THE ENCYCLOPEDIA 1

Preface

Encyclopedia of Ukraine is the complement of *Entsyklopediia ukraïnoznavstva*, a work that was initiated thirty-five years ago by the Shevchenko Scientific Society, the oldest Ukrainian learned association. Founded in 1873 in Lviv, the society was dissolved during the first Soviet occupation of Western Ukraine in early 1940 and was likewise not permitted to exist under the Nazi occupation. The opportunity to revive the society arose after the Second World War in Germany, where the majority of Ukrainian scholars who had left Ukraine after the second Soviet occupation had found refuge. Among them were specialists in every area of Ukrainian studies. Thus, in 1948, the Shevchenko Scientific Society resumed its activities, and Munich became its temporary center. Since that time the greater part of the society's human and material resources has been directed toward preparing and publishing *Entsyklopediia ukraïnoznavstva*.

Prior to the existence of *Entsyklopediia ukraïnoznavstva*, only one Ukrainian encyclopedia – the three-volume *Ukraïns'ka zahal'na entsyklopediia* (edited by I. Rakovsky and V. Simovych) – had been published (Lviv 1930–5). This general reference work was modeled on other encyclopedias and was the first major source of information about Ukraine and Ukrainians. It contained about 8,000 short entries and a long section titled 'Ukraine.' It was only after the appearance of the first volume that a project to publish a Soviet Ukrainian encyclopedia was initiated under the editorship of M. Skrypnyk, a prominent Soviet political leader. The Stalinist terror and the accompanying campaign to suppress Ukrainian culture prevented the realization of this project.

The publication of *Entsyklopediia ukraïnoznavstva* in the West played a role in the appearance of the first Soviet Ukrainian encyclopedia, *Ukraïns'kaadians'ka entsyklopediia*, seventeen volumes of which were published in Kiev between 1958 and 1962 (including an English translation of the seventeenth volume, which is devoted exclusively to the Ukrainian SSR). Subsequently, a number of specialized encyclopedias devoted to such areas as the history and economy of Ukraine were published in Soviet Ukraine.

There is a fundamental difference in the approach and the spirit of *Entsyklopediia ukraïnoznavstva* and its Soviet counterpart. The former aspires to be an objective reference work, providing truthful, comprehensive information about all manifestations of Ukrainian life in the past and the present; if there are differing interpretations of some person, subject, or event, *Entsyklopediia ukraïnoznavstva* tries to present all of them. According to its foreword, the Soviet encyclopedia aims to demonstrate in its content the brotherly unity of the Ukrainian people, the Russian people, and all the other peoples of the 'Soviet Fatherland.' Furthermore, it is directed against Ukrainian bourgeois nationalism (a concept that is applied to even such 17th- and 18th-century figures as I. Vyhovsky, P. Doroshenko, I. Mazepa, and P. Orlyk). The Soviet work thus avoids mentioning many facts and individuals, misrepresents others, and provides no or minimal and distorted information on the church and on the period of Ukrainian independence (1918–21).

Entsyklopediia ukraïnoznavstva consists of two parts: a three-volume reference work divided into subjects or themes (history, literature, economy, and so on) and a ten-volume encyclopedia with entries arranged alphabetically. The first part was completed in 1952. At that time the offices of the Shevchenko Scientific Society and the encyclopedia editors were moved to Sarcelles, France. While preparation of the alphabetic encyclopedia was underway, the first, thematic part was revised and translated into English as *Ukraine: A Concise Encyclopaedia*. This translation was funded by the largest Ukrainian fraternal organization in

the United States, the Ukrainian National Association, and was published by University of Toronto Press in two volumes (1963, 1970; the first volume was reprinted in 1982).

In 1977 work was begun on an updated, English version of the alphabetic part of *Entsyklopediia Ukraïnoznavsta*. The result is the publication of the first volume of *Encyclopedia of Ukraine*, a work funded by the Canadian Foundation for Ukrainian Studies and the Canadian Institute of Ukrainian Studies. The publisher is again University of Toronto Press.

Encyclopedia of Ukraine will be published in four volumes, each volume having about 1,000 pages. It will contain close to 20,000 entries, many of which will be from one to fifteen pages in length. The entries can be divided into several groups. The first group includes entries on Ukraine's geography and natural environment (geography, geology, soils, flora and fauna, climate, and hydrography); archeology and history; jurisprudence in Ukraine (including Ukrainian law); the church in Ukraine; the Ukrainian language and Ukrainian literature; education, art, theater, and music in Ukraine; the economy of Ukraine, and the like. A second group includes a number of longer entries surveying the various scholarly disciplines in Ukraine, including disciplines not dealing with Ukraine specifically, but with technical or scientific subjects; for example: anthropology, archeology, botany, chemistry, and economic studies. A third group consists of long entries, many of them brief surveys, on Ukraine's natural geographical-historical regions. The first volume of *Encyclopedia of Ukraine* contains the following entries of this type: the Sea of Azov, Bessarabia, the Black Sea, Bukovyna, the Carpathian Mountains, the Chernihiv region, the Crimea, Dobrudja, the Don Region, and the Donets Basin. These regional entries provide a description of the natural environment and the region's history, economy, and culture; they are accompanied by maps. The entry on cities and towns and entries on the major cities (Chernihiv, Chernivtsi, Dnipropetrovske, and Donetsk) also belong to this group. A fourth group consists of a number of entries dealing with Ukraine's relations with other countries, contacts between the Ukrainians and other peoples and nations in the past and present, countries to which Ukrainians have emigrated, and national minorities in Ukraine. This volume contains such entries in this group as Albanians, Argentina, Armenians, Australia, Austria, Bačka, Belgium, Belorussia, Belorussians, Bohemia, Brazil, Bulgaria, Bulgarians, Canada, Czechoslovakia, the Far East, and France. There are also entries on Ukrainian communities in Berlin, Chicago, Edmonton, and other cities. Finally, a large part of *Encyclopedia of Ukraine* consists of a fifth group of entries: brief accounts of individuals; geographical locations; historical, political, juridical, and economic periods, events, and institutions; periodicals and publications; and associations and organizations. In general, most longer entries include a bibliography.

Illustrations, totaling about 450 photographs and over 150 tables and maps, supplement the text. A chromatic map of Ukraine also accompanies the volume.

To conclude, as the editor in chief I would like to extend to all members of the editorial board, to the editors responsible for the various subject areas, to the authors and reviewers, and to everyone who contributed to the publication of this encyclopedia my heartfelt gratitude for their co-operation.

Volodymyr Kubijovyč
Sarcelles, August 1983

Explanatory Notes

In general matters of style, this work follows *The Chicago Manual of Style*. Spelling conforms by and large to the American variant of English found in *Webster's Dictionary*. The editors have 'anglicized' many frequently used Ukrainian words by giving them English plural endings. Such words are not italicized in the text; for example: *zemstvo/s*, *sobor/s*, *opryshok/s*, *kobzar/s*, *duma/s*, *hetman/s*, and *tekhnikum/s*. Most words of non-English origin, however, unless they have already been accepted into the English language, are italicized in the text and retain their original plurals.

The editors have striven to find English equivalents for as many Ukrainian, Russian, Polish, and other foreign words as possible. Thus the terms *povit*, *uezd*, *komitat*, *zhupa* have all been translated as 'county.' The word 'gubernia' is now an accepted English word, as is 'voivodship' (for *voievodstvo* or *województwo*). In most cases, administrative and territorial terms not having English equivalents have been transliterated, but not italicized, and have been given English plurals; for example, *stanytsia/s*, *gmina/s*, *okruha/s*, *kurin/s*, *zemlia/s*, *palanka/s*.

First names of individuals are not generally given in the texts of entries; only the initial and surname are provided. Exceptions have been made for rulers, saints, and ancient historical figures known by their first names.

With rare exceptions, weights and measures are given in metric forms, and temperatures are given in centigrade degrees. Dates are given according to the New Style (Gregorian) calendar.

Abbreviations in the text are not usually followed by a period, with the exception of initials of personal names and the abbreviation for 'number' – 'no.' – in order to distinguish it from the word 'no'.

Cross-references are indicated by an asterisk. Generally these have been provided only when the entry referred to contains additional, relevant information on the subject.

TRANSLITERATION

Three systems have been used to transliterate words and names from the Cyrillic alphabet:

1. The modified Library of Congress system has been used in the titles and in texts of all but the linguistic entries. This form does not use diacritical marks or ligatures. Only in the case of the word *Rus'* has the apostrophe been retained to indicate the soft sign. At the end of surnames '-ий' is transliterated as 'y.' The letters 'є,' 'й,' 'ю,' and 'я' in *initial* positions in personal, institutional, organizational, and geographical names are transliterated as 'Ye,' 'Y,' 'Yu,' and 'Ya,' respectively.
2. The strict Library of Congress system (with all diacritical marks) has been used to transliterate all published and manuscript titles.
3. The International Linguistic system has been used to transliterate the phonetic equivalents of non-English entry titles, which appear in brackets following the entry titles, and for linguistic terms (but not personal names) in entries on linguistic topics. Ukrainian surnames transliterated from languages other than English are given in brackets after the linguistic transliteration.

The first names of non-English individuals are never anglicized; for example, Mykhailo does not become Michael, Ivan does not become John. The only exception is for individuals or historical figures who have well-established English names.

