appeared in Ukrainian literature for the first time: in S. Cherkasenko's collection of short stories about workers, *Na shakhti* (In the Mine, 1908); in M. Cherniavsky's *Donets'ki sonety* (Donets Sonnets, 1898), and in A. Shablenko's poems. The composer M. Leontovych also worked in the Donbas.

1917–41. At the beginning of the First World War the rising demand for coal and metals stimulated industrial growth in the Donbas. New branches of the chemical industry geared to military needs were established.

With the outbreak of the February Revolution in 1917, most workers in the Donbas were led by Russian parties: the Socialist Revolutionaries, Social Democrats (Mensheviks), and particularly the Bolsheviks. The Donbas Bolsheviks constituted a large part of the party's membership in Ukraine in 1917. According to the Party census of 1922, only 16.6 percent of the Donbas Bolsheviks were Ukrainian by nationality, and barely 4.3 percent could speak Ukrainian. Ukrainian parties had little influence among the workers, half of whom were Russian. Bolshevik organizations in the Donbas, headed by Artem (F. Sergeev), K. Voroshilov, and O. Parkhomenko, with the help of military units sent from Moscow (A. Egorov's group), gained the upper hand and established Soviet rule in part of the Donbas. The Red Guard organized here fought against General A. Kaledin's Don Cossack army and the army of the Central Rada, which tried from the east and west to force the Bolsheviks out of the Donbas. In December 1917, mostly as a result of the support of Donbas Bolsheviks, a puppet Ukrainian Soviet government was established in Kharkiv. In February–April 1918, when the Bolsheviks withdrew from Ukraine under the pressure of the German and Ukrainian armies, the *Donets–Kryvyi Rih Soviet Republic continued to exist in the Donbas and to maintain its independence of Ukraine and Russia. But the Bolsheviks were eventually forced out, and the Ukrainian government gained control of the part of the Donbas that until 1917 had belonged to Katerynoslav gubernia and Tahanrih county. Under the Hetman government the treaty of 8 August 1918 between

the Ukrainian State and the Don Cossack domain confirmed the eastern boundary of Ukraine to be the boundary of Katerynoslav gubernia, except for a few modifications eastward in the vicinity of Mariupil. To preserve the economic unity of the Donbas, a joint Don-Ukrainian commission was formed in Kharkiv to plan and supervise mutually the industry of the region. The UNR Directory's power in the Donbas was short-lived. The Donbas was seized by the Bolsheviks at the beginning of 1919 and then by the White army, which held it to the end of December, when it was recaptured by the Bolsheviks. The efforts of local and Moscow Communists to form a separate state in the Donbas failed, owing to the opposition of the Ukrainian Communists, and the Donbas became a part of the Ukrainian SSR together with the western territory of the Don Cossack domain. The Donets gubernia, with its capital in Bakhmut, was formed. In 1924 the boundaries of the Ukrainian SSR were changed, and the eastern part of the Donbas, containing the cities of Shakhty, Sulin, and Tahanrih, became part of the RSFSR.

The industry of the Donbas collapsed during the revolution. In 1920–1 only 258 mines were in operation. Most mines were flooded. Coal production fell from 25.3 million t in 1913 to 4.6 million t (18 percent of the 1913 production). Metals production fell to 500,000 t (only one blast furnace was working at the Petrovsky Plant). Soon, however, the reconstruction of the economy began. By 1928–9 the prewar production of pig iron, steel, and coal was exceeded. In 1926 the population surpassed the 1910 figure. The cities grew very rapidly: the population of Yuzivka increased from 49,000 to 106,000. As before the war the Donbas attracted immigrants from outside Ukraine, particularly from Russia, for the Ukrainian peasants, enriched now with the lands of the former landowners, were not interested in industry. According to the 1926 census, of 111,139 immigrants to the Donbas, 33,814 were Ukrainian and 63,910 were Russians.

In the second half of the 1920s and at the beginning of the 1930s the Donbas was Ukrainized, although the process did not advance as far there as in other areas of the Ukrainian SSR (see *Ukrainization). Ukrainian schools were established side by side with Russian elementary and secondary schools. The Institute of People's Education in Luhanske (now Voroshylovhrad) was Ukrainized, but a Ukrainian and a Russian division were eventually set up. Some of the press was Ukrainized: the oblast newspaper *Luhans'ka pravda* was published in Ukrainian. Ukrainian theater groups were formed in the cities and villages, and later drama theaters were organized. Ukrainian theater groups often toured the Donbas. The Ethnographic Commission of the All-Ukrainian Academy of Sciences studied the folklore of the Donets Basin workers. From 1926 the Scientific Society of the Donets Region was active in Luhanske and was headed by S. Hrushevsky. Ukrainian writers such as H. Bahliuk, V. Haivoronsky (Haidarivsky), V. Pavlivsky, V. Ivan-Kramatorsky, K. Herasymenko, M. Ledianko, and A. Halan either wrote or began their careers in the Donbas. The writers V. Sosiura, P. Baidebura, A. Klochchia, M. Upenyk, D. Tkach, H. Stetsenko, and others came from the Donbas but lived elsewhere in the Ukrainian SSR. The Donbas writers' organization *Zaboi was founded in 1925 and was later Ukrainized. It published a journal under the same title. In 1932 the monthly **Literaturnyi Donbas* began to appear, but it was Russified the following year as many

Ukrainian cultural and literary figures in the Donbas were liquidated or exiled. Ukrainization was brought to an end that year, and only some manifestations of national culture were tolerated. (The Donbas is the most Russified region of Ukraine today: the schools, theater, and mass media are Russian.)

A debate on the role of the Donbas in Ukraine's economy took place in the 1920s. The Ukrainian side argued for the integration of the Donbas into Ukraine's, not Russia's, economy to enable Ukraine to overcome the heritage of tsarist colonialism. The integration did not occur; hence, the development of Ukraine's economy in the 1930s was uneven.

From the late 1920s industrialization in the Donbas was accelerated under the five-year plans. The old anthracite mines were rebuilt, and new ones were built. Coal production rose to 37 million t (76 percent of USSR production in 1930). The anthracite industry became very concentrated: in 1934, 196 anthracite mines (out of a total of 339) produced 85.4 percent of the coal in the Donbas. Mining became increasingly mechanized: by 1937 almost 90 percent of the coal was mined by mechanized means, but 30 percent of the hardest labor, involving loading, continued to be manual. In 1932 the first combined coal-mining and loading machine in the world was invented in the Donbas.

The construction of thermoelectric stations was speeded up: in 1928–32, 10 stations (DRES) were built, producing 630,000 kW in 1932. The largest of them were in Shterivka, Zuivka, and Lysychanske.

Ferrous metallurgy developed at a slower pace. New plants were not built, although working ones were rebuilt in Makiivka, Donetsk, and Yenakiieve. This diminished the Donbas's importance in Ukraine's production of metal. But non-ferrous metallurgy developed rapidly: an enrichment factory was built in 1934 at the Mykytivka mercury plant in Horlivka, and the Ukrtsynk zinc plant was built in 1930 in Kostiantynivka. Machine building, which had been poorly developed, grew at an unusual rate with the establishment of a mining-machinery plant in Kramatorske (1930), a coal-mining-machinery plant (1932) and a tractor-parts plant (1935) in Luhanske, and a machine-building plant in Kadiivka (1934). Operating machine-building plants in Donetsk, Luhanske, Pervomaiske, Horlivka, and elsewhere were rebuilt. Existing chemical plants were reconstructed, and new ones built, including a chemical-pharmaceutical plant in Luhanske (1932–6), a nitrogen plant in Horlivka (1934), and coke-chemical plants in Yenakiieve, Horlivka, and Novomakiivka. New armaments plants developed quickly, and military production at existing metallurgical and machine-building factories increased.

Up to the Second World War the Donbas remained the leading industrial region in Ukraine and the entire USSR. Table 1 shows the production in various industries in 1940.

As the Donbas became more industrialized, the population increased. Donetsk and Voroshylovhrad oblasts grew from a population of 2,960,000 in 1926 to 4,940,000 in 1939. The largest urban concentrations in Ukraine arose in the Donbas. The population increased in these years usually at the cost of other parts of Ukraine. Owing to the fact that in the period of Stalinist terror and collectivization it was easier to survive in the Donbas than in the agricultural countryside, there was an increase in the

TABLE 1
Industrial production, 1940

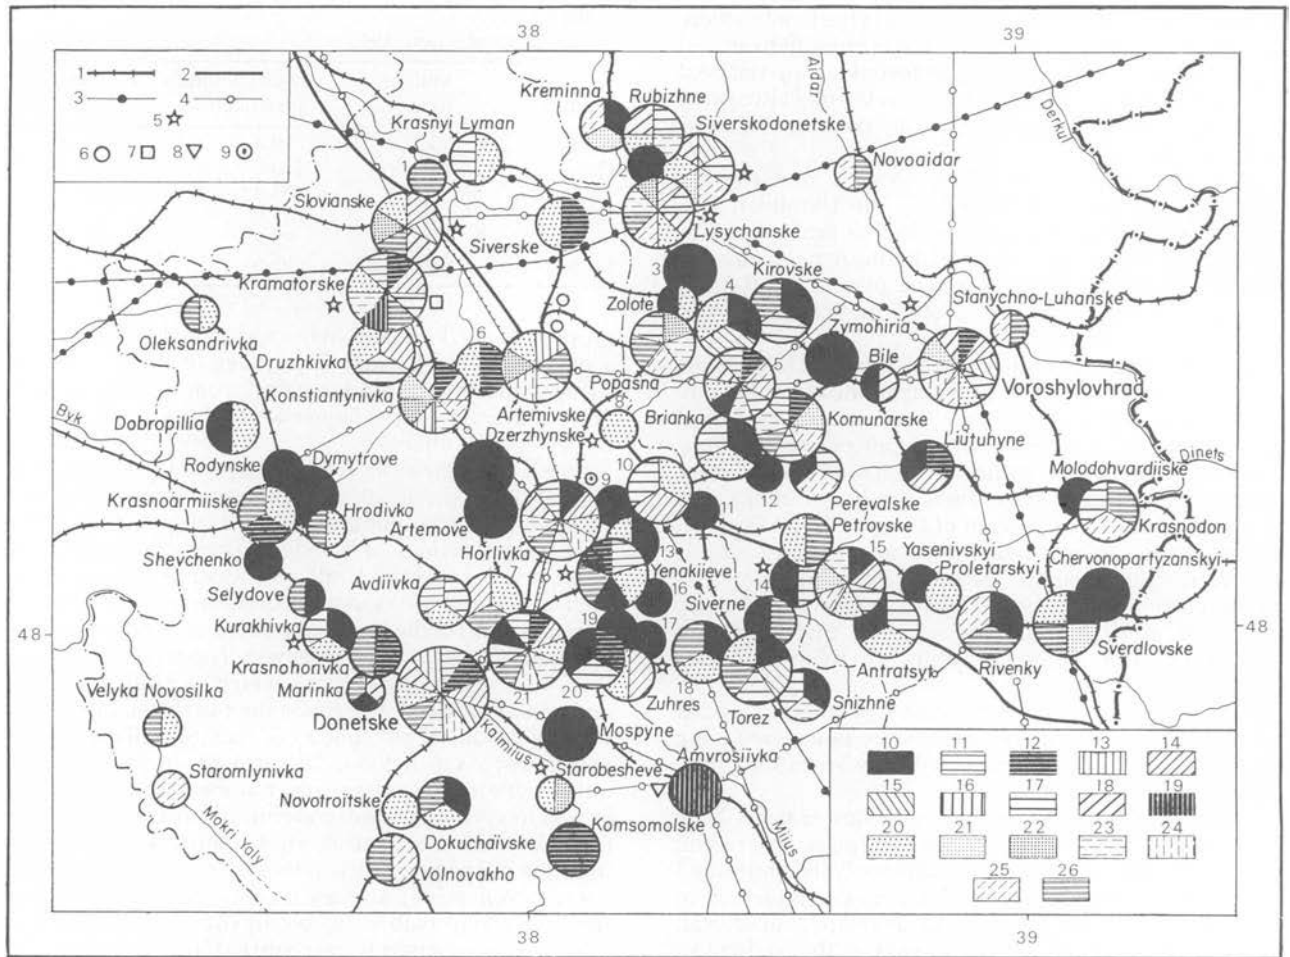

Product	Million tonnes	% of Ukraine's production	% of USSR production
Coal	83.3	99.4	50
Coke	15.1	100	50
Pig iron	5.1	55.4	34
Steel	4.2	48.9	23
Soda	0.43	98.6	80
Locomotives	640 units	95.3	70

proportion of Ukrainians in the region: S. Kosior stated at a plenum of the Central Committee of the CPU that in 1926–39 the proportion increased from 26 percent to 33 percent in Staline (now Donetsk) and from 43 percent to 60 percent in Luhanske.

From 1941 to the 1980s. During the war the Donbas was several times the theater of military confrontation and suffered extensive damage. Almost all plants and coal mines were ruined or flooded. Their equipment was evacuated beyond the Urals and was not returned after the war. During the 22 months of German occupation the Ukrainian part of the Donbas suffered an economic loss of 37 billion rubles (at 1926–7 values). The reconstruction of the Donbas economy was completed by 1949, when coal and metals production reached the 1940 level. In 1950 the Donbas produced 78 million t of coal (84 million in 1940) and in 1955, 116 million. This growth in production is attributable to an increase in the number of mines from 306 in 1941 to 355 in 1955, the modernization of existing mines (including the mechanization of mining and transporting), the deepening of the mines by an average of 100 m every seven years, and an increase in the work force from 200,000 in 1940 to 427,000 in 1955. In the 1960s coal mining was intensively mechanized and automated (in 1960 there were 5 complex mechanized mines, while in the 1950s there had been none, and by 1965 there were 56) and became more concentrated (in 1955, 138 t were extracted daily per mine; in 1965, 1,214 t were extracted). These trends led to greater labor productivity and a decrease in the number of miners from 522,600 in 1963 to 399,000 in 1967, while the number of mines fell to 350. In 1967, 176.6 million t of coal were mined.

The metallurgical industry, which in 1955 produced 7.4 million t of pig iron (21.6 percent of USSR production), 8.3 million t of steel (18.3 percent), and 6.8 million t of rolled steel (22.2 percent), grew as a result of expanded production and improvements in technology. At the end of the 1950s, four blast furnaces were constructed, and almost all the plants were converted to the modern methods of smelting, which use natural and coke gas and oxygen. Ferroalloy and non-ferrous metallurgy developed at the same time: in 1962 a ferroalloys plant was built in Almazne and a non-ferrous-metals plant in Artemivske; as well, the Mykytivka mercury production complex in Horlivka was reconstructed. The shortage of fresh water for metallurgy and thermoelectricity was partly overcome by the building of the Donetsk-Donbas (1954–7) and the Dnieper-Donbas (beginning in 1969) canals.

In the 1960s the growth rate of the metallurgical industry slowed somewhat. Production increased in absolute terms (21.8 million t of pig iron were produced by 1970), but no new plants were built because of the Soviet economic policy of accelerating the development of in-

dustrial complexes beyond the Urals and decelerating Ukraine's industrial growth.

What is peculiar to the postwar economy of the Donbas is the accelerated growth of the machine-building industry (particularly in the area of mining equipment and machinery), the chemical industry, the power industry, and the building-materials industry. Since the mid-1960s light industry and the food industry have also developed rapidly. At the same time the relative weight of the coal industry in the economy of the Donbas has diminished.

Until recently the Donbas oblasts were economically the most highly developed oblasts of Ukraine. Now Dnipropetrovske and Zaporizhia oblasts have outstripped the Donbas oblasts, and their populations are increasing at a faster rate. The economic integration of the Donbas with Ukraine has decreased. A large number of firms in the Donbas are now under the jurisdiction of all-Union ministries. Hence, the government of Ukraine has little control over the development of the Donbas and the role it plays in the development of Ukraine's economy.

The electrical-energy foundation of Donbas industry was strengthened by the construction of large thermo-electric stations beginning in the 1950s: at Myronivskiy (500,000 kW), Slovianske (2.1 million kW), and Starobesheve (2.3 million kW; since 1967 the largest in Ukraine). Existing stations – Zuiivka, Shterivka, etc – were modernized. To connect the operative electric stations with the Volga Cascade 400 km of transmission lines were installed in 1965.

As industry developed, the Donbas became an important scientific research and development center of Ukraine. In 1964 a branch of the Academy of Sciences of the Ukrainian SSR with a host of research and planning institutions was established in Donetsk. There are 15 institutions of higher learning, with many branches, where tens of thousands of students are taught. Although the relative weight of its Ukrainian population has grown, the Donbas remains at the fore of Russification processes in Ukraine. Lectures in higher and secondary schools are given in Russian. Most of the oblast newspapers published in the Donbas appear in Russian. Ukrainian textbooks are not available, and most of the publications of Donbas publishers are in Russian. Opposition to the destruction of the Ukrainian culture in the Donbas is spreading, however. This is evident from the examples of the Ukrainian human-rights activists I. and N. Svitlychny, I. Dziuba, O. Tykhy, and M. Rudenko, who worked in the Donbas.

Economy

Metallurgy. The leading branch of the Donbas economy is metallurgy. Today the Donbas is the largest producer of metals in Ukraine: in 1975 it produced 23.2 million t of cast iron (50 percent of Ukraine's production, 24.9 percent of the USSR's production); 25.8 million t of steel (48.6 percent and 18.3 percent respectively); and 21.7 million t of rolled steel (49.1 percent and 18.9 percent). Ferrous metallurgy is based on the iron ore of the Kryvyi Rih Basin, the manganese of the Nykopol Basin, and the fuel and limestone of the Donbas. A high degree of concentration is characteristic of the metallurgical industry: the four largest plants produce over 50 percent of Donbas steel. The metallurgical plants are large territorial-manufacturing complexes with their own coke-chemical plants, slag-cement plants, and refractory-products factories. They are closely linked to coal mines (the Kirov Metal-

lurgical Plant in Makiivka owns over 40 of them). Besides cast iron, various high-quality steel alloys and rolled steel (70 percent in the form of profiled steel) are made here. The main centers of the ferrous-metallurgy industry are Makiivka, Donetsk, Yenakieve, Komunarske, Kramatorske, and Kostiantynivka. The large reserves of fuel and cheap electricity have stimulated the growth of non-ferrous metallurgy, which utilizes local quicksilver in Horlivka (of the Mykytivka mercury complex) and zinc concentrates from the Far East (at the Ukrtsynk plant in Kostiantynivka). A plant of non-ferrous metals is also located in Artemivske.

Anthracite industry. In the Donbas economy this industry is second in importance. Although other anthracite fields have been developed in the USSR, those of the Donbas have the highest production, yielding in 1976, 191.4 million t (26.9 percent of the USSR production). In 1975 there were 325 mines here. The largest of these were the Abakumov (in Donetsk); Kapitalna (in Krasnoarmiiske), the largest in the USSR (13,500 t daily); Prohres (in Torez); and N-21-bis (in Makiivka). The deepest of the mines were the Kirov (in Donetsk) at 1,033 m, and the V. Bazhan (in Makiivka) at 1,012 m. Sixty-eight enrichment plants are in operation. Coal mining in the Donbas has a high degree of mechanization: by 1975 cutting was 100 percent mechanized; loading in drifts, the most labor-intensive process, was 92 percent mechanized; and haulage and loading onto railroads was 100 percent mechanized. The degree of mechanization was higher than in France, Belgium, or West Germany. Ninety mines have a complex mechanized or automated system of extraction; in 1975 these produced 73.8 million t or 41 percent of the underground production. Production has become more concentrated: a single mine produced 1,805 t of coal per day in 1975. The territory that is mined has expanded north, west (a group of mines in the Krasnoarmiiske coal-industry region), and south. Today close to 400,000 people are employed in the coal industry, yet there is a constant shortage of labor because of the high level of worker fluidity (almost 40 percent of the average work force). Relatively high wages are designed to encourage workers to stay in one place. In 1976 a shorter, 30-hour, work week was introduced. The cost of coal mining is relatively high in the Donbas because mines have to be sunk deeply. The average depth of extraction was 292 m in 1956 and 437 m in 1968. Forty percent of the proved reserves of coal are in seams 0.5–0.8 m thick; 13 percent of the seams are inclined, and 20 percent are vertical. (See also *Coal industry.)

Machine building. The Donbas is the second-largest producer in Ukraine of machines: it produces 44.9 percent of Ukraine's metallurgical equipment, 97 percent of the coal-mining machines, and 95.2 percent of the locomotives built in the USSR. Based on the local metallurgy and energy, branches of the heavy-machine-building industry were organized first to supply the metallurgical, coal, coke-chemical, chemical, railway, and construction industries. Plants specializing in mining machinery tend to be located in coal-mining regions. The largest of them are the Kirov Plant in Horlivka, the Parkhomenko Plant in Voroshylovhrad, the Komsomol Plant in Donetsk, and the plants in Druzhkivka, Yasynuvata, and Debaltseve. The largest machine-building plants for ferrous metallurgy are the Lenin and Ordzhonikidze plants in Kramatorske and the plant in Stakhanov. The largest machine-

tool construction enterprises are the Chubar Plant in Kramatorske, the Frunze Plant in Krasnorichenske (formerly Kabannie), and the Ivanivka Plant.

A number of plants in Torez, Kostiantynivka, Donetsk, Voroshylovhrad, and Slovianske serve the electro-technological industry and the power industry. Transport machinery is built in Stakhanov (railway cars) and Voroshylovhrad (at the October Revolution Steam Locomotives Plant, one of the largest in Ukraine). As well, equipment for the chemical industry and agriculture and various complex instruments are produced in the Donbas.

Chemical industry. Led by the coke-chemical branch, which developed mostly after the revolution, this is an important part of Donbas industry. Fourteen enterprises, located near mines and metallurgical plants, produce almost half of the coke-chemical output of the USSR. The largest are the plants of Donetsk, Yenakieve, Kramatorske, Komunarske, and Avdiivka (the largest in Europe). The other branches of the chemical industry that are highly developed are those producing mineral fertilizers (50 percent of Ukraine's production), synthetic tars, plastics, polymer materials, sulfuric acid, and caustic and soda ash. The Khimprom complex in Slovianske and the Lenin Soda Plant in Lysychanske produce all of Ukraine's soda. The large chemical firms include Styrol in Horlivka, Azot in Siverskodonetske, Krasitel in Rubizhne (the sole manufacturer of synthetic dyes in Ukraine), and plants in Kostiantynivka, Lysychanske, Donetsk, Verkhnie, Proletarske, and elsewhere.

Electric power. The enormous power supply required by Donbas industry is provided by thermoelectric stations organized into the most powerful energy system in Ukraine – the Donbasenerho. The largest thermoelectric station in Europe – the Vuhlehrske State Regional Electric Station (DRES), which produces 3.6 million kW – is located near Debaltseve. Several stations here are among the largest in the USSR: the Zuivka 1 and 2 in Zuhres (2,780,000 kW), the Voroshylovhrad near Shchastia (2.3 million kW), the Slovianske (2.1 million kW), and the Kurakhove (1,460,000 kW). Almost all of the stations are fired by crushed anthracite, the by-products of the enrichment plants, and partly by natural gas and mazout. Today the Donbas produces over one-third of Ukraine's electric power. The main consumers of electricity are the coal (over 40 percent), metallurgical (20 percent), machine-building, and chemical industries. Most of the power is used in the Donbas itself, and some is exported to Russia and East European countries.

Building materials. The Donbas is rich in the raw materials needed for industrial and residential building and produces one-third of Ukraine's building materials. The main branches of the industry are cement (at Amvro-siivka); window glass (at Kostiantynivka, Lysychanske, and Makiivka: 93.5 percent of Ukraine's glass comes from the Donbas); and refractory materials (at Chasiv Yar, Krasnohorivka, and Dokuchaievsk). The manufacture of reinforced-concrete structures, ceramic facing, and thermo-insulating products of brick, etc. is well developed and is usually done in regions of industrial and residential construction. The mining of natural stone material such as limestone or basalt, in the Slovianske, Volnovakha, and Dokuchaievsk raions, also plays an important role in the economy of the area.

Light industry. This branch is developing rapidly and employs many women. Textile plants in Donetsk, Arte-

mivske, Makiivka, Kramatorske, and particularly the silk mills of Voroshylovhrad and Stakhanov produce 25 percent of Ukraine's textiles. Leather and shoe factories are located in Donetsk, Makiivka, Voroshylovhrad, Kramatorske, and Dzerzhynske.

Food industry. The best-developed sectors of the food industry are the meat and dairy industries, with over 50 meat-packing plants in Donetsk, Voroshylovhrad, Torez, Lysychanske, etc; the bread industry, with over 100 large bakeries; and the brewing and liquor-distilling industries. The champagne and wine plant in Artemivske is one of the most famous distilleries in the area.

Agriculture. Farming in the Donbas differs somewhat from that of the Ukrainian steppe region. It is hindered by the poorer soils and greater erosion that result from the higher relief and frequent dry winds, and it mainly takes the form of suburban cultivation, specializing in garden vegetables, potatoes, orchards (particularly apple orchards), dairying, and poultry raising. Many miners who live on the city outskirts raise their own domestic animals and poultry and cultivate small gardens.

Transportation. The Donbas has the densest and most used railway network in Ukraine. There are 3,000 km of main track and nearly 3,000 km of side track serving various industries. The largest railway junctions are Yasynuvata, Chervonyi Lyman, Popasna, Voroshylovhrad, Ilovaiske, Rodakove, and Debaltseve. Lines serving suburban areas are very important in the Donbas. The main railroad lines are the meridional line connecting the Donbas with Kharkiv and Moscow and with the Azov coastal region (Zhdanov, Tahanrih, Rostov) and the line connecting the Donbas with the Dnieper Industrial Region (Dnipropetrovske, Zaporizhia, Kryvyi Rih) and with the Don, the Volga, and the Caspian Sea.

The freight transported in the Donbas constitutes half the freight in all of Ukraine. Coal, metal, machinery, and chemical products are carried out of the Donbas, and iron ore (from the Kryvyi Rih and Kerch basins), manganese ore (from the Nykopol Basin), lumber, petroleum, food products, and textiles are brought in.

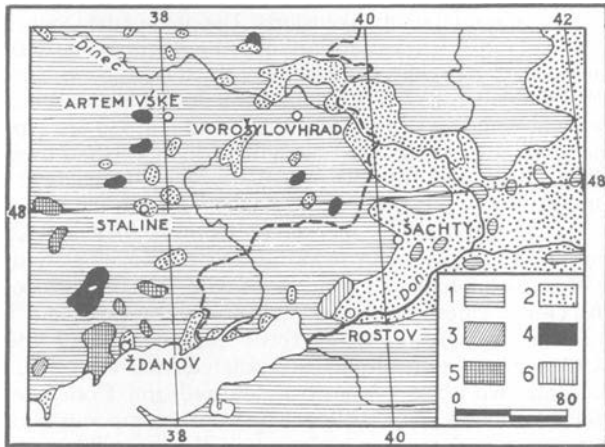

Automobile transportation is well developed: Donetsk and Voroshylovhrad oblasts have 15,000 km of roads (of which 9,700 km are paved), which connect all the cities of the region. The main highways are Voroshylovhrad–Kharkiv, Voroshylovhrad–Donetsk, and Moscow–Kharkiv–Slovianske–Debaltseve–Rostov. Trolleybus and trolley-car transport have developed considerably, providing interurban transportation in urban clusters.

Airports in Donetsk, Zhdanov, Siverskodonetske, and Voroshylovhrad connect the Donbas with many cities in Ukraine and the USSR. Zhdanov is the commercial seaport of the Donbas.

The Donbas is dissected by various pipelines, including the Soiuz main gas pipeline from Orenburg and the Moscow-Stavropol pipeline, which has branches to Voroshylovhrad, Stakhanov, Lysychanske, Horlivka, Slovianske, and other places. Donetsk receives natural gas from Krasnodar krai, and Slovianske gets gas from Kharkiv oblast.

Water for domestic and industrial use is supplied by large reservoirs such as those in Vuhlehrske, Starobesheve, Vilkhivka, and Staryi Krym, and by the Dnieper-Don and the Donets-Donbas canals, which extend from the Donets River to the heartland of the Donbas.

Population. The Donbas is the most densely populated

ETHNIC MAP OF THE DONETS BASIN
IN THE 1930s

| 2. Russians | 5. Greeks |
| 3. Bulgarians | 6. Armenians |

region of Ukraine and, after the Moscow region, of all of Eastern Europe. In 1979 almost 6.5 million people lived in an area of 23,000 sq km, that is, 283 people per sq km. In the 1860s scarcely 400,000 people lived in this area, and the density was similar to that in steppe Ukraine. The rapid development of industry brought about the great population increase: in 1897 the population was 1.1 million; in 1926, 1.7 million. A large natural increase (27.7 per 1,000 annually in 1924–8 as compared to 23.2 in all Ukraine) and in-migration into the area accounted for the swift growth. In 1926 only 23 percent of the Donbas population was born there. Primarily Russians of the Central Chernozem and Central Industrial regions moved to the Donbas. Ukrainians migrated in much smaller numbers, mainly from neighboring districts. In 1897, for example, only 45 percent of the migrants to the Donbas were born on Ukrainian territory, and in 1926 only 32 percent, while barely 12 percent of workers migrating to the Donbas came from other parts of Ukraine. By 1902 half of the workers in the Donbas were non-Ukrainian. The reason for this was the reluctance of Ukrainian peasants to change their way of life and their work. They preferred to emigrate as farmer-colonists to Asia rather than to go to the mines and factories of the Donbas (see *Emigration). Most of the migrants to the Donbas were men of working age. In 1926 they outnumbered the women 100 to 96 (the ratio was 100 to 106 for all of Ukraine). Thirty-five percent of the men were between the ages of 20 and 39 (30 percent in Ukraine).

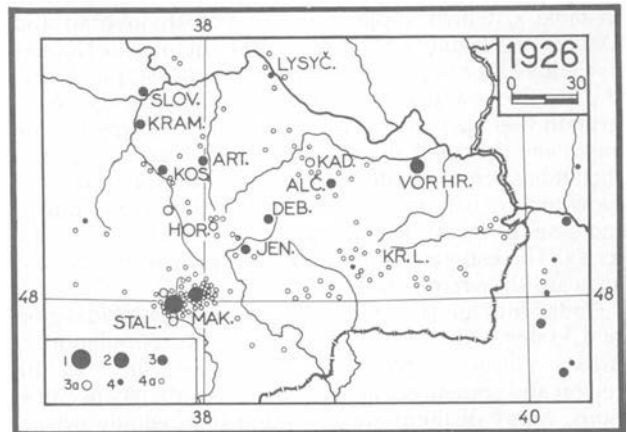

The ethnic composition of the Donbas has also been influenced by its location on the Ukrainian-Russian ethnic border and the presence of a number of Russian peasant islands in the Ukrainian Donbas. In 1926 Ukrainians constituted only 58.4 percent of the region's population; Russians, 33.4 percent; Jews, 2.2 percent; Germans, 1.6 percent; Belorussians, 0.8 percent; and Poles, 0.5 percent. Russians were the majority in the cities: 48.9 percent of the population was Russian while only 40.4 percent was Ukrainian. In the larger cities the difference was even larger: in Donetsk the figures were 56.6

percent and 26.2 percent; in Makiivka, 64.5 percent and 28.5 percent.

The population of the Donbas grew particularly rapidly in the period of the first five-year plans at the end of the 1920s and the beginning of the 1930s. In six years (1927–32) the population increased by 25 percent: in the cities by 13.9 percent and in the countryside by 11 percent. In 1933–8 the population increased by 56 percent. Table 2 shows the growth rate of the largest cities.

TABLE 3
Population changes in Voroshylovhrad and Donetske oblasts, 1926–78

Year	Total population		Urban population		Rural population (1,000s)
	1,000s	per sq km	1,000s	% of total	
1926	2,960	56	980	33	1,980
1940	5,170	97	3,850	75	1,320
1950	4,800	90	3,420	71	1,380
1960	6,840	129	5,740	84	1,100
1970	7,640	144	6,550	86	1,090
1978	7,948	150	6,956	88	992

In contrast to the past, in the 1930s most of the migration to the Donbas was from other regions of Ukraine, particularly from the countryside, because the demand for labor and better working conditions made survival easier in the Donbas than elsewhere during the collectivization, famine, and Stalinist terror.

The German-Soviet war caused a sharp decline in the population: part of it was evacuated by the Soviets, about 320,000 people were deported as labor to Germany, about 420,000 perished, and some scattered into the countryside where food was easier to come by. The 1940 population size was reached again only in the mid-1950s. The population changes in the last 50 years are presented in table 3, which applies only to Voroshylovhrad and Donetske oblasts (53,200 sq km) rather than to the Donbas as a whole. The population growth was most rapid during the first five-year plans (1927–39), when the average rate of growth was 4.2 percent annually. It slowed down in the 1950s and the first half of the 1960s (to 1.5 percent); since then it has constantly decreased (to 0.3 percent in 1976–9). Now the annual growth rate is below the natural rate of increase. In-migrants continue to come mostly from the RSFSR. The estimates for the Donbas proper in 1926 and 1979 are shown in table 4.

Today the Donbas is the most densely populated region of Ukraine. Ninety-three percent of its population is urban. Villages survive only on the periphery of the region and sometimes among the large urban concentrations. Many of them are becoming increasingly urbanized. The present cities and towns (smt) have developed from former small industrial or mining settlements, which at first consisted of primitive, unsanitary barracks and workers' earthen huts (*shankhaiky*, *sobacheivky*, *pekynynky*) scattered chaotically around factories and mines. Only a few of the older towns – Bakhmut, Luhanske, Slavianske – had the appearance and the status of towns. The character of the towns and cities changed after the revolution because of the growth of industry and population: not only did they increase in area, but they also acquired proper city centers. The process is still continuing. As late as 1940, however, many workers, particularly newcomers and single men, still lived in barracks and even in

TABLE 4
Population of the Donbas

Year	Total population		Urban population		Rural population (1,000s)
	1,000s	per sq km	1,000s	% of total	
1926	1,800	78	850	47	950
1979	6,400	278	5,960	93	440

earthen huts on the urban outskirts. The cities of the Donbas are constantly growing: suburban settlements merge with the cities, certain cities merge with each other, and worker's settlements become cities. Many cities do not have distinct centers. Some stretch along streams and railroad lines for many kilometers and are not sharply distinguished from other cities; for example, Kostiantynivka–Oleksiievo–Druzhkivka extend along the Kryvyi Torets River for 25 km. Some cities have almost merged with others, for example, Donetske–Makiivka. In 1979 there were four cities with over 300,000 inhabitants, nine cities with 100,000–300,000, and eleven cities with 50,000–100,000 in the Donbas.

Ethnic composition. The ethnic composition of the Donbas population can be extrapolated from the census data for two oblasts – Voroshylovhrad and Donetske. Figures are shown in table 5. The ethnic composition of the urban and rural population in the two oblasts is shown in table 6.

TABLE 5
Ethnic composition of Voroshylovhrad and Donetske oblasts (percentages)

Nationality	1926	1959	1979
Ukrainian	64.1	56.4	51.6
Russian	26.1	38.1	43.4
Jewish	1.7	0.9	0.4
German	2.2	–	–
Belorussian	0.5	1.2	1.4
Greek	3.4	1.4	1.1
Other	2.0	2.0	2.1

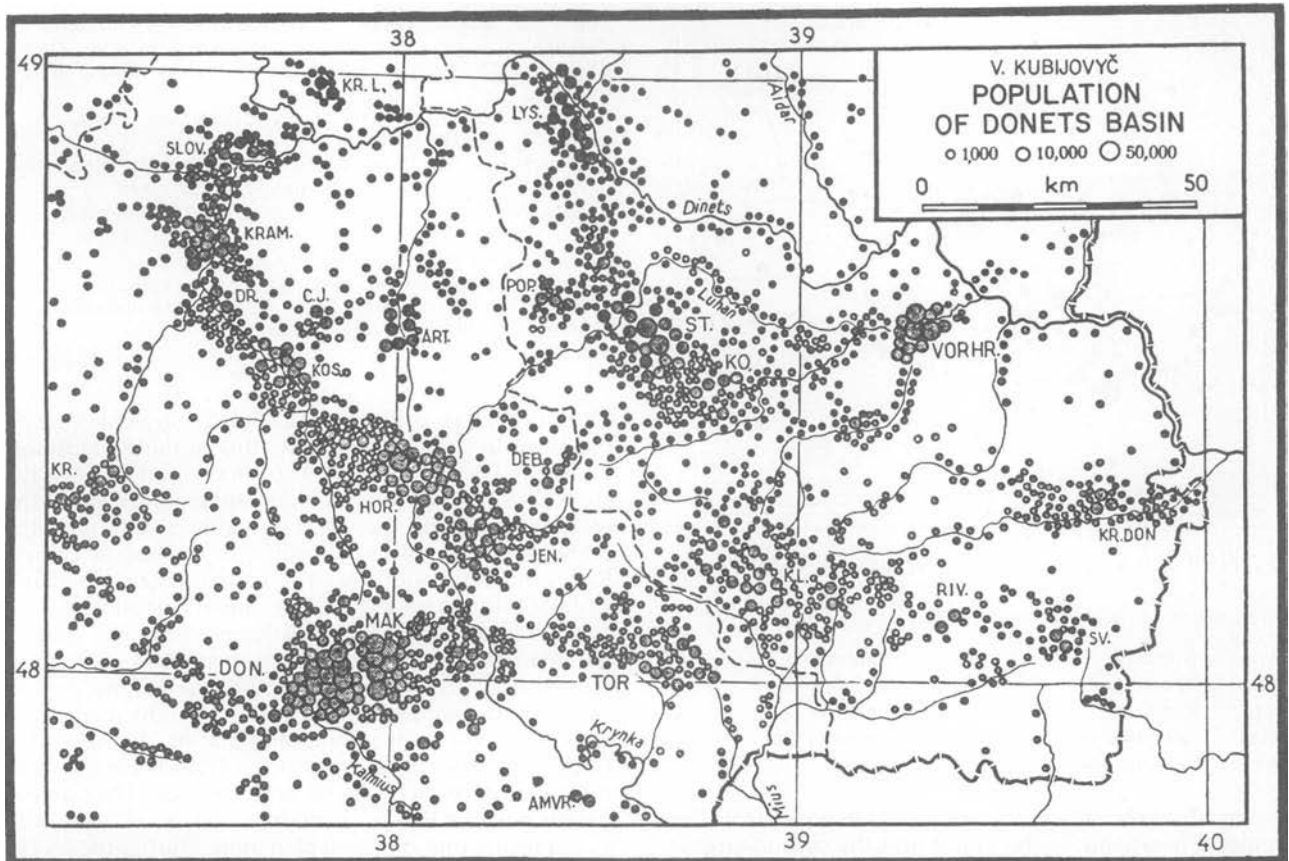

TABLE 6
Urban and rural composition, Voroshylovhrad and Donetske oblasts (percentages)

Nationality	1926		1959		1970	
	Urban	Rural	Urban	Rural	Urban	Rural
Ukrainian	40.2	75.6	42.5	76.4	50.3	73.7
Russian	47.9	15.5	42.0	18.4	44.3	24.4
Other	11.9	8.9	15.6	5.5	5.4	1.9

Linguistic Russification has advanced rapidly. In 1959, 21 percent of Ukrainians in both oblasts gave Russian as their native language; in 1979 the figures were 36.7 percent in Donetske oblast and 28.4 percent in Voroshylovhrad oblast. In 1970, 13 percent of Ukrainians did not know Ukrainian. In 1979, 2,723,000 people (34 percent of the total population of both oblasts) gave Ukrainian as their native language; 4,485,400 (62 percent) gave Russian. In 1959, 3,142,000 (47 percent) gave Ukrainian as their native tongue, and 3,752,000 (56 percent) gave Russian. Thus, an absolute decline in the number of Ukrainians who consider Ukrainian their native language is occurring.

The ethnic composition of the Donbas proper cannot be described more accurately. Approximate figures from 1970, however, can be compared to the figures for 1926, which are quite accurate. These are shown in table 7.

Main industrial and population centers. These are located mostly in the central part of the Donbas near the rich deposits of coking coal. The densest concentration of population is in Donetske and nearby Makiivka, the largest centers of the coal, machine-building, and coke-chemical industries. Some of the largest metallurgical plants in Ukraine are found there: the Lenin Plant in

1956

Donetske, the Kirov Plant in Makiivka, and huge machine-building plants producing mining equipment, metal structures, industrial machines, etc. Along with Yasynuvata, Khartsyzke, and several other cities and towns, Donetske-Makiivka is the largest urban cluster in the Donbas and the second largest after Kiev in Ukraine. Almost 2.5 million people live in an area of 600 sq km. About 20 km north of Donetske lies another cluster, consisting of Horlivka, Yenakiieve, and other cities, of almost 800,000 people in an area of 500 sq km. There the coal, metallurgical,

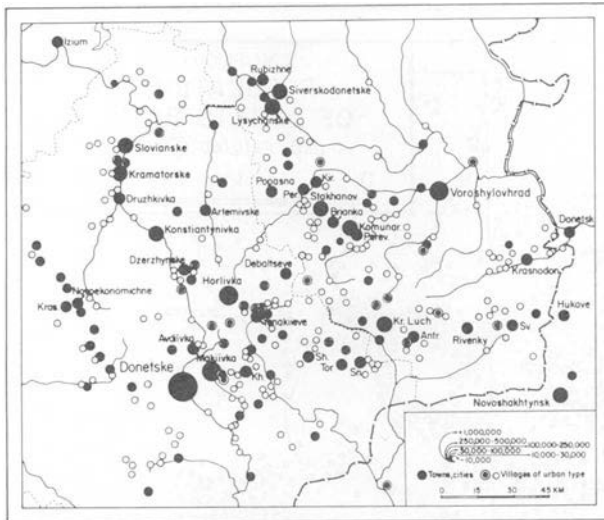

machine-building, coke-chemical, and chemical industries are concentrated.

Farther north a third cluster – Kostiantynivka, Druzhkivka, Kramatorske, Slovianske and several other cities – stretches along the Kazennyi Torets River for 50 km and has a population of 800,000. Kramatorske is the center of machine building, with two huge heavy-machine-building plants and an industrial-machine-building plant. Druzhkivka and Kostiantynivka have metallurgical as well as non-ferrous – metallurgical, chemical, and glass plants. Slovianske is primarily a center for the chemical (soda) industry, but it has a heavy-machine-building plant and an armature-insulation plant.

The fourth cluster, consisting of Stakhanov, Komunarske, and the smaller cities of Pervomaiske and Popasna, has a population of almost one million. It is an important coal, coke-chemical, and metallurgical center. The metallurgical industry is concentrated in Komunarske, the ferroalloys industry in Stakhanov.

TABLE 7
Ethnic composition of the Donbas (percentage in parentheses)

Year	Total population	Ukrainians	Russians	Others
1926	1,800,000	1,060,000 (59)	580,000 (32)	160,000 (9)
1970	6,180,000	3,210,000 (52)	2,660,000 (43)	310,000 (5)

Voroshylovhrad, which is somewhat removed from the region's heartland, is the oldest and the second-largest industrial center. Its population is about 500,000, and it is known for machine building, particularly of steam locomotives, and industrial-machine building.

The cluster of Lysychanske, Siverskodonetske, Rubizhne, Kreminna, with over 400,000 inhabitants, lies along the Donets River. It is the largest chemicals center in the Donbas, with plants such as Azot in Siverskodonetske, Krasitel in Rubizhne, and a soda plant in Lysychanske, where the largest oil refinery in Ukraine is also located. The coal and glass industries are well developed there.

The last large population cluster is Torez-Snizhnianske in the south, with a population of 350,000. Its primary industry is coal.

Donets Ridge or Donets Upland. Stretching along the bend in the Donets River, this is the easternmost upland in Ukraine. It extends from the northwest to the southeast. It is 370 km in length and from 50 km (in the east) to 120 km (in the west) in width. In the north the ridge drops abruptly to the valley of the middle Donets River, and in the southeast it drops to the Azov Lowland. In the southwest it meets the Ukrainian Crystalline Shield and the Azov Upland. The Donets Ridge is a folded, mountainous formation, which was built in several phases from the Carboniferous to the Eocene period. Orogenic movements were at their height during the Hercynian cycle of mountain-building between the Upper Permian and the end of the Triassic periods. The ridge was destroyed several times between the Carboniferous and the Eocene periods by external causes such as sea incursions and peneplanation. During the Upper Pliocene, when the Donets Ridge was almost a plain, it underwent its final uplifting. Since then it has been subject to vigorous erosion.

Most of the Donets Ridge is built of immense Carboniferous strata 12,000 m thick. They constitute the basic component of the ridge. The strata of the Lower Carboniferous period are limestone. As the sea alternated with dry land, up to 200 substrata – continental (coal-bearing) and marine (limestone, clay, sandstone) – were formed. Besides Carboniferous strata there are Permian strata, rich in gypsum and rock salt, in the northwest; chalk strata and also Triassic and Jurassic strata in the north and northwest. Tertiary deposits are found only on the periphery of the ridge. Almost all of the Donets Ridge is covered with loess.

Today the Donets Ridge is an undulating upland dissected by valleys and gullies. The highest points of the upland are located on the main watershed, which extends from the upper Kryvyi Torets River in the west to the upper Kundriucha River in the east. Its highest section, the Debal'tseve-Ivanivka Ridge, has an elevation of over 300 m (Mechetna Mohyla is 369 m high) and extends for 120 km. The elevation decreases to the north and south, reaching 150 m. Lower ridges, separated by depressions (of which the Bakhtmutka and Luhanka depressions are the largest), branch out from the main watershed. The ridges are wide, gently undulating plateaus covered with burial mounds, the most elevated points of the Donets Ridge. In some cliffs the hard strata of sandstone and limestone reach the surface. The plateaus are frequently and deeply dissected by river valleys and gullies, because sharp elevation differences have caused extensive erosion. The valleys are 100-150 m in depth and are

particularly picturesque where they cut into hard Carboniferous strata. The right bank of the Donets (elevation 100 m) consists of hard Carboniferous, Jurassic, and particularly chalk strata and is most picturesque. Like the right bank of the Dnieper it contrasts sharply with the low left bank for a distance of 300 km. The Donets River is different in the east, where it cuts into anthracite strata, particularly at the mouth of the Kalytva. The landscape of the Donets Ridge is affected also by anthropogenic forms such as tumuli and sandpits.

The rivers of the Donets Ridge (the Sukhyi, Kryvyi Torets, Bakhmutka, Luhanka, Lykha, Bila Kamianka, Kundriucha) flow north to the Donets or (in the case of the Kalmiuis, Miius, Tuzliv) south to the Sea of Azov. In the west the Vovcha and Samara flow into the Dnieper. All of these rivers, except the Donets, are shallow and often dry up in summer. The southeastern location and the relief of the Donets Ridge influence some features of its climate. The climate here is more continental than in other regions of Ukraine: the average annual temperature is 6.6°C to 7.8°C, the average January temperature is -6°C to -8°C, and the average July temperature is 21°C to 22°C. The winds are strongest here and come from the east and southeast. In summer dry winds and 'black storms' damage crops. Because of the higher elevation the region gets more precipitation than the surrounding steppes: 410–500 mm annually and even more at the highest elevations. Summers bring downpours, but winters bring little snow. Low humidity and a shortage of river water make agriculture and industry difficult. The most common soils are the chernozems – ordinary chernozems with a moderate humus content, low-humus chernozems, and bleached chernozems. Dark-gray chernozems are found in the higher areas, and meadow chernozems are found in river valleys.

The vegetation of the Donets Ridge differs somewhat from that of the surrounding regions. The ridge lies within the belt of multicolored-fescue-feather-grass steppes, but because of its greater precipitation it has some features of the forest-steppe. Oak, ash, maple, linden, and other forests are sometimes found in the gullies or on the watershed of the highest, central section of the ridge. Small hornbeam woods occur here and there, far from the hornbeam's natural habitat. Larger forests can be found along the Donets. (For population, economy, and a bibliography see *Donets Basin.)

V. Kubijovyč

Donets River [Donec'], also known as Dinets and Donets Siverskyi (sometimes incorrectly called the Northern Donets owing to the confusion of the Russian *severnii* with *siverskyi*). The largest tributary of the *Don River, it flows into the Don from the right, 210 km above its mouth. The Donets is 1,050 km long and has a basin area of 98,900 sq km. Almost the entire stretch of the river lies within Ukrainian ethnic territory, and 950 km of it lie within the Ukrainian SSR. The Donets rises in the Kursk region, south of the Central Upland, at an altitude of 215 m. Its upper stretch, above Belgorod, is narrow; farther down, the river attains a width of 100 m and an average depth of 1 m. Below Belgorod the river forms the *Pechenihy Reservoir (86 sq km in area), which supplies Kharkiv with water. From there the right bank of the Donets is usually high and frequently dissected (especially the chalk hills called the Holy Hills [Sviati Hory] below Izium). The left bank is flat.

About 220 km above its mouth the Donets cuts into the Donets Ridge near Hundorivka. The river basin is asymmetrical, the larger tributaries – Korocha, Vovcha, Oskil, Aidar, Derkul, Kalytva – being distributed on its left side. Of the shorter tributaries on the right side the most important are the Udy, Kazennyi Torets, and Luhanka. The Donets derives its waters from rain and snow. The highest water level occurs from February to April. The average water discharge 119 km from the river mouth is 159 cu m/sec. The total annual discharge is 5 cu km. The river freezes at the beginning of December and thaws in mid-March.

The Donets is the main source of water for most of the inhabitants and industry in the Kharkiv region and the Donbas. The *Donets-Donbas Canal was constructed in 1954–8 to improve the water-supply system. Excessive use of the river's waters has resulted in the lowering of the groundwater level, deforestation, and pollution. About 220 km of the Donets, up to the town of Donetske, is open to ships. Some of the towns that lie on the river are Belgorod, Chuhuiv, Zmiiv, Izium, Lysychanske, and Kamensk-Shakhtinskii.

V. Kubijovyč

Donets-Donbas Canal (officially known as the Siverskyi Donets-Donbas Canal). Canal built in 1954–8 in the Don oblast. It extends from the Donets River near the village of Raihorodka to the city of Donetske. Its length is 131.6 km; bottom width, 1.5–3.0 m; and depth, 3.5–4.8 m. From the Donets to Donetske the water's elevation is raised 248 m. The flow capacity is 25 cu m/sec. Among the canal's hydrotechnological projects is a series of reservoirs, four pumping stations, and seven filtration stations. The canal is an important source of water for industry and the population of the Donbas.

Donetske or Donetsk [Donec'ke]. VI-18, DB IV-3. City (1983 pop 1,055,000) in Donetske oblast, called Yuzivka until 1924, then Staline until 1961. Donetske is an oblast capital in the *Donets Basin and the largest center of metallurgy and coal mining in Ukraine. It is located in the steppe region on the Kalmiuis River. In 1983 it was the fifth-largest city in Ukraine. Donetske is a junction of railway and bus lines and has an airport. Together with Makiiivka, Yasynuvata, Khartsyzke, and Avdiivka, Donetske forms an urban cluster that, with a population of two million, is the second-largest metropolis in Ukraine after Kiev.

History. Donetske was established in 1869 as a settlement for the workers of the New Russia Company of Anthracite, Iron, and Rail Production (known today as the *Donetske Metallurgical Plant), owned by the Welsh industrialist J. Hughes and named Yuzivka after him. Rapid industrial growth was promoted by the availability of large anthracite-coal deposits (especially coking coal) and water and by the construction of the Kostiantynivka (1872) and then the Donbas–Kryvyi Rih (1883) railway lines. In 1876 its metallurgical plant was the largest in the Russian Empire. In 1889 a French- and German-owned machine-building plant was constructed, which is now known as the Komsomol plant. It produced equipment for mines (nine by 1899) owned by English, French, Russian, and Ukrainian industrialists.

As industry developed, the population increased greatly, mainly through the influx of Russian workers.

Yuzivka had a population of 5,500 in 1884; 32,000 in 1897; and 70,000 in 1913, of which 43,000 were workers and their families. Most of the workers lived in poor one-story dwellings scattered chaotically along the banks of the Kalmiuis. Merciless exploitation and difficult living conditions led to massive strikes by the workers in 1875, 1887, 1892, 1898, 1905, and 1913 (3,500 miners). Since most of Yuzivka's population was Russian, the Ukrainian national movement had no apparent influence there. In the 1900s, besides the Russian revolutionary press, some Ukrainian publications reached Yuzivka. Workers' groups of the Prosvita society were active. In 1917–18 the Mensheviks were the dominant political party in Yuzivka.

In April 1918 Yuzivka was occupied by German-Austrian forces, and in November by the army of Gen A. Denikin. Then it changed hands several times before it was taken by the Red Army in January 1920. During the First World War, the revolution, and the civil war the city declined, and its population greatly decreased (32,000 in 1923). Gradually it was rebuilt. In 1925 Donetske (then known as Staline) became an okruha center and in 1932 an oblast center. During the period of Stalin's five-year plans the city experienced its highest rate of development. At the end of the 1930s there were 223 large enterprises in Staline. It produced 7 percent of Ukraine's coal, 5 percent of its steel, and 11 percent of its coke. New plants were set up: a motor-vehicle repair plant, a mechanical plant (Donenerho), and a nonferrous-metalworking plant. Ten new mine shafts were opened, among them NN29, 17-17-bis, and the Red Star. Staline became a cultural center with 2 theaters, 4 institutions of higher education, 113 schools of general education, and 9 tekhnikumus. The writers' association Zaboï was active here, and a publishing house was established. In 1941 an opera and ballet theater was opened. As industry developed, the population increased. In 1926 Staline had 105,900 inhabitants (26.1 percent Ukrainian, 56.2 percent Russian, 10.7 percent Jewish). Its population was 287,000 in 1933 and 472,400 in 1939.

Staline was under German occupation from 1941 to 1943. The destruction sustained by the city is estimated at four billion rubles. The population fell to 175,000.

Industrial reconstruction lasted until 1950. Along with the reconstruction and renovation of existing enterprises and mines, there was considerable growth in the machine-building, chemical, light-manufacturing, and food industries. By 1959 Staline's population had reached 708,000 (31 percent Ukrainian, 51 percent Russian, 3 percent Jewish). In the last 20 years the rate of population increase has slowed down in Donetske because of a change in economic policy aimed at reducing the use of

coal as fuel. In 1971 Donetske's population was 891,000, and in 1979 it was 1,021,000.

Economy. Donetske is one of the largest metallurgical, coal-mining, machine-building, and chemical-industry centers in Ukraine. It has about 200 industrial enterprises. Some of its key metallurgical plants are the Donetske Metallurgical Plant and a rolled-steel plant (established in 1956).

Among the coal mines, the Eastern, Ihnativska, New Central, Socialist Donbas, and E. Abakumov shafts should be mentioned. The machine-building industry consists of the following plants: *Donetske Machine-building Plant (1889), a food-industry equipment plant, a metal-constructions plant, the Donenerho plant, a stamp and press-form plant, an auto-repair plant, a refrigerator plant, and a non-ferrous-metal-working plant. Chemical plants include the Donetske and Rutchenkivskiyi coke-chemical plants, and the company Khimik. The building industry is well developed and includes such trusts as the Donbasenerhobud, Donetskshakhtobud, Donetskshakhtprokhodka, and Donbaskanalbud. Light industry produces knitted materials, clothing, and shoes. The food-industry plants produce beer, liqueurs, liquor, dairy products, meat, and fish. The city's enterprises export their products to 56 countries.

Donetske is a large railway junction of 11 stations at the center of the densest railway network in Ukraine.

Culture. Donetske is one of the largest centers of learning and culture in Ukraine, containing about 30 research and development institutions. The following institutes of the Academy of Sciences of the Ukrainian SSR are located there: Applied Mathematics and Mechanics, Physics and Technology, Industrial Economy, Physical, Organic, and Coal Chemistry, and a statistics center. The institute of Ferrous Metallurgy, of Mining Mechanics, of Technical Cybernetics, of Mining Lifesaving, and of Work Physiology are some of the other scientific research institutes. There are five institutions of higher learning: *Donetske University (est 1965), the *Donetske Polytechnical Institute (est 1960), the Medical Institute (four faculties, est 1930), the *Donetske Institute of Soviet Commerce (est in Kiev in 1920 and moved to Donetske from Kharkiv in 1959), the Music-Pedagogical Institute (est 1968), and a branch of the Kharkiv Institute of Railroad Engineers (since 1967). About 55,000 students study at these institutes. There are 21 specialized secondary schools and 151 general schools. Three theaters (the Opera and Ballet Theater; the Artem Ukrainian Theater of Music and Drama; and a puppet theater, established in Kharkiv in 1925 and transferred here in 1933), a philharmonic orchestra, and a circus provide artistic entertainment. There are 2 state museums – an oblast museum (1924) and a city art and historical museum – as well as 15 other museums and an oblast archives (1924). The Donbas publishing house is located here. Three oblast newspapers – *Radians'ka Donechchyna*, *Sotsialisticheskii Donbass* (in Ukrainian and Russian), *Komsomolets Donbassa* (in Russian) – are published here. There is an oblast television station and a radio station. There is a branch of the Writers' Union of Ukraine, which has published the bilingual journal *Donbas/Donbass* since 1968 (until 1957 it published the Russian bimonthly *Literaturnyi Donbass* and from 1958 to 1968 the Ukrainian almanac *Donbas*). Branches of the Union of Journalists and of the Union of Artists, a branch of the Ukrainian Theater Society, and a

Donetske; the city center on Artem Street

branch of the Choir Society of the Ukrainian SSR are also active in Donetske.

City plan. Donetske now stretches for 55 km from east to west and 28 km from north to south. Its area covers almost 400 sq km and is divided into eight administrative (city raion) sections. The main street, Artem Street, runs for 8 km, from a metallurgical plant to a railway station. The main administrative and cultural buildings – the Building of Soviets, the Drama Theater, the Ministry of Mining of the Ukrainian SSR, the Oblast Philharmonic Hall – are located on this street in the city center. New streets have been constructed nearby – Shevchenko Boulevard, Pushkin Prospect, Maiakovsky Prospect, and University Street. In the northern and eastern sections new multistory apartment complexes have sprung up. Donetske is one of the greenest cities in Ukraine: in 1976 up to 12,000 ha of the city's land were parkland and gardens, and the green suburban belt had almost 72,000 ha. The outstanding parks of Donetske are Shcherbakov Park, which is the oldest, Komsomol Park, Seredni Prudy park, Miskyi Lis park, Verkhni Lis park, and the Botanical Gardens of the Academy of Sciences of the Ukrainian SSR.

The basic means of transportation in Donetske are the trolley (1927), trolleybus (1939), and bus. The suburbs are linked by trains.

V. Kubijovyč

Donetske Institute of Soviet Commerce (Donetskyi instytut radianskoi torhivli). An institution of higher learning under the auspices of the Ministry of Trade of the Ukrainian SSR. It was established in Kiev in 1920 as an advanced co-operative technical school. In 1927 it was renamed the V. Chubar Co-operative Institute. In 1934 it was moved to Kharkiv, where, after amalgamating with the Institute of Consumer Co-operatives in 1935, it was

renamed again, becoming the Kharkiv Institute of Soviet Commerce in 1940. In 1959 it was moved to Donetske and given its present name. The institute is divided into the following faculties: economic accounting, economic trade, commodities research, technology, mechanics, and qualifications upgrading. It also has a correspondence school, an evening school, and a graduate program. In 1962 a department of Communist labor was added. In 1978–9 the institute's enrolment was 12,200 students, of whom 3,000 were registered in the day school, 1,900 in the evening school, and 7,300 in the correspondence school.

Donetske Machine-building Plant (Donetskyi mashynobudivnyi zavod im. LKSMU). A large firm that builds mining machinery in Donetske. It was established as a small-scale mining-equipment enterprise in 1889 by the Frenchman Bosse and the German Genefeld. Its basic products are multicable hoists with a capacity of 3,000–5,000 kg, rotary excavators, large ventilators, maneuvering equipment, shaft hoisting drums, and loaders. In 1941 the plant's machinery was evacuated to the east, and the basic buildings were destroyed by the Germans. After the war the plant was fully rebuilt and expanded. The plant has the following shops: pig-iron foundry, steel foundry, smithy, metal-constructions shop, mechanical shop, reduction-gear shop, assembly shop, mechanical-assembly shop, and consumer-products shop.

Donetske Metallurgical Plant (Donetskyi metalurhiinyi zavod im. V.I. Lenina). A large ferrous-metallurgy plant located in Donetske. It was founded in 1869 by the New Russia Company of Anthracite, Iron, and Rail Production, which was directed by the Welshman J. Hughes. Its basic production consists of pig iron, steel, and rolled steel. Expanded in the 1930s, in 1941 the plant was partly evacuated to the east, and the rest of it was destroyed by the Germans. In 1947–55 it was reconstructed and modernized. In 1952 a technological breakthrough was achieved there: evaporation cooling was applied to the vacuum elements of the Martin furnace. In 1960 the largest continuous steel-pouring facilities in the world were installed there.

Donetske oblast. Called Staline oblast to 1961, this is the easternmost region of southern Ukraine. The oblast was established on 2 July 1932. Its area is 26,500 sq km, most of which lies within the *Donets Basin. The population in 1983 was 5,251,700, of which 89.8 percent or 4,717,700 was urban. The oblast is divided into 18 raions, 208 rural soviets, 49 cities, and 134 towns (smt). *Donetske is the oblast's capital. The oblast is closed to foreigners.

Physical geography. Donetske oblast consists of an undulating plain dissected by river valleys, ravines, and gullies. The southeastern part consists of the Donets Ridge (up to 350 m in elevation). In the northwest the ridge meets the Dnieper Lowland; in the west, the Zaporizhia Ridge; and in the south, the Azov Upland (elevation 300 m), which slopes southward and changes into the Azov Lowland. The climate of Donetske oblast is temperate-continental, with hot summers (average temperature: 20.8° to 22.8°C) and cold winters (average temperature: –5.4° to –7.8°C). The temperature is over 10°C on 170 days of the year. Annual precipitation is 450–500 mm. In spring dry winds (*sukhovii*) and dust

storms are frequent. The largest river of the region is the *Donets, with its tributaries the Kazennyi Torets, the Bakhmutka, and the Luhanka on the right bank and the Zherebets on the left. The Samara and Vovcha rivers flow into the Dnieper. The Kalmiius, Hruzkyi, Yelanchyk, and Krynka (a tributary of the Miius) rivers run south into the Sea of Azov. Many rivers dry up in the summer. To supply the population and industry with water, a series of reservoirs and the *Donets-Donbas and *Dnieper-Donbas canals were constructed. The soils are mostly middle chernozems with a low humus content. Slightly solonized chernozems and saline soils (*solontsi*) are found on the coast of the Sea of Azov. Donetsk oblast lies in the steppe belt. Deciduous forests and wooded ravines are common on the Donets Ridge, and pine woods grow in the Donets Valley. Forests and thickets cover 5 percent of the region's territory.

Donetsk oblast shares a common history with *southern Ukraine. In the 17th–18th century, the northern part belonged to *Slobidska Ukraine and the eastern part to the Don Cossacks (see *Don region). From 1802 to the 1917 Revolution this region, except for a small eastern section, was part of Katerynoslav gubernia.

Population. The average population density is 198 people per sq km, the highest of any oblast in Ukraine. Within the Donets Basin the density increases to 300 and over, while in the south it falls to 40. The percentage of urban population is the highest in Ukraine and is constantly increasing: it was 78.7 percent in 1940, 77.1 percent in 1950, 85.8 percent in 1960, 87.4 percent in 1970, and 89.4 percent in 1978. The population growth was very rapid up to 1960 and then slowed down. The population was 3,235,000 in 1940, 2,997,000 in 1950, 4,342,000 in 1960, 4,894,000 in 1970, and 5,280,000 in 1978. The natural population growth is average: in 1945 it was 4.5 per 1,000. In-migration into the oblast considerably exceeds out-migration, although since the 1960s it has decreased. As a result of industrialization a number of urban clusters have formed. The largest of them are Donetsk–Makiivka, Horlivka–Yenakieve, and Kramatorske–Kostiantynivka. The largest cities in 1983 were Donetsk (1,055,000), *Zhdanov (516,000), *Makiivka (446,000), *Horlivka (339,000), *Kramatorske (187,000), *Slovianske (142,000), and *Torez (87,000).

The ethnic composition of the oblast's population in 1979 (with 1959 figures in parentheses) was 50.9 (55.5) percent Ukrainian, 43.2 (37.6) percent Russian, 1.7 (2.2) percent Greek, 1.4 (1.5) percent Belorussian, 0.6 (0.9) percent Jewish, and 0.5 percent Tatar. After Crimea oblast Donetsk oblast has the lowest proportion of Ukrainians and the highest proportion of Russians in Ukraine.

Industry. Donetsk oblast is one of the most developed industrial regions of Ukraine. It contains the principal mining and metallurgical complex of Ukraine. After 1917 a varied machine-building and toolmaking industry developed. The oblast is a large producer of energy and has strong chemical, construction, light-manufacturing, and food industries. In 1970 it produced 52.7 percent of Ukraine's coal, 44.4 percent of its cast iron, 42.5 percent of its steel, and 47 percent of its rolled steel. The industrial products of the oblast are exported to 80 countries.

The industrial development of Donetsk oblast is based on the huge deposits of high-quality hard coal (anthracite and coking coals) in the Donbas. Reserves are estimated

at 40 billion t. Deposits of industrial rock salt (at Artemivske) and refractory clays and mercury (at Mykytivka) are important. Mining accounts for 20 percent of the industrial production of the oblast. The oblast ranks first in Ukraine in coal extraction (it produced 106 million t in 1970). There are 29 enrichment plants, located mostly in the Donetsk-Makiivka and the Horlivka-Yenakieve industrial regions but also near Krasnoarmiiske, Torez, and Selidovske. The other branches of the mining industry include the mining of rock salt, lime, and refractory clays. The enormous output of electrical power is based on local coal and partly on imported gas and oil and is produced at such thermal stations as Zuivka I and II, Starobesheve, Myronivskiyi, Kurakhove, Vuhlehirske (the largest in Europe at 3.6 millions kW). These stations form the largest electrical network in Ukraine, called Donbasenerho.

Thirty-five percent of the oblast's industrial production consists of ferrous metals. The metallurgical industry operates using local coke, ores from Kryvyi Rih and Kerch, and manganese from Nykopol. The main centers of ferrous metallurgy are the Lenin plant (1872) in Donetsk, the Illich plant (1897) and the Ordzhonikidze Azov plant (1933) in Zhdanov, the Kuibishev plant (1932) in Kramatorske, the Frunze plant (1897) in Kostiantynivka, the Kirov plant (1899) and a pipe plant in Makiivka, and the plant in Yenakieve (1897). The largest plants of non-ferrous metallurgy are the Kvirng plant in Artemivske (1950), the Ukrtsynk plant in Kostiantynivka (1930), and the Mykytivka mercury complex in Horlivka (1886). The Red October plant in Kostiantynivka, the Dzerzhinsky complex in Krasnoarmiiske, and the complex in Chasiv Yar, as well as plants in Dokuchaievske, Horlivka, and Yama, supply the ferrous-metals industry with refractory products such as dolomite and lime.

The construction of heavy machinery (for mining and metallurgy), transportation equipment, and chemical equipment occupies an important place in the industry of Donetsk oblast. The largest machine-building plants are the Kirov plant in Horlivka (1895), the Chubar Heavy-Equipment plant in Kramatorske (1941), the October Revolution Heavy-Machinery plant in Zhdanov (1958), the Komsomol plant in Donetsk (1889), the 50th Anniversary of Soviet Ukraine plant in Druzhkivka (1893), the Lenin plant in Novokramatorske (1934), and the plants in Debaltseve, Yasynuvata, and Slovianske. The coke and chemical industries, which are closely linked with ferrous metallurgy and coal mining, have grown greatly, particularly those producing sulfuric acid and nitric acid, mineral fertilizers, and plastics. The largest coke-chemical works are in Makiivka, Avdiivka, Horlivka, Donetsk, Zhdanov, and Yenakieve. The main chemical plants are the Styrol Chemical Complex in Horlivka (1933), the soda complex in Slovianske (1898), the Lenin Soda Plant in Lysychanske (1890), and chemical plants in Donetsk (1916) and Kostiantynivka (1897).

In the building-materials industry, cement (5.3 million tons or 30.6 percent of Ukraine's production) is produced in Amvrosiivka, Yenakieve, Kramatorske, and Makiivka. Technical glass is made in Kostiantynivka and Artemivske. Precast reinforced concrete, slate, and asbestos are also produced. The food industry produces meat (eight complexes in Donetsk, Zhdanov, Horlivka, etc), dairy products, confectioneries, beer, processed fish, salt, wine, and canned goods. Light manufacturing, particularly the textile, clothing, and shoe industries (Donetsk,

Zhdanov, Artemivske, Kramatorske), is well developed. The household-appliances industry has expanded. One of the largest pencil factories in Ukraine is located in Slovianske.

Agriculture. Agriculture in Donetske oblast is intensive and diverse. The central, most industrialized part of the oblast specializes in fruit growing, orcharding, and meat- and dairy-cattle raising. In the southern and western raions mainly grain and meat cattle are produced. In 1975, 77.3 percent of the land was devoted to agriculture; of this 82.3 percent was cultivated, 0.8 percent was hayfield, and 13.7 percent was pasture. The total area under crop was 1,571,500 ha, of which 793,400 ha (50.5 percent) were devoted to grain, 504,900 (32.1 percent) to fodder crops, 172,900 (11 percent) to industrial crops, and 100,600 (6.4 percent) to fruits, melons, and potatoes. The main grain crops planted were winter wheat (389,700 ha), winter barley (238,600 ha), and corn (100,200 ha). Sunflowers were the main industrial crop (172,600 ha). The average grain yield in 1970–5 was 24 centners per ha; the average for winter wheat was 28.1; for potatoes, 77; for sunflowers, 17.3, the highest in Ukraine. Besides cattle, hogs, sheep, and poultry are raised on a large scale. At the beginning of 1975 there were 1,076,800 head of cattle (406,800 cows), 950,000 hogs, and 283,000 sheep and goats in the oblast. The Red Steppe cattle, the Great White hog, and the Tsigai sheep are the prevalent animal breeds. Fishing is important along the Azov coast.

Transportation. Donetske oblast has one of the densest railway networks in Ukraine: 61.1 km per 1,000 sq km in 1970. The length of track in general use in 1978 was 1,976 km. Most of the track is electrified. The main railway lines are Donetske–Lozova–Kharkiv–Moscow, Donbas–Dnieper region (Yasynuvata–Chaplyne–Dnipropetrovske–Kryvyi Rih), and Donbas–Kiev. The largest railway junctions are Yasynuvata, Mykytivka, Debal'tseve, Krasnyi Lyman, Ilovaiske, and Volnovakha. There were 8,200 km of highways in 1979, of which 7,100 km were paved. The Kharkiv–Kostiantynivka–Artemivske–Debal'tseve–Rostov na Donu highway, the Artemivske–Donetske–Zhdanov highway, and the Donetske–Voroshylivhrad highway run through the oblast. Gas pipelines from the Krasnodar region to Donetske, Zhdanov, and other cities, and from Kharkiv oblast to Slavianske cross Donetske oblast. In Zhdanov on the Azov coast there is a large seaport. Donetske and Zhdanov have airports.

Inner divisions. Donetske oblast can be divided into two regions, northern and southern, according to geographical and economic conditions. The northern region is a part of the Donets Basin. It is highly industrialized (it is noted for its heavy industry) and has a suburban agriculture. In the southern region, along the Azov coast, agriculture (grain and oil-yielding crops, dairy and meat animals, and fish) is still important. Zhdanov, with its heavy-industry and machine plants, is the main industrial center in this region.

Donetske Opera and Ballet Theater (Donetskyi teatr opery ta baletu, since 1977 known as Donetskyi derzhavnyi akademichnyi rosiiskyi teatr opery ta baletu). Established in 1932 as the Donetske Traveling Musical Theater, which was formed out of the Luhanske and Dnipropetrovske opera theaters. The repertoire of the Donetske Theater consists mostly of world and Russian opera and ballet classics and the works of Soviet composers. The opera directors A. Zdykhovsky and Ye. Kushakov (since 1968) have worked at the theater. Its conductors have been I. Latsevych and T. Mykytka (since 1975). The ballet masters M. Trehubov, M. Yefremov, V. Shkolko (since 1979), and N. Slobodian have worked there. The theater's best-known singers are R. Kolesnyk, M. Momot, and K. Kyrylina, and its best-known dancers are Ye. Honchakova and H. Kyrylina. Its chief stage designer is B. Kupenko. Since 1948 the theater has had a ballet school. The theater building was erected in 1935–44; it was designed by the architect L. Kotovsky.

Donetske Polytechnical Institute (Donetskyi politekhnichnyi instytut). The largest institution of higher learning in the Donbas, located in the city of Donetske. Founded in 1921 as the Mining Technical Institute, it was renamed the Artem Mining Institute in 1926 and the Donetske Industrial Institute in 1935. Since 1960 it has been known as the Donetske Polytechnical Institute. The institute consists of the faculties of mining, electro-mechanics, mechanics, metallurgy, chemical technology, geology, electrotechnology, economic engineering, computer science, automation, and energetics. It also has two evening schools and a correspondence school. The institute has technical faculties in Horlivka, Torez, and Yenakiiie and branches in Makiivka and Krasnoarmiiske. It has its own computing center, a television station, and library holdings of over a million items. About 18,000 students attended the institute in 1979. The institute publishes an interdepartmental series, *Razrabotka mestorozhdenii poleznykh iskopaiemykh* (Study of the Locations of Useful Minerals), and other educational and scientific literature.

Donetske University (Donetskyi derzhavnyi universytet). An institution of higher learning in Donetske, founded in 1965 to succeed the Donetske Pedagogical Institute (est 1937). In 1977–8 the university had the following faculties: mathematics, physics, biology, finance, economics, chemistry, philology, Romance and German philology, and history. It has an evening school, a school for foreign students, a graduate school, and a correspondence school, which is located in Horlivka. The university trains graduates in 30 areas. In 1978, 10,162 students were enrolled at the university. The university has a teaching staff of approximately 700. It has five museums and a library of 750,000 items, and publishes textbooks, scholarly monographs, and research collections.

Donets-Kryvyi Rih Soviet Republic (Donetsko-Kryvorizka Respublika Sovietiv). An ephemeral Bolshevik state that existed in the Donbas in February–April 1918 with Kharkiv as its capital. The republic was set up

after the Ukrainian National Republic signed the Peace Treaty of *Brest-Litovsk with the Central Powers. Its organizers intended in this way to exclude the government of the Central Rada from the industrial regions of the Donbas. The Council of People's Commissars of the republic consisted of Artem (F. Sergeev) as chairman, Y. Vareikis, B. Magidov, M. Rukhymovych, S. Vasylychenko, and others. The relationship of the republic to the Soviet government of Ukraine, which was established in December 1917, was not fully clarified. The Party organizations of Kharkiv and Katerynoslav gubernias were not subordinate to the Kiev Party center of L. Piatakov and V. Zatonsky, and the Donets-Kryvyi Rih Soviet Republic regarded itself as independent of Soviet Ukraine. At the urging of M. Skrypnyk, the head of the Soviet government of Ukraine, V. Lenin ordered representatives of the republic to participate in the Second All-Ukrainian Congress of Soviets on 17–19 March 1918. The congress resolved to abolish the Donets-Kryvyi Rih Soviet Republic. In November 1918 the Bolsheviks of the Donbas (including Artem and Voroshilov) joined the Provisional Workers' and Peasants' Government of Ukraine, and the question of a separate Donets-Kryvyi Rih Soviet Republic was no longer raised.

V. Markus

Donetskyi [Donec'kyj]. ДВ II-5. Town smt (1978 pop 11,700) in Voroshylovhrad oblast, under the jurisdiction of the Kirovske city soviet. The town was founded in 1902; until 1963 it was called Petro-Donetskyi. The town has a coal mine.

Donets-Tesseir, Mariia [Dontec'-Tessejr, Marija], b 4 May 1889 in Kiev, d 15 December 1974 in Kiev. Singer (soprano), pedagogue; wife of M. Donets. She studied at the Vienna and Milan conservatories. In 1915–22 and 1927–48 she was a soloist with the Kiev Opera; in 1923–4, with the Kharkiv Opera; and in 1924–5, with the Sverdlovsk Opera. She appeared on stage in the roles of Oksana in S. Hulak-Artemovsky's *Zaporozhets' za Dunaiem* (Cossack beyond the Danube), Princess Swan in N. Rimsky-Korsakov's *Tsar Saltan*, and Violetta and Gilda in G. Verdi's *La Traviata* and *Rigoletto*. She began lecturing at the Kiev Conservatory in 1935 and in 1953 was promoted to the rank of professor at the conservatory. Her works deal with the methodology of teaching singing.

Dontsov, Dmytro [Doncov], b 29 August 1883 in Melitopol, d 30 March 1973 in Montreal, Quebec. Political journalist and theorist, editor, literary critic. From 1900 to 1907 Dontsov lived and studied law in St Petersburg, where he was active in Ukrainian circles, joined the Revolutionary Ukrainian party and later the Ukrainian Social Democratic Workers' party (USDRP), and began his journalistic career. Imprisoned briefly and persecuted for his USDRP involvement, Dontsov fled from Kiev to Galicia in 1908. In 1909–11 he studied law in Vienna. At the Second Ukrainian Student Congress in Lviv in 1913, Dontsov condemned the prevalent Little Russian orientation among the intelligentsia and advocated an anti-Russian political program and Ukraine's political separation. His speech, published separately as *Suchasne politychne polozhennia natsii i nashi zavdannia* (The Present Political Situation of the Nation and Our Tasks), elicited the disapproval of many Ukrainian socialist leaders, as

Dmytro Dontsov

well as that of V. Lenin. Breaking with the USDRP, Dontsov became the first head, in 1914, of the *Union for the Liberation of Ukraine, which he soon left over political differences. In 1914–16 he headed the information service in Berlin of the Ukrainian Parliamentary Club in Vienna and edited its weekly press bulletin *Korrespondenz*. In 1916–17 he headed the Bureau of the Peoples of Russia in Bern, Switzerland, and edited its press bulletin. In 1917 he returned to Lviv, where he finished his doctor of law degree, and then moved on to Kiev. There he directed the press bureau and the Ukrainian Telegraph Agency under the Hetman government. Falling out with the regime after its proclamation of federation with Russia, Dontsov left Kiev and in 1919–21 directed the press and information section of the Ukrainian diplomatic mission in Bern. By the early 1920s Dontsov had rejected all of his earlier socialist and Marxist ideas and had become a leading ideologue of Ukrainian antidemocratic integral nationalism. Up to the Second World War many of his articles appeared in the German, Polish, and Swiss press.

From 1922 to 1939 Dontsov lived in Lviv and became an influential figure as the editor of **Literaturno-naukovyi vistnyk* (1922–32), **Zahrava* (1923–4), and **Vistnyk* (1933–9) and the author of numerous articles and books. With the Soviet occupation of Galicia, he fled to Danzig. From there he went to Berlin and then to Bucharest, where he edited the journal *Batava* (1940–1). In 1941 he moved to Berlin and then to Prague, where he wrote articles on Eastern Europe for the German press. In 1945 he fled to the American zone in Germany, and from there went to Paris, England, and the United States. In 1947 he settled in Montreal, where in 1949–52 he lectured on Ukrainian literature at the University of Montreal. His life in Canada was devoted to writing for the Ukrainian émigré press, mainly that of the Bandera faction of the Organization of Ukrainian Nationalists (OUN), and revising many of his works of the 1920s and 1930s for publication. A good account of Dontsov's life and ideas can be found in M. Sosnovsky's *Dmytro Dontsov* (see bibliography).

Dontsov's writing is marked by passionate argumentation and a dynamic style. He quoted his ideological opponents somewhat freely. Dontsov changed his world view several times: he embraced socialism and then renounced it; he rejected religion and then extolled a militant church. All his work was directed clearly against Russia and against the idea of Ukraine's federation with Russia. In defending unconditionally the idea of Ukrai-

nian independence, Dontsov attacked Russian imperialism in all its forms and made a decisive contribution to the undermining of Russophilism and the influence of Communist ideas in Western Ukraine in the 1920s. He pointed out that Ukraine was organically tied to the West and strongly condemned those tendencies among Ukrainians in the 19th and 20th centuries that weakened this tie. Influenced profoundly by the debacle of the Ukrainian revolution, for which he blamed its leaders, he idealized Cossack traditions and increasingly emphasized the importance of traditionalism and a ruling caste, and the necessity of militancy and activism among the younger generation. His ideology was built on the principles of voluntarism and idealism: irrational will, according to him, was the main force in the life of the individual and of society. Dontsov believed that ideas have played an increasingly important role in history; hence, he denounced Marxism and historical materialism, thus provoking bitter attacks by the socialist and especially Communist camps. Because of his brilliant style of writing and his oratorical skill, Dontsov's ideas had a great impact on the minds of many young Galician Ukrainians in the 1930s. Nationalism and idealism became a dominant ideology. Dontsov's theses were to a large extent the basis for the revolutionary underground activity of the OUN in the 1930s. His ideology (Dontsovism) was opposed by Ukrainian democratic and Catholic circles, which condemned his antidemocratic, elitist ethic and his amoral justification (in his system of voluntaristic and pantheistic monism) of any deed that benefits the primacy of the nation. More than any of his contemporaries Dontsov was a figure of both adulation and vilification.

Dontsov's main works are *Moderne moskvofil'stvo* (Modern Russophilism, 1913), *Suchasne politychne polozhennia natsii i nashi zavdannia* (The Present Political Position of the Nation and Our Tasks, 1913), *Die ukrainische Staatsidee und der Krieg gegen Russland* (1915), *Istoriia rozvytku ukrains'koi derzhavnoi idei* (The History of the Development of the Idea of a Ukrainian State, 1917), *Mizhnarodne polozhennia Ukrainy i Rosiia* (Ukraine's International Position and Russia, 1918), *Ukrains'ka derzhavna dumka i Evropa* (Ukrainian Political Thought and Europe, 1919), *Kul'tura pryimityvizmu: Holovni pidstavy rosiis'koi kul'tury* (The Culture of Primitivism: The Main Foundations of Russian Culture, 1919), *Pidstavy nashoi polityky* (The Foundations of Our Politics, 1921), *Poetka ukrains'koho risordzhimentu: Lesia Ukrainka* (The Poetess of the Ukrainian Risorgimento: Lesia Ukrainka, 1922), *Natsionalizm* (Nationalism, 1926), *Polityka pryntsyypial'na i oportunistychna* (The Politics of Principle and of Opportunism, 1928), *Spirit of Ukraine: Ukrainian Contribution to the World Culture* (1935), *Nasha doba i literatura* (Our Era and Literature, 1936), *Durman sotsiializmu* (The Intoxicant of Socialism, 1936), *De shukaty nashykh istorychnykh tradytsii* (Where to Seek Our Historical Traditions, 1938), *Dukh nashoi davnyny* (The Spirit of Our Antiquity, 1944), *Poetka vohniannykh mezh: Olena Teliha* (The Poetess of the Fiery Limits: Olena Teliha, 1952), *Pravda pradidiv velykykh* (The Truth of the Great Ancestors, 1952), *Rosiia chy Evropa?* (Russia or Europe? 1955), *Vid mistyky do polityky* (From Mysticism to Politics, 1957), *Der Geist Russlands* (1961), and *Klych doby* (The Watchword of the Era, 1968).

Dontsov's papers are preserved in the Public Archives in Ottawa, Canada.

Donuzlav Lake. Saltwater lake on the western shore of the Crimea. It is 30 km long, up to 8.5 km wide, and attains a depth of 27 m. Its area is 48 sq km. The lake is fed by seawater and underground streams.

Dopovidi Akademii nauk Ukrain's'koi RSR (Lectures of the Academy of Sciences of the Ukrainian SSR). A monthly journal published by the Academy of Sciences of the Ukrainian SSR in Kiev since 1939. In 1967 the journal began to appear in two series: one for the physical-mathematical and technical sciences, and one for the geological, chemical, and biological sciences. Until the late 1970s the articles were published in Ukrainian with abstracts in Russian and English. In 1939–41 all articles in the journal appeared in Ukrainian and in one of the West European languages (German, French, or English). Eventually, a parallel Russian edition was published. *Dopovidi* also contains brief research reports.

Dormition Brotherhood of Lviv. See Lviv Dormition Brotherhood.

Dormition Cathedral in Volodymyr-Volynskyi. Built in 1160 by the Volhynian prince Mstyslav Mstyslavovych. The church was built according to an established pattern which is exemplified in the church of St Cyril's Monastery in Kiev. This fact indicates that its builders were Kiev masters. The Dormition Cathedral is a one-story, cruciform building with a dome supported by six columns. Its walls are harmoniously divided by arches and decorated with frescos. The church was rebuilt in the 18th century. In spite of the poor restoration work done by the architects A. Prakhov and G. Kotov in 1896–1900, the church has a majestic appearance.

Dormition Cathedral of the Kievan Cave Monastery. Built in 1073–8 at the initiative of St Theodosius of the Caves during the hegumenship of Stefan and funded by Prince Sviatoslav Yaroslavych. The cathedral consisted basically of one story built on a cruciform plan with a cupola supported by six columns. It had three naves, which on the outside terminated in many-faced apses. The cross section of the columns was cross-shaped. The proportion of the building's length to its width (3:2) became normative for the churches of the Princely era. The facades were divided by flat pilasters with semi-circular garlands between them. The external walls had brick ornaments (meandering friezes). Inside, the central part was decorated with mosaics (including an Oranta), while the rest of the walls were painted in fresco. According to the Patericon of the Kievan Cave Monastery, Alipii was to have been one of the mosaic masters.

1

The Dormition Cathedral of the Kievan Cave Monastery: 1) prior to its demolition by a Soviet mine in 1941; 2) after its demolition

2

After many reconstructions these artistic works have been lost. At the end of the 11th century many additions to the cathedral were built, including St John's Baptistery in the form of a small church on the north side. In the 17th century more cupolas and decorative elements in the Cossack baroque style were added. As the Soviet army retreated from Kiev on 16–17 September 1941, mines were placed under the cathedral, and on 3 November it was blown up. So far the cathedral has not been rebuilt.

Dormition Church in Lviv (also known as Wallachian Church). Built in 1591–1631 for the Lviv Dormition Brotherhood according to P. Romanus's design, with the help of V. Kapynos and A. Prykhylny. The church was erected on the site of a church built by P. Italiets in 1547 that had burned down in 1571. The Dormition Church is built in the Italian Renaissance style, modified by the Ukrainian building tradition. On the east-west axis it is divided into three parts and three stories, as is the basic type of Ukrainian wooden churches. The walls are divided by pilasters, the windows are surmounted by

The Dormition Church in Lviv

arches, and the metopes are filled with bas-reliefs. The doorposts of the north and south entrances are decorated with carvings. The donors' coats of arms are carved above on the pendentives. The carvings were done by Lviv masters – K. and Ya. Kulchytsky. The iconostasis was painted by F. Senkovych in 1630. After it was destroyed in a fire, another was installed by M. Petrakhnovych in 1638. It was later moved to the church in Velyki Hrybovychi near Lviv. The iconostasis now in the church was painted by M. Yablonsky in the 19th century. In 1926–7 the fine stained-glass windows by P. Kholodny Sr were installed. A belfry was erected in 1572–8, before the church was built, and was named the Korniyakt Tower, after the donor who financed it. Designed and built by P. Barbone and P. Romanus, the tower was to serve as a stronghold during a siege. At first the tower had three stories, a tentlike, three-stage roof, and a pyramidal lantern. Damaged in a siege in 1695, the tower was restored by Ya. Bober and acquired a fourth story with a baroque helmet and a tall lantern surrounded by four pyramids. The tower is 66 m high. The Chapel of the Three Baptists was built later and dedicated in 1591. It was named after a church that had been destroyed during a siege in 1340. The chapel has a simple construction: a rectangular floor plan with three domes topped with lanterns. Its portal, which is decorated with a grapevine relief, is one of the architectural masterpieces of Lviv. The chapel is attributed to the builder P. Krasovsky. The building complex of the Dormition Church is one of the finest examples of Ukrainian architecture, blending in perfect harmony the traditional elements of Ukrainian architecture with Renaissance elements.

S. Hordynsky

Dormitories. See Bursas and student residences.

Dorodnytsyn, Oleksii [Dorodnytsyn, Oleksij] (secular name: Anempodyst), b 1859 in Katerynoslav, d 1920 in Novorossiisk. Orthodox church leader, bishop of Sumy, archbishop of Vladimir on the Kliazma, and rector of the Kazan Theological Academy. Dorodnytsyn was the honorary head of the *All-Ukrainian Orthodox Church Council in 1917–18 and professor at the Kamianets-Podilskyi Ukrainian State University in 1919. His publications include *luzhnorusskii neobaptizm, izvestnyi pod imenem shtundy* (South Russian Neobaptism, known as Shtundism, 1903); *Religiozno-ratsionalisticheskoe dvizhenie na luge Rossii vo vtoroi pol. xix-go st.* (The Religious-Rationalist Movement in Southern Russia in the Second Half of the 19th Century, 1909); and *Otnoshenie Mitr. Petra Mogily k unii s Rimom* (The Attitude of Metropolitan Petro Mohyla to the [Church] Union with Rome, 1930).

Dorofeievych (Doroteievych), Havrylo [Dorofeievych], b ca 1570 in Lviv, d ca 1630 in Kiev. A cleric and a teacher of Greek at the Lviv Brotherhood School. Some time after 1614 he went to Kiev, where he taught at the school of the Kievan Cave Monastery and took part in the work of the monastery's press. In 1624 the press published his translation of St John Chrysostom's *Sermons on the Acts of the Apostles* from the Greek, with forewords by Z. Kopystensky and Ye. Pletenetsky and an appendix of epigrams by T. Zemka describing the coat of arms of Prince K. Dolmat. Dorofeievych's works were studied by K. Kharlampovych and M. Vozniak. An account of his life

and works can be found in H. Koliada's 'Havrylo Dorofeievych, ukrains'kyi literator xvii st.' (Havrylo Dorofeievych, a Ukrainian Writer of the 17th Century), in *Radians'ke literaturoznavstvo*, 1958, no. 3.

Doroĥa (The Road). Illustrated monthly magazine of a nationalist outlook for young people published in Lviv in 1937–8. It resumed publication in Cracow in 1940 under the sponsorship of the *Ukrainske Vydavnytstvo publishers. The magazine was devoted primarily to science, regional studies, and sports. In 1942–4 *Doroĥa* was again published in Lviv and was an advocate of scouting. Its editors were B. Hoshovsky (1937–42) and Yu. Starosolsky and O. Sheparovych (1942–4). The magazine also published a book series called *Doroĥa*.

Dorohobuzh [Dorohobuż]. An ancient princely town, today a village on the Horyn River east of Rivne. The first mention of the town is found in *Ruskaia Pravda* of the 11th century. A later chronicle entry states that in 1084 the town was granted to Prince Davyd Ihorevych, who died there in 1112. From 1170 the town was the capital of Dorohobuzh appanage principality, ruled by Inhvar Yaroslavych (d after 1211), and later it became part of Lutske principality. The Monastery of the Savior that existed here was abolished by the Russian government in the 19th century and probably dates back to the Princely era.

Dorohychyn [Dorohyčyn] (Polish: Drohiczyn). 1-3. Town on the lower Buh River in Siemiatycze county, Białystok voivodeship, Poland. Dorohychyn is of ancient origin. A settlement dating back to the Neolithic period, crematoria of the La Tène period (in Kozarivka), and many graves have been uncovered at Dorohychyn. In the Princely era this was the main city of the Dorohychyn Land, which was part of the Volhynia principality. In 1238 the region was annexed to Galicia by *Danylo Romanovych, who was crowned king in Dorohychyn in 1253. The town was an important trade center on the route from Ukraine to Poland: Arabic coins from the end of the 9th century and thousands of lead seals from the 11th–13th century have been discovered there. During the Polish-Lithuanian wars over Ukrainian territory in the second half of the 13th century the city frequently changed hands. Beginning in 1443 it belonged to Lithuania and, from 1569, to Poland. It was a county town in Podlachia voivodeship.

Dorosh, Volodymyr [Doroš], b 27 July 1898 in Tyvriv, Podilia gubernia, d 19 June 1964 in Zhmerynka, Vinnytsia oblast. Master woodcarver. He began his career doing traditional ornamental carving and eventually turned to three-dimensional sculpture, executing busts of T. Shevchenko, B. Khmelnytsky, M. Kotsiubynsky, and U. Karmeliuk, and the composition *Shevchenko in Exile*. At the end of the 1950s Dorosh took up Soviet themes.

Doroshchuk, Stepan (Semen) [Doroščuk], b 1894 in Boryshkivtsi, Borszhiv county, Galicia, d 1945 in the United States. Teacher, poet, and publisher. Doroshchuk came to Canada in 1897 and homesteaded with his parents near Sifton, Manitoba. A bilingual teacher for 12 years, in 1912 he formed his own publishing company, Promin, in Winnipeg, where he published the children's magazine *Promin*, the satirical-humoristic monthly *To-*

chylo, and approximately 200 books and pamphlets. He wrote poetry in English and Ukrainian. In 1943 Doroshchuk emigrated to the United States.

Dmytro Doroshenko

Doroshenko, Dmytro [Dorošenko], b 8 April 1882 in Vilnius, d 19 March 1951 in Munich. Eminent historian and historiographer and moderate conservative political figure. Doroshenko was descended from an old Cossack hetman and officer line in the Chernihiv region. He studied at the universities of Warsaw, St Petersburg, and Kiev, from which he graduated in 1909. While in St Petersburg, he was the head of the Ukrainian Student Hromada in 1903 and the secretary of the journal *Ukrainskii vestnik* in 1906. In Kiev and Katerynoslav he was active in the local Prosvita society and the Katerynoslav Archival Commission, was the secretary of *Ukraina* in 1907, and edited the Katerynoslav weekly *Dniprovi khoyli* in 1910–13. In this period Doroshenko also contributed to various journals, including *Literaturno-naukovyi vistnyk*, *Rada*, *Ukrainskaia zhizn'*, and *Vestnik vospitaniia*. From 1913 he was the secretary and editor at the Ukrainian Scientific Society in Kiev.

Before the revolution Doroshenko belonged to the Society of Ukrainian Progressives. During the First World War he worked for the Union of Cities (Soiuz Mist), a relief organization in the Russian-occupied parts of Galicia and Bukovyna. After the 1917 revolution he became the Russian Provisional Government's commissar of Galicia and Bukovyna. Soon after he was elected to the Ukrainian Central Rada. After refusing the nomination to become head of government, he became the Ukrainian commissar of Chernihiv gubernia. In May–November 1918 Doroshenko was the minister of foreign affairs in the Hetman government and then went to teach at the Kamianets-Podilskyi Ukrainian State University. In 1919 he emigrated, never to return to Ukraine. He remained an important figure in the émigré hetmanite movement.

As an émigré, Doroshenko held several academic positions: professor of Ukrainian history at the Ukrainian Free University in Vienna, Prague, and Munich (1921–51) and at Charles University in Prague (1926–36); director of the Ukrainian Scientific Institute in Berlin (1926–31); professor of church history in the faculty of Orthodox theology at Warsaw University (1936–9); and professor of Ukrainian history at St Andrew's College in Winnipeg (1947–50). From 1923 he was a full member of the Shevchenko Scientific Society. In 1945–51 he was the first president of the Ukrainian Academy of Arts and Sciences. He belonged to many other learned societies.

Doroshenko is the author of close to 1,000 works on

Ukrainian political, cultural, regional, intellectual, literary, and church history, Ukrainian historiography, and Ukrainian cultural and political relations with Western Europe (particularly with Germany). He was the first historian to write a survey of Ukrainian history from the perspective of the development of Ukrainian statehood and a national elite. He was published in Ukrainian, Russian, Polish, German, Czech, Swedish, and English periodicals. Doroshenko's main works are *Narys istorii Ukraïny* (A Survey of Ukraine's History, 2 vols, Warsaw 1932–3), translated under the title *History of the Ukraine* (Edmonton 1939) and later *A Survey of Ukrainian History* (Winnipeg 1975); *Istoriia Ukraïny 1917–1923 rokiv* (History of Ukraine 1917–23, 2 vols, Uzhhorod 1930–2, repr New York 1954 [vol 2 was published in English in Winnipeg in 1973]); *Ohliad ukraïns'koi istoriohrafii* (Prague 1923), translated under the title *A Survey of Ukrainian Historiography* (New York 1957, coauthor O. Ohloblyn); monographs on P. Kulish (1918), M. Kostomarov (1924), V. Lypynsky (1925), V. Horlenko (1934), and V. Antonovych (1942); brief regional histories of Katerynoslav gubernia (1913), Chernihiv gubernia (1918), Podilia (1919), Galicia (1914), and Transcarpathia (1914); *Die Ukraine und das Reich: Neun Jahrhunderte deutsch-ukrainischer Beziehungen* (Leipzig 1941); *Z istorii ukraïns'koi politychnoi dumky za chasiv svitovoi viiny* (On the History of Ukrainian Political Thought during the World War, Prague 1936); *Pravoslavna Tserkva v mynulomu i suchasnomu zhytti ukraïns'koho narodu* (The Orthodox Church in the Past and Present Life of the Ukrainian People, Berlin 1940); *Slovians'kyi svit v ioho mynulomu i suchasnomu* (The Slavic World in Its Past and Present, 3 vols, 1922); and brief historical surveys of Ukrainian history for secondary schools (1921, 1923, 1942, 1947, 1957). Doroshenko is also the author of an unpublished monograph on Hetman P. Doroshenko. His valuable memoirs are titled *Moi spomyny pro davnie-mynule (1901–1914 roky)* (My Memoirs about the Distant Past, 1901–14, Winnipeg 1949) and *Moi spomyny pro nedavnie mynule 1914–1920* (My Memoirs about the Recent Past, 1914–20, 4 vols, Lviv 1923–4).

O. Ohloblyn

Doroshenko, Mykhailo [Dorošenko, Myxajlo], ?–1628. Hetman of the registered Cossacks in 1625–8. In 1616 he became a Cossack colonel, and he participated in P. Sahaidachny's campaign against Muscovy and in the Battle of *Khotyn in 1621. After M. Zhmailo's Cossack rebellion against Poland failed, Doroshenko was elected hetman and signed the *Kurukove Treaty with the Polish government in 1625. In the following year he led the registered Cossacks against the Zaporozhian Cossacks, who were opposed to the treaty. During Doroshenko's rule six registered regiments were established for the first time. He supported the Crimean Girei khans against the

Turkish supporters of the Moldavian *murza* Cantemir, and campaigned in the Crimea. Doroshenko died during the siege of Kaffa (now Teodosiia) in the Crimea.

Doroshenko, Nataliia [Dorošenko, Natalija] (née Vasylchenko), b 1888, d 17 October 1970 in Munich. A stage actress and prominent figure in the theater world; wife of D. *Doroshenko. Doroshenko studied at the M. Lysenko Institute of Music and Drama in Kiev. In 1917–18 she was a member of the Theater Council in Kiev and one of the organizers of the State Drama Theater. An émigré from 1920, Doroshenko organized theater-arts courses in Prague and Warsaw. She often performed oratorios on stage. Doroshenko lived in Canada from 1947 and in Munich from the 1950s.

Petro Doroshenko

Doroshenko, Petro [Dorošenko], b 1627 in Chyhyryn, d 19 November 1698 in the village of Yaropolcha (now Yaropolets) near Moscow. Hetman of Right-Bank Ukraine from 1665 to 1676, grandson of Hetman M. *Doroshenko. He served under Hetman B. Khmelnytsky in a military and diplomatic capacity. In 1649 he was appointed artillery secretary of the Chyhyryn Regiment. He carried out various diplomatic assignments from the hetman. In 1657–9 he was colonel of Pryluky. After Khmelnytsky's death Doroshenko supported I. Vyhovsky and signed the Treaty of Hadiache in 1658. During the rule of Yu. Khmelnytsky, Doroshenko took part in negotiations with Moscow. He supported the Zherdiv Articles, proposals drawn up by Yu. Khmelnytsky's followers to ensure maximum freedom for the Cossack state. However, he was forced to accept the Treaty of Pereiaslav of 1659, dictated by the Russians. As colonel of Chyhyryn (1660–3) and the representative of the acting hetman, Doroshenko signed the Treaty of Slobodyshche with Poland in 1660. Under Hetman P. Teteria, Doroshenko held the post of general aide-de-camp (1663–4) and then colonel of Cherkasy (1665). In October 1665 the council of officers in Chyhyryn elected him acting hetman, and in January 1666, hetman of Right-Bank Ukraine.

Doroshenko's main aim was to restore the Hetman state on both banks of the Dnieper River. In the struggle with Poland over Right-Bank Ukraine, Doroshenko crushed the Polish army with Crimean Tatar help at Brailiv in Podilia, but the victory proved to be inconsequential because of Tatar treachery and Zaporozhian Otaman I. Sirko's opposition. Meanwhile a revolt against Muscovy

broke out on the Left Bank, where after I. Briukhovetsky's execution Doroshenko was proclaimed hetman of all Ukraine on 8 June 1668. However, an unexpected Polish offensive forced Doroshenko to return to the Right Bank. His opponents on the Left Bank took advantage of the situation and, with Russian support, elected Doroshenko's acting hetman, D. Mnohohrishny, hetman of Left-Bank Ukraine (1668–72). To make matters worse, Zaporozhian Cossacks who were hostile to Doroshenko proposed one of their *kish* chancellors, P. Sukhovii, for hetman, and this candidacy was supported by the Tatars. Doroshenko lost control of Left-Bank Ukraine.

The Treaty of *Andrusovo in 1667 and the partition of Ukraine by Muscovy and Poland forced Doroshenko to seek help from Turkey. The Council of Officers that met in Chyhyryn in January 1668 expressed its support of an alliance with Turkey, and in the fall of that year Cossack emissaries in Istanbul presented a proposal for an Ottoman protectorate over Ukraine. This was to be a military-political alliance of two independent states – Turkey and the Zaporozhian Host – aimed at liberating 'all the Ruthenian [Ukrainian] people,' who were to be ruled by a hetman elected for life by the Zaporozhians without interference from Turkey or the Tatars. The Turks and Crimean Khanate could not establish peace or an alliance with Poland or Muscovy without the consent of the hetman and the Host. The national interests of Ukraine were to be safeguarded, and the rights of the patriarch of Constantinople were to be guaranteed. The general council in Korsun, which met on 10–12 March 1669, approved the alliance, which was proclaimed by the sultan on 1 May 1669.

Various international and internal factors hindered the implementation of the treaty. Poland and Muscovy were hostile to it, as were the Crimean Tatars. The idea also proved unpopular in Ukraine. Doroshenko's opponents, led by the colonel of Uman, M. Khanenko, took advantage of this unpopularity. Doroshenko's efforts to reach an understanding with Poland based on the principles of the Treaty of Hadiache of 1658 through the Ostrih Commission of 1670 proved in vain, and the Polish government recognized Khanenko hetman of Right-Bank Ukraine. In 1672 Doroshenko and Sultan Mehmed IV set out on a large campaign against Poland and defeated Khanenko and his Polish supporters at Chetvertynivka. The war ended with the capture of Kamianets-Podilskyi. In the Peace Treaty of *Buchach of 5 October 1672 Poland surrendered Podilia and Cossack Ukraine to Turkey as an independent protectorate.

The next serious threat to Doroshenko arose in Left-Bank Ukraine. Muscovy wanted to abolish the Hetmanate on the Right Bank, all the more since it was allied with Turkey. The new hetman of Left-Bank Ukraine, I. *Samoilovych, sought to unify both banks under his rule. A number of Right-Bank colonels changed sides and at the Council of Pereiaslav summoned by Samoilovych proclaimed him hetman of Right-Bank Ukraine on 17 March 1674. An army of Left-Bank Cossacks and Russians led by Prince G. Romodanovsky besieged Doroshenko in Chyhyryn in June 1674. But Vizier M. Kara Mustafa came to the rescue with a Turkish army, and Samoilovych's forces retreated to the Left Bank. Right-Bank Ukraine was retained by Doroshenko, but the land was devastated and the population did not support the hetman. Disappointed with the Turkish protectorate, Doroshenko de-

ceded to abdicate and handed over his hetman insignia to I. Sirko, who received them in the name of the tsar. But the Russians demanded from Doroshenko a special oath to be taken on the Left Bank. Chyhyryn was again besieged in September 1676, and after brief fighting Doroshenko surrendered to Samoilovych on 19 September 1676. He then settled in Sosnytsia, but was soon taken to Moscow, where he was kept in honorary exile. In 1679–82 Doroshenko was the voivode of Viatka and then lived out his last years at the village of Yaropolcha near Volokolamsk, which was granted to him by the tsar.

Doroshenko, Petro [Dorošenko], b 1858, d July 1919. Cultural and civic leader, physician by profession, descendant of a Cossack hetman and officer line from the Chernihiv region. He collected and studied monuments of Ukrainian antiquity and was a member of the Chernihiv Archival Commission. In 1918–19 he headed the Administration of Artistic Affairs and National Culture. He helped found the Ukrainian State Drama Theater, the Ukrainian university in Kiev, and other cultural institutions. Doroshenko was shot by the Bolsheviks in Odessa. His principal works were studies of serfdom in Left-Bank Ukraine (1911) and of St Dmytro Tuptalo (1909), which were published in *Trudy* of the Chernihiv Archival Commission.

Doroshenko, Volodymyr [Dorošenko], b 30 October 1879 in St Petersburg, d 25 August 1963 in Philadelphia. Bibliographer, literary scholar, civic and political leader. Doroshenko was brought up in the Poltava region. He was a co-founder of the Ukrainian students' hromada in Moscow, a member of the Revolutionary Ukrainian party, and then a member of the Ukrainian Social Democratic Workers' party, until 1911. To escape police persecution, he moved to Lviv in 1908, and until 1944 he worked at the library of the Shevchenko Scientific Society, where he became the director in 1937. In 1944 he emigrated to Germany and in 1949 settled in the United States. During the First World War Doroshenko helped found the *Union for the Liberation of Ukraine and sat on its presidium. He edited and wrote some of the union's publications. In 1913 he became a member of the Ukrainian Scientific Society in Kiev, and in 1925, a full member of the Shevchenko Scientific Society. Doroshenko wrote many bibliographical works, including the bibliographies of the works of I. Franko (2 vols), T. Shevchenko (vol 16 of the Warsaw 1939 edition of Shevchenko's works), O. Kobylianska, and P. Kulish. He also translated the works of N. Gogol, L. Tolstoi, J.W. von Goethe, and V. Korolenko into Ukrainian. He wrote a number of literary works, among which his polemics with S. Yefremov

(published separately in his *Zhyttie i slovo* [Life and the Word, 1918]) should be singled out. He also wrote on V. Stefanyk (1921), I. Franko (1926), H. Chuprynka (1926), and many other writers, on zemstvos and co-operatives in Ukraine, on Ukrainian literary history and politics, and on the Shevchenko Scientific Society and its library (*Ohnyshche ukraïns'koi nauky* [The Hearth of Ukrainian Scholarship, 1951]). Doroshenko edited the almanac **Dniipro* (1929–39) in Lviv. He published a number of valuable memoirs and articles on various topics, particularly in *Ukrainskaia zhizn'*, *Kievskaia starina*, *Literaturno-naukovyi vistnyk*, *Rada*, *Dilo*, *Svoboda*, and *Ameryka*.

Volodymyr Doroshenko

Oleksander Doroshkevych

Doroshkevych, Oleksander [Doroškevyč], b 27 September 1889 in Bronnitsy, Moscow gubernia, d 1 April 1946 in Kiev. Literary scholar, pedagogue, and critic. In 1913 Doroshkevych graduated from Kiev University. In the 1920s he was a professor at the Kiev Institute of People's Education, an associate of the All-Ukrainian Academy of Sciences, and the director of the Kiev branch of the Institute of Literature. In the 1930s he was exiled to the Ural region, from which he returned in 1943. During the last years of his life he was a professor at Kiev University and director of the department of Ukrainian prerevolutionary literature at the Institute of Literature of the Academy of Sciences.

Doroshkevych edited a number of editions of 19th-century Ukrainian writers, including the best edition of T. Shevchenko's *Kobzar* (1933). He wrote many studies, mostly on 19th-century literature. While they are rich in factual material, their value is diminished by his use of the crude sociological method that was fashionable in the 1920s and 1930s. Some of his essays were collected in *Etiudy z Shevchenkoznastva* (Studies in Shevchenko Scholarship, 1930). Doroshkevych's large biography of Marko Vovchok was published in 1938. He wrote many articles on I. Kotliarevsky, P. Kulish, I. Franko, O. Kobylianska, and V. Samiilenko. He is the author of *Do istorii modernizmu* (On the History of Modernism, 1925), *Ukrains'ka literatura v shkoli: Sproba metodyky* (Ukrainian Literature in the School: An Attempt at a Method, 1921, a text on teaching methods), *Khrestomatiia po istorii ukraïns'koi literatury* (Chrestomathy on the History of Ukrainian Literature, 1918), and the popular *Pidruchnyk istorii ukraïns'koi literatury* (Textbook on the History of Ukrainian Literature, 5 edns, 1924–30). In the latter Doroshkevych combined the sociological method with an analysis ac-

ording to basic literary genres. It was later attacked for treating Ukrainian literature 'in isolation from the Russian literary process.'

I. Koshelivets

Doroshko, Petro [Doroško], b 24 December 1910 in Tupyshiv, Chernihiv gubernia. Poet and prose writer. Since 1931 he has published 32 collections of poetry. One of them, *Try bohatyri* (Three Heroes, 1959), is a novel in verse. He is also the author of the prose collection *Lisova huta* (Forest Forge, 1964) and the novel *Ne povtory moi doliu* (Don't Repeat My Fate, 1968). In 1980 his *Vybrani tvory* (Selected Works, 2 vols) was published.

Dorozhynsky, Dionysii [Dorožyns'kyj, Dionysij], b 31 July 1866 in Halych, d 2 July 1930 in Mizun, Dolyna county, Galicia. Ukrainian Catholic priest, theologian, and pedagogue. Dorozhynsky studied at the Lviv Academic Gymnasium, the Barbareum seminary in Vienna, and the University of Vienna. In 1893–6 he was a catechist at the Ternopil teachers' seminary. He then taught in Lviv at the Academic Gymnasium (1896–1906) and the Second 'German' Gymnasium (1906–22). From 1920 he was a professor of canon law at the Greek Catholic Theological Seminary and, from 1928, at the Greek Catholic Theological Academy in Lviv. Dorozhynsky wrote an ethics textbook and the following studies: *Nacherk istorii unii Ruskoj Tserkvi z Rimom* (Outline of the History of the Union of the Ruthenian Church with Rome, 1896), *Praznychni kartyny Hreko-Katolyts'koi Tserkvy* (Pictures of Holy Days in the Greek Catholic Church, 1908), and *Ohiad dzherel oriiental'noho tserkovnoho prava* (A Survey of Sources of Eastern Canon Law, 1930). He was also the publisher and editor of the periodical *Bohoslovs'kyi vistnyk* (1900–3) and a founding member of the Theological Scholarly Society.

Doshkil'ne vykhovannia (Preschool Education). A methodological monthly published by the education ministry of the Ukrainian SSR in Kiev since 1951. In 1968, 60,000 copies were published. The monthly is the successor of *Za komunistychni vykhovannia doshkil'nyka*, which was published in Kharkiv (1931–6) and Kiev (1937–41).

Dostava. A commercial-manufacturing co-operative in Lviv founded in 1906 for the production and distribution of church-related artifacts. The firm had branches in Stanyslaviv, Peremyshl, and Ternopil and workshops of Hutsul woodcarving in Kosiv. Its products received gold medals at international exhibitions in Odessa, Rome, and Karlovy Vary. The director of the firm was Rev V. Lytsyniak. Its technical supervisors were I. Petrushevych and, from 1924, L. Savoika. The firm was liquidated by the Soviets in 1939.

Dosvitni ohni (Dawn Fires). A collection of works by Ukrainian writers published in Kiev in 1906. The editor was B. *Hrinchenko. It contained selections from almost every Ukrainian poet, beginning with I. Kotliarevsky, to the end of the 19th century, among them T. Shevchenko, Yu. Fedkovich, and I. Franko. The collection began with Lesia Ukrainka's poem 'Dosvitni ohni.' The prose selections consisted of excerpts from the novels and stories of I. Nechui-Levytsky, M. Kotsiubynsky, M. Yatskiv, and

others. Several songs by M. Lysenko were included. The collection also contained translations of Homer, W. Shakespeare, H. Heine, H. Ibsen, and A. Negri.

Dosvitnii, Oles [Dosvitnij, Oles'] (pen name of Skrypala), b 8 November 1891 in Vovchanske, Kharkiv gubernia, d 11 November 1934. Writer, literary critic. In 1906 Dosvitnii enrolled at St Petersburg University, from which he was expelled for revolutionary activity. During the First World War he was court-martialed and sentenced to execution for spreading revolutionary propaganda among the soldiers, but he escaped and reached the United States via Mongolia and China. In 1918 he returned to Ukraine via Japan and took part in the civil war in 1918–20 on the Bolshevik side. He was involved in underground propaganda work in Galicia and spent eight months in the Warsaw prison. From 1920 he lived in Kharkiv. In 1921–3 he worked as an editor of various newspapers. For some time he was the chief editor of the All-Ukrainian Photo-Cinema Administration. In 1927 he became chairman of the Playwrights' and Composers' Union. From 1925 Dosvitnii was one of M. *Khvylovy's closest associates. He was a leading member of *VAPILITE, from which he, along with Khvylovy and M. *Yalovy, was expelled by order of the Central Committee of the CP(B)U in 1927. Dosvitnii contributed to **Literaturnyi iarmarok*. During P. Postyshev's terror Dosvitnii was arrested and shot.

Oles Dosvitnii

Dosvitnii published several collections of short stories, among them *Novely* (Short Stories, 1920), *Tiunhui* (1924), *Piimav* (Grabbed, 1930), *Novely* (Short Stories, 1932), and *Postati* (Figures, 1930). Among his longer works and novels are *Amerykantsi* (Americans, 1925), *Alai* (1927), *Hiulle* (1927), *Nas bulo troie* (There Were Three of Us, 1929), *Khto?* (Who?, 1927), and *Kvartsyt* (Quartzite, 1932). In 1930–1 Dosvitnii's collected *Tvory* (Works) were published in five volumes. His work was not artistically brilliant, but the subject of travel, with its exotic elements (the action usually takes place in an Asian country or America), introduced a new theme into the Ukrainian prose of the time and made for interesting reading. In the late 1950s Dosvitnii was rehabilitated. His *Vybrani tvory* (Selected Works) and *Hiulle* were republished in 1959 and 1961 respectively, *Kvartsit* was republished in Russian in 1963, and *Nas bulo troie* was republished in 1969.

I. Koshelivets

Dotsenko, Nadiia [Docenko, Nadija], b 9 January 1914 in Shyroke, Katerynoslav gubernia. Stage actress. Dotsenko graduated from the Kiev Institute of Theater Arts in 1936 and since then has worked with the M. Zankovetska Ukrainian Drama Theater in Zaporizhia and Lviv.

Oleksander Dotsenko

Dotsenko, Oleksander [Docenko], b 1897 in the Poltava region, d 7 June 1941 in Cracow. Military leader, historian of the Ukrainian revolution, lieutenant colonel in the UNR Army. In 1919–20 he served as Supreme Otaman S. Petliura's aide-de-camp. As an émigré he published a valuable two-volume collection of documents entitled *Litopys ukrains'koi revoliutsii* (The Chronicle of the Ukrainian Revolution, Kiev-Lviv 1923–4) and *Zymovyi pokhid* (The Winter Campaign, Warsaw 1932; repr, New York 1966).

Doukhobors. See Sects.

Dovbush. Ukrainian sports club in Chernivtsi (1920–40) that played an educational role in Bukovyna. The club had soccer, hockey, and athletics sections. Among the leading members of the association were F. Yendzheiovsky, R. Yasenysky, Teodosii Hlynsky, A. Hanytsky, A. Ivanovych, S. Prots, and Ya. Shlemko. Among its athletes the following were the best known: Tsopa, Boshniak, Dragan, Popyk, Lesko, Bernadyniuk, Yankovy, T. and A. Sukhoversky, O. Sukhoverska, M. Ivanovych, and R. Petrushenko (who represented Rumania at the 1936 Winter Olympics).

Dovbush, Oleksa [Dovbuš] (also known as Dovbushchuk), b 1700 in Pechenizhyn, d 24 August 1745 in Kosmach in the Hutsul region. A Ukrainian Robin Hood, chief of Carpathian *opryshoks. He became an outlaw with his brother Ivan and led a band of 30–50 men. Local peasants admired him. What Dovbush took from the landlords, rentiers, usurers, merchants, nobles, and rich Jews, he gave to the poor. His band was active mostly in the Hutsul region and in Pokutia, but sometimes raided Podilia. Stih peak in the Chornohora range was his home base. For several years Polish military expeditions of up to 2,000 men led by the crown hetman J. Potocki sought to capture Dovbush, who was finally betrayed by a fellow opryshok. His legend captured the popular imagination and left a lasting mark in Ukrainian folklore, literature (I.

Oleksa Dovbush by O. Kulchytska (wood carving, 1942)

Vahylevych, Yu. Fedkovych, M. Pavlyk, I. Franko, V. Gzhytsky, L. Pervomaisky), painting (O. Kulchytska), music (A. Kos-Anatolsky's ballet *Dovbush's Kerchief*), and film (*Oleksa Dovbush*). Many Carpathian sites are connected with Dovbush.

Dovbysh or Dovbush [Dovbyś or Dovbuś]. III-8. Town smt (1978 pop 6,200) in Baranivka raion, Zhytomyr oblast, in the eastern part of Volhynian Polisia. In 1925 the government of the Ukrainian SSR organized in Dovbysh the only Polish district in the republic – Marchlewski raion (29 of the 33 rural soviets and 27 of the 29 schools were Polish). As a Polish region it was abolished in the 1930s. Dovbysh has porcelain and brick factories.

Dovbyshchenko, Viktor [Dovbyśchenko], b 3 November 1910 in Kharkiv, d 24 September 1953 in Kiev. A stage director, theater scholar, and educator. He graduated from the Kharkiv Music and Drama Institute in 1934 and worked as a director in the theaters of Donetske, Kharkiv, Odessa, and Luhanske. From 1947 to 1952 he was the artistic director of the Young Spectators' Theater in Kiev. From 1947 he was a lecturer at the Kiev Institute of Theater Arts. Dovbyshchenko wrote the textbook *Pro mystetstvo rezhysera* (On the Art of Directing, 1948) and co-authored the book *Pro mystetstvo teatru* (On the Art of the Theater, 1954).

Dovha Spit. A sandspit on the south shore of Tahanrih Bay in the Sea of Azov. It is 17 km in length and approximately 0.5 km in width.

Dovhal, Oleksander [Dovhal'], b 27 January 1904 in Debaltseve, Katerynoslav gubernia, d 12 March 1961 in Kharkiv. Graphic artist. Dovhal graduated from the Kharkiv Art Institute in 1929 and belonged to M. Boichuk's school. His work evolved from Boichukism to a synthesis of Boichukism with elements of Western expressionism. He was a member of the Association of Revolutionary Art of Ukraine. From the late 1930s Dovhal worked within the official Soviet guidelines on art. Among his works are line engravings such as *Estacade* (1923), *The Weeder Woman* (1926), and *Sharing Rations* (1927); series of prints such as *Socialist Kharkiv* (1937) and *The Classical Figures of World Culture* (1939–60); a cycle of watercolors, *Along the Roads of War* (1942–4); and illustrations for the works of I. Kotliarevsky, Marko Vovchok, P. Tychyna, L. Pervomaisky, I. Kocherha, and P. Kozlaniuk.

Spyrydon Dovhal

Dovhal, Spyrydon [Dovhal'], b 31 October 1896 in Nosivka, Chernihiv gubernia, d 15 October 1975 in Munich. Journalist, political leader, economics lecturer at the Ukrainian Technical and Husbandry Institute. He was the co-founder and commander of the Student Battalion during the fighting in Kiev in the winter of 1917–18. Then he was appointed lieutenant colonel of the UNR Army. As an émigré Dovhal edited the periodicals *Nova Ukraïna* (Prague 1925–9), *Vpered* (Uzhhorod 1932–8), *Nova svoboda* (Uzhhorod 1938–9), *Dozvillia* (Berlin and Plauen 1942–5), and *Slovo* (Regensburg 1945–6). He was a member of the Central Committee of the Ukrainian Party of Socialist Revolutionaries abroad. In 1950 he became a member and the chairman of the Central Committee of the Ukrainian Socialist party abroad. He was active in the Ukrainian National Council and in 1972–5 served as its president. In 1969–72 he was the chairman of the council's executive agency. Dovhal wrote several works on economics.

Dovhalevsky, Mytrofan [Dovhalevs'kyj], 18th century. Student at the Kievan Mohyla Academy in 1718–32, monk, lecturer at the academy from 1733, professor of poetics from 1736. Dovhalevsky wrote a course on poetics in Latin and two dramas: a Christmas play, *Komicheskoe deistvie* (A Comic Act, 1736) and an Easter play, *Vlastotvornii obras chelovekoliubiiia Bozhiia* (The Power-Endowing Image of Divine Love for Man, 1737). The *intermedii* of these plays (five in each) are of particular interest. Such personae as an astrologer, peasants, Cossacks, traveling tutors, Muscovite soldiers, Poles (appearing as oppressors), a Belorussian, and a gypsy appear in them. The *intermedias* are written in a language close to the vernacular.

Dovhan, Kost [Dovhan', Kost'], b 1902 in Podilia. Bibliographer, bibliologist, literary critic. Dovhan was an associate of the Ukrainian Scientific Research Institute of Bibliology and a follower of official Communist party policy in literary criticism and bibliology, attacking various apolitical writers. He wrote numerous articles for *Krytyka*, *Zhyttia i revoliutsiia*, and other journals. In spite of Dovhan's sharp attacks on the better Soviet Ukrainian writers, especially the Neoclassicists, he was arrested in the 1930s; he has not been heard from since.

Dovhan, Volodymyr [Dovhan'], b 22 July 1929 in Smila, Cherkasy oblast. A film director, Dovhan graduated from the Soviet Institute of Cinematography in 1959. Since 1963 he has worked at the Kiev Artistic Film Studio,

where he directed the films *Try doby pislia bezsmertia* (Three Days after Immortality, 1963), *Zahybel' eskadry* (Destruction of a Squadron, 1965), *A teper sudy* (And Now, Judge, 1967), *Simnaadtsiatyi transatlantychnyi* (The Seventeenth Transatlantic, 1972), and *Osobyste zhyttia* (Personal Life, 1974), as well as the television films 'Nazvit' urahan Mariieiu' (Call the Hurricane Maria, 1970) and 'Talant' (Talent, 1978).

Dovhyi Island. Island in the western part of Yavorlyk Bay in the Black Sea. It extends from the northwest to the southeast, having a length of more than 6 km and a width up to 1 km. The island was formed by sedimentary deposits of sand. It is part of the Black Sea Nature Reserve.

Dovnar-Zapolsky, Mytrofan [Dovnar-Zapol's'ky], b 4 June 1867 in Rechytsa, Belorussia, d 1934. Historian of Belorussian origin. Dovnar-Zapolsky studied at Kiev University under V. Antonovych until 1894 and from 1901 to 1919 was a professor there. He was an associate of the Kievan Archeological Commission. In 1925–6 he taught at the Belorussian State University in Minsk. Dovnar-Zapolsky was the author of works on the economic history and ethnography of Belorussia as well as on the history of Ukraine, Lithuania, Poland, and Russia. His major works are *Ocherk istorii Krivichskoi i Dregovichskoi zemel' do kontsa XII stoletia* (An Outline of the Krivichian and Drehovichian Lands to the End of the 12th Century, 1891), *Gosudarstvennoe khoziaistvo Velikogo Kniazhestva Litovskogo pri Iagellonakh* (The State Economy of the Grand Duchy of Lithuania under the Jagiellons, 1900), *Ocherki po organizatsii zapadno-russkogo krest'ianstva v XVI v.* (Essays on the Organization of the West Ruthenian Peasantry in the 16th Century, 1905), and *Istoriia russkogo narodnogo khoziaistva* (The History of the Russian National Economy, 1911).

Dovzhenko, Hryhorii [Dovzhenko, Hryhorij], b 1877, d 18 December 1958 in Abondan, France. Political and civic leader. Active in the Ukrainian Social Democratic Spilka (1905–13) and then in the Ukrainian Social Democratic Workers' party (USDRP), he worked as a union organizer. In 1917 Dovzhenko became a member of the Ukrainian Central Rada and the Little Rada. He was director of the Department of the Labor Market and director of publications for the USDRP in Kiev. In 1920 he emigrated to Poland, where he headed the Ukrainian Red Cross. In 1931 he settled in France and in 1950 became director of the Petliura Library in Paris.

Dovzhenko, Oleksander [Dovzhenko], b 10 September 1894 in the village of Sosnytsia, Chernihiv gubernia, d 25 November 1956 in Moscow. Film director. After graduating from the Hlukhiv teachers' seminary in 1914, Dovzhenko worked as a teacher in Zhytomyr. In 1917–21 he participated in the revolutionary events in Kiev and in 1919–20 belonged to the *Borotbist party. In 1921–3 he worked in Warsaw and Berlin as a member of Ukrainian diplomatic missions. In 1923–6 he drew caricatures for the newspaper *Visti VUTsVK* in Kharkiv and played an active role in the literary and artistic life of the city. He had begun studying painting in Berlin in the school of E. Heckel and continued to paint in Kharkiv.

In 1926 Dovzhenko began to work as a film director at the *Odessa Artistic Film Studio. His first films were

Vasia – reformator (Vasia, the Reformer), *Iahidka kokhannia* (The Berry of Love, 1926), and *Sumka dyppkur'iera* (The Diplomatic Courier's Bag, 1927). Drawing on Ukrainian history, in 1927 he created the film *Zvenyhora*, which is considered to mark the beginning of Ukrainian national cinematography. Dovzhenko's expressionist film *Arsenal* (1929) is devoted to the revolutionary events in Kiev in 1918. His last silent movie, *Zemlia* (The Earth, 1930), dealing with the collectivization drive in Ukraine, is a masterpiece. Dovzhenko was severely criticized as a Ukrainian nationalist for this film and for his next film, *Ivan* (1932), about the building of the Dnieper Dam. He was forced to move to Moscow, where he lived as if in exile until his death. In Moscow he made *Aerograd* (1935) about the Far East and spent over four years on the film *Shchors* (1939), which depicts the struggle of the Bolshevik army against the Ukrainian forces defending Ukraine's statehood. During the Second World War Dovzhenko made three chronicle films: *Vyzvolennia* (The Liberation, 1940), on the annexation of Galicia to the Ukrainian SSR; *Bytva za nashu Radians'ku Ukraïnu* (The Battle for Our Soviet Ukraine, 1943); and *Peremoha na Pravoberezhnii Ukraïni* (The Victory in Right-Bank Ukraine, 1945). In 1948 he made his last film, *Zhyttia v tsvitu* (Life in Bloom), which was devoted to I. Michurin. Dovzhenko's rich lyricism, his vivid characters, and the poetic power of his landscapes earned him a reputation as 'first poet of the cinema' and as one of the world's leading film directors. An international jury in 1958 ranked his *Zemlia* among the 12 best films in world cinematography.

Oleksander Dovzhenko

From the beginning of the Second World War Dovzhenko devoted more of his time to writing than to directing. He wrote a few dozen short stories, mostly about Ukraine's tragic fate during the Second World War, and a number of novels of a new genre, 'film novels': *Ukraïna v ohni* (Ukraine in Flames, 1943), prohibited from publication by J. Stalin because of its nationalism and published posthumously only in excerpts; *Povist' polu-m'ianykh lit* (The Tale of Fiery Years, 1945); and *Poema pro more* (A Poem about the Sea, 1956). His autobiographical novel *Zacharovana Desna* (The Enchanted Desna, 1955) is a literary masterpiece. All of his novels were published posthumously. His writings have been published in two collections: *Tvory v tr'okh tomakh* (Works in Three Volumes, 1958 and 1960) and *Tvory v p'iaty tomakh* (Works in Five Volumes, 1966). After Dovzhenko's death his wife, Yu. *Solntseva, who is also a film director, made the following films using his scripts: *Poema pro more* (1958), *Povist'*

polum'ianykh lit (1960), *Zacharovana Desna* (1964), and *Nezabutnie* (The Unforgettable, 1968).

I. Koshelivets

Dovzhenko, Valerian [Dovženko, Valerijan], b 27 September 1905 in Rostov-na-Donu. Music scholar and composer. He graduated in 1931 from the Kharkiv Institute of Music and Drama (now the Kharkiv State Conservatory) and lectured at the Kiev Conservatory, where in 1972 he was promoted to the rank of professor. Among his published works are *V.S. Kosenko* (1951), *P. Nishchyns'kyi* (1955), and *Narysy z istorii ukrains'koï radians'koï muzyky* (Essays on the History of Soviet Ukrainian Music, 2 vols, Kiev 1957–65). He has composed music for piano, violin, cello, choir, and vocal solos.

Dovzhenko Film Studio. See Kiev Artistic Film Studio.

Dovzhenok, Vasyl [Dovženok, Vasyl'], b 24 April 1909 in Kropyvnia, Starodub region, d 16 December 1976 in Kiev. Archeologist and historian. Dovzhenok worked at the Institute of Archeology of the Academy of Sciences of the Ukrainian SSR from 1938. He studied the city of Vyshhorod (1947), the ruins of fortified settlements in the Ros River valley (1949), and, with V. Honcharov, conducted excavations in old Halych (1951). Dovzhenok published works on the economy and socioeconomic development of East Slavic tribes and of Kievan Rus', including *Viis'kova sprava v Kyïvs'kii Rusi* (Military Affairs in Kievan Rus', 1950), *Zemlerobstvo drevn'oi Rusi do seredyiny XIII st.* (Land Cultivation in Ancient Rus' to the Mid-13th Century, 1961), *Drevn'orus'ke misto Voïn* (The Ancient Rus' City Voin, co-author, 1966), and articles in archeological journals and collections.

Drabat, Hryhorii, b 17 March 1921 in Galicia, d 30 August 1977 in London. Journalist, civic and political activist of the OUN (Bandera faction). Drabat was an organizer for the OUN in Great Britain from 1945, an active member of the Association of Ukrainians in Great Britain, editor of **Vyzvol'nyi shliakh* in 1949–77, a member of the leadership of the Bandera faction, and, from 1968, vice-chairman of the leadership council.

Drabiv. IV-13. Town smt (1975 pop 6,600) in the Dnieper Lowland; a raion center in Cherkasy oblast. The town has a food industry.

Drach, Ivan [Drač], b 17 October 1936 in Telizhyntsi, Kiev oblast. Poet and screenwriter. Drach graduated from Kiev University and completed advanced scriptwriting courses in Moscow. He worked for a few years in the

Ivan Drach

script department of the Kiev Artistic Film Studio and on the editorial staff of *Literaturna Ukraïna* and *Vitczyzna*. His works have appeared in print since 1959. He has published the following collections of poetry: *Soniashnyk* (The Sunflower, 1962), *Protuberantsi sertsia* (Protuberances of the Heart, 1965), *Poezii* (Poems, 1967), *Balady budniv* (Everyday Ballads, 1967), *Do dzherel* (To the Sources, 1972), *Korin' i krona* (The Root and the Crown, 1974), *Kyïvs'ke nebo* (The Kievan Sky, 1976), *Duma pro vchytelia* (Duma about the Teacher, 1977), *Soniashnyi feniks* (The Solar Phoenix, 1978), *Sontse i slovo* (The Sun and the Word, 1979), *Amerykans'kyi zoshyt* (American Notebook, 1980), *Shablia i khustyna* (The Saber and the Kerchief, 1981), *Dramatychi poemy* (Dramatic Poems, 1982), and *Povist' kyïvs'kykh lit* (Tale of Kievan Years, 1982). He has also written several scripts that have been used for films, including *Kaminnyi khrest* (The Stone Cross), based on a short story by V. Stefanyk, and *Idu do tebe* (I Am Coming to You). Drach is also a recognized literary critic. Drach stood at the forefront of the Ukrainian literary renaissance initiated by the *Shestydesiatnyky (the 'Sixtiers'). His poetry is noted for its originality, fresh imagery, complex metaphors, philosophical meditation, neologisms, and varied rhythm. Drach was criticized sharply for his departure from the canons of socialist realism, especially in the poem 'Nizh u sontsi' (Knife in the Sun, 1961), and for the satirical poem 'Oda chesnomu boiahuzevi' (Ode to an Honest Coward, 1963). Drach compromised with the regime in the late 1960s, and this proved detrimental to the quality of his later work. Since the 1970s he has traveled abroad as an official Soviet cultural emissary.

I. Koshelivets

Drachynsky, Teofil [Dračyns'kyj, Teofil'], b 1862 in Pohorylivka, Zastavna county, Bukovyna, d 21 June 1929 in Mamaivtsi, Chernivtsi county. Bukovynian political, civic, and church figure, an Orthodox protopresbyter. Drachynsky was a member and vice-marshal of the Bukovynian diet in 1911–18, president of the Society of Orthodox Priests in Bukovyna, and an active member of the Ukrainian National party in 1927–9.

Dragan, Mykhailo, b 21 November 1899 in Tustanovychi, Drohobych county, Galicia, d 8 March 1952 in Lviv. Art historian and museologist. In 1924 Dragan became an associate of the Ukrainian National Museum in Lviv and in 1932 the director of the museum of the Greek Catholic Theological Academy. Dragan co-authored *Rozvytok i zanepad Skytu Maniavs'koho i Bohorodchans'kyi*

ikonostas (The Development and Decline of the Maniava Hermitage and the Bohorodchany Iconostasis, 1926). He wrote the monographs *Ukrains'ki derev'iani tserkovy* (Ukrainian Wooden Churches, 1–2, 1937) and *Ukrains'ka dekoratyvna riz'ba XVI–XVIII st.* (Ukrainian Decorative Carving of the 16th–18th Century, 1970). Numerous articles by Dragan on art appeared in newspapers, magazines, and catalogues. His 'Mystets'ka tvorchist' Petra Kholodnoho' (The Art of Petro Kholodny) appeared in the catalogue of Kholodny's posthumous exhibit in Lviv in 1931.

Dragomirov, Mikhail, b 20 November 1830 near Konotip, d 28 October 1905 in Konotip. Military leader and infantry general (from 1891) in the Russian army, descended from an old line of Galician nobility, the Drahomyretskys. Dragomirov was well known as a military theoretician and tactician. From 1860 to 1876 he was chief of staff of the Kiev military district and in 1878–89 director of the Nicholas Academy of the General Staff in St Petersburg. In 1889 he was appointed commander of the forces of the Kiev military district and in 1898–1903 governor general of Kiev, Podilia, and Volhynia gubernias. Dragomirov was favorably disposed towards the Ukrainian movement. He was a friend of V. Antonovych and P. Zhytetsky and helped them circumvent Russian censorship and the ban on the Ukrainian language and culture.

Drahan, Antin, b 28 August 1913 in Holeshiv, Zhydachiv county, Galicia. Journalist, community and political leader. Drahan served a prison term (1934–6) for his activities as a member of the OUN. In 1938–41 he was a contributor to the Ukrainian Press Service in Berlin and later served as an editor of **Ukrainets'* and *Khliborob* – newspapers published for Ukrainians who had been brought to Germany to do forced labor. In 1946 he moved to the United States. After serving as the co-editor of **Svoboda*, he was appointed its editor in chief and served in this capacity from 1952 to 1979. He also edited the almanacs of the Ukrainian National Association. He is the author of *Ukrains'kyi rezystans* (The Ukrainian Resistance, 1948), *Ukrains'kyi Narodnyi Soiuz v mynulomu i suchasnomu* (The Ukrainian National Association in the Past and Present, 1964), and *Maiemo Kardynala* (We Have a Cardinal, 1966). He was the editor of a book on L. Myshuha (1973) and the managing editor of *Ukraine: A Concise Encyclopedia*, 2 vols (1963–71).

Drahomanivka. The Ukrainian alphabet as reformed by M. *Drahomanov. The reform was based on the principle of one letter per phoneme. Hence, Drahomanov rejected *ш* and *ъ* and replaced *є*, *ї*, *ю*, *я* after a vowel by a combination of the vowel in question with *j* (*ярмарок* [fair]), and after a consonant by a combination with *ь* (*царьа* [tsar's, gen sing]). Drahomanov used this alphabet in his letters and publications starting in 1876, but it did not catch on.

Drahomanov, Mykhailo, b 6 September 1841 in Hadiache, Poltava gubernia, d 20 July 1895 in Sofia, Bulgaria. Scholar, civic leader, publicist, political thinker. Born into a gentry family of Cossack origin, Drahomanov studied at Kiev University, where in 1864 he became privat docent, and in 1873, docent, lecturing on ancient history. While pursuing an academic career, Drahomanov rose to a position of leadership in the Ukrainian secret society the

Mykhailo Drahomanov

Kiev Hromada (later known as the Old Hromada) and took part in its various activities, such as the transformation of the Southwestern Branch of the Imperial Russian Geographic Society into a center of Ukrainian studies and the editing of the daily *Kievskii telegraf*. During his trips abroad Drahomanov established contacts with Galician Ukrainians; under his influence the Russophile student circle in Lviv associated with the journal **Druh* adopted a Ukrainian democratic platform in 1875–6. Among the Russian educated public Drahomanov attracted attention with his articles (in *Vestnik Evropy* and elsewhere), in which he critically discussed Russia's internal and foreign policies.

Drahomanov became an early victim of anti-Ukrainian repressive measures by the Russian government and was dismissed in 1875 from the university. Entrusted by the Hromada with the mission to become its spokesman in Western Europe, he settled in Geneva in 1876. Aided by A. Liakhotsky (Kuzma), he published the journal **Hromada* (5 vols, 1878–82), the first modern Ukrainian political journal, and a number of pamphlets, mostly in Russian. With S. Podolynsky and M. Pavlyk, who for some time joined him in Switzerland, Drahomanov formed the Geneva Circle, an embryo of Ukrainian socialism. He strove to alert European opinion to the plight of the Ukrainian people under tsarism by pamphlets (*La littérature oukraiennne proscrite par le gouvernement russe*, 1878) and articles in the French, Italian, and Swiss press. Drahomanov also played a prominent role in the Russian émigré community; he edited *Vol'noe slovo*, the organ of the zemstvo liberals. His contacts extended to Polish, Jewish, Serbian, Bulgarian, and Rumanian radicals and groups.

In 1886 a rift occurred between Drahomanov and the Kiev Hromada; the latter felt that political activity abroad might provoke increased anti-Ukrainian repression. The socialist stance adopted by Drahomanov in exile was often at variance with the moderate views of the Hromada members. Drahomanov also antagonized Russian émigré factions by his constitutionalism and sharp criticism of the Russian revolutionaries' dictatorial proclivities and covert chauvinism. In Galicia, too, Drahomanov's followers (I. Franko, M. Pavlyk, Ostap Terletsky) suffered persecution from the Austro-Polish administration and ostracism from the local clerical-conservative Ukrainian society. By the mid-1880s Drahomanov found himself in isolation and deprived of Hromada's financial support.

In 1889 Drahomanov accepted a professorship at Sofia University. During his last years he saw the rise of the Ruthenian-*Ukrainian Radical party, founded in 1890 by

his Galician followers. Drahomanov was their mentor through his intensive correspondence and programmatic articles in the party's organ, **Narod*. He also contributed to the London monthly *Free Russia*, edited by S. Kravchinsky (Stepniak). Soon after his move to Bulgaria, Drahomanov developed a heart ailment. He died and was buried in Sofia.

Drahomanov began his scholarly work as an ancient historian and wrote *Vopros ob istoricheskom znachenii Rimskoi imperii i Tatsit* (The Problem of the Historical Significance of the Roman Empire and Tacitus, 1869). Later he worked in Slavic, especially Ukrainian, ethnography and folklore, using the historical-comparative method. Drahomanov applied oral literature to his study of the history of social ideas in Ukraine. His principal works are *Istoricheskie pesni malorusskogo naroda* (Historical Songs of the Little Russian People, with V. Antonovych, 2 vols, 1874–5); *Malorusskie narodnye predaniia i rasskazy* (Little Russian Folk Legends and Tales, 1876); *Novi ukrains'ki pisni pro hromads'ki spravy* (Recent Ukrainian Songs on Social Topics, 1881); and *Politychni pisni ukrains'koho narodu 18–19 st.* (Political Songs of the Ukrainian People in the 18th and 19th Centuries, 2 vols, 1883–5). Drahomanov's articles appeared in foreign journals (*Mélusine* and others). *Notes on the Slavic Religio-Ethical Legends: The Dualistic Creation of the World* (Bloomington, Ind 1961) is an English translation of one of his works that was originally published in Bulgarian.

Drahomanov was an outstanding Ukrainian political thinker. He dealt extensively with constitutional, ethnic, international, cultural, and educational issues; he also engaged in literary criticism. Drahomanov's ideas represent a blend of liberal-democratic, socialist, and Ukrainian patriotic elements, with a positivist philosophical background. Influenced by P.-J. Proudhon, Drahomanov envisaged the final goal of humanity's progress as a future condition of anarchy: a voluntary association of free and equal individuals, with the elimination of authoritarian features in social life. He assumed that this ideal could be achieved through federalism and the self-government of communities and regions. Drahomanov insisted on the priority of civil rights and free political institutions over economic class interests and of universal human values over exclusive national concerns. However, he believed that nationality was a necessary building stone of all mankind, and he coined the slogan 'Cosmopolitanism in the ideas and the ends, nationality in the ground and the forms.'

Drahomanov declared himself a socialist, without subscribing to any school of contemporary socialist thought. The motivation for his socialism was ethical: concern for social justice and the underprivileged and exploited. He advanced a program of concrete socioeconomic reforms (eg, protective labor legislation, progressive income tax). Drahomanov was convinced that in agrarian Ukraine socialism must be oriented towards the peasantry. Therefore, he may be classified as a populist in the broad sense of the term, although he objected to some features of Russian populism (eg, the glorification of peasant revolts and disregard for Western-type liberal institutions). Drahomanov rejected Marxism, especially the materialist interpretation of history.

Drahomanov continued the democratic-federalist tradition as represented by the Ukrainian *Decembrist movement of the 1820s (the *Society of United Slavs, of which

an uncle, Ya. Drahomanov, had been a member), and the *Cyril and Methodius Brotherhood. He wished to link the Ukrainian movement with progressive trends in the contemporary Western world. Drahomanov regretted that the Ukrainian people had not preserved an independent state in the past. However, he thought that a policy of separatism was unrealistic, and his philosophical anarchism did not allow him to envisage national statehood as an objective. He admonished his compatriots to concentrate on the democratization and federalization of the existing states of Russia and Austria-Hungary, which he thought would provide sufficient scope for the free development of the Ukrainian nation. He postulated collaboration with all peoples of Eastern Europe, including Russians. Yet, Drahomanov insisted on the organizational independence of the Ukrainian movement. He combated both the concept of 'non-political cultural work' (Kiev Hromada's preference in the 1880s) and the Ukrainians' participation in Russian revolutionary organizations, which alienated them from their own people.

Drahomanov's vision embraced all ethnic Ukrainian lands. He was the first national leader to visit Transcarpathia, and he developed a lasting commitment to 'the wounded brother.' Drahomanov envisaged a systematic co-operation among various Ukrainian lands, cutting across state boundaries. He proposed that until the overthrow of Russian autocracy the center of the national movement should be located in Galicia, where the constitutional regime offered some opportunities. It was imperative for Galician Ukrainians, however, to rid themselves of their provincial and clerical outlook. Drahomanov pleaded for secularization of Ukrainian civic and cultural life, and church-state separation. Considering Protestantism more amenable to progress than either Orthodoxy or Catholicism, Drahomanov showed interest in the emergence of evangelical sects in Ukraine. He wrote a series of tracts to encourage religious non-conformity and anticlericalism. Drahomanov consistently opposed expressions of a xenophobic Ukrainian nationalism and defended the usefulness of progressive Russian literature for Ukrainians. He maintained that national liberation was inseparable from social emancipation. He called on the intelligentsia to work for the uplifting of the masses through education, economic improvement, political participation, and the building of popular associations.

Viewing the Ukrainian problem in a broad context, Drahomanov devoted attention to Ukraine's neighbors. Concerning Russia, he advocated a common front of moderate liberals and revolutionary socialists against autocracy, but condemned terrorist methods. Drahomanov drafted a proposal for a constitutional reorganization of Russia (*Vol'nyi soiuz/Vil'na spilka* [A Free Union], 1884) with rule of law, guarantees of civil rights, regional and local self-government, and equality of nationalities. (M. Weber praised Drahomanov's constitutional plan for its treatment of the nationality problem.) Drahomanov endorsed the right of minorities in Ukraine, particularly the Jews, to a corporate national-cultural autonomy. He welcomed the liberation of the southern Slavs from the Turks but cautioned against tsarist imperialism in the Balkans. He criticized equally the Russian oppression of Poland and Polish claims to lands where the majority of the population was ethnically non-Polish. He saw threats to Eastern Europe in Prusso-German militarism, in the

inflated territorial aspirations of the Polish 'historical' patriots, and in the 'Jacobinism' of Russian revolutionary groups.

Drahomanov's principal political works are 'Perednie slovo do "Hromady"' (Introduction to *Hromada*, 1878), 'Propashchyi chas – ukraïntsi pid Moskovs'kym tsarstvom, 1654–1876' (The Lost Epoch: Ukrainians under the Muscovite Tsardom, 1654–1876, written in about 1878, publ 1909), 'Shevchenko, ukraïnofily i sotsiializm' (Shevchenko, the Ukrainophiles, and Socialism, 1879), *Istoričeskaia Pol'sha i velikoruskaia demokratiia* (Historical Poland and Great Russian Democracy, 1881–2), *Vol'nyi soiuz/Vil'na spilka* (A Free Union, 1884), *Liberalizm i zemstvo v Rossii* (Liberalism and Zemstvo in Russia, 1889), *Chudats'ki dumky pro ukraïns'ku natsional'nu spravu* (Eccentric Thoughts on the Ukrainian National Problem, 1891), *Lysty na Naddnyprians'ku Ukraïnu* (Letters to Dnieper Ukraine, 1893). Drahomanov's contributions to the study of Russian social thought include his editions, with introductory essays, of *Pis'ma K.D. Kavelina i I.S. Turgeneva k A.I. Gertsenu* (Letters of K.D. Kavelin and I.S. Turgenev to A.I. Herzen, 1892) and *Pis'ma M.A. Bakunina k A.I. Gertsenu i N.P. Ogarevu* (Letters of M.A. Bakunin to A.I. Herzen and N.P. Ogarev, 1896).

A notable part of Drahomanov's works are his memoiristic and epistolary writings: 'Avtobiograficheskaia zametka' (Autobiographical Note, 1883) with a 'Dobavlenie' (Supplement, 1889) and *Avstroruss'ki spomyny, 1867–1877* (Austro-Ruthenian Reminiscences, 1867–1877, 1889–92). He corresponded with M. Pavlyk (7 vols), I. Franko (2 vols), and M. Buchynsky, Volodymyr Navrotsky, T. Okunevsky, and N. Kobrynska (1 vol each), among others. Of particular historical importance is *Arkhiv M. Drahomanova: Lystuvannia Kyïvs'koi Staroi Hromady z M. Drahomanovym 1870–1895* (The Archives of M. Drahomanov: Correspondence of the Kiev Old Hromada with M. Drahomanov in 1870–1895, 1937).

There exists no complete edition of Drahomanov's works. His folkloristic papers have been collected in *Rozvidky Mykhaila Drahomanova pro ukraïns'ku narodniu slovesnist' i pys'menstvo* (Studies of Mykhailo Drahomanov on Ukrainian Folk Poetry and Literature, 4 vols, 1899–1907). The following are partial editions of his political writings: *Sobranie politicheskikh sochinenii M.P. Drahomanova* (Collected Political Works of M.P. Drahomanov, ed B. Kistiakovsky, 2 vols, 1905–6; Russian-language writings of the emigration period); *Politicheskie sochineniia* (Political Works, ed I. Grevs and B. Kistiakovsky, 1908; pre-exile Russian-language writings); *Vybrani tvory* (Selected Works, ed B. Bohatsky, 1937); and *Literaturno-publitsychni pratsi* (Literary and Publicist Works, 2 vols, 1970). The only edition in a Western language is *Mykhaylo Drahomanov: A Symposium and Selected Writings*, edited by I.L. Rudnytsky (1952).