GEOGRAPHICAL ENTRIES

Geographical names in the Ukrainian SSR and on historically Ukrainian ethnic territories have been transliterated from the Kharkiv orthography using the modified Library of Congress system. Places in the Ukrainian SSR whose names end in 'sk' according to the Kiev orthography thus appear in the encyclopedia with the ending 'ske.' For technical reasons, maps in the encyclopedia occasionally have names in the linguistic form of transliteration. Entries on cities, towns, and villages provide, after the entry title, the relevant co-ordinates on the map of Ukraine accompanying the encyclopedia. Doubling of consonants has been suppressed; for example, the forms 'Polisia,' 'Podilia,' and 'Zaporizhia' are used. The full transliteration of names with double consonants appears only in the linguistic transliteration that follows the main entry title.

Certain places have acquired generally accepted English names; these have been retained. Thus, the reader will find the names Sea of Azov, Bessarabia, Black Sea, Carpathian Mountains, Caucasia, Crimea, Danube, Dnieper, Dniester, Galicia, Kiev, Odessa, Podlachia,

and Volhynia in the text. The only exceptions are the use of the Ukrainian transliterated name 'Bukovyna' instead of 'Bucovina' or 'Bukovina,' and of the Ukrainian name 'Donbas' instead of the Russian form 'Donbass.'

Entries on population centers indicate whether they are cities, towns, or villages. A place that has been designated in the USSR as 'urban-type settlement' (*selyshche miskoho typu*) is designated here as a town and has the acronym of the Ukrainian term – 'smt' – following the word 'town.'

Names of places outside Ukrainian ethnic territory are given in the accepted English form or are transliterated from the language of the country where they are found. Thus, for example, Belorussian names are transliterated from the Belorussian; Russian names, from the Russian; Polish names, from the Polish. Names of places on historically Ukrainian ethnic territory are transliterated from the Ukrainian (for example, Kholm instead of the Polish Chełm).

ORGANIZATIONS AND INSTITUTIONS

Descriptive names of organizations and institutions have been translated; for example, 'Instytut botaniky' appears as 'Institute of Botany.'

Ascriptive names have not been translated, but transliterated. Usually a qualifier has been added. For example, 'Ruska Besida' appears in texts as the 'Ruska Besida *society*.'

Entry titles for all names, both descriptive and ascriptive, include the linguistic transliteration from the original Ukrainian name in brackets at the end.

Names of organizations and institutions in the West are given in the official English form, if one exists, or are translated into English. If such organizations are known under other foreign names, these names are included only as cross-reference entry titles. For example, 'Ukrainska Natsionalna Yednist u Frantsii' and 'Alliance Nationale Ukrainienne en France' are both cross-reference entry titles; the text of the entry appears under the English translation 'Ukrainian National Alliance in France.'

Many organizations that are popularly known by the short forms of their name appear in the text under the short forms. 'Tsentrosoiuz,' for example, is a main entry title. The longer, descriptive name is translated and appears as a cross-reference entry title only.

Factories, plants, and educational and cultural institutions usually appear under the name of the place where they are located. Institutes of the Academy of Sciences of the Ukrainian SSR all appear under the title 'Institute of ...'

ABBREVIATIONS

The following abbreviations are used in the entries:

ACRONYMS

The following acronyms are used in the text. Many acronyms are based on the original language but the full name is given in English translation.

AN URSR	Academy of Sciences of the Ukrainian SSR
ASSR	Autonomous Soviet Socialist Republic
CC	Central Committee
Cheka	Extraordinary Commission to Fight Counterrevolution, Sabotage, and Speculation
Comecon	Council of Mutual Economic Assistance
Comintern	Communist International
CP	Communist Party
CP(Б)U	Communist Party (Bolshevik) of Ukraine
CPSU	Communist Party of the Soviet Union
CPU	Communist Party of Ukraine
Donbas	Donets Basin
DP	Displaced Person
Gosplan	State Planning Commission for Agriculture and Industry of the Council of Ministers of the USSR
GPU	State Political Administration
GULAG	Main Administration of Labor Camps
KGB	Committee for State Security
kolkhoz	collective farm
Komsomol	Communist Youth League
LKSMU	Communist Youth League of Ukraine
MGB	Ministry of State Security
MVD	Ministry of Internal Affairs
NATO	North Atlantic Treaty Organization
NEP	New Economic Policy
NKVD	People's Commissariat of Internal Affairs
OUN	Organization of Ukrainian Nationalists
Politburo	Political Bureau
RSFSR	Russian Soviet Federated Socialist Republic
SSR	Soviet Socialist Republic
TASS	Telegraph Agency of the Soviet Union
UAN	Ukrainian Academy of Sciences
UNR	Ukrainian National Republic
UPA	Ukrainian Insurgent Army
US, USA	United States, United States of America
VUAN	All-Ukrainian Academy of Sciences

A

Abashev, Dimitrii [Abašev, Dimitrij], b 1829, d 22 January 1880 in Odessa. Chemist. Abashev graduated from the universities of St Petersburg (1851), Moscow (1858), and Kharkiv (1868). He was a lecturer at Kiev University (1858–62) and a docent and a professor at Odessa University, where he taught agricultural chemistry (1865–79). In 1875–9 he was vice-president of the Imperial Agricultural Society of Southern Russia. His pioneer works, which concerned the mutual dissolubility of liquids and the thermochemistry of non-aqueous solutions, were 'Issledovaniia o iavleniakh vzaimnogo rastvoreniia zhidkosti' (Studies on Phenomena of the Mutual Dissolubility of Liquids, MSc thesis, 1858) and 'O teplovykh iavleniakh, obnaruzhivaiushchikhsia pri soedinenii zhidkosti' (On Heat Phenomena Manifested in the Mixing of Liquids, *Zapiski Imperatorskogo Novorossiiskogo universiteta* 1, 1868).

Abazyn, Andrii, ?–1703. A colonel in the Bratslav Regiment and leader of the restored Cossack formations in Right-Bank Ukraine. In 1684 he settled in Bratslav and began to colonize the region. From 1691 to 1696 he participated in the military campaigns of the Right-Bank Cossacks against the Turks and the Tatars. During S. *Pali's anti-Polish rebellion (1702–4) Abazyn took the city of Nemyriv, then barricaded himself in Ladyzhyn and courageously defended it with his 2,000 Cossacks. Overpowered by the army of the Polish hetman A. *Sieniawski on 20 February 1703, Abazyn was taken prisoner and executed.

Abbot. See Hegumen.

Abbreviations. Used in the Ukrainian language (especially after the 1917 revolution) as substitutes for the names of institutions, states, official positions, and the like, whose names in full are phrases developed in Ukrainian since the beginning of the 20th century. The main types are (1) initials of the component words read each as a sound: sša (pronounced sša) = Spolúčení Štáty Améryky (United States of America); (2) initials of the component words read as letter names: UNR (pronounced uenér) = Ukraíns'ka Naródnja Respúblika (Ukrainian National Republic); (3) syllabic, with a syllable (and usually the first consonant of the next syllable) from each component word: *liknép* = *likvidácija nepys'ménnosti* (elimination of illiteracy); (4) mixed: Dniprohés = Dniprovs'ka Hidroelektrýčna Stáncija (Dnieper Hydroelectric Station); (5) partial, with only the first word component abbreviated as in syllabic abbreviations: *medsestrá* = *medýčna sestrá* (hospital nurse). The last type functions as a compound word without a linking vowel.

ABN Correspondence. The English bulletin of the *Anti-Bolshevik Bloc of Nations (ABN), issued bimonthly

in Munich since 1950, under the editorship of V. Oreletsky (1950–4), M. Borys (1954), D. Osinsky (1954–7), and S. *Stetsko (since 1957). It publishes articles by Ukrainians and non-Ukrainians about the conditions in Ukraine and other captive countries of Eastern Europe and Asia and about international communism, translations of samvydav documents, and reports on the activities of ABN and the World Anticommunist League. The *ABN Correspondence* was also published irregularly in German (1949–58) and French (1952–4).

Abortion. An artificial termination of pregnancy. The criminal codes that were in force in Ukrainian territories up to the First World War regarded the fetus as the beginning of human life and treated its artificial expulsion as an attempt on the child's life which called for severe punishment. Abortion without the woman's consent was punished with even greater severity. Codes introduced in the interwar period provided for legal abortions in certain exceptional circumstances. The Polish Criminal Code of 1932, for example, permitted abortion if the pregnancy threatened the mother's health or life or if the pregnancy was due to rape. On 4 June 1921 the people's commissariats of justice and of health of the Ukrainian SSR issued a decree modeled on the 1920 decree of the Russian SFSR legalizing abortions provided that they were carried out free of charge in state hospitals by competent physicians. Unqualified abortionists and physicians who performed abortions privately and under improper conditions were prosecuted. Legalization brought about an increase in the number of abortions. In the county towns of Ukraine abortions amounted to 14.3 percent of all births in 1923–4, 32.3 percent in 1924–5, and 55.2 percent in 1925. This problem was considered at the First All-Ukrainian Congress of Obstetricians and Gynecologists, which was held in Kiev in 1927. Faced by a catastrophic decline in the birth rate and an enormous loss of life during the famine of 1932–3, the government prohibited abortion in 1936 and made it punishable by up to two years' imprisonment. An exception was made for abortions on medical or moral grounds. This policy led to an unprecedented increase in illegal abortions. The Soviet government was forced to revoke its decision of 1936 and on 8 February 1955 issued the decree 'On the Repeal of the Prohibition against Abortion.' On 29 February 1956 the USSR Ministry of Health published instructions on carrying out abortions. Thus, the law reverted to that of the 1920s. Since 1955 abortions performed outside of hospitals under unsanitary conditions and by unqualified personnel have been considered illegal. For reasons of the woman's health, abortion after 12 weeks of pregnancy is prohibited. The health of the woman, rather than the survival of the fetus, is protected by law.

A. Bilynsky

Abramov, Fedir, b 21 March 1904 in Lysychanske in the Donbas, d 5 December 1982 in Kiev. Mining specialist, corresponding member of the Academy of Sciences of the Ukrainian SSR. After graduating from the Dnipropetrovsk Mining Institute in 1930, he taught there. From 1962 he worked at the Institute of Geotechnical Mechanics of the Academy of Sciences of the Ukrainian SSR. His main works deal with the problem of ventilation in mine shafts and the air and gas dynamics of shafts.

Abramovych, Dmytro [Abramovyč], b 26 July 1873 in Hulevychi, Volhynia, d 4 March 1955 in Vilnius. Literary scholar, specializing in Old Ukrainian literature; corresponding member of the Academy of Sciences of the USSR from 1921. Abramovych graduated from the St Petersburg Theological Academy in 1897 and in 1903 became head of that institution's faculty of Russian and Old Slavonic languages. In 1909 he was dismissed from his position for alleged unreliability. During the Soviet period he was a professor at the University of Leningrad and the Smolensk Pedagogical Institute, and in the later years of his life at the University of Vilnius. His major works were *Issledovanie o Kievoo-Pecherskom Paterike* (A Study of the Kievan Cave Patericon, 1902) and *K voprosu ob ob"eme i kharaktere literaturnoi deiatel'nosti Nestora Letopistsa* (On the Scope and Character of Nestor the Chronicler's Literary Activity, 1902). Several editions of the Kievan Cave Patericon were published under Abramovych's editorship, including an edition in the series *Pamiatky movy ta pys'menstva davn'oi Ukraïny*, vol iv, Kiev 1930. He also edited *Zhitie sviatykh muchenikov Borisa i Gleba* (The Lives of the Holy Martyrs Boris and Gleb, 1916). Several of his articles on Old Ukrainian literature appeared in the serials of the Ukrainian Scientific Society in Kiev and the All-Ukrainian Academy of Sciences, as well as in the journal *Ukraïna*. Abramovych also conducted research on the history of 19th-century Russian literature.

I. Koshelivets

Metropolitan Nykanor
Abramovych

Abramovych, Nykanor [Abramovyč], b 27 July 1883 in Mizovo in the Kovel area, Volhynia, d 21 March 1969 in Karlsruhe, Germany. A prominent figure and metropolitan of the *Ukrainian Autocephalous Orthodox church. He studied at the Volhynian Theological Seminary and at the Kiev Theological Academy and, following his ordination in 1910, served as a priest in Volhynia. During the struggle for Ukrainian independence he was inspector of schools for the Zhytomyr region and Volhynia. Under Polish rule between 1920 and 1930 Abramovych was active in the Ukrainianization of the Orthodox church in

Volhynia, served as president of the Brotherhood of the Holy Savior, and was active in the Volodymyr church administration. In 1942–3 he was archbishop of Kiev and Chyhyryn and participated in organizing the restored Ukrainian Autocephalous Orthodox church. In 1947 he became vice-metropolitan under Metropolitan P. *Sikorsky, and after the latter's death in 1953 he was made metropolitan. From 1946 he lived in Karlsruhe, Germany. Abramovych was the author of various articles and books, including *Dohmatychno-kanonichniy ustrii Vselens'koï Pravoslavnoi Tserkvy* (Dogmatic and Canonical System of the Ecumenical Orthodox Church, 1948), *Istoriia Dermans'koho manastyria* (History of the Derman Monastery), and *Stari tserkovni zovychai na Volyni* (Old Church Customs in Volhynia). He was editor of the journal *Bohoslovs'kyi visnyk* and of the texts of *Sluzhebnyk* (Missal, 1949) and *Chasoslov* (Breviary, 1950). Abramovych also served as president of the Theological Institute of the Ukrainian Autocephalous Orthodox church from 1948.

A. Zhukovsky

Academic Brotherhood (Akademichne bratstvo). A student self-help and educational organization in Lviv (1882–96) with a socialist orientation. The brotherhood organized vacation lecture tours and professional groups. Together with the *Vatra society it formed the *Academic Hromada society in 1896.

Academic Circle (Akademicheskii kruzhok). A Russo-ophile student society in Lviv founded in 1870. In 1876 it merged with the Galician populist circle *Druzhnyi Lykhvar*, but a year later reverted to a Russophile orientation. Among its leading members were I. Franko, M. Pavlyk, and O. Terletsky. The society's organ was **Druh* (1874–7).

Academic Gymnasium of Lviv (Akademichna Himnaziia). The oldest Ukrainian gymnasium in Galicia and Ukraine. It was established in 1784 along with the university of which it was a part. The gymnasium was a continuation of the Jesuit Academic Gymnasium founded in 1591. In 1774 this school became the Royal Gymnasium, and from 1776 to 1784 it was called the Theresian Royal State Gymnasium. Until 1849 Latin was the language of instruction, with German as an auxiliary language. Then German became the language of instruction. In 1867 Ukrainian came into use in the four lower grades, and in 1875 it became the language of instruction in all grades. At first the school had five grades, then six, and by 1849 the eight grades that constitute a classical gymnasium. Afterwards parallel departments of the humanities (eg, foreign languages) were added. After the reforms of 1932 the school was reorganized into a four-year general gymnasium and a two-year lyceum. Although the Polish government abolished the name 'academic gymnasium,' it remained in common use. The gymnasium had a reputation as the best Ukrainian high school. Its principals were prominent pedagogues: Rev V. Ilnytsky, E. Kharkevych, I. Kokorudz, M. Sabat, and others. Among its teachers were authors of textbooks, scholars, writers, and public figures. At the beginning of the 20th century over 1,000

students attended the school. Between 1921 and 1931 the number of students varied from 500 to 800. There were also about 100 part-time students. The school produced hundreds of church and secular leaders in various fields of Ukrainian life. Under Soviet rule the Academic Gymnasium was turned into a 10-year school in 1939.

Academic Hromada (Akademichna hromada). A student organization in Lviv (1896–1921), formed from the union of the *Academic Brotherhood and the *Vatra societies. Its groups and scientific sections were well developed; its organ was **Moloda Ukraina*. Its activity ceased for some time following the *secession of Ukrainian students from Lviv University in 1901–2. Beginning in 1908 the Academic Hromada society conducted large-scale educational activity among peasants and townspeople (giving lectures, courses, and assistance to reading rooms, and publishing a book series, the 'Desheva biblioteka'). It was disbanded by the Polish authorities in connection with their reprisals against the Ukrainian underground university in Lviv.

Academism. Art movement based on ancient Greek esthetics and on the dogmatic imitation of classical art forms. Academism first arose in the art academies of Italy in the 16th century and then in France; later it spread to other countries. Such art schools were founded in Rome, Paris, Vienna, Berlin, St Petersburg, Munich, Cracow, and other cities. Many Ukrainian artists graduated from these schools; for example, A. *Losenko, I. Buhaievsky-Blahodarny, H. Vasko, I. *Soshenko, T. *Shevchenko, D. *Bezperchy, V. *Orlovsky, A. *Mokrytsky, I. *Aivazovsky, P. Orlov, K. Ustyianovych, T. Kopystynsky, and K. *Kostandi. As advanced schools of art theory and practice, the academies played a positive role, but eventually their conservatism and dogmatism, their restriction of artistic freedom, and their narrow limits on the selection of theme and formal means (composition, color, technique) called forth a strong reaction among progressive artists, beginning in the 18th century. These artists organized their own art groups with anti-academic programs, such as the romantics, the *Pere-dvizhniki, the impressionists, and the Secessionists. Ukrainians – for example, T. Shevchenko, N. *Ge, I. *Kramsky, O. *Lytovchenko, M. Bodarevsky, M. *Pymonenko, and M. Yaroshenko, and in time the Ukrainian impressionists – participated in this reaction too. Academism has been revived in Soviet art in Ukraine and has primarily manifested itself in socialist realist portraiture, which is photographically accurate and conforms to officially approved models.

S. Hordynsky

Academy of Construction and Architecture of the Ukrainian SSR (Akademiia budivnytstva i arkhitektury Ukrainskoi RSR). Established in 1956 in Kiev on the basis of the Academy of Architecture of the Ukrainian SSR (founded in 1945) and of a number of other research institutes. From 1956 to 1964 the academy co-ordinated all research conducted in Ukraine in the field of construction and architecture, and trained research personnel. Many of the results of this research were applied in the Ukrainian SSR postwar reconstruction plans. The academy was headed by a presidium. Its presidents were A. Komar (1956–9) and P. Bakuma (1960–4); the permanent secretary was I. Litvinov, who also edited its journal, **Visnyk Akademii budivnytstva i arkhitektury URSR*. In 1964 the academy was replaced by a number of other architectural research institutes.