Drahomanov's impact was strongest in Galicia, where it extended not only to the Radicals, but also to segments of the National Populists (*narodovtsi*; see *Populism, Galician). In Russian-ruled Ukraine his influence was checked by the conflict with the Old Hromada. However, some activists continued to support him: M. Kovalevsky, Ia. Shulhyn, V. Malovany, Ye. Chykalenko, and B. Kistiakovsky. Scattered 'Drahomanovian circles' also existed. Drahomanov's ideological legacy is partially reflected in the basic political orientation of the Central Rada in 1917 (the concept of an autonomous Ukraine within a feder-

ated Russian republic) and in the Rada's specific policy measures, such as the Congress of Peoples of Russia in Kiev and the national-cultural autonomy of minorities. Of the political parties of 1917–21, the one closest to the Drahomanov tradition was the Ukrainian Party of Socialists-Federalists; certain prominent Socialist Revolutionaries (M. Shapoval, N. Hryhoriiv) 'rediscovered' Drahomanov only in exile. During the interwar era reaction against him took place among Ukrainians outside the USSR – a symptom of the general 'turn to the right' in Ukrainian politics. Representative publicists of the integral nationalist movement (D. Dontsov, M. Mukhyn) attacked Drahomanov, charging him with the moral responsibility for the failure of the Ukrainian struggle for independence. In Soviet Ukraine some objective scholarly research on Drahomanov was undertaken in the 1920s (D. Zaslavsky and others). With the advent of Stalinism Drahomanov was condemned as a 'petit bourgeois liberal' and 'Ukrainian nationalist.' After a lapse of more than 30 years, a new interest in Drahomanov surfaced among Soviet Ukrainian intellectuals in the post-Stalin period, culminating in the 1970 edition of his selected works. The authors who wrote on Drahomanov during the comparatively liberal 1960s (R. Ivanova, I. Romanchenko, V. Sokurenko, and others) took care to play down the features of his thought that were incompatible with Soviet ideological orthodoxy. Despite this, the revival of Drahomanov studies was censured in the early 1970s (*Komunist Ukraïny*, 1972, no. 11). In the countries of the socialist bloc research on Drahomanov has been carried on by P. Atanasov (Bulgaria) and E. Hornowa (Poland).

Drahomanov, Petro, b 29 June 1802, d September 1860. Father of M. *Drahomanov; jurist. Until 1838 Drahomanov served in the Ministry of Defense in St Petersburg. Later, in Hadiache; he devoted himself to ethnography and wrote poetry and short stories in Russian.

Drahomanov, Svitozor, b 1884, d 4 December 1958 in Rochester, New York. Economist; son of M. *Drahomanov. A professor at several institutions in Kiev from 1922 to 1930, Drahomanov was dismissed from all teaching positions with the advent of anti-Ukrainian repressions in the 1930s. He went to Germany in 1943, and later immigrated to the United States. He served as a professor at the Ukrainian Technical and Husbandry Institute. His published works include *Dribni zemlevolođinnia na Poltavshchyni* (Small Landholdings in the Poltava Region), *Munitsypal'ni pidpriemstva v Shvaitsarii* (Municipal Enterprises in Switzerland), and articles on socioeconomic themes.

Drahomanov, Yakiv, 1803-40. Uncle of M. *Drahomanov, officer of the Poltava Infantry Regiment, member of the secret *Society of United Slavs (1823-5). For belonging to this secret society, Drahomanov was imprisoned and exiled to Siberia. Eventually he was permitted to return home, but he lived under police surveillance. He wrote some poetry in Russian.

Drahomyretsky, Antin [Drahomyrec'kyj], b 1887 (?), date of death unknown. Political activist from the Kiev working-class milieu, member of the Central Committee of the *Ukrainian Social Democratic Workers' party, member of the Ukrainian Central Rada in 1917. In 1918 Drahomyretsky headed the Kiev organization of the Ukrainian Social Democratic Workers' party; he later became a leader of the group of independent social democrats who formed the *Ukrainian Communist party. Drahomyretsky later supported the fusion of the Ukrainian Communist party with the CP(B)U. He disappeared in 1936 during the Stalinist terror.

Drai-Khmara, Mykhailo [Draj-Xmara, Myxajlo], b 10 October 1889 in Mali Kanivtsi, Poltava gubernia, d 19 January 1939 in Kolyma, Siberia. Poet, linguist, literary scholar, translator. Draï-Khmara studied at the Galagan Collegium (1906-10), Kiev University (1910-15, including a year abroad), and Petrograd University (1915-17). He became a specialist in Ukrainian, Belorussian, and Serbian literatures and the history of the Serbian and Belorussian languages. He was the professor of Ukrainian studies at Kamianets-Podil'skyi Ukrainian State University (1918-21) and at the Kiev Medical Institute (1923-9). From 1924 he was a member of the Historical-Literary Society of the All-Ukrainian Academy of Sciences and worked in the academy's Research Institute of Linguistics.

Mykhailo Draï-Khmara

In 1929 he became a member of the Commission for Researching the History of the Ukrainian Scientific Language and edited its *Zbirnyk* (Collection) of 1931. Draï-Khmara also taught at the Ukrainian Institute of Linguistic Education, the Polish Pedagogical Institute, and the Agricultural Institute. He was arrested in February 1933 and imprisoned for three months, during which time he lost all of his positions. Rearrested in September 1935, he was sentenced for 'counterrevolutionary terrorism' in March 1936 and perished in a Kolyma labor camp.

Draï-Khmara wrote several studies of Lesia Ukrainka, most notably *Lesia Ukrainka: Zhyttia i tvorchišt'* (Lesia Ukrainka: Her Life and Works, Kiev 1926). He began writing poetry in 1910, and in the 1920s was a member of the *Neoclassicists. His early poetry was lyrical, emotive, and essentially symbolist. His later poetry combined symbolist elements with an increasing attention to form, language, and imagery reminiscent of Kievan classicism. Draï-Khmara published only one collection in his lifetime: *Prorosten'* (The Offshoots, Kiev 1926). His poems were also published in the major Ukrainian literary journals of the 1920s. Most of his translations of the French, German, Russian, Belorussian, and Polish romantics and symbolists remain unpublished, as do his translations of Dante's *Divine Comedy* and the Finnish epic *Kalevala*. Draï-Khmara was severely criticized for his 'reactionary' poetry in the 1920s and 1930s, but he was partly rehabilitated in the 1960s.

Drainage of land. Artificial means of ridding the soil and its surface of excess water, primarily for agricultural purposes. Drainage is applied to both permanent and temporary wetlands. Drainage systems may be categorized into two types: surface (open canals or ditches) and subsurface (underground mains).

Permanent *wetlands cover 2.8 million ha of the Ukrainian SSR, and permanent and temporary wetlands together make up an area of 4-5 million ha. Almost 80 percent of Ukraine's wetlands lie in *Polisia, mostly in the west. Considerably fewer are found in the Dnieper, Sian, and Tysa lowlands, in the Buh and Dniester depressions, and in the Danube, Dniester, Dnieper, Don, and

DRAINAGE OF LAND AND WATER MANAGEMENT

Kuban floodplains. Drainage works were first started in Ukraine in the second half of the 19th century. By 1914 the problem of drainage had been most thoroughly studied in Polisia, where the findings were applied (particularly through the work of the Western Expedition on the Reclamation of Wetlands in 1875–1902), and to a lesser extent in the Dniester Depression and the Tysa Lowland. During the First World War and the revolution work on land drainage was neglected, and the area of the wetlands expanded. Drainage work was resumed and expanded in the 1920s–1930s. By 1940 reclaimed marshland accounted for 950,000 ha in Soviet Ukraine. The area diminished during the war to 827,000 ha in 1946 but increased steadily thereafter: to 1,031,000 ha in 1956, to 1,594,000 ha in 1970, and to 2,445,000 ha in 1979. Of the reclaimed land, 85.5 percent is used for farming: 52 percent of this is tilled, and 47 percent is hayfields and pastures. Land drainage is proceeding relatively slowly in Polisia, which contains only 45 percent of the reclaimed land in Ukraine, but is expanding more rapidly in Lviv oblast (27 percent) and in Transcarpathia (11 percent). The main drainage systems are the Oster system in Chernihiv oblast (32,600 ha), the Tur system in Volhynia oblast, and the Tiasmyn system in Cherkasy oblast. The main irrigation-drainage systems are the Irpin system (8,400 ha) in Kiev oblast and the Trubizh system (33,300 ha) in Kiev and Chernihiv oblasts.

Drak, Matvii, b 30 September 1887 in Vinnytsia, d 20 July 1963 in Kiev. A set designer, Drak graduated from the Odessa Art School in 1910 and the Munich Academy of Arts in 1914. He was the chief set designer for the Ukrainian Drama Theater in Vinnytsia (1920–6) and Kiev (1926–49), where he designed sets for about fifty productions, including productions of Lesia Ukrainka's *Lisova pisnia* (Forest Song); L. de Vega's *Fuente ovejuna* and *El perro del hortelano*; A. de Musset's *Lorenzaccio*; M. Maeterlinck's *Monna Vanna*; G.B. Shaw's *Saint Joan*; and V. Vynnychenko's *Chorna pantera i bilyi vedmid'* (The Black Panther and White Bear), *Hrih* (Sin), *Bazar* (Market), and *Brekhnia* (The Lie).

Drama or dramatic literature. A literary genre. In the wide sense drama is the depiction of certain actions through monologues or through dialogues between dramatic personae. In the narrower sense drama is merely a

genre of dramatic literature among other genres such as tragedy, comedy, melodrama, pantomime, and farce.

Contemporary Ukrainian drama, like Western European drama (except medieval mystery plays), is of Greek origin. In Old Ukrainian literature only certain elements of the dramatic style can be found: dialogues in the sermons of Cyril of Turiv, such as the dispute between the soul and the flesh in his tale 'The Blindman and the Cripple.' The history of Ukrainian dramatic literature begins with school drama at the end of the 16th century. Several dozen texts from the 17th–18th century, exemplifying various types of drama – dialogues, morality plays, mystery plays, and ordinary theatrical plays on the lives of the saints – have survived. The beginnings of comedy can be traced to the **intermediia* or interlude of this period. Among the noted playwrights of the time were I. Volkovych, D. Tuptalo, M. Dovhalevsky, T. Prokopovych, V. Lashchevsky, and H. Konysky. This Ukrainian drama had a great influence on the development of Russian and South Slavic dramatic literature.

Modern Ukrainian literature of the 19th century produced classicist drama of a sentimental type. Its first representative was I. Kotliarevsky, whose plays *Natalka Poltavka* (Natalka from Poltava) and *Moskal'-charivnyk* (The Soldier-Sorcerer) display the typical features of classicist poetics on the one hand and, in keeping with the spirit of national rebirth of the period, an interest in the common people on the other. The latter element accounts for *Natalka Poltavka's* popularity to the present day and its influence on the development of dramatic literature in the 19th century. V. Hohol's *Prostak* (The Boor) and *Sobaka ta vovtsia* (The Dog and the Sheep) and H. Kvitka-Osnovianenko's *Svatannia na Honcharivtsi* (Betrothal in Honcharivka) and *Shel'menko-denshchuk* (Shelmenko the Orderly) are other examples of classicist drama.

The romantic period is represented by M. Kostomarov's plays *Sava Chalyyi* and *Pereiaslav's'ka nich* (Pereiaslav Night). They were greatly influenced by Shakespeare and partly by Schiller. Lacking theatrical quality, these plays left no mark on the further development of Ukrainian drama. A more popular play of this period, owing to its rich ethnographic content, was T. Shevchenko's *Nazar Stodolia*.

Ukrainian drama attained a particularly high level of development in the second half of the 19th century, in the period of realism. M. Starytsky's populist-realist plays, which tended to be melodramatic, combined romanticism with common-life realism. He wrote *Ne tak stalosia, iak zhadalosia* (It Did Not Happen as Was Desired); plays on borrowed themes: *Tsyhanka Aza* (Aza, the Gypsy Girl) and *Oi, ne khody, Hrytsiu* (Don't Go to the Party, Hryts); historical plays: *Ostannia nich* (The Last Night), *Marusia Bohuslavka*, *Bohdan Khmel'nyts'kyi*, *Oborona Bushi* (The Defense of Busha); and reworkings of plays by other authors: *Chornomortsi* (The Black Sea Cossacks), *Za dvoma zaitiamy* (Chasing Two Hares), *Kruty, ta ne perekruhchui* (Twist, but Don't Lie). Another playwright who combined elements of romanticism and melodrama with ethnographic realism was M. Kropyvnytsky. Among his many plays the most popular were *Dai sertsiu voliu – zavede v nevoliu* (Give the Heart Free Reign and It Will Lead You into Slavery), *Doky sontse ziide – rosa ochi vyist'* (Before the Sun Rises the Dew Will Consume the Eyes), and *Hlytai, abozh pavuk* (The Profiteer, or the Spider). The greatest Ukrainian dramatist of the 19th century, I. Tobilevych (Karpenko-Kary), began as an author of romantic plays –

Bondarivna (The Cooper's Daughter), *Palyvoda 18 st.* (A Madcap of the 18th Century), *Chumaky* (The Chumaks), and *Sava Chalyyi* – and turned gradually to realist-populist plays – *Burlaka* (The Homeless Wanderer), *Ponad Dniptom* (Along the Dnieper), *Naimychka* (The Servant Maid), and *Beztalanna* (The Hapless Girl). His work culminated in the realistic, socially critical, and profoundly psychological plays of his later period: *Martyn Borulia*, *Sto tysiach* (A Hundred Thousand), *Suieta* (Vanity), and particularly *Khaziain* (The Farmer), which marks the peak of realism as well as the transition to modern drama. The dramas of I. Franko and P. Myrny belong basically to realism.

V. Vynnychenko became a very popular playwright in the period of modernism. Rejecting the populist realism of his predecessors, he concentrated on the psychological and moral problems that concerned the intelligentsia between the two revolutions (1905–17). His best dramas were *Shchabli zhyttia* (The Steps of Life), *Memento*, *Velykyi Molokh* (The Great Moloch), *Chorna pantera i bilyi vedmid'* (The Black Panther and White Bear), and *Brekhnia* (The Lie).

Less typical of the modernist period were the romantic dramas of S. Cherkasenko – *Pro shcho tyrsa shelestila* (What the Grass Rustled about), *Kazka staroho mlyna* (Tale of the Old Mill) – and the historical dramas of L. Starytska-Cherniakhivska – *Hetman Petro Doroshenko*, *Rozbiinyk Karmeliuk* (The Brigand Karmeliuk), *Ivan Mazepa*. The dramas of Lesia Ukrainka, in which her creativity attains its fullest expression, were novel and unique. In her dramas in verse, dialogues, and dramas she reached out beyond the populist subjects of the former period to biblical and classical antiquity and treated themes that are often found in the classics of world literature in an original manner (*Kaminnyi hospodar* [The Stone Host]). She wrote about the eternal questions of human existence, such as spiritual freedom and the struggle against slavery, with unusual earnestness and passion. Even *Lisova pisnia* (The Forest Song), which is wholly based on folklore materials, although influenced by G. Hauptmann's *Die versunkene Glocke* in subject and composition, deals in symbolic images with the eternal questions.

In the Soviet period some Ukrainian dramatists, such as I. Mykytenko and later O. Korniiuchuk, adapted to the official Party line, while others, such as M. Kulish, sought an independent solution to the Ukrainian national problem and an individual philosophical approach to life. M. Kulish is the outstanding Ukrainian dramatist of this century. He began his career depicting the revolution in the villages in *97* and *Komuna v stepakh* (A Commune in the Steppes). Then he raised the nationality question (in the comedy *Myna Mazailo*) and condemned the Bolshevik revolution as antinational in *Narodnyi Malakhii* (The People's Malakhii) and attained an artistic generalization of the struggle for Ukrainian independence in the heroic image of Maryna in *Patetychna sonata* (The Sonata Pathétique). At the beginning of the 1930s, however, terror and political repression were invoked to force writers to serve the Party and the Soviet dictatorship. M. Kulish died in exile. Another excellent dramatist of the period, I. Kocherha, turned from originally structured, philosophical plays such as *Maistry chasu* (Masters of Time) and *Pidesh – ne verneshsia* (If You Go, You'll Never Return) to historical subjects. The leading dramatist at the beginning of the 1930s was I. Mykytenko, whose plays – *Dyktatura* (Dictatorship), *Kadry* (Cadres), *Sprava chesty* (A Question of

Honor), *Dvochata nashoi krainy* (The Girls of Our Country) – served as propaganda for the then-current Party policy. Mykytenko was liquidated in 1937, but O. Korniiuchuk continued to write in this vein. He became popular through his play *Zahybel' eskadry* (The Destruction of a Squadron). Korniiuchuk's dramas depicted the 'positive' ideal of the Soviet man in a one-dimensional manner (*Platon Krechet*) or served as illustrations of Party resolutions – *V stepakh Ukrainy* (In the Steppes of Ukraine), *Kryla* (Wings), and many others. A middle line between opposition and servility was taken by Ya. Mamontov, I. Dniprovsky, and others. The next generation of dramatists, which began to write in the 1930s (L. Dmyterko, Ya. Bash, V. Mynko, Ya. Halan, O. Levada, etc) followed the official Party line without the slightest deviation. In the 1960s and 1970s many young dramatists appeared in print, the most talented being O. Kolomiets and M. Zarudny. Writers who have made their name in other genres have also turned to drama – the poets I. Drach, P. Voronko, L. Zabashta, and O. Pidsukha and the prose writers P. Zahrebelny, Yu. Zbanatsky, Yu. Mushketyk, and many others. All of the present playwrights observe the standards of socialist realism, and there are no impressive individuals among them as there were in the 1920s and at the beginning of the 1930s.

I. Koshelivets

Drazhevska, Liubov [Draževs'ka, Ljubov], b 12 September 1910 in Kharkiv. Geologist, journalist. Drazhevska studied at Kharkiv, Frankfurt, and Columbia universities. She is an associate of the Ukrainian Academy of Arts and Sciences in the United States, a member of the academy's executive, and a co-editor of its publications. She is the author of *The Geology of Paterson, N.J.* (1976), a survey of Soviet geological publications, memoirs, and articles in such periodicals as *Lysty do pryiateliv* and *Novi dni*. She has worked for the Voice of America and Radio Liberty.

Drazniowsky, Roman [Dražn'ovs'kyj], b 13 August 1922 in Chortkiv, Galicia. Cartographer, geographer. In 1957 Drazniowsky became the map curator at Columbia University in New York. From 1962 to 1978 he was the curator of rare maps and geography books of the Ameri-

can Geographical Society. In 1979 he was promoted to professor of library science at the University of Wisconsin in Milwaukee. Drazniowsky is the author of *Cataloging and Filing Rules for Maps and Atlases* (1964) and *Map Librarianship: Readings* (1975). Since 1964 he has edited *Current Geographical Publications* of the American Geographical Society, and in 1974 he became vice-president of the Ukrainian Librarians' Association of America. He was president of the Educational Council of the Ukrainian Congress Committee of America.

Drehovichians (Drehovychi). An East Slavic tribe that occupied the territory between the Prypiat River and the upper Western Dvina River. The Old Slavic word *driahva* or *dreha* means marsh and indicates the nature of the land that was inhabited by the Drehovichians. The land of the Drehovichians constituted a separate principality, the capital of which was the town of Turiv. In the 10th century it was annexed by the Kievan state. The main occupation of the Drehovichians was agriculture, while manufacture and crafts were secondary.

Dreisykh (Dreisig), Ivan [Dreisyx], b 1791 in Saxony, d 24 December 1888 in Kharkiv. A comic actor who performed on the stage from 1814, Dreisykh was a member of I. Shtein's acting troupe in Kharkiv and later joined the companies of K. Zelinsky, D. Zhurakhivsky, I. Piloni, and others. From 1860 to the 1880s Dreisykh worked with various troupes throughout Ukraine. He performed parts in the plays of I. Kotliarevsky, H. Kvitka-Osnovianenko, and N. Gogol. Dreisykh wrote the vaudeville revue *Dva braty z Sanzhariivky, tretii z Khorol* (Two Brothers from Sanzhariivka, the Third from Khorol, 1846), as well as a revised version of K. Zelinsky's *Vesillia Terpelykhy* (Terpelykha's Wedding).

Mykola Dremluha

Dremluha, Mykola [Dremljuha], b 22 June 1917 in Buturlynivka, Voronezh gubernia. Composer and pedagogue. In 1946 he graduated from the Kiev Conservatory and later served as a professor there. Among his works for symphony orchestra are *Bat'kivshchyna* (The Fatherland) and the symphonic poems *Bolhars'ka poema* (A Bulgarian Poem), *Symfoniczni kartyny* (Symphonic Pictures), *Lirychna symfoniia* (Lyric Symphony), and *Vesniiana siuita* (Spring Suite). He has also written concertos for piano and orchestra, as well as preludes and études and almost 60 vocal solos and arrangements of folk songs. He is the author of *Ukrains'ka fortepianna muzyka* (Ukrainian Piano Music, 1958).

Dress. The earliest depictions of dress worn in Ukraine pertain to the Scythian and Sarmatian tribes. Men wore trousers made of woven cloth or fur, jackets, pointed caps, and boots. Women wore a wide shirt extending to the knees, a coat with slits for the arms, and a cap similar to a man's cap but covered with a wrap.

The styles of dress worn in the Princely era and the later periods of Ukraine's history were very diverse. The main elements of the dress were the shirt, trousers, cloak, sheepskin vest (*kozukh*), overcoat (*korzno*, *miatel*, *luda*), cap (*klobuk*), footcloths, stockings, and boots. The clothes worn by the princes and boyars were influenced by Byzantine fabrics and ornaments.

In the Cossack period the nobility dressed according to the prevalent fashion in Europe, in costumes of the Renaissance style, except for certain departures demanded by the severe climate (long overcoats and sheepskin jackets). The Cossack officers and common Cossacks adapted these clothes to military need (short caftan or *zhupan*, wide trousers or *sharavary*, and mantle or *kyreia*). The burghers to some extent imitated the fashions of the nobility and used imported cloth. Changes in peasant dress took place under the influence of Cossack dress, particularly in Hetman Ukraine.

Later the nobility adopted European baroque fashions, while the burghers and peasants preserved those features of dress that had been created in the Cossack period. Yet, changes crept in, either in the form of dress (bodice, skirt, man's shirt without ruffles) or in the material (fur coat covered with woolen cloth). With the greater availability of factory-made fabrics in the second half of the 19th century the fabrics from which folk costumes were made changed even more; yet, the general features of folk dress were preserved in the small towns and villages until the First World War.

In general, Ukrainian folk dress can be classified into five regional groups. The people of the Middle Dnieper region, including the Left-Bank and steppe areas, dressed in clothes originating in the Hetman period. Women wore wide sleeves, a wraparound skirt (*plakhta*), a bodice (*kersetka*), and varied outerwear, including the narrow-waistcoat (*yupka*), coat (*svyta*), fur coat (*kozhushtanka*), and a complicated headdress (*ochipok*); men's costumes consisted of shirts of differing cut (*chumachka*, *strilkova*) and various outer garments – the coat (*svyta*), overcoat (*chumarka*), long, hooded topcoat (*kobeniak*), and sheepskin coat (*kozukh*).

In the second region, Polisia, very old features of dress, dating back to the Princely era, have been preserved. There were certain differences between Left-Bank and Right-Bank Polisia and between these regions and Volhynia. In general, women wore an embroidered blouse with a predominance of red, a colorful woven skirt (*spidnytsia*, *litnyk*, *andarak*), and a white headband (*namitka*); men wore a shirt outside the trousers, a white or gray coat (*svyta*), and a high felt hat (*iolomok*) or gray woolen cap (*maherka*).

In the third region, Podilia, women wore a multicolored embroidered blouse, a rectangular, woven wraparound skirt (*horbatka*), and a coat of dark woolen cloth; men wore a mantle (*manta-hunka*), coat (*svytka*), short woolen overcoat (*opancha*), and sheepskin coat (*kozukh*).

The fourth region, consisting of central Galicia and Volhynia, preserved many old features of dress but also displayed foreign influences. The extensive use of linen

in men's and women's outerwear (*polotnianka*, *kabat*, *leibyk*) is distinctive of this region. Women wore corsets and complex, turbanlike head wraps. Men's outer garments were very diverse: jackets (*kurtky*), caftans (*kaf-tany*), woolen overcoats (*opanchi*), felt overcoats (*suk-many*), and spencers (*spensery*).

The fifth region encompasses the Carpathian Mountains and Subcarpathia and can be subdivided into four districts – Pokutia and Bukovyna, the Hutsul area, the Boiko area, and the Lemko area. The costumes of Bukovyna and Pokutia are similar to those of Podilia and differ only in the use of the short, sleeveless, fur coat (*kyptar*) and the tuniclike man's shirt. The clothing of the Hutsul area was distinguished by its vivid colors and rich ornaments. The brassworking craft (necklaces [*zgardy*], clasps [*chepraky*]) was most highly developed there. In the Boiko area printed cloth was widely used. Women's skirts were ornamented with pleats and folds. The Lemkos used mostly factory-made cloth. Their characteristic clothes were the felt vest (*leibyk*) for men and women, the pleated skirt, and the starched, white head wrap (*fatselyk*) for women.

After the First World War urban clothing began to replace folk dress in the countryside because of its low price and the peasant's desire not to appear different from the townfolk. This first occurred in rural areas close to towns and cities. In the 1930s a certain revival of folk dress became popular in Western Ukraine. Young people in the cities and countryside dressed up for festive occasions in the typical folk costume of the Poltava or Kiev region, which was popularized by the Ukrainian theater. At the same time the intelligentsia of Western Ukraine attempted to study and popularize the various regional folk costumes and borrowed folk elements to enrich the style of urban clothing. A similar tendency in central and eastern Ukraine led to the daily use of embroidered shirts and blouses and then to the stylization of urban clothing in imitation of folk costumes.

Today in Soviet Ukraine folk dress is rarely worn, even in the countryside, and is used mainly in stage performances. In a few areas – for example, in the forest belt of the Carpathian Mountains (Hutsul area) – the folk costume is worn only for festive occasions or for dressing the deceased. The rural inhabitants wear factory-made clothes of poor quality. The urban population wears better, more fashionable clothes.

The production of the textile and *clothing industries is determined by the designs prepared by fashion centers in the oblast cities. Relative to the size of the population and its needs, the number of textile and clothing factories in Ukraine is low. Much of the clothing is still sewn to order. The price of clothing relative to wages earned is much higher in the Soviet Union than in Western countries.

L. Burachynska

Drevynsky, Lavrentii [Drevyns'kyj, Lavrentij], end of 16th–beginning of 17th century. Volhynian noble, deputy to the Sejm of the Polish Commonwealth, 'cupbearer from the Volhynian Land,' civic and church leader, member of the Orthodox brotherhoods of Vilnius, Lutske, and Kiev. A defender of the Orthodox faith, Drevynsky attended the Berestia sobor and was a member of the Orthodox delegation to Sigismund III in 1596. He composed the 'Rech' (speech) given at the Warsaw Sejm in 1620 and the 'Protestatsiia' (Protest) of 1630. He participated in the Kiev sobor of 29 June 1629 and in the work of the Sejm commission for the restoration of the Orthodox church's rights in 1632. With the help of the nobleman Elo-Malynsky, in 1633–7 Drevynsky founded the Epiphany Monastery and its school, hospital, and press in the town of Kremianets in Volhynia.

Dribna Biblioteka (The Little Library). A publishing house established in Lviv in 1878–81 through the initiative of I. Belei and the encouragement of I. Franko. It released 14 publications, chiefly translations of works by Erckmann-Chatrion, G. Uspensky, G. Byron, N. Dobroliubov, D. Pisarev, and E. Zola done by I. Franko, I. Belei, Ye. Olesnytsky, V. Poliansky, and O. Roshkevych.

Drimtsov, Serhii [Drimcov, Serhij], b 15 May 1867 in Kharkiv, d 18 August 1937 in Kharkiv. Composer and pedagogue. Drimtsov was an active revolutionary and served a term (1887–1905) in exile in Siberia. After the 1917 revolution he was one of the organizers of the Kharkiv Philharmonic Orchestra and the Kharkiv branch of the Leontovych Musical Society. In 1924 he helped found the Kharkiv Music and Drama Institute, at which he lectured. Among Drimtsov's musical works were the opera *Ivan Morozenko* (1929), a piano trio, choral works, and vocal solos to the words of T. Shevchenko, Lesia Ukrainka, and others. He was the author of *Elementy narodnoho styliu v tvorchosti M.V. Lysenka* (Elements of Folk Style in the Works of M.V. Lysenko) and *Muzychna teoriia* (Musical Theory, 1925).

Drinov, Marin, b 2 November 1838 in Panagiurishte, Bulgaria, d 13 March 1906 in Kharkiv. Bulgarian Slavist and political leader. Drinov completed his studies in Kiev and Moscow. In 1873 he was appointed professor of Slavic studies at Kharkiv University. In 1877 he was elected secretary and in 1890 president of the Kharkiv Historical-Philological Society. For a brief period (1878–9) Drinov served as the minister of education for Bulgaria. Drinov served a number of historians who were graduates of Kharkiv University, and he laid the foundations of Bulgarian history and modern Bulgarian orthography. His principal works are *Zaselenie Balkanskogo poluostrova slavianami* (The Settlement of the Balkan Peninsula by the Slavs, 1873) and *Iuzhnye slaviane i Vizantiia v x v.* (The Southern Slavs and Byzantium in the 10th Century, 1876).

Drobiazko, Yevhen [Drob'iazko, Jevhen], b 1 September 1898 in Kiev. Writer and translator. Drobiazko stud-

Yevhen Drobiazko

ied at Kiev University and the Kiev Music and Drama Institute. He worked as a play director and as an editor in the publishing house of the Academy of Sciences of the Ukrainian SSR. He began translating in 1930, and since 1950 he has worked only as a translator. He translates from Russian, French (particularly H. de Balzac and J.B. Molière), German (H. Heine, J.W. Goethe, F. Schiller, and others), and Polish (J. Słowacki and J. Tuwim). He has also translated the librettos of operas such as C.W. Gluck's *Orpheo et Eurydice* and W.A. Mozart's *The Marriage of Figaro* and *The Magic Flute*. Drobiazko's greatest achievement was the full translation of Dante's *Divine Comedy* in 1976.

Drobnik, Mykhailo [Drobnjak, Myxajlo], b 3 October 1942 in Zbudsky Rokitov, Humenne county, Slovakia. Ukrainian poet, writer, and journalist in the Prešov region of Slovakia. From 1964 to 1975 he was an editor of the weekly *Nove zhyttia* in Prešov. Since that time he has worked with the Duklia Ukrainian Folk Ensemble. Drobnik is the author of four collections of poetry: *Rozluky i zustrichi* (Partings and Meetings, 1967), *Smuhy svitla* (Bands of Light, 1969), *Ochi v doloniakh* (Eyes in the Palms of the Hands, 1974), and *Kolossia nadii* (Grain Ears of Hope, 1975). He has also published a number of novels: *Koly zhasaiut' zori* (When the Stars Burn Out; in *Duklia*, 1974), *Dalyny* (Distances, 1974), *Zdyblennia hir* (Discovering the Mountains, 1975), and *Shumovynnna chasu* (The Frothing of Time, 1979). Drobnik also writes plays.

Drobotko, Viktor [Drobot'ko], b 23 November 1885 in Dihtiari, Chernihiv gubernia, d 10 September 1966 in Kiev. Microbiologist and epidemiologist, full member of the Academy of Sciences of the Ukrainian SSR since 1948. From 1944 to 1962 he served as director of the Institute of Microbiology of the academy. With the co-operation of other scientists Drobotko defined and combated stachybotryotoxicosis. He also discovered several new antibiotics, such as imanin and novoimanin.

Drohobych or Drohobytsky, Yurii [Drohobych'kyj, Jurij] (pen name of Yu. Kotermak), b ca 1450 in Drohobych, d 4 February 1494 in Cracow. The first doctor of medicine in Ukraine. He was brought up in Drohobych and received a master's degree from Cracow University (1473) and a doctoral degree and medical degree from Bologna University (1476, 1482). In 1481–2 he was rector of Bologna University, where he taught astronomy and medicine, and in 1487 he became a professor of medicine

at Cracow University. His book *Judicium prenosticon Magistri Georgii Drogobicz de Russia* was published in Rome in 1483, but only two copies of it are known to exist. This was the first book published abroad by a Ukrainian. His biography by Ya. Isaievych was published in Kiev in 1972.

Yurii Drohobych; relief by Yevhen Dzyndra

Drohobych; the wooden Church of St George, built in the 17th century

Drohobych (Drohobyč). IV-4. City (1983 pop 71,000) in Subcarpathia on the Tysmenytsia River; the center of the *Drohobych-Boryslav industrial region in Lviv oblast. The population of Drohobych was 32,300 in 1931, 42,000 in 1959, and 56,000 in 1970. The town probably existed in the Kievan Rus' period. It was first mentioned in documents in the second half of the 14th century. In 1496 it received Magdeburg law. Under the Polish Commonwealth Drohobych was the center of a large rural county (*starostvo*). In the 14th–16th century a large salt industry and trade developed. From the beginning of the 17th century a Ukrainian Catholic brotherhood was active in the town. After Austria's annexation of Galicia, one of the two urban Ukrainian schools in Galicia was located in Drohobych from 1775 to 1830. In the middle of the 19th century ozocerite began to be mined, and then oil and natural gas. Petroleum refineries were built at the beginning of this century. The influx of foreigners who worked in industry and trade changed the composition of Drohobych's population: in 1869, of the town's 16,880 inhabitants 28.7 percent were Ukrainian, 23.2 percent were Polish or Roman Catholic, and 47.7 percent were Jewish; in 1939, when the population was 34,600, the respective figures

were 26.3 percent, 33.2 percent, and 39.9 percent. Until 1939 Drohobych was a Ukrainian national and cultural center, with a Ukrainian gymnasium, music school, and Basilian monastery. In 1939–41 and 1944–59 the town was the capital of Drohobych oblast, which later became incorporated into Lviv oblast. By 1959 Ukrainians constituted 70 percent of the town's population; Russians, 22 percent; Poles, 3 percent; and Jews, 2 percent.

Today Drohobych is one of the largest industrial centers of Lviv oblast. It has highly developed petroleum-refining, machine-building, woodworking, light, and food industries. The most important plants are the Drohobychnaftopererobka (a petroleum refinery built out of the Galicia Plant of 1863 and the Polmin Plant of 1909–12), a gas-appliances plant, an automotive-crane plant, a gas- and petroleum-machinery plant, a salt refinery, a potassium plant, an alcohol distillery, a canning factory, a meat-packing plant, a bakery complex, a clothes factory, and a ceramics plant. The Franko Pedagogical Institute (founded in 1940) and the general technical faculty of the Lviv Polytechnical Institute are located in Drohobych. The town also has two tekhnikums, a music school, a commercial-co-operative school; the Ukrainian Music and Drama Theater (founded in 1939); and a regional historical museum. Among its architectural monuments are the wooden churches of St George, with its bell tower, and the Elevation of the Cross (17th century); the Polish Church (15th century Gothic); and the Church of the Basilian Fathers (18th century), which was dismantled by the Soviets.

V. Kubijovyč

R = Petroleum refinery

Drohobych-Boryslav Industrial Region. The oldest and for many years the most important petroleum basin of Ukraine. The region also produces natural gas, ozocerite, rock salt, and potassium salt. It lies in southwestern Galicia in Lviv oblast and covers about 400 sq km. Its population in 1975 was 145,000. The northern part of the region, around the city of Drohobych, is part of the undulating Subcarpathian Upland, with an elevation of 300–400 m. The High Beskyd (Tsukhovyi Dil, 942 m) rises steeply above the upland and separates Boryslav in the

Tysmenytsia River Valley from Skhidnytsia and other oil fields that lie in the valley of the middle Stryi River.

Industry until 1940. The industry of the Drohobych-Boryslav region is based on its rich mineral resources: primarily petroleum (in the Boryslav, Tustanovychi, Mraznytsia, Skhidnytsia, Oriv-Ulychne, and Urych oil fields), natural gas (in Oporiv, Boryslav, and Truskavets), rock salt (in Drohobych), potassium salt (in Stebnyk), and salt and sulfate mineral waters (in Truskavets).

Petroleum has been extracted in the region since the middle of the 18th century, but actual production began in the 1850s, though on an insignificant scale. In the 1870s ozocerite mining was the most important industry: in 1873, 20,000 t were mined, and 10,500 workers were employed in the industry. Petroleum and ozocerite were extracted by primitive methods from wells and shafts up to 60 m deep, in an unplanned, chaotic manner and without any safety precautions. Most of the mining firms were small and owned by Jews. The miners were mostly Ukrainian peasants; their life was described by I. Franko in his Boryslav cycle of stories and novels. In the 1890s petroleum production rose (at Boryslav, Tustanovychi, and Mraznytsia). In 1909, 1.9 million t of oil (about 90 percent of Galicia's production) were produced in the region. The *petroleum industry became dominated by large firms funded usually by foreign capital and using modern technology. With time oil production fell back to 1 million t annually, and in the 1920s and 1930s it fell as low as 300,000 t. Ozocerite production fell even more dramatically – to 10,000 t in 1880, 1,000 t in 1914, and 300 t in 1938. For a long time the extracted oil was not refined locally but was shipped outside Galicia. Only in 1909 was a large refinery built in Drohobych. With the decline in production the local oil refineries did not work at full capacity.

The Soviet period. Under the Soviet regime the industry of the region underwent important changes. Oil production in the Boryslav fields continued to fall (to 140,000 t in 1967), but a new field – the Oriv-Ulychne oil field – was opened, with a production second only to the Dolyna field in Galicia. The exploitation of natural gas increased significantly, as did that of ozocerite (to 800–

1,000 t annually). The chemical industry grew rapidly; a large potassium production complex was built in Stebnyk.

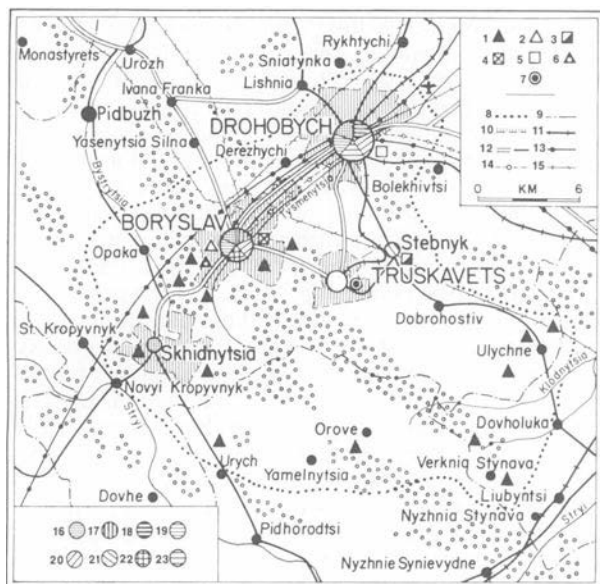

Among other branches of industry, the salt refineries in Drohobych, a small metalworking industry serving the needs of the petroleum and natural-gas industries, a woodworking industry, and a food industry have been developed.

Industrial development stimulated an increase in the population of the region and a change in its composition. In the mid-19th century the region was inhabited only by Ukrainians, except for Drohobych, which was approximately 50 percent Jewish and 50 percent Ukrainian and Polish. In the 1860s the population influx consisted of Ukrainians and foreigners, mainly Jews at first and then, in the 20th century, Poles, many of them from the oil fields of western Galicia. In the 1920s and 1930s the Polish authorities hindered the inflow of Ukrainians by denying them jobs. The population figures over this period were as follows: 49,000 in 1880, 66,000 in 1900, 94,000 in 1910, 95,000 in 1921, and 108,000 in 1931. The accompanying table presents the changes in the ethnic composition of the region's population.

Ethnic composition in the Drohobych-Boryslav Industrial Region (percentages)

Nationality	1880	1900	1939
Ukrainians	47.5	48.6	41.7
Poles	12.8	21.8	32.9
Jews	38.8	28.9	24.8

After 1940 radical changes in the population, particularly in the ethnic composition, took place. The size of the population increased to 145,000 (in 1975), of which 105,000 (72 percent) was urban. The growth of the cities has been uneven, however. Drohobych has grown at the greatest rate – from 32,000 in 1931 to 69,000 in 1978 – while the population of Boryslav has declined from 41,000 in 1931 to 34,000 in 1978 because of decreasing oil production. Former resort towns such as Truskavets (1931 pop 3,000, 1975 pop 20,000) and Stebnyk (1931 pop 1,300, 1975

pop 18,000) have grown as a result of the development of the chemical industry. The composition of the population has changed because of Nazi destruction of the Jews, the departure of Poles after the war, and the influx of Russians. In 1959 the composition of the population was as follows (the composition in 1931 is given in parentheses): Ukrainians, 81 percent (42 percent); Russians, 12 percent; Poles, 3 percent (33 percent); Jews, 2 percent (25 percent).

V. Kubijovyč

Drozd, Volodymyr, b 25 August 1939 in Petrushyn, Chernihiv oblast. Writer and journalist. In 1966–70 Drozd was an editor at the publishing house Radianskyi Pysmenyky; he now works for the Union of Writers. He has published the following novels and collections of short stories: *Liubliu syni zori* (I Love Blue Stars, 1962), *Parost'* (Sprout, 1966), *Semyrozum. Maslyny* (Seventh Sense. Olives, 1967), *Bilyi kin' Sheptalo* (The White Horse Sheptalo, 1969), *Liudy na zemli* (People on the Earth, 1975), *Dobra vist'* (Good News, 1971), *Rytmy zhyttia* (Rhythms of Life, 1974), *Doroha do materi* (The Road to My Mother, 1979), *Zemlia pid kopytamy* (The Land under the Hooves, 1980), *Samotnii vovk* (The Lone Wolf, 1982), and *Kryk ptakha v sutinkakh* (The Bird's Call at Twilight, 1982). Drozd is one of the best writers about contemporary rural and city life. His masterly satire on the small-town Party elite, the novelette 'Katastrofa' (The Catastrophe, 1968), was unfavorably received in official literary circles and ignored by critics.

Drozdenko, Vasyl, ?–1665. Leader of a Cossack rebellion in Right-Bank Ukraine in 1664–5. At the beginning of the 1660s he led the struggle in the Bratslav region against the Right-Bank hetmans P. Teteria, S. Opara, and P. Doroshenko. In the spring of 1665 his army defeated Teteria's troops and captured Bratslav. After Teteria was deposed, Drozdenko became the colonel of Bratslav and declared his intention to become hetman. In the autumn of 1665, however, P. Doroshenko took Bratslav, captured Drozdenko, and had him executed.

Druh (Companion). A student journal, organ of the *Academic Circle, published as a bimonthly in Lviv from 1874 to 1877. At first it reflected a Russophile orientation, but under the influence of M. Drahomanov it became Ukrainophile. A. Dolnytsky was the editor, and the contributors included I. Franko, M. Pavlyk, I. Belei, V. Lukych-Levytsky, S. Labash, O. Avdykovsky, V. Davydiak, and V. Stebelsky.

Druh chytacha (Reader's Friend). Weekly dealing with bibliography and bibliography, organ of the State Publishing Committee of the Ukrainian SSR (Derzhkomvydav) and of the Society of Bibliophiles, published in Kiev since 1960 in a large press run (more than 50,000 copies in 1965). *Druh chytacha* publishes professionally written articles on printing and the book trade, and lists of new publications, reviews, and articles recommending books to the reading public.

Druh Ditei (Children's Friend). A society in the Ukrainian SSR (1923–35) whose purpose was to help the agencies of the People's Commissariat of Education and the Communist Youth League to combat juvenile delin-

quency and to provide elementary education for all children. In 1925 the society had 2,500 centers and 240,000 members. In 1925–33 it published the monthly *Druh ditei* in Kharkiv (in Russian until 1928).

Druzhba [Družba]. 1-14. City (1970 pop 9,400) in Yampil raion, Sumy oblast, formed in 1962 from three settlements: Zhuravka, Yurasivka, and Khutir-Mykhailivskyyi. It is a railway junction and has a sugar refinery and railway-servicing shops.

Druzhba (Friendship). One of the largest oil pipelines in the world, Druzhba delivers oil from the USSR to Poland, East Germany, Czechoslovakia, and Hungary. It was built on the 1959 decision of the Council for Mutual Economic Assistance in 1960–4. The southern course of the pipeline runs through the territory of the Ukrainian SSR from Homel through Rivne to Uzhhorod.

Druzhkivka. [Družkivka]. v-18; DB II-3. City (1983 pop 68,000); an oblast center in Donetsk oblast, located on the Torets River, a tributary of the Donets. The town of Druzhkivka was founded in the 19th century and was classified as a city in 1938. The city boasts a mining-machinery plant, which was established in 1863 and until 1965 was called the Torets Plant. It also has a gas-equipment plant, a brick factory, a building-materials complex, and a food industry. There are two tekhnikums in the city – one for machine building and the other for housing.

Druzhno vpered (In Friendship Forward). An illustrated sociopolitical and literary monthly (bimonthly in 1956–8) published since 1951 in Prešov (Slovakia) by the *Cultural Association of Ukrainian Workers in Czechoslovakia.

Druzhyna. An armed retinue in ancient Rus' that served the prince and constituted the main military force of the state. The members of the *druzhyna*, originally of Varangian origin, were in charge of individual districts in peacetime and represented the nucleus of the prince's army during campaigns. Members of the *druzhyna* were closely associated with the prince. In exchange for their services, the members were provided for in full, in addition to being assigned to influential positions in the government. The prince consulted his retinue, and they were bound to him in loyal service. The *druzhyna* participated alongside the prince in diplomatic functions such as the negotiation of treaties. The *druzhyna* consisted of two groups: the senior *druzhyna*, or *muzhi kniazhtie*, composed mainly of boyars, who performed the higher state functions; and the junior *druzhyna*, or *hryd'*, who were responsible for the personal protection of the prince and who carried out a variety of his commissions in the royal court and in the provinces. In the 11th–12th century two elements – the princely *druzhyna* and the *zemski* boyars (local aristocracy, city elders) – united to form one aristocratic and landowning boyar stratum in society. The *boyars became very influential in affairs of state, particularly in the Principality of Galicia-Volhynia.

The word *druzhyna* was also applied in a wider sense: in the chronicles the national militia or the entire princely army is referred to as the *druzhyna*; *druzhyna* could also

designate the members of the *vervy*, rural communities that accepted monetary pledges from their members.

Druzhyna Kniahyni Olhy (Company of Princess Olha). An organization of women established in 1938 in Lviv in place of the *Union of Ukrainian Women, which was banned by the Polish authorities. The organization formally presented itself as a political organization to avoid the need for government confirmation of its statutes. Its program emphasized the woman's role in the Ukrainian national struggle. The organization had a three-level structure with county and local branches. It published its own biweekly, **Hromadianka*. The presidium of the organization consisted of K. Malyska, M. Rudnytska, and O. Fedak-Sheparovych. The organization functioned until the Soviet occupation of Galicia in 1939.

Druzhyny ukrainskykh natsionalistiv. See Legion of Ukrainian Nationalists.

Drymalyk, Sylvester, 1855–1923. Physician and community figure in Zhovkva county, Galicia, director of the *Narodna Lichnytsia medical-aid society in Lviv from 1914. Drymalyk wrote several popular booklets and articles, including *Likars'kyi poradyk* (Medical Advice Book).

Drymba (Jew's harp). A plucked musical instrument that was popular among the common people in Ukraine. It consists of a small horseshoe-shaped metal piece and a slender metallic strip (tongue) extending between the two arms. The *drymba* is held between the teeth while the end of the metallic tongue is twanged with the forefinger. The instrument is used mostly by shepherds.

Dubai, Mykhailo [Dubaj, Myxajlo], b 4 June 1910 in Hačava in the Prešov region, Czechoslovakia. Painter, critic, high school teacher in Prešov, editor in chief of the section of Ukrainian belles lettres of the Slovak Pedagogical Publishing House in Bratislava. His early paintings were religious in theme and tended towards cubism in form. Dubai has also produced impressionist landscapes. Dubai was one of the organizers of the Museum of Ukrainian Culture in Svidnik.

Orest Dubai

Dubai, Orest [Dubaj], b 15 August 1919 in the village of Velyka Poliana in the Prešov region, Slovakia. Painter and graphic artist; brother of M. *Dubai. Dubai studied at the Slovak Higher Technical School in Bratislava (1939–43). He has been a professor since 1967 at the Bratislava Higher Art School and was its rector from 1968 to 1971.

Dubai works predominantly in woodcuts and book art. He has produced woodcuts and line engravings, and illustrations for B. Antonych's *Persten' molodosty* (Ring of Youth, 1966), H. Khotkevych's *Rozbiniyche lito* (Brigand's Summer), and other books. An honorary member of the Florence Academy of Art and Design, Dubai has frequently exhibited abroad (in Austria, Germany, Egypt, South America, and the Soviet Union). A catalog of his work was published in Prešov in 1970.

Dubiecki, Marian Karol, b 26 August 1838 in Iziaslav, Volhynia, d 24 October 1926 in Cracow. Polish historian and participant in the Polish Insurrection of 1863–4. In 1863 he was appointed secretary for Ruthenian affairs in the Polish Provisional National Government. In 1864 Dubiecki was exiled to Siberia. From 1875 to 1883 he lived in Katerynoslav gubernia, Odessa, and Warsaw, and from 1884 to the end of his life he lived in Cracow. Dubiecki wrote a number of works on world history and on the history of Poland and Ukraine, including *Kudak twierdza kresowa i jej okolice* (Kodak, the Frontier Fortress and Its Environs, 1879), *Pole bitwy u Zótych Wód* (The Battlefield of Zhovti Vody, 1880), and the series *Obrazy i studia historyczne* (Historical Sketches and Studies, 1899, 1901, 1915). In his works Dubiecki denied that Ukrainian culture was an independent creation and explained its attainments as merely borrowings from Polish culture.

Dubliansky, Anatolii [Dubljans'kyj, Anatolij], b 11 November 1912 in Peretoky, Lutske county, Volhynia. Church leader, journalist. Dubliansky edited *Ukrains'kyi holos* (1942–4) in Lutske and then emigrated to Germany. In 1951 he was ordained in the Ukrainian Autocephalous Orthodox church (UAOC) and in 1956 became a member of its metropolitanate council. He headed the higher church administration of the UAOC in Europe and became bishop of London and Western Europe in 1981 and archbishop in 1983. In 1952 Dubliansky founded the quarterly **Ridna tserkva*, which he edited. He wrote *Ukrains'ki sviati* (Ukrainian Saints, 1962), *Ternystym shliakhom* (Along the Thorny Path, 1962), *Zhyttia Mytropolyta Nikanora Abramovycha* (The Life of Metropolitan Nikanor Abramovych), and other works.

Dubliany [Dubljany]. iv-5. Town smt (1978 pop 7,900) in Nesterov raion, Lviv oblast, situated northeast of Lviv. The Lviv Mechanical Repairs Plant and the Lviv Agricultural Institute are located in Dubliany.

Dubnevych, Amvrosii [Dubnevyč, Amvrosij], ?–1750. Orthodox clergyman, bishop. He graduated from the Kievan Mohyla Academy and eventually became professor, prefect (1727–30), and rector (1731–7) at the academy. He was the archimandrite of the Epiphany Brotherhood Monastery in Kiev, and in 1739 he became the archimandrite of the Holy Trinity–St Sergius Monastery in Moscow gubernia. In 1742 he was appointed bishop of Chernihiv. He wrote two textbooks, which remain in manuscript: 'Deo Uno in Personis Trino' and 'Philosophia Peripatetica.'

Dubno. iii-6. City (1972 pop 26,900) on the Ikva River in western Volhynia; raion center in Rivne oblast. It was first mentioned in 1100 as the village of Duben. In 1498 Dubno received Magdeburg law and came under the con-

trol of the Ostrozky princes. In the 15th century a fortress was built there that played an important role during the Cossack-Polish war and survived until the First World War. In 1592 the Dubno Monastery was built. Because of its fairs the town was a trade center, particularly from 1774 to 1797 when the famous Lviv contract fair was transferred to Dubno. Under Polish and Russian rule the town was a county center known for its trade in hops and cultural activities. Today it has some small industry: a food industry, a woolen-cloth industry, a furniture factory, and a foundry-machinery plant. It has a regional studies museum. Among its architectural monuments are the castle of the Ostrozky princes (15th century), the city gate (16th century), the Transfiguration Church (17th century), and St George's Church (18th century).

Dubno Monastery. Monastery in Dubno, Volhynia, founded by Prince K. *Ostrozky in 1592. Originally an Orthodox monastery, it was taken over by the Catholic church in 1700. In the 19th century it reverted to Orthodox control and was known as the Monastery of the Elevation of the Cross.

Dubovy, Ivan [Dubovyj], b 24 September 1896 in Chmyrivtsi (now Novoselytsia), Kiev gubernia, d 28 July 1939. Bolshevik army commander. From 1918 to 1920 Dubovy commanded the First Ukrainian Soviet Army against the Ukrainian, White, and Polish forces. Later he commanded the 14th Corps of the Red Army, the Ukrainian military district (from 1929), and the Kharkiv military district (from 1935). Dubovy died during the Yezhov terror.

Dubovy, Yukhym [Dubovyj, Juxym], b 23 November 1898 in Ananiv, Kherson gubernia. Radiologist, professor at the Odessa Medical Institute from 1944 to 1973. Dubovy produced studies on x-ray therapy for oncological diseases.

Dubovyk, Leontii, b 30 October 1902 in Kiev, d 28 August 1952 in Kharkiv. Stage director and educator. Dubovyk graduated from the Kiev Music and Drama Institute in 1925 and joined the Berezhil theater company, which in 1935 became the Kharkiv Ukrainian Drama Theater. Dubovyk's finer productions were marked by a vivid romantic theatricality and included T. Shevchenko's *Nazar Stodolia*, M. Starytsky's *Talan* (Destiny), *Teveye the Dairyman* (based on the story by Sholem Aleichem), and Molière's *Monsieur de Pourceaugnac*. Dubovyk also taught at the Kharkiv Theater Arts Institute.

Dubrovsky, Vasyl [Dubrovs'kyj, Vasyl'], b 19 May 1897 in Chernihiv, d 23 April 1966 in Richmond, Virginia. Ukrainian historian and Turkologist, journalist, and civic leader. In the 1920s Dubrovsky lectured at the Chernihiv and Kharkiv institutes of people's education. He was an associate of the Chair of the History of Ukrainian Culture in Kharkiv and of the Institute of Eastern Studies until 1933 and an inspector of cultural monuments in Ukraine. He was imprisoned in Stalin's labor camps in 1934–9. In 1941–3 was a professor at Kharkiv University and headed the Kharkiv Prosvita society. In 1943 Dubrovsky moved to Lviv, and after the war he settled first in Germany and then in the United States, in 1956. Dubrovsky was the author of many articles on Left-Bank Ukraine's social and

Leontii Dubovyk

Vasyl Dubrovsky

economic history, museology, and Turkish affairs, as well as of translations of Turkish literature, journalistic sketches, and stories. His major works are *Selians'ki rukhy na Ukraïni pislia 1861 r.: Chernihivs'ka hub. (1861–1866)* (Peasant Movements in Ukraine after 1861: Chernihiv Gubernia [1861–1866], 1928); *Narysy z istorii Chernihivs'koï Troïts'ko-Illins'koï drukarni v pershii polovyni XIX st.* (Essays on the History of the Chernihiv Holy Trinity-St Elijah [Monastery] Printing House in the First Half of the 19th Century; 1928); *Zhyttia i dila Feodosiia Uhlyts'koho (Polonyts'koho)* (The Life and Deeds of Feodosii Uhlytsky [Polonytsky], 1930).

Dubrovsky, Viktor [Dubrovs'kyj], 1876–1937. Lexicographer, associate of the Institute of Ukrainian Scientific Language at the All-Ukrainian Academy of Sciences. He compiled the *Moskovs'ko-ukraïns'kyi slovnyk* (Russian-Ukrainian Dictionary, 1911, 1917, 1918), *Moskovs'ko-ukraïns'ka frazeolohiia* (Russian-Ukrainian Phraseology, 1917), *Rossiis'ko-ukraïns'kyi tekhnichnyi slovnyk* (Russian-Ukrainian Technical Dictionary, 1925, 1926), and a technical dictionary, mostly of river-transportation terminology (1938). In 1930 he was arrested in connection with the *Union for the Liberation of Ukraine and was exiled to Alma-Ata in 1932. There he was arrested again in 1936 and deported to a labor camp, where he died.

Dubrovysia [Dubrovycja]. II-7. City (1972 pop 7,600) on the lower Horyn River in Volhynian Polisia; a raion center in Rivne oblast. The town has shown little growth (1931 pop 7,000). In the 12th–13th century it was the center of an appanage principality in Turiv-Pynske principality. In the 14th century it was the family estate of the Olshansky princes (kinsmen of the Lithuanian grand duke Vytautas). Today the town's industry is of merely local importance.

Dubyna, Kuzma, b 23 October 1906 in the village of Pidhorodnie in Katerynoslav gubernia, d 22 September 1967 in Kiev. Historian. In 1943–9 he served as director of the Derzhpolityvdav publishing house of the Ukrainian SSR; in 1956–64, as rector of the Institute for Upgrading the Qualifications of Social Sciences Lecturers, which became part of Kiev University; in 1964–7, as director of the Institute of History of the Academy of Sciences of the Ukrainian SSR; and in 1967, as the editor in chief of *Ukraïns'kyi istorychnyi zhurnal*. From 1962 Dubyna was also a professor at institutions of higher learning in

Kiev. He published works on the Soviet-German War of 1941–5 and co-authored the popular *Istoriia Ukraïns'koi RSR* (History of the Ukrainian SSR, 2 vols, 1967).

Duck, wild (*Anas*; Ukrainian: *dyka kachka*). Water bird of the Anseriformes order. Several species of wild duck migrate through or nest in Ukraine. The most common species are the mallard (*A. platyrhynchos*), which is 63 cm in length and 1.5–2 kg in weight and has a wingspan of over 1 m, and the garganey (*A. querquedula*), which weighs 0.3–0.6 kg. The shoveler (*A. clypeata*), which weighs 0.5–0.8 kg, is less common. The European teal (*A. crecca*), weighing 0.2–0.5 kg, and the pintail (*A. acuta*), weighing 0.6–1 kg, nest mostly in northern Ukraine. The gadwall (*A. strepera*), which weighs 0.6–1 kg, is usually found on the seacoast and on the large lakes of western Polisia. The widgeon (*Mareca penelope*) is rare in Ukraine and is usually encountered during its migration. The domesticated duck is believed to be the descendant of the mallard.

Duda (bagpipe) (also known as *volynka*, *koza*, *baran*, and *mikh*). A folk instrument that has been played in Ukraine since the 16th century. It consists of a goatskin bag that holds the air and has wooden sockets (*holovychky*). Into these sockets (stocks) are inserted the following pipes: (1) the blowpipe (*sysak*), with a stopper or a non-returning valve, through which the bag is inflated; (2) two bass pipes (drones): the longer one, known as the *huk*, emits a low drone, the shorter a high drone; and (3) the melody pipe with holes for fingering as in the **sopilka*.

Dudariv (Dudariev), Dmytro, b 2 November 1890 in Katerynoslav, d 6 August 1960 in Lviv. Stage actor. Dudariv began his stage career in 1910 with various provincial Ukrainian troupes. From 1927 he was the leading actor of the Ukrainian drama theaters in Zaporizhia and (from 1944) Lviv. His life is chronicled in K. Hubenko's *Shliakh artysta* (The Artists's Road, 1950).

Dudchak [Dudčak]. A family of nineteenth-century folk artists who produced artistic metal wares in the village of Brustury in the Hutsul region. Lukyn Dudchak, who flourished in the late 18th and early 19th century, and his son Nykora made pipes, nutcrackers, powder horns, etc, decorated in a highly geometric style. Lukyn's grandson, Dmytro Dudchak (1865–?), employed plant motifs and other innovative decorations in his work.

Dudchenko, Ivan [Dudčenko], b 1 October 1867 in Novomyrhorod, Kherson gubernia, d 19 June 1947 in Chita, Russian SFSR. Physician, epidemiologist, and bacteriologist. Dudchenko worked in Ukraine, Siberia, and the Far East. His topics of study included bubonic plague and health statistics.

Dudick, Michael (Dudyk, Mykhailo), b 23 February 1916 in St Clair, Pennsylvania. Catholic bishop of the Byzantine rite in charge of the Passaic eparchy in the United States since 1968. He is a consultant of the Congregation for Eastern Churches and a member of the Harvard Ukrainian Studies and Research Institute.

Dudko, Danylo, b 28 July 1921 in the village of Popeliukhy, Vinnytsia oblast. Specialist in the science of materials and electric welding, full member of the Acad-

emy of Sciences of the Ukrainian SSR since 1978. In 1944 Dudko joined the Institute of Electric Welding of the Academy of Sciences of the Ukrainian SSR. His principal publications and inventions deal with the mechanization of welding and its technological and metallurgical properties, the plasmatic treatment of materials, and the behavior of complex materials under various conditions of use.

Fedir Dudko

Dudko, Fedir (pseuds: Odud, F. Karpenko, F. Dudko-Karpenko), b 7 May 1885 in the village of Shabolyna, Chernihiv gubernia, d 1 March 1962 in New York. Writer and journalist. Dudko studied journalism in Moscow and began to work as a journalist in Kiev in 1907. In 1920 he moved to Lviv, where he worked as a journalist and at the library of the Shevchenko Scientific Society. During the Second World War he worked for *Krakov's'ki visti*. In 1944 he emigrated to Western Europe and in 1949 to the United States. Dudko wrote many short novels, most of them linked with the period of the Ukrainian revolution. They display an intimate knowledge of the daily life of the times, an ability to build captivating plots, and an inclination towards romanticization. Dudko's legacy includes the following works: *Otaman Kruk* (1924); the collections of short stories *Divchata ochaidushnykh dnoiv* (The Girls of Desperate Days, 1937) and *Hlum* (Scorn); a cycle of novels (1928–31) – *V zahravi* (In the Blaze), *Chortoryi* (Vortex), *Kvity i krov* (Flowers and Blood), *Na zharyshchakh* (On the Burned Ruins), and *Prirva* (The Precipice); the collection *Zametil'* (The Blizzard, 1948); a historical novel, *Velykyi het'man* (The Great Hetman, 1936); the historical story 'Strybozha vnuka' (A Granddaughter of Stryboh, 1937); and stories for children.

Dudykevych, Bohdan [Dudykevych], b 12 April 1907 in Kropyvnyk, Kalush county, Galicia, d 6 January 1972 in Lviv. Activist of the Communist Party of Western Ukraine, later a Soviet historian. In the 1930s Dudykevych edited Communist publications in Galicia. From 1950 he served as director of the Lviv branch of the Lenin Central Museum. He published a number of works on the history of the Communist movement in Western Ukraine.

Dudykevych, Volodymyr [Dudykevych], 1861–1922. Lawyer in Kolomyia. Dudykevych was one of the leaders of the Galician *Russophiles at the turn of the century. He was a member of the Galician Diet and headed a group known as the Novokursnyky, which advocated complete unity with Russia. During the Russian occupation of Galicia in the First World War, Dudykevych supported

the official Russification policy. Dudykevych died in a Cheka prison in Tashkent.

Duel. Combat with deadly weapons between two persons. Dueling was known to some extent in Rus'. It was considered to be a trial decided by God and was used to prove guilt or innocence. The combatants had to be equal in physical strength. Women could use a proxy. Lithuanian-Ruthenian law prohibited dueling without the consent of the grand duke, which was given only in exceptional cases. Dueling was punishable as a crime, but in cases of homicide or maiming the murderer did not pay the usual private fine called *holovshchyna*. Hetman law strictly forbade dueling. Homicide resulting from a duel was treated as ordinary murder and was punished by death without private compensation to the victim's family. Neither the victim nor the executed murderer could be given a Christian burial. For this reason duels were very rare among the Ukrainian gentry and the Cossacks. Under the Russian Empire, in spite of the fact that it was forbidden, dueling was an accepted way of 'defending one's honor' among the nobility and army officers. The criminal code of the Ukrainian SSR does not recognize the institution of dueling. Homicide or maiming in the course of a duel is punished as common murder or assault.

Duka, George, ?–1685. Moldavian ruler who in 1681, after the unseating of Yu. Khmelnytsky, was appointed hetman over a part of Right-Bank Ukraine by the Turkish government. Duka was given the title 'Voivode and Hospodar of Moldavian and Ukrainian Lands' and established his capital in Nemyriv, Podilia. He was to populate the devastated land and restore the old Cossack privileges, but he died in Lviv before he could carry out his plans.

Duka, Stepan, b 10 April 1907 in the village of Zhovte in Katerynoslav gubernia, d 23 June 1960 in the village of Novosilky near Kiev. Specialist in the selection and genetics of fruit and berry plants. Duka worked at the Uman Agricultural Institute (1929–38) and then at the Ukrainian Scientific Research Institute of Orcharding, where he became the director in 1949. His publications deal with genetics, selection, and the cultivation of orchards.

Dukhivnytsia (testament). The act of determining the disposition of one's property after death; a will or testament. The term *dukhivnytsia* was used alongside the Old Rus' *riad* beginning in the 15th century. In **Ruskaia Pravda* this institution of inheritance law was not clearly defined. The disposition of a person's property was usually settled by an agreement among family members, not by the wishes of the deceased. A dying man could leave his property only to his children or wife. In the distant past the form of *dukhivnytsia* was usually oral; later it was written. The Lithuanian Statute and Cossack law defined the institution of *dukhivnytsia* quite specifically in terms of who had a right to make a testament, within what limits, the formalities, etc. (See **Inheritance law*.)

Dukhnovsky, Mykola [Duxnovs'kyj], b 12 October 1908 in Warsaw. Theater set designer. Dukhnovsky graduated from the Kiev Art Institute in 1931 and was the

chief designer of the Kiev Russian Drama Theater (1934–62). Through the years he also designed sets for various Ukrainian theaters – in Zhytomyr, Chernivtsi, and for the Ukrainian Drama Theater in Kiev. From 1946 to 1971 Dukhnovsky lectured at the Kiev Institute of Theater Arts, and from 1964 to 1977 he was a professor at the Kiev Art Institute.

Oleksander Dukhnovych

Dukhnovych, Oleksander [Duxnovyč], b 24 April 1803 in Topolia in the Prešov region, d 30 March 1865 in Prešov. Pedagogue, writer and publicist, Greek Catholic clergyman, canon of the Prešov consistory, Transcarpathian community and cultural leader. Dukhnovych devoted himself to defending Transcarpathia from Magyarization, and in 1848 he was severely persecuted for this. He began his cultural work by collecting Ukrainian folk songs, which were published by Ya. Holovatsky in 1878. In 1850 he founded the Prešov Literary Society, which engaged in cultural and educational work, such as publishing calendars and popular books. Dukhnovych wrote a number of patriotic poems, in particular 'Ia rusyn був, ies'm i budu' (I Was, Am, and Will Be a Ruthenian) and 'Podkarpats'ki rusyny' (Subcarpathian Ruthenians), which in 1919–38 were adopted as the national anthems of the Transcarpathian Ukrainians. He also wrote a play in the vernacular – *Dobroditel' perevyshchaet bohats'tvo* (Virtue Is More Important than Wealth, 1850). His numerous articles appeared in such periodicals as *Zoria Halytskaia* (Lviv), *Vistnyk* (Vienna), *Tserkovnaia hazeta* (Budapest), and *Slovo* (Lviv). Dukhnovych was known for his elementary school textbooks (*Knyzhytsia chytal'naia dlia nachynaiushchykh* [Reader for Beginners], 1847), catechism, prayer book (*Khlib dushi* [Bread for the Soul]), and pedagogical articles. He wrote in the vernacular with an admixture of Church Slavonic. One of Dukhnovych's works in Latin was translated into Russian and published in St Petersburg in 1877 under the title *Istoriia Priashevskoi eparkhii* (History of the Priashiv Eparchy); it also appeared in English as *The History of the Eparchy of Prjasev* (Rome 1971). Transcarpathian Russophiles of the **Dukhnovych* Society exploited his name in 1922–38 for their anti-Ukrainian campaign. Dukhnovych's works were published in two volumes in Bratislava-Prešov in 1967–8.

Dukhnovych Society (Obshchestvo im. A. Dukhnovicha). A Russophile cultural-educational society in Transcarpathia founded in 1923 by Y. Kaminsky, S. Fentsyk, and others to compete with the *Prosvita society. For many years its president was Rev Ye. Sabov and its secretary was S. Fentsyk. Among its most active members were I. Hadzhega (the last president), A. Brodii, M. Demko, and E. Bachynsky. The society's central offices were in Uzhhorod and Prešov. In its most active period (1934) the society had 315 reading rooms, 16 people's homes, 76 choirs, 39 orchestras, 19 sports clubs, over 200 amateur theatrical groups, a publishing house for popular books, and a scholarly-cultural monthly in Russian, *Karpatskii svet* (The Carpathian Light, 1928–33). The society held the so-called Days of Russian Culture. Publication and research were mostly in the hands of Russian émigrés; the society received financial aid from the Czechoslovakian government. When the Hungarian government refused to support the Russophile movement in Transcarpathia, the society's activities came to an end in Uzhhorod in 1939–40 and in Prešov in 1945.

A. Shtefan

Dukhovne uchylyshche. See School for children of the clergy.

Dukhovnyi reglament (Spiritual Regulation). A collection of state ordinances entitled *Reglament ili ustav Dukhovnoi Kollegii*, which defined the status of the Holy Synod, the highest ecclesiastical authority in Russia and Ukraine. It was written in 1721 on the orders of Tsar Peter I by T. *Prokopovych. The *Dukhovnyi reglament* abolished the office of patriarch and subordinated the Orthodox hierarchy to secular authority; the emperor became head of the church. In 1917 the Russian Provisional Government annulled the *Dukhovnyi reglament*.

Dukhovnyi siiach (The Spiritual Sower). An Orthodox, popular-religious illustrated bimonthly that appeared first in Warsaw in 1927 (ed, V. Ostrovsky) and from April 1928 in Kremianets as the organ of the Volhynian eparchy (ed A. Kotovych). Its publication was stopped by the Polish government in August 1931.

Duklia. A leading Ukrainian literary journal in Prešov, eastern Slovakia; named after a Carpathian mountain pass. *Duklia* first appeared as a quarterly in Russian in 1953. From 1960 it appeared every second month, and, from 1966, entirely in Ukrainian. From 1966 until the Soviet occupation of Czechoslovakia in 1968, it played a prominent role, mainly under the leadership of O. Žilynsky, printing many contributions from Soviet Ukraine and becoming the focal point for dissenting Ukrainians in Czechoslovakia. Its editor in chief at that time was F. Ivanchov, and Yu. Bacha, Ye. Biss, V. Datsei, P. Murashko, I. Matsynsky, O. Rudlovchak, and I. Shelepets were on the editorial board. Since 1972 F. Kovach and M. Iliuk have been the editors. In recent years *Duklia* has almost entirely lost its independent, creative spirit.

Duklia Pass. iv-2. A pass in the Lower Beskyds in the Lemko region (elevation 502 m) on the border between Poland and Czechoslovakia. It is one of the most convenient Carpathian passes. In the past it provided an important route between the Principality of Galicia-

Volhynia and Hungary, and then between Poland and Hungary. In the 19th century the pass lost its importance because it lacked a railroad. In 1914–15 it was the site of fierce battles between the Russian and Austro-Hungarian armies and in 1944–5, between the German and Soviet armies. In January 1945 many Ukrainians who belonged to the *Czechoslovak Brigade, led by General L. Svoboda, perished there fighting the Germans.

Duklia Ukrainian Folk Ensemble (Pidduklianskyi ukrainskyi narodnyi ansambl or PUNA). A professional song and dance ensemble of the *Ukrainian National Theater in Prešov, founded in 1956. Most of the ensemble's repertoire consists of artistic arrangements of the folklore of the Prešov region. The ensemble gives performances throughout the region and outside the country. It has visited Transcarpathia oblast of the Ukrainian SSR, Poland, Yugoslavia, Bulgaria, Rumania, West Germany, France, Holland, and Italy. The artistic directors of the ensemble have been Yu. Kostiuik, Yu. Tsymbora, and M. Němcova.

Dulcimer. See *Tsymbaly*.

Dulibians (Duliby). An East Slavic tribe or alliance of tribes that, according to Rus' chronicles, inhabited western Volhynia. In the mid-7th century the Dulibians were crushed by the Avars. According to the Primary Chronicle, they took part in Prince Oleh's campaign against Constantinople in 911. In the 10th century the alliance probably disintegrated, and the tribes, bearing the names Volhynians and Buzhanians, came under the Kievan state.

Duma. Lyrico-epic works of folk origin about events in the Cossack period of the 16th–17th century. The dumas differ from other lyrico-epic and historical poetry by their form and by the way in which they were performed. They did not have a set strophic structure, but consisted of uneven periods that were governed by the unfolding of the story. Each period constituted a finished, syntactical whole and conveyed a complete thought. The poem's lines varied in length from 4 to 40 syllables. Rhyme played an important role. Usually the verbs carried the rhyme and in this way bound several lines together. The dumas were not sung, but were performed in recitative to the accompaniment of a *bandura, *kobza*, or *lira*. The chanting had much in common with funeral lamentation. The poetics of the *duma* were similar in some ways to that of Serbian epic poetry. Synonym pairs (*plache-rydaie*, *bizhyt-pidbihaie*) and standard epithets (*buinyi viter*, *synie more*, *syva zozulia*) were frequently used.

Origin. Scholars connect the dumas with the poetic forms that appeared in Ukraine in the 12th century, particularly with the **Slovo o polku Ihorevi*. One widely accepted theory of the origin of the dumas is that proposed by P. Zhytetsky, according to which they were a unique synthesis of popular and 'bookish-intellectual' creativity. The dumas were based on the folk song, modified by the influence of the syllabic poetry produced in the schools of the 16th–17th century. The language of the dumas retains many archaisms and Church Slavonic expressions. The bookish elements could have been introduced into the historical songs by traveling tutors and cantors in the 17th century. V. Peretts described the dumas as 'a harmonious synthesis of cultural-individual

creativity with folk creativity.' The dumas were first mentioned by the Polish historian S. Sarnicki, who, in his *Annales* under the year 1506, mentions that mournful songs – dumas – were composed in honor of two brothers who died during the Wallachian campaign. The dumas arose from the military life of the 16th–17th century.

Themes. The dumas can be divided into two thematic cycles. The first and older cycle consists of dumas about the struggle with the Tatars and Turks. Among these the following groups can be distinguished: (1) dumas about Turkish captivity ('The Escape of the Three Brothers from Azov,' 'Marusia Bohuslavka,' etc.); (2) dumas about a Cossack's heroic death ('Samara Brothers,' 'Ivan Konochnenko,' 'Khvedir Bezridny,' etc.); (3) dumas about the successful liberation of Cossacks from slavery or their return from a campaign ('Samiilo Kishka,' 'Oleksii Popovych,' 'Otaman Matiash,' etc.). In addition, the older group of dumas includes (4) moralizing songs about daily life ('About the Widow and Her Three Sons,' 'About the Brother and Sister,' etc.). All the older dumas are distinguished by their lyrical quality, mournful tone, and profound moral insight. Their linguistic richness and style point to their close connection with the older folk songs, particularly funeral laments.

The second cycle consists of dumas about the Cossack-Polish struggle. By content they can be divided into two groups: (1) dumas about the Khmelnytsky period ('Khmelnytsky and Barabash,' 'The Battle of Korsun,' 'Leases,' 'Khmelnytsky's Moldavian Campaign,' etc) and (2) dumas on social themes ('The Duma about Handzha Andyber,' 'Duma about Cossack Holota's Duel with a Tatar,' etc).

History of collection and scholarship. The collecting and study of dumas has evolved through three periods. During the first period, in the 1820s–1830s, the earliest collections of Ukrainian folk songs were published by N. Tsertelev, M. Maksymovych and P. Lukashevych, and these collections contained the first transcriptions of dumas. In this period no scholarly analysis was attempted. In the second period there was a great surge of interest in dumas. They were widely used by such writers as T. Shevchenko, Ye. Hrebinka, N. Gogol, and P. Kulish. Kulish tried to construct an anthology of dumas in his poem *Ukraina od pochatku Ukrainy do bat'ka Khmelnyts'koho* (Ukraine from the Origin of Ukraine to Father Khmelnytsky, 1843). Dumas were collected and published by D. Metlynsky in *Narodnye iuzhno-russkie pesni* (South Russian Folk Songs, 1854) and by Kulish in *Zapiski o Iuzhnoi Rusi* (Notes on Southern Rus', 1856–7). In this period many new variants were discovered, and new standards of transcription were established. Scholarly research on dumas was begun, particularly by M. Kostomarov. The third period of collection and research came in 1860–90, and its achievements have retained their validity to this day. V. Antonovych and M. Drahomanov's publication of dumas entitled *Istoricheskie pesni malorusskogo naroda* (The Historical Songs of the Little Russian People, 2 vols, 1874–5) had an epochal significance. The texts of the dumas were accompanied an extensive historical and comparative-literary commentary. P. Zhytetsky's works were very important. The earliest research on the music of the dumas was done by M. Lysenko.

In connection with the Twelfth Archeological Conference in Kharkiv in 1902, there was a great increase of interest in the professional duma singers–bandurysts,

kobzars, and lirnyks. Research on the dumas reached its scholarly culmination in K. Hrushevska's work *Ukrains'ki narodni dumy* (Ukrainian Folk Dumas, 2 vols, 1927–31).

The dumas have been translated into various languages: into Polish by M. Grabowski in 1837 and M. Kasjan in 1973, into German by F. Bodenstedt in 1845, into French by A. Rambaud in 1876, and into English by Florence K. Livesay in 1916. The best and most complete collections were translated into French by M. Scherrer (1947) and into English by G. Tarnawsky and P. Kilina (1979).

Duma, State. A parliament with limited powers that existed in the Russian Empire in 1906–17. The duma was established in response to the Revolution of 1905 by the tsar's manifesto of 30 October 1905, setting forth its limited legislative powers. The body was elected using the curial system. Ukrainians under Russia were able to elect their own representatives in the elections to the first and second dumas. Among the elected representatives were nationally conscious Ukrainian leaders as well as ordinary peasants. A Ukrainian caucus existed in the First Duma (10 May–21 July 1906) and Second Duma (5 March–15 June 1907). It consisted of 44 and 47 members respectively, who eventually formed the Ukrainian Duma Hromada with its own political program. The prominent members of the Ukrainian caucus at the First Duma were I. Shrah (leader), P. Chyzhevsky, V. Shemet, A. Viazlov, and the peasants M. Onatsky, H. Zubchenko, and A. Hrabovetsky. The caucus of the Second Duma included M. Rubis, Rev A. Hrynevych, S. Nechytailo, and V. Khvist. The official publication of the caucus in the First Duma was *Ukrainskii vestnik*; in the Second Duma, *Ridna sprava – Dumski visti*. Most of the Ukrainian deputies belonged at the same time to the larger caucus of non-Russian nationalities known as the *Autonomists' Union. The first and second dumas were dissolved by the tsar's government.

The Third Duma (1907–12) and Fourth Duma (1912–17) were elected under a different electoral system, introduced by the law of 3 June 1907. This law limited the representation of the peasantry, workers, and national minorities

and favored the landowners. The majority in the dumas represented Russian conservative circles. There were few nationally conscious Ukrainians in the last two dumas, and they did not form their own caucus or representation. Ukrainian and other progressive delegates often raised questions in the dumas about such matters as the persecution of the Ukrainian press, the need for Ukrainian schools, and Russian repressions in occupied Galicia during the First World War, but their efforts were of little consequence.

Anton Dumansky

Dumansky, Anton [Dumanskii], b 20 June 1880 in Ivanovo-Voznesensk (now Ivanovo), Russia, d 14 May 1967 in Kiev. Chemist, full member of the Academy of Sciences of the Ukrainian SSR from 1945, corresponding member of the Academy of Sciences of the USSR from 1933, director of the Scientific Research Institute of Colloidal Chemistry in Voronezh in 1932–41, director of the Institute of General and Inorganic Chemistry of the Academy of Sciences of the Ukrainian SSR in 1945–60. Dumansky was a pioneer of colloidal chemistry in Ukraine and the Soviet Union. His basic works were devoted to studies of the properties of colloidal substances using physico-chemical analysis, investigations of the factors that determine the stability of colloidal systems, and to research on the lyophilic qualities of dispersed systems. Dumansky was the founder of the journal *Kolloidnyi zhurnal* and its main editor from 1935 to 1967.

Dumin, Osyp, 1893–1945. Captain of the Sich Riflemen and military historian. Dumin also wrote memoiristic articles for such journals as *Literaturno-naukovyi vistnyk* and *Litopys Chervonoï Kalyny*. The following works were published separately: *Narys istorii ukrains'ko-pol's'koi viiny, 1918–19* (An Outline of the History of the Ukrainian-Polish War, 1918–19, Lviv 1933; repr, New York 1966), *Istoriia Legionu uss* (A History of the Legion of Ukrainian Sich Riflemen, Lviv 1936), and *Partyzany* (The Partisans). He co-authored *Istoriia ukrains'koho viis'ka* (History of the Ukrainian Armed Forces, Lviv 1936; repr, Winnipeg 1953). Dumin was a research associate of the Institute of Eastern Studies in Königsberg. His pen name was Antin Krezub.

Dumka, Pavlo, 1854–1918. Galician civic and political peasant activist, resident of the village of Kupchyntsi in

Ternopil county, where he was born and died. Dumka was a founding member of the Ukrainian Radical party, a deputy to the Galician Diet (1908–18), and a member of the Ukrainian National Council of the Western Ukrainian National Republic. He wrote poetry, which appeared in Galician magazines, almanacs, and collections.

Dumka. Nineteenth-century term for lyrical, often sentimental, Slavic songs or instrumental (especially piano) works patterned on folk-song melodies. Piano works of this type include 'Dumka' by D. Bonkovsky, 'Dumky' and 'Dumka z Ukraïny' by M. Zavadsky, and 'Dumka i kolo-myika' by S. Vorobkevych.

Dumka (Thought). Bimonthly, and from 1942 a semi-monthly, of a nationalist orientation published in Zagreb and Ruski Krstur in Yugoslavia between 1936 and 1944. The newspaper appeared in both literary Ukrainian and in the Ukrainian *Bačka dialect until 1940, after which time only the literary language was used. Its editors were Rev S. Salomon (1936–7) and Rev M. Buchko (1937–44). In 1941 the paper became the official organ of the Ukrainian Representation in Zagreb.

Dumka. Ukrainian choir in New York. Founded in 1949, Dumka was at first a male choir; it has been mixed since 1959. The choir has given concerts in the United States and Canada. Among its conductors have been L. Krushelnysky, O. Bernyk, I. Sonevytsky, I. Zadorozhny, and S. Komirny.

DUMKA (Derzhavna ukrainska mandrivna kapelia [State Traveling Ukrainian Kapelle]). Soviet Ukrainian chorus formed in Kiev in 1919 from the Dniprosouiz Chorus, which had been founded during the struggle for Ukraine's independence and reconstituted as the chorus of the Kiev Department of People's Education. DUMKA has become famous for its highly artistic interpretations of the Ukrainian and world choral repertoire. The chorus has toured very successfully in Ukraine, in other republics of the Soviet Union, and abroad, especially in France (1929). Its principal conductors have been N. Horodovenko (1919–41), O. Soroka, P. Muravsky, and M. Krechko (since 1969).

Dumytrashko, Kostiantyn [Dumytraško, Kostjantyn] (pseud: O. Kopytka), b 1814 in Zolotonosha, Poltava gubernia, d 7 May 1886 in Kiev. Writer. Dumytrashko studied and then taught Russian oral literature at the Kiev Theological Academy, where he was also secretary and librarian. His first poem, 'Zolotonosha,' and folk songs collected by him were published in 1848 in the journal *Maiak*. He was the author of ballads such as 'Zmii' (The Dragon) and 'Pomynky' (Commemoration Feast) and of poetry such as 'Chornii brovy, kariï ochi' (Black Brows, Brown Eyes), later a popular folk song. In 1858 he published a collection of his works entitled *Banduryst* (The Bandura Player). A year later he published the poem *Zhabomyshodrakivka* (The Frog mouse fight), which is a travesty and burlesque on the political events of the 17th century, written with an anti-Polish and pro-Russian tendency. With this work Dumytrashko became a belated epigone of I. Kotliarevsky.

Dunaiivtsi [Dunajivci]. v-7. City (1970 pop 14,600) situated on the Ternava River in eastern Podilia; a raion center in Khmelnytskyi oblast. Dunaiivtsi was first mentioned as Dunaihorod in documents in 1403. In 1592 it was granted Magdeburg law, and from then on fairs were held there. In the 19th century a textile industry (consisting of several woolen-cloth factories) developed in Dunaiivtsi. Later, a furniture factory, armature plant, and machine-repair shop were built.

Durdukivsky, Volodymyr [Durdukivs'kyj], b 17 September 1874 in the Kiev region, date of death unknown. Pedagogue. During the period of the Ukrainian National Republic, Durdukivsky was the director of the Shevchenko First Ukrainian Gymnasium in Kiev. During the Soviet period he was the director of the First Labor School. He headed the Scientific-Pedagogical Commission of the All-Ukrainian Academy of Sciences until the commission was dissolved in 1930. He was one of the founders of the Vik publishing house. His articles on pedagogy appeared in such Kiev journals as *Svitlo* (1910–14) and *Vil'na ukrains'ka shkola* (1917–20), and in *Pratsi Naukovo-pedahohichnoi komisii pry VUAN*. In 1930 he was sentenced to eight years' imprisonment at the show trial of the *Union for the Liberation of Ukraine but was soon released. He was arrested again during the Yezhov terror and disappeared without trace.

Durnovo, Nikolai, b 4 November 1876 in Moscow, d 27 October 1937 in Czechoslovakia. Russian Slavist of the neogrammarian school, lecturer at the University of Kharkiv and then professor at Moscow University and Brno University, corresponding member of the USSR Academy of Sciences from 1924. In *Ocherk istorii russkogo iazyka* (An Outline of the History of the Russian Language, 1924) he gave a survey of the history of Ukrainian phonology and morphology from a perspective close to Shakhmatov's. In *Vvedenie v istoriiu russkogo iazyka* (Introduction to the History of the Russian Language, 1927; 2nd edn 1969) he presented the most complete survey of the time of old East Slavic texts and a bibliography of publications of them. Durnovo succeeded in showing the importance of Old Ukrainian manuscripts for the study of Church Slavonic (*Južnoslovenski Filolog*, 4–6) and researched the phonetic problems of Old Ukrainian texts such as the Arkhangelsk Gospel and the Halych Gospel of 1144. He also studied Ukrainian dialectology and compiled *Khrestomatiia malorusskikh govovorov* (A Chrestomathy of Little Russian Dialects, 1913). With N. Sokolov and D. Ushakov he worked out a classification of these dialects in *Opyt dialektologicheskoi karty russkogo iazyka* (An Attempt at a Dialectological Map of the Russian Language, 1915). He supported V. Hantsov's conception of Ukrainian dialects in the latter's polemics with S. Smal-Stotsky (1925) and did fieldwork on the dialects of Transcarpathia (1928). Durnovo also launched the theory of the interrelation of the two Slavic alphabets – Glagolitic and Cyrillic. He died in exile. A list of his writings is published in *Trudy uchenykh filologicheskogo fakul'teta Moskovskogo universiteta po slavianskomu iazykovedeniiu*, 2 (Moscow 1968).

Dushchenko, Yevhen [Duščenko, Jevhen], b 23 June 1925 in Odessa. Conductor. Dushchenko worked as a chorus master and conductor in Kiev and Kharkiv. From 1963 to 1973 he was chief conductor of the Kharkiv

Theater of Opera and Ballet; since 1973 he has been chief conductor of the Kiev Operetta Theater.

Dushechkin, Aleksandr [Dušečkin], b 13 August 1874 in Opechenskii Riadok near Novgorod in Russia, d 8 April 1956 in Kiev. Agricultural chemist and plant physiologist. Dushechkin became a full member of the Academy of Sciences of the Ukrainian SSR in 1945, a professor at the Kiev Institute of Agriculture in 1923, and served from 1946 to 1953 as director of the Institute of Physiology and Agrochemistry of the Academy of Sciences of the Ukrainian SSR. His research studies are concerned with the form and dynamics of feed components in soil, their absorption by plants, and their influence on harvest quality, as well as with the technology of fertilization.

Dushnyck, Walter [Dušnyk, Volodymyr], b 1908 in the village of Zastavtsi, Pidhaitski county, Galicia. Journalist, community figure. Dushnyck has edited the journals *Natsionalist* and *Visnyk ODVV* and has been co-editor of the newspapers *Svoboda* and *The Ukrainian Weekly*. He has also edited the periodical publications of the Ukrainian Congress Committee of America: *The Ukrainian Quarterly* (since 1957), and *Ukrainian Bulletin* (until 1970). Dushnyck has prepared and published a number of English translations of works on Ukraine. His writings include *Death and Devastation on the Curzon Line* (1949) and *The Ukrainian-Rite Catholic Church at the Ecumenical Council, 1962–1965* (1967).

Dushpastyr (Spiritual Pastor). Church bimonthly published in Lviv in 1887–98, first as a supplement to the journal *Myr*, then independently. Its publisher was Rev O. Bachynsky; its editor, Rev I. Komarnytsky. The journal contained sermons and essays.

Dushpastyr (Spiritual Pastor). Monthly organ of the Mukachiv and Prešov eparchies. It was published in Uzhhorod-Prešov in 1933–38 under the editorship of Rev O. Ilnytsky.

Dutchak, Vasyl [Dutčak, Vasyl'], 1869–1947. A Bukovynian civic and political leader, lawyer, deputy to the Rumanian parliament (1930–2). Dutchak was one of the founders of the Ukrainian National Organization in Chernivtsi (1922–7) and a member of the executive of the Ukrainian National party in Bukovyna (1927–38). As a member of parliament he protested the infringement by the Rumanian authorities of Ukrainian national rights in Bukovyna and drafted four petitions to the League of Nations on this issue. Dutchak published a number of works on law in Ukrainian, German, and Rumanian: *Tabuliarni dobra i dvirs'ki obshary na Bukovyni* (Tabular Property and Estate Lands in Bukovyna, 1907), *Iak vidzhyvaiut' davni shtuchni obshary dvirs'ki na Bukovyni* (How the Old Artificial Estate Lands Are Being Revived in Bukovyna, 1912), 'Innere Kolonisation in der Bukovina,' in *Zur Beleuchtung der Agrarreform* (1920), *Das Feststellen der rumänischen Staatsangehörigkeit* (1923), *Das Minimum der Vokstammrechte in Rumänien* (1923), and others. He contributed articles to the following newspapers: *Bukovyna* (which he edited in 1896), *Chas*, and *Czerowitzzer Allgemeine Zeitung*.

Duties. See Tariffs.

Ivan Dutka

Dutka, Ivan, b 25 May 1899 in Lenkivtsi near Chernivtsi; d 28 March 1940 in Chernivtsi. Stage actor and director in Bukovyna. In 1918–33 Dutka worked with the troupes of K. Rubchakova, K. Terletsky, and I. Dudych. From 1933 to 1939 he was an actor and director in the drama group of the Bukovynskiy Kobzar society in Chernivtsi. Dutka performed leading roles in the plays *Dovbush* by Yu. Fedkovych and *Nazar Stodolia* by T. Shevchenko, and the role of Ion in I.L. Caragiale's *Năpastă* (False Witness). He directed productions of M. Starytsky's *Taras Bul'ba*, B. Hrinchenko's *Yasni zori* (Bright Stars), A. Strindberg's *The Father*, and other plays.

Dutkevych, Yuliiian [Dutkevych, Julijan], 1857–1925. Ukrainian Catholic clergyman, for many years pastor of Dubie parish in Brody county, Galicia. Dutkevych was the founder of the first Ukrainian farmers' association – *Sil'skyi Hospodar – in 1898. He wrote popular articles and studies on farming, particularly on beekeeping. His collection of short stories – *Tsvity i budiaky* (Flowers and Thistles) – was published under the pseudonym E. Varnych.

Duzhy, Mykola [Dužyj], b 1900 in the village of Kariv, Rava Ruska county, Galicia, d 17 May 1955 in Lviv. Leading member and organizer of the Prosvita society. In 1930–9 Duzhy served as secretary of the society's head office in Lviv and in 1935 became the editor of its calendars. He wrote articles on education and history. Duzhy was a member of the leadership of the OUN and one of the organizers of the Ukrainian Supreme Liberation Council. He served a term in Soviet concentration camps in 1946–55 and died soon after returning to Ukraine.

Dvir. See *Dym*.

Dvorichna [Dvorična]. IV-18. Town smt (1976 pop 3,600) situated on the Oskil River; a raion center in Kharkiv oblast. Dvorichna was founded in 1661. It has a building-materials plant.

Dvoryshche. A self-sufficient farmstead (also called *ohnyshche*) in ancient and medieval Ukraine. Under ancient Ukrainian law the *dvoryshche* was an economic unit, the members of which were bound by blood ties, collective ownership, and collective obligation. In the Lithuanian-Rus' period the *dvoryshche* was declared a taxable unit. The *dvoryshche* generally comprised about 40–50 people of

the same family; non-family members could be accepted into the *dvoryshche* (such a member was known as a *siabr* or *prymych*), but only their children could become co-owners. The estates of the *dvoryshche* included the farmyards, arable land, and appanages of the property (*vhiddia* – apiaries, pasturelands, etc). The *dvoryshche* could be divided up or extended only with the agreement of all its members. This legal and economic institution survived in Polisia, Volhynia, some parts of Galicia, and Podilia until the institution of the *voloka land reform in the 16th century, when it was replaced by individual ownership. The *dvoryshche* was especially common in Belorussia, and it existed among the Southern Slavs, where it was known as *zadruga*, until the 19th century. M. Ivanyshchev and O. Yefimenko wrote scholarly studies on the *dvoryshche*.

Dvuzhyl'na, Kateryna [Dvužyl'na], b 19 September 1913 in Zalizne, Katerynoslav gubernia. Surgeon and professor at the Odessa Medical Institute since 1955. Her research studies are concerned with diagnostic methods, prophylaxis, the surgical treatment of abdominal diseases, and tumors.

Dychenko, Mykhailo [Dyčenko, Myxajlo], b 27 January 1863 in Budaivka near Kiev, d 4 December 1932 in Kiev. Astronomer specializing in astrometry and theoretical astronomy. From 1891 to 1898 Dychenko worked at the Pulkovo Observatory, where he determined the positions of 125 circumpolar stars on the meridian circle. In 1898 he moved to the Kiev Observatory. He studied the motion of the sun by observing stars in the region of Argelander. On the basis of observations made over many years he compiled a catalogue of 640 zodiacal stars, which was published in 1933.

Dychkivna, Yevdokiia [Dyčkivna, Jevdokija], b 18 May 1921 in Demianiv, Rohatyn county, Galicia. Stage actress; wife of V. *Blavatsky. Dychkivna has appeared on the stage since 1935: first with Y. Stadnyk's troupe; from 1939 to 1941 in the Lviv State Drama Theater; and from 1941 to 1944 in the Lviv Opera Theater. After emigrating in 1945, Dychkivna was the leading actress of the Ensemble of Ukrainian Actors in Germany and America. In the 1950s she settled in Philadelphia, where she conducts a Ukrainian radio program.

Yevdokiia Dychkivna

Lesia Dychko

Dychko, Lesia (Liudmyla) [Dyčko, Lesja (Ljudmyla)], b 24 October 1939 in Kiev. Composer. Dychko graduated from the Kiev Conservatory in 1964. Her works include

scores for ballets, voice, chorus, and orchestra, most notably the symphony *Pryvitannia zhyttia* (Welcoming Life) for soprano, bass, and chamber orchestra, based on the words of the imagist poet B.I. Antonych.

Dyka or Dykova, Mariia, b 13 November 1879 in Symferopil, d 26 February 1974 in Moscow. A stage actress, accomplished in various styles and roles, Dyka began her career in 1894 with the Ukrainian troupe of H. Derkach and then (1898–1918) performed with the troupe of O. Sukhodolsky. She worked in the theaters of Kiev and Poltava (1919–31), the Kharkiv Theater of the Revolution (1931–4), and the Kharkiv Ukrainian Drama Theater (1935–42). Dyka acted in heroic and character roles in the Ukrainian classical and Soviet repertoires, as well as in the plays of V. Vynnychenko.

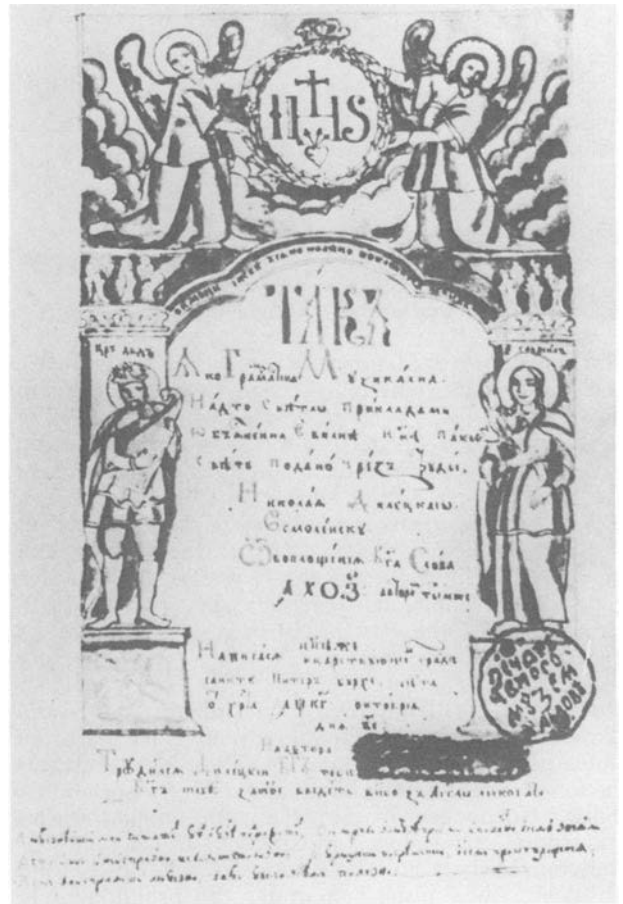

Dykanka [Dykan'ka]. iv-15. Town smt (1978 pop 6,700), a raion center in Poltava oblast. In 1658 the town witnessed the battle between Hetman I. Vyhovsky and the Zaporozhian Cossacks under Ya. Barabash. From 1689 to this century it belonged to the Kochubei family. For centuries the Dykanka region has been renowned for its bedspreads, blankets, and kilims. Today co-operative artels produce woven coverlets, kilims, and embroidered articles. St Nicholas's Church, built in 1794 by N. Lvov, and the Kochubei palace (1810) are its architectural monuments. The town was immortalized by N. Gogol, who called his first collection of stories *Vechera na khutore bliz Dikan'ki* (Evenings on a Homestead near Dykanka, 1831–2). Dykanka has a gas compressing station, a building-ceramics plant, and a food industry.

Dykariv, Mytrofan (also: Dykarev, Dykariiev; pseud: M. Kramarenko), b 12 June 1854 in Valuiky county, Voronezh gubernia, d 26 November 1899 in Mineralnye Vody, Subcaucasia. Ethnographer, full member of the Shevchenko Scientific Society. Dykariv's articles on folk rites and mythology appeared in *Kievskaia starina*, *Etnograficheskoe obozrenie*, and *Materiialy do ukrains'koi etnohrafii*. He wrote one of the most comprehensive surveys of the annual folk rites in Slobidska Ukraine, entitled 'Narodnyi kalendar Valuisokoho povitu' (The Folk Calendar of Valuiky County), which was published in *Materiialy do ukrains'koi etnohrafii*, VI (1905). Another collection of his studies, published after his death, was 'Posmertni pysannia z polia folkl'oru i mitolohii' (Posthumous Works in the Field of Folklore and Mythology), which appeared in *Zbirnyk Filolohichnoi sektsii NTSh*, 6 (1903).

Dyky, Ivan [Dykyj], b 1897 in Luhanske. Painter, iconographer. Dyky studied painting in Kharkiv and at Mt Athos. He emigrated in 1921 and has resided in Yugoslavia, Austria, Venezuela, and the United States. He has painted over 100 churches, including the royal Karageorge church-mausoleum in Topola, Serbia. In North America the best examples of his work in this area are the Ukrainian Catholic churches of St Nicholas in Toronto (1957–9) and ss Volodymyr and Olha in Chicago (1974–8).

Dyky, Vasyl [Dykyj, Vasyl'], b 11 March 1891 in Ukraine. Editor and journalist. Active in the hetmanite movement in Canada, Dyky served as editor of the

Catholic weekly *Kanadiis'kyi ukrainets'* in Winnipeg from 1927 to 1931, and was editor of the weekly *Ukrains'ki visti* in Edmonton from 1932 to 1948.

Title page of Mykola Dyletsky's manuscript 'Hramatyka muzykal'na,' Lviv 1723

Dyletsky or Diletsky, Mykola [Dylec'kyj], b ? in Kiev, d after 1723. Music theoretician, composer, pedagogue. Dyletsky studied in Vilnius (1675) and worked for some time in Smolensk (1677), Kiev, Moscow (1679), St Petersburg, Lviv, and Cracow. He was a master of polyphonic choral music. Among his works are compositions for four voices and eight voices, liturgical music, various motets, and canons. His most important work was *Hramatyka muzykal'na* (Musical Grammar), a textbook of polyphonic singing, which explains the fundamental theory of music, some principles of counterpoint, and the general rules of composition; it is illustrated by selections from the works of Dyletsky himself, M. Zamarevych, I. Ziuska, I. Koliada, M. Mylchevsky, Ye. Zakonnyk, and others. His theoretical views are augmented by comments on esthetics and on the educational value of music. The original text of the work, written in Vilnius in 1675, is not extant, but it exists in several variants and new redactions: 20 manuscript transcriptions are known, mainly of the six-part Polish version, written in Smolensk in 1677, and the seven-part *Ideia grammatiki musikiiskoi ...* (The Idea of a Musical Grammar ... , Moscow 1679). The variants

occurred because Dyletsky adapted his text to suit the needs he encountered in his work as a pedagogue. The first printed edition appeared in St Petersburg in 1910 under the title *Musikiiskaia grammatika* and was based on the 1679 Smolensk redaction. The latest known autograph was written in Ukrainian in 1723 and was discovered in Lviv. It was published in Kiev in 1970.

Dym. Literally, 'smoke'. The smallest economic unit in ancient Ukraine, also referred to as *dvir* (farmstead, courtyard, house) or *vochnyshche* (hearth, home). In the western Carpathian lands the *dym* was a part of the property of manor houses. The *dym* was a taxable unit (see *Tribute); in the Lithuanian Ruthenian period there was a tax on it known as *podymshchyna* or *podymne*.

Dyma, Mariia (birth name: Savchak), b 12 March 1904 in Ukraine. Community leader. A University of Manitoba graduate, Dyma was the first woman of Ukrainian origin elected to public office in Canada, sitting on the Winnipeg public-school board during the 1930s. She was an organizer and first president of the Ukrainian Catholic Women's League, the Ukrainian Canadian Women's Committee, and the Ukrainian Handicraft Guild. During the Second World War she served on the executive of the Ukrainian Canadian Relief Fund. In 1950 a Winnipeg chapter of the Imperial Order of the Daughters of the Empire was named in her honor.

Dymer. III-11. Town smt (1978 pop 6,600) situated on the Irpin River, 12 km from its junction with the Dnieper, in Vyshhorod raion, Kiev oblast. It was founded in 1582.

Dymet, Mykhailo, 1821–90. Merchant of Lviv, patron of culture, city councilor for many years. Dymet was one of the first to supply the Galician public with the literary works produced in Central Ukraine. In 1862 he brought T. Shevchenko's *Kobzar* and other books and portraits from Kiev. He gave financial support to the journals *Meta* and *Rus'ka chyta'nia*, published by K. Klymkevych, as well as to the Shevchenko Scientific Society.

Dyminsky, Andrii [Dymins'kyj, Andrii], b 1829 in Borshchivtsi, Mohyliv county in Podilia gubernia, d 14 January 1905. Ethnographer. Dyminsky collected many folkloric materials for the *Trudy* of the Southwestern Branch of the Imperial Russian Geographic Society and for the Podilia Statistical Committee. His large collection, *Kazky ta opovidannia z Podillia* (Fairy Tales and Stories from Podilia), was published by the All-Ukrainian Academy of Sciences in 1928.

Dyminsky, Roman [Dymins'kyj], b 1898, d 1949 in Regensburg, West Germany. Economist, full member of the Shevchenko Scientific Society. From 1927 Dyminsky taught at the Ukrainian Husbandry Academy in Poděbrady. In 1934 he became a docent at the Ukrainian Free University in Prague and a research associate of the Ukrainian Scientific Institute in Berlin. In 1945 he was appointed professor at the Ukrainian Technical and Husbandry Institute and at the Ukrainian Free University in Munich. Dyminsky wrote the outline of Ukraine's economy in *Handbuch der Ukraine* (1942), the chapter on industrial geography in V. Kubiiovych's *Heohrafiia*

Roman Dyminsky

Ukrainy (A Geography of Ukraine, 1943), and *Velykoprostirne hospodarstvo Evropy* (The Large-Area Economy of Europe, 1942).

Dymytrov. v-18; DB III-2. City (1983 pop 61,000) in Donetsk oblast; known as the town of Novyi Donbas in 1937–57 and to 1972 as Novoeconomichne, which became a city in 1965. Located in the northwest Donbas, Dymytrov is administered by the Krasnoarmiiske city soviet. The site was originally a mine, built in 1911. The city has a large coal-mining complex, Krasnoarmiiskvuhillia. It is named for the Bulgarian Communist leader G. Dimitrov.

Dymytrove. v-14. Town smt (1978 pop 8,400) in Kirovohrad oblast administered by the Oleksandriia city soviet. The town arose in 1947 as a lignite mining center. It has a briquette factory, a mineral-wax plant, a heat and power plant, and a coal pit.

Dynamo. Soviet sports club within the physical-education system of the *КГВ, founded by F. Dzerzhinsky in 1923. It has branches in many cities of the Soviet Union and cultivates various sports. The leading Ukrainian Dynamo club is in Kiev, where it has its own large stadium. The Kiev Dynamo soccer team, in existence since 1928, has won the USSR championship numerous times. In 1975 it won the European Cup. The club also has a strong water polo team, which won the USSR championship in 1971. In other sports, members of the Kiev Dynamo club won five gold medals at Olympic competitions in 1972, 1976, and 1980 and several championships at other world and European competitions. The runner V. Borzov was a member of Dynamo.

Dyr. See Askold and Dyr.

Dytiachyi rukh (Children's Movement). Illustrated monthly (from 1932 bimonthly) organ of the Central Bureau of the Communist Children's Movement at the Central Committee of the Communist Youth League of Ukraine. The magazine was aimed at Pioneer leaders. It was published in Kharkiv in 1925–34 and in Kiev in 1934–41 under the title *Pionirovzhatyj*.

Dzbanivsky, Oleksander [Dzbaniv'skyj], b 1870 in Mankivka, Kiev gubernia, d 28 October 1938 in Kiev. Composer, music critic, teacher. Dzbanivsky taught from

1898 at the Zhytomyr gymnasium and from 1909 at the St Petersburg Music Institute. In 1921–8 he was secretary of the Supreme Music Council of Ukraine and taught at the Kharkiv Music and Drama Institute. In 1928 he organized the music division at the National Library in Kiev, which he directed until 1938. He is the author of *Shkil'nyi spiv* (School Singing), *Khorovyi spiv* (Choir Singing), *Dytiachi hry ta pisni* (Children's Games and Songs), over 40 choral works, solo vocal pieces, and folk-song arrangements.

Dzendzelivsky, Yosyp [Dzendzelivs'kyj, Josyp], b 1927 in Mazurove, Mykolaiv oblast. A linguist and professor at the University of Uzhhorod, Dzendzelivsky wrote studies in Ukrainian dialectology (including *Konспект лектсії з курсу української діалектології* [Conspectus of Lectures for the Course in Ukrainian Dialectology, 1966] and *Fonetyka* [Phonetics, 1965]), especially that of Transcarpathia, devoting particular attention to vocabulary (*Linhvistychnyi atlas української народних говорів Закарпатської області* *URSР*: *Leksyka* [A Linguistic Atlas of Ukrainian Folk Dialects of the Transcarpathian Oblast, Ukrainian SSR: Lexicon, 1–2, 1958, 1960]). His works also treat the problem of linguistic geography, the semantic grouping of vocabulary, and the history of Slavic philology. His monograph *Українсько-західнослов'янські лексичні паралелі* (Ukrainian–Western Slavic Lexical Parallels, 1969) concentrates primarily on Slovak words and their parallels in Ukrainian dialects.

Dzerovych, Yuliiian [Dzerovyč, Julijan], b 3 January 1871 in Smilno, Brody county, Galicia, d 1 April 1943 in Vienna. Pedagogue, church and cultural leader, Greek Catholic priest. Beginning in 1918, he was an associate professor and then a professor at the Greek Catholic Theological Seminary and Greek Catholic Theological Academy in Lviv. He wrote books and articles on education and religion: *Katekhytyka* (Catechization, 1930), *Pedahohika* (Pedagogy, 1938). He held various positions, including the presidency of many Galician societies, such as *Ridna Shkola*, *Prosvita*, *Uchytelska Hromada*, and the Society of the Holy Apostle Paul.

Dzerzhynske [Dzeržyns'ke]. v-18; ДВ III-3. City (1975 pop 45,800) in Donetsk oblast, established in 1806 and known until 1936 as Shcherbynivka. The city's industries include coal mining and the production of coke chemicals, ceramics, phenol, and acid-resistant articles. The town has a mining *tekhnikum*, a medical school, and a music school.

Dzerzhynske [Dzeržyns'ke]. III-8. Town smt (1978 pop 7,900) in eastern Volhynia; a raion center in Zhytomyr oblast. Until 1933 the town was called Romaniv. The village from which it developed existed as early as the 15th century. Dzerzhynske has glass and brick factories and a food industry.

Dzeverin, Ihor, b 5 November 1929 in Drabiv, Cherkasy oblast. Literary scholar. Dzeverin graduated from Lviv University in 1952 and completed his graduate studies at the Institute of Literature of the Academy of Sciences of the Ukrainian SSR. He became chairman of the Department of the Theory of the Literature of Socialist Realism at the institute in 1966. In 1978 he became director of the institute. From 1962 to 1973 he was editor in chief of the

journal *Radians'ke literaturoznavstvo*. Since 1951 he has written on socialist realism and on various prerevolutionary and Soviet writers. Among his publications are the following books: *Ostap Vyshnia* (1957), *Lenin i pytannia estetyky* (Lenin and Questions of Esthetics, 1960), *Estetyka leninizmu i pytannia literatury* (The Esthetics of Leninism and the Problems of Literature, 1967, 2nd edn 1975).

Dzhalalii, Filon [Džalalij] (also known as Dzhezhalii [Džedžalij]), birth and death dates unknown. Outstanding 17th-century Cossack leader of Tatar descent, colonel of the Pryluka and then the Kropyvnia (Ichnia) Regiment. At first Dzhalalii served as captain in the Pereiaslav Regiment of registered Cossacks. Then in 1648, with B. Tovpyha, a captain of the Cherkasy Regiment, he led a revolt of the registered Cossacks in Kamianyi Zaton. Dzhalalii was one of the closest and most influential associates of B. Khmelnytsky. He took part in the battles of Zhovti Vody, Korsun, Pyliavtsi, Zboriv, and Berestechko, where he was elected acting hetman. In 1648 he headed the Ukrainian delegation to Istanbul and worked out a treaty with the Porte.

Yuliiian Dzerovych

Ivan Dzhydzhora

Dzhankoi [Džankoj]. VIII-15. City (1974 pop 46,000) in the northeastern Crimea, railway junction; a raion center in Crimean oblast. The city has a large food industry, with plants specializing in fruit canning, winemaking, dairy products, and meat packing. It also has railroad shops, as well as machine-building and machine-repair plants. Dzhankoi was founded in the second half of the 19th century.

Dzhedzhula, Karpo [Džedžula], b 26 May 1918 in the village of Obidne, Podilia gubernia. Historian, professor of general history at the Kiev Pedagogical Institute of Foreign Languages and (since 1950) at Kiev University. In 1945–8 he served in the Ministry of Foreign Affairs of the Ukrainian SSR. Dzhedzhula has published works on world history and particularly on French history.

Dzhunkovsky, Vasyl [Džun'kovs'kyj, Vasyl'], b 1767 in Lebedyn, Kharkiv gubernia, d September 1826 in Kharkiv. Historian of medicine, translator, bibliographer. In 1818 he was appointed professor at, and in 1821 rector of, Kharkiv University. Dzhunkovsky cataloged the medical holdings of the university and wrote articles and translated works on problems of medicine, farming, and

chemistry. He was one of the founders of *Ukrainskii zhurnal*, a literary-scientific periodical at Kharkiv University (1824–5).

Dzhydzhora, Ivan [Džydzžora], b 9 February 1880 in Zastavtsi, Pidhaitsi county, Galicia, d 22 April 1919 in Zastavtsi. Historian, civic figure, publicist, full member and librarian of the Shevchenko Scientific Society (NTSh). A student of M. Hrushevsky, Dzhydzhora contributed to NTSh publications. As a journalist he wrote for *Dilo* and *Literaturno-naukovyi vistnyk* under the pseudonym Ignotus. In 1919 he was the commander of Rava Ruska for the Western Ukrainian National Republic. His research dealt almost exclusively with the history of the Hetman state of the 18th century. His studies were published in *Zapysky NTSh* (vols 5, 61, 67, 69, 70, 71, 76, 86, 98, 101, 103, 105, 107–12) and *Naukovyi zbirnyk* (1906). They were republished as *Ukraina v pershii polovyni xviii viku* (Ukraine in the First Half of the 18th Century) by the All-Ukrainian Academy of Sciences (Kiev 1930).

Dziadyk, Vladyslav [Dzjadyk], b 18 February 1919 in the village of Sakhnivshchyna in Kharkiv gubernia. Mathematician, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1969, associate of the Institute of Mathematics since 1960. Dziadyk's principal works deal with the theory of converging functions of real and complex variables.

Dzis, Volodymyr [Dzis'], 1903–44. Galician journalist who worked first for *Novyi chas* and then (1933–9) for the various periodicals of the Front of National Unity such as *Peremoha*, *Bat'kivshchyna*, and *Ukrains'ki visti*. In 1941–2 Dzis worked for *Ukrains'ke slovo* in Kiev. He served time in Polish and Soviet prisons as a political prisoner.

Ivan Dziuba

Dziuba, Ivan [Dzjuba], b 26 July 1931 in Mykolaivka, Donetsk oblast. Literary critic and publicist, Ukrainian dissident. Having graduated from the Donetsk Pedagogical Institute in 1953, Dziuba was a graduate student at the Institute of Literature of the Academy of Sciences of the Ukrainian SSR until 1956. He was in charge of the literary-criticism section of the journal *Vitchyzna* and an editor of the journal *Dnipro*. He began to write literary criticism in 1950. In the latter half of the 1950s he wrote a series of articles sharply criticizing the 'graphomania' and provincialism evident in Soviet Ukrainian literature (published in the collection *Zvychna liudyna chy mishchany?* [An Ordinary Human Being or a Philistine?], 1959). He was one of the spokesmen of the *Shestydesiatnyky

and expressed the aspirations of the younger writers (V. Symonenko, L. Kostenko, I. Drach, M. Vinhranovsky, V. Holoborodko, and others) to revitalize Ukrainian literature and to liberate it from the influence of Russian literature. On the subject of literary history Dziuba stressed the need to review the literary theories of the Stalinist era and to study Ukrainian literature in relation to Western European literature (in his articles on H. Skovoroda and O. Biletsky).

In the 1960s Dziuba became active in the Ukrainian dissident movement against the Russification of Ukraine and the persecution of the Ukrainian intelligentsia. He spoke at a demonstration in the Kiev cinema Ukraina (September 1965) protesting the mass arrests in Ukraine, and at a rally in Babyn Yar protesting the government's anti-Semitism. Along with other dissidents he signed petitions to various officials in defense of political prisoners. At the end of 1965 Dziuba completed his main work, *Internationalizm chy rusyfikatsiia?* (Internationalism or Russification?), in which he demonstrated how the Soviet government had departed from the theoretical principles of Leninist nationality policy and had been Russifying Ukraine and destroying its intelligentsia under the pretext of internationalism, ie, how the Soviet government was perpetuating the colonial policies of tsarist Russia. This work circulated in samvydav and was finally published in the West in 1968. It has been translated into Russian, English, French, and Italian and is a basic source of information on modern Ukraine. In 1965 Dziuba's work ceased to be published. In January 1972 he was arrested, and in March he was expelled from the Writers' Union of Ukraine. In the following year he wrote a public recantation and was released from prison. From then until the late 1970s he lived in isolation: he was not readmitted to the Writers' Union and was in effect removed from the literary scene. At the same time he was strongly condemned for recanting by the members of the Ukrainian dissident movement (V. Moroz, L. Pliushch). In 1978 his book *Hrani krystala* (Facets of a Crystal), a repudiation of *Internationalism or Russification?*, was published. Dziuba was readmitted into the Writers' Union. In the past few years Dziuba has occasionally published tame literary criticism in Soviet journals. A book of his literary essays, *Na pul'si doby* (On the Pulse of the Age), appeared in 1981.

I. Koshelivets

Dziubai, Oleksander [Dziubaj], b 1857 in Kalnyk, Transcarpathia, d 1933. Influential church hierarch in the Carpatho-Ruthenian community in the United States during the first decades of the 20th century. In 1913 Bishop S. Ortynsky, a native of Galicia, appointed Dziubai to serve as vicar general of the Greek Catholic church in the United States in an attempt to assuage the anti-Galician views of priests in the eparchy from the Transcarpathian region. In 1916, when the Greek Catholic church was divided into Galician and Transcarpathian administrations, the ambitious Dziubai hoped to be appointed the Transcarpathian administrator. When he was passed over in favor of another candidate, he turned to the Russian Orthodox church, which in August 1916 consecrated him as Bishop Stefan to head the Pittsburgh 'Carpatho-Russian Orthodox subeparchy.' Bishop Stefan proceeded to convert several Greek Catholic parishes in western Pennsylvania to Orthodoxy. As a result of these efforts, he expected to have his 'Carpatho-Russian sub-

eparchy' raised to the level of a jurisdictionally independent eparchy within the Russian Orthodox church. When this did not happen, the disillusioned Dziubai resigned in 1923, eventually returned to the fold of Greek Catholicism, and spent his remaining years as a recluse in a monastery.

P.R. Magocsi

William Dzus

Dzus, William [Dzus, Volodymyr], b 5 January 1895 in the village of Chernyshivtsi, Zbarazh county, Galicia, d 19 June 1964 in West Islip, Long Island, in the United States. Industrialist, inventor, philanthropist. Dzus arrived in New York in 1913, worked as a lathe operator, and then opened an auto-repair shop in West Islip. After patenting a number of mechanical inventions for cars and planes, he invented in 1932 a fastener screw that did not become loose under vibration. The screw was widely adopted, and by 1943 Dzus employed 600 workers in the Dzus Fastener Company. After the war his inventions were used by truck, bus, boat, electrical-appliance, and rocket manufacturers, and even by orthopedic surgeons. In 1948 Dzus founded the *Ukrainian Institute of America in New York and became its president. In 1955 he purchased the residence of A. Van Horn Stuyvesant, Jr for the institute.

Dzvin (Bell). Monthly journal published by Ukrainian Social Democrats in Kiev (1913–14) and financed by L. Yurkevych. The editor was D. Antonovych; later, V. Levynsky. Among the contributors were V. Vynnychenko, Lesia Ukrainka, M. Vorony, H. Chuprynka, S. Cherkasenko, D. Antonovych, Kh. Alchevska, L. Yurkevych (Rybalka), V. Sadovsky, K. Myrhorodsky, D. Dontsov, and A. Lunacharsky.

Dzvin (Bell). Collection of literary and scholarly papers edited by I. Franko in 1878 in Lviv, a continuation of the banned *Hromads'kyi druh*. *Dzvin* was subsequently banned and reappeared as *Molot* (1879).

Dzvin (Bell). Publishing company established in 1907 in Kiev. It published the monthly *Dzvin* (1913–14). From 1919 to 1921 it was active in Vienna, where it published the works of V. Vynnychenko, S. Cherkasenko, and others. The director of the company was Yu. Tyshchenko.

Dzvinochok (Little Bell). Illustrated mass monthly aimed mainly at peasant children. It was published by Ukrain-ska Presa publishers in Lviv from 1931 to 1939. Its editor was Yu. Shkrumeliak, and its illustrator was E. Kozak. In

1937–9 the magazine also published a book series for youths, called *Ranok*, under the editorship of V. Kalyna.

Dzvinok (Little Bell). Illustrated biweekly for children and adolescents published in Lviv from 1890 to 1914. At first O. Barvinsky (1890) and V. Shukhevych (1891–2) published and edited the magazine. From 1892 the Ruthenian Pedagogical Society published it under the editorship of V. Shukhevych, V. Biletsky (1896–1902 and 1904–8), K. Malyska (1903), K. Hrynevych (1909–11), and I. Krypiakevych (1912–14). Among the writers associated with the magazine were H. Barvinok, L. Hlibov, M. Kotsiubynsky, U. Kravchenko, I. Lypa, I. Franko, H. Khotkevych, and Lesia Ukrainka. Among the illustrators were T. Kopystensky and I. Kosynyn. I. Franko's *Lys Mykyta* (The Fox Mykyta) was first published in *Dzvinok*. *Dzvinok* was an outstanding educational magazine of artistic quality.

Dzvony (Bells). Literary monthly of Catholic orientation, published in Lviv from 1931 to 1939 and supported financially by Metropolitan A. Sheptytsky and the rector of the Theological Academy, Rev Y. Slipy. The editorial board, headed by Slipy, consisted of Rev M. Konrad, Rev H. Kostelnyk, M. Chubaty, and P. Isaiv (editor). Among the contributors were N. Koroleva, U. Samchuk, Yu. Lypa, U. Kravchenko, K. Hrynevych, B.I. Antonych, K. Chekhovych, M. Hnatyshak, and S. Shelukhyn. The journal serialized the literary works of Samchuk, Koroleva, and Antonych.

Dzyk, Meletii, 17th century. Cultural and church leader. Dzyk studied at the Kievian Mohyla Academy and then became a professor and rector there (1655–7). He was the hegumen of the Epiphany Brotherhood Monastery and then of the St Cyril Monastery in Kiev. Dzyk was a defender of the Ukrainian church from the Moscow patriarchs. In 1666 he went to Moscow as a representative of the Kiev clergy to discuss the election of a metropolitan. He supported Metropolitan Y. Neliubovych-Tukalsky of Kiev and Hetman P. Doroshenko.

Dzykovsky, Ivan [Dzykovs'kyj], b ?, d 9 October 1670 in Ostrohozke, Slobidska Ukraine (now RSRSR). Colonel of Ostrohozke Regiment (1652–70) and leader of one of the earliest Cossack-peasant revolts in Slobidska Ukraine. In 1652 he directed the resettlement of 2,000 Cossack and peasant families from the territory of the Nizhen and Chernihiv regiments to Slobidska Ukraine. In 1670 he became the leader of a revolt against the nobility and the tsar, which was provoked by the tsarist government's curtailment of Cossack privileges and regimental autonomy. Dzykovsky co-ordinated his anti-tsarist movement with S. Razin's revolt in Russia. After capturing the towns of Ostrohozke and Olshanske, Dzykovsky was betrayed and shot by his opponents among the Cossack officers and the nobility.

Dzyndra, Mykhailo, b 1921. Modernist sculptor. Born in Galicia, he emigrated to Germany in 1944 and then to the United States. He has created many, mostly abstract, compositions in cement, wire, and other materials. A. Archipenko's influence is evident in Dzyndra's work. Exhibits of his work have been held in Bamberg (1945), Nürnberg (1946), and the United States. The Association

of Ukrainian Artists in America arranged an exhibit for him in 1978 in New York.

Dzyndra, Yevhen, b 12 August 1913 in Dymivka, Lviv county, Galicia. Sculptor. Dzyndra graduated from the Lviv School of Applied and Decorative Art in 1938. He works mostly in stone. Among his works are the following: a bust of I. Svientsitsky (1939) and his grave

monument in Lviv (1960); busts of L. von Beethoven (1955), M. Leontovych (1959), Ye. Kozak (1962), I. Trush (1964), and H. Tiutiunnyk (1965); the monument to T. Shevchenko in Mukachiv (1954); the monument to the victims of fascism in Volodymyr-Volynskyi (together with T. Bryzh, 1966); and the compositions *Girl with a Book* (1942) and *Shevchenko in Exile* (1964).

E

Eagle (Ukrainian: *orel*). Bird of prey of the Accipitridae family. In Ukraine there are two genera: *Aquila* and *Haliaeetus*. The wingspan of these birds reaches 2.5 m, and their weight varies from 650 g to 6 kg. Eagles feed on small mammals, birds, reptiles, fish, and sometimes carrion. In Ukraine there are eight species of eagle. The golden eagle (*A. chrysaetus*; Ukrainian: *berkut*) has a wingspan of almost 2.3 m and nests almost exclusively in the Carpathians. The tawny eagle (*A. rapax*) is rare and nests only in the steppe. The imperial eagle (*A. heliaca*; Ukrainian: *mohylnyk*) nests in various regions. Two types of spotted eagles, one larger (*A. clanga*) and the other smaller (*A. pomarina*), are found in Polisia and the forest-steppe belt. The booted eagle (*Hieraetus pennata*), a closely related genus, is also found in several regions of Ukraine. To the *Haliaeetus* genus belong the white-tailed eagle (*H. albicilla*), which lives in Polisia, the forest-steppe, and the Carpathians; and Pallas's sea eagle (*H. leucoryphus*), found in the eastern steppe. Today the eagle is a rare bird, and most species are under state protection.

Earthquakes. Seismic waves in the earth's crust caused by subterranean disturbances (tectonic earthquakes) or, less frequently, by volcanic eruptions or collapsing subterranean caverns. The intensity of earthquakes is measured on the Mercalli scale of 12 degrees and designated by Roman numerals. In Ukraine significant earthquakes (v degrees and over) occur in the vicinity of folded mountains – the Crimean, Caucasus, and Carpathian mountains. They are most powerful in the Crimea, where tectonic movements occur in the south and where the basin of the Black Sea is settling. The earthquake of 12 September 1927 had a strength of ix degrees and was felt over an area of one million sq km (in Kiev, 450 km away, its recorded intensity was v). Earthquakes in the northern Caucasus are less intense, and those in the Carpathians and Subcarpathia are even less intense, for their epicenter lies south of the Carpathian Mountains.

BIBLIOGRAPHY
Seismichnost' Ukrainy (Kiev 1969)

Easter. The feast of Christ's resurrection, which in its observance combines both pagan and Christian elements. It was celebrated at different times by different churches, often at the same time as the Jewish Passover. In 325, the Council of Nicea decided that Easter must be observed everywhere on the same Sunday – the first after the full moon following the vernal equinox – and that whenever the full moon fell on a Sunday, Easter would be postponed for a week to avoid coinciding with Passover. The Orthodox church and Eastern-rite Catholic church adhere to the Julian calendar and a different 'paschal moon' and so celebrate Easter on a different Sunday.

In Ukrainian, Easter is called *Velykden* (The Great Day),

a term used in early Rus' translations of John Damascene. In Ukraine Easter has been celebrated over a long period of history and has had many rich folk traditions that are no longer fully preserved.

The last Sunday before Easter (Palm Sunday) is called Willow Sunday (*Verbna nedilia*). On this day pussy-willow branches are blessed in the church. The people tap one another with these branches, repeating the wish: 'Be as tall as the willow, as healthy as the water, and as rich as the earth.' They also use the branches to drive the cattle to pasture for the first time, and then the father or eldest son thrusts his branch into the earth for luck.

The week before Easter, the Great (*Velykyi*) Week (Holy Week), is called the White (*Bilyi*) or Pure (*Chystyi*) Week. During this time an effort is made to finish all field work before Thursday, since from Thursday on work is forbidden. On the evening of 'Pure' (also called 'Great' or 'Passion' [*Strasnyi*]) Thursday, the passion (*strasti*) service is performed, after which the people return home with lighted candles. Maundy Thursday, called 'the Easter of the dead' in eastern Ukraine, is connected with the cult of the dead, who are believed to meet in the church on that night for the Divine Mass.

On Passion (*Strasna*) Friday – Good Friday – no work is done. In some localities, the Holy Shroud (*plashchanytsia*) is carried solemnly three times around the church and, after appropriate services, laid out for public veneration.

Easter is the principal spring festival, and a series of rites have become centered around it that, in the distant past, were connected with the Annunciation, with St. George, and even with the rites of the winter cycle, especially those of New Year's Day. Easter rites preserve traces of pre-Christian rites, which in general show a striking similarity to those of Christmas and New Year's. These rites are closely related to agriculture, to the remembrance of the dead, and to the marriage season; during their performance, praise is given, ritual songs are sung, and there is much well-wishing.

Easter is a feast of joy and gladness that unites the entire community in common celebration. For three days the community celebrates to the sound of bells and to the singing of spring songs – *vesnianky*. Easter begins with the Easter matins and high mass, during which the *pasky* (traditional Easter breads) and *pysanky* and *krashanky* (decorated or colored *Easter eggs) are blessed in the church. Butter, lard, cheese, roast suckling pigs, sausage, smoked meat, and little napkins containing poppy seeds, millet, salt, pepper, and horseradish are also blessed. After the matins all the people in the congregation exchange Easter greetings, give each other *krashanky*, and then hurry home with their baskets of blessed food (*sviachene*). In eastern Ukraine they go home, place the *sviachene* on the table, and the oldest member of the family opens the cloths in which the food is wrapped, slices pieces from each item, and distributes them to members of

the family along with a piece of unleavened bread that has also been blessed. In Western Ukraine, especially in the Hutsul region, the people first walk around the house three times, go to the stable, extend Easter greetings to the cattle, touch them with the *sviachene*, scatter pieces of Easter bread and salt in the manger, and send holiday greetings to the bees. Only then do they enter the house, ceremoniously open the bundle (*dorinnyk*) over the heads of the children, and sit down to the table to break their fast.

In Western Ukraine at Easter the girls perform special choral dances on the church grounds. These are the *haivky* or *hahilky*, which have retained a number of motifs that are older than those of the ordinary spring songs (*vesnianky*). They have a greater amount of ritual in them and contain elements of the round dance, of mimicry, and of choral composition.

The *krashanky* and *pysanky* (Easter eggs) are an old pre-Christian element and have an important role in the Easter rites. They are given as gifts or exchanged as a sign of affection, and their shells are put in water for the *rakhmany* (peaceful souls); finally, they are placed on the graves of the dead or buried in graves and the next day are taken out and given to the poor. Related to the exchange of *krashanky* is the rite of sprinkling with water, which is still carried on in Western Ukraine on the second day of Easter (Wet Monday, *Oblyvanyi ponedilok*); it is practiced by young people, the boys usually splashing the girls with water.

During the Easter season in Ukraine the cult of the dead is observed. The dead are remembered on Maundy Thursday and also during the whole week after Easter (called the 'Week of the Nymphs' [*navskiy tyzhden*]), especially on the first Sunday following Easter Sunday (called *Khomyna* [Thomas's] or *Providna* [Seeing-off]). For the commemoration of the dead (*provody*) the people gather in the cemetery by the church, bringing with them a dish containing some food and liquor or wine, which they consume, leaving the rest at the graves.

Not many of these traditions are observed today in Ukraine, and only some, having lost their full meaning, are kept in the diaspora as symbolic rituals.

Easter egg or *pysanka*. *Pysanka* painting is a widely practiced form of decorative art in Ukraine. The practice originated in the prehistoric *Trypilian culture. Ukrainian *pysanky* have a symbolic significance. They symbolize spring, renewed life, and resurrection and have thus become associated with the celebration of *Easter. Today *pysanky* are also appreciated as works of art.

Pysanky can be made of various materials – poultry (usually chicken) eggs, stone, wood, or clay – and can be decorated by various techniques – by painting with a brush (*malovanka*), by dyeing the egg a solid color (*krashanka*), by dripping hot wax on the egg before dyeing it (*kapanka*), or by scratching a design on a dyed egg (*driapanka*). The *pysanka* (literally, 'written egg') is pro-

duced by a complex technique. An initial design on the egg is done in beeswax, which is applied to the surface with a special instrument called a *kystka* (a small, metal, conic tube attached to a wooden handle). The egg is then dipped in yellow dye. Then those elements of the design that are to be yellow are covered with wax and the egg is dipped in a red dye (sometimes two shades of red are used). After the surfaces that are to be red are covered with wax, the egg is dipped in an intense, dark dye (violet or black). So that the color will adhere well, the egg is sometimes washed with vinegar or alum before being dyed. When the design is completed, the egg is heated to melt off the wax. The process of 'writing' *pysanky* is similar to batik printing. Traditionally, the dyes were prepared by skilled folk artists from the roots, skin, or bark of various plants and trees according to traditional recipes. These dyes were resistant to light and did not smear. Synthetic aniline dyes are widely used today. *Pysanky* are usually decorated just before Easter. The ornamentation of the *pysanky* consists of ancient motifs such as the solar motif (represented by the circle, rose, swastika, triskelion, and other forms). The design and the appearance, based on a limited number of contrasting colors, are connected with the technique, form, and purpose of the *pysanka*. Since it is spherical, the *pysanka* can be appreciated from many perspectives.

A great variety of ornamental patterns are found on *pysanky*. Because of the egg's fragility, no ancient examples of *pysanky* have survived. The oldest designs of Ukrainian ornamentation are known only because of the continuity of the ritualistic tradition of painting *pysanky*. By a system of lines the decorator divides the surface into a number of regularly shaped sections. The decorative elements, such as dots, lines, crosses, cones, and zoomorphic or anthropomorphic motifs, are painted within these sections or at their junctions in symmetrical or asymmetrical arrangement.

In the central regions of Ukraine vegetative motifs, stylized and geometrical (in the Kiev and Poltava regions), the meander (*bezkoniecznyk*), and the stylized rose, symbolizing the sun, have been dominant elements in *pysanka* designs. In the Chernihiv area more naturalistic, asymmetrical, floral patterns have been widely used. Geometric ornamentation has been more prevalent in the western regions. Certain regions, however, such as the Carpathian foothills, have had their own, distinct ornamental patterns. In the Sokal vicinity floral ornamentation has been used in a florid manner. The designs and colors of the Boiko region have been more restrained: darker colors have been used near Drohobych and strongly contrasting colors near Kalush.

The *pysanky* of the Hutsuls are distinguished by their intricate designs and fine execution. In most, complex geometric ornamentation has dominated. Their strong and rich colors, color range, and combinations and complexity correspond to the ornamentation of the Hutsul woodcarvings, metal art objects, and embroidery. The Hutsul region merits the name 'land of the artists.' It is not surprising that *pysanka* painting was most developed there.

In earlier times people believed in the magical powers of the *pysanka*. It could protect one from evil, cure illnesses, and defend homes from lightning and fire. Such beliefs are mentioned in 12th-century documents.

As an art form the *pysanka*, like weaving, embroidery,

pottery, and woodcarving, constitutes a source of new masterpieces of the decorative folk arts. In recent times the art of the *pysanka* as a traditional folk art has been revived, mainly among Ukrainians abroad. Sometimes elements of abstract art are introduced into the new designs. Contests and exhibits of *pysanky* attract much attention and admiration.

Eastern Catholic Life. Official publication of the Byzantine-Ruthenian-rite eparchy of Passaic in New Jersey. It was established in 1964 by Rev S.J. Kocisko, then bishop of Passaic. The weekly is published by the Eastern Catholic Press Association in Passaic. Its first editors were Rev T. Dolinay (now bishop of Van Nuys eparchy) and R.G. Moneta, and the language of publication has from the outset been English only.

Échanges: Revue franco-ukrainienne. A bimonthly French-language cultural and political journal aimed at Ukrainians born in France; published in Paris since November 1971. Its editors are K. Uhryn and M. Richard.

Echos d'Ukraine. A monthly information bulletin published in French by the Circle of Franco-Ukrainian Studies in Paris in 1962–9 (60 issues). It contained information about current events in Soviet Ukraine for the French press. Its editors were M. Tatarulia and K. Mytrovych, and its publisher was P. Shumovsky.

Economic crises. Periods of sharp reductions in production, widespread bankruptcy and unemployment, declining prices, and economic stagnation, which under early capitalism were directly connected with the periodic fluctuations of the market economy. Such crises of the world economy occurred in 1847–8, 1857–8, 1866, 1873, 1882, 1890, 1900–3, 1907, 1920–1, and 1929–33. The crises were usually followed by years of economic depression, succeeded by an economic upswing. Because of a lower level of industrial development in comparison to Western Europe and the United States, Ukraine was not affected as severely by these crises. The first industrial crisis struck Ukraine in 1875–6, the second in 1880–2, the third in 1899–1902, and the fourth in 1907–9; 1896–9 and 1910–13 were periods of economic boom. Since the Second World War severe economic crises in market

economies have been avoided through the application of government economic and financial policies, but economic recessions, with downturns in production and increases in unemployment, continue to recur cyclically (the last one in 1981–2).

This type of economic crisis is unknown in the Soviet economy. Yet economic planning in the Soviet system does not always lead to the desired results, and economic recessions and even depressions are also part of the Soviet economic system. A vivid example of this is the failure of the Sixth Five-Year Plan (1956–60) and the change to seven-year planning (1959–65) (see *Five-year plan). The crisis in agriculture that began in the 1970s is now almost a permanent phenomenon, and the shortage of consumer goods contributes to a worsening of economic relations and disproportions in the production processes. Economic crises, especially industrial crises, were studied by M. Tuhon-Baranovsky. V. Tymoshenko studied economic crises in agriculture.

Economic education. Originally economic training in Ukraine was acquired empirically, and it was only in the second half of the 17th century that economic disciplines began to be studied to some extent at the *Kievan Mohyla Academy. Starting in the 18th century, much attention was devoted to theoretical questions of economics, and eventually lectures on 'agricultural and domestic economy' were introduced. These lectures were given by Rev A. Sambirsky (1732–1815), a well-known agronomist-economist and representative of the physiocratic school of economics. In the mid-19th century lower-level economic education, particularly agricultural trade schools supported by *zemstvos, began to develop in Ukraine. The first chair in political economy was established at Kharkiv University in 1806; it was held for the first 10 years by the German economist L.H. von Jacob, an adherent of the British classical school. Eventually a chair in political economy was set up at Kiev University as well; it was held by I. Vernadsky (1846–9). In the second half of the 19th century economic disciplines such as political economy, economic policy, finance, and statistics became part of the curriculum not only of the universities in Ukraine, where they were offered by special departments of economics or faculties of law, but also of commercial institutes (Kiev and Kharkiv), polytechnical schools (Lviv), and agricultural schools. At the end of the 19th and the beginning of the 20th century a network of lower trade schools, usually commercial and agricultural, developed in central and eastern Ukraine. In Galicia economic disciplines were offered at Lviv University and the Higher Commercial School in Lviv as well as at a number of secondary trade schools, at the Ridna Shkola commercial schools, and in the short courses of various co-operative institutions.

In conjunction with the dissolution of the universities in 1919–20, higher economic education in Soviet Ukraine was offered at four institutes of national economy – in Kiev, Kharkiv, Odessa, and Dnipropetrovske. In 1928 these institutes had an enrollment of 3,500. Economists were trained in the Social-Economic Department of the All-Ukrainian Academy of Sciences. A secondary economic education was available at various tekhnikum

(in 1928 at four *tekhnikums* with 1,800 students) and by correspondence. When the universities were reopened in 1934, special chairs of political economy and of the economy of the USSR were set up at Kiev, Kharkiv, and Odessa universities. Beginning in 1936, doctoral and postdoctoral programs in economics were offered at the *Institute of Economics of the Academy of Sciences of the Ukrainian SSR. In the interwar years schools offering secondary economic education increased greatly in number: 11 schools, with an enrollment of 4,000, specialized in commerce, finance, co-operative enterprise, industry, and agriculture.

As a result of Ukraine's rapid economic development, particularly since the mid-1950s, economic education has expanded greatly and has become more differentiated. Higher economic education is offered by the economic faculties of four universities – Kiev, Kharkiv, Lviv, and Donetsk – and by seven special institutes – the Kiev Institute of the National Economy, the Odessa Institute of the National Economy, the Donetsk Institute of Soviet Trade, the Kharkiv Institute of Engineering and Economics, the Kiev Institute of Trade and Economics, the Lviv Institute of Trade and Economics, and the Kharkiv Institute of Public Nutrition. An incomplete higher economic education can be obtained at about 20 faculties of various *tekhnikums* and agricultural postsecondary schools, which provide specialization in about 40 economic areas such as the economics of the different branches of industry and agriculture, finance, labor, credit and accounting, statistics, mechanized information processing, and economic cybernetics. In the postwar period the number of graduates in the various areas of economics, in comparison to the number of graduates in the humanities or even the number of graduates in all disciplines, has increased significantly, as is evident from the table below.

Economists with higher education, 1960–78

Year	Economists with higher education	% of all graduates with higher education
1960	4,830	7.2
1965	7,300	10.2
1970	15,300	13.0
1975	18,200	14.1
1980	21,600	14.6

Furthermore, all other universities in Ukraine and a number of economic faculties of technical and agricultural postsecondary schools offer correspondence courses in economics. Economists are trained at the Institute of Economics of the Academy of Sciences of the Ukrainian SSR in Kiev and its branches, at the Institute of Industrial Economics in Donetsk, at the *Council for the Study of the Productive Resources of the Ukrainian SSR, and at the Scientific Research Institute of the State Planning Committee of the Ukrainian SSR.

A secondary and lower economic education is available at about 95 economic and commercial-economic secondary schools and *tekhnikums* in 345 different specializations. In 1965 these schools produced 26,200 economists with a secondary education (21.1 percent of all secondary school graduates). In 1978 the corresponding figure was 48,200 (20.7 percent). Economic disciplines, particularly political economy and the economy of the USSR, are mandatory in

almost every faculty of an institution of higher learning in Ukraine. Short courses in economics for improving one's qualifications are offered in all Party schools and at most of the larger enterprises. Such courses are mandatory for almost all economic and technical-engineering managers.

Outside Ukraine lectures on economics were offered in 1922–32 at the *Ukrainian Husbandry Academy in Poděbrady and in 1945–51 at the *Ukrainian Technical and Husbandry Institute in Germany, as well as in the faculty of law and social sciences of the Ukrainian Free University in Prague and Munich. The Ukrainian Higher School of Economics in Munich offered courses in economics in 1946–50.

Economic geography. Area of geography belonging to the social sciences and dealing with the geographic distribution of, and the interconnections among, a society's resources and its production, as well as with the special features of the development of these two factors. Different departments of economic geography investigate the distribution of natural resources in various countries or regions; territorial complexes of production (regional economic geography); the distribution of population, industry, farming, transportation, and communications; and other economic factors. Besides cartographic research, economic geography employs in its methodology statistical sampling, comparative tables, and mathematical models. Research on Ukraine's economic geography was tied for a long time to geographic and *economic studies.

The economic geography of Ukraine began to be studied in the mid-18th century. The first studies were regional economic-statistical descriptions by V. Ruban and D. Pashchenko. They became more sophisticated in the 19th century when the economic-statistical studies of M. Arandarenko, A. Skalkovsky, D. Zhuravsky, and the zemsto economists headed by O. Rusov appeared. The first survey of the economic geography of all Ukrainian territories appeared in the geographic handbook *Ukraine, Land und Volk* (1916) by S. Rudnytsky. The first reference works on the economic geography of Ukraine were published in 1918–20 with the purpose of clarifying the economic-geographic foundations of the new Ukrainian state. Their authors were V. Kistiakovsky (1918), V. Gerynovych (1919), S. Ostapenko (1920), V. Sadovsky (1920), and I. Feshchenko-Chopivsky (1920). In 1918 P. Tutkovsky published the detailed *Mapa korysnykh kopalyn Ukrainy* (Map of Ukraine's Useful Minerals). All of these works dealt only with central and eastern Ukraine.

In Soviet Ukraine economic-geographic research began at the beginning of the 1920s at the All-Ukrainian Academy of Sciences at the initiative of V. Vernadsky, who headed a commission for surveying the natural resources of Ukraine (in 1922 it was turned into a commission for regional studies). Many studies in economic geography were published among the works of the Social-Economic Department of the Research Commission

on the Economy of Ukraine, which was chaired by K. Vobly, and among the works of the Commission for the Study of the Productive Resources of Ukraine, which was chaired by L. Yasnopolsky. In this period the more important specialists in the field of economic geography were K. Vobly (the author of a popular textbook, 1919), Ya. Feihin, Yu. Kryvchenko, O. Sukhov, O. Rumiantsev, V. Kistiakovsky, and I. Zilberman. In 1928 the All-Ukrainian Academy of Sciences published the first geographic atlas of Ukraine in which a great deal of space was devoted to economic geography. After almost all Ukrainian institutions were abolished under Stalin's regime, some research in economic geography continued at the *Council for the Study of the Productive Resources of the Ukrainian SSR, which was established in 1934 and chaired by O. Shlikhter, and, beginning in 1936, at the *Institute of Economics of the Academy of Sciences of the Ukrainian SSR, which studied the productive potential of Ukraine and its economic regions in connection with the five-year plans (works by Ya. Feihin, V. Vvedensky, and others).

In Western Ukraine the leading specialist in the geography of Ukraine was V. Kubijovyč, the author and editor of *Atlas Ukraïny i sumezhnykh kraïv* (Atlas of Ukraine and Neighboring Countries, 1937) and *Heohrafiia Ukraïns'kykh i sumezhnykh zemel'* (Geography of Ukrainian and Neighboring Lands, 1938). In these works he dealt also with economic geography.

After the Second World War the Institute of Economics of the Academy of Sciences continued to work on economic geography and published a series of works on the economic regionalization and cartography of Ukraine, as well as a considerable number of monographs on the different branches of industry, agriculture, transport, etc. Among its important publications were *Narysy ekonomichnoi heohrafiï URSR* (Studies of the Economic Geography of the Ukrainian SSR, 2 vols, 1949–52), edited by K. Vobly; *Rozvytok promyslovosti na Ukraïni* (The Development of Industry in Ukraine, 3 vols, 1959–66), by O. Nesterenko; *Pryroda i hospodarstvo pïvdennykh raioniv URSR* (Nature and Economy of the Southern Regions of the Ukrainian SSR, 1953), edited by P.M. Pershyn; *Donbas* (1956), by L. Yasnopolsky; *Ekonomichni raiony URSR* (Economic Regions of the Ukrainian SSR, 1965); *Sil's'kohospodars'ki zony URSR* (The Agricultural Zones of the Ukrainian SSR, 1961), by I. Mukomel; and *Ekonomichna heohrafiia URSR* (The Economic Geography of the Ukrainian SSR, 1st edn 1961), edited by O. Koroid.

The institute also published a number of regional studies, such as O. Dibrova's work on Transcarpathia oblast (1957), P. Hudzenko's on Sumy oblast (1958), and I. Miniakov and V. Onykiienko's on Chernivtsi oblast (1958). Since the end of the 1950s the Council for the Study of the Productive Resources of the Ukrainian SSR has devoted a great deal of attention to research in economic geography, particularly under the chairmanship of academician P. Pershyn (1957–64). It has investigated the problems of the Greater Dnieper and of various regions of Ukraine, particularly the Kiev, Kharkiv, and Lviv regions and Polisia. In 1964 a geographic section was set up at the Academy of Sciences of the Ukrainian SSR, and within it a department of economic geography was established to study the distribution of industry in Ukraine. Valuable studies were published by the following members of the department: O. Vashchenko, P. Voloboi, L. Koretsky, and M. Palamarchuk. Materials on

the economic geography of Ukraine can be found in the monthly journal **Ekonomika Radians'koi Ukraïny*, as well as in the interdepartmental collections *Ekonomichna heohrafiia* (Economic Geography, published by Kiev University) and *Organizatsiia i planirovanie otraslei narodnogo khoziaïstva* (The Organization and Planning of the Branches of the National Economy, published by the State Planning Committee and Kiev University), and in the nonperiodic publications *Heohrafiia v shkoli* (Geography in the School) and *Kraieznavstvo v shkoli* (Regional Studies in the School). Valuable factual information can be found in *Entsyklopediia narodnoho hospodarstva URSR* (Encyclopedia of the National Economy of the Ukrainian SSR, 4 vols, 1969–72) and *Ukraïns'ka sil's'kohospodars'ka entsyklopediia* (The Ukrainian Agricultural Encyclopedia, 3 vols, 1970–3), as well as in *Istoriia mist i sil Ukraïns'koi RSR* (The History of the Cities and Villages of the Ukrainian SSR, 26 vols) and in the series *Oblasti Ukraïns'koi RSR* (The Oblasts of the Ukrainian SSR, 25 vols).

Historical materials in economic geography are available in a number of works, such as *Ocherki razvoitiia narodnogo khoziaïstva Ukraïnskoi SSR* (Outlines of the Development of the National Economy of the Ukrainian SSR, 1954), edited by O. Nesterenko, and *Rozvytok narodnoho hospodarstva Ukraïns'koi RSR, 1917–1968* (The Development of the National Economy of the Ukrainian SSR, 1917–68, 2 vols, 1967), edited by D. Virnyk. The main cartographic publications are *Atlas Ukraïns'koi RSR* (The Atlas of the Ukrainian SSR, 1962), *Atlas sil's'koho hospodarstva Ukraïns'koi RSR* (The Atlas of the Agriculture of the Ukrainian SSR, 1958), and *Nove na karti Ukraïny* (Innovations on the Map of Ukraine, 1961).

Since the end of the 1960s most of the works in economic geography have been published in Russian, and their content is usually determined by the utilitarian demands of Soviet economic policy. In the most recent period much attention has been devoted to the balance of territorial complexes (works by L. Koretsky, I. Kuhukalo, I. Velychko, A. Emelianov, M. Chumachenko) as well as to the economic geography of population, territorial organization, manufacture, regional planning, and urban development (M. Ihnatenko, F. Zastavny, M. Pistun, M. Khyliuk, V. Tereshchenko, and M. Shtepa). Labor resources, migration, and the specialization of and cooperation among economic firms are studied also.