The Academy of Sciences Building in Kiev

Academy of Sciences of the Ukrainian SSR (Akademiia nauk URSR; known in 1918–21 as *Ukrainska akademiia nauk* or UAN [Ukrainian Academy of Sciences], in 1921–36 as *Vseukrainska akademiia nauk* or VUAN [All-Ukrainian Academy of Sciences], and then by its present name). The highest institution of learning in Ukraine. The idea of a Ukrainian academy of sciences was proposed by the *Ukrainian Scientific Society in Kiev in April 1917 but was realized only in 1918 under the independent Ukrainian State. On the recommendation of M. *Vasylenko, the minister of education and art, a special commission was set up, which, from 9 August to 17 September 1918, drew up the law establishing the Ukrainian academy. Hetman P. Skoropadsky confirmed the law on 14 November 1918. According to its statute the academy was to be located in Kiev and divided into three divisions: historical-philological, physical-mathematical, and social-economic. Its publications were to be in Ukrainian. The statute emphasized the all-Ukrainian character of the academy: not only citizens of the Ukrainian State but also Ukrainians of Western Ukraine, then a part of Austria-Hungary, could be full members. Admission of foreign candidates required approval by two-thirds of the academy's full members. The first academicians were appointed on 14 November 1918, the day the academy was inaugurated: D. Bahalii, A. Krymsky, M. Petrov, S. Smal-Stotsky, V. Vernadsky, M. Kashchenko, S. Tymoshenko, M. Tuhan-Baranovsky, O. Levytsky, V. Kosynsky, F. Taranovsky, and P. Tutkovsky. V. *Vernadsky was elected president, and A. *Krymsky permanent secretary.

The academy, 1919–23. When the Bolsheviks captured

Kiev on 11 February 1919, they issued a decree regarding the structure and financing of the Ukrainian Academy of Sciences. Ignoring its previous activity, they considered this date to mark the academy's origin and themselves as its founders. After the Bolsheviks ousted Denikin's forces and returned to Kiev, Vernadsky retired in December 1919, and the historian O. *Levytsky became the academy's president (1919–21). During this period the associates of the academy lived under difficult economic conditions and experienced their first political persecutions. In 1921 the government refused to recognize the newly elected president of the academy, M. Vasylenko, and in 1923 arrested him along with other associates of the academy. In 1924 they were condemned at the trial of the 'Action Center' (Tsentri dii) but were later granted amnesty.

By decree of the Council of the People's Commissars of the Ukrainian SSR on 14 June 1921, the Ukrainian Academy of Sciences was renamed the All-Ukrainian Academy of Sciences. Its importance for Ukrainians in Poland, Rumania, and Czechoslovakia was thus emphasized. That year the *Kiev Archeographic Commission and the Ukrainian Scientific Society in Kiev were incorporated into the academy. From 1920 to the early 1930s the *Historical Society of Nestor the Chronicler, with M. Vasylenko as president and S. Maslov as secretary, functioned independently under the first division of the academy. The People's Library of Ukraine in Kiev, which was established in 1918 under the name National Library of the Ukrainian State and is known today as the *Central Scientific Library of the Academy of Sciences of the Ukrainian SSR, was also brought under the academy in the 1930s. In 1922 the printing facilities of the Kievan Cave Monastery were transferred to the academy, and this led to an improvement in the academy's publications. The botanist V. *Lypsky assumed the office of president in 1922. With the introduction of the NEP the academy's budget in hard currency was cut, and the number of its associates was reduced to 149 in 1922 and 118 in 1923. The academy had a considerable number of unofficial unpaid associates, however (over 1,000 in 1921).

Development from 1924 to 1928. With the beginning of *Ukrainization and the return of M. *Hrushevsky from abroad in 1924, the academy expanded its work. Having been elected to full membership, Hrushevsky held the academy's chair of modern Ukrainian history and presided over the historical-philological division, with its numerous commissions, and the archeographic commission. Personnel at the academy increased to 160 in 1924. The number of publications increased during the period: the academy published 32 titles in 1923, 35 in 1924, 52 in 1925, 75 in 1926, 88 in 1927, 90 in 1928, 136 in 1929, and 116 in 1930. In 1930 the academy began to decline noticeably in connection with the trial of the *Union for the Liberation of Ukraine.

Historical-philological division. During the 1920s the historical-philological division played the leading role in the academy. In 1927–8 it had the following chairs: historical-philological (held by A. Krymsky), history of the Ukrainian language (Ye. Tymchenko), Ukrainian oral literature (A. Loboda), history of modern Ukrainian literature (S. Yefremov, also vice-president of the academy in 1923–9), Old Ukrainian literature (V. Peretts), Old Ukrainian history (D. Bahalii), modern Ukrainian history (M. Hrushevsky), historical geography (O. Hrushevsky),

Byzantology (F. Myshchenko), and history of Ukrainian art (O. Novytsky). The historical-philological division also had 39 other commissions, institutes, committees, and museums under it in 1928, as well as the following learned societies: the Historical Society of Nestor the Chronicler, the Historical-Literary Society, headed by S. Yefremov, and the *Leningrad Society of Researchers of Ukrainian History, Literature, and Language, headed by V. Peretts. The division published several serials: **Zapysky Istorychno-filolohichnoho viddilu vUAN*, edited at different times by P. Zaitsev, D. Bahalii, M. Hrushevsky, and A. Krymsky in 1919–31 (26 vols); the scholarly journal **Ukraïna*, edited by M. Hrushevsky in 1924–30; *Naukovyi zbirnyk Istorychnoi sektsii vUAN*, which was a continuation of **Zapysky Ukraïns'koho naukovoho tovarystva v Kyievi* and was edited by M. Hrushevsky in 1924–9 (vols 19–32); the annual *Pervisne hromadianstvo*, edited by K. Hrushevka in 1926–30 (6 vols); **Etnohrafichnyi visnyk*, edited by A. Loboda and V. Petrov in 1925–32 (10 vols); the collection **Za sto lit*, edited by M. Hrushevsky in 1927–30 (6 issues). From 1923 to 1931 a total of 111 numbered collections appeared.

Owing to the efforts of the historical-philological division, a number of first-rate historical works were published: D. Bahalii's *Narys istorii Ukraïny na sotsial'no-ekonomichnomu grunti* (An Outline of the Socioeconomic History of Ukraine), I (1928), *Narys Ukraïns'koi istoriografii* (An Outline of Ukrainian Historiography), I–II (1923–5), and *Ukraïns'kyi mandrovanyi filosof Hryhorii Savych Skovoroda* (The Ukrainian Wandering Philosopher Hryhorii Savych Skovoroda, 1926); K. Hrushevka's *Z pryमितyivnoi kul'tury* (On Primitive Culture, 1924) and *Ukraïns'ki narodni dumy* (Ukrainian Folk Dumas, 1927); M. Hrushevsky's subsequent volumes of *Istoriia Ukraïny-Rusy* (The History of Ukraine-Rus', 1898–1936) and *Istoriia Ukraïns'koi literatury* (A History of Ukrainian Literature, 1923–7); S. Yefremov's monographs on Ukrainian literature in the 19th century and the academic editions of T. Shevchenko's diary and correspondence, edited by Yefremov (1927–8); A. Krymsky's *Istoriia Persii ta ii pys'menstva* (A History of Persia and Its Literature, 1934), *Istoriia Turechchyny* (A History of Turkey), I–II (1924–7), *Pers'kyi teatr ...* (The Persian Theater ... , 1925), etc, often in collaboration with other authors; and jubilee collections, particularly in honor of D. Bahalii (1927) and M. Hrushevsky (1928–9). The division also republished B. Hrinchenko's *Slovnyk Ukraïns'koi movy* (Dictionary of the Ukrainian Language, 1927–8), began the publication of *Rosiis'ko-Ukraïns'kyi slovnyk* (A Russian-Ukrainian Dictionary), edited by A. Krymsky, in 1927–8, which was completed to the letter 'P,' and published 22 specialized dictionaries.

Physical-mathematical division. The division had the following chairs: geology (P. Tutkovsky), applied mathematics (D. Grave), applied physics (B. Sreznevsky), mathematical physics (M. Krylov), pure mathematics (Yu. Pfeiffer), biology of agricultural plants (Ye. Votchal), botany (V. Lypsky), experimental zoology (I. Schmalhausen), chemistry (V. Plotnikov), chemical technology (V. Shaposhnikov), public health (O. Korchak-Chepurkivsky), and clinical medicine (F. Yanovsky). Nineteen scientific institutions belonged to this division, among them the Geological Society (headed by P. Tutkovsky), the Botanical Society (O. Fomin), the Institute of Technical Mechanics (K. Syminsky), the Acclimatization Garden (M. Kashchenko), and the Microbiological Institute (F.

Omelchenko). The division published **Zapysky Fyzyko-matematychnoho viddilu* in 1923–9 (4 vols), *Zoolohichnyi zhurnal*, **Ukrains'kyi botanichnyi zhurnal*, and *Heolohichni visti*.

Social-economic division. The division was organized into the following chairs: history of western-Ruthenian and Ukrainian law (M. Vasylenko), statistics (M. Ptukha), commercial trade and industrial economics (K. Vobly), history of the philosophy of law (O. Hiliarov), Ukrainian customary law (Y. Malynovsky), finance (L. Yasnopolsky), international law (V. Hrabar), civil law (S. Dnistriansky), economic history (V. Levytsky), and political economy (S. Solntsev). Among the institutions that came under this division were the Demographic Institute (M. Ptukha), the Society of Economists (K. Vobly), and the **Association of Ukrainian Lawyers* (O. Malynovsky). The division set up a number of commissions: for example, the **Commission for the Study of the History of Western-Ruthenian and Ukrainian Law* (M. Vasylenko), which investigated the *Ruskaia Pravda*, the Lithuanian Statute, the legal and political system of the Hetman state and the Zaporizhia, and the Little Russian Collegium and published its *Pratsi*; and the commission for the Study of the Economy of Ukraine (K. Vobly). From 1923 to 1927 *Zapysky Sotsial'no-ekonomichnoho viddilu* was published (6 vols).

Various scholarly societies in Kharkiv, Odessa, Poltava, Dnipropetrovske, Kamianets-Podilskyi, Chernihiv, Lubni, Nizhen, Mykolaiv, Shepetivka, and Leningrad were affiliated with VUAN. In Odessa the Commission for Regional Studies was connected with the academy, and in Vinnytsia the Cabinet for the Study of Podilia collaborated with the academy. In 1928 VUAN had 63 full members, 16 corresponding members, 111 staff researchers, and 212 non-staff researchers.

1928–39. Beginning in 1928, the authorities increased their control over the academy by interfering directly and even brutally in its organization and scholarly work. Their purpose was to transform it into a Soviet institution imbued with the official ideology of Marxism-Leninism.

The plenum of full members, called the General Assembly, was replaced as the governing body of the academy by a council, which included among its members representatives of the People's Commissariat of Education. The presidium, consisting of a president, two vice-presidents, a permanent secretary, and five academicians, was the executive body. In 1928 the microbiologist D. **Zabolotny* was elected president to appease the authorities. From 1930 to 1946 the pathophysiological O. **Bohomolets* was president. A. Krymsky was replaced as permanent secretary by O. Korchak-Chepurkivsky in 1928. In the following year the authorities had three people's commissars – M. Skrypnyk, V. Zatonsky, and O. Shlikhter – elected to full membership, and a number of party members, among them S. Semkovsky, M. Yavorsky, and V. Yurynets, were accepted as candidates. Shlikhter became the head of the social-economic division. The vice-president of the academy, S. Yefremov, was arrested at the time and in 1930 was sentenced to 10 years' imprisonment in the Union for the Liberation of Ukraine trials. A number of associates of the academy were sentenced with him: Y. **Hermaize*, A. **Nikovsky*, V. **Hantsov*, H. **Holoskevych*, and M. **Slabchenko*. Several dozen research associates were exiled without trial. In July 1930 the historical-philological division was abolished, and its institutions

were incorporated into the social-economic division, which henceforth became known as the second (instead of the third) division. The natural science-technical division became the first. In 1931 these two divisions represented 164 scientific institutions with 242 research associates, including 79 academicians. Most of the institutions of the academy that were headed by M. Hrushevsky at the beginning of the 1930s were abolished, and the historian himself was deported to Moscow. In 1930–1 VUAN was 'purged' of many more of its associates, and the most important members of the academy were forced to attend meetings of 'criticism and self-criticism.'

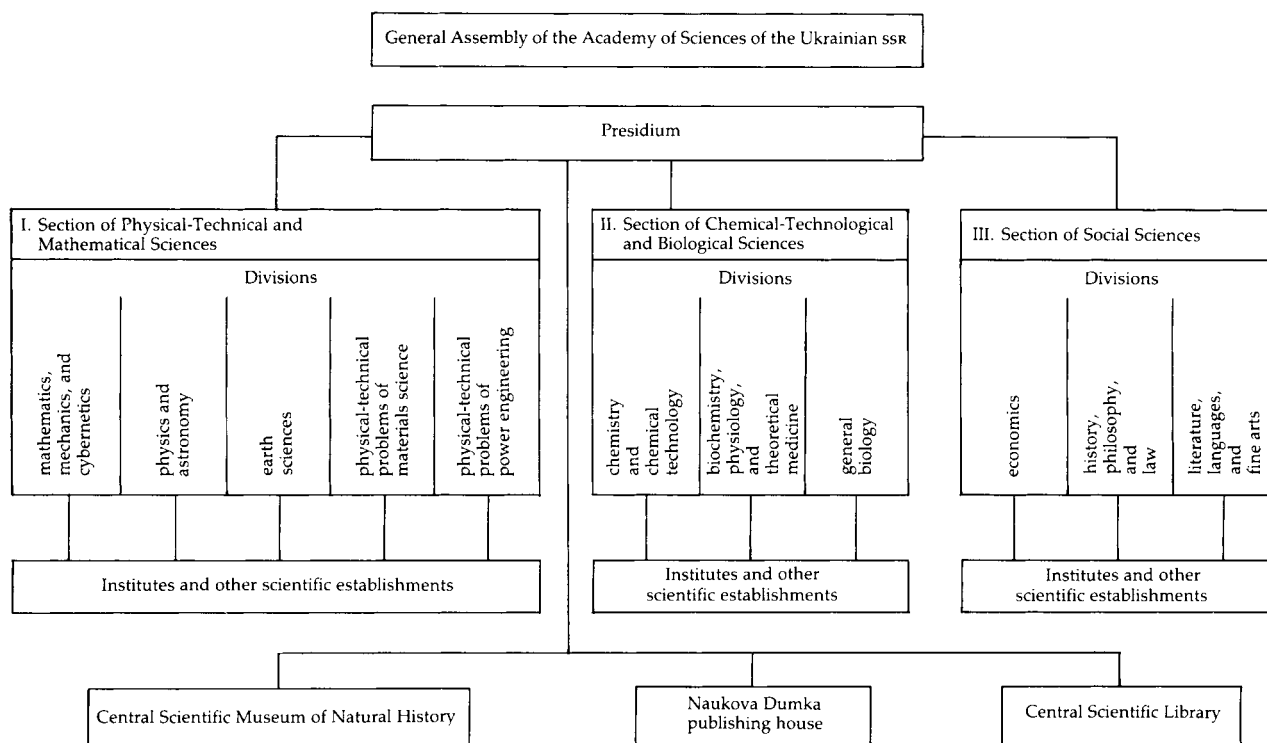

At the beginning of the 1930s all the academy's serial publications in the humanities were discontinued. Most of the earlier publications were condemned and taken out of circulation because of their alleged nationalism. Many important works that were approved for publication or already in print disappeared in the first half of the 1930s.

The repressions against the academy reached a peak during P. **Postyshev's* regime in 1933–4. In 1933 the soil scientist O. **Sokolovsky* was imprisoned, and M. **Skrypnyk* committed suicide. In 1934 V. **Peretts* was exiled to Saratov and died there. F. **Shmit* and S. **Rudnytsky* died in exile, and M. **Ptukha* spent several years in exile. In 1934 the four members from Galicia who had been elected full members in 1929 – M. **Vozniak*, F. **Kolesa*, K. **Studynsky*, and V. **Shchurat* – were deprived of the title of academician. Their titles were restored in 1939 when Galicia was occupied by the Soviets. The repressions continued until the beginning of the Second World War. In 1936 S. Semkovsky was imprisoned and later perished, and M. Kravchuk, Ye. Oppokiv, and M. Svitalsky were exiled. A. Krymsky and K. Studynsky died under unknown circumstances during the forced evacuation at the time of the German invasion of the USSR.

According to the estimates of N. Polonska-Vasylenko, over 250 research associates of the academy, including 22 academicians, were repressed in the 1930s, the largest number being in the humanities: 49 historians, 15 archeologists, 12 art scholars, 18 ethnographers, 5 Orientalists, 43 literary scholars and philologists, 5 pedagogues, 29 jurists, and 29 economists. Nine mathematicians, physicists, and chemists, 14 zoologists and botanists, 19 geologists, 10 medical specialists, and 7 others also suffered political persecution.

The reorganization of the academy in 1934 put an end to the divisions. The academy became an association of 36 branch institutes. It was subordinated to the Council of the People's Commissars of the Ukrainian SSR. Since then, the mathematical, technical, and natural sciences have been accorded first place among the activities of the academy. In 1936 the All-Ukrainian Academy of Sciences was renamed the Academy of Sciences of the Ukrainian SSR and became a territorial, rather than a national, institution. It was divided again into three divisions: social sciences, mathematical and natural sciences, and technical sciences. That year the **All-Ukrainian Association of Marxist-Leninist Scientific Research Institutes* was disbanded, and its institutes were placed under the academy. In 1938 the second division was divided into the physical-mathematical and biological divisions. By 1939 the Academy of Sciences of the Ukrainian SSR consisted of four divisions: physical-chemical and mathematical sciences, biological sciences, technical sciences, and social sciences. The last encompassed the institutes of eco-

nomics, Ukrainian history, archeology, Ukrainian literature, linguistics, and Ukrainian folklore.

The academy since 1939. With the Soviet takeover of Volhynia and Galicia in 1939, the Soviets abolished the *Shevchenko Scientific Society and transferred its assets to the Ukrainian academy. During the German-Soviet war the academy was evacuated to Ufa in 1941, moved to Moscow in 1943, and returned to Kiev in 1944. The efforts made by Ukrainian scholars who stayed in Kiev during the war to restore at least partially the activities of the Ukrainian academy were prohibited under the German occupation, during which heavy losses were inflicted on the institutions and collections of the academy. In 1946 the biochemist O. *Palladin became president of the Academy of Sciences. In 1945–6 a separate division of agricultural sciences was established. By the 11 April 1963 decree of the Central Committee of the Communist Party of the Soviet Union and the USSR Council of Ministers, the Academy of Sciences of the Ukrainian SSR, as well as all the other academies of the national republics, became subordinated to the Academy of Sciences of the USSR, that is, it became a local branch of the Russian academy, which is called an all-Union academy.

In 1962 B. *Paton, a specialist in electric welding, became president of the Ukrainian academy. In the following year the academy was reorganized on the pattern of the USSR academy. It was divided into three large sections: physical-technical and mathematical sciences, chemical-technological and biological sciences, and social sciences.