Economic peasants. A category of Russian peasantry who lived on lands that had once been controlled by the clergy. During secularization these lands and the peasants on them were placed under the jurisdiction of the Economic College for Church Property; hence the term 'economic peasants.' Instead of providing service (*corvée*), these peasants paid monetary fees. In Ukraine, secularization was carried out in 1786–8 on the Left-Bank and in 1793 on the Right-Bank. The classification of economic peasants was eventually replaced by that of state peasants.

Economic planning. One of the basic means of managing the national economy by establishing plans for the country's economic, cultural, educational, scientific, and technological development. According to the Soviet view, the whole state with its nationalized means of production forms one enormous manufacturing enterprise that, in the absence of a free market, can develop only on the basis of state plans. After the Bolshevik revolution the Soviet system of planning was introduced into Ukraine gradually according to the instructions of the RSFSR government. In January 1919 the Council of the National Economy of Ukraine was established under the Council of People's Commissars, and in March of that year the council was integrated with the Supreme Council of the National Economy of the Russian SFSR. The production department of the supreme council prepared a single production plan for both republics. In September 1921 the Ukrainian Economic Council was established to oversee the implementation of economic plans by the people's commissariats of Ukraine and by the representatives of the Russian people's commissariats in Ukraine. The Ukrainian State Planning Commission, which was charged with preparing a general economic plan for the Ukrainian SSR conforming to the economic plan for the Soviet Union, became an advisory and auxiliary agency of the Ukrainian Economic Council. That same year planning commissions were also set up in the people's commissariats of the Ukrainian SSR (these included representatives of the Russian people's commissariats in Ukraine), as well as in the regional economic conferences. In the course of development these commissions were frequently reorganized. Industry was divided into three sectors – Union, republican, and local. All the branches of heavy industry and some branches of light industry were assigned to the all-Union sector. The rest of the branches were assigned according to their importance either to the republican or the local sector. The Council of the National Economy of the Ukrainian SSR was in charge of the republican industries in Ukraine, while appropriate regional economic councils oversaw local industries. The Supreme Council of the National Economy of the USSR drew up plans for the development of all-Union industries and a general plan for the industrial development of the USSR. The Council of the National Economy of the Ukrainian SSR prepared plans for republic and local industries. In the 1920s there existed no all-Union economic plan. Instead, plans for particular enterprises, towns, districts, and oblasts were drawn up and confirmed.

This relatively decentralized system of planning was replaced after the adoption of the First Five-Year Plan by a centralized system of planning applied to the different branches of industry and under the direction of the people's commissariats (ministries since 1946). Accordingly, the Council of the National Economy of the Ukrainian SSR was transformed into the People's Commissariat of Light Industry for the republic, and the local agencies such as regional economic councils were turned into the corresponding departments of the local soviets. Plans were classified as all-Union, Union-republican, republican, and local industry. The first was placed in its entirety under the jurisdiction of the all-Union people's commissariats, the second under the jurisdiction of the Union-republican commissariats of the USSR and the Ukrainian SSR, the third under the republican commissariats of Ukraine, and the last under local soviets. An

appropriate commissariat of the Ukrainian SSR began to assume general responsibility (including the responsibility for planning) for local industry, while operational responsibility was assumed by appropriate departments of the executive councils of the local soviets.

The five-year plans consisted of general indices on the basis of which the state planning committees of the Ukrainian SSR and the USSR and the people's commissariats prepared annual plans for various enterprises, which merely received plans without taking part in their preparation. As the economy developed, new branches of industry and new ministries with their own interests (branch 'egoism') had to be established, and this caused significant difficulties in planning. To improve economic planning in Ukraine on the territorial level and to review its implementation, a department of complex territorial planning was organized in 1940 under the State Planning Commission of the Council of the National Economy of the Ukrainian SSR.

It became obvious after the war that annual plans could not be accurate if the enterprises themselves did not take part in the planning. Hence, enterprises were instructed to prepare draft plans on the basis of guidelines provided by the state planning committee and the ministries. It turned out that the enterprises were partial to 'easy plans' that could be fulfilled without much effort and would earn bonuses. It seemed that this problem could be overcome by bringing the planning center closer to the enterprises. To this end, all economic ministries were abolished in 1957 and the whole Soviet Union was divided into about 100 economic administrative regions, each with its council of the national economy. There were 14 such regions in Ukraine, which were later reduced to 7. Ministry officials were transferred to these regions and were assigned the task of monitoring the operations of the enterprises at close range. Planning began to evolve according to the territorial, not the branch, principle. At the center remained the state planning committee apparatus. Under these new conditions grave difficulties arose in devising a unified and harmonious plan; the so-called territorial particularism of the regional economic councils had to be overcome. A gradual return to centralism began with the founding of the Ukrainian Council of the National Economy in 1960 and a similar council for the Russian SFSR and for Central Asia and the Supreme Economic Council of the USSR in 1963. In 1965 the system of the regional economic councils was abolished and the branch (ministry) system was reinstated with the condition, however, that the rights of the enterprises – even in the sphere of planning – would be expanded. A suitable system of material incentives was to encourage enterprises to adopt ambitious plans.

After many years of experience a certain system of state economic planning has emerged, involving (1) a long-term 20-year plan broken down into 5-year plans; (2) 5-year plans broken down into yearly plans that specify more concretely the tasks mentioned in the long-range plans; and (3) annual economic plans in which the more important tasks are organized quarterly. All state agencies – all-Union, republican, and local; complexes and enterprises – participate in the preparation of the economic plans. Specifically, the all-Union planning agencies are the State Planning Committee of the USSR, as well as the state committees for material-technical supplies, prices, construction, and science and technology resources. The

state committees are usually Union-republican agencies: the Chief Administration of Material-Technical Supplies of the Council of Ministers of the Ukrainian SSR, for example, is subordinated, on the one hand, to the Council of Ministers of the Ukrainian SSR and, on the other, to the USSR State Committee on Material-Technical Supplies. In Ukraine the planning agencies are the State Planning Committee of the Ukrainian SSR and the ministries and departments of the Ukrainian SSR. The local planning agencies in Ukraine include oblast, raion, and city planning committees and also branch administrations and departments of oblast, raion, and city executive committees. The planning is organized according to the principle of democratic centralism, by which a rigid division of authority has been replaced by a flexible division of functions. Since 1955 the economic plans of the USSR have defined only the fundamental tasks that determine the basic direction, rate, and proportions of economic development for the USSR, while the concrete tasks have been specified in the plans of the particular ministries of the Union republics, the local agencies, complexes, and enterprises.

On the basis of a 20-year program prepared by the Academy of Sciences of the USSR and the central state committees, the State Planning Committee of the USSR, in close co-operation with the ministries of the USSR and the Union republics (including the Ukrainian SSR), develops a draft of the 'basic directions' of economic development for 10 years, which is broken down into five-year plans. After the Council of Ministers of the USSR approves the draft, the State Planning Committee of the USSR prepares what are known as the 'control figures' for the main indices of the five-year plan and presents them to the ministries of the USSR and the Council of Ministers of the Ukrainian SSR, which then present them to the complexes and enterprises under their jurisdiction. On the basis of these figures, the complexes and enterprises prepare drafts of their own five-year plans of economic and social development. Based on these drafts and control figures the ministries of the USSR and the Council of Ministers of the Ukrainian SSR develop a draft of a five-year plan with a breakdown by year and economic sector and present this draft to the Council of Ministers of the USSR and to the State Planning Committee of the Ukrainian SSR. Here all the plans are reconciled, confirmed by the Council of Ministers of the USSR, and adopted by the Supreme Soviet of the USSR. The economic plan for the USSR is confirmed only in respect to the main indices. On the basis of these indices appropriate corrections are later introduced into the draft plans of the Ukrainian SSR and the ministries of the USSR and are confirmed by the Council of Ministers of the Ukrainian SSR or by the appropriate ministries of the Ukrainian SSR. Finally, the Supreme Soviet of the Ukrainian SSR nominally approves the developed five-year economic plan. This plan defines for the ministries and departments of the Ukrainian SSR the tasks of the complexes and enterprises under their jurisdiction, for the departments and bureaus of oblast executive committees the tasks of enterprises under oblast jurisdiction, and for the city and raion committees the tasks of enterprises under their jurisdiction (see *Five-year plan).

The preparation of one-year plans begins at the bottom. The complexes and enterprises prepare, on the basis of their five-year plans, drafts of annual plans and present them to their ministries. The Council of Ministers of the

Ukrainian SSR and the USSR ministries develop from these drafts the annual plans and provide a quarterly breakdown for the more important tasks. The drafts cannot have targets lower than the indices of the five-year plans. Finally, the State Planning Committee of the USSR develops from these drafts a project draft of a one-year plan and sends it to the Council of Ministers of the USSR for confirmation.

The Council of Ministers of the Ukrainian SSR is not limited to planning the economy under republican jurisdiction. It has the right to make proposals for the plans of all-Union and Union-republican enterprises that are located on the territory of the Ukrainian SSR. Once adopted the plans are law and technically cannot be changed. Yet the central planning agencies during the planning stage may lack precise information, for example, about the power of machines used by the enterprises and are dependent on the enterprises for this information, which is often falsified in favor of lower estimates. Because of the conflict of interest between the center and the enterprises, the plans are inaccurate; this only becomes obvious, however, in the process of their implementation. The plans must be changed frequently. Revisions in one area require revisions in all areas of the plan, but because of the short time limits this is often impossible. As the economy expands, the center's task of controlling the whole national economy becomes more and more difficult.

Economic press. Periodical and serial publications devoted to economic theory and practice as well as to particular areas of economic activity. Before the appearance of a specialized economic press, economic problems were discussed in Ukrainian sociopolitical, scholarly (*Kievskaia starina*), and literary journals and in Russian scholarly serials such as *Trudy Vol'nogo ekonomicheskogo obshchestva* (280 vols, St Petersburg 1795-1919). Besides these sources, the official publications of the ministries and government institutions of the Russian and Austro-Hungarian empires contained much information about economic conditions in Ukraine. Such information was also published in the early Russian economic periodicals, such as *Torgovyi sbornik* (1864-73), *Vestnik finansov, promyshlen-*

nosti i trgovli (1884–1917), and *Russkoe ekonomicheskoe obozrenie* (1897–1905).

The first popular Ukrainian periodicals devoted to economics appeared at the end of the 19th century in Galicia. These were the biweekly **Hospodar* (Lviv 1869–72); a monthly under the same title, published in Pere-myshl (1898–1913); the biweekly **Hospodar i promyshlennik* (Stanyславiv and Lviv 1883–7); and the biweekly *Hospodars'ka chasopys'* (Lviv 1910–18, 1920, later [1921–44] called **Hospodars'ko-kooperatyvnyi chasopys*). The following journals were of a scholarly nature: *Chasopys' pravnycha i ekonomichna* (Lviv 1902–14), published by the Shevchenko Scientific Society; the monthly **Economist* (Lviv 1904–14), published by the Provincial Audit Union; and the semiweekly *Nasha kooperatsiia* (Kiev 1913–4). The last two were devoted to co-operative affairs. Agricultural problems were discussed in the biweekly *Rillia* (Kiev 1910–6) and in the quarterly *Ril'nychi vidomosti* (Lviv 1906–11). In Bukovyna, the Union of Ruthenian Farmers' Associations published the biweekly *Narodne bohatstvo* (Chernivtsi 1908–11). The best periodical in the period of Ukrainian independence was the biweekly **Kooperatyvna zoria* (Kiev 1918–20), published by the Dniprosiuz union of consumer co-operatives.

In interwar Western Ukraine, several periodicals were devoted to economic problems: *Tekhnichni visti*, published in Lviv by the Ukrainian Technical Society as a quarterly (1925–30), a bimonthly (1931–6), and a monthly (1937–9); the monthly **Kooperatyvna respublika* (Lviv 1928–39), published by the Audit Union of Ukrainian Co-operatives; and the biweekly **Torhovia i promysl* (Lviv 1934–9), published by the Union of Ukrainian Merchants and Manufacturers.

In Soviet Ukraine the economic press reached its highest level of growth in the 1920s with such scholarly serials as *Zbirnyk Sotsial'no-ekonomichnoho viddilu VUAN* (37 vols, Kiev 1925–31) and *Pratsi Demohrafichnoho institutu VUAN* (14 vols, Kiev 1924–38). There were also some general periodicals. *Ukrainskii ekonomist* (1923–8), published in Russian, was a journal of a more popular nature. Soviet official views were reflected in *Narodnoe khoziaistvo Ukrainy* (Kharkiv 1919, 1921–3); *Khoziaistvo Ukrainy* (Kharkiv 1924–34), and *Hospodarstvo Ukrainy* (Kharkiv 1924–34).

The following journals were devoted to problems of labor and labor productivity: *Materialy po statistike truda na Ukraine* (4 vols, Kharkiv 1920–3), the biweekly *Visnyk profukhu Ukrainy* (Kharkiv 1922–9), and the journal of the People's Commissariat of Labor of the Ukrainian SSR *Pytannia pratsi* (Kharkiv 1923–31). The journals *Promyshlennost' Ukrainy* (Kharkiv 1923–4) and *Sotsialistychna industriia* (Kharkiv 1930–3) were devoted to studies of industrial development.

The Central Statistical Administration of the Ukrainian SSR published several journals and bulletins, among them *Visnyk statystyky Ukrainy* (Kiev 1928–30) and the irregular *Statystyka Ukrainy* (Kharkiv 1921–31). The Ukrainian General Planning Economic Commission published the monthly *Sotsialistychna Ukraina* (Kharkiv 1924–34), and the People's Commissariat of Agriculture published the monthly *Visnyk sil's'ko-hospodars'koi nauky* (Kiev 1922–9). *Radian'skyi kredyt* (Kharkiv 1927–8), *Finansovyi biuletен'* (Kharkiv 1923–6), and *Na finansovomu fronti* (Kharkiv 1930–41) were devoted to finance.

Many journals on co-operative affairs were published in the Ukrainian SSR (see **Co-operative press*). The main

ones were the biweekly (later monthly) *Kooperatyvne budivnytstvo* (Kharkiv 1923–35, Kiev 1934–5), published by the All-Ukrainian Association of Consumer Co-operative Organizations; *Kooperatyvne selo* (Kharkiv 1923–8), which served the agricultural co-operatives; *Promyslova kooperatsiia*; the biweekly **Sil's'kyi hospodar* (Kharkiv 1922–6); and *Ukrains'ka kooperatsiia*.

Beginning in the 1930s, most Ukrainian economic periodicals ceased publication as a result of the general repressive measures against Ukrainian economic science. A few new journals, such as *Shliakhy industriializatsii* (Kiev 1929–33) and *Kharchova i sil's'ko-hospodars'ka promyslovist'* (Kharkiv 1930–4), were short-lived. Only the popular journal dealing with problems of production was left: the monthly *Sotsialistychne tvarynnytstvo Ukrainy* (Kiev 1931–, titled *Ukrains'ke skotarstvo* in 1926–31).

The economic press in Ukraine began to revive only at the end of the 1950s, when the monthly **Economika Radians'koi Ukrainy* (Kiev 1958–) began to appear. This joint publication of the State Planning Commission and the Institute of Economics of the Academy of Sciences of the Ukrainian SSR has been published since the mid-1970s in a Russian as well as a Ukrainian edition. Since 1965 the Institute of Economics has also published the collection *Istoriia narodnoho hospodarstva ta ekonomichnoi dumky Ukrain's'koi RSR* (14 issues by 1980). Some other serial publications are Dnipropetrovske University's *Nekotorye problemy sotsial'no-ekonomicheskoi i politicheskoi istorii Ukrain's'koi SSR* (1973–); Kiev University's *Pytannia politychnoi ekonomii* (1965–), published since 1978 only in Russian under the title *Voprosy politicheskoi ekonomii* (148 issues by 1981), and *Ekonomichna heohrafiia* (1966–); Lviv University's *Pytannia politekonomii* and *Visnyk-seriia ekonomichna*; and Kharkiv University's *Visnyk – ekonomika* and *Visnyk – ekonomika promyslovosti*.

Since the 1960s, the Ministry of Trade of the Ukrainian SSR has published *Ekonomika trgovli*, the Economic Scientific Research Institute of the State Planning Committee of the Ukrainian SSR has published *Organizatsiia i planirovanie narodnogo khoziaistva* (59 issues by 1980), and the Ministry of Agriculture of the Ukrainian SSR has published *Ekonomika i orhanizatsiia sil's'koho hospodarstva* (62 issues, 1964–81). Because of the government's increasing emphasis on Russification since 1970, many economic journals in the Ukrainian SSR have switched to publishing only in Russian, while some have ceased publication altogether. All the publications of the Institute of Cybernetics of the Ukrainian SSR are published in Russian, among them *Kibernetika* and *Avtomatika* (both translated into English in the United States), and *Upravliaiushchie sistemy i mashyny*. These publications contain many theoretical studies in economic theory.

Abroad, in Poděbrady, the Society of Ukrainian Economists in Czechoslovakia published irregularly *Ukrains'kyi ekonomist* (1928–30). In Warsaw *Torhovel'no-promyslovyy visnyk* appeared in 1931–3. In Munich the biweekly *Suchasna Ukraina* published a monthly economic supplement in 1955–8. A scientific-popular quarterly, *Ukrains'kyi hospodarnyk*, was published in 1954–62. The Ukrainian Free University, the Ukrainian Technical and Husbandry Institute, and the Ukrainian Academy of Arts and Sciences in the United States publish articles on economics in their serials. Shorter economic articles have been published in Ukrainian newspapers and journals in the

United States, Canada, and Europe. (See also *Co-operative press, *Economic studies, *Statistics.)

B. Wynar

Economic regionalization. A division of a given territory (a country, group of countries, or even a continent) into economic regions that are economically homogeneous, that is, whose economic resources and productive forces are effectively integrated and whose various branches of production have an efficient specialization (see also *Economic geography). Two kinds of economic regionalization are distinguished: general (integral) and branch (special). General economic regionalization encompasses the totality of the economic life in a given territory and takes under consideration the existing natural conditions, the historical development, the social division of labor, the internal and external ties, the effectiveness of the control mechanisms, etc. Branch regionalization investigates the territorial relations within the individual branches of production such as manufacturing, agriculture, and transport.

In Soviet economics, regionalization is an integral part of the central planning of the national economy. It has two basic aims: to promote the specialization of a region within the all-Union economy in those branches of production that enjoy the most favorable natural conditions in a region; and to ensure the 'economic completeness of a region,' that is, to stimulate a balanced development of interconnected branches of production within the limits of the given economic complex in order to increase productivity and minimize costs by reducing unnecessary transportation of raw materials, utilizing available labor resources, and so on. In practice the 'economic completeness of a region' is subordinated to extra-economic factors (general foreign policy, military interests of the Soviet government), and the economic specialization of a region must conform to the programmatic tasks of the overall Soviet economic policy. This frequently leads to relocations that are economically unjustified and that negatively affect industrial productivity.

The first steps toward economic regionalization in Ukraine were taken at the end of the 18th century and were connected with the fiscal goals (taxation system) as well as the strategic military and administrative planning of the Russian and the Austro-Hungarian empires. K. Arsenev's scheme (1818), proposing to divide the Russian Empire into 10 regions based on historical and geographic factors, was the earliest attempt at economic regionalization. Two of the regions covered mostly Ukrainian territory: the Carpathian region, which included the

gubernias of Volhynia, Podilia, Kiev, Chernihiv, Kharkiv, and Poltava; and the steppe region, which included all the other parts of Ukraine. Projects of agricultural regionalization were prepared by A. Ermolov (1879), A. Fortunatov (1896), and O. Chelintsev (1910); projects of industrial regionalization by D. Mendeleev (1893, 1906) and others. The proposals of the statistician K. Herman (1819) were more precise, since he demarcated eight economic regions of Russia, one of which was the region of the 'Little Russian Province, Russian and Polish Ukraine, and New Russia.' P. Semenov-Tian-Shansky's project of geographic-economic regionalization (1871), in which Ukraine was divided into three economic districts – the southwestern (Right-Bank Ukraine), the Little Russian (Left-Bank Ukraine), and New Russian (southern Ukraine) – was also popular. A. Richter devoted more attention to economic factors in his scheme (1896), which encompassed two systems – a provincial regionalization (16 regions) and a county regionalization (24 regions). Ukraine was divided into two regions – the Little Russian and the New Russian. Some elements of Richter's scheme were adopted by the Ukrainian economist P. Liashchenko, who distinguished two belts in the European part of the Russian Empire – the productive (exporting) and the consuming (importing). Within each of these belts economic regions existed in relation to their position to markets attracting grain products. Thus, according to Liashchenko's interpretation, economic regionalization had a specific task: to determine the regions of the grain trade. According to his scheme Ukraine constitutes two regions: the southwestern and the Little Russian. A similar specialized approach can be found in the work of the Ukrainian finance specialist M. Yasnopolsky. Through an analysis of state income and expenditure he determined Ukraine's position in the financial system of the Russian Empire and demonstrated on the basis of statistical data that the central Russian government was exploiting Ukraine. All these projects of economic regionalization were built on the basic premise that the Russian Empire constituted a natural economic entity; therefore, the regionalization of Ukraine's territory was viewed as part of the general schema and was carried out from the viewpoint of the Russian economy. A similar attitude existed in the Austro-Hungarian Empire in respect to the regionalization of Western Ukrainian territories.

Ukraine was first treated as an organic economic entity only at the beginning of the 20th century in the works of S. *Podolynsky (industry), S. *Rudnytsky (geographic regionalization), and then of P. Fomin and K. *Vobly. In this regard, the works of P. Fomin, which remained somewhat tied to traditional Russian economic thought of the prewar period, form a transitional phase and contain a wealth of interesting theoretical material. Fomin's regions were set up according to zonal belts based on the soils prevalent in a given belt. The various belts show the method of natural-resources exploitation and the specific number of industrial-commercial centers dependent on the existing economic conditions. Besides these 'agricultural belts' there were also belts of an 'azonal' character, which were independent of the vegetative and animal environment. To estimate the industrial, agricultural, and commercial potential of a region Fomin used data on fiscal taxation. Ukrainian belts included the southern mining-industrial region, the southern agricul-

tural-commercial region, and the southwestern agricultural and industrial region.

Under the Soviet regime, of a more practical significance were the numerous projects of Ukraine's economic regionalization drawn up at the beginning of the 1920s by the State Planning Committee of Ukraine, which attempted to substantiate the autonomous status of Ukraine's economy. Many works of a more theoretical nature (by K. Vobly, M. Shrah, P. Tutkovsky, R. Yanovsky, and others) were published under the auspices of the All-Ukrainian Academy of Sciences. In conjunction with this, a broad discussion of the issue of Ukraine's economic autonomy took place in the press among the Ukrainian and Russian economists. The all-Union authorities, particularly the State Planning Committee of the USSR, proposed a series of projects that subordinated economic regionalization to the policy of centralized control of the economy. General economic regionalization was to come under the all-Union agencies, and the economic regions would not have to coincide with the borders of the Union republics (I. Aleksandrov's energy scheme). For political reasons many Russian economists (M. Vladimirovsky, G. Kryzhanovskiy, and others) referred to the plan of the State Commission for the Electrification of Russia (GOELRO) of 1920, which was drawn up by Lenin and divided the USSR into eight regions, with Ukraine belonging to the Donets-Southern region. Eventually, this plan was modified somewhat, with Ukraine being divided into two or three economic regions.

From a theoretical viewpoint these plans of the all-Union agencies were based on the need to expand industrial production and to utilize the economic resources of Siberia. The practical aim was to create favorable conditions for the all-Union agencies to transfer capital produced by Ukraine's economy, with its wealth of industrial and agricultural resources, to regions outside of Ukraine. Ukrainian economists objected particularly to the division of Ukraine's territory into two or three regions leaving only the southwestern region within the borders of the Ukrainian SSR. It was proposed that the industrial regions such as the Donets Basin, Dnieper, Kharkiv, and Black Sea regions be removed from the control of the Ukrainian republic. These proposals were reminiscent of the attempts to set up separate Donetsk-Kryvyi Rih and Odessa Soviet republics in 1918-19. Members of the Soviet Ukrainian government (M. Skrypnyk, V. Chubar, V. Zatonsky), and Ukrainian economists (M. Poloz, H. Hrynko, M. Hurevych, V. Vvedensky, the geographer A. Syniavsky) protested against these proposals. V. Dobrohaiev and M. Volobuiev were especially critical of these plans and accused the all-Union agencies of trying to exploit Ukraine's national economy as the tsarist government had done. In his well-known article 'Do problem ukrains'koï ekonomiky' (Concerning the Problems of Ukrainian Economics, *Bil'shovyk Ukraïny*, 1928, nos 2-3), M. Volobuiev sums up the discussion in this way: 'The principle of unity of Ukraine's national economy sharply contradicts the division of her territory. The fact of the linguistic-cultural unity of what we call the national territory is a consequence of economic unity. ... The territory (national) must in no case be divided, but on the contrary must be unified.'

With the rescinding of the NEP and the introduction of the *five-year plan, the Ukrainian SSR's agencies lost what autonomy they possessed, and during Stalin's

regime any discussion of the independence of Ukraine's national economy was impossible. Volobuiev and other Ukrainian economists were repressed. The State Planning Committee of the Ukrainian SSR was turned into an executive agency of the all-Union institutions. The USSR planning agencies regarded Ukraine's economy as an integral part of the USSR economy and thus returned to the centralist policy of the Russian government. Although from the beginning of the First Five-Year Plan the borders of the Union republics could not be violated in setting up economic regions, the principle of linking economic regionalization with the administrative-territorial division did not have much significance in practice and even had many negative consequences. Economic factors were often confused with purely bureaucratic requirements in economic planning, and this proved detrimental to the economies of individual regions, republics, and the whole USSR. In this period some methodological guidelines for economic regionalization were developed; they stressed the following factors: the objective consideration of the economic unity of a region, the principle of the territorial unity of all its parts, the objective inclusion of the existing specialization of the economy and the prospects for its development. The economic profile of individual economic regions had to be viewed from the standpoint of the interests of the all-Union economy, whose projected development would dictate suitable changes in the production profile of individual regions. As a result of these measures not only did the production profile of particular regions constantly change, but so did the number of regions and even the theoretical foundations for their constitution. The territory of the Soviet Union was divided into 24 regions under the First Five-Year Plan, into 32 under the Second, into 19 under the Third, and into 13 after the Second World War. In 1957 *regional economic councils were introduced in connection with the reorganization of economic management and the decentralization of the national economy, and the number of regions was increased to 105. After N. Khrushchev's downfall the regional economic councils were abolished, the management of industry was converted to a branch structure, and 18 large economic regions were introduced. This state of affairs, with various modifications, continues to the present day.

According to the project of 1921 there were two economic regions in Ukraine: the southern mining-industrial region and the southwestern region. These regions were abolished in 1924, and Ukraine was treated as one economic region to which, a short while later, Moldavia was added. After Khrushchev's experiments with regional economic councils in Ukraine, three large regions were set up in 1961: the Donets-Dnieper, southwestern, and southern regions. This division has been kept until the present time. These regions were created to meet the needs set by Soviet central planning, and the specialized production of certain kinds of goods is strictly prescribed in each of the regions to meet the needs of other regions in the Soviet Union. The other branches of the economy that are not defined in a region's profile are closely connected within the region with the branches of Union specialization and together form one economic complex (O. Koroid).

The Donets-Dnieper region specializes within the all-Union division of labor in the fuel and mining, electric-

power, metallurgy, machine-building, chemicals, and food-processing industries and in a number of branches of agricultural production. As for the region's productive-territorial relations with other regions, the data on railway freight (for 1965) indicates that the region imports only 30.6 percent of its total freight from the two other regions of Ukraine, while it exports 43.8 percent of its freight to these regions. However, the Donets-Dnieper region imports 69.5 percent of its railway freight from non-Ukrainian regions (62 percent from the Russian SFSR) and exports 56.2 percent beyond Ukraine (37.7 percent to Russia). Thus, the most important economic region of Ukraine is tied more closely to the Russian republic than to other parts of Ukraine. This was the ultimate purpose of Soviet economic policy and was opposed by Ukrainian authorities in the 1920s. The southwestern economic region is more closely connected with the profile of the Ukrainian economy. It has a many-branched food industry, an extensive machine-building industry, and some branches of the chemical, mining, and light industries. This region accounts for a large proportion of Ukraine's agricultural production.

Not having the means to undertake general planning, the State Planning Committee of the Ukrainian SSR has done some branch planning in the 1960s and 1970s, referring back to the works of K. Vobly, M. Shrah, R. Yanovsky, and particularly to I. Zilberman's (1929) schemes for locating industries. Zilberman had proposed 7 industrial regions: the northeastern, southwestern sugar-industrial, Poltava, Polisia, mining-industrial, Dnipropetrovske metallurgical, coastal and the cities of Kiev and Kharkiv. Eventually, this scheme was modified resulting in 11 industrial regions in 1957 and 14 in 1960. In their synthetic work in 1965, I. Panko and O. Makhrachov proposed 7 regions: Kiev, Donetske, Lviv, Podilia, Dnipropetrovske, Kharkiv, and the Black Sea. In 1965 the Scientific Research Institute of the State Planning Committee of the Ukrainian SSR began to publish the periodical *Organizatsiia i planirovanie otraslei narodnogo khoziaistva* (ed A. Emalianov, 80 issues by 1980). Some schemes have also been worked out for agricultural regionalization. One of the most important schemes distinguishes five zones of agricultural specialization: Polisia, the Forest-Steppe, the Northern and Central Steppe, and the upland and mountain regions of the Crimea and the Carpathians. In 1958 the first agricultural atlas of Ukraine appeared (editor I. Romanenko). In the 1970s much attention was devoted to the study of territorial ties of production, that is, to the analysis of the economic interconnections among territorially divided producer enterprises and consumer regions in order to improve the exchange in raw materials, fuels, equipment, industrial products, and agricultural products. The question of economic regions is investigated at the State Planning Committee of the USSR and of the Ukrainian SSR, and at the Institute of Economics of the Academy of Sciences of the Ukrainian SSR. Among Ukrainian émigré scholars the problem of economic regionalization has been studied by K. Matsiievych (agriculture), V. Sadovsky, O. Mytsiuk, V. Tymoshenko, and V. Kubijovyč.

Economic studies. The scientific disciplines that investigate all aspects of the national economy, that is, the circumstances of production, methods of distribution and exchange of goods, and the rates of consumption. *Political economy, the history of the national economy and of economic thought, and *economic geography are known as general economic sciences, for they deal with the economic structure of society from a territorial and historical viewpoint. The economics of industry, farming, trade, finance and economic policy, *statistics, *demography, and *cybernetics concentrate on economic relations in the separate departments or branches of the national economy.

Before 1917. In Ukraine economic studies developed at the end of the 18th and the beginning of the 19th century. They were begun by the natural scientists of the Kievan Mohyla Academy, Ukrainian philosopher-physiocrats such as Ya. Kozelsky and V. Karazyn, and agronomists such as the brothers P. and A. Prokopovych and A. Prokopovych-Antonsky. The Cossack chronicles, memoirs (particularly M. Khanenko's and Ya. Markovych's diaries), and the geographical accounts of foreign travelers provide some data on economic relations in Ukraine up to the 18th century. In the second half of the 18th century statistical-geographical descriptions of various regions of Ukraine were compiled by F. Tumansky, A. Shafonsky, V. Ruban, and others. This work was continued in the first half of the 19th century by S. Rusov (for Volhynia), V. Marchynsky (for Podilia), M. Arandarenko (for the Poltava region), A. Skalkovsky (for New Russia).

Particularly notable in this regard were the works of the Ukrainian statistician D. Zhuravsky (1810–56), whose numerous studies, including *Statisticheskoe opisaniie Kievskoi gubernii* (A Statistical Description of Kiev Gubernia, 1852), not only provided a wealth of factual data, but also introduced methodological innovations in the application of statistical methods to economic phenomena. An important contribution to economic and statistical research on Ukraine's economy was made by the Southwestern branch of the Russian Geographic Society, the Southwestern branch of the Russian Export Office, and from 1870 by the statistical bureaus of the *zemstvos*, which studied agriculture of the separate gubernias, cottage industry, and trade. The most noted *zemstvo* statistician was O. Rusov (1847–1915), who worked in the Chernihiv *zemstvo*. Other scholars who worked in this field were M. Domontovych, H. Rotmistrov, and V. Ivanov. Economic problems, particularly the development of co-operatives, farming, and industry, attracted the attention of Hromada members such as P. Pylychiv, M. Ziber, P. Chubynsky, V. Domanytsky, T. Rylsky, M. Porsh, S. Ostapenko, S. Podolynsky, and V. Kosynsky.

The first chair of political economy was established at Kharkiv University in 1806 (held by the German scholar L. von Jacob) and promoted the studies of such noted economists as Ya. Pavlovych and T. Stepanov, the author of the first Russian textbook in political economy. While at Kiev University studies were undertaken by I. Vernadsky, N. Bunge, H. Tsekanovsky, and M. Yasnopolsky, the noted finance expert who first drew attention to Russia's exploitation of Ukraine. In the second half of the 19th century and at the beginning of the 20th century historians such as O. Lazarevsky, V. Antonovych, M. Liubavsky, M. Vladymyrsky-Budanov, and then M. Hrushevsky, D. Bahalii, M. Slabchenko, and M. Vasylenko devoted much attention to the economic history of Ukraine. M. Tuhan-Baranovsky gained world recognition for his work on economic theory and the co-operative movement. M. Aristov studied the history of industrial development, S. Borodaievsky studied the history of co-operatives, and F. Shcherbyna did statistical research. Many studies of the economic resources of Ukraine were published in Russian journals such as *Zhurnal manufakturny i torgovli*, *Gornyi zhurnal*, *Ekonomist*, and *Promyshlennost' i torgovlia*; some studies were also published in *Kievskaiia starina*, a journal devoted to Ukrainian studies.

In Western Ukraine economic research was mostly in the hands of Austro-Hungarian government institutions and was published in German or Polish in the official publications of the provincial diets. Some materials on the history of the economy of this region were published by Galician civic leaders such as D. Zubrytsky, A. Petrushevych, I. Sharanevych, and Ya. Holovatsky and by the Polish historian A. Jablonowski. Other Ukrainian authors – V. Barvinsky, T. Voynarovsky, V. Navrotsky, K. Pankivsky, I. Petrushevych, Ye. Olesnytsky, and others – wrote articles on economic questions for the general and economic press. From 1909 they contributed to a special publication, *Studii z polia suspil'nykh nauk i statystyky* (Studies in the Field of Social Sciences and Statistics), of the Social-Statistical Commission of the Shevchenko Scientific Society.

1917–45. After the 1917 Revolution and during the period of Ukrainian statehood a number of uncensored studies of Ukraine's national economy appeared. M.

Hrushevsky made the first attempt at a historical survey of Ukraine's economy in his *Studii z ekonomichnoi istorii Ukrainy* (Studies on the Economic History of Ukraine, Kiev 1918). M. Porsh, P. Stebnytsky, M. Stasiuk, S. Ostapenko, and others wrote studies on Russia's colonial exploitation of Ukraine. Ukrainian diplomatic missions, press bureaus, and particularly the Union for the Liberation of Ukraine published some economic studies on Ukraine by such authors as V. Tymoshenko, A. Serbynenko, S. Rudnytsky, I. Feshchenko-Chopivsky, M. Korduba, Kh. Lebid-Yurchyk, and V. Mazurenko.

In the 1920s the All-Ukrainian Academy of Sciences (VUAN), and particularly its social-economic department with sections of political economy, trade and industry, statistics, agriculture, finance, and economic history, became the center for economic research. At this time 14 economists were members of the academy, among them M. Tuhan-Baranovsky (the first chairman of the social-economic department), K. Vobly (chairman of the Commission on the National Economy of Ukraine), L. Yasnopolsky (chairman of the Commission on Finance), D. Bahalii (chairman of the Commission on the Socioeconomic History of Ukraine), and M. Vasylenko. Research on Ukraine's economic history was also carried on at Ukrainian historical institutions, headed by M. Hrushevsky. The commissions of the VUAN published their proceedings and collections consisting of contributions from specialists in various fields, such as M. Slabchenko, O. Ohloblyn, M. Yavorsky, N. Polonska-Vasylenko, A. Yaroshevych, P. Kovanko, A. Syniavsky, V. Dobrohaiev, M. Shrah, H. Kryvchenko, A. Koporsky, O. Popov, V. Kosynsky, O. Leontovych, V. Levytsky, K. Vobly, Ya. Dymanshtein, P. Fomin, and M. Ptukha. A number of works in various areas were published by the Society of Ukrainian Economists, headed by K. Vobly. Economic data and research appeared in the transactions of the institutes of national economy in Kiev and Odessa and in the publications of the Statistical Administration of Ukraine, the Odessa Scientific Society, the Kharkiv Scientific Economic Society, the Bureau for the Study of Ukraine's Productive Resources at the Ukrainian State Planning Committee, and so on. The central vehicle of economic thought in Ukraine, which reflected the views of the Soviet government, was the periodical *Narodnoe khoziaistvo Ukrainy* (1919, 1921–3), followed by the monthly *Hospodarstvo Ukrainy* (1924–34), a publication of the State Planning Committee of the Ukrainian SSR. There were a few dozen periodicals and serial publications in the field of economics, for example, *Ukrainskii ekonomist* (1923–8) and *Visnyk profprukhu Ukrainy* (1922–9) (see *Economic press).

A number of collections and monographs on the productive resources of Ukraine were published by Ya. Vvedensky, H. Hryenko, H. Kryvchenko, Ya. Dymanshtein, and others in connection with the planned industrialization of the USSR and the growing conflict between Ukrainian and Russian economists over the allocation of capital investment. These publications emphasized the high economic development of Ukraine in comparison with the other regions of the USSR. V. Dobrohaiev argued in the journal *Khoziaistvo Ukrainy* that Ukraine's financial contribution to the Union budget was greater than its share from the budget, and M. Volobuiev boldly asserted in 1928 that Ukraine was being exploited. This tendency in Ukrainian economic thought was sharply

condemned by government circles as economic nationalism and was labeled 'Volobueivism.' Most of the economists who held this position were arrested. In the 1930s, as widespread repression engulfed Ukraine, the economic sciences declined, and most of the scientific institutions were abolished. In 1936 the Institute of Economics of the Academy of Sciences of the Ukrainian SSR replaced the social-economic department of the VUAN. Its task was to co-ordinate all economic research. Up to the Second World War the institute's work, like the work of all economic-research institutions, was confined to technical-production assignments. Scientific research was practically non-existent.

In this period economic studies continued to develop in Western Ukraine and abroad, with an emphasis on those problems that, because of censorship, could not be investigated in Ukraine. These problems included Ukraine's economic independence, economic relations between Ukraine and Russia, and the influence of Soviet economic policy on the preservation of Ukraine's economic resources. An important center of research was Lviv, the seat of the Economic, Sociological, and Statistical Commission of the Shevchenko Scientific Society and the location of the head offices of various co-operatives and economic institutions with their own publications (see *Co-operative movement). Because of the rapid expansion of co-operatives in Western Ukraine, many economists, including Yu. Pavlykovsky, Ye. Khraplyvy, V. Nestorovych, I. Vytanovych, and O. Lutsky, studied the theoretical and practical problems of the co-operative movement. I. Dzhydzhora, I. Karpynets, and R. Zubyk did research in economic history. K. Kobersky studied general economics, and V. Kubijovych and others studied economic geography. Among Polish economists F. Bujak was a noted specialist on the economy of Galicia. In Czechoslovakia economic research was conducted by Ukrainian scholars at the *Ukrainian Husbandry Academy and then at the *Ukrainian Technical and Husbandry Institute in Poděbrady (1921–45), as well as at the *Ukrainian Free University in Prague. Among the more important scholars were O. Mytsiuk (political economy and the economic history of Transcarpathia), V. Tymoshenko (economic geography and economic policy), S. Borodaievsky and B. Martos (co-operatives), K. Matsiievych and V. Domanysky (agriculture), V. Sadovsky (economic policy), Ye. Glovinsky and I. Kabachkov (finance), F. Shcherbyna and L. Shramenko (statistics), M. Dobrylovsky (political economy), K. Kobersky (trade), and V. Ivanys and S. Goldelman (industry). Economic research in Germany was carried on at the *Ukrainian Scientific Institute in Berlin (1926–45) by R. Dyminsky, with Kh. Lebid-Yurchyk and O. Odarchenko. In Poland the *Ukrainian Scientific Institute in Warsaw (1929–39) produced a series of monographs on Ukraine's economy by V. Sadovsky, Ye. Glovinsky, B. Ivanytsky, V. Ivanys, I. Ivasiuk, K. Matsiievych, I. Shovheniv, and others.

After 1945. The development of the economic sciences in the Ukrainian SSR after 1945 can be divided into three periods. In the first period, from the end of the war to J. Stalin's death (1945–53), the basic problem discussed by Ukrainian economists was the reconstruction of the national economy, and economic research was fully subservient to the current needs of Soviet economic policy. At the time only a few popular works were published, and older works, particularly K. Vobly's, were reprinted.

In the second period there was some liberalization of Soviet nationality policy and economic policy, beginning with N. Khrushchev's decentralization of the USSR economy. Research on Ukrainian economic problems increased, new research institutions were established, and a number of important monographs on the history and the present state of the Ukrainian economy appeared. In 1956 the Scientific Research Institute for the Organization of Agriculture was established. In 1957 the *Institute of Economics of the Academy of Sciences of the Ukrainian SSR was reorganized (with branches in Kharkiv, Donetsk, and Lviv). In 1958 this institute and the State Planning Committee began to publish the journal **Ekonomika Radians'koi Ukraïny*. In 1962 the Research Institute of the State Planning Committee of the Ukrainian SSR was established. The work of the Council for the Study of the Productive Resources of the Ukrainian SSR at the Academy of Sciences of the Ukrainian SSR was greatly expanded. New special institutes were established. The work of existing institutes – the Ukrainian Scientific Research Institute of Trade and Public Nutrition (est 1945), the Institute of Mining (1958), the Mining-Metallurgical Institute (1957), the Institute of Mechanics and Automation (1951), etc – was widened. By the end of the 1960s about 2,000 research scholars were employed in the research institutes and the 150 chairs of economics at the universities and other schools in Ukraine.

A number of encyclopedias were published: *Entsyklopediia narodnoho hospodarstva Ukraïns'koi RSR* (The Encyclopedia of the National Economy of the Ukrainian SSR, 4 vols, 1969–72), *Ukraïns'ka sil's'kohospodars'ka entsyklopediia* (Ukrainian Agricultural Encyclopedia, 3 vols, 1970–2), *Ekonomichnyi slovnyk* (The Economic Dictionary, 1973), and *Entsyklopediia kibernetiky* (The Encyclopedia of Cybernetics, 2 vols, 1973). A number of general monographs appeared, among them *Rozvytok narodnoho hospodarstva Ukraïns'koi RSR, 1917–1967* (The Development of the National Economy of the Ukrainian SSR, 1917–67, 2 vols, 1967), O. Nesterenko's *Rozvytok promyslovosti na Ukraïni* (The Development of Industry in Ukraine, 3 vols, 1959–66), and *Atlas sil's'koho hospodarstva URSR* (Atlas of the Agriculture of the Ukrainian SSR, 1958). Since 1957 the Statistical Administration of the Ukrainian SSR has published an annual collection of statistics, *Narodne hospodarstvo Ukraïns'koi RSR* (The National Economy of the Ukrainian SSR), and statistical compendiums for the various branches of the economy: *Radians'ka torhivlia v URSR* (Soviet Trade in the Ukrainian SSR, 1960, 1963), *Tvarynystvo URSR* (Animal Husbandry in the Ukrainian SSR, 1960), etc. A lot of attention was devoted to the current state of the Ukrainian economy, particularly to such problems as the cost of production, the rational use of capital, labor productivity, the structure of the national income, and the distribution of production. These areas were studied by O. Liberman, L. Horelik, S. Yampolsky, M. Vasilenko, A. Moskvyn, and others. Industrial production was analyzed by O. Alymov, A. Kochubei, P. Levytsky, M. Seredenko, O. Khramov, Ya. Shevchenko, and L. Yasnopolsky. P. Pershyn, I. Lukinov, V. Bondarenko, I. Romanenko, A. Radchenko, P. Doroshenko, and A. Chaikovsky specialized in agriculture. Ya. Feihin, O. Dibrova, L. Koretsky, I. Mukomel, M. Palamarchuk, and others specialized in economic geography. Academician M. Ptukha, O. Korchak-Chepurkivsky, P. Bahrii, V. Bondarenko, M. Darahan, I.

Paskhaver, P. Pustokhod, V. Steshenko, P. Nahirniak, and others worked in the field of demography and statistics.

After a long interruption research in Ukrainian economic history, two interdisciplinary collections were published: *Pytannia sotsialistychnoi ekonomiky ta istorii narodnoho hospodarstva* (Problems of Socialist Economics and the History of the National Economy, 1963) and *Z istorii marksysts'ko-lenins'koi ekonomichnoi dumky na Ukraïni* (On the History of Marxist-Leninist Economic Thought in Ukraine, 1966). D. Virnyk, M. Herasymenko, O. Nesterenko, V. Teplytsky, Z. Shulha, T. Dereviankin, L. Korniiuchuk, I. Hurzhii, S. Zlupko, I. Boiko, and others specialized in economic history. One of the most prominent economic historians of the USSR – P. Liashchenko – worked in Russia. The most neglected areas of economics were the theoretical problems of political economy, finance, income distribution, and comparative economics. Apart from a few fragmentary works on these topics by P. Nahirniak, M. Perovych, and L. Kukhareenko, they remain almost the exclusive domain of the Leningrad and Moscow research institutes. A few interdepartmental serial publications, such as *Pytannia politychnoi ekonomii*, published by Kiev University, and *Pytannia politekonomii*, published by Lviv University, appeared in Ukraine.

The third period in the development of the economic studies is connected with the Russification of most of the scientific institutions in Ukraine and a considerable reorientation of economic research in the 1970s. At present economic research is concentrated in the economics division of the Academy of Sciences of the Ukrainian SSR. Various institutes are subordinated to this division: the Institute of Economics, under the direction of I. Lukinov, with 6 departments, 16 sections, and 135 research associates; the Institute of Industrial Economics in Donetske, directed by M. Chumachenko, with 11 departments and 120 research associates; the Council for the Study of the Productive Resources of the Ukrainian SSR, directed by O. Alymov, with 11 departments and 90 research associates; and the Institute of Social and Economic Problems in Foreign Countries, established in 1978 and directed by A. Shlepakov, with 97 research associates. Economic research is also carried on at the Scientific Research Institute of the State Planning Committee, which issues the journal *Organizatsiia i planirovanie otraslei narodnogo khoziaistva*, and the Institute of Cybernetics, established in 1962 and directed by V. Hlushkov, with 732 research associates and three periodicals, all printed in Russian: *Kybernetika*, *Upravliaiushchie sistemy i mashyny*, and *Avtomatika*.

Most of the works in economics – about 1,000 monographs and serials annually – are of a popular scientific nature and are printed in Russian. Most of the effort today is devoted to the complex study of natural and labor resources, because of noticeable shortages in the skilled labor force. In the same way much attention is given to statistical studies and forecasts of the development of economic regions and industrial complexes and of the interconnections among certain branches of industry and agriculture. A lot of time is also spent on working out economic models, on investigating automatic control systems, and, in the last few years, on studying the demographic trends in Ukraine and the profile of labor resources. Economic research in Ukraine shows none of the autonomous tendencies that were evident in the 1960s and is fully subservient to the utilitarian directives of the planning boards of the central scientific institutions in

Moscow. There is hardly any research on the Ukrainian economy as a separate economic entity. Economic history, economic geography, national income, and economic regionalization are largely neglected.

Outside Ukraine. Economic research was conducted in the larger centers of Ukrainian émigrés, mainly in Munich, where the Shevchenko Scientific Society, the Ukrainian Free University, the Ukrainian Academy of Arts and Sciences, the Ukrainian Technical and Husbandry Institute, and the Ukrainian Higher School of Economics relocated after the war. The following scholars worked in these institutions: R. Dymynsky, Ye. Khraplyvy, M. Vasylyv, I. Vyatanovych, V. Domanytsky, M. Velychkivsky, T. Sosnovy, and K. Kononenko. In the 1950s the economists B. Martos, Ye. Glovinsky, P. Kovankovsky, A. Popliuiko, D. Solovei, V. Holubnychy, V. Marchenko, F. Haienko, and others did research at the Institute for the Study of the USSR. Most of these scholars emigrated overseas, and some of them found work in their profession at American and Canadian universities and scientific institutions. At present the more productive economists are L. Dobriansky, N. Chirovsky, B. Wynar, I. Koropeckyj, V. Bandera, L. Melnyk, S. Protsiuk, A. Kachor, and I. Maistrenko.

Ediger, Teodor, b 18 December 1886 in Berdianske, Tavriia gubernia. German historian descended from Mennonite colonists in southern Ukraine. Ediger studied history at the universities of Berlin, Basel, and Halle in 1906–9. In 1911 he published in Halle his dissertation on relations between Rus' and Germany, France, and the Roman Curia entitled *Russlands älteste Beziehungen zu Deutschland, Frankreich und der römischen Kurie*. In this work Ediger presented some rarely mentioned facts about

the ties between southern Rus' (northern Rus' is not discussed) and Western Europe.

Edmonton. Capital city (1981 pop 532,246) of Alberta. There were 62,655 residents of Ukrainian origin in Edmonton in 1971. They formed 12.6 percent of the population and were the second-largest Ukrainian urban community in Canada. Ukrainians initially settled in Edmonton at the turn of the century, establishing modest businesses and pioneer institutions, including the city's first bookstore (slated for restoration in the historical Fort Edmonton Park) and Canada's first Ukrainian students' residence or bursa (1912). Since 1951, Edmonton has been the see of the western eparchy of the Ukrainian Greek Orthodox church and since 1948 of the Edmonton exarchate (after 1956, eparchy) of the Ukrainian Catholic church. Other notable Ukrainian institutions include *St. John's Institute (Orthodox); Ukrainian News Publishers, which publishes the bilingual Ukrainian Catholic weekly **Ukrains'ki visti*; the *Canadian Institute of Ukrainian Studies at the University of Alberta; and the Ukrainian Canadian Archives and Museum of Alberta. In 1974 the

Ukrainian Language Resource Centre, Canadian Institute of Ukrainian Studies, University of Alberta, Edmonton

first English-Ukrainian bilingual or partial immersion classes, which have since spread to other Prairie centers, were established in Edmonton. Ukrainian businessman W. *Hawrelak was elected mayor of Edmonton four times between 1951 and 1977. L. *Decore, a Ukrainian politician, was elected mayor in 1983. Several Ukrainians have served as city aldermen and represented Edmonton in the Alberta legislature and the federal House of Commons.

Education

Until the mid-14th century. The Cyrillic script found its way from Bulgaria to Rus' before the adoption of Christianity as the state religion by Prince Volodymyr the Great. This led to the ready acceptance of the Bulgarian (Church Slavonic) liturgy and religious literature under Prince Volodymyr, although the faith he had adopted came from the Greeks. Historians assume that at first the clergy were trained at episcopal cathedrals as was the practice in Byzantium. The princes were probably educated at home by private tutors. According to the Primary Chronicle Volodymyr the Great forced the children of the upper class to attend school and to acquire 'book learning.'

Yaroslav the Wise assigned a stipend in 1037 for priests who taught the people to read and write at the churches. Inscriptions on objects of daily use indicate that a sizable portion of the urban population, including women, were literate. Fluency in foreign languages was highly regarded at the princely courts. Volodymyr Monomakh, for example, wrote that his father Prince Vsevolod Yaroslavych knew five languages, which was an ideal standard for the educated monarch in Europe at the time, and advised his children to imitate their grandfather. Greek was commonly known by church bookmen. The use of Latin at the court of the Galician-Volhynian rulers in the first half of the 14th century indicates the beginnings of a West European influence in education.

Mid-14th to 18th century. The Kievan state did not establish a clearly defined school system; hence, education could not be maintained at the same level after the loss of statehood. Lacking educational facilities, particularly higher ones, at home, Ukrainians sought higher education abroad – at the Latin universities of Cracow, Prague (where in 1397 the Lithuanian college, a residence house for students of mostly Ukrainian and Belorussian origin, was established), and in Western Europe. The level of education in Ukraine was low but it was widely accessible. The schools (sometimes called *dydaskalii* in the 16th century) were usually *parochial schools taught by *precentors (known sometimes as *ustavnyky*). Children began school at seven years of age. The wealthier families hired precentors as private tutors (a fact noted in V. Zahorovsky's testament of 1577). The primer published by I. Fedorovych in 1574, which was based on Greek and Bulgarian models, gives us some idea of the curriculum.

In the 16th and early 17th century Protestant, and particularly Jesuit, schools spread rapidly in Ukraine and Belorussia. The Calvinist school in Panivtsi in Podolia and the Socinian schools (see *Socinians) in Kyselyn (near Volodymyr Volynskyyi), Khmilnyk, Hoshcha, and Berestchko taught in Polish, German, or Latin. The Jesuits managed 23 schools in Ukraine, including colleges in Yaroslav (1575), Peremyshl, Lviv, Lutske (1608), Ostrih, Kamianets-Podilskyyi (1610), Vinnytsia, Bar, Pynske, and Kiev (1647) and the *Zamostia Academy (1595). Polish or Latin was the language of instruction in these schools. In order to counteract the influence of Protestant and Catholic education in Ukraine the Orthodox community sought to improve the level of its Church Slavonic schools. Imitating the Protestant and Catholic models, Prince K. *Ostrozky established Orthodox schools in Turiv (1572), Volodymyr-Volynskyyi (1577), Slutsk (1580), and Ostrih (ca 1580, see *Ostrih Academy). Similar schools were opened in Smotrych (1579) and Kholm (1582). Besides Church Slavonic, Latin, Greek, and Polish were taught at the Orthodox schools.

The *brotherhood schools, founded and supported by Orthodox brotherhoods, were an important new force in the history of Ukrainian education. At first the Greek influence predominated – the schools received support from the Greek patriarchs, imported Greek teachers, and emphasized the Greek language. The subjects and methods of instruction, school-parent relations, and so on were governed by school statutes, regulations, or articles of law, such as the statute of the Lviv school (1586) or the Lutske school (1624). Some information about the teaching methods used in the brotherhood schools appeared in the introduction to M. Smotrytsky's grammar (1619). The

brotherhoods were the first publishers of grammars, among them the three Church Slavonic grammar textbooks written by Ukrainians and published in Vilnius (1586 and 1596) and in Yevie (1619), the textbook published in Kremianets (1638), and the Greek–Church Slavonic grammar published in Lviv (1591). At the end of the 16th century Latin and Polish began to force out Greek, which disappeared from the curriculum by the mid-17th century.

The first brotherhood school was established in Lviv in 1586 (see *Lviv Dormition Brotherhood). The *Kiev Epiphany Brotherhood school was founded in 1615 and reorganized in 1632 into the Kievan Mohyla College (see *Kievan Mohyla Academy), becoming the first Ukrainian institution of higher learning. In spite of the opposition of some priests and Cossacks, Metropolitan P. *Mohyla introduced Latin and Polish into its curriculum and successfully defended the curriculum against Jesuit attempts to undermine it. A branch of the college was set up in Vinnytsia.

The Ukrainian language was not taught in the schools. Mohyla took some measures to bring it into the curriculum by instructing teachers to assign his Ukrainian catechism (1645) to students, but there were no Ukrainian grammars or primers. The first 'Ruthenian' (ie, not Church Slavonic) grammar, was written in 1643 by I. Uzhevych and was based on a literary language incorporating both Ukrainian and Belorussian elements. It has been preserved as an unpublished manuscript in France and never came into use in either Ukraine or Belorussia.

The Uniate church also made some efforts to improve the education of its clergy: the Kobryn sobor (1629) resolved to establish a seminary with Latin and Church Slavonic or Ruthenian as the languages of instruction.

At the same time eastern Transcarpathia experienced an educational revival when the ruler of Protestant Transylvania, Prince G. Bethlen, granted in 1627 to the bishop of Mukachiv, I. Hryhorovych, the right to set up 'schools and gymnasia wherever there are churches' and to teach Church Slavonic, Greek, Latin, Hebrew, and other languages.

By the mid-17th century elementary (parochial) education was generally accessible in Ukraine. As Paul of Aleppo asserted in 1654, among the Ukrainian population governed by B. Khmelnytsky 'everyone or almost everyone, including most of the women and girls, can read and knows the sequence of prayers and hymns by heart; even the orphans are instructed by the priests and are not allowed to loiter.'

The Treaty of Andrusovo (1667) led to the decline of brotherhood schools in Right-Bank Ukraine, while the union with Muscovy led to the emigration of leading scholars from Left-Bank Ukraine to the new imperial centers. The Kievan Mohyla College experienced a period of decline. Until the end of the 18th century no new grammar books appeared in print.

Hetman P. Doroshenko's plan to set up a second Orthodox college under the protection of the Polish state was never realized because of his defeat in 1676. For the Orthodox population of the Polish Commonwealth the most important center of education was the monastery school in *Hoshcha on the Horyn River (est 1638). Some Ukrainians under Polish rule, particularly the clergy, sent their sons to the Kiev College. This school experienced a revival with Hetman I. Mazepa's accession to power

(1687) and in 1701 received the status of an academy. Mazepa also permitted the Jesuits to open a school in Kiev in 1690. After Mazepa's defeat in 1709 the academy suffered a decline but it was revived again under the protection of Metropolitan R. Zaborovsky (1731–47). From the mid-18th century attempts were made to secularize the academy's curriculum; for example, modern European languages, geodesy, and fortification design were introduced, but the academy was soon overshadowed by the secular university in Moscow (est 1755). In 1784 the Russian pronunciation of Church Slavonic was adopted at the academy. Finally, the Kievan Mohyla Academy was closed down in 1817, to be reorganized two years later into the *Kiev Theological Academy.

Among the other schools in Hetman Ukraine the more important ones were the school in Chernihiv (est 1689), which in 1700 became *Chernihiv College and in 1776 the Chernihiv Seminary, and *Pereiaslav College (est 1738), which in 1778 became a seminary. There was a wide network of parochial schools taught by local or itinerant preceptors (see *Itinerant tutors). Contributions (*rokivshchyna* or *rokove* of 1 *shah* per household) to support these schools were collected by the students themselves. In 1740–7 there were 866 schools in the 1,099 villages (ie, 1 school per 1.3 community), according to the statistics found in the books of 7 of the 10 Hetman regiments. The Zaporozhian Sich had its own schools – one for future preceptors, church choir singers, and deacons, and one for orphans. Among other subjects, the military arts were taught.

In the 18th century the cultural importance of Slobidska Ukraine with Kharkiv as its center began to increase. In 1727 *Kharkiv College was opened there with a more modern program than that of the declining Kievan Academy or the two other colleges in Hetman Ukraine. H. Skovoroda taught in Kharkiv for a time. The use of the Ukrainian vernacular was tolerated in literary exercises at the college.

In Right-Bank Ukraine, after the decline of the Orthodox church at the turn of the 18th century, the Uniate church assumed responsibility for Ukrainian education. The *Basilian monastic order, which maintained colleges in Volodymyr-Volynskyi, Uman, Liubar, Sharhorod (ca 1749), Buchach, and Hoshcha (in place of the former Orthodox school) and schools for the sons of impoverished gentry, was particularly active in this field. Among the subjects taught in these schools were Church Slavonic, Polish, and Latin. In 1781 the Polish Commission of National Education transferred some schools that had been run by the Jesuit order before its dissolution in 1773 to the Basilians. Among these was the Ostrih Collegium. In 1788 the Basilians began to use the vernacular for some subjects in the parochial schools, but in the following year the Commission of National Education ordered all Ukrainian parochial schools to be Polonized. The Piarists, who ran schools in Lviv, Zolochiv, Mezhyrichi, and other towns, replaced the Jesuits as the strongest Polonizing force in education. Ukrainians also attended the Armenian Uniate college in Lviv.

In Transcarpathia West European influence in education increased after the union with Rome. In 1684 the Jesuits set up a seminary in Trnava, western Slovakia, for training clergy to serve the region. The bishop of Mukachiv, J. de Camelis, modernized the Catholic system of education in Transcarpathia. His successor, M. Olshav-

sky (1743–67), founded a theological school in Mukachiv in 1744, which was moved to Uzhhorod along with the seat of the eparchy and turned into a seminary by Bishop A. Bachynsky. As a result of the efforts of a number of bishops Transcarpathia possessed the best educational system in all Ukraine (300 schools in 1793) and provided scholars for other Ukrainian territories.

End of the 18th century to the First World War

Ukrainian territories under Russia. After Russia's annexation of Right-Bank Ukraine in 1793–5, the *Kremianets Lyceum (est 1819) and the Polish schools, including a Basilian school in Uman using Polish as the language of instruction, continued to operate until 1831 under the jurisdiction of the Vilnius school district, which was under Polish control. All other Ukrainian territories came under the Kiev and Kharkiv school districts and were provided with Russian schools. After the suppression of the Polish rebellion of 1830–1 the Russian school system was extended to Right-Bank Ukraine as well, and all Ukrainian areas were transferred from the jurisdiction of the Vilnius school district to the Kiev and the new Odessa (est 1832) school districts.

In 1804 a network of four-year *gymnasiums was set up in gubernial cities. These schools were placed under the supervision of universities. *Kharkiv University (est 1805), the first university in Russian-ruled Ukraine, was given responsibility for the gymnasiums in eastern Ukraine, while the Polish university of Vilnius oversaw until 1831 the gymnasiums in Right-Bank Ukraine. Furthermore, two-year county schools under the supervision of gymnasium principals were set up in gubernial and county towns, and one-year church-parish (*tserkovnoprykhodski*) schools under the supervision of county school principals were established in small towns and villages.

In 1834 *Kiev University, the second university in Russian-ruled Ukraine, was established on the basis of the Kremianets Lyceum, which had been closed in 1831. In 1835 the universities were brought under the Ministry of Education and deprived of academic freedom. Other schools of higher learning were the lyceums, in particular the *Nizhen Lyceum (est 1825) and the Richelieu Lyceum in Odessa (est 1817).

Besides the gymnasiums, whose program was extended to seven years in 1817, secondary schools also included cadet schools in Kiev and Poltava, finishing institutes for daughters of the nobility (see *Education of women) in Kiev (1837), Kharkiv, Poltava, Odessa, and other cities, and *boarding schools (*pansiony*). The five-year junior gymnasiums were a lower type of secondary school (see *Secondary education).

The peasants preferred to send their children to preceptors instead of Russian schools. In the 1820s some landowners organized 'Lancastrian schools' for their serfs modeled on the educational system developed by J. Lancaster.

After the death of Nicholas I in 1855 the *Sunday school movement developed rapidly; by 1859–60 there were 68 Sunday schools in Ukraine. Instruction in these schools was given in Ukrainian and, because of a shortage of Ukrainian textbooks, in Russian. T. Shevchenko, P. Kulish, and others prepared textbooks. In 1862, however, the Russian authorities closed down the Sunday schools and punished their organizers. In 1863 a circular of the minister of internal affairs, P. Valuev, prohibited the publication of textbooks and other books in Ukrainian.

A new system of elementary education was introduced in 1864, consisting of one- and two-classroom schools under the jurisdiction of the Ministry of Education, literacy schools (*shkoly hramoty*) under the jurisdiction of the Holy Synod, and three-year parochial schools. Some changes were made in the system in 1874. At the same time zemstvos, which had just been introduced in Left-Bank and southern Ukraine, were permitted to establish *zemstvo schools. The number of these schools, which ranged from three-year to seven-year schools and even teachers' seminaries, increased from about 1,600 in 1877 to 4,700 in 1909–10. From 1870 efforts were made to introduce Ukrainian into the zemstvo schools, but they proved fruitless. The government was suspicious of these schools and preferred to support the more primitive parochial schools.

The Russian government doubted the loyalty of the gentry in Right-Bank Ukraine, which was predominantly Polish, and hence did not permit zemstvos to be organized in the region before 1911. This factor contributed to the political and cultural backwardness of this part of Ukraine. In 1910 the zemstvos prepared a plan for compulsory universal education, but it was never put into effect.

In 1912 the county schools were reorganized into *upper elementary schools with a four-year program. Most of them were coeducational. These schools were established even in the smaller towns and villages. However, by the outbreak of the Revolution of 1917 only 60 percent of the children in Left-Bank Ukraine attended school; the percentage was even lower in Right-Bank Ukraine (about 40 percent in Kiev gubernia). Thus, under Russian rule the almost universal literacy in Ukraine of 1654 fell to 26 percent in 1897, that is, below the average for the Russian Empire.

In the 1890s the zemstvos began to organize kindergartens and nurseries (see *Preschool education). The first teachers' training school in Russian-ruled Ukraine was the Provisional Pedagogical School in Kiev (est 1862). In 1869 the first *teachers' seminary was opened in Kiev, and by 1917 there were 33 such schools. In 1874 a *teachers' institute was opened in Hlukhiv. By 1917 there were eight such institutes, which had a somewhat higher standard than the teachers' seminaries. (See also *Pedagogical education.)

After the reforms of 1864 and the succeeding years, the secondary schools were divided into the classical gymnasiums with an eight-year program, *Realschulen with a six- or seven-year program, cadet schools, four-year *schools for the children of the clergy, and *theological seminaries, and various women's secondary schools. *Galagan College, founded in Kiev in 1871, was a more advanced secondary school.

In the 1870s the zemstvos began to organize vocational schools such as the Gogol Art School in Myrhorod and the school of weaving in Dihtiari. By 1917 there were 93 secondary vocational schools in Ukraine.

In 1895 the first Ukrainian students' organization was formed at Kiev University. By 1913 there were 22 such organizations, most of them clandestine. As a result of the Revolution of 1905 and the influence of students' hromadas some professors began to lecture in Ukrainian, but this was prohibited in 1910. Women were allowed to attend university only during the period of 1905–9, but there were various higher courses for women dating back

to 1878. Higher technical education was provided by the Kharkiv Veterinary Institute (est 1871 on the basis of a veterinary school founded in 1851), the Technological Institute in Kharkiv (est 1884), the *Kiev Polytechnical Institute (est 1898), and the Higher School of Mining in Katerynoslav (est 1889 and changed to the Mining Institute in 1912). By 1915 there were 19 higher technical schools in Ukraine.

Towards the end of the 19th century *extramural education and particularly literacy societies began to spread (first society established in Kharkiv in 1891). New government-controlled Sunday schools were approved by the authorities in 1864. In the 1870s the zemstvos and later the clergy assumed responsibility for the Sunday schools. The *public readings, first organized in Poltava in 1861 (in Russian), were prohibited and then again revived in the 1870s. In 1898 a group of Ukrainians in St Petersburg set up the *Philanthropic Society for Publishing Generally Useful and Inexpensive Books, which began to publish self-teaching materials in Ukrainian similar to those published by the *Prosvita society in Galicia. The Revolution of 1905 permitted a more open imitation of Galician models, and in 1905 the first Prosvita society was formed in Katerynoslav, followed by the appearance of similar societies in other cities.

In the Kuban there were separate Russian schools for the Cossacks and for the non-Cossacks (*inogorodnye*). Only the Cossack schools were free. In 1905 a Prosvita society was founded in Katerynodar.

Galicia. Austria's annexation of Galicia in 1772 brought a temporary halt to the Polonization of education and raised the level of Ukrainian education in Galicia. In 1774 the *Barbareum seminary was founded at St Barbara's Church in Vienna for the Uniates or, as they came to be known, the Greek Catholics of Austria. In 1777 three types of state-run schools were introduced in Galicia and throughout the Austrian part of the empire: the six-grade *normal school (only one in Lviv), the four-grade *major school (in middle-sized towns and monasteries), and the trivium school (the lowest and open to everyone). The language of instruction in the first two types was German, while in the third it was Polish or Ruthenian (an Ukrainian version of Church Slavonic, in fact). These schools were under the control of the Provincial School Commission.

In 1781 Joseph II introduced compulsory universal education in every locality that had at least 90–100 school-age children. Most of the schools were placed under the care of landowners, who in Galicia were mostly Poles, and some came under the state treasury. In the cities German was taught even in the trivium schools. Five five-grade gymnasiums with Latin as the language of instruction were opened, and from 1784 only graduates of these schools were accepted as candidates for the priesthood. In 1783 the *Greek Catholic Theological seminary was established in Lviv, followed by *Lviv University (1784, with lectures in Latin). A temporary institute, the *Studium Ruthenum, was set up within the university in 1787 for candidates for the priesthood who did not know Latin. In 1788 the Lviv Dormition Brotherhood was reorganized into the *Stauropegion Institute, which published school textbooks and ran a school and a student residence.

Following the death of Joseph II a retreat from his enlightened policies began in 1792. As a result of Polish

pressure instruction in Ruthenian was restricted to two hours per week, Greek Catholic priests were barred from teaching religion in public schools, Lviv University was demoted to a lyceum in 1805, compulsory universal education was repealed in 1812, and Ukrainian trivium schools were closed down.

A revival in education began in 1817 when Lviv University was reopened, this time with German as the language of instruction. In 1817 a group of churchmen in Peremyshl, including bishops M. Levytsky and I. Snihursky and Canon I. Mohylnytsky, founded an institute for sextons and teachers. As a result of the group's efforts, in 1818 the government accepted school instruction in Ruthenian and entrusted the Ukrainian schools (in practice only parochial schools) to the Greek Catholic clergy. The Peremyshl group began to publish Slavonic Ruthenian textbooks.

In 1818 the number of grades in the gymnasiums was increased to six. By 1843, of the 2,132 schools in Ukrainian Galicia 921 were Ukrainian (parochial), 190 Polish, 81 German, and 938 mixed. But only 50 trivium schools and one major school (run by the Basilians in Lavriv) were managed by the Greek Catholic clergy. The standard of education in the Ukrainian parochial schools was significantly lower than in the trivium schools.

The Revolution of 1848 resulted in the establishment of *Halysko-Ruska Matytsia, an educational organization in Lviv. In 1849 the chair of Ruthenian literature was established at Lviv University and was occupied by Ya. Holovatsky. H. Shashkevych, who in 1848 was appointed chairman of the Department of Galician Public Schools and Gymnasiums within the Education Ministry in Vienna, achieved a great deal in publishing Ukrainian textbooks and in developing Ukrainian scholarly terminology. In 1855 Franz Joseph I placed the schools under the supervision of the consistories. Theoretically, this change gave the Greek Catholic consistory in Lviv a greater voice in the running of Ukrainian schools. In 1856, however, Ukrainian ceased to be a compulsory subject in the secondary schools.

In 1867 the government in Vienna transferred control of Galician affairs to the Poles. In the same year the Provincial School Board, consisting of four Poles and one Ukrainian, was established in Lviv and German was replaced by Polish in the secondary schools and at Lviv University. Ukrainian could be used as a language of instruction only in the lower grades of the *Academic Gymnasium in Lviv. Six years of schooling became compulsory for all children. In 1868 the important self-educational association Prosvita was founded as a counterbalance to the Halysko-Ruska Matytsia, which had adopted a Russophile policy. In 1869 the schools were separated from the church, which under the circumstances meant that Ukrainians could no longer influence educational policy through the Greek Catholic church. In 1871 knowledge of the two languages of Galicia – Polish and Ukrainian – became a requirement for the faculty members of Lviv University, yet the university remained a Polish-speaking institution. In 1876 the Russophiles organized the *Kachkovsky Society to compete with Prosvita. The first Ukrainian newspaper devoted to education, *Hazeta shkol'na*, appeared in 1875.

The *elementary schools had a maximum of seven grades of which the last three constituted the so-called separate (*vydilova*) school (see *senior elementary school).

Because of the policy of the Provincial School Board, one- and two-grade schools were predominant in Ukrainian villages. There were only a few Ukrainian four-grade schools and two private Ukrainian senior elementary schools for girls. On the eve of the First World War 70 percent of elementary schools in the Ukrainian part of Galicia were Ukrainian and 97 percent of Ukrainian children attended Ukrainian schools. Yet, educational opportunities were restricted: 30 percent of the population over nine years of age remained illiterate.

Ukrainians succeeded in gaining only six state (eight-grade classical) gymnasiums: two in Lviv and one each in Peremyshl, Kolomyia, Ternopil, and Stanyslaviv, as well as parallel Ukrainian classes at the Polish gymnasiums in Berezhany and Stryi. While the Poles had one gymnasium per 60,400 inhabitants, the Ukrainians only had one per 546,000. In the Ukrainian part of Galicia there were seven teachers' seminaries for men and three for women, and all of them were bilingual (Polish and Ukrainian). There were no state-sponsored Ukrainian vocational schools, only one private secondary commercial school in Lviv run by Prosvita, and one private agricultural lower school in Myluvannia (est 1911).

In 1881 the Ruthenian Pedagogical Society (see *Ridna Shkola), which published the semimonthly *Uchytel'* (1889–1914), was founded, followed in 1910 by the *Provincial School Union, headed by M. Hrushevsky and I. Kyveliuk. These societies organized private Ukrainian schools. On the eve of the First World War there were 16 private Ukrainian elementary schools and 13 secondary schools, including 9 gymnasiums (2 of them for women), 3 teachers' seminaries (1 for women), and 1 lyceum for women.

In 1892 Rev K. Seletsky organized the first Ukrainian nursery school, run by the Sister Servants of Mary Immaculate. In 1901 the Ruska Zakhoronka nursery school society (see *Ukrainska Zakhoronka) was founded. Some nurseries were organized also by the Basilian order of nuns.

The student movement in Galicia, which dates back to the Theology Students' Association formed in Lviv in 1830, expanded rapidly in the last quarter of the 19th century (see *Student movement). Elementary school teachers were organized under the *Ukrainian Teachers' Mutual Aid Society (est 1905), while secondary and higher school teachers belonged to the *Teachers' Hromada (est 1908). These organizations published pedagogical journals, and the latter also published school textbooks. In 1911–12 O. Tysovsky and several other teachers formed a Ukrainian scouting organization known as *Plast.

Ukrainians were unhappy with the Polish domination of post-secondary education and demanded a separate Ukrainian university. At Lviv University there were only eight Ukrainians among a faculty of 80, while at other institutions, such as the Lviv Polytechnic, the School of Veterinary Sciences in Lviv (est 1881), and the Agricultural Academy at Dubliany, the position of Ukrainians was even weaker. There was student unrest in Lviv in 1901 and 1907. Some students protested by enrolling at Prague University and other foreign schools. In 1912 the Austrian authorities agreed to set up a Ukrainian university by 1916, but the war prevented this project from being realized. During the Russian occupation of Galicia in 1914–15 the Ukrainian schools were closed down.

Bukovyna. Before Bukovyna's annexation by Austria in

1774 educational opportunities were very limited: monasteries provided some schooling for candidates for the priesthood. In 1777 the same system of education as in Galicia was introduced. A *normal school existed in Chernivtsi. Ukrainian was first taught at the German gymnasium in Chernivtsi in 1851. The *Ruska Besida self-educational society was founded in 1869 to serve the same purpose as Prosvita in Galicia. In 1875 the German *Chernivtsi University was established; it had three Ukrainian chairs – in language, literature, and theology. In 1887 the Ruska Shkola educational society (see *Ukrainska Shkola), which published school textbooks and the newspaper *Rus'ka shkola*, was organized. By 1896 there were 165 Ukrainian state-supported schools, including 34 bilingual Ukrainian-German and Ukrainian-Rumanian schools. Ukrainian elementary schools spread slowly in the towns because much of the urban population was Jewish and supported German schools. In 1896 Ukrainian or Ukrainian-German state-supported gymnasiums were opened in Chernivtsi, Kitsman, and Vyzhnytsia. A private Ukrainian realgymnasium was opened in Vashkivtsi. In 1907 the Ridna Shkola society opened a private Ukrainian teachers' seminary for women in Chernivtsi, and in 1910 a Ukrainian language division was set up at the state teachers' seminary in Chernivtsi.

In general Ukrainian schools were better off in Bukovyna than in Galicia, because the Austrian authorities were not as biased in favor of the Rumanians as they were in favor of the Poles in Galicia. The Ukrainian schools were supervised by Ukrainians (O. Popovych on the Provincial School Board). By 1910–11 there were 224 Ukrainian schools, including 8 bilingual schools, compared to 177 Rumanian, 82 German, 12 Polish, and 8 Hungarian schools in Bukovyna. Eight hundred teachers were employed in the Ukrainian schools. Ukrainian student organizations were active in Bukovyna from the 1870s.

Transcarpathia. After Bishop A. Bachynsky's death the Ukrainian schools in Transcarpathia began to decline, because they received no government support. Bishop N. Popovych of Mukachiv (1837–64) made an effort to improve the Ruthenian schools. In the 1840s the most prominent cultural leaders in Transcarpathia were O. Dukhnovych, the author of the first primer written in the vernacular (1847), and A. Dobriansky, the founder of the *Society of St Basil the Great (1866), which published school books and by 1870 had a membership of 700. A. Ripai published the state-supported paper *Uchytel'* (1867–8).

The creation of the dual monarchy of Austria-Hungary in 1868 resulted in intensified Magyarization in Transcarpathia. Hungarian became the language of instruction in the public schools, while Ruthenian-Slavonic was retained only as a subject of instruction. Only the parochial schools remained Ruthenian. While in 1881 there were 353 Ruthenian public schools and 265 Hungarian schools, by 1906 there were only 23 Ruthenian schools and the rest were Hungarian. In 1907 the law introduced by the Hungarian minister of education, A. Apponyi, abolished even these Ruthenian schools, leaving only the bilingual Ruthenian-Hungarian parochial schools, which by 1918 decreased from 107 to 34. Ruthenian language courses were offered in the gymnasiums, teachers' seminaries, and theological seminaries. In general the new Hungarian policy undermined the educational progress achieved by Ukrainians in Transcarpathia

since the 17th century and led to an illiteracy rate of 60 percent.

1917–20. After occupying Volhynia, Podlachia, and Polisia, the Austrian and German authorities permitted Ukrainian schools (250 altogether) to be organized in these regions. The Austrian authorities did not permit Ukrainian schools in the Kholm region.

Following the Revolution of February 1917 the responsibility for organizing Ukrainian schools was assumed by the General Secretariat of Education (under I. Steshenko) of the Ukrainian Central Rada. The three former school districts were retained and renamed commissariats. The *Society of School Education was established to prepare Ukrainian textbooks. In Kiev the journal **Vil'na ukrain-s'ka shkola* (1917–19) and later *Narodna osvita* (1919) were published. In August 1917 the first congress of Ukrainian teachers was held in Kiev and the Ukrainian Pedagogical Academy was founded. After the fall of the Russian Provisional Government in November Ukrainian secondary education expanded rapidly.

In late 1917 a special commission of the UNR Ministry of Education began work on the curriculum of the planned twelve-grade unified labor school. Under the Hetman government, however, the Ministry of Education, headed by M. Vasylenko, developed the school system according to West European models. In the summer of 1918 over 50 Ukrainian secondary schools were opened, some of which were converted from Russian schools. In Poltava the history and philology faculty of Kharkiv University, and in Kiev the State School of Drama and the Academy of Arts were founded. A system of adult education was organized under the direction of S. Rusova. In the fall of 1918 two Ukrainian universities – the *Ukrainian State University of Kiev and *Kamianets-Podilskyi Ukrainian State University – were opened in addition to the three existing universities, which were so far only partly Ukrainianized. New universities were established in 1918 in Katerynoslav (now *Dnipropetrovske University) and in Symferopil (closed in 1925).

In the Kuban, Ukrainian instruction was introduced in 1917 only in the elementary schools. In 1919 two Ukrainian gymnasiums were opened in Katerynodar and Okhtyr'ska Stanytsia and two teachers' seminaries were Ukrainianized, but most of the schools remained Russian.

In Galicia during the period of the Western Ukrainian National Republic, the schools were run by the State Secretariat of Education and by county school councils. Some of the Polish schools in the cities were Ukrainianized, and private Ukrainian schools were nationalized in February 1919. There were 30 Ukrainian secondary schools, including 20 gymnasiums, 3 Realschulen, and 7 teachers' seminaries.

Interwar period

Soviet Ukraine. One of the first measures in education introduced by the Soviet authorities was to ban religious instruction in 1919. In the spring of 1918 the Soviets accepted the concept of a unified labor school similar to the Central Rada's. In 1920 the people's commissar of education for the Ukrainian SSR, H. *Hrynko, and his assistant, Ya. *Riappo, introduced a version of the system somewhat different from that in the RSFSR. It was distinctive in its extreme emphasis on technical education and political indoctrination to the almost complete exclusion of the humanities and classical studies. The universities were replaced by *institutes of people's education (INO).

A positive aspect of this system was its accessibility: advancement from the seven-year elementary school to various technical secondary schools and then to the institutions of higher learning was relatively easy. The purpose of this educational system was to promote the transformation of Ukraine from an agrarian to an industrial country and to provide care for almost one million homeless children (see *Children, homeless). The very existence of an educational system independent from Russia's was an achievement that paved the way for the *Ukrainization of the schools (the official policy of the CC CP(B)U from 1923 to 1933).

During M. Skrypnyk's term as people's commissar of education (1927–33), enrollment in the Ukrainian schools of Soviet Ukraine grew from 78 to 88.5 percent of the total student population. In 1917–18 over 300 Ukrainian schools had been organized for the Ukrainian minorities in other republics of the USSR. The Ukrainization of the school system proceeded more slowly in the cities than in the countryside (43.8 percent of urban schools were Ukrainian versus 81.9 percent of rural schools in 1925–6); there was also more resistance in vocational schools (51.9 percent were Ukrainian) and institutions of higher learning (48.9 percent) than in the lower schools. In some schools minority languages (Yiddish, Polish, Bulgarian, Rumanian, Belorussian, Greek, and German) were the languages of instruction.

Although a seven-grade (known as incomplete secondary) education was announced as the universal goal, in practice only the four-grade school introduced in 1925 was compulsory for all children. Even then almost one-third of the children failed to complete the four years of school in the 1920s. The children of well-to-do peasants, merchants, or clergy (5 percent of the school children in 1928) met with discrimination and had to pay for their education, which for others was free. In 1930 seven-grade education became compulsory in the cities (see *Seven-year school).

From 1921 vocational schools were under the jurisdiction of the Chief Ukrainian Administration of Vocational Education (Ukrholovprofos) of the People's Commissariat of Education. Most of these schools (79 percent in 1928) charged tuition, but children of poor peasants and workers were exempt. Vocational training of skilled industrial workers was conducted by the factory seven-year schools, which were mostly Russian (only 17.6 percent taught exclusively in Ukrainian in 1929–30). The *tekhnikums were higher technical schools until 1928, when technical education within the USSR was standardized and the tekhnikums were reduced to the status of secondary schools, as in the RSFSR. Ukrainians were underrepresented in the vocational schools: they accounted for only 53.1 percent of the enrollment in 1929–30, at a time when Ukraine's population was 80 percent Ukrainian. Only 53.1 percent of the tekhnikums and 59.1 percent of the vocational schools used Ukrainian as the language of instruction in 1929–30.

The main task of the INO's was to prepare propagandists for political agitation and teachers for the higher grades of the seven-year schools and for secondary vocational schools. Such institutes were formed on the basis of certain divisions of former universities in Kharkiv, Kiev, Odessa, Dnipropetrovske, and Kamianets-Podilskyi or were newly organized, as in Mykolaiv, Kherson, Nizhen, Poltava, Chernihiv, Zhytomyr, and

Luhanske (now Voroshylovhrad). In the early 1930s they were reorganized into more narrowly specialized institutions and their number increased to 42. Only 56 percent of the INO students at the time were Ukrainian and only 28.9 percent of the institutes used Ukrainian as the language of instruction (1929–30).

Politically dependable cadres were trained from 1921 to 1940 at two-year *workers' faculties (*robotfaky*). In 1929, 57 percent of these students belonged to the Communist party or the Communist Youth League of Ukraine. The language of instruction in most of these schools was Ukrainian (60.4 percent in 1929–30).

Frequent experimentation and changes in the school system and teaching methods had an adverse effect on higher education and made progress difficult; for example, in 1928 only 6 percent of the students enrolled in technical institutes graduated. The Chief Ukrainian Administration of Vocational Education appointed the rectors (directors) of the institutions of higher learning, while the CC CP(B)U appointed the political commissars. But by 1926–7 more than 90 percent of the rectors were Party members. Thus the position of commissar became superfluous.

The Prosvita society continued its activities in the early years of the Soviet regime: the number of branches increased from 852 in 1918 to 4,322 in 1921. But in 1922 the society was dissolved and some of its branches were reorganized into Soviet cultural institutions such as village centers (*selbudy*) and reading houses (*khaty-chyitalni*). In 1921 a system for the *elimination of illiteracy (Liknep) was initiated, and a network of educational centers was set up with compulsory instruction for illiterate adults up to the age of 50. The illiteracy rate was 36.4 percent in 1926. By 1939 it had fallen to 11.8 percent.

In 1930 many vocational schools were placed under the jurisdiction of various economic commissariats in Moscow. In 1936 institutions of higher learning were brought under the Committee for Higher Education in Moscow (through a similar committee in Kiev). Thus, the People's Commissariat of Education of the Ukrainian SSR was in charge only of the lower and secondary schools, preschool education, and some *tekhnikums*. With Skrypnyk's death in 1933 the policy of Ukrainization came to an end. The proportion of Ukrainian students fell from 62.8 percent in 1930 to 54.2 percent in 1938. Enrollment in Ukrainian schools declined from 88.5 percent in 1933 to 79 percent in 1940. The Ukrainian schools outside Ukraine were closed down in 1932–3. In 1934–5 the history of Ukraine ceased to be taught as a separate subject in the secondary schools and a positive evaluation of tsarist imperialism was reintroduced in history classes. In 1938, by secret decree of the CC CP(B)U, Russian became a compulsory subject at all levels of schooling. In 1940 some subjects were taught in Ukrainian at only 44 percent of the institutions of higher learning. The children of 'class enemies' were expelled from school.

Beginning in 1933 the distinctive features of the Ukrainian system of education as compared to the USSR system were steadily eroded. The restoration of the universities (Kharkiv, Kiev, Odessa, and Dnipropetrovske) in 1933, after merging the various institutes, was a positive step. In 1936 a Union-wide system was introduced, consisting of primary four-year schools, 'incomplete' secondary schools of seven grades, and 'complete' secondary schools of ten grades (see *Ten-year school). Primary

education was compulsory in the countryside as was incomplete secondary education in the cities. The new system introduced privileged and underprivileged schools: the graduates of incomplete secondary schools did not have access to higher education. Even a ten-year school diploma did not guarantee admission to an institution of higher learning, because half of the entrants were admitted on the basis of political connections. Some of the institutes were turned into four-year *pedagogical institutes. In 1940 *labor reserve schools, with compulsory enrollment based on a selection system and involving work conscription, were introduced. At the end of the 1930s military training was introduced in the schools.

Ukrainian territories under Poland. When Poland occupied Galicia in 1919, it found a developed network of Ukrainian schools (about 2,500 primary schools in 1915). In the northwestern parts of the UNR seized by Poland at the time there were another 500 Ukrainian primary schools. There were also about 25 Ukrainian secondary schools. At first the Poles maintained the Austrian school system in Galicia, but beginning in 1921 a unified system of education and administration was introduced on all Polish-ruled lands. The Ukrainian territories were brought under the Lviv, Volhynian, and Polisian curatoriums (school-governing agencies) and partly also under the Cracow, Lublin, and Białystok curatoriums. Education was compulsory up to grade 6 and was extended to seven years in 1932. On Ukrainian territories, however, the proportion of children attending school was lower than the average for Poland as a whole: 85 as compared to 90 percent in 1937–8. The proportion of the superior (seven-grade) elementary schools in the Ukrainian regions was also lower than average: 13.5 percent of the total number of elementary schools in Galicia and 8.5 percent in the northwestern territories as compared with 16 percent for Poland. Most of the elementary schools were of the lower, four-grade type.

In 1924 the Polish minister of education, S. Grabski, introduced legislation (*lex Grabski*) that required that Polish and Ukrainian schools in a given area be unified into bilingual schools. The language of instruction in the schools in the Lviv school district and in Volhynia and Polisia was to be determined by a referendum submitted to the parents of school children. As a result of this law and its many abuses, such as tampering with referendum results, the number of Ukrainian schools in Galicia declined from 2,420 in 1921–2 to 352 in 1937–9. The Polish language and teachers dominated the 'bilingual' schools in Galicia. In Polisia all 22 Ukrainian elementary schools were closed down and bilingual schools were not introduced. The Ukrainian language was no longer taught even as a subject. It was forbidden to teach Ukrainian in the Kholm region and Podlachia; even Orthodox religion could be taught only in Polish. In Volhynia the number of Ukrainian schools fell from 443 in 1922–3 to 8 in 1937–8, but the number of bilingual schools rose sharply. In general, only 7 percent of Ukrainian school children could attend strictly Ukrainian schools by the end of the 1930s. Large numbers of Ukrainian teachers were transferred to schools in Polish territories or were dismissed. In Ukrainian secondary schools, most of which were privately operated, some subjects had to be taught in Polish. The only state-supported Ukrainian gymnasiums were those that had been established in the Austrian period. (Of these, the Ternopil gymnasium was closed down in

1930). There was only one state-run Ukrainian vocational school: the agricultural lyceum in Chernytsia. At the beginning of the 1930s all eight Ukrainian (in fact bilingual) teachers' seminaries were closed down.

Throughout this period leadership in matters pertaining to Ukrainian schools and education was assumed by the Ukrainian Pedagogical Society (after 1926, the *Ridna Shkola* society). Its work was limited to Galicia, since the Polish government did not permit the society into the northwestern Ukrainian land. Among other activities, *Ridna Shkola* financed schools and student residences and published the pedagogical periodical **Ridna shkola*. As a result of the efforts of the *Ridna Shkola* society the number of Ukrainian private schools increased from 9 secondary schools in the mid-1920s to 38 in 1938–9, and their standard was improved. From the 1920s this association and the Audit Union of Ukrainian Co-operatives also tried to organize vocational schools and courses; however, despite their efforts Ukrainian vocational schools constituted only 7 percent of all the vocational schools in Galicia. Ukrainian preschool education was well-developed. In 1934 the Basilian Sisters opened the **Nursery Teachers' Seminary* in Lviv.

Ukrainian university courses were organized in Lviv in 1919. These were banned by the Polish authorities in 1920, but continued clandestinely as the **Lviv (Underground) Ukrainian University* (1921–5). The **Lviv (Underground) Ukrainian Higher Polytechnical School* (1922–5) functioned in a similar way. Although the Polish government was obligated by an international agreement to set up a Ukrainian university by 1924, it made no efforts in this direction. The only officially recognized Ukrainian school of higher learning was the **Greek Catholic Theological Academy* in Lviv (est 1928). Until 1925 Ukrainians boycotted the Polish institutions of higher learning, but the dissolution of the Ukrainian underground schools and the difficulty of obtaining foreign diplomas forced them to end the boycott. Yet the number of Ukrainians admitted to higher Polish schools was restricted. In extramural education *Prosvita* continued to be the most active organization in Galicia. At first the Polish occupation disrupted its work, and the number of its reading rooms fell from 2,869 in 1918 to 882 in 1922. But eventually the society recovered and by 1935 it was running 3,071 reading rooms. In the Stanyslaviv region, the Ukrainian Catholic educational society **Skala* and the Mohyla Ukrainian Learned Society were active in extramural education. The strength of the Kachkovsky society in the region declined. In Volhynia and Polisia the *Prosvita* society was allowed to operate legally from 1928 to 1932. In the Kholm region and Podlachia, the **Ridna Khata* society conducted educational work until 1930, when it was banned by the authorities.

Transcarpathia. After Transcarpathia's incorporation into the Czechoslovak Republic in 1919, significant advances were made in schools and education. Conditions for the development of Ukrainian education were more favorable in the eastern part, known as Subcarpathian Ruthenia, than in the western part (Prešov region), which came under Slovakia. The number of Ruthenian (Ukrainian) elementary schools in Subcarpathian Ruthenia increased from 34 in 1916 to 492 in 1938, including 23 **municipal schools*, junior high schools based on Czechoslovakian models. Ukrainian elementary schools formed a majority – 492 out of 861 schools; the same was true

of teachers' seminaries (4 out of 5 were Ukrainian in 1938) and vocational schools (138 out of 179 in 1938). The proportion of Ukrainian kindergartens (132 out of 252) and gymnasiums (5 out of 11) was lower. There was also a Greek Catholic theological seminary in Uzhhorod. In the Prešov region only 57 percent of Ukrainian children attended Ruthenian schools. There was a Greek Catholic seminary and a Ruthenian teachers' seminary in Prešov.

Initially, the language of instruction in Ruthenian schools was the object of several competing linguistic orientations: the local Ruthenian, sometimes with an admixture of Church Slavonic, standard Ukrainian, and Russian. After 1931, however, the trend towards Ukrainian became predominant in Subcarpathian Ruthenia. It was weaker in the Prešov region, where Russophilism was well entrenched.

Ukrainian teachers were represented by the Union of Ukrainian Teachers (est 1929), which published *Uchytel's'kyi holos* and *Nasha shkola*. Extramural education was organized by *Prosvita* (from 1920) and the Russophile *Dukhnovykh* society (from 1923). Several organizations such as the **Pedagogical Society of Subcarpathian Ruthenia* (est 1924), the *Ruska Shkilna Matytsia* educational society, and the **Ukrainian Pedagogical Society* in Prague (est 1930) assisted Ukrainian schools in various ways.

When the autonomous Carpatho-Ukrainian state was established in the fall of 1938, the School Administration in Uzhhorod was turned into the Ministry of Education and was headed by A. Shtefan.

Bukovyna and Bessarabia. Having occupied Bukovyna in 1918, the Rumanians imposed a state of emergency in 1919 and began to Rumanianize the Ukrainian schools. This process continued until 1927. When the state of emergency was lifted in 1928 the government permitted in 1929 the partial use of Ukrainian as the language of instruction in the Rumanian schools of Bukovyna, but reversed this decision in 1934. Ukrainian was taught secretly. In 1920–7 Bessarabia enjoyed greater educational autonomy and had 120 Ukrainian schools.

1939–45. In 1939–41 the Soviet system of education was extended temporarily to Galicia, Volhynia, northern Bukovyna, and Bessarabia.

Under the German occupation, Ukrainian lands incorporated into the Generalgouvernement (initially western Galicia, the Kholm region, and Podlachia) witnessed the development of a fairly large network of schools with Ukrainian as the language of instruction. By 1941 there were 911 Ukrainian schools (five of them private), managed by a special section in charge of educational matters under the Ukrainian Central Committee in Cracow and the **Ukrainian Teachers' Union*, which published the journal *Ukrains'ka shkola*. After the incorporation of eastern Galicia, there were 4,173 Ukrainian elementary schools in the Generalgouvernement in 1941–3, a number unprecedented in the entire history of the Western Ukrainian lands. In 1942 there were 12 gymnasiums and, in 1943–4, 9 teachers' seminaries, none of which had existed under the Polish regime. Higher education was available at the Lviv Technical Institute and at various state-run vocational schools; German was the language of instruction, although most of the students were Ukrainians.

In the Reichskommissariat Ukraine the Germans did not permit Ukrainian general schools above grade 4, except for some vocational schools.

In Transcarpathia under the Hungarian regime (1939–44) the number of elementary schools was reduced by one-third, and the number of Ruthenian (Ukrainian) gymnasiums fell from seven to three.

During the war with Germany the Soviets set up Ukrainian schools for Ukrainian evacuees in the RSFSR (71 schools in 1942–3), Kazakhstan (64), and other Asian republics. There were also 32 evacuated institutions of higher learning of the Ukrainian SSR that continued to function as separate establishments. On the return of the Soviets to Ukraine, night schools were established in 1943–4 for youth deprived of a normal education during the war period. Urban night schools were known as Schools for Working Youth, and those in rural areas as Schools for Peasant Youth.

Since 1945. The rapid increase in the number of night schools in the cities from 876 in 1950–1 to 2,070 in 1964–5 (rural areas experienced a decrease in this period) reflected the difficulties facing the educational system in Ukraine in the postwar period. Courses for adults and vocational correspondence schools were also established (see *Correspondence courses). As a result of consolidation, the number of institutions of higher learning decreased from 173 in 1940–1 to 134 in 1958–9, while the number of students increased. In 1945 *Uzhhorod University was founded. Only 55.7 percent of the students in Soviet Ukraine were regular day students in 1958–9; the rest were correspondence-school or night-school students. By 1965–6 the proportion of day students fell to 38.7 percent because of N. Khrushchev's reforms, but began to rise afterwards.

The process of *Russification continued in the schools of Ukraine. The proportion of students enrolled in Russian-language schools increased from 14 percent in 1938–9 to about 25 percent in 1955–6. Among the minority schools only Moldavian (Romanian), Hungarian, and Polish schools were retained (319 altogether in 1950–1). In 1946 almost all institutions of higher learning (except for pedagogical, medical, and art colleges) were brought under the direct control of the Ministry of Higher Education in Moscow. The republic's Ministry of Higher Education in Kiev was restored only in 1955 as a Union-republican agency, but its powers were greatly curtailed.

In newly incorporated Western Ukraine, the Soviet government proceeded to revamp the educational system. As many as two-thirds of the teachers were designated as unqualified to teach in Soviet schools and had to undergo 'ideological' retraining. About 35,400 teachers from eastern Ukraine were transferred to Western Ukraine between 1945 and 1951. Following the demographic changes that took place during and after the war, this part of the Ukrainian SSR (consisting of Galicia, Volhynia, and Bukovyna) had the highest percentage of Ukrainian schools: 93.3 in 1946–7 compared to 86 in 1940–1. Twenty-two institutions of higher education were created here, most of which initially had Ukrainian as the language of instruction. By 1949–52, however, it was replaced by Russian. During the brief 'thaw' of 1953 the first secretary of the CC CPU, L. Melnikov, was dismissed for instituting too flagrant a policy of educational Russification in Western Ukraine.

According to the provisions of the 1959 school reform the seven-year and ten-year schools were turned into *eight-year (compulsory) schools and eleven-year 'general education labor-polytechnical schools with produc-

tion training,' reminiscent of the former unified labor schools (see *Secondary general-education school). Secondary school graduates, except for 20 percent of the best students, were obligated to spend at least two years in the labor force before applying to higher schools. Although this reform, as many others instituted under Khrushchev, was to a large extent abandoned in 1964–7, a few important elements remained intact: eight-year universal compulsory education was retained; tuition fees for secondary and higher education were not reinstated; and the Ukrainian language and literature were no longer compulsory subjects in the Russian schools of the Ukrainian SSR. During this new offensive against the Ukrainian language the percentage of Ukrainian-language schools declined from 85.3 in 1955–6 to 81.1 in 1967–8. In 1978 several steps were taken to expand and improve the teaching of Russian in Ukrainian schools in order to raise the level of fluency in 'the language of the great Lenin.'

The majority of teachers in Ukraine are women (76 percent in 1982–3). In 1977–8, 45,700 teachers taught Russian language and literature in grades 4 to 10, while only 43,500 teachers taught the Ukrainian, Hungarian, Moldavian, and Polish languages and literatures. The teachers of Russian in schools with a language of instruction other than Russian were better qualified than their colleagues in Russian-language schools: 96.3 percent of the former had a higher education compared to 91 percent of the latter.

*Day-care centers and kindergartens require parents to pay about one-third of the actual cost of maintenance. Most of the kindergartens in the cities are conducted in Russian.

In 1956 fee-charging *boarding schools (*shkoly-internaty*) were introduced, followed by 'extended day' schools (*shkoly prodovzhenoho dnia*) in 1960. In 1968 students again began to receive military training.

In 1967–8 up to a half of the *tekhnikum* and vocational school students were still enrolled in correspondence and night schools. Most of them (45.3 percent) received training in industrial occupations and the building trades. Compared to the Western countries, the percentage studying commerce, finance, administration, and law was small (only 13.3 in 1967–8).

Military education is restricted to 'closed' (only for the sons of the military elite) secondary schools conducted in Russian – the Suvorov and the Nakhimov schools (named after the military heroes of imperial Russia). In 1966 there were nine higher military colleges in Ukraine, but no military academies (these are found only in Russia). The CC CPU has a school in Kiev.

In 1964 *Donetske University was established, followed by *Symferopil University in 1972. Since 1956 academic degrees have been approved by the All-Union Accreditation Commission in Moscow. There is a sharp contrast between the standard of achievement in the natural sciences, which is high, and the standard in the humanities. As in secondary vocational schools, up to 41.8 percent of post-secondary students specialized in various industrial fields and construction, while only 6.8 percent studied finance, economics, and law (1967–8). Only 61 percent of the students in Ukraine's institutions of higher education were Ukrainian. Since 1967 veterans and former policemen have enjoyed privileged access to higher education. Graduates of higher schools and voca-

tional schools must work for three years wherever they might be assigned, usually outside Ukraine. In 1965 tenure was introduced for the faculty of institutions of higher education. At the end of the 1960s Ukraine had 25 percent fewer students per 10,000 inhabitants than Russia. In 1968–9 only 21.8 percent of the students lived in dormitories (*hurtozhnyky*). Most of the students received scholarships, but the Communist Youth League had the right to increase or decrease the sum involved. In 1974 a secret order was issued requiring that not more than 25 percent of the freshman class at universities in Western Ukraine be drawn from the local population. Political dissent grew among the students in the 1960s–1970s, but has been brutally suppressed in recent years.

Education of women. Information on education for girls and women prior to the 18th century is fragmentary. It is known that it was originally associated with monastery schools, where women were taught writing, religious knowledge, and singing. The earliest known of such schools was the girls' school established in 1088 by Princess Anna Vsevolodivna at St Andrew's Monastery in Kiev. A 17th-century traveler, Paul of Aleppo, testified to the high standard of education attained by women. The daughters of Cossack officers received instruction in monastery schools or from private tutors.

In those areas of Ukraine that were incorporated into the Russian Empire some girls attended parish schools and later *zemstvo schools in the villages, or *county schools in the towns. A high proportion of girls went to *Sunday schools, which were established in the 1850s–1860s in the towns throughout Ukraine by the Ukrainian intelligentsia. Some of these schools were designed only for girls. After the school reforms of the 1860s the elementary schools in the villages were coeducational; in the towns they were usually segregated by sex. However, in 1897 scarcely 11.2 percent of females over the age of five

in Ukraine were literate (compared to 34.2 percent of males).

The finishing institutes for daughters of the nobility were the first secondary schools for women in Russian-ruled Ukraine. Their purpose was to develop devout and patriotic women. Such institutions were established in Kharkiv (1812), Poltava (1817), Odessa (1829), and Kiev (1838). The language of instruction was often French, and the curriculum included such subjects as literature, history, and foreign languages.

Many daughters of Ukrainian nobles were educated at private boarding schools for girls, which were usually run by foreigners, mostly French and Germans. Such schools became established in Russia in the first decades of the 19th century. In the mid-19th century gymnasiums for women began to open, and in a short while they became the main type of secondary school for women. The first such gymnasium in Ukraine was established in Kiev in 1850. The lower type of gymnasium – the junior gymnasium – had a four-year program, while the higher type had a seven-year program. An additional eighth grade provided pedagogical training for teachers of public schools. The program for women was not as demanding as that in the men's gymnasiums (classical languages were not required), although some private women's gymnasiums were on a par with those for men. The seven-year eparchial schools for daughters of the clergy had the same program as the gymnasiums. On 1 January 1919 there were 362 women's gymnasiums in Ukraine, 4 women's institutes, and 15 eparchial schools. Until 1917 Russian was the language of instruction in elementary and secondary schools. At the end of the 19th century secondary vocational schools, co-educational commercial schools, dental schools, obstetrical schools, and other schools were opened.

Higher education was closed to women for a long time. Only in 1860 did women gain the right to study at universities in Ukraine, and this was revoked two years later. The first higher educational institution for women in Ukraine, the Higher Courses for Women, was established at Kiev University in 1878. It was closed down by the authorities in 1886. A number of higher schools for women were set up only after the 1905 revolution, notably St Olha's Women's Institute, the private courses of Mme Zhekulina in Kiev, and a school founded by the Association of Working Women in Kharkiv. They had a four-year program, with standard departments of physics and mathematics, history and philology, and jurisprudence. Some of them also had departments of economics and medicine. In 1912 their enrollment numbered more than 4,000 students. By 1915 there were also the following higher professional schools for women: women's medical institutes in Kiev, Kharkiv, and Odessa; the Women's Polytechnical Institute in Kharkiv; and the Froebelian Pedagogical Courses in Kharkiv. The universities were again open to women briefly in 1906–9.

The Revolution of 1917 gave women an equal right to education and made schools co-educational at every level. Russian was replaced by Ukrainian as the language of instruction, usually quite abruptly but sometimes gradually. As the network of schools expanded and elementary schooling became universal in 1930, literacy among women increased steadily. The literacy rate for women in Soviet Ukraine was 37.1 percent (it was 32.5

percent for Ukrainian-speaking women) in 1926 and 72 percent in 1939; it is close to 100 percent today. The percentage of women with a secondary education (6.8 percent compared to 8.9 percent for men in 1939) and higher education has increased steadily. Before the revolution women accounted for only 10 percent of the students at institutions of higher education. By 1928 they accounted for 26 percent, in 1936 for 38 percent, in 1955 for 42.9 percent, and in 1979 for 51.7 percent. Among students at special secondary schools (see Secondary special education) girls accounted for 47.2 percent in 1956 and for 55.3 percent in 1979.

In Galicia and Bukovyna under the Austrian regime, the school reforms of the 1860s introduced universal education with co-educational lower schools in the villages, but segregated higher schools in the towns. Several private Ukrainian elementary schools were opened in the towns, including girls' schools. In 1898, for example, the Shevchenko Elementary School for Girls was founded in Lviv.

The first secondary schools for women in Galicia were Polish private lyceums with a six-year program. The first Ukrainian school of this type was the lyceum established in Peremyshl in the 1890s. The first private gymnasiums for women were founded only in the 1890s in Lviv, with Polish as the language of instruction. The first Ukrainian gymnasium for women was opened by the Basilian order of nuns in Lviv in 1906. In Bukovyna women attended Ukrainian co-educational gymnasiums in Chernivtsi, Vyzhnytsia, and Kitsman. A larger proportion of Ukrainian women studied at teachers' seminaries, which provided them with not only an education but also a profession. The first teachers' seminars were founded in the 1870s in Lviv and Chernivtsi. By the 1910s there were three state teachers' seminaries, which were bilingual (Ukrainian-Polish), and one private one in Yavoriv. In Bukovyna there was one state and one private teachers' seminary (see Pedagogical education). In 1900 women were admitted to universities in the Austro-Hungarian Empire by law.

In Ukrainian territories under the Polish regime education for women expanded in the 1920s–1930s despite a strong policy of Polonization. The literacy rate among women in Western Ukraine rose from 44.4 percent in 1921 to 56 percent in 1931. Secondary and vocational education for women grew with particular rapidity. In 1939, of 27 Ukrainian gymnasiums in Poland, 7 were for women, 7 for men, and 13 were co-educational. The Nursery Teachers' Seminary, established in Lviv in 1934, was meant particularly for women.

Under the German occupation professional education, particularly pedagogical education for women (women constituted 60 percent of the enrollment at teachers' seminaries), expanded greatly in the Generalgouvernement, especially in Galicia. However, the number of women enrolled in gymnasiums fell to 20 percent.

In Bukovyna, in addition to a girls' gymnasium and a teachers' seminary, there was also a trade school, which provided a general education and taught tailoring and home economics.

The education of women made great progress in Transcarpathia because of its coeducational system. There was, however, a teachers' seminary that trained women only.

Ukrainian schools abroad are coeducational. Several

Ukrainian Catholic schools, such as St Basil's Academy in Philadelphia and St Mary's Villa Academy in Sloatsburg, New York, in the United States, and Mount Mary Immaculate Academy in Ancaster, Ontario (1953–73), and Sacred Heart Academy in Yorkton, Saskatchewan, in Canada, are women's secondary schools with English as the language of instruction and Ukrainian as a subject of study. (For a bibliography, see *Education.)

K. Gardetska, O. Trofymovska

Edwards, Borys, b 1860 in Odessa, d 1924 in Malta. Sculptor. Edwards studied at the Odessa School of Painting (1876–81) and the Academy of Arts in St Petersburg (1881–3). In 1915 he became a member of the Academy of Arts, and in 1919 he emigrated. Among his works are the realistic compositions *Kateryna* (illustrating T. Shevchenko's poem) (1885), *Life Is Unhappy* (1887), and *Unexpected News* (1887); the psychologically expressive busts of L. Pasteur (1887) and others; and the monuments of V. Hryhorovych in Yelysavethrad (1892), A. Pushkin in Kharkiv (1904), A. Suvorov in Ochakiv, and others.

Egan, Edmund, b 13 July 1851, d 20 September 1901. Hungarian economist of Irish descent. In 1899–1901 Egan headed the economic relief program in Transcarpathia initiated by the Hungarian government. In the 1890s Egan was commissioned by the Ministry of Agriculture in Budapest to study socioeconomic conditions in Transcarpathia. He reported on the harsh conditions in which the Ukrainian peasants lived, noting their exploitation by moneylenders, and demanded immediate reforms. Egan's report was translated into Ukrainian under the title *Ekonomichne polozhennia rus'kykh selian v Uhorshchyni* (The Economic Situation of the Ruthenian Peasants in Hungary, Lviv 1901).

Eichhorn, Hermann, b 1848 in Breslau, d 30 July 1918 in Kiev. Eichhorn was a German field marshal who in 1918 was appointed commander in chief of the German army in Ukraine. On 6 April 1918, without consulting the Central Rada, he issued an order to the Ukrainian populace concerning crop sowing. This action brought him into conflict with the Ukrainian government. On April 13 the Little Rada issued a writ reversing Eichhorn's order. Eichhorn was largely responsible for the repressive German policy in Ukraine. He was murdered in Kiev by the Russian Socialist Revolutionary B. Donsky.

Eight-year school. School providing incomplete general secondary education in the USSR that was established on the basis of the law 'On Strengthening the Connection of the Schools with Life and on the Further Development of the Educational System in the USSR' (1958; adopted in Ukraine in 1959). The eight-year school is compulsory for all children from the age of 7 to 15–16. It consists of eight grades and functions as an independent school (popularly called *vosmyrichka*) or as part of the regular *ten-year school (*desiatyrichka*). In 1980–1 there were 9,131 eight-year schools, with an enrollment of 1,461,500 in Soviet Ukraine. Since 1965 the number of eight-year schools and students in attendance has steadily declined, reflecting lower birthrates and increasing enrollment in the ten-year secondary school system.

Otto Eikhelman

Eikhelman, Otto [Ejxel'man], b 1854 in St Petersburg gubernia, d 21 February 1943 in Prague. Jurist, specialist in several branches of state and international law, professor at Kiev University and head of the international law department there from 1884 until the First World War. He was a professor at the Ukrainian Free University in Prague from 1922 and a full member of the Shevchenko Scientific Society. In 1918 Eikhelman was active in the UNR government and worked for the Ministry of Trade and Industry and for the Ministry of Foreign Affairs as a deputy to the minister. In 1918 he took part in economic negotiations between the Ukrainian government and the Austrian and German governments as well as in negotiations with the Soviet Russian government. As an émigré he devoted himself mainly to legal scholarship. His major works include *Khrestomatiia russkogo mezhdunarodnogo prava* (Anthology of Russian International Law, 1887–9), *Ocherki iz lektzii po mezhdunarodnomu pravu* (Outlines of Lectures on International Law, 1900, 1905), and *Proiekt konstytutsii osnovnykh derzhavnykh zakoniv UNR* (Draft of the Constitution of Fundamental State Laws of the UNR, 1921).

Einhorn, Oleksander [Ejnhorn], b 12 December 1888 in Mariiupol, Katerynoslav gubernia, d December 1939 in Kharkiv. Architect, graduate of the Kharkiv Civil Engineering Institute. Einhorn designed a number of industrial buildings in Kharkiv and various towns of the Donets Basin in 1914–20, workers' settlements in the Donets Basin, the buildings and the workers' housing of the Kharkiv Tractor Plant, and various buildings in Kharkiv in 1921–31. In 1930–9 he served as director of planning for Kharkiv's reconstruction and was involved in planning the reconstruction of Zaporizhia, Odessa, and other cities. His publications deal with various aspects of architecture.

Eklblom, Richard, b 30 October 1874, d 7 April 1959. A Swedish Slavist of the neogrammarian school, Eklblom was a professor at Uppsala University. His works include studies on Balto-Slavic historical phonetics and toponymy, including the origins of East Slavic pleophony, place-names and words of Varangian origin in Ukraine and Russia, and the development of Slavic intonations.

Ekonomika Radians'koi Ukrainy (The Economics of Soviet Ukraine). Journal published by the State Planning Committee of the Ukrainian SSR and the Institute of Economics of the Academy of Sciences of the Ukrainian SSR. It began publication in 1958 in Kiev as a bimonthly and became a monthly in March 1965. It was first

published only in Ukrainian, but since 1960 there has been a parallel Russian edition as well. The journal is devoted to theoretical and practical questions of economics, the problems of planning, organizing, and managing the production process, increasing efficiency, and applying mathematics to economics. In the 1960s many articles were published urging economic reforms to stimulate enterprise initiative and economic responsibility. The journal conforms to the economic guidelines set forth in the decrees of the CPSU and the agencies of economic management, and little controversial material is published. The sections on the history of economic theory and on economic life outside the USSR are weak, although non-socialist economies are systematically criticized. The journal has a book review section, a section of reports from the economic regions, and an 'Aid to Propagandists' section. The editors of the journal have been A. Baranovsky (1958–61), A. Kochubei (1961–4), A. Lalaïants (1964–5), S. Yampolsky (1966–74), P. Bahrii (1974–77), and I. Lukinov (1977–). The printing of the Ukrainian edition has fluctuated from 5,000 to 9,000, reaching a peak of 10,000 in 1972–4. The printing of the Russian edition was somewhat lower. In the 1980s the printing of the Ukrainian edition fell to 5,000, while the printing of the Russian edition was increased proportionately.

Ekonomist (Economist). An economic monthly of the Provincial Audit Union in Lviv in 1904–14. The editors were M. Kotsiuba (1904), K. Pankivsky (1905–8), and A. Zhuk (1909–14). I. Petrushevych, K. Kulchytsky, and V. Domanytsky were among those who worked on the journal. The publishers of *Ekonomist* also published, in 1909–14, a popular monthly for associated co-operatives entitled *Samopomich*.

Ekstrakt malorossiiskikh prav (Extract of Little Russian Laws). Collection of legal norms that were enforced in Ukraine in the 18th century; an important source of information about the legal system of the later Hetman state. The collection was compiled in 1767 by O. *Bezborodko, a member of the General Court. It included norms of administrative law and judicial law by which the author and his supporters (the *Little Russian Collegium) tried to demonstrate the necessity of restoring Ukraine's autonomy. It consisted of 16 chapters, dealing with such topics as the main administrative bodies of Little Russia, the courts, the rights of Little Russians, court procedure, state property, state income, the towns, the nobility, the clergy, the Cossacks, and the common people. It included the 1730 Instruction on the Courts and the 1765 Information on the Ranks. In 1786 the Russian senate revised the *Ekstrakt malorossiiskikh prav*, omitting certain chapters and adding new acts of the Russian government that pertained to legislation in Ukraine. It was published in 1902 by M. Vasylenko in Chernihiv.

Elcheshen, Dmytro [El'čyšin], b 20 October 1902 in Sokyryntsi, Kopychyntsi county, Galicia. Agronomist, editor and publisher, community leader. Elcheshen immigrated to Canada as a youth and graduated from the University of Manitoba in agriculture in 1928. He was active in the Ukrainian community in Winnipeg, especially in the Prosvita association, and also served as national secretary of the Sich Sporting Association (1928–36), secretary of St Raphael's Ukrainian Immi-

grants' Welfare Association and editor of seven of its almanacs (1925–38), and president of the United Hetman Organization (1937). He was briefly associate editor of *Kanadiis'kyi ukrainets'* and in 1932–3 editor-publisher of *Monitor*. In 1938 Elcheshen was elected to the Winnipeg City Council. He translated into English the second volume of D. Doroshenko's *Istoria Ukrainy, 1917–1923* (*The Ukrainian Hetman State of 1918*, Winnipeg 1973).

Elect Cossacks (*vyborni kozaky*). Common Cossacks who were economically independent and used their own arms in performing military service. In accordance with the reforms of the Russian government in 1734, the Cossacks were divided into elect Cossacks and *Cossack helpers. The hetmans usually included the children of the clergy among the elect Cossacks.

Elections. The selection of individuals to the governing agencies of a state through a vote of some or all of the citizens. A primitive form of election and voting was practiced as early as the Princely period in Ukraine: the popular assembly (**viche*) elected some of the higher officials and sometimes even bishops. During the Lithuanian-Ruthenian period only the nobility had electoral privileges, and it elected at its **dietines* two representatives each to the large general assembly (*valnyi soim*). These deputies of the nobility abided by the instructions of the regional assemblies (see **Diet*). Elections were more common in the self-governing volosts and particularly in towns governed by **Magdeburg law*. In Zaporizhia officers were elected at the **Sich Council* and the councils of individual **kurins*. In the Hetman state the **General Military Council*, which represented the entire Cossack estate, held the power to elect the hetman and the general officer staff. The **chorna rada*, a council consisting of the peasantry (*chern*) and the Cossacks, was sometimes convened. After the decline of the Cossack state, elections of administrative officers had limited use on Ukrainian territory. They were held to elect representatives of the nobility such as county and gubernia marshals and later the nobility representatives (*predvoditeli*). Local self-governing bodies in the Russian Empire such as town councils and volost officers (see **Cities and towns*, **Nobility*, **Volost*) were elected by a very small electorate based on estate, property, and corporative qualifications. Elections and an electoral system in the modern sense appeared in the Austrian and Russian empires only at the end of the 19th and the beginning of the 20th century when the ideas of parliamentarianism and democracy became widespread.

Elections to the provincial diet of Galicia, which was set up in 1861, were held by the four curiae (see **Curial electoral system*) – the large landowners, members of the chambers of commerce and industry, the burghers, and the villagers (electoral ordinance of 1873). In practice Ukrainians could vote only through the curia of village communities, and for this reason the number of Ukrainian deputies was small: 49 in 1861, 14 in 1877, 11 in 1883, and 30 in 1913 – out of a total of 150 deputies. The majority consisted of Polish deputies elected from the higher-estate curiae. Elections to the diet were held every six years. In addition to elected deputies, there were *ex officio* members, including three Ukrainian Greek Catholic bishops. The provincial diet of Bukovyna was elected under a similar system. A significant number of Ukrai-

nians (16) were elected to this body only in 1911 when national curiae were introduced by a new electoral ordinance. A reform granting Ukrainians just over 25 percent of the seats in the Galician Diet was adopted in 1914, but it was never put into practice because of the outbreak of the First World War. Elections to bodies of local self-government (community offices, offices of the magistracy, and county assemblies) were regulated in Austria by the electoral ordinance of 1866. All voters were divided into three constituencies according to their tax assessment. Besides the largest taxpayers, the first section included voters with a doctoral degree, parish priests, and certain officials. Each constituency elected an equal number of representatives to the community and county assemblies. In Lviv, however, there were no constituencies. All taxpayers and corporate bodies had the right to vote. Only males who were entitled to vote and enjoyed full rights of citizenship could stand for election. The curial system severely restricted the eligibility of Ukrainian representatives to local government bodies. In Bukovyna there were no elections to county assemblies.

The attempts to introduce a parliamentary system in Austria in 1848–9 were short-lived and failed to establish a separate electoral system. Until 1873 the Austrian chamber of deputies was composed of representatives of the provincial diets. A new electoral ordinance introduced direct elections by curiae, similar to the system for provincial elections. The peasant curia elected the electors indirectly and also openly and orally. This led to many election abuses by the Polish authorities in Galicia. Only male taxpayers could vote or stand for election. Because of the curial system, the Ukrainians of Austria did not have fair representation in parliament. Only after 1907, when the curial electoral system was replaced by universal, equal, direct, male suffrage by secret ballot, did the Ukrainians of Galicia and Bukovyna succeed in increasing their representation: there were 33 Ukrainian deputies out of a total of 516 in the Viennese parliament. In Hungary too, until 1918, elections were conducted according to a curial system that was open to abuses; hence, apart from a few individuals, the Ukrainians of Transcarpathia did not have their own representation in the parliament in Budapest.

The first parliamentary elections in the Russian Empire were the elections to the State *Duma in 1906. They were conducted according to a curial system consisting of the landowners', burghers', peasants', and workers' curiae. The votes of the different curiae were unequal, and the elections consisted of various stages: the peasants had four-stage elections; the workers, three-stage; the burghers, two-stage. The deputies of the State Duma were elected by provincial assemblies of the electors from all the curiae. The elections to the Second State Duma of 1907 were conducted under the same law. The provincial electoral assemblies were dominated by the landowners. The elections to the Third Duma (1907) and the Fourth Duma (1912) were conducted under a new law that increased the power of the landowners at the expense of the burghers, the workers, and particularly the peasants. In Ukraine the 1,191 electors in nine gubernias elected 98 deputies out of a total of 442 deputies in the Duma. The cities of Kiev and Odessa chose 2 deputies each in direct elections.

In the second half of the 19th century and in the early 20th century the vote in local elections was restricted to

the members of certain estates and property holders. According to the statute of 1882, the city councils, which usually consisted of 20–60 representatives (*hlasni*) (Kiev, Odessa, and Kharkiv each had 90), were elected by a city electoral meeting of the larger real-estate owners and the owners of commercial and manufacturing enterprises. Elections to the *zemstvos involved several stages and gave an advantage to the landowners.

Under the Central Rada in Ukraine elections to the city councils were held in the summer of 1917 and to the *All-Russian Constituent Assembly in November. The latter elections were based on a general, direct, equal, proportional, and secret vote and provided the Ukrainian parties with a clear victory (75 percent). The 29 November 1917 law of the Central Rada provided for elections to the *Constituent Assembly of Ukraine based on the same principle. Everyone who was at least 20 years old, regardless of sex, could vote and stand for election. The Constitution of the UNR adopted by the Central Rada confirmed this age qualification. One deputy per 100,000 people was to be elected to the National Assembly of the UNR for a term of three years. The 1919 elections to the *Labor Congress of the UNR were based on the Directory's declaration of 26 December 1918. The elections were indirect, and 'non-labor elements' could not vote. The Labor Congress itself expressed its support for general and direct elections to the Ukrainian parliament.

Elections to the diet of the Western Ukrainian National Republic were governed by the law of 14 April 1919. All citizens over 20 years of age could vote, and those over 25 could be elected. The deputies were to be elected by national curiae – Ukrainian, Polish, Jewish, and German.

On Ukrainian territory under Polish rule (1920–39) elections to the Sejm and Senate were held in 1922, 1928, 1930, 1935, and 1938. The first elections were boycotted by the Ukrainians of Galicia, while in the northwestern regions Ukrainians formed an alliance with other national minorities to elect 20 deputies and 5 senators. The second elections took place under greater pressure, and with the help of the bloc of national minorities the Ukrainians of Galicia and the northwestern regions won 48 seats in the Sejm and 11 in the Senate. The elections of 1930 were marred by acts of political violence, abuses, and fraud; however, 27 Ukrainian deputies and 5 senators were elected. In 1935 a new electoral ordinance retained the universal, secret vote for the Sejm elections, but introduced an educational qualification for Senate electors. Candidates for deputies were appointed by special electoral colleges, which were influenced by government authorities. Although some Ukrainian political groups refused to participate in the elections of 1935, 19 Ukrainian deputies and 6 senators were elected. The elections of 1938 were based on the 1935 agreement between the Ukrainian National Democratic Alliance and the Catholic group on one side and the Polish government on the other. This agreement guaranteed Ukrainians the same number of seats as in 1935. Participation in local elections was severely restricted.

Under the Rumanian occupation Ukrainians participated in several elections and allied themselves with Rumanian parties, because it was required that a party win at least 2 percent of the vote in the country as a whole.

In Czechoslovakia during the interwar period Ukrainians participated in parliamentary elections and allied

themselves with Czech or Slovak parties. The Agrarians and Communists usually received the largest vote. The Subcarpathian electoral district elected only 9 deputies and 5 senators to the central parliament, whereas based on its population and electorate it should have been entitled to 14 deputies and 8 senators. Provincial, regional, and local elections provided Ukrainians with greater opportunities. Elections to the autonomous Diet of Carpatho-Ukraine were held on 12 February 1939 and were regulated by the 1927 electoral law of the parliament in Prague. One list of candidates was presented by the *Ukrainian National Alliance, a coalition of Ukrainian parties and national minorities. In Transcarpathia between 1939 and 1944 no elections to the Hungarian parliament were held. Instead, the head of the Hungarian state appointed a certain number of representatives to both chambers.

Electoral system of the Ukrainian SSR. Based on the constitutions of 1919 and 1929, the multistage electoral system of Soviet Ukraine favored the cities over the villages. Only the elections to rural and city soviets of workers', peasants', and soldiers' deputies were direct. The volost (later raion), county (later okruha), gubernia (later abolished), and all-Ukrainian congresses of soviets were elected by the deputies of the lower soviets.

The vote was neither general nor equal. Besides those people usually disenfranchised, such as the mentally ill or sentenced criminals, the so-called non-working elements who either used hired labor or did not receive a wage – merchants, middlemen, priests, policemen and higher officials of the former regime – did not have the right to vote. The deputies of the USSR Congress of Soviets were elected, beginning in 1923, according to an unequal standard of representation: 1 delegate for every 25,000 urban voters and 1 delegate for every 125,000 rural voters. The standard of representation in the *All-Ukrainian Congress of Soviets was set in 1920: 1 delegate per 10,000 urban or 50,000 rural voters. Citizens over 18 years of age had the right to vote and to be elected. Elections were conducted openly in the shops, plants, firms, and institutions and only rarely by electoral districts.

According to the 1937 Constitution of the Ukrainian SSR, elections were to be conducted thenceforth on the basis of 'a general, equal, direct, and secret vote' (art 114). All soviets – the village, town, city, raion, and oblast soviets and the supreme soviets of the Ukrainian SSR and the USSR – were to be elected directly. The right to vote was granted to all citizens who were at least 18 years of age. Candidates to the Supreme Soviet of the USSR had to be at least 23 years of age; those to the *Supreme Soviet of the Ukrainian SSR, at least 21; and those to the other soviets, at least 18.

Elections were held according to the territorial principle – by electoral district. Each district elected one deputy. One deputy for every 300,000 people was sent to the Supreme Soviet of the USSR; 1 deputy for every 100,000 to the Supreme Soviet of the Ukrainian SSR; 1 deputy for every 15,000, but not fewer than 70 deputies, to the oblast soviets; 1 deputy for every 1,000, but not fewer than 35 and not more than 60 deputies, to the raion soviets; and 1 deputy for every 350 people, but not fewer than 35 and not more than 250 deputies, to the city soviets. In Kiev and Kharkiv 1 deputy for every 1,500 people was elected. Deputies to rural and town soviets were elected according to the ratio of 1 per 100 inhabitants, but not fewer than 9 (later 15) and not more than 35 deputies. The winner

in an election was the one who received an absolute majority of valid votes. If an election failed to produce a winner or was proclaimed invalid, a new election was to be held.

At present, election candidates, who may or may not be Party members, are nominated by local organizations of the CPU or by civic organizations that are controlled by the Party. They can also be chosen at Party-controlled meetings of workers or office staff at plants, collective farms, or institutions. Although the electoral law does not restrict the number of candidates that can be nominated to run in the same district, in practice the name of only one candidate appears on the ballot. There is no law compelling people to vote, yet according to official statistics almost all eligible voters vote in every election, and almost all of them vote for the approved candidate. This shows that elections in the Soviet Union are not a method by which the people select their leadership, but rather a mobilization of the people and a 'political ritual' for politicizing the masses and legitimizing the political system at home and abroad.

The new constitutions of the USSR (1977) and the Ukrainian SSR (1978) confirmed the established system of elections and did not introduce any essential changes, as was evident from the elections to the Supreme Soviet of the USSR of 4 March 1979 and to the Supreme Soviet of the Ukrainian SSR and the local soviets of 24 February 1980 (99.99 percent of the eligible voters voted in Ukraine). In these documents attention was devoted to defining more precisely than in previous constitutions all the stages of the electoral process. The new law increased the size of the central commission for the elections to the Supreme Soviet of the Ukrainian SSR and of the oblast, district, and precinct electoral commissions (over 1,700,000 members in 1980). The number of electoral districts for the elections to the Supreme Soviet of the Ukrainian SSR was increased from 435 (in 1955) to 650. The number of districts for local elections was increased also. The age restriction for candidates to the Supreme Soviet was lowered from 21 to 18 years. Elections to the republic's Supreme Soviet must take place every five years (previously every four years) and to the local soviets every two and a half years (formerly two years). The powers of the local soviets, particularly the oblast soviets, have been somewhat widened and more precisely defined. The status of 'the people's deputy' has been raised. In practice the role of the deputy and of all soviets hinges on the obvious contradiction between the constitution and the program of the Party: the former states that 'the people express political power through the soviets of the people's deputies, which constitute the political foundation of the Ukrainian SSR' (art 2), while the latter describes the soviets merely as 'a school for governing the state.'

Electric power. The electric-power industry is a relatively new branch of Ukraine's economy. For many centuries the main sources of energy were rivers, wind, and wood. A radical change in Ukraine's energy base occurred only in the second half of the 19th century when manufacturers and financiers, many of them of foreign origin, began to industrialize Ukraine and to exploit its natural resources, including its energy resources. The *coal industry in eastern Ukraine and the *petroleum and *natural gas industries in Galicia developed rapidly. On the eve of the First World War Ukraine was producing about 23 million t of coal and over 2 million t of petroleum per year.

The first electric-power stations in Ukraine were built to use these resources. A station was built in Kiev in 1890, in Lviv in 1900, and later in Kharkiv, Katerynoslav, Odessa, Chernivtsi, and other large cities. Some of the equipment for these stations was manufactured by factories of the German firm AEG in Ukraine, but most of it, including generators, boilers, and instrumentation, was imported from Germany and England. In 1913 the electric-power stations in Ukraine had a capacity of 304,000 kW and produced 543 million kW·h per year.

The electric-power industry expanded rapidly in Ukraine after the period of economic reconstruction following the revolution, particularly during the Soviet period of industrialization in the 1930s. The building of electric-power stations was co-ordinated by a special agency—the Commission for the Electrification of Ukraine—along with the State Planning Committee, the scientific institutes of the All-Ukrainian Academy of Sciences, and such building trusts as Donbastok, Dniprobud, and Holovelektro of the Higher Council of the National Economy. The Commission for the Electrification of Ukraine, which was first headed by I. Aleksandrov, designed a series of thermoelectric stations with a total capacity of one million kilowatts in 1921–2, and their construction was assigned to the State Planning Committee, then known as the Ukrainian State Planning Commission (Ukrderzhplan), which was directed by I. Aleksandrov, T. Akoronko, O. Maslov, and A. Kuznetsov. In accordance with the plans the Shter State Regional Electric Station (DRES) with a capacity of 10,000 kW was built in 1926, followed by the Chuhuiv, Kryvyi Rih (1927–9; 44,000 kW), Siverskodonetske, Kiev (1930), Dniprodzerzhynske (1931), Zuiivka (1932; 150,000 kW), and Kharkiv (1935) DRES. These thermoelectric stations formed the backbone of Ukraine's industrialization process. In 1932 the *Dnieper Hydroelectric Station, the largest in Europe at the time, was constructed. Smaller electric stations were built at a number of large metallurgical and machine-building plants. Thermal stations began to use crushed coal instead of quality coal, which had been burned wastefully until 1926. The total capacity of the electric stations in Soviet Ukraine (within the pre-1939 boundaries) increased from 295,000 kW in 1926 to 2,051,000 kW in 1937, and the production of electric

energy increased from about 900 million kW·h to 9,451 million kW·h.

In Western Ukraine under the interwar Polish occupation the production of electric power grew slowly. In the absence of large-scale industry small electric stations supplied municipal public buildings and residential buildings. The production of electric power in 1937 was only 148 million kW·h, that is, less than 2 percent of Soviet Ukraine's production.

The Second World War inflicted heavy losses on Soviet Ukraine's electric-power system. The prewar level of production was reached only in 1949–50. The accelerated introduction of electrically driven machinery in industry, the conversion of the railways from steam engines to electro-diesel and electric locomotives, and the reconstruction and expansion of cities required a rapid growth in the electric-power industry in 1950–75. Large new thermoelectric stations (DRES) were built, and existing stations enlarged. The primary ones were the Kurakhove (present capacity, 1,650,000 kW), Myronivskiyi (500,000 kW), Slovianske (2,100,000 kW), Prydniprovskoe (2,400,000 kW), Starobesheve (2,300,000 kW), Voroshylovhrad (2,300,000 kW), Zmiiv (2,400,000 kW), Burshtyn (2,400,000 kW), Zaporizhia (3,600,000 kW), and Ladyzhyn (1,800,000 kW) DRES. The large cities of Ukraine each have several electric stations. Thus, Kiev has Central Electric Station no. 1, DRES no. 2, Thermoelectric Centers (TETs) nos 3, 4, and 5, and a storage station; located on the outskirts of Kharkiv are the DRES nos 2, 3, and 4; Lviv is supplied by TETs no. 1 and the Dobrotvir DRES; and Mykolaiv has one TETs and one DRES.

During the Tenth Five-Year Plan (1975–80) the Kurakhove DRES was reconstructed, and the Kryvyi Rih no. 2 (3 million kW) and Vuhlehrske nos 1 and 2 (3.6 million kW) DRES were completed. To supply the demands of the population and industry of rapidly growing Kiev and Kharkiv work on TETs no. 6 in Kiev (1 million kW) and TETs no. 5 in Kharkiv (400,000 kW) was begun in 1977.

The *Dnieper Cascade of Hydroelectric Stations and some other large hydroelectric stations (HES) have greatly increased Ukraine's production of electrical power. The first station of the cascade to be built was the Dnieper HES (1927–32) in Zaporizhia, which now is composed of two stations with a total capacity of 1.5 million kW. The other stations are the Kiev HES (361,200 kW) together with the Kiev Hydro-Storage Electric Station (225,000 kW), the Kaniv HES (440,000 kW), the Kremenchuk HES (625,000 kW), the Dniprodzerzhynske HES (352,000 kW), and the Kakhivka HES (352,000 kW). The total productive capacity of the Dnieper Cascade is 3,860,000 kW, and its average annual production is about 10 billion kW·h. During the spring floods the reservoirs of the cascade's electric stations hold about 20 million cu m of water.

Some large hydroelectric stations are still under construction: the Dniester Hydroelectric Complex near Mohyliv-Podil'skyi (600,000 kW), the Tashlyk Hydroelectric Station, and the Kostiantynivka Hydro-Storage Electric Station, which together will have a capacity of 2.2 million kW.

The newest plants of the power industry in Ukraine are atomic-electric stations (AES). The first to be built, in 1977, was the Chernobyl AES north of Kiev, which by 1980 attained a capacity of 2 million kW, and by 1985 will attain 4 million kW. The Rivne AES has a capacity of 1.9 million kW, and the Southern Ukrainian AES near Mykolaiv will

TABLE 1
Production of electric power

Year	Capacity (in thousands of kW)	Output (in millions of kW·h)
1913	304	543
1928	474	1,261
1932	1,425	3,248
1940	2,681	12,411
1945	1,141	3,150
1955	6,460	30,099
1960	11,729	53,926
1965	18,929	94,614
1970	27,889	137,600
1975	38,210	194,590
1980	43,882	235,979
1982	47,286	238,318

have a capacity of four million kilowatts. The eastern regions of Ukraine get some power from the Kursk and the Novovoronezhskii AES in the RSFSR, which have a capacity of over two million kilowatts. In the 1980s the Crimean, Zaporizhia, and Khmelnytskyi AES will be built, and then the total capacity of Ukraine's atomic energy stations will reach 19.9 million kW.

In the last two decades the equipment and machinery of the power stations have been extensively modernized. Huge high-output energy blocks (steam-turbine-driven generators) are typical now: in 1980 there were 6 with a capacity of 150,000 kW each, 43 with a capacity of 200,000 kW, 38 with a capacity of 300,000 kW, and 8 with a capacity of 800,000 kW. The energy blocks of 800,000 kW produce annual savings of four million rubles. The boilers of the new stations produce superheated steam at 540°C with a pressure of 240–250 kg per sq cm. TPP-312 boilers use coal dust, while THMP-204 boilers use gaseous mazout. The new equipment of the thermoelectric stations has reduced their fuel consumption from 590 g per kW·h in 1950 to 470 g per kW·h in 1960 and 345 g per kW·h in 1980. The consumption of gas by the power stations in Ukraine increased from 4.1 billion cu m in 1960 to 14.3 billion cu m in 1975. The electric-power industry in Soviet Ukraine uses 59 percent of the republic's thermal reserves.

The Chernobyl AES is equipped with heterogenic uranium-graphite reactors of the REMK-1000 type, while the Rivne AES uses water reactors of the VVER-440 and VVER-1000 type. The Southern Ukrainian AES will use reactors of the VVER-1000 type.

⁴New boilers for mazout introduced

In 1975–80 automatic control systems came increasingly into use. They are standard equipment with the 800,000 kW energy blocks and at atomic stations. These systems are based on computers of various types and on the computer complex iv-500 M. Through automation the number of servicing personnel has been reduced from 7.6 persons per 1,000 kW in 1950 to 1.2 persons per 1,000 kW in 1980. Personnel for the power stations are trained at the Trypilia DRES training center, where the work regimes of various stations can be easily simulated.

Administratively Ukraine is divided into the following energy systems: Vinnytsia, Dnieper, Donets Basin, Kiev, Crimea, Lviv, Odessa, and Kharkiv. They encompass 30 large thermoelectric stations (DRES) and the 7 hydroelectric stations of the Dnieper Cascade and in 1980 had a total capacity of 32.8 million kW. All the energy systems are connected and secured from accident or power interruption by special automated control systems (S-ASU). In the Tenth Five-Year Plan, and even more in the Eleventh Five-Year Plan (1980–5), considerable attention was devoted to increasing the productivity of the capital investment in the electric-power industry. Growth in output is limited by environmental considerations. From 1975 to 1980 the people of the Ukrainian SSR and the USSR as a whole became increasingly aware and critical of the water and air pollution that result from electrification and industrialization. A typical electric station with a 2.4–3 million kW capacity produces annually 1.5 million t of smoke and slag. To store this huge amount of wastes 300–400 ha of land is needed. Even more harmful is the emission of nitrogen and sulfur oxides and other poisonous gases. For this reason the thermoelectric stations must be provided with smokestacks 250–350 m in height, as well as with coagulators and electrofilters. All this equipment greatly raises the cost of construction. The emission of warmed water, which leads to the spread of blue-green algae in the Dnieper's water reservoirs and kills fish, is a complex problem. In the Tenth Five-Year Plan over 200 million rubles were spent on protecting the environment from the effects of power stations; yet the results proved to be unsatisfactory. The introduction of atomic power stations has made it increasingly necessary to protect the environment from accidents and harmful wastes and spills.

The energy systems of Ukraine are connected with each other and with other energy systems of the Soviet Union by high-voltage transmission lines. The first such line, of 110 kV, was built in 1929 between the Shter DRES and

Kadiivka. Later, as the capacity of the thermoelectric stations and the amount of transmittable energy grew, the voltage of the lines was gradually increased. Today the long-distance transmission lines have a voltage of 750–800 kV. The most powerful line, known as the Trans-Ukrainian Line, runs from the Donets Basin to Western Ukraine. It was constructed in 1973–8 and has a length of 1,112 km. The power systems of Ukraine have been connected in the last few years with the systems of Hungary and Poland. Ukraine is an exporter of energy, for the Soviet bloc countries are deficient in electric power. The

current from the power stations is introduced into the transmission network of Ukraine and distributed by huge transformer stations equipped with transformers of types ORU-154, ORU-330, and the like.

The development of Ukraine's electric-power industry has facilitated a high level of electrification in the various branches of the national economy. Table 3 shows the growth of energy consumption in Soviet Ukraine from 1940 to 1980. Industry is the largest consumer of energy (70 percent of electric energy is used to drive electric motors and power systems, and a little more than 20

*Export to the republics of the USSR and the Comecon countries

percent is used in technological processes). The electrification of production in the food, textile, leather, and light industries lags far behind that of the West, however. The electrification of dwellings also continues to be inadequate. Thus, in the cities gas stoves and ranges are mostly used for home heating and cooking, and in the villages wood stoves are used. The consumption of electric power by such domestic appliances as refrigerators, washing machines, dryers, vacuum cleaners, and typewriters is very low. Many consumer appliances that are widespread in the West are unheard of in the USSR or are very rare.

The electrification of agriculture has been significantly altered, however. In 1941 scarcely 4 percent of the collective farms were electrified. After the Second World War there was a trend towards the construction of small rural electric stations and hydroelectric stations. In 1960 there were 11 rural electric-power systems, and their output in 1965 reached 806 million kW·h (from 600 million kW·h in 1958). But in the 1970s most of the rural electric stations were disassembled, and their transmission networks were connected up with the systems served by the large, centralized thermoelectric stations, usually by means of low-voltage transmission lines of 6–20 kV. As late as 1960 only 31 percent of the collective farms were electrified, and in the western oblasts scarcely 10 percent of the farms were electrified. Only 5 percent of agricultural production work was electrified. Only in 1970 did the percentage rise to about 20. In 1980 plans were adopted to raise the use of electricity on farms (water supply, feed preparation, lighting, ventilation, etc) to 14 billion kW·h per year out of a total of 19 billion kW·h used in Ukraine's agriculture.

The electrification of transportation is more advanced. In 1970–5, 1,100 km of railroad were electrified, and in 1975–80 another 365 km were electrified. The total electrified railroads in 1980 amounted to about 7,000 km. In 1975 electric locomotives pulled 56.7 percent of the freight; in 1980 they pulled 60.5 percent.

In 1975, 89 percent of the capacity of electric stations in Ukraine was derived from steam systems and 11 percent from hydro systems. In 1985 steam systems will account for 44.9 percent of the capacity, hydro systems for 2.7 percent, and atomic reactors for 52.4 percent.

Electrotechnical industry. Branch of the machine-building industry that manufactures electrical machines, motors, cables, and other products for the transmission and consumption of electric power. The growth of the electrotechnical industry is directly related to electrification, and the main consumers of the production of this industry are the electric-power, chemical, fuel, machine-building, transportation, and agriculture enterprises.

The first plants of the electrotechnical industry were founded in Ukraine prior to the revolution (cable factory in Kiev in 1900; electromechanical plant in Kharkiv in 1916). The output of the industry at this time consisted of 16 percent of the overall production of the Russian Empire. Not counting several minor enterprises in Lviv and Chernivtsi, there was virtually no electrotechnical industry in Western Ukraine. A marked growth in the industry began in the 1920s (the reconstruction of the Kharkiv electromechanical plant – one of the largest such plants in the USSR; the construction of two new plants in Kiev). Some plants were also constructed in the 1930s, in particular the turbo-generator plant and the electric-locomotive plant in Kharkiv, a plant for electrotechnical equipment in Kiev, and others. By 1941 about 80 percent of the production in the electrotechnical industry was concentrated in Kharkiv and Kiev. In general, this industry did not manage to satisfy the demands of the national economy and lagged substantially behind the growth of industrial productivity in Ukraine.

After the Second World War, especially in the late fifties, the electrotechnical industry began a rapid growth and underwent a geographic expansion: in 1946 a heavy-electrical-machinery plant (Elektrovazhmash) was constructed in Kharkiv, as was an electromechanical plant in Voroshylovhrad; in 1948 the Zaporizhia transformer plant was built; in 1957 the electromachine-building plant in Novokakhivka; in 1958 the electromechanical plant in

Output of the major products of the electrotechnical industry in the Ukrainian SSR

Products	Units of measure	1940	1965	1970	1980

Elegy (Greek term, probably of foreign origin). Originally, in the 7th century BC, the term signified a song accompanied by a flute. In Greek and Roman literature it referred to long poems of a certain form (elegiac couplet: hexameter and pentameter) regardless of content. Its meaning began to change in Roman literature: an elegy became a poem of any form expressing grief and sadness, tinged with eroticism. In Ukraine numerous elegies were written in the 17th–18th century. They dealt with various subjects – erotic, political, and religious – and expressed longing for the past, longing for one's homeland, grief over human fate ('worldly songs'), and sorrow over political events (eg, songs attributed to I. Mazepa). The best known among them are E. Yavorsky's elegy on his parting with his library, written in Latin, and the elegiac poems of D. Tuptalo and H. Skovoroda. The term *elegy* was not used in the 19th century, but typical elegiac poems can be found among those of T. Shevchenko, M. Shashkevych, M. Metlynsky, Ye. Hrebinka, M. Petrenko, O. Chuzhbynsky, L. Hlibov, Ya. Shchokoliv, and others, up to the modern poets (M. Zerov was a master of the elegiac couplet). It is characteristic that the elegiac verses of Ukrainian poets became folk songs (eg, 'Ni, mamu, ne mozhna neliuba liubyt' by Ye. Hrebinka and 'Stoit' hora vysokaiia' by L. Hlibov). The oldest elegiac folk songs are laments for the dead. These were imitated in prose as early as the 11th century (eg, 'Skazanie,' about the lives of ss Borys and Hlib). Original elegiac songs are very popular even today (besides burial songs, there are lirnyk songs, religious songs, and love songs). Some travesties (by P. Hulak-Artemovsky) and parodies (by V. Samiilenko) of elegies have been composed in Ukrainian.

D. Chyzhevsky

Elementary schools (*pochatkovi shkoly*, *narodni shkoly*). Until the 18th century schools were run by the church (see *Parochial schools). The secularization of education at the end of the 18th century brought in new kinds of elementary schools. On Ukrainian territories within the Russian Empire primary schools with a two-year curriculum were known as minor schools (*mali uchyl'nyshcha*) and those with a four-year curriculum were known as *major schools in accordance with the statute of 1786. Other primary schools run by various agencies included the ministry (*ministerskie*) or government (*kazennye*) schools;

the parochial, private, and *Sunday schools, and, in accordance with the 1864 and 1874 statutes, *zemstvo schools. On the average, most primary schools had a three-year curriculum. However, the ministry 'two-class' schools, which had two teachers in two separate classrooms, had a five-year curriculum.

*County schools were elementary schools of a more advanced type than the primary schools. They were established in 1804 in county and gubernia towns to prepare pupils from different estates for the *gymnasiums to which they were subordinated. Graduates of primary schools spent another two years in the county schools. In 1828 the link with the gymnasiums was severed, and the program of the county schools was lengthened to three years. Introductory courses to the professions were set up in county schools, which were designed basically for the children of merchants, craftsmen, and other town residents.

In 1872 county schools and parish schools were replaced by *city schools with a six-year curriculum that combined the primary and the senior elementary programs. The pupils of these schools could not enter gymnasiums or Realschulen. City-school teachers were trained at special institutes. The first teachers' institute of this type in Ukraine was established in Hlukhiv in 1874. In 1912 these schools were replaced by *upper elementary schools.

After the school reforms of 1775–83 the elementary schools in Austrian-ruled Ukraine consisted of *normal schools, major schools (*Hauptschulen*), trivium schools (*Trivialschulen*), and parochial schools. In the 1860s all these schools were reorganized into public schools (German: *Volksschulen*, Polish: *szkoly ludowe*, Ukrainian: *narodni shkoly*). The number of grades varied from one to seven, and the curriculum took six to seven years to complete. In Galicia and Bukovyna the public schools in the towns were organized in a somewhat different way from those in the villages. The higher-level town schools were called *senior elementary schools (*vydilovi shkoly*). The law of 1868 established similar schools in Transcarpathia, except that some of the public schools were run by the church, while in Galicia and Bukovyna almost all public schools were state-run.

Ukrainian was used as the language of instruction only in Galicia and Bukovyna. In Russian-ruled Ukraine the language used in school was Russian, and in Transcarpathia it was usually Hungarian.

In the period of Ukrainian independence the elementary schools were Ukrainianized, and many new schools were opened. In 1917 the Society of School Education drafted a plan for unified labor schools (*iedyni trudovi shkoly*) – 12-year schools providing general education. The Ministry of Education of the UNR incorporated this plan into its program for a public education system, but the plan was never put into effect.

In 1921 elementary schools on Ukrainian territory under the Polish regime, came under the same statutes as those in Polish lands. They were known as public schools (Polish: *szkoly powszechnie*, Ukrainian: *vseliudni* or *narodni shkoly*). Later elementary education was subdivided into three levels in accordance with the law of 11 March 1932: the first level consisted of the first four grades; the second, of grades five and six, and the third of grade seven. When Transcarpathia became part of Czechoslovakia, its elementary schools expanded rapidly. Beginning

in 1930 they had an eight-year curriculum. Senior elementary schools were known as *municipal schools (Ukrainian: *horozhanski shkoly*, Slovak: *občanské* or *městanské školy*). Meanwhile, the quality of elementary education in Rumanian-ruled Bukovyna declined seriously because of a shortage of qualified teachers and the compulsory use of Rumanian.

The subjects that were taught in elementary schools were religion, reading and writing, basic mathematics, singing, drawing, handicrafts, physical education, and, in the higher grades, geography, natural science, history, and literature. Sometimes foreign languages were taught as well.

In the Ukrainian SSR the People's Commissariat of Education published in the summer of 1920 a new plan for a unified labor school that differed from that in the Russian SFSR. The plan provided for elementary schools of two levels: grades one to four and grades five to seven. Schools of the first level were called primary schools (*pochatkovi shkoly*), and they accepted children aged 8 to 11. A large number of these schools were incomplete: in 1928, 36 percent of the schools had only three grades, and 15.7 percent had only two. Most peasant children ended their schooling with grade two. Only 15 percent of pupils attended grade four. In 1930 the CC of the CP(B)U adopted a resolution that elementary education was to be compulsory up to grade four and that it was to include more polytechnical and vocational training.

In 1934 the *incomplete secondary school of general education was established. It provided a seven-year program; hence, it was really an incomplete elementary school by Western standards. Its popular name was *seven-year school.

The four-year primary schools continued to exist both as separate schools and as the first level of the seven-year schools and *ten-year schools (full secondary schools). The number of separate primary schools, their enrollment, and the enrollment in the first four grades of other schools in the various years are shown in table 1. In 1938-9, 78.7 percent of the pupils in grades one to four were instructed in Ukrainian, 14.2 percent in Russian, and 6.3 percent in other languages.

After the Second World War, primary schools were quickly re-established with the help of the population. By 1944-5 there were already 15,596 primary schools with an enrollment of 1,366,000 pupils. The number of primary schools later diminished as more advanced types of elementary schools expanded.

Today primary schools are found mostly in small villages and are branches of the nearest eight-year schools (see below). In 1969-70 the number of grades in primary schools was reduced to three. The 'labor and

polytechnical education' that was reintroduced in 1959 was radically altered after 1964 (the fall of N. Khrushchev): it has been limited to handicrafts classes, excursions, and so on. Thus, there has been a return to a more traditional pedagogical approach. According to the recommendations of the conference held in Tashkent on 29 May 1979 under the slogan 'The Russian language is the language of friendship and co-operation among the peoples of the USSR, Russian is to be given a privileged position in the school program starting with grade one.

Table 3 shows the development of the seven-year schools. The decline in the number of these schools from the early 1950s resulted from the expansion of more advanced schools such as the ten-year schools and, in 1959-65, of eleven-year schools. Yet the percentage of seven-year Ukrainian schools was higher than of seven-year Russian schools in Ukraine: 85.3 percent compared to 67.8 percent in 1951.

In 1959, a year after the new law was issued in Moscow, seven-year schools were replaced by eight-year schools. Thus, elementary education was raised to the level of elementary education in the West. The eight-year school is designed for children between the ages of 7 and 15-16. Since 1965-6 the enrollment in these schools has steadily declined from 8,670,500 to 7,600,000 in 1978-9 as a result of the declining birthrate. In 1978 over 99 percent of the graduates of eight-year schools continued their education in secondary schools. (See also *Education, *Secondary education.)

Eleniak, Wasyl [Jelyniak, Vasył'], b 22 December 1859 in Nebyliv, Kalush county, Galicia, d 12 January 1956 in Chipman, Alberta. Eleniak and I. Pylypiv, another peasant from Nebyliv, were the first clearly documented Ukrainians to settle in Canada (they arrived in 1891) and to stimulate large-scale Ukrainian immigration to the country. After spending some time in Manitoba, Eleniak homesteaded in the Edna-Star colony in the Northwest Territories (near present-day Chipman, Alberta) in 1898. In 1947 in a special ceremony in Ottawa he represented the Ukrainian group as one of the first four Canadians to receive a citizenship certificate.

Elimination of illiteracy (*likvidatsiia nepysmennosty* or *Liknep*). A system of institutions and resources established in the USSR (26 December 1919) and in the Ukrainian SSR (21 May 1921) for teaching reading and writing to the illiterate part of the population, ranging in age from 8 to 50 years. The central agency managing the campaign against illiteracy in Ukraine was the All-Ukrainian Extraordinary Commission for Eliminating Illiteracy, which published the semimonthly *Het' nepys'mennist'*. The lower agencies were known as 'elimination points' (*likvidatsiini punkty*) and offered instruction lasting from three to six months to two years. Their curriculum included 'political literacy.' The network of elimination points, which was established in 1921, numbered 487 points by the end of that year, 5,096 by the end of 1923, and 13,028 by 1925. The number of students served by the system (in thousands for January of the given year) is presented in the accompanying table. As a result of the campaign against illiteracy the literacy rate in the Ukrainian SSR rose from 57.5 percent in 1926 to 85.3 percent in 1939, to 98.5 percent in 1961, and to 99.7 percent in 1970. (See also *Literacy.)

Elizabeth I, b 29 December 1709 in Moscow, d 5 January 1762 in St Petersburg. Russian empress in 1741–62, daughter of Peter I and Catherine I. Elizabeth seized the throne through a palace coup, overthrowing the regent for Ivan VI, Anna Leopoldovna. Her policies were aimed at broadening and strengthening the privileges of the nobility at the expense of the serfs. Having secretly married a member of the court choir, the Ukrainian Cossack O. Rozumovsky, in 1744 she approved the request of the Ukrainian officers to restore the office of

hetman. According to her instructions, the Council of Hlukhiv in 1750 elected her husband's younger brother, K. *Rozumovsky, as the new hetman of Ukraine. Elizabeth was succeeded by her nephew, Peter III.

Elk (*Alces alces*; Ukrainian: *los*). The largest even-hoofed mammal of the deer family. The elk reaches up to 3 m in length, up to 2.3 m in height, and up to 650 kg in weight. It has large, palmated antlers and a short tail. Its hair is short and grayish-brown in color, turning lighter in winter. The elk lives in marshy forests, feeding on grass, young shoots, leaves, and bark. In Ukraine the elk was common until the 16th century in the forest and forest-steppe belts. Then it was almost wiped out by humans because of its tasty meat and valuable hide. Today some elk survive in the forest belt, particularly in northwestern Polisia.

Elko, Nicholas [El'ko], b 14 December 1909 in Donora, Pennsylvania. Bishop of the Byzantine Rite Catholic church in the United States. Elko graduated from the seminary in Uzhhorod and served as rector of the seminary in Munhall, Pennsylvania. In 1954 he was appointed exarch. In 1963–7 he served as acting bishop of the *Pittsburgh eparchy. Because of certain difficulties with the clergy, Elko was recalled to Rome and was given the title of archbishop. Since 1970 he has served as the coadjutor of the Roman Catholic archbishop of Cincinnati, Ohio.

Elm (*Ulmus*; Ukrainian: *berest, viaz*). Tree of the Ulmaceae family with the characteristic broad crown and a height of up to 30 m. It grows in the lowland forests of Europe. Seven species grow in Ukraine; *U. laevis*, *U. foliacea*, *U. suberosa*, and *U. scabra* are the most common. The wood of the elm is durable and elastic. It is used in making farm implements, furniture, wagons, musical instruments, veneer, and so on. The elm tree is often cultivated in parks.

Eltekov, Aleksandr [El'tekov], b 1846? in Briansk, Russia, d 19 July 1894 in Yalta, Crimea. Chemist, professor at Kharkiv University from 1887 and at Kiev University from 1889 to 1894. Eltekov did most of his research on the structure and transformation of hydrocarbons and their acid derivatives. In 1877 he formulated a law about the inability of simple alcohols containing a hydroxyl joined by a double bond with a carbon atom to exist independently (known in Soviet chemical literature as the Eltekov Rule). Eltekov discovered in 1878, at the same time as Yu. Lermontova, the alkylation of olefins by halogen derivatives of the aliphatic series.

Emblem. A baroque literary art form that consisted of a symbolic drawing accompanied usually by a motto or a versed maxim and sometimes even by longer prose commentary. In Ukraine emblem verses were widespread in the 17th–18th century. Collections of these verses appeared in print – for example, L. Krszczonowicz's panegyric to L. Baranovych, *Redivivus Phoenix* (Chernihiv 1682–4); A. Radyvolovsky's *Ifika hieropolityka* (*Ethica Hieropolitica*, Kiev 1712). T. *Prokopovych wrote cycles of emblematic verses about the christening of Rus' and in memory of V. Yasynsky. H. *Skovoroda provided a theoretical foundation for the emblem literary art form. His own emblem drawings have not yet been published.

Among the translated works that were well known at the time were H. Hugo's *Pia Desideria* (from German) and D. Saavedra Falandro's collection of political emblems (translated from Spanish by T. Prokopovych). Heraldic poetry, which was popular in Ukraine in the 16th–17th century, was closely related to emblem verses.

Embroidery

History. Archeological discoveries in Ukraine indicate that embroidery has existed there since prehistoric times. Embroideries are found on drawings and on the oldest pieces of extant cloth (eg, the veil from the Church of the Tithes, destroyed in 1240).

Cloth embroidery was first inspired by faith in the power of protective symbols and later by esthetic motives. Symbolic designs were incorporated into the woven cloth by means of a weaving shuttle or a needle. These symbols formed the basis of ornamentation for both cloth and Easter eggs. Most of the symbols came from Asia. As a result of migrations, wars, and trade, they penetrated the Dnieper Valley and the neighboring areas. In historical times they were transformed into more complicated patterns and modified by Byzantine influence. Under this influence a new branch of embroidery – church embroidery, which required imported materials and a more complicated technique – was developed.

In the course of time and under the influence of new artistic styles, folk embroidery and church embroidery became more differentiated. Centers of church embroidery developed in the monasteries, while certain cities (Kiev, Lviv, Brody) became centers for the embroidery trade (*haftiarstvo*), which produced cloth for the Cossack *starshyna* and the nobility. The later artistic styles did not influence folk embroidery as much. Embroidery remained popular and developed as techniques and materials were perfected. Folk art specialists found that at the end of the 19th century it was flourishing in three fields – in the church, in folk rites, and for clothing.

Ornamentation. Ukraine can be divided into three regions in terms of embroidery (as well as Easter egg) ornamentation: (1) the country's inaccessible areas, such as Polisia in the north and the Hutsul region in the Carpathian Mountains, where strict geometric patterns have been preserved; (2) central and eastern Ukraine, from the Buh River along the Dnieper River to the Black Sea, where floral designs predominate; and (3) the remaining areas (Volhynia, central Galicia, the Boiko and Poltava regions), where floral motifs, when they occur, are strongly geometric in their interpretation.

Color was related to the embroidery pattern. Even in the case of complicated and varied designs, colors are limited to one or two, such as black and red. The finest examples are found in Polisia, where the embroideries are primarily red with a slight admixture of black. The same can be said of the embroideries of the Lemko region and Podilia. The geometric patterns of the Hutsul region and Bukovyna, however, are multicolored. At times floral motifs appear in a greater number of colors, such as black, red, and yellow. They differ greatly in form and reflect various artistic styles, whereas the geometric patterns still reflect the old symbols. Animal motifs are rarely encountered.

Among the neighboring peoples a rich geometric ornamentation can be found in central and eastern Russia, in

Belorussia, and in Rumania. Realistic floral designs are developed among the Poles, Slovaks, and Hungarians.

Application. Embroidery designs are used mostly on clothing. A traditional form of embroidery is used for the shirt (for both men and women). The basic part of the design on a woman's shirt is placed on the upper sleeve just below the shoulder. This is an elongated design, 10–15 cm in breadth, called the *polyk* or *ustavka*. In some areas another strip is added under it, which is called the *pidpolichchia* or *morshchynka*. The lower length of the sleeve may also be embroidered. Other parts of the shirt – such as the collar, the front, the cuffs, and the bottom hem – have narrower bands of embroidery, which complement or harmonize with the main motif on the sleeve.

Shirts are beautifully embroidered throughout Ukraine, but other parts of the traditional costume are embroidered only in certain regions (eg, skirts among the Boikos, aprons in Polisia). The head covering of a married woman is simply, but meticulously, decorated. In Polisia this decoration is a narrow band that frames the face; in Pokutia it takes the form of broad, colored bands (*zabory*) woven into the ends of the headscarf, which hang down the back. The best-developed decorations are those on kerchiefs, in the form of large flowered motifs (eg, in the Yavoriv area and Lemko region). Other pieces of clothing also have embroidered decorations. Sleeveless jackets have intricate motifs of branches and flowers, and outer garments are decorated with various finishing stitches. Sheepskin jackets (*kozhlukhy*) also have very intricate ornamentation.

Special significance is attached to the embroidery on *rushnyky* (towels) and kerchiefs used in folk rites and popular customs. The ancient, symbolic signs are rarely found today; they have been replaced by floral designs extending along both sides of the *rushnyk*. Embroidered *rushnyky* were used in folk rites, particularly for weddings and for decorating holy icons. Embroidered kerchiefs were used in funerals for covering the face of the deceased.

Ukraine's neighbors use embroidery differently. All use a shirt that is more or less carefully decorated. In Russia the *poneva* – a wraparound garment – is decorated. Everywhere great attention is lavished on the head covering (Russia, Poland, Slovakia, Hungary), but only the Rumanian style of head covering can rival the Ukrainian in its classic simplicity.

Techniques of embroidery

Solid stitches. The oldest technique of Ukrainian embroidery is the *nyz*, *nyzia*, or *zanyzuvannia*. This is done with red or black thread along the warp (the lengthwise threads) of the linen. The embroiderer works on the reverse side of the cloth and thus makes a negative pattern. The design is developed by advancing thread by thread in a progressive pattern. The threads of the cloth that are thus covered are always odd in number (1, 3, or 5). In theory the technique is simple, but in practice the person who has not done it since childhood can rarely accomplish it proficiently.

This method of embroidery – from the reverse side – can be employed only with geometric motifs which are formed by the crossing and breaking of lines. The motifs thus developed have a symbolic meaning and are regarded as having protective powers.

Related to this stitch is the *zavolikannia* or *pidbyrannia*

This page intentionally left blank

(running stitch). This is not as well preserved as the *nyz*. While the *nyz* is usually done in black thread, more rarely in red, the *zavolikannia* is almost exclusively done in red with a very small mixture of black or blue. While the *nyz* is worked along the warp, the *zavolikannia* is done along the woof. The embroiderer advances in double or triple steps. While the steps in the pattern of the *nyz* are almost imperceptible, they are much clearer in the *zavolikannia*.

Such stitches are also found among Ukraine's neighbors. They are used in the central and eastern provinces of Russia, throughout Belorussia, and in Rumania, Bulgaria, and Serbia. However, they are not as widespread as in Ukraine, where they have been preserved in certain areas (Polisia, Hutsul region, Podilia).

The second most widespread technique of embroidery in Ukraine is the *lyshtva* (leafing stitch), a two-sided, counted satin stitch that makes the design appear almost the same on both sides of the cloth. As the unit for determining the count, the *chysnytsia* (ie, three threads, but even more can be included) is used. Embroideries done in *lyshtva* usually consist of stylized leaves or flowers in the form of geometric figures, or true geometric designs. In using this stitch the craftspeople at one time employed only white threads or unbleached threads on white linen. Later the linen threads were dyed in oak bark (light brown) or in ashes (gray). The embroidery thread must be heavier than the thread of the cloth. *Lyshtva* stitching is often used with openwork embroidery. This stitch, in various forms, is also found in Russia and in the Balkans, especially in those areas where geometric patterns predominate.

The most popular method of embroidery today is the cross-stitch. It is of more recent origin but has penetrated into the most remote areas because it made possible, to a large degree, the transition from geometric to floral motifs. The Ukrainian embroiderer has shown great care in the use of the cross-stitch, which easily permits the creation of personal designs. The cross-stitch has become widespread among all European peoples and in Ukrainian embroidery has replaced other, ancient techniques.

The most intricate stitches are those used for the headcloths in Galicia and for *rushnyky* in the Dnieper region. The most important feature of these stitches is that they allow preliminary outlines of the designs, which are later filled with other stitches. Both the outline and the filling stitches are duplicated exactly on the front and reverse sides.

Openwork stitches. These are of three principal types: *merzhenka* (cut-and-drawn work), *stiahuvannia* (drawn-work), and *vyrizuvannia* (cutwork).

In Ukrainian, unlike Russian, *merzhenka* the threads are drawn crosswise only, and never lengthwise. The design is embroidered on the remaining lengthwise threads. *Stiahuvannia* is executed by drawing the lengthwise and crosswise strands into square or circular designs. In *vyrizuvannia*, which has developed in various parts of Ukraine (Poltava region, Polisia, Pokutia), first the contours of the cutwork sections (square or circular) are overcast in various prescribed ways, then the centers are cut out and the filling in is completed. The overcasting and filling are done usually with white or unbleached thread, and only rarely with brown or gray. Cutwork finishing is always used in conjunction with the *lyshtva*.

Threads. Originally the embroidery thread was the same linen thread used in weaving the cloth. So that it would be more durable, it was coated with wax or soot, which made it yellow or gray. Later the art of dyeing threads with plant dyes was discovered. More recently commercially manufactured threads have been introduced. Most of these are of colored cotton, but sometimes wool or silk threads are made. In southern Ukraine embroideries are also executed with metallic threads (gold and silver).

Embroidery production. Embroidering was done in the village by specialists in the art who worked for pay. These were talented persons who created their own patterns. Others also embroidered but copied the designs of the professionals.

At the end of the 19th century students of folk art saw the need for commercializing this field. The first steps in this direction were taken by the Poltava zemstvo, which founded several embroidery shops.

After the First World War efforts to revive the commercial production of embroidery were intensified. These steps were taken by the co-operatives and the state administration in Soviet Ukraine and by cultural and economic institutions in Western Ukraine. In the Ukrainian SSR these efforts attracted persons of significant artistic talent. Beginning in 1934, workshops for Ukrainian folk art were opened with the intention of exporting the products. The chief centers for the production of embroidery were the oblasts of Kamianets-Podilskyyi, Vinnytsia, Zhytomyr, Kiev, Chernihiv, Poltava, Kharkiv, Odessa, and Dnipropetrovske; in 1940 there were 109 artels employing 54,000 workers. In Western Ukraine production was concentrated in co-operatives: Ukrainian Folk Art in Lviv; Hutsul Art in Kosiv; and the Women's Society in Chernivtsi. All of these groups had their work exported; most of it was labeled Soviet or Polish.

As often happens in the transition from individual work to mass production, the quality of folk embroidery declined. Production methods were often inferior, and much harm was also done by the use of carelessly printed patterns.

Church embroidery. Church embroidery had quite a different character than that of folk embroidery. While the stitches of the latter were counted by strands (*chysnytsi*), church embroidery was done only by copying a free design.

Albs, chasubles, stoles, and veils were embroidered. The albs were embroidered usually on linen cloth in a broad band. The design was composed of a continuous motif, bordered on both sides by a chain stitch; above and below scattered flowers were embroidered. The embroidery thread used was a twisted silk of a dark red or dark green color combined with gold or silver thread. The stitches used on the albs were either the Poltava or old Kiev types. Both resulted in heavy embroideries, covering large expanses. Often designs from *rushnyky* were used on the albs; then the thread used was red cotton. The church chasubles, stoles, and veils were embroidered with gold or silver thread. The technique of embroidering with gold was known by only a few people. Factory-made brocade later replaced church embroidery. Under the Soviet regime the art of church embroidery has almost completely disappeared.

Emigration. Socioeconomic conditions and political events in Ukraine frequently caused whole groups of the population or certain individuals to emigrate abroad or beyond Ukrainian ethnic territories.

The first documented significant political emigration from Ukraine occurred after Charles XI's and I. Mazepa's defeat at Poltava in 1709. The so-called Mazepist émigrés were Senior Cossack officers (*starshyna*) and political leaders, such as P. and H. Orlyk, A. Voinarovsky, and H. Hertsyk. They received asylum and continued their struggle in Turkey, France, Sweden, and Poland. They kept in touch with a group of Zaporozhian Cossacks who, as a result of Mazepa's defeat, settled in the Crimea. In 1734 these Cossacks returned to Ukraine and recognized Russian sovereignty. When the Zaporozhian Sich was destroyed in 1775 some of the Cossacks fled to the Turkish lands around *Dobrudja at the mouth of the Danube. There they established what is known as the *Danubian Sich. From there a few thousand moved for a period to the *Banat. Cossack descendants still live in the *Dobrudja region.

The emigration from central Ukraine in the 1870s of a small group of scholars and public figures (among them, M. Drahomanov, M. Ziber, S. Podolynsky, and F. Vovk) was essentially political. The political and journalistic activities of these men in Vienna, Geneva, and Lviv had a significant impact on Ukrainian political thought and national consciousness.

In the 1900s many political figures from central Ukraine (including D. Antonovych, V. Vynnychenko, Ye. Holitsynsky, M. Rusov, M. Kanivets, and B. Yaroshevsky) emigrated to Western Ukraine and established a publishing base for Ukrainian political parties in the Russian Empire. When the tsarist regime became more repressive after 1905, another group of political émigrés moved to Galicia, Austria, Switzerland and elsewhere. Among them were the prominent Social Democrats D. Dontsov, V. Doroshenko, A. Zhuk, and L. Yurkevych; the Socialist Revolutionaries M. Zalizniak and F. Koroliv; and the Radical Democrat V. Kozlovsky. These émigrés were responsible for founding the *Union for the Liberation of Ukraine in 1914.

The first documented socioeconomic emigration from Ukrainian territories (but within the same state) took

place within the Austro-Hungarian Empire in the middle of the 18th century, when some inhabitants of the southeastern Prešov region emigrated to Hungarian ethnic territories around *Bačka and the Banat. The Austrian government granted them unsettled lands, and the first Ukrainian settlements sprang up in what is today Vojvodina in Yugoslavia. A century later new settlers from the northern Prešov region arrived in *Srem. At the end of the 19th century about 10,000 Galicians settled in *Bosnia. The government in Vienna encouraged this kind of internal migration in order to settle the fertile, uncultivated lands in the south and to relieve overpopulated, impoverished areas. In 1892–3 almost 15,000 peasants from eastern Galicia and Bukovyna emigrated to Russia, attracted by promises of free land, homes, and equipment. Most of them eventually returned disillusioned.

The mass emigration of Ukrainians began in the last quarter of the 19th century. Inhabitants of Russian-ruled territories migrated east, mainly Central Asia and the *Far East. Subjects of the Austro-Hungarian Empire migrated west, mainly to America. In both cases the causes were difficult social and economic conditions, primarily rural overpopulation, poverty, and industrial underdevelopment.

Eastward out-migration. In the first half of the 19th century emigrants from overpopulated areas in central and eastern Ukraine moved into the Black Sea steppe and the Azov steppe and then into *Subcaucasia and the *Don region. As a result of these migrations, Ukrainian ethnic territory expanded, because the colonized regions were adjacent to regions inhabited by Ukrainians to the present day. Only the settlers of the Volga region (in-migrations there began in the mid-18th century) were far removed from Ukrainian territories. In the 1860s–1870s there was a large migration into this region, particularly into the Samara, Saratov, Orenburg, and Ufa gubernias. Later, some of the settlers heading further east into Asia stopped and settled there. In the 1870s, when little free land was left in European Russia, Ukrainians emigrated to Asia, where they were met by previous settlers from Russian provinces. Ukrainians settled mainly in the Amur region of the Far East, in northern Turkestan, and in southwestern Siberia. In general, they sought climatic conditions similar to those of Ukraine and engaged in agriculture. Most of the immigrants came from Left-Bank Ukraine, from the densely populated Poltava, Chernihiv, Kiev, and Kharkiv regions. Few settlers came from Volhynia and Podilia. Some came from the Kursk and Voronezh regions. During the period of migration (1894) there was already an excess of labor in the Ukrainian gubernias: 400,000 people in Voronezh, Kharkiv, and Poltava gubernias, and 130,000 in Volhynia, Podilia, and Kiev gubernias. Land rent was high in these areas.

Intensive migration to Asia began in the 1890s. In the 20 years before the First World War two million Ukrainians out-migrated. The rate of out-migration increased during the construction of the Siberian railroad (1891–1905) and between 1894 and 1903 constituted 42,000 people annually. During the Russo-Japanese War (1904–5) it fell to 27,000, but rose sharply after the war when it became apparent that the Stolypin reforms would not improve the condition of the peasantry. In 1906–10 about 202,000 people left the nine Ukrainian gubernias each year; in 1909, 290,000 left, that is, 68 percent of the natural

population increase. In 1911–14 the rate of out-migration again declined, because free land became scarcer in the Asian regions of settlement. During the First World War migration came almost to a halt. Some of the settlers returned from Asia to Ukraine: 480,000 in 1890–1914. The largest number returned in 1911–12, when most of the out-migrants found the conditions of settlement discouraging. About two million Ukrainians settled permanently in Asia by 1914.

At first most of the out-migrants were *state peasants. After the abolition of serfdom various categories of peasants began to migrate. To emigrate, a peasant would sell his possessions and use the money for the trip, often saving some of it to set up a new home. The poorer peasants usually settled in the regions closer to Ukraine; the richer ones settled farther away. Out-migration to the East was only partly organized and planned by the government (mainly in those regions where land was scarce); it was mostly spontaneous. But the government tried to control it and even encouraged it, since it served the interests of the Russian Empire (relief of overpopulated areas, population of large, unsettled regions, the strengthening of the Far East against the Japanese threat, Russification of the indigenous populations). The government distributed the new lands: in the steppe belt it allotted 15 desiatyns per person and elsewhere 8 desiatyns (until 1897 up to 100 desiatyns per family in the Altai and Semipalatinsk oblasts). Settlers obtained other advantages: exemption from military service for three to six years, exemption from taxation for four years, help in obtaining seed and lumber, and so on. The government also provided some help to migrants at the transit stations, but most of them made their own way. Volunteer groups or whole communities sent out scouts (*khodaky*) to investigate new areas of settlement and then set out according to their reports. Others were guided by the letters of other settlers, and some even by rumors. The first Ukrainian out-migrants traveled by cart along dirt roads or by steamboat. In 1883–5, 4,668 settlers were transported by sea from the Chernihiv gubernia to the South Usuri krai. The Siberian railway began to carry settlers only in the 1890s. Conditions during the trip were difficult: disease, famine, and death were always looming. A migrant aid society existed in St Petersburg, but its efforts, like the government's efforts, were inadequate. Prince G. Golitsyn was one of the organizers of aid.

When the eastward migration became massive, the state tried to regulate it. In 1889 a migration law was adopted (until then only separate decrees dealing with individual regions had been issued). According to the new law, people had to have prior permission from the government to migrate. Those without permits were sent back. In 1897 a special migration agency was set up in the Ministry of Domestic Affairs (later transferred to the Administration of Land Tenure and Agriculture). But the agency could not control the whole migration movement, which continued to develop spontaneously. A committee of the Siberian railway also promoted and organized migration. In 1906 a new government regulation was issued to stimulate emigration to Asia.

In the Soviet period out-migration to the East began in 1925. It was organized by the Soviet authorities and was directed towards Siberia and the Far East, Kazakhstan, and northern Caucasia. Relatively few Ukrainians out-migrated in the 1920s. Only in the 1930s did Ukrainians

out-migrate in large numbers because of *collectivization and the *famine. They settled usually in industrial regions such as the Kuznetsk Basin. Ukrainian prisoners in Soviet concentration camps in the East were a category all their own. Of the large number of Ukrainians who were evacuated to the East in 1941–2, only a fraction returned home after the war. Many of those who had been slave laborers and were repatriated in 1945–6 from Germany and Austria ended up living permanently in Siberia. Some of the concentration-camp prisoners who were granted amnesty in 1955–7 did not return to Ukraine, but stayed in Soviet Asia. The last out-migration from Ukraine to the 'virgin lands' in the East occurred in the 1950s. It consisted mostly of young people who were sent out to build new industrial facilities. Most of them returned to Ukraine.

At the beginning of the Soviet period internal migration was supervised by the All-Union Migration Committee of the Central Executive Committee of the USSR. In 1930 the matter was put in the care of the People's Commissariat of Land Affairs and the corresponding republican agencies. Eventually, internal migration, particularly when it was connected with political exile, came to be viewed as a political matter and was put under the jurisdiction of the state-security agencies and the Ministry of Internal Affairs. Today it is under the State Committee for the Utilization of Labor Resources of the Council of Ministers of the Ukrainian SSR and the corresponding departments of oblast executive committees. The latter recruit migrants in an organized way. According to a 1973 regulation the government provides all kinds of incentives to the migrants at the point of departure and the point of arrival.

It is difficult to estimate how many Ukrainians have settled in Soviet Asia. The 1926 Soviet census gave the figure of 2,070,000, but it could have been as high as three million. Later migration, including exile, could have increased the figure to six or seven million, although the census of 1959 gives the figure of 2,378,000 and the census of 1970 barely 2,275,000.

Transoceanic emigration before 1914. A mass emigration from Western Ukraine to the New World took place almost at the same time as mass out-migration from eastern and central Ukraine to the East. Western Ukraine, particularly eastern Galicia and the Lemko region, had long experienced rural overpopulation. In the 1900s there were 67 people per sq km in eastern Galicia who depended on agriculture for a living. The farms were very small: 3 ha on the average in 1880, 2.5 ha in 1900. According to the Polish professor F. Bujak, 1,200,000 workers could not find jobs in eastern and western Galicia at this time. The region and the Austro-Hungarian Empire as a whole were industrially underdeveloped and could not provide work for so many people. Migration for seasonal work provided only a partial solution. Much of the population lived in poverty and suffered from malnutrition and a high mortality rate. The government made little effort to overcome the basic economic and social evils, apart from sporadic attempts like E. Egan's relief program in Transcarpathia.

Under such conditions emigration was about the only solution. News of great economic opportunities in America reached the Ukrainian population in the 1870s. The stories were exaggerated by various shipping agents, who recruited scab-laborers for Pennsylvania's coal mines. The year 1877 marked the beginning of mass

emigration to the United States from Transcarpathia and the Lemko region. With time the movement embraced eastern Galicia and all of Transcarpathia and Bukovyna. Later it affected, to some extent, several Ukrainian territories within Russia – the Kholm region, Volhynia, and Polisia – from which by 1914 about 50,000 Ukrainians emigrated. Many Jews and several thousand Ukrainian Baptists (Stundists) emigrated from central and eastern Ukraine to the United States.

The emigrants were usually impoverished peasants, young people without families. Their goal was to earn enough money to pay for the voyage and any existing debts and to save enough to return to Ukraine, buy some land, and establish themselves as farmers. Later most emigrants expected to settle permanently in the new land; yet, a significant number of them returned. Yu. Bachynsky estimates that of 393,000 Ukrainian immigrants to the United States 70,000 had returned to Ukraine by 1909.

In the 1890s Ukrainian peasants began to emigrate to Canada and Brazil. Both countries had enormous tracts of uncultivated, tillable land. Immigration agents, who received a commission for every immigrant (five dollars per family and two dollars for each member who went to Canada), spread fantastic stories about 'the promised land' throughout the Galician villages. A 'migration fever' gripped the impoverished peasantry. Peasants sold their possessions and emigrated to the Canadian prairies (Alberta, Manitoba, Saskatchewan) or the Brazilian jungle (Paraná). At the same time (1895–6) a smaller number of Ukrainians immigrated to Argentina and settled mostly in Misiones province. The emigration process itself was beset with various difficulties: most emigrants had little or no education, spoke Ukrainian only, and had no money. The Austrian and Hungarian governments did not encourage emigration and often administratively hindered it, because the large landowners feared losing cheap labor.

Ukrainian emigrants embarked on the ocean crossing from such ports as Bremen, Hamburg, Trieste, and Fiume. Emigrants from Russia left from Libau (Liepaja).

Under Austria there were no laws on emigration. The constitution provided for the freedom of emigration; hence it was difficult to prohibit or limit it. But in 1897 the Austrian parliament passed a law forbidding the solicitation of people to emigrate. Hungary, however, had detailed emigration laws. The law of 1881 regulated the activity of the agents of shipping companies. The laws of 1903 and 1909 accepted the principle of freedom of emigration, restricting it only for minors and military draftees. The government assumed responsibility for emigrants and set up an emigration fund and special agencies. Taking advantage of the law, Transcarpathians emigrated in greater numbers than did Galicians.

Russia had no emigration laws. Freedom of emigration applied in practice, and it was mostly Jews who took advantage of it.

The immigration policies of the host countries were basically liberal: Canada, Brazil, and Argentina needed farmers, and the United States needed industrial workers. Nevertheless, public opinion in the United States was hostile to certain categories of immigrant, such as the Chinese (the immigration act of 1882 halted Chinese immigration), and some circles were hostile to East Europeans. Through the influence of the Immigration Restriction League in Boston and American labor organi-

zations, federal laws were passed in 1891, 1893, 1903, and 1907 setting restrictions on the immigration of European workers. Anyone who might become a burden or threat to society (because of health, material circumstances, moral character, or political conviction) was rejected. From 1882 the Treasury Department and from 1906 the Immigration Bureau of the Department of Commerce and Labor supervised and controlled immigration.

The Canadian minister of the interior, C. Sifton, initiated the policy of settling the prairie provinces with immigrants and favored Ukrainian immigrants. In spite of this, the immigration law of 1910 made it more difficult for East Europeans to enter Canada. It required of immigrants certain skills, good health, literacy, and a certain amount of money.

Ukrainian society and its organizations had mixed feelings about emigration. At first their attitude was very reserved, but eventually they accepted it in spite of the fact that emigration weakened the national community. The newspapers generally expressed opposition to emigration. The Peremyshl Greek Catholic bishop called on the priests to dissuade the Lemkos from emigrating. The first wave of Ukrainian emigration (1880–90) received no special aid from the organized Ukrainian community apart from church circles and some secular intellectuals, who themselves emigrated voluntarily to work among the immigrants. Finally, reports of intolerable living conditions encountered by immigrants in Brazil (epidemics, high mortality, exploitation by plantation owners) compelled the Galician public and government to take an interest in their emigrants. In 1896 the Galician provincial executive sent a commission consisting of Rev I. Voliansky (representing the Ukrainians) and J. Siemiradzki (representing the Poles) to investigate the situation of the immigrants in Brazil. Their reports presented a bleak picture and for a time even discouraged emigration to Brazil. The Lviv Prosvita society sent O. Oleskiv to Canada to investigate the circumstances of immigrants there. Having familiarized himself with the life of the first settlers and their prospects, Oleskiv recommended that Ukrainians emigrate in large numbers to the prairie provinces. His efforts led to the creation by the Canadian government of an immigration bureau in Winnipeg. The bureau was headed by K. Genyk. Oleskiv's two brochures *O emigratsii* (On Emigration, 1895) and *Pro vil'ni zemli* (About Free Lands, 1895) counteracted the 'Brazilian fever' and stimulated emigration to Canada.

Galician Ukrainians began organizing associations for advising and aiding emigrants relatively late. In 1907 a Ukrainian branch of the Austrian St Raphael Society, the *St Raphael Galician and Bukovynian Emigrant Aid Society, was established in Lviv. In 1911 it began publishing the guide *Emigrant*. In 1908 the independent Ukrainian emigrant-aid society Provydinnia was formed. In 1911 a third Ukrainian organization – the Ruthenian Emigration Society – was set up as a commercial company to provide emigrants with information, arrange their travel formalities, and find jobs for them.

Immigrants arriving in a new land were in particular need of help. In the United States various nationalities had their immigrant centers. Ukrainian immigrants usually went to Austrian, Hungarian, Polish, or Russian centers. Attempts at establishing a separate Ukrainian immigrant center ended in failure. In 1900–4 the Ruthenian People's Emigration Home provided some aid to

immigrants. Eventually, in 1907, Ukrainian immigrants, together with other nationalities, founded the Slavic Emigration Society. This organization cared for various Slavic immigrants from Austria with the exception of the Poles. A year later the St Raphael Ukrainian Emigration Society was formed in New York through the initiative of M. Pidhoretsky. The society had a free employment service.

The Austro-Hungarian consulates gave little legal and cultural support to Ukrainian immigrants. German, Polish, and Hungarian immigrants had more influence and got more support. Russian consulates and Russian Orthodox parishes showed an interest in Ukrainian immigrants. As more and more immigrants decided to stay permanently in the new countries, their contacts with the consulates of their mother countries became minimal. Most of the immigrants became citizens and participated in the political as well as the economic and social life of their host countries (see *Naturalization).

On the whole, 700,000–800,000 people from Western Ukraine emigrated overseas up to the First World War. About 500,000 were Ukrainians; the rest were Jews and Poles. About 350,000 Ukrainians emigrated to the United States, 100,000 to Canada, and 50,000 to Brazil and Argentina.

Before the First World War seasonal migration from Western Ukraine to Germany (1907–12), involving about 75,000 people annually, and to a lesser extent to Bohemia, Rumania, and Denmark took place. These migrants worked for short periods as farm hands and used their savings to improve their material condition after returning home.

Political emigration after the First World War. The war and the unsuccessful struggle for independence led to the first large-scale political emigration from Ukraine. It consisted mainly of military personnel and functionaries of the Ukrainian National Republic (UNR) and the Western Ukrainian National Republic (ZUNR). In 1920–1 there were about 30,000 émigrés from central Ukraine in Poland. Most of them were soldiers interned in camps. The UNR government-in-exile found temporary residence at Tarnów, Poland. Some of the soldiers of the Ukrainian Galician Army were interned in camps in Czechoslovakia. Other Ukrainian refugees settle in Austria, Germany, Rumania, and Yugoslavia. The total number of refugees in the early postwar years reached 80,000–100,000. With time the number and location of the refugees changed: most of the refugees from Galicia returned home after the Conference of Ambassadors recognized Galicia to be part of Poland and Poland declared an amnesty (1923). A small number of refugees from central Ukraine and Galicia returned to the Ukrainian SSR during the 'Ukrainization' campaign. Many refugees left Poland and Austria to settle in France, Belgium, or the New World. In the main émigré centers – Prague, Warsaw, Berlin, Paris, and Vienna – Ukrainian political and cultural life developed independently of the occupation regimes. The government of Czechoslovakia was particularly hospitable to Ukrainians and supported a number of scholarly and educational institutions.

Ukrainian political émigrés received asylum in the host countries. Unlike other immigrants, they had no right of protection by the diplomatic missions of their home countries. They were subject to the laws and regulations of the countries of residence. The League of Nations

tried to regulate the status of political refugees. Treaties signed in 1922, 1924, and 1928 by most European countries recognized the refugees from Eastern Europe as stateless persons and provided them with Nansen passports (named after F. *Nansen, the high commissioner for refugees at the League of Nations). The 1933 Convention on the International Status of Stateless Persons granted them many of the rights and responsibilities enjoyed by citizens or the most privileged aliens (the right to education, social security, employment, taxation). Most Ukrainians obtained Nansen passports, although the League of Nations did not formally recognize the category of Ukrainian nationality (the convention mentions only Russian and Armenian refugees). Ukrainians were not represented on the High Commission for Refugees at the League of Nations. Emigré organizations, particularly those in France, constantly demanded official recognition for Ukrainian refugees; the Council of the Union of Ukrainian Emigré Organizations in France had semiofficial ties with the League of Nations. In 1928 a Ukrainian representative, O. Shulhyn, was a member of the Consultative Council of the High Commissioner for Refugees. In the 1930s a large number of émigrés, particularly in Czechoslovakia and Poland, became naturalized citizens in their countries of residence.

Economic emigration 1920–39. Between the two world wars emigration for economic reasons from Western Ukrainian territories under Poland, Czechoslovakia, and Rumania continued. Except for a few cases at the beginning of the Soviet period, emigration from the Ukrainian SSR was halted. Most emigrants came from Galicia and western Transcarpathia, which were overpopulated. However, the numbers were much smaller than before the war. The largest emigration from Western Ukraine occurred in 1927–9. In 1931–4 emigration almost ceased because of the Great Depression. The United States, Brazil, and Canada passed new laws restricting immigration. This resulted in a sharp decline in the number of immigrants. In 1921 and 1924 the United States introduced annual quotas for immigrants from various countries; low quotas were set for immigrants from East European countries (eg, in 1930 immigrants from Poland were limited to 6,524 and from Czechoslovakia to 2,874). Canada, too, placed restrictions on Eastern Europeans in favor of Anglo-Saxons or immigrants from Western Europe. A 1923 amendment to the 1910 immigration law required immigrants to be literate and to pay for their own transportation. Canada severely limited the admission of non-agricultural labor. In spite of this over 70,000 Ukrainians entered Canada in 1919–39 (more than from any other country). Ukrainians from Rumania emigrated almost exclusively to Canada. Argentina received the second largest contingent of Ukrainians – 50,000. Up to 15,000 emigrated to the United States and almost 10,000 to Brazil. Several thousand emigrated to Paraguay and Uruguay. Of the European countries, France received the most agricultural and industrial workers from Galicia, and Belgium the most emigrants from Transcarpathia. The largest re-emigration took place from these countries, although a sizable number of Ukrainians remained in France.

Table 1 gives the number of Ukrainians who emigrated from and returned to Poland, Czechoslovakia, and Rumania in 1919–35. Those who emigrated for economic reasons were under the legal protection of the Polish,

TABLE 1
Ukrainian emigration from Poland, Czechoslovakia, and Rumania, 1919–35

Host countries	Emigration	Re-emigration	Balance
European countries	74,000	35,000	39,000
France	59,000	23,000	36,000
New World countries	146,000	15,000	131,000
United States	13,000	2,000	11,000
Argentina	47,000	5,000	42,000
Canada	73,000	6,000	67,000
Brazil	8,000	1,000	7,000
Total	220,000	50,000	170,000

Czechoslovakian, or Rumanian consulates. Their cultural and spiritual needs were seen to by political émigré organizations and the various Ukrainian churches. Ukrainian society tried to influence the process and organization of this non-political emigration. The Relief Society for Ukrainian Emigrants, headed by M. Zaiachivsky, was formed in Lviv mainly to provide emigrants with information through its periodical *Ukrains'kyi emigrant* in 1927–34. In 1923–4 the journal *Emigrant* appeared sporadically. Of the Ukrainian communities abroad, it was Canada's that showed the greatest interest in immigrants. In 1925 the St Raphael Relief Society for Ukrainian Immigrants was founded in Winnipeg and headed by S. Savula. It helped many immigrants with information, legal advice, and material support, particularly in the years of intensive emigration to Canada (1925–30). The society published an almanac, *Preriia* (The Prairie). The Ukrainian Immigration and Colonization Society in Edmonton published the newspaper *Novyi kraj* (The New Land) in 1929.

Political refugees after the Second World War. The war and the subsequent Soviet occupation of all Ukrainian territories and the East European countries where many Ukrainian political émigrés resided led to another wave of emigration. After the war two to three million Ukrainians found themselves in Western Europe, mainly in Germany and Austria. Most of them had been shipped to work there during the war, but there were also forced evacuees, former prisoners of German concentration camps, prisoners of war, members of Germany military units, refugees from Ukraine, or political émigrés of the 1920s. Most of the forcibly deported workers returned home voluntarily or under pressure. The rest, together with the refugees from Ukraine, formed the core of the postwar political emigration. At the beginning of 1946 there were about 220,000 emigrants in West Germany (178,000), Austria (29,000), and Italy (12,000). All of them refused to return to the Ukrainian SSR. By demonstrating that they would be subject to religious, national, or political persecution in their homeland, they received asylum and then the opportunity to emigrate to various Western countries. Soviet missions conducted a propaganda campaign in favor of repatriation in these and other countries. They met with partial success in France, Belgium, and Argentina (7,000–10,000 returned). (The population exchange between Poland and the Ukrainian SSR and between Czechoslovakia and the Ukrainian SSR that resulted from boundary changes does not come under emigration and is treated separately; see *Repatriation, *Poland, and *Czechoslovakia.)

At first most of the Ukrainian and other émigrés from Eastern Europe were recognized as *displaced persons. Eventually all political émigrés obtained refugee status. For some time governments called them stateless persons, but the term was not used generally. Usually refugees were registered by country of origin. By identifying nationality with citizenship, the agencies of the Allies and the international administration of refugees often confused Ukrainian refugees with Poles, Russians, or Czechoslovaks. For this reason Ukrainian citizenship and Ukrainian relief organizations were not recognized in the British occupation zone. At the same time, the Soviet Union claimed that all Ukrainian emigrants were Soviet citizens and has demanded since 1945 that they be repatriated. The legal position of the postwar emigrants was defined by the occupation authorities, and since 1947 has been determined by the international agencies of the United Nations. As the Allied occupation powers withdrew, those with alien status came under the regulation of the West German and Austrian governments. Material aid was provided by the United Nations Relief and Rehabilitation Administration (UNRRA, 1943–7) and the International Refugee Organization (IRO, 1947–52). The IRO also provided legal aid and helped the refugees to resettle. UNRRA and then the IRO administered a network of displaced persons camps.

In 1947 the permanent resettlement of refugees began. The Ukrainian refugees attempted to organize themselves and to draw up their own plan of emigration, but failed. In 1947–8 the Central Resettlement Commission existed in Munich; its work was limited to providing refugees with information. Belgium and Britain were the first to admit refugees for work in industry, mining, and agriculture. Eventually, refugees began emigrating overseas to the United States, Canada, Brazil, Argentina, Venezuela, Australia, and elsewhere. Some countries adopted special laws or resolutions on the admission of refugees. A. Hlynka's and F. Zaplitny's interventions as members of the Canadian parliament on behalf of the Ukrainian refugees had some influence on Canada's immigration policy. By 1 August 1948, 33,000 Ukrainians had emigrated from Germany: 14,000 to Britain, 9,000 to Belgium, 5,000 to Canada, and 1,000 each to the United States and France. In 1949–50 large-scale emigration overseas took place after the United States adopted special provisions for the refugees: the 1948 Displaced Persons Act allowed 220,000 people from Germany, Austria, and Italy to enter the country outside of the immigration quotas. In 1950 this number was increased to 415,000, and in 1953 the Refugee Relief Act admitted another 205,000 refugees. Resettlement became the basic task of the IRO. Various countries, mainly the United States, established a fund to cover the costs of resettlement. Ukrainians in large numbers took advantage of the new opportunities. The *Ukrainian Canadian Relief Fund, the *United Ukrainian American Relief Committee, and the *Ukrainian Catholic Relief Committee had representatives in Germany, Austria, France, Belgium, and Britain and did much to help Ukrainians emigrate.

In 1948 the Ukrainian Resettlement Center was established in New York with M. Demydchuk at the head. Some Ukrainians emigrated with the help of non-Ukrainian organizations such as the World Council of Churches and the Tolstoy Fund.

By 1957 the emigration of Ukrainians from Europe had

halted almost completely, although small numbers continued to emigrate to the United States or Canada on their own initiative. In the span of 10 years the number of Ukrainians in Germany and Austria had declined to 22,000–25,000. Those remaining were either denied entry to overseas countries because of old age, illness, or some other reason, or had found jobs in Europe, or simply did not want to emigrate. Those who were not naturalized citizens remain under United Nations protection and specifically under the legal and material care of the United Nations high commissioner, who has representatives in various European countries.

The legal status of the political refugees in European countries was defined by the Geneva Convention of 28 July 1951. They have many of the same rights and responsibilities as the citizens of the countries in which they live or of the most privileged aliens (employment, social security, taxation, etc). Special travel documents permit them to travel to all countries except the USSR. The large majority of Ukrainian immigrants has entered the economic mainstream of the host countries.

The approximate number of Ukrainians who emigrated from Germany and Austria to various countries in 1947–57 is as follows:

United States	80,000
Canada	30,000
Australia and New Zealand	20,000
Great Britain	20,000
Belgium	10,000
France	10,000
Brazil	7,000
Argentina	6,000
Venezuela	2,000
Other countries	2,000

Many immigrants who settled in Britain, France, or Belgium in 1950–7 emigrated again to the United States and Canada. Similarly, a small number of postwar emigrants to South America and Australia resettled in North America at the end of the 1950s.

In the late 1960s and the 1970s a small number of Ukrainians emigrated on their own to Western Europe

and North America from Poland, Yugoslavia and, after 1968, Czechoslovakia. By 1980, their number may have reached 2,000–2,500. A smaller number of Ukrainians has been allowed to leave the USSR in the 1970s as individuals along with the large numbers of Jewish emigrants. Of Soviet Ukrainian Jews, 100,000–130,000 have emigrated to Israel or the West, but only a few have become involved in the cultural life of the Ukrainian diaspora.

Table 2 gives the total number of Ukrainians who emigrated to Western Europe, excluding Germany and Austria, and overseas between 1870 and 1957 (subtracting those who returned). For comparison, the approximate number of Ukrainians and descendants of Ukrainians living in the various countries in 1980 is also given.

The phenomenon of economic and political emigration is reflected in Ukrainian literature. I. Franko included a cycle 'Do Brazylii' (To Brazil) in his poetry collection *Mii izmarahd* (My Emerald). V. Stefanyk treated the theme of migrant labor and emigration to the New World in his collection of short stories 'Synia knyzhchekha' (Little Blue Book) and the story 'Kaminnyi khrest' (The Stone Cross). The theme of economic emigration is treated in the works of M. Cheremshyna, A. Teslenko, S. Vasylychenko (in his novel *Na chuzhynu* [To a Foreign Land]), and others. In his Russian stories, V. Korolenko depicts the life of Ukrainian immigrants in Siberia and in the United States. Immigrant writers, particularly in the United States and Canada, have provided images of the immigrants in their poems, plays, and prose. Among them are Yu. Chupka, N. Dmytriv, S. Makar (in his play *Amerykans'kyi shliaktych* [The American Noble]) and Z. Bychynsky (in his short novel *Emigranty* [Emigrants]) in the United States; T. Fedyk (in his poetry collection *Pisni pro staryi kraj i Kanadu* [Songs of the Old Country and Canada]), H. Ewach (in his novella *Holos zemli* [Voice of the Land]), and I. Kyriak (in his novel *Syni zemli* [Sons of the Soil]) in Canada. V. Pavliuk (*Canadian Cossacks*) and V. Lysenko (*Men in Sheepskin Coats*) wrote in English. The accounts of immigrants in Canada and Brazil by P. Karmansky are well known. Of the modern émigré writers, U. Samchuk, O. Liaturynska, T. Kurpita, Dima, E. Andiiivska, and O. Izarsky deal with the subject of emigration in their

TABLE 2
Ukrainian emigrants, 1870–1957

Host country	1870–1914	1919–39	1946–57	Number of Ukrainians (1980)
United States	350,000	15,000	80,000	1,200,000–1,500,000
Canada	100,000	70,000	30,000	750,000
Argentina	10,000	50,000	6,000	130,000
Brazil	45,000	10,000	7,000	130,000
France	–	40,000*	10,000*	30,000–35,000
Britain	–	500	35,000*	25,000–30,000
Australia and New Zealand	–	–	20,000	35,000–40,000
West Germany	–	–	–	20,000
Austria	–	–	–	4,000–5,000
Belgium	–	1,000	10,000*	3,000
Paraguay	–	5,000(?)	1,000	8,000
Uruguay	–	4,000(?)	–	6,000
Venezuela	–	–	2,000	2,000
Other	1,000	1,000(?)	1,000(?)	3,000(?)
Total	506,000	196,500	202,000	1,196,000–2,512,000

*Many of them emigrated in the 1950s to the United States and Canada.

Ukrainian works. Canadian-born artist W. Kurelek immortalized the experience of Ukrainian-Canadian pioneers in his paintings.

Empire style. A late version of *classicism that originated in the Napoleonic period. From France the style

spread throughout Europe in the first half of the 19th century and was particularly influential in architecture and in the applied arts and crafts such as furniture making. In Ukraine the style assumed some peculiar features, as revealed primarily in provincial buildings such as Prince V. Kochubei's palace in Dykanka in Poltava gubernia. The important architects of the period were V. *Yaroslavsky, who worked in Kharkiv and the Kherson region, and A. *Melensky, who built in Kiev the contract fair building, the theater, and the monument to municipal self-government (in the form of a classical column, 1802) and developed the Podil district of Kiev after the fire of 1811. The largest number of churches in the Empire style has been preserved in the Kharkiv region (for example, the belfry of the Cathedral of the Dormition of the Virgin Mary in Kharkiv, built in 1824-33) and churches in the Poltava region (in Khorol, Romeni, Lubni, Pyriatyn, and Pryluka). In urban architecture, mostly city halls were built in the Empire style; for example, the city halls in Kharkiv, Poltava, Kiev, Lviv, Chernivtsi, and Kamianets-Podilskyi.

Ems Ukase. A secret decree issued on 30 May 1876 by the Russian tsar Alexander II in the town of Ems, Germany, aimed at stopping the printing and distribution of Ukrainian-language publications within the Russian Empire. It represented a continuation of the repressive anti-Ukrainian policy introduced by the circular of the Russian minister of internal affairs, P. *Valuev, of 20 June 1863. The Ems Ukase prohibited the printing in the Ukrainian language of any original works or translations. Historical documents could be printed in the original orthography, but belles-lettres could appear only in Russian orthography. It also forbade the importation from abroad of Ukrainian-language publications, the staging of plays and public readings in Ukrainian, and the printing of Ukrainian lyrics to musical works. All manuscripts permissible under the new act were subject to approval by the censors before publication. Known also as the Yuzefovich Ukase (after its author, M. Yuzefovich, deputy curator of the Kiev school district), it summed up the work of a commission set up in 1875 to inquire into 'Ukrainophile propaganda in the southern gubernias of Russia.' Normal legislative channels were circumvented, and the Ems Ukase was never examined by the State Council or the Council of Ministers, nor was it ever formally revoked, despite pressure from Ukrainian and progressive Russian circles. It dealt a crushing blow to Ukrainian culture and coincided with the closing down of the *Southwestern Branch of the Imperial Russian Geographic Society and the newspaper **Kievskii telegraf* (unofficial organ of the Kiev Hromada), and the expulsion of a number of professors from Kiev University (M. Drahomanov, M. Ziber, and others). As a result of the decree not one Ukrainian book appeared in print in 1877. In 1878 at the International Literary Congress in Paris, M. Drahomanov severely condemned the Ems Ukase and defended the Ukrainian language in his brochure *La littérature ukrainienne, proscrite par le gouvernement russe. Rapport présenté au Congrès littéraire de Paris* (Geneva 1878).

Enamel. A thin layer of colored glaze fused by heat to a metallic or ceramic surface. The term is also applied to the technique and to the object decorated in this way. Colored ceramic glazes are also called enamel. There are three basic methods of enameling: (1) *champlevé* enameling, which consists of applying the enamel to carved or gouged troughs in metal; (2) *cloisonné* enameling, which consists of filling a raised outline made of thin, soldered strips or flattened wires with enamel; and (3) Limoges enameling, known in Kiev as *finifti*, which involves painting with enamel paints of different colors or whitener on a metallic surface. The art of enameling is one of the oldest techniques used in making jewelry.

In Ukraine the earliest enamels were *champlevé*. Such enamels have been found in southern Ukraine and northern Caucasia on bronze objects, such as weapons, harnesses, pottery, and jewelry, made in the 1st millennium BC. In the 6th–5th century BC such articles were made in the Greek and then Roman colonies of the Black Sea coast and the Bosporan Kingdom. From there the art spread to the Dnieper region. In the 3rd–5th century AD the tribes of the middle Dnieper River did their own *champlevé* ornaments on bronze articles such as spurs, clasps, and bracelets.

In the second half of the 10th century *champlevé* enameling was replaced by *cloisonné* enameling, which was introduced from Byzantium. The new technique reached its peak of development in the 11th–13th century. Kiev was the main center for the production of enameled gold, silver, and bronze articles. Many archeological excavations in different regions of Ukraine, but particularly in Kiev, have uncovered workshops, gold hoards, and a rich assortment of women's jewelry decorated in *cloisonné* enamel. Among this jewelry are such masterpieces as an enameled gold necklace consisting of 17 medallions from the 11th–12th century; gold earrings of the 11th–12th century with fantastic enameled birds with women's heads, the tree of life, female heads, doves, and other motifs; two gold diadems with Christian saints – one consisting of seven leaves from the 11th–12th century and the other consisting of nine leaves from the 12th century (both now in the Hermitage in Leningrad); and a gold pendant from the 13th century of 10 medallions, depicting the saints. In this period the jewelers in the Galician-Volhynian state decorated silver articles with *cloisonné* enamel and *chern glaze*. On the articles made in the Dnieper region the enameled picture contrasted with the golden background, while Galician products were decorated with an intricate geometrical and plant design which covered the object like a carpet. The enameled jewelry made in Kiev was exported to Poland, Hungary, Germany, Scandinavia, and other countries and was famous as the specialty of the Rus' masters. The enamels of Kievan Rus' differed from Byzantine enamels in their harmony of colors, which contrasted with the gold, and in the use of white. In stylistic quality these *cloisonné* enamels were close to Byzantine mosaics and book miniatures.

The art of enameling declined in Ukraine with the Tatar invasions in the mid-13th century. It was revived in the

Enamels: 1) medallion from a 12th-century necklace (Kiev State Museum); 2) section of a 12th-century gold diadem (Kiev State Museum); 3) 12th-century gold pendants (Kiev State Museum)

14th–16th century, mainly in Western Ukraine – in Lviv, Kamianets-Podilskyi and elsewhere – and eventually in the Kiev and the Chernihiv regions. In the 17th–18th century, during the Cossack period, new centers of jewelry making arose in Left-Bank Ukraine, but Kiev remained the leading center. Jewelry articles of the period are remarkable for their variety of decorative techniques. Jewelers who did *cloisonné* enameling often used a thin, twisted wire (*skan*) for the divisions, and this created a rich ornament when filled with enamel. *Champlevé* enameling and a closely related technique of enameling over a carved picture were used also. From the 17th century Limoges (*finifti*) enamel became widespread in Ukraine. It was widely used in conjunction with other techniques, particularly with carving and gilding, in making church decorations such as medallions for chalices, miters, book bindings, episcopal pendants, and iconostases. Limoges enameling was used mainly for the miniatures of saints and for small portraits. Some Ukrai-

nian jewelers of the 18th century (eg, I. Ravych, I. Biletsky, Ya. Zynoviev, K. Chyzhevsky) used a flux that was different from enamel and known as *chern* (silver, copper, and lead). The Ukrainian Limoges were noted for their strong colors: various tones of red, azure, maroon, green, and orange predominated. The renaissance of enameling was connected with the Ukrainian baroque period. From the 17th century Ukrainian master enamelers worked in Russia and made an important contribution to the development of the art there.

In the 19th century the art of enameling declined in Ukraine. In the 20th century, however, some artists have used enamel as an artistic technique. The first experiments were made by O. Kulchytska in Vienna and Peremyshl and M. Butovych in Lviv at the beginning of the century. In the 1950s Yu. Kulchytsky in Paris and K. Shonk-Rusych in New York did enamels. Ya. Muzyka in Lviv and, particularly, M. Dolnytska in Vienna worked in enamel for a long time. In the Ukrainian SSR the art of enameling has almost disappeared. Only the technique of enameling is used, for the protection of metals against corrosion.

In the Kievan and Galician-Volhynian periods enamel was used not only by jewelers, but also by ceramics masters. Glazed decorative tiles for palace and church floors or walls were enameled with stylized flowers, garlands, and ornaments in yellow, white, green, and blue colors (eg, in the 12th century church and palace in Bilhorod). Colored enamel was used also on high-quality dishes. Galician ceramicists introduced enamel relief into ceramics and depicted warriors, griffins, animals, birds, and plants, usually in two colors (a bright-yellow silhouette on a dark-red background). In the 17th–18th century, when ceramics reached its peak of development, ceramic articles were decorated with opaque, colored enamel. (See also *Ceramics, *Majolica, and *Porcelain and ceramics industry.)

Encyclopedias of Ukraine. The first thematic encyclopedia of Ukraine was published in Petrograd in 1914–16 under the title *Ukrainskii narod v ego proshlom i nastoiashchem* (The Ukrainian People: Its Past and Present). Its editors were F. Volkov (Vovk), M. Hrushevsky, F. Korsh, A. Krymsky, M. Tuhan-Baranovsky, and A. Shakhmatov. Because of the war only two volumes appeared. They contained a survey of Ukrainian studies; Hrushevsky's outline of the history of Ukraine; Vovk's contribution on the anthropology and ethnography of Ukraine; S. Rudnytsky's article on Ukraine's geography; demographic statistics by O. Rusov, V. Okhrymovych, and S. Tomashivsky; and P. Yefymenko's study of customary law.

The first reference work on Ukraine in Ukrainian was a survey entitled 'Ukraina' in the third volume of *Ukrains'ka zahal'na entsyklopediia* (The Ukrainian General Encyclopedia, 1935). There for the first time almost all areas of knowledge about Ukraine and the Ukrainians were

covered in articles by 79 authors (in 320 pages). The editor was V. Simovych.

In 1942 the Ukrainian Scientific Institute in Berlin prepared a reference handbook in German, *Handbuch der Ukraine*, under the editorship of I. Mirchuk, which was published in Leipzig by O. Harrassowitz. It contained articles by seven authors, among them a long article on the national economy of Ukraine by R. Dymynsky. In 1949 the handbook appeared in a shortened English translation entitled *Ukraine and Its People* (Munich).

The Shevchenko Scientific Society, which was revived in Germany after the Second World War, published, in 1949–52, three volumes of the general *Entsyklopediia ukrainoznavstva* (Encyclopedia of Ukraine) under the editorship of V. Kubijovych and Z. Kuzelia. This thematic encyclopedia was the most comprehensive reference work on Ukraine and for the first time covered all the areas of Ukrainian studies. One hundred and four scholars participated in its preparation. In 1963 and 1971 an updated and expanded English version of this encyclopedia appeared in Toronto in two volumes under the title *Ukraine: A Concise Encyclopaedia*. Its publication was funded by the Ukrainian National Association in the United States.

The 17th volume of *Ukrains'ka radians'ka entsyklopediia* (The Ukrainian Soviet Encyclopedia, *URE*) can be considered as a general encyclopedia of Ukrainian studies. It was published in Kiev in 1965 and then separately in Russian in 1967 and in one volume in English in 1969 (entitled *Soviet Ukraine*). In contrast to *Entsyklopediia ukrainoznavstva* published in the West, the material in *URE* is severely limited by the restrictions of Soviet ideology and policy.

In 1970 a Polish encyclopedic handbook, *Ukraina, terażniejszość i przeszłość* (Ukraine: Its Present and Past) appeared under the editorship of M. Karaś and A. Podraza as volume 32 of *Prace historyczne* of the Jagellonian University in Cracow. Its 14 authors discuss almost all areas of Ukrainian studies, particularly archeology and history, fairly objectively, without going beyond what is politically permissible.

Ukrainian general alphabetic encyclopedias. The first general alphabetic encyclopedia in Ukrainian was *Ukrains'ka zahal'na entsyklopediia* in three volumes (Lviv-Stanyslaviv-Kolomyia 1930–5) by the co-operative publishers Ridna Shkola. Its main editor was I. Rakovsky; the other editors were V. Simovych, V. Doroshenko, and M. Rudnytsky. One hundred and thirty-eight scholars in Western Ukraine and abroad contributed to this work. The general information contained in it was based on the famous German *Brockhaus Konversationslexikon*, but the information pertaining to Ukraine was original.

The first attempt to publish a large, 20-volume *Ukrains'ka radians'ka entsyklopediia* proved unsuccessful. Work on this project began in the early 1930s in Kharkiv. The editor-in-chief was M. Skrypnyk, and M. Bazhan was associate editor. The first volume was ready for printing at the beginning of 1933, and two fascicles were published; however, the wave of arrests that began in 1933 put an end to the project. In November 1934 the *URE* publishers were abolished. Only in 1957 did the Academy of Sciences of the Ukrainian SSR in Kiev undertake again the publishing of *Ukrains'ka radians'ka entsyklopediia*. A board of editors was set up, chaired by M. Bazhan. The encyclopedia appeared in 17 volumes between 1959 and

1965 in Kiev. (A name and subject index came out separately in 1968.) In 1966–8 the publishers issued a shorter *Ukraïns'kyi radians'kyi entsyklopedychnyi slovnyk* (Ukrainian Soviet Encyclopedic Dictionary) in three volumes. In 1977 the second edition of *URE* began to appear. By 1983 ten volumes had been published.

In 1961–6 the Radianska Shkola educational publishers published *Dytiacha entsyklopediia dlia seredn'oho i starshoho viku* (Encyclopedia for Older Children and Youth) in 10 volumes, an unrevised translation of the thematic Russian encyclopedia. Because it is oriented towards the Russian culture, it is a convenient instrument for Russifying Ukrainian children.

The only Western alphabetical encyclopedia that provides information in Ukrainian about Ukraine in short articles is the second part of *Entsyklopediia ukraïnoznavstva*, which has been prepared at the European center of the Shevchenko Scientific Society in Sarcelles, France. Its editor in chief is V. Kubijovyč. Nine of the projected ten volumes were published in 1955–83. Other 'national encyclopedias' of a similar kind dealing with Eastern Europe are *Enciklopedija Jugoslavije* (8 vols, Zagreb 1955) and *Encyclopedia Lituanica* (6 vols, Boston 1970–8).

Work on a revised, English version of the alphabetic *Entsyklopediia ukraïnoznavstva* began at the University of Toronto in 1977. Entitled the *Encyclopedia of Ukraine*, it is a joint project of the Shevchenko Scientific Society, the Canadian Institute of Ukrainian Studies, and the Canadian Foundation for Ukrainian Studies.

In 1957–67 Ye. Onatsky published in Buenos Aires his *Ukraïns'ka mala entsyklopediia* (The Ukrainian Small Encyclopedia) in three volumes. Being the effort of a single individual, it is very uneven: important data are missing, while secondary details are included, and there are many methodological shortcomings.

Specialized Ukrainian encyclopedias and dictionaries. Preparation of specialized encyclopedias began in Western Ukraine in the 1930s. In 1939 the first fascicle of the *Ukraïns'ka sil's'ko-hospodars'ka entsyklopediia* (Ukrainian Agricultural Encyclopedia) was published by the Ukrainian Publishing Institute in Lviv. The editor was Ye. Khraplyvy. Publication was interrupted by the Second World War.

In the Ukrainian SSR the first specialized encyclopedia was also an agricultural one – *Kolhospna vyrobnycha entsyklopediia* (Encyclopedia of Collective Farm Production) – in two volumes, edited by M. Spivak (Kiev 1950–6). The Polityvdav political literature publishers in Kiev published a translation of V. Ponomarev's Russian *Politicheskii slovar'* (Political Dictionary; 2nd edn, 1959). In the 1960s the editors of the *URE* began publishing encyclopedias in various areas of Ukrainian studies. *Radians'ka entsyklopediia istorii Ukraïny* (The Soviet Encyclopedia of the History of Ukraine) was published in four volumes in 1969–72 (chief editor: A. Skaba). At the same time *Entsyklopediia narodnoho hospodarstva Ukraïns'koi RSR* (The Encyclopedia of the National Economy of the Ukrainian SSR) was published in four volumes under the editorship of S. Yampolsky. Although both are mines of information, the information is often tendentiously presented. In 1973 *Slovnyk khudozhnykiv Ukraïny* (Dictionary of Ukraine's Artists) was published and, in 1978, *Shevchenkivs'kyi slovnyk* (The Shevchenko Dictionary) in two volumes. In 1964 the Radianska Shkola publishers issued A. Buhaiev's *Korotkyi tлумachnyi matematychnyi slovnyk* (A

Short Explanatory Mathematical Dictionary). The *URE* publishing house published several specialized encyclopedias: V. Peresypkin's *Ukraïns'ka sil's'kohospodars'ka entsyklopediia* (Ukrainian Agricultural Encyclopedia, 3 vols, 1970–2); *Politychnyi slovnyk* (Political Dictionary, 1971, 2nd edn 1976); *Entsyklopediia kibernetiky* (Encyclopedia of Cybernetics, 2 vols, 1973), edited by V. Hlushkov – the first work of its kind in the USSR and one of the first in the world; *Ekonomichnyi slovnyk* (Economic Dictionary, 1973); *Filosofs'kyi slovnyk* (Philosophical Dictionary, 1973); *Iurydychnyi slovnyk* (Juridical Dictionary, 1974); and *Bioloichnyi slovnyk* (Biological Dictionary, 1974). In 1972 V. Zvorych's *Numizmatychnyi slovnyk* (Numismatic Dictionary) was published by the University of Lviv. Other Soviet publishers issued biographical and bibliographical handbooks of Ukrainian writers (1960–5 and 1966), Ukrainian composers (1968), the academic staff of higher institutions (1968), and artists (1972). The materials were usually limited chronologically and territorially to the Ukrainian SSR. The first book of this type in the Ukrainian SSR was *Materiialy do slovnyka ukraïns'kykh graveriv* (Materials for a Dictionary of Ukrainian Engravers, Kiev 1926–7).

Two volumes of B. Romanenchuk's *Azbukovnyk: Entsyklopediia ukraïns'koi literatury* (Alphabetarion: Encyclopedia of Ukrainian Literature, Philadelphia 1969, 1973) and one volume of O. Zaliessky's *Mala ukraïns'ka muzychna entsyklopediia* (The Small Ukrainian Encyclopedia of Music, Munich 1971) have been published in the diaspora.

Closely related to specialized encyclopedias are dictionaries of terms in various disciplines (literature, linguistics, journalism, polygraphy, music, geology, etc), which have been published in the Ukrainian SSR since 1957, and biographical dictionaries, which have little to do with Ukrainian studies and have been published there since 1969 (biographies of Soviet historians, botanists, mathematicians of various nationalities, etc). (See also Lexicography.)

Eneolithic period. Transitional period between the Neolithic and Bronze ages, during which the earliest metallic (copper) artifacts appeared; hence, it is also known as the Copper Age (2500–2000 BC).

Engel, Johann-Christian, b 17 October 1770 in Levoča, Slovakia, d 20 March 1814 in Vienna. An Austrian historian, among whose works on Ukrainian history are *Geschichte von Halitsch und Wladimir bis 1772* (1792–3) and *Geschichte der Ukraine und der ukrainischen Kosaken* (1796). The latter work is one of the first substantial contributions to scholarly studies on the history of Ukraine and is based on important historical documents. B. Krupnytsky's study on Engel was published in *Abhandlungen des Ukrainischen Wissenschaftlichen Instituts*, 3 (Berlin 1931).

Engels [Engel's]. City (1977 pop 163,000) on the left bank of the Volga River and a raion center in Saratov oblast,

RSFSR. In 1914–31 the city was known as Pokrovsk. In 1924–41 it was the capital of the Volga German ASSR. The raion is inhabited by many Ukrainians. In 1926 there were 11,500 Ukrainians among the city's 34,300 inhabitants and 17,000 Ukrainians among the raion's 21,500 inhabitants.

England. See Great Britain.

Entente or Allied Powers. An alliance of states, consisting of the United Kingdom, France, Russia, Italy, Portugal, and Japan, and the associated powers of the United States (from 1917), China, and thirteen other states (mostly in Eastern Europe and Latin America), that, during the First World War, opposed the Central Powers of Germany, Austria-Hungary, Turkey, and Bulgaria. The alliance began with the Anglo-French Entente Cordiale of 1904. Until the Revolution of 1917 the Entente powers ignored Ukrainian affairs. In the summer of 1917, after the proclamation of the First *Universal by the Central Rada, the French embassy in Petrograd sent the journalist J. Pélissier to Kiev for information about the situation in Ukraine. After the Bolshevik Revolution of November 1917 and initial attempts by the Soviet government to establish contacts with the Central Powers, a French military mission, under General G. Tabouis, arrived in Kiev. On 3 January 1918 he officially informed the Secretariat of External Affairs of the Ukrainian National Republic of his appointment as commissioner of the French Republic assigned to the Ukrainian government; on 4 January he was received by the head of the General Secretariat, V. Vynnychenko. Then J.P. Bagge presented himself as the official representative of the British government. In their negotiations with the Ukrainian government both representatives aimed at receiving a guarantee that the Ukrainian government would not sign a separate peace with the Central Powers and would continue the war on the southern and western fronts (although the Bolshevik Council of People's Commissars had already begun negotiations on behalf of Ukraine as well as itself). In return, the Allies promised financial and technological aid. The circumstances, however, forced the Ukrainian government to negotiate with the Central Powers, and on 9 February 1918 it signed the Peace Treaty of *Brest-Litovsk. This, of course, ended the relationship with the Allied representatives, and they left Kiev before the entry of the German and Ukrainian armies.

During the following months the governments of the Entente states treated the Ukrainian government as an enemy power. After the defeat of the Central Powers in November 1918 the Allies began organizing anti-Bolshevik forces, but opposed the independence of Ukraine and relied on Generals A. Denikin and A. Kolchak. The signing of the declaration of a 'federal union' with Russia (14 November 1918) by Hetman P. Skoropadsky, with the aim of coming to an understanding with the Allies, brought about an insurrection in Ukraine and the coming to power of the Directory of the UNR. At this time the Allies completely supported the Russian Volunteer Army, which was aiming to re-establish 'one, indivisible Russia' and which saw the position of the Ukrainian government as 'Bolshevik.' In December 1918 French and Greek troops under General Boriuis disembarked and occupied Odessa, and in January 1919 General d'Anselme extended the occupation to 60 km around the city. Negotiations in February between the command of the Allied

troops and the UNR government (Premier S. Ostapenko) were not successful, because d'Anselme, not recognizing an independent Ukraine, demanded that the Ukrainian army become a part of the general Russian anti-Bolshevik front. Under pressure from the Red forces and Otaman M. Hryhoriiv, and particularly because of the threat of an uprising in the French fleet, Allied troops abandoned the southern Ukrainian territories at the beginning of April 1919.

In January 1919 governments of both the UNR and the Western Ukrainian National Republic (ZUNR) established contact with Entente diplomats and sent a joint delegation to the Versailles Peace Conference. In July the ZUNR formed a separate delegation, whose members participated in the joint delegation; in November the ZUNR members withdrew from the joint delegation. The Ukrainian delegation was confronted constantly with the Russophile and Polonophile attitude of the leading diplomats of the Entente (W. Wilson, D. Lloyd-George, Y. Clemenceau, V. Orlando), before whom hostile propaganda continuously represented the Ukrainian army as 'Bolsheviks.' In February 1919, after the appearance of the Polish delegate R. Dmowski, who demanded all of eastern Galicia for Poland, the Entente sent a mission to Warsaw, headed by J. Noulens. He called on the Entente to send Polish divisions to Galicia and himself sent a mission of Entente delegates headed by General J. Berthélemy to the ZUNR government to discuss an armistice with the Poles. On 28 February the mission proposed that war activities cease immediately and that Ukrainian armies be withdrawn to a line that would give Poland one-third of eastern Galicia, including the Drohobych oil fields (see *Berthélemy Mission). The proposition was not accepted. After requests to the Allies by the head of the Western UNR government, S. Holubovych, and the head of its delegation, V. Paneiko, and an appeal of the Supreme Council on 19 March 1919, a commission for peace negotiations headed by the South African general L. *Botha began work in Paris. The recommendations of General Botha's commission were accepted by the Ukrainian side, but the Polish side sent against the Ukrainian army the forces, under General J. Haller, that had been sent against the Bolsheviks. The Poles continued their successful attack in spite of the efforts of the Supreme Council on 21–22 April and 26 June. The Supreme Council authorized the leaders of the Polish Republic to continue the advance to the river Zbruch, at the same time guaranteeing the freedom of the population of the Galician territories by offering them the right of self-determination.

In August 1919 W. Churchill and G. Clemenceau made attempts to bend General Denikin to an agreement with the UNR government, but they were not successful. The tension between the armies of the UNR and Denikin's forces, both of which were fighting the Red Army, led to an open war, in spite of the involvement of the American military attaché in Warsaw, who came to Kiev on 19 September 1919.

After the defeat of the Ukrainian armies in 1919–20, disregarding the actions of the ZUNR government in exile, especially its protest against the Riga Peace Treaty of 1921 before the presidium of the peace conference, and the recommendations of the Council of the League of Nations in 1921, the *Conference of Ambassadors of the Allied Powers passed a resolution on 14 March 1923 giving

Poland sovereignty over Galicia on the condition of its autonomy – a condition never fulfilled by Poland.

Entomology. The scientific study of insects. The origins of entomology in Ukraine can be traced to the 18th century (eg, the writings of P. *Pallas). In the first half of the 19th century a number of works on the insects of Ukraine appeared: C. Steven's work on the insects of the Crimea, W. Besser's work on the insects of Volhynia and the environs of Kiev, O. Chernai's work on the insects of the Kharkiv region, G. Belke's study of the insects of Kamianets Podilskyi, and M. Novytsky's study of the insects of Galicia. More intensive research was conducted at the end of the century by K. Kessler, F. Keppen, V. Yaroshevsky, Ye. Rekal, H. Wildheim, and in Galicia by I. Verkhratsky, M. Komnicki, and others. At the turn of the century entomological studies were conducted by the universities, scientific research institutes, the faculty of agronomy at the Kiev Polytechnical Institute, agricultural research stations, and zemstvo institutions that employed regional zemstvo entomologists. In this period Ukraine, particularly Kiev, became the center of entomology for the entire Russian Empire. It hosted entomological conferences and was home to the Society of Applied Entomology and the journals *Entomologicheskii vestnik* and *Zhurnal prikladnoi entomologii*. Special research was conducted on those groups of insects that were most widespread and harmful by the scientists O. Mokshytsky, M. Bobretsky, O. Korotnev, V. Pospelov, J. Paczowski, V. Karavaiev, M. Kurdiunov, and others.

After the Ukrainian Academy of Sciences was founded in 1918, its entomological department developed a broad program of research on the distribution of certain insect groups: spiders, beetles, dragonflies, and Orthoptera. These groups were studied by I. Bilanovsky, V. Sovynsky, L. Krulykovsky (who presided over the Kiev Entomological Society), Ye. Savchenko, S. Paramoniv, Ye. Zvirozomb-Zubovsky, M. Telenha, and others. V. Khranevych and D. Bohatsky studied the butterflies and moths of Podilia in Kamianets Podilskyi. S. Medvedev, H. Boshko, and others conducted research on beetles at Kharkiv University. P. Egorov (who concentrated on the genus *Phylloxera*), I. Lopatin, N. Andriievska, and others worked in Odessa. The entomofauna of Western Ukraine was studied by V. Lazorko, Ya. Lomnytsky, R. Kuntse, Ya. Noskevych, and E. Zharsky. I. Klodnytsky, J.

Hirschler, M. Voskresensky, and others have done studies of the cytology, histology, and embryology of insects. Since 1960 some findings of entomological research have been published in the series *Fauna Ukrainy*, most of the volumes of which deal with insects.

Considerable research is being done in agricultural entomology. Field and garden pests are being studied by A. Znamensky, H. Bei-Biienko, O. Kyrychenko, O. Kryshtal, V. Mamontova-Soluka, and S. Petrukha. Beet pests are the specialization of Ye. Zvirozomb-Zubovsky, M. Ulashkevych, O. Zhytkevych, B. Bielsky, and D. Ohloblina. Forest pests are being investigated by Z. Holovianko, V. Parkhomenko, V. Husiev, A. Illinsky, V. Lozynsky, I. Zahaikevych, D. Rudnev, and K. Shmyhovsky. A. Znamensky, M. Hiliarov, and O. Kryshtal are studying the entomofauna of the soil and the role of insects in soil formation. In the field of medical and veterinary entomology, insect parasites and carriers of infectious human and animal diseases are being studied by H. Boshko (Tabanidae [horse flies]), V. Yurkina (Siphonaptera [fleas]), H. Pyrianyk-Shchebrak (Acarina [ticks and mites]), I. Fedorenko, N. Ovander, I. Akimov, O. Prendel, L. Reinhard (malaria mosquito), and others.

Entomological research in Ukraine is conducted by the Institute of Zoology of the Academy of Sciences of the Ukrainian SSR, the universities, the Academy of Agricultural Sciences, the Ukrainian Scientific Research Institute of Plant Protection, the All-Union Scientific Research Institute of Corn in Dnipropetrovske, and a number of other institutions.

Environmental protection. A system of measures aimed at the conservation, rational utilization, and, where possible, renewal of natural resources, both living (flora and fauna) and non-living (picturesque landscapes, natural and cultural landmarks, as well as fossil fuels and minerals). These measures have also come to include the control and elimination of environmental pollution (air, water, soil) and the maintenance of balanced ecosystems. Special areas set aside and protected for their natural (or historical-cultural) value are known as *nature reserves, game preserves, wildlife refuges and sanctuaries, natural parks, landmarks, historical sites, and so on.

During the Princely and Hetman periods in Ukraine, efforts to conserve forests and wildlife were, at best, sporadic. Protective *forest legislation introduced in the late 19th century was largely inadequate, especially in those Ukrainian territories incorporated into the Russian Empire (see also *Forest management). In 1883 the first nature reserve, *Askaniia-Nova, was established in the Kherson gubernia steppes through private initiative. Other areas under strict protection were the tsar's forest

hunting preserves in the Crimean Mountains and the *Bilovezha Forest. The first environmental protection society in Ukraine (and the Russian Empire) was organized in 1910 on Khortytsia Island in the Dnieper River at the initiative of P. Buzuk. In 1913-14 the Friends of Nature Society in Kharkiv, headed by V. Taliev, organized the first conservation exhibition.

1918-40. The protection of the environment assumed a more organized form in 1918 when a special section for this purpose was set up under the *Agricultural Scientific Committee of Ukraine. The Ukrainian Academy of Sciences also recognized environmental protection as one of its tasks. On 16 June 1926 a government decree 'Concerning Natural Landmarks and Cultural Monuments' was issued. The People's Commissariat of Education was charged with the co-ordination of conservation programs. The Ukrainian Committee for Environmental Protection worked under its auspices, and in 1928 began to publish *Zbirnyk okhrony pam'iatok pryrody na Ukraini* (Collection on the Protection of Natural Sites in Ukraine). The Kiev Regional Commission for the Protection of Monuments of Material Culture and Nature, an association of the All-Ukrainian Academy of Sciences, was established in 1926 and chaired by F. Ernst, M. Sharleman, and V. Bazylevych.

More nature reserves were established in the 1920s than in any other decade. As early as 1919 Askaniia-Nova was declared a state steppe reservation. In 1921 the Koncha-Zaspa state reserve was established near Kiev. Two years later the Crimean State Reservation (now the *Crimean Game Preserve) was founded, followed by the state forest-steppe reservation in Kaniv. In 1926 several local reserves were set up: Khomutiv Steppe, Bilosarai Spit, and *Kamiani Mohyly (now part of the Ukrainian Steppe Reservation). The *Black Sea Nature Reserve and other local preserves were founded in 1927. The campaign against Ukrainian culture in the 1930s cut short the development of environmental protection and reservations. The lands allotted to reservations were reduced, and control over them was transferred to Moscow.

In interwar Western Ukraine, particularly in Galicia, a number of smaller reservations were established. Among the Carpathian reservations was the Sheptytsky Cedar Reserve on Yaitse Mountain in the Central Gorgany and the Chornohora Reserve in the upper Prut Basin at the foot of Mount Hoverlia. A new reserve was set up in Kniashdvir (now Verkhnie) near Kolomyia in Subcarpathia. In Podilia the relicts of steppe flora and the gypsum caves in Bilche Zolote and Kryvche near Borschiv were placed under special protection. The Commission for Environmental Protection of the Shevchenko Scientific Society was active in this field.

From 1940 to the present. Conservation measures were totally suspended in Ukraine during the war and immediately afterwards. The Carpathian forests were hardest hit, being mercilessly exploited by the Soviet authorities in the postwar period. In the Central Gorgany alone, 1,470 ha of stony fields and ridges appeared. The restoration of state nature reserves in 1946 and the foundation of a number of conservation societies had little positive effect. The situation improved somewhat with the introduction of new governmental environmental protection laws in 1958 and 1960, supplemented in 1964, and the formation in 1967 of the first full State Committee for Environmental Protection of the Council of Ministers

of the Ukrainian SSR with oblast inspectors. Further conservation guidelines are provided by government decrees, such as the decree of the Council of Ministers of the Ukrainian SSR in 1972 on state nature reserves.

Territories set aside as state reserves in the 1920s and 1930s and their specific designations have undergone numerous changes; many of these areas are no longer under state protection. There are currently several types of reserves, classified according to the desired objective. Strict nature reserves (*zapovidnyky*) maintain the biological community in a more or less unmodified form. In 1979 there were 10 such reserves in Ukraine, covering an area of 92,340 ha. Among the largest were the Black Sea, Polisia, Yalta, *Carpathian, and Askaniia-Nova nature reserves. Wildlife refuges or natural sites (*zakaznyky*) are less restrictive in maintaining an area of wild land and have as their aim the protection of specific elements of a biological complex. Ukraine has 123 *zakaznyky*, covering an area of 156,000 ha. National parks (*zapovidni parky*) can have natural or artificially modified landscapes; belonging to this category are *botanical gardens, *dendrological parks such as the *Sofiivka, memorial parks, and wooded parks on the outskirts of urban areas. In 1979 there were 102 national parks (with a total area of 7,600 ha) run by republican agencies, and 713 local parks (with a total area of 83,700 ha). Game preserves (*zapovidno-myslyvski hospodarstva*) do not permit the hunting of animals, although other methods of regulating animal populations are used. Refuge is provided for many endangered species. There are four republican game preserves with a total area of 133,000 ha; the most important of them is the Crimean Game Preserve.

The important animal species that are protected by law include the marbled polecat (*Vormela peregusna*), Russian desman (*Desmana moschata*), aurochs, beaver, common Carpathian squirrel, wildcat (*Felis silvestris*), common otter (*Lutra lutra*), bobac (*Marmota bobak*), lynx, great bustard (*Otis tarda*), little bustard (*Otis tetrax*), houbara bustard (*Otis undulata*), slender-billed curlew (*Numenius tenuirostris*), raven, brant, red-breasted goose (*Branta bernicla*, *B. ruficollis*), purple and gray herons (*Ardea purpurea*, *A. cinerea*), squacco heron (*Ardeola ralloides*), and demoiselle crane (*Anthropoides virgo*). Plants that are under special protection include the yew tree, garland flower (*Daphne cneorum*), yellow and Carpathian rhododendron (*Rhododendron helei*, *Rh. kotschyi*), green alder (*Alnus viridis*), spring adonis (*Adonis vernalis*), arum lily (*Calla palustris*), globe flower (*Trollius europaeus*), yellow lady's-slipper (*Cypripedium calceolus*), edelweiss (*Leontopodium alpinum*), adder's-tongue fern (*Ophioglossum vulgatum*), and ostrich fern (*Matteuccia struthiopteris*).

*Soil erosion is a major conservation problem, caused by such factors as extensive timber cutting, plowing, and trampling of the plant cover by cattle. Among the areas most susceptible to water erosion are the right banks of the Dnieper, Desna, and Donets rivers, the territories between the Dnieper and Boh and the Dniester and Prut, and the Donets Ridge. In the eastern oblasts much damage is caused by dry winds. Certain soil conservation programs were initiated by the zemstvos prior to the revolution; some of these were continued in later years. In March 1967 a resolution on the problem of soil erosion was issued by the Communist party and the Council of Ministers of the USSR, followed in May by more concrete proposals and an outline of the extent of the projected

conservation campaign. The Ministry of Agriculture of the Ukrainian SSR established the Department of Field-Protective Forestation and Forest Management on Collective and State Farms and the Inspection Bureau for Soil Protection. Various soil-protective cropping methods were introduced; slopes planted with orchards and vineyards were terraced. To protect fields in the southern and southeastern regions of the Ukrainian SSR against dust storms, a system of forest shelterbelts was planted. Deep sands were fixed by planting pines.

Environmental protection includes the protection of water resources, the fight against pollution, the improvement of manufacturing technology, the recycling of water, and other measures. Countermeasures against air pollution include the conversion of industry to gas fuel, the introduction of filters, technological improvement in the manufacturing industries, and the planting of trees and shrubs in industrial areas to act as natural filters.

Various institutions monitor the implementation of the resolutions concerning environmental protection: local authorities, national economic councils, ministries, and special inspection agencies. These have been assisted by scientific institutes and, in 1955–64, by the Commission for Environmental Protection of the Academy of Sciences, as well as by a public organization – the Ukrainian Society for Nature Conservation and the Development of Natural Resources, which was formed in 1946 and is at present subordinated to the State Committee for Environmental Protection of the Council of Ministers of the Ukrainian SSR. In 1971 the society embraced 48,000 primary organizations and about 7,500,000 members. The society uses various methods to promote the protection of the environment – contests, competitions, radio documentaries, lectures, various publications, and so on.

Eparchial school (*eparkhialne uchylyshsche*). Name of women's secondary schools in the Russian Empire that had the same program as *gymnasiums and were meant specifically for the daughters of the clergy. These schools were under the jurisdiction of the Holy Synod. They had a six-year program until 1900, when a seventh grade for pedagogical training was added. In 1914 there were 15 eparchial schools in Ukraine.

Eparchy. An administrative district of the Eastern Christian church headed usually by a bishop (called a diocese in the Roman Catholic church). In the Eastern church a group of eparchies constitutes a metropolitanate (metropoly). Eparchies are divided into deaneries and further into parishes.

In Ukraine eparchies were established under the rule of Prince Volodymyr I the Great and were part of the *Kiev metropolitanate. There were 6, perhaps 9 eparchies, of which 4, or perhaps 6, were on Ukrainian ethnic territory. By the time of the Tatar invasion the number of

eparchies had increased to 16, of which 10 were on Ukrainian territory: Kiev, Chernihiv, Bilhorod, Volodymyr-Volynskiy, Turiv, Pereiaslav, Yuriiv, Peremyshl, Halych, and Uhriv (near Kholm). The boundaries of the eparchies coincided with the boundaries of the principalities, and the cathedrals of the bishops were located in the princes' capitals. Hence, the eparchies covered large areas. Political and administrative changes led to changes in the number and boundaries of the eparchies. Some eparchies declined and disappeared as new ones were formed. Thus, by the end of the 15th century, after the separation from it of the Moscow metropolitanate in 1458, the Kiev metropolitanate consisted of eight Ukrainian eparchies, of which Kiev, Chernihiv, Turiv-Pynske, Lutske, and Volodymyr were part of the Grand Duchy of Lithuania, and Kholm, Peremyshl, Lviv-Halych, and two Belorussian eparchies were part of Poland.

After the Church Union of *Berestia in 1596 there were two parallel systems of Ukrainian eparchies – one Orthodox and the other Catholic – consisting of the metropolitan eparchy of Kiev and the eparchies of Chernihiv (Orthodox only), Volodymyr-Berestia, Lutske-Ostrih, Pynske-Turiv, Kholm, Peremyshl, and Lviv-Halych. With the decline of the Ukrainian church in the Polish-Lithuanian state the eparchies became impoverished. There were frequent disputes over their land holdings. In the 15th century some of the lands belonging to the Lviv-Halych eparchy were taken over by the Roman Catholic archbishop of Lviv.

After the partition of Ukraine between Russia and Austria there were 11 Orthodox eparchies on Ukrainian territory. The following were within the Russian Empire: Kiev, Chernihiv, Poltava, Kharkiv, Katerynoslav, Tavriia (see in Symferopil), Kherson (see in Odessa), Podilia (see in Kamianets), Volhynia (see in Zhytomyr), and Kholm (from 1907). In Austria-Hungary there was one Ukrainian-Rumanian Orthodox eparchy, with its seat in Chernivtsi (in Rădăuți until 1783). In 1873 this eparchy was elevated to the Metropolitanate of Bukovyna and Dalmatia. Ukrainian Catholic eparchies existed only within the Austro-Hungarian Empire, because the Uniate church was persecuted and eventually abolished in the Russian Empire. The Ukrainian Catholic eparchies in Galicia were the metropolitan archeparchy of Lviv and the eparchies in Peremyshl and Stanyславiv (from 1885); in Transcarpathia they were Mukachiv (see in Uzhhorod), Prešov (from 1818), and Hajdúdorog (from 1912, see in Nyiregyháza). Until 1875 the only Ukrainian Catholic eparchy within the Russian Empire was Kholm.

In the 1920s the old system of eparchies was retained in Soviet Ukraine, but religious persecution resulted in the destruction of the church administrative structure in the 1930s. In the 1920s besides the traditional eparchies there were also eparchies of the *Ukrainian Autocephalous Orthodox church, which were called 'regional [okruha] churches' in Soviet Ukraine. Their numbers varied, and their boundaries did not coincide with the government-administrative boundaries. Before the Autocephalous church was completely destroyed, it included the following 'regional churches': Balta, Berdychiv, Bila Tserkva, Cherkasy, Chernihiv, Hlukhiv, Kamianets, Katerynoslav (Dnipropetrovske), Kharkiv, Kiev, Konotip, Korosten, Lubni, Nizhen, Poltava, Proskuriv, Pryluka, Romen, Shepetivka, Uman, Vinnytsia, and Volhynia.

When the 'loyal' churches were granted some freedom

after the Second World War, the patriarchal exarchate of Ukraine within the Russian Orthodox church was divided into 18 eparchies, which for the most part coincide with the oblast boundaries; they include Kiev with two vicariates (Uman and Pereiaslav–Khmelnyskyi), Vinnytsia–Bratslav, Volhynia–Rivne, Zhytomyr–Ovruch, Lviv–Ternopil, Mukachiv–Uzhhorod, Odessa–Kher-son, Poltava–Kremenchuk, Symferopil–Crimea, Ivano-Frankivske–Kolomyia, Kharkiv–Bohodukhiv, Chernihiv–Nizhen, Chernivtsi–Bukovyna, Kirovohrad–Mykolaiv, and four vacant eparchies – Dnipropetrovske–Zaporizhia, Voroshylovhrad–Donetske, Sumy–Okhtyrka, Khmelnyskyi–Kamianets-Podilskyi.

In the 1920s–1930s the Autocephalous Orthodox church in Poland had the following eparchies that covered Ukrainian territory: Volhynia, Warsaw–Kholm, and, in part, Polisia. In 1940–4 the Ukrainians in the German Generalgouvernement belonged to three eparchies: Kholm–Podlachia, Warsaw, and Lemko–Cracow. After the First World War the Ukrainian Catholic eparchies in Western Ukraine did not change, but a separate Lemko administrative unit was carved out of the Peremyshl eparchy. All these eparchies were abolished by the Soviet authorities after the Second World War.

Outside Ukraine the *Križevci eparchy in Croatia was established in 1777 for Ukrainian Catholic settlers. In Canada today there are five Ukrainian Catholic eparchies: the metropolitan archeparchy of Winnipeg, and eparchies in Edmonton, Toronto, Saskatoon, and New Westminster. In the United States there are four eparchies: the metropolitan archeparchy of Philadelphia, and eparchies in Stamford, Parma, and Chicago. In addition, there are four Byzantine-rite eparchies for Carpatho-Ruthenians: the archeparchy in Pittsburgh and eparchies in Passaic, Parma, and Van Nuys. There are also Ukrainian Catholic eparchies in Brazil (Curitiba), Argentina (Buenos Aires), and Australia (Melbourne); and exarchates in Great Britain, France, and West Germany. Ukrainian Catholics in Poland and Czechoslovakia have two vacant eparchies (Peremyshl and Prešov).

Outside Soviet Ukraine the Ukrainian Orthodox church consists of metropolitanates without further division into eparchies. In Western Europe there is the *Ukrainian Autocephalous Orthodox church (with two bishops). In the United States the Ukrainian Orthodox church is governed by one metropolitan and two archbishops, with sees in Washington, Chicago, and South Bound Brook, New Jersey. The Ukrainian Orthodox church in Canada (until 1980 officially known as the Ukrainian Greek Orthodox church) has been divided since 1951 into three eparchies: central (headed by a metropolitan in Winnipeg), western (see in Edmonton), and eastern (see in Toronto). In 1963 a bishopric was set up in Saskatoon as a vicariate of the central eparchy. Ukrainian Orthodox parishes exist in Argentina, Brazil, Venezuela, Paraguay, and Australia; most of them are governed by the metropolitanate in the United States. (For the administration of eparchies see *Bishop.)

Eparkhial'nye vedomosti (Eparchial News). Title of official organs, usually weeklies, of the eparchies of the Orthodox church in the Russian Empire. These newspapers were printed in Russian. In Ukraine they were published in various periods beginning in the 1860s. They consisted of two parts: official news (instructions of

the church authorities, appointments, information) and a section containing sermons, historical and current materials, biographies of religious leaders, and so on.

Epic poetry or epic literature. Though by strict definition the term refers to the conventional epic or Homeric poem, it may be used as a general descriptive term to encompass all literary genres that evoke the impression of objectivity in their depictions of reality. Thus, epic literature may include the *epopee, short story, short novel (*povist*), novel, numerous ballads of a specific type, and the didactic epos.

Old Ukrainian epic literature includes the chronicles, the lives of the saints, and translated romances and novellas (*The Trojan War*, the *Alexandriad*, the romance of Digenes Akritas, *Varlaam i Ioasaf* [Barlaam and Josaphat], *Premudryi Akir* [The Wise Akir], etc). The texts of the original Ukrainian epics, with the exception of **Slovo o polku Ihorevi* (The Lay of Ihor's Campaign), have been lost; however, parts of them were incorporated into the northern Russian **bylyny*. The fact that some of the *bylyny* developed, in part, from 11th–13th-century Ukrainian 'epics' is, in most cases, indisputable (eg, the cycle of *bylyny* dealing with Prince Volodymyr, in whose character are combined the historical figures of Volodymyr the Great, Volodymyr Monomakh, and, possibly, Yaroslav the Wise; also, the *bylyny* dealing with the major heroes–Illia Muromets, Dobrynia, and Alosha-Oleksander Popovych).

New forms of epic literature, such as the folk **duma*, short story, and short historical poem, arose during the 16th and 17th centuries; however, the didactic epos, represented in the writings of I. Maksymovych, I. Horlenko, S. Klymiv-Klymovsky, and others, had a greater significance. Epic travesties (mock epics), such as I. Kotliarevsky's *Eneida* (Aeneid), appeared in the 18th century. The short story (H. Kvitka-Osnovianenko), the novel (P. Kulish), and a new variation on the epic poem – the Byronic poem (T. Shevchenko, P. Kulish, and others) – all developed during the 19th century. Modern Ukrainian literature has concentrated primarily on the prose epic genres, although epic poetry has also been developed (eg, M. Rylsky's *Maryna*, P. Tychnyna's *Skovoroda*, V. Sosiura's *Chervona zyma* [Red Winter], M. Bazhan's *Danylo Halyts'kyi* [Danylo of Halych]; L. Pervomaisky's *Trypil'ska trahediia* [Trypylian Tragedy], L. Mosendz's *Kanitfershtan* and *Volyns'kyi rik* [Volhynian Year], T. Osmachka's *Poet*, Yu. Klen's epic poem *Popil imperii* [The Ashes of Empires]). In contemporary Soviet literature the long narrative poem (eg, P. Doroshko's *Viliuis'kyi viazen'* [The Prisoner of Viliuisk], T. Masenko's *Mariia Ul'ianova*, and many others) has been artificially cultivated and has little artistic value. One notable exception is L. Kostenko's *Marusia Churai*.

D. Chyzhevsky

Epidemic. A contagious disease that becomes widespread. Epidemics are caused by bacteria, viruses, or other simple microorganisms that are transferred from an infected organism to a healthy one. There are over 1,300 such pathogenetic agents and they are divided into (1) intestinal agents, which cause such diseases as intestinal typhoid, cholera, dysentery, and paratyphoid; (2) blood agents, which cause malaria, European and murine typhus, bubonic plague, and yellow fever; (3) respiratory

agents, which cause pneumonia, grippe, smallpox, and diphtheria; and (4) skin agents, which cause diseases such as syphilis, anthrax, mange, and trachoma. Microbiology studies the microorganisms that cause epidemics, while *epidemiology studies their incidence, transmission, and control.

The chronicles refer to a number of epidemics that occurred in Ukraine. They were called airs or pestilences (*mory*). People of that time already realized that the sick had to be isolated. Later (in the 16th–17th century) various measures were systematically applied to prevent contagious diseases from spreading (the sick were isolated in designated houses, quarantines were imposed on travellers, special hospital wards were reserved for certain diseases, infected articles were burned or disinfected by heating or smoking). In medieval times the most destructive epidemics in Ukraine, as in other European countries, were the bubonic plague, smallpox, and cholera, which killed hundreds of thousands of people. The other common infectious diseases were tuberculosis, syphilis, malaria, and children's diseases (eg, scarlet fever, diphtheria, chickenpox, and intestinal infections). Large epidemics continued to occur in Ukraine even in the 19th century: smallpox broke out in 1802, 1807, 1810, and 1826, and cholera was rampant in 1830, 1831, 1847, 1853, 1855, and even at the beginning of the 20th century. In 1920, 4.3 million people were infected with typhus. In 1923–4 about 3 million and in 1932–4 about 2 million Ukrainians per year suffered from malaria. Before the revolution about 200,000 people died each year from tuberculosis, and in 1937–40 about 100,000 died annually from the disease.

Today, cholera, typhus, and dysentery epidemics have been almost eliminated in Ukraine. Outbreaks of smallpox or the plague are very rare. The incidence of tuberculosis, malaria, and children's diseases has been reduced drastically.

V. Pliushch

Epidemiology. A branch of medicine that deals with methods of preventing and controlling epidemic diseases. Some advice on how to deal with epidemics can be found in the writings of the first Ukrainian physician – Princess Yevpraksiia-Zoia (12th century) – and then in the works of Yu. Drohobych (15th century). In the 18th century the following Ukrainians distinguished themselves as epidemiologists: D. Samoilovych, K. Yahelsky, O. Shafonsky, and I. Rutsky, all of whom specialized in the bubonic plague; S. Andriievsky, M. Hamaliia, and V. Zhukovsky, who specialized in mange; I. Andriievsky and S. Venechansky, who specialized in syphilis; and D. Pyschekov, a specialist on scab. In the 19th–20th century the following scientists made important contributions to microbiology and epidemiology: I. Mechnikov, M. Hamaliia, O. Bezredka, H. Minkh, V. Vysokovych, V. Pidvysotsky, D. Zabolotny, M. Neshchadymenko, O. Mochutkovsky, I. Savchenko, V. Drobotko, L. Hromashevsky, B. Padalka, A. Ziukov, V. Danylevsky, and V. Rubashkin. In 1886 Mechnikov established in Odessa the first bacteriological station in Ukraine (now the Odessa Scientific Research Institute of Epidemiology and Microbiology). Later bacteriological institutes were set up in Kharkiv (1887) and in Kiev (1896).

In 1908 an institute for preparing vaccines and serums was opened in Kharkiv. In 1913 the Hygiene-Bacterio-

logical Institute was set up in Katerynoslav (now the Dnipropetrovske Scientific Research Institute of Epidemiology, Microbiology, and Hygiene). Similar institutes were established also in Lviv and Uzhhorod.

Today epidemics are controlled in Ukraine through a network of clinics, hygiene-epidemiological stations, and epidemiological, microbiological, and hygiene institutes (see *Medicine and *Health care). All medical institutes and institutes for the upgrading of physicians have departments of epidemic diseases, which provide training in epidemiology, microbiology, and immunology. The first chairmen of such departments were V. Stefansky in Odessa, A. Ziukov in Kiev, and M. Stanishevskya in Dnipropetrovske. The first Ukrainian textbooks on epidemic diseases were written by A. Ziukov and V. Padalka in 1947; on epidemiology, by K. Soloviov in 1936; and on microbiology, by D. Zabolotny in 1932 and V. Drobotko in 1936. From 1934 the Institute of Microbiology of the Academy of Sciences of the Ukrainian SSR published a bimonthly journal in Ukrainian entitled *Mikrobiolohichnyi zhurnal* in Kiev. Since the late 1970s the journal has appeared in Russian as *Mikrobiologicheskii zhurnal*. The Scientific Research Institute of Epidemiology, Microbiology, and Parasitology in Kiev and the Scientific Research Institute of Epidemiology and Microbiology in Lviv belong to the medical research system of the Ministry of Health of the Ukrainian SSR.

V. Pliushch

Epigram. A type of poetry. At first epigrams were brief verses inscribed on buildings or objects, but by the 6th century BC the term was already being applied to short poems. Since the 18th century the term has usually been used for short poems of a satirical or polemical nature. Since the 16th century various types of epigrams have been known in Ukraine: 'heraldic [*herbovni*] poems' and epitaphs; a large cycle of epigrams against the Arians; 17th–18th-century epigrams with a religious content that were conjoined in cycles ('garlands') or inserted into prose works (S. Velychko); and epigrams of a liturgical nature (*Synaksar*). The following were some of the masters of the epigram: I. Velychkovsky, the archmonk Klymentii, S. Yavorsky, D. Tuptalo, T. Prokopovych, and H. Skovoroda. Since the 19th century epigrams have been composed by H. Kvitka-Osnovianenko, T. Shevchenko (eg, his poem 'Umre muzh velii' [A Great Man Has Died]), P. Kulish, I. Franko, V. Samilenko, O. Oles, and authors of literary polemics in Ukraine and abroad.

D. Chyzhevsky

Epigraphy. An auxiliary historical and philological discipline that studies ancient inscriptions on hard or durable materials (eg, marble, stone, metal, wood, and clay) and that is related to *paleography, which investigates writing found principally on soft materials. Epigraphic inscriptions may be carved in stone (lapidary), scratched on (graffito), or painted on (dipinti). In Ukrainian territories Greek inscriptions dating back to the 6th century BC and later Latin inscriptions were found at the sites of ancient Greek cities on the northern coast of the Black Sea – Tyras, Olbia, Chersonese Taurica, and Panticapaeum. Slavic inscriptions that have survived on temple walls, grave monuments, and household objects date back to the 10th century AD. The St Sophia Cathedral in Kiev is particularly rich in epigraphic inscriptions. The

ancient Greek inscriptions in southern Ukraine were first collected and published by the German historian and founder of epigraphy A. Böckh (4 vols, Berlin, 1832). They were more thoroughly studied and published in a full collection of Greek and Latin inscriptions entitled *Inscriptiones Antiquae Orae Septentrionalis Ponti Euxini Graecae et Latinae* (vols 1, 2, 4, St Petersburg 1890–1916) by the Russian scholar V. Latyshev. Ancient inscriptions found in southern Ukraine were also studied by I. Tolstoi and E. Solomonik. B. Rybakov and S. Vysotsky studied the inscriptions of St Sophia Cathedral.

Hryhorii Epik

Epik, Hryhorii, b 17 January 1901 in the village of Kamianka, Katerynoslav gubernia, d ? Writer and critic. In 1920–5 he worked in the Young Communist League and as an editor. In 1925–9 he studied in the department of Ukrainian history at the Kharkiv Institute of Red Professors. After graduating, he became director of the Derzhlitvydav publishing house. His writings began to appear in print in 1923. Epik was a member of the literary organizations *Pluh, *VAPLITE, and *Prolitfront. Among his publications are the collections of short stories *Na zlomi* (At the Break, 1926), *V snihakh* (In the Snows, 1928), *Obloha* (The Siege, 1929), and *Tom satyry* (A Tome of Satire, 1930); and the novels *Bez gruntu* (Without Soil, 1928), *Zustrich* (The Meeting, 1929), and *Nepiia* (NEPIA, 1930). In his prose of the 1920s he sharply criticized certain aspects of the Soviet regime, particularly in *Bez gruntu* (5th edn, 1932). But his last novels – *Persha vesna* (The First Spring, 1931) and *Petro Romen* (1932) – were written in the Stalinist spirit. In 1934 Epik was arrested; he perished in the labor camps in unknown circumstances. The date of his death is uncertain; some sources give it as November 1937, others say 28 January 1942.

I. Koshelivets

Epiphany (Ukrainian: *Bohoiavlennia*). A religious feast on January 6 (OS) or January 19 (NS), popularly called *Vodokhryshchii* (Blessing of Water) or *Yordan* (Jordan River), which completes the winter (Christmas–New Year) festivities cycle. Its Christian content is permeated with old agricultural rituals of diverse origins. The Eve of Epiphany is called ‘the second Holy Eve’ or ‘Hungry *Kutia*’; in Podilia it is also called *Shchedryi Vechir* (Generous Eve). It calls for a more simple meal than on Christmas Eve but with *kutia* still as the main traditional dish (see *Christmas). The principal ceremony of Epiphany traditionally consisted of the solemn outdoor blessing

of waters, usually at a river or at a well, where a cross was erected out of blocks of ice (nowadays water is usually blessed inside the church). A procession was led to the place of ceremony. After the blessing of the water, everyone present drank the water and also took some home to be kept there for a whole year. On the second day of Epiphany (Day of St John the Baptist) the head of the household traditionally fed his cattle with bread, salt, and hay, which had been in the house since Christmas Eve, ‘to last them till the new bread.’ Following the feast of Epiphany, parish priests visit the parishioners’ homes and bless them with the new holy water.

Epiphany Brotherhood Monastery of Kiev. See Kiev Epiphany Brotherhood Monastery.

Epiphany Brotherhood School of Kiev. See Kiev Epiphany Brotherhood School.

Epopoe or epic. Usually a long narrative poem written in the ‘high’ or exalted style and recounting tales of gods or heroes, histories, and momentous events. The primary or original epics, representing the pure epic form, are Homer’s *Iliad* and *Odyssey*. These were first translated into Ukrainian by S. Rudansky and P. Nishchynsky; however, successful translations were accomplished only in the latter half of the 20th century by B. Ten. P. Kulish’s ‘Ukraina’ is considered to be an example of original epic poetry in 19th-century Ukrainian literature; however, the majority of Ukrainian epic poems, beginning with T. Shevchenko’s *Haidamaky* (The Haidamakas), modified the pure epic form, rejecting its exalted style and introducing elements of lyricism. An example of the modern epopee is *Popil imperii* (The Ashes of Empires) by Yu. Klen. Characteristic elements of the epic include thematic breadth and the use of epic repetition and extended (Homeric) similes and metaphors.

Erdeli, Adalbert, b 25 May 1891 in the village of Zahattia in Transcarpathia, d 19 September 1955 in Uzhhorod. Painter. Erdeli studied at the Budapest Academy of Arts in 1911–15 and then worked and held exhibits abroad in Munich, Paris, and Prague. He taught painting in secondary schools in Mukachiv and Uzhhorod. With Y. *Bokshai he founded an art school in Uzhhorod in 1927 and the Society of Subcarpathian Artists, of which he was president, in 1931. In 1945–55 he was chairman of the Transcarpathian branch of the Union of Artists of Ukraine. Erdeli painted landscapes, portraits, and icons, in which the influence of Western impressionism was evident. Among his works are *Still Life: Breakfast* (1915), *Old Man* (1924), *Uzhok* (1933), and *Still Life with Apples* (1939). From the mid-1940s his paintings dealt with Soviet themes. A. Kotska, E. Kontratovych, and F. Manailo studied with Erdeli.

Ernst, Fedir, b 11 November 1891 in Hlukhiv, Chernihiv gubernia, d 17 August 1949 in Ufa, Bashkiria. Art historian. A graduate of Kiev University and a student of H. Pavlutsky, Ernst was a member of the All-Ukrainian Archeological Committee of the All-Ukrainian Academy of Sciences and chairman of the art department of the All-Ukrainian Historical Museum in Kiev (1922–33). Ernst was exiled in 1934. For a short period after his release he worked in the museums of Alma-Ata and Ufa. He wrote

Adalbert Erdeli; self-portrait,
oil, 1950

Fedir Ernst

books on the history of Ukrainian architecture and painting, including *Kyïvs'ki arkhitektury XVIII viku* (Kiev Architects of the 18th Century, 1918), *Ukraïns'ke mystetstvo XVII–XVIII vikiu* (Ukrainian Art of the 17th–18th Century, 1919), *Stara bursa v Kyievi* (The Old Bursa in Kiev, 1921), *Kyïvs'ka arkhitektura XVII viku* (Kiev Architecture of the 17th Century, 1926), and *Heorhii Narbut. Posmertna vystavka tvoriv* (Heorhii Narbut: A Posthumous Exhibit of His Works, 1926). With D. Shcherbakivsky, Ernst organized the first large exhibits of Ukrainian art, the contents of which were published in *Ukraïns'kyi portret XVII–XX st.* *Vystavka ukraïns'koho portreta* (Ukrainian Portraits of the 17th–20th Century: An Exhibit of Ukrainian Portraits, 1925) and *Ukraïns'ke maliarstvo XVII–XX st.* (Ukrainian Painting of the 17th–20th Century, 1929). Ernst raised the issue of returning to Ukraine the art treasures that had been exported to the central Russian museums.

Esaiw, John [Isajiv, Ivan], b 28 November 1907 in Strilche, Dolyna county, Galicia, d 25 August 1961 in Edmonton, Alberta. Community leader. Esaiw emigrated to Canada in 1924. He was a prominent leader in the hetmanite movement and active in the Ukrainian Catholic Brotherhood, Ukrainian News Publishers, the Edmonton branch of the Ukrainian Canadian Committee, and the Ukrainian Professional and Businessman's Club of Edmonton.

Eskhar [Esxar]. IV-17. Town smt (1978 pop 6,800) in Chuhuiv raion, Kharkiv oblast, on the Donets River. It has an electric-power station that supplies electricity for Kharkiv and a reinforced-concrete plant. Eskhar was established in 1927.

Eski-Kermen (in Tatar: old fortress). Cave fortress located near the village of Kripke, 25 km from *Bakhchesarai. This is the largest medieval cave settlement in the southwestern Crimea (over 300 constructed caves). Originally, Eski-Kermen was a fortress established probably by Scythian or Sarmatian tribes in the 5th–6th century AD, following the destruction of the Scythian state by the Huns. In time, the settlement became a manufacturing and trade center. Its inhabitants practiced farming as well. At the turn of the 9th century the *Khazars destroyed the fortress, but the town survived until 1299, when it was burned down by Nogai hordes. M. Repnikov excavated the site in 1928–37 and found the remains

of above-ground dwellings, temples (basilica of the 6th century and the Dormition Church from the 12th century), and fortifications. There is a burial site with a temple dedicated to three horsemen in the vicinity. In 1938 Eski-Kermen was declared a preserve and was made part of the *Bakhchesarai Historical and Archeological Museum.

Esperanto. An international language invented by L. Zamenhof in 1887 that attained some popularity in Ukraine. Under the Russian Empire Ukrainians belonged to regional Esperanto societies. Ukrainians contributed to Esperanto literature: V. Deviatkin translated T. Shevchenko's poem 'Kateryna,' and O. Loiko translated folk songs and stories. The Esperanto Union of Soviet Countries was established at the Third All-Russian Conference of Esperantists in Petrograd in 1921. Groups for the promotion of Esperanto were organized in the Ukrainian SSR. The general policies of the Esperanto movement were compatible with Communist ideology. In 1933 a translation of M. Kotsiubynsky's *Fata Morgana* was published in Kharkiv. During the Stalinist terror of the 1930s, the Esperanto movement in the USSR was liquidated because Esperanto was a means of communication with the outside world and because Russian was being promoted as the lingua franca of the Soviet Union. During the post-Stalin thaw, the ban on Esperanto was lifted. In 1968 courses in Esperanto were taught at the Scholars' Building in Kiev, but the government does not promote the use of Esperanto, and the language is virtually unknown in Soviet Ukraine.

In Galicia Ukrainians belonged to international Esperanto societies until 1913. The first Ukrainian textbook on Esperanto was published in 1904 and was written by V. Yurkiv. In 1912, on the occasion of the Eighth International Esperanto Congress in Cracow, a brochure by L. Denysiuk, *Ukraïntsi i Vos'myi mizhnarodnyi kongres esperantystiv* (Ukrainians and the Eighth World Esperanto Congress), appeared; the first Ukrainian Esperanto society, Progreso, was founded in Kolomyia and headed by O. Kuzma. In 1913–14, the society published a Ukrainian Esperanto newspaper, *Ukraina Stelo* (The Star of Ukraine). Some of Shevchenko's poems and M. Hrushevsky's brief history of Ukraine were translated into Esperanto. With the outbreak of the First World War, the Ukrainian Esperantists ceased their activities. In 1922 publications in Esperanto reappeared, and the Progreso society was revived. It continued its work until the Second World War. O. Kuzma's textbook and I. Verbytsky's Ukrainian-Esperanto dictionary were published. *Kliuch do Esperanta* (The Key to Esperanto) was published in Ukrainian in Geneva.

After the Second World War, Esperanto courses were taught in several displaced persons camps in Germany, and in 1947–9 the monthly *Ukraina Esperantisto* was published. Today, some Ukrainian Esperantists abroad are members of the North American Esperanto Association.

Essentuky. IX-23. City (1980 pop 79,000) in Stavropil krai in the Russian SFSR. Essentuky is one of the resort centers of the Caucasian Mineral Waters region. In 1926 Ukrainians constituted 17 percent of the city's 23,000 inhabitants and 89 percent of the 11,500 inhabitants of its environs.

L'Est européen. A bimonthly journal published in Paris since 1960, first under the title *Problèmes actuels de l'Est européen* and under its present title since 1964. Its editor is V. Kosyk. The journal supports the Anti-Bolshevik Bloc of Nations and is directed by the Bandera faction of the Organization of Ukrainian Nationalists. It publishes articles on nationality problems in the USSR and Eastern Europe, particularly articles on Ukraine and French translations of samvydav documents.

Estates. Closed social groups that originated in the medieval period and survived in various forms until the mid-19th century. Members of each estate enjoyed certain rights or privileges and fulfilled various duties towards the sovereign and other members of their estate. The estates differed in social function and economic status; they were basically legally defined entities. Each estate was an autonomous group, with its own courts and administration and its own representation at the level of state government. Membership in a given estate was hereditary, and mobility from one estate to another was difficult, although not impossible. Only the admission to the clerical estate, which was purely functional, was open, although in the Eastern church, including the church in Ukraine, where the clergy could marry, there existed a semihereditary, semiclosed estate. The principal estates were the aristocracy (nobility), the clergy, the burghers, and the free peasantry. Beyond the estate system there were various categories of semifree peasants and slaves.

The beginning of the estate system in Western Europe can be traced to the 12th–13th century and in Central and Eastern Europe, including Ukrainian territories, to the 13th–14th century. The division of society into estates manifested itself fully under *feudalism. Most historians (eg, M. Hrushevsky, O. Yefymenko, R. Lashchenko, and M. Chubaty) do not detect clear attributes of the estate system in the society of Kievan Rus'. Apart from the princes, the social groups of Rus' differed rather in economic status, service obligations, and social function than in hereditary rights. Soviet historiography (B. Grekov, M. Tikhomirov, and S. Yushkov), however, dates the origin of the estate system in Rus' in the 11th–12th century, in the same period that feudalism originated. In the principality of Galicia-Volhynia the *boyars and the leading members of the princely **druzhyna* tended to organize themselves into a separate estate after the example of the aristocracy in neighboring Poland and Hungary. Yet, in Galicia the estate system was firmly established only in the 15th century when Ruthenian law was replaced by Polish law.

The clearest example of an estate structure was found in the social order of the Grand Duchy of Lithuania. There the higher aristocracy consisted of princes and magnates who were descended from princes or notable boyars. The lower boyars, large landowners, and distinguished warriors organized themselves under Polish influence into the *nobility (*shliakhta*), which at the end of the 15th and the beginning of the 16th century was the most influential estate in society. From 1522 to the Union of Lublin (1569) the nobility of Lithuania evolved gradually into a closed, politically influential estate. A magnate oligarchy, which determined the policy of the Polish Commonwealth, arose within this estate. Several Polonized Ukrainian families belonged to this oligarchy. In theory the Ukrainian *clergy, both Orthodox and Uniate, belonged to the clerical estate,

but only certain church hierarchs and archimandrites possessed the political rights of their estate, the common clergy being treated rather like the peasantry. The Church Union of *Berestia was essentially an attempt to emancipate the Ukrainian clerical estate.

At the time, a new and more distinctly defined estate – the *burghers – became an important political force. Consisting of merchants and artisans, the burgher estate gained certain individual and corporate privileges set down in *Magdeburg law. Among the collective privileges was the right to municipal self-government. Yet many of the so-called private cities that were under the control of magnates (in contrast to crown cities) did not enjoy self-government. Although it was the largest social group, the peasantry did not possess rights similar to those of the burghers. The peasants were economically and legally dependent on their feudal lords and on the nobility, and in this context they cannot be treated as a separate estate. The position of the Ukrainian peasantry was somewhat different, because part of it participated in colonizing the frontier and thus received certain favors. Because of the conjunction of certain geographic and social conditions, a special social group – the Ukrainian *Cossacks – arose as an attempt of the Ukrainian population to liberate itself from under the control of the nobility. The Cossack-peasant rebellions are a manifestation of the conflict between the two models of the estate system – the Polish nobility model and the Ukrainian Cossack model.

Both Lithuania and Poland, which had control of Ukrainian territories in the 14th–18th century, gradually turned into estate monarchies. Only the upper estates – the higher aristocracy, nobility, and church hierarchy – sat on representative bodies such as the *Council of Lords, the Sejm, and the provincial *diets.

The Khmelnytsky uprising radically changed the estate system of the Polish state on Ukrainian territories. The Cossacks, who arose out of peasant warriors, became a new social force that, on the one hand, liberated itself from various economic, political, and religious restrictions and, on the other, strove to consolidate its economic and political gains by forming a new estate. Those Ukrainian nobles who supported the revolution joined this force. Thus a new ruling class – the *notable military fellows – began to be formed by the Cossack *starshyna* under B. Khmelnytsky's rule, and particularly after his death. Although this group never became a completely closed estate, it enjoyed some important privileges and a great deal of political power. Governed by the upper estate and the large, politically active Cossack estate, the Hetman state evolved towards an estate structure characterized by relatively smaller social and legal differences and antagonisms than the Polish state. For a time the peasants (known as *common peasants) retained individual liberty but had no political rights. The burghers gradually assumed their role as the third estate. Although individual church leaders had much influence, the clergy generally did not act as a distinct estate in political life.

Customary law, royal decrees, ducal charters, the Lithuanian Statute, hetmans' universals, and the tsars' grants and acts were the legal sources of rights and privileges of the various estates. Estate privileges were also guaranteed by various articles in Cossack-Muscovite treaties. The estate-structured state is well reflected in P. Orlyk's Constitution of *Bendery (1710), which provided for a General Council, a type of Cossack parliament. The

individual rights of the Cossacks in the civil and juridical spheres were defined by the *Code of Laws of 1743, which, though not approved by the Russian government, served as the de facto law in Ukraine.

After the reign of I. Mazepa estate relations in Ukraine came under the influence of the Russian social order. Peter I's Table of Ranks (1722) widened the former criteria of nobility and enabled the Russian government to enlarge this estate by admitting into it various officials, including the descendants of Cossack officers. Catherine II's estate reforms (charters for noblemen and cities in 1785) established clear distinctions between the estates, removed distinctions within each estate, and divided all the estates into privileged (untaxed) and unprivileged (taxed) estates. As a result, the society of the Russian Empire was divided into four principal groups: nobility, clergy, burghers, and peasantry. The last became increasingly enserfed. In addition to these main groups, there were various subestates such as 'personal nobility,' 'honorary citizenship,' and various members of guilds, merchants, and the like. From the end of the 18th century the *raznochintsy*, or individuals from various estates, formed a distinct stratum between the main estates. In the 19th century, out of this stratum arose the *intelligentsia, which later became a distinct social group.

At the end of the 18th century the Russian estate system was extended to Left-Bank and Right-Bank Ukraine and the estate system of the Hetman state was legally adjusted to the Russian estates. The Cossack *starshyna* was generally granted the status of nobility, while the common Cossacks lost their political rights and acquired the status of a free (unenserfed) peasantry known as the Little Russian Cossacks. The estate structure of the Russian social order was severely shaken by the emancipation of the serfs in 1861, but the estates continued to exist in a modified form until the Revolution of 1917. Russian legislation treated the peasantry as a separate estate even after 1861 (the peasants owned land on a different basis than did the nobles, and members of some of the other estates were excluded from village communities). At the same time the corporate structure of the nobility was preserved and elections to the state дума were still based on the estates. Similarly, the estate system on Ukrainian territories under Austria-Hungary remained intact after the abolition of corvée in 1848. Under Austria elections to parliament and provincial diets (up to 1907) were based on the estate curial principle. Manorial estates, which did not come under the jurisdiction of village communities, the lords' right of *propination, and other such practices were retained. With the rise of *capitalism and the subsequent Industrial Revolution in the 19th century, a new force arose in society, namely, economic *classes, whose development, coupled with political liberalization, led to the complete collapse of the estate system.

The Hetman government of 1918 attempted to resurrect a modified estate structure by endowing the revived Cossack estate with a special political status. The principle was conceptually defined by V. *Lypynsky in his theory of the monarchy of labor. In his 'classocratic' society the 'warrior-producer' estate was to be the bulwark of the state.

The problem of a distinct Cossack estate was particularly acute at the time of the Russian Revolution in the Kuban and in the territory of the Don Cossacks. A sharp conflict arose between the privileged Cossack estate and

the non-Cossacks, and this was exploited by the Soviet authorities.

The legislation of the Ukrainian National Republic and the Soviet regime did not recognize any estate differences or privileges.

(For a bibliography see *Feudalism.)

V. Markus

Estonia (Eesti). A country on the eastern coast of the Baltic Sea, which forms its north and west boundaries; on the south it borders Latvia and the Russian SFSR; on the east it is bounded by Lake Peipus and the Narva River. Estonia covers an area of 45,100 sq km, of which 9 percent consists of islands and islets. On 21 July 1940 it became the Estonian SSR, and on 6 August 1940 it became part of the Soviet Union. Its population in 1979 was 1,466,000, of which 2.1 percent were Ukrainians. The capital is Tallin.

At the beginning of the 11th century the southeastern part of Estonia belonged to Kievian Rus'. Yaroslav the Wise established the city of Yuriiv in 1030. It was known later as Dorpat, and today as *Tartu. Throughout its history Estonia has been dominated by its neighbors – Novgorod, the Teutonic Knights, Denmark, Sweden, Poland, and Russia. Ukrainians came into contact with the Estonians at the end of the 19th century. Ukrainians studied at Dorpat University and in the 1880s set up their own students' club. Ukrainians served in Estonia in the Russian civil service or the armed forces. At the same time individual Estonians lived in Ukraine. The most notable figure among them was the zemstvo leader R. Renning, who worked in the Poltava region and Volhynia and in 1917–20 was active in the co-operative movement and in banking in Ukraine.

In 1917 the Ukrainian community of the town of Valk published the newspapers *Ukrains'kyi holos* and *Dosvid*. In 1919 Ye. *Holitsynsky served as a representative of the Ukrainian National Republic to the Estonian national government, and an Estonian consulate was opened in Kiev. After the demise of the Ukrainian National Republic Estonia recognized the government of the Ukrainian SSR and concluded several treaties with it. In the interwar period a few Ukrainians lived in Estonia, but there was no émigré community there.

Ukrainian-Estonian literary relations began in the second half of the 19th century. In 1869 L. Koidula translated Marko Vovchok's short stories into Estonian. Translations of Ukrainian folklore appeared. In 1901 P. Hrabovsky published some translations of Estonian poetry. At the beginning of the 20th century some works of I. Franko, L. Martovych, and M. Kotsiubynsky were published in Estonian, and during the Soviet period some works of T. Shevchenko, I. Franko, Lesia Ukrainka, and contemporary writers have appeared in Estonian. In the Ukrainian SSR, translations of works of A. Tammsaare, E. Vilde, Yu. Smuul, and others have appeared. The plays of A. Kitzberg and A. Jakobson have been staged in Ukraine. The two countries have an exchange program for dramatic groups and musical ensembles. In 1974 the Decade of Ukrainian Literature and Art was celebrated in Estonia, and in 1975 Days of Estonian Culture were held in Ukraine. In the 1970s the Ukrainian A. Yuzkevych took active part in the Estonian dissident movement.

V. Markus

Estuary. A partly enclosed coastal body of water that forms where river water mixes with and is diluted by seawater. In Ukraine estuaries can be found on the northwest coast of the Black Sea, the northern coast of the Sea of Azov, and the coast of the Kerch Peninsula in the Crimea. The estuaries of the larger rivers – Dnieper, Dniester, Boh – are separated from the sea by spits, shoals, and barrier islands and have turned into saline inlets or lagoons (Khadzhybei, Tylihul, Kuialnyk, Molochne Lake, etc). Certain estuaries (eg, Odessa Bay) are known for their curative waters and sediments.

Eternal Peace of 1686. A peace treaty between Muscovy and Poland signed in Moscow on 16 May 1686 that confirmed the division of Ukraine set out in the Treaty of *Andrusovo in 1667. Left-Bank Ukraine with Kiev (for a compensation of 146,000 rubles) and the Zaporozhian Cossack territories were to come under Russian control, while Right-Bank Ukraine was to come under Polish control. The Bratslav and southern Kiev regions were to remain an unpopulated neutral zone. Both states promised not to sign a separate peace treaty with Turkey. The Eternal Peace guaranteed religious freedom for the Orthodox population of the Polish Commonwealth and recognized Moscow's right to protect the Orthodox. On signing the treaty, Muscovy became an ally in the anti-Turkish coalition known as the Holy League, which included Poland, the Holy Roman Empire, and Venice.

Ethics. Moral principles or values of an individual or of a society. Ethics is also the study of morals, of their development and role in social and private life. In ancient Ukrainian literature an ascetic morality was usually advocated. Numerous translations, such as the sermons or *Listvytsia* (The Ladder) of John of Sinai, place the same moral demands on monks and laymen. This is also true of homilies, for example, the sermons of Bishop Serapion of Vladimir on the Kliazma (1275). Strict ethics are also reflected in the guides to confession. Some ancient works, such as **Izbornik Sviatoslava* (Sviatoslav's Collection, 1076), which has a chapter 'Advice for the Wealthy,' and Volodymyr Monomakh's *Pouchenie* (Instruction, before 1125), which classifies the virtues and mentions, in addition to divine moral sanctions, such human sanctions as a good reputation and respect, deal with the moral values of secular life. The anonymous Sermon on Princes (1175) applies Christian ethics to political questions. It is evident from the chronicles, particularly the Hypatian Chronicle, that certain circles lived by a code of chivalry. Thus, three types of morality can be distinguished in ancient Rus' – the ascetic, the worldly, and the chivalrous. With various changes these types remained in effect until the 17th century.

The first systematic work in ethics produced in Ukraine was I. Gizel's *Myr s Bohom cheloviku* (Man's Peace with God, 1669), a confessor's handbook. At the Kievian Mohyla Academy ethics was first taught in 1632, and in 1670 began to be treated systematically as one of the four philosophical disciplines. T. *Prokopovych wrote a course in ethics in 1707–9 (first published in 1980). S. Kalynovsky and H. Konysky (on morality as the search for the highest good and happiness) also made contributions to ethics. In the 19th century ethics was taught at the Kiev Theological Academy and in the philosophy departments of universities in Ukraine. An original Christian

treatment of ethics can be found in the works of H. *Skovoroda, particularly 'Nachal'naia dver' ko khristianskomu dobropraviiu' (The First Door to Christian Morality) and his dialogues. Skovoroda emphasized the individual's moral duty, assigned to him by God, which has an ultimate value independent of its character. Similarly, in N. Gogol each person has a special 'assignment' from God and is a laborer on 'God's farm.' Among later Ukrainian writers we find only occasional theoretical speculations on ethical problems in connection with religious, pedagogical, or political subjects (T. Shevchenko, I. Franko, Lesia Ukrainka). P. *Yurkevych's theory of the emotive source of moral action ('Serdtsie i ego znachenie v dukhovnoi zhizni cheloveka' [The Heart and Its Importance in Man's Spiritual Life], 1860) should be mentioned. In the late 19th century N. Lange, a professor at Odessa University, began but did not complete a history of ethics. In the 20th century ethical problems have been studied by the Philosophical Commission of the All-Ukrainian Academy of Sciences (S. *Semkovsky) and then by the Institute of Philosophy of the Academy of Sciences of the Ukrainian SSR, where ethics is restricted to 'the moral principles of building communism' (I. Nadolny's *Liudyna i moral'* [Man and Morality], 1972). M. *Shlemkevych treated ethics from a sociological-psychosocial aspect (*Filosofia* [Philosophy], 1934).

D. Chyzhevsky, A. Zhukovsky

Ethnographic Commission of the Shevchenko Scientific Society (Etnohrafichna komisiia NTSh). The commission was founded in 1898 for the purpose of collecting and studying Ukrainian ethnographic materials. For many years its chairmen were I. Franko and V. Hnatiuk, who edited its publications from 1900. The commission published *Etnohrafichnyi zbirnyk* (The Ethnographic Collection, 40 vols, beginning in 1895) and *Materiialy do ukrains'koi etnologii* (Materials on Ukrainian Ethnology, beginning in 1899), which in 1916 was renamed *Materiialy do ukrains'ko-rus'koi etnologii* (Materials on Ukrainian-Ruthenian Ethnology) and in 1920 *Materiialy do etnologii i antropologii* (Materials on Ethnology and Anthropology, 22 vols altogether).

Ethnographic Commission of the All-Ukrainian Academy of Sciences (Etnohrafichna komisiia VUAN). The commission was founded in 1920 and functioned at first as a section of the Ukrainian Scientific Society in Kiev (УНТК). It became part of the All-Ukrainian Academy of Sciences in June 1921. The chairman of the commission was Academician A. Loboda and its secretary was O. Onyshchuk (replaced by V. Petrov in 1924). The commission had over 30 members and a network of 600 permanent correspondents and several thousand collectors of ethnographic materials. Several seminars were conducted under the commission: a seminar for the study of national minorities, chaired by Ye. Rykhlik; one for musical folklore, chaired by K. Kvitka; and one for the study of rural folkways. In 1925–32 the commission published **Etnohrafichnyi visnyk* (10 vols). The commission was abolished in 1933 after the academy was purged.

Ethnographic Society (Etnohrafichne tovarystvo). Founded in Kiev in 1924 at the *Museum of Anthropology and Ethnology, it became the All-Ukrainian Ethnographic Society in 1928 with branches in various cities of Ukraine.

In 1928 the society had 320 members, and its president was O. Malynka. It published one issue of *Zapysky* (1925), a bulletin (1927–8), and seven issues of *Pobut* (1927–30). The society was abolished at the beginning of the 1930s.

Ethnographic Society of Subcarpathian Ruthenia (Etnohrafichne tovarystvo Pidkarpatskoi Rusy). The Society was founded in 1935 in Mukachiv (Mukacheve) for the purpose of investigating the popular culture and folklore of Transcarpathia and preserving its monuments. The society supported a museum and published a periodical, *Visti Etnohrafichnogo tovarystva Pidkarpatskoi Rusy*. Its president was A. Voloshyn, and its most active members were M. Obidny, O. Prykhodko, Yu. Holovatsky, and I. Pankevych. The society ceased to exist in 1939.

Ethnography. Ethnography, like ethnology, is an important branch of cultural and social anthropology. While ethnology is a theoretical science, ethnography is a descriptive science, which studies the general characteristics of various cultures by means of the historical-comparative method. This distinction is tentative, however. Ethnography does not exclude theoretical generalizations, and ethnology cannot avoid description. In its broadest sense ethnography deals with the origin of a people, its relations with other peoples, the historical stages of the formation of ethnic territories, the population's physical and racial types, and the people's settlements, dwellings, economy, *dress, familial and social life, *folk customs and rites, world outlook, *folk beliefs, *folklore, and folk art. As a historical science ethnography deals with a people at all of its social levels and stages of historical development.

Sources and studies until the end of the 18th century. The first ethnographic information about Ukraine dates back to the Princely era. It is found in Byzantine and Arabic works, the Rus' chronicles, and literary works of the 11th–13th century, particularly in the church sermons attacking pagan customs and rites. The medieval chronicles have also documented certain spells, proverbs, and fragments of epic songs. The epic **Slovo o polku Ihorevi* (Tale of Ihor's Campaign) is imbued with many elements of Ukrainian folk poetry. A song from the mid-16th century about Štefan the Voivode has been preserved in the Czech grammar of J. Blahoslav of 1571. S. Sarnicki mentions the Ukrainian dumas in his account of the war with Wallachia (1506). Examples of Ukrainian funeral lamentations are found in S. Klonowicz's poem 'Roxolania' and in the writings of I. Menecius (1551). Many old transcriptions of songs from the 16th–18th century in manuscript collections or old printed books were published by O. Potebnia, P. Zhytetsky, V. Peretts, M. Hrushevsky, I. Franko, V. Hnatiuk, M. Vozniak, P. Rulin, and others.

The travel accounts of foreigners in Ukraine contain much ethnographic material. These sources are discussed in V. Kordt's bibliography *Chuzhozemni podorozhni po Skhidnii Evropi do 1700* (Foreign Travellers in Eastern Europe until 1700, 1926) and in V. Sichynsky's *Chuzhyntsi pro Ukraïnu* (Foreigners about Ukraine, 1942).

The first works of Ukrainian ethnographers appeared towards the end of the 18th century. In 1777 H. Kalynovsky published a large work in St Petersburg, *Opisanie svadebnykh ukrainskikh prostonorodnykh obriadov v Maloi Rossii i v Slobodskoi Ukrainskoi gubernii* (Description of Ukrainian Folk Marriage Customs in Little Russia and

Slobidska Ukraine Gubernia). Much ethnographic material was published in the journals of the time, particularly in *Trudy Vol'nogo ekonomicheskogo obshchestva*.

Beginnings of Ukrainian ethnography. The Polish ethnographer and archeologist Z. *Dołęga-Chodakowski can be considered to be the pioneer of Ukrainian ethnography. He collected over 2,000 folk songs and a wealth of other materials. M. *Maksymovych used Dołęga's collection extensively. Other Poles who collected Ukrainian materials were T. Czacki and I. Lubicz-Czerwiński (on marriage customs). The travel accounts of the Germans B. Hacquet, J. Rohrer, and S. Bredecki contain materials from Western Ukraine. Among the Russians, Prince N. *Tsertelev was an enthusiastic collector of Ukrainian folk songs. In 1819 he published *Opyt sobraniia starinnykh malorossiiskikh pesen* (An Attempt at a Collection of Ancient Little Russian Songs). A number of important collections of Ukrainian folk songs were published in the 1830s. The first large, systematic collection, *Malorossiiskie pesni* (Little Russian Songs), was published in 1827 by M. Maksymovych, who later produced three more collections. N. Gogol collected a large number of Ukrainian folk songs, which appeared in print only on the eve of the First World War. I. Sreznevsky, the Kharkiv linguist, published six volumes of **Zaporozhskaia starina* (1833–8). P. Lukashkevych published *Malorossiiskie i chervonorusskie narodnye dumy i pesni* (Little Russian and Red Ruthenian Folk Dumas and Songs, 1836). The Slavist O. *Bodiansky made an important contribution with his publication of *Nas'ki ukrains'ki kazky zaporozhtsia Is'ka Materynky* (Our Own Ukrainian Tales of the Zaporozhian Isko Materynka, 1835).

In Galicia ethnographic materials were collected and published by, among others, M. Shashkevych (*Rusalka Dnistrovaia* [The Dniester Nymph], 1837), Y. Lozynsky (*Ruskoje wesile* [Ruthenian Wedding], 1835), Ya. *Holovatsky (*Narodnyia pesni Galitskoi i Ugorskoi Rusi* [Folk Songs of Galician and Hungarian Ruthenia], 3 vols, 1878), and I. Vahylevych.

In this period much work in Ukrainian ethnography was done by Polish scholars: L. Gołębiowski; W. Zaleski, who published *Pieśni polskie i ruskie ludu galicyjskiego* (Polish and Ruthenian Songs of the Galician People, Lviv 1833); and I. Pauli Żegota, who published *Pieśni ludu ruskiego w Galicyi* (Songs of the Ruthenian People in Galicia, 2 vols, 1839–40).

In the 1840s and 1850s M. *Kostomarov and P. *Kulish made important contributions to the analysis of ethnographic materials. In 1843 Kostomarov's *Ob istoricheskoi znachenii russkoi narodnoi poezii* (On the Historical Significance of Russian Folk Poetry) and in 1847 his *Slavianskaia mifologija* (Slavic Mythology) appeared. (Much later he also published 'Istoricheskoe znachenie iuzhnorusskogo narodnogo pesennogo tvorchestva' [The Historical Significance of South Russian Folk-Song Creativity], *Beseda*, 1872, nos 4–6, 8, 10–12.) Kulish's *Zapiski o Iuzhnoi Rusi* (Notes on Southern Rus', 2 vols, 1856–7) has a special place in Ukrainian ethnography. It contains not only the texts of songs and tales, but also biographies and descriptions of the singers (kobzars) and storytellers. In 1861–2 the journal *Osnova* (St Petersburg) published the works of M. Nomys, A. Svydnytsky, P. Yefimenko, and others. Kulish's article 'Pohliad na usnu slovesnist' ukrains'ku' (A Look at Ukrainian Folklore), which appeared in the Lviv *Pravda* in 1870, summed up the romantic-populist view of ethnography of the 1840s to 1860s.

In the 1850s and 1860s a number of other valuable works appeared: A. Metlynsky's *Narodnye iuzhnorusskie pesni* (South Russian Folk Songs, 1854), M. Hattsuk's *Uzhynok ridnoho polia* (Harvest of Our Native Field, 1857), M. Markevych's *Obychai, poveriia, kukhnia i napitki malorossiian* (Customs, Beliefs, Cuisine, and Beverages of the Little Russians, 1860), M. Zakrevsky's *Starosvetskii bandurista* (Old-World Banduryst, 1860–1), and K. Sheikovskyy's *Byt podolian* (The Podilians' Folkways, 1860). The outstanding work of this period was M. Nomy's *s Ukrain-s'ki prykazky, prysliv'ia ta inshe* (Ukrainian Proverbs, Sayings, and So On, 1864).

1870–1917. A new period in the history of Ukrainian ethnography began with the founding of the *Southwestern Branch of the Imperial Russian Geographic Society in Kiev in 1873. The scope of ethnographic studies expanded greatly during this period. Researchers advanced from producing individual publications to the codification of ethnographic materials, that is, to the publication of corpuses. As a result of organized expeditions in Right-Bank Ukraine in 1869–70, the society obtained a wealth of new material, and in 1872 it began to publish, under the direction of P. *Chubynsky, **Trudy etnograficheskostatisticheskoi ekspeditsii v Zapadno-Russkii krai* in several large series consisting of 10 volumes each (1872–8). This was the first large-scale attempt at codifying ethnographic materials.

Chubynsky's work was a stimulus to such scholars as V. *Antonovych, M. *Drahomanov, F. *Vovk, I. *Rudchenko, O. *Potebnia, O. *Rusov, P. *Zhytetsky, and M. *Lysenko. The most outstanding representative of this group was M. Drahomanov, who developed the theory of borrowed and migrating themes and motifs in folklore. His numerous works on Ukrainian folklore were published in *Rozvidky pro ukrains'ku narodnu slovesnist' i pys'menstvo* (Studies of Ukrainian Folklore and Literature, 4 vols, 1899–1907). Drahomanov also published several collections of Ukrainian folk songs (one in collaboration with V. Antonovych). I. Rudchenko published the valuable collections *Narodnye iuzhno-russkie skazki* (South Russian Folk Tales, 2 vols, 1869–70) and *Chumatskie narodnye pesni* (Chumak Folk Songs, 1874), which included a monograph on the *chumaks. M. Lysenko collected folk melodies and published them in *Zbirnyk ukrains'kykh narodnykh pisen'* (A Collection of Ukrainian Folk Songs, 7 vols, 1868–1911). He also wrote *Kharakteristika muzykal'nykh osobennosti malorusskikh dum i pesen ispolniaemykh kobzarem Ostapom Veresaem* (A Description of the Musical Traits of the Little Russian Dumas and Songs Sung by the Kobzar Ostap Veresai, 1874). Important works were produced by O. Potebnia: *O nekotorykh simvolakh v slavianskoi narodnoi poezii* (On Several Symbols in Slavic Folk Poetry, 1860, 1914) and *Ob'iasnenie malorusskikh i srodneykh narodnykh pesen* (An Exposition of Little Russian and Related Folk Songs, 1883).

Ethnographic research did not come to an end with the closing of the Southwestern Branch of the Russian Imperial Geographic Society and the prohibition of the Ukrainian language in 1876. Many materials were published in **Kievskaiia starina* (1882–1906), *Sbornik Khar'kovskogo istoriko-filologicheskogo obshchestva* (1886–1914), the Moscow journal *Etnograficheskoe obozrenie* (from 1889), and *Zhivaia starina* (1890–1916), the journal of the Ethnographic Section of the Russian Imperial Geographic Society.

Many collections were published separately, particularly beginning in the 1890s. M. *Sumtsov, who began his research as an adherent of the mythological school but eventually changed to the comparative philological approach, was the author of many ethnographic studies in article form, particularly in *Kievskaiia starina*, and of *Sovremennaia malorusskaia etnografiia* (Contemporary Little Russian Ethnography, 2 vols, 1893, 1897), *Maliunky z zhyttia ukrains'koho narodnoho slova* (Sketches from the Life of Ukrainian Folk Oral Literature, 1910), and *Slobozhane. Istorychno-etnografichna rozvidka* (The Slobidska Ukrainians: A Historical-Ethnographic Study, 1918). B. *Hrinchenko published *Etnograficheskie materialy, sobrannye v Chernigovskoi i sosednikh s nei guberniakh* (Ethnographic Materials Collected in the Chernihiv and Neighboring Gubernias, 3 vols, 1895–9), *Iz ust naroda. Malorusskie rassказы, skazki i proch.* (From the Mouths of the People: Little Russian Stories, Tales, etc, 1900), and the bibliographic guide *Literatura ukrainskogo fol'klora (1770–1900)* (The Literature of Ukrainian Folklore, 1777–1900, 1910). His *Slovar' ukrains'koi movy* (Dictionary of the Ukrainian Language, 4 vols, 1907–9) contains a wealth of ethnographic material and colloquialisms. I. *Manzhura, a specialist on folkways, published *Skazki, poslovitsy i t.p., zapisannye v Ekaterinoslavskoi i Khar'kovskoi guberniakh* (Tales, Proverbs, etc, Recorded in Katerynoslav and Kharkiv Gubernias, 1890). M. Dykariv published *Narodnyi kalendar Valuis'koho povitu* (The Folk Calendar of Valuiyki County, 1905), one of the richest surveys of the folk rites connected with the calendric cycle.

At the turn of the 20th century many collections and studies in Ukrainian ethnography appeared, by such scholars as Kh. Yashchurzhynsky, M. Komarov, V. Yastrebov, V. Myloradovych, S. Vengzhynovsky, V. Okhrymovych, O. Malynka, P. Ivanov, V. Domanytsky, V. Horlenko, and P. Lytvynova. Special mention must be made of D. *Yavornytsky's collections of ethnographic materials about the Zaporozhian Cossacks – *Po sledam zaporozhtsev* (In the Footsteps of the Zaporozhians, 1898) and *Malorusskie narodnye pesni* (Little Russian Folk Songs, 1906) – and of Ya. *Novytsky's work *Malorossiskaia i zaporozhskaia starina v pamiatnikakh ustnogo narodnogo tvorchestva* (Little Russian and Zaporozhian Antiquity in the Monuments of Oral Folk Creativity, 1907). In 1891 A. Pypin's valuable work *Malorusskaia etnografiia* (Little Russian Ethnography) appeared as the third volume of his *Istoriia russkoi etnografii* (The History of Russian Ethnography).

In 1898 the *Ethnographic Commission of the Shevchenko Scientific Society was created in Lviv. It collected and edited an enormous wealth of material, which was published in the commission's two periodicals – *Etnografichnyi zbirnyk* (40 vols) and *Materiialy do ukrains'koi etnologii* (22 vols, from 1899) – as well as in other publications of the society. The main initiative for this work came from M. *Hrushevsky. F. Vovk was an active member of the commission and published a study of wedding customs and funeral rites. His most important ethnographic work, 'Etnograficheskie osobennosti ukrainskogo naroda' (The Ethnographic Peculiarities of the Ukrainian People), was part of the second volume of his collection *Ukrainskii narod v ego proshlom i nastoiashchem* (The Ukrainian People in Its Past and Present, 1916). Another prominent member, I. *Franko, wrote many ethnographic studies, including *Halyts'ko-rus'ki narodni*

prypovidky (Galician-Ruthenian Folk Proverbs, 1908) and *Studii nad ukrains'kymy narodnymy pisniamy* (Studies of Ukrainian Folk Songs, 1913).

An important role in the commission's work was played by V. *Hnatiuk. His main work was *Etnohrafichni materialy z Uhors'koi Rusy* (Ethnographic Materials from Hungarian Rus', 6 vols, 1897–1911). Hnatiuk edited 22 volumes of *Etnohrafichnyi zbirnyk*, which contained carols, folk tales, legends, Easter songs, and descriptions of funeral rites. Both older and younger ethnographers were associated with the commission. F. *Kolesa edited *Melodii haivok* (Easter Spring Melodies, 1909), *Melodii ukrains'kykh narodnykh dum* (Melodies of Ukrainian Folk Dumas, 1910–13), and other works. He also wrote several studies, including *Rytmika ukrains'kykh narodnykh pisen'* (The Rhythms of Ukrainian Folk Songs, 1906–7) and *Pro henezu ukrains'kykh narodnykh dum* (On the Genesis of Ukrainian Folk Dumas, 1922). Z. *Kuzelia also contributed works in ethnography.

The Soviet period. With the founding of the Ukrainian Academy of Sciences in Kiev in 1918 ethnographic research became concentrated in four of its sections: the *Ethnographic Commission, the Cabinet of Anthropology and Ethnology, the Cabinet of Primitive Culture, and the Cabinet of Musical Folklore. In 1925–32, 10 volumes of the journal **Etnohrafichnyi visnyk* appeared under the editorship of A. *Loboda and V. *Petrov. The Ethnographic Commission published collections dealing with the folklore of the chumaks and boat pilots (*lotsmany*) – *Kazky i opovidannia z Podillia v zapysakh 1850–1860kh rr.* (Tales and Stories from Podilia Recorded in the 1850s–1860s, 1928), edited by M. Levchenko, and *Zvenyhorodshchyna* (The Zvenyhorod Region), with materials collected by S. Tereshchenkova. The commission also produced the monumental *Bibliohrafiia literatury z ukrains'koho folkloru* (Bibliography of Literature on Ukrainian Folklore, 1930), prepared by O. Andriievsky.