In 1956 the Donetsk Scientific Center of the Academy of Sciences of the Ukrainian SSR was set up. It was followed by other similar centers: the Western (or Lviv), Kharkiv, Southern (or Odessa-Crimean), and Dnipropetrovske centers. By 1980 the academy had 144 full members and 206 corresponding members and about 12,500 research associates. Its three divisions contained 11 departments and 86 scientific institutions, among them 60 scientific-research institutes (see the organizational scheme of the academy). Altogether about 35,500 people were employed by the academy. In 1979 the Central Scientific Library of the Ukrainian academy held over 10 million published items, many in 'special repositories' (*spetsfondy*) accessible only by special permission. The academy has its own publishing house, Naukova Dumka, and has published *Visnyk AN URSR* since 1947 and *Dopovidi AN URSR* since 1939. In 1921–8 *Zvidomlennia VUAN* was published.

By the early 1930s the All-Ukrainian Academy had made important contributions in the humanities, particularly in Ukrainian studies. During the repressions and reorganizations that followed, the humanities were neglected, and some of them completely disappeared from the programs of the scholarly research institutes (eg, classical philology, Orientology, comparative linguistics, comparative literature, pre-1917 Ukrainian history, world history, church history, and psychology). Statistical data reflect the decline of humanistic studies: of the 118 full members of the academy in 1970, only 10 represented the humanities, and these were either writers, such as M. Bazhan and O. Korniiichuk, who were not involved in scholarly work, or party ideologists, such as A. Skaba and M. Shamota. Elevated to first place are the physical-mathematical, technical, and natural sciences, which are expected to bring concrete practical results in machine building,

metallurgy, energy resource use, agricultural productivity, the quality of production, and environmental protection. A number of theoretical schools have emerged at the academy. These schools – the D. Grave school of algebra, the M. Krylov school of non-linear mechanics, the O. Dynnyk school of the theory of elasticity, the L. Pysarzhevsky school of chemistry, and the V. Hlushkov school of theoretical cybernetics – have made important contributions to the development of various scientific areas. The Ukrainian academy is known for its contributions to pathophysiology (O. Bohomolets), physics (K. Synelnykov), botany (M. Kholodny), and medicine (M. Strazhesko, V. Filatov). In the areas of powder metallurgy and electric welding the academy is the leading institution in the USSR. The academy's chemists were the first in the USSR to produce heavy water and isotopes of hydrogen and oxygen. The first electronic calculator in the USSR was built in Kiev. For details on the academy's contributions to the development of various fields (biology, economics, historiography, cybernetics, literary scholarship, mathematics, medicine, technical sciences, physics, chemistry), see the individual articles and entries on the institutes. The lack of normal contacts with scientists and scholars outside the USSR and the Soviet bloc has degraded the Ukrainian academy to a provincial scientific institution. The emphasis on the technical sciences and the neglect of the humanities have deprived the academy of its national characteristics and given it an increasingly Soviet character. The increasing Russification of the academy's publications indicates that its national distinctiveness is disappearing and that it serves the interests of Russian scholarship. In the 1970s most of the scientific and scholarly works published by the Ukrainian academy were in Russian: of 34 specialized journals only 16 were published in Ukrainian, the rest being in Russian (13) or bilingual (5). The process of Russification advances steadily. Soviet historians today falsify the past of the Ukrainian Academy of Sciences, omitting any mention of disputes, purges, trials, the liquidation of many of the academy's members and associates, the discrimination introduced by the party authorities, and the increasing Russification of the academy's institutions. Prominent scholars and distinguished members of the academy, such as S. Yefremov, M. Vasylenko, S. Rudnytsky, S. Smal-Stotsky, F. Myshchenko, K. Kharlampovych, M. Slabchenko, and M. Yavorsky, no longer appear in the membership lists of the academy.

A cappella. A choral style marked by the absence of instrumental accompaniment. In the Middle Ages it was the basic style of church music. A cappella singing reached the height of its development during the Renaissance. The choral concertos of M. *Berezovsky, D. *Bortniansky, and A. *Vedel are examples of Ukrainian a cappella music. The style is widespread in both folk and professional choral art, and the works of M. *Lysenko, M. *Leontovych, A. *Shtoharenko, and P. *Maiboroda are popular in a cappella repertoires.

Accent. In the Ukrainian language the accenting of a word is dynamic (expiratory). An accented vowel is both emphasized and lengthened. The intonational characteristics of accentuation in Ukrainian have not yet been studied thoroughly, but it is assumed that in northern and eastern Ukraine the accented vowel has a falling pitch curve, whereas in the southwest the pitch is even or slightly rising (V. Hantsov, O. Kurylo). These differences are phonemically irrelevant. (See *Intonation for a discussion of the loss of tone accent in Old Ukrainian.) The force of the accent in the Ukrainian language is significantly weaker than in Russian or Bulgarian, and there is, consequently, almost no reduction in the strength of vowels in unstressed syllables. A word consisting of more than three syllables has not only a primary accent, but also a secondary accent, which usually falls on the second syllable (trochaic type) or on the third syllable (dactylic type) following the primary stress: *ponávvyzbýruvalý*. Particles (enclitics), prepositions, and one-syllable conjunctions (proclitics), as well as personal pronouns preceding verbs, normally lack the primary stress (*tút taky, do nohý, i voný, ja berú*). Primary accents are retracted to prepositions only in several petrified expressions (*ná ruku, ná nič, ná smix*). Phrasal emphasis ('logical' accent) on a word is but a strengthening of its usual word accent relative to other word accents in an intonational unit. In other words, qualitatively, phrasal accent does not differ from word accent, and its strengthening is great only under a strong emphasis.

The accent can fall on any syllable of a word (free stress) and can change location because of the inflection of a word (mobile stress). Accordingly, accentuation may and often does serve to distinguish otherwise identical words (*pótjah* – noun [train]; *potjáh* – verb, past tense [pull]), including appellatives and toponyms (*hranký* [glowing coals]; *hránky* [galley proofs]). This device is broadly used in morphology to differentiate singular and plural forms (*xáty* – gen sing; *xatý* – nom pl [house]), case forms (*stépu* – gen sing; *stepú* – loc sing [steppe]), and aspectual forms (*nasýpaty* – perf; *nasy páty* – imperf [pour]). Peculiar to the Ukrainian language are its relatively numerous accentual doublets, which do not differ from each other in meaning or grammatical function (*zapýttannja/zapýtánnja*

[question]; *potík/pótík* [stream]; *bájdúže/bajdúže* [indifferent]). The factors that contributed to the rise of such doublets were grammatical analogy, the influence of various dialects, and, in certain cases, the influence of the Russian and Polish languages. They were able to develop as they did, however, only because of the existence of secondary stress, a phenomenon typical of Ukrainian: occasionally the secondary stress alternated in its function with the primary stress.

The earliest descriptions of Ukrainian accentuation were made by K. *Hankevych (1877), I. *Verkhratsky (1879), J. *Hanusz (1883), and V. *Okhrymovych (1900). The most significant studies of modern accentuation are those of Z. Nebozhivna, T. *Lehr-Spławiński, P. *Kovaliv, M. *Nakonechny, and E. Stankiewicz. L. *Bulakhovsky provided historical commentaries on the development of accent in the Ukrainian language. Accentuation in Old Ukrainian was studied by Z. *Veselovska, I. *Ohiienko, O. *Horbach, and V. Skliarenko. J. *Rudnyckyj, Z. Veselovska, and A. Biloshtan have examined the accentual doublets. A normative dictionary of Ukrainian accentuation was published by M. Pohribny in 1959 (2nd edn 1964).

G.Y. Shevelov

Acheulean culture. An archeological culture of the early Paleolithic period; it succeeded the Chellean culture. The name is derived from the type site of Saint-Acheul, now a suburb of Amiens in northern France. Acheulean culture spread throughout Europe, Africa, and Asia. It flourished some 400,000–100,000 years ago. Typical of the Acheulean culture was the use of stone implements (hand axes, flake tools). The *Homo erectus* and early *Homo sapiens* of the Acheulean culture lived in primitive communities in caves and in the open. They were hunters and gatherers who had discovered the use of fire. Known Acheulean sites in Ukraine are the *Kiik-Koba, Zhytomyr, and *Luka Vrublivetska.

Acrobatics. An old form of sport that consists of various exercises such as leaps, balancing, back-bends, and pyramids. The sport was practiced in ancient Egypt, Greece, and Rome. In Ukraine the *skomorokhy of the Princely era practiced acrobatics. Acrobatics was applied in military training, particularly by the Cossacks. In the Ukrainian SSR there are special organizations devoted to acrobatics. The following Ukrainian acrobats have won the USSR championship: the brothers A. and V. Tishler and V. Motuzenko (members of Burevisnyk in Kiev), and O. Cherkas (member of Avanhard). In 1976 the first world competitions in acrobatics were held. Among the winners were two women from the Kievan Avanhard – N. Tyshchenko and M. Kukharenko – and a man from Spartak – M. Kukharenko. Acrobatics is also used in the circus.

Acrostic. A poem in which the initial letters of each line, read from top to bottom, spell out a word or sentence. The acrostic was one of the most popular poetic forms in Ukrainian baroque literature. Many 18th-century authors recorded their own names in acrostics (eg, in the *Bohohlasnyk and various manuscripts). After the baroque period the acrostic was used infrequently.