The Cabinet (Museum) of Anthropology and Ethnology, directed by A. Onyshchuk, concentrated on the material folk culture. The *Ethnographic Society was set up as an adjunct to the museum; it published one issue of *Zapysky* (1925), a bulletin (1927–8), and seven issues of the journal *Pobut* (1927–30). The Cabinet of Primitive Culture, at the chair of history under M. Hrushevsky, studied the relics of primitive cultures in Ukraine; from 1926 to 1929 it published 12 issues of *Peroisne hromadianstvo ta ioho perezhytty na Ukraïni*. The Commission of Historical Songs of the historical-philological section of the Academy of Sciences was headed by K. *Hrushevskia and published her *Ukrains'ki narodni dumy. Korpus* (Ukrainian Folk Dumas: The Corpus, 2 vols, 1927, 1931). Among the noted works of this period special mention must be made of the survey of the Ukrainian oral tradition from ancient times, which appeared in volumes 1 and 4 of M. Hrushevsky's *Istoriia ukrains'koi literatury* (History of Ukrainian Literature, 1923, 1925).

In the early 1930s the Stalinist terror and repression of Ukrainian culture brought ethnographic research at the Academy of Sciences almost to a standstill and caused the above ethnographic institutions to close down. Yet, in 1936 the Institute of Ukrainian Folklore, the forerunner of the *Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences, was founded. In 1937–41 it published the irregular periodical *Ukrains'kyi fol'klor*

(renamed *Narodna tvorchist'* in 1939–41). This institute was subject to Stalinist cultural policies and produced nothing of real scholarly value.

In 1939 a branch of the Institute of Ukrainian Folklore was established in Lviv, and the *Ukrainian State Museum of Ethnography and Crafts was created using the holdings of the former Museum of Ethnography of the Shevchenko Scientific Society and of other Galician museums. Most ethnographers in Western Ukraine continued to work in their field under the Soviet regime.

Since 1944 ethnographic research in Ukraine has been centered in Kiev at the ethnographic department of the Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR. In 1947–58 it published four volumes of *Naukovi zapysky*. In the 1940s and 1950s the ethnographic department conducted several expeditions in the Donbas, Kryvyi Rih region, Transcarpathia, and elsewhere, while the Museum of Ethnography and Crafts in Lviv sent expeditions into the villages of Lviv oblast in 1949 and into Polisia in 1953. In 1954–63 the museum published eight issues of *Materialy z etnografii ta mystetstvoznavstva*. In 1956 a valuable volume, *Vostochnoslavianskii etnograficheskii sbornik* (East Slavic Ethnographic Collection), appeared in Moscow; it dealt with the material culture of the Russians, Ukrainians, and Belorussians. In spite of the existence of several institutions and publications, however, the development of Soviet Ukrainian ethnography in the 1940s and 1950s was rather limited in comparison to that of the 1920s and even to that of the prerevolutionary period.

Ethnographic research and publication expanded at the end of the 1950s, in the 1960s, and in the first half of the 1970s. In 1957 the Institute of Fine Arts, Folklore, and Ethnography began publishing the journal **Narodna tvorchist' ta etnografia*, first as a quarterly, and since 1965 as a bimonthly. General studies on the genres and forms of Ukrainian folklore were published by the institute in the two-volume *Ukrains'ka narodna poetychna tvorchist'* (Ukrainian Folk Poetry, 1958). At the beginning of the 1960s the institute began publishing the book series *Ukrains'ka narodna tvorchist'* (Ukrainian Folk Creativity). The following works appeared in this series: *Istorychni pisni* (Historical Songs, 1961), *Zahadky* (Riddles, 1962), *Ihry ta pisni* (Games and Songs, 1963), *Pisni lavdokhy Zuikhy* (Songs of lavdokha Zuikha, 1965), *Koliadky ta shchedrivky* (Christmas and Epiphany Carols, 1965), *Zhartivlyvi pisni rodynno-pobutovi* (Humorous Family-Life Songs, 1967), *Radians'ki pisni* (Soviet Songs, 1967), *Kolomyiky* (Kolomyikas, 1969), *Vesillia* (The Wedding, 2 vols, 1970), *Tantsiuval'ni pisni* (Dance Songs, 1972), *Instrumental'na muzyka* (Instrumental Music, 1972), *Spivanky-khroniky* (Song-Chronicles, 1972), *Rekruts'ki ta soldats'ki pisni* (Recruits' and Soldiers' Songs, 1974), *Naimyts'ki ta zarobitchans'ki pisni* (Servants' and Laborers' Songs, 1975), *Chumats'ki pisni* (Chumak Songs, 1976), *Kazky pro tvaryny* (Animal Fables, 1976), and *Pisni literaturnoho pokhodzhennia* (Songs of a Literary Origin, 1978). Other notable publications of the institute are *Zakarpats'ki narodni pisni* (Transcarpathian Folk Songs, 1962), *Bukovyyns'ki narodni pisni* (Bukovynian Folk Songs, 1963), *Ukrains'ke radians'ke narodne mystetstvo* (Ukrainian Soviet Folk Art, 1966) by B. Butnyk-Siversky, four volumes of F. *Kolesa's works (1969–70), and *Ukrains'ki narodni pisni v zapysakh Osypa ta Fedora Bodians'kykh* (Ukrainian Folk Songs as Transcribed by Osyp and Fedir Bodiansky, 1978).

Ukrainian scholars have also studied other areas of ethnography and folklore: the architecture of peasant houses (V. Samoilovych), weaving and embroidery (O. Kulyk, N. Manucharova), folk dress (O. Kulchytska), folk ceramics (K. Mateiko), metal art objects (L. Sukha), folk kilims (A. Zhuk, Ya. Zapasko), folk dances (A. Hume-niuk, V. Verkhovynets, H. Borymska), Ukrainian musical instruments (A. Hume-niuk), and folk cuisine (L. Artiukh).

Some recent works in ethnology are: Yu. Krut, *Khlibo-rob's'ka obriadova poeziia slov'ian* (Agricultural Ritual Poetry of the Slavs, 1973); N. Zdoroveha, *Narysy narodnoi vesil'noi obriadovosty na Ukraini* (Essays on Folk Wedding Rituals in Ukraine, 1974); and O. Dei, *Poetyka ukrains'koi narodnoi pisni* (The Poetics of Ukrainian Folk Songs, 1978). The influence of folklore on Ukrainian literature is explored in T. Komarynets, *T. Shevchenko i narodna tvorchist'* (T. Shevchenko and Folklore, 1963); B. Kho-menko, *Narodni dzhherela tvorchosty Marka Vovchka* (The Folk Sources of Marko Vovchok's Works, 1977); O. Myshanych, *Hryhorii Skovoroda i usna narodna tvorchist'* (Hryhorii Skovoroda and Oral Folklore); and other works. Works dealing with the history of ethnography and folklore include V. Horlenko, *Narysy z istorii ukrains'koi etnografii ta rosiis'ko-ukrains'kykh etnografichnykh zv'iazkiv* (Essays on the History of Ukrainian Ethnography and Russian-Ukrainian Ethnographic Ties, 1964); Z. Vasylenko, *Folk-lorystychna diial'nist' M.V. Lysenka* (M.V. Lysenko's Work in Folklore, 1972); O. Dei, *Storinky z istorii ukrains'koi fol'klorystyky* (Pages from the History of Ukrainian Folklore Studies, 1975); and Z. Boltarovich, *Ukraina v doslidzhenniakh pol's'kykh etnografiv XIX st.* (Ukraine in the Research of Polish Ethnographers of the 19th Century, 1976).

Today Ukrainian ethnographers are preparing surveys of past studies, university courses in Ukrainian folklore, and histories of ethnography in Ukraine. The bimonthly journal *Narodna tvorchist' ta etnografii* publishes many valuable articles, but also an inordinate number of propa-gandistic articles of questionable value. Compared to the long period of stagnation under Stalin, however, ethno-graphic research in Ukraine has improved considerably in the last 25 years.

Outside Ukraine. V. *Shcherbakivsky was engaged in ethnographic research in Prague from the 1920s to 1941. From 1926 to 1945 the Ukrainian Scientific Institute in Berlin had a permanent department of Ukrainian ethnog-raphy and regional studies chaired by Z. Kuzelia. Among the institute's publications were the ethnographic studies of V. Petrov and P. Kovaliv. In 1946 the Ukrainian Free University published V. Petrov's work on spells and lamentations. Various periodicals and collections pub-lished articles on ethnography and folklore by such scholars as L. Biletsky, V. Shcherbakivsky, P. Odar-chenko, J.B. Rudnyckyj (on Ukrainian-Canadian folk-lore), S. Klymyuk, O. Voropai, Yu. Senko, A.H. Hor-bach, P. Zvarych, O. Berest, Ye. Onatsky, I. Sydoruk, V. Lev, L. Burachynska, D. Horniatkevych, H. Hor-dienko, and I. Ohienko. Of the larger works that were published abroad the following deserve to be mentioned: L. Biletsky's *Istoriia ukrains'koi literatury (Ukrains'ka narod-nia poeziia i ukrains'ki obriady ta zvychai)* (A History of Ukrainian Literature [Ukrainian Folk Poetry and Ukrai-nian Rites and Customs], 1947) and I. Ohienko's *Dokhry-styians'ki viruvannia ukrains'koho narodu* (Pre-Christian Beliefs of the Ukrainian People, Winnipeg 1965).

Etnografichnyi visnyk (Ethnographic Herald). Irregular publication of the *Ethnographic Commission of the All-Ukrainian Academy of Sciences. Ten volumes appeared in Kiev in 1925-32. Its editors were A. Loboda and V. Petrov. D. Revutsky, K. Kvitka, P. Popov, D. Yavornytsky, V. Peretts, V. Kaminsky, B. Navrotsky, and others collaborated with the journal. It ceased publication when the Ukrainian Academy of Sciences was severely re-pressed at the beginning of the 1930s, and all of its serial publications in the humanities were discontinued.

Etnografichnyi zbirnyk (Ethnographic Collection). Serial publication of the *Ethnographic Commission of the Shevchenko Scientific Society in Lviv; it began publica-tion in 1895, and a total of 40 volumes appeared. *Etnografichnyi zbirnyk* published folk songs, carols, proverbs, and other materials in the field of *ethnography collected mostly in Galacia and Transcarpathia; its editors were I. Franko, V. Hnatiuk (22 vols), S. Liudkevych, and others.

Etymological spelling. A system of spelling based not on contemporary pronunciation (phonetic spelling), but on the principle of preserving the traditional notation of words, regardless of subsequent changes in pronuncia-tion. Viewed synchronically, etymological spelling is characterized by the preservation of the same spelling of a morpheme regardless of its changing pronunciation in different inflexional positions (eg, *pot* - *potu* [sweat, nom-gen sing] for the pronunciation *pit* - *potu*). Since pronunciation changes with time, all spellings gradually become etymological. The phonetic spelling introduced by St Cyril in the 9th century to denote the words of the *Church Slavonic language had already become historical when it was introduced in Ukraine through Christian writings in the 10th century. With the exception of the sporadic deviations of individual authors and the intro-

duction of the *hrazhdanka* alphabet in the first half of the 18th century, the Cyrillic orthography preserved its historical-etymological character in Ukraine well into the first half of the 19th century. At this time reforms were introduced in the direction of phonetic spelling (the *kulishivka* [P. Kulish's spelling], with modifications by B. Hrinchenko, and the *zelekhivka* [Ye. Zelekhivsky's spelling] in Galicia and Bukovyna). In 1821 and 1841 M. Maksymovych promoted etymological spelling as the standard writing system for the Ukrainian language (*maksymovychivka*), but it caught on only in Galicia and Bukovyna, where it was used in schools until 1893. (Russophile publications used this spelling to the end of the 1930s, and it was used to this time as well in Transcarpathia in the form of the *pankevychivka* orthography.) The resistance to the adoption of etymological spelling was closely related to the political struggle for the independence of Ukraine, with its inherent fight against Russophilism, and with its attempts to introduce the vernacular and themes from the life of the common people into Ukrainian literature.

G.Y. Shevelov

Etymology. The study of the origins and history of words; a relatively underdeveloped area of linguistics in terms of the Ukrainian language. There were some early haphazard attempts to etymologize this or that word, but etymologizing on a relatively broad scale was undertaken for the first time by P. Berynda in his *Leksykon slavenorosskyi* (A Slavic-Ruthenian Lexicon, 1627), mostly in application to loan words. Berynda's work was done unsystematically and subjectively, because at that time the comparative method had not yet been developed. The foundations of precise etymology in the modern sense were laid by O. *Potebnia, particularly in his series of publications *K istorii zvukov russkogo iazyka* (On the History of Sounds in the Russian Language, 1876–83), but also scattered in his other publications. His etymologies are based on a fairly strict use of the comparative method and use a broad background of mythology, folklore, and history. This combination of precision with the broad 'romantic' approach was mostly lost in the work of later etymologists, such as G. Ilinsky (in his 'Slavianskie etimologii' [Slavic Etymologies, 1908–30], 'Ukrainskie etimologii' [Ukrainian Etymologies, 1933–4], and other scattered publications) and P. Buzuk (in 'Ukrains'ki etimolohii' [Ukrainian Etymologies, 1926–7]). With the wave of terror against Ukrainian linguists and linguistic institutions in the 1930s, etymological work in the Ukrainian SSR came to a complete standstill. Only when Ukrainians in Canada produced the first issues of *An Etymological Dictionary of the Ukrainian Language* (1966–82) by J.B. Rudnyckyj was it decided at the Institute of Linguistics of the Academy of Sciences of the Ukrainian SSR in Kiev that *Etymolohichnyi slovnyk ukrains'koi mowy* (Etymological Dictionary of the Ukrainian Language) should be prepared. Initially R. Kravchuk was entrusted with this task, but the first issue prepared by him was rejected. Then a special research group, guided by O. Melnychuk, was created. Reportedly, a seven-volume dictionary was prepared by 1978, but the first volume (A–H, introducing the phoneme *g*) was published only in 1982.

For the want of complete and satisfactory etymological dictionaries of Ukrainian, general Slavic etymological dictionaries may be consulted. They are of two basic types: dictionaries of the attested Slavic languages and dictionaries of Common Slavic. The most important dic-

tionaries of the former type are F. Miklosich's *Etymologisches Wörterbuch der slavischen Sprachen* (Vienna 1886), basically a juxtaposition of data from several Slavic languages, including Ukrainian; E. Berneker's incomplete *Slavisches etymologisches Wörterbuch* (A–mor, 1924), typically neogrammarian in its approach in which Ukrainian is insufficiently used; and L. Sadnik and R. Aitzemüller's *Vergleichendes Wörterbuch der slavischen Sprachen* (1963–), which is broader in scope and more modern in method, but is far from being finished. Dictionaries of Common Slavic select only those words that their compilers consider to have been used in Common Slavic. The most important of them, all incomplete as of this time, are *Etymologický slovník slovanských jazyků* (An Etymological Dictionary of Slavic Languages, Prague 1973–), *Etymologicheskii slovar' slavianskikh iazykov* (Etymological Dictionary of Slavic Languages, 1974–) by O. Trubachev, and *Słownik prasłowiański* (Dictionary of Common Slavic, 1974–) by F. Sławski. While incomplete in their selection of words, these dictionaries have the advantage of dealing with entire words and not just word roots as was typical of neogrammarian undertakings. Ukrainian material is also treated marginally in all etymological dictionaries of individual Slavic languages, especially in M. Vasmer's *Russisches etymologisches Wörterbuch* (1953–8; Russian translation and supplements by O. Trubachev, 1964–73), but his Ukrainian material is both unsystematic and, often, unreliable.

G.Y. Shevelov

Eurasianism. An ideological-political movement among Russian intellectuals who emigrated in the 1920s–1930s. Its basic tenet was that the territories of the Russian Empire (Eastern Europe and northern Asia) form a geographical and a cultural-political whole distinct from either Europe or Asia. According to the doctrine of Eurasianism, the Russian people and the Orthodox church provide the spiritual and political leadership in Eurasia, which is historically rooted in the Mongol legacy, tsarist imperialist policy, and the messianic Orthodox doctrine of the Third Rome. The Eurasianists were hostile to European culture and to Western political systems. The movement was also hostile to the Ukrainian national problem and to the idea of political self-determination for the different peoples of Russia. It even frowned on their cultural independence. According to the Eurasianists, Ukrainian culture was only a regional variant of the general Russian culture. To regard it as a national culture was thought to be harmful to the Eurasian cause. The main spokesmen of the movement were Prince N. Trubetskoi, G. Florovsky, V. Ilin, S. Frank, L. Karsavin, and P. Savitsky and G. Vernadsky (both scholars of Ukrainian origin). In the interwar period the Eurasianists published several periodicals, among them *Evrasiiskii sovremennik* and *Evrasiiskaia khronika*.

Mytsiuk, O. *Evrasiistvo* (Prague 1930)

V. Markus

Eusebius Gospel. A handwritten aprakos of 140 folios that was copied by 'Eusebius, the priest's son' at St John's Church in 1283 in Kholm or Peremyshl (according to M. Hrushevsky). The script is characterized by the appearance of *o* and *e* instead of *ъ* and *ь* in positions where they

are not pronounced, of the new *ě*, and of other Ukrainian features. The manuscript is preserved in the Lenin Library in Moscow. The language of the Eusebius Gospel was studied by A. Sobolevsky (1898) and H. Holoskevych (1914).

Evangelical Christians. The beginning of the evangelical movement in Ukraine dates back to the late 14th century. There was a rationalistic sect, the *strigolniki* (shearers), in Novgorod. After their condemnation, some of them escaped to Galicia. The *biczownicy* or *pokutnicy* (flagellants or penitents) in 13th- and 14th-century Poland may have also wandered through Ukraine. A more prominent role was played by the sect of *zhidov-stvuiushchie* (Judaizers). Working on translations of the Old Testament, they anticipated some of the principal ideas of the Reformation.

The *Reformation first reached Ukraine in the 15th century through Hussite refugees from Bohemia. By the middle of the 16th century Calvinism reached Ukraine. By then some communities of 'new believers' already existed in the western territories of Ukraine. They had their own preachers and schools and were organized into three Reformation 'districts': Ruthenia, the Belz land, and Podlachia. However, Calvinism made little headway among the masses. As a new vogue, the 'new faith' found its converts primarily on the estates of the Ukrainian nobility, such as the Hoisky, Nemyrych, and Chaplych families, as well as among the burghers. Among the 'new faith' movements, Antitrinitarianism became especially popular. It became well established in Volhynia (Kyselyn, Hoshcha, Berestechko, and other large estates), where there were at least 25 congregations. The Calvinists made significant contributions to the growth of cultural life. They translated the Holy Scriptures into Belorussian and Ukrainian. A series of Ukrainian translations appeared (V. Nehalevsky's New Testament in 1581, V. Tiapynsky's Gospel, the Peresopnytsia Gospel in 1556-61, and others).

Lacking support among the lower strata of the population, the Protestant movements did not survive. The Counter-Reformation dealt them a destructive blow. By the beginning of the 17th century (1608), a Jesuit college was already in operation in Lviv. Jesuit schools were also opened in a number of other places and played a major role in winning the most capable Protestant and Orthodox youth to Catholicism.

Wars, political changes, and the pressures of occupying powers all affected the higher social strata, arresting the further development of Protestantism. Nevertheless, there were individuals among the leading circles of Ukraine who took a somewhat critical attitude towards the formalism, doctrine, and practices of the dominant churches (H. Skovoroda, T. Shevchenko, P. Kulish, M. Kostomarov, M. Drahomanov, I. Franko, and others). The Protestant movement was reborn in the 19th century among a completely different social group and in response to different stimuli.

The rebirth of Protestantism. At the end of the 18th and the beginning of the 19th century, many immigrant farmers from Western Europe, especially from Germany, settled in Ukraine, mainly in the south. Among them were active Lutherans, members of the Reformed church, and Protestants of other confessions.

Among these denominations were the *Mennonites. Each congregation was independent in its faith and

organization. The Mennonites, along with other immigrants from Germany, settled in the steppe regions of Odessa and Molochna and in the cities of Katerynoslav (now Dnipropetrovsk), Kherson, and Kharkiv. Before the First World War they numbered 75,000. Together with other Germans, they suffered very much at the time of the revolution and civil war. In order to save themselves, thousands left for Canada in the 1920s. Although as late as 1925 the Ukrainian Mennonite General Conference was attended by 84 delegates representing 25,000 organized members, there are almost no Mennonites in Ukraine now. A similar fate befell other religious groups of German and other colonists who settled in the various gubernias of Ukraine.

The contacts of the indigenous population with German settlers gave rise in the mid-19th century to a mass movement of evangelical Christianity, popularly called Stundism. Local Ukrainian peasants who were hired to work for the wealthy colonists participated in German homes or churches in religious gatherings for the study of the Holy Scriptures. These gatherings were called hours (*Stunde* in German). This movement, initially close to Calvinism but with a pietist coloring, later acquired a distinct Baptist character (after 1868). At this time German *Baptists conducted particularly intensive missionary activity among the Germans in Ukraine. The Union of Baptists in Russia, which was recognized by the Russian government, was organized in 1884. However, this movement had little influence among Ukrainians, since it was far removed from major social concerns, was under Russian influence, and used the Russian language in its Baptist congregations. This worked against the cultural-national interests of the Ukrainian people, and some national alienation is still noticeable among many Ukrainian Baptists. The Evangelical Christians and Baptists were particularly numerous in Kherson, Katerynoslav, Kiev, and Volhynia gubernias. Later the government authorities and the dominant Orthodox church joined in combating these movements, and many of their adherents were deported to Siberia. The position of the Evangelical Christians and Baptists improved with the proclamation of the toleration edict in 1905. This also contributed to the later emergence of new currents, such as the Pentecostal Christians.

The earlier religious persecution in Russia forced large numbers of Ukrainian Evangelical Christians and Baptists to emigrate to North America in the 1880s and 1890s. Many of their descendants now live in the state of North Dakota.

The mystic sects of Russian origin occupied a separate place among the religious currents in Ukraine, although they shared some traits with the Baptists. Their beliefs did not spread among the native population. Of these sects (Khlysts, Doukhobors), the most widespread group was the Molokans, who settled in southern Ukraine in the second half of the 18th century. Their only native Ukrainian offshoot was the Malovantsi sect in Kiev gubernia, but it was unable to win many adherents.

The situation in the USSR. Until the revolution there were two main Baptist groups in the Russian Empire: the Union of Baptists and the Union of Evangelical Christians. The differences between them were not substantial. At present in the USSR there are nearly 5,000 Baptist congregations with over half a million members, who are officially united in the All-Union Council of Evangelical

Christians and Baptists. (These data are only projections, as are all statistical data on religious groups in the USSR.) Based in Moscow, the council heads the Ukrainian Baptists and appoints local presbyters. The council embraces the following groups: Evangelical Christians, Baptists, Pentecostals, Adventists, and Mennonites. Those of the faithful who do not wish to subordinate themselves to Moscow's leadership are particularly persecuted.

Lutheran churches were located primarily in the cities, especially in Western Ukraine. Many Lutherans were persecuted after the revolution of 1917–18. This church has virtually disappeared from the Ukrainian lands, although in 1914 the Lutherans had 234 congregations with 225 clergymen. (Most of the Lutherans were German by origin.)

The Ukrainian Protestant churches in Western Ukraine. Between the two world wars the Protestant churches in Polish-controlled Western Ukraine developed along different paths than those in Soviet Ukraine. In Galicia and Volhynia the influence of Ukrainian Protestants in Canada and the United States (united in the *Ukrainian Evangelical Alliance of North America) contributed, in 1925, to the rise of a Calvinist-type of reformational movement that formed the *Ukrainian Evangelical-Reformed church, with a consistory in Kolomyia. This church, led by Bishop V. *Kuziv, benefited from the temporary protection of the Evangelical-Reformed church in Poland. It was composed of 35 congregations and had almost 5,000 official members, who were served by 17 preachers. Their organ was the monthly *Vira i nauka*.

The Ukrainian Lutherans were organized in the *Ukrainian Evangelical Church of the Augsburg Confession. This church had over 20 congregations with 16 preachers and some 5,000 members. Among their leaders were pastor T. Yarchuk, who perished in a Soviet prison, and pastor I. Shebets. The Lutheran organ was the monthly *Stiah*. The church's headquarters was located in Stanyslaviv. This group profited from the legal guardianship of the German evangelical superintendent in Galicia.

With the Soviet occupation of Western Ukraine in 1939, the Ukrainian Reformed and Lutheran churches were liquidated. Many preachers and members were exiled to Siberia; others managed to escape to the West.

The Western Ukrainian Evangelical Christians and Baptists outside Galicia remained to a great extent under foreign influence, although their desire to have their own national organization and leadership grew. They published the monthly **Pislanets' pravdy* in Lviv, edited by Rev L. Zhabko-Potapovych. The number of Evangelical Christians and Baptists grew between the two world wars, especially in western Volhynia, where they had built many new prayer houses and enjoyed substantial moral and material assistance from the Baptist churches in Western Europe and America. The war and the Soviet occupation did not interrupt the activities of their congregations, but they were henceforth subordinated to the leadership of Moscow.

Ukrainian Protestants abroad. Outside the Soviet bloc Ukrainian Protestant groups have developed freely. They were strengthened by the postwar arrival in the United States and Canada of considerable numbers of more nationally conscious Ukrainian Protestants. It is estimated that their total membership approaches 150,000, of

which 100,000 live in Canada and 50,000 in the United States.

Evenbakh, Semen [Evenbax], b 20 April 1870 in Kharkiv; d 31 January 1937 in Kiev. Stage designer. From 1901 to 1916 and again from 1921 Evenbakh worked with the Kiev Theater of Opera and Ballet, designing many sets, including those for productions of G. Verdi's *Aida*, E. Wolf-Ferrari's *The Jewels of the Madonna*, A. Pashchenko's *Orlynyi bunt* (The Eagle's Rebellion), M. Lysenko's *Natalka Poltavka*, and M. Rimsky-Korsakov's *Christmas Eve*.

Evliya, Çelebi, b 25 March 1611 in Istanbul, d ca 1682 in Istanbul. Turkish traveller and writer. Starting in 1640, Evliya journeyed for over 40 years throughout the Ottoman Empire and neighboring countries, including Ukraine. An account of his travels appeared as the 10-volume *Seyahatnâme* (Book of Travels), a work that contains much valuable historical material on Ukraine, including descriptions of Ukrainian cities, information on the lifestyle and the ethnic composition of the population, and facts about the struggle of the Ukrainian Cossacks against the Turks and Tatars.

Evpatoriia. See Yevpatoriia.

Ewach, Honore [Ivax, Onufrij], b 25 June 1900 in Pidfylypia, Borshchiv county, Galicia, d 2 May 1964 in Winnipeg, Manitoba. Poet and author. Ewach came to Canada in 1908. He graduated from the University of Saskatchewan in 1929, and then lectured at the Mohyla Ukrainian Institute in Saskatoon before joining the editorial staff of *Ukraïns'kyi holos* in Winnipeg in 1932. Among his poems is the collection *Boiova surma Ukraïny* (The Battle Trumpet of Ukraine, Winnipeg 1931); his best-known prose work is *Holos zemli* (The Voice of the Earth, Winnipeg 1937), a novel about Ukrainian-Canadian pioneering life.

Ewasew, John [Ivasiv, Ivan], b 13 March 1922 in Grenfell, Saskatchewan, d 26 March 1978 in Montreal, Quebec. Lawyer and senator. As president of the Mount Royal Liberal Association in Montreal, Ewasew was responsible for the 1968 and 1972 election campaigns in Prime Minister P. Trudeau's constituency. From 1969 to 1978 he served on the Manpower and Immigration Council of

Canada, and in 1976 he was summoned to the Senate of Canada.

Exarch. Title of a hierarch in the Eastern church since the time of the first ecumenical councils. An exarch is a patriarch's representative with permanent functions, residing wherever he is sent by the patriarch. Usually his task has been to preserve a patriarch's power over a church province that wants to secede. In Byzantium the title of exarch was often bestowed on a person who was given certain important temporary secular, as well as ecclesiastical, assignments. After the patriarchate in Russia was abolished, Metropolitan S. Yavornytsky bore the title of exarch. In Ukraine in the second half of the 16th century, Patriarch Jeremiah II bestowed the title on the bishop of Lutske, K. Terletsky, and ordered him to counteract Metropolitan M. Rohozá's plans for a church union with Rome. Metropolitan P. Mohyla also bore the title of exarch. In 1921–37 the autonomous Orthodox church in Ukraine formed an exarchate. Its exarchs were Archbishop M. Yermakov and Metropolitan K. Diakov.

The Kiev metropolitan of the present Russian Orthodox church has the title 'patriarchal exarch of Ukraine,' but there are no jurisdictional functions associated with the title. The following have held the office of exarch of Ukraine: I. Sokolov (1944–64), Y. Deliukhin (1964–6), and F. Denysenko (1966–).

The Ukrainian-Catholic bishops in the United States, Canada, and South America at first held the title of exarch (of Stamford, Pittsburgh, Winnipeg, Toronto, Saskatoon, Edmonton, Argentina, Brazil, and Australia) and exercised the ordinary eparchial powers over their congregations. These powers were granted to them by the pope as the universal patriarch of the Catholic church. Apostolic exarchates for Catholics of the Eastern rite were established in Great Britain in 1957, in Argentina in 1958, in West Germany in 1959, and in France in 1960.

I. Korovytsky

Exchange. The place where trade in commodities, services, securities, or currency takes place through brokers. The first exchanges in Ukraine were established in Odessa in 1796, in Kiev in 1815, and in Kharkiv in 1818. The emancipation of the serfs in 1861 opened up new opportunities for investment. In 1865 a commodities exchange and a stock exchange were set up in Kiev. The commodities exchanges in Odessa and Kremenchuk began to deal also in securities and foreign currency. Until 1917 commodities and stock exchanges were usually in one place. During the New Economic Policy period (1922–7) there were four private stock and currency exchanges in Ukraine – in Kharkiv, Odessa, Kiev, and Berdychiv. In 1926 a state exchange was established in Kharkiv to compete with the private exchanges. For a time evening stock exchanges handled securities that were not accepted at the regular exchanges. In 1930 all exchanges in Ukraine were closed down.

Executive committee (*vykonavchyi komitet* or *vykonkom*). Soviet administrative executive body of a territorial unit. In the Ukrainian SSR the *All-Ukrainian Central Executive Committee governed the republic until 1936, along with gubernia (later *okruha* and then *oblast*), county and *volost* (later *raion*), city, and rural executive committees (see *Administrative territorial division). Today there are *oblast*,

city, *raion*, town (*smt*), and rural executive committees. Their members are elected by the deputies of soviets at the respective levels. In rural areas only the larger soviets elect executive committees. The work of the committees is strictly centralized. Their departments and agencies are formally subject to a dual hierarchy – to their respective soviets and to the special departments of the higher executive committees. In fact they are completely subordinate to the committees of the Communist party.

Exhibition of Economic Achievements of the Ukrainian SSR (*Vystavka dosiahnen narodnoho hospodarstva URSR*). A permanent exhibition of the various branches of the economy and culture of the Ukrainian SSR opened in 1958 in Holosiieve near Kiev. The exhibition consists of a complex of pavilions (30 by 1980), structures, and open areas, which together cover 340 ha. The exhibits are divided into three groups: (1) industrial, construction, and transport (thirteen pavilions), (2) agricultural (eight pavilions), and (3) scientific and cultural (seven pavilions). Participants in the exhibition (institutions, enterprises, or individual workers) that distinguish themselves are awarded monetary prizes and citations. Thematic exhibits, scientific conferences, seminars, and foreign exhibits are held on the premises of the exhibition. The exhibition attracts 1.8–2 million visitors annually.

Exile. A form of punishment consisting of forced deportation to a distant locality, based on a court sentence or on an administrative ruling. In contrast to expulsion, exile involves a designated place of residency and often compulsory labor as well. In Ukrainian the foreign term *deportation* has acquired a special meaning: the mass exile of whole groups of the population under terror. As a specific form of deprivation of freedom, exile has been known since early historical times. In the Princely era banishment from the community (*vysslady iz volosty*) and even from the country (*vybyty von iz zemli*) was tied to the confiscation of property (see *Banishment and seizure) and constituted one of the severest public penalties. In Lithuanian-Ruthenian law banishment was called *vyvolannia* and was one of the so-called substitute penalties. In the Hetman state banishment from the community was imposed as a supplementary form of punishment. In contrast to exile, banishment was limited to the severance of ties with the community: the banished person could reside wherever he/she wished outside the community. Exile as a form of punishment was rarely used. It applied mainly to religious crimes, such as heresy and schism. Later, under the influence of Russian criminal law, exile was included in the *Code of Laws of 1743. Exile could be temporary or permanent.

Many Cossack officers were exiled to Muscovy during tsarist repressions: the hetmans P. Doroshenko ('honorary' exile), D. Mnohorishny, and I. Samoilovych; the Mazedist émigré A. Voinarovsky; the last *otaman* of the Zaporozhian Sich, P. Kalnyshesky; and many others.

In the 18th–19th century exile was very common in the Russian Empire. Peter I exiled people to hard labor, called *katorga*, such as building fortifications and ports (Azov and St Petersburg, which was said to have been built on 'Cossack bones'). With the conquest of Siberia many exiles were sent to that region. Caucasia and northern Russia were other common areas of exile. Exile could be imposed by a court or by administrative fiat. It was often

perpetual, but those who had served their term of imprisonment could join village communes. Besides common criminals, politically suspect individuals were exiled. In 1897 half of the non-indigenous population of Siberia consisted of exiles or their descendants.

In the 19th–20th century the Russian government exiled many Ukrainian figures: T. Shevchenko, M. Kostomarov, P. Kulish, O. Konysky, P. Hrabovsky (died in exile in Yakutsk), to name but a few. Their punishment took various forms, including exile with military service.

Austrian jurisprudence, like the law of most democratic countries, allowed the use of expulsion from a province or from the country as a punishment in itself or as a supplement to other punishment. In Austria only a foreigner could be expelled from the country. Citizens could be banished from a certain province only. This was also true of Poland and Czechoslovakia in 1920–39.

Under the Soviet regime exile became a systematic device, applied not only to court-sentenced individuals but also, at various times, to whole nations or social groups, which were deported en masse to hard-labor camps. In the USSR exile has become both a principal and a supplementary form of deprivation of freedom. It can be either ordinary exile, which merely restricts an individual's residency to a designated remote locality, or exile with 'corrective labor.' Since 1933 exile has involved, as a rule, forced labor. Although the Soviet criminal code originally stipulated 10 years as the maximum term of exile, special decrees such as the 4 June 1947 decree of the Presidium of the Supreme Soviet of the USSR have raised the term to 20 or 25 years. The 1961 Criminal Code of the Ukrainian SSR recognized exile for two to five years as the main form of punishment or as a supplementary form of punishment. Escape from exile is punishable by deprivation of freedom equal to the balance of the term of exile, but not exceeding two years. Exile is mostly used as a punishment for 'counterrevolutionary' or 'anti-Soviet' activity. At the beginning of the Soviet period some political leaders were still expelled abroad and deprived of citizenship. This practice was resumed in the 1970s when well-known dissidents such as A. Solzhenitsyn and P. Hryhorenko were deprived of their citizenship and were expelled. Exile could be imposed by a court or by the administrative decision of the Special Commission of the *НКВД or, later, of the МВД or the *КГБ. In the 1960s–1970s many prominent Ukrainian dissidents or human-rights activists were exiled, particularly to the Asian parts of the USSR.

In the Soviet period most of the exiles from Ukraine were participants in the national-liberation struggle and insurgents, members of the upper classes, wealthier peasants (kulaks), intellectuals, clergy, and purged Ukrainian Communists. (See also *Concentration camps.)

V. Markus

Expressionism. A movement in the plastic arts that originated during and immediately after the First World War and had the greatest impact in Germany and Austria. The expressionists revolted against representational conventions and sought a new spontaneity and an intensity of inner vision. From this followed the intensely subjective expression, emotivity, exaggeration, and distortion that are typical of the movement. In Ukrainian art expressionism was quite moderate and was represented mainly by O. Novakivsky, A. Petrytsky, O. Hryshchenko, M.

Butovych, M. Radysh, and partly by A. Archipenko (in sculpture). J. Solovij, L. Hutsaliuk, and other modern painters in the West have been influenced by American (the so-called New York) expressionism.

In literature, as in painting, expressionism emphasized the inner significance of things and not their external forms. It paid more attention to the effect of imagery, language, and sound than to content, in order to evoke a state of mind. In Ukrainian literature, the reverberations of expressionism did not last long, although they left their mark on poetry, prose, and drama. In the 1920s, the poet V. Polishchuk was influenced by German expressionists such as W. Hasenclever, K. Edschmid, and J. Becher. The most important representative of expressionism in Ukrainian literature was M. Khvylovy; his short stories were a combination of expressionism and neoromanticism. The poetic expressionism of T. Osmachka (in his first collection, *Krucha* [Precipice 1922]) and M. Bazhan was fresh and original. In drama M. Kulish's *97* and *Narodnyi Malakhii* (The People's Malakhii) and I. Dniprovsky's *Liubov i dym* (Love and Smoke) and *lablunevyi polon* (Apple-Blossom Captivity) showed an affinity to expressionism. Dniprovsky's prose was also expressionistic (eg, *Dolyna uhrii* [The Valley of the Hungarians]). Elements of expressionism are also evident in the poetry and plays of I. Bahriany. At the beginning of the 1930s socialist realism was imposed by the Soviet authorities and thus expressionism declined and disappeared. The expressionists became victims of political persecution. M. Khvylovy committed suicide; others (V. Polishchuk and M. Kulish) perished in Stalin's camps, fell silent, or followed the official Soviet cultural line (M. Bazhan).

S. Hordynsky, I. Koshelivets

Expropriation. Forced seizure of private property by the state or community, usually for the purpose of building public facilities such as roads or buildings. Expropriation may or may not be accompanied by compensation. Expropriation without compensation is known as requisition or confiscation and applies usually to movable goods. Expropriation is normally carried out by competent government agencies according to special laws. In Ukraine church and monastery wealth was expropriated without compensation during the reign of Joseph II of Austria and under the Soviet regime. Under the various governments that ruled Ukraine, the expropriation of land for the building of railways and roads was governed by a complex system of laws.

Nationalization – the state's acquisition of land, industries, transportation, buildings, and so on – is a special form of expropriation and is applied particularly in socialist countries. The land laws of the Ukrainian National Republic and the Western Ukrainian National Republic, which applied to large private, church, and, partly, state landholdings, aimed at forming a land fund out of the holdings and provided compensation to the owner (see *Land reform). The Ukrainian SSR adopted the laws of the Russian SFSR dealing with the nationalization of land, surface waters, mines, forests, banks, transportation, industry, and trade (in several stages) without compensation. In Communist terminology this is called the expropriation of the expropriators. It was applied with great vigor in the period of War Communism, even in relation to goods of everyday use, apartments, valuables, and the like.

V. Markus

Extramural education. Cultural and educational work among adults and young people that is carried on outside the school system by private, civic, or government organizations. In the second half of the 19th century, in central and eastern Ukraine this type of work was limited to adult education, particularly for the peasantry and workers, and was conducted by individuals or by civic groups at *Sunday schools and later at the *zemstvo schools, at *public libraries and reading rooms, and through *public readings, *literacy societies, Ukrainian clubs, and *Prosvita societies (in 1906–12 and during Ukrainian independence in 1917–20). In Western Ukraine extramural education was conducted by civic organizations: *Halytsko-Ruska Matytsia, Prosvita, the *Kachkovsky Society, *Skala, and others in Galicia; *Ruska Besida in Bukovyna; the *Society of St Basil the Great, the *Dukhnovych Society, and Prosvita in Transcarpathia; Prosvita in Volhynia; and *Ridna Khata in the Kholm region and Podlachia. Women's organizations, student groups, and youth organizations also were active in this field. In spite of administrative restrictions on the expansion of extramural education in central and eastern Ukraine, which were under Russian rule, Ukrainian civic organizations and educators who worked in this field were able to exert some influence on the content and method of instruction.

In central and eastern Ukraine, after a brief period of development during Ukrainian independence (resulting in the opening of 3,142 libraries, 4,322 local Prosvita societies and *people's homes, and 5,620 *reading houses and *village centers by June 1921), the Soviet authorities introduced a government and Party-controlled system of extramural education. The program was prepared by the Communist party and was restricted almost completely to *political education. Even the *elimination of illiteracy campaign, which was begun in 1923 under the motto 'Away with illiteracy,' was carried out with the purpose of re-educating the masses. Communist methods of *agitation and propaganda were used in extramural education to achieve Communist goals. After the abolition of the Prosvita societies and people's homes, extramural educa-

tion was conducted at clubs and *palaces and houses of culture in the cities; at clubs, village centers, and reading houses in the rural areas; in recreation halls and at reading rooms known as *red corners at industrial enterprises; and on collective and state farms. In 1979 there were 26,049 club-type institutions in the Ukrainian SSR, of which 20,655 were under the supervision of the Ministry of Culture, 2,010 belonged to collective farms, and 3,384 to union organizations. The cinema, theater, and especially radio and television, as well as museums and public libraries (26,097 in 1982), are also important instruments of extramural education. In 1947 the Society for the Propagation of Political and Scientific Knowledge, which in 1963 was renamed the *Znannia Society of the Ukrainian SSR, became the principal institution of extramural education. It is a voluntary organization and is subject to the directives of the Communist party. In 1979 the association employed 684,700 lecturer-propagandists.

Various institutions under the direction of the *Communist Youth League of Ukraine provide a Communist upbringing and supervised recreation for children and adolescents – *Pioneer palaces and houses, clubs, *stations of young technicians, *stations of young naturalists, excursion bases, summer camps, and so on. Extracurricular activities for children and youth are conducted at young people's libraries, *young spectators' theaters, sports schools, and so on. Some adult institutions also have special sections for children and adolescents.

Outside Ukraine extramural education for Ukrainians is provided in Poland by the *Ukrainian Social and Cultural Society, in the Prešov region of Slovakia by the *Cultural Association of Ukrainian Workers, and in Yugoslavia by the Prosvita society until 1940 and now by other cultural and educational associations. In other countries with organized Ukrainian communities, extramural education is provided by Prosvita societies, women's associations, and youth and other cultural and educational organizations.

I. Bakalo

Eyewitness Chronicle. See Samovydet's Chronicle.

F

Fable. A brief tale, in either prose or verse, with a moral point. Frequently the main characters are animals. Classical Greek (Aesop) and French (J. de La Fontaine) fables often contained satire and were imitated in other countries. In Ukraine fables were frequently used in the 17th century (at the Kievan Mohyla Academy) to illustrate lectures on poetics and rhetorics. The first Ukrainian author of a collection of fables was H. Skovoroda, whose *Basni Kharkovskie* (Kharkiv Fables, 1769–74) contained 30 fables. Written in prose, they display local color and contain humorous aphorisms and proverbs. The narrative is laconic, generally in the form of a dialogue. They are devoted to the defense of a virtuous and useful Christian life, with occasional satire upon human vanity.

Many Ukrainian classicists wrote fables, a genre that easily lent itself to adaptation. I. Kotliarevsky is reported to have translated La Fontaine's fables, but these translations have been lost. P. Biletsky-Nosenko wrote many fables between 1812 and 1829, which were first printed in 1871. P. Hulak-Artemovsky is well known for his fable 'Pan ta sobaka' ('The Master and His Dog,' 1818), which contains satirical overtones directed against serfdom. L. Borovykovsky was the author of much weaker fables written before 1836 and published in 1852. The greatest classicist writer of fables was Ye. Hrebinka, the author of a slim volume of *Malorosyiskie prikazki* (Little Russian Fables, 1834). Although based on I. Krylov, his fables are considered masterful because of the skillful use of the narrator and of the vernacular language.

In the 1860s the best fables were written by L. Hlibov (published in 1872), the most prominent Ukrainian fabulist. He surpassed other writers in the 19th century, including B. Hrinchenko, V. Samiilenko, S. Rudansky, I. Franko, M. Starytsky, and I. Manzhuira.

In the Soviet period fables tended to demonstrate social satire and the class struggle. Original, realistic fables with a revolutionary ideology were written by V. Ellan-Blakytyn (under the pseudonym Valer Pronoza). Other prominent fabulists of the 1920s were S. Pylypenko and M. Hodovanets. Soviet fables today are often vehicles for anticapitalist propaganda.

Factory legislation. Laws, decrees, and directives governing hired labor in factories, plants, and other enterprises. The term *factory legislation* was used in prerevolutionary Russia. In the USSR factory legislation is a part of *labor law.

In 1722 Peter I established the 13½-hour work day in the factories and appointed a government inspector to see

that the law was respected. The first partial act of factory legislation came into effect in 1835 and dealt with the relations between the workers and the factory owners. In the second half of the 19th century the tsarist government issued several laws regulating work at industrial enterprises: in 1882, a law on the 8-hour work day for minors (between 12 and 15 years of age); in 1886, a series of regulations on hiring industrial and farm workers and on their relations with their employers; in 1897, a law instituting an 11½-hour work day for ordinary workers; in 1899, a law establishing factory police; in 1903, an act establishing the office of factory mediator (*starosta*) to settle conflicts between workers and employers; in 1905, a law recognizing the workers' right to strike (except for government employees, workers in enterprises with a national significance, and, after 1906, farm workers); and in 1912, a law on insurance and sickness and accident compensation.

In 1917 the Russian Provisional Government in Petrograd and the Ukrainian Central Rada in Kiev passed a number of progressive acts of factory legislation dealing with such matters as work safety, the exclusion of minors and women from night work, and the introduction of factory and plant committees. The Central Rada's Third Universal brought in the eight-hour work day and government control over production. The workers' factory and plant committees that were formed in March and April 1917 were to propose wage scales for the new collective agreements, look after improving working and living conditions, and introduce *workers' control in enterprises. At first the committees were non-partisan, but eventually many of them came under Bolshevik control. Certain committees tried to preserve their independence even after the Bolshevik coup d'état; it was from these committees that members of the Workers' Opposition arose in the 1920s. In January 1918 the Bolshevik government merged the factory committees with the trade unions.

In imperial Russia the implementation of factory legislation was supervised from 1882 by factory inspectorates, which nevertheless monitored only private enterprises, excluding mines. In Ukraine there were two factory inspectorates: the Kiev inspectorate, which encompassed seven Ukrainian gubernias, and the Kharkiv inspectorate, which encompassed two Ukrainian gubernias. Each inspectorate had a senior factory inspector and permanent bureaus in each gubernia, which supervised individual factories. Each bureau (*prisutstvie*) consisted of high officials in the gubernia administration, including the head of the department of gendarmes. The inspection system continued to function under the Central Rada. In March 1919 the Council of People's Commissars of the Ukrainian SSR turned this system into the Soviet labor inspection system.

V. Markus

Factory seven-year school (Fabrychno-zavodska semyrichka, fzs). An incomplete secondary school in the Ukrainian SSR that was introduced in industrial settlements in the second half of the 1920s on the model of the general *seven-year school for the purpose of combining a general education with an introduction to the production process of the neighborhood enterprise. The factory seven-year schools had no practical significance and were turned into normal seven-year schools when the school system was reorganized in 1934.

Fadeichev, Vladyslav [Fadejičev], b 10 November 1906 in Kharkiv. Architect. Fadeichev graduated from the department of architecture of the Kharkiv Art Institute in 1930. In the 1950s–1960s he collaborated on a number of projects with B. Dzbanovsky and others. His main achievements are the Club of Engineers and Technicians in Lysychanske (1951), the Drama Theater in Makiivka (1951), the Technology Building in Voroshylohrad (1953), and the Ukrainian State Planning and Design Institute in Kiev. He was one of the city planners of Novovolynske and other towns. In 1971 Fadeichev began to lecture at the Kiev Institute of Civil Engineering.

Faience industry. See Porcelain and ceramics industry.

Fainshmidt, Isak [Fajnsmidt], b 18 June 1875 in Orel, Russia, d 25 April 1940. Therapist and phthisiologist. Fainshmidt was a founder and the director of the first Ukrainian Tuberculosis Institute in Kharkiv (1917–22). In 1923 he was appointed to the chair of tuberculosis and then became the head of the therapy department of the Kharkiv Medical Institute. Among his works on internal diseases the most important ones are *K voprosu o tuberkuleze i gipertireoze* (On the Problem of Tuberculosis and Hyperthyroidism, 1926) and *Rak legkogo i tuberkulez* (Lung Cancer and Tuberculosis, 1940).

Fair (Ukrainian: *yarmarok*, from the German *Jahrmarkt*, 'annualmarket'). Periodic markets or market places where wholesale and retail sales of various goods were conducted. Fairs attracted buyers and sellers from far and near, sometimes even from abroad. Some cities in Western and Central Europe were known for their fairs from the medieval period (10th century). The most famous fairs that were held in countries close to Ukraine were those of Cracow, Poznan, Vienna, Königsberg, Leipzig, Pest, and Debrecen. Beginning in the 16th century goods from these large fairs were imported into Ukraine, and products from Ukraine such as skins, leather, horns, wool, grain, salt pork, and honey were sold at the fairs. Most of the trade at the fairs in Central Europe was in the hands of Jewish merchants, who also conducted various financial transactions that were connected with the fairs. On Ukrainian territories small fairs were held as early as the 16th century, mostly in cities that enjoyed the privileges of *Magdeburg law. Besides Ukrainian burghers, Germans, Poles, Armenians, and particularly Jews were active in trading at the fairs.

The so-called *contract fairs acquired great importance in the 17th century, first in Lviv and then in Dubno, Kiev (from 1797), and Kharkiv (19th century). The building of highways and particularly of railways encouraged the growth of fairs. The number of fairs increased, and every city or town provided certain inducements to merchants

such as tax reductions, safety, and suitable premises to attract them to its fair. In the 19th century most of the fairs in Russia lasted only one day, about 30 percent of the fairs lasted from two to seven days, and only 3 percent of the fairs lasted longer (some a whole month). Most fairs were connected with religious feasts. From the 18th century, fairs in Ukraine played an important role in the trade of the Russian Empire. Some of them were part of the so-called fair-cycle, which consisted of 10 wholesale fairs that were held consecutively in seven cities (Vozdvyzhenske, Krolevets, Poltava, Yelysavethrad, Kharkiv, Sumy, and Romen) and were attended by the same merchants. Some of the fairs specialized in certain products: for example, Zhytomyr, Dubno, and Rivne specialized in hops; Kakhivka, Bakhmut, and Pavlohrad, in wool; and Kryvyi Rih, in cattle and horses. Most of the fairs, however, sold a variety of goods or animals.

Of the 2,600 fairs held in the eastern gubernias of Ukraine (Kharkiv, Poltava, Chernihiv) at the end of the 19th century, the most important fairs were the Epiphany, Trinity, Dormition, and the Holy Protectress fairs in Kharkiv (mostly wool and manufactured goods), the St Elijah Fair in Poltava (various farm products) and the four fairs in Romen. In the southern gubernias (Katerynoslav, Tavriia, Kherson, and Bessarabia) there were about 700 fairs, the most famous of which were the Trinity Fair in Kryvyi Rih, the ss Peter and Paul Fair in Katerynoslav, and the St Nicholas and Holy Protectress fairs in Kakhivka. The most important of the 1,000 fairs held in the western gubernias were the Presentation at the Temple Contract Fair in Kiev, at which mostly agricultural products (sugar, grain, oil) were sold wholesale; the ss Peter and Paul Fair in Yarmolyntsi, Podilia, and the Trinity Fair in Balta, Podilia. In the early 1900s about 4,300 fairs were held annually in the Ukrainian gubernias, compared to 18,500 in the entire Russian Empire. The fairs in Ukraine had annual sales of 250 million rubles, compared to 1.1 billion for the whole empire. Of the 24 large fairs in Russia in 1910–14, each with sales over 1 million rubles, 4 were in Ukraine. Together, the large fairs had sales of 370 million rubles per year, of which 44 million rubles were earned in Ukraine. Most of the fairs in Ukraine were small or of medium size.

The fairs declined during the First World War and particularly during the revolution. They were restored in the Ukrainian SSR and the USSR at the beginning of the 1920s. Most of the fairs sold goods retail, thus supplementing the inadequate official system of distribution. In 1927 there were 7,500 fairs in the Russian SFSR and 15,000 fairs in Ukraine in 1,500 localities. Soviet fairs at the time were divided into all-Union, republican, oblast, and local fairs. The Baku and Nizhnii Novgorod fairs, which were famous before the revolution, were all-Union fairs, while the Kiev and Kharkiv fairs were republican. As trade became more centralized and the economy was brought under centralized planning, the importance of fairs declined. In the 1930s the Soviet government abolished fairs altogether, except in the republics of Central Asia. After the Second World War some smaller-scale fairs were restored in the USSR. Since 1960 wholesale fairs of manufactured goods have been introduced in the USSR. Soviet trade organizations purchase manufactured goods from Soviet enterprises on the basis of samples and draw up appropriate contracts at these fairs. Today oblast, interoblast, republican, and interrepublican wholesale

fairs of manufactured goods are held in the USSR. The Kiev fairs, which are held annually and specialize in various products, such as clothing, furs, and children's wear, are among the most important.

The semilegal markets, which in the larger cities deal in various goods but mostly in second-hand or imported goods and are known as *tolkushky* or the black market, and the *collective-farm markets, which deal in farm products produced mainly on private plots, do not have the character of the former fairs. Soviet trusts, enterprises, and particularly state institutions such as ministries take part in international fairs and exhibitions.

Fairs were common in Western Ukrainian territories under Austria-Hungary before the First World War and under Poland, Rumania, and Czechoslovakia in the interwar period. The most important fairs were held in Lviv (a contract fair at first), Ternopil, Stanyslaviv, Kolomyia, Sambir, Yaroslav, Sadhora near Chernivtsi, and Mukachiv.

In the past fairs were usually held on feast days or during a festive season, from which many of them derived their name. They were not merely commercial but also social and cultural events. They brought together people from distant regions and strengthened family ties and friendships. Fairs engendered their own folklore, and plays, particularly puppet shows, musical performances, and other spectacles were presented on improvised stages. N. Gogol described a typical Ukrainian fair in his short story *Sorochinskaia iarmarka* (The Fair at Sorochyntsi).

Falcon (*Falco*; Ukrainian: *sokil*). Hawk of the family Falconidae. The birds are up to 60 cm in length and weigh up to 2 kg or more. Falcons prey on birds, rodents, and insects. There are 30–40 species of falcon known; of these 8 are found in Ukraine. The following species nest in Ukraine: saker (*Falco cherrug*), found throughout Ukraine except the steppes; common kestrel (*F. tinnunculus*); lesser kestrel (*F. naumanni*), found in the south and the Tysa Lowland; red-footed falcon (*F. vespertinus*), found throughout Ukraine, but mostly in the south; *peregrine falcon (*F. peregrinus*), a rare resident of the Carpathians and Polisia; and the hobby (*F. subbuteo*), found everywhere but the steppes. The merlin (*F. columbarius*) only winters in Ukraine. The common kestrel and red-footed falcon are useful birds, since they control the rodent and insect populations, but the peregrine falcon and the hobby are harmful, destroying songbirds and game birds.

Faliiev (Faleev), **Ivan** [Faliiev], b 10 September 1858 in Kiev, d 3 November 1924. Ichthyologist and a specialist in fish farming. Most of Faliiev's published works deal with applied ichthyology. As a result of his initiative, the

first breeding stations for pond-fish species and the first fish reserves in Ukraine were established.

Dmytro Falkivsky

Falkivsky, Dmytro [Fal'kivs'kyj] (pen name of Dmytro Levchuk), b 3 November 1898 in the village of Lypesy, Kobryn county, Polisia, d 16 December 1934. Poet. Falkivsky served in the Cheka in Belorussia in 1920–3 and thereafter lived in Kiev. He was a member of the literary organizations Hart, Lanka, and MARS. From 1924 his poetry was published in the leading Ukrainian literary journals. Falkivsky is the author of the poem *Chaban* (The Shepherd, 1925) and the collections *Obrii* (Horizons, 1927), *Na pozharyshchi* (At the Burning Place, 1928), and *Polissia* (1931). In 1927–33 he worked as the secretary of the journal *Kino* of the All-Ukrainian Photo-Cinema Administration. Falkivsky was a lyrical neoromantic. His poetry often displayed autobiographical elements (the Cheka, the revolution and civil war, life in Polisia). He was criticized for his extolment of village life and his critical pessimism. Falkivsky's later poetry was influenced by the *Neoclassicists. He was executed by a military court together with 27 other cultural figures, including H. Kosynka, O. Vlyzko, and K. Burevii, for alleged terrorism. The latest edition of Falkivsky's works, *Raneni dni* (Wounded Days), was published in Prešov in 1969.

Falkovsky, Irynei [Fal'kovs'kyj, Irynej], b 28 May 1762 in Bilotserkivka, Poltava gubernia, d 29 April 1823 in Kiev. Prominent educator, church leader, writer, and Orthodox bishop. Falkovsky studied at the Kievan Mohyla Academy and at the University of Budapest (1775–82). From 1783 to 1804 he was a professor and rector at the Kievan Mohyla Academy. In 1799 Falkovsky became archimandrite of the Hamaliia Monastery, and later of the Kiev Epiphany Brotherhood Monastery. He was bishop of Chyhyryn and bishop co-adjutor of Kiev from 1807 to 1812 and of Smolensk in 1812–13. After that he was bishop co-adjutor of Kiev once more and head of the St Michael's Golden-Domed Monastery of Kiev. Falkovsky was the author of numerous philosophical, historical, theological, and poetic works, which were collected in 92 volumes of manuscript. His published works included the collection of historical essays entitled *Kalendarii* (Calendars, Kiev 1797), *Sokrashchenie tserkovnoi khronologii ...* (A Synopsis of Church History ... , Kiev 1797), and *Christianae Orthodoxae Dogmatico-Polemicae Theologiae ... Compendium* (Moscow 1802), as well as sermons and biographical notes on the Kievan Mohyla Academy between the years 1762 and 1783.

Fallow-land system. See Short-fallow system and Long-fallow system.

Family law. The body of laws that governs the procedure and conditions of marriage and of its dissolution, and also regulates the personal and property relations that arise between spouses, between parents and children, and among other family members.

In pre-Christian times seizure, purchase, and transfer of women were the basic forms of marriage, which was the main institution of family law. The introduction of Christianity brought about a gradual acceptance of monogamy as the dominant principle of family law. According to the Byzantine law practiced in Ukraine during the Princely era, the contractual element of the marriage act was more important than the religious, sacramental element. **Ruskaia Pravda* contained a number of sections on care and support, but did not discuss family law separately.

Family law was more fully developed in the Lithuanian Statute. The principle of monogamy became firmly established, and marriage came to be regarded as both a contract and a sacrament. To make marriage binding, both sides had to enter into it voluntarily. A minimum age limit for marriage was set. The church courts ruled on matters of separation.

The Hetman state did not introduce any changes in the family laws of the Lithuanian Statute. The introduction in 1835 of a Russian imperial code of law in Ukraine, however, led to the complete transfer of family matters to the church courts and to the marked inequality of women. In the Ukrainian territories under Austrian control, the Austrian civil code of 1811 with its confessional system of family law and the indissolubility of Catholic marriages was in force.

During Ukraine's independence in 1917–20 the old family law remained in effect. But as soon as Soviet rule was established in Ukraine, tsarist family law was revoked, and the Council of People's Commissars of the Ukrainian SSR issued on 20 February 1919 the following decrees: On Civil Marriage and the Registration of Civil Status Documents, On Divorce, and On the Organization of Departments of Civil Registry. These decrees, as well as the new 1926 Code of Laws on Family, Guardianship, Marriage, and Acts of Civil Status of the Ukrainian SSR were a sharp reaction against tsarist legislation. They provided for full equal rights for men and women, excluded the church from family life, removed any distinction between legitimate and illegitimate children, and made the dissolution of marriage a very simple matter. In contrast to the Russian code of family law, the Ukrainian code accepted the registration of marriage at an office of the civil registrar (ZAHs) as the only real proof of marriage unless there was a court decision to the contrary. The only legal form became the declaration of marriage by both parties and its registration with the civil registrar. According to the code of 1926 the minimum marriageable age was 18 for men and 16 for women. Individuals married at the time, who were recognized as mentally ill or retarded, or who were close kin, were barred from marrying. In 1947–53 marriage between a Soviet citizen and a foreigner was prohibited.

An unlimited right to divorce without court involvement and even at the wish of only one of the parties existed until 1936. Thereafter, both parties had to appear at a civil registrar's office, had to pay a prorated

divorce fee, and the divorce was noted in their internal passports. A disabled divorced party (man or woman) had the right to receive *alimony from the other party for one year. In order to strengthen the family and to increase the population, which was greatly reduced by the Second World War, the decree of 8 July 1944 restricted significantly the freedom to divorce. High divorce fees and announcement in the press of the intention to divorce were required. The lower courts tried to reconcile the married parties, while the higher courts examined the validity of the grounds for divorce and issued a decision. The Union decree of 1965 reduced these requirements by revoking the obligation to publicize the intention to divorce and the obligatory review of the case by a higher court.

Until 1944 the father of a legitimate or illegitimate child was obligated to support the child. Hearings for determining the father's identity were accepted. The decree of 8 July 1944 prohibited such hearings and charged the state with the support of children born out of wedlock.

On 1 October 1968 the Law Foundations of Legislation in the USSR and Union Republics on Marriage and Family was adopted, and on 1 January 1970 the Code on Marriage and Family of the Ukrainian SSR, which was based on the Foundations, was put into force. The purpose of the code is 'to further strengthen the Soviet family, which is based on the principles of Communist morality' (art 1). The rights and duties of marriage are recognized only after a ceremony has been conducted at a civil registrar's office. Mutual consent of both partners and a minimum age – 18 for men and 17 for women – are the necessary conditions of marriage. The partners enjoy equal rights within the family and have equal obligations. Any property acquired during marriage belongs to both parties.

The new code permits divorce through mutual consent if there are no dependent children; the formalities can be settled at a civil registrar's office. Otherwise, a court has to grant divorce after determining that living together and family life are impossible. A husband cannot initiate divorce proceedings without his wife's consent if she is pregnant or if there is a baby under one year of age. To avoid precipitate marriages, the formal procedure takes place a month after the couple inform a civil registrar's office in writing of their intention to marry. In some cases this time limit can be shortened. A divorced party has the right to receive alimony only if he/she is disabled (with certain exceptions). The parentage of a child born out of wedlock can be registered by its natural parents at a civil registrar's office or can be determined by a court. The courts may deprive people of their parental rights. Parents are obligated to support underage and disabled children. Children also have the duty to support disabled parents. To minimize the state's burden, other family members and relatives have alimony obligations.

Adoption is permitted only in respect to underage children and in their interest. Children whose parents have died, have lost their parental rights, are too ill to care for them, or have abandoned them are provided with guardians and care in such a way as to safeguard their personal and property rights and interests. Guardianship and care is determined not by the courts but by the executive committee of the raion, city, town, or rural soviet.

Marriage between a Soviet citizen and a foreigner does not entail changes in citizenship. Any marriage that is

contracted outside the USSR according to the law of the given country is recognized in the Ukrainian SSR, unless there is a specific reason why such recognition cannot be granted, as set down in the Ukrainian family code – lack of mutual consent, insufficient age, polygamy, blood ties, illness, an so on.

Famine. The medieval chronicles and other literary sources (eg, the Patericon of the Kievan Cave Monastery) mention famine caused mainly by crop failures or war. The 1090s, 1193 (or 1195), and 1219 were 'hungry years.' Of the great famine in 1230–1, a chronicler wrote 'there was famine throughout Rus' except Kiev.' Famine was not as frequent in Ukraine as on Russian or Belorussian territories because of more favorable natural conditions. As well, sometimes when famine struck one region (eg, Volhynia in 1219), the other regions had good harvests. The devastation caused by Tatar incursions led to famine in some regions.

In the Hetman state there were 'hungry years' in B. Khmelnytsky's time and in the Period of Ruin. There was also a great famine in 1698 and after the Battle of Poltava (1709). The causes were crop failures, locusts, war, Tatar incursions, and Muscovite and Polish military expeditions. However, it was generally the population of certain regions or a part of Ukraine, not of all Ukraine, that suffered famine. The regions that experienced hunger most frequently in the 18th century were the steppes, Polisia, and the Carpathians.

In the 19th century there were a few difficult years of famine in Ukraine (1833–4, 1844–6, 1855, etc), but much fewer than in the Russian gubernias (which had 40). Crop failures and hunger led to great unrest among the peasantry in 1901–7 and stimulated *emigration.

In the Russian Empire famine relief was organized by the government, zemstvos, and philanthropic societies. The tsarist government restricted the initiative of the societies because they encouraged opposition. The government lent grain to certain categories of the population on the strength of future harvests.

In Western Ukraine, mainly in the mountain regions of Subcarpathia and Transcarpathia, malnutrition was practically chronic in the 1930s. In 1930–1 famine struck these areas. The Polish and Czechoslovakian governments failed to provide adequate relief. In 1935, when the Ukrainian population of southern Bessarabia was stricken with famine caused by drought, the Ukrainians of Bukovyna furnished aid.

The Ukrainian SSR experienced two great famines, which took millions of lives. The famine of 1921–2 was caused by crop failure and the sociopolitical conditions in the Ukrainian SSR after the war. Because of drought, only 35 percent of the normal harvest was obtained in Ukraine in 1921. The southern gubernias – Zaporizhia,

Donetske, Katerynoslav, Odessa, and Mykolaiv – were hardest hit. The grain harvest there fell below 25 percent of the 1916 harvest. The calamity was even greater in the Russian gubernias, mainly along the Volga. In 1920 grain was requisitioned with much violence by special military expeditions and *Committees of Poor Peasants for food allotments (*prodrazverstki*). In 1921 an unusually heavy tax in kind was exacted of Ukraine: 295,000 t (out of a total of 884,449 t) were collected from the five southern gubernias of Ukraine. As a result, in the fall of 1921 famine hit Ukraine. By 1 March 1922, in the five Ukrainian gubernias that were officially recognized as famine-stricken, 3.5 million people, or 36 percent of the population, were without food (78 percent of the population of Zaporizhia gubernia and 50 percent of Mykolaiv gubernia, but only 500,000 in the other gubernias). In May 1922 the total number of people affected almost doubled. The mortality rate increased sharply: in Katerynoslav gubernia, 67 people per 1,000 died in 1921–2; 79 per 1,000 died in the Crimea. One may assume that about up to 1 million people in Ukraine died of famine. Epidemic diseases, mainly relapsing fever, typhus, typhoid, and at times cholera, also took many lives.

The Soviet government organized a relief program, but gave most of its attention to the Russian Volga regions. In Ukraine most of the relief work was done by civic and co-operative organizations. The clergy, which had been deprived of civil rights, participated in this work. The Soviet government confiscated church valuables under the pretext that they were needed to help the hungry. Metropolitan V. Lypkivsky issued a special appeal from the Ukrainian Autocephalous Orthodox church for help to the famine victims. In Lviv the National Committee for Relief to Starving Ukraine was active. Similar committees were formed by émigrés in Vienna, Prague, Berlin, and America. Foreign philanthropic institutions – the *American Relief Administration, the Nansen International Office for Refugees, the Jewish Joint Distribution Committee, and the Czechoslovakian Red Cross – also furnished aid. Under F. *Nansen's instructions, Captain V.A. Quisling toured Ukraine at the beginning of 1922 and later published a report on the famine.

Famine; corpses being collected in a village in 1933

The famine of 1932–3 stemmed from political rather than natural causes. In 1932 Ukraine had an average grain harvest of 146,600,000 centners (or 15,500,000 centners

more than in 1928), and there was no danger of famine. The famine was, first, a planned repression of the peasants by the Soviet government for their resistance to *collectivization; secondly, an intentional attack on the Ukrainian village, which was the bulwark of the process of Ukrainization; and, thirdly, a result of the forced export of grain in exchange for imported machinery, which was required for the implementation of the policy of industrialization.

With increased grain requisitioning in 1930–2, the rural population was already experiencing hunger in the spring of 1932. But an unprecedented calamity came in the winter and spring of 1933 before a new harvest could be gathered. The grain collections of 1932 were carried out with brutality and with the threat of death to those who resisted. A law of 7 August 1932 introduced the death penalty 'for violating the sanctity of socialist property,' and 112,000 special agents were sent to Ukraine for the exaction of grain. They fulfilled their task by using terror against both collective and independent farmers. By the end of 1932 Moscow's food-collection plan, which exceeded the actual harvest, was 72 percent fulfilled. The food-collection plan for 1932–3 was based on the area of land that was to be seeded. In reality, less land was seeded, and even less produced the expected crops. The rural population was left without any means of sustenance, and the authorities did not organize any supplies for the villages. The famine affected almost all parts of Ukraine, but it grew to massive proportions in the southern and eastern oblasts. It also struck territories bordering on the Ukrainian SSR and populated mostly by Ukrainians, such as the Kuban and the Don region. Only an insignificant part of the population – the privileged rural Communists and officials who were served by a special distribution system – did not experience hunger. Towns and industrial regions suffered less, because they were provided with a rationing system. The peasants were thus hardest hit. They fed on various surrogates. Disease became rampant, and occurrences of cannibalism were reported. Whoever had the strength fled to the towns, to the Donbas, or to the north in search of food, although this was prohibited. The mortality rate was very high: in some regions it reached 20–25 percent of the population.

Some villages in the regions of Poltava, Kharkiv, and Kiev were completely deserted by the spring of 1933. Most of their inhabitants perished; others escaped. In the fall of 1933 these villages began to be resettled with Russian peasants, mainly from Orlov oblast. Much of Ukraine, particularly the villages and small towns, looked like ghost towns. Agricultural work was hardly noticeable. During the spring sowing in 1933 the state-assigned seed had to be protected by armed guards. The field workers got minimal rations. Only the first fruits and vegetables of the summer saved those who had survived. But the effects of poor health, accelerated mortality, and a falling birthrate became apparent later.

There are various estimates of the number of victims in Ukraine in 1932–3. The maximum figure suggested is over six million (1976 samvydav document of the Ukrainian Helsinki Group). Others give a figure of three to four million (D. Solovii, M. Prykhodko, W.H. Chamberlin, and V. Hryshko). V. Kubijovyč and C. Manning suggest two to three million. The fact that the 1937 Soviet census was officially declared invalid suggests that it might have shown a catastrophic drop in population.

Undoubtedly, this great tragedy for Ukraine was a

planned action of the Party leadership, headed by J. Stalin. Its purpose was to break the backbone of the Ukrainian people by destroying 'the kulak class,' ie, all those who resisted the regime, including collectivized peasants. Actually, the blow was directed at the peasantry as a whole, which in Bolshevik theory was 'the basic army of the nationalist movement.' It should be noted that this policy was accompanied by a campaign to suppress Ukrainian culture. The manager of this campaign was Stalin's personal commissar from Moscow, P. *Postyshev. As the second secretary of the Central Committee of the CP(Б)У, he ruled Ukraine like a dictator. According to him, '1933 was the year of defeat for the Ukrainian nationalist counterrevolution.' Leading Ukrainian Communists (H. Petrovsky, M. Skrypnyk, V. Chubar) tried to persuade Moscow to change its policy and to counteract the famine, but their efforts were to no avail. They were accused in the Central Committee of 'sabotage.' In protest, M. Khvylovy and then M. Skrypnyk committed suicide.

The Soviet authorities were silent about the famine they organized in 1932–3 and provided no aid for the people. Some news of the famine reached the West and evoked responses from Ukrainians in Western Ukraine and in the diaspora. Massive demonstrations were staged. To draw public attention to the famine, M. Lemyk, a member of the OUN, assassinated O. Mailov, the Soviet consul in Lviv, in October 1933. Relief committees were organized in Europe and America. Memoranda were sent to the League of Nations, and the issue was raised in the British parliament. Cardinal T. Innitzer of Vienna headed the relief action. But the Soviet government rejected any proposals of external aid and insisted that the famine was a slanderous fabrication by the enemies of the Soviet Union. The authorities arranged a tour of the USSR by the French statesman E. Herriot, who then denied any reports of famine in Ukraine. Although the foreign press did publish some information on the famine, it did not call forth an adequate public response because at the time the USSR was attempting to establish closer relations with the Western powers (through talks on recognition by the United States and admission to the League of Nations). M. Muggeridge's reports on the famine went unheeded in Britain. In addition, there is evidence that foreign governments and correspondents (W. Duranty) avoided discussing or writing about the famine, and sometimes even denied it, for political reasons.

The 1932–3 famine in Ukraine is considered to have been a planned genocide, comparable to the Jewish Holocaust of the Second World War or the starvation of the Cambodian people in 1975 and 1979. There is an extensive list of memoirs and studies on the subject by Ukrainian, Russian, and other writers, but a basic documentary study is still lacking. The present Soviet regime continues to conceal all traces of the famine: it has rehabilitated P. Postyshev, who was liquidated during the Yezhov terror, and exonerated Stalin for the policy of forcible collectivization and, hence, for the famine as well. N. Khrushchev bears witness to the famine in Ukraine in his memoirs. It is mentioned by R. Medvedev in *Let History Judge*, V. Grossman in *Forever Flowing*, and L. Kopelev in *The Education of a True Believer*. A. Solzhenitsyn gives a dramatic account of the famine in *The Gulag Archipelago*. The question is mentioned indirectly by Ukrainian writers in the Ukrainian SSR (O. Honchar) and is treated boldly by dissidents (I. Dziuba and *Ukrains'kyi visnyk*, nos 7–8).

There are also literary treatments of the subject; the most recent one is M. Rudenko's poem 'Khrest' (The Cross), which appeared in 1977 as a samvydav work.

During the Second World War the urban population of Ukraine experienced hunger, especially in 1941–2 in eastern Ukraine. The food shortage was due to the destruction of supplies by the retreating Soviet army and to German obstruction of supply deliveries. In the spring of 1942 Subcarpathian Galicia experienced a partial famine as a result of floods and crop failure. The *Ukrainian Central Committee in Cracow organized relief, especially for children.

After the war, in 1946–7, the population in certain regions of Ukraine suffered from hunger because of postwar dislocations in agriculture and drought. In spite of this, the Soviet government refused to lower delivery quotas on grain and other products. This forced peasants in the eastern oblasts to 'go begging for bread' in Western Ukraine, not only to survive but also to fulfill their quotas. In the summer of 1946 trains from the eastern regions were crammed with starving peasants seeking food. In these conditions robberies, murder, and juvenile vagrancy were rampant. The authorities tried to stop the westward movement by police methods and by rumours of epidemics and poisoned food in the western oblasts. The peasants of the western regions were forbidden to sell food to newcomers and were required to deliver large quotas to the state.

Far East. The easternmost region of Soviet Asia in the RSFSR, encompassing the Pacific coast, the Amur River basin (in the southeast), the Kolyma River basin, the Khabarovsk and Primore kraia, and the Amur, Sakhalin, Kamchatka, and Magadan oblasts. Its southern boundary with China and North Korea is formed by the Amur and Ussuri rivers and Lake Khanka. The region has an area of 3,112,700 sq km. In 1979, 446,687 Ukrainians lived there, constituting about 8 percent of the population (total 6 million). Hence, this land can be regarded as a major territory of settlement by Ukrainians (the second such territory in Asia after the central Asian steppe). Since 1900 the territory settled initially by Ukrainians – the Amur and Primore (Maritime) oblasts – has been known as Zelenyi Klyn (the Green Wedge). It has an area of 2,500,000 sq km and a population of 4,000,000.

In the Far East the ancient Oriental cultures of China and Japan and the younger Slavic culture have clashed, as have interests of such great powers as Russia, China, Japan, and, more recently, the United States. For the former Russian Empire and the present Soviet Union the Far East has provided access to the Sea of Japan, which in the Primore krai freezes for only a brief period each year, and from there to the world shipping routes of the Pacific Ocean. It has also served as a base of expansion into Southeast Asia. Its remoteness (9,300 km by railway from Moscow to Vladivostok) makes it difficult to defend the region. For this reason the Russian and Soviet governments have promoted its settlement and economic development.

The Far East is very distant from Ukraine: Vladivostok is 10,070 km from Kiev, and Blagoveshchensk is 8,750 km by rail. It is also quite far from the central Asian steppe (5,300 km from Blagoveshchensk to Omsk).

Relief. The Far East is a region of old uplands, plateaus, and mountains. Low plains cover only a small part of the area. The northern part is occupied by the Siberian Platform, which consists of high plateaus and gentle, broad ranges, usually 1,000–1,500 m in altitude. The land is deeply dissected by rivers and covered with taiga. On the border with the Yakut ASSR lies the longitudinal Stanovoi range (maximum altitude 2,412 m), which forms a watershed between the Amur and Lena river basins. East of it lies the southern part of the Dzhugdzhur range. The Stanovoi range is separated from the Yankan-Tukuringra ranges (maximum altitude 1,840 m) in the south by the valleys of the Zeia and Gilui rivers. Farther south lies the large Amur-Zeia Plateau at an altitude of 200–500 m. It is a gently undulating plain dissected by the tributaries of the Amur and the Zeia rivers. East of the lower Zeia the plateau merges with the

Zeia-Bureia Lowland, the largest plain of the Amur region. This lowland has fertile soil and a warm summer and is densely settled with Ukrainians. It is enclosed in the east by the Khingan-Bureia mountain massif, which reaches an altitude of 2,070 m and is deeply dissected by valleys and small lowlands, of which the largest lies along the lower Amur River. A lowland 800 km long stretches between the Khingan-Bureia range in the west and the Sikhote-Alin Mountains in the east along the Amur River (from Komsomolsk to Khabarovsk), its right-bank tributary the Ussuri River to Lake Khanka, and along the Suifun River as far south as Peter the Great Bay. This tectonic depression, like the Zeia-Bureia Lowland, is fertile though quite marshy. It has hot summers and is densely populated, mostly by Ukrainians.

The Sikhote-Alin Mountains extend for 1,200 km parallel to the coast of the Sea of Japan. They consist of sedimentary, crystalline, metamorphosed, and volcanic rock that was folded in the Cretaceous period. The mountains are divided into several parallel ranges, which are on the average 800–1,200 m in altitude. The highest

peaks reach 2,078 m. River valleys cut deeply into the ranges. The coastline runs parallel to the ranges; hence, there are practically no natural harbors on it. The coastline cuts across the ranges only in the north and the south and is frequently dissected, particularly at the southern end (Peter the Great Bay).

Climate. The Far East lies in the moderate monsoon belt and has the belt's characteristic bitterly cold, dry winters and hot, wet summers. The most pleasant season is the dry, warm, and sunny autumn. In general the climate is harsher than Ukraine's climate. Variations can be quite large, depending on the latitude, distance from the sea, and the altitude. In the warmest month the average temperature can range from 12° to 22°C and in the coldest month from -12° to -30°C. The average annual temperature ranges from -2° to 4.5°C, and the maximum temperature ranges from 31° to 46°C, depending on the location. Annual precipitation varies from 450 mm to 800 mm, and the growing season varies from 140 to 190 days. The coast has a cooler summer than the interior, a warmer winter (although still severe), and more precipitation. The centers of Ukrainian settlement – the Zeia-Bureia and Ussuri-Khanka lowlands – have cold winters and hot summers; 92 percent of the rainfall occurs in the summer (the three warmest months get 65 percent). The excessive precipitation in the summer turns the lowlands into marshland and makes farming difficult.

Soil. The most common soils in the Far East are gley-podzol and peat-bog soils. Their nature depends on the climate and relief. The best soils of the forest-steppe belt in the Zeia-Bureia and the Ussuri-Khanka lowlands are gray forest soils. Along the rivers the best soils are rich meadow chernozems and alluvial soils.

Rivers. A large part of the Far East lies in the Amur River basin, which has an area of 1,855,000 sq km and a length of 4,440 km. The Amur's main tributaries are the Zeia (1,242 km, 230,000 sq km), the Bureia (623 km, 70,000 sq km), and the Ussuri (588 km, 187,000 sq km). All these rivers, but particularly the Amur, are important communication routes and are well stocked with fish. Because of the seasonal nature of the rainfall, the water level in the rivers varies: it is low in winter and very high in the second half of the summer. The rivers are frozen over for 180–210 days a year. The area of the 95 km–long, shallow Lake Khanka (maximum depth, 10 m) varies with the season from 4,000 to 4,400 sq km.

Vegetation. The Far East lies within three floral zones with unnoticeable transitions between them: the East Siberian zone, Okhotsk zone, and Manchurian zone. The northern part of the Far East is covered by the East Siberian taiga (Dahurian larch), and the wet seacoast by the Okhotsk taiga (silver fir, rock birch, white spruce). At the lower altitudes and in the south the taiga changes into mixed and finally into mixed and broad-leaved forests (Amur linden, Mongol oak, elm, maple, hazelnut) with a thick undergrowth. In the southern part of the Far East typical Manchurian flora, rich in Tertiary species, predominates. Besides the above-mentioned deciduous trees, species of Korean and Japanese vegetation flourish there. Lianas twine around trees. Wetlands (the 'Amur forest-steppe' of the middle Amur) with brush and forests (mainly willow and poplar) are common.

Animal life. The animal world is rich in species, which fall into three sectors – European Siberian, Manchurian Chinese, and Central Asian. Because the southern part of

the Far East did not undergo glaciation, there are many traces of the old fauna of the Tertiary period and numerous endemic species. Among the northern species are the elk, musk deer, sable, brown bear, ermine, alpine hare, and reindeer. Among the southern species are the Siberian tiger, Himalayan black bear, leopard, spotted deer, and wild pig. Of the bird species, the pheasant and Japanese ibis flourish. Among the steppe and forest species that are found are the marmot, Manchurian hare, and steppe polecat. The animal species, particularly the fur-bearing animals, have been mercilessly slaughtered. Many species have survived only in inaccessible forests, and some, like the Siberian tiger, only on reserves.

History of settlement. Zelenyi Klyn became a part of the Russian empire later than Siberia or the other parts of the Far East, which came under Russian control in the 17th and at the beginning of the 18th century. The first attempts to gain control of Zelenyi Klyn were made in the mid-17th century when Cossack explorers reached the Amur River from the north and from the west (Transbaikalian region). In 1651 E. Khabarov built a defensive outpost on the Amur and named it Albazin. The Cossacks engaged in constant skirmishes with the indigenous peoples, the Tungusic Daghur, and eventually with the Manchu troops of China, which controlled the Amur region. The first phase of the struggle for Zelenyi Klyn ended with the Treaty of Nerchinsk in 1689, with Russia retaining only the upper Amur Basin (Transbaikalian region) and China getting the Amur region itself up to the watershed between the Amur and the Lena rivers in the north.

The second phase of expansion into the Far East began in the mid-19th century, particularly after Russia's defeat in the Crimean War (1853–6). The key figure in this expansion was the governor general of Siberia, Count N. Muravev (later known as Amursky). Following his instructions, G. Nevelskoi explored the Amur all the way to its mouth in 1849–55. A number of settlements and Cossack outposts were built along the river. China, which was weak at the time, had to renounce its territorial claims to the Amur region in Russia's favor (Treaty of Aigun, 1858). Later China also dropped its claims to the Primorye krai (Treaty of Peking, 1860). The new boundary – along the Amur River, its tributary the Ussuri, Lake Khanka, and then south to the territory on Peter the Great Bay bordering on Korea – remains unchanged to this day.

To secure the new territories for Russia, Muravev began to colonize them by force. In 1855–62, 14,000 Cossacks from the Transbaikalian Cossack Host and 2,500 soldiers were settled on the frontier between the Amur and the Ussuri rivers and were granted large tracts of land for farming. The Far East was divided into two oblasts – Amur oblast and Primorye oblast. In 1881 all of the Russian Far East became part of Vladivostok general gubernia. The main cities arose at this time – the ports Nikolaevsk at the mouth of the Amur (1850) and Vladivostok (1860), as well as Blagoveshchensk (1856) and Khabarovsk (1858) at the intersection of the river routes.

But the Cossacks, whose primary task was to defend the frontiers, were too few in number (18,000 men in 1876) to settle the interior of the country and to bring large land areas under cultivation. Because of the distance from Europe peasant settlement of the Far East proceeded slowly, in spite of the law of 1861 that granted settlers long-term aid. In 1859–82 only 14,000 peasants arrived.

When General P. Unterberger, the governor of Primorye oblast, obtained free transportation for the settlers from the central government in 1882, the settlement of the Far East became more rapid. In 1883–96, 68,600 peasants settled in the Far East (44,500 in Primorye oblast), almost all of them Ukrainians who left their homeland at Odessa by sea. They obtained the best land in the Ussuri-Khanka Lowland. At the same time Koreans settled the southern part of Primorye oblast near the Korean frontier, and the Chinese settled in various parts of the oblast, particularly in the towns.

Large-scale settlement of the Far East expanded after the opening of the Trans-Siberian Railroad between Moscow and Vladivostok (1891–1905) and the construction of the additional Ussuri and Amur lines. New lands were opened up to the settlers. In 1901–3, 14,000 settlers on the average arrived in the Far East per year. During the Russo-Japanese War colonization ceased almost completely. It reached a peak of 70,600 people per year in 1907 and fell to 36,000 per year in 1908–10, to 21,000 in 1911–12, and to 12,000 in 1913–14. Altogether, in 1907–13 about 250,000 peasants came to the Far East. Most of them (85 percent in 1907) settled in the Primorye oblast, but a small number settled in the Amur oblast. The majority of the settlers were Ukrainians; for example, in 1907, 74 percent of the settlers came from Ukraine. Ukrainians made up 75–80 percent of the settlers in the Primorye oblast and 60–65 percent of the settlers in the Amur oblast. Hence, on the eve of the First World War Ukrainians constituted the nucleus of the Far East's population. They settled primarily on the fertile lands of the Zeia-Bureia and Ussuri-Khanka lowlands. Koreans continued to settle in the southern part of the Primorye oblast, and the Chinese continued to migrate into the towns in spite of the restrictions that the Russian government imposed on them. The government encouraged not only peasants to immigrate to the East. In order to develop industry, communication routes, and the region's economy generally, particularly after the unsuccessful war with Japan, European workers were attracted to the Far East. In 1911–13 almost 150,000 arrived. As a result of these migratory processes the population of the Far East increased to 940,000 by 1913. In spite of this the population density was still relatively low, and the region's development proceeded at a slow rate.

The world war, revolution, and civil war further slowed down the rate of population increase. In 1918 the civil war between the Reds and the Whites, who were backed strongly by the local Cossack population, broke out. After the seizure of the Trans-Siberian Railroad by Czech troops and the intervention of the Allies in April 1918, power in the Far East fell into the hands of the Whites led by Admiral A. Kolchak. When this government collapsed and the Allies, except for the Japanese, departed, the Far Eastern Republic was formed in April 1920 on the territory of the Far East and Transbaikalia. It served as a buffer between Soviet Russia and Japan. When the Japanese withdrew, the Red Army occupied the Far East, and on 15 November 1922 the parliament of the Far Eastern Republic was forced to adopt a resolution of union with Russia. The Far East became part of the Russian SFSR as the so-called Far Eastern krai.

The Soviet government exerted greater effort than its tsarist predecessor to secure its control over the Far East, particularly after Japan occupied Manchuria in 1932 and the USSR had to renounce its rights to the Manchurian

railway. The Soviet government strongly promoted the settlement of the territory and even offered the settlers some economic aid. Thousands of Jews were resettled; in 1934 they were granted a Jewish Autonomous oblast (in 1930–4 known as the Birobidzhan National Region). At the same time almost all the Koreans and Chinese were expelled for being supposedly politically unreliable elements. On the economic front the USSR tried to make the Far East less reliant on imports from the distant Soviet west and more self-sufficient, particularly in the event of war. For this reason it began to develop all the necessary branches of industry, including those that lacked any natural base. Ferrous metallurgy, for example, was established in the remote but strategically secure city of Komsomolsk on the Amur. Transport communications with the interior were also developed. Consequently, the population of the Far East, particularly the urban population, grew more rapidly than the population in other parts of the Soviet Union. By 1926 it reached 1,230,000 and, by 1939, two million.

The development of industry and transportation continued during the Second World War. After the war the Soviet government continued to develop the Far East at a rapid rate to secure its interests in the region in the face of American influence in the Pacific and the threat of Chinese expansion. Priority was given to colonizing the far north and southern Sakhalin, which was acquired from Japan in 1945.

Population. When Russia first annexed the Far East, it was very sparsely populated. After the first influx of Cossacks and European settlers the population, including the few indigenous peoples, was about 50,000. In 1880 it was about 100,000. As a result of immigration and natural growth the population increased as follows: 310,000 in 1897, 810,000 in 1911, 1,230,000 in 1926, about two million in 1939, and 3,200,000 in 1959. Growth was slower in time of war, particularly in 1917–22.

The Far East's population is distributed very unevenly. Much of the area is mountainous and unpopulated or almost unpopulated. The Zeia-Bureia and the Ussuri-Khanka lowlands and the Vladivostok region are the most densely populated and contain the largest number of cities (see map). The urban population constitutes a large proportion of the total population in the region and has increased more rapidly than the urban population of the Soviet Union as a whole: in 1959 it was 3,860,100, and in 1979 it was 4,567,000. The population growth in the Far East is more rapid than in Siberia. Almost all the growth occurs in the urban centers: the rural population increased from 1,022,000 in 1939 to 1,413,000 in 1979, while the urban population increased from 1,157,000 to 4,567,000 in the same period. Today 76.4 per cent of the population is urban.

All the larger cities arose at the intersections of transportation routes. A few cities were built in mining areas. The larger cities date back to the period of Russia's first occupation of the territory; others sprang up during the Soviet period. The largest cities of the Far East in 1979 were the following (the 1959 population is in parentheses): Vladivostok, 550,000 (291,000); Khabarovsk, 528,000 (323,000); Komsomolsk, 264,000 (177,000); Blagoveshchensk, 172,000 (94,000); and Ussuriisk, 147,000 (104,000).

The influx of population from Soviet Europe is continuing: in 1960–9, 203,000 immigrants, 28,000 of

whom came from the Ukrainian SSR, settled in the Far East.

The national composition of the population is quite varied. The earliest population, consisting of local peoples of the Tungusic-Manchurian language group, is insignificant in size. The Koreans and Chinese who immigrated to the Far East in tsarist times constituted at one time a large group. The Koreans practiced intensive farming (soya and rice) and lived mostly in the southern Primore oblast, where in 1926 they formed a majority. There were 26,000 Koreans in 1897, 60,000 in 1911, and 166,000 in 1926. Most of the Koreans were expelled by the Soviet government, so today there are practically none in the Far East. The same fate was suffered by the Chinese, who were even more numerous than the Koreans until 1914. There were 41,000 Chinese in 1897, 95,000 in 1911, and 63,000 in 1926, mostly in the Primore oblast; 22,000 Chinese lived in Vladivostok alone.

According to the 1926 census, 79.9 percent of the population of the Far East consisted of Europeans or their descendants (in 1897 the figure was 71.2 percent). Eastern Slavs – Ukrainians, Russians, and Belorussians – made up 77.8 percent of the population. Of the other national groups, the largest was the Jewish group, which in 1926 numbered only 3,000, but eventually grew to 50,000. Most Jews were settled in the Jewish Autonomous oblast. In 1926 there were officially 308,000 Ukrainians, 617,000 Russians, and 39,000 Belorussians in the Far East. In fact, however, the figure for the Russians was greatly inflated at the expense of the Ukrainians. Considering that Ukrainians accounted for over 70 percent of the immigrants during the most intense period of settlement (1900–14) and that, according to the 1926 census, most of the inhabitants of the Far East who were not born there came from Ukraine, the estimate for the Ukrainian population can be raised to 500,000, thus lowering the figure for the Russians (including the Cossacks) to 410,000. Table 1 presents the national composition of the Far East population according to the 1926 census and revised estimates. According to T. Oleksiuk, of every 1,000 inhabitants in 1926, there were 477 Ukrainians, 160 Russians, 100 Cossacks, 32 Belorussians, 48 Chinese, 135 Koreans, and 48 others.

A separate group, overlooked by government statistics, consisted of the Cossacks of the Amur and Ussuri Cossack hosts. These were the descendants of Cossacks who had settled on the Chinese frontier in the 1850s–

TABLE 1
Population of the Far East

*Including about 80,000 Cossacks

1860s. Their numbers had increased through the absorption of some peasants, a fresh influx of Cossacks, and natural growth. In 1912 the Amur Cossacks numbered 41,000, and the Ussuri Cossacks, 31,400. There were many Ukrainians among them. The Cossacks had a strong sense of being different from the Russians. In economic terms they were poor, for the adult males devoted themselves to military service and left the farming to the women, old folk, and children. The Cossacks suffered heavy losses at the hands of the Bolsheviks, because they had fought against them during the Civil War of 1918–22.

The Ukrainians and Russians inhabited different regions: the former constituted a majority in the best agricultural regions – the Zeia-Bureia and the Ussuri-Khanka lowlands – while the latter formed a majority in the western Amur region. The area around Khabarovsk was settled by both groups, but with a slight preponderance of Russians. Even in mixed regions the Ukrainians lived in separate settlements or at least in separate parts of settlements, which differed in appearance and daily life from the Cossack or Russian settlements.

In the 1920s and at the beginning of the 1930s many Ukrainians from Soviet Ukraine sought refuge from Stalin's terror in the Far East, particularly during the campaign against the kulaks and collectivization. A period of forced resettlement followed. During the Second World War many evacuees from Ukraine were settled in the Far East. Yet, the influx of Russians, particularly into the cities, was larger than the influx of Ukrainians; hence, the proportion of Ukrainians in the population decreased. Furthermore, a certain number of Ukrainians, particularly in the cities and ethnically mixed regions, became Russified as a result of Soviet educational and cultural policies.

The bulk of the Ukrainian settlers in the Far East prior to the revolution were peasants, who after a few years of hard work achieved a relatively high standard of living. They possessed the best land and were the wealthiest farmers. Besides farming they engaged, particularly in winter, in lumbering, fishing, and hunting. Ukrainians predominated on the railroads; many Ukrainians also worked as teachers or served in the army or navy. Few worked in government. There was a large Ukrainian colony in Harbin, China, consisting mostly of the employees of the Manchurian railroad.

According to the Soviet censuses the Ukrainian population in the Amur, Primore and Khabarovsk regions underwent the changes shown in table 2. Only a minority of Ukrainians considered Ukrainian to be their mother tongue in 1979 – 110,300 or 36 percent (145,000 or 41.3 percent in 1959) – and only 39,400 or 12.7 percent were still fluent in Ukrainian as their second language. In 1970, 42.7 percent of the Ukrainians lived in cities (in 1959, 35.6

percent). The distribution of Ukrainians in 1979 was as follows: Amur oblast, 56,669 (6.2 percent); Primore krai, 163,116 (8.3 percent); and Khabarovsk krai, 89,657 (5.8 percent). There are grounds for believing that the Russification of the Ukrainian population has not advanced as far as Soviet statistics suggest, but it is not possible to determine the real situation.

Organized life. Ukrainian cultural activity developed slowly before the revolution and was centered mainly on the theater and educational groups. A Ukrainian club was established in Harbin in 1907 and in Blagoveshchensk in 1910. In 1907 a Ukrainian students' club was organized at the Oriental Institute in Vladivostok, followed in 1909 by a theater group. Secret Ukrainian political groups existed in Iman and Vladivostok (organized by D. Borovyk).

The 1917 Revolution brought an end to restrictions on Ukrainian organized life. Several local organizations arose in the Far East – Ukrainian clubs, co-operatives, military associations, and so on. These organizations convoked the Ukrainian Far Eastern Congress, which took place in Nikolsk-Ussuriiskii (now Ussuriisk) on 11–14 June 1917. The 57 delegates present passed resolutions demanding recognition of Ukrainian autonomy in the Far East by the Provisional Government in Petrograd, organization of Ukrainian soldiers in the Russian army into separate Ukrainian units, and establishment of a permanent central agency representing the Ukrainians of the Far East – the Far Eastern Ukrainian Territorial Council.

As a result of the congress the Ukrainian movement gained momentum. District councils, which represented local communities (10 in all, including one in Harbin, arose. The Far Eastern Teachers' Association and a central co-operative association, Chumak, in Vladivostok were organized. Ukrainian newspapers and journals began to appear: *Ukrainets' na Zelenomu Klyni* in Vladivostok, *Zasiv* in Harbin, the daily *Shchyre Slovo* in Vladivostok, *Ranok* in Khabarovsk, and others. The Far Eastern Ukrainian Territorial Council and its executive – the Far Eastern Ukrainian Secretariat – began to function in Vladivostok at the end of 1918. The president of the secretariat was Yu. Mova, and the secretaries were F. Steshko, I. Osypenko, A. Radioniv, and Ya. Sytnytsky. In the spring of 1917 Ukrainian military units began to be organized with the purpose of returning to Ukraine for its defense. The first company left Vladivostok in June 1917, and the second left Harbin in the fall. Only at the end of 1918 were Ukrainian units formed to defend the interests of the Ukrainians in the Far East. During the Allied intervention in Siberia and the Far East, representations were made to the Allied command to form a Ukrainian corps, but without success.

The Ukrainian movement in the Far East was most evident in the cultural sphere. The low educational level of the peasantry and the small number of Ukrainian intelligentsia ruled out any widely based political activity and direct participation in the struggle for power. The political program of the Ukrainians and the Far Eastern Secretariat aimed at national territorial autonomy, but in practice the government was always in Russian hands. The Ukrainians in the Far East recognized the UNR and considered themselves in theory to be its citizens. In practice their relations with Ukraine were limited to sending a special delegation to Kiev, the appointment by the Ukrainian government of a consul (P. Tverdovsky) in

TABLE 2
Ukrainian population, 1926–70

Harbin in 1918, and the granting of representational prerogatives to the agents of the Far Eastern Council in areas where Ukrainian consulates did not exist. The rapidly changing situation in both Ukraine and the Far East made closer relations impossible however. Political power in the Far East was in the hands of various Russian governments that were hostile to Ukrainian demands. Ukrainians played a role in the Far Eastern Republic (1920–2), which they actively helped organize. Of the 351 delegates to the constituent assembly of 2 March 1921, 41 were Ukrainian (not including the Primore oblast). The constitution of the Far Eastern Republic guaranteed all nationalities, including the Ukrainians, national autonomy. A separate ministry headed by P. Marchyshyn established a number of Ukrainian schools. The Ukrainian Far Eastern Secretariat planned to hold a Far Eastern congress, which was to proclaim a Ukrainian state in the Far East known as Zelena Ukraina (Green Ukraine), but in November 1922 the Far Eastern Republic was occupied by Soviet troops.

The Soviet authorities abolished all Ukrainian organizations and arrested the key Ukrainian leaders; most of them were sentenced at a trial in Chita to long prison terms. But, faced with the strength and size of the Ukrainian element, the Soviet authorities were forced to carve out Ukrainian national regions – 10 in the Primore oblast and 4 in the Amur oblast. In these regions Ukrainian became the language used in the schools and the administrative agencies. In the mid-1930s there were 17 such regions. The daily *Sotsialistychna perebudova* was published from 1932 to 1949 in Khabarovsk. In 1926–32 a Ukrainian pedagogical institute functioned in Blagoveshchensk. In 1935 the Soviet authorities began to abolish Ukrainian cultural autonomy and to introduce Russification measures. Some concessions were made during the Second World War, because many Ukrainians were evacuated to the Far East from the German-occupied parts of Ukraine. After the war these evacuees were not allowed to return home.

Ukrainian colonies in *China, particularly in Manchuria (Harbin), maintained close links with Ukrainians in the Far East.

Economy. Besides the physical nature of the Far East, its peripheral location, remoteness from Europe, and sparse population have an influence on the region's economic development. The natural resources of the country are still only partially exploited. However, military-defense considerations require that the Far East be self-sufficient. The economic policy of the tsarist government was designed to develop all branches of the economy simultaneously, even those that lack a natural base, and the Soviet government has continued this policy.

For centuries, gold mining, fishing, and hunting have been important to the economy of the area. During the Soviet period the forest industry, the mining of ferrous metals, shipbuilding, and sea transport have been established.

Today agriculture in the Far East has a secondary importance relative to other branches of the economy. Almost 60 percent of the country's area is covered with forest. The area under cultivation is 2,500,000 ha, of which over 1,000,000 ha are devoted to grain such as spring wheat, oats, barley, and corn for silage. Soya is important among the industrial crops and is exported.

Potatoes are a major crop. In 1975 there were over 1,000,000 head of cattle and 800,000 hogs in the Far East.

Mining, forestry, and fishing are the main industries. Gold and brown coal are mined in the Amur oblast; lead near Komsomolsk; lead, iron ore, zinc, and coal in the Primore krai. The lumber and woodworking industries are important exporters. Fishing has grown from a local, coastal industry to an ocean industry and supplies one-quarter of the USSR demand for fish. The main port and center of the fishing industry is Vladivostok. The machine-building industry is concentrated in Khabarovsk, Vladivostok, and Blagoveshchensk. There is an important metallurgical plant in Komsomolsk on the Amur.

The primary aim of the transport system is to connect the Far East with the interior of the USSR. Along with sea transportation, the Trans-Siberian Railroad with its branches, including the recently built Baikal-Amur trunk line, and civil aviation serve this purpose. The most important river route is the Amur.

Far Eastern Republic (Dalne-Vostochnaia Respublika). A democratic state set up in April 1920 in the Far East (including the Trans-Baikal region) as a buffer state between Soviet Russia and Japan. Its territory covered about 3,000,000 sq km, and its population was about 2,000,000.

The constituent assembly of the Far Eastern Republic, which met from 12 February to 26 April 1921, consisted of 351 delegates, of whom 41 were Ukrainians. In accordance with the constitution, the Ukrainians received special rights and their own minister. The republic was occupied by the Red Army and ceased to exist on 10

November 1922, when its parliament was forced to adopt a resolution of unification with Russia.

Far Eastern Ukrainian congresses (*daleko-skhidni ukrainski zizdy*). Congresses of Ukrainians in the Far East held in 1917–18. The first congress took place on 11–14 June 1917 in Nikolsk-Ussuriiskii (now Ussuriisk), the second and third in Khabarovsk on 7 January 1918 and 7 April 1918, and the fourth in Vladivostok on 24 October 1918. The third congress set up the Far Eastern Ukrainian Regional Council, which by the end of 1920 had held three sessions, and its executive arm – the Far Eastern Ukrainian Secretariat, which operated from 1918 to 1920.

Farmers'ke zhyttia (Farmer's Life). An organ of the *Ukrainian Labour-Farmer Temple Association, *Farmerske zhyttia* appeared as a pro-Communist weekly from 1 April 1925 to 3 July 1940, when it was banned by the Canadian government. It was published in Winnipeg, Manitoba, with D. Prystash, M. Saviak, S. Pura, and J. Navis as editors; by 1939 its circulation was 8,000. It focused on the concerns of Ukrainian farmers in western Canada, carrying women's and youth's sections (in 1937 a special page, 'Robitnytsia,' was introduced) and supporting farmer protests against depressed economic conditions in the 1930s.

Fashchivka [Faščivka]. v-19, DB III-5. Town smt (1976 pop 4,200) in the Donets Basin in Anratsyt raion, Voroshylovhrad oblast, established in the 18th century. Its main industry is the mining and processing of anthracite coal.

Fashchivka [Faščivka]. v-19, DB III-5. Town smt (1976 pop 6,670) in the Donbas in Pereval'ske raion, Voroshylovhrad oblast, established in 1795. Its main industry is anthracite mining, and it has an enrichment plant (est 1870).

Fastiv. See Khvastiv.

Fatalchuk, Volodymyr [Fatal'čuk], b 8 June 1903 in the town of Horokhiv in Volhynia. Graphic artist. Fatalchuk graduated from the Kiev Art Institute in 1929. Together with O. Yunak he designed books and posters, and illustrated *Ukrains'ki narodni kazky* (Ukrainian Folk Tales, 1951), *Antolohiia ukrains'koi poezii* (An Anthology of Ukrainian Poetry, 4 vols, 1957), T. Shevchenko's *Kobzar* (1959), *Ukrains'ki narodni pisni* (Ukrainian Folk Songs, nos 1 and 2, 1964–5), I. Le's *Khmel'nyts'kyi* (1969), and other books.

Fatma-Koba [Fat'ma-Koba]. A cave in the Baidarska Valley in the Crimea where an archeological site from the Mesolithic period was uncovered. Studies of this site were conducted by G. Bonch-Osmolovsky in 1927 and S. Bibikov in 1956–8. Excavations revealed strata of the Azilian and Tardenoisian cultures, including a flexed skeleton of Cro-Magnon man in the latter stratum.

Fauna. The present fauna of Ukraine began to develop in the late Eocene epoch, if not earlier. Only a few fossil remains of land animals of the Eocene and Paleocene epochs have been discovered in Ukraine. Among the mammals at the end of the Paleocene were the piglike Anthracotheriidae and the hornless rhinoceros *Chilo-*

therium; among the birds were the cormorant, sea gull, stork, duck, and owl. The rivers were inhabited by crocodiles and the seas by whales (zeuglodons) and many forms of mollusk and fish related to modern representatives of these groups.

In the Neogene period, when the climate was subtropical, the *Hipparion* fauna flourished on the extensive steppes. It was represented mostly by herbivores such as the *Hipparion*, the ancestor of our horse, rhinoceros (*Dicerorhinus orientalis* and *D. etruscus*), mastodon (*Anancus*, *Mastodon*), elephant (*Archidiskodon meridionalis*), giant deer (*Eucladocerus pliotarandoides*), archaic camel (*Paracamelus*), saber-toothed tiger (*Machairodus*), and beaverlike trogontherium (*Trogontherium cuvieri*). Beside them lived families and species that still exist (or existed until recent times) both inside Ukraine – for example, the desman (*Desmana moschata*), pika (*Ochotona*), hedgehog, fox, bear, rabbit, bustard, chicken, partridge – or outside Ukraine – for example, the monkey, giraffe, porcupine, ostrich, and marabou. In the late Pliocene most of the present invertebrate and vertebrate species were to be found in Ukraine.

During the several ice ages in the Pleistocene epoch much of Ukraine's territory was covered with glaciers. In the tundra bordering them lived species adapted to the cold climate. In the interglacial periods the forest fauna returned to the lands from which the ice sheets retreated. After each glaciation the Tertiary species diminished greatly: some died out and others (eg, the monkey, ostrich, and giraffe) migrated south, but many withstood the existing conditions. Thus, in the period of maximum glaciation, there was a characteristic mixed mammoth fauna in Ukraine. Beside its typical representatives – the mammoth, woolly rhinoceros, cave-dwelling bear and lion, spotted hyena – lived such arctic animals as the musk-ox (*Ovibos moschatus*), arctic fox (*Alopex lagopus*), and true lemming (*Lemmus lemmus*); such steppe animals as the saiga (*Saiga tatarica*), bobac (*Marmota bobak*), ground squirrel or suslik (*Citellus*); and such forest animals as the beaver. Besides these, horses, bison, deer, foxes, wolves, bears, hares, ducks, geese, woodcocks, and many other extant species inhabited Ukraine.

In the Middle Holocene the climate became similar to what it is today. Many species of the earlier period gradually perished (mammoth, rhinoceros); some species moved farther north (musk-ox). In the relatively short dry period that succeeded the retreat of the glaciers, the steppe species advanced far north.

Human activities – hunting, herding, agriculture – contributed to the impoverishment of the mammoth fauna. The cultivation of the steppes, destruction of the forests, and draining of the marshes contracted the habitat of many species and contributed to their migration from Ukraine or to their extinction. Within historical times reindeer ceased visiting Ukraine during their winter migration. In the 16th century the Asiatic wild ass (*Equus hemionus*) and in the 17th century the aurochs and bison became extinct. In the 19th century the wolverine and flying squirrel disappeared from the forest zone; the tarpan, saiga, and ruddy ground squirrel disappeared from the steppe and forest-steppe zone; the alpine marmot (*Marmota marmota*), willow grouse (*Lagopus lagopus*), and white hare (*Lepus timidus*) vanished from the Carpathians; and the wild boar disappeared from the Crimean Mountains. Some species have become rare: the little bustard (*Otis tetrax*), great bustard (*Otis tarda*), ruddy

sheldrake (*Tadorna ferruginea*), and swan. Some valuable fish species – sturgeon and eel – have disappeared from the rivers. Some species, for example, the suslik, have spread with the cultivation of the steppes; these include pests (mouse, hamster). As well, humans have added to the variety of fauna by acclimatizing such new species as the nutria, raccoon, silkworm, and others.

Zoogeographically, the fauna of Ukraine belongs to the Euro-Siberian zone of the Palaearctic subregion of the Holarctic region. Only the Crimean Mountains and the southwest part of Caucasia belong to the Mediterranean subzone. Because of Ukraine's border locations and the absence of natural barriers, its fauna is intermediate between the fauna of Europe and Central Asia, and between the fauna of the forest and steppe belts and that of the subtropics. The western boundaries of the habitats of many eastern species run through Ukraine; for example, of the yellow suslik (*Citellus fulvus*) and pygmy suslik (*Citellus pygmaeus*). The eastern and northern limits of the habitats of many western European and Mediterranean species are found in Ukraine: Bechstein's bat (*Myotis bechsteini*), the wildcat (*Felis silvestris*), the eel (*Anguilla anguilla*), the Baltic sturgeon (*Acipenser sturio*), and others. The Dnieper River is an important natural barrier to the east-west distribution of animals. The habitat of many northern species – elk, lynx, brown bear, white hare, capercaillie, black grouse, hazel hen, and others – extends as far south as Ukraine. The northern boundary of many southern species, including the lesser mouse-eared bat (*Myotis oxygnatus*), long-winged bat (*Miniopterus schreibersi*), and many insects, lies in Ukraine. There are few endemic species in Ukraine.

In general, there are about 28,000 species on the territory of Ukraine, among them more than 690 species of vertebrates (101 mammal, 350 bird, 21 reptile, 19 amphibian, and over 200 fish, 110 of which are freshwater species), over 1,500 protozoan species, over 700 species of worm, 400 crustacean species, 330 mollusk species, about 3,300 arachnid species, 20,000 other species of insects, and about 1,080 others.

The zoogeographical regions of Ukraine coincide with the natural biogeographical zones: Polisia, forest-steppe, steppe, semidesert, littoral, mountain (Carpathians, Crimean Mountains, and western Caucasia), and marine (the Black Sea and the Sea of Azov).

The fauna of Polisia is known for its variety of forest and swamp species. In the past Polisia had large numbers of elk, lynx, bear, capercaillie, black grouse, and hazel hen, which today can be found only in the remotest areas. Wild boars, wolves, foxes, roe deer, forest martens, and other species are quite common. Valuable fur-bearing animals such as the beaver (on reservations along the Teteriv, Horyn, Prypiat, Dnieper, and Desna rivers), mink, otter, and ermine have survived here. The red-backed mouse (*Clethrionomys glareolus*), field vole (*Microtus agrestis*), striped field mouse (*Apodemus agrarius*), and red-toothed shrew (*Sorex*) live in the forests, swamps, and meadows. Untilled, open fields are inhabited by the common mole, gray common vole (*Microtus arvalis*), wood mouse, and other species. Among the birds are found the capercaillie, black grouse, hazel hen, tit, rock dove, spotted eagle (*Aquila clanga*), short-toed eagle (*Circæetus ferox*), and tree pipit (*Anthus trivialis*). Along rivers and swamps wild ducks, snipes, bald coots, black storks (*Ciconia nigra*), and common cranes (*Grus grus*) thrive. At

crystalline cliffs and outcrops along the rivers the bee-eater (*Merops apiaster*) and rock thrush (*Monticola saxatilis*) can be found. Among the reptiles, the forest grass snake, asp, slowworm (*Anguis fragilis*), quick lizard (*Lacerta agilis*), viviparous lizard (*Lacerta vivipara*), and mud tortoise are quite common. Amphibians such as the newt, common fire-bellied toad (*Bombina bombina*), bullfrog, and frog are widely distributed. Rivers and lakes sustain such fish as the carp, tench, and pike. Various species of beetles, bugs, mosquitoes, cicadas, and other insects live here.

The forest-steppe is a transitional zone in which steppe species live side by side with forest species. Certain forest species that inhabit wooded river banks penetrate far into the steppe, for example, the squirrel and the pine marten (*Martes martes*). Among the forest species that inhabit the forest-steppe are the roe deer, hazel mouse (*Muscardinus avellanarius*), forest dormouse (*Dyromys nitedula*), gray dormouse (*Glis glis*), red-backed mouse, and field vole. The steppe species that can be found deep in the forest-steppe are the steppe polecat (*Mustela eversmanni*), birch mouse (*Sicista subtilis*), mole rat (*Spalax*), and gray hamster (*Cricetulus migratorius*). The Left-Bank forest-steppe provides a habitat for the steppe lemming (*Lagurus lagurus*) and the large jerboa (*Alactaga jaculus*). The spotted suslik (*Citellus suslica*) is common in the entire forest-steppe, while the European suslik (*Citellus citellus*) lives in the southwestern section. The black-bellied hamster (*Cricetus cricetus*) and gray vole are fairly widespread. The red kite (*Milvus milvus*), stock dove (*Columba oenas*), ringdove (*Columba palumbus*), common turtledove (*Streptopelia turtur*), green woodpecker (*Picus viridis*), thrush nightingale (*Luscinia luscinia*), and other species inhabit oak forests. The common quail and partridge are widely distributed. Since the Dnieper River is a migration route and the forests, ponds, and fields of the forest-steppe are stations for migratory birds, wild geese, cranes, and various species of duck can be found here. Among reptiles, the Aesculapian snake, viper, common and tree snakes, mud tortoise, and lizard are the most common. The amphibians are represented by the pond frog (*Rana esculenta*), common newt, crested newt (*Triturus cristatus*), and others. Among the insects of the forest-steppe are such pests as the owl moth (*Agrotis segetum*), sugar-beet weevil (*Bothynoderes punctiventris*), and lamellicorn (*Lethrus apterus*).

The Tysa Lowland of Transcarpathia is a unique region of the forest-steppe. Here are found species that are rare or non-existent in other regions of the forest-steppe: the greater horseshoe bat (*Rhinolophus ferrum-equinum*), Ikonnikov bat (*Myotis ikonnicovi*), lesser mouse-eared bat, and long-winged bat. There are many Mediterranean species among the insects.

In the steppe the most typical species are rodents that are adapted to open plains and an arid climate. As in the forest-steppe, so in the steppe the western, central, and eastern sections differ from one another. The mammals that are typical of the steppe are the large jerboa, pygmy suslik, steppe vole, mole-vole (*Ellobius talpinus*), and three-toed sand jerboa (*Scirtopoda tellum*), all of which live east of the Dnieper. The western steppe is inhabited by the spotted suslik, mole rat, and steppe polecat. The lesser mole rat (*Spalax leucodon*) is found in the southwest, while the marbled polecat (*Vormela peregusna*) is limited to the southern part of the steppe and is retreating gradually

eastward into the Asiatic steppes. The bobac, which formerly was common in the west, still survives on reservations along the Donets River. In the eastern steppe one can still encounter the corsac fox (*Vulpes corsak*) and long-eared hedgehog (*Hemiechinus auritus*). The birds that are typical of the steppe are rare today: the great bustard, calandra lark (*Melanocorypha calandra*), demoiselle crane (*Anthropoides virgo*), black-winged pratincole (*Glareola nordmanni*), tawny eagle (*Aquila rapax*), and little bustard. The most common reptiles are the yellow-bellied coluber (*Coluber jugularis*), steppe viper (*Vipera renardi*), four-striped snake (*Elaphe quatuorlineata*), and green lizard (*Lacerta viridis*). The steppe lizard (*Eremias arguta*) is less common. A great variety of insects, including Italian and Asiatic locusts, inhabit the steppe.

In the east the steppe changes into semidesert, where desert species from the Aral-Caspian deserts exist side by side with steppe species.

The steppe north of the Black Sea and the Sea of Azov belongs to the littoral region, in which water fowl and aquatic animals are prominent. Many bird species are found here: the herring gull (*Larus argentatus*), tern (*Sterna*), Kentish plover (*Charadrius alexandrinus*), avocet (*Recurvirostra avosetta*), and spoonbill (*Platalea leucorodia*). The Old World white pelican (*Pelecanus onocrotalus*) and the eastern glossy ibis (*Plegadis falcinellus*) nest at the mouth of the Danube. Migratory birds pass through or winter in this region: in spring and fall innumerable geese and ducks come here. The muskrat, otter, mink, ondatra (acclimatized), goose, duck, occasional swan, gadflies, gnats, and mosquitoes inhabit the river floodplains. In the limans and deltas is found a mixture of sea and freshwater fish species. Mullet, medusa, flounder, and other sea species live alongside migratory species.

In the Black Sea dolphins and the rare white-bellied seals (*Monachus monachus*) are found. The fish of the Sea of Azov and the coastal waters of the Black Sea are very similar. Yet there are some local species: the Azov herring, Azov anchovy, Azov percarina, sardelle, great plaice, sprats, and gobies are found in the Sea of Azov, and the Black Sea trout, Black Sea herring, seahorse, tunny, mackerel, sturgeon, and others are found in the Black Sea.

The Carpathian Mountains contain mostly forest fauna. The vertical distribution of animals is to a great extent related to the vegetation. High mountain species – the snow vole (*Microtus nivalis*), alpine shrew (*Sorex alpinus*), water pipit (*Anthus spinoletta*), alpine accentor (*Prunella collaris*), and certain insects – are confined to the subalpine and alpine zone of the Carpathians. Some taiga species are found in the mountain forest zone: lynx, capercaillie, hazel hen, black grouse, and others. But most of the fauna consists of Central European forest species, which appear in all regions of the Carpathians: the now rare wildcat and brown bear, and roe deer, forest marten, ermine, Carpathian squirrel, wild board, wolf, fox, golden eagle, hawk, owl, rock pipit, woodcock, and others. There are many species of reptiles and amphibia (Carpathian newt, spotty salamander, smooth snake, etc) and many European mountain species of insects, mollusks, and other invertebrates.

The fauna of the Crimean Mountains, especially that of the southern coast of the Crimea, is Mediterranean. The fauna is insular in character: species that are typical of the forest or steppe belts are absent. Instead, there are many

endemic subspecies. The forests are inhabited by the Crimean red and roe deer, Crimean mountain fox, badger, bats, and other species. The squirrel and mouflon are acclimatized. Of the bird species, we find the griffon vulture, tawny owl, Crimean jay, and tomtit. The Crimean scorpion (*Euscorpium tauricus*) and spider solifug (*Galeodes araneides*) represent the arachnids, and the scolopendra (*Scolopendra cingulata*) represents the centipedes. There are many Mediterranean species, which arrived in the Paleogene when the Crimea was connected to the Balkans and western Caucasia, for example, the Crimean gecko (*Gymnodactylus kotschyi Danilevskii*), Crimean cicada (*Cicada taurica*), Crimean beetle (*Procerus tauricus*), and Crimean mantis (*Ameles taurica*). Many Mediterranean species of mollusk are found here. Of the pests introduced from the outside, the phylloxera is harmful. Mediterranean fauna appears also on the Black Sea coast of western Caucasia.

The ichthyofauna of Ukrainian rivers consists mainly of members of the Cyprinidae family. The main European watershed between the Baltic and Black Sea limits the distribution of certain fish species. In the rivers of Ukraine that flow into the Baltic are found the eel and Baltic sturgeon. The rivers flowing into the Black Sea contain gobies (*Gobiidae*), vyrezub (*Rutilus frisi*), sterlet (*Acipenser ruthenus*), other sturgeons, and the Ukrainian lamprey (*Lampetra mariae*), along with other species. In the Tysa, Cheremosh, and mountain tributaries of the Danube are found the Danube salmon (*Hucho hucho*), striped ruff (*Acerina schraetser*), and little zingel (*Aspro zingel*). Mountain streams contain trout and grayling (*Thymallus thymallus*).

To protect what remains of the rich flora and fauna of Ukraine from extinction, a network of ten nature reserves (*zapovidnyky*) that provide full protection to wildlife have been set up. There are also 123 wildlife refuges (*zakaznyky*) that provide partial protection. Many species – the beaver, lynx, muskrat, bobac, elk, bustard, and others – are under special protection.

Fauna Ukraïny (The Fauna of Ukraine). A monumental, 40-volume monograph series on all the animal species on Ukrainian and adjacent territories, which is being prepared and published by the Institute of Zoology of the

Academy of Sciences of the Ukrainian SSR. The first volume appeared in 1956. The project was started through the initiative of I. *Pidoplichko (1905–75). The editorial committee has consisted of V. Kasianenko, I. Pidoplichko, I. Bilanovsky, H. Boshko, M. Voinstvensky, O. Markovych, V. Puchkov, and I. Sokur. The first volumes of *Fauna Ukraïny* describe the vertebrates; the next volumes deal with the invertebrates; and the two final volumes will present the history of Ukraine's fauna, its zoogeographical character, and the history of research. The work is an important achievement of Ukrainian zoology. It meets the highest standards of modern systematics. Based on large museum collections of Ukrainian fauna, *Fauna Ukraïny* summarizes many years of research and identifies the questions that still need to be investigated. Every family, genus, and species is provided a diagnosis, classification table, synonymy, a description of its distribution and ecological traits, and so on. By 1980, 19 volumes in 30 issues had been published.

Feather grass (*Stipa*; Ukrainian: *kovyla*). A genus of perennials of the grass family, 30–100 cm high. Feather grass is one of the basic steppe plants. In Ukraine there are eight species that are widespread in the steppe and somewhat less common in the forest-steppe. The most common are hairy feather grass or *tyrsa* (*S. capillata*); and feathery or silky grass species such as John's grass (*S. joannis*), which is found mostly in the forest-steppe; Lessing grass (*S. Lessingiana*; narrow-leaved feather grass (*S. stenophylla*); and Ukrainian feather grass (*S. ucrainica*). Young feather grass is good feed for domestic animals, while old feather grass is rough and hardly edible.

February Revolution of 1917. The second revolution (after the 1905–7 one) in the Russian Empire, which led to the collapse of the tsarist regime and the inauguration of a democratic, republican government. Russia was weakened at the time by military failure, an economic crisis, and public discontent. The working class wanted better living and working conditions, the peasants wanted more land, and the oppressed nationalities wanted freedom. Almost everyone wanted an end to the war with the Central Powers.

The immediate causes of social unrest were the military losses and disorder at the front and the food shortages in Petrograd. There the Putilov factory went on strike on 2 March (os 17 February) 1917, and Petrograd's workers took to the streets. On 12 March (27 February) they were joined by the soldiers – the guard regiments that contained many Ukrainians, such as the Volhynian Regiment, which had ties with the Ukrainian Social Democrats and with V. Vynnychenko. That day the Russian State Duma, under the leadership of M. Rodzianko, assumed power in Russia and constituted the Provisional Committee to direct the revolution. On 15 (2) March the committee formed the *Provisional Government, which was headed by Prince G. Lvov (a liberal zemstvo leader) and composed of the Kadets (P. Miliukov), Octobrists (A. Guchkov), Socialist Revolutionaries (A. Kerensky), Social Democrats (N. Chkheidze), and independent members (M. Tereshchenko and others). The Bolsheviks were opposed to the Provisional Government. By dominating the increasingly more radical soviets of workers' and soldiers' deputies, they succeeded in creating a situation

of dual authority. On 15 (2) March Nicholas II abdicated, and the Provisional Government replaced the tsar's high administrators (governors) with its own gubernial and county commissars throughout the empire, including Ukraine. During the revolution the Ukrainians organized their own representative body – the *Ukrainian National Council in Petrograd. It was headed by O. Lototsky and demanded national rights for Ukraine from the Provisional Government. There was also a Ukrainian faction (headed by O. Shulhyn) in the Petrograd Soviet of Workers' and Soldiers' Deputies.

The revolution quickly spread throughout the Russian Empire. On Russian ethnic territory the revolution was primarily a social one; on non-Russian territories it was mainly a national revolution. Ukrainians organized their own associations and demanded recognition for their language, Ukrainian schools, and their own distinct military formations.

In Kiev the *Central Rada was established to direct the Ukrainian national movement. M. *Hrushevsky presided over the Central Rada, which, after convening the *All-Ukrainian National Congress on 17–21 April 1917, became Ukraine's revolutionary parliament. Various Ukrainian political parties became active in this period: the Social Democrats, Socialist Revolutionaries, Socialists-Federalists, Socialists-Independentists, Democratic Agrarians, and others. Various occupational associations and unions were also very active and elected delegates to the Central Rada.

From the beginning of the revolution the tsarist prohibitions against the Ukrainian language ceased to have any force, and Ukrainian was gradually introduced in the schools, administration, press, and publishing. The Ukrainian cultural and civic movement engulfed all Ukraine.

At the beginning of the revolution two governments competed in Ukraine: the Russian Provisional Government with its commissars, and the Ukrainian Central Rada and its General Secretariat, which was formed later. The Provisional Government soon lost its influence in Ukraine, and its functions were assumed by the Central Rada.

In general the February Revolution was carried out in a more peaceful and organized way in Ukraine than in Russia. Many massive rallies, demonstrations, congresses, and so on were staged without bloodshed. Besides social change the struggle for national, political, and cultural rights played a primary role in the Ukrainian revolution. Gradually national rights, followed by autonomy, and finally independence were achieved. (See also *October Revolution.)

Stepan Fedak

Fedak, Stepan, b 9 January 1861 in Peremyshl, d 6 January 1937 in Lviv. A prominent community leader in Galicia; father-in-law of Ye. Konovalts. Fedak worked as a lawyer in Lviv from 1890. He cofounded and was active in many economic institutions, including the Dnister Insurance Company (Fedak was its executive director from 1909 to 1920), Tsentrobank central co-operative bank, Audit Union of Ukrainian Co-operatives, Land Mortgage Bank, Karpatiiia Life-Insurance Company, and Ukrainian Savings Bank in Peremyshl. From 1913 to 1918 Fedak was vice-president of the Provincial Bank of Lviv. In 1915 he was deported by the Russians to Kiev, where he organized aid for Ukrainians from Galicia. He returned to Lviv in 1916. Fedak was the state secretary for food administration in the government of the Western Ukrainian National Republic. In December 1918, after the occupation of Lviv by Poland, Fedak organized a Citizens' Committee to represent Ukrainian interests before the Polish authorities and to aid prisoners of war and political prisoners under Polish occupation. He headed the committee until its dissolution in September 1921. Thereafter Fedak founded an aid committee in defense of Ukrainian political prisoners and headed it until his death.

Fedak, Stepan, b 6 May 1901 in Lviv, d ? Son of S. Fedak, officer in the Ukrainian Galician Army and the Army of the Ukrainian National Republic. As a member of the Ukrainian Military Organization (uvo) he made an attempt on the lives of the Polish president J. Piłsudski and the Lviv voivode O. Grabowski on 25 September 1921. This brought on mass arrests of uvo members. Towards the end of the Second World War he disappeared without trace in Berlin.

Fedak, Wasyl, b 1 November 1910 in Kadovbyshche, Bukovyna. Religious leader, bishop of the Ukrainian Orthodox church in Canada. Coming to Canada in 1912, Fedak settled with his parents at Sheho, Saskatchewan. Initially trained as a teacher, he completed theological studies in 1944 and served 25 years as a priest in Hamilton, Ontario. In July 1978 Fedak was consecrated bishop of Saskatoon and designated auxiliary bishop of

the Central Eparchy; in 1981 he also received temporary responsibility for the Eastern Eparchy.

Fedak-Sheparovych, Olena [Fedak-Šeparovyč], b 21 October 1894 in Lviv, d 27 April 1982 in Babylon, New York. Journalist, community figure, activist in the Ukrainian women's movement. Fedak-Sheparovych was the daughter of S. *Fedak and the wife of L. Sheparovych. In 1919 she became the Red Cross representative of the Western Ukrainian National Republic. She helped found the *Union of Ukrainian Women (1921) in Lviv and served as its vice-president. From 1928 to 1935 she was an executive member of the Ukrainian National Democratic Alliance. In 1938 she helped cofound the *Druzhyna Kniahyni Olhy women's organization. From 1935 to 1939 she co-edited the biweeklies *Zhinka* and *Hromadianka*. She took part in international women's congresses. As an émigré she lived in Austria and in the United States.

Fedchenko, Vasyl [Fedčenko, Vasył'], b 22 March 1907 in the town of Novyi Buh in Kharkiv gubernia, d 24 June 1979 in Voroshylovhrad. Sculptor. In 1932 he graduated from the Kiev Art Institute. He collaborated with V. Ahibalov and V. Mukhin on a series of monuments in the Donbas dedicated to the events of the civil war. He also produced portraits of Soviet leaders and thematic sculptures such as *To School* (1947) and *May War Be Damned* (1957).

Panas Fedenko

Fedenko, Panas, b 13 December 1893 in Veseli Terny, Katerynoslav gubernia, d 10 September 1981 in Munich. Socialist leader, historian, writer, and publicist. Before the revolution Fedenko studied in St Petersburg, where he was active in the Ukrainian Hromada and joined the Ukrainian Social Democratic Workers' Party (USDWP). He was a member of the Ukrainian Central Rada in 1917–18, a delegate to the Labor Congress in 1919, a member of the Central Committee of the USDWP, co-editor of the paper *Robitnycha hazeta* in 1919, and a USDWP representative to the Socialist International. After the failure of the Ukrainian revolution Fedenko emigrated to Prague, where he taught at the Ukrainian Higher Pedagogical Institute from 1926 and the Ukrainian Free University from 1934. After the Second World War he moved to Munich, taught at the Ukrainian Free University there, and led the USDWP (later the Ukrainian Socialist party) abroad. In 1950–67 he represented the Ukrainian Socialist party in the Ukrainian National Council. Fedenko is the author of *Natsional'na i sotsiial'na borot'ba ukrains'koho narodu* (The

National and Social Struggle of the Ukrainian People, 1923), *Z dyplomatychnoi dial'nosti Danyla Hreka* (The Diplomatic Activity of Daniel the Greek, 1929), *Istoriia sotsial'noi i politychnoi borot'by na Ukraïni* (History of the Social and Political Struggle in Ukraine, 2 vols, 1936), *Mykhailo Drahomanov i P.-Zh. Prudon* (Mykhailo Drahomanov and P.J. Proudhon, 1930), *Ukraïns'kyi hromads'kyi rukh u xx stolitti* (The Ukrainian Movement in the 20th Century, 1934, 2nd edn 1959), *Nationalitätenfrage in der Sowjetunion* (1937), *Ukraine: Her Struggle for Freedom* (1951), *Marksysts'ki i bol'shevysts'ki teorii natsional'noho pytannia* (Marxist and Bolshevik Theories of the National Question, 1960), *Novoia 'Istoriia kpsu'* (The New 'History of the CPSU,' 1960), and *Sotsiializm davnii i novochasnyi* (Socialism Past and Present, 1968). Fedenko also wrote short historical novels – *Homonila Ukraïna* (Ukraine Echoed, 1942), *Het'maniv kum* (The Hetman's Godfather, 1943), *Nesmertel'na slava* (Immortal Glory, 1953), and *Amor patriae (Liubov do bat'kivshchyny)* (Love of One's Country, 1962). He published many articles on historical and political themes. He was highly critical of both communism and Ukrainian nationalism.

A. Zhukovsky

Federalism. Political and constitutional system based on partnership and co-operation that results from the integration of geographically, historically, and culturally related regions or countries, which are united by common interests into one polity while preserving their autonomy and state character; also any movement that aims at establishing a federated state or federation. Some unitary states, particularly multinational ones, attempt to avoid fragmentation and to preserve unity through federation, that is, by creating self-governing, constituent states for each nationality.

Modern federated states date back to the founding of the United States of America in 1787. The oldest such state in existence is Switzerland, which arose in 1291 out of a confederation of separate cantons that was formed for mutual defense and that evolved into a federated state based on a constitution. The nation-states that are members of a federation participate in setting up a common, supreme, federal government. Usually the constituent states share power equally. In a federation the powers and prerogatives of the central government and of the constituent states are defined and guaranteed by the constitution. The purpose of federation is to decentralize the political system and to diffuse political power. Federalism is a higher form of *autonomy and is the result of the striving for self-government. Autocratic systems and imperial concepts are incompatible with federalism, while democratic systems, particularly those with republican and liberal-constitutional doctrines, are compatible.

Federalism in Ukraine before the 19th century. According to the historian M. Kostomarov, Kievan Rus', which was a union of lands and principalities, had certain attributes of a federation and a tendency toward federalism. Its development was cut short, however, by the Tatar conquests and the subsequent rise in Muscovy of a different state system – a unitary state with centralized power. The Russian historian P. Danilevsky saw the Kievan state as an 'autocratic-Slavic federation.' V. Kliuchevsky defined Kievan Rus' not as a political federation but rather as a dynastic federation based on the consanguinity of the rulers. The German historian

G. von Rauch called it simply 'princely federation.' The Ukrainian historians of law R. Lashchenko and M. Chubaty agree with Kostomarov that the Kievan union of principalities manifested federative tendencies.

The state of Muscovy was not based on the principle of federation. Even when Muscovy granted temporary autonomy to those principalities and non-Russian states (the Hetman state, the Don Cossack Host, Georgia) it had annexed, usually by force, this autonomy was based on the system of vassalage.

Ukrainian territories within the Polish or Lithuanian state cannot be regarded as members of a federation, because the Ruthenians never acquired an equal status and the Polish Commonwealth was never a federal state. Some aspects of federalism may have been present in Hetman I. *Vyhovsky's thought and in the Treaty of *Hadiache (1658), but they were never implemented beyond the preliminary stage.

Federalism in the 19th century. Modern theories of federation developed in Ukraine and Russia only in the 19th century. Among the Decembrists only the *Society of United Slavs raised the idea of a federation of Slavic nations, but it omitted Ukraine as a separate member, treating it as an indivisible part of Russia (in M. Muravev's draft for a constitution). The Russian Slavophiles rejected federalism on principle, for they adopted the ideal of a strong Russian tsar and autocrat as the protector of all Slavs against the non-Slavic world (see *Autocracy).

In contrast, Ukrainian Slavophilism, represented by the *Cyril and Methodius Brotherhood, highlighted in its program the free and equal federation of the Slavic nations in a democratic republic. Under the influence of romantic messianism, the brotherhood believed that Ukraine would play a central role in the Slavic federation (as expressed in M. Kostomarov's *Knyhy byt'ia Ukraïns'koho narodu* [Books of Genesis of the Ukrainian People]). The strongest proponent of federalism among the brotherhood's members was M. Kostomarov. These ideas were not very popular in the 1840s, but eventually they inspired many important political thinkers and activists.

Certain Russian liberal and revolutionary circles of the 19th century looked to federalism for a solution of the numerous problems that beset autocratic tsarism. A. Herzen vigorously propagated the idea of federalism, including Ukraine's right to autonomy in a new Russian federation and even secession. A. Shchapov, a professor at Kazan University, and the writers and journalists N. Ogarev (proponent of a free union of indigenous peoples) and N. Chernyshevsky, who envisioned a union of equal ethnic states based on self-government, were federalists. M. Bakunin represented anarchist federalism among the Russians.

M. *Drahomanov, who preserved and developed the main ideas of the Cyril and Methodius Brotherhood, attained the status of the leading theoretician of federalism in Ukraine and Russia. In spite of certain affinities with the position of Russian liberal federalists, Drahomanov's concept of federalism was deeper and more solidly grounded. It was designed to meet the specific needs of both Russia and Eastern Europe.

Political federalism (in contrast to P. J. Proudhon's economic federalism) was, according to Drahomanov, the best solution to the nationalities problem in the Russian and Austrian empires and also the highest form of democracy. Drahomanov's federalism was based on the

self-government of communities (*hromady*) and larger territories (*zemli*), which would unite to form a 'free association or union' built on modern constitutional principles and governed by representative bodies at various levels. Centralism, even of the republican and parliamentary form, is alien to true federalism. Drahomanov's ideal of political federalism was to be realized through the decentralization and debureaucratization of the state 'from the bottom upwards' and the free recognition of self-governing entities. A two-chamber parliament representing the whole population and the constituent nation-states was to be the central governing body of the federation. Drahomanov advocated this form of federation not only for Russia, but for all Europe and eventually for the world. In his time he encouraged the *zemstvo* movement and municipal self-government (city autonomy), through which, he hoped, Russia would eventually evolve into a federal system.

The 'free communities' (*vilni hromady*) and free, contractual relations among these communities and territories form the basis of Drahomanov's federalism. It is quite likely that his research in Roman history and his investigation of Swiss federalism and British self-government had an influence on his ideas. In one of his projects he divided Russia on the basis of economic and geographic criteria into 20 autonomous territories, 4 of which lay in Ukraine: the Polisia, Kiev, Odessa, and Kharkiv regions. Drahomanov recommended federalism, based on Austria's crown provinces, for Galicia, but he believed that in the long run a Dnieper Ukraine federated with Russia could become attractive to Galicia.

S. *Podolynsky expounded his idea of federalism, based on Drahomanov's free communities, in the journal *Hromada*, published by Drahomanov in Geneva. According to Podolynsky Ukraine would form a federated republic of voluntarily united communities that in turn would join a world federation. The constituent elements of the state, the communities, would determine obligatory norms in all areas for themselves, while the central 'council of communities' would serve only as an arbitrator among them in the event of conflict. Judicial, as well as legislative and executive, powers would be decentralized. The police, army, statistical office, and certain departments of economic planning and administration would be federal agencies.

Federalism in the 20th century. The most active political leaders in Dnieper Ukraine at the end of the 19th century and particularly at the beginning of the 20th century, when political parties began to be formed, shared Drahomanov's and Podolynsky's views. Only the *Revolutionary Ukrainian party at first and the *Ukrainian People's party advocated independence for Ukraine. Other parties, such as the Ukrainian Social Democratic Workers' party, the Ukrainian Democratic Radical party, and the Society of Ukrainian Progressives, offered only a program of autonomy, sometimes mentioning federation as an ultimate demand. Most of the other non-Russian factions in the Russian State Duma (see *Autonomist's Union) offered a similar program. During the first stage of the 1917 Revolution the *Congress of the Peoples of Russia, which convened in September 1917 under the chairmanship of M. Hrushevsky, demanded that the state be reconstructed on the federal principle. Among the Russian parties only the Socialist Revolutionaries, probably because of the influence of Drahomanov's

ideas, were prepared to accept a federated Russian republic. The Social Democrats (Mensheviks and Bolsheviks) and Octobrists were centralists, while the Constitutional Democrats accepted a limited autonomy for the non-Russian nations. The non-Russian socialist parties, including the Jewish *Bund, defended federalism, however.

The proclamation of the Russian republic under A. Kerensky on 14 September 1917 did not specify its political system, including whether it would be a unitary or a federated state. Most of the non-Russian nations, particularly the peoples on the borderlands of the former empire, quickly adopted the position of political independence. The Bolshevik coup accelerated their evolution from autonomy to independence. This is illustrated by the four *universals of the Ukrainian Central Rada. Although the Third Universal still endorsed the idea of federation, the proclaimed UNR actually had no one with whom to federate. The authors of the Fourth Universal were faithful to the principles of 'self-determination' and respect for the 'will of the people' and hence left it for the constituent assembly to decide about the UNR's possible federation with other parts of Russia. By the beginning of 1918, practically all Ukrainian parties, including the Ukrainian Party of Socialists-Federalists, had adopted the position of Ukraine's independence. Russian parties in Ukraine still insisted on federation in theory, but there were few unequivocal and convinced federalists in the Russian anti-Bolshevik movement. When the Ukrainian state had been almost completely rejected by the Allies, Hetman P. Skoropadsky, as a result of the influence of his Russian milieu, proclaimed on 14 November 1918 Ukraine's federation with Russia. But even those Russians who collaborated with the hetman did not believe in a genuine federation, but rather regarded it as a tactical maneuver to restore a centralized Russian state.

After the revolutionary events of 1917–20 and the short-lived Ukrainian state (in the form of the UNR or Hetman monarchy), no important Ukrainian group remained that advocated federalism. The one notable exception was the Galician politician V. Paneiko, who in 1922 presented a plan of confederation with Russia as an alternative to Polish domination in Western Ukraine in his work *Z'iedyneni derzhavy skhidnoï Evropy: Halychyna i Ukraina suproty Pol'shchi i Rosii* (The United States of Eastern Europe: Galicia and Ukraine in Relation to Poland and Russia).

The unification of the UNR and the Western Ukrainian National Republic was not federative in form but was envisioned, rather, after 21 January 1919, as a merger of the two states with a temporary continuation of their separate political and military structures. An internal Ukrainian federation was proposed as the future system for Ukraine by two jurists – S. Dnistriansky and O. Eikhelman – in their respective draft constitutions for the UNR.

The Czechoslovak Republic to which the Carpatho-Ukrainian state belonged was on the way to becoming a federated state, but its period of reorganization in October 1938–March 1939 was too brief for it to develop the classical federal structure. In the 1950s, during the cold war, some American political circles tried to use anti-Soviet immigrants for propaganda purposes and made attempts to create a federalist trend among Ukrainians (through the fictitious federalist groups, ephemeral publications, etc). The

American-inspired Committee for the Liberation of the Peoples of Russia, which promoted federalism for the non-Russian peoples of the USSR, met with strong opposition from Ukrainian émigré circles.

Soviet federalism in theory and practice. The Russian Marxists G. Plekhanov, R. Luxemburg, and V. Lenin followed K. Marx and F. Engels in rejecting federalism as incompatible with their central idea of the concentration of power in the hands of the working class (ie, the Communist party) and with the principles of socialism in general. Lenin and the Bolsheviks were also opposed to the federated structure of the Russian Social Democratic Workers' party, which was made clear in their conflict with the Ukrainian Spilka and the Jewish Bund. In 1913 Lenin declared that he was opposed to federalism on principle and was ready to accept publicly instead the right of 'self-determination up to and including secession.' The Bolsheviks met the Russian Revolution and prepared their coup in an antifederalist spirit, although they criticized the Provisional Government for its policy towards non-Russian nations. When the latter were well on the way to independence, the Third All-Russian Congress of Soviets adopted a resolution on 25 January 1918 to the effect that 'the Soviet Russian Republic is founded on the principles of a voluntary union of free nations in a federation of Soviet national republics.' In 1920 the Comintern confirmed federalism as a transitional form of Soviet statehood preceding full unification. The Russian Soviet Federated Socialist Republic that was proclaimed in 1918 was regarded as a federation of peoples rather than states, and the peoples were granted autonomy.

Having created in December 1917 a Soviet government for Ukraine in Kharkiv, the Bolsheviks announced that Ukraine was in a federated union with Russia. After the abrogation of this union (Russia's Peace Treaty of Brest-Litovsk with the Central Powers) and the proclamation of the 'independence' of Soviet Ukraine, as well as the attempts by the Bolsheviks to fragment Ukraine by creating separate Soviet republics such as the Donets-Kryvyi Rih, Tavryda, Crimean, and Odessa republics, the Ukrainian national Communists, and the Left Social Democrats and Socialist Revolutionaries who sympathized with them, reacted by planning, in February–April 1918, to transform the UNR into an 'independent, federated, Soviet republic.' The Provisional Workers' and Peasants' Government of Ukraine again approved, on 25 January 1919, Ukraine's union with the Russian SFSR 'on the principles of Soviet federalism.' This was confirmed by a separate agreement and by legislative acts in June 1919 and later. In spite of the 'federative ties' among the Soviet republics, the Russian Communist Party (Bolshevik) remained centralized with one central committee, while the parties of the individual republics, such as the Communist Party (Bolshevik) of Ukraine, acquired the status of regional organizations.

In 1918–23 the relations between the Russian SFSR and the other republics, including the Ukrainian SSR, were officially defined as federative, based on a political, economic, military, and diplomatic union. Yet, in reality they were quite unique, and they can be considered only as quasifederative. The role of the common federal agencies was fulfilled by the agencies of one of the constituent states; hence, the relations among the members of the federation were asymmetrical. There were no guarantees of the 'sovereign' rights of the constituent

republics, and their relations were based either on contractual principles or on the de facto interventions of the RSFSR government in the affairs of the other Soviet republics. Today Soviet jurists describe the relations between the RSFSR and the other republics as federative, but this view was not generally accepted in the 1920s. Writers such as M. Reikhel, O. Malytsky, M. Paliienko, D. Magerovsky, and Ye. Korovin argued that the relations among the Soviet republics in 1919–23 were confederative. Certain Western scholars (V. Gsovski) and Ukrainian émigré scholars of law (V. Halaichuk, O. Yurchenko, and R. Yakemchuk) share this opinion.

When the Soviet Union was being formed, there was a tendency to annex the hitherto formally independent Soviet republics to the RSFSR by means of the process of autonomization (a term used by J. Stalin and others). The representatives of some republics (Ukraine and Georgia), particularly Kh. Rakovsky, M. Skrypnyk, V. Zatonky, B. Mdivani, and Tsivtsivadze, preferred a confederative relationship with the retention of the broadest rights by the national republics. With his unquestioned authority Lenin put an end to the discussion between the two extremes by deciding on federation, which was established in an almost classical form as far as its structure was concerned (see *Union of Soviet Socialist Republics). The new federation was formed on the basis of a union treaty and, later, of a constitution, and it encompassed unitary and composite states such as the RSFSR. Because of this, certain scholars distinguish two types of Soviet federations: state alliances of a higher type, such as the USSR, and of a lower type, such as the RSFSR and certain other republics, which have autonomous components. In 1924–40 the Ukrainian SSR, which at the time included the territory of the Moldavian ASSR, was one of the latter federations (see *Ukrainian Soviet Socialist Republic).

The constitutions of the USSR (1924, 1936) and the Ukrainian SSR (1925, 1929, and 1937) were constructed on the principle of a formal federation and a de facto centralized state. The latter aspect of the Soviet political system is confirmed by the fact that there were no guarantees of the republics' rights, which, without any formal, constitutional process, were gradually usurped by the central agencies. Because of the persistent tendency towards the centralization of power and the arbitrary substitution of Union agencies for republican agencies, certain Western scholars (Livingston, R. Maurach, Finer, and V. Aspaturian) deny that the Soviet Union is a federation. Most writers, including Ukrainian ones, agree that it is a special type of federation (Soviet federalism), which has a tendency to be a de facto unitary state while preserving institutional and functional federal forms. This general tendency was not deflected by two attempts to broaden the rights of the Union republics – in 1944 the republics were granted some foreign-policy powers and some prerogatives in the military sphere, and in 1956–9 their economic rights were expanded – because these reforms were to a large degree never implemented. In recent years the USSR has actually been undergoing a process of defederalization, although the constitution of 1977 formally reaffirmed the principle and institutions of federation. During the discussion of the proposed new constitution some authorities (P. Semenov and D. Zlatopolsky) asserted that the federation would gradually wither away as nations 'merged.' At the same time, M. Kulychenko, S. Yakubovskaia, H. Aleksan-

drenko, and others defended the permanency of the federalist principle. The nature of this discussion and the future of Soviet federalism are influenced by the evolution of the *nationality policy of the CPSU as well as by the concept of the so-called *Soviet People, which was introduced after the 22nd CPSU Congress.

Federation of Ukrainian Organizations in Australia (Soiuz ukrainskykh orhanizatsii v Avstralii or suOA). Central co-ordinating body of Ukrainian civic, cultural, and political organizations in *Australia. suOA also represents Ukrainians in Australia as a whole before Australian authorities. suOA was founded in 1950 in Melbourne. Its head office has most frequently been there, but at times in Sydney and Adelaide. In 1975 suOA represented seventeen organizations, divided among the communities (hromadas) of the six states. By 1982 sixteen biannual conferences had been held. suOA is a constituent member of the World Congress of Free Ukrainians. It organizes mass rallies and conferences and supports educational and publishing projects. In 1966 suOA published the collection *Ukrainci v Avstralii* (Ukrainians in Australia). The presidents of suOA have been V. Boliukh (1950-1), V. Solovii (Archbishop Varlaam, 1951-2), F. Melnykiv (1952-3), M. Shegedyn (1954-5), L. Haievska-Denes (1956-7), B. Shemet (1957-9), M. Boliukh (1959-73); M. Tsiurak (1973-5), M. Svidersky (1975-7), and Yu. Denysenko (1977-).

Federation of Ukrainian Social Democrats in Canada. In 1909 Ukrainian branches of the Socialist Party of Canada (SPC) formed the Federation of Ukrainian Social Democrats in Canada (FUSD), seeking autonomous affiliation with the SRC and professing solidarity with Ukrainian social democrats in Europe. M. Stechishin was elected first secretary. The SPC rejected both autonomy and international ties, and in 1910 the FUSD formally affiliated with the Social Democratic Party (SDP), adopting *Robochyi narod* as its organ. The election in 1910 of an Alberta-based executive under R. Kremar precipitated a power struggle with the editorial board of *Robochyi narod* in Winnipeg and a controversy over the FUSD's relationship with the SPC and SDP. In 1911 Kremar's followers formed the *Federation of Ukrainian Socialists, but by the end of 1912 the FUSD, led by Stechishin and V. Holovatsky, was again unrivalled in the Ukrainian socialist movement in Canada. Between 1912 and 1916 control of the movement passed to younger men like M. Popovych and J. Navis (I. Navizivsky), who were more sympathetic to Marxism. The FUSD propagated among workers and farmers; at its peak, in mid-1913, 23 branches served 424 members. In January 1914, when the FUSD was renamed the Ukrainian Social Democratic party, it had 18 branches with 238 members.

Federation of Ukrainian Socialists in Canada. In 1911 a power struggle developed in the *Federation of Ukrainian Social Democrats in Canada (FUSD) between the Edmonton-based executive, led by R. Kremar, and the editorial board of the party's newspaper, *Robochyi narod*, in Winnipeg. Affiliation with the Social Democratic party or a return to the Socialist Party of Canada (SPC) was the main issue. At a convention in Edmonton in May a minority in the FUSD formed the Federation of Ukrainian Socialists in Canada (FUS) with Kremar's *Nova hromada* as its organ. In June the FUS became an autonomous affiliate of the SPC. An interparty conference in February 1912 tried to reunite the FUS and the FUSD, but, with Kremar's following declining, *Nova hromada* ceased publication in September 1912 and by year's end the FUSD was unchallenged.

Federation of Ukrainian Student Organizations of America (Soiuz ukrainskykh studentskykh tovarystv Ameryky or susta). An umbrella organization of Ukrainian students in the United States that represents about 50 students' associations and clubs at various universities and colleges. The *Obnova Society of Ukrainian Catholic Students, the *Zarevo Ukrainian Student Association, and the *Ukrainian Student Organization of Mikhnovsky have special status in the federation. The federation was founded at the first congress of Ukrainian students in the United States, held at Columbia University on 10-12 April 1953. The congress was convened by the Preparatory Secretariat of Ukrainian Student Associations, headed by Z. Melnyk. The first president of the federation was E. Kulchytska, followed by O. Fedyshyn, Z. Kravets, K. Savchuk, V. Prybyla, B. Futei, Yu. Kulchytsky, B. Satsiuk, A. Chornodolsky, K. Semanyshyn, Ye. Ivantsiv, I. Hikava, Yu. Sierant, I. Prynada, and, in 1979, R. Stoiko-Lozynska.

Federation of Ukrainians in Great Britain (Obiednannia ukrainciv u Velykii Britanii). Cultural-educational organization founded in 1949 in London by the

supporters of the Melnyk faction of the OUN and of the UNR government-in-exile as an alternative to the *Association of Ukrainians in Great Britain. The federation's head office co-ordinated the work of 12 branches and 2,400 members in 1980 (1,200 in 1950 and 2,300 in 1970). The federation owns seven buildings. The Society of Ukrainian Women (president: V. Smereka), the veterans' group the League of Ukrainian Insurgents (presidents: O. Boruchyk and O. Chuiko), and the Organization of Ukrainian Youth belong to the federation. The federation runs several Ukrainian schools and supports a choir in Oldham. It publishes an irregular bulletin, as well as pamphlets in English to inform non-Ukrainians about Ukrainian concerns. The association's presidents have been G. Panchuk, V. Kokhanivsky, S. Onysko, A. Kohut, V. Shaian, M. Tarnavsky, V. Khomiak, A. Iselsky, and, since 1978, A. Kostiuk.

Federation of Ukrainians (also Ukrainian Federation) **in the United States** (Ukrainska federatsiia [Federatsiia ukrainsiv] u Zluchenykh Derzhavakh). Political association of Ukrainian-American organizations in 1915–21, founded at the First Ukrainian Assembly (Soim) in New York on 30–31 October 1915 for the purpose of helping the Ukrainian people in their struggle for independence. In contrast to the *American Ruthenian National Council established by Bishop S. Ortynsky, the federation supported the Allies from the outset. Its first president was V. Simenovych, and its principal leaders were M. Sichynsky, M. Tsehlynsky, and M. Repen. Socialist tendencies and eventually anticlerical attitudes were dominant in the federation. As a result, the *Ukrainian National Association left the federation and joined the rival umbrella organization the Ukrainian National Council. The Federation of Ukrainians organized large political meetings, raised funds for charitable and political causes in Ukraine, and published pamphlets, as well as the daily *Ukrains'ka gazeta* (in 1919). It established an information office in Washington. In 1920–1 the influence of the federation diminished, and it ceased its activities. Some of its organizations joined the United Ukrainian Organizations in America, and some of its active members joined the Oborona Ukrainy association.

Fedetsky, Alfred [Fedec'kyj, Al'fred], b 1857 in Zhytomyr, d 2 July 1902 in Minsk, Belorussia. Cinematographer. Fedetsky was the first Ukrainian to produce chronicle-documentary films. His films include *Dzhytyvannia kozakiv* (Cossack Trick Riding, 1896), *Vidkhid poizda vid Kharkivs'koho vokzalu* (Train Departure from Kharkiv Station, 1896) *Khresnyi khid z Kuriazha u Kharkiv* (Procession of the Cross from Kuriazh to Kharkiv, 1896), and *Narodni huliannia na Kinnii ploshchi v Kharkovi* (Folk Celebrations at the Horse Market in Kharkiv, 1897). Fedetsky also worked on the problems of color photography.

Fedir, A., late 17th–early 18th century. Woodcut artist who worked in Kiev in 1694–1724. He designed and illustrated with woodcuts the following publications: *Apostol* (1695), containing his *Beating of Steven*; *levanheliie naprestol'ne* (The Altar Gospel, 1697), which contains his frame for the title; *Strasne levanheliie* (Gospel of the Passion, 1706), which contains his *Washing of the Apostles' Feet*; *Molytvoslov* (Prayer Book, 1707), containing his *Dormition*, and *Mother of God*. Fedir's biblical scenes dis-

A wooden picture frame carved by A. Fedir, late 17th century

play local Ukrainian features. He signed his works with the initials F. or F.A.

Fediuk, Mykola [Fedjuk], b 26 February 1885 in Holubysia, Brody county, Galicia, d 17 May 1962 in Vynnyk near Lviv. Realist painter. He studied painting at the Cracow and Munich academies of art. From 1922 he taught painting and drawing at the Lviv Academic Gymnasium and later at the Lviv Institute of Applied and Decorative Arts (1947–50). His works include portraits, landscapes, and woodcuts.

Fediushka, Mykola. See Yevshan, Mykola.

Fediv, Ihor, b 8 September 1895 in Kolomyia, Galicia, d 12 March 1962 in Montreal. Community figure, geographer, teacher, publisher, publicist. Fediv was active in student life in Vienna and Prague, becoming head of the Central Union of Ukrainian Students (1923–4). In 1929 he settled in Lviv, where he became an associate publisher of *Ukrains'ka zahal'na entsyklopediia* (Ukrainian General Encyclopedia) and a member of the board of the Ukrainian Publishing Institute. From 1940 to 1945 he was a director of the Ukrainske Vydavnytstvo publishers in Cracow and Lviv. As an émigré he lived in Germany, Tunis, and, from

1951, in Montreal. Fediv published articles on geography, particularly on the Black Sea, and was co-author of the adaptation of D. Defoe's *Robinson Crusoe*, the novel *Syn Ukrainy* (Son of Ukraine, 1919).

Fedko, Ivan [Fed'ko], b 24 June 1897 in Khmeliv, Romen county, Poltava gubernia, d 26 February 1939. Soviet military leader. In 1918–21 Fedko fought in the civil war in southern Ukraine and in northern Caucasia. From 1922 he held high posts in the Soviet army. In 1937 he was appointed commander of the Kiev military district and, in the following year, deputy people's commissar for defense of the Soviet Union. He was executed on Stalin's orders along with other generals.

Fedkovych, Yurii [Fed'kovyč, Jurij], b 8 August 1834 in the village of Storonetys Putyliv in Bukovyna, d 11 January 1888 in Chernivtsi. Prominent Ukrainian writer of the late romantic school, herald of the Ukrainian revival in Bukovyna. From 1852 to 1863 he served in the Austrian army and took part in the Italian campaign, during which he wrote his first poem in Ukrainian (up to that time he wrote in German). Retiring as a lieutenant, he worked in his native village as a bailiff from 1863 and as school inspector in Vyzhnytsia county in 1867–72. In 1872–3 he worked in Lviv as an editor in the Prosvita publishing house and in the Ruska Besida theater. From 1876 to his death he lived in Chernivtsi, where, in 1885–8, he was the first editor of the newspaper **Bukovyna*. For his contribution to literature he was elected an honorary member of the Shevchenko Scientific Society.

Fedkovych published many poems and stories in Galician and Bukovynian periodicals. His major collections include *Poezii* (Poems, 1862) and *Poezii Iurii Horodenchuka-Fed'kovycha* (Poems of Yurii Horodenchuk-Fedkovych, 2 vols, 1867). In his lyrical poetry Hutsul themes predominate: the life of the recruit torn from his home who in despair either deserts or kills himself; the soldier's longing for his native region and his home; and the hardship of a soldier's life. He also wrote poems about the opryshoks ('Dovbush,' 'Iurii Hinda,' 'Luk'ian Kobylitsia'). The influence of T. Shevchenko is evident in many of his poems.

Fedkovych's first collection of prose, *Povisti Osypa Fed'kovycha* (The Tales of Osyp Fedkovych, 1876), was published by M. Drahomanov. The main themes in his prose are village life in Bukovyna ('Farmazoni' [The Cheats]), unhappy love ('Liuba-zhuba' [Love Is Fatal]), and the unhappy life of the soldier ('Shtefan Slavych,' 'Safat Zynych'). Some of his stories reveal the influence of H. Kvitka-Osnovianenko's ethnographic approach and Marko Vovchok's narrative style.

Fedkovych also wrote plays: the comedy 'Tak vam treba!' (You Deserve It! *Nyva*, 1865), the historical tragedy *Khmel'nyts'kyi* (1886–7), the melodrama *Kermanysh* (The Pilot, 1876), the historical drama *Dovbush* (1869), and a rendering of W. Shakespeare's *Taming of the Shrew* – *Iak kozam rohy vypravliaiut'* (How the Goats Have Their Horns Straightened, 1872). He also translated Shakespeare's *Hamlet* and *Macbeth*.

His poems in German were published in the collections *Gedichte von J. Fedkowicz* (1865) and *Am Tschheremuschl Gedichte eines Uzulen* (1882). Fedkovych also translated the poetry of J. Goethe, F. Schiller, H. Heine, the Grimm brothers, A. Pushkin, and H. C. Andersen.

Despite the obvious influence on his early work of T. Shevchenko and Marko Vovchok, Fedkovych was a talented and original writer. Many of his poems have become well-known popular songs. His works have been published in Ukraine in many editions. The first full and critical edition of his works was published in four volumes (six books) by the Shevchenko Scientific Society between 1902 and 1938.

Fedkovych Memorial Museum (Fedkovycha Yurii Muzei). Museum founded in Chernivtsi in 1945 to preserve the materials connected with the life of Yu. *Fedkovych. The museum contains documents, photographs, the writer's personal effects, the first editions of his works, studies of his life and writings, and translations of his works. A branch of the museum is located in Putyliv, Fedkovych's home village.

Yurii Fedkovych

Ivan Fedorchenko

Fedorchenko, Ivan [Fedorčenko], b 31 October 1909 in Tahanrih. Specialist in powder metallurgy and special alloys, full member of the Academy of Sciences of the Ukrainian SSR since 1961. From 1935 to 1952 he worked as an engineer in the Institute of Farm Machinery in Moscow. In 1952 he joined the Institute for Problems in Materials Science of the Academy of Sciences of the Ukrainian SSR. His main works deal with the theoretical foundations of powder metallurgy and of the creation of new materials, alloys, and metallic powders.

Fedorchuk, Vitalii [Fedorčuk, Vitalij], b December 1918 in Ukraine. Minister of Internal Affairs of the USSR and Soviet general; former chairman of the KGB of the USSR and the Ukrainian SSR. A career security officer, Fedorchuk joined the NKVD in 1939 after studying at a military academy and the NKVD higher school. He was involved in

the liquidation of the Ukrainian Catholic church in Western Ukraine in the 1940s. In July 1970 he became head of the Ukrainian KGB and throughout the 1970s conducted the campaign against 'Ukrainian bourgeois nationalism' and the Ukrainian opposition (mass arrests of Ukrainian dissidents in 1972, suppression of the Ukrainian Helsinki Group, etc). In 1973, after P. Shelest's fall, he became a candidate member, and in 1976 a full member, of the Ukrainian Politburo, the first KGB head to do so. On 26 May 1982 Fedorchuk succeeded Yu. *Andropov as head of the Soviet KGB. In November 1982, after Andropov succeeded L. Brezhnev as general secretary of the CPSU, Fedorchuk was appointed Soviet minister of internal affairs. His promotion points to the increased role that the KGB plays in running the USSR.

Yaroslav Fedorchuk

Fedorchuk, Yaroslav (Fedortchouk, Jaroslav) [Fedorčuk], b 1878 in Sniatyn, Galicia, d 1916 in Switzerland. Journalist, follower of M. Drahomanov. Fedorchuk settled in Geneva in 1902 and moved to Paris in 1906. He informed the French public about Ukrainian affairs and was a founding member of the *Circle of Ukrainians in Paris. His articles on Ukrainian themes appeared in the weekly *Le courrier européen* (1912–14), and he edited an issue (no. 3–4) of the journal *Les annales des nationalités* devoted to Ukraine. Fedorchuk wrote the brochure *Le réveil national des Ukrainiens* (1912) and, together with G. Raffalovich, prepared a *Memorandum on the Ukrainian Question in Its National Aspect* (1914).

Fedorenko, Ivan, b 18 February 1827 in Kharkiv, d 7 January 1889 in Kharkiv. Astronomer. Fedorenko graduated from Kharkiv University in 1848 and worked at the universities of Kiev (1853–7) and Kharkiv from 1857, becoming a professor in 1862. His main works deal with the motions of the stars. While working at the Pulkovo (St Petersburg) Observatory in 1850–3, he helped compile a catalogue of 4,637 polar stars.

Fedorenko, Pavlo, b 1880 in Yampil, Chernihiv gubernia, d 5 February 1962. Historian from the Chernihiv region who specialized in the history of that area. A graduate of Kiev University, Fedorenko served as director of the Historical Archive in Chernihiv in the 1920s and early 1930s. He published articles on the economic history of monasteries in the Hetman state, on the history of the iron-ore industry in the Chernihiv region in the 17th–18th century, on legal relations in the Hetman state, on the cultural history of the Chernihiv region, and other

topics. Under Fedorenko's editorship the Archeographic Commission of the All-Ukrainian Academy of Sciences published *Opys Novhorod-Sivers'koho namisnytstva* (1779–1781) (Description of the Novhorod-Siverskyi Vicegerency in the Years 1779–81, 1931; a Russian-language edition had appeared the year before). His work on the mines of Chernihiv gubernia in the 17th–18th century, which he readied for publication in the early 1930s, was published in 1960 as the monograph *Rudni Levoberezhnoi Ukrainy v xvii–xviii vv.* (Ore Mines in Left-Bank Ukraine in the 17th–18th Century.)

Fedorenko, Vasyl, b 30 March 1928 in the Chernihiv region. Dissident, locksmith by trade. After serving two prison terms (1959–66 and 1967–72) for anti-Soviet propaganda, Fedorenko demanded an emigration visa and renounced his Soviet citizenship. In September 1974 he tried to escape to West Germany and was arrested in Czechoslovakia. At a closed trial six months later he was sentenced to 15 years' imprisonment for anti-Soviet agitation and propaganda and treason. At the trial he denounced the government's violation of human rights and demanded independence for Ukraine. In prison he has staged several long hunger strikes, which have severely undermined his health, to protest his unjust sentence and the authorities' abuse of power.

Fedorenko, Yakiv, b 20 October 1896 in the village of Chervonyi Oskil, Kharkiv gubernia, d 26 March 1947 in Moscow. Soviet military leader. He fought in the civil war of 1918–20 on the Soviet side and then held various posts in the Soviet army. In 1937–40 he was commander of the mechanized, armored, and tank forces of the Kiev military district, and during the Second World War he was deputy people's commissar of defense and marshal of armored and mechanized forces of the Soviet Union from 1942.

Fedorenko, Yevhen, b 7 August 1903 in the village of Rakivshchyna, Volhynia gubernia. Marxist philosopher. Fedorenko completed his studies at Odessa University in 1933. He taught at Kiev University (1946–62), the Higher Party School of the Central Committee of the Communist Party of Ukraine (1947–51), and, from 1963, at the Kiev Medical Institute, where he held the chair of philosophy. His works on Communist ethics include *Pro rol' narodnykh mas i osoby v istorii* (On the Role of the Popular Masses and the Individual in History, 1957), *Kommunisticheskaia npravstvennost'* (Communist Morality, 1958), and *Moral'ni osnovy radians'koï sim'i* (The Moral Bases of the Soviet Family, 1963).

Fedoriv, Roman, b 1 December 1930 in the village of Bratkovtsi, Stanyslaviv county, Galicia. Writer and journalist. In 1968 he became editor of the journal *Zhovten'*. His works first appeared in print in 1955. He is the author of the novels *Kapelian zhovtoho leva* (Chaplain of the Yellow Lion, 1962), *Otchyi svityl'nyk* (Father's Candlestick, 1976), and *Kam'iane pole* (Stone Field, 1978); a novel in legends, *Zhban vyna* (Flask of Wine, 1968); short stories; collections of short stories, among them, *Ievshan zillia* (1966), *Kvit paporoti* (Fern Flower, 1969), and *Znak kimmeriitsia* (The Cimmerian's Mark, 1972); and a number of collections of novellas, sketches, and travel accounts.

Fedoriv, Yurii, b 21 March 1907 in the village of Sadzhava, Bohorodchany county, Galicia. Catholic priest, historian. Fedoriv completed his theological studies at the Lviv Greek-Catholic Theological Academy and at the universities of Vienna and Prague. Since 1949 he has been a priest in Toronto and a professor of church history at the Ukrainian Catholic University in Rome. His published works include *Istoriia tserkvy v Ukraini* (The History of the Church in Ukraine, 1967), *Obriady Ukrain's'koï Tserkvy* (The Rites of the Ukrainian Church, 1970), and articles in the journal *Bohosloviia*.

Fedorivka burial site. The site dates back to the *Bronze Age (about 1,000 years BC) and lies near the village of Fedorivka in Zaporizhia oblast. Excavations of the site were conducted by O. Bodiansky in 1946–9. The dead were buried in a crouched position in stone containers or under stone plates. Clay pottery and metal ornaments were discovered in the graves.

Fedoronchuk, Vasyl [Fedorončuk, Vasyl'], b 26 January 1915 in the village of Sokoliv, Buchach county, Galicia. Journalist, political figure. Fedoronchuk studied in Paris and, from 1942, in Rome, where he represented the OUN (Melnyk faction). He co-operated actively with other émigrés from Central and Eastern Europe, serving as secretary general of Freedom International. He was a co-founder of the Italian-Ukrainian Society, wrote for the Italian and Ukrainian press, and published informational brochures on the Ukrainian question. From 1951 to 1975 he was director of Ukrainian-language broadcasts for Italian state radio. In the 1960s and 1970s he served as director of the external-affairs department of the UNR government in exile. He has also served as organizer and leader of one faction of the Ukrainian National Democratic Alliance.

Fedorov, Ivan. See Fedorovych, Ivan.

Fedorov, Mykhailo, b 1 September 1867 in Katerynodar (now Krasnodar), d 29 March 1945. Specialist in mining mechanics, full member of the Academy of Sciences of the Ukrainian SSR from 1929. After 1905 he taught at the mining institutes in St Petersburg and Katerynoslav (now Dnipropetrovske) and later at the Institute of Agriculture in Kamianets-Podilskyi. In 1923 Fedorov was appointed professor at the Mining Academy in Moscow. From 1929 he headed the chair of mining mechanics of the Department of Technical Sciences of the All-Ukrainian Academy of Sciences, and in 1934 he joined the staff of the academy's Mining Institute. His works deal with the dynamics of lifting equipment for mines and the design of mining turbo-machines.

Fedorov, Oleksii, b 30 March 1901 in Lotsmanska Kamianka near Katerynoslav. Soviet major general and official. In 1943, as head of the Soviet partisans in Chernihiv oblast, he led a raid into Volhynia oblast, where he then united and headed over 10,000 Soviet partisans in both oblasts. He fought against the Germans and the Ukrainian Insurgent Army and later helped the Red Army capture Kovel. After the war Fedorov was first secretary of the Kherson (1944–9), Izmail (1950–2), and Zhytomyr (1952–7) oblast Party committees. In 1957 he

became the minister of social security for the Ukrainian SSR. Fedorov is the author of the memoirs *Podpol'nyi obkom deistvuet* (The Underground Oblast Committee in Action, 2 vols, 1949) and *Posledniaia zima* (The Last Winter, 1965).

Fedorov, Vasiliï, b 1802, d 24 March 1855. Astronomer. In 1837 Fedorov was appointed professor at Kiev University and served as its rector in 1843–7. He was one of the founders and then the first director of the Kiev Astronomical Observatory. In 1832–7 he took part in several geographic expeditions to southwestern Siberia and published reports on them in a number of scientific journals.

Fedorov, Yevhen, b 26 June 1909 in Irkutsk, Siberia. Astronomer, full member of the Academy of Sciences of the Ukrainian SSR since 1969. In 1944–59 he worked in the Poltava Gravimetric Observatory of the Academy of Sciences of the Ukrainian SSR and from 1959 to 1973 was the director of the Main Astronomical Observatory of the Academy of Sciences. During 1955–61 he was president of the International Astronomical Union's Commission for the Investigation of the Earth's Nutation. His works are devoted to the study of the earth's rotation and nutation, and various related geophysical processes.

Fedorovsky, Mykola [Fedorovs'kyj], 1838–1918. General of the Russian army who also worked in the field of Ukrainian education. With P. Nishchynsky, the Tobilevych brothers, and M. Kropyvnytsky he organized a theatrical group in Yelysavethrad (now Kirovohrad). He was the leading organizer of the Philanthropic Society for Publishing Generally Useful and Inexpensive Books in St Petersburg.

Fedorovsky, Oleksander [Fedorovs'kyj], b 30 April 1885 in Lebedyn, Kharkiv gubernia, d 8 August 1939. Geologist, paleontologist, professor at Kharkiv University. Fedorovsky published studies and articles on the geology and the archeology of the Kharkiv region and the Donets River Basin.

Mykhailo Fedorov

Ivan Fedorovych

Fedorovych (Fedorov), Ivan [Fedorovyč], b ca 1525, d 16 December 1583 in Lviv. Fedorovych (also known as Khvedorovych or Khodorovych) was the founder of book

printing and publishing in Russia and Ukraine. He was deacon of St Nicholas Gostunsky Church in Moscow, where, from 1553, he oversaw the construction of a printing house commissioned by Tsar Ivan IV. In 1564–5 Fedorovych and the Belorussian P. Mstislavets published in Moscow several liturgical works in Church Slavonic. This technical innovation created competition for the Muscovite scribes, who persecuted Fedorovych and Mstislavets and finally caused them to flee to the Grand Duchy of Lithuania. There they were received by the Lithuanian great hetman H. Khodkevych at his estate in Zabludiv (northern Podlachia, on the Ukrainian-Belorussian border), where they published *levanhelie uchytel'noie* (Didactic Gospel, 1569) and *Psaltyr'* (Psalter, 1570). In Zabludiv, Fedorovych changed his surname from Fedorov to Fedorovych. He moved to Lviv in 1572 and resumed his work as a printer the following year at the St Onuphrius Monastery. (Fedorovych's tombstone in Lviv is inscribed 'drukovanie zanedbanoe vobnov[y]l' [renewed neglected printing].) In 1574 Fedorovych, with the help of his son and Hryn Ivanovych of Zabludiv, published the second edition of *Apostol* (originally published in Moscow), with an autobiographical epilogue, and *Azbuka* (Primer). Fedorovych was known as the 'Muscovite printer' or Iwan Moschus (Ivan the Muscovite) in Lviv, a name used more to identify his place of origin than his nationality. In 1575 Fedorovych, in the service of Prince K. Ostrozky, was placed in charge of the Derman Monastery; in 1577–9 he established the Ostrih printing press, where, in 1581, he published the *Ostrih Bible and a number of other books. Fedorovych returned to Lviv after a quarrel with Prince Ostrozky, but his attempt to reopen his printing shop was unsuccessful. His printery became the property of the Lviv Dormition Brotherhood (later the Stauropegion Institute). The brotherhood used Fedorovych's original designs until the early 19th century.

BIBLIOGRAPHY

Isaievych, Ia. *Pershodrukar Ivan Fedorov i vynykennia drukarstva na Ukraïni* (Lviv 1975)

B. Struminsky

Fedorovych, Ivan [Fedorovyč], 1811–70. Galician public figure, owner of an estate in the village of Vikno in Skalat county, father of V. *Fedorovych. Ivan Fedorovych was a democrat and populist; in 1848 he served as a deputy to the Austrian parliament. He wrote the words of the song 'Pomarnila nasha dolia' (Our Fate Looks Sad), which was set to music by A. Vakhnianyn. His son published his *Aforyzmy Jana Fedorowicza* (Aphorisms of Ivan Fedorovych) in 1873 and his philosophical works in 1882.

Fedorovych, Taras [Fedorovyč] (known also as Triasylo), date of birth and death unknown. Hetman of the unregistered Cossacks from 1629, when he conducted a campaign against the Crimean Tartars. In March 1630 Fedorovych led a large peasant-Cossack revolt against Poland. His forces defeated the Polish army at Korsun and Pereiaslav and on 8 June forced the Polish hetman S. Koniiecpolski to sign the *Pereiaslav Treaty of 1630. Fedorovych was dissatisfied with the treaty, which had been accepted by most of the Cossack leadership, and was dismissed from the post of hetman. Hence, he attempted to organize a new revolt. In 1635 he led a part of the

Zaporozhian Host beyond the Don River. In 1636 he offered his services to the Muscovite tsar, who rejected the offer in order to avoid tensions with Poland.

Fedorovych, Volodyslav [Fedorovyč], b 26 May 1845 in Bilitivka, Skalat county, Galicia, d 22 December 1917 in Kiev. Galician community figure, patron of the arts, and owner of a large estate in the village of Vikno, Skalat county. From 1873 to 1876 he was president and honorary member of the Prosvita society, to which he donated 12,000 guildens. In 1879 he became a deputy to the Austrian parliament in Vienna and later a member of the upper chamber. In 1887 he organized a Ukrainian ethnographic exhibit in Ternopil in connection with the visit to Galicia of the heir apparent to the Austrian throne, Rudolf. Fedorovych's mansion, which contained many collections of Ukrainian art, including some antique kilims, and his library were burned down by Russian soldiers during their retreat from Galicia in July 1917.

Fedorovych-Malytska, Ivanna. See Vikonska, Dariia.

Fedortseva, Sofiia [Fedorceva, Sofija] (birth name Sabat), b 8 March 1900 in the village of Pomoniata, Rohatyn county, Galicia, d 1981 in Lviv. Dramatic actress of the tragic-heroic tradition and a master of the art of dramatic reading. Fedortseva began her career in 1923, performing dramatic readings in Lviv and other Western Ukrainian centers, and joined the Kharkiv theater group Berezil in 1927. After Berezil was reorganized into the Kharkiv Ukrainian Drama Theater in 1934, she remained to work with this theater until 1960. She has played leading roles in plays by I. Mykytenko, I. Kocherha, M. Kropyvnytsky, M. Gorky, O. Korniiuchuk, and others. Fedortseva performed on radio and in concerts as a dramatic reader and acted in motion pictures. A monograph about her by P. Omelianovska-Chorna appeared in Kiev in 1971.

Sofiia Fedortseva

Fed Fedortsiv

Fedortsiv, Fed [Fedorciv, Fed'], b 1 December 1889 in the village of Dolyna, Tovmach county, Galicia, d 5 March 1930 in Lviv. Galician journalist and community leader. Fedortsiv was editor of the magazine *Shliakhy* (1915–18); he was one of the co-editors of the daily *Dilo* (published under various titles) in 1920–3 and served as its chief editor in 1925–7. He published the Novitnia Biblioteka series of books and edited the publications of the Prosvita society. Fedortsiv was one of the founders of the Ukrainian

Labor party and became its secretary in 1923. He was also a founder of the Ukrainian National Democratic Alliance.

Fedotov-Chekhovsky, Oleksander [Fedotov-Čexov-s'kyj], b 13 January 1806 in Tahanrih, d 1892. Historian, specialist in Roman and civil law. After graduating from St Petersburg University, Fedotov-Chekhovsky lectured at Kharkiv University (from 1837 as full professor) and later at Kiev University (1838–61). He researched Old Rus', Ukrainian, and Russian legal acts and documents of the 14th–17th century, as well as the history of the city of Volodymyr-Volynskyi; his studies on Ukrainian history were published in *Kievskaia starina*. Fedotov-Chekhovsky's major work was *Akty, otnosiashchiesia do grazhdanskoj raspravny drevenej Rossii* (Acts Relating to Civil Justice in Ancient Russia, 2 vols, Kiev 1860–3).

Annunciation, an icon by Fedusko of Sambir, 1579

Fedusko of Sambir. Painter of the 16th century, guild master of the town of Sambir in Galicia. In 1579 he painted an icon of the Annunciation with a background consisting of local architecture and elements of Renaissance ornamentation. The icon was painted in the village of Ivanychi in Volhynia and is preserved in the Kharkiv Art Museum.

Fedyk, Teodor, b 1873 in Uhryniv Horishnyi, Stany-slaviv county, Galicia, d 1949 in Winnipeg, Manitoba. Poet. Schooled as a precentor, Fedyk emigrated to Canada in 1905. He was author and compiler of the first collection of Ukrainian poems to be published in Canada, *Pisni pro Kanadu i Avstriiu* (Songs about Canada and Austria, Winnipeg 1908). The collection contained 19 poems by different authors, including his own immensely popular *kolomyika*-like poems full of nostalgia for the homeland. Six editions of the book appeared (estimated 50,000 copies sold); the last (1927) was issued under the

title *Pisni pro staryi i novyi kraj* (Songs about the Old and New Country) and incorporated some 30 poems by 15 authors.

Fedynskyj, Jurij [Fedyns'kyj], b 19 September 1912 in Mosty Velyki, Zhovkva county, Galicia, d 25 November 1979 in Bloomington, Indiana. Jurist, professor, librarian. Fedynskyj studied at the universities of Lviv, Vienna, Innsbruck, Columbia, and Indiana. He was a member of the Shevchenko Scientific Society, a lecturer in civil law at the University of Lviv (1939–41), and a teaching associate in Innsbruck and lecturer in Graz (1945–9). In 1966 he became a professor of international and comparative law at the University of Indiana in Bloomington. He is the author of *Rechtstatsachen auf dem Gebiete des Erbrechts im Gesichtsbezirk Innsbruck, 1937–41* (1968). He wrote numerous articles and studies (in Ukrainian, German, and English) on legal questions and served as secretary of the Shevchenko Scientific Society in New York.

Fedyshyn, Oleh [Fedyšyn], b 1 January 1928 in the village of Hlubichok, Ternopil county, Galicia. Political scientist. Fedyshyn was active in the Ukrainian students' movement in the United States. He is a professor at City University of New York, secretary of the Ukrainian Academy of Arts and Sciences in the United States (since 1979), and the author of *Germany's Drive to the East and the Ukrainian Revolution, 1917–1918* (1971) and a series of articles and reviews in the field of Sovietology (particularly on the nationality question in the USSR).

Feed base. The production and utilization of animal feeds. The feed base consists of natural *hayfields; *pastures; seeded feed crops; wastes of feed crops (straw, chaff, and leaves of tubers); byproducts of such industries as milling, distilling, and sugar refining; and the production of mixed feeds and mineral feeds. The main types of feed for farm animals are coarse feeds such as hay, straw, and chaff; succulent feeds such as silage, roots and tubers, and melons; green feeds such as grasses; and concentrate feeds such as grain, bran, and oil meal.

As natural hayfields and pastures began to be tilled, Ukraine's feed base diminished until it became inadequate in the second half of the 19th century. The land devoted to feeds in Ukraine (within the present Ukrainian SSR boundaries) in 1913 was about 10 million ha, and only 9 percent of this land was sown with feed crops. The feed of farm animals consisted mainly of hay and straw in winter and forage in pastures (fallow or stubble) in summer. A much smaller use was made of oats and barley or the residues of sugar refining as feeds. The feed base was expanded only in the 1930s, when feed crops began to be intensively cultivated. In 1955 the land devoted to the provision of animal feed in the Ukrainian SSR covered 13,600,000 ha and 40 percent of it was sown with feed crops. In 1959, 17,700,000 ha were used for feeding animals, and 55 percent of them were sown with feed crops (compared to 17 percent for the whole USSR). Hence, natural hayfields and pastures provide no more than one-third of the feed today. In 1979 hayfields and pastures covered 7,052,000 ha, while feed crops covered 10,627,000 ha or 59.2 percent of the land devoted to animal feeding. The feed base in Soviet Ukraine was expanded and made more productive particularly in the 1960s, when the Soviet government attempted to increase

the number and quality of farm animals. To this end the area devoted to feed crops and the productivity of these crops were increased. The production of corn, roots, and tubers grew rapidly. The preparation of silage was intensified: it reached 8,200,000 t in 1953 and 58,700,000 t in 1959, including 38,500,000 t of corn. The productivity of natural hayfields was improved, and the production of mixed feeds was increased at the plants. In 1979 the gross harvest of various feeds was as follows (in tonnes): roots and tubers, 18,922,000; melons, 857,000; corn for silage and green feed, 65,706,000; hay from annual grasses, 8,032,000; hay from perennial grasses, 8,012,000; and hay from natural pastures, 3,183,000. (See also *Animal husbandry.)

Feihin, Yakiv [Fejhin, Jakiv], b 12 May 1903 in the village of Liskonohy in Chernihiv gubernia, d 19 August 1973. Economist, geographer, corresponding member of the Academy of Sciences of the Ukrainian SSR from 1939. In 1932–41 he worked at the Institute of Economics of the Academy of Sciences of the USSR as a research associate; in 1947 he became director of the Institute of Economics of the Academy of Sciences of the Ukrainian SSR, and in 1949 the head of its department for the distribution of production. Feihin wrote works on the theoretical aspects of economic geography and the distribution of the forces of production in the Soviet economy, among them *Razmeshchenie proizvodstva pri kapitalizme i sotsializme* (The Distribution of Production under Capitalism and Socialism, 1958), and co-authored *Zakonomernosti i faktory razvitiia ekonomicheskikh raionov sssr* (Natural Tendencies and Factors in the Development of the USSR's Economic Regions, 1965).

Feldman, Valentyn [Fel'dman], b 16 March 1864 near St Petersburg, d 26 February 1928 in Kiev. Architect and painter. In 1889 he graduated from the St Petersburg Academy of Arts. He worked as an architect in Sevastopol, where he designed the building with the panorama *The Defense of Sevastopol in 1854–5*. In 1910 he moved to Kiev, where he lectured at the Polytechnical Institute and the Kiev State Art Institute. Feldman produced numerous watercolors and graphics that exhibit an influence of impressionism. A retrospective exhibit of his works was held in Kiev in 1940. He also published works on the theory of painting and on watercolors; for example, *Svet i chistota krasok v zhivopisi* (Light and the Purity of Colors in Painting, 1915).

Feldsher (from the German *Feldscher*, 'army surgeon'). In its present sense the term refers to an individual of the intermediate level of medical personnel who assists a physician or sometimes provides medical aid independently at the so-called feldsher stations. In the Soviet Union today a feldsher corresponds to what is known in North America as a medical assistant, physician's assistant, or paramedic. In Russia and Ukraine feldshers were known as assistants of army physicians as early as the 17th century. At first they received their training from the physicians, but from 1740 they were trained at special hospitals and medical schools. In the mid-19th century three-year feldsher schools were established at large hospitals, particularly army hospitals. A feldsher school was opened in Kiev in 1842. After the zemstvo reforms of 1864 feldsher schools were founded by zemstvos. Private

schools also existed. After 1870 there were three types of feldsher: military (known as *rotnyi*), veterinary (known as *konoval*), and physician's assistant (known as *shkilnyi feldsher*). The latter usually worked under zemstvo physicians at medical stations in the villages within the system of zemstvo medicine. The number of stations grew rapidly: in seven Ukrainian gubernias (Bessarabia, Katerynoslav, Poltava, Tavriia, Kharkiv, Kherson, and Chernihiv) there were 516 stations by 1870 and 854 stations by 1912. In this period the number of feldshers increased from 640 to 3,100. The ratio of physician's assistants to military feldshers was about 2:1. In the gubernias of the southwestern region (Kiev, Volhynia, Podilia) feldsher stations were at first the responsibility of the Department of Public Welfare but were transferred to the zemstvos after 1903. By 1913 there were 305 such stations in this area. Thus, counting the stations in the other seven gubernias, there were altogether 1,159 feldsher stations on Ukrainian territory on the eve of the First World War.

In the Ukrainian SSR secondary medical schools, which numbered 27 in 1920, were reorganized in 1927 into medical *tekhnikums*, usually with a three-year program that was open to graduates of incomplete secondary schools. Eventually, these schools became narrowly specialized *tekhnikums* that trained medical personnel in 13 specializations. The length of training was reduced to two or two and one-half years. In 1930 the number of medical *tekhnikums* increased to 47, with an enrollment of up to 80,000 students. Later the number of schools and students was reduced, and the variety of specializations diminished. In 1936 the medical *tekhnikums* were divided into feldsher, pharmaceutical, and dental schools. In 1939 special schools for first-aid feldshers were opened, and in 1946, for entomologist's assistants. In 1947 secondary medical education was placed under the jurisdiction of a department of the Ministry of Higher Education. Since 1954 these institutions have been known as medical schools for training therapy and first-aid feldshers, laboratory feldshers, and other medical personnel of the intermediate level. They offer a program of two and one-half to three and one-half years for students with an incomplete secondary education and a two-year program for graduates of ten-year schools. Feldsher correspondence courses are offered, and courses for improving qualifications and for specializing in various branches of the profession (electrocardiography, massage, physiotherapy, anesthesiology, etc) are available.

The number of medical personnel of the intermediate level in the Ukrainian SSR was as follows (in thousands): 102 in 1940 (23.9 per 10,000 population), 411.5 in 1970 (86.8), 504.2 in 1980 (100.6). (See also *Zemstvo medicine and *Medical education.)

H. Schultz

Fellner, Ferdinand, b 19 April 1847 in Vienna, d 22 March 1916. Austrian architect of the Munich school, a partner of the Fellner und Helmer architectural firm in

Vienna. From 1872 to 1915 the firm built 48 theaters and concert halls in Central and Eastern Europe, including Ukraine. Its opera theaters in Odessa (1884–7) and Chernivtsi (1904–5) were built in the Renaissance style with elements of the baroque.

Fellow of the banner (*znachkovyi tovarysh*). Honorific title of the lower stratum of the *notable military fellows in Hetman Ukraine, which was introduced at the end of the 17th century. The fellows of the banner were usually rich Cossacks who aided the Cossack *starshyna* and campaigned under the banner of a colonel, to whom they were subordinated instead of to the *company system. At first colonels chose the fellows of the banner. Later this decision was made by the General Military Chancellery. From 1734 the number of fellows of the banner was fixed at 30–50 per regiment (420 altogether). The title was abolished in 1785 by the tsarist government.

Fellow of the standard (*bunchukovyi tovarysh* or *pidbunchuzhnyi*). A member of the *notable military fellows in the Hetman state, assistant to the *general standard bearer (*heneralnyi bunchuzhnyi*). Although they held no specific office, fellows of the standard were obliged to perform military and, in peacetime, administrative duties when requested by the *hetman. During campaigns they were positioned around the hetman ('under the standard'), serving as his direct aides; at military ceremonies they carried small standards. In the 17th century fellows of the standard were under the direct jurisdiction of the hetman; in the 18th century they were responsible to the *General Military Court. The title was abolished in 1764.

Volodymyr Femelidi

Femelidi, Volodymyr, b 29 July 1905 in Odessa, d 3 October 1931 in Odessa. Composer. In 1928 he graduated from the Odessa Music and Drama Institute. His works include the opera *Rozlom* (The Break), performed in Odessa in 1929; the ballet *Karman'iola* (Carmagnole, Odessa 1930); two symphonies; a piano concerto; vocal solos; and an unfinished opera, *Tsezar i Kleopatra* (Caesar and Cleopatra, 1930–1), based on G.B. Shaw's play.

Feminism. See Women's Movement.

Fencing. The sport of dueling with cold steel weapons such as the foil, épée, and saber. The sport has been highly developed since the end of the 17th century, but was practiced even earlier among the aristocracy and the military elite. It is included in the program of the Olympic

Games. Before the First World War the Ukrainian fencer P. Zakovorot distinguished himself at international tournaments in Budapest, Paris, and Stockholm. In 1935 the first all-Ukrainian fencing tournament was organized. Among Soviet fencing champions there are a number of Ukrainians, including V. Andriievsky, T. Samusenko, V. Zhdanovych, Ya. Rylsky, and S. Kosenko. In the 1960s H. Kryss won the USSR fencing championship several times and in 1971 he won the world championship. In the Ukrainian SSR over 10,000 individuals practice the sport of fencing.

Feniks (Phoenix). Irregular journal of the *Ukrainian Student Organization of Mikhnovsky, published from 1951 to 1970 (16 issues), initially in Munich and later in the United States. The editors of *Feniks* were V. Markus, M. Kravchuk, K. Savchuk, and M. Bohatiuk. The journal treated ideological and sociopolitical themes on an academic level and published commentaries, surveys, news of student life, and reviews.

Fentsyk, Stepan [Fencyk], b 1892 in Velyki Luchky in the Mukachiv region, d 1945 in Uzhhorod. Greek Catholic priest and a cultural and political leader in Transcarpathia. Politically, he was pro-Russian, pro-Polish, and pro-Hungarian. In the early 1920s he taught at the Uzhhorod seminary. Fentsyk helped to organize and administer the Dukhnovych Society. In 1935 (after being unfrocked in 1934) he founded the Russian National Autonomous party, which he represented in the Czechoslovak National Assembly (1935–8). Fentsyk published a series of newspapers, including *Karpatorusskii golos* (1932–4, 1938–42) and *Nash put'* (1935–8). Fentsyk's activities were financed by Carpatho-Ruthenian organizations in America and by Polish intelligence services. In October 1938 he became a member of the autonomous government of Carpatho-Ukraine, but fled to Budapest in November after the disclosure of his pro-Hungarian role. He returned to Uzhhorod, where he organized a pro-fascist paramilitary organization known as the 'Blackshirts,' who rose up against the Ukrainian government in Transcarpathia. In 1939 Fentsyk was appointed to the upper chamber of the Hungarian parliament; soon after, he lost his influence. In 1945 he was hanged by local vigilantes for treason.

Fentsyk, Yevhen [Fencyk, Jevhen], b 5 October 1844 in the village of Martynka in the Mukachiv region, d 5 December 1903. Educator and writer, a Russophile in political orientation, Greek Catholic priest in Transcarpathia. From 1885 to 1903 he published and edited the semimonthly *Listok* in a mixture of Russian and Church Slavonic, but published a popular supplement in a language close to the vernacular. Fentsyk wrote poetry, mostly ballads, as well as stories and novels about the life of the intelligentsia and clergy; these included *Nishchie dukhom* (The Meek in Spirit) and *Uchitel' neboraka* (The Poor Teacher). He also wrote a historical play – *Pokorenie Uzhhoroda* (The Subjugation of Uzhhorod). Some of his works were published under the pseudonym Vladimir. Fentsyk wrote school textbooks and journalistic articles. His selected works appeared in 1932 under the title *Sobranie sochinenii* (Collected Works).

Feodosiia. See Teodosiia.

Feofilaktov, Konstantin, b 1 November 1818 in St Petersburg, d 2 February 1901. Geologist. Feofilaktov lectured at Kiev University from 1845 to 1891 (after 1852 as full professor), serving a term as rector (1880–1). His main works deal with the geology of Right-Bank Ukraine, particularly the Kiev region. He published the first geological map of Kiev gubernia (on a scale of 1:420,000) in 1872 and of Kiev (1:16,800) in 1874. From 1877 to 1898 he was president of the Kiev Society of Naturalists.

Ferley, Taras [Ferlej], b 14 October 1882 in Balyntsi, Galicia, d 27 July 1947 in Winnipeg, Manitoba. Community leader. A Radical party sympathizer before emigrating to Canada in 1903, Ferley became one of the major pioneer figures in the Ukrainian Canadian community. He taught at the Ruthenian Training School in Brandon, Manitoba, and, as a Liberal member of the Manitoba legislature for Gimli (1915–20) in 1916, he actively opposed the abolition of bilingual schools in Manitoba. As a founder of the Ukrainian Publishing Company, he became the first manager of *Ukrains'kyi holos*. He helped to establish the Ukrainian Greek Orthodox Church of Canada, the Ukrainian National Home Association in Winnipeg (which he headed for many years), the Ukrainian Fraternal Society, and the Ukrainian Canadian Committee. He served as a director of St Andrew's College in Winnipeg. In 1933 he was elected to the Winnipeg city council.

Ferliievych, Vasyl [Ferlijevyč, Vasyl'], b 1 February 1783 in Tovtry, Bukovyna, d 21 January 1851 in Tovtry. Orthodox priest and first Ukrainian writer in Bukovyna. Ferliievych edited a collection of religious songs (with notes) entitled *Pisni, psal'my, stykhy* (Songs, Psalms, Verses), which was published in Chernivtsi in 1844 and 1849 in bookish, literary Ukrainian.

Fesenko, Ivan, b 27 May 1846 in Baranivka, Poltava gubernia, d January 1882. Revolutionary populist who was active in N. Chaikovsky's secret circle while studying law at St Petersburg University. Eventually Fesenko organized a similar group in Kiev (1874–5). He went abroad several times to establish contacts with other revolutionaries. Fesenko was arrested in the Katerynoslav region for spreading socialist propaganda and died on the way to exile.

Fesenko, Mykhailo, b 1 December 1900 in Krasnovodsk, Turkestan. Religious leader. A veteran of the Kuban Cossack Army, Fesenko emigrated to North America in the late 1920s. Ordained as a Presbyterian minister in 1929, he worked among Ukrainian congregations in Canada, serving as editor-publisher of *Ievanhel's'ka pravda* and in the 1970s as president of the Council of Ukrainian Protestant Churches in Canada. He published *Kubans'kyi kraj* (The Kuban Land) and several religious service books.

Feshchenko, Stepan [Feščenko], b 12 March 1903 in Chornobyl, Kiev gubernia. Mathematician and specialist in mechanics (dynamics). Feshchenko graduated from Kiev University in 1929 and lectured at the Kiev Aviation Institute in 1937–9 and the Kiev Polytechnical Institute in 1940–1 and 1947–67. Then he became an associate of the Institute of Mathematics of the Academy of Sciences of the

Konstantin Feofilaktov

Ivan Feshchenko-Chopivsky

Ukrainian SSR and of the Kiev Pedagogical Institute. Feshchenko has published works on the theory of the motion of three-body systems (1934–9), which take into account the effect of perturbations. Twenty-five years after their publication these works served as the basis for calculating the orbits of spacecrafts. Feshchenko is also a specialist in asymptotic solutions to linear differential equations with changing coefficients. Many of his works have been published in Ukrainian.

Feshchenko-Chopivsky, Ivan [Feščenko-Čopiv's'kyj], b 19 January 1884 in Chudniv, Volhynia gubernia, d 2 September 1952. Noted metallurgist, civic and political leader. In 1908 Feshchenko-Chopivsky graduated from the Kiev Polytechnical Institute, where he was soon appointed assistant professor of metallurgy. He was active in the Ukrainian Party of Socialists-Federalists and a member of the Central Rada and the Little Rada in 1917. At the end of February 1918 he was appointed minister of trade and industry in V. Holubovych's government and in 1919 vice-premier and minister of the economy in S. Ostapenko's government. In February–August 1921 he served as chairman of the Council of the Republic in Tarnów, Poland. In 1922 he was appointed professor of metallurgy and metallography at the Academy of Mining and Glassmaking in Cracow. In 1928 he became scientific consultant to the Baildon firm in Katowice and director of the laboratory of the Friedenschütte foundry. In March 1945 he was arrested by Soviet authorities in Katowice and sent to a concentration camp in the Karelo-Finnish ASSR, where he died.

Feshchenko-Chopivsky conducted research on carbonizing iron, on the diffusion of nitrogen, boron, tin, sulfur, and titanium in iron and other metals, on welding metals, and so on. He wrote about 140 works, including *Cementacja żelaza, niklu i kobaltu borem i berulem* (The Cementing of Iron, Nickel, and Cobalt by Means of Boron and Beryllium, 1927), *Blachy kotłów parowych* (Plates of Steam Boilers, 1927), the monograph *Metaloznawstwo* (The Science of Metals, 3 vols, 1930–6), and a secondary school textbook, *Ekonomichna heohrafiia Ukraïny* (The Economic Geography of Ukraine, 2 vols, 1921). He was a full member of the Ukrainian Scientific Society in Kiev, the Shevchenko Scientific Society from 1926, the Polish Academy of Technical Sciences, the Iron and Steel Institute in London, and the American Society for Metals.

A. Zhukovskyy

Feudalism. Feudalism is a controversial topic in Ukrainian history, and East Slavic history in general, because of a different understanding of that concept in Western (including non-Soviet Ukrainian) and Soviet Marxist scholarship. The hallmarks of feudalism, according to Western historians, are the institutions of vassalage (a contract binding lord and vassal by bonds of loyalty and mutual obligations) and fief or benefice (heritable land held by a vassal from a lord in return for military and other services). Feudalism emerged in the post-Carolingian period (9th–10th centuries AD), and it passed away, save for some survivals, with the transition from the Middle Ages to modern times (15th–16th century). Feudalism is seen as limited basically to Western Europe; only isolated feudalistic features appeared occasionally in other civilizations.

A much broader meaning is ascribed to the concept of feudalism in Soviet historiography, which stresses its socioeconomic rather than institutional aspect. According to Marxist theory, humanity advances through a sequence of socioeconomic 'formations' – primeval communist (communal-clan society), slaveholding, feudal, capitalist, and socialist – towards the final future goal of full communism. These categories are supposed to possess a universal, worldwide validity, although differences in the rate of progress among individual peoples are recognized; it is also possible to skip a stage under certain circumstances. Thus, the Germanic and Slavic peoples moved directly from the communal-clan to the feudal formation, bypassing the slaveholding stage. The nature of a formation is determined by its modes of economic production and, based on the latter, the society's class structure. Each formation, excluding primeval communism and socialism, possesses two principal, antagonistic classes: a class of original producers and a dominant class, which, by owning the means of production, exploits the labor of the former. The feudal formation is characterized by a natural (non-market), agricultural economy. Its principal classes are a half-free, bound-to-the-soil peasantry (serfs) and a landowning aristocracy. The exploitation of the peasants takes place through unpaid labor services (corvée), deliveries in kind, and, at a later stage, money rents, and it is bolstered by the jurisdiction of the landlords over the tenants. It should be noted that in popular and propagandistic Marxist literature the term 'feudalism' is often used loosely in an abusive sense to castigate any condition of social inequality and class privilege.

Because of the absence of the crucial institutions of vassalage and fief, non-Marxist historians tend to question the very existence of feudalism among the Eastern Slavs; it was denied by most prerevolutionary Ukrainian historians, including M. Hrushevsky. In contrast, Soviet historians assert that the feudal era in the East Slavic lands lasted from the inception of Kievan Rus' in the 9th–10th century AD to the abolition of serfdom in the Russian Empire in 1861. This interpretation, as adumbrated by V. Lenin and developed in the writings of B. Grekov, S. Yushkov, and others, has become canonized in Soviet historiography since the 1930s. It enjoys official sanction, and no basic deviations from it are tolerated; discussion is allowed only on points of detail. Soviet historians distinguish three subdivisions in the development of 'Russian' feudalism: early feudal monarchy (9th–10th century to the early 16th century), estates-representative

monarchy (16th to the mid-17th century), and absolute monarchy (from the late 17th century). With respect to Ukraine, Soviet scholars stress the antifederal nature of the Cossack revolts of the 16th–17th century. The great uprising under the leadership of B. Khmelnytsky (1648) destroyed the rule of Polish feudal lords in large parts of Ukraine and undermined feudalism; feudal relations, however, were later restored, owing to the transformation of the stratum of *Cossack *starshyna* (officers) into a new feudal nobility and to the reimposition of *serfdom. Soviet historiography applies a double standard to the Russian and the Ukrainian past. It readily acknowledges the 'progressive' contributions of feudalists and monarchs as builders of the Russian state and culture. In the case of Ukraine, it systematically plays down and denigrates the traditional upper classes, except for those representatives who adhered to a pro-Russian orientation.

Without entering into a critique of Marxist philosophy of history (so-called historical materialism), one can state that, on empirical grounds, it makes little sense to subsume under the label of feudalism a whole millennium extending from the 9th to the 19th century. The concept of feudalism should not be stretched to cover any social system that encompasses a landed nobility and a dependent peasantry. But neither should the concept be defined too narrowly by predicating it on a single institution such as vassalage. Feudalism may perhaps be best understood as a syndrome, a coming together of several interrelated socioeconomic, political, juridical, and cultural traits. Feudalism allows for a great variety of forms, and the historian will be concerned less with the general (and necessarily imprecise) categorization, but will focus rather on the specific shape the system has assumed in a given time and place.

Keeping in mind the preceding methodological guidelines, it is possible to present the following outline of the role of feudalism in the history of Ukraine. The Kievan Rus' state was definitely non-feudal during its formative period (9th–10th century AD). Its ruling class consisted not of landowners, but of a highly mobile stratum of warrior-merchants, whose livelihood derived from international commerce, military loot, and tribute. The bulk of the population were not serfs, but free farmers living in extended family groups and tribal units. The process of feudalization started in Rus'-Ukraine around the middle of the 11th century with the settlement on land of the **druzhyina* (military retinue of the princes). Simultaneously, the Kievan realm began to break up into a number of appanage principalities (*udily*). This growth of a multiplicity of local centers paralleled a similar earlier development in Western Europe. The 12th–13th-century Ruthenian *princes and *boyars adhered to an ethos whose supreme values were the search for chivalrous honor and glory, loyalty to one's lord, and struggle against the 'infidels' (the steppe nomads). Feudalistic tendencies were particularly pronounced in the westernmost Halych principality (later, the principality of Galicia-Volhynia), whose powerful and turbulent boyars were influenced by the example of the neighboring Hungarian and Polish nobilities.

Nevertheless, in spite of many similarities, there were also significant structural differences between Rus'-Ukraine of the appanage period and feudal Western Europe. In Rus' there were no formal contractual ties

between prince and boyar. The landed estates of the boyars were not conditional fiefs, but allodial property (*votchyny*). Neither was there a hierarchy of noble titles. The grand princes of Kiev, and later also senior regional princes, exercised authority over the minor appanage princes; but inasmuch as all the princes belonged to a single dynasty, the *Riurykids, interprincely relations were conceptualized in familial rather than in feudal terms: as relations between father and son or between older and younger brother, rather than between suzerain and vassal. The common people were free, although there also existed many slaves (mostly war captives) and a growing stratum of semifree bondsmen (**zakupy*) resulting from indebtedness. Prior to the mid-13th-century Mongol invasion, medieval Rus' had numerous cities whose inhabitants at times acted politically through popular assemblies (**viche*). In contrast to the West, however, the cities were not organized in self-governing municipalities, and burghers were not legally differentiated from the rural population. The Ukrainian Orthodox church, true to its Byzantine heritage, was politically much less assertive than the Roman Catholic church in Western countries.

While the sociopolitical structure of pre-Mongol Rus'-Ukraine can be called 'feudal' only with reservations, a full-fledged feudalism is to be found in the Grand Duchy of Lithuania (often referred to as the 'Lithuanian-Ruthenian state' by historians), to which the majority of Ukrainian lands belonged from the middle of the 14th century to 1569. Thus, the high point in the development of feudalism in Ukraine occurred at a time when it was already waning in the West. Under the grand duke, there existed in Lithuania a hierarchy of princes (belonging either to the junior lines of the Lithuanian Gediminas dynasty or to the surviving families of Riurykid descent), non-princely magnates (*barones* in Latin sources), and landowning knights (boyars, later named, on the Polish model, *shliakhta*). The princes and magnates were quasi-independent in the internal administration of their domains; they went to war at the head of their own contingents and monopolized high state offices. The estates of the nobility were burdened with definite military obligations. As a reward for service, the nobles obtained, in the course of the 15th century, a number of privileges, securing their personal and property rights, tax and other exemptions, and participation in the organs of provincial administration. These rights were embodied in provincial charters (*zemski pryvilei*) and were later codified on a state-wide basis in the *Lithuanian Statute (which underwent three editions: 1529, 1566, and 1588).

A peculiarity of the Grand Duchy was the division of its aristocracy and nobility into Roman Catholic-Lithuanian and Orthodox-Ruthenian (Belorussian-Ukrainian) factions. The latter was more numerous, but the former enjoyed legal advantages and dominated the central government in Vilnius. (This religious rift weakened the Grand Duchy's internal cohesion and contributed to its decline as an independent power.) Constitutionally the Lithuanian-Ruthenian state evolved towards a feudal parliamentarianism. A *Council of Lords assisted the grand duke and, during his prolonged absences, acted as the government. (Because of Lithuania's dynastic union with Poland, the monarch frequently resided in that country.) By the early 16th century there emerged provincial assemblies of nobles, which began to send elected

delegates to Vilnius, enlarging the Council of Lords by a second chamber and forming the Grand Duchy's diet (*soim*). The more important cities received charters granting them municipal self-government on the German model, the so-called *Magdeburg law. Cities, however, as was generally the case in Eastern Europe, were excluded from the country's government. The line between petty boyars and substantial peasants was at first fluid, but it gradually grew rigid. The peasants were placed under the jurisdiction of the noble landowners and reduced to serfdom.

The Union of Lublin (1569) may be considered as marking the end of the feudal age, properly speaking, in Ukrainian history. The union created the federated Polish-Lithuanian Commonwealth and transferred the Ukrainian provinces from Lithuania to the Crown of Poland. The system of Polish 'gentry democracy,' which thereafter prevailed in Ukraine, was essentially non-feudal in its institutional and political aspects: it entailed legal equality of all noblemen (ie, abrogation of feudal hierarchy) and freed the *shliakhta* from service obligations. The commonwealth's nobility lost its military characteristics and became a class of agrarian entrepreneurs. The latifundialists and the middle gentry, in search of money income, were producing for export. This transition from a subsistence to a market-oriented agricultural economy led to an intensification of corvée (*panshchyna*) and to a plantation-like organization of manorial domains (see *Filvarok). Some historians consider this 'second serfdom' a form of feudalism. But the choice of this term should not cloud the essential differences between genuine medieval feudalism and manorialism-cum-serfdom, typical of early-modern Eastern Europe.

Some observations, touching on the problem of feudalism, should be made about Ukraine's social development in the 17th and 18th centuries. Widespread dissatisfaction with social conditions in the commonwealth was the major cause of the 1648 Ukrainian revolution. The *Khmelnychchyna* (Khmelnysky uprising), however, was not merely an 'antifeudal,' peasant revolt, but rather a war of national liberation, in which all strata of the Ukrainian population participated, except the magnates and their retainers. The Cossack military order, the Zaporozhian Host, served as the nucleus, around which rallied the peasants and the burghers and which was also joined by a large segment of the Orthodox petty nobility. The Ukrainian Cossack *Hetman state, or Hetmanate, that emerged from the revolution was in its social structure neither feudal nor, of course, a modern 'bourgeois democracy.' It may be seen as a variant of the estates-bound, corporate social system common to 17th-century Europe. Peculiar to Ukraine was the adaptation of the Cossack military organization, which had originated under the conditions of the steppe frontier, to the requirements of civil life. The Hetmanate's social groupings, or *estates (*stany*), were made up of the Cossack *starshyna* (who had absorbed many former commonwealth nobles), the rank-and-file Cossacks (a class of farmer-warriors), the burghers (to whom the Magdeburg law continued to apply), the Orthodox clergy, and the peasants or commoners (*pospolyti*). Social differentiation became more pronounced in the post-Khmelnysky period, and there were many instances of class antagonism in the second half of the 17th century. Still, the status of the peasantry was more favorable in the Hetmanate than in any East

European country of the time: they were personally free and could own land. Ukraine's indigenous social development, however, was deflected in the course of the 18th century by the ever-increasing pressure of the Russian Empire, involving, among other things, economic ruin to Ukrainian towns and continual deterioration of the position of the peasantry. The final dismantling of Ukrainian autonomy in 1783 coincided with the official restoration of serfdom.

Since by the late 18th century Ukraine's social structure was brought into line with that prevailing in the Russian Empire at large, the question arises about the nature of the latter's social system. Soviet historians contend that it was feudal, but this view is not shared by most non-Marxist scholars. The feudal elements, which actually existed in northeastern Rus', the future Russia, during the appanage era (12th–14th century), were stifled and suppressed by the rise of the Muscovite state. The Grand Principality (later Tsardom) of Muscovy of the 15th–17th century was a patrimonial autocracy, resembling Oriental despotic empires (eg, the Ottoman Empire) rather than European feudal monarchies. The hallmarks of the Muscovite system were the lack of secure personal and property rights, the absence of any autonomous corporate bodies, and the total subjugation of all social groups, including the 'nobility of service' (*dvorianstvo*), to the unlimited, arbitrary power of the tsar. The reforms of Peter I superimposed on the Russian Empire the facade of contemporary European absolute monarchies without affecting the patrimonial nature of the system. While the question of Muscovite and imperial Russia's sociopolitical system – whether it was feudal or patrimonial – is debatable, two things may be considered as well established. First, Ukraine's social evolution followed for some 400 years, during the Lithuanian, Polish, and Cossack periods, a course markedly divergent from that of Muscovy-Russia. Second, the annexation of Ukraine by the Russian Empire had a generally noxious and regressive effect on Ukrainian social conditions.

I.L. Rudnytsky

Feuilleton. A short literary composition characteristic of the popular periodic press (newspapers, magazines) and distinguished by a familiar tone, thematic currency, satirical wit, or humor. The feuilleton has been known in Ukrainian literature since the publication of the journal *Osnova* (1861–2). At the end of the 19th and the beginning of the 20th century I. Franko, O. Makovei, and V. Samiilenko were among the best-known feuilleton writers. In the Soviet period the classical writer of feuilletons was O. Vyshnia, who wrote many cycles of what he called *usmishky* (smiles). In the 1920s A. Hak, V. Chechviansky, and others were popular feuilletonists. Since the 1930s the main subjects of Soviet feuilletons have been bureaucracy, lack of labor discipline, theft of state property, and alcoholism. Quite a large number of feuilletons are defamatory critiques of Ukrainian dissidents and émigrés, who are labeled 'bourgeois nationalists.' Among the best-known authors of this genre are Ya. Halan, Yu. Melnychuk, T. Myhal, F. Makivchuk, and S. Oliinyk. One of the most popular Ukrainian feuilletonists in the West is I. Kernytsky.

George Fiala

Fiala, George [Fijala, Jurij], b 31 March 1922 in Kiev. Composer. Fiala studied music at the Tchaikovsky State Conservatory in Kiev, the Akademische Hochschule für Musik in Berlin, and the Conservatoire royal de musique in Brussels. Emigrating to Canada in 1949, he settled in Montreal, where he has been a composer, pianist, organist, music teacher, and producer of the Russian section of the Canadian Broadcasting Corporation's international service. Numbering over 200, his works have included symphonies, piano concertos and other compositions, chamber music, and educational pieces for children. His *Concerto for Violin and Orchestra*, commissioned by the Ukrainian Canadian Committee for Winnipeg's centennial in 1973, was based on Ukrainian folk elements.

Field gendarmery. A military formation that is one of the auxiliary or service forces in the army. Its history is closely tied to the history of the gendarmery.

In the Russian Empire there were six squadrons of field

gendarmerie, which were unrelated to the General Corps of Gendarmes and served exclusively as a military police, with military commands and units, in both peace and war. In Austria-Hungary the field gendarmerie was organized in 1876, but was intended only for wartime. It was formed during general mobilization and disbanded at the conclusion of war.

In 1918 a field gendarmerie was organized at the Supreme Command of the Ukrainian Galician Army on the pattern of the Austro-Hungarian gendarmerie. On 12 March 1919 the gendarmerie was formally instituted by a decree of the Supreme Command. On 24 June 1919 its name was changed to the Field Guard, and it was subordinated to the army's quartermaster. The Field Guard had six units – one attached to the Supreme Command and five attached to the corps. It served as a military police at the front and in its vicinity, guarded military supplies, provided security for railroads and communication lines, combatted desertion, conducted convoys, and helped to control epidemics. The Field Guard's organizers and commanders served on the staff of the Supreme Command of the Ukrainian Galician Army. In chronological order they were Lieutenant Colonel O. Krasitsky, Captain I. Kozak, and Captain M. Yavorsky.

In 1920 a company of field gendarmerie commanded by Colonel M. Pohotovko was organized in the Army of the UNR, but it served only in the rear. The divisional headquarters of the front Army of the UNR used cavalry units to provide security services.

I. Kozak

Figol, Atanas [Figol'], b 11 May 1908 in Kolomyia, Galicia. Civic figure, son of I. *Figol, since 1966 professor at the Ukrainian Technical and Husbandry Institute in Munich. In Lviv Figol was active in student organizations. In 1941–5 he worked for the Ukrainian Central Committee as its representative in Germany. Since 1945 he has lived in Munich. He was active in the Plast Ukrainian Youth Association: in 1945–52 as president of the Union of Ukrainian Scouts in exile and as director of *Molode Zhyttia* in Munich, publishers of *Entsyklopediia ukrainoznavstva* (Encyclopedia of Ukraine). Since 1955 he has been the business manager of the Shevchenko Scientific Society in Europe and editor of *Visti iz Sarseliu*. In 1966–8 Figol headed the executive of the Ukrainian National Council in exile, and in 1976–82 he headed the Ukrainian Democratic Alliance. He has published articles on economics, cybernetics, and civic matters.

Figol, Ivan [Figol'], b 4 May 1881 in Knihynyn near Stanyslaviv, d 3 August 1933 in Lviv. Ukrainian Catholic priest, teacher, church and community figure. Figol was a catechist at gymnasiums in Kolomyia (1907–12) and Stanyslaviv (1912–28), and at the Lviv Ukrainian Academic Gymnasium (1928–33). He helped organize Marian societies for youth and women and taught homiletics at the Greek Catholic Theological Academy in Lviv from 1929. Figol is the author of *Ekzorty na nedili i sviata shkil'noho roku* (Spiritual Exercises for Sundays and Holy Days during the School Year, 2 parts, 1928–9; reprinted as *Propovidi dlia molodi* [Sermons for Youth, Rome 1981]). He contributed to the journals *Nyva* and *Bohosloviia*.

Figol, Mykhailo [Figol', Myxajlo], b 18 October 1927 in Krylos, Stanyslaviv county, Galicia. Painter, art scholar.

Figol graduated from the Repin Institute in Leningrad in 1961 and specializes in monumental-decorative painting. His works include the mosaic *On the High Mountain Meadow*, the diptych *Warriors*, the panel *Cosmos* in the foyer of the cinema theater in Ivano-Frankivske, landscapes, and thematic kilims. Figol is author of the monograph *Iaroslav Vasylovych Pstrak* (1966) and the album *S. Kyrychenko ta N. Klein* (1970).

Fiialkov, Yakiv [Fijalkov, Jakiv], b 20 November 1895 in Kiev, d 16 November 1958. Chemist, corresponding member of the Academy of Sciences of the Ukrainian SSR from 1945 and a professor at the Kiev Pharmaceutics Institute (1929–35) and at Kiev University (1935–57). Beginning in 1938, he was also an associate of the Institute of General and Inorganic Chemistry of the Academy of Sciences. He researched primarily the chemistry of complex compounds, especially of halogens and iodine with organic substances, and compounds of certain rare and non-ferrous metals.

Filalet, Khrystofor. Pen name of an unknown author of a major anti-Uniate polemical work, *Apocrisis*. The first edition, in Polish, was published in 1597, and a Ukrainian edition appeared in Ostrih in 1598. Some scholars attribute authorship to M. Bronewski.

Filaretov, Mikhail (church name: Filaret), b 1824, d 23 February 1882. Russian bishop. Filaretov studied at the Kiev Theological Academy. In 1859 he was appointed superior of St Nicholas's Monastery in Chernihiv gubernia. In 1860–77 he was rector of the Kiev Theological Academy and superior of the Kiev Epiphany Brotherhood Monastery. In 1874–7 he served as bishop of Uman and second vicar of the Kiev eparchy. From 1877 he was bishop of Riga. As editor of *Rukovodstvo dlia sel'skikh pastyrei* (from 1859) at the Kiev seminary, *Trudy Kievskoi dukhovnoi akademii* (from 1860), and *Voskresnoe chtenie*, he published a number of sermons and articles on church history and theology in these journals. Filaretov was awarded the degree of doctor of theology for his important study *Proiskhozhdenie knigi Iova: Bibliologicheskoe issledovanie* (The Origins of the Book of Job: A Bibliological Study, 1872).

Filatov, Vladimir, b 27 February 1875 in the village of Mikhailovka, Penza gubernia, d 30 October 1956 in Odessa. Noted ophthalmologist, full member of the Academy of Sciences of the Ukrainian SSR from 1939 and of the Academy of Medical Sciences of the USSR from 1944. Filatov graduated from the medical faculty of Moscow University in 1897. In 1903–11 he was an associate of the eye clinic of Odessa University and in 1921 he was appointed professor at the Odessa Medical Institute. There he founded the first Soviet glaucoma center in 1931. In 1936 he established and directed the Ukrainian Scientific Research Institute of Eye Diseases and Tissue Therapy, which now bears his name. He published over 430 works, including *Uchenie o kletochnykh iadakh v oftal'mologii* (Teachings on Cellular Poisons in Ophthalmology, 1908), *Opticheskaia peresadka rogovitsy i tkanevaia terapiia* (Optical Transplantation of the Cornea and Tissue Therapy, 1945, 1948), *Tkanevaia terapiia. Lechenie biogennymi stimulatorami* (Tissue Therapy: Treatment with Biogenic Stimulators, 1948), *Moi puti v nauku*

Vladimir Filatov

Mykola Filiansky

(*My Paths in Science*, 1955), *Operatsii na rogovoi obolochke i sklere* (Operations on the Cornea and Sclera, 1960), and *Izbrannyye trudy* (Selected Works, 4 vols, 1961). Filatov founded an important ophthalmological school. In 1917 he made a major contribution in plastic surgery by inventing the Filatov pedicle, a tubed pedicle flap. In surgical ophthalmology he introduced the method of transplanting corneas from corpses. He proposed new methods for diagnosing and treating glaucoma, trachoma, trauma, and ophthalmia and invented many original ophthalmosurgical instruments. He discovered biogenic stimulants and developed a method of tissue therapy (1933) that is widely used in medicine, veterinary practice, and animal husbandry. In 1946 Filatov founded and edited *Oftal'mologicheskii zhurnal* in Odessa. For many years he served as president of the Society of Ophthalmologists of Ukraine.

H. Schultz

Filevych, Mykhailo [Filevyč, Myxajlo], b ?, d 1804 in Kholm. Sculptor in wood. Filevych worked until 1777 in Lviv and, after that, in Kholm. Among his works are the external and internal sculptures, two wooden gates, and the wooden statues of Aaron and Melchizedek in the main altar of St George's Cathedral in Lviv, which he executed with the help of S. Stazhevsky; six wooden figures of saints in the church of the Basilian monastery in Buchach; and a group sculpture, *The Archpriests*, in the main altar of the Dormition Church in Lviv. His works are rococo in style, with some features of classicism.

Filiansky, Mykola [Filjans'kyj], b 19 December 1873 in the village of Popivka, Poltava gubernia, d 12 January 1938 (?) in a Soviet concentration camp. Poet. Filiansky studied at Moscow University and then worked as a construction engineer and architect in Moscow. From 1903 to 1904 he worked in Paris and from 1906 to 1917 in the Urals. In 1917–23 he was in charge of an agronomy school in Yaresky in the Poltava region. From 1924 he worked as a geologist, and from 1928 in the Social Museum in Kharkiv. He was arrested in 1937. Filiansky is known for his collections of fine lyric poetry: *Liryka* (Lyrics, 1906), *Calendarium* (1911), and *Tsiluiu zemliu* (I Kiss the Earth, 1928); he also wrote a long poem, 'Buzkovyi kushch' (A Lilac Bush).

Filias, Platonid Petro [Filjas], b 27 September 1864 in Dobrochyn, Sokal county, Galicia, d 16 June 1930 in Drohobych, Galicia. Basilian priest and church leader. Filias was co-founder and editor of the journal *Misionar* (1897–8, 1921–6). He compiled, in co-operation with Rev Ye. Lomnytsky, the breviary *Hostynets'* (1892). In 1902 he arrived with the first Basilians at Beaverlake (near present-day Mundare, Alberta), and served to 1905 as superior of the Basilian mission in Canada. On his return to Galicia, Filias became the first protohegumen of the reformed *Basilian monastic order. In 1914–16 Filias was the apostolic administrator of the Ukrainian Catholics in Austria, and in 1918–19 he was a member of the Ukrainian National Rada of the Western Ukrainian National Republic.

Filimonov, Mykola, 1884–1943. Opera singer, baritone, noted pedagogue of vocal music. Filimonov worked in the Kiev Opera with interruptions from 1916. He served as professor at the Lysenko Music and Drama Institute in Kiev in 1925–32, at the Kiev Theatrical Institute in 1938–41, and at the Kiev State Conservatory in 1941–2. In 1933–7 Filimonov served a term in exile.

Filin, Fedot, b 7 March 1908 in Selino, Tula gubernia, d 6 May 1982 in Moscow. A Soviet Russian linguist specializing in Slavic linguistics. Filin was a supporter of N. Marr's theories until their prohibition; subsequently he became a leading figure among orthodox 'Marxist' linguists, opposing structuralism, generative linguistics, and, on the whole, most modern Western linguistics. In 1968 Filin became director of the Institute of the Russian Language at the Academy of Sciences of the USSR and, in 1971, editor of the journal *Voprosy iazykoznaviia*. Filin actively promoted the Russification of the national languages of the USSR. His works pertaining to the Ukrainian language include *Leksika russkogo literaturnogo iazyka drevnekievskoi epokhi* (The Vocabulary of the Russian Literary Language of the Ancient Kievan Epoch, 1949), *Obrazovanie iazyka vostochnykh slavian* (The Formation of the Language of the Eastern Slavs, 1962), and *Proiskhozhdenie russkogo, ukrain-skogo i belorusskogo iazykov* (The Origin of the Russian, Ukrainian, and Belorussian Languages, 1972); among the symposia edited by Filin are *Voprosy istoricheskoi leksikologii i leksikografii vostochnoslavianskikh iazykov* (Questions of Historical Lexicology and Lexicography of the Eastern Slavic Languages, 1974) and *Aktual'nye problemy istoricheskoi leksikologii vostochnoslavianskikh iazykov* (Topical Problems in the Historical Lexicology of the Eastern Slavic Languages, 1975). In his historical works he defended the theory of long-lasting Eastern Slavic unity, but stressed local differences as dialectal ones.

Filipenko, Arkadii, b 8 January 1912 in Kiev. Composer, graduate of the Kiev Conservatory (1939, L. Revutsky's class). Filipenko's works include the symphonies *Heroic Poem* (1947) and *Concert Waltz* (1957), four string quartets, one piano suite, two sonatas, vocal solos, numerous choral songs, the children's opera *In the Green Orchard* (1967), the comic operettas *The Naked President* (1967) and *The Sultan's One Hundred and First Wife* (1971), and music for the theater, films, radio, and television.

Filipov, Anatolii, b 29 November 1899 in Hlukhivka, Vinnytsia gubernia, d 23 April 1978. Specialist in applied mathematics and mechanics, full member of the Academy

of Sciences of the Ukrainian SSR from 1967. In 1954 he was appointed director of the Laboratory of Hydraulic Machines in the Institute of Mechanics of the Academy of Sciences of the Ukrainian SSR. At the same time (1948–61) he was a professor at the Kharkiv Polytechnical Institute. In 1972 he became chairman of a department of the Institute for the Problems of Machine Building of the Academy of Sciences of the Ukrainian SSR. Filipov's works deal with problems of applied mathematics and mechanics, particularly with the oscillation of mechanical systems.

Filipov, Oleksii, b 30 March 1902 in the village of Dmytrivka, Kherson gubernia, d 30 June 1955. Pedagogue. Filipov graduated from the Odessa Institute of National Economy. He served as director of the Kiev Pedagogical Institute, worked in school administration, and held office as a deputy people's commissar of education and deputy minister of education of the Ukrainian SSR (1944–55). He edited the journal *Radians'ka shkola* from 1947 to 1951. He is the author of *Rozvytok radians'koï shkoly v Ukraïns'kii RSR u period pershoï pislia-voïennoï piatyrychky, 1946–1950* (The Development of the Soviet School in the Ukrainian SSR in the Period of the First Postwar Five-year Plan, 1946–1950, 1957).

Film. Motion pictures were first seen in Ukraine in 1896 when the cinematographic productions of the Lumière brothers appeared in Odessa and then spread to other cities. At first short films that were imported from France were shown. These were soon joined by others when A. Fedetsky, a photographer in Kharkiv, began to show his own homemade films, such as *Train Departing from the Kharkiv Station*, *Procession of the Cross from Kuriazh to Kharkiv* (1896), and *Folk Celebrations at the Horse Market* (1897). At the beginning of the 20th century film studios in Kiev, Kharkiv, and Odessa began to produce films on Ukrainian themes. O. Oliksiienko, D. Baida-Sukhovii, and L. Sakhnenko were among the first Ukrainian film directors. At first primitive, everyday dramas were filmed, but by the early 1910s the classics of drama were being produced. In particular, the Katerynoslav studio filmed in 1911 the Sadovsky Theater performing I. Tobilevych's *Naimychka* (The Servant Girl) and I. Kotliarevsky's *Natalka Poltavka* (Natalka from Poltava) featuring M. Sadovsky, M. Zankovetska, H. Borysohlibska, L. Linytska, and I. Marianenko. With the outbreak of revolution in 1917 the development of cinema almost ceased. Only the Ukrainfilm studio, which was established in 1918 during Ukrainian independence, produced a few documentary films.

Period of the All-Ukrainian Photo-Cinema Administration. After occupying Ukraine, the Soviets nationalized all private film studios and placed them under the jurisdiction of the cinema section of the Theater Committee. After several reorganizations the section became in 1922 the *All-Ukrainian Photo-Cinema Administration (vUFKU) and was subordinated to the People's Commissariat of Education. Thus began the most productive period in the development of the Ukrainian cinema, which lasted to the beginning of the 1930s. During this period the production base of the film industry, the technical and artistic cadres, and the network of theaters expanded enormously. At first there were only two film studios (known as film factories)—one in Yalta and one in Odessa. In 1929 the largest vUFKU film studio opened in Kiev.

Four films were produced in 1923, 16 in 1924, 20 in 1927, 36 in 1928, and 31 in 1929. In these years the technical-manufacturing personnel of the studios increased from 47 in 1923 to 1,000 in 1929. The number of movie theaters grew just as rapidly, from 265 in 1914 to 5,394 in 1928. The outstanding film directors of this period were P. *Chardynin, V. Hardin, Yu. *Stabovy, H. *Tasin, D. Vertov, F. *Lopatynsky, M. *Tereshchenko, O. *Dovzhenko, and I. *Kavaleridze. Among the large number of screenwriters there were some well-known Ukrainian writers – M. Bazhan, Yu. Yanovsky, H. Epik, D. Falkivsky, O. Dovsivnii, and M. Yohansen. Besides the stars of Ukrainian theater who acted in films before the revolution, many prominent actors of the older and the younger generations appeared in films. Among them were I. Zamychkovsky, Yu. Shumsky, S. Shkurat, M. Nademsky, and the following actors of the *Berezil theater: A. Buchma, L. Hakkenbush, M. Krushelnytsky, V. Chystiakova, N. Uzhvii, and P. Masokha.

A number of excellent films on purely Ukrainian themes were made in this period: *Taras Shevchenko* (1926), directed by P. Chardynin and starring A. Buchma in the title role; *Boryslav smiiet'sia* (Boryslav Is Laughing, 1927), based on I. Franko's novel, directed by I. Rona and starring I. Zamychkovsky and Yu. Shumsky; *Mykola Dzheria* (1927), based on I. Nechui-Levytsky's novel, directed by M. Tereshchenko and starring A. Buchma in the main role; *Taras Triasylo* (1927), directed by P. Chardynin and starring A. Buchma, N. Uzhvii, I. Zamychkovsky, and Yu. Shumsky; *Cherevychky* (The Shoes, 1928), based on a work by N. Gogol and directed by P. Chardynin; *Zvenyhora* (1928), directed by O. Dovzhenko and starring S. Svashenko and M. Nademsky. All these films to some degree marked a technical and artistic achievement in the history of silent film. Many of them were attacked by the official critics for nationalist deviations and were banned in the early 1930s. I. Kavaleridze's film *Zlyva* (The Downpour, 1929), starring S. Shkurat and I. Marianenko, was criticized with particular severity. It attempted to present the epic of the Haidamaka rebellion and experimented with innovations in form, using a black velvet backdrop and geometric props instead of a naturalistic setting.

In this period a number of other films on Soviet themes still preserved a Ukrainian setting to a considerable degree and, in spite of official propaganda, managed to convey real life artistically. Among them were *Ostap Bandura* (1924), one of the first films about the civil war, directed by V. Hardin and starring M. Zankovetska; *Ukraziia* (1925), directed by P. Chardynin; *Dva dni* (Two Days, 1927), directed by H. Stabovy; *Arsenal* (1929), written and directed by O. Dovzhenko and starring S. Svashenko and A. Buchma. Several films are known for the masterly performance of the actors, for example, *Prodanyyi apetyt* (The Sold Appetite, 1928), starring A. Buchma and directed by N. Okhlopov. Documentary films of the period such as D. Vertov's *Odynadtsiatyi* (The Eleventh One, 1928), *Cholovik z kinoapparatom* (Man with a Movie Camera, 1929), and *Symfoniia Donbasu* (Symphony of the Donbas, 1931) are interesting because of their formal innovations.

The best Ukrainian silent motion pictures were Dovzhenko's three films, which won him the reputation as 'the first poet of cinema' – *Zvenyhora*, *Arsenal*, and particularly *Zemlia* (The Earth, 1930). In 1968 an interna-

tional jury included *Zemlia* among the 12 best films in world cinematography. Dovzhenko developed his own style in the art of motion pictures and trained a group of actors according to its demands. Among these actors S. Shkurat, M. Nademsky, P. Masokha, and S. Svashenko were particularly well known. A separate school of camera work in the Ukrainian cinema emerged under Dovzhenko. Its most outstanding representative was D. *Demutsky.

1930–41. The end of silent films in the history of the Ukrainian cinema coincided with the beginning of the campaign to crush Ukrainian culture, including the cinema. The All-Ukrainian Photo-Cinema Administration, which until 1930 was independent, was then reorganized into Ukrainfilm and shortly thereafter subordinated to central Soviet film organizations in Moscow. The semimonthly magazine *Kino* (1925–33) ceased publication. The Odessa film studio was used almost exclusively by Mosfilm and Lenfilm, while the Yalta film studio was officially transferred to Russian film organizations. Film directors such as H. Stabovy and Yu. Lopatynsky, cameramen such as D. Demutsky, and screen writers such as M. Yohansen, Yu. Tiutiunnyk, and H. Epik suffered political persecution. Yu. Lopatynsky's last film, *Karmeliuk*, was produced in 1930. In 1932 O. Dovzhenko completed his first sound film, *Ivan*. After this he was accused of being a Ukrainian nationalist and was forced to live as though in exile in Moscow for the rest of his life. There he worked in Mosfilm. His next film, *Aerograd* (Air City, 1935), lacked the slightest hint of a Ukrainian theme. *Shchors* (1939), which was ordered by Stalin and produced during the Yezhov terror, contains only a few scenes that recall Dovzhenko's artistic power. In the 1930s I. Kavaleridze was quite successful in making films on Ukrainian themes: *Perekop* (1930), *Koliivshchyna* (1933), and *Prometei* (Prometheus, 1935). Later he also adapted the operas *Natalka Poltavka* (1935) and *Zaporozhets' za Dunaem* (Zaporozhian Cossack beyond the Danube, 1937) for film. Until the war the standard film was an adaptation of a literary work about a Soviet civil war hero (eg, Yu. Yanovsky's *Vershnyky* [The Riders, 1939]). Ukrainian history was distorted, as in O. Kornichuk's screenplay *Bohdan Khmel'nyts'kyi* (1941). These last two films were directed by I. *Savchenko, one of the outstanding directors of the Ukrainian cinema of the 1930s–1940s. The decline in quality was accompanied by cutbacks in production, from 30 films in 1931 to 10 in 1933 and 7 in 1941.

1941–5. By the beginning of the war the Ukrainian cinema was in a state of almost complete ruin: either short propaganda films were produced, or films begun before the war were completed; for example, *Dochka moriaka* (The Sailor's Daughter, 1941), directed by H. Tasin; *Mors'kyi iastrub* (The Sea Hawk, 1941), directed by V. Braun; and *Oleksander Parkhomenko* (1942), directed by L. Lukov. The majority of the films made until the end of the war were adaptations of war novels: O. Kornichuk's *Partyzany v stepakh Ukraïny* (Partisans in the Steppes of Ukraine, 1942), directed by I. Savchenko, and V. Vasylevska's *Raiduha* (The Rainbow, the only Ukrainian film released in 1944), directed by M. Donskoi. O. Dovzhenko's two documentary films of this period should be mentioned: *Bytva za nashu Radians'ku Ukraïnu* (The Battle for Our Soviet Ukraine, 1943) and *Peremoha na Pravoberezhnii Ukraïni* (The Victory in Right-Bank Ukraine, 1945).

Postwar production, 1945–55. During the Zhdanov

period and the growing campaign against nationalism, film production was low: one to two films per year, with six films in 1953 and 1954 and five in 1955. Except for the film *Taras Shevchenko* (1951), directed by I. Savchenko and starring S. *Bondarchuk, nothing of artistic worth was produced during this period. After the war Russification efforts increased: the better Ukrainian actors were sent to Moscow, while Russian actors filled the studios in Ukraine.

1956–69. From 1956 onwards the Ukrainian cinema experienced a steady revival. This was evident first of all in the expansion of its production base: the *Kiev Artistic Film Studio and the Odessa studio were expanded. In 1957 the Yalta studio again became a Ukrainian studio. Film production increased rapidly: 16 films were released in 1957 and 23 in 1958. Most of the films made in the 1950s dealt with the revolution; for example, *Pravda* (The Truth, 1957), an adaptation of O. Kornichuk's novel; and *Pavlo Korchagin* (1956) and *Narodzheni bureiu* (Born of the Storm, 1957), adaptations of N. Ostrovsky's novels. Some films depicted life on collective farms, for example, *Daleke i bliz'ke* (The Distant and Near, 1957). Screen adaptations of literary classics were also popular: M. Kotsiubynsky's *Pekopt'or* (1956) and H. Kvitka-Osnovianenko's *Svatannia na Honcharivtsi* (The Marriage Engagement in Honcharivka, 1958). Some concerts and ballets were filmed, for example, the ballet adaptation of Shevchenko's poem *Lileia* (The Lily, 1959). In 1958 the total production of artistic, documentary, popular science, and other films amounted to 109 titles. Except for a few films, such as *Hryhorii Skovoroda* (1959, written and directed by I. Kavaleridze), that were devoted to original themes, the quality of this production reflected the general level of Soviet art.

In the 1960s the quantity of production remained similar to that of the 1950s but with a falling-off tendency: 22 films in 1960, 17 artistic films in 1965, 11 in 1966, and 18 in 1967. As before, these were mainly typical screen adaptations of literary works, concerts, and operas: M. Starytsky's play *Za dvoma zaitsiamy* (After Two Hares, 1961), directed by V. Ivanov; P. Myrny's *Poviiia* (The Strumpet, 1961), directed by I. Kavaleridze; A. Holovko's *Pylypko* (1964), directed by M. Sergeev; and others. The two outstanding films of the decade were *Ivanna* (1960), written by V. Beliaev and directed by V. Ivchenko, a typical propaganda film directed against the Catholic church and nationalism; and the adaptation of M. Kotsiubynsky's novel *Tini zabutykh predkiv* (Shadows of Forgotten Ancestors, 1964), directed by S. *Paradzhanov, camera work by Yu. *Illienko, and artistic direction by H. Yakutovych, which won awards at film festivals in Argentina (1965), Rome (1965), and Greece (1966). The increasing Russification of the Ukrainian cinema in the 1960s is evident from the fact that after O. Dovzhenko's death all the films based on his scripts – *Poema pro more* (Poem about the Sea, 1958), *Povist' polumianykh lit* (Tale of Fiery Years, 1960), *Zacharovana Desna* (The Enchanted Desna, 1964), and *Nezabutnie* (The Unforgettable, 1968) – were made not in Ukraine but in Moscow, by his wife, Yu. Solntseva.

1970s. In the 1970s the Ukrainian cinema continued to develop along the basic lines fixed in the 1960s without significant variation in annual production. No films of exceptional artistic merit appeared. It is difficult to determine how many Ukrainian films were made, because the Kiev and Odessa studios produced Russian films as well,

and these were not clearly distinguished from the Ukrainian ones. The basic themes of the films remained as before: (1) the revolution and the civil war, with such examples as *Rodyna Kotsiubyns'kykh* (The Kotsiubynsky Family, 1970), directed by T. Levchuk; a new adaptation of N. Ostrovsky's *Kak zakalialas' stal'* (How the Steel Was Tempered, 1973), directed by M. Mashchenko; and *Bilyi bashlyk* (The White Hood, 1975), directed by Yu. Illienko; (2) the Second World War and the partisan movement, with such examples as *Sofia Hrushko* (1971), written by V. Sobko and directed by V. Ivchenko; *Nina* (1971), written by S. Smyrnov and directed by O. Shvachko; *Simnadtsiatyi transatlantychnyi* (The Seventeenth Transatlantic, 1972), directed by V. Dovhan; a trilogy (1974–6) on S. Kovpak's campaign consisting of *Spolokh* (Alarm), *Khurtovyna* (The Storm), and *Karpaty* (The Carpathians); (3) industrial achievements, with films such as *Dyvytysia v ochi* (To Look into the Eyes, 1976), written by Ye. Ononrienko and directed by V. Luhovsky, and *Kanal* (The Canal, 1976), written by L. Cherevatenko and V. Bortko and directed by V. Bortko; (4) life on the collective farm, with such films as *Tut nam zhyty* (Here We Can Live, 1972), written by M. Zarudny and directed by A. Bukovsky, and *Sered lita* (In the Middle of Summer, 1975), written by Yu. Parkhomenko and M. Tkach and directed by V. Illiashenko. The antireligious struggle was continued in the film *Spokuta chuzhykh hrikhiv* (Penance for the Sins of Others, 1978), written by V. Sychevsky and directed by V. Pidpaly. A large number of films were again adaptations of literary classics: several films based on the works of Lesia Ukrainka, and I. Franko's *Zakhar Berkut* (1971), written by D. Pavlychko and directed by L. Osyka, M. Stelmakh's *Husy, lebedi letiat'* (The Geese and Swans Are Flying, 1974, directed by O. Muratov) and *Shchedryi vechir* (Epiphany Eve, 1978, directed by O. Muratov), and O. Honchar's novel *Bryhantyna* (The Brigantine, 1979, directed by Yu. Illienko).

In the last decade some younger screenwriters have established themselves – M. Zarudny, D. Pavlychko, and I. Drach. Alongside the older film directors several younger ones have appeared, among them, Yu. Illienko, noted for his films *Vechir naperedodni Ivana Kupala* (The Evening before Ivan Kupalo, 1968), *Bilyi ptakh z chornoii oznakoiu* (White Bird with a Black Spot, 1972), and the adaptation of Lesia Ukrainka's *Lisova pisnia* (The Forest Song, 1980); and I. Hrabovsky, noted for his *Lesia Ukrainka* (1971), *Kryla peremohy* (The Wings of Victory, 1972), and *Vohnennyi shliakh* (The Fiery Road, 1974). Both of these directors also write the scripts for some of their films.

The Studio of Popular Science Films and the Ukrainian Studio of Documentary Films in Kiev release several hundred titles per year, many of them of a propagandist nature. The former has produced a series of historical films, including *Marusia Bohuslavka*, *Kyrylo Kozhum'iaka*, *Skazannia pro Ihoriv pokhid* (The Tale of Ihor's Campaign), and *Lisova pisnia*. A popular illustrated film magazine *Novyny kinoekrana* has been published on a monthly basis since 1961.

Filomafitsky, Evgraf [Filomafitskij, Jevgraf], b 20 December 1790 in Malakhovo, Yaroslavl gubernia, Russia, d 1831. Scholar and writer of Russian origin. Filomafitsky graduated from Kharkiv University and in 1826 was appointed professor of general history, geography, and statistics at the university. Filomafitsky was one of the editors of the first journal in Ukraine, **Ukrainskii vestnik* (1816–19), which dealt with literary, artistic, scholarly, and political affairs. He is also known as a promoter of the theater in Ukraine.

Filts, Bohdana [Fil'c] b 14 October 1932 in Yavoriv, Galicia. Composer and music scholar. In 1958 Filts graduated from the Lviv Conservatory and in 1963 she became an associate of the Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR. Her compositions include *Highland Rhapsody* for orchestra (1961), a concerto for piano and orchestra (1958), piano pieces, choir pieces, children's songs, arrangements of Ukrainian folk songs, and vocal solos to the words of T. Shevchenko, Lesia Ukrainka, V. Sosiura, and A. Mickiewicz. She is the author of *Fortepianna tvorchist' V.S. Kosenka* (The Piano Works of V.S. Kosenko, 1965), *Khorovi obrobky ukrains'kykh narodnykh pisen'* (Choral Arrangements of Ukrainian Folk Songs, 1965), and *Ukrains'kyiadians'kyi romans* (The Ukrainian Soviet Romance, 1970).

Filvarok ('homestead' or 'manorial farm,' from the Polish *folwark*). Large farm on the estates of gentry and sometimes of royalty and church dignitaries. Under the *corvée* system free labor was used at the *filvarok*; later, hired labor was used. *Filvarky* existed in Poland and in the Grand Duchy of Lithuania. They produced mostly grain for the wide market, including export, as well as other farm products, such as industrial crops. Some *filvarky* specialized in animal husbandry and raised oxen on Ukrainian territory. Sometimes the operations on these manorial farms included such farm crafts as potash mining, bee-keeping, and liquor distilling. In the 19th century the agricultural importance of *filvarky* began to decline because of their unprofitability, lack of modern technology, and the high cost of labor. The farms and fields of gentry were known as *filvarky* in Right-Bank Ukraine and Galicia until the Revolution in 1917 and in Poland until the 1930s.

Finarovsky, Hryhorii [Finarovs'kyj, Hryhorij], b 2 January 1906 in Shpola, Kiev gubernia. Composer. In 1933 Finarovsky graduated from the Kharkiv Music and Drama Institute, where he studied with S. Bohatyrov. His works include the children's opera *In the Artist's Workshop* (1929); variations on Ukrainian folk songs for piano and orchestra; four musical comedies, including *Palm Island* (1959) *Spring Goes through the City* (1960); choral works; works for piano, violin, and cello; songs for solo

voice, including songs to poems by T. Shevchenko; and children's songs. Since 1952 he has worked in Kharkiv.

Fine Arts, Folklore, and Ethnography, Institute of the Academy of Sciences of the Ukrainian SSR. See Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR.

Finkel, Oleksander [Finkel'], b 1899 in Bakhmut (now Artemivske), Katerynoslav gubernia, d? Linguist, Russian specialist. In 1924 Finkel graduated from the Kharkiv Institute of People's Education. He has worked at the Institute of Linguistics of the Ukrainian Academy of Sciences, the Kharkiv Institute of People's Education, the Institute of Journalism, the Institute of Foreign Languages, the Teachers' Institute in Chimkent, Kazakhstan, and Kharkiv University. In 1934 he took part in the campaign against 'nationalism' in Ukrainian linguistics and published the article 'Terminolohichne shkidnytstvo i ioho teoretychne korinnia,' (Terminological Wrecking and Its Theoretical Roots) in the journal *Movoznavstvo*, no. 2. Finkel has written over 130 works, mostly on Russian and on general linguistics. Among them are *Teoriia i praktyka perekladu* (The Theory and Practice of Translation, 1929) and other works on translation and a textbook for Soviet Ukrainian schools, and *Russkii literaturnyi iazyk* (The Russian Literary Language, co-authored with M. Bazhenov, 1941), which has gone through numerous revised editions.

Finland (Suomi). Republic in northern Europe with a territory of 337,000 sq km and a population in 1983 of 4,850,000. Its capital is Helsinki. From 1809 to 1917 Finland was an autonomous grand duchy within the Russian Empire. In this period ties were established between Ukrainian and Finnish civic leaders in St Petersburg. The historian H. Gummerus was a popularizer of the Ukrainian question among the Finns. He was also the Finnish emissary to the Ukrainian government in Kiev in 1918. The Ukrainian legation in Finland was headed in 1918–20 by K. Losky and V. Zalizniak. In the interwar period a small Ukrainian community existed in Finland. In 1942–4 the Committee to Aid Ukrainian Prisoners of War and the Ukrainian Information Bureau, headed by B. Kentzhytsky, were active in Finland. Today several dozen Ukrainian families, but no organizations, can be found in Helsinki and Turku. The Finnish national epic *Kalevala* was translated into Ukrainian by Ye. Tymchenko. Works of the realist writers E. Leino and M. Lassila have also been translated into Ukrainian. In 1961 Finnish art from the town of Tampere was exhibited in Kiev. An exchange of artistic ensembles takes place occasionally between Finland and the Ukrainian SSR. Libraries in Helsinki contain valuable prerevolutionary Ukrainian publications.

Finn, Volodymyr, b 1 May 1878 in Kiev, d 13 October 1957. Botanist. In 1901 Finn graduated from Kiev University. He worked at the university from 1903 to 1941, becoming a full professor in 1927. From 1944 to 1951 he worked at the Zhytomyr Agricultural Institute. He published studies in embryology and plant systematics.

Fir (*Abies*; Ukrainian: *yalytsia*). A genus of evergreen trees of the pine family having needlelike leaves growing

directly from the branch. Approximately 40 species have been classified. There are 9 species in Ukraine, of which the most widespread is the silver fir (*A. alba*), which is capable of growing in shady areas and attains a height of 30–35 m. It is widespread in the Carpathian Mountains (usually alongside beech and spruce). Other species grow sparsely on the southwestern Ukrainian plains; they are cultivated in parks and orchards.

Firak, Mykhailo, b 21 November 1897 in the village of Liatske Velyke (now Chervone), Zolochiv county, Galicia. Religious and cultural leader in Bačka and Croatia, Greek Catholic clergyman, editor of *Ruski novini* in Ruski Krstur, editor and publisher of *Ridne slovo* and of calendars and books for the Ukrainian population of Bosnia and Slovenia. Firak has also done translations from Croatian into Ukrainian and vice versa.

Firtsak, Yulii [Fircak, Julij], b 22 August 1836 in Khudlove in Uzhhorod county, d 1 June 1912 in Uzhhorod. Bishop and religious leader in Transcarpathia. Firtsak was ordained in 1861 and served as professor of theology and rector of the eparchial seminary in Uzhhorod in 1876–87. In 1887–90 he held a seat in the Hungarian parliament. In 1891 he was appointed bishop of Mukachiv. Firtsak founded a teacher's seminary in Uzhhorod and organized social aid for the poor through a series of reforms called Highland Action. He resisted the Magyarization of the Mukachiv eparchy.

Fishchenko, Oleksii [Fišchenko, Oleksij], b 29 December 1920 in Uman. Graphic artist. Fishchenko graduated from the Kiev Institute of Art in 1959. He employs primarily the technique of colored line engraving. Among his works are the landscape series *Kaniv* (1957–9), *The Land of Taras* (1961), *My Fatherland* (1961), and *The Carpathians* (1961–70), and individual engravings such as *Sound of the Fields* (1967), *Wary Silence* (1969), and *A Fine Day* (1971). An album of his work was published in Kiev in 1969.

Fishing, sport. A form of active recreation employing sports equipment such as fishing rods and tackle to catch fish. Before 1917 various sports clubs in Ukraine were involved in fishing. In the Ukrainian SSR sport-fishing enthusiasts are organized in voluntary sports clubs and in the Ukrainian Association of Hunters and Fishermen, which was founded in 1947 and by the 1960s had 250,000 members.

Fishing industry. An industry that includes the catching and processing of fish, the manufacture of fish products, and the management of fish resources in natural and artificial reservoirs. Current terminology in the Ukrainian SSR divides the fishing industry into fishing, which involves the catching of fish and marine organisms, and pisciculture, which is the preservation and amelioration of fish supplies in natural reservoirs and the breeding of fish in artificial ones.

In Ukraine fishing has existed since the Paleolithic period. In the ancient epoch large amounts of fish were exported to Greece from Olbia and other Greek colonies, and during the Middle Ages fish were exported to Byzantium. Fishing was fundamental to the trade of the Zaporozhian Cossacks. During the 19th century Ukraine's fish resources were depleted by excessive

fishing, despite the introduction of controls restricting the size of the catch and despite the development of fish hatcheries. Protective measures were first instituted in the Russian Empire in 1771; the first fishing regulations were published in 1878. In Poland fishing has been regulated by the Fishing Statute of 1932. As a result of new government restrictions, the annual catch from the rivers of central and eastern Ukrainian lands, especially the catches of valuable and rare fish (some species of which have even become extinct), decreased by approximately half between 1900 and 1914. Between 1916 and 1923 the annual catch began to improve, reaching 139,000 t by 1940 (see table 1). During the 1930s the fisheries were collectivized.

TABLE 1
The catch of fish, marine animals, whales,
and other marine life

Year	USSR 1,000 t	Ukrainian SSR	
		1,000 t	% of USSR
1913	1,051	37.1	3.5
1928	840	44.7	5.3
1932	1,333	126.4	9.5
1940	1,404	139.1	9.9
1945	1,125	59.8	5.4
1950	1,755	190.3	10.8
1955	2,737	246.1	6.6
1960	3,541	535.8	15.2
1965	5,774	589.4	10.2
1970	7,900	891.1	9.9
1976	9,600	1,142.7	11.9

After a second decline in fishing productivity between 1941 and 1944, the industry revived and grew rapidly as a result of the perfection of fishing methods, the modernization of the fishing fleet, the acquisition of the newest types of fishing vessels (fishing trawlers of various sorts, factory ships, etc), the introduction of hydroacoustic apparatus in marine research, the expansion and improvement of piscicultural and ameliorative methods, and the expansion or ports and manufacturing resources.

The expansion of fishing farther into the open parts of the Black Sea and, more importantly, into world oceans (from 1958), together with the introduction of whaling in Antarctic waters, contributed greatly to the rapid growth of the industry. Eighty percent of the catch is made in marine waters, 20 percent in interior waters.

The development of fishing in Ukraine, especially in the interior, is facilitated by the Ukrainian Scientific Research Institute of Fishing in Kiev (established in 1930), the Kiev branch of the All-Union Institute for the Planning of Fishing Facilities Plants, the Azov-Black Sea Scientific Research Institute of Marine Fishing and Oceanography in Kerch, the Institute of the Biology of Southern Seas of the Academy of Sciences of the Ukrainian SSR, the Azov Scientific Research Institute of Fishing in Rostov-na-Donu, the Institute of Hydrobiology of the Academy of Sciences of the Ukrainian SSR, and other institutions. These institutions study the pollution level of rivers, the problems of pond fisheries, and the hydrobiological conditions of reservoirs, estuaries, and limans; they devote attention to the distribution and acclimatization of various fish and invertebrates in interior waters.

Ocean and marine fishing in the USSR and the Ukrainian SSR is under the jurisdiction of state agencies with large industrial-fishing fleets, fish-processing plants, ship-repair dockyards, and so on. The littoral zones and interior waters are fished primarily by fishing collective farms and in some places by state farms, which have operated under the statute of the fishing artel since 1939 and are organized under the collective-fishing union. Fishing collective farms annually land 10-25 percent of the catch of the Ukrainian SSR.

All fishing in the USSR is governed by the Ministry of Fishing in Moscow, to which the Ministry of Fishing of the Ukrainian SSR is subordinated. Fisheries in the interior waters of Ukraine are controlled by the Central Administration of Interior Fishing of the Ukrainian SSR, which is attached to the Council of Ministers of the Ukrainian SSR. The 1969 catch (fish, shellfish, whales, and other marine products) of the Ukrainian SSR is given in table 2.

The waters of Ukraine have about 200 (according to other data, 180) varieties of fish: 110 in the rivers, 180 in the seas (about 90 species inhabit the littoral waters of the Azov and Black seas, as well as the rivers that flow into these seas). About 10 percent of these species are caught for commercial purposes. Until the beginning of the 19th century river fishing was the major branch of the industry in Ukraine. The most productive rivers are the Dnieper, the lower Danube, and, to a lesser extent, the Dniester, Boh, Donets, and Kuban. Of the 66 species of fish in the Dnieper the following are of commercial value: bream, zander, carp, tench, pike, sheat-fish, perch; in the lower Danube (with a total of 71 fish species): beluga, sturgeon, sevruga, sterlet, sheatfish, tench, carp, pike, and herring (all of which swim up from the sea); in the Boh River (with a total of 70 fish species): carp, bream, dace, roach, perch, crucian carp; in the Dniester (with a total of 57 species): barbel, chondrostoma, chub, dace, roach, perch, bull-head, razor fish, bream; in the Donets River (with 44 species): bream, chondrostoma, ide, sheatfish. The fish of the Kuban River are of lesser commercial importance.

Lake fishing is concentrated primarily in Polisia and in the spring floodwaters of the lower Danube. Polisia has 268 lakes, with an average area of 16,000 ha, containing 32 species of fish, among which bream, dace, pike, perch, tench, and crucian carp are of commercial value. The fish productivity of the individual lakes ranges from 7.5 to 40 kg per ha. The area covered by the Danubian lakes is about 48,500 ha, and their fish productivity ranges from 21 to 73 kg per ha. The commercial catch includes carp, bream, zander, and pike.

Pond fishing constitutes the most intensive form of fishing. The Ukrainian SSR's 22,000 ponds together cover an area of 183,000 ha, of which 75,000 ha are inhabited by fish. The annual catch from the ponds totals about 30,000 t, and the average fish productivity of the state ponds, as of 1970, was 720 kg per ha. The main commercial species of warm-water ponds is carp, and of cold-water ponds, trout (mainly in the mountains).

The construction of the Dnieper hydroelectric stations and dams contributed to the decline of fishing in the Dnieper. A new type of fishing unlike river fishing has been developed in the larger reservoirs of the river. (The dam near Dnipropetrovske and, later, other dams limited the movement of migratory fish, which, disliking stagnant waters, migrated upriver.) The main species of commercial

TABLE 2
Catch of Ukrainian SSR, 1969

Fishing area	1,000 t	%
World oceans	419.0	61.8
Azov and Black seas	139.5	20.6
Interior waters	119.9	17.7
rivers	67.7	10.0
lakes	2.3	0.3
ponds	30.0	4.4
reservoirs	20.0	2.9
Total	678.4	100.0

fish in the Dnieper reservoirs are bream, carp, and sheatfish. In 1969, 172,600 centners of fish were caught in the reservoirs of the Dnieper. Much attention is devoted to the amelioration of the reservoirs.

Marine fishing is centered in the Black Sea and the Sea of Azov. The latter is most important, because it provides depositories for the roe of both migratory and semimigratory fish. The commercial productivity of the Sea of Azov is high, reaching 80 kg per ha. Commercial species include salt sprat, anchovy, bullhead, zander, and bream. The average annual catch in the 1960s from the Sea of Azov, in both the Ukrainian SSR and the Russian SFSR, was 170,000 t (89,000, in 1893, 34,000 in 1910, 114,000 in 1930).

The fish productivity of the Black Sea (2–2.5 kg/ha) is limited by its lack of sufficient shoals and its considerable depth, which is suffused with hydrogen sulfide. Marine species constitute the major part of the Black Sea catch.

In the reservoirs adjacent to the Black Sea and in the lower reaches of the Dniester and Danube rivers the freshwater crab industry is well developed (455,500 t in 1969).

Ocean fishing, which accounts for 80 percent of the total catch, is of the greatest economic importance. The Ukrainian SSR's fishing fleets have access to all international sea and ocean waters, but their principal fishing and whaling grounds are the Antarctic waters. New fishing grounds and facilities have been established in the Indian Ocean and off the coast of Antarctica. The fishing fleet, which in 1966 had 50 oceangoing vessels, compared to three in 1960, co-ordinates its operations with the scientific-industrial exploration fleet as well as with the service fleet, which is composed of 25 large, refrigerated, cargo vessels and receiving-transport vessels. The ocean catch consists mostly of the following species: horse mackerel, anchovy, pilchard, Atlantic mackerel, hake, and tuna. In addition, the small crab, spiny lobster, and squid catch as well as the commercial haul of non-piscine aquatic organisms (eg, marine algae) is expanding.

In 1946 the Antarctic whaling flotilla *Slava* (28,715 t) and, in 1959, the flotilla *Radianska Ukraina* (43,800 t) were launched and were based in the port of Odessa. Today they constitute the Antarctic whaling flotilla *Radianska Ukraina*, which includes a whaling base of the same name and 20 whaling vessels. The flotilla operates south of latitude 40°S, around Antarctica, and is one of the largest flotillas in the world.

The fish-processing and fish-canning industry is concentrated on the coast of the Black and Azov seas and on the Dnieper River. The major centers are Odessa, Kerch, Berdianske, Izmail, and Kherson.

In early 1971 there were 181 fishing, fish-canning, and

fish-processing enterprises in Ukraine. The largest were the Kerch Administration for Antarctic Fishing, the Sevastopol Administration for the Trawling Fleet, the Administration for the Antarctic Whaling and Fishing Fleet in Odessa, and the Zhdanov, Kerch, Berdianske, and Sevastopol fish-canning complexes. Although the fish and marine catch reached 1,142,700 t in 1976, it failed to meet consumer demand, and Ukraine was forced to import fish from other regions of the USSR.

The annual per capita consumption of fish and fish products in the Ukrainian SSR was 9.7 kg in 1960, 12.5 kg in 1964, 16.9 kg in 1969 (in the USSR the consumption was 9.9, 12.6, and 15.8 kg respectively). The proportion of fish to meat consumed is 1:2.8.

He produced studies on folklore and folk art in Poland, as well as popular monographs on the rites and customs of Slavic peoples, including *Rusini* (The Ruthenians, 1928).

Fitsnerivna-Morozova, Mariia [Ficnerivna-Morozova, Marija], b 1873 in Lviv, d 1920 in Kaminka Strumylva, Galicia. A dramatic actress and operatic soprano, Fitsnerivna-Morozova belonged to the Ruska Besida theater society from 1892 to 1902 and made concert tours through central and eastern Ukraine, Moscow, and Siberia from 1897 to 1899. Her roles included Fesia in I. Franko's *Riabyina* (Mountain Ash), Odarka in S. Hulak-Artemovskyy's *Zaporozhets' za Dunaiem* (Zaporozhian Cossack beyond the Danube), and Santuzza in P. Mascagni's opera *Cavalleria Rusticana*.

Five-year plan (*piatyrychka*). Abbreviation of the term 'five-year plan for the development of the national economy of the USSR.'

Theory. The USSR decree of 22 February 1921 establishing the State Planning Committee emphasized that short-term economic plans are based on a long-term plan, which at that time was supposed to be the plan for the electrification of Russia (GOELRO). As experience showed, it was difficult to fulfill the basic tasks set forth in a long-term plan by means of annual short-term plans because of the inherent incompatibility between the two types of plans. Hence, a middle-term plan was necessary,

and the five-year plan was introduced to meet this need. However, since in the meantime GOERLO had lost its meaning as a long-term plan and a new long-term plan was not yet prepared, the five-year plan adopted in 1928 became not a middle-term plan, but a long-term plan for the development of the national economy of the USSR. In the 1950s it was admitted that five-year plans do not guarantee continuity in planning because by the fifth year of any plan neither the ministries nor the enterprises know what they will be doing in the following year. Attempts to introduce long-term plans and to demote the five-year plans to middle-term plans proved unsuccessful at first because of errors in calculations. A long-term plan of 20 years was adopted only in 1979 and the five-year plan was reduced to a middle-term plan.

Since 1928 the one-year plan was the main form of planning for all state agencies and enterprises, while the five-year plan was compulsory only for the central agencies and served as a guideline for one-year planning. As soon as enterprises were given an active role in developing one-year plans, it was necessary to widen the temporal framework of the planning by enterprises and industrial complexes. Hence, the USSR law of 12 July 1979 resolved that five-year plans, not one-year plans, were to be the main form of planning for all state agencies, enterprises, and complexes whether they were central, republican, or local. Thus, five-year plans became compulsory for enterprises and complexes, whose subordinate divisions work out their one-year plans on the basis of the five-year plans.

To ensure that five-year plans are developed in an orderly way, the State Planning Committee of the USSR prepares uniform methodological instructions that provide concrete direction for the complex process of planning in all the branches of the economy. On the basis of the so-called control figures the central ministries prepare very detailed drafts of five-year plans for Union enterprises located in the Ukrainian SSR, and the Council of Ministers of the Ukrainian SSR prepares detailed drafts of plans for the enterprises under its jurisdiction. Today the structure of the five-year plans includes the following sections: (1) the basic general indicators of the development of the national economy; (2) scientific research publications and scientific and technical data on the national economy; (3) the development of industry; (4) agriculture and forestry; (5) transportation and communications; (6) investments; (7) geological works; (8) labor and cadres; (9) income; (10) trade; (11) consumer services and communal economy; (12) public education, culture, and health care; (13) improvement of the standard of living; (14) the distribution of productive forces and the development of the Union republics; and (15) foreign economic relations.

The State Planning Committee of the USSR, along with other central agencies, examines the draft plans of the USSR ministries and of the Council of Ministers of the Ukrainian SSR, co-ordinates them, and prepares on their basis a draft five-year plan of economic and social development for the USSR. This plan is approved on the basis of the most important indicators, those that define the basic direction and rate of development. In the next stage the approved plan is sent in the form of suitable extracts to the ministries of the USSR and the Council of Ministers of the Ukrainian SSR. The ministries and the Council of Ministers use this plan to correct their own earlier five-year

draft plans, which are then approved. In these approved plans concrete tasks are assigned to the Council of Ministers of the Ukrainian SSR for the economy that is under the management of the republic's ministries and departments and for the economy that is under local (oblast) management. The agencies responsible for executing these tasks are informed by means of copies of the government's resolutions. On the basis of these resolutions the draft plans of the ministries, departments, and oblasts of the Ukrainian SSR are revised and are then confirmed by decrees of the heads of these agencies. In these approved plans the ministries of the Ukrainian SSR define the tasks of the enterprises, complexes, and organizations under their jurisdiction, and the oblast executive committees set the tasks of the oblast departments and agencies, and of the cities and raions. The ministries and departments of the USSR define the tasks of the enterprises, conglomerates, and organizations on Ukrainian territory that are under all-Union jurisdiction.

In the past, five-year planning took place primarily in branches of the economy and secondarily on a territorial basis. Moreover, the territories of the Union republics were treated very unequally as to their development. From an economic point of view, territorial planning is important for the interconnected development of the branches and territories, for the resolution of infrastructural problems, and for the proper supply of labor, modes of construction, materials, and so on. Experience has shown that branch planning, no matter how carefully prepared, cannot guarantee optimal decisions for the national economy as a whole unless it is linked with territorial planning. Furthermore, the autonomy of the Union republics must also be taken into account.

The First Five-Year Plan covered 24 territories. The second took into consideration the development of the union republics and regions. The Third Five-Year Plan encompassed 10 republics and 13 economic regions. In 1946 a law was passed calling for a five-year plan for the reconstruction and development of the national economies of the Union republics and particularly of the regions that were devastated during the war. The directives on the Fifth Five-Year Plan of the USSR (1951-5) did not contain a separate section on the Union republics. Many investment goals were included in the branch plans.

In the 1970s more attention was given to territorial planning. The law of 12 July 1979 states that the central ministries of the USSR must inform the Council of Ministers of the Ukrainian SSR and the planning commissions of the oblasts about their control figures and must draft five-year plans and those parts of approved five-year plans that refer to the Union enterprises, complexes, and organizations located within Soviet Ukraine (except for the defense industry). They are to consult the Council of Ministers of the Ukrainian SSR in developing draft plans. The Council of Ministers of the Ukrainian SSR not only develops draft five-year plans for the enterprises under its jurisdiction, but also makes suggestions to the USSR State Planning Committee and appropriate ministries of the USSR government about plans for the Union enterprises in order to facilitate the complex territorial economic and social development of the Ukrainian SSR. The key indicators of the plans for Union enterprises that are located in Ukraine must be included in the five-year plans of Ukraine's economic and social development. The Council of Ministers of the Ukrainian SSR and

the executive committees of the oblast and city soviets develop and approve the collective plans for the production of local building materials and consumer goods and for the construction of residential, communal, and recreational buildings. These plans also include the indicators from the plans of all-Union enterprises in Ukraine. The government of the Ukrainian SSR is responsible for the implementation of these plans.

Implementation

The First Five-Year Plan, 1928–33. Instructions for drawing up the First Five-Year Plan were approved by the 15th Congress of the All-Union Communist Party (Bolshevik) in 1927. This was to be a five-year plan for the accelerated industrialization of the USSR, and at first a fierce political struggle over its contents developed between Stalin and the Trotskyists. The final text of the five-year plan was approved only in April 1929 by the 16th Party Conference. Yet, the controversy over the distribution of industry continued: the State Planning Committee of the USSR argued for the development of the Ural-Kuznetsk region, while the State Planning Committee of the Ukrainian SSR defended the economic preferability of concentrating economic development in Ukraine. On 15 May 1930 the Central Committee of the All-Union Communist Party (Bolshevik) decided the issue in favor of Ukraine and the Kuzbas. The plan was appropriately revised to reflect this decision. The First Five-Year Plan made no provisions for the forcibly accelerated collectivization of agriculture and for the quantity of agricultural exports that turned out to be necessary to pay for imported machinery during the world agrarian and financial crisis.

During the First Five-Year Plan, in addition to the agricultural crisis, a fuel crisis, a metals shortage, and a transportation crisis developed. The plan was not fulfilled. Yet, about 1,500 new industrial plants were built, of which about 400 were located in Ukraine. Machines were mostly imported from abroad. Besides the Ural-Kuznetsk metals and coal region, a new machine-building and arms industry was developed in central Russia, while the Dnieper Hydroelectric Station, other electric stations, and tractor, combine, and mining-machinery plants were built in Ukraine. During this period the Soviet economic system assumed the shape it has maintained to the present day.

The implementation of the First Five-Year Plan, at the cost of consumer goods, and the accompanying total collectivization led to a catastrophic famine in Ukraine in 1932–3 and to a radical and permanent decline in the standard of living.

The Second Five-Year Plan, 1933–7. Instructions for drawing up the Second Five-Year Plan were passed by the 17th Party Conference in 1932, and the plan was approved by the 17th Party Congress in 1934. Unlike the first plan, the Second Five-Year Plan for the Ukrainian SSR was worked out and approved in Moscow. The State Planning Committee of the Ukrainian SSR merely published the official article 'The Direction and Orientational Limits of the Economic Development of the Ukrainian SSR' in *Hospodarstvo Ukrainy* (1932, nos 3–4). Neither the CP(B)U nor the government of Ukraine approved this plan. The main goals of the plan were the completion of the Ural-Kuznetsk complex, the development near Moscow of an automobile and airplane industry, and the development of ship building in Leningrad. In Ukraine the development of the coal and metallurgical industries

and of heavy machine building was emphasized. New plants of the aluminum, chemical, and arms industries were built in Ukraine. According to official statistics the whole metal-working industry in the RSFSR grew by a factor of 3, while in Ukraine it grew by a factor of only 2.6. The crises in agriculture, transportation, and metallurgy persisted. Great strides were made in training workers and technical personnel. The standard of living stopped falling only in 1935–6 and even rose somewhat. The Second Five-Year Plan was generally more fully realized than the first, although the plan for 1937 was seriously underfulfilled because of political terror. About 4,500 new plants were built throughout the USSR, about 1,000 of which were in Ukraine.

The Third Five-Year Plan, 1938–42. This plan for all the USSR and Ukraine was approved by the 18th Congress of the All-Union Communist Party (Bolshevik) in 1939. The declared main goal of the Third Five-Year Plan was to surpass the main capitalist countries in per capita production. This was an impossible task. Because of the threat of war, large resources were allocated to modernizing armaments and the development of the arms industry, mostly in the eastern USSR. For Ukraine the plan emphasized the development of the coal industry, metallurgy, the production of pipes, machine tools, airplanes, tanks, and ships for the navy. Before the eruption of war 600 new plants were built in Ukraine (about 3,000 in the USSR). The fuel shortage was critical. The plan could not be fulfilled because of the war.

The Fourth Five-Year Plan, 1946–50. This plan was approved in 1946 by special laws passed by the supreme soviets of the USSR and the Ukrainian SSR. The all-Union plan emphasized the continued, all-sided development of the eastern regions of the Russian SFSR. The main goal for Ukraine was to rebuild the war-ruined economy. For this purpose Ukraine was assigned 20.7 percent of all the capital investment distributed among the republics – the largest percentage it ever received. Over 2,000 plants were rebuilt, and a number of large plants were built in Lviv. The natural-gas industry was set up. The electric-power industry was expanded considerably. Many other goals of the plan were not met, however. As a result of the destruction caused by the war and the focus on the development of the eastern regions of Russia, the relative importance of Ukraine's economy within the USSR economy declined noticeably.

The Fifth Five-Year Plan, 1951–5. This plan was implemented on the basis of instructions passed by the 19th Congress of the CPSU in October 1952. Ukraine was not treated in this plan as a separate economic region. Planning centralization reached its highest peak in this five-year plan. A ten-year (1951–60) hydroelectric-development plan (stations on the Volga and in Siberia) and an environmental development plan (dealing with canals, forestation, etc) had been approved back in 1949. Because of the Korean War significant resources were reallocated for military projects. During this period over 3,000 new industrial plants were erected in the USSR, only about 500 of them in Ukraine. The development of the petroleum industry in Ukraine and of the Lviv-Volhynia Coal Basin was begun. The Kakhivka Hydroelectric Station was put into operation. Economic relations between Ukraine and the socialist countries of Eastern Europe began to expand. Towards the end of the period the grain crisis grew more acute. To overcome the crisis extensive resources were

assigned to the cultivation of the virgin lands in Central Asia.

The Sixth Five-Year Plan, 1956–60. The first version of this plan was approved by the 20th Congress of the CPSU in February 1956, but as early as December 1956 the CC of the CPSU approved a new set of control indicators for the plan and beginning in 1957 the supreme soviets of the USSR and the Ukrainian SSR regularly passed one-year plans into law. The Sixth Five-Year Plan was in force formally until 1958 only; it was actually undercut by the territorial restructuring of the USSR's economic planning and management. The annual plans set much lower targets than did the five-year plans. The main tasks of the Sixth Five-Year Plan for the USSR was to improve agriculture and animal husbandry, to continue the rapid development of industry in Siberia, and to limit the construction of energy-consuming branches in the European part of the USSR. Special attention was devoted to technological modernization of the economy. Development of the radio-electronic industry, the computer industry, and the equipment-building industry was started in the Soviet Union, including Ukraine. Residential housing for the population was to be expanded at a faster rate. The plan provided for a significant increase in the production of fuel and energy, grain, meat, milk, sugar, and textiles in Ukraine. By 1958, 563 large plants were built in Ukraine, compared to 2,690 in the whole USSR.

The Seven-Year Plan, 1959–65. This plan was drafted according to the new territorial principle and was intended to form a part of a 20-year plan for the building of the 'foundations of communism' (according to the CPSU program adopted in 1961 the USSR was to surpass the United States in per capita production by 1970). The control indicators of the Seven-Year Plan were approved at the beginning of 1959 by the special 20th Congress of the CPSU and the 21st Congress of the CPSU. The main tasks according to the all-Union plan were technological progress, development of the chemical industry, conversion of railways to diesel and electric power, further development of Siberia's industry, and accelerated improvement in the people's standard of living. Provisions were made for at least a slow development of nuclear arms and rockets, as well as for extending the mechanization of agriculture and economic aid to non-socialist countries. In Ukraine the main goals of the plan were increasing the mining of iron ores; starting the mining of uranium, titanium, and nickel; constructing four hydroelectric stations on the Dnieper; a large increase in the production of special metals for rocket, nuclear, and electronic technology; mastering the chemical synthesis of organic substances; building about 2,000 new types of machines, implements, and instruments; greatly increasing the production of petroleum and natural gas; increasing the production of grain, particularly of corn, by a large amount; and expanding the fund of residential and communal housing. The plan neglected the coal industry, and when the planned transmission of electric power, gas, and petroleum from Siberia did not materialize, a critical shortage of fuel occurred in the European part of the USSR, Ukraine, and Eastern Europe at the beginning of the 1960s. In 1963 the Supreme Soviet of the USSR officially changed the seven-year plan. Even before then the CC of the CPSU decided to increase the pace of re-arming the army with nuclear arms and rockets and to begin an ambitious program of naval construction. The

agricultural crisis was not overcome, and the USSR began to import wheat regularly. The plans for residential housing were left to a large extent underfulfilled. The monetary income of the people increased greatly, but their real income grew more slowly than planned because prices were rising. In the seven years covered by the plan, 5,470 new plants were built in the USSR, including 899 in Ukraine.

The Eighth Five-Year Plan, 1966–70. This plan was drawn up according to the old branch principle of economic management. Instructions on the planning were approved by the 23rd Congress of the CPSU and of the CPSU in March 1966. Because the rate of development for the whole economy was noticeably declining, new methods and indicators of effectiveness for capital investment, new technology, and income were introduced. Mathematical methods began to be used, especially interbranch balance sheets, but territorial balance sheets were again neglected. The main goals of the five-year plan were a faster rate of scientific and technological development, modernization of the basic funds, intensification of agriculture, and improvement in the standard of living. There was a little less emphasis on the development of Siberia because this goal had no economic justification. The shortage of energy, fuel, and grain (particularly feed grains) was not solved. Furthermore, new problems arose: local shortages of skilled labor accompanied by unemployment of unskilled workers, a decline in natural population growth, and widespread transience. In Ukraine the plan emphasized the following goals: a large increase in the production of fuel and energy, construction of eight thermoelectric stations, extensive development of the chemical industry, and greater agricultural production. In 1966 the first Ukrainian territorial interbranch balance sheet was prepared, but it was not used in the plan. The Eighth Five-Year Plan was generally poorly implemented, but the structure of Ukraine's fuel balance improved and Ukraine became increasingly economically integrated with the countries of the Soviet bloc. In 1967 the supreme soviets of the USSR and the Ukrainian SSR significantly changed the plans for 1969–70 by lowering their impossible targets.

The Ninth Five-Year Plan, 1971–5. This plan recognized the slower rates of development as inevitable. The instructions of the 24th Congress of the CPSU, which were approved in April 1971, no longer demanded accelerated rates, but rather insisted on a general intensification of the economy. Higher rates of development were projected for those branches that determine technological progress. For the first time in the history of the USSR the plan called for a faster rate of growth in the production of consumer goods than in the production of the means of production. Also, an attempt was made for the first time to balance the delivery plans for equipment and machines. Until then the discrepancy between these plans led to the fragmentation and squandering of resources and to construction projects that could not be completed on time. In the territorial cross-section the regionalization of economic balances was defined somewhat more precisely, but again the plan stressed the accelerated development of western Siberia and ignored the mathematical model of Ukraine's economy that was prepared in 1970. During the period covered by the plan the industrial production of the RSFSR was to have grown by 44–47 percent, while Ukraine's production was to have grown by only 38–41

Some five-year plans for Ukraine (official indicators)

	4th Plan by 1950		6th Plan by 1960		7-Year Plan by 1965		8th Plan by 1970	
	P	F	P	F	P	F	P	F
Electric power (billion kW·h)	13.7	14.7	51.2	53.9	89.0	94.6	163	138
Coal (million tonnes)	86.1	78.0	201.5	172.1	211	194	211	207
Petroleum (million tonnes)	0.32	0.29	1.5	2.2	6.0	7.6	15.2	13.9
Steel (million tonnes)	8.8	8.3	26.1	31.5	31.5	36.9	49	46.6
Tractors (thousand units)	25.0	22.6	88.0	184.8	184.8	118.3	189	148
Sugar (million tonnes)	1.6	1.8	5.3	5.6	5.3	5.6	5.7	6.0
Grain (million tonnes)	27.8	20.4	34.4	31.6	34.4	31.6	37.5	31.9

P = projected, F = fulfilled.

percent. New methods of 'social planning' in respect to the movement of population and labor were introduced. The plan emphasized the following goals for Ukraine: a faster growth in the electric-power, chemical, petroleum-processing, petrochemical, machine-building, and textile industries. Eight thermoelectric, one nuclear, and two hydroelectric stations were to be completed. The construction of two nuclear-power stations and two petroleum-processing plants was to start. Industry in western Ukraine was to grow more quickly than in eastern Ukraine. A probably unrealistic goal was set for agriculture – to produce 40 million t of grain. At last some attention was given to the acute problem of water shortage. The plan called for the construction of the Dnieper-Donbas Canal and the widening of existing canals.

The Tenth Five-Year Plan, 1976–80. This plan came into being on the instructions of the 25th Congress of the CPSU in 1976 and addressed itself to the chronic shortages of fuel, calling for an increase in the output of natural gas to 436 billion cu m and of petroleum to 695 million t by 1980. Electrical power to be generated by all types of power plants was to reach 830 billion kW. The coal output was also scheduled to increase as in the preceding five-year plan. Considerable emphasis was placed on agriculture. With a view to easing the chronic shortage of grain, investments were planned to increase the supply of agricultural machinery. Plans were made also for incentives to encourage initiative in overfulfilling the quotas. In order to narrow the technological gap between the Soviet Union and the United States, emphasis was again placed on high labor productivity in the fields of computer technology, machine-building, and the like. The Ninth Five-Year Plan emphasized heavy industry at the expense of light industry and the production of consumer goods, and only one-sixth of the total industrial investment was actually devoted to consumer goods. The priority again given to heavy industry, which had a 38–42 percent projected growth compared with a 30–32 percent increase in consumer goods, once again indicated the basic failure of the five-year plans to raise the standard of living.

Fizer, John, b 13 June 1925 in the village of Myrcha, Transcarpathia. Professor of Slavic literatures at Rutgers University, New Brunswick, New Jersey; vice-president of the Ukrainian Academy of Arts and Sciences in the United States. Fizer has written on esthetics and literary theory and is the author of studies of O. Potebnia and R. Ingarden. His latest book is *Psychologism and Psychoaesthetics* (Amsterdam 1981).

Fizicheskaia geografiia i geomorfologiia (Physical Geography and Geomorphology). Scientific collection that has been published since 1970 by the Kiev State University Press. It contains articles on all branches of Ukraine's physical geography and geomorphology. Until the mid-1970s it appeared in Ukrainian as *Fizychna heohrafiia ta heomorfolohiia*; since then it has been published in Russian under its present title. By 1982, 27 issues had appeared.

Fiziolog (Physiologist). Popular secular literary work in 'Kievian Rus', which came from Greece via Bulgaria, containing tales about animals, rocks, and trees. It included fantastic details about animals and a symbolic, moralistic interpretation of these details. The images presented in it were used by the church fathers and in sermons as late as the 18th century (I. Galiatovskiy, A. Radyvylovskiy, and others). There are many of them in H. Skovoroda's works.

Fizkul'tura i sport (Physical Culture and Sport). Popular illustrated monthly magazine of the Council of the Union of Sports Associations and Organizations of the Ukrainian SSR published in Kiev from 1957 to 1965. The magazine's predecessor was *Vestnik fizicheskoi kul'tury*, published in Kharkiv beginning in 1922, which changed its title several times: *Visnyk fizkul'tury* (1929–30), *Fizkul'turnyk Ukrainy* (1931–35), and *Sport* (1936–41); it was not published from 1941 to 1957. In July 1965 *Fizkul'tura i sport* was succeeded by the monthly magazine **Start*.

Flag. A piece of usually rectangular cloth used to transmit a signal or as an identifying symbol and flown

from a staff or halyard. Flags came into common use in Europe, including Ukraine, with the inception of heraldry in the early medieval period. Flags can be classified in various categories: national, royal, international, territorial (provincial, city, etc), military and naval, organizational, church, dynastic, and so on.

The Princely era. Some information about the flags of the Princely era in Ukraine can be gleaned from the written sources and the art of the time: the chronicles; biographies such as the *Life of Borys and Hlib*; epics such as *Slovo o polku Ihorevi* (The Tale of Ihor's Campaign); foreign works, particularly Byzantine and Bulgarian (Manasses's chronicle, etc); Queen Gertrude's kilim; the seal of King Yurii I of Galicia; Novgorodian and Muscovite miniatures; and so on. The earliest banners were triangular and were attached to a staff either directly along one side or perpendicularly to a cross-staff. At the close of the 13th century square flags with pennants along the free side appeared. Red was the most common color, followed by white and azure; yellow was rare. Parti-colored flags were not uncommon. The most common symbols that appeared on flags were the cross, the celestial bodies, and the emblems of the princely dynasties – the trident and the bident. Old Ukrainian flags can be divided into princely-dynastic and military banners; the latter were completely red. The standard of Kievan Rus' was a predominantly red flag with a golden trident or bident, the emblem of the individual grand prince. Later the standard of the Rus' kingdom of the Galician-Volhynian period displayed a golden lion on an azure background.

Lithuanian-Polish period. All Ukrainian territories – the principalities and provinces of the Grand Duchy of Lithuania and the voivodships of the Polish Kingdom with their lands and counties – had their own banners, which were usually the same as their coats of arms. The Peremyshl land, for example, had a flag and coat of arms consisting of a golden two-headed eagle on an azure background. Sometimes the emblem of a territory was placed on a different background in the flag; for example, the flag of Kiev voivodeship was green, displaying on the right side a silver Archangel Michael on a red shield and on the left side a black bear on a silver shield. Local flags were quite common: municipal banners (the famous 'Golden Banner' of Kiev), guild flags, military standards, etc. The Renaissance left its mark on the flags of the period: the flags of magnates and landowners and state and church authorities were modeled on their family or personal coats of arms and displayed a variety of forms and colors.

In the 15th century the flag of the Grand Duchy of Lithuania continued the Old Ukrainian tradition and was red with a golden tridentlike emblem (*kolona*) of the Gediminas dynasty. Later it was red and displayed a white horse in gold harness on which sat a white knight holding a sword in his right hand and an azure shield with a two-barred golden cross against his left shoulder (known in Lithuanian as *vytis*, in Polish as *pogoń*, and in Ukrainian as *pohonia*; this was also claimed by the Belorussians as their national emblem).

The Cossack period. The most common banners were rectangular or oblique (*skosheni*), that is, right-angled trapeziums with angular upward or downward cuts. Triangular pennants were used on the lances of cavalymen and as standards of small military units. The most important state emblems were the two hetman standards:

the first was red with a white figure of the Archangel Michael; the second had a representation of the coat of arms of the individual hetman. The flags were in the charge of the *general standard-bearer. The flags of the Hetman state in the 17th century were of many colors, but red was predominant. There were company, regimental, and kurin standards, banners, and pennants. In the 18th century azure flags with golden or yellow crosses and sometimes other devices (celestial bodies, weapons, saints) began to predominate. The right side of regimental and company flags displayed the national emblem – a Cossack with a musket on a golden or yellow shield – on an azure background. The left side displayed the regimental or company emblem. The Zaporozhian Sich had its own flags. The great banner of the Sich was red with a white Archangel Michael on the right side and a white Greek cross surrounded by a golden sun, crescent, and stars on the left side. The flags of the kurins and palankas were usually crimson with representations of the Archangel Michael or white cross. The ensign used in sea campaigns was white and contained a depiction of St Nicholas. In the 17th and 18th centuries, not only military units, but also so-called privileged cities and their guilds had their own flags.

19th–20th century. With the downfall of the Hetman state and the annexation of central and Western Ukraine by Russia and Austria, Ukrainian state, territorial, military, and other flags disappeared.

In Ukraine within the Russian Empire, only the vertically striped white-blue-red imperial flag and the official government flags based on it were used. The flag of the Austrian Empire was at first yellow with a black, two-headed eagle and then a black and yellow vertically striped flag.

There were no territorial flags in the Russian Empire. Under Austria, only two flags of Ukrainian territories were official: the flag of the Kingdom of Galicia, which was changed three times (azure-red-yellow, azure-red, and red-azure) and the azure-red flag of the Duchy of Bukovyna. The Supreme Ruthenian Council in Lviv adopted the coat of arms of the Romanovych princely dynasty – a golden lion on an azure background – as the emblem of the Ukrainian people in October 1848. Standards of independent military formations and civic organizations appeared. They were either azure flags with a golden lion or horizontally striped yellow-azure or azure-yellow flags. The modern Ukrainian flag spread quickly under the Austro-Hungarian regime and at the beginning of this century in Russian-ruled Ukraine. The order of colors was not fixed, but publications on this question at the beginning of the 20th century argued for the yellow-azure flag. This flag was adopted by the Ukrainian Sich Riflemen in 1914.

The modern period. The flag of the first Ukrainian National Republic (UNR) was yellow-azure. On 18 January 1918 a naval ensign with a trident was adopted, and on 22 March 1918 the national flag was approved. Under Hetman P. Skoropadsky's regime the order of the horizontal colors was changed to azure-yellow, and a new naval ensign as well as several dozen government flags were designed on this basis. With minor changes these flags were retained under the second UNR. The flags of military units and partisan detachments were freely chosen – yellow-azure, azure-yellow, or modeled on the old Cossack flags. In 1920 the Directory of the UNR

approved battalion and brigade banners and company flags. On 13 November 1918 the azure-yellow flag of the Western Ukrainian National Republic was adopted. Two other state flags were adopted that same year: the blue-crimson-green flag of the Kuban and the Crimean flag, which was azure with a yellow Crimean sign (*tamga*). On 20 March 1920 the provincial azure-yellow flag of Subcarpathian Ruthenia, which was a part of Czechoslovakia, was adopted. On 15 March 1939 this flag was recognized officially as the national flag of Carpatho-Ukraine. The All-Ukrainian National Rada in May 1920 and the Governmental Constitutional Commission of the Ukrainian State on 1 October 1920 expressed their support for an azure-yellow flag. Between 1920 and 1939 only the yellow-azure flag was used in Galicia and by some important Ukrainian organizations abroad, such as the Plast youth association. This practice was based on vexillologic studies. The same flag was used by Ukrainian military formations – the Ukrainian Liberation Army and the Division Galizien – in 1943–5. The controversy between the advocates of a yellow-azure and those of an azure-yellow flag was decided by the 27 June 1949 resolution of the Ukrainian National Council, which stated that until the national emblems were defined by an independent government of Ukraine, the azure-yellow flag would be the Ukrainian national flag.

The first flag of the Ukrainian Soviet Socialist Republic was adopted in March 1919. This was a red flag with the Cyrillic initials УССР (for the Ukrainian Socialist Soviet Republic) in gold standing in a red, gold-bordered canton. When Ukraine became part of the Soviet Union, it received a new flag: a red flag with a crossed golden hammer and sickle, a red, gold-bordered, five point star above them, and the Cyrillic initials УРСР at the bottom (for the Ukrainian Soviet Socialist Republic). The Presidium of the Supreme Soviet of the Ukrainian SSR approved a new flag on 21 November 1949: the upper horizontal stripe, constituting two-thirds of the flag, was red; the lower, azure. The upper part displays the same golden sickle, hammer, and star. The Ukrainian SSR does not have its own naval or merchant-marine flag. Ships in Ukrainian ports fly the ensigns of the Soviet Union.

Hardly any territorial flags have been in use in recent times. Only the more important cities in Western Ukraine, such as Lviv and Chernivtsi, had their own flags before they came under Soviet rule. (See also *Vexillology.)

Flax (Ukrainian: *lon*). Cultivated flax (*Linum usitatissimum*) is an annual that is raised for its fiber and oil. The main types of flax grown in Ukraine are (1) long-staple flax (*dovhunets*), which is cultivated principally for its fiber and which prefers a moderately cool, moist climate (the main varieties in Ukraine are Svitoch L.D. 147 and Tomsk 9 and 10); (2) oil-yielding flax (*kudriash*), which is

grown for its oil and which prefers a warm climate (the main varieties are Large-Seed 3, Voronezh 1308, and Kirovohrad 2); and (3) *mezheumok*, which is used for oil and secondarily for fiber, but which is grown in small quantities.

Flax has been cultivated in Ukraine since the Trypilian period, but its commercial value has not been great. The main flax-growing region was Polisia. The land area devoted to flax decreased with time: in the nine Ukrainian gubernias 159,800 ha were devoted to flax in 1901–5, while only 109,400 ha (less than 10 percent of the hectares planted in flax in the whole Russian Empire) were used for flax in 1913. Productivity in 1913 was 2.6 centners of fiber and 4.2 centners of seed per hectare.

Flax growing began to expand in 1920, partly because of the importance of flax fiber in war production. At the same time, flax growing and processing became increasingly mechanized. The expansion of *dovhunets* was especially encouraged. It currently occupies 95 percent of the land planted in flax and is grown in the northern forest belt of Ukraine, where it is the main industrial crop. Seven percent of the belt's seeded area and 66 percent of its land under industrial crops are devoted to *dovhunets*. This type of flax is also grown in Lviv oblast. *Kudriash* is grown in the steppe. The changes in the land area devoted to flax in the Ukrainian SSR are presented in table 1, and the average flax harvest is shown in table 2.

TABLE 1
Land area in flax (1,000s of hectares)

Type of flax	1913	1940	1950	1955	1960	1969	1975
<i>Dovhunets</i>	16.4	118.2	125.6	169.4	223.4	237.0	238.0
<i>Kudriash</i>	93.0	77.6	84.9	42.3	37.8	11.0	–

TABLE 2
Flax harvests (1,000s of tonnes)

Type of yield	1951–5		1956–60		1961–5	
	<i>Dov</i>	<i>Kud</i>	<i>Dov</i>	<i>Kud</i>	<i>Dov</i>	<i>Kud</i>
Fiber	30.8	–	69.1	–	66.7	–
Seed	298.0	329.0	613.0	287.0	–	–

Dov = *Dovhunets*; *Kud* = *Kudriash*

In 1967–9 the average annual harvest of *dovhunets* in the Ukrainian SSR was 3.7 centners of fiber and 2.5 centners of seed per hectare. The land area devoted to flax and the annual harvest of the Ukrainian SSR constitute about 20 percent of the USSR's flax area and harvest.

V. Kubijovych

Flis, John [Flys, Ivan], b 1 September 1922 in the village of Pidsosniv, Bibrka county, Galicia. Lawyer, community leader in the United States, where he has lived since the 1920s. Flis graduated from the New York University law school. A member of many Ukrainian organizations, he has served as vice-president (1944–78) and president (since 1978) of the *Ukrainian National Association. In 1983 Flis was elected president of the Ukrainian-American Coordinating Council.

Floodplains (*plavni*). Water saturated, often muddy, riverbeds that are characteristic of the river valleys of

southern Ukraine, especially of the Dnieper, Danube, Dniester, Kuban, and Inhulets rivers. (The Dnieper River floodplains are now mostly submerged by the *Kakhivka reservoir.) The riverbeds in the floodplains consist of numerous branches that crisscross and form a multitude of islands. Annually the floodplains are inundated with flood waters. The vegetation in the floodplains is very rich in its varieties of trees, shrubbery, and grasses. The floodplains are used for grazing animals. As well, their reeds, willows, and the like are harvested. Once drained, floodplains are used for vegetable gardening. The greatest amount of drainage has been completed on the floodplains of the Kuban River.

Flora. The vegetation of Ukraine evolved through long geologic epochs and through many developmental phases before it attained its present form. In the Paleocene, and particularly in the Eocene, Ukraine had a tropical and subtropical flora. Palms (*Sabal ucrainica*, *Nipa burtini sive ucrainica*, and other species) cinnamon trees (*Cinnamomum ucrainicum*), figs, laurels, eucalyptus, yacca trees (*Podocarpus*), banksias, sequoias, and other trees grew in Ukraine. In the mid-Oligocene Mediterranean plants began to spread gradually to Ukraine, including oleander, pomegranate, beech, maple, and poplar. In the Miocene the vegetation generally assumed a temperate broad-leaved or broad-leaved-coniferous character, with a preponderance of deciduous forms such as beech, oak, and walnut. Alongside these species grew the tulip tree, swamp cypress, sequoia, and pine. The laurel continued to flourish in the Crimea. Gradually the flora changed to temperate warm-climate vegetation. In the Pliocene most of Ukraine was covered with forest vegetation. Among the evergreens were species of pine, with an admixture of hemlock, spruce, fir, swamp cypress, and others; and among deciduous trees were birch, oak, hornbeam, maple, chestnut, walnut, and magnolia. The southern region was covered with steppe grasses and pigweed. At the end of the Pliocene the forest vegetation became impoverished and approached the vegetation of the early Anthropogenic period (although a small number of swamp cypress did survive).

As the climate grew colder in the Pleistocene, pine-birch forests spread through northern Ukraine. The impoverished deciduous forests retreated into areas that were suitable to their development and free from glaciers (the right bank of the Donets River, the Dniester Valley, the southern slopes of the Crimea, and Caucasia). During the warmer interglacial periods the broad-leaved species spread out to form extensive deciduous forests in the forest-steppe belt. In certain areas swamps and meadows were inhabited by tundra species – the midget birch, midget willow, and dryas. In the Holocene there was a migration of forest vegetation. Pine and pine-birch forests predominated in the early Holocene. In the middle Holocene broad-leaved species from central and southern Europe – linden, elm, hazelnut, oak – began to spread into Ukraine and by the late Holocene began to force out the hornbeam and beech. The steppe vegetation in southern Ukraine was enriched with xerophyte migrants from the east, from the Aral-Caspian floral center, Caucasia, and the Balkans. With the development of a favorable climate and the leaching away of salts from the loess subsoil, the deciduous forests advanced into the humid steppe of Ukraine. They attained their maximum area about 5,000

years ago. Forests were always more widespread in Right-Bank Ukraine, particularly in regions of dissected relief, which hindered the development of agricultural plants. In Left-Bank Ukraine forests spread mainly along the banks of the Sula, Pslo, Vorskla, and Donets rivers and in the higher regions of the Donets Ridge.

Human agricultural activity greatly altered the original vegetation of Ukraine. Almost all the steppe is under cultivation and devoted to agricultural species. Large areas of the forest belt have also been converted to agricultural use. Intense long-term logging in the Carpathians has diminished the protective influence of the forests, as frequent floods and increasing erosion have shown. Between 1814 and 1914 the forest area in Ukraine diminished by 30.5 percent. Only a few ancient tracts remain untouched by humans, and for their preservation they have been placed under state protection.

The present flora of Ukraine encompasses quite a large number of relicts from the Tertiary period and the Ice Age. It includes also migratory species from the north (coniferous forests, swamp vegetation), the west (deciduous trees), the south, the Crimea, and Caucasia (some deciduous trees and steppe plants), and the southwest and southeast (steppe vegetation, especially the plants of the saline soils). There are also a number of endemic forms in Ukraine, particularly on sands and rocks. The boundaries of the habitats of many plants and trees run through Ukraine: the northeastern boundary of the beech (*Fagus sylvatica*) and silver fir (*Abies alba*); the eastern boundary of the sycamore maple (*Acer pseudoplatanus*), field maple (*Acer campestre*), linden (*Tilia platyphyllos*), and ash (*Fraxinus excelsior*); the southern boundary of the scots pine (*Pinus sylvestris*); and the western boundary of the steppe cherry (*Cerasus fruticosa*).

Among the over 16,000 species of plants that are now found in Ukraine there are over 4,400 species of higher plants, 800 species of bryophytes, 1,000 species of lichen, close to 7,000 species of fungi and molds, over 3,000 species of continental algae, and 600 species of marine algae. Many foreign plants (various decorative plants and useful cultivated grasses) have also been introduced.

The close relation between vegetation and climate, relief, humidity, and soil is apparent in the organization of plant life in Ukraine into wide meridional belts stretching from the southwest to the northeast. Moving from north to south the belts are forest, forest-steppe, steppe, and Mediterranean. In the mountain regions of the Carpathians, the Crimea, and Caucasia the vegetation is distributed in altitudinal belts.

The forest belt. The forest belt extends through northern and western Ukraine. Its southern border with the forest-steppe runs along the line Lviv-Kremianets-Zhytomyr-Kiev-Nizhen-Hlukhiv. This line also separates the podzolic soils of Polisia and the clayey chernozems of the forest-steppe. Within this belt lies a large island of forest-steppe on the Kholm-Volhynia Upland, circumscribed roughly by the line Kholm-Lutske-Rivne-Mezhyrich-Kryvyn-Ostrih-Stoianiv-Belz. The forest belt can be subdivided into the western part, or the belt of Central European deciduous forests, and the northern belt of mixed forests in Polisia.

Central European deciduous forests cover the western part of Podilia, Roztochia, the Sian Depression, Subcarpathia, and the Tysa Lowland. Here the forests contain a greater variety of trees than anywhere else in Ukraine.

The beech is most characteristic of western Ukraine, where the eastern boundary of its habitat is located. The beech grows in large numbers in Transcarpathia and the Roztochia region. The silver fir (*Abies alba*) is found in this belt also. It is widespread in the Carpathians and some areas of Subcarpathia and Roztochia (usually on the northern slopes) and rarer in the lowlands. The oak (*Quercus sessiliflora*, *Q. pedunculata*), linden (*Tilia cordata*), elm (*Ulmus campestris*), birch (*Betula verrucosa*), sycamore maple (*Acer pseudoplatanus*), Norway maple (*A. platanoides*), pine (*Pinus silvestris*), and spruce (*Picea excelsa*) are common here. The larch (*Larix decidua*) and yew (*Taxus baccata*) (found in the Kniazhdvory Preserve near Kolomyia) are rarer.