Acting hetman (*nakaznyi hetman*). Governing authority who in 17th–18th-century Ukraine temporarily substituted for the hetman. The acting hetman was appointed by the hetman or elected by the *council of officers, consisting of the senior *general officer staff, or of colonels. The acting hetman performed the duties of the hetman in the following circumstances, which gave rise to distinct forms of the office of acting hetman: (1) during military campaigns in which the hetman did not participate (the oldest and most-frequent form of the office, which was particularly common in the 17th century), (2) during a prolonged absence of the hetman from his residence (because of war or foreign travels, particularly visits to Moscow) or his incapacitation (eg, V. *Mnohohrshny became acting hetman when his brother, Hetman Demian, fell ill in 1671), and (3) when the hetman's office became vacant because of his death, resignation, or ouster (eg, V. Borkovsky became acting hetman in 1687 when Hetman I. *Samoilovych was ousted).

The third form of the office of acting hetman was particularly important because the acting hetman retained the powers of the hetman for an extended period. The following acting hetmans held this form of the office: Ya. *Somko, who was appointed by Yu. *Khmelnysky in 1660 and retained the office until 1663; D. *Mnohohrshny, who was the acting hetman of P. *Doroshenko in the northern region in 1668–9; and particularly P. *Polubotok (1722–4), who was appointed by the dying I. *Skoropadsky and confirmed by Peter I.

O. Ohloblyn

Acting otaman (*nakaznyi otaman*). Temporary commander of the UNR Army, appointed by the *supreme otaman to take charge of the military operations at the front. Gen O. *Osetsky and Gen O. *Hrekov were acting otamans.

Acts, Books of (*aktovi knyhy*). Collections of original legal documents (and copies) of the 15th and 16th centuries, issued by or addressed to various institutions (courts and municipalities) of the Polish Kingdom. Books of Acts were introduced in Galicia in 1435, in Podilia, Volhynia, and Kiev in 1529, and elsewhere in Ukraine in 1566. The collections (books) were classified by subjects: current, judicial, criminal ('Black Books'), and civil matters. The colonel's chanceries in the Hetman state also maintained various documents (acts), including contracts, wills, and executive records. The Books of Acts are an important source for the study of the social, cultural, and legal history of Ukraine. They have been preserved in several regional and city archives. Many of them were published in the 19th and 20th centuries: O. Levitskii, *Ob aktovykh knigakh, otnosiashchikhsia k istorii Iugo-Zapadnogo kraia i Malorossii* (On the Books of Acts relating to the History of the Southwestern Land and Little Russia, Moscow 1900); *Piriatinskie aktovye knigi, 1683–1719* (The Books of Acts of Pyriatyn, 1683–1719, Kiev 1908); *Aktovye knigi Poltavskogo gorodovogo uriada XVII veka* (Books of Acts of the Poltava Municipal Government of the 17th Century, 3 vols, Chernihiv 1912–14); and *Akta grodzkie i ziemskie* (City and Land Acts, 25 vols, Lviv 1868–1935).

Adam von Bremen, ?–1081. North German chronicler, author of the chronicle *Gesta Hamburgensis ecclesiae*

pontificum. The *Gesta* is a rich source of information about the Scandinavian countries and the Western Slavs; Kiev is mentioned as a rival of Byzantium.

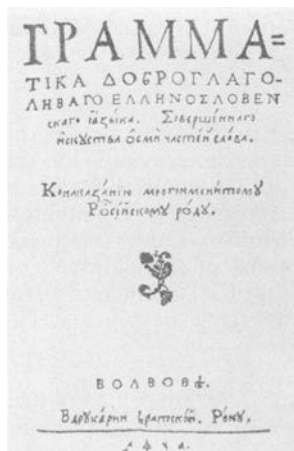

Adamant, Samiilo. Engraver in the latter half of the 18th century. Adamant produced engravings for the following books, published in Chernihiv: *Akafistnyk* (Book of Acathisti), for which he prepared six engravings, including *Sviaty Mykola* (St Nicholas), *Uspinnia* (Dormition), and *Sobor sviatykh* (Council of the Saints); and *Akafist Sviatoi Varvary* (Acathistus of St Barbara, 1783), for which he prepared the engraving *Sviata Varvara*. His monogram was S.A.

Adamovych, Serhii [Adamovyc, Serhij], b 2 April 1922 in Rubizhne, now Lysychanske in Voroshylovhrad oblast. Graphic artist. Adamovych attended the Kiev State Art Institute and in 1944–50 studied with O. Shovkunenko. He illustrated I. Franko's *Boryslav smiet'sia* (Boryslav Is Laughing, 1952), M. Kotsiubynsky's *Vybrane* (Selections, 1955), O. Kobylanska's *Zemlia* (The Land, 1960), M. Stelmakh's *Krov liuds'ka – ne vodytsia* (Human Blood Is Not Water, 1970), M. Cheremshyna's *Vybrane* (Selections, 1973), etc. Adamovych produced a linoprint series ('Prerevolutionary and New Donbas') and lithographs (*Sedniv*, Trees). Since 1954 he has lived in Riga. A monograph on him by L. Vladych, *Hrafika S. Adamovycha* (The Graphics of S. Adamovych, 1977), was published in Kiev.

Adams, Nick, stage name of Nicholas Adamschock [Mykola Adamščuk], b 10 July 1931 in Nanticoke, Pennsylvania, d 7 February 1968 in Beverley Hills, California. Screen and television actor. From 1952, Adams played lead and supporting roles in 31 films and 32 television episodes. Usually he played neurotic or aggressive types. He became popular as the star of the TV series 'The Rebel' (1959–60). In 1963 he was nominated for an Oscar as best supporting actor in the film *Twilight of Honor*.

Adelheim, Yevhen [Adel'hejm, Jevhen], b 14 November 1907 in Kiev. Literary scholar and critic. He began his literary work in 1929 and wrote numerous articles in journals such as *Zhyttia i revoliutsiia* and *Krytyka*. His major works written before the Second World War are *Poetychnyi molodniak* (Young Poets, 1931) and *Dva dramaturhy* (Two Playwrights, 1938). He was much criticized during the struggle against so-called rootless cosmopolitanism in the early 1950s. His major postwar works dealing with issues in Ukrainian literature are *Poeziia borot'by i truda* (The Poetry of Struggle and Labor, 1948), *Ukrains'ka radians'ka poeziia* (Soviet Ukrainian Poetry, 1948), *Vasyl' Ellan* (1959), and *Mykola Bazhan* (1965, 1970, 1974).

Adelphotes (Ἀδελφοτης). A grammar of the Greek language, published in Lviv in 1591. It was compiled by the students of the Stavropygian School under the guidance of *Arsenii of Elasson. *Adelphotes* was based on the grammar of Lascaris, and partially on the grammars of Crusius, Clenard, and Melanchthon, but it is most significant in that it provided Old Ukrainian parallels to the Greek material and contributed to the development of grammatical terminology in Ukraine.

Adelphotes: title page of
Greek grammar, Lviv 1591

Administrative Code of the Ukrainian SSR (Administrativnyi kodeks URSR). For several years the administrative code of 1927 was the basic source of effective administrative law in the Ukrainian SSR. It was one of the few independent manifestations of the Soviet government of Ukraine, for neither the Russian SFSR nor the other republics possessed such a code. The administrative code was drawn up by a legal commission in 1926 and confirmed by the All-Ukrainian Central Executive Committee on 12 October 1927. It came into force on 1 February 1928. The code consisted of 528 articles organized under 15 sections: (1) principles; (2) administrative acts; (3) administrative sanctions; (4) other administrative measures of compulsion; (5) labor conscription for preventing and combating natural disasters; (6) the people's duties in preserving public order; (7) Ukrainian Soviet citizenship, its acquisition and forfeit; (8) registration and recording of population movements; (9) associations, unions, clubs, conferences, and assemblies; (10) regulations on religious cults; (11) public spectacles, recreation, and sports; (12) the use of the state flag and seals; (13) supervision of administrative bodies in industry; (14) supervision of administrative bodies in trade; (15) appeal procedures against local administrative agencies.

Because of legislative changes and strong tendencies towards centralization in Soviet administrative law (introduction of new all-Union state administrative agencies), only a part of the administrative code has remained in force (not more than 150 articles in 1962). The last complete official edition of the code was published in 1935, and selections from it were published in 1956.

For several years, and particularly in 1958 and 1959, it was frequently asserted that a new administrative code was needed. A general proposal was quickly prepared and discussed, although the Presidium of the Supreme Soviet of the Ukrainian SSR adopted a resolution 'On Organizing the Work of Codifying the Legislation of the Ukrainian SSR' only on 24 May 1967. In this resolution the presidium assigned the task of organizing the preparation of proposals for various new codes, particularly an administrative code, to the Commission for Legislative Proposals of the Supreme Soviet. The projected code included sections on administrative wrongdoings, administrative procedure, and judicial control over the legality of state administrative acts. The work on the new and possibly complete administrative code, which was to encompass administrative-procedural norms, did not cul-

minate in legislative action. The Presidium of the Supreme Soviet revoked on 19 July 1977 its previous resolution of 1967 on publishing a new administrative code. As a result of the intensified administrative integration of the USSR, the work plan that was appended to the resolution required merely that the code on administrative wrongdoings be prepared by the Council of Ministers of the Ukrainian SSR by December 1980.

Administrative law. The part of the state legal system that deals with the norms and modes of operation of the government agencies concerned with internal affairs. This sphere includes various administrative activities apart from the legislative and judicial functions, external relations, and the exclusive fields of the supreme state power. Administrative law regulates public administration, the maintenance of internal order, health care, education, finance and credit, industry, trade, agriculture, etc.