The forests of Polisia belong to the belt of Eastern European mixed forests. In the past Polisia formed a continuous forest-swamp landscape, but the wanton destruction of the forests diminished their area (eg, in 1861–1914 the area that forests occupied in Volhynia gubernia shrank from 41.9 percent to 25.4 percent). Today forests cover about 30 percent of Polisia. The distribution of vegetation depends on the type of soil and the relief. Many northern species are found here, particularly on the border with Belorussia. Certain steppe forms have also found their way here (feather grass, adonis). Certain varieties of glacial flora (Lapland willow [*Salix lapponum*], etc) can also be found. The natural vegetation grows in forests, meadows, and swamps. The main forest trees are the pine (57.4 percent of the forest area), oak (21 percent), birch (10 percent), black alder (6 percent), aspen (2 percent), and hornbeam (2 percent). Pine forests (*bory*) are widespread. They grow in weakly and moderately podzolized soils overlying deep sands. In places birches appear among the pines, and there is no undergrowth. These forests are indifferent to relief, humidity, and soil. Large tracts are covered with oak-pine forests (*subory*), which grow in sandy, slightly podzolized soils with a rich cover of bracken fern (*Pteridium aquilinum*). Depending on the depth of undersoil water, these forests are characterized as dry, fresh, moist, or wet. In the Zhytomyr area the yellow rhododendron (*Rhododendron luteum*) is part of the undergrowth. Hornbeam-oak-pine woods (*suhrudky*) flourish on podzolized sandy soils underlain by clay. The herbaceous covering is diverse and contains bracken, blackberry (*Rubus saxatilis*), huckleberry, and so on. In eastern Polisia linden-oak-pine woods prevail. In the northern part of the Chernihiv region spruce forests abound, while numerous birch groves grow in the southern part. Oak-hornbeam woods (*hrudy*) are characteristic of podzolized clayey soils and have an abundant undergrowth. Oak-maple-linden woods are found on the Left Bank. Alder groves appear on peaty bog-gley soils, sometimes with an admixture of birch. Ash-alder and oak-hornbeam-alder woods are rarer. *Bory* and *subory* turn into swampy forests where the undersoil water rises close to the surface. Pine with an admixture of pilose birch is dominant in the less swampy forests, while a thick covering of sedges, reed grass, and cotton grass is found in the more swampy forests. Silver grass associations, sometimes richly colored by thyme, are dominant on poorly fixed sands. Areas that are somewhat lower are completely overgrown with heather.

The prevailing forests are broken up by dry meadows, which have developed where the trees have been cut down. The vegetation in the meadows is diverse: mat-grass, sedges, tufted hair-grass. Flood meadows along

the Polisian river valleys are rich in variety and yield large harvests of high-quality hay.

Bogs are most characteristic of Polisia. Most of them are eutrophic bogs located in low-lying areas and rich in mineral salts. They are covered with sedges and sedge-hypnum communities. Many bogs are mesotrophic (transitional) and are located on watersheds and sandy terraces. Oligotrophic bogs, which are elevated and poor in mineral salts, are common in western Polisia. Their vegetation is sparse. Low swamp pines grow in clusters.

Little Polisia is a unique part of Polisia. It is dissected by slow-flowing streams with swampy valleys and is dotted with *bory* and *subory*. The region is bounded by the Kholm-Volhynia Upland in the north, the Podilia Upland in the southeast, and Roztochia in the west. In the east it merges with Polisia through the Ostrih-Slavuta Lowland. Pine and deciduous-pine woods, without beech, are abundant in Little Polisia. The meadows are covered with sedges and various grasses. The swamps are often quite deep and rich in turf deposits.

The forest-steppe belt. The forest-steppe, which extends south of Polisia and east of the deciduous forests of the central European variety in western Ukraine (Soviet scholars subsume this territory under the forest-steppe), is the Middle Dnieper subprovince of the East European forest-steppe province. In the south the forest-steppe merges with the steppe belt. The boundary between them is indistinct (many forest islands located in its vicinity have been cut down) and is defined in various ways, usually as the line Chişinau-Kirovohrad-Kremenchuk-Krasnohrad-Zmiiv-Valuiky. The soils of the forest-steppe are deep chernozems, parts of which have changed under the influence of forests to degraded chernozems and gray forest podzolized soils. Some forest-steppe islands are found in the forest belt (in the Kholm-Volhynia Upland) and in the steppe belt (in the Donets Upland). A narrow forest-steppe belt appears in the mountain foothills and is connected with the altitudinal zonality of mountain vegetation.

In the forest-steppe the elevated, more-dissected right banks of the rivers, watersheds, hilly areas, ravines, and gullies are covered with forests. The oak is the predominant tree of the forest-steppe, covering almost half of its surface, but only a few large oak groves remain – the Chorny Lis Forest in Kirovohrad oblast and several groves in Khmelnytskyi oblast. West of the Dnieper River hornbeam trees grow among the oaks. Ash, elm, linden, maple, and beech (the last only in Podilia) are also found in the forest-steppe. The underbrush consists mainly of hazel (*Corylus avellana*), small-leaved field maple (*Acer campestre*), and spindle tree (*Euonymus verrucosus*). Under these are found certain ferns and many types of flowering herbs. There are also hornbeam woods with very limited vegetation. As one moves east through the forest-steppe, western species become rarer: the beech does not grow beyond western Podilia, and hornbeam is rare in the forest-steppe of the Left Bank, where oak-maple-linden woods are widespread. The river valleys contain mostly oak, ash, elm, black poplar, and willow. Pine woods, mixed woods, and hypnum-sedge and sedge-sphagnum swamps are common on the sandy river terraces, particularly on the left bank of the Dnieper. In the ravines and gullies the so-called ravine (*bairak*) forests are found. They consist of oak and hornbeam, but also of ash, maple, and linden and sometimes birch and aspen. The under-

brush consists of wild guelder rose (snowball; *Viburnum opulus*), wayfaring tree (*V. lantana*), European dogwood (*Cornus sanguinea*), and hazel. The deep ravines of Podilia have a peculiar vegetation.

The steppe in the forest-steppe belt is now almost entirely under cultivation. At one time it was a grassy, colored, broad-leaved steppe. Its well-watered soil supports the following meadow-steppe vegetation: low sedge (*Carex humilis*), sheep fescue grass (*Festuca sulcata*), narrow-leaved bent grass (*Agrostis tenuifolia*), feather grasses (*Stipa capillata* and *Stipa joannis stenophylla*), representatives of the colored northern herbs such as yellow bedstraw (*Galium verum*), meadow sage (*Salvia pratensis*), pedicularis (*Pedicularis comosa*), and steppe varieties of clover. The thickets consist of blackthorn (*Prunus spinosa*), steppe cherry (*Erasus fruticosa*), wild rose (*Rosa* spp.), and Ruthenian broom (*Cytisus ruthenicus*). In the southern part cut-leaved meadow sweet (*Spiraea crenifolia*) occurs as well. The left-bank terraces of the Dnieper provide a habitat for holophytes (salt plants). Low swamps are frequent in the floodplains along the left-bank tributaries of the Dnieper.

In the forest-steppe of the Kholm-Volhynia Upland the forests are concentrated mainly along the southern and northern edges. The belt in the middle of the upland is almost forestless. Pine-oak and hornbeam groves are prevalent. Sometimes oak-pine *subory* occur, frequently containing hornbeam. The meadows along river plains have survived.

The forest-steppe of the Tysa Lowland in Transcarpathia consists of oak forests, flood meadows, and steppe plant varieties, which migrated there from the Danube Valley. Natural vegetation in the form of small oak and hornbeam groves has been preserved in this cultivated lowland only here and there on steep slopes.

The Donets Ridge, which by its nature belongs to the forest-steppe, is covered with various fescue-grass and feather-grass steppe vegetation and an admixture of ravine and watered-valley forests of oak, linden, and ash. Hornbeam and a number of grassy plants typical of deciduous forests grow in isolated clusters here.

The forest-steppe in the Crimea extends to the north and east of the Crimean Mountains. It consists of alternating strips of steppe and forest. The forests contain various oaks – pubescent, rock, and common (*Quercus pubescens*, *Q. petraea*, *Q. robur*) – and small-leaved field maple (*Acer campestre*), pear, and other species. The region abounds in thickets (European dogwood, hawthorn, blackthorn, buckthorn).

In the Subcaucasian forest-steppe, meadow-steppe fields are common along the line Kuban River–Krasnodar-mouth of the Laba–Piatigorsk–Groznyi. They are dotted by islands of woods containing oak (*Quercus pedunculata*, *Q. sessiliflora*), hornbeam, ash, elm (*Ulmus campestris*), maple, pear, apple, and other species. The undergrowth consists of hazel, hawthorn, yellow rhododendron, and so on. The forests of the Stavropol Upland also belong to the forest-steppe. Of the feather grasses one finds *Stipa joannis* and *Stipa pulcherima*. On the periphery oak-ash forests with some hornbeam trees appear. The birch tree is rare.

The steppe belt. This belt extends southward from the forest-steppe belt to the foothills of the Crimean Mountains and the Caucasus. It is part of the Black Sea–Azov subprovince of the Pontic-Pannonian Steppe province.

The steppe belt can be subdivided into several smaller belts according to climatic and soil conditions.

The northern part of the steppe is a more humid fescue–feather-grass colored steppe or grassy-meadow steppe. It is characterized by an abundance of thick, rough grasses, such as fescue (*Festuca sulcata*), koeleria (*Koeleria gracilis*), feather grasses (*Stipa lessingiana*, *S. capillata*, and on slopes *S. stenophylla*), and dicotyledons, such as the fernleaf peony (*Paeonia tenuifolia*), pheasant's eye (*Adonis vologensis*), and knapweed (*Centaurea trinervia*). There are many broad-leaved grasses with creeping rhizomes: brome grass (*Bromus erectus riparius*), bluegrass (*Poa pratensis*), couch grass (*Agropyron glaucum*). Various tumbleweeds – sea cabbage (*Crambe tataria*), sea pink (*Statice latifolia*), Cossack tumbleweed (*Phlomis pungens*) – flourish in the steppe. Mosses such as *Tortula ruralis* grow in the gaps of the sod cover. Steppe copses contain blackthorn (*Prunus stepposa*), caragana (*Caragana frutex*), broom (*Cytisus*), and almond (*Amygdalus nana*). Oak groves are found on the slopes of ravines. The original vegetation of the steppe is preserved on the following reserves: Khomutiv skyi Steppe, Kamiani Mohyly, and Striletskyi Steppe.

Farther south, down to the Black Sea and the Sea of Azov, lies the dry grassy steppe or the narrow-leaved, fescue–feather-grass steppe. It grows on southern chernozems and dark chestnut soils. Among the grasses, fescue and feather grasses (*Stipa capillata*, *S. lessingiana*, and *S. ucrainica*) predominate. Grass varieties are few and consist of xeric species: pheasant's-eye, ferula (*Ferula caspica*, *F. orientalis*), *Limonium sareptanum*, and others.

Many ephemeral annuals and perennials flower in the spring: jagged chickweed (*Holosteum umbellatum*), whitlow grass (*Erophila verna*), medwort alisium (*Alyssum desertorum*), androsace (*Androsace elongata*), forget-me-not (*Myosotis micrantha*), and tulip (*Tulipa schrenkii*, *T. biebersteiniana*). The original vegetation of the steppe is protected on the Askaniia-Nova Nature Reserve.

Meadow vegetation occurs in the river floodplains, and includes: meadow foxtail (*Alopecurus pratensis*), quack grass (*Agropyron repens*), epigeal reed grass (*Calamagrostis epigeios*), and sedge (*Carex schreberi*), and such dicotyledons as the buttercup (*Ranunculus acer*), bird's-foot trefoil (*Lotus corniculatus*), and clover (*Trifolium*). The humid, low-lying meadows produce various sedges and grasses (*Beckmania eruciformis*, *Poa palustris*). Small woods of oak, elm, black poplar, and alder grow in the valleys of the larger rivers. Swamp vegetation can also be found in the river floodplains and on the shores of limans and lakes, which are periodically flooded; such vegetation includes the reed (*Phragmites communis*), broad-leaved cattail (*Typha latifolia*), the great bullrush (*Scirpus lacustris*), and sweet flag (*Acorus calamus*). Floodplains cover large areas along the great rivers of Ukraine. The best-known among them is the Velykyi Luh of the Dnieper with its ravine woods, terrace groves, reeds, and cattails. It once played a significant role in Cossack history, but is now submerged under the Kakhivka Reservoir.

Depressions known as *poly*, which are common on the watersheds between the Boh and the Dnieper and between the Dnieper and the Molochna, contain a meadow and meadow-halophytic vegetation. The sandy steppe from Nova Kakhivka to the Black Sea supports typical psammophile (sand-loving) vegetation (*Festuca beckeri*, etc).

In the south, in the Syvash Lake region and along the coast of the Black Sea, there is a strip of salinized chestnut soils, which supports a grassy sagebrush steppe. This is a transitional form between steppe and desert vegetation. Here we find fescue grasses, sometimes *Stipa capillata*, and an abundance of Crimean and Austrian wormwood (*Artemisia taurica*, *A. austriaca*). On the seacoast halophilic plants grow in solonchaks soils. Jointed glasswort (*Salicornia herbacea*), sea-blite (*Suaeda*), and sea pink (*Statice suffruticosa*) are dominant. To the south of the steppe the southern chernozem plains of the Crimea were once covered with fescue-feather-grass steppes. The ordinary chernozems farther south supported steppes of various grasses, fescues, and feather grasses. Now these lands are cultivated, but some remnants of the steppe continue to flourish on the slopes of ravines. The Tarkhankut and Kerch peninsulas with their rocky and gravelly soils are covered with a shrub steppe consisting of thyme, germander (*Teucrium*), Crimean skullcap (*Scutellaria taurica*), cliff lucerne (*Medicago rupestris*), various feather grasses, fescue grasses, and others.

Mediterranean vegetation. A narrow zone of Mediterranean vegetation extends along the southern coast of the Crimea and the Caucasian coast of the Black Sea. The typical forests in this zone consist of pubescent oak, tall juniper (*Juniperus excelsa*), Crimean pine (*Pinus pallasiiana*), and Stankevich pine (*P. Stankevichii*). The undergrowth consists of arbutus (*Arbutus andrachne*), *Ruscus ponticus*, and other species. Today the Mediterranean vegetation is different from what it was: wild plants have been displaced by vineyards, orchards, and decorative gardens.

Mountain vegetation. The Carpathian Mountains are a subprovince of the central European deciduous province. They contain a large number of West European varieties (mainly beech, Carpathian hornbeam, common and rock oak, linden, and maple), a number of endemic species, and some representatives of north Balkan, Mediterranean, and Euro-Siberian taiga and alpine vegetation. The diverse climatic zones in the mountains have reproduced an altitudinal distribution of plants in several belts. The foothills and the lower slopes up to 500–600 m above sea level constitute the mixed-forest belt consisting primarily of oak (*Quercus robur*, *Q. sessiliflora*), as well as pine, fir, hornbeam, beech, sharp-leaved maple, and large-leaved linden. At higher elevations the proportion of beech and coniferous species increases. At 600–1,200 m lies the belt of beech and mixed beech-fir and spruce forests. In Subcarpathia this forest belt faces north and contains mostly coniferous trees, but in Transcarpathia the belt is occupied by large beech forests. Spruce (*Picea excelsa*) forests are dominant only at higher elevations. The upper limit of the forests reaches 1,500–1,600 m. Above this line lie the subalpine and alpine belts, with thick scrub of dwarf pine (*Pinus mughus*), Siberian juniper (*Juniperus sibirica*), mountain alder (*Alnus viridis*), and Carpathian rhododendron (*Rhododendron kotschyi*). Extensive mountain meadows (*polonyny*) and clearings at this elevation are used for pastures in summer. The alpine belt (above 1,800–1,850 m) contains arnica (*Arnica montana*), gentians, various orchids, etc; the ground is covered with white mosses and matted lichens at higher elevations.

The Crimean Mountains, which are a subprovince of the Euxine province of the Mediterranean forest region, are remarkable for their developed forests and rich vegetation. In the Tertiary period they belonged to the

east Mediterranean landmass, on which the ancient Mediterranean vegetation established itself. Northern varieties are fewer here. The mountains are covered with forests of oak, beech, hornbeam, and other trees. Near the upper boundary of the beech forests there are small tracts of pine. The mountains are topped with pastures, called *yaily*, with short, thick grasses.

The western and southern foothills of the Caucasus are covered with thick, Mediterranean evergreen vegetation. Above the juniper and juniper-oak belt (with some Caucasian beech [*Fagus orientalis*]) the relatively low coastal mountain range is forestless and covered with mountain-steppe or mountain-meadow vegetation. Above this vegetation belt is a belt of fescues and feather grasses. Strong winds are responsible for drastically lowering the boundary of forest vegetation. Farther south, at elevations up to 2,000 m, there are deciduous forests of oak, beech, hornbeam, maple, and other trees and mixed forests containing the Caucasian fir (*Abies nordmanniana*) and spruce (*Picea orientalis*). Above 2,000 m lies a subalpine belt, with high mountain meadows, and an alpine belt. Beyond 3,000 m the bare cliffs are covered with permanent snow.

Flora URSS (Flora of the Ukrainian SSR). A monumental compilation of systematic, geographical, and practical information and knowledge about all the plant species in Ukraine that was prepared and published by the Institute of Botany of the Academy of Sciences of the Ukrainian SSR in 12 volumes in 1936–65. The project's initiator and the editor of the first volume was O. Fomin. The

first volume contains a fundamental study in botanical geography: Ye. Lavrenko's 'Kharakterystyka botaniko-geohrafichnykh raioniv URSS' (Characterization of the Botanical-Geographical Regions of the Ukrainian SSR). At first the chief editor was Ye. Bordzilovsky, and then a committee of editors, consisting of D. Zerov, M. Kotov, M. Kliukov, O. Visiulina, and L. Barbarych, took over.

Flora URSS meets the highest standards of modern systematics. Based on the huge herbaria in Ukraine, it gives a systematic inventory and a precise, detailed description of all wild, naturalized, and indigenous plants. To facilitate its use by non-Ukrainian scientists, all the descriptions of species, varieties, and forms are given in Latin translation. The work gives the geographical distribution of the plants, their useful chemical properties, nutritional value, and practical importance. The volumes are richly illustrated with descriptive and analytical drawings, most of which are drawn from nature.

E. Zharsky

Florence, Church Union of. A union of the Eastern and the Western (Roman Catholic) churches concluded at the Church Council of Florence in 1439. The Byzantine emperor John VIII Palaeologus was eager for a union for political reasons (the Turkish threat), and there were those among the Greek hierarchy who wanted a union for religious reasons (Patriarch Joseph II and Archbishop Bessarion of Nicaea). The expected military aid from the West against the Turks was not forthcoming, however; hence, the Union of Florence, which meant submission to Rome's authority, was badly received by the citizens of Constantinople and most of the Orthodox world.

The Kievan metropolitan *Isidore, who was of Greek descent and who represented the Church of Rus' at the Ferrara-Florentine Council, was a prominent advocate of the Union of Florence. On his return to Moscow (the seat of the Kiev metropolitanate at the time), Isidore met with opposition to the union from the Muscovite grand prince Vasilius II and the clergy. Nor did his efforts gain any support among the Polish hierarchy. Only the Kiev prince Oleksander (Olelko) Volodymyrovych favored the union. Lacking wider support, Isidore left Rus' and returned to Rome, where he became a cardinal. One important consequence of the union was the division of the Kiev metropolitanate into a Muscovite and a Ukrainian-Belorussian metropolitanate. The union was partly in force in the latter until 1501. The conditions of this union became the basis of the Church Union of *Berestia in 1596.

W. Lencyk

Florence Psalter. A manuscript of 211 folios written in 1384 by the priest Ivan in Lutske in Ukrainian Church Slavonic with features of northern Ukrainian dialects. The psalter also contains prayers from the breviary. The manuscript (unpublished) of the Florence Psalter is kept in the Medicea Laurenziana Library in Florence. A partial linguistic description of the manuscript by C. Verdiani appeared in *Ricerche slavistiche*, 3 (1954).

Florinsky, Timofei [Florinskii, Timofej], b 28 October 1854 in St Petersburg, d 1919. Russian Slavist and Byzantine scholar. In 1882 Florinsky became associate professor of Slavic philology at Kiev University, in 1884 lecturer on the history of Slavic literatures at the school of

Higher Courses for Women in Kiev, and in 1888 full professor at Kiev University and later dean of the history-philology faculty. He was vice-president of the neo-Slavophile and anti-Ukrainian Slavic Benevolent Society, which gave assistance to Galician Russophiles and campaigned for Russia's involvement in the First World War. In 1884 Florinsky became editor of the society's new publication, *Slavianskii ezhegodnik*. He was a member of the Historical Society of Nestor the Chronicler and a corresponding member of the Imperial Academy of Sciences from 1898. He was an honorary member of the Galician-Russian Society, founded in 1902 in Russia to aid Galician Russophiles. At the start of the First World War, Florinsky presided over the Censorship Committee in Kiev, which was instrumental in suppressing the Ukrainian press. In 1899 he published an article opposing Ukrainian linguistic rights entitled 'Maloruskii iazyk i "ukrains'ko-rus'kii" literaturnyi separatizm' (The Little Russian Language and 'Ukrainian-Ruthenian' Literary Separatism, also published separately in 1900) in the anti-Ukrainian newspaper *Kievlianin*. Florinsky's major scholarly works include research studies in the Byzantine and Slavic fields, which appeared in *Sbornik statei po slaviano-vedeniiu* (Collection of Articles in Slavic Studies, 1883), compiled by the students of V. Lamansky; *Lektsii po slavianskomu iazykoznaniiu* (Lectures on Slavic Linguistics, 2 vols, 1895-7), from which the East Slavic languages were excluded; and *Etnograficheskaia karta Zapadnogo Slavianstva i Zapadnoi Rusi* (Ethnographic Map of the Western Slavs and Western Russia, 1911), a work that ideologically justified Russia's involvement in the First World War.

G.Y. Shevelov

Flour milling. A branch of the *food industry that produces flour and grits. In Ukraine grain was ground into flour and grits as early as the Neolithic period. Rotating querns appeared in the Roman period. The first water mills were built in Ukraine at the end of the 16th century, but they were not widespread. Most of the milling continued to be done by small querns or by large millstones known as *voliani*, which were turned by horses or oxen (*voly*). Windmills appeared in the 16th century and began to spread, particularly in Volhynia. Milling developed rapidly under the Hetman state. The mills not only produced flour and grits, but were sometimes used for fulling broadcloth, sawing lumber, making paper or gunpowder, and other purposes. The larger mills belonged to the landowners and Cossack *starshyna*, but in the second half of the 18th century a number of large state-run mills that purchased grain came into operation. Windmills spread throughout Ukraine, while water mills were built mostly in Poltava, Kharkiv, and Podilia gubernias. Part of the population, particularly in the Lemko and Boiko regions, used querns until the 20th century.

The flour-milling industry took shape in Ukraine in the second half of the 19th century. Its development was tied to the rapid growth of the urban population and large consumer centers. The introduction of railways and steam rolling mills provided a stimulus to the industry. The first steam mills in Ukraine appeared in the 1840s, but they became widespread only at the end of the century. By 1912 there were 158 steam mills in the nine Ukrainian gubernias. In 1913 there were almost 120,000 small mills

(mostly in Right-Bank Ukraine) and windmills (half of them in Left-Bank Ukraine), almost 10,000 middle-sized mills, and 700 large commercial mills in Ukraine. Their annual production was 8 million t of flour and grits (25 percent of the production of the Russian Empire), of which 3 million were produced by the large mills. The flour-milling industry accounted for 18 percent of the production of the food industry and was its second-largest branch. Among all industries it was in fifth place. Almost two-thirds of the flour was exported: wheat flour usually outside the Russian Empire and rye flour to Russia. The main milling centers were Katerynoslav, Kremenchuk, Poltava, Kiev, and Odessa. In the Kuban and in eastern Subcaucasia flour milling was the main industry. Its center was Katerynodar.

After the revolution and the Soviet occupation of Ukraine the flour-milling enterprises were nationalized and enlarged. New mills were built, mainly in Voroshylovhrad, Donetsk, Dnipropetrovske, and other cities. In 1940 the flour-milling industry in the Ukrainian SSR had 23,800 enterprises and produced 6,887,000 t of flour (23.7 percent of USSR production). Its production had the highest value of all the branches of Ukraine's food industry.

After its wartime collapse in 1941–5 the flour-milling industry returned to its prewar production level in 1955. In the succeeding years the industry was mechanized and automated to increase its productive capacity. In 1958 there were 16,951 mills in Ukraine, 619 of which were large and produced 63.9 percent of the industry's output. That year a record was set for flour production: 7,695,000 t. Production declined thereafter, and Ukraine's proportion of the USSR's flour production fell from 19.6 percent in 1965 to 17.9 percent in 1979. In 1975 the flour-milling industry accounted for only 8 percent of the food industry's output (23.6 percent in 1940). The production of flour and grits in the Ukrainian SSR is shown in the table below (in thousands of tonnes).

	1940	1950	1960	1965	1970	1979
Flour	6,887.0	4,371.0	7,278.0	7,287.0	7,526.0	7,503.0
Grits	411.8	270.7	371.8	567.2	767.4	767.2

Flour-mills are distributed fairly evenly throughout Ukraine. The main centers of the industry are Kiev, Kharkiv, Dnipropetrovske, Mykolaiv, Zaporizhia, Voroshylovhrad, and, in the Kuban, Krasnodar, Novorosisk, and Kropotkin-Labinsk. In the Azov region the main center is Tahanrih. (For a bibliography see *Food industry.)

TABLE 2
Fodder cultivation by type (percentage of total in parentheses)

Year	Root and gourd fodder (ha)	Corn for silage and green fodder (ha)	Annual grasses (ha)	Perennial grasses (ha)
1913			378,000 (42.3)	401,000 (54.9)
1940	350,000 (7.9)		1,793,000 (40.4)	2,038,000 (45.9)
1955	547,000 (8.1)	2,497,000 (36.9)	2,976,000 (43.9)	1,574,000 (23.3)
1960	577,000 (4.3)	7,479,000 (55.8)	3,809,000 (28.4)	1,254,000 (9.4)
1970	713,000 (6.6)	4,465,000 (41.6)	3,421,000 (31.9)	1,947,000 (18.1)
1976	776,000 (7.0)	4,705,000 (42.4)	3,315,000 (29.9)	2,018,000 (18.2)

TABLE 1
Fodder cultivation in Ukraine

	1913	1928	1940	1950	1960	1970	1980
1,000s of hectares	894	1,350	4,441	5,238	13,412	10,733	10,684
% of tilled land	3.2	4.3	14.2	17.1	40.0	32.8	31.8

Fodder crops. Fodder crops together with certain grains (oats, barley, corn) today constitute the basis of intensive animal husbandry. Among the fodder crops raised in Ukraine are sown grasses (annual and perennial), silage cultures (mainly corn and green feed), fodder root plants (fodder carrots, turnips, beets, rape, etc), fodder gourds (pumpkins, melons, squashes, etc), and fodder legumes (peas, beans, lupine, vetch, etc).

Until the end of the 1920s fodder crops were widely cultivated only in Western Ukraine, where they were included in the system of crop rotation and covered 9.6 percent of the cultivated land. In central and eastern Ukraine only 2.7 percent of the cultivated land was devoted to fodder in 1928 (2 percent in 1913); this land was mostly in the northern regions. Fodder cultivation was greatly increased throughout Ukraine and brought into the crop-rotation system only in the period of the five-year plans. This was done to increase the productivity of agricultural crops and to provide a permanent feed base for animal husbandry. The increase in fodder cultivation on the territories of what is now the Ukrainian SSR is shown in table 1.

Until the mid-1950s the main fodder crops were annuals (legumes: vetch, dum peas, peavine, lupine, seradella, etc; cereals: sudan grass, foxtail millet, sorghum, green bristle grass, etc) and the perennial grasses (mainly clover, alfalfa, and sainfoin). On the suggestion of N. Khrushchev the CC of the CPSU passed a resolution in January 1955 making corn the basic fodder crop. That year 2,497,000 ha were devoted to silage corn and green fodder (37 percent of all fodder crops); in 1960 it was 7,479,000 ha (55.8 percent). In 1964, with Khrushchev's fall, the 'corn fever' came to an end. Yet corn continues to be the most important fodder crop. The changes in land devoted to fodder crops are given in table 2.

Geographical distribution. Fodder crops constitute the smallest percentage of tilled land in the forest belt and in the Carpathians, where natural meadows and mountain pastures provide most of the feed. Fodder grasses constitute 40–60 percent of the fodder crops in all oblasts, but the steppe oblasts produce the largest proportion of annual grasses and the smallest proportion of perennial grasses. The reverse is true of Polisia. Corn for silage and

green fodder constitutes the highest proportion (60 percent) of the fodder crops in the steppe and the lowest (25–30 percent) in Polisia and the Carpathians. The highest proportion of root fodder is grown in Western Ukraine and the lowest in the steppe. Gourd fodder is produced mostly in the steppe.

In the Kuban (Krasnodar krai) 1,311,000 ha (30.5 percent of arable land) were devoted to fodder crops in 1972 (694,000 in 1950; 965,000 in 1955).

V. Kubijovyč

Fogel, Robert [Fogel’], b 1 March 1859 in Rzhyshev, Kiev gubernia, d 27 February 1920. Astronomer. Fogel became a professor at Kiev University in 1899 and director of the Kiev Astronomical Observatory in 1901. His major works deal with methods of determining the orbits of planets and comets.

Fogorashii, Ivan [Fogorašij], b 1786, d 1834 in Vienna. Transcarpathian philologist and community figure, Greek Catholic priest, rector of the Uzhhorod Theological Seminary, and parish priest of St Barbara’s Church in Vienna from 1818. Under the pseudonym Ivan Berezhanyin, Fogorashii wrote the first study of Transcarpathian dialects, entitled *Voobshche o razlichii slavianskikh narechii, sobstvenno zhe o malo i karpato- ili ugro-russkikh* (On the General Differences among Slavic Dialects, and on the Little and Carpatho- or Hungaro-Ruthenian Dialects in Particular; manuscript finished in 1827 and published in the early 20th century in St Petersburg). He also wrote *Istoricheskoto-pograficheskoe karpato- ili ugro-rossiian opisanie* (Historical-Topographic Description of the Carpatho- or Hungaro-Ruthenians) and other works.

Folbort, Georgii [Fol’bort, Georgij], b 4 February 1885 in St Petersburg, d 17 April 1960 in Kiev. Physiologist. Folbort graduated from the St Petersburg Military Medical Academy in 1909. While still a student he began working with I. Pavlov. From 1912 to 1926 he taught at the Military Medical Academy, and from 1923 to 1926 he was also a professor at Leningrad University. In 1926 he came to Ukraine to head the chair of Normal Physiology at the Kharkiv Medical Institute. In Kharkiv he organized a laboratory for the study of the physiology of digestion at the Ukrainian Institute of Experimental Endocrinology (1927); he also established a large physiology department at the Institute of Experimental Biology and Medicine. From 1946 to 1960 he was head of the chair of normal physiology of the Kiev Medical Institute, and from 1949 head of the Institute of Physiology of the Academy of Sciences of the Ukrainian SSR. Folbort wrote over 130 works dealing with blood circulation, digestion, endocrinology, and the central nervous system. He studied the physiology of exhaustion and recovery; his ‘Folbort rules’ describe the basic laws of these processes. He discovered negative conditioned reflexes. His selected works were published in 1962.

Folk architecture. A system of construction techniques and architectural forms used in Ukraine, based on centuries of experience. Folk architecture was the work of master carpenters and masons and sometimes of ordinary peasants.

The buildings considered typical of folk architecture are village and town houses and farm buildings, as well as

religious buildings (eg, chapels, churches, belfries, and synagogues) and public buildings (eg, taverns, inns, schools, and community halls). The character of Ukrainian folk architecture was influenced by such natural factors as the climate and available materials, by regional-ethnic traits, and by town architecture and the folk architecture of neighboring nations.

In the past the basic building material in the forest belt was lumber, and in the steppe belt, clay. In the forest-steppe belt both lumber and clay were available. Stone and brick were rarely used before the 20th century (they were used particularly in the 1930s). Clay houses were common in the steppe regions of Ukraine and Subcaucasia; they reached as far west as Podilia. The main building material was unfired clay mixed with cut straw or cylindrical forms (*valky*); lumber was used only for the frame of the ceiling and roof and for door and window frames. In the forest-steppe belt so-called *turluchni* houses were common. They consisted of a wooden frame with walls made of woven willow branches, twigs, or reeds. A layer of clay was then applied to this structure on the inside and the outside. When the clay was dry, it was whitewashed with a lime mixture. Wooden houses were built in the forest belt in the north and west, in the Carpathians and Subcarpathia. The walls were built of posts driven into the ground or of thick, long logs. Then spikes were usually driven into the walls in preparation for plastering, and the walls were covered with plaster. This method of finishing the walls was not used in northern Polisia (where the houses are reminiscent of the Belorussian and Russian types), the northern Chernihiv region, or the Carpathians. The plastering was done not for utilitarian, but for traditional-esthetic, reasons.

Statistical data published in 1924 show that 50 percent of surveyed houses in the Ukrainian SSR were built of wood (posts or logs), 33 percent, of clay, and the rest, of stone and brick.

The floor plan of houses is similar all over Ukraine. The archaic one-room house was no longer in evidence by the 1920s; the two-room house also became obsolete and could be found only in some areas of the Carpathians. Houses consisted usually of three parts: a central hallway (*siny*), entered from the outside and leading into the living quarters (*svitlytsia*) on one side and the storage room (*komora*) on the other side. The storage room, unlike the rest of the house, was not always plastered on the outside. This basic plan originated in the distant past. It is common to all parts of Ukraine regardless of materials, economic conditions, or foreign influences. It differs markedly from the typical Russian house.

The roof rests on joists attached to rafters. In the steppe and forest-steppe belts the roof could be thatched with bundles of straw or reeds. The roofs in Right-Bank Ukraine differed from those in Left-Bank Ukraine by having roof poles and bunches, rather than sheaves, of straw. In forested or mountainous areas the roofs were covered with thin boards or shingles. The roofs usually had four sloping sides, but in recent times the two-sided roof (which gave a higher loft) with a window has become popular.

In all regions houses were encompassed on the outside by a ridge of pressed clay known as the *pryzba*. In some areas, particularly in the steppe belt and the Poltava region, the houses could have an outside porch. All Hutsul houses and most Boiko houses had a narrow gallery

1

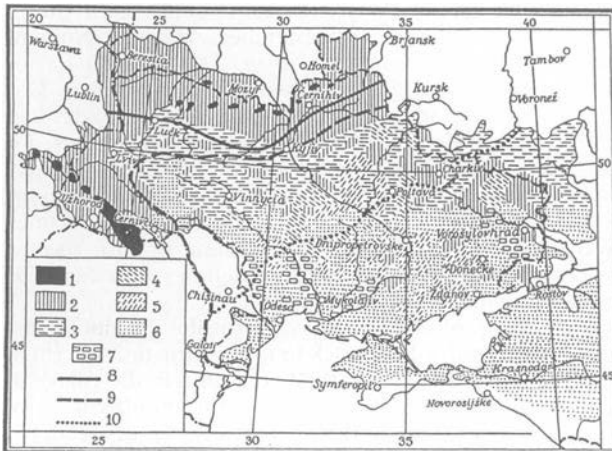

2

Folk architecture: 1) bell tower of Holy Trinity Church, 1593; 2) bell tower of St Michael's Church in the village of Yasenytsia, 18th century

along the front wall. The houses were surrounded with green orchards and flower gardens, which set them clearly apart from the dark cottages (*izby*) of the Russian peasants.

The doors in Ukrainian peasant houses were made of solid wood and were hung on iron hinges. Usually they were rectangular in shape, but one can still find the rarer and older hexagonal door with the upper corners cut off. The door and window frames were sometimes ornamented with carvings of a geometric pattern. The threshold, particularly in the west, was quite high. The doors were secured with wooden locks.

Usually Ukrainian houses had three windows – two in

CONSTRUCTION OF HOUSES

1. Unplastered log cottages
2. Plastered log cottages
3. Houses with wooden corner posts and interior and exterior wooden walls
4. Osier or brushwood cottages covered with clay
5. Reed cottages covered with clay
6. Houses built of clay and straw mixed together
7. Brick houses
8. Northern boundary of the use of wooden posts
9. Boundary between forest and forest-steppe belts
10. Boundary between forest-steppe and steppe belts

the front and one on the side. There was also a small window high above the stove, which was always to the right of the entrance from the hall into the living quarters. At first the windows were made of ox bladder and then of glass.

The arrangement in the living section of a peasant house was the same throughout Ukraine: to the right of the entrance stood the clay stove (*pich*) with a planked sleeping extension (*prypichok*) and clothes pegs on the wall and a cradle. To the left was a hanging shelf for dishes (*mysnyk*), and in the corner opposite the stove was a table with fixed benches along the walls. Over the table in the place of honor (*pokutia*) hung the icons, which were often decorated with embroidered towels. Clothes were stored in a chest, which was often painted with flowers.

The stove was built of clay or brick and, in the mountains, of stone. In the Hutsul region stoves were often covered with tiles. Painted ornaments on the stove were characteristic of Ukrainian houses. In the 19th century flues, which were built in the halls, became common, and 'smoky' houses (which were also called 'black') became obsolete. A few black houses could still be found at the beginning of the 20th century in the Carpathians and Polisia. The ceiling was constructed of wood. The *svolok* or beam on which the dates of important family events were carved or written is characteristic of the Ukrainian folk cottage. The floor was usually the earth, covered with clay. Only the richer peasants had plank floors.

The houses were whitewashed on the inside and outside. Sometimes they were painted a pale blue.

The homestead. The layout of the homestead varied in Ukraine. In the Hutsul region the house was joined with the farm buildings under one roof, forming a kind of fortress surrounded by a high fence with a narrow roof. This complex was called *grazhda*. Among the Boikos and somewhat less frequently among the Lemkos the house and the farm buildings were under one roof, but were arranged in a row rather than a square as among the Hutsuls. Enclosed homesteads were also found in Volhynia, Polisia, and the Chernihiv and Kursk regions. Fenced yards are typical of Ukrainian territories. Fences were usually wattled (*tyln, plit*). In forested areas they were wooden (*parkan*). In the steppe they often consisted of a ditch or mound planted with thorns or bushes (*zhyvoplit*). The gate was built of logs or boards.

The farmhouse and buildings constituted the homestead (*sadyba, obistia*). The number of buildings and type of construction depended on the owner's means. The main buildings were the stable for horses and cattle, the barn (*stodola, klunia*) for threshing and storage, the grain-storage house (*komora*), the pig sty (*khliiv*), the chicken house (*kurnyk*), and the shed (*shopa*) for farm implements, wagons, sleighs, and so on. The well, with its counterpoised lever (*zhuravel*), had also a partly decorative function.

The houses and homesteads of non-peasants (eg, parsonages) differed little, apart from size, from the average house or homestead of the region. The church was an important part of a village's architecture. Windmills and water mills (built mainly in the mountains) were included in the class of farm buildings.

Changes in the Soviet period. Peasant houses were built according to the traditional pattern until the 1930s, when the collectivization drive brought great changes in

house building. The elimination of family farms led to the disappearance of such buildings as the stable, storage house, and barn. Families were provided only with houses and small sheds. At the same time, however, new communal buildings and clubs made their appearance. Although traditional houses are still built, the modern rectangular house, with a hall, a pantry, a kitchen, and a large room, divided by the built-in stove into a bedroom and living room, is becoming more and more common. The new houses are painstakingly decorated. Large work centers are built to accommodate the farm work of the state farms or collective farms. They are often located at the outskirts of the village and separated from the living quarters of the collective-farm members. These buildings include stables, sties, chicken houses, garages, silos, workshops, mills, and bakeries. They are built according to standard plans out of new building materials such as cement and blocks.

After the Second World War, according to the decree of the Council of Ministers of the Ukrainian SSR and the CC of the CPU On the Construction of Farmers' Housing, Farm and Cultural Buildings in the Country (2 April 1945), all farm construction was to take place according to previously approved plans. According to Soviet statistics, 750,000 standard buildings were built in the villages of Ukraine in the first three years after the war. Model building complexes were constructed, such as the village of Demydiv in the Kiev region with 900 residential homes of wood frame faced with brick. In the 1950s *agrotowns were started in a few places, but were later abandoned. They consist of standard two-story buildings that contain two to four apartments, schools, kindergartens, and other facilities. Attention was given to greenery and parks. Alongside officially propagated architecture, private construction of traditional Ukrainian houses takes place in agrotowns and workers' settlements.

Except in the western regions, Ukraine's village landscape has largely changed. Most churches and belfries have disappeared, and the villages are dominated by administrative buildings, schools, clubs, cafeterias, and the like.

Folk beliefs. A fundamentally religious interpretation of the world that determines the conduct and the attitude of the common people towards the forces of nature and the events of ordinary life. These beliefs are passed on by tradition or spring from an animistic view of natural phenomena, spiritual life (eg, the souls of the

dead), and inanimate objects, or from such psychic experiences as illusions, hallucinations, and dreams.

Ukrainian folk beliefs encompass almost all events and objects of the external world, which are held to have a determining influence on individual destiny. There is a rich body of beliefs connected with the sun, moon, and stars. There are many different beliefs about atmospheric phenomena – clouds, storms, thunder, winds, rainbows – and about the actions of fire, water, earth, stones, plants, animals, and birds as well as man-made objects. A special cycle of beliefs deals with one's personal appearance – one's way of seeing, speaking, and breathing – and with the main events in life – birth, marriage, and death. Folk beliefs about wandering lights, fern flowers, werewolves, witches, sorcerers, and so on have served as sources of themes for many Ukrainian and other Slavic writers. (See also *Demonology and *Mythology.)

Folk calendar. A folk method of measuring time, based on centuries of observations of periodic changes in nature. The seasons were the earliest measure of longer periods of time; at first two seasons were recognized – the warm and the cold, spring and winter – and then four. This led to the popular way of counting years in terms of springs, summers, or winters. The time unit based on the phases of the moon (*misiats*) originated in Ukraine in prehistorical times and carries the same name as the moon (*misiats* [month]). That this system was used by the ancient Slavs is evident from the names of the months, which were common to the Slavic nations and have been preserved in their folk and Christian calendars: *berezyn* or *berezil* (Old Ukrainian: *berezozol*) (March), *kviten* (April), *traven* (Old Ukrainian: *travny*) (May), *cherven* (June), *lypen* (July), *serpen* (August), *veresen* (September), *lystopad* (November), *hruden* (December), *sichen* (January), *liutyi* or *snizhen* (February). The names of the months in Old Ukrainian and in the later vernacular were derived from natural events or from agricultural activities; for example, *bokohrii* (side-warmer) for February, *sinozornyk* (hay-watcher) for July, *kazybrid* (spoiler of fords) for October, *studen* (the cold one) for December. The names were not always applied to the same month: *cherven* was sometimes July, *lystopad* sometimes October, and *hruden* sometimes November.

Archeological evidence shows that the division of the year into months dates back to prehistoric times: a ritual chalice of the 3rd–4th century AD, found in the village of Lepesivka in Volhynia, represents the months in symbols, and a Polianian calendar of the 4th century from the village of Romashky in the Kiev region defines the spring and summer cycles of agricultural labor as running from the emergence of shoots at the beginning of May to the completion of harvest in the first half of August. In the Ukrainian folk calendar, as in the calendars of many other nations, the year consisted of 13 months, which coincided with the lunar cycles. It began on 1 March or 9 March (old style) or even on 1 April (see *New Year). The beginning, duration, and end of the year were defined by the sun's position on the ecliptic, the moon's phases, or the position of the stars and constellations. The dates of feasts and folk rites that inaugurated, separated, or marked the end of the various seasons of the year or periods of agricultural work were determined in the same

way. These folk feasts and rites were combined with Christian holidays and saints' days and are grouped in four cycles according to the seasons: in the spring cycle there are the celebrations of the Annunciation, Easter, and St George; in the summer cycle, Pentecost, Ivan Kupalo, and St Elijah; in the fall cycle, the first and second Blessed Virgin, the Holy Protectress, and St Demetrius; and in the winter cycle, Christmas, New Year, and Epiphany.

Folk customs and rites. Ritual actions and verbal formulas belonging to the traditions of familial, tribal, and folk life and connected with the changing seasons and the resulting changes in agricultural or other work. These customs and rites are regulated by the *folk calendar and are often accompanied by magical acts, religious ceremonies, incantations, songs, dances, and dramatic plays. They arose in prehistoric times and evolved through the centuries of Ukrainian history, blending in many cases with Christian rites. They can be divided into: (1) familial customs and rites, which consist of birth, marriage, and burial rites; (2) seasonal-productive customs and rites, which are tied to farming, herding, and hunting tasks; and (3) communal customs and rites, which mark certain events in the life of the community.

With the spread of modern civilization and urban culture, as well as the changes triggered by the two world wars, the folk customs and rites in Ukraine have been greatly transformed. Soviet efforts to eradicate them have not succeeded. Recently an increasingly persistent effort is being made to revive folk rites, particularly in the family and communal sphere, often with the intention of luring the population away from Christian rites and feasts. Believers continue to practice the folk customs and rites of the Christian calendar, particularly those of Christmas and Easter, but in the last few decades the country people have been turning to ancient folk customs and rites such as New Year's rites and its special carols (*shchedrivky*); spring rites and songs (*vesnianky*); the procession of nymphs and *Kupalo festival, which are associated with harvest celebrations (*obzhynky*); marriage rites, with their ritualized dramas; celebrations of birth, involving godparents and christening linen; and farewells to army or labor recruits. These customs and rites, like the Christianized customs and rites, are steeped in tradition and are tied to ancient ancestral beliefs, symbols, and images.

Folk dance. In prehistoric and ancient times dance was a ritual means of communicating with nature and the divine forces. Only isolated elements of ancient calendar ritual and cult dances have survived through the centuries. With the introduction of Christianity in Ukraine, the archaic relics of these dances blended with Christian rituals and were adapted to the church calendar and Christian festivals. Certain mentions of ancient dances can be found in written sources, but the largest number of them can be found in ancient Ukrainian folk songs. The oldest Slavic word for the dance is *plias*; the modern word *tanets* was borrowed from West European languages.

Ancient Ukrainian dances were actually agricultural dance games (*khovorody*); their basic form was the circle, associated with the cult of the sun, the greatest life-giving power. The most widely known are the spring *khovorody* (circular choral dances), such as *kryvyi tanets*, *podoliano-chka*, *perepilka*, *yahilochka*, and *verbova doshchechka*. In time, the **vesnianky-hahilky* were enriched by new themes, and some of them conveyed the image of life under serfdom (*zelman*, *bondarivna*, and others). In general, the *vesnianky-hahilky* have a lyrical character; their movements are gentle, tranquil, and restrained.

In the summer the dances of the *Kupalo festival, which was probably connected with the pre-Christian feast of *Rusalii*, were performed. In the Hutsul region, on the eve of St George's day, girls performed a ritual dance called *lelia*, which was reminiscent of the old Roman festival of roses (*des rosae*, *rosalia*, *rosatio*) and invoked the happiness of love. Dances were also performed during the Whitsuntide celebrations. In the late summer and early autumn the harvest feast (*obzhynky*) was celebrated by circular dances (*obzhynkovi khovorody*), which constituted a dramatization of the song content and an imitation of agricultural work. The harvest circular songs were performed mainly by women, and the scything ones by men. The pre-Lenten carnival period (*miasnytsi*) was also the time for weddings, which have in part preserved the traditional ritual character of dance. The carnival dances are performed primarily by women. Such dances as *podushkovyi*, *kocherha*, and *stilchuk* are mimetic representations of the wedding songs. The wedding dances are similar in certain respects to the ancient funeral dances.

Ukrainian ritual dances are performed mostly to the accompaniment of a churchlike, antiphonic chant. They are rarely performed to music. The chorals most typical of these dances are supplicative and commemorative in nature. The ritual folk dance has been little studied. It is presumed that the separation of song and dance began during the early Middle Ages, as the ancient cult rites became divided with the introduction of Christianity. One part was retained in the form of folk dancing; the other was taken over by professional dancers, who replaced the song in the dance with mime. Dance became a form of pure entertainment. New types of travelling dancers (the *skomorokhs) appeared. They performed their art in squares or in palaces, where they entertained the princes and nobles.

Ukrainian folk dances can be divided into two groups: those performed to the accompaniment of songs and those performed to music. Musical instruments (*husli*,

flutes, horns, *tsymbaly*, *kobza*, and others [see *Folk musical instruments]) were introduced later as a means of maintaining the rhythm of the dance. The dances are classified as circular and topical, the latter including dances that reflect folkways, occupational and humorous dances, and others. The majority of Ukrainian folk dances closely resemble the circular dance types but are enriched by figurative intricacies; the pair and solo dances evolved from this type. Their structure is linear, even geometrical, showing a tendency towards imaginative patterns (circle, cross, serpent, chain, rows, and others), spatiality, and rounded lines. They unfold in a horizontal direction, except for the vertical dances of the mountain peoples. The circular dances are accompanied by a song. The choreographic image depends on the song's content. These dances contain many ancient elements and are ritually allegoric or symbolic, but their technique is somewhat poorer because, as group dances, they are subordinated to one leading performer.

Through their movements, gestures, and type of music, the topical dances portray events that occur in nature or in everyday life. While they have a variety of steps and figures, their content is simple. Performed to a song that has a 2/4 musical beat, they are based on one or two steps, are quite diverse in composition, and are arranged in an orderly and successive manner. The dances that are most popular today in Ukraine are those that portray the people's way of life. They are performed at weddings, dances, parties, and so on.

Performed originally by females only, the following dances are now performed by men and women: *metelytsia*, *Kateryna*, *Vasylykha*, *dribushka*, *horlytsia*, *volynianka*, and *tropotianka*. At one time exclusively men's dances, the following are now also performed as male-female pair, group, or solo dances: *chumak*, *hopak*, *chaban*, *veselyi*, *viuchar*, *ocheret*, *zaporozhets*, *kozak*, and *arkan*. The *kolomyika*, popular in Western Ukraine and performed with a variety of steps (*holubka*, *merzhenka*) to the accompaniment of dialogue-type songs, is reminiscent of the ancient circular dances and has a 2/4 musical beat. Ukraine's historic past is reflected in men's dances, for example, the *Gonta*, which symbolizes heroism, manliness, and patriotism. The *hopak*, which features physical strength and almost acrobatic agility, has, in time, become transformed into a pair or group dance. Its theme is a youth's wooing of a girl. The youth executes ingenious leaps, kicks, and squats in order to gain the girl's favor. The theme of labor finds expression in such topical dances as *kravchik*, *shevchik*, *lisoruby*, and *kovali*; various movements in these dances convey the intricacies of a trade or occupation and the dexterity of the artisan. There are also humorous dances (eg, *bychky*, *husak*, *kozlyk*, and others) that depict the behavior of animals and birds.

Podlachian folk dances (eg, *haiduk*, *kozak*, *shatalier*) have retained most of their ancient elements. In Slobidska Ukraine such ancient dances as *dudochka*, *horlytsia*, and *zaveriukha* have been preserved, and in southern Ukraine there are still traces of the old Cossack dances (eg, *zaporozhets*). Lemko folk dances (eg, *koshychok*, *kolechko*, *obertas*, *kyvanyi*, *Dzhurylo*, and *striasuvanets*) have preserved some ancient elements, but they have been influenced considerably by Slovak folk culture. Transcarpathian folk dances have movements not known elsewhere in Ukraine.

Because of their recurring motifs, Ukrainian folk

dances, like those of other peoples of the world, appear as a whole to be slightly repetitious in presentation. Yet, even though they do have many common elements, they vary by region in choreographic method, content, and dynamics. Ukrainian folk dances, unlike those of other peoples, were not affected strongly by court dances. Therefore they preserved their virtuosity and originality for a longer period of time. It should be emphasized that the female in Ukrainian folk dances has a dignified role: she dances gracefully and behaves modestly; she may at times act flirtatiously, but she always expresses her feelings in a restrained manner. The esthetic beauty and originality of the Ukrainian folk dances are augmented by the colorful folk costumes of the dancers and the melodic musical accompaniment.

Since the 1950s, with the growth in the Ukrainian SSR of professional and amateur dance troupes, a greater repertoire of folk dances, based both on traditional folk culture and on new choreographic improvisations, has been created. The dances reflect history (*zaporozhtsi*), a former folkway (*chumatski radoshchi*), contemporary rural life (*na kukurudzianomu poli*, *kolhosna polka*, *kolhosne vesillia*, *novorichna metelytsia*), or contemporary industrial life (*shakhtiarskyi sviatkovyi*).

Folk etymology. A treatment of words (mostly foreign) whose morphological structure does not fit into the existing pattern of a given language. In folk etymology a part or several parts of an 'abnormal' word undergo a modification, being replaced by similar-sounding morphemes of that language. By the same token the rest of the word, even if it remains semantically obscure, acquires the function of a 'normal' morpheme. For example, as represented by Chuvash, a Turkic word, *vismen* (measure), was modified in Ukrainian into *bezmin* ([a kind of] steelyard), with the 'prefix' *bez-* (without) and the 'root' *-min-* (change) compatible with Ukrainian prefixes and roots both structurally (consonant + vowel + consonant) and semantically (correct scale, scale without cheat). In *čavun* (cast iron), also based on a Turkic word (cf Chuvash *tšugun*), a 'root,' *čav-* as in *čavyty* (crush), was introduced, thus isolating a 'suffix' *-un*, devoid in this word of any semantic function, but fitting into a typical structure of Ukrainian suffixes (vowel + consonant).

Being an important device in the naturalization of loan words, folk etymology was, in Old and Middle Ukrainian, broadly applied to words and names of Germanic and Turkic origin. An example of the former is *barvinok* (periwinkle), with a historically 'false' root, *barv(a)* (color). It came originally from the Latin word, *pervinca*,

through the German *Bärwinkel* (where it was folk-etymologized into a 'compound' word – *Bär* [bear] and *Winkel* [corner]) and the Polish *barwinek*. In the case of words borrowed through written channels and used primarily by intellectuals, folk etymology is mostly resisted. In Old and Middle Ukrainian this applies to most words of Greek and Church Slavonic origin. Folk etymology in such words is more often than not limited to the speech of the uneducated and, if used in literary work, serves as a comic device to ridicule the 'low' language of the common people (hence the very name folk etymology). Such usage may be found in satiric and humoristic genres and is especially typical of the 'low genres' of the classical school; an example is *krutopopy* (literally, stern priest), from the Greek *protopapas* (archpriest) in I. Kotliarevsky's travesty of the Aeneid (*Eneida*, 1978).

G.Y. Shevelov

Folk medicine. A store of empirical medical knowledge and practical preventative and therapeutic methods used by the people for the prevention and curing of disease. Based on the results of the observations and experience of many generations, folk medicine served to some extent as the source of scientific medicine.

Paleopathological research has established that early inhabitants of the territory of present-day Ukraine suffered from arthritis, osteomyelitis, rickets, syphilis, and tuberculosis. Various traumas were also frequent. Even in ancient times folk healers were familiar with some surgical procedures, even as complex as amputation (attested to by findings at the burial site of the Tardenoisian culture in Murzak-Koba in the Crimea) and trepanation of the skull (archeological digs in Kiev). Various primitive surgical instruments have been found at burial sites throughout Ukraine – for example, at the Scythian Chortomyk kurhan. Skin diseases must have been quite widespread as early as the pre-Slavic age, judging by the fact that Ukrainian and other Slavic languages share common names for such diseases. The prevalent skin diseases, such as mange, eczema, scabies, sclerodermas, boils, ulcers, and warts, were treated by various methods. That the ancient Slavs possessed a good knowledge of medicinal plants is attested to by the fact that Slavic languages share common names for more than 10 of the plants basic to folk medicine: *Ranunculus* (buttercup), *Achillea millefolium* (yarrow), *Malva sylvestris* (high mallow), *Pimpinella saxifraga* (pimpernel), *Origanum vulgare* (marjoram), *Mentha piperita* (peppermint), *Arctium lappa* (burdock), *Artemisia absinthium* (wormwood), *Tussilago farfara* (coltsfoot), *Inula helenium* (elf dock), *Valeriana officinalis* (fragrant valerian), *Plantago major* (ripple grass), etc. Most of these plants were used for medicinal purposes by the Scythians and, according to literary sources, during the Princely era.

In Kievan Rus' folk medicine played an important role in the medical practices of court and army physicians, fortunetellers, sorcerers, and monks. Practitioners were able to diagnose and treat diseases such as jaundice, asthma, epilepsy, tuberculosis, malaria, arthritis, pleurisy, and typhus. Various methods of treatment, including the medicinal plant cures mentioned above, were in use. These cures were quite famous: the renowned medieval physician Avicenna recommended especially the so-called Rus' medicines. Together with sorcerers and midwives, surgeons (*rizal'nyky* or *rukodily*) were highly respected. With the help of primitive instruments (knives,

scalpels, saws, frames, drills), they performed such complex procedures as cataract operations and the removal of bladder stones. Pain-killing medication was used during surgery, and wounds were stitched together with hemp threads or gut strings.

With the development of official, and later scientific, medicine, folk medicine became increasingly isolated and was eventually restricted to rural areas. In the process it adopted many rational, if sometimes outdated, views from scientific medicine and at the same time preserved and developed its store of primitive knowledge and ancient medical treatments, often imbued with religious imaginings and cultist or magical rituals. In this sense folk medicine is a combination of rational and irrational, beneficial and harmful elements. Faith in folk medicine and its occasional success account for the use of folk remedies and the services of folk healers, not only by peasants and workers, but also by the intelligentsia and the urban populace. Many superstitions and outdated beliefs have been preserved, especially in the area of folk etiology – the identification of the source of disease. It is believed that diseases are caused by 'the will of God'; by various magic spells or charms (the casting up of an object, liquid, etc), the administering of charmed potions, the sprinkling of water, the tying of knots, the casting of spells, the casting of the evil eye; by the moon, stars, and eclipses of the sun; by wind, water, or earth; by worms, snakes, and frogs; and by various demons and spirits (house spirits, vampires, demonic tempters, possessed and hysterical women). Some diseases, such as plague and cholera, are personified as demonic beings. At the same time folk medicine often has an empirical explanation for a disease (infections, colds, lacerations).

Folk medicine was practiced not only by skilled folk healers, sorcerers, and sorceresses, but also, quite often, by the closest relatives of the sick person. On occasion the mentally ill and retarded were consulted, as they were considered to be 'God's people.' Sorcerers had their own specializations and treated only one disease or some particular category of illness. In preventative medicine, in addition to a number of hygienic procedures (washing, shaving, haircutting, quarantining the sick), magic or cultist activities (plowing around a village, walking around a house, drawing magic circles, using lies and disguises to deceive evil spirits) played a prominent role.

Magical rituals performed on the afflicted individual were often part of the treatment. The disease was 'driven out' by sucking, squeezing, shaking, washing, blowing, and licking. Diseases were also 'frightened off' by shouts, gnawing, pricking, scratching, beating, cauterizing, and so on, or they were 'transferred' from the sick person to some inanimate object, plant, tree, animal, or other person. Sometimes the treatment involved manipulating objects that were or could have been related in some way to the illness. An important group of therapeutic practices consisted of charming a disease away by uttering magic formulas, incantations, and prayers, appealing to various natural and supernatural powers, or exorcizing the disease. Genuine medical treatments such as baths, massages, and bleeding (done by applying cupping glasses or leeches) are also used in folk medicine.

Folk medicine encompasses a wide variety of medical remedies and medications. Medicinal plants, an integral part of folk medicine, are widely cultivated in Ukraine. Poisonous plants such as *Daphne mezereum* (mezezon)

and *Veratrum viride* (hellebore) are used in curing some diseases, such as rheumatism. In addition, various medications derived from animal products are used; some of these are effective, others completely unhelpful and even harmful. Many of the successful and beneficial remedies and resources of folk medicine are studied by specialists and researchers for use in scientific medicine.

Folk musical instruments. Musical instruments, usually homemade, that were played by folk musicians. They can be divided into three basic groups according to their emission of sound: (1) string instruments, which are subdivided into (a) plucked instruments – psalmer (*husli*), bandura or *kobza*, *torban*, and *drymba* (Jews' harp); (b) bow instruments – *hudok* (three-string ancestor of the violin), violin (*skrypka*), and bass viol (*basolia*); (c) key and bow instruments – *lira*; and (d) string percussion instruments – dulcimer (*tsymbaly*); (2) wind instruments, which are subdivided into (a) free-reed instruments – *sopilka* (reed), *kuvytsi* or *svyryl*; (b) reed-pipe instruments – *duda* (bagpipe, also known as *koza*, *baran*, *mikh*, or *volynka*); and (c) woodwind instruments – *trembita*; and (3) percussion instruments, which are subdivided into (a) membranophones – drum (*bubon* or *taraban*), tambourine (*resheto*), and kettledrum (*tulumba* or *litavry*); and (b) idiophones – cymbals, bells, and rattles. The most popular instruments in Ukraine were the bandura, *sopilka*, violin, and dulcimer.

Folk musical instruments were used primarily at dances and for marching (eg, the wedding march), as accompaniment to popular plays (*koza*, *vertep*), or for simple listening enjoyment. Dance music (*metelytsia*, *hopak*, *tropak*, *kozachok*, *kolomyika*, *hutsulka*, *chabashka*, *verkhovynka*, *shumka*, etc) was often played by one instrument (usually the violin) or by a small ensemble (violin and drum). *Vertep* performances were accompanied by single instruments or ensembles consisting of some combination of the violin, bandura, dulcimer, drum, and *sopilka*. Strings formed the basis of an ensemble. The classic folk ensemble known as **troisti muzyky* originated probably in the 17th century and consisted of a violin, drum, and dulcimer or bass viol. About the same time manorial orchestras appeared. They eventually played for the peasants and survived to the beginning of the 20th century in the form of an ensemble of two violins, bass, and flute. In Polisia and Podilia (and before that in other regions) brass orchestras were

popular. Imitating military and earlier Cossack bands, they consisted of two to three trumpets (cornets), clarinets, two alto horns, a tenor horn, a baritone, drum, and brass cymbals. Since the 1950s ensembles and orchestras of folk instruments have been gradually disappearing from daily life. Instead, amateur and professional folk-instrument orchestras under the direction of qualified conductors have been organized. Instrumental folk music has been used as a source of material by composers of symphonies, operas, and ballets.

Folk oral literature. The sum of oral works, both poetry and prose, which are produced usually by anonymous authors and are preserved in the people's memory for a long time by being passed on orally from generation to generation. Ukrainian folk oral literature has its distinctive artistic qualities, its unique poetic devices – metaphors, similes, epithets, and symbolism. The poetic folk literature consists mostly of songs, which are subdivided into various genres: ritual songs (spring songs, including *vesnianky* and *hahilky*, carols, *shchedrivky*, Kupalo songs, harvest songs, wedding and funeral songs), historical dumas, and lyrical and dance songs. Folk prose can be divided into fables, fairy tales, stories, legends, anecdotes, and others. Poetic-prose folk literature consists of spells, proverbs, sayings, and riddles.

In the 19th century the works of folk oral literature were held to be the products of a collective popular mind. Contemporary folklorists favor the theory that individuals are the creators of the oral tradition. In the basic examples of ancient folk oral literature, however, the words are associated with ritual actions and the verbal text and ritual actions always have a practical, vital purpose. This delimits the creative impulse of the performer. The basic changes that occur in the works of the oral tradition are caused by their dissociation from the original ritual contexts in which they arose. The verbally conveyed image that is divorced from the ritual loses its original practical motivation and either becomes forgotten or else acquires a new motivation, becomes accepted, and begins a new life. Thus, with the coming of Christianity and the church's rejection of folk literature, customs, and rites as pagan relics, folk oral literature nevertheless managed to retain its vitality and to absorb the influences of medieval written literature. Already beginning with the Renaissance and baroque periods there was a constant interchange between oral and written literature. Mixed folklore-literary genres of the baroque appeared – for example, the interludes (*intermedii*), through which Christmas, Easter, satirical, and parodic verse passed into

folklore. The populist movement of the 19th century declared folk oral tradition as the norm and canon for all literature, while literature of the 19th and the beginning of the 20th century systematically grew closer to the folk roots by absorbing certain elements of the language, genres, and content of the folk tradition.

The main genres of traditional folk literature continue to exist under the Soviet regime. After decades in which the Soviets struggled against certain forms of folk oral literature that were viewed as 'religious vestiges' and attempted to create artificially a so-called Soviet folklore, the old carols, spring songs, Easter songs, harvest songs, and wedding songs continue to constitute the most important part of the oral literature among the peasantry of the collective farms. They are also promoted by the nationally conscious intelligentsia. The Soviet authorities try to take advantage of this fact in creating so-called Soviet rites, usually by replacing old song lyrics with new ones dealing mostly with life on the collective farm or in the industrial city. The artificial 'Soviet folklore' is restricted to such themes as the glorification of Lenin and the Party, the building of communism, the victories of Soviet arms, and the heroes of labor. A good deal of attention is devoted in Soviet publications on folklore to 'anti-religious folk literature.' Examples of the very popular folk humor and satire aimed against the regime are never published. The same is true of the rich folk materials that are created in the prisons and concentration camps of the USSR.

Since 1957 conditions for ethnographic-folklore research have become somewhat easier, and some ethnographers and folklorists have taken advantage of the situation to collect various forms of oral literature, even those that were previously forbidden. Only a small part of the collected materials has been published – *Pisni Iavdokhy Zuikhy* (The Songs of Yavdokha Zuikha), for example – and most of the materials are preserved in the manuscript holdings and catalogues of the Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR. (See also *Folklore.)

Folk songs. The song is one of the oldest and most prevalent forms of folklore. It unites a poetic text with a melody. The poetic imagery determines the character and emotive quality of the melody. Songs usually have a well-defined strophic structure: all stanzas are set to the same melody as the first stanza. Each stanza is often followed by a refrain. Folk songs are usually monodic choral songs, but Ukrainian folk songs are exceptional for their rich polyphony. The folk songs express the common experience of the Ukrainian people: all the important events in life from the cradle to the grave are accompanied by song.

By their content and function folk songs can be divided

into four basic groups: (1) ritual songs, such as *carols (*koliady* and *shchedrivky*), spring songs, songs about nymphs (*rusalni*), and Kupalo songs; (2) harvest and wedding songs; (3) historical and political songs, such as *dumas and ballads; and (4) lyrical songs, such as family songs, social class songs, and love songs. *Chumak songs, conscripts' songs, wanderers' songs, and cradle songs belong to separate groups. Together these genres of folk song encompass the variegated life of the Ukrainian people. The universal content and the artful clarity of expression of Ukrainian folk songs account for their survival for many centuries. In many songs – historical, social – the epic and lyrical elements form an organic unity.

In Ukrainian folk songs nature manifests human emotions. Poetic parallelism is one of the oldest devices of the lyrical song. In later songs the parallelism of contradiction is found. In lyrical songs poetic images or symbols are very common. Bird symbolism is very popular. The eagle or falcon is the symbol of manliness, power, beauty, courage, and freedom. The dove symbolizes femininity. The sea gull is the symbol of the suffering mother. Many symbols are derived from the plant world, for example, the guelder-rose tree represents the girl, and the oak represents the boy. In songs similes predominate: a girl is compared to a star, a red guelder-rose tree, a pine tree, and a poppy; a boy is compared to an oak, a maple, and a pigeon. Favorite tropes of the Ukrainian folk song include the standard epithet, repetition, antithesis, hyperbole, and metaphor. A vehicle often employed in lyrical songs to express emotion is the dramatic dialogue. In some folk songs assonance, alliteration, and onomatopoeia are also used.

Folk songs have provided inspiration for many Ukrainian composers, such as S. *Hulak-Artemovskyy, M. *Arkas, M. *Lysenko, M. *Leontovych, S. *Liudkevych, K. *Stetsenko, Ya. *Stepovy, and H. *Maiboroda. The famous Russian composers P. Tchaikovsky, M. Glinka, M. Moussorgsky, N. Rimsky-Korsakov, and S. Rachmaninoff collected, arranged, and used Ukrainian folk melodies widely in their works.

Folklore. In Ukrainian folklore scholarship there is an overwhelming tendency to equate folklore with folk oral literature. In this discipline folk tales (tales of magic, animal tales, legends, anecdotes, etc), folk songs (ritual and non-ritual songs), and items of the minor verbal genres (proverbs and riddles) are collected and studied. Some of the above (animal tales, some songs and games, and certain types of proverbs and riddles) are children's folklore. Oral literature consists of variant texts whose authorship is unknown, the texts being passed along by

word of mouth and in the process changed to some degree by each performer (storyteller, singer, etc).

Pre-Christian Ukrainian folk customs and rites have been described in Arabic and Byzantine sources. Other documentation of Ukrainian folklore is found in the earliest of literary monuments in Ukraine (ie, in the *chronicles and **Slovo o polku Ihorevi*), where instances of folk prose, proverbs, and ritual songs can be found. Christianity introduced into Ukraine not only dogma but also apocryphal and classical folklore traditions. (See *apocryphal literature.)

S. Sarnicki, describing the war with the Wallachians (1506), mentions Ukrainian *dumas (an epic folk-song genre). Ukrainian laments are mentioned in the writings (1551) of J. Menecius and in the poem 'Roxolania' (1582) by S. Klonowicz. The 'Song of Shtefan the Voivode' has been preserved from the middle of the 16th century in the Czech grammar of J. Blahoslav of 1571. From the 17th century on, the amount of recorded folklore material increases. M. *Vozniak published, from a 17th-century collection, the oldest record of a *duma* text (the duel between a Cossack and a Tatar). A Polish pamphlet (1625) by J. Dzwonowski contains a popular song 'Cossack Plakhta.' Ukrainian songs are also found in manuscripts and printed songbooks of the 18th century.

The first systematic recording and publication of Ukrainian oral folklore took place at the beginning of the 19th century. Several collections appeared: N. *Tsertelev's *Opyt sobraniia starinnykh malorossiiskikh pesen* (An Attempt at a Collection of Ancient Little Russian Songs, 1819), M. *Maksymovych's *Malorossiiskie pesni* (Little Russian Songs, 1827), and other collections published in 1834 and in 1849. In the 1830s I. *Sreznevsky published a six-volume collection, **Zaporozhskaia starina* (Zaporozhian Antiquity), containing mainly *dumas* and historical songs with commentaries. In 1836 P. Lukashevych published *Malorossiiskie i chervonorusskie narodnye dumy i pesni* (Little Russian and Red Ruthenian Folk Dumas and Songs), containing material from both central and western Ukrainian territories. F. Bodiansky also collected songs during this period (1830–50), although some of his collections have only recently been published – *Ukrainski narodni pisni v zapysakh Osypa ta Fedora Bodians'kykh* (Ukrainian Folk Songs Transcribed by Osyp and Fedir Bodiansky, 1978). O. *Bodiansky was also active as a publisher, critic, and editor of Slavic folklore publications. In Western Ukraine M. Shashkevych, Ya. *Holovatsky, and I. Vahylevych collected oral literature in the 1830s. Holovatsky continued collecting and publishing into the second half of the century. His three-volume collection of Ukrainian folksongs, *Narodnye pesni Galitskoi i Ugorskoi Rusi* (Folk Songs of Galician and Hungarian Ruthenia, 1878), is his greatest publication.

The historian M. *Kostomarov wrote a dissertation – *Ob istoricheskom znachenii russkoi narodnoi poezii* (On the Historical Significance of Russian Folk Poetry, 1843) – and several articles on the historical aspects of Ukrainian folk songs. The main contribution to Ukrainian folklore by the author and poet P. *Kulish is the two-volume collection *Zapiski o Iuzhnoi Rusi* (Notes on Southern Rus', 1856–7), which provides not only texts but also annotations about the informants (a basic stipulation for modern folklore collecting). Kulish's 'Pohliad na usnu slovesnist' ukrains'ku' (A View on Ukrainian Oral Literature, *Pravda*, 1870) illustrates the romantic-populist interpretation of

folklore. The best 19th-century Ukrainian proverb collection was published by M. Nomys in 1864 as *Ukrains'ki prykazky, prysliv'ia ta inshe* (Ukrainian Proverbs, Sayings, Etc).

The largest organized folklore collecting in Ukrainian territories under Russia in the 19th century took place under the leadership of P. *Chubynsky. The seven-volume publication that appeared between 1872 and 1878 contains texts on various aspects of folklore and folkways: tales, proverbs, songs, beliefs, calendric and other folk rituals and customs, as well as dialects and observations on the national minorities in Ukraine. The Chubynsky collections were a great stimulus for further folklore scholarship. M. *Drahomanov adhered to the theory of type and motif borrowing in folklore. He edited several collections of folk prose as well as of historical and political folk songs. The philologist O. *Potebnia analyzed folk songs with regard to customs, beliefs, and symbols. Two other philologists – M. *Sumtsov and B. *Hrinchenko – contributed greatly to the study and publication of Ukrainian folklore material at the turn of the century. Sumtsov wrote a number of short articles and longer studies on a variety of folklore topics (wedding and calendric customs, apocryphal tales, *bylyny*, *dumas*, incantations). His synthesis of Ukrainian ethnography, *Sovremennaia malorusskaia etnografiia* (Contemporary Little Russian Ethnography, 2 vols, 1893, 1897), is also important. Hrinchenko published collections of folk prose and the first bibliography of Ukrainian folklore, *Literatura ukrainskogo fol'klora (1777–1900)* (The Literature of Ukrainian Folklore [1777–1900], 1901).

The turn of the century saw an impressive number of folklore collections and studies from Western Ukraine. The Shevchenko Scientific Society started publishing ethnographic collections and established a separate *Ethnographic Commission. Its work centered around the two serials *Etnohrafichnyi zbirnyk*, which consisted of 40 volumes of annotated texts of oral folklore genres, and *Materialy do ukrains'koi etnologii*, consisting of 22 volumes of works with an anthropological direction. Two outstanding members of the commission were I. *Franko and V. *Hnatiuk. Franko wrote numerous articles on oral folklore, but his greatest contribution to Ukrainian folklore remains his six-volume edition of Ukrainian proverbs, *Halys'ko-rus'ki narodni prypovidky* (Galician-Ruthenian Folk Proverbs), published as part of *Etnohrafichnyi zbirnyk*. The most productive ethnographer and folklorist of this period was V. Hnatiuk. He was responsible for the publication of most of the volumes of *Etnohrafichnyi zbirnyk*, contributing on a variety of folklore genres as editor, collaborator, collector, and critic. One of his singular achievements is the six-volume *Etnohrafichni materialy z Uhors'koi Rusy* (Ethnographic Materials from Hungarian Ruthenia). His publication (together with P. Tarasevsky) *Das Geschlechtsleben des ukrainischen Bauernvolkes in 1909–10* is also noteworthy.

In the interwar period there was a lull in folklore studies in Western Ukraine in comparison with the days prior to the First World War. In contrast, the twenties were marked by an explosion of activity in Soviet Ukraine exemplified by the growth of a multitude of commissions, museums, societies, committees, and institutes. These activities came to almost a complete halt in the thirties. In Western Ukraine the outstanding folklorist of the period was the musicologist F. *Kolessa, who had published before the First World War; he continued his work on a

variety of musical genres and regional music, wrote encyclopedia articles, and published the first Ukrainian school text (an introduction and a reader) devoted solely to oral folklore, *Ukraïns'ka usna slovesnist'* (Ukrainian Oral Literature, 1938). A contemporary of Kolessa's was the literary scholar M. *Vozniak, who published a number of manuscripts containing folk songs and dumas from the 17th and 18th centuries.

The historian M. *Hrushevsky, who as president of the Shevchenko Scientific Society in the period before the First World War had published the first two volumes of *Etnohrafichnyi zbirnyk*, continued his work in the Ukrainian SSR. Parts of his *Istoriia Ukraïns'koi literatury* (History of Ukrainian Literature) are valuable in Ukrainian oral folklore studies. His daughter, K. *Hrushevska, published a two-volume collection of the duma genre. Another musicologist of note was K. *Kvitka, whose publications are numerous. His collection *Ukraïns'ki narodni melodii* (Ukrainian Folk Melodies, 1922), containing over 700 melodies of various genres of Ukrainian folk songs, is still an important source for Ukrainian musicologists. Of the prose collections published in this period, only M. Levchenko's *Kazky ta opovidannia z Podillia v zapysakh 1850–1860kh rr.* (Folk Tales and Stories from Podilia Transcribed in the 1850s and 1860s, 1928), containing collections made by A. Dymynsky and S. Rudansky, is of any importance. The leading ethnographic journal was *Etnohrafichnyi visnyk* (1925–32), and the most complete bibliography up to 1916 was published by O. Andriievsky (1930).

The years after the Second World War have meant a renewal of folklore activity in Soviet Ukraine. This activity revolves particularly around the bimonthly periodical *Narodna tvorchist' ta etnografia* and the planned 50-volume series *Narodna tvorchist'* (Folk Creativity). When completed, the latter should provide a rich collection of Ukrainian oral folklore genres. (See also *Ethnography.)

Folvarochny, Vasyl [Fol'varočnyj, Vasyl'] b 30 January 1941 in the village of Napadivka, Ternopil oblast. Poet, prose writer, playwright. Folvarochny graduated from Lviv University in 1963. In 1976 he was appointed executive secretary of the Chernivtsi branch of the Writers' Union of Ukraine. Extremely prolific, he has published numerous poetry collections: *Tryvoha* (Alarm, 1966), *Rostut' syny* (The Sons Are Growing, 1967), *Dosvitok* (The Dawn, 1968), and *Uroky virnosti* (Lessons in Fidelity, 1975); documentary novels: *Sontse v zernyni* (The Sun in the Seed, 1972), *Tsiliushchi dzhherela* (Curative Springs, 1975), and *Pid znakom braterstva* (Under the Sign of Brotherhood, 1975); and a number of plays: *Skladna hama* (The Complex Scale, 1968), *Druhe tsvitinnia* (The

Second Blossoming, 1969), *Zhyva voda* (Living Water, 1974), *Ne prospaty rosy* (Not to Oversleep the Dew, 1976), *Zori otchoho kraiu* (Stars of the Father's Country, 1978), and *Vesniana muzyka* (Spring Music, 1979).

Folys, Yosyp, 1862–1917. Galician community and political leader, Greek Catholic priest and parish priest of Sknyliv near Lviv. Folys was a political organizer in the Lviv region, and in 1907 became a deputy to the Austrian parliament. He sat on the National Committee of the National Democratic Party. Folys was a patron of Ukrainian national causes, to which he bequeathed his estate.

Fomenko, Mykola, b 25 December 1894 in Rostov-na-Donu, d 8 October 1961 in New York. Composer, pianist, music critic, pedagogue. Fomenko graduated from the Kharkiv Conservatory in 1929 in the class of P. Lutsenko and S. Bohatyrov. Later he lectured at the conservatory. He gave concerts with K. Bohuslavsky. In 1951 he settled in New York and taught at the Ukrainian Musical Institute in America. Fomenko's main works are the operas *Marusia Bohuslavka*, *Hanna* (unfinished), and the operatale *Ivasyk-Telesyk*; two symphonies, a poem, and three suites for orchestra; a piano concerto; compositions for the piano, violin, and cello; vocal solos to the words of T. Shevchenko, I. Franko, P. Tychna, and Ya. Slavutych; children's songs; and choir music.

Fomin, Ivan, b 3 February 1872 in Orel, Russia, d 12 July 1936. Russian architect, academician of the St Petersburg Academy of Arts from 1915. Fomin was the architect of buildings in St Petersburg, the Crimea, and Podilia. In particular, his design of an estate in Khmilnyk (1911–15) was an attempt to return to the Russian classical style. Fomin participated in the competition for the construction of the Government Square and the Contract Fairs Building in Kiev (1936) and of the Land Bank in Odessa. With P. Abrasymov he designed the building of the Council of Ministers of the Ukrainian SSR (1934–7).

Mykola Fomenko

Oleksander Fomin

Fomin, Oleksander, b 14 May 1869 in Yermolovka, Saratov gubernia, Russia, d 16 October 1935 in Kiev. Prominent botanist, full member of the Academy of Sciences of the Ukrainian SSR from 1921. After graduating from Moscow University in 1893 he worked at Yuriev (Tartu) University and from 1901 in Tbilisi, where he directed a botanical garden. From 1914 to 1927 he was a professor

at Kiev University. He became the director of the botanical cabinet and herbarium of the Academy of Sciences of the Ukrainian SSR in 1921 and the director of the chair of botany at the Kiev Botanical Garden in 1922. In 1931 he became the director of the Institute of Botany of the Ukrainian Academy of Sciences. In 1924 he founded the journal *Visnyk Kyivs'koho botanichnoho sadu*. Fomin's publications deal with plant morphology, systematics, and the flora of Caucasia, Siberia, the Far East, and Ukraine. He was the first to map out the botanical regions of Ukraine and to investigate systematically the sporogenous plants of Ukraine. He studied the sphagnum mosses and ferns of the Kiev and Kharkiv regions. He participated in the publication of the monumental *Flora URSR* (Flora of the Ukrainian SSR), writing the first volume himself.

Fomin, Yevhen, b 27 December 1910 in Kakhivka, d 5 November 1942 in Kiev. Poet. Fomin studied at the Kharkiv Institute of People's Education and moved to Kiev in 1935. During the Second World War he worked as a newspaper correspondent at the front. In the summer of 1942 he was taken prisoner by the Germans and tortured to death by the Gestapo. Fomin started writing poetry in the mid-1920s and became a member of the literary organization Molodniak. His publications include poetry collections: *Poezii* (Poems, 1927), *Zasidannia heroiv* (A Meeting of Heroes, 1932), *Liryka* (Lyric Poetry, 1938), *Krov za krov* (Blood for Blood, 1942); the long poem *Trypil's'ka trahediia* (Trypilian Tragedy, 1929); a children's story, *Ivasyk Telesyk* (co-authored with A. Shyian, 1941); and the posthumously published *Vybrane* (Selections, 1956, 1958, 1963).

Food industry. The food industry in Ukraine consists of over 40 different branches: these include the *flour-milling, *sugar, *liquor and spirits distilling, *brewing, *confectionery, *dairy, *fishing, *meat-processing, *starch-and-syrup, *wine-making, *canning, *salt, and *fruit-and-vegetable-processing industries. Besides processed foods, the industry also produces fertilizer, animal feed, tobacco, cosmetics, and soap products.

To 1913. Until the beginning of the 19th century, food products were produced in Ukraine by cottage industries. Food-processing factories or plants began to appear in Ukraine only in the second half of the 19th century. Only sugar refineries existed before then: in 1824 the first sugar-refining plants were built in the villages of Makoshyne in Chernihiv gubernia and Troshchyna in Kiev gubernia. By 1848 Ukraine was producing 81.2 percent of the sugar of the Russian Empire. The growth in the urban population and particularly the expansion of large consumer centers and the building of railways favored the development of industrial flour milling, oil making, liquor distilling, and brewing. By 1913 the food industry was already one of the most developed branches of industry in Ukraine: it made up the largest proportion of large firms (51.7 percent) and was in second place in gross output (36.2 percent) and number of workers (169,000 or 45.7 percent). Most of the 150,000 enterprises of the food industry were still small and semidomestic. Only 1,635 were large (ie, with over 100 employees).

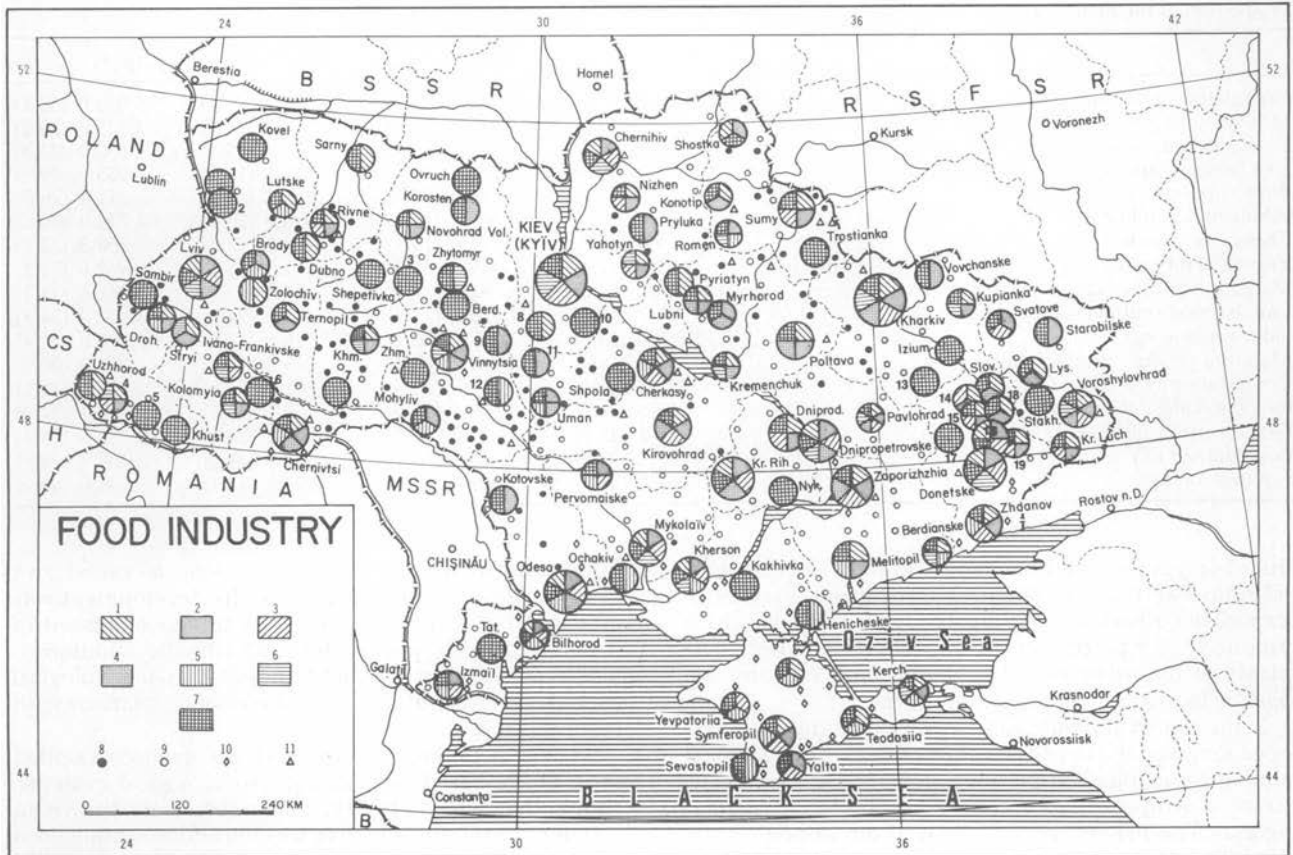

Among the branches of the food industry the sugar industry held first place: 203 sugar refineries in Ukraine (84 percent of the refineries in all of the Russian Empire) employed 130,000 workers (75 percent of the workers in

the food industry) and produced 56.1 percent of the output of the food industry. The first monopoly in Ukraine and in the Russian Empire – the *Syndicate of Sugar Manufacturers – emerged in the sugar industry. Second place was taken by flour milling, which accounted for 18.7 percent of the total output of the food industry. The branches producing liquor, vegetable oil, confectioneries, salt, and tobacco were less developed. Some branches were still at the domestic stage of development – bread baking, meat packing, and dairy-products making – or non-existent – margarine making, concentrate refining, mineral-water bottling. In 1913 the food industry in Ukraine produced over 100 different products. It produced 1,108,000 t of granulated sugar (81.3 percent of the empire's production), 15,900,000 DL of liquor (28.8 percent), 1,100,000 t of salt (53.6 percent), and 30,300,000 standard cans of food (26.4 percent). These products were sold not only in Ukraine but also throughout the Russian Empire. Some of the production was exported abroad.

The branches of the food industry were not evenly distributed, except for flour mills, which could be found throughout Ukraine. The sugar refineries and distilleries were concentrated mostly in Right-Bank Ukraine. The canneries were mostly in the south. Wine making was concentrated in the Odessa region, the Crimea, and Transcarpathia. Salt was mined in the Donbas, Subcarpathia, and Transcarpathia. Breweries, confectionery factories, and tobacco-processing plants were mostly in Kiev, Lviv, Kharkiv, Odessa, and Mykolaiv. The food industry was poorly developed in the Donbas and the Dnieper region.

1914–41. After suffering a drastic decline during the First World War, the revolution, and civil war (production in 1920 was only 17 percent of that in 1913), the food industry was rebuilt during the NEP period. In 1926 its production was worth one billion rubles, compared to 927 million in 1913. During the industrialization period of 1928–37 over one billion rubles were invested in new food-processing plants and the modernization of old plants. Not only were existing branches of the industry modernized, but new branches were established – butter making, bread baking, and margarine making – and production was concentrated. The number of plants was reduced to 69,100, which employed 287,000 workers in 1940. By then the gross production of the food industry was almost six times that of 1913, but the industry's share of total industrial production had fallen from 51.2 percent (in 1913) to 17.6 percent. The food industry now held second place among all industries, behind machine building and metalworking. By 1940 the relative size of sugar production had fallen to 14.2 percent of food production (56.1 percent in 1913), and liquor production to 2.1 percent (6.4 percent), while flour milling rose to 23.6 percent (18.7 percent), bread baking to 17.5 percent (0 percent), meat packing to 11.4 percent (0 percent), confectionery making to 8 percent (2.9 percent), and canning to 3 percent (0.6 percent).

Since 1941. The Second World War brought ruin to the food industry in Soviet Ukraine, from which it recovered only in 1952. At the end of the 1950s new branches of the food industry were established, producing milk concentrates and non-alcoholic beverages. In the last two decades the food industry has developed mainly through concentration and modernization of existing and new plants. From 1966 to 1975 alone over 140 new plants were

built and almost 730 were reconstructed. New branches, producing baby foods, dietetic foods, food acids, ferments, and mixed feed were developed. The rapid growth of the branches that process the production of animal husbandry have led to changes in the structure of the food industry: by 1975 the meat industry accounted for almost 23.5 percent of total food production (in 1940 it accounted for only 11.4 percent and in 1963 for 17 percent), dairy products accounted for 12.8 percent (previously 3 percent and 10.6 percent), and fish products accounted for 4.2 percent (previously 0.9 percent and 2.7 percent), for a total of 40.5 percent (15.3 percent and 30.3 percent). At the same time the share of the sugar, flour-milling, bread-baking, and liquor-distilling industries in the total food production declined. In 1976 the food industry accounted for almost a quarter of the total industrial production of the Ukrainian SSR (see the accompanying table). In 1976 there were almost 2,540

enterprises, the largest of them being the sugar-manufacturing complexes in Lohvytsia (largest in the USSR) and Pervomaiske, the sugar refineries in Sumy and Odessa, the meat-production complexes in Kiev and Dnipropetrovske, the oil-and-fat production complexes in Slovianske and Zaporizhia, the liquor-distilling complexes in Lohvytsia and Andrushivka, the canning complexes in Kherson and Symferopil, and the confectionery factories Svitoch in Lviv and K. Marx in Kiev. The food-processing firms in Ukraine are subordinated to the Union-republican ministries of the food, meat, dairy, and fishing industries. Ukraine exports sugar, confectioneries, sausages, liquor, salt, wines, and other items.

The food industry is well developed in all regions of Soviet Ukraine, although there are regional differences (see map). The sugar industry is concentrated in the beet-growing areas, mostly in Vinnytsia, Cherkasy, Khmelnytskyi, Kiev, and Poltava oblasts, which in 1977 pro-

Production of the main branches of the food industry in the Ukrainian SSR (percentage of USSR in parentheses)

	1940	1960	1970	1979
Granulated sugar (million kg)	1,580.0 (73.0)	3,877.0 (60.9)	5,973.2 (58.4)	5,935.0 (55.7)
Meat including subproducts of first category (million kg)	299.3 (19.9)	911.4 (20.7)	1,565.1 (23.3)	2,223.0 (23.2)
Sausages and smoked meats (million kg)	66.8 (16.5)	243.4 (18.0)	436.4 (19.1)	632.2 (23.3)
Fish, whales, and sea animals (million kg)	139.1 (9.9)	535.8 (15.1)	891.1 (10.8)	935.0 (9.9)

Macaroni products (million kg)	79.4 (24.4)	185.2 (18.4)	219.5 (18.5)	294.3 (20.0)
Confectioneries (million kg)	191.8 (24.1)	357.0 (20.5)	601.2 (20.8)	794.8 (21.1)
Raw ethyl alcohol (million dl)	26.5 (29.7)	38.7 (36.7)	56.4 (35.6)	66.1 (34.5)
Grape wine (million dl)	5.1 (25.9)	20.2 (26.0)	65.0 (24.2)	56.6 (19.2)
Beer (million dl)	27.2 (21.9)	52.2 (20.9)	90.0 (21.5)	138.8 (21.9)
Salt (million kg)	1,987.0 (45.2)	3,089.0 (46.1)	5,093.0 (41.1)	5,848.0 (40.9)

duced 54.5 percent of the sugar in Ukraine. The vegetable oil industry is concentrated in Dnipropetrovske, Odessa, Zaporizhia, Kharkiv, and Voroshylovhrad oblasts, which produced 68.7 percent of the vegetable oil in 1977. The plants of the other branches of the food industry are usually located in the consuming areas.

In the Kuban and Subcaucasia the food industry developed long ago and consists mainly of flour milling and oil and lard making. The principal centers are Krasnodar, Armavir, Kropotkin, Nevinnomysk, Stavropol, and Piatigorsk. The fishing industry is well developed on the Black and Azov sea coasts.

The food industry and its problems are studied by the following scientific research institutes (NDI): in Kiev by the NDI of the Sugar Industry, NDI of the Meat and Dairy Industry, NDI of the Spirits and Liquor Industry, and NDI of the Planning of Enterprises of the Food and Meat-Dairy Industry; in Odessa by the NDI for the Automation of Production Processes in the Food Industry, NDI of the Canning and Fruit-drying Industry, and NDI of Grape Growing and Wine Making; in Kharkiv by the NDI of the Food Industry and NDI of the Vegetable-oil and Animal-fat Industry; in Yalta, Kerch, and elsewhere. Qualified personnel for the food industry are trained at the Kiev Technological Institute of the Food Industry, the Odessa Institute of the Food and Refrigeration Industry, and the Odessa Technological Institute.

Foods, traditional. Ukrainian cuisine is varied and rich in taste and nutritional value. Its development was influenced by the same factors as the development of material culture: geography and climatic conditions, plant cultivation and animal domestication, technological change, cultural influences, and economic relations with other countries.

Since ancient times Ukrainians have practiced a settled form of life based on farming. Archeological evidence shows that wheat, barley, and millet were grown in Ukraine 3,000 years ago. Rye was introduced about 2,000 years ago, and then buckwheat was imported from Asia in the 11th century AD. Already at that time cattle, sheep, hogs, and poultry were raised. Beekeeping, hunting, and fishing were practiced. The exceptional fertility of Ukraine's soil and its climate were favorable to the development of agriculture, which had a marked influence on the type of food eaten by Ukrainians.

It is evident from the chronicles and other sources that even in Kievan Rus' food was choice, varied, and plentiful. There were professional cooks at princely courts and monasteries, and in the homes of wealthy families. Also, in the Cossack period, the officers, settled Cossacks, and well-to-do peasants enjoyed various delicacies. In the 19th and the early 20th century the culinary arts reached a high level of development, particularly in the homesteads and in the households of parish priests and the urban intelligentsia. Choice dishes were served primarily during the entertainment of guests. In time the new culinary art spread even to the villages. In general, Ukrainian cuisine does not differ from that of Western Europe, yet it has some distinctive features.

As a result of Ukraine's trade relations with other countries, the cultivation of new plants, particularly from eastern and central Asia (eg, melons and eggplants), was introduced into Ukraine. The potato reached Ukraine from America through Europe in the 17th century, followed by corn, tomatoes, pumpkins, beans, cayenne peppers, cocoa, and other plants. The introduction of these new products greatly enriched the variety of Ukrainian foods.

Since ancient times bread has held a special, primary position in the cuisine of the Ukrainian people. Long ago the grain for flour was ground manually between two rounded grindstones; such querns were still in use in

some places even in recent times. Then, beginning in the 13th century, water mills and windmills appeared. Today *floy milling is highly developed.

A single grinding produces whole-wheat flour, which retains all the constituents of wheat and is used in baking whole-wheat bread. As milling technology was improved, white flour was produced by repeated grinding and sifting. This type of flour is used in baking white-wheat bread or light-rye bread. In preparing rye bread the rising catalyst used is not yeast but a sourdough starter, which gives the product a more sour taste than that of wheat bread. In general sour rye bread is the common type of bread produced in Ukraine, except in the southern and southeastern regions, where white-wheat bread is more common. Besides ordinary bread Ukrainians bake various ritual breads from special doughs: the braided bread (*kalach*), Easter bread (*paska*), bread with a filling (*knysht*), wedding bread (*korovai*), sweet bread (*babka*), and egg bread (*bulka*). Many kinds of pastries are popular: turnovers, doughnuts, strudel, poppy-seed rolls, sweet buns, tortes, layered coffee cakes, honey cake, rolls, and cookies. Ukrainian bread with its many variations has become quite famous.

For the common people bread was an object of reverence; it was considered holy and a gift of Gōd. This is attested by the word for grain – *zbizhzhia* – meaning the totality of divinity. As a sacred object bread plays an important role in all Ukrainian folk customs. No significant family event can take place without it. Bread is used to bring divine blessings to the commencement of every farm task, the marriage ceremony, the birth of a child, and the move to a new home. Bread is also used at wakes to part with the dead. As a sign of hospitality, guests of honor at celebrations and public functions are greeted with a ceremonial offering of bread and salt. In the past even the preparation of the dough and the baking of the bread had their own ritual practices and were performed as mysterious, almost magical, acts. Today these rituals have lost their meaning but have been preserved in the folk tradition.

The ritual breads for Christmas, Easter, weddings, and funerals have their special names, shapes, recipes, symbolic meaning, and use. The Easter bread, which is brought to church to be blessed, is in Western Ukraine of low cylindrical shape and is decorated with dough ornaments, as is the sweet bread (*babka*), while in eastern Ukraine *paska* has a tall cylindrical form. A special dough is used for the *babka*, which is made with milk, butter, eggs, sugar, raisins, and, for flavoring, traces of saffron, vanilla, and lemon peel. Cheesecake, layered coffee cake, dainties (*khrusty*), tortes, and cookies are also prepared for the Easter festivities. The main ritual wedding bread (*korovai*) is made of a special, rich dough like that used for the *babka*. The *korovai* has a circular form and is intricately decorated with dough. There are also other kinds of wedding breads – *dyven*, *lezhen*, *shyshky*. There are various symbols, beliefs, and rituals, at one time strictly adhered to, connected with the *korovai*. For Christmas and for funerals Ukrainians bake the *kalach*, symbolizing eternity. For Sundays, feast days, or family celebrations they bake *pyrohy* (pies) made of leavened dough, or the smaller *pyrizhky*, a Ukrainian specialty filled with cheese, meat, cabbage, peas, buckwheat, mushroom, plum, or poppy seed. In the past beggars at church doors were given *pyrohy* or *knyshti* to pray for the souls of

the dead. For Maccabees' Day (14 August) special biscuits (*korzhi*) called *shulyky* were prepared and were served with honey and poppy seed. On the Eve of Epiphany (*Shchedryi Vechir*) the carollers were rewarded with pastries (*balabushky*) or pancakes (*oladky*). Other fancy baked goods include poppy-seed rolls, doughnuts, crescents, tortes, honey cakes, strudels (borrowed from Austria), dainties, and cookies.

Cooked or baked cereal – whether wheat, barley, buckwheat, millet, oat, or corn grits – is an ancient Ukrainian food. The most commonly eaten cereals are buckwheat (*kasha*), millet, and, in the Hutsul and Transcarpathian regions, cornmeal (*mamalyga* or *kulesha*). The same grits boiled in water or milk to produce a thin gruel is called *iushka*; a thicker gruel of millet is called *kulish* or *lemishka*. In recent times rice has been added to the list of cooked cereals.

There are also dishes prepared by boiling dough: *zatyryka* (pieces of dough dropped into boiling water or milk) and dumplings (*halushky*) made of wheat, buckwheat, or corn flour with or without the addition of potatoes or cheese. The favorite dish made of flour is filled dumplings (*varenyky*) with various types of filling: cheese, potato and cheese, cabbage, meat, fish, buckwheat, plum. A quick dish, *varenytsi*, made of rolled out dough cut into triangles, is also quite popular. Such dishes as *halushky*, *varenyky*, and *varenytsi* are served with fried bacon, fried onions, or sour cream. Noodles, made of egg dough, are also frequently used, served either with soup or separately with cheese. Some very old foods made of flour are *kvasha* (a sweet dish made of fermented buckwheat or rye flour), *lemishka* (a thick buckwheat gruel), and *salamakha* (a thin gruel of buckwheat or rye flour boiled in water). *Salamakha* and millet grits were the main dishes of the Zaporozhian Cossacks.

The potato is the most widely used vegetable in Ukrainian cooking. It is a necessary ingredient in all soups, particularly borsch and cabbage soup. Boiled or baked potatoes are served alone or with meat, fish, cheese, cabbage, mushrooms, and so on. Potato pancakes are served with cheese or sour cream. Certain dumplings and various types of filling for *varenyky* and *pyrizhky* are made with potatoes. Another important element in Ukrainian cooking is cabbage, particularly sauerkraut, which is used to make cabbage soup (*kapusniak*) or is served with meat, pea puree, or potatoes. Cabbage filling for *varenyky* and *pyrizhky* is also very popular. Fresh or pickled cabbage leaves are used in making cabbage rolls (*holubtsi*), which are filled with buckwheat or millet grits, rice, or meat. In the Hutsul region and Bukovyna, *holubtsi* are made of soured yeast dough and are baked in sour cream. Other vegetables such as onions, garlic, carrots, turnips, radishes, and cucumbers are frequently eaten raw. Sunflower and pumpkin seeds are usually dry-fried. Cucumbers, cabbage (whole or sliced), tomatoes, and beets (for sour borsch) are pickled for the winter.

Quite popular are dishes of pea or bean purees, seasoned with garlic or fried bacon. A similar dish made with oil instead of bacon is served during the Christmas Eve supper. Orach or spinach is also seasoned this way. Tomatoes are used as cold appetizers in sauces and as an ingredient in borsch. In recent times the eggplant has been cultivated in Ukraine. It is used in the preparation of *ikra*, a cold appetizer, or is served hot, fried, or stuffed. Mushrooms – boletus, meadow mush-

rooms, honey mushrooms, chanterelles, milk fungi – are an essential ingredient in many dishes. Certain varieties of the mushroom (boleti, meadow mushrooms) are dried for winter; others (milk fungi and honey mushrooms) are marinated or pickled.

In the Ukrainian tradition a soup or borsch must be served with dinner. Various soups – made with meat, fish, vegetables, fruit, or milk – are popular, but borsch remains the favorite. It is made of vegetables, among which beets and cabbage are predominant, and meat or fish stock. There is also a meatless (Christmas) borsch consisting of various vegetables cooked in water and soured with sour beets or some other souring agent. Borsch is served with sour cream and *pyrizhky* or rye bread. There are many varieties of borsch depending on the locality, the ingredients used, and the season; these include sorrel borsch, spring borsch, cold borsch, and clear borsch (bouillon).

Meat is usually eaten on feast days, Sundays, or at family celebrations. The most popular meat is pork and its products, such as ham, sausage (*kovbasa*), blood sausage (*kyshka*), head cheese (*saltsezon*), smoked bacon, and salt pork. Meat is often ground to make patties (*sichenyky*), or is boiled or fried and served with potatoes, cabbage, buckwheat grits, or mushrooms. Sometimes it is stuffed. Veal is rarely served. In southern Ukraine lamb is popular. Neither raw meat nor horse meat is consumed. A lot of poultry is prepared, particularly chicken, baked in sour cream, stuffed, roasted, fried, or cooked for soup. Fish is fried, poached, or baked with stuffing. Jellied fish is popular, and fish stock is used in making borsch or soup. Cold appetizers are made from salted herring. Fish is one of the basic dishes of the Christmas supper.

Foods prepared with milk, dairy products, and eggs have long been a part of Ukrainian cooking. Gruels, noodles, little dumplings (*shchypantsi*), and *zatyрка* are boiled in milk. Soured milk is a favorite drink throughout Ukraine; a variant of this is *huslianka* or *riazhanka*, made by souring boiled milk with sour cream. Cottage cheese is eaten mixed with sour cream, as a filling in *varenyky* and *pyrizhky*, or with noodles, dumplings, potatoes, and *kasha*. It is also used in baking cheesecake. A salty cheese from sheep's milk known as *budz* or *bryndzia* is made in the Hutsul region and Bukovyna.

Fruits and berries, when in season, are eaten fresh or made into custards (*kysil*, *khokolodets*) and compotes. Some fruits are prepared for winter by drying or preserving. The most popular dishes made from either fresh or dried fruit are *uzvar*, a compote, and *kysil*, a custard. Plum butter is made from plums; apples are preserved.

Salt pork, sunflower, flax, and hemp oils, and butter are the common cooking fats. Local herbs such as chives, thyme, celery leaves, garlic, dill, caraway seeds, and parsley, and imported spices such as pepper, cinnamon, bay leaves, and cloves, are used for seasoning.

Bread *kyvas* (or *syrivets*), fruit or cucumber broth, and birch sap (in the spring) are popular folk beverages in Ukraine. Tea is the most widely consumed hot beverage, followed by coffee and cocoa. Alcoholic beverages such as mead, wine, fruit liqueurs (*nalyvka*), herb-flavored alcohol (*zapikanka*), alcohol with pepper (*horilka z per-tsem*), and beer have been popular for many centuries.

Special dishes that are prepared for such feasts as Christmas Eve supper, Christmas, Easter, church holidays, and wakes differ from everyday foods. The Christ-

mas Eve supper is rich in meatless dishes (see *Christmas). On Christmas Day, New Year's Day, and Epiphany, however, roasts, fried sausages, cabbage rolls, jellied meats (*studenets*), and borsch are served. On Easter morning, after the liturgy and the blessing of the *paska* and other staples, everyone returns home to feast on the eggs, cold meats, and other foods that were blessed at church (see *Easter.) On church holidays and at weddings relatives and guests are treated to an abundance of local delicacies. The *kalach* is prominent at burials and wakes. *Kolyvo*, a dish dating from pagan times and consisting of boiled wheat or barley with honey, is inseparable from the burial rituals. It symbolizes the resurrection of the dead: just as the kernels of wheat must be buried to produce new plants, so the corpse of the dead person must be interred to be resurrected.

There are significant regional variations in Ukrainian cuisine that resulted from the availability of different agricultural products, foreign influences, or even the conservatism of the common people in regard to change. Not only is there a distinctive Poltava, Galician, or Kiev borsch, but there are whole regional cuisines such as the Bukovynian, Transcarpathian, Volhynian, Dnieper, and Slobidska Ukrainian. Relatively little change in the nature of the local diet took place among the mountain peoples and in Polisia. The diet there is also poorer than in other regions. Today regional differences in the diet are disappearing under the influence of popular culinary literature; courses in cooking that, since the turn of the century, have been a part of public education in the countryside, particularly in Western Ukraine; and, most important, of semiprepared and prepared foods produced by the food industry. The food consumed by different socioeconomic classes differs in nutritional value and caloric content. The foods described above were characteristic of the middle classes and to some extent of the well-to-do peasants. The diet of the majority of Ukrainian peasants and workers, however, was of a lower standard. In Soviet Ukraine most clerical workers, students, and factory workers lunch in cafeterias and restaurants, where the food is now standardized.

Ukrainian cooking has been influenced by Turkish and Tatar, Russian, Polish, Hungarian, and Rumanian-Moldavian cooking. At the same time Ukrainian foods, particularly borsch, *varenyky*, and *holubtsi*, have become popular among Ukraine's neighbors.

Ukrainians in the diaspora have preserved Ukrainian cooking as part of their cultural heritage. This is particularly true of their festive or ritual foods.

Footwear. No examples of prehistoric footwear have been preserved in Ukraine, although a type of shoe extending above the ankle is represented on the Trypilian clay female figurines unearthed at the Koshylivtsi settlement. During the Middle Ages Ukrainians wore linen foot-cloths (*onuchi*) or woolen socks (*kopyttsia*), which were manufactured by the monks of the Kievan Cave Monastery, and, over these, shoes (*chereviiie*), cut from

one piece of soft belly hide, or boots (*sapohy*), made of better leather and reinforced with metal heel clips. In the villages of the northern forest belt the peasants wore bast shoes (*lychaky*) instead of boots. The upper classes wore red or green boots made of kid leather (*sapiantsi*) and sewn with gold thread. The shoes of upper-class ladies were decorated with golden thread. In the Cossack period the footwear of wealthy individuals was particularly ornate, perhaps because of Eastern influences.

Until recent times Ukrainian peasants, men and women, wore almost identical linen or woolen foot-cloths. Sometimes woven wool socks were worn (eg. *kapchuri* among the Hutsuls), some decorated with designs. In Galicia, the town of Uhniv was known for the manufacture of archaic footwear. In Polisia the primitive bast shoes continued to be worn until the 20th century. The bast shoes and the popular heavy shoes (*postoly*, *khodaky*) made of thick hide were homemade. In the second half of the 19th century the peasants began to order boots from the local shoemakers or more frequently purchased them at markets and fairs. With time they began purchasing women's shoes as well, and the form of these shoes changed to resemble the West European form (shoes on high heels). With industrial development in the 19th century, the population of the cities and towns to a large extent abandoned traditional dress and footwear and began to use factory-made footwear. After the revolution urban-type footwear, manufactured by small craftsmen and in factories, displaced the old, indigenous footwear among the peasants, but supplies were so short that peasant women and children continued to go barefoot.

Ya. Pasternak

Footwear industry. A branch of *light industry that manufactures various types of footwear. Until the second half of the 19th century *footwear was manufactured by individual shoemakers and by small enterprises, which, up to the Revolution of 1917, satisfied 90 percent of the demand for footwear. The first footwear factory in Ukraine was opened in Kiev in 1867. By 1903 there were 13 small and 3 large factories of military clothing that produced footwear. They were located in such cities as Kiev, Kharkiv, Vinnytsia, Katerynoslav, Mykolaiv, Bakhmut, and Kherson. In Left-Bank Ukraine the footwear cottage industry was well developed in certain villages and towns such as Reshetylivka, Smile, Okhtyrka, Kotelne, Berezne, Klymiv, Semenivka, Borzna, Ichnia, and Myropillia where family enterprises were common. Mass production of footwear by factories began only in the 1920s when leather-substitute (synthetic leather) plants were set up in Odessa and a rubber-regeneration plant was built in Kiev. During the interwar period old factories were restored and new ones were built mostly in Kiev (where the No. 4 Footwear Factory is one of the largest in the USSR) and in Kharkiv (No. 5 Footwear Factory). Together these two factories accounted for 60 percent of Ukraine's production. Odessa produced over 10 percent of the footwear manufactured in Ukraine. Smaller footwear factories were established in Dnipropetrovske, Poltava, Chernihiv, Romen, Artemivske, Mykolaiv, Lviv, and Stryi. Artels of manufacturing co-operatives in Soviet Ukraine also produced footwear. During the Second World War 20 footwear factories were evacuated to the east and were rebuilt after 1944. By 1954 the footwear industry of Ukraine reached the prewar

production level. New factories were built after the war in Luhanske and Vasylivka (Zaporizhia oblast), and new leather-footwear enterprises were organized in Ivano-Frankivske and Symferopil. In 1961 the Lviv factory was expanded into the Prohres footwear complex. By 1968 the Ministry of Light Industry of the Ukrainian SSR was in charge of 44 footwear enterprises, including 7 larger manufacturing complexes. The production process has been mechanized extensively.

The production of leather footwear grew as follows (in millions of pairs): 8.0 in 1913, 12.6 in 1928, 40.7 (or 18 percent of the USSR production) in 1940, 3.8 in 1945, 43.8 in 1955, 148.9 in 1970, and 175.2 in 1981. Of the footwear produced in Ukraine 53 percent has leather uppers, 20.6 percent has leather soles, and the rest is made of leather substitutes. Ukraine accounts for over 22 percent of the USSR production of footwear and produces 3.5 pairs of footwear per capita (compared to 2.8 for the USSR). Yet footwear of better quality is imported by Ukraine from other Soviet republics or from abroad.

The problems of footwear manufacturing are studied by the Scientific Research Institute of the Leather-Footwear Industry in Kiev.

B. Wynar

Forced labor. Forced labor can take two forms: (1) a socioeconomic institution, or (2) an institution of criminal law. In the first form forced labor was known in Ukraine as slavery, *corvée*, or serfdom. In recent times, after Ukraine's occupation by the Bolsheviks, forced labor was used under War Communism in the form of labor armies (*trudo-armii*). There were attempts to set up labor armies during the Second World War and in the first few months after the war. At first the introduction of the Five-Year Plan in 1929 had no influence on the labor market. A revival of forced labor came at the end of the 1930s. The decree of 2 October 1940 'On State Labor Reserves' gave the government the power to 'mobilize' 800,000–1,000,000 teenagers between the ages of 14 and 17 each year for training in various types of professional schools. Graduates of these schools were held to be 'mobilized and obligated to serve for four consecutive years in state enterprises under the instructions of the Chief Administration of Labor Reserves of the Council of People's Commissars of the USSR.' This decree was abrogated only on 18 March 1955. The decree of 26 June 1940 prohibited anyone from changing his/her place of work without official approval and made violations punishable by imprisonment. The application of this decree was eased by the decree of 14 July 1951. Similar decrees were issued on 17 July 1940 – 'On Prohibiting the Free Abandonment of Work by Tractor Drivers and Combine Operators Working for Machine Tractor Stations' – and on 19 October 1940 – 'On the Obligatory Transfer of Engineers, Technicians, Skilled Tradesmen, Office Workers, and Qualified Workers from Enterprises and Institutions.' Both decrees were revoked on 13 November 1952. Although the government in the 1950s did not favor direct coercion, the CC of the CPSU found a new way to compel people to work by means of civic organizations – the public summons (*obshchestvennyi prizyv*). Resistance was met with civic influence that was tantamount to administrative coercion to work. On 4 May 1961 the decree against the so-called parasites (*tuneiadtsy*) was issued; after N. Khrushchev's fall it was changed several times.

Today this decree is applied with great severity. Instead of force, material incentives to work have gained some favor. Still in force is the principle that graduates of secondary and higher trade and professional schools are obligated to reimburse the state with three years of work in firms or institutions designated by the government.

For a long time forced labor was the basis of the collective-farm system. Members of collective farms were forbidden to have internal passports, and this made it impossible for them to leave the farms and to take up work in industry. The peasants were thus tied to the farms, which they could leave only with the permission of the farm chairman. A quota of work days was imposed on collective-farm members. Those who failed to meet the quota were penalized in various ways. The new passport system introduced in 1976 made provisions for passports for collective farmers, but so far this part of the law has not been put into effect. Although conditions within collective farms have been liberalized, members can leave the farms only by permission.

Forced labor as a form of criminal punishment has been practiced in Ukraine and around the world since the times of slavery and serfdom. The courts of princes and nobles punished various crimes with limited or unlimited forced labor. Forced labor was used in the Russian Empire as a form of political repression. Peter I, for example, exiled the Cossacks who supported I. Mazepa and used them to build St Petersburg, where most of them perished. Later, political prisoners were punished by hard labor (*katorga*), mostly in Siberia. Tens of thousands of Ukrainian peasants, rebels (*haidamak*), and populist revolutionaries were exiled to hard labor. The term *katorzhnye raboty* (hard labor) was temporarily reinstated in Soviet legal practice in 1944–53. This form of punishment was applied to individuals guilty of treason or other political crimes and only rarely to ordinary criminals.

Soviet criminology is based on the principle that labor can reform criminals. In the Soviet Union and the Ukrainian SSR a corrective-labor law, a corrective-labor code, and a corrective-labor policy have sanctioned forced labor as an instrument of reform since the 1920s. The 1971 *Corrective-Labor Code of the Ukrainian SSR states in article 49 that 'every convicted person should work.' This law encouraged the government to organize corrective-labor colonies in remote areas near enterprises requiring a great amount of human labor. In these colonies a production norm is set for each type of job and failure to fulfill the norm is punished by reduced food rations (art 75 of the Corrective-Labor Code of the Ukrainian SSR of 1971). Formally, the forced labor of prisoners is remunerated at the same rate as the labor of free workers. But 50 percent of the prisoners' wages are withheld to pay for the maintenance, administration, and protection of the camps; from the remainder the cost of the prisoners' food, clothing, and so on is deducted. Many railroads, canals, and hydroelectric stations have been built by prison labor. The state has an immediate interest in the cheap labor of prisoners, hence in the large supply of prisoners, even if some of them are innocent of any crime. (For the important economic value of forced labor see *Concentration camps.)

Forced labor is widely used in Soviet Ukraine as punishment for petty crime. Administrative arrest for hooliganism, for example, is punished by 15 days of imprisonment and forced labor in construction, cargo

loading, or some other heavy physical work, usually in the vicinity of the convict's residence. Forced labor without imprisonment is commonly used as a form of punishment for infringement of the criminal code. Corrective labor can last from one month to one year, and a maximum of 20 percent is deducted by the government from the convict's wages for 'administration.' If the convict refuses to do corrective labor, the court can substitute a prison term for the term of forced labor. (For the forced labor done by Ukrainian workers in Germany under Hitler's regime see **Ostarbeiter*.)

Foregger, Mykola (pseud of Mykola Greifenturn), b 18 April 1892 in Samara, d 8 June 1939 in Kuibyshev, Russia. An opera director and ballet master. In 1926 he staged *Konstruktivnyi hopak* (Constructivist Hopak) as part of a cycle of historical dances. From 1929 to 1934, as director of the Kharkiv opera, Foregger staged 'Polovtsian Dances' from O. Borodin's opera *Prince Igor*, the ballets *Ferendzhi* by B. Yanovsky and *Futbolist* (The Soccer Player) by V. Oransky, and the operas *Marriage of Figaro* by Mozart and *Hopkins the Machinist* by M. Brandes. At the Kiev opera (1934–6) he directed G. Meyerbeer's *The Huguenots*, B. Liatoshynsky's *Zoloty obruch* (The Golden Hoop), and other operas. Foregger was criticized for cultivating formalism.

Foreign trade. The exchange of goods and services involving the lands and the people of Ukraine has been important throughout history. The founding of the city of Kiev and the flourishing of Kievan Rus' (9th–11th century) were influenced by trade moving along the Dnieper River, 'the highway from Varangian to Greek lands,' and by trade between Eastern Europe and the lands beyond the Ural Mountains and the Caucasus. Between the 13th and 16th centuries, Ukrainian territories under the Principality of Galicia-Volhynia, Poland, and Lithuania exported grain and raw materials to Europe and imported textiles, spices, and household goods for the gentry. In the early Cossack period (16th–17th centuries), the landlords of large estates exported significant amounts of agricultural staples. After the 1654 treaty of the Cossack state with Muscovy, the gradual curtailment of Ukraine's autonomy was accompanied by its integration with the expanding market system of the tsarist empire.

From the mid-1800s, French, Belgian, and other foreign capital enhanced the growth of factories and mining and the construction of railroads in Ukraine. This process was accompanied by imports of machinery and some manufactures and by the export of grains, metals, and other primary products by Ukraine to other parts of the Russian Empire and Europe.

While Galicia and Bukovyna were part of the Austro-Hungarian Empire (1772–1918) these regions held the status of less-developed agricultural trading partners.

During the struggle for independence (1917–21) the

TABLE 1
Shares of Soviet republics and of outside countries in Ukraine's exports and imports in 1964 (percent)

Soviet republics or countries	Exports	Imports
RSFSR	51.1	75.3
(European part of RSFSR)	(49.4)	(72.3)

Less-developed countries	1.4	1.3
Total	100.0	100.0

Ukrainian governments concluded several commercial treaties with such neighboring countries as Russia, Turkey, Lithuania, Germany, Austria, and Poland, but international trade was limited. After the formation of the USSR in 1923, and particularly after the imposition of a planned, centralized, command economy in the late 1920s, Ukraine lost its autonomy in the conduct of foreign trade.

Viewed as an open economy with about one-third of its national product traded externally, the present-day Ukrainian SSR is comparable to Austria, Belgium, or Canada. In 1966 Ukraine's total exports to other Soviet republics and non-Soviet countries amounted to 13.4 billion rubles of its national product (according to Soviet definition) of 40.11 billion rubles. In the industrial sector alone the republic exported 21.9 percent of its output and imported 20.7 percent of the total utilized (absorbed) product in the republic. The relative magnitude of Ukraine's trade has declined somewhat as a result of industrialization and growth in recent decades.

Ukraine's productive structure is linked through trade predominantly with the European regions of the USSR and

the neighboring countries belonging to the Council for Mutual Economic Assistance (CMEA). The pattern of Ukraine's foreign trade is characterized by the destination of exports and the source of imports as shown in table 1; the composition of total trade is shown in table 2; and Ukraine's share in the external exports of the USSR is given in table 3.

TABLE 3
The products of the Ukrainian SSR in USSR export in 1968 (percent)

Refined sugar	65.0
Oil	48.6

Under the recent five-year plans the location of production and the direction of trade have been modified by efforts to rationalize shipments and to reduce shipping distances. The development of industrial centers near new sources of raw materials reflects a preference for self-contained territorial complexes. As a result of the development of Soviet primary and manufacturing industries beyond the Urals, Ukraine's eastward shipments of

*Not elsewhere classified

industrial inputs have declined in importance. The gradually declining share of exports to the RSFSR has been replaced by increased deliveries to Belorussia, the Baltic republics, and Moldavia. The largest share of intra-Union imports is from the European part of the RSFSR; these imports constituted 85 percent of the incoming tonnage during the 1970s. Since the 1950s trade expansion has occurred along the north-south axis, and trade reduction along the west-east axis.

Ukraine's trade turnover with outside countries is about 25 percent of the Union total, and the exports to outside countries absorb about 6 percent of its national product. About 77 percent of Ukraine's external trade is with such socialist countries as East Germany, Czechoslovakia, Poland, Bulgaria, Rumania, Yugoslavia, and Cuba. Some 14 percent of its trade is with the industrialized European countries, the United States, and Canada. About 9 percent of its trade is with the developing countries of Asia, Africa, and Latin America.

Ukraine appears to be a less-developed partner than other CMEA countries and, within the USSR, than Russia and the Baltic republics. Thus, in 1965, various ores and concentrates constituted 50.2 percent of Ukraine's external exports, compared with 21.6 percent of USSR exports, while machinery exports to CMEA countries were 10 percent for Ukraine, compared with 18 percent for the USSR. Various Moscow-sponsored long-term plans and trade treaties with the CMEA rigidify the reliance of the Soviet bloc on primarily industrial inputs from Ukraine (table 3). About 80 percent of all metallurgical inputs in Eastern Europe are supplied by Ukraine. This applies especially to the iron and steel industry, since CMEA countries are deficient in iron and coking coal. Poland, for example, imports 70 percent of its iron ore and 80 percent of its manganese from Ukraine, and East Germany imports more than 50 percent of its iron-ore needs from Ukraine. Similar permanent exports have been established for other primary products. Natural gas is piped from Western Ukraine to Silesia, major Czechoslovakian cities, and West Germany. The electric power grid 'Mir,' which supplies the CMEA countries, requires a net outflow of electricity from Ukraine.

The items in the engineering, chemical, and consumer-

Model showing exports (X) and imports (M) involving Poland, Ukraine, and the rest of the USSR, 1974* (in million rubles)

*The Foreign Trade Monopoly interposes itself between the republic and outside countries, thus redistributing income territorially within the Soviet Union. Ukraine's net export surplus with Poland of 300.3 million rubles occurred while the rest of the Union absorbed from Poland an import balance of 207.5 million rubles.

goods categories that are exported and imported by Ukraine are numerous and varied. Ukraine's external exports of machinery, largely to CMEA and less-developed countries, amounted to 17 percent of the republic's exports during the 1970s. Ukraine is also contributing scientific and technical assistance to developing nations. The republic is a participant in commercial tourism encouraged by the Soviet Union to attract foreign currency.

In accord with the USSR pattern, Ukraine's imports of industrial equipment and processed inputs are mainly from CMEA countries and constitute about 67 percent of the total imports. Such imports are especially important for the development of consumer-oriented industry. However, the evidence shows that Soviet imports of Western equipment favor new industrial projects like the Kama River complex in the eastern regions of the USSR.

Viewed in the context of a command system, the planned content and size of the republic's external trade have a major impact on economic development. Soviet trade and credit treaties with Poland, Hungary, and other CMEA countries are intrinsically related to the triangular pattern of trade balances depicted in the accompanying figure. Thus, the CMEA net imports from Ukraine (formally from the USSR) are financed by Soviet long-term credits, and the repayments in equipment and machinery are channeled to the developing regions of Siberia. In this way Ukraine's external exports contribute to the development of other regions of the USSR.

While international specialization and trade are important for economic reasons, Ukraine's perennial uncompensated export surpluses vis-à-vis the Union and outside countries, as illustrated by the accompanying figure, diminish the republic's gains from trade. In 1966 Ukraine's net export balance with the Union and outside countries amounted to about 3 billion rubles, or 7.5 percent of the republic's national product of 40.1 billion. These estimates are consistent with other evidence about the persistent unrequited net export of goods from Ukraine. Historically, the export surpluses generated by Ukraine within the tsarist empire reappeared during NEP in the 1920s, persisted during the prewar five-year plans (even during the famine of 1933), and were reinstated soon after the Second World War. This phenomenon of 'unequal exchange' has been studied by M. Volobuev in the 1920s and, more recently, by such Western economists as V. Holubnychy, Z. Melnyk, V. Bandera, and H. Wagener.

Even though Ukraine maintains a semblance of identity in international cultural and diplomatic relations, it does not do so in commercial relations with foreign countries. Today, the republic has its Ministry of Foreign Affairs (designated as a Union-republican ministry) and boasts of being a founding member of the United Nations, a voting member of various United Nations agencies, and a signatory to various international treaties. However, the Ukrainian SSR does not partake as a direct partner in international economic transactions, not even in the various agencies of the CMEA.

The subordinate status of the Ukrainian SSR in the realm of foreign trade is maintained by the dominant Moscow-oriented Foreign Trade Monopoly (FTM). The term FTM embraces the institutional, operational, and financial aspects of the Soviet foreign-trade system. Thus, the Union-level Ministry of Foreign Trade oversees the

specialized foreign-trade combines that export assignments and import allocations according to centralized plans. FTM officials can interact with the enterprises directly and supersede republican and local administrations. Over 1,000 enterprises in Ukraine participate in exporting. The implementation of trade commands by the FTM is facilitated by the prevalence in the republic of large enterprises under Union jurisdiction. They are similar to giant Western multinational corporations that cater to the interests of the metropolis and escape the controls of the systemically weak local governments. The FTM also involves the Union-level Ministry of Finance, which manages foreign currency; the State Bank of the USSR and six giant Soviet banks abroad, which manage international finances and make profit from accumulated foreign reserves; and the Union-level Chamber of Commerce, which supervises international exhibits and promotes contacts with foreign firms. Given this controlling superstructure of the FTM, Ukraine appears to be an unequal trading partner with a subservient role in international and interrepublican specialization and trade.

Forest. One of the basic types of vegetation groupings, consisting of trees and shrubs and covering an extensive area. Forests have an effect on climate; the hydrological regime of the soil and the environment; the retention of surface soils, particularly on steep slopes and sands; and the composition of flora and fauna. Forests also have an enormous economic and esthetic importance. In the past forests provided humans with protection from invaders and uninhabited space for settlement.

The degree of forestation and the variety of forest species in Ukraine are determined by Ukraine's geographical position between the humid region of Western Europe and the dry steppes of Asia. The forests in the western part of Ukraine have a Western European character; in the southern part small woods rather than forests are found. As Ukraine's climate, relief, soils, and water regime change from the west and north towards the east and south, large differences arise in the extent of forestation and the composition of the forests. The eastern and part of the southern limits of dispersal for such important tree species as the fir, spruce, beech, hornbeam, and ash dissect Ukraine.

In prehistoric times the following natural regions of Ukraine were almost completely covered with forest: the northern forest belt consisting of Polisia with the exception of the bogs, the mountains with the exception of the slopes above the forest line, Subcarpathia, the Sian

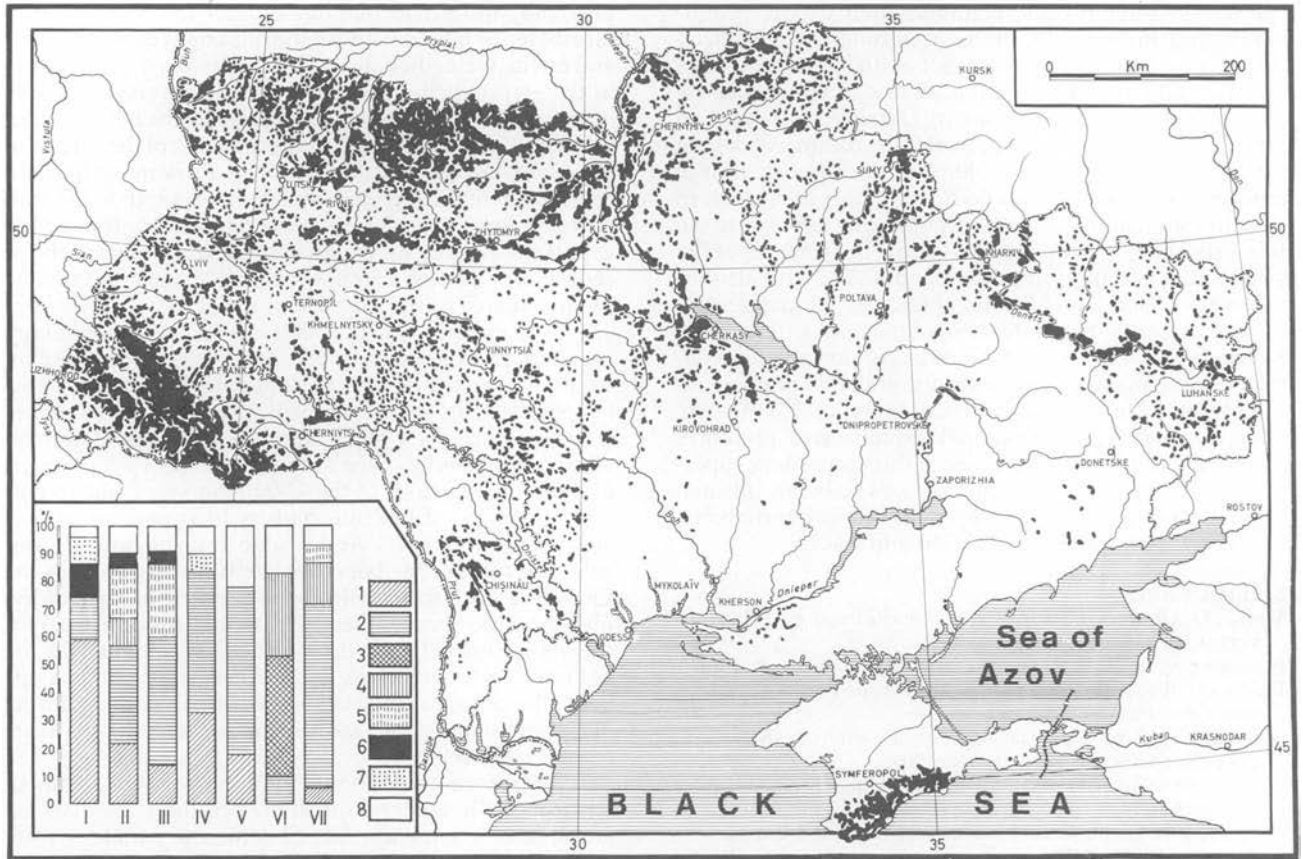

Lowland, and Roztochia; one-quarter to one-half of the forest-steppe belt (mostly on the high right banks of rivers and on the watersheds); and the river valleys and ravines in the steppe belt. Altogether forests covered probably over one-third of Ukraine's territory. Eventually, human intervention halted the natural expansion of the forests in the forest-steppe belt. Settlement and farming led to a contraction of the forested area. From the 17th to the 19th century large tracts of forest were sacrificed to the lumber export trade and to the fuel industry, particularly in central and eastern Ukraine, where in 1880-1913 alone the forest area in the nine Ukrainian gubernias fell from 4,858,000 to 3,861,000 ha. Deforestation was particularly rapid in Ukraine during the two world wars and in 1944-5, when the Soviets exploited the forests mercilessly, especially in the Carpathian Mountains (see 'Forest management'). As a result, the forest area of Ukrainian ethnic territories has been reduced to about 13-14 percent of the total area and, of the Ukrainian SSR, from 18 percent at the end of the 18th century to 15 percent in 1890 and 14 percent in 1968. At the same time the fund of valuable tree species has been depleted; for example, in the Carpathian Mountains the beech and fir have been replaced by the spruce, the cedar has almost disappeared, the yew is extinct, and the oak has become rare. In the last few years, particularly in the forest-steppe and steppe belts, the Soviet authorities have increased the planting of fast-growing species such as the poplar, willow, white acacia, and larch.

Today forests cover about 11 million ha of all Ukrainian territories. The general forest area of the Ukrainian SSR (1978) was 9.7 million ha, of which 8.3 million were covered with trees. On the average 13.6 percent of Ukraine's territory is under forest. Fifty-two percent of the trees are deciduous and 48 percent are coniferous. The composition of the forests by tree species is given in table 1. There are 15 coniferous species (12 tree and 3 bush varieties) and 74 deciduous species (59 tree and 15 bush varieties) in Soviet Ukraine. There is 0.19 ha of forest per capita (2.4 in the USSR).

The extent of forestation in each vegetation belt of Ukraine is given in table 2. In Polisia the central part is most densely forested. The main tree species is the pine (about 60 percent), which is mixed with oak (15 percent) on the richer soils. Birch (12 percent) and aspen (10 percent), which are of low value and often occupy the tracts cleared of pine, are quite widespread.

TABLE 1
Composition of forests by tree genus

Genus	Area (in 1,000 ha)	Percentage of forest
Pine	1,872.0	34.7
Oak	1,419.0	26.3

FORESTS OF THE UKRAINIAN SSR

Inset: Prevalent types of forest in various regions of Ukraine

Regions

- I. Polisia
- II. Western Forest-Steppe
- III. Central Forest-Steppe
- IV. Eastern Forest-Steppe
- V. Steppe
- VI. Carpathian Mountains
- VII. Crimean Mountains

Principal forest types

- 1. Pine
- 2. Oak
- 3. Spruce
- 4. Beech
- 5. Hornbeam
- 6. Birch
- 7. Alder
- 8. Other (including trees that occupy under 5 percent of the given region's forested area)

In the forest-steppe belt the most densely forested areas are Roztochia, the Sian Lowland, and the Buh Depression. The forests here (beech, pine, oak, etc) are similar to the forests of Central Europe. In the forest-steppe belt itself oak is the most prevalent species (about half of the forest area); it is mixed with beech (only in western Podilia), hornbeam (mostly in Right-Bank Ukraine - 26

percent of the forest area), ash, maple, and linden. Pines grow on the left-bank terraces of rivers, covering 30 percent of the forest area in Left-Bank Ukraine. In spite of extensive deforestation the remnants of large ancient forests have been preserved here and there, for example, the Chorny Lis Forest near Znamianka, the Trostianets Forest in the Sumy region, the Cherkasy Forest, consisting of pine, on the Dnieper River, the Lithuanian Forest on the Vorskla River, and the Donets Forest.

TABLE 2
Forestation by vegetation belt

Region	Area (in 1,000 ha)	Percentage of belt's area	Percentage of total forest area
Polisia	2,650	31.0	39.0
Forest-steppe	2,250	10.7	33.0
Steppe	500	2.0	17.2
Carpathian Mts	1,250	40.0	8.2
Crimean Mts	180	50.0	2.6

The forests of Subcarpathia and the Carpathian Mountains consist of beech in the southwest and spruce with an admixture of beech and fir elsewhere. In the forests of the Crimean Mountains and the Caucasus the dominant trees are the oak and beech, with an admixture of hornbeam and maple. The Crimean pine also grows in the Crimea. On the southern slopes of the mountains subtropical forests can be found.

No substantial forests grow in the steppe belt. Here

woods are found in ravines, wet forests in the wetlands, pine copses on the Oleshia Sands, and shelterbelts along the Donets River. The main species are the oak (60 percent), pine, hornbeam, white acacia, ash, maple, and elm.

Special preserves and reservations have been established in order to preserve the ancient forests in their original state.

(For more detail see *Alder, *Beech, *Birch, *Carpathian Mountains, *Crimean Mountains, *Fir, *Forest management, *Forest-steppe, *Hornbeam, *Pine, *Oak, *Polisia, *Spruce, and *Steppe).

Forest belt. One of the basic natural zones of vegetation in Ukraine, which covers its northern part and borders to the south with the *forest-steppe belt approximately along a line through Kholm-Lutske-Zhytomyr-Kiev-Nizhen-Hlukhiv. The forest belt covers approximately the northern Ukrainian lowlands – Podlachia, Polisia, and the Chernihiv region. The belt has a glacial topography and gray podzol soils and bog soils (see *Soils). Its climate is temperate, becoming more continental towards the east: the average July temperature is 17.5° to 19.5°C; the average January temperature is –4° to –7°C; the annual precipitation is 500–600 mm, 70 percent of which occurs from April to October. The forest belt is a mixed-forest zone. Pine is the most widespread (60 percent); oak predominates on the richer soils; birch, alder, and linden are also encountered (for more detail see *Flora). The fauna is that of the Central European forest belt (see *Fauna). At one time almost the entire belt was covered with forest. Today less than 33 percent is forested. The forests have been replaced by cultivated fields (over 33 percent) and hayfields, meadows, and pastures (20 percent); other lands account for 15 percent. The population density is moderate – about 50 people per sq km – because of the encroachment of bogs and the decline in soil fertility.

The forest belt that lies within the Ukrainian SSR (the northern parts of Chernihiv, Rivne, Volhynia, Zhytomyr, Kiev, and Sumy oblasts) and southern Belorussia (parts of Brest and Homel oblasts) is commonly known as Polisia, although Polisia proper encompasses only the basin of the Prypiat River. (For more information see *Chernihiv region, *Podlachia, and *Polisia.)

*Little Polisia and the *Buh Depression (of which the *Sian Lowland is an extension), situated between the Volhynia-Kholm and Podilia Uplands, is considered an island of the forest belt.

V. Kubijovyč

Forest Code of the Ukrainian SSR. The principal source of current Soviet Ukrainian *forest legislation. The code was developed on the basis of the all-Union law Foundations of Forest Legislation of the USSR and the Union Republics (1977). It was approved by the Supreme Soviet of the Ukrainian SSR on 13 December 1979 and took effect on 1 April 1980. The code consists of an introduction and seven chapters and contains 148 articles, which deal with general principles (state ownership, powers of forest-management agencies), forest utilization, reforestation and the increase of productivity, conservation and protection measures, government statistics and the forest register, forest maintenance, penalties for infringement of forest legislation, and international treaties.

Forest legislation. Legal norms that govern forest ownership, the use of forest resources, and forest management in general. Until the 19th century forest legislation in Ukraine dealt only with infringements of the rights of ownership, although particular laws during I. Samoilovich's and I. Mazepa's rules dealt also with certain questions of management – there was a law, for example, limiting the cutting of timber that was suitable for boat building. Protective forest legislation was introduced in the second half of the 19th century (the Russian laws of 1867 and 1888 and the Austrian laws of 1852 and 1904), when much of the forest had already been destroyed. These laws prohibited individuals from clearing forests as they wished but did not yet require forest-management planning. The legislation applied to all forests, including privately owned forests (mostly forests belonging to large estates), which accounted for 80 percent of the forested area.

The forest legislation of the Ukrainian National Republic (the law of 13 January 1919) and of the Western Ukrainian National Republic (November 1918 and 14 April 1919) nationalized the privately owned forests, except those owned by peasants. A Polish law of 1928 that set forth detailed prescriptions of rational management and state control was in effect on Ukrainian territories ruled by Poland in the interwar period.

Generally speaking, the forest legislation of Soviet Ukraine is merely a repetition of the legislation of the RSFSR and of the USSR. The most important acts are the 26 February 1919 decree of the Council of People's Commissars of the Ukrainian SSR on the protection of forests, which introduced the principle of the complete nationalization of forests; the forest law approved by the All-Ukrainian Central Executive Committee on 3 November 1923; and the laws of the USSR and the Ukrainian SSR passed in 1931, 1936, 1943, 1947, 1953, 1959, and 1960. All Soviet laws are based on the principle that the state is the owner of the forests, but that besides the state others may use the forests – the peasants (in the 1920s), the collective farms, and the so-called long-term users (various government agencies). In 1957 the government of the Ukrainian SSR adopted the decree On the Measures for Improving Forest Resources and Rejuvenating Forests. On 4 March 1968 the Council of Ministers adopted the Statute on Collective-Farm Forests. The Union-wide law Foundations of Forest Legislation of the USSR and the Union Republics was adopted in 1977; it was followed in 1979 by the *Forest Code of the Ukrainian SSR, which was based on it.

With changes in the forest legislation the forms of

forest administration changed also. In 1921 the All-Ukrainian Forest Administration and its subordinate departments were put in charge of the forests. In 1928 the management of Ukraine's forests was subordinated directly to the USSR Council of National Economy in Moscow, and the All-Ukrainian Forest Administration was turned into the Ukrainian State Forest Agency. In 1931, in accordance with a decision of the USSR government, all forests were divided into a forest-industry zone (under the jurisdiction of the People's Commissariat of Forest Industry in Moscow) and an afforestation zone (under the USSR People's Commissariat of Lands). In 1936 a special category of water-conservation forests, which encompassed the forests of Ukraine, was established, and the Chief Administration of Forest Conservation and Afforestation, which had a plenipotentiary in the Ukrainian SSR, was set up at the Council of People's Commissars of the USSR. In 1947 the newly formed USSR Ministry of Forest Management was made responsible for Ukraine's forests, and in 1953 this responsibility was transferred to the Ministry of Agriculture. In 1959 forest management in Ukraine was reorganized once more, and the Chief Administration of Forest Management at the Council of Ministers of the Ukrainian SSR was put in charge of the work.

The forest farm (*lishosp*) is the administrative-territorial unit of forest management. It encompasses several forest stations and looks after forest cultivation, reforestation, and forest conservation.

Forest management. A branch of the national economy that is devoted to the preservation, exploitation, restoration, and particularly the development of forests. As in other countries, the forests in Ukraine are an important source of various valuable resources and have a great environmental impact (hydrological, climatic, and soil-protective). They also have an esthetic value and salutary powers.

Attitudes towards the forest and forest management have changed in Ukraine through history. Deforestation took place slowly, as a consequence of internal colonization. In the Princely era and afterwards the forest was primarily the source of fuel and food for the population. It also had a great strategic significance and served as a refuge from invading nomads. As well, it provided the first commodities of international trade – honey, wax, furs – and led to the rise of the forest industries, which from the end of the 15th century exported their products to Western Europe beginning with Danzig (lumber, potash, tars, charcoal, and hides). Forests provided fuel for the foundries and smelting furnaces and, beginning in the 17th century, for the textile factories. At the beginning of the 19th century the use of wood in industry declined. The building of railways and the conversion to coal fuel made the manufacturing industries less dependent on forests but at the same time facilitated the transportation of lumber. As a result of rapid economic development and inadequate protection for the forests the forest area in Ukraine diminished steadily, and the character of the forests changed in favor of less-

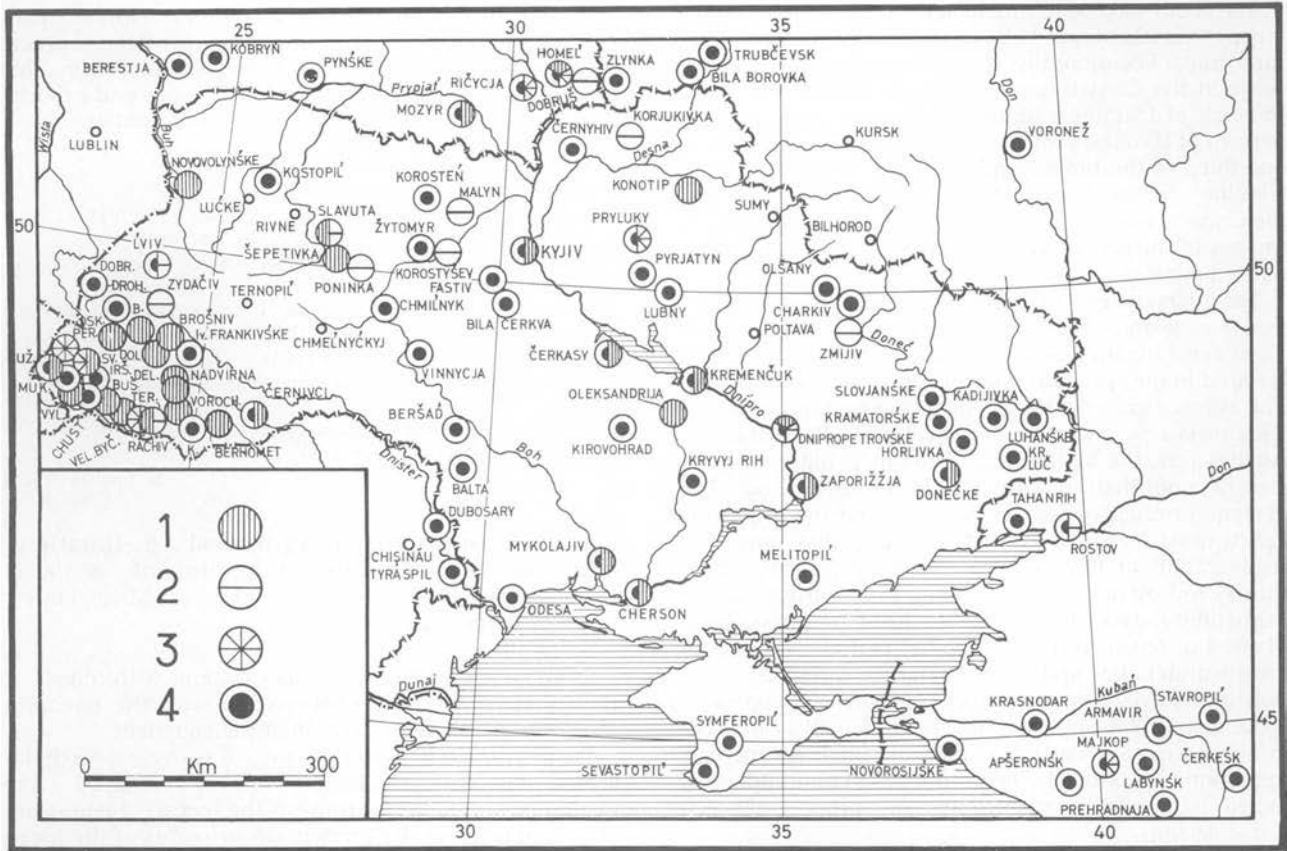

valuable trees or unusable trees. The proportion of deforested clearings in the total forest area increased (see *Forest).

Forest management improved only at the end of the 19th century as a result of new laws (see *Forest legislation). An unchanging harvesting age, which could not be lower than the natural age of maturation, was prescribed for each tree species. A constant sequence of harvesting was instituted. A classification by age was introduced. The annual harvest was determined by the rate of growth and the actual supply of mature trees. Nevertheless, an average of 27,100 ha of forest was cleared annually in central and eastern Ukraine, while only about 4,000 ha were reforested (not quite one-seventh of the harvest). By 1913 in state-owned forests of central and eastern Ukraine 96 percent of the area cleared of forest each year was replanted. Forest management was somewhat better in Western Ukraine. It was superior in state forests to that in the great estates. The community forests and the small forests, however, continued to be exploited.

During the First World War forest management was completely neglected. The fronts ran through the forest regions of Ukraine – the Carpathian Mountains and Polisia – and Ukraine had to supply lumber for military needs. In central and eastern Ukraine, during the revolution forest use was not subject to any control. As a result, the area of unforested land in Soviet Ukraine that was suitable for forestation increased from 175,000 ha in 1913 to 667,000 ha in 1923 (18 percent of the forest area), and the percentage of forested land decreased from 8.2 to 7.4. Eventually, the five-year plans for forests, which began in 1928, raised the quotas on the extraction of raw materials and totally undermined the principles of sound forest management. Under the first two five-year plans the rate of harvesting was almost twice the rate of forest growth. The destruction of the forests was halted only in 1938 as a result mostly of the efforts of the Ukrainian Administration of Forest Protection and Cultivation. For a few years thereafter logging operations remained normal.

In Western Ukraine, during the interwar period forest management was more rational; it was most effective in Transcarpathia.

During the Second World War the forests of Ukraine were cut down mercilessly. They suffered even heavier losses after the Soviets reoccupied all Ukrainian territories. The authorities began to exploit the forests excessively, particularly in the Carpathian Mountains. According to the state of the forests on 1 January 1956 the harvest should have been 7.8 million cu m annually, but in the postwar period the average harvest was 210 percent of the optimal harvest. Thus, in 1953–6 the annual forest harvest in the Ukrainian SSR (in millions of cubic meters) was 12.3 in 1953, 18.3 in 1954, 17.8 in 1955, and 18.6 in 1956. In 1945–58, 195 million cu m of timber were cut down in the state forests alone. Of this volume, 92 million cu m were harvested in the Carpathians. Such a rapid depletion of this natural resource posed a threat to the economic potential of Ukraine's forests. The problem is illustrated most vividly by the abnormal disproportion in the sizes of the age groups of the trees. Of the 5.2 million ha overgrown with forest in the state fund of Soviet Ukraine on 1 January 1956, the following age groups covered the given percentage of the area: young forest, 54.8 percent; middle-aged forest, 24.1; ripening forest, 10.4; ripe and overripe forest, 10.7 (normally each group

should form 25 percent). Although forest management improved in the 1960s, young forests (51.9 percent) and middle-aged forests (32.1 percent) are still predominant (in 1980), while ripe and overripe forests account for only 16 percent. The condition of the collective-farm forests is far worse.

Generally the authorities kept shortening the cutting cycle and lowering the harvesting age. The forests were not thinned but denuded. As a result of this kind of mismanagement, those forests that would have matured in 20 years, or sometimes in as many as 50 years, were cut down first. The quality of timber is therefore very low: over 30 percent of it is suitable only for firewood. Some of the timber – 5–8 percent on the average – is wasted because of poor harvesting and transport methods. Erosion is spreading and has reached dangerous proportions in the Carpathian Mountains: by 1960, 487,000 ha in the Carpathians were unusable because of the denudation of steep slopes and erosion. The deplorable condition of the environment in the Carpathians compelled

the Soviet authorities to introduce in 1957, regulations governing logging, transport, and harvest size. The annual harvest for all of Soviet Ukraine was limited to 6.2 million cu m. Since 1961 the logging area has been diminished considerably until the greater part of ripening forests reach the state of ripeness and middle-age forests reach the state of ripening. However, the area of deforestation and the volume of timber continue to increase: in the collective- and state-farm forests, 407,000 ha were cut down in 1960, yielding 2,757,100 cu m, 660,700 ha (6,223,000 cu m) in 1970, and 738,600 ha (9,468,500 cu m) in 1979. Of the 9,787,000 ha of forest in Soviet Ukraine, state forests cover 7,141,700 ha; collective-farm forests, 2,184,500 ha; and forests under various agencies, 481,800 ha.

By economic function the forests of the Ukrainian SSR are classified as protective forests (water-retaining, soil-protecting, field-protecting, special-purpose forests consisting of green belts around cities, resort forests, and reserves) and as exploitable forests, which account for 56.7 percent of all the forests. The forest belts protecting

fields (about 500,000 ha) are usually planted forests in the steppe or forest-steppe belts providing shelter for agricultural crops. Economically, the most important forests are those in the Carpathian Mountains, which yield about one-half of Ukraine's timber while comprising only 18 percent of Ukraine's total forested area. Polisia produces one-third of the timber and accounts for 39 percent of Ukraine's forested area. The forest-steppe, steppe, and the Crimea, which contain 43 percent of the forested area (mostly of the protective category), provide one-seventh of the timber.

The average age of Ukrainian forests is very young – under 40 years – because of the excessive exploitation. Their average rating is second quality (the highest rating is found in the spruce and fir forests of the Carpathians). The average growth rate of timber per hectare for Soviet Ukraine is 2.75–2.92 cu m per year. In the Carpathians it reaches 4.21, the highest rate. The rate is higher in state forests (2.98) than in collective-farm forests (1.99). The average productivity is 117 cu m/ha, and the highest is 448 cu m/ha for spruce forests in the Carpathians. The regeneration of forests takes place by planting (two-thirds) and by natural propagation (one-third). According to official data, about 53 million ha of forest have been planted or sown during the Soviet period. Apart from forests under state and collective farms, forest regeneration and development projects covered 158,600 ha in 1960, 104,400 ha in 1970, and 71,600 ha in 1979. Fast-growing trees such as the poplar and larch are increasingly being introduced. The proportion of pine and oak is increasing, while the proportion of fir, spruce, and beech is decreasing.

The protection of forests consists first of all of pest control, particularly insect control, followed by fire-preventative measures. To control pests, protective regions have been set up, and a special service has been organized. The regulation of mountain streams, which had been developed in the Carpathians under the Austrian regime, has been neglected, however. Erosion control is inadequate.

In 1956–60 about 19,000 people were employed in forest management in the Ukrainian SSR. Of these, 2,000 had a higher education, and 2,900 had a secondary education. In the Carpathians alone 100,000 workers (some of them seasonal workers) worked in the forests, mostly in cutting and transporting timber. For a long time forest work was almost exclusively manual.

In the context of the Soviet Union, Ukraine's forest management is secondary. Ukraine's forests account for only 0.7 percent of the forests of the USSR, although some valuable species account for a higher percentage of the USSR's resources: oak, 15.1 percent; beech, 19.9 percent; hornbeam, 38.7 percent; and alder 9.1 percent. Ukraine's supply of timber constitutes 0.9 percent of the USSR's, while its timber harvests in various years have accounted for 3.5–4.5 percent of the Union harvests. The annual demand for timber in the Ukrainian SSR is over 40 million cu m, and almost 70 percent of it has to be met with imports from Russia, Belorussia, and the Baltic republics. In the 1950s Ukraine exported a small part of its timber, mostly processed lumber such as parquet (79 percent of it from the Carpathians).

The Kuban (Krasnodar krai), in comparison to the Ukrainian SSR, is more richly endowed with forests, which cover 23 percent of its area of 1.9 million ha. The

main tree species are oak (46 percent of the forest area), beech (19.6 percent), hornbeam (8.6 percent), and spruce (8.6 percent). The volume of timber is 3.5 million cu m. The Kuban produces more lumber than it needs and exports the surplus as raw material or as dressed lumber.

Forest Management and Agroforest Amelioration, Ukrainian Scientific Research Institute of. See Ukrainian Scientific Research Institute of Forest Management and Agroforest Amelioration.

Forestry. The group of sciences dealing with forests – their nature, their interrelationship with the environment, their cultivation, and their management.

Before the Revolution of 1917 forestry research in central and eastern Ukraine was conducted by such institutions of higher learning as the Forestry Institute in St Petersburg and the forestry departments of the Moscow Agricultural Academy and the Novo-Aleksandriia Institute of Agriculture and Forestry (moved to Kharkiv in 1915). In Kiev there was a department of forest management at the Kiev Polytechnical Institute. Forestry research was also conducted at the *Velyko-Anadol Forest Project and stations in Darnytsia near Kiev and elsewhere. Much research in the field was funded by the zemstvos and private individuals. Even before the revolution forestry research and practice in central and eastern Ukraine showed a certain preference for the natural environment of Ukraine, concentrating on such questions as steppe afforestation, forest typology (mainly in the forest-steppe and Podilia), and ameliorative forestation. The principal specialists in the field during this period were V. Dokuchaev and Yu. Vysotsky (both worked in the area of steppe afforestation), E. Alekseev (forest typology), O. Marchenko (forest management and policy), G. Morozov (biology and forest phytosociology), and V. Ohievsky (forest research).

In the 1920s the All-Ukrainian Forest Administration organized an extensive research program. One of the research stations established by it was the Central Forestry Research Station in the village of Rakytne near Kharkiv (1925–30), which published 15 issues of *Pratsi z lisnychoi doslidnoi spravoy na Ukraïni* (Papers in Forestry Research in Ukraine). Important work was also done by the *Agricultural Scientific Committee of Ukraine in Kiev and other institutions. In this period the scientific-industrial periodicals *Lisovod Ukraïny*, which was later renamed *Ukraïns'kyi lisovod*, and, for a time, *Lisoderevobrobnyk* were published. Besides those mentioned above, the important research scientists in this period included Ye. Votchal and V. Shkatelov (forest technology), D. Vorobiov (typology),

O. Kolesnykiv (forest management), P. Kozhevnykov, H. Makhiv (forest ecology), and B. Shustov.

In the 1930s the centers of forestry research in Ukraine were the Kiev Institute of Forest Management and the Ukrainian Scientific Research Institute of Forest Management and Agro-amelioration in Kharkiv (UNDILH), which is still functioning. At the time much energy was devoted to research on soil-protective forest belts and to compiling tables of the basic forest species (D. Tovstolis and B. Shustov).

Today, in addition to the work of UNDIH, forest research has been conducted by the Ukrainian Academy of Agricultural Sciences, the Institute of Botany and the Stare Selo Biological Station of the Academy of Sciences of the Ukrainian SSR, the Lviv Institute of Forest Technology, the departments of the Faculty of Forest Amelioration at the Kharkiv Agricultural Institute, Dnipropetrovske and Kiev universities, and the Ukrainian Scientific Research Institute of Economics and the Organization of Agriculture. Research in dendrology, acclimatization, and selection is conducted at various botanical gardens, particularly at the Nikita Botanical Garden near Yalta, the Crimean Game Preserve near Alushta, and at various *dendrological parks, such as the Trostianets Park in the Chernihiv region, the Sofiivka Park in the Uman region, and Oleksandriia in Bila Tserkva. *Nature reserves are also used partly for research.

In the postwar period the typology of forest species has been studied by D. Lavrynenko, P. Pohrebniak, A. Florovsky, and S. Tiukov; the selection of tree species by O. Kolesnykiv, S. Piatnytsky, and P. Podhursky; seeding and stratification by I. Lototsky; the physical-mechanical properties of trees by I. Yakhontov and A. Zhukov; reforestation and the reconstruction of low-quality seedlings by P. Iziunsky and P. Podhursky; the cultivation of fast-growing species by P. Pohrebniak, A. Soldatov, P. Krotkevych, and M. Turkevych; steppe forestry by L. Ustynovska and B. Lohinov; forest entomology by Z. Holovianko and D. Rudnev; plant pathology by P. Kliushnyk and M. Zerova; the construction and application of mechanical implements in forestry by O. Nedashkivsky and I. Labunsky; accounting in forest management by L. Mushketnyk and S. Tsitsilinsky; and lowering the age of harvestable forests by A. Soldatov and S. Tiukov. A valuable monograph, *Lisy Ukraïny* (The Forests of Ukraine) by A. Soldatov, S. Tiukov, and M. Turkevych, appeared in 1960.

Almost all scientific and research publications deal with the natural and technological problems of forestry. Very few works explore its political or statistical aspects. So far no dictionary of Ukrainian forestry terminology has appeared, although such a dictionary was ready for printing in the 1930s. There is no professional journal of forestry in Soviet Ukraine, and many articles on forestry are published in *Visnyk sil's'kohospodars'kykh nauk* or in *Ukraïns'kyi botanichnyi zhurnal*. Among the non-periodic serials in forestry are the various scientific papers published by UNDIH, the Ukrainian Academy of Agricultural Sciences, and the Carpathian Forestry Research Station.

In Western Ukraine forestry did not have an opportunity to develop before 1945. Yet, several Ukrainians have distinguished themselves in this field; for example, M. Marynets, V. Levytsky, S. Yatsiv, Ye. Filvarkiv, Ye. Burachynsky, R. Yurkevych, Yu. Napadiievych, I. Martynkiv, O. Kotys, and A. Piasetsky.

Outside Ukraine the Ukrainian Husbandry Academy (later the *Ukrainian Technical and Husbandry Institute [УТНІ]) in Poděbrady was also a center of forestry research. B. Ivanytsky, who developed new concepts of forestry and forest policy in Ukraine from the viewpoint of the Ukrainian national interest, was a leading specialist among Ukrainian foresters. M. Kosiura, professor of forestry at the Ukrainian Agricultural Academy, was another important specialist abroad. After the Second World War, besides those just mentioned, the following scientists emigrated from Ukraine: H. Makhiv (soil specialist), O. Paramoniv (forest protection), B. Luchakovsky (forest policy), and M. Chapovsky (forest soils).

B. Luchakovsky

Forestry education. In Soviet Ukraine there are three levels of training in forestry: lower, intermediate, and higher. Forestry staff of the lower level – forest rangers and workers – are trained at one-year schools of forestry. The intermediate staff – traveling inspectors and forest keepers – are trained at forestry *tekhnikums* such as those in Velyko-Anadol Forest, Chuhuiv, Lubni, and Starozhynets. Forestry specialists with higher qualifications are trained at the Lviv Institute of Forest Technology (est 1953), the faculty of forestry at the Ukrainian Academy of Agricultural Sciences (est 1954, previously the Kiev Institute of Forest Management [est 1930]) in Holosiieve near Kiev, and the Kharkiv Agricultural Institute. These schools graduate over 150 foresters each year. Before the revolution the Ukrainians under the Russian Empire could obtain a higher education in forestry at the Forestry Institute in St Petersburg, the Moscow Agricultural Academy, and the Novo-Aleksandriia Institute of Agriculture and Forestry (moved to Kharkiv in 1915). After the revolution such specialization was available mainly in the agricultural institutes in Kiev and Kharkiv.

In Western Ukraine under the Austrian regime there was a higher forestry school in Lviv, and in the interwar period a forestry department at Lviv Polytechnic. Secondary schools of forestry were opened in Bolekhiv and Kremianets. A lower forestry school operated in Svaliava, Transcarpathia. Outside Ukraine the Ukrainian Husbandry Academy (later the *Ukrainian Technical and Husbandry Institute) in Poděbrady had a forestry faculty. Some Ukrainians studied forestry at the schools of agriculture in Vienna and Prague.

B. Luchakovsky

Forest-steppe. A natural belt characterized by the alternation of forests – mostly deciduous – with steppe vegetation and fauna.

In Ukraine the forest-steppe is the central belt stretching between the *forest belt in the north and the *steppe belt in the south. It is part of the Eastern European forest-steppe and covers about 30 percent of Ukraine's territory. The boundary with the forest belt (Polisia) runs along the line Lviv–Kremianets–Zhytomyr–Kiev–Nizhen–Hlukhiv and is distinct. Generally, it coincides with the northern limits of the loess and chernozem soils. Northwest of the main forest-steppe belt lies a large forest-steppe island called the Volhynia–Kholm forest-steppe (north of the line Kholm–Lutske–Zhytomyr). In the west the forest-steppe borders on a belt of forests of the Central European variety, covering Roztochia, the Sian Lowland, Subcarpathia, and Opilia. Soviet authorities today classify these territories as forest-steppe. The southern

border of the forest-steppe is not as distinct and is defined in different ways, usually by the line Chişinau–Kirovohrad–Krasnohrad–Zmiiv–Valuiky–Buturlynivka.

The Ukrainian forest-steppe is a gently undulating plain, covered for the most part by a thick, loess stratum that overlies various geological layers dissected by gullies and ravines. An erosive-ravine landscape, in particular a ravine-gully, plate, and granite landscape, is characteristic of this belt. The forest-steppe covers the *Volhynia-Podilia Upland, the *Dnieper Upland, the *Central Upland, and partially the *Dnieper Lowland. A warm summer and a moderately cold winter are characteristic of the forest-steppe. The climate becomes more continental towards the east; the average July temperature is 18°C in the west and 20°C in the east, while the average January temperatures are -4°C and -8°C. The number of days above 0°C is 230 in the northeast and 270 in the southwest. The number of days above 5°C is 190 and 220. Annual precipitation is usually 450–550 mm in the east and 550–700 mm in the west. Eighty percent of the precipitation falls when the temperature is above 0°C. In the summer the rain comes in downpours. The main soils of the belt are deep chernozems and high-humus chernozems (particularly in the southern regions), some of which have been degraded into podzolized and meadow chernozems and gray podzol soils under the influence of forests.

Originally, forests covered one-quarter to one-third of the territory of the forest-steppe, and even more in the west. Now they cover only 11 percent of the territory. Because of deforestation and plowing, rainfall and snow run off quickly (more than half of the river water comes in the spring) and cause erosion and loss of topsoil, particularly in Left-Bank Ukraine. Today forests usually cover the sloping right banks of rivers, gullies, and ravines and the hilly watersheds. The oak is the most common tree (found in almost half of the belt). Ash, maple, elm, linden, and other varieties are found alongside the oak. Hornbeam grows west of the Dnieper, and beech only in western Podilia. Pine forests and plants associated with those in Polisia are found on the Left-Bank terraces, particularly on the left-bank of the Dnieper. The undergrowth usually consists of hazel, alder, buckthorn, spindle-tree, wayfaring tree, hawthorn, blackthorn, and thelycrania. The ground cover consists of fir, asarum, asperula, broad-leaved snail clover, mercurialis, anemone, cynosurus, and certain varieties of fern. Beech, beech-hornbeam, hornbeam, hornbeam-oak, and oak forests grow in the westernmost part of the forest-steppe, which is also the most forested part. Oak and hornbeam-oak forests are found in eastern Podilia and in Right-Bank Ukraine. Oak and oak-linden forests predominate in Left-Bank Ukraine. The steppe part of the forest-steppe (now under cultivation) is classified as a grassy, colored, broad-leaved steppe. The following meadow-steppe vegetation is characteristic of it: feather grass, fescue, meadow sage, pedicularis, and so on. The fauna is a mixture of forest species (eg, squirrel, marten, rabbit, bobcat, fox, deer, otter, woodpecker, woodcock, pigeon, and turtle-dove) and steppe species (eg, spotted ground squirrel, mole rat, gray hamster, gray vole, polecat, great and little bustard).

Because of its favorable natural conditions, the forest-steppe was the earliest settled belt in Ukraine and is the most populated (apart from the recent industrial and mining centers). Hence, it is largely deforested and under

cultivation. Sixty-eight percent of the land is tilled, 10 percent is pasture and hayfield, and 11 percent is forest (11 percent is other). Forests become fewer towards the east (ranging from 19 percent to 6 percent) while tilled land increases (ranging from 56 percent to 72 percent). For every 100 ha, 54 are devoted to grain, 12 to industrial crops, 10 to potatoes and squash (16 in the west, 7 in the east), 20 to fodder, and 4 are kept fallow (0.5 in the west, 8 in the Central Upland). Grain growing and animal husbandry are most intense in the forest-steppe belt. Two-thirds of the grain cultivated is made up of winter wheat and corn. The most important industrial crops are sugar beets (8 percent of the tilled land and three-quarters of the land devoted to sugar beets in Ukraine), and tobacco (44 percent of the land devoted to tobacco in Ukraine) and *makhorka* (88 percent).

A part of the Central European forest-steppe, which covers the Pannonian Lowland, extends into Ukraine and occupies the Tysa Lowland, the northern slopes of the Crimea, and Subcaucasia.

V. Kubijovč

Forgách, János (Johann), b 24 October 1870 in Gács, d ? Austro-Hungarian diplomat of Austrian descent. Forgách represented the Austro-Hungarian government in Belgrade and, from March 1918, in Ukraine, first as the chairman of an Austrian trade delegation and later as an envoy to the Ukrainian Central Rada and the Hetman government. Forgách tried to keep an eye on the activities of the Ukrainian government and played a role in invalidating the secret treaty on Galicia and Bukovyna and in stopping the Ukrainian administration from establishing itself in the Kholm region. His reports to the Austrian government on developments in Ukraine were unsympathetic towards the Ukrainians.

Forostenko, Yakiv, b 4 March 1911 in Tahanrih, d 1972. Pilot record holder, instructor at the Poltava flying school and at Poltava airport. In the 1950s Forostenko set three Soviet records and world records for small-propeller airplanes, which he held for 20 years. He was awarded the Paul Tissandier Diploma for distinguished service to the cause of aviation, and private and sport aviation in particular. He later moved to Moscow, where he continued to train pilots.

Fort-Shevchenko [Fort-Ševčenko]. City (1959 pop 11,400) in Mangyshlak oblast in the Kazakh SSR, built on Mangyshlak Peninsula. The town serves as a Caspian Sea port and a fishing base. It was founded in 1846 as the fortification Novopetrovskoe and in 1857 was renamed Fort-Aleksandrovskii. In 1939 it received its present name in memory of T. Shevchenko, who was exiled there in 1850–7. The city is home to the Shevchenko Memorial Museum and contains a park in his name.

Fortunatov, Filipp, b 2 January 1848 in Vologda, d 20 September 1914 in Kosalma, Russia. A prominent Russian

linguist, Fortunatov was a professor at Moscow University from 1876 to 1902 and a member of the Russian Academy of Sciences from 1902. He was the author of studies in Indo-European, Balto-Slavic, and general linguistics, all of which were written in a spirit of extreme neogrammarianism. He was one of the pioneers of Slavic historical-comparative accentology; in particular, he explained the distribution of accents in East Slavic pleophony and mobility of accent of the type *ruká: rúku* (hand – nom sing, acc sing), which is characteristic of the Ukrainian language as well. Fortunatov was an active member of the Imperial Academy of Sciences commission that prepared the memorandum about lifting restrictions on the Ukrainian printed word (1905).

Fortune-telling. Predicting the future on the basis of various signs and omens. Fortune-telling was a very common practice in ancient Ukrainian folk customs and was associated with the *folk calendar, mostly with the fall and winter cycle. On St Demetrius's Day (8 November [os]), fortune-tellers tried to guess who would die and how the harvest would turn out. On ss Kuzma and Damian's Day (14 November), they foretold what the winter would be like. On St Catherine's Day (7 December), and particularly on St Andrew's Day (13 December), fortune-tellers predicted how marriages would turn out. On New Year's Eve (13 January), forecasts about marriage and harvests were made. The Kupalo festival is associated with fortune-telling by unmarried women.

Forum. Quarterly magazine published in English by the *Ukrainian Fraternal Association in Scranton, Pennsylvania. *Forum* began publication in 1967. Its editor is A. Gregorovich, and its managing editor is J. Pronko. *Forum* popularizes Ukrainian history and culture, gives a survey of events in Ukraine and among Ukrainians abroad, and informs its readers of the latest developments in Ukrainian life around the world. The magazine is richly illustrated.

Fotytsky, Orest [Fotyts'kyj], 1863–1919. Historian, lecturer at the Volhynia Institute of People's Education, associate of the Volhynia Research Society, and director of the church museum in Zhytomyr. Fotytsky's works on the history and archeology of Volhynia appeared in *Kievskaiia starina* and other journals. He was the author of *Iz semeinoi khroniki dvorian Zagorovskikh vo vtoroi polovine XVI v.* (From the Family Chronicle of the Zahorovsky Noble Family in the Second Half of the 16th Century, 1900).

Fox (*Vulpes vulpes*; Ukrainian: *lys* or *lysytsia*). Mammal of the carnivore order and the dog family. The fox has a body 60–90 cm long and a tail 40–60 cm long and is brown or yellowish brown in color. It feeds on small animals, mainly mouselike rodents. Foxes are quite numerous throughout Ukraine. Their fur is valuable; fox pelts produced on fur farms comprise one of the main commercial furs in Ukraine.

Fradkin, Moisei, b 28 September 1904 in Borzna, Chernihiv gubernia. Graphic artist, graduate of and then lecturer (1931–71) at the Kharkiv Art Institute. Fradkin specializes in prints and book illustrations (mostly woodcuts and linocuts); these include *Funeral in a Small Town* (1927), *Fishermen* (1930), *Spring* (1956), and illustrations to

a collection of Jewish folk songs, the selected works of Sholem Aleichem (1937–40), and the tales of I. Franko (1947). In the 1930s Fradkin was criticized for formalism and 'Boichukism.'

Fraierman, Teofil [Frajerman], b 16 March 1883 in the town of Berdychiv, Kiev gubernia, d 7 January 1957 in Odessa. Painter of the impressionist school. Fraierman completed his studies at the art academies in Munich (1903) and Paris (1905). In 1920 he began to lecture at the Odessa State Art School and in 1935 was promoted to the rank of professor. His works include portraits, landscapes, and still lifes.

France. A country in Western Europe with an area of 551,800 sq km and a population (in 1982) of 54.4 million. Paris, the country's capital, and its suburbs have a population of 9.9 million. France is one of the centers of European culture and a refuge for political émigrés. Ukraine's contacts with France were livelier than with any other Western European country, and French works about Ukraine served as sources of information for all Europe.

Political and cultural contacts. The earliest contacts between Ukraine and France date back to the 11th century when King Henry I married Princess *Anna Yaroslavna of Kiev on 19 May 1051. From the second half of the 14th century Ukrainians came to Paris to study at the Sorbonne. They were registered in the student lists as coming 'from Ruthenia' (1353, 1369) or as belonging 'to the Ruthenian nation from Kiev' (1463, 1469) or 'Natione Ruthenia de Ucraina' (1567). I. Uzhevych, who compiled the first handwritten grammar of the Ruthenian literary language in Latin, 'Grammatica Sclavonica' (original copies in the manuscript department of the Bibliothèque Nationale [1643] and the city library of Arras [1645]), studied at the Sorbonne in 1643–5. Ukrainians continued to study in Paris in the 18th–19th century. A. Losenko, for example, attended an art school in 1760–4. In the 17th century Ukrainian students began to enroll also at Strasbourg University.

Some valuable Ukrainian literary monuments have been preserved in France: the Reims Gospel (1574), which is considered to be an East Slavic copy of the 11th–12th century, and the manuscript of Metropolitan P. Mohyla's *Orthodoxa Confessio Fidei*, known as the Codex Parisinus and located at the Bibliothèque Nationale.

Descriptions of Ukraine by Frenchmen date back to the 16th century. B. de Vigenère, a secretary of the foreign ministry and a historian, included information about Galicia, Volhynia, and Podilia in his *La description du royaume de Pologne et pays adjacens ...* (1573). French government and diplomatic circles as well as individual scholars took an interest in the Cossacks from their very inception and followed closely the Cossack campaigns against Turkey, the Crimea, and Poland. The earliest information about the Cossacks appeared in France in 1531. The French press periodically published news about the Cossack wars. Articles about the Cossacks appeared in *Mercure français* (1605) and *Mercure anglais* (1648, about the battles of Zhovti Vody and Korsun), while the official journal of the French government, *Gazette de France*, kept the public informed about developments in Ukraine from 1631 to 1715.

The successful Cossack campaigns against the Ottoman

Ukrainian Catholic church in Paris

Empire at the beginning of the 17th century attracted the attention of the League of la milice chrétienne led by the Duc de Nevers, which tried to organize a coalition against Turkey. In 1617–18 it established contact with Hetman P. Sahaidachny through its agent de Malconnet and the hetman became a member of the league. The first French book devoted entirely to Ukraine and the Cossacks, *Description de l'Ukraine* (1650), was written by G. le Vasseur de *Beauplan, a French engineer and military cartographer who worked in Ukraine in 1631–47.

In 1645 the French government, through the royal adviser, P. Chevalier, invited a detachment of about 2,400 Cossacks to fight against Spain. They took part in the siege of Dunkirk under the leadership of Prince de Condé. B. Khmelnytsky conducted negotiations with the French ambassador in Warsaw, Comte de Bregy, and with Prince de Condé at Fontainebleau. Chevalier was the author of *Histoire de la guerre des Cosaques contre la Pologne* (1663), which supplemented Beauplan's information about Ukraine. In this period French policy, as well as public opinion about Ukraine, was under Polish influence; hence, in the mentioned books events in Ukraine are sometimes interpreted from a Polish viewpoint.

The Cossack-Polish War of 1648–57 and the Cossack state that B. Khmelnytsky built aroused much interest in France. The head of the government, Cardinal J. Mazarin, was kept abreast of the developments in Ukraine by his diplomats in Warsaw and the secretaries of the French embassy, P. Chevalier and P. Linage de Vauciennes. The latter was the author of *L'origine véritable du soulèvement des Cosaques contre la Pologne* (1674), a sensationalist and sometimes inaccurate account of Khmelnytsky's rebellion. France supported the Peace Treaty of Hadiache signed by Ukraine and Poland. After the Treaty of Andrusovo (1667), when Muscovy adopted an aggres-

sive policy towards Ukraine, France opposed the growth of Muscovy's power. F. de Béthune, the French envoy to Warsaw, visited Hetman P. Doroshenko in Chyhyryn to discuss the participation of a Cossack corps on the French side in the war against the German emperor. C.-F.O. de Nointel, the French envoy to Istanbul in the 1670s–1680s, was acquainted with Hetman Yu. Khmelnytsky, and Nointel's secretary, F. Petit de la Croix, described the last period of Yu. Khmelnytsky's life in his memoirs (1684).

At the turn of the 17th century a new political situation arose in Europe: Poland's power declined, the French-Swedish alliance was formed to offset the Russo-Prussian alliance, and the Ottoman Empire gravitated towards the former. France was sympathetic to Ukrainian aspirations to autonomy. French diplomats approved of Hetman I. Mazepa's actions and helped to set up the Ukrainian-Swedish alliance. After Mazepa's defeat at Poltava (1709) French diplomats urged the Porte not to hand over Mazepa and his followers to the tsar. The French press gave detailed coverage of the events in Ukraine, condemning the destruction of Baturyn and regretting the defeat at Poltava.

Hetman P. Orlyk continued Mazepa's policy of seeking closer ties with the West. The French diplomatic service tried to persuade Turkey in 1711–14 not to sign a treaty with Russia unless Russian forces were withdrawn from Ukraine and Ukraine was placed under the protection of France's allies. French diplomats continued to support the efforts of Orlyk's son, H. *Orlyk, who had served in the French army, attaining the rank of general, and in the diplomatic service. As emissary of King Louis xv he visited the Crimean khan to persuade him to wage war on Russia. Both Orlyks had close ties with French political and cultural leaders. They supplied Voltaire with documentation for his *Histoire de Charles XII* and informed him of Ukrainian aspirations to autonomy.

French diplomatic circles followed the activities of Hetman K. Rozumovsky through their agent N.G. Lelerc, who served as the hetman's personal physician. French envoys to St Petersburg informed their government about the abolition of the Hetmanate in 1764 and the dissatisfaction of the populace. In 1765 K. Rozumovsky visited France and was received at the royal court.

Under Louis xvi French policy continued to favor Ukraine's autonomy. In response to the destruction of the Zaporozhian Sich, Louis's foreign minister, the Comte de Vergennes, wrote a memorandum on the Cossacks and Ukraine entitled 'Observations sur les Cosaques Zaporogues' (1776), in which he proposed 'to establish contact with the Cossacks to organize a diversion against the tsarina.' J.-B. Scherer's *Annales de la Petite-Russie, ou histoire des Cosaques Saporogues et des Cosaques de l'Ukraine ou de la Petite-Russie* (1788), which gives an outline of Ukraine's history up to 1734 in two volumes, was an important source of information for the French public.

During the French Revolution an attempt was made to establish contact with the Danubian Cossacks and with their help to organize a revolt in Ukraine. During Napoleon's reign many books on the Ukrainian question were published. Prince C. Lesur's *Histoire des Cosaques* (1813), written at Napoleon's request on the eve of the Russian campaign, was particularly important. Comte d'Hauterive, the director of the political department of the foreign affairs ministry, outlined in a memorandum

1) Taras Shevchenko Square in Paris. 2) Taras Shevchenko monument in Paris.

2

Napoleon's plans for Ukraine: after the division of the Russian Empire, Left-Bank Ukraine was to form a separate state named Napoléonidie, which would serve as a buffer against Russian aggression and cut off Russia's access to the Black Sea (Right-Bank Ukraine was to be placed under Poland's care). Most Ukrainian leaders, except for V. Lukashevych, did not approve of Napoleon's plans. Yet, the Russian government did not trust the regiments formed in Ukraine (Cossack and conscripted) and did not send them to the front against the French. Eventually, in 1813–15, some of the Cossack regiments took part in the fighting in Central and Western Europe. There Ukrainian officers absorbed new ideas and on their return to Ukraine promoted free thinking, which stimulated the growth of Freemasonry and later the Decembrist movement.

In 1847 T. Shevchenko and the Cyril and Methodius Brotherhood began to be mentioned in France, and eventually studies of them were published by such writers as E.A. Durand, A. d'Avril, A. Leroy-Beaulieu, and L. Léger.

Because of his friendship with E. Hańska, H. de Balzac visited Ukraine in 1847–50 and stayed in Verkhivnia in the Zhytomyr region. In 1847 he wrote some notes on his trip to Ukraine, which were published posthumously under the title *Lettre sur Kiev* (1927).

During the Crimean War (1853–6) A. Czartoryski and M. *Czajkowski made some efforts in France to have the Danubian Cossacks mobilized against Russia, while French journalists and historians such as P. Douhaire and C.-H. Barault-Rouillon wrote about the Ukrainian question. The French writer P. Mérimée wrote two studies of the Cossacks – *Les Cosaques de l'Ukraine et leurs derniers atamans* (1854) and *Les Cosaques d'autrefois* (1865).

In the second half of the 19th century Ukrainian-French cultural relations expanded. In 1860–87 Markó *Vovchok lived in France and had close ties with such writers as J. Verne, G. Flaubert, George Sand, and P. Mérimée and the publisher P.-J. Hetzel-Stahl, the co-author of *Maroussia* (1878), which went through more than 30 reprintings, gained a wide reputation, and received an award from the Académie Française. The painter M. *Bashkyrtseva began to study in Paris in 1877 and stayed there, producing about 150 paintings, a diary published in French (1887), and a volume of correspondence (1902). In the 1870s M.

Drahomanov brought the Ukrainian question to the attention of French cultural and political figures. At the 1878 international literary congress in Paris, presided over by V. Hugo, M. Drahomanov protested against the Ems Ukase and distributed his brochure *La littérature oukraïnienne proscrite par le gouvernement russe*. He acquainted L. Léger, the founder of Slavic studies in France, with the Ukrainian question. (In 1906 Léger lectured on T. Shevchenko and Ukrainian literature at Collège de France.) Drahomanov also brought the Ukrainian question to the attention of the historian and ethnographer A. Rambaud, the geographer E. Reclus, and the socialist leader B. Malon, who in his *Histoire du socialisme* (1884) discussed Ukraine. Léger and Rambaud took part in the 1874 archeological congress in Kiev.

In 1887–1900 the noted Ukrainian scholar F. *Vovk studied and then worked at the School of Anthropology in Paris. He published some of his work in French. In 1903 M. Hrushevsky lived in Paris and lectured at the Higher Russian School of Social Sciences.

On the political front Senator C. Delamarre (1796–1870) submitted a petition to the French senate in 1869 concerning reforms in the teaching of Eastern European history – 'Un peuple européen de quinze millions oublié devant l'histoire' (published also as a separate brochure). Except for the change in the name of the Slavic department at Collège de France, Delamarre's proposals were fruitless, because at the time France felt threatened by Germany and was planning to form an alliance with Russia. After the signing of the Franco-Russian treaty of 1891, French interest in Ukraine outside of the Russian Empire declined. Large sums of French capital were invested in industry, particularly in the metallurgical and coal industries in Ukraine under Russia (almost half of the foreign capital or about 20 million rubles). This fact, as well as French loans to the Russian government amounting to about 11.5 billion francs in 1888–1914, played a role in changing French attitudes to Russia. Ukrainian protests, such as Lesia Ukrainka's poem in prose 'La voix d'une prisonnière russe' (1896, protesting the grand reception given Tsar Nicholas II in Paris by French cultural leaders), were of no consequence.

As a result of France's pro-Russian policy at the beginning of the 20th century, the French public received information about Ukrainian affairs only from Ukrainian émigrés, among them Ya. *Fedorchuk, and from the Office de l'Union des Nationalités, which was founded in 1912 and defended oppressed nations (secretary: J. Péliissier). One issue of the office's journal, *Annales des nationalités*, in 1913 was devoted to Ukraine (introductory article by C. Seignobos). During the First World War France avoided the Ukrainian question in order not to antagonize its Russian ally, and in 1916 the French government prohibited the distribution in France of *La revue ukrainienne*, a journal published in Lausanne by the Union for the Liberation of Ukraine.

With the outbreak of revolution in March 1917 the French government attentively followed the work of the Ukrainian Central Rada. In the summer of 1917 the French ambassador in Petrograd, J. Noulens, sent J. Péliissier on a fact-finding mission to Kiev. Péliissier established contact with Ukrainian political leaders and with the assistance of the Masonic lodge Young Ukraine tried to influence public opinion in Ukraine in favor of France. In the meantime the French mission in Iași,

headed by P. Berthelot, began to interfere in Ukrainian affairs. On 18 December 1917 General G. Tabouis, the representative of the Iași mission, proposed to V. Vynnychenko, the head of the General Secretariat, financial and technical aid. France demanded that Ukraine avoid any peace treaties with the Central Powers. On 27 December 1917 S. Pichon, the minister of foreign affairs, made a statement in the French parliament that was favorable to Ukraine, and on 3 January 1918 the French government appointed General Tabouis commissioner of the French Republic to the government of the Ukrainian National Republic. His appointment amounted to recognition by France of the UNR. Peace negotiations in Brest-Litovsk and war against the Bolsheviks, however, interrupted the friendly relations between Ukraine and France. France reacted strongly against the Treaty of Brest-Litovsk and wanted an anti-German uprising in Ukraine. On 20 July 1918 S. Pichon welcomed representatives of the pro-Entente Ukrainian National Council (F. Savchenko and Ya. Ekzempliersky) to France. However, the Entente, in which France played a key role, supported A. Denikin, P. Wrangel, and A. Kolchak in an effort to restore 'one and indivisible Russia' and regarded the Directory of the UNR as 'Bolshevik.' To stop the Bolsheviks from reaching the Black Sea, France, along with the other Allied powers, sent an expeditionary force into southern Ukraine in December 1918 and occupied Odessa and the surrounding areas. The government of the UNR (Premier S. Ostapenko) negotiated with General d'Anselme on a possible joint campaign against the Bolsheviks, but the negotiations broke down when the French refused to recognize the Ukrainian state and demanded that the Ukrainian army be merged with the general Russian front. At the beginning of April 1919, pressed by Otaman M. Hryhoriiv's insurgents, the French forces left Ukraine.

The delegation of the UNR and the Western Ukrainian National Republic at the Versailles Peace Conference found no sympathy for its proposals in the French government, which was influenced by the Polish and Russian points of view. The partition of Galicia proposed by General J. Berthelot's peace mission to Poland (28 February 1919) was rejected as unfair to the Ukrainians. At the end of the peace conference in 1921 the Ukrainian delegation was turned into a diplomatic mission in France under the chairmanship of O. *Shulhyn.

Beginning in 1917 a large number of French publications dealing with Ukraine expressed support for Ukraine's statehood. In 1917 P. Chasles published 'La question ukrainienne et le principe des nationalités' in *Le monde slave*. L. Réau, the director of the French Institute in Petrograd, published his speech 'La République indépendante de l'Ukraine' at a meeting of the France-Russia Society. An article, 'L'Ukraine, son passé, son avenir,' by the prominent Slavic scholar L. Léger, appeared in *Revue hebdomadaire* on 26 October 1918. A former teacher of French in Kiev, C. Dubreuil, published his recollections, entitled *Deux années en Ukraine, 1917-1919*. A French-Ukrainian study group in Paris published F. Savchenko's brochure *L'Ukraine et la question ukrainienne* (1918). The Ukrainian National Council, a representative body under the leadership of F. Savchenko and Ya. Ekzempliersky, was established in Paris with the support of E. Denis and A. Thomas. The Ukrainian delegation to the peace conference published many works in French, including

Notes présentées par la délégation de la République Ukrainienne à la Conférence de la Paix à Paris (2 vols, 1919), *Mémoire sur l'indépendance de l'Ukraine, présenté à la Conférence de la Paix* (1919), and *L'Ukraine, l'Europe orientale et la Conférence de la Paix* (1919).

In the interwar period France opposed all liberation movements in Eastern Europe and supported the status quo. The French government did not support Ukrainian separatist demands under Poland, Rumania, or Czechoslovakia, either directly or at the League of Nations. In 1924 E. Herriot's government in France established diplomatic relations with the Soviet Union. In 1932 the two countries signed a non-aggression and non-interference pact, promising to curtail the activities of organizations hostile to the other side. In 1935 a treaty of mutual assistance was signed. The attitude in official French circles made it impossible for them to regard the Ukrainian liberation struggle with favor. In 1927 M. Skrypnyk, the people's commissar of education of the Ukrainian SSR, visited France and met with French Slavists such as P. Boyer, informing them about the Ukrainization policy in Soviet Ukraine. In 1933 Herriot visited Ukraine and on his return denied that there was a *famine there.

Among French Slavists who took an interest in Ukrainian history and culture was A. *Martel, who visited Ukraine and established contact with the Ukrainian Academy of Sciences. Many articles on Ukraine appeared in the Slavic journals *Le monde slave*, to which R. Martel contributed articles on Ukraine, and, beginning in 1921, *Revue des études slaves*. R. Labry, A. Meillet, and P. Boyer contributed to the study of Ukrainian literature and particularly of T. Shevchenko. F. Mazade, Ch. Steber, J. Bourdon, and others translated Shevchenko's poetry. R. Tisserand wrote a popular history of Ukraine – *La vie d'un peuple: l'Ukraine* (1933). E. *Borschak and O. Shulhyn constantly informed the French public about Ukraine. In 1939 the Ukrainian language was introduced at the École Nationale (now Institut National) des Langues et Civilisations Orientales in Paris, first as a non-credit subject and then since 1952 as a special chair. E. Borschak and M. Scherrer, and now E. Kruba, lectured on the Ukrainian language, and A. Zhukovsky lectured on Ukrainian culture.

On the eve of the Second World War the French political leader R. Schuman (pseud: A. Sidobre) warned Ukrainians against the German threat in his *Les problèmes ukrainiens et la paix européenne* (1939). At the beginning of the German-Soviet War the French sided with the USSR and, therefore, showed no interest in Ukrainian affairs. Former Soviet prisoners of war, among them a well-known Ukrainian, V. Poryk, took part in the French resistance.

After the war the representative of Soviet Ukraine, D. Manuilsky, participated in the signing of the Paris peace treaties in 1947 with the former German allies; these defined the Soviet-Rumanian border in Bukovyna and Bessarabia. In Paris there is a permanent Ukrainian delegation at the headquarters of the United Nations Educational, Scientific, and Cultural Organization (UNESCO), of which the Ukrainian SSR became a member in 1954). The efforts of the French government in the 1950s to establish French consulates in Soviet Ukraine were rebuffed by the Soviet authorities.

After the war the following French scholars made contributions to Ukrainian studies: M. Scherrer (a book

on Ukrainian dumas [1947] and articles on T. Shevchenko), G. Luciani (*Le livre de la genèse du peuple ukrainien* [1956], a history of Ukrainian literature [1961], etc), R. Portal (*Russes et Ukrainiens*, 1970), A. Desroches (*Le problème ukrainien et S. Petlura*, 1962), L. Aragon (on Soviet Ukrainian literature), and E. Guillevic (on Shevchenko; the latter also translated Shevchenko's works).

In 1958 the Ukrainian SSR participated in the International Industrial Fair at Marseille. The State Dance Ensemble of Ukraine under the direction of P. Virsky visited France three times, and the Verovka Choir and Dance Ensemble, directed by A. Avdiievsky, visited once. Apart from some exhibitions arranged by the Ukrainian UNESCO delegation (of Shevchenko, H. Skovoroda, holograms of Ukrainian museums), cultural and scientific exchanges between Ukraine and France have been minimal. The Ukrainian department of the USSR-France Society is a mere formality. As well, the proclamation of 'fraternal cities' – Toulouse and Kiev, Marseille and Odessa, etc – has had no practical effects.

Ukrainians in France. The first group of Ukrainian émigrés in France consisted of I. Mazepa's supporters, led by H. Orlyk. As a general in the French army, Orlyk brought a detachment of Zaporozhian Cossacks to France, and it served as a separate unit in the French army. Having lost contact with Ukraine, these Cossacks were later assimilated. Ukrainian students and cultural figures such as Marko Vovchok, M. Drahomanov, F. Vovk, and M. Hrushevsky also lived for some time in France.

A second small group of émigrés from central Ukraine and some from Galicia came to France at the beginning of the 20th century in connection with the 1905 Revolution in Russia. They formed the first Ukrainian organization in France – the *Circle of Ukrainians in Paris (1908–14) – which in 1910 had a membership of about 120, mostly from Dnieper Ukraine. These émigrés established their own choir, organized Ukrainian-language courses, and published information about Ukraine in French. The main activists in this group were Ya. Fedorchuk, M. Parashchuk, V. Vynnychenko, S. Mazurenko, M. Rudnytsky, E. Batchinsky, and S. Makarenko.

The third influx of Ukrainian émigrés to France began after the First World War. They were Ukrainian soldiers of the expeditionary Russian corps that fought on the French front; officials of the diplomatic and economic missions of the Ukrainian National Republic and the Western Ukrainian National Republic; former members of the *Ukrainian Republican Kapelle, directed by K. Stejsenko and O. Koshyts (O. Chekhivsky, K. Mykolaichuk, and others); prominent leaders of the Ukrainian National Republic (eg, S. Petliura, V. Prokopovych, and O. Shulhyn); and former soldiers and officers of the UNR Army who came from internment camps in Poland and Rumania (M. Kapustiansky, M. and O. Udovychenko, M. Shapoval, and others). In the early 1920s about 5,000 émigrés from Soviet Ukraine found refuge in France.

The largest group of Ukrainian immigrants in France consisted of workers seeking a better life. They began to arrive from Western Ukrainian territories, mostly from Galicia, in 1923. In the 1930s the number of immigrants declined, and some returned to Ukraine. Most of the new immigrants found work in the mines and textile factories in northern France, in the mines and metallurgical plants in eastern France, or on farms throughout France.

FRANCE

1. State borders
2. Cities with Ukrainian inhabitants

During the Second World War thousands of Ukrainians who had served in the Soviet army were brought to France by the Germans to do forced labor. Some Ukrainians who served in German army units defected to the French Resistance and set up their own military detachments, such as the Ivan Bohun Ukrainian Battalion, consisting of 820 men; the Taras Shevchenko Battalion with 546 men; and the Ukrainian Partisan Detachment under the command of O. Krukovsky. Although these units fought against the Germans, they were demobilized by the French in response to Soviet demands. Some of their members joined the Foreign Legion.

The last wave of Ukrainian immigrants reached France after the war: about 4,000 Ukrainians came from the displaced persons camps in Germany and Austria. Because of unemployment and difficult economic conditions many of them emigrated to the United States and Canada in the 1950s.

Number and distribution of Ukrainians. It is difficult to assess the number of Ukrainians in France. In the 1930s there were about 40,000 people of Ukrainian origin in France. In 1946–55, taking into account natural population growth and migration, the number was about the same. Today there are 25,000–30,000 Ukrainians in France, most of them born there and assimilated to some degree. Most Ukrainians are naturalized French citizens: by 1981 only 3,035 (4,849 in 1964) Ukrainians were registered with the Office Français de Protection des Réfugiés et Apatrides (OFPRA). Many Ukrainians are registered as Polish, Russian, or Soviet citizens.

Before the Second World War the majority of Ukrainians were unskilled laborers or farmhands. After 1945 many émigrés were professional people. In the 1970s about 20 percent of the Ukrainians in France were industrial workers; 5 percent, miners; 15 percent, farm

workers; 10 percent, tradespeople; 15 percent, professionals; 10 percent, students; and 25 percent, housewives, small children, and others. Apart from the farm workers, Ukrainians live in the cities or suburbs.

The areas in which Ukrainians are concentrated are (1) Paris and central France, with about 6,000 Ukrainians living in Bois d'Arcy, Saint-Germain-en-Laye, Sarcelles, Melun, Magny, Vésines-Chalette, Orléans, Reims; (2) northern France, with about 3,800 Ukrainians in Lille, Roubaix, Lens, Libercourt, and Amiens; (3) northwestern France, with 1,500 Ukrainians in Évreux, Caen, and Mondeville; (4) eastern France, with 6,500 Ukrainians in Metz, Thionville, Algrange, Nilvange, Nancy, Strasbourg, Mackwiller, Colmar, Mulhouse, and Sochaux; (5) southeastern France, with 5,800 Ukrainians in Lyon, Saint-Étienne, Clermont-Ferrand, Grenoble, and Dijon; and (6) southwestern France, with 2,200 Ukrainians in Bordeaux, Limoges, Toulouse, and Lourdes. Few Ukrainians live in western and southern France (only about 1,000).

Religious life. About two-thirds of the Ukrainians in France belong to the Ukrainian Catholic church. Most of the rest belong to the Ukrainian Orthodox church, and a few are Protestants or Roman Catholics. Before 1925 Orthodox Ukrainians did not have their own church in France. That year the first convention of Orthodox Ukrainians was held at Knutange, and it invited Rev P. Hrechyshkyn from Transcarpathia to France (served as pastor 1925–32). The first parish came under the jurisdiction of Archbishop I. Teodorovych of the United States. Eventually, other Orthodox clergy arrived: Rev I. Bryndzan (served 1932–46), Archbishop M. Skrypnyk (1947), and Rev V. Vyshnivsky (1948–61). Besides Paris, in the 1960s parishes were established in Vésines-Chalette, Nilvange, Lyon, and Grenoble (the latter two no longer exist). These were served by four priests. Since the Second World War the Ukrainian Orthodox community in France has belonged to the *Ukrainian Autocephalous Orthodox church headed by Metropolitan M. Skrypnyk and administered in France by Archpriest B. Khainevsky. In 1951–3 Metropolitan P. Sikorsky resided in France; he died and was buried in Paris. St Simon's Brotherhood, headed by P. Plevako, is active in Paris. M. Maslov is the head of the Paris parish.

Until 1937 the Ukrainian Catholics in France did not have their own priest. In 1938 a Greek Catholic mission was established in Paris under the care of Rev J. Perridon (served 1938–52), who came under the jurisdiction of the Lviv metropolitan and in 1946 under Bishop I. Buchko in Rome. In 1942 the Ukrainian Church of St Volodymyr was founded in central Paris. After the war the number of Ukrainian Catholic clergy increased. In 1961 a Ukrainian exarchate was set up in France under Bishop V. *Malanchuk, who was succeeded by M. Hrynychshyn in 1983. Today the Ukrainian Catholic church in France has 2 parishes, in Paris and Lyon, and 13 clergy. Rev M. Vasylyk is vicar general, and Rev M. Levenets is the pastor in Paris. In 1952–6 the Junior Seminary was located in Loury near Orléans; it was then moved to Rome. The Sisters Servants of Mary Immaculate have convent facilities in Paris and Mackwiller. A new Ukrainian church and pilgrimage center were established in 1982 in Lourdes near the Marian shrine. There are about 20,000 Ukrainian Catholics in France.

Education. Ukrainian schools are inadequately devel-

Ukrainian Catholic church in Lourdes, 1982

oped in France. They have been managed by sociocultural institutions and youth organizations. Regular classes are held in the so-called Thursday schools (now on Wednesdays), which have been in operation in Paris since 1946 as well as in Vésines-Chalette and Lyon. Each year during summer vacations the Organization of Ukrainian Youth in France and the Ukrainian Youth Association (SUM) organize courses in Ukrainian studies. Three-year programs in the Ukrainian language and culture are offered at the Institut National des Langues et Civilisations Orientales of the New Sorbonne.

Cultural and social life. In the interwar period a number of Ukrainian organizations in France served the needs of the immigrants. The first sociocultural organization among them was the *Ukrainian Hromada founded in 1924 under the presidency of M. Kapustiansky. It embraced Ukrainians of various political convictions, but in 1925 the Sovietophiles and the supporters of the Ukrainian National Republic left the association and set up their own organizations. Eventually the nationalists also left, leaving behind the supporters of M. Shapoval, who were mostly workers from Galicia (up to 1,200 members and 22 branches in the 1930s). The association's chief leaders were M. and A. Shapoval, I. Bondar, and P. Turkevych. The association published *Visnyk* and *Ukrains'ka volia* (1939–40). It ceased to exist in 1976.

As a result of the initiative of the veterans of the Army of the Ukrainian National Republic, the Union of Ukrainian Emigré Organizations in France was founded in 1926. Until 1940 it represented émigrés from Dnieper Ukraine and was associated with the government in exile of the Ukrainian National Republic. In the 1930s the union co-ordinated the work of 56 clubs and 7 groups. Among its leaders were M. Shumytsky, I. Kosenko and M. Kovalsky. The *Society of Former Combatants of the

Ukrainian Republican Democratic Army in France, founded in 1927, co-operated with the Union of Ukrainian Émigré Organizations in France. Its leading members were O. Udovychenko, M. Kovalsky, and Ya. Musianovych. Closely associated with this veterans' union was the weekly **Tryzub* and the **Petliura Ukrainian Library*, which contains books as well as archival and museum materials (on its own premises since 1966). In 1932 an organization with a nationalist ideology was founded – the **Ukrainian National Union in France*. By 1939 it had close to 5,000 members who had emigrated from all regions of Ukraine. M. Kapustiansky, M. Zavornytsky, O. Boikiv, M. Nebeliuk, I. Stasiv, and L. Huzar were some of the union's key members. With the union's support the weekly **Ukrains'ke slovo* was published in Paris and the First Ukrainian Press in France was set up in 1938.

The Union of Ukrainian Citizens in France (1925–32) was a pro-Soviet association and stood isolated from the Ukrainian organizations that advocated Ukraine's independence. This union had a membership of 800 in 1927, drawn mostly from Galician émigrés, and published *Ukrains'ki visti*. Its leaders were E. Borschak, O. Sevriuk, and A. Halip.

During the Second World War the Institution of Trust of Ukrainian Emigrés in France (1942–4) was the only agency permitted to operate among Ukrainians in France. Under the presidency of I. Stasiv it provided social and cultural services to émigrés and refugees.

After the war a number of new Ukrainian organizations were formed. In 1945 the cultural–trade union association **Union of Ukrainian Workers in France* was founded. By 1950 it had about 4,000 members. It published the weekly *Ukrainets' u Frantsii* and co-operated with French Christian trade unions. The union was under the influence of the Organization of Ukrainian Nationalists (Bandera faction). Its leaders were I. Popovych, Yu. Zablotsky, and V. Nesterchuk. In 1949 a parallel sociocultural organization – the **Union of Ukrainians of France* – was set up. In 1962 it began to publish the monthly **L'Est Européen*, and by 1965 it had about 300 members. Its leading activists were V. Nesterchuk, O. Melnykovich, and V. Kosyk. In 1949 the **Ukrainian National Alliance in France* was organized to replace the Ukrainian National Union in France. Ideologically it is associated with the Organization of Ukrainian Nationalists (Melnyk faction) and the weekly *Ukrains'ke slovo*. Its leading members are Ya. Musianovych, V. Lazovinsky, Yu. Kovalenko, A. Zhukovsky, O. Korchak, and V. Malynovych.

In 1946 the émigrés from Dnieper Ukraine founded the Ukrainian Community Aid society in Paris. Until the 1960s this association represented the supporters of the government in exile of the Ukrainian National Republic and worked hand in hand with the Society of Former Combatants of the Ukrainian Republican Democratic Army in France. Its key members were S. Sozontiv, S. Kachura, and I. Kosenko. The association published the magazines *Hromada* and *L'Ukraine libre* (1953–4). In 1955 the **Ukrainian Christian Movement* was established, with an international office in France.

The **Ukrainian Academic Society in Paris* was founded in 1946 and has been headed by O. Shulhyn and A. Vyrsta. Since 1951 the **Shevchenko Scientific Society* has maintained a center at Sarcelles with a Ukrainian library and the editorial offices of the *Encyclopedia of Ukraine*. The head office of the **Ukrainian Students' Aid Commission*

(KoDUS) is housed at the center. The president of the Shevchenko Scientific Society in Europe is V. Kubijovyč. Ukrainian scholars were once active in the **International Free Academy of Arts and Sciences*, which was founded in Paris in 1951. The *Ukrainian Movement for a Federated Europe*, headed by Ya. Musianovych, has been active since 1961.

The *Ukrainian Women's Association of France* has been active since 1945 (president: M. Mytrovych, since 1974). Young Ukrainians are organized in the *Ukrainian Youth Association (SUM)*, founded in 1949 with several local branches (president: L. Druar), and in the *Organization of Ukrainian Youth in France*, founded in 1956 (president: V. Genyk). Since 1924 Ukrainian students have formed the *Ukrainian Student Hromada*. Since 1948 the **Ukrainian Central Civic Committee in France* has co-ordinated the activities of all Ukrainian organizations (about 20) in France and has represented the Ukrainian community before the French authorities. The committee is a member of the World Congress of Free Ukrainians. Its presidents have been S. Sozontiv (1948–69), O. Melnykovich (1970–9), and Ya. Musianovych (1979–).

Press and publishers. In the 1920s and 1930s eight Ukrainian periodicals were published in France, of which only two – **Tryzub* and **Ukrains'ke slovo* – survived over a decade. Of three French-language magazines the most informative one was *La revue de Prométhée* (1938–40), which was published by O. Shulhyn. After 1945 there were 18 Ukrainian periodicals, including *Ukrains'ke slovo* (starting in 1948; editors: O. Shtul-Zhdanovych, V. Maruniak, M. Styranka), and **Ukrainets'* (1945–60; editors: D. Shtykalo, D. Chaikovsky, and B. Vitoshynsky). Among the French-language magazines published by Ukrainians were: *L'Est Européen* (1962–; editor: V. Kosyk), associated with the **Anti-Bolshevik Bloc of Nations*; **Échos d'Ukraine* (1962–9; editors: M. Tatarulia and K. Mytrovych), published by the Franco-Ukrainian Society in Paris; *Bulletin Franco-Ukrainien* (1959–70; editor: K. Lazovinska); and **Échanges* (1971–; editors: K. Uhryn, M. Richard). In 1949–53 E. Borschak published the scholarly journal **Ukraina*.

Among the Ukrainian publishing centers in France are the *First Ukrainian Press in France*, which publishes the weekly *Ukrains'ke slovo* and books in Ukrainian and French and maintains a book-distributing office, and the *Shevchenko Scientific Society in Sarcelles*, which publishes *Zapysky NTSh* and *Visti NTSh u Evropi*.

Folklore, art, literature. A number of dance, song, and drama ensembles have been active in Paris and in other cities of France. Since 1978 the *Committee of Ukrainian Folk Art*, chaired by I. Chumak, has been propagating Ukrainian art and folklore among the French public. Among choir conductors who have specialized in folk music were O. Chekhivsky, K. Mykolaichuk, O. Horain-Shumovska, O. Savchyn, T. and V. Dratvinsky, and O. Vyshnevka. Famous Ukrainian painters and sculptors such as M. Bashkyrtseva, M. Parashchuk, M. Boichuk, A. Archipenko, S. Levytska, O. Hryshchenko, M. Hlushchenko, P. Omelchenko, M. Andriienko-Nechytailo, M. Krychevsky, V. Khmeliuk, S. Hordynsky, J. Hnizdovsky, Z. Zarytska, I. Vynnykiv, O. Savchenko-Bilsky, L. Hutsaliuk, Yu. Kulchytsky, A. Solohub, T. Vyrsta, O. Mazuryk, V. Makarenko, and A. Solomukha have studied, worked, or still work in Paris.

Some Ukrainian composers and musicians have lived or live now in France: I. Vovk, B. Hrudyn, Yu. Pono-

marenko, F. Yakymenko, the instrumentalist A. Vyrsta, and the singers Z. Dolnytsky, Ye. Zarytska, M. Skala-Starytsky, and U. Chaikivska. The following writers worked in France: S. Yablonska-Oudin, V. Yaniv, M. Kalytovska, and L. Poltava. The journalists and authors O. Zhdanovych, M. Kovalsky, L. Pliushch, and S. Naumovych either worked or work in France. The following members of the Shevchenko Scientific Society lived and worked in France: the psychologist O. Kulchysky, the literary historian M. Hlobenko-Ohloblyn, the sociologist and psychologist V. Yaniv, the historians E. Borschak, O. Shulhyn, and A. Zhukovsky, the biologist-veterinarian P. Shumovsky, and the musicologist A. Vyrsta.

The following historical monuments in France are connected with Ukraine: St Vincent's Church in Senlis, built by Anna Yaroslavna (containing a statue of her); the T. Shevchenko Square with his monument near the Ukrainian Catholic Church in Paris; the Shevchenko monument and street in Toulouse and Vésines-Chalette; the grave of S. Petliura at Montparnasse Cemetery and the graves of Metropolitan P. Sikorsky and General M. Omelianovych-Pavlenko at Père-Lachaise Cemetery; a monument in Boulay (Lorraine) to 22,000 Ukrainian victims of the Second World War who were inmates of the concentration camp at Ban-St-Jean; a monument to the soldiers of the Ukrainian battalion in Vercel (Doubs department); and a monument to V. Poryk in the city of Hénin-Liétard (Pas-de Calais department). (See also *Paris.)

A. Zhukovsky

Francis Joseph I, b 18 August 1830, d 21 November 1916. Emperor of Austria from 1848 and king of Hungary from 1867. In the first years of his rule Francis Joseph was favorably disposed towards his Ukrainian subjects, who,

unlike the Poles and Hungarians, were loyal to the Hapsburgs. At the end of 1848 he issued a decree establishing the chair of Ukrainian language and literature at Lviv University. On 4 March 1849 Bukovyna became a crown land. On the same day the emperor proclaimed a new constitution that strengthened his absolute rule, and on 7 March 1849 he abolished the state parliament. He appointed Count A. Gołuchowski, a Polish noble, vicegerent of Galicia and through him succeeded in getting the *Supreme Ruthenian Council to abolish itself. On 29 September 1850 the 'Kingdom of Galicia and Lodomeria' was given a provincial charter, which made the incorporation of eastern Galicia into a Ruthenian crown land more difficult to achieve. Although the Ukrainians of Galicia received the government's approval to divide Galicia into Ukrainian and Polish administrative areas (1854, 1863, 1866), the emperor was swayed each time by the Polish majority in the Galician Diet, which opposed partition. On 31 December 1851 the emperor withdrew the promise of a constitution made in 1849, and a 10-year period of reaction began, which hampered the development of Ukrainian political and national life in Galicia. On 20 October 1860 Francis Joseph approved a new constitution based on the estates principle. On 26 February 1861 he approved the curial system of election to the provincial diets, which gave the Ukrainians minority representation in the Galician Diet. In 1866, after losing the war against Italy and Prussia, the emperor came to an understanding with the Polish nobility: for its loyalty he gave it control of Galicia – the provincial administration, courts, education. As a result Polish became the official language of government, and Lviv University was Polonized. At the beginning of the 20th century the threat of war with Russia persuaded the emperor to seek reconciliation between the Poles and the Ukrainians in Galicia. His efforts led to the signing of an agreement by parliamentary delegations representing the two camps on 24 January 1914. The outbreak of the First World War, however, prevented the implementation of the agreement.

Frank, Hans, b 23 May 1900, d 16 October 1946 in Nuremberg, Germany. German jurist and Nazi leader. In 1934 Frank was appointed German minister of justice. In 1939–45 he served in Cracow as governor general of the German-occupied parts of Poland and Galicia (see *General-gouvernement), where he implemented discriminatory and repressive policies vis-à-vis Poles, Jews, and Ukrainians. He tolerated the restricted cultural and relief activities of the *Ukrainian Central Committee and tried to maintain tensions between the Poles and Ukrainians. He promoted plans for the future Germanization of Galicia. At the Nuremberg trials of the chief Nazi war criminals Frank was sentenced to death by hanging.

Franko, Ivan (pseud: Dzhehdzhalyk, Zhyvyi, Kremin, Myron, etc), b 27 August 1856 in Nahuievychi (today Ivan Franko), Drohobych county, Galicia, d 28 May 1916 in Lviv. Writer, scholar, political and civic leader, publicist; like T. Shevchenko, one of Ukraine's greatest creative geniuses. The son of a village blacksmith, Franko graduated from the Drohobych gymnasium in 1875 and began to study classical philology and Ukrainian language and literature at Lviv University. His first literary works – poetry (1874) and the novel *Petrii i Dovbushchuky* (1875) –

Ivan Franko

were published in the students' magazine **Druh*, whose editorial board he joined in 1875. Franko's political and publishing activities and his correspondence with M. *Drahomanov attracted the attention of the police, and in 1877 he was arrested along with M. *Pavlyk, O. *Terletsyky, and others for spreading socialist propaganda. After spending eight months in prison Franko returned to political work with even greater fervor. He helped organize workers' groups in Lviv, contributed articles to the Polish newspaper *Praca*, and studied the works of K. Marx and F. Engels. In 1878 he founded with Pavlyk, the magazine *Hromads'kyi druh*, which was confiscated by the authorities but resumed publication under the names *Dzvin* and *Molot*. In 1880 Franko was arrested again and charged with inciting peasants against the authorities. After serving a three-month term, he was released but was kept under police surveillance and was forced to discontinue his university studies.

During the first period of his creative work Franko wrote political poems, such as 'Kameniar'i' (The Stonecutters, 1878), 'Vichniy revoliutsioner' (The Eternal Revolutionary, 1880), and 'Ne pora ...' (This Is Not the Time ..., 1880), which became patriotic anthems and influenced the outlook of a whole generation; the novels *Boa constrictor* (1878), *Boryslav smiet'sia* (Boryslav Is Laughing, 1881), and *Zakhar Berkut* (1883); and a series of literary and journalistic articles. In 1881 Franko co-published the journal *Svit*, and after its closing in 1882 he edited the

journal *Zoria* and the newspaper *Dilo* (1883–5). Leaving the Populists, who were apprehensive about his radical socialist and revolutionary ideas, Franko tried to set up an independent journal; to find support, he made two trips to Kiev, in 1885 and 1886. In May 1886 he married O. Khorunzhynska in Kiev. When the journal failed, Franko joined the staff of a Polish newspaper, *Kurjer Lwowski*. In referring to the decade (1887–97) that he spent working for the Polish press (he also worked for *Przyjaciel ludu*) and the German press (*Die Zeit*), Franko said that he was 'doing hired labor for the neighbors.'

For a while in 1888 Franko was a contributor to the journal *Pravda*. His ties with compatriots from Dnieper Ukraine led to a third arrest in 1889. In the following year, with the support of M. Drahomanov, Franko co-founded the Ruthenian-Ukrainian Radical party (see *Ukrainian Radical party) and drew up its program. He published the semimonthly **Narod* with M. Pavlyk (1890–5). In 1895, 1897, and 1898 he was the Radical party's candidate for a seat in the Austrian Parliament and the Galician Diet but lost the elections because of manipulations of the administration and provocations of the opposition. In 1899 a crisis arose in the Radical party, and Franko joined the Populists in founding the National-Democratic party, in which he was active until 1904, when he retired from political life. For many years Franko collaborated in the sociopolitical field with M. *Drahomanov, whom he regarded highly as a 'European political leader,' but eventually their views on socialism and the national question diverged. Franko parted with Drahomanov, accusing him of tying Ukraine's fate to that of Russia (in 'Suspil'no-politychni pohliady M. Drahomanova' [The Sociopolitical Views of M. Drahomanov, 1906]).

Besides his political and literary work Franko continued his university studies, first at Chernivtsi University (1891), where he prepared a dissertation on I. Vyshensky, and then at Vienna University, where on 1 July 1893 he defended a doctoral dissertation on the spiritual romance *Barlaam and Josaphat* under the supervision of the eminent Slavist V. Jagić. In 1894 Franko was appointed lecturer in the history of Ukrainian literature at Lviv University but failed to obtain the chair of Ukrainian literature because of opposition from Vicegerent C. Badeni and Galician reactionary circles. In 1894–7 he and his wife published the journal *Zhytie i slovo*, in which many of his articles appeared, among them 'Sotsiializm i sotsiial-demokratyzm' (Socialism and Social Democracy, 1897), a severe criticism of Ukrainian Social Democracy and the socialism of Marx and Engels. In the introduction to the poetry collection *Mii izmarahd* (My Emerald, 1898) Franko continued his attack on Marxism as 'a religion founded on dogmas of hatred and class struggle.'

With M. *Hrushevsky's coming to Lviv in 1894, Franko became closely associated with the *Shevchenko Scientific Society. In 1899 he became a full member of the society and in 1904 an honorary member. Most of his scholarly works, historical and literary notes, and reviews appeared in **Zapysky NTSh*. Franko worked in the society's Ethnographic Commission and headed the Philological Section (1898–1908). Through the efforts of Franko and Hrushevsky the Shevchenko Scientific Society became akin to an academy of sciences on the eve of the First World War. In 1897 Franko's article in *Die Zeit* in which he called A. Mickiewicz the poet of treason ('Der Dichter des Verrates') led to the end of his career as a

Title pages of some of Franko's fictional works

journalist. Henceforth, Franko devoted himself completely to editing **Literaturno-naukovyi vistnyk* (Lviv 1898–1906) with Hrushevsky and V. Hnatiuk. Actually, Franko did all the editing. In 1898 the Ukrainian community celebrated the 25th anniversary of Franko's work as a writer.

In 1908 Franko's health began to decline rapidly. Yet, he continued to work to the end of his life. In this last period he wrote *Narys istorii ukrains'ko-rus'koi literatury do 1890 r.* (Outline of the History of Ukrainian-Ruthenian Literature to 1890, 1910) and *Studii nad ukrains'kymy narodnymy pisniamy* (Studies of Ukrainian Folk Songs, 1913) and did numerous translations of ancient poetry. In 1913 all Ukraine celebrated the 40th anniversary of his literary work.

With his many gifts, encyclopedic knowledge, and uncommon capacity for work, Franko made outstanding contributions to many areas of Ukrainian culture. He was a poet, prose writer, playwright, critic, literary historian, translator, and publisher. The themes of his literary works were drawn from the life and struggle of his own people and from sources of world culture: Eastern cultures and the classical and Renaissance traditions. He was a 'golden bridge' between Ukrainian and world literatures.

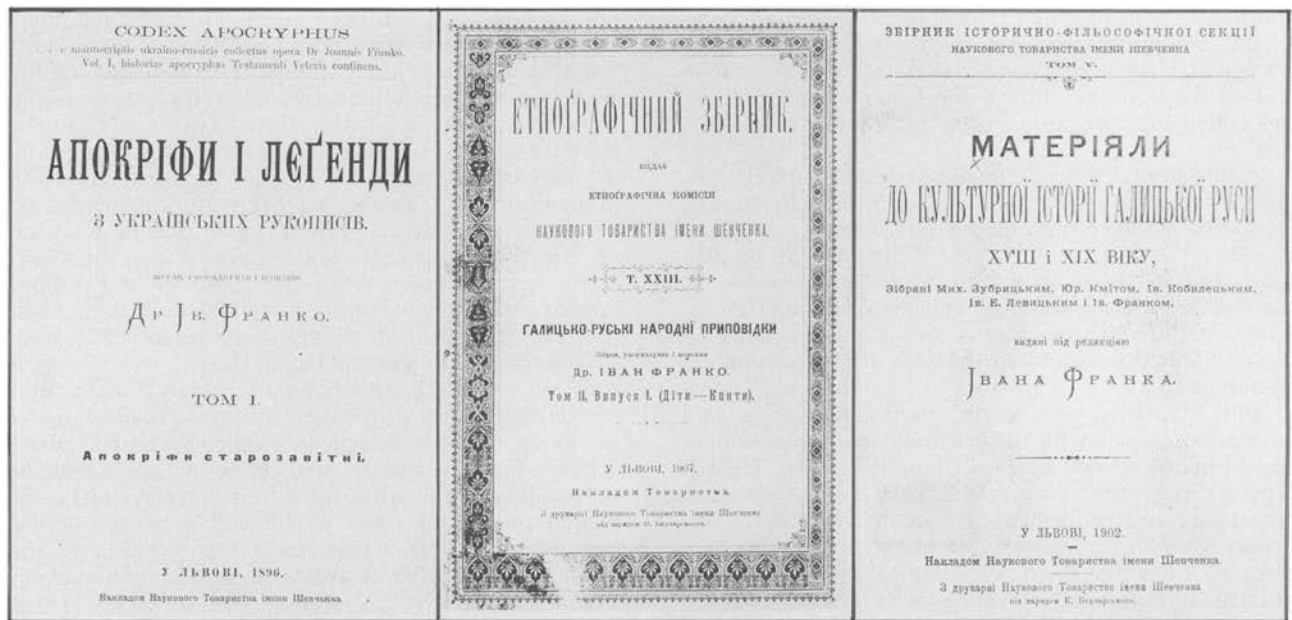

Franko was one of the first realists in Ukrainian literature and the most outstanding poet of the post-Shevchenko period. His second collection, *Z vershyn i nyzyn* (From the Heights and the Depths, 1887, expanded 1893), which included the masterpieces of his social lyrical poetry, such as 'Tovarysham z turymy' (To Comrades from Prison), 'Vichnyi revoliutsioner,' 'Kameniari,' 'Zemle moia' (My Land), and 'Tiuremni sonety' (Prison Sonnets), broke new ground. It radicalized the younger generation and for this reason was banned in Ukraine under Russia. Franko's *Ziv'iale lystia* (Withered Leaves, 1896) marks the culmination of his love poetry. Philosophical themes predominated in the collection *Mii izmarahd* (1898) – reflections on good and evil, beauty, fidelity, duty, and the meaning of life. But the collection also contained some social poetry that depicted the suffering of the Ukrainian people – 'Po selakh' (Through the Villages), 'Do Brazyl'ii' (To Brazil), etc. In the collection *Iz dnyv zhurby* (From the Days of Sorrow, 1900) the poet reflected on his personal fate. The collection *Semper tiro* (1906) is a poetic statement of the revolutionary poet's own faith. Franko displayed his poetic skills in large epic poems such as *Pans'ki zharty* (A Landlord's Jests, 1887), *Surka* (1890), *Smert' Kaïna* (The Death of Cain, 1889), and *Ivan Vyshens'kyi* (1900). His greatest poem, *Moisei* (Moses, 1905), which in a biblical setting deals with the conflict between a leader and his people and proclaims the ideal of service to one's people, was based to a large extent on autobiographical material.

Franko's prose works include over 100 short stories and dozens of novels. His earliest prose works (beginning in 1877) form the Boryslav cycle, which painted a vivid picture and gave a profound analysis of the social evils that plagued Galicia at the time. The impoverishment and proletarianization of the Galician peasants are the basic themes of the collections *V poti chola* (In the Sweat of the Brow, 1890) and *Halyts'ki obrazky* (Galician Pictures, 1885), which include some autobiographical stories such as 'Malyi Myron' (Little Myron), 'Hrytseva shkil'na nauka' (Hryts's School Lesson), 'Olivets' (The Pencil), and 'Schönschreiben'. His greatest masterpieces of prose

are the novel *Boa constrictor* (1878) and the social novel *Boryslav smiiet'sia* (1881), which for the first time depict the incipient forms of revolutionary struggle among the workers and the spontaneous awakening of working-class consciousness. *Zakhar Berkut* (1883), a historical novel based on ancient Ukrainian chronicles, presents the heroic resistance of Ukrainian highlanders to the Mongols in 1241. Franko's other historical novels are *Heroi ponevoli* (Unwilling Hero, 1904), dealing with the 1848 revolution in Lviv, and *Velykyi shum* (The Great Noise, 1907), dealing with the abolition of serfdom. Franko dealt with the moral decay of the leading circles in contemporary Galician society in the novels *Dlia domashn'oho vohnyshcha* (For the Home Hearth, 1897), *Osnovy suspil'nosti* (The Foundations of Society, 1895), and *Perekhresni stezhky* (Crossed Paths, 1900). The novel *Lel' i Polel'* (1887) is didactic in character. Franko's prose is noted for its variety of themes, as well as its realistic presentation of the life of the different social strata.

In drama Franko proved himself a master of the sociopsychological and historical play and of comedy. His first attempts in this area date back to his gymnasium days – *Iuhurta* (1873), *Try kniazia na odyń prestol* (Three Princes for One Throne, 1874), and others. He wrote the largest number of his plays in the 1890s. His best plays are the sociopsychological drama *Ukradene shchastia* (Stolen Happiness, 1894) and the historical drama in verse *Son kniazia Sviatoslava* (The Dream of Prince Sviatoslav, 1895). Of his longer plays the comedies *Riabyňa* (The Rowan Tree, 1886) and *Uchytel'* (The Teacher, 1896) are also well known. His best-known one-act plays are *Ostannii kreitsar* (The Last Kreutzer, 1879), *Budka ch. 27* (Hut No. 27, 1893), *Kam'iana dusha* (The Stone Soul, 1895), *Maister Chyrniak* (Master Chyrniak, 1896), and *Sud sv. Mykolaia* (The Trial of St Nicholas, 1920). Franko contributed several masterpieces to children's literature, including *Lys Mykyta* (Fox Mykyta, 1890), *Pryhody Don-Kikhota* (The Adventures of Don Quixote, 1891), *Abu-Kazemovi kaptsi* (Abu-Kasim's Slippers, 1895), *Koly shche zviriv hovoryly* (When Animals Still Talked, 1899), and *Koval' Bassim* (Bassim the Blacksmith, 1900). Special mention must be made of Franko's work as a translator, which he carried on throughout his life. He translated masterpieces from 14 languages by such famous authors as Homer, Dante, W. Shakespeare, J. Goethe, E. Zola, B. Bjørnson, A. Pushkin, M. Lermontov, N. Chernyshevsky, A. Herzen, N. Nekrasov, A. Mickiewicz, W. Gomułicki, K. Havlíček-Borovský, J. Neruda, J. Machar, H. Ibsen, H. Heine, and others.

Starting with his doctoral dissertation (1893) and qualifying thesis *Rozbir 'Naimychky' Shevchenka* (Analysis of Shevchenko's 'The Servant Girl,' 1895), Franko's works on the theory and history of literature and criticism were an important contribution to Ukrainian literary studies. His largest scholarly work was the five-volume *Apokryfy i legendy z ukrains'kykh rukopysiv* (Apocrypha and Legends from Ukrainian Manuscripts, 1896–1910), a monumental collection of texts and scholarly analysis. Among his works on old and medieval literature were *Karpatorus'ke pys'menstvo xvii–xviii vv.* (Carpatho-Ruthenian Literature of the 17th–18th Centuries, 1900), *Sv. Klyment u Korsuni* (St Clement in Korsun, 1906), and materials on the history of Old Ukrainian drama, particularly of the *vertep* (*Do istorii ukrains'koho vertepa xviii v.* [On the History of the Ukrainian Puppet Theater of the 18th

Title pages of some of Franko's scholarly works

Century, 1906]). In modern literature Franko devoted attention to the contributions of I. Kotliarevsky, M. Shashkevych, T. Shevchenko, Yu. Fedkovych, O. Konysky, Lesia Ukrainka, V. Samiilenko, V. Vynnychenko, and others. He wrote a number of articles on Slavic literatures, particularly on Russian and Polish literature, as well as on Western European literature. His literary studies were summed up in his article 'Iuzhnoruskaia literatura' (Southern Russian Literature) in F. Brockhaus and I. Efron's *Entsiklopedicheskii slovar'* (Encyclopedic Dictionary, vol 81, 1904) and in *Narys istorii ukrains'ko-rus'koi literatury do 1890 r.* (Outline of the History of Ukrainian-Ruthenian Literature to 1890, 1910). Franko's theoretical views on the purpose of literature were expressed in 'Z sekretiv poetychnoi tvorchosti' (On the Secrets of Poetic Creativity, 1898) and 'Teoriia i rozvii istorii literatury' (The Theory and Development of the History of Literature, 1899). He emphasized the social basis of literary work but accepted esthetic qualities as essential to its evaluation. In his studies of literary monuments Franko used the comparative and historical-cultural approach.

In the area of linguistics Franko produced several studies of the Ukrainian literary language, including 'Etymolohiia i fonetyka v iuzhno-rus'kii literaturi' (Etymology and Phonetics in Southern Ruthenian Literature, 1894), 'Literaturna mova i diialekty' (The Literary Language and Dialects, 1907), and 'Prychynky do ukrains'koi onomastyky' (Materials on Ukrainian Onomastics, 1906). He defended the view that there is only one Ukrainian literary language, based primarily on the Dnieper dialects and enriched with dialects from Western Ukraine. For his philological contributions Franko was awarded an honorary doctorate by Kharkiv University in 1906. He was also elected to a number of Slavic scholarly associations. A. Shakhmatov's and F. Korsh's recommendation to admit Franko to the Russian Academy of Sciences was rejected by the tsarist government.

In the field of ethnography and folklore Franko collected a wealth of source material and wrote a series of

studies and articles about the clothing, food, art, and beliefs of the Galician people. These were published in *Svit*, *Druh*, *Zhytie i slovo*, *Zoria*, *Kievskaia starina*, *Zapysky NTSh*, and elsewhere. In 1898–1913 Franko served as chairman of the Ethnographic Commission of the Shevchenko Scientific Society and co-edited *Etnohrafichnyi zbirnyk* with V. Hnatiuk. His main studies of folklore are 'Deshcho pro Boryslav' (Something about Boryslav, 1882), *Zhinocha nevolia v rus'kykh pisniakh narodnykh* (Women's Servitude in Ruthenian Folk Songs, 1883), 'Jak powstajaja pieśni ludowe' (How Folk Songs Originate, 1887), 'Voia-ts'ka pisnia' (The Soldier's Song, 1888), *Nashi koliady* (Our Carols, 1889), *Iz ust naroda* (From the Mouths of the People, 1894–5), 'Eine ethnologische Expedition in das Bojkenland' (1905), and 'Ohliad prats' nad etnografiiem Halychyny v XIX st.' (A Survey of Works on the Ethnography of Galicia in the 19th Century, 1928). Franko's *Studii nad ukrains'kymy narodnymy pisniamy* (Studies of Ukrainian Folk Songs, three volumes of *Zapysky NTSh* published separately in 1913), in which he used the comparative-historical method, is a fundamental contribution to the field of folklore studies.

Franko formulated his philosophical, sociological, and political ideas in the following studies: 'Nauka i jej stanowisko wobec klas pracujących' (Scholarship and Its Attitude to the Working Classes, 1878), 'Mysli o evoliutsii v istorii liuds'kosti' (Reflections on Evolution in the History of Mankind, 1881–2), and 'Najnowsze prądy w ludoznawstwie' (The Newest Trends in Ethnology, 1895). His article 'Sotsiializm i sotsiial-demokratyzm' (1897) is a critique of 'scientific socialism' and the materialist conception of history. 'Shcho take postup?' (What Is Progress?, 1903) is a survey of sociocultural development and a critique of the communist concept of the state, while 'Sotsiial'na aktsiia, sotsiial'ne pytannia i sotsiializm' (Social Action, the Social Question, and Socialism, 1904) is an analysis of Metropolitan A. Sheptytsky's pastoral letter on the social question and an essay on the causes of social injustice.

Franko's works in economics deal with the condition of the workers and peasants from a historical viewpoint: 'Promyslovi robotnyky v skhidnii Halychyni i ikh plata r. 1870' (Industrial Workers in Eastern Galicia and Their Wages in 1870, 1881), *O pracy* (On Work, 1881), 'Galicyjska własność ziemska' (Land Ownership in Galicia, 1887 and 1914), 'Die Auswanderung der galizischen Bauern' (1892), 'Die Bauernbewegung in Galizien' (1895), 'Hrymaliv's'kyi kliuch v 1800 r.' (Hrymaliv's Key in 1800, 1900), 'Bauernstrikes in Ostgalizien' (1902), and *Hromads'ki shpykhliri i shpykhliriovnyi fond u Halychyni 1784–1840* (Community Storehouses and the Storehouse Fund in Galicia in 1784–1840, 1907).

About a hundred published works, most of them dealing with the peasant movement and the 1848 revolution in Galicia and with Ukrainian-Polish relations, were the subjects of Franko's sociological, sociopolitical, and historical-economic studies. The first group includes 'Pol's'ke povstannia v Halychyni 1846 r.' (The Polish Revolt in Galicia in 1846, 1884), 'Prychynky do istorii 1848 r.' (Materials On the History of 1848, 1886), *Panshchyna ta ii skasovannia 1848 r. v Halychyni* (Corvée and Its Abolition in 1848 in Galicia, 1898, 1913), 'Lukian Kobyltsia: Epizod z istorii Hutsul'shchyny v pershii polovyni XIX st.' (Lukian Kobyltsia: An Episode from the History of the Hutsul Region in the First Half of the 19th Century, 1902). The second group includes *Nieco o stosunkach polsko-ruskich* (A Few Words about Polish-Ruthenian Relations, 1895), 'Polen und Ruthenen' (1897), 'Novi prychnyky do istorii pol's'koï suspil'nosti na Ukraïni v XIX st.' (New Materials On the History of Polish Society in Ukraine in the 19th century, 1902), and 'Rus'ko-pol's'ka zhoda i ukraïns'ko-pol's'ke bratannia' (Ruthenian-Polish Harmony and Ukrainian-Polish Fraternalization, 1906). Among Franko's other historical studies are two studies of Bishop Y. Shumliansky (1891, 1898), 'Khmel'nychchyna 1648–49 rr. u suchasnykh virshakh' (The Khmelnytsky Period of 1648–9 in Contemporary Poetry, 1898), 'Stara Rus' (Ancient Rus', 1906), 'Ten iak istoryk frantsuz'koi revoliutsii' (Taine as a Historian of the French Revolution, 1908), *Prychnyky do istorii Ukraïny-Rusy* (Materials On the History of Ukraine-Rus', 1912), and some articles on ancient Ukraine.

Franko's journalistic work evolved with his outlook and was governed by his scientific approach. Hence, it is often difficult to distinguish his scholarly articles from his journalistic writings. Franko regarded Ukraine as a sovereign entity belonging to 'the circle of free nations.' At the same time he devoted much attention to the defense of universal human rights. Franko first became politically active in a circle of Russophile secondary school students. Soon after he left it and joined the Populist camp (see *Populism, Galician). As a student he was a fervent advocate of socialism and studied Marx and Engels, but later he attacked it vehemently. In general, Franko evolved in his thinking from radical to a progressive national democrat. The evolution of his views is reflected in his numerous journalistic articles.

Franko's world view was influenced by A. Comte and H. Spencer's positivism, C. Darwin and E. Haeckel's theory of evolution, the theories of French, German, and Russian sociologists, and such literary critics as N. Boileau, G. Lessing, J. Lemaitre, V. Brunetière, and G. Brandes. Yet, Franko remained true to himself and formed his own outlook.

Today in Soviet Ukraine the cult of Franko is used for political ends, and Soviet critics present his works in a one-sided, tendentious manner. In order to depict Franko as an active champion of Ukrainian-Russian unity, a fervent socialist, and a militant atheist, the authorities suppress a number of his works in Ukraine – 'Ne pora ...,' 'Velyki rokovyny' (The Great Anniversary), 'Rozvyvaisia ty, vysoky dube' (Grow, You Lofty Oak), and others. Other works are falsified or abridged: for example, the introduction to the collection of poetry *Mii izmarahd*, 'Shcho take postup?,' 'Sotsializm i sotsial-demokratyzm,' 'Narodnyky i marksysty' (Populists and Marxists), 'Sotsial'na aktsiia, sotsial'ne pytannia i sotsializm', the review of Yu. Bachynsky's *Ukraina Irredenta*, 'Mykhailo Pavlyk: Zamist' iuvileinoï syl'vetky' (Mykhailo Pavlyk: Instead of a Silhouette for His Anniversary), and others. Furthermore, the influence of Russian 'revolutionary democratic' writers on Franko is emphasized, and the friction between him and Hrushevsky as well as the Ukrainian conservative camp is exaggerated. The most complete collections of Franko's works are: *Tvory* (30 vols, Kharkiv 1924–31), *Tvory v 20 t.* (Kiev 1950–6), *Tvory v 20 tt.* (New York 1956–62), and *Zibrannia tvoriv u p'iatydesiaty tomakh* (Kiev 1976–).

Franko, Petro, b 21 June 1890 in the village of Nahuievychi, Drohobych county, Galicia, d 1941. Writer and pedagogue; son of I. *Franko. A graduate of the Lviv Polytechnic, Franko was one of the organizers of the Plast Ukrainian youth association. In 1914 he joined the Legion of Ukrainian Sich Riflemen, in which he later commanded a company; as a captain in the Ukrainian Galician Army he organized an air-force squadron in 1919. After the war Franko was a teacher in Kolomyia; from 1927 to 1936 he worked as an engineer in Soviet Ukraine. After his return to Galicia he began to teach at the Lviv Trade and Economics Institute in 1939; in 1940 he was elected to the Supreme Soviet of the Ukrainian SSR. Franko was the author of short stories, a film script based on I. Franko's novel *Boryslav smiiet'sia* (Boryslav Is Laughing), translations of the works of Jack London, and a memoir about his father, *Ivan Franko zbliz'ka* (Ivan Franko from Close Up, 1937). With the outbreak of the Soviet-German War he was evacuated from Galicia by the Soviets and died in unknown circumstances.

Franko, Taras, b 9 March 1889 in Lviv, d 13 November 1971 in Kiev. Classical philologist, writer, translator, and critic; son of I. *Franko. Franko studied classical languages at Lviv and Vienna universities; from 1919 to 1922 he was employed at publishing houses and higher

educational institutions in Kharkiv. After his return to Galicia in 1923 Franko worked as a gymnasium teacher until 1945, when he became a lecturer in classical philology at Lviv University. In 1953 he defended his candidate's dissertation 'Ivan Franko i Boryslav' (Ivan Franko and Boryslav). From 1950 to 1963 he was a research associate of the Institute of Literature of the Academy of Sciences of the Ukrainian SSR. As a specialist in Franko scholarship he helped to prepare for publication the 20-volume collection of Franko's works. He is the author of original poems and translations, chiefly of classical Latin works, a collection of humorous short stories *Vzdovzh i vpoperek* (Lengthwise and Across, 1965), and a book about his father, *Pro bat'ka: Statti, spohady, opovidannia* (About My Father: Articles, Reminiscences, Stories, 1956).

Frantsev, Vladimir [Francev], b 6 April 1867 in Novogeorgiev, Poland, d 1942. Russian literary and cultural historian, professor at the universities of Kiev, Warsaw (1900), Rostov (1915), and Prague (beginning in 1922). Frantsev's work in Slavic studies included publications on the literary history of Transcarpathia and on language and religion in the Kholm and Podlachia regions.

Ivan Frantsevych

Frantsevych, Ivan [Francevych], b 3 August 1905 in Poltava. Physical chemist and specialist in materials science, member of the Academy of Sciences of the Ukrainian SSR since 1961. In 1945-57 Frantsevych was a professor at Kiev University; in 1955-6 he served as director of the Institute of Metal Ceramics and Special Alloys, and in 1962-73 as director of the Institute of Problems of Materials Science of the Academy of Sciences of the Ukrainian SSR, in which he has chaired a department since 1974. Frantsevych's publications deal with the formation of new materials that are meant for use under especially demanding conditions and that are characterized by strength, durability, and a high resistance to fire and electrochemical corrosion.

Franzos, Karl-Emil, b 25 October 1848 in Chortkiv, Galicia, d 28 January 1904 in Berlin. Austrian writer and literary scholar. From 1858 Franzos lived in Chernivtsi. He studied in Vienna and Graz. In 1877 he settled in Vienna and edited *Neue illustrierte Zeitung* and the journal *Deutsche Dichtung*. In 1886 he moved to Berlin. Franzos wrote poetry, short stories, and novels dealing with the life of Ukrainian peasants. His novel *Ein Kampf um Recht* (1882) depicts the hard life of the Hutsuls in the 19th

century and their struggle against social injustice. In 'Die Kleinrussen und ihre Sanger' (1877) and other articles, which were eventually collected in his book *Vom Don zur Donau* (1878), Franzos gave a very positive evaluation of T. Shevchenko's poetry and claimed for the first time that the poet's talent was of world stature. In 'Die Literatur der Kleinrussen' (*Vom Don zur Donau*, 2nd edn, 1889), Franzos presented a general survey of Ukrainian literature from the 11th century to the 1880s, clearly distinguishing the Ukrainians from the Russians.

Free Academy of Proletarian Literature. See VAPLITE.

Free Cossacks (*Vilne kozatstvo*). Ukrainian volunteer militia and military formations in 1917–18, which arose spontaneously and organized themselves at a congress in Zvenyhorodka in Kiev gubernia in April 1917. Their purpose was 'to defend the liberties of the Ukrainian people' and to maintain civil order, which was threatened by bands of Bolshevik-inspired deserters. The units were organized by territory: villages provided companies; the companies of a volost constituted a *kurin* (battalion); the *kurini* of a county, a regiment; and the regiments of a region, a *kish* (division). The officers were elected. Arms were purchased from funds that were provided by taxes. In 1917 the Free Cossack movement spread through Kiev, Volhynia, Kherson, Poltava, and Chernihiv gubernias. The troops consisted mostly of peasants, but also included workers, particularly in Kiev. The All-Ukrainian Congress of Free Cossacks in Chyhyryn on 16–20 October 1917 represented 60,000 organized Cossacks. General P. Skoropadsky was elected otaman of the Free Cossacks.

Until January 1918 the General Council of the Free Cossacks in Chyhyryn was subordinate to the UNR General Secretariat of Internal Affairs and then to the Secretariat of War. With the outbreak of the Ukrainian-Soviet War, the General Secretariat decided to turn the Free Cossacks into a territorial army. The Free Cossacks played an important role in battles with the Bolsheviks, particularly in the southern Kiev region. In March–April 1918 the Cossacks were disarmed in compliance with the demand of the German command. Many Cossacks later took part in the insurrection against the Hetman government and the subsequent war against the Bolsheviks.

Freedom International (*Internatsional svobody*). Anti-Communist organization of emigres from Eastern Europe, founded in 1946 in West Germany by A. Melnyk, leader of a faction of the Organization of Ukrainian Nationalists (OUN), to counterbalance the existing *Anti-Bolshevik Bloc of Nations formed by the OUN faction of S. Bandera. From 1952 its headquarters were in Rome. The Buenos Aires branch was very active in the 1950s. The membership included Albanians, Belorussians, Bulgarians, Georgians, Chinese, Lithuanians, Poles, Rumanians, Slovaks, Slovenes, Croats, Czechs, and Ukrainians. V. *Fedoronchuk was the long-standing general secretary. The organization was dissolved at the beginning of the 1960s.

Freemasonry (from the English *mason* and French *franc-maonnerie*). A cosmopolitan religious-moral movement that recognizes the 'Great Builder of the Universe' as the creator of the world order and views itself as the builder of his temple. In their writings the Masons advocate moral

improvement and the union of all humans regardless of religious and national affiliation according to the principles of brotherhood, equality, mutual aid, and fidelity. The origins of the movement can be traced back to the medieval masons' guilds, from which the Freemasons adopted their name and the organizational form of the lodge. In 1717, the accepted founding date of Freemasonry, several lodges in England were consolidated to form the grand lodge. Eventually the movement spread from England, Scotland, and Ireland to other countries in Europe, America, and Asia.

In the Masonic movement there exist various tendencies, which differ in beliefs about its origin, goals, tasks, and in the rituals. With time the movement began to digress from its Christian principles and the doctrine of the church and to assume an anticlerical and antichurch political position. This prompted the popes to take a clear stand against the Freemasons and to forbid Catholics to participate in the movement (encyclicals of Clement XII and later popes up to Pius XII). The Orthodox church also condemns Freemasonry as an antichurch organization. In some countries the Freemasons took an active part in revolutionary movements, for example, in the Decembrist movement, the Polish uprisings, and the February Revolution in Russia. At the end of the 18th and the beginning of the 19th century Masonic lodges in some countries and particularly in Russia propagated free thought and gave rise to opposition movements against the existing order. Today Freemasonry is banned by totalitarian regimes.

The history of Freemasonry in Ukraine has not been fully researched. The movement entered Ukraine directly from Western Europe and through Poland, where the first lodges date back to 1738, and Russia, where the first lodge was organized in 1731. The first Masonic lodge on Ukrainian territory was founded by Polish noblemen in 1742 in Vyshnivets, Volhynia. In 1758 the Lodge of the Three Goddesses already existed in Lviv. Freemasonry began to spread from Russia through Left-Bank Ukraine and Slobidska Ukraine in the 1740s. Masonic influence in Left-Bank Ukraine increased from the reign of Hetman K. Rozumovsky, who was a member of the Three Brothers Lodge in Warsaw and probably had connections with Masonic circles in France and Russia. The hetman's brother, Count O. Rozumovsky, and his sons – particularly the oldest, Count O. Rozumovsky, the Russian minister of education – were also Freemasons. The sons of Cossack officers, many of whom studied at European universities from the 1740s on, returned home with Masonic ideas. Representatives of Ukrainian officer-noble families such as the Kapnist, Kochubei, Kuliabka, Lomykovsky, Lukashkevych, Martos, Poletyka, Rodzianko, Skoropadsky, Sulyma, Tarnovsky, Tomara, Tumansky, and Khanenko families were Freemasons in the second half of the 18th and at the beginning of the 19th century.

The participation of Ukrainians in the Russian Masonic movement (S. Hamaliia, Ya. Dubiansky, M. Antonovsky, M. Kovalynsky, V. Tomara, Kh. Chebotarov, A. Prokopovych-Antonsky, and others) facilitated the spread of Freemasonry in Ukraine. A significant contribution to the movement was made by the numerous foreigners from the West and Russia who were brought into Ukraine to serve in various government institutions and the armed forces or to provide professional services, such as medical, architectural, technical, and commercial services. The participation

of professional men in the Masonic movement expanded its social base in Ukraine at the turn of the 18th century. The main Masonic center in Ukraine in the last quarter of the 18th century was Kiev. The Lodge of Immortality, which was directly subject to the Great Orient Lodge of Poland, was founded there in 1784; it was followed by the Lodge of Three Columns ten years later. At the end of the 18th century Masonic lodges existed in Zhytomyr, Kharkiv, Odessa, Kremenchuk, Nemyriv, Dubno, and in Galicia in such cities as Lviv, Sambir, and Zalizhchyky. Most of the members were Russians or Poles.

As a result of Russia's annexation of Right-Bank Ukraine after the partitions of Poland and the government's more liberal attitude to Freemasonry, the number of Masonic lodges in Ukraine increased at the beginning of the 19th century. Two lodges arose in Odessa, which had a multinational membership and direct ties with the West: the Pontus Euxinus Lodge in 1803 and the Lodge of the Three Kingdoms of Nature. In 1818 the Lodge of Osiris to the Fiery Star was formed in Kamianets-Podilskyi. One of the main lodges in Ukraine was the United Slavs Lodge in Kiev, which was founded in March 1818 and consisted mostly of Russians and Poles but also a few Ukrainians, including V. Lukashevych. Its activities influenced the development of ideas about a Slavic federation in Ukraine. A second important lodge, known as the Love of Truth Lodge, was formed in Poltava in April 1818. Its orator was I. Kotliarevsky, and its membership included, among others, S. Kochubei, V. Tarnovsky, V. Kapnist, V. Lukashevych, and D. Oleksiiv. Both the Kiev and Poltava lodges were connected with the *Decembrist movement. Their purpose was to involve the 'Little Russian nobility' in political activity and to prepare members for the Union of Welfare. The first territorial Masonic organization in Ukraine was the Volhynian Provincial Lodge, which united the Polish lodges in Right-Bank Ukraine.

The activities of the Masonic lodges in Ukraine promoted to some extent the development of a Ukrainian national-political movement and encouraged opposition to the government. For these reasons the Russian authorities suppressed them. In March 1819 the lodge in Poltava was dissolved. In 1822 the Masonic movement was prohibited throughout the Russian Empire by an imperial decree. In spite of this decree and later prohibitions, Masonic lodges continued to function in a conspiratorial manner and their members took part in the Decembrist movement and in later secret political organizations.

While all Masonic lodges in Russia ceased their activities in obedience to the tsar's decree, some lodges in Ukraine continued to act clandestinely. These were the only secret organizations whose existence the tsarist police did not even suspect. M. Kostomarov was not a Mason, but Ukrainian Masons inspired and supported the *Cyril and Methodius Brotherhood and selected from its membership reliable candidates for their secret lodges. One of the noted leaders of this conspiratorial Ukrainian Masonic movement in the 19th century was O. Konysky. Among the military, Lieutenant Colonel A. Krasovsky belonged to the Freemasons. In 1862 he refused to suppress peasant uprisings in the Zhytomyr region and was sentenced to death for insubordination.

During the 19th century Masonic lodges existed in Kiev, Zhytomyr, Kamianets-Podilskyi, Odessa, and Poltava. In 1900 five lodges from these cities formed the

Grand Lodge of Ukraine. Later two more lodges were organized: the Shevchenko Lodge in Kharkiv in 1901 and the Brotherhood Lodge in Chernihiv in 1904. Notable Ukrainian political and cultural figures of the turn of the century belonged to these lodges.

In 1917 the Lodge of Young Ukraine was formed in Kiev, and in April 1919 the Grand Lodge of Ukraine was re-established. Its grand master was S. Petliura, and it encompassed the Lodge of St Andreas Praevocatus as well as other lodges. The regalia and part of the archive of the grand lodge are preserved in Paris. As a result of political events this lodge did not become very active and did not win the recognition of other grand lodges around the world. P. Skoropadsky and S. Morkotun belonged to the Kiev Lodge of Martinists, known as Narcissus. This lodge did not recognize the Grand Lodge of Ukraine.

With the Soviet occupation of Ukraine, Masonry fell under a strict ban. Soviet historians either belittle or ignore the role of the Masonic movement in Ukraine.

Masonic lodges continued to exist and act conspiratorially on Ukrainian territories ruled by Austria and later Poland. In the first half of the 19th century D. Zubrytsky and B. Didytsky belonged to the movement. In 1919–23 the Ukrainian lodge Unity was active in Lviv.

Outside Ukraine one of the first prominent Ukrainians to be connected with the Freemasons was H. *Orlyk, in France. Ukrainian émigrés in Switzerland formed a Ukrainian grand lodge back in 1902. In the United States there are no Ukrainian Masonic lodges, only Masonic clubs. One of them is the Ukrainian Masonic Club in New York, which represents Ukrainians who are members of various American lodges.

After the Second World War S. Tataroula (d 1971) proposed that a Ukrainian lodge be formed in France. In 1966 the Vox Ucrinae Lodge was consecrated in Paris by the grand master of the Grande Loge Nationale Française. This lodge maintains ties with world Masonry and pursues the task of reviving Ukrainian Masonic traditions.

Fresco painting. A method of painting on freshly plastered walls with powdered pigments that are resistant to the erosive action of lime. Before the colors are applied to the wet plaster the main lines of the composition are usually traced on the preceding coat. The painting is very durable and is applied to both interior and exterior walls.

The origins of fresco painting in Ukraine can be traced back to the 4th century BC. Frescos adorned the homes, public buildings, and tombs of the Greek colonists and Scythians on the northern coast of the Black Sea. The most interesting ancient frescos from the 1st century BC were discovered during excavations of burial sites in Kerch in the tomb of Demeter (depiction of Hades kidnapping Demeter's daughter, Persephone). A fresco on a stone sarcophagus depicting a painter's studio (now preserved at the Hermitage Museum in Leningrad) dates back to the same period.

In the Kievan state the fresco was the principal method of decorating church interiors. Mosaics adorned churches only in the 11th and 12th centuries and were limited to the central part, while frescos covered all the side apses, vaults, columns and walls of the side naves, and sometimes even the arch supports, galleries, niches, and external portals. In Byzantium, mosaics were never mixed with frescos in the same building; this is a unique practice of Ukrainian church art. Harmony between mosaic and fresco was achieved by using the same dominant colors. The most famous examples of this decorative system are St Sophia Cathedral (1037) and the Cathedral of St Michael's Golden-domed Monastery (mid-12 century, destroyed by the Soviets) in Kiev. A different Kiev school of fresco painting was represented by the painters who decorated the Dormition Cathedral of the Kievan Cave Monastery (11th century, destroyed by the Soviets in the Second World War).

The frescos of St Sophia are painted on a two-layer plaster base 1.5–2 cm thick and strengthened with chopped straw. The cool blue, white, purple, and green colors predominate in both the frescos and mosaics, creating a reverential mood. In the main apse, near the mosaic of Orante, frescos depict various scenes from the life of the Mother of God and her parents; the main events in the life of Christ appear in the central nave. Another series of frescos, dealing with the Christological cycle, adorns the second level. Of particular interest are the secular frescos: episodes from court life, hippodrome events, hunting scenes, musicians, acrobats, and comedians are depicted in the two towers; there are figural portraits of Prince Yaroslav the Wise and his children in the main nave. The prevalent ornament, consisting of braided coils of straw worked into a geometric pattern, reappears in other Kiev, Chernihiv, and Novgorod frescos of the 11th–12th century. The surviving frescos of St Michael's Cathedral suggest that the interior was decorated with brighter colors and that the characters were portrayed according to different artistic conventions than in the St Sophia Cathedral; for example, the apostles in the mosaic of the sanctuary lack aureolas. The apostles of the 11th–12th century found in frescos of St George's Chapel in Oster near Pereiaslav are similarly portrayed, but in a warmer

color scheme dominated by red and ocher. The appearance of local features in character depiction, however, relates these figures more closely to those found in the frescos of St Nicholas's Rotunda Chapel in Horiany in Transcarpathia. Fragments of frescos from the following Chernihiv cathedrals have also been preserved: the Cathedral of the Transfiguration (early 11th-century depiction of St Teklia), the ss Borys and Hlib Cathedral, Dormition Cathedral of Yelets'kiy Monastery (Orante, etc), the Church of Good Friday. Traces of frescos were found in Pereiaslav during the excavations of St Michael's Cathedral (built 1089), in the Church of the Savior in Posada, and in other churches.

After the middle of the 12th century frescos almost completely replaced mosaics in the decoration of church interiors. The most complete set of frescos from this period has been preserved in the church of St Cyril's Monastery in Kiev. The influence of Balkan art is evident. Frescos depicting the sacraments of the Eucharist and the holy orders are found under the traditional Orante in the altar apse and, as in Bulgaria, are imitations of hanging icons. On the walls and vault of the narthex appear the first paintings of the Last Judgment and scenes of the Apocalypse known in Ukraine. In contrast to the idealized figures of St Sophia's frescos, the figures of St Cyril's display features of the local population. The colors are bright and warm, dominated by ocher and red. The vaults and walls are covered with numerous scenes representing a new type of decorative art, which was characteristic of the 12th-century Kiev school of church painting.

It is evident from numerous monuments that in this period the Chernihiv, Pereiaslav, Halych, and Volhynian principalities already had their own schools of church painting. Preserved fragments of frescos from the 14th century demonstrate that the same techniques used in the Kiev school were used here. Among the better preserved are the 14th–15th century frescos in Polish churches of the Sandomierz, Sieradz, and Cracow regions executed by Ukrainian masters, probably from Galicia and Volhynia; the frescos of the Holy Trinity Chapel in Lublin done in 1418 by a group of nine or ten painters under the direction of master Andrii; the frescos of Sandomierz Cathedral done in the 1430s; the paintings of Wislica Collegiate Cathedral from the 14th century (by master Hail); and the paintings in the Holy Cross Chapel of the Wawel Cathedral in Cracow (1470). In all these churches the frescos, which are based on Byzantine tradition, are skillfully integrated with the Gothic architecture of the interior. More dramatic and dynamic than their Byzantine models, they often depart from conventional scenes. Western European influences are evident in the iconography. The lively colors of the frescos are complemented by the floral-geometric ornamentation. The synthesis of traditional Ukrainian painting with the Gothic style is particularly successful in the Chapel of the Holy Cross in Wawel.

Among the monuments of the 15th century are the partly preserved frescos of St Onuphrius's Church at the monastery in Lavriv, in which the Mother of God is the central figure and is depicted in various ways, particularly as the protectress modelled on the Western European Madonna. These highly ornamented paintings are stylistically similar to the frescos in Wislica and Sandomierz, and to those of the Dormition Church in the village of Luzhany in Bukovyna.

The development of fresco painting was halted by the spread of wooden churches and the use of simpler painting techniques in decorating secular buildings. Attempts to revive the art came only in the early 20th century, when the fresco technique was studied by such artists as T. Boichuk, K. Hvozdyk, A. Ivanova, O. Myzin, O. Pavlenko, I. Padalka, V. Sedliar, M. Rokytsky, and M. Shekhtman in the studio of M. Boichuk at the Kiev State Art Institute. These painters took part in composing many frescos in Kiev, which depict the daily life of the workers and resemble the folk paintings and icons of the 17th–18th century; a series of frescos at the Peasant Sanatorium in Odessa (1928), which depict the work of the peasants; the frescos at Mezhyhiria tekhnikum (V. Sedliar and O. Pavlenko); and the frescos in the Children's Village in Kiev (1924, D. Shavykin and I. Zhdanko). Many tempera and fresco paintings (secco) in 1929–32 were done on dry plaster by artists from Odessa or the Odessa region: the murals of the Press Building (1929–30, by M. Pavliuk, H. Dovzhenko, I. Hurvykh, I. Pasternak, and Ya. Tymofeev), the GPU Club (1930–1, by P. Parkhet, I. Pasternak, I. Hurvykh, and Ya. Tymofeev), and the Eastern Chamber of Commerce (1927, by H. Komar and H. Dovzhenko). The influence of Boichuk's school on these artists is evident. Under the direction of L. Kramarenko, I. Zhdanko and Yu. Sadylenko decorated the walls of the conference hall in the building of the Academy of Sciences of the Ukrainian SSR with frescos in 1930. M. Boichuk's last frescos, on which he collaborated with V. Sedliar and I. Padalka, were painted in the Red Factory Theater in Kharkiv in 1933–5. All three artists were charged with formalism and perished in exile. Most of their works were destroyed. Henceforth fresco painting declined in Ukraine.

S. Hordynsky

Frič, Josef Václav, b 5 September 1829 in Prague, d 14 October 1891 in Prague. Czech political leader and publicist, active participant in the Prague revolt in 1848. Frič was persecuted by the Austrian authorities and spent many years abroad. He was acquainted with Marko Vovchok and corresponded with A. Vakhnianyn. Frič was sympathetic to Ukrainian cultural and political aspirations within the Austrian and Russian empires. He translated and adapted N. Gogol's *Taras Bul'ba* for the theater in 1857 and wrote the tragedy *Ivan Mazepa* (1865). He also wrote articles on the Ukrainian question, such as 'Asimilace maloruského národa' (The Assimilation of the Little Russian People, 1863) and 'At' žije Ukrajina!' (May Ukraine Live, 1868).

Friday (*piatnytsia*). The fifth (*piat'*) day of the week. In the Christian world it is marked by fasting and prayers in

commemoration of Good Friday, when Jesus Christ died. Under the influence of pre-Christian beliefs and sometimes the cult of St Paraskevia, Friday assumed the mythological figure of St Friday (*P'iatinka-Matinka*) – a woman with straight hair who is dressed in white and warns women not to work on Friday, rewarding those who heed her and punishing the disobedient. A woman dressed as St Friday used to be led through the streets, offered gifts, and honored with ceremonial meals, particularly on Good Friday and on the eve of St Paraskevia's day on October 28. The apocryphal 'Slovo pro 12 p'iatnyts' (The Tale of the 12 Fridays) describes the great events that occurred on Fridays and the 12 Fridays that must be celebrated, particularly the 10th Friday (*Desiatukha*). In folk legends and songs Friday is sometimes worshipped as the Mother of God or the Virgin Mary, who bestows her blessings on people.

Fridman, Elius, b 22 September 1904 in Kishinev, Moldavia. Sculptor, monumentalist. Fridman graduated from the Odessa Art Institute in 1929. With Yu. Bilostotsky and H. Pyvovarov he created the compositions *Industry* and *Agriculture* for the Ukrainian pavilion at the All-Union Agricultural Exhibition in Moscow in 1937. He designed a number of monuments with Bilostotsky in Donetske, Uman, and Kryvyi Rih and sculpted busts of A. Buchma, Yu. Shumsky, V. Kasiian, I. Patorzhynsky, L. Bulakhovsky, and others.

Frog (*Rana*; Ukrainian: *zhaba*). A tailless amphibian of the family Ranidae. Of the many frog species in Ukraine the most common are the edible frog (*R. esculenta*) and the marsh frog (*R. ridibunda*), which are up to 10 cm long and are distributed in rivers, lakes, and ponds all over Ukraine; the common frog (*R. temporaria*), which is found mainly in the forest and forest-steppe belts, and the field frog (*R. arvalis*), which is the most common species of all and lives even in the Carpathians, where no other frog species live.

Frollick, Stanley [Froljak, Svjatoslav], b 7 July 1920 in Hillcrest, Alberta. Community leader and lawyer. In 1943 he joined the British military intelligence and in 1945 he helped to found the Central Ukrainian Relief Bureau in England, serving first as secretary general and then as director. He was national president of the Ukrainian National Youth Federation (1943–4), a founding member of the Canadian League for Ukraine's Liberation, and president of the Ukrainian Canadian Professional and Business Federation (1971–3) and the Canadian Foundation for Ukrainian Studies (1975–6). A graduate of Osgoode Hall Law School (1958), Frollick was appointed Queen's Council in 1968.

Front of National Unity (Front natsionalnoi yednosti or FNU). A nationalist organization on Polish-ruled Ukrainian territories. The FNU opposed the policy of normalizing relations with the Poles (*normalization) pursued by the Ukrainian National Democratic Alliance (UNDO), as well as the revolutionary activity of the underground Organization of Ukrainian Nationalists (OUN). It arose in 1933 at the initiative of D. *Paliiv. Eventually an organizing committee was set up, consisting of S. Herasymovych as head, D. Paliiv as secretary, Rev M. Blozovsky, V. Kokhan, L. Savoika, and members

of the *Bat'kivshchyna co-operative publishing house (president: I. Rudnytsky; secretary: M. Konovalts). On 1 February 1933 the first issue of the FNU's biweekly **Peremoha* appeared (it became a quarterly in 1936). The Front's goal was to organize an elite drawn from all social groups and classes of the Ukrainian nation. Eventually its ideological position was described as 'creative nationalism' (*tvorchyi natsionalizm*). As a result of vigorous educational and organizing efforts the FNU grew rapidly. In November 1934 the weekly **Bat'kivshchyna* began publication. The Bat'kivshchyna publishing house expanded its publishing program. In November 1935 the daily **Ukrains'ki visti* began to appear.

On 20 September 1936 the First Congress of the FNU convened in Lviv. One hundred and fifty delegates, the majority of whom were peasants, participated. D. Paliiv announced the party's program, disassociating the Front from the terrorism used by the OUN and defining the purpose of Ukrainian nationalism to be the overcoming of the nation's state of chaos and the attainment of a permanent state of organization and order. The family, based on Christian principles, was to be the foundation of the nation. 'The Nation's good is our highest command' became the Front's slogan.

The basic organizational units of the FNU were the so-called cohorts (*druzhyny*). These were organized by region under the leadership of region commanders (*oblasni*). The FNU was the first non-socialist organization in Western Ukraine that succeeded in attracting workers, including those who during the Ukrainization in Soviet Ukraine had fallen under the influence of communism. Among those who joined the FNU were disenfranchised former members of the UNDO, OUN, and the monarchist Hetmanite movement, as well as non-partisan individuals.

The political collegium, which was elected at the congress, served as the supreme executive of the FNU. It consisted of S. Herasymovych (head), D. Paliiv (leader of the FNU), V. Kokhan, L. Savoika, M. Shlemkevych, S. Volynets (secretary), Yu. Krokhmaluk, M. Dzoba, and I. Hladylovych. Other influential members of the FNU were V. Dzis, D. Kuziv, M. Kushnir, and T. Rudensky. The political collegium ruled on all the principal organizational and political questions and determined the FNU's program and tactics. The National Council, with 30 members, was a second governing body.

The Polish authorities interfered in the Front's activities by frequently confiscating its publications and arresting its active leaders. At the beginning of 1939, for example, the whole secretariat was arrested. In the autumn of 1935 the publication of *Peremoha* and *Bat'kivshchyna* was suspended, and the journal *Khliborob's'kyi shliakh* offered space on its pages to the FNU.

With the outbreak of the German-Polish War many leading members of the FNU left Soviet-occupied Western Ukraine. Since it also became impossible to conduct independent Ukrainian politics under the German occupation on the territory of the Generalgouvernement, Paliiv suspended the FNU's activities. In spring 1941 at a meeting in Krynytsia (Krynica) the political collegium dissolved the organization. Its members were instructed to join the civic organization known as the *Ukrainian Central Committee and its constituent bodies.

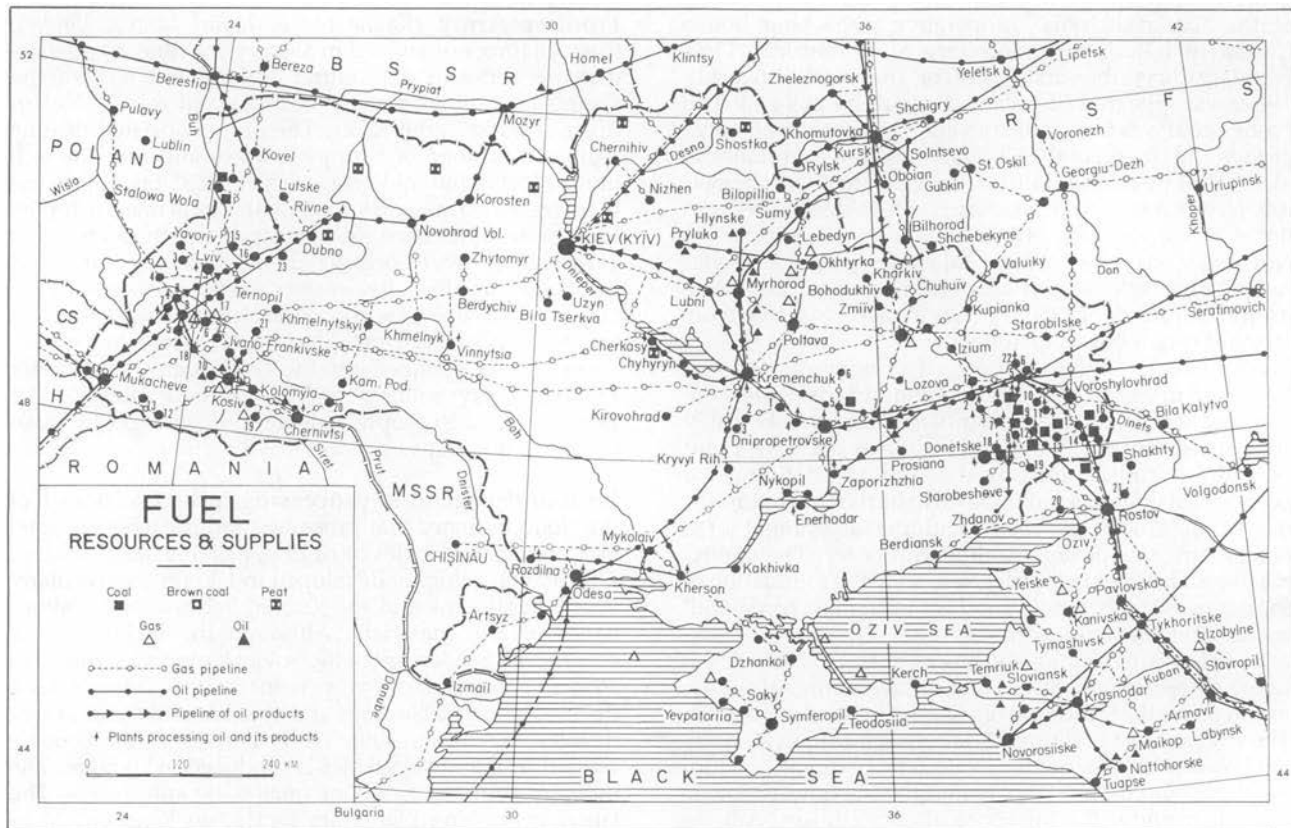

S. Volynets

Frontier Army (*liniine viisko, liniini kozaky, liniitsi*). Cossack forces organized in 1832 by the Russian government to serve in the central and eastern part of the Caucasian frontier along the upper and middle Kuban River and the Terek River. The army consisted of nine regiments formed of various Cossack and non-Cossack units. Most of the soldiers were from the Don region, but there were also many Ukrainians and local men. After the Caucasian frontier line was abolished and the Kuban and Terek oblasts were organized, the Frontier Army was disbanded in 1860. Its western part, consisting of six brigades, was united with the *Black Sea Cossacks to form the *Kuban Cossack Host. The eastern part of the Frontier Army was reorganized into the Terek Army. The former Frontier Army soldiers within the new Kuban Host proved to be a Russophile element, hostile to Ukrainian political aspirations.

Fruit-and-vegetable-processing industry. Branch of the *food industry that processes and preserves vegetables, fruits, and berries by drying, pickling, and canning. This branch is highly developed in Ukraine, particularly southern Ukraine and the Kuban, because of the abundance of raw materials. Although the Ukrainian SSR covers only 2.7 percent of the Soviet Union's Territory, in 1969 it encompassed 31 percent of the Union's land devoted to vegetable crops and 35 percent of the land area devoted to fruit farming. Thirty percent of the Union's canned fruit and vegetables is produced in Ukraine. The industry consists mostly of small-scale enterprises. The larger processing plants are located in Kherson, Melitopol, Odessa, Izmail, Symferopil, Cherkasy, Zhdanov, Dzhankoi, Berdianske, Nizhen, Romen, and in the Kuban at Krymske, Armavir, Temriuk, and Sloviansk. The fruit and vegetable canning plants in Soviet Ukraine produced the following number of standard cans in 1980 (all figures in millions; 1965 figures in parentheses): vegetables, 1,296.2 (500.2); fruit, 340.6 (289.4); tomatoes, 457.8 (321.3); and juices, 629.2 (198.6). (See also *Canning industry.)

Fruit farming. See Orcharding and fruit farming.

Frunze, Mikhail, b 2 February 1885 in Pishpek (now Frunze) in Kirghizia, d 31 October 1925 in Moscow. Soviet military commander and Party leader who served briefly in Ukraine. In September 1920 he was appointed commander of the southern front, where he defeated the White forces of General P. Wrangel. In December 1920 he became plenipotentiary representative of the Revolutionary Military Council in Ukraine and the Crimea and, in February 1922, deputy chairman of the Council of People's Commissars and deputy chairman of the Supreme Ukrainian Economic Council. Frunze fought and defeated the Ukrainian guerrilla forces of N. Makhno and Yu. Tiutiunnyk. From November 1921 till January 1922 Frunze headed the Soviet Ukrainian diplomatic mission to Turkey, which concluded a treaty of friendship between the Ukrainian SSR and Turkey. In 1921-4 he was a member of the Politburo of the CP(B)U. He was also a member of the All-Union Central Committee from 1921 and was made a candidate member of the All-Union Politburo in 1924. In that year Frunze was transferred to military and Party work in Moscow to act as a counter-

Until the mid-19th century wood was the main fuel in Ukraine. Coal became the main source of energy only when industry began to develop in the second half of the 19th century. Petroleum, which began to be commercially extracted in the 1880s in Subcarpathia, was less important. Since the mid-20th century the importance of natural gas has been increasing. The commercial exploitation of the Dashava natural-gas fields near Kalush began in 1924. Yet, coal remains the principal fuel. The extraction of various mineral fuels in the USSR and the Ukrainian SSR is presented in the accompanying table.

The structure of fuel extraction in the Ukrainian SSR has changed because of the accelerated extraction of petroleum and natural gas after the Second World War. While in 1940 coal accounted for 96 percent, petroleum for 0.67 percent, natural gas for 0.8 percent, and other forms for 2.6 percent of the fuel extracted in the Ukrainian SSR, the respective figures were 86.1, 1.9, 10.4, and 1.6 in 1960; 69.8, 7.7, 26.19, and 0.8 in 1969; and 59.8, 7.3, 32.6, and 0.7 in 1975.

The structure of fuel extraction in Ukraine differs from that in the Soviet Union as a whole, where in 1975 coal accounted for 30.8 percent and petroleum and natural gas for 65.9 percent of the total fuel extracted. This fact indicates a policy of restrained development of Ukraine's plentiful gas fields, which increases Ukraine's dependence on gas imported from the eastern oblasts of the USSR.

Fuel use is quite inefficient in the USSR. In contrast to such countries as the United States, Japan, and West Germany, the Soviet Union uses only a small proportion of the natural fuels as raw material for the chemical industry and burns up the bulk of them to produce heat for industrial and residential purposes.

Fundamental laws. See Legislative foundations of the USSR and Union Republics.

Funduklei, Ivan [Funduklej], b 25 November 1804, d 3 September 1880 in Moscow. Russian administrator, civic leader, archeologist. In 1839–52 Funduklei was governor of Kiev gubernia and helped in the publication of materials on Kiev and the Kiev region, such as *Obzrenie Kiev i Kievskoi gubernii po otnosheniiu k drevnostiam* (A Survey of the Antiquities of Kiev and Kiev Gubernia, 1847) and *Statisticheskoe opisanie Kievskoi gubernii* (A Statistical Description of Kiev Gubernia, 3 vols, 1852).

Fur industry. The commercial procurement of animal pelts for furs. The industry also produces such by-products as meat, animal fat, and raw hides, and facilitates control of the population of wild animals and pernicious rodents.

In Ukraine the fur industry is the joint responsibility of the Chief Administration of Game Management, the Ministry of Forest Management of the Ukrainian SSR, the Ukrainian Association of Hunters and Fishermen, and the All-Army Military-Hunting Association. The most important fur-bearing animals hunted in Ukraine are the red fox (22,000–36,000 pelts per year) and the common hare (about 350,000 pelts per year), both of which are found throughout Ukraine, and the mole (150,000 pelts per year), which is found in Polisia and the forest-steppe belt. The pelts of the fox are processed into fur coats; those of the hare are used by manufacturers of felt and fur hats. The marten, squirrel, muskrat, wolf, and common ferret are also hunted for their fur. Some species are protected by law because of their scarcity: the white ferret, ermine, weasel, otter, badger, and beaver. In the Carpathians one can still encounter such rare species as the wildcat, lynx, and brown bear. To ensure the survival of the fur-bearing species the government regulates the hunting season, sets quotas, restricts the methods of hunting, improves feeding conditions on hunting preserves, destroys harmful pests, organizes special animal farms, preserves, and reservations, and so on. (See also *Hunting and *Fur manufacturing.)

Fur manufacturing. A branch of *light industry that produces articles from the pelts of wild and farm-raised animals. Before the revolution such articles were produced mainly by home craftspeople. The first fur-manufacturing factory in Ukraine was built in Kharkiv in 1931 and specialized in making articles from spermophile skins. In 1978 the largest fur-manufacturing complex in Ukraine was in Kharkiv; it manufactures articles from mink, Persian lamb, sheep, and Arctic fox pelts. The fur-manufacturing factories include the Tysmenytsia Factory in Ivano-Frankivske oblast, which since 1963 makes articles from the pelts of rabbits and Persian lambs; a factory in Lviv specializing in fur headwear; and factories in Odessa and Zhmerynka, which manufacture goods from sheepskins. The pelts used by the fur manufacturers are mainly processed locally. Some are also imported from Central Asia and Caucasia. (See also *Fur industry.)

Furniture industry. Branch of the woodworking industry. Until the 1920s furniture making was primarily a cottage industry. It produced mostly simple furniture, particularly chests, to meet the needs of the peasantry. In Poltava there was an artistic workshop that produced furniture for the urban population. In 1912 there were only 19 large factories in central and eastern Ukraine, the largest being in Kiev, Odessa, Dnipropetrovske, Kharkiv, and Zhytomyr.

In the 1930s furniture making as a cottage industry declined, but the number of large furniture factories increased. The quality of the production, however, was poor. In 1941–4 most of the factories were devastated. A number of new factories were built after the war. The manufacture of semiprocessed products for the furniture industry is concentrated in forest areas, while the furniture factories are concentrated mostly near the consumer markets.

In 1980 there were about 350 specialized factories of the furniture industry. The largest were the Zhytomyr Furniture Plant, the Bozhenko Furniture Factory in Kiev, the Svaliava Plant, the Teresva Woodworking Plant, the Mukachiv Furniture Factory, the Ivano-Frankivske Furniture Factory, and the furniture plants in Dnipropetrovske, Voroshylovhrad, and Lviv. In 1979 the furniture production of the Ukrainian SSR was valued at 980.3 million rubles (compared to 51.7 million in 1940 and 226.5 million in 1960). In the 1970s the designs were standardized and the quality improved to some extent. Ukraine produces mostly lower-quality house and office furniture for mass consumption. The main materials used are wood (chipboard and wood fiberboard), polymer materials, synthetic veneer, lacquers and paints, metal hinges and fastenings, glass, and plastic.

In 1979 the total output of the furniture industry in Ukraine was as follows (all figures in thousands; 1965 figures in parentheses): tables, 3,672 (2,514); stools and chairs, 10,468 (9,065); cupboards, 1,955 (1,130); sideboards, 389 (685); sofas and ottomans, 86 (675); sofa beds, 1,092 (364).

Problems connected with the development of the furniture industry are studied at the technical planning institute in Kiev and at the Ivano-Frankivske Technological Institute of Design and Construction.

Futurism. Art movement that originated in Italy in 1909. Its founder is considered to be F. Marinetti, whose main objective was to destroy old art forms, particularly realism and classicism, the dominant trends of the 19th century. Cubism still recognized a certain convention, while futurism rejected all accepted forms and gave individualism free reign. In painting this freedom led to fantastic forms and colors, and in literature, especially poetry, to abstruse language (*zauмна мова*) consisting of sound-words that often had no meaning. Futurism sought to transmit the ideas and spirit of the future technological and cosmopolitan society, which was opposed to the old conservative esthetic sensibility of the peasants and petite bourgeoisie. Hence, urban and industrial themes were typical of this movement. One of the key devices of the futurists was the 'shocking of the bourgeois,' that is, provoking him/her with various inventions and deformations. Futurism did not receive much sympathy in Ukraine before the First World War because of the dominance of the tradition-oriented peasant masses. Such works as

P. Kovzhun's bookplate for the Ivan Franko Society of Writers and Journalists, Lviv 1926

M. Zhuk's portrait of P. Tychyna, 1919

A. Archipenko's *Dance* or *Medrano I* (1912) were produced in Paris and were known in Ukraine only from reproductions.

The first collection of Ukrainian futurist poetry – M. Semenko's *Preliud* (Prelude) – appeared in 1913. It was followed by *Derzannia* (Audacity) and *Kverofuturyzm* (Querofuturism). As an active proponent of futurism, Semenko founded several Ukrainian futurist organizations and journals: *Flamingo* (1919–21), *ASPANFUT* (*Association of Panfuturists, 1921–4), and, after moving to Kharkiv from Kiev, the journal **Nova heneratsiia* (1927–30). Because only Communist ideals were permitted, the journal became a militant advocate of 'proletarian art.' At first it called for the destruction of old forms and, when this was recognized to be of little use for the building of a new society, it propagated *constructivism and *suprematism. After K. Malevich's expulsion from Moscow, Semenko published a series of Malevich's articles on suprematism in his journal. A number of talented poets belonged to the futurist group: H. Shkurupii and O. Vlyzko, who like Semenko were executed for 'nationalism' in the 1930s, O. Skuba, and the theoretician O. Poltoratsky. The eminent poet M. Bazhan and the greatest poet of the Ukrainian revolutionary period, P. Tychyna, were for some time influenced by futurism and utilized some of its ideas in their work. The poet V. Polishchuk was closely associated with futurism, on the basis of which he tried to build his own movement of 'dynamic spiralism.' The futurists were never as prominent in the Ukrainian literature of their time as the symbolists or Neoclassicists, who never severed their ties with the past. Yet the futurists succeeded in reinventing

poetry by introducing fresh themes and forms and above all by their experimentation. The group Nova Heneratsiia propagated new Western European trends such as Dadaism and surrealism, although this practice conflicted with its journal's official crude sociological declarations. The journal ceased publication under pressure from the authorities.

Besides the organizations mentioned above, there were also local groups of futurists: Kom-Kosmos in Kharkiv (1921), Yugolif (including local Russian futurists) in Odessa, and SiM (Selo i Misto [Village and City]) in Moscow (1925), which embraced Ukrainian writers in the USSR. All these groups rejected the classical legacy and advocated 'the destruction of forms' for the sake of 'the Communist future.' In the 1920s the futurists published the following periodicals: *Universal'nyi zhurnal*, *Semafor u maibutnii*, *Katafalk iskusstva*, and *Golfshtrom*.

In the fine arts, besides Archipenko, who left Ukraine in 1906, the following artists in Ukraine were closely associated with futurism of the constructivist rather than the anarchist bent: A. Ekster, O. Bohomazov, A. Petrytsky, M. Semenko's brother Vasyl, V. Yermilov, K. Malevich, Ye. Prybylska, Ye. Sahaidachny, O. Sorokhtei, P. Kovzhun, and the members of the Nova Heneratsiia circle. Still, before all the literary and artistic organizations were disbanded in Ukraine in 1932, futurism was officially denounced as bourgeois and was banned.

S. Hordynsky

Fuzhenko, Anatolii [Fuženko, Anatolij], b 3 March 1936 in the village of Svydivok, Cherkasy oblast. Sculptor. In 1962 Fuzhenko graduated from the Kiev Art Institute. Among his better-known works are the monument to T. Shevchenko in Moscow, on which he worked together with M. Hrytsiuk and Yu. Synkevych (1964), the monument to M. Mokriak in Novoukrainka (1971), and sculptures of T. Shevchenko (synthetic glass, 1963; granite, 1964) and Nestor the Chronicler (1971). In 1963 he completed a thematic sculpture entitled *Bread*.

Fylymonovych, Maksym [Fylymonovyč], d ca 1690. Orthodox bishop. A former Nizhen archpriest who supported Muscovy in its attempt to subordinate the Ukrainian Orthodox church to the patriarch of Moscow, he was consecrated Bishop Metodii of Mstislau and Orsha in 1661 in Moscow and illegally appointed auxiliary overseer of the Kiev metropolitanate. He lived in Kiev and did not recognize the legal metropolitan, Y. Tukalsky. In 1667, however, he opposed Moscow and supported Hetman I. Briukhovetsky's rebellion against the tsar. For this Fylymonovych was incarcerated in Uman Monastery and then in New Savior's Monastery in Moscow, where he died.

Fylyp, Dorotei (secular name: Dmytro), b 20 October 1913 in the village of Nankove, Transcarpathia. Orthodox church figure in Czechoslovakia. From 1950 to 1955 Dorotei was bishop of Prešov since 1964; he has been

the Prague metropolitan of the Orthodox church in Czechoslovakia. He is active in the ecumenical movement and in church-sponsored peace campaigns.

Fylypchak, Ivan [Fylypčak], b 29 January 1871 in the village of Lishnia in the Sian region, d 1945. Pedagogue, writer, co-founder of the Sambir Region Museum, organizer in the silk industry. Fylypchak taught mostly in Sambir. In 1944 he was arrested by the Soviets and died in exile. He wrote several historical novels – *Kniahynia Romanova* (Princess Romanov), *Za Sian* (Beyond the Sian), *Kulchyt's'kyi, heroï Vidnia* (Kulchyt'sky, the Hero of Vienna), *Dmytro Det'ko*, and others – and studies in the history of education.

Fylypovych, Atanasii [Fylypovyč, Atanasij], b ca 1592, d 5 September 1648 in Berestia. Saint, churchman, hegumen of St Simeon Monastery in Berestia (from 1640). Fylypovych was known for his bold defense of the Orthodox population before the Polish authorities, in particular for his speech to the Polish Sejm in 1643. It was probably for this reason that he was imprisoned in 1644–5. He was arrested once more in 1648 on suspicion of being a Khmelnytsky sympathizer and was tortured and executed by the Poles. The Orthodox church canonized him as a martyr. Some of Fylypovych's works were published in the 19th century, among them his diary of 1638–48, 'Diariush, albo spisok diev pravdivykh ...' (Diary, or Chronicle of True Events ...), which appeared in print in 1878.

Fylypovych, Illia (Iliarii) [Fylypovyč, Illja], 1832–97. Church and community figure in Bukovyna, Orthodox priest. He was rector of the theological seminary in Chernivtsi, one of the founders of the *Ruska Besida society, and archimandrite of the monastery in Suchavtsia.

Fylypovych, Ivan [Fylypovyč], d ca 1770. Noted copper-plate engraver and printer of the 1740–60 period in Lviv, master of thematic engraving. Usually employing dry-point techniques, Fylypovych illustrated the publications of the Lviv Dormition Brotherhood, Univ, Pochaiv, and Berdychiv printing presses as well as the printed materials of the Jesuit College in Lviv. Of his book and print gravures 216 are known; most of these are on religious, symbolic, and allegorical themes. He did engravings of the coats-of-arms of the Sheptytsky, Rozumovsky, Sapiha, and other noble families. Among his portrait engravings those of A. and L. Sheptytsky and J. Sanguszko are well known. He was the first designer of *bookplates in Ukraine (eg, for the Zaluskys). Fylypovych illustrated the following publications: *Ifika ieoropolityka* (Ethica Hieropolitica, 1760), *Liturhikon* (Liturgicon, 1759), and *Molytvoslov* (Prayer Book, 1755). In 1753–65 Fylypovych owned his own printing press and produced books of high workmanship. The finest of his publications was *Flos* (1756), which was printed in Latin and contained two copper-plate engravings. Although uneven, Fylypovych's polygraphic work is among the highest accomplishments of his period.

Fylypovych, Pavlo [Fylypovyč], b 1 September 1891 in the village of Kaitanivka, Kiev gubernia, d 3 November 1937. Poet and literary scholar. Fylypovych studied at

Pavlo Fylypovych

Galagan College and at Kiev University (1910–5), where he later was a professor (1917–35). His first poems were published in Russian journals beginning in 1910. After the revolution Fylypovych switched to writing poetry in Ukrainian. He contributed to the Ukrainian symbolist almanac *Muzahet* (1919). In the 1920s he became a member of the *Neoclassicists and published two collections of poetry – *Zemlia i viter* (Earth and Wind, 1922) and *Prostir* (Space, 1925). Fylypovych was an associate member of the All-Ukrainian Academy of Sciences and secretary of its historical-literary society. His first major scholarly work was *Zhizn' i tvorchestvo E.A. Boratynskogo* (The Life and Works of E.A. Boratynsky, 1917). Fylypovych is the author of over 100 scholarly articles and reviews. He made a major contribution to the comparative study of Ukrainian

literature, particularly to the study of T. Shevchenko and Ukrainian romanticism. He edited (and wrote introductions for) the collection of articles *Shevchenko ta ioho doba* (Shevchenko and His Period, 2 vols, 1925–6) and a collection on I. Franko (1927); he also edited, with long introductions, collections of works by Lesia Ukrainka, O. Kobylianska, O. Oles, N. Gogol, N. Leskov, and A. Pushkin. A collection of his literary studies, *Z novitn'oho ukrains'koho pys'menstva* (From the New Ukrainian Literature), was published in 1929. Fylypovych was arrested in August 1935 during the Stalinist terror, presumably for his critical attitude to official Soviet cultural policies, and sentenced to 10 years in concentration camps. He died in a camp in the Ukhta-Pechorsk region of Siberia. His collected poems were published posthumously in *Poezii* (Poems, Munich 1959), as were his major scholarly articles, collected in *Pavlo Fylypovych, Literatura: Statti, rozvidky, ohliady* (Pavlo Fylypovych, Literature: Articles, Studies, Reviews, Melbourne 1971).

R. Senkus

Fylypovych-Pukhalsky, Lavrentii [Fylypovyč-Puxal's'kyj, Lavrentij], ?–1610. Painter and engraver of the 16th and early 17th century working in Lviv. Fylypovych-Pukhalsky is considered to be the author of the engraving of St Luke in the *Apostol* published in Lviv in 1573–4. His work appeared also in the publications of the Ostrih printing press. He trained Hryn Ivanovych and other masters.

Introduction

UKRAINIAN ETHNIC TERRITORY

Ukrainian ethnic territory, ie, the territory inhabited by Ukrainians, can be divided into (1) a compact national territory with a predominantly Ukrainian population, and (2) a mixed ethnic territory (Ukrainian-Russian, Ukrainian-Polish, and so on). From earliest times, as a result of the colonizing processes of nomadic peoples in the south and southeast, the boundaries and size of Ukrainian ethnic territory have changed substantially. In the early 13th century, during the Princely era, Ukrainian ethnic territory covered about 400,000 sq km. The Tatar invasions reduced this area to approximately 250,000 sq km and resulted in the relocation of its boundaries farther to the north. In the early 14th century, during the period of Lithuanian political expansion, Ukrainian ethnic territory increased. It decreased again, to about 280,000 sq km, towards the end of the 15th century during the second period of Tatar expansion. Intensive Ukrainian colonization of the forest-steppe on the Right Bank and subsequently on the Left Bank, as well as of Slobidska Ukraine and Zaporizhia, began in the late 16th century. As a result, Ukrainian ethnic territory grew to about 450,000 sq km by the middle of the 18th century. By the middle of the 19th century, with the settlement of the steppe region and the Kuban, this area increased further to about 700,000 sq km. The eastern Kuban and the Terek and Stavropol regions were also colonized by Russians. Consequently a large Ukrainian-Russian mixed territory arose in the southeast. As Ukrainian ethnic territory expanded in the south and east, it diminished, though not greatly, in the west and southwest, where it was replaced by Polish, Slovak, and Hungarian ethnic territories.

The size of the compact Ukrainian national territory in 1914 was estimated at 739,160 sq km with a population of 46 million: 664,630 sq km with 39.6 million inhabitants was under Russian domination, and 74,530 sq km with 6.4 million inhabitants was part of the Austro-Hungarian Empire.

The independent Ukrainian state of 1918–20 embraced an area of 690,000 sq km, including 60,000 sq km that had been temporarily annexed.

Using the Soviet census of 17 December 1926, Polish and Czechoslovak statistics, and other data, V. Kubijovyč determined that Ukrainian ethnic territory embraces 932,000 sq km. He subdivided this territory into two areas: compact – 729,000 sq km – and mixed (eastern Subcaucasia, the Crimea, the northern Chernihiv region, the Kholm region, and Podlachia – 203,000 sq km. The following table shows how Ukrainian ethnic territory was divided politically (the mixed territory is in parentheses) towards the end of 1938.

UKRAINIAN LANDS IN 1938

Country	Territory (1,000 sq km)	Population (millions)
USSR	564 (767)	37.7 (42.2)
Poland	132	10.2
Rumania	18	1.4
Czechoslovakia	15	0.8
TOTAL	729 (932)	50.1 (54.6)
Ukrainian SSR	443	31.9

During the Second World War, the territory of the Ukrainian SSR increased, with the incorporation of Galicia and western Volhynia in 1939, northern Bukovyna and parts of Bessarabia in 1940, and Transcarpathia in 1945. In 1954 the Crimea was transferred to Soviet Ukraine from the Russian RSFSR. Consequently almost all Ukrainian lands lie within the borders of the USSR today; 80 percent of the compact territory and more than 87 percent of the population are in Soviet Ukraine. The western borderlands of Ukrainian ethnic territory diminished by 19,500 sq km immediately after the war, however, as a direct result of the mass deportation and resettlement of the indigenous Ukrainian population from those areas that became part of the Polish People's Republic.

The unceasing Russification of all Soviet areas lying outside the Ukrainian SSR has contributed to the diminution of Ukrainian compact territory, and even more so of mixed territory. In general the western boundaries of Ukrainian territory now correspond closely with the political borders of the Ukrainian SSR with Poland, Czechoslovakia, Hungary, and Rumania, although small strips of Hungarian and Rumanian ethnic territory are found in Soviet Ukraine.

The following table shows the division of Ukrainian ethnic territory in 1970 (the data for Ukrainian lands outside Soviet Ukraine are only approximate).

UKRAINIAN ETHNIC TERRITORY IN 1970

Country	Territory (1,000 sq km)	Population (millions)
I. Ukrainian SSR	603.7	47.1
II. Ukrainian compact (ethnic) territory outside the Ukrainian SSR		
1. Russian SFSR		
a) Belgorod, Kursk, and Voronezh oblasts ¹	43.9	2.5
b) Don region ²	23.8	1.0
c) Western Subcaucasia (the Kuban ³)	46.6	2.9
Subtotal (I)	114.3	6.4
2. Belorussia ⁴	27.0	1.0
3. Czechoslovakia ⁵	3.5	0.1
4. Rumania ⁶	1.7	0.1
Subtotal (II)	146.5	7.6
III. Ukrainian compact (ethnic) territories in Europe (subtotal I + II)	750.2	54.7
IV. Ukrainian ethnically mixed territories		
1. Northern Chernihiv region ⁷	14.2	0.8
2. Eastern Subcaucasia ⁸	163.4	4.6
3. Ukrainian territory in Poland ⁹	19.5	1.7
Subtotal (IV)	197.1	7.1
V. Ukrainian lands in Europe (total III + IV)	947.3	61.8

1 Southern parts

2 The western part of Rostov oblast

3 Part of Krasnodar krai and a small southwestern section of Rostov oblast

4 Part of Brest and Homel oblasts

5 The eastern part of Slovakia

6 Small parts of Suceava and Maramureş districts

7 Part of Briansk oblast

8 The eastern part of Krasnodar krai, together with Adygei autonomous oblast, Stavropol krai, and parts of Karachai-Cherkess autonomous oblast

9 Parts of Białystok, Cracow, Lublin, and Rzeszów voivodeships. This formerly Ukrainian ethnic territory was settled by Poles after the deportation of the Ukrainian population in 1946-7. Statistics are for 1939.

ADMINISTRATIVE TERRITORIAL DIVISION AND POPULATION OF THE UKRAINIAN SSR
(as of 1 January 1983)

Oblast	Area (1,000 sq km)	Population (thousands)			Urban population (% of total)	Population density per sq km
		Total	Urban	Rural		
Cherkasy	20.9	1,533.3	733.4	799.9	48	73.4
Chernihiv	31.9	1,459.0	703.1	755.9	48	45.7
Chernivtsi	8.1	905.2	357.0	548.2	39	111.8
Crimea	27.0	2,276.5	1,570.1	706.4	69	84.3
Dnipropetrovske	31.9	3,746.6	3,078.0	668.6	82	117.4
Donetske	26.5	5,251.7	4,717.7	534.0	90	198.2
Ivano-Frankivske	13.9	1,360.1	539.5	820.6	40	97.8
Kharkiv	31.4	3,110.1	2,383.9	726.2	77	99.0
Kherson	28.5	1,194.4	716.1	478.3	60	41.9
Khmelnyskyi	20.6	1,536.9	620.5	916.4	40	74.6

Total	37,870	100.0	41,869	100.0	47,126	100.0	49,609	100.0

NOTE: The current ethnic composition of Ukrainian ethnic territories outside the boundaries of the Ukrainian SSR, ie, in the Russian SFSR and Belorussian SSR, is impossible to determine. This is because since 1959 the Soviet censuses have presented the statistics of ethnic composition only for entire oblasts (krajs) and Ukrainian ethnic territory embraces only part of oblasts (with the exception of Krasnodar krai). In addition, Soviet censuses deflate the actual numbers of Ukrainians, presumably to show that the boundaries of Ukrainian ethnic territory correspond to the actual borders of Soviet Ukraine.

NUMBER OF UKRAINIANS IN THE WORLD

Some 11 million Ukrainians (about 23% of the total number of Ukrainian people) live outside Ukrainian ethnic territory. Their number is constantly increasing (in millions): 1.2 in 1880, 4.3 in 1914, 6.3 in 1933, 11 in 1980.

In the USSR, outside their ethnic territory, Ukrainians live either in small enclaves near Ukrainian ethnic territory or in large enclaves in the Volga and Ural regions, Moscow, Leningrad, and other cities. This European part of the USSR outside of Ukraine contains approximately 3 million Ukrainians. Considerably more live in Asian regions of the USSR: some 5 million, mostly in northeastern Kazakhstan and neighboring areas of western Siberia and the Far East.

The approximate number (in millions) of Ukrainians outside the Ukrainian SSR – individuals of Ukrainian ethnic origin who live in various countries – is evident from the following table.

Ukrainians in	1933	1980
USSR	35.2	44.5 ¹
(of this number in the Ukrainian SSR)	(25.5)	(36.5)
Poland	6.0	0.3
Rumania	1.2	0.15
Czechoslovakia	0.6	0.15
USA	0.75	1.25
Canada	0.35	0.75
Other	0.4	0.6 ²
Total	44.5	47.7

1 On the basis of official statistics: 42.3

2 Of this number, 0.2 in Brazil, 0.2 in Argentina, 0.05 in Yugoslavia, 0.03–0.04 in Australia, 0.03–0.035 in France, 0.03 in Great Britain, 0.02 in Germany.

MAP OF UKRAINE

- SETTLEMENTS**
- Rural types:
 - Less than 10,000 inhabitants
 - 10,000 or more inhabitants
 - Urban type:
 - Less than 25,000 inhabitants
 - 25,000 - 50,000 inhabitants
 - 50,000 - 100,000 inhabitants
 - 100,000 - 250,000 inhabitants
 - 250,000 - 500,000 inhabitants
 - 500,000 - 1,000,000 inhabitants
 - 1,000,000 or more inhabitants
 - Settlements incorporated into cities (Przemysli) - non-Ukrainian name (Lubanski) - former name
 - Center of Raion (Raion) - former name
 - Capital of Oblast, Krai, Autonomous Republic
 - KIEV** - National Capital
- LEGEND**
- BOUNDARIES**
- International boundary
 - Boundary of Soviet Republics
 - Boundary of Autonomous Republics
 - Boundary of Autonomous Oblasts, Oblast, Krai, Volosts (provinces)
 - Boundary of Ukrainian territory, 1930's
 - Boundary of Ukrainian territory, including ethnically mixed regions, 1920's
 - Ukrainian - Name of country and administrative unit
 - (Administrative units named after their centres are not identified separately)
 - Historical province
- PHYSICAL FEATURES**
- Pass
 - Elevation in meters
 - Depth in meters
 - Reservation
 - Swamp
 - Salt marsh (solonchak)
 - Lake, Lyman
 - Stream, intermittent
 - Canal, irrigation and drainage
- TRANSPORTATION**
- Main railroad
 - Other railroad
 - Highway
 - Main road
 - Other road
 - Navigable canal
 - Sand
 - Seaport
 - Limit of navigation
 - River, Lyman
 - International airport
 - Other airport
- Scale 1:2,000,000