The sources of administrative law are the general and special legislative and other acts. Because of their large number and frequent, necessary changes, the codification of administrative law is very difficult. In the Russian and Austrian empires administrative law was only partially codified. In the Ukrainian SSR the following are accepted as sources of administrative law: (1) the constitutions of the USSR and the Ukrainian SSR; (2) the laws of the USSR and the Ukrainian SSR; (3) the decrees of the Presidiums of the Supreme Soviets of the USSR and of the Ukrainian SSR; (4) the statutes and ordinances in the various branches of government; (5) the resolutions and orders of the councils of ministers of the USSR and of the Ukrainian SSR; (6) the orders and instructions of state committees and ministers of the USSR and the Ukrainian SSR; (7) the decisions and instructions of local soviets and their executive committees. The Ukrainian SSR is the only Soviet republic with a partly codified administrative law, contained in the Code of Laws on Public Education in the Ukrainian SSR (1922) and the *Administrative Code of the Ukrainian SSR (1927).

In many countries there is a specific system for settling conflicts among various administrative agencies by means of administrative tribunals or by the common courts. The concept of administrative justice became popular in Europe in the middle of the 19th century and was tied to the expansion of individual rights vis-à-vis the state. A system of administrative justice was set up in Austria in 1867, and in 1875 the Administrative Tribunal (Verwaltungsgerichtshof) was established to investigate com-

plaints about administrative bodies. There was no separate administrative justice system under the Russian Empire. Complaints against a ministry were submitted to the First Department of the Senate. This department also settled disputes among judicial bodies and among central judicial bodies and local ones. From 1884 the reorganized Second Department of the Senate, which continued to be known as the Peasant Department, accepted grievances and petitions from peasants about the decisions of lower administrative agencies that were in charge of peasant and land affairs. The concept of administrative justice was quite common in the legal literature, and eventually the Russian Provisional Government issued the law of 30 May 1917 that established a special system of administrative courts. The system had three levels: administrative courts in counties, administrative tribunals in gubernias, and the First Department of the Senate at the top. The powers of these courts were quite limited.

Under the Ukrainian National Republic (UNR) the *General Court, which was established by the 17 December 1917 law of the Central Rada, had an administrative department. When on 8 July 1918 the General Court was reorganized into the State Senate under the Hetman regime, this department was renamed the General Administrative Court. The Directory of the UNR returned to the arrangements established by the law of 17 December 1917.

The Ukrainian SSR does not have a distinct system of administrative justice. Some elements of such a system can be found in the procurator general's review powers over administrative agencies and the right to prosecute such agencies in court for infractions such as incorrect election lists or the refusal to register property ownership. Yet the concept of administrative justice was quite popular in the 1920s. Some jurists considered the right to grievance a protective device for civil rights and thought it necessary and expedient to preserve some elements of administrative justice in the new system. In 1922 the People's Commissariat of Justice of the Ukrainian SSR even drew up a project for a system of special administrative courts. The concept of administrative justice was, however, later denounced as bourgeois and unnecessary. The discussion on administrative justice was revived only in the 1960s. Jurists and administrators began to insist that better protection of citizens from 'manifestations of bureaucratism' requires not only improvements in the methods of procuratorial review, but also greater judicial control over the activities of administrative agencies. The discussion led to a consensus among the theoreticians of Soviet justice and administration that the courts should have broader powers of review over administrative agencies and that administrative-procedural law should be worked out in greater detail. Such changes would more effectively expose and punish administrative abuses and protect innocent citizens from administrative sanctions. In the discussion the term 'administrative justice' was replaced by 'judicial control.'

The participation of lawyers in the administrative process, which so far had been restricted to consultation and the preparation of appeals and grievances, was also to be broadened. Special attention was given to the strengthening of the administrative commissions of the local government agencies that operate under the 15 December 1961 decree of the Presidium of the Supreme Soviet of the Ukrainian SSR as amended on 26 March 1971.

These commissions investigate cases of petty administrative abuse, such as infractions of traffic laws, sanitary-hygienic laws, hunting laws, and water-conservation laws. The judgments handed down by the commissions (fines, loss of certain professional rights) can be appealed before the raion or city courts. The resolution of the Plenum of the Supreme Court of the Ukrainian SSR 'On Judicial Practice in Cases Arising from Administrative-Legal Relations,' adopted on 26 July 1974, has improved the procedures considerably.

The new constitution of the Ukrainian SSR of 20 April 1978, which in art 56 states that 'the citizens of the Ukrainian SSR have the right to lay charges against civil servants, state and civic agencies' and that 'functionaries can be taken to court for their actions,' has given a new impetus to the demands for broader judicial control over the administration.

Administrative territorial division. The beginnings of such a division can be found in the principalities of Kievan Rus': Kiev, Chernihiv, Pereiaslav, Turiv-Pynske, Volodymyr-Volynskiy, and Halych. These principalities were divided into *volosts, which were usually small principalities. One can speak about a definite administrative territorial division of Ukraine within the Polish-Lithuanian Commonwealth. It was divided into *voivodships (palatinates), which in turn were divided into *counties (*povity*) or lands (*zemli*). There were nine Ukrainian voivodships, of which eight belonged to Poland: Ruthenia (Lviv, Halych, Peremyshl, Sianik, and Kholm lands); Podlachia (Melnytsia, Bilske, and Dorohychyn lands); Belz (Buzke, Hrabovets, and Horodlo counties); Volhynia (Volodymyr, Lutske, and Kremianets counties); Bratslav (Bratslav and Vinnytsia counties); Podilia (Kamianets, Letychiv, and Chervonohorod counties); Kiev (Kiev, Ovruch, and Zhytomyr counties); and Chernihiv (formed in 1630). The Berestia voivodship (Berestia and Pynske counties) belonged to Lithuania.

In the Cossack state, the administrative territorial units were based on the military formations and were called *regiments (*polky*), which were subdivided into *companies (*sotni*). Right-Bank Ukraine was divided into the following regiments: Chyhyryn, Cherkasy, Korsun, Kaniv, Bila Tserkva, Uman, Bratslav, Vinnytsia (until 1653 called the Kalnyk regiment and in the 1660s joined with the Bratslav regiment), and Kiev. The regiments on the Left Bank were: Pereiaslav, Kropyvna (in 1658 incorporated into the Pereiaslav and Lubni regiments), Myrhorod, Poltava, Pryluka, Nizhen, and Chernihiv. When Right-Bank Ukraine was annexed by Poland, the Left-Bank Hetman state was divided into ten regiments: Starodub, Chernihiv, Kiev, Nizhen, Pryluka, Pereiaslav, Lubni, Hadiache, Myrhorod, and Poltava (see *Regimental system). *Zaporizhia was divided into eight districts, called *palankas. *Slobidska Ukraine, which belonged to Muscovy, was divided into five regiments: Okhtyrka, Kharkiv, Izium, Sumy, and Ostrohozke. The residence of the Muscovite voivode was Belgorod.

In 1765 the regiments of Slobidska Ukraine were abolished and replaced by the Slobidska Ukraine gubernia. In *Southern Ukraine the Azov gubernia (1708–83) and the *New Russia gubernia (1764–83) were established. After abolishing the Hetman state and the regimental system, Russia introduced the *vicegerencies (*namestnichestva*) at the beginning of the 1780s. There were five of them: Kiev, Chernihiv, Novhorod-Siverskyi, Kharkiv, and Katerynoslav. When lands on the Right Bank were annexed in 1793, the Bratslav, Podilia, and Vinnytsia vicegerencies were added. According to Paul I's edict of 1796 'On the New Division of the State into Gubernias,' the vicegerencies were replaced by *gubernias. The Right Bank consisted of the Kiev, Podilia, and Volhynia gubernias, (together forming the Kiev general-gubernia). The lands of the Hetman state were organized into the gubernia of Little Russia, which, in 1802, was divided into the Chernihiv and Poltava gubernias (together forming the general-gubernia of Little Russia until 1835). In 1802 the large gubernia of New Russia (1797–1802) was divided into three gubernias: Mykolaiv (renamed Kherson in 1803), Katerynoslav, and Tavriia (including the Crimea). After the annexation of *Bessarabia in 1812, the general-gubernia of New Russia and Bessarabia was established. It consisted of the Kherson, Katerynoslav, and Tavriia gubernias and the Bessarabia oblast, which in 1878 became a gubernia. In 1835 the Slobidska Ukraine gubernia was abolished. Most of it became part of the Kharkiv gubernia, but some of it, in the north, became part of the Voronezh and Kursk gubernias.

Thus, at the beginning of the 19th century, Ukraine was divided into nine gubernias: Volhynia, Podilia, Kiev, Chernihiv, Poltava, Kharkiv, Kherson, Katerynoslav, and Tavriia. Other Ukrainian lands formed parts of other gubernias: in the west, of the Lublin and Siedlce gubernias, which in 1912 were merged to form the Kholm gubernia; in the southwest, of the Bessarabian gubernia; in the north, of the Hrodna and Minsk gubernias; in the northeast and east, of the Kursk and Voronezh gubernias and the oblast of the Don Cossack Host. In Subcaucasia, predominantly Ukrainian and partly Ukrainian ethnic regions constituted almost the entirety of the Black Sea and the Stavropol gubernias and the Kuban and part of the Terek oblasts. In 1861 the volost (rural district) became the smallest administrative territorial unit in Russian-

TABLE 1
Area and population of Ukrainian ethnic territories in 1914

Province	Area in sq km	Population
IN THE RUSSIAN EMPIRE		
Bessarabia gubernia	11,990	788,000
Chernihiv gubernia	38,330	2,235,000
Don oblast*	20,860	1,197,000
Hrodna gubernia*	13,700	716,000
Katerynoslav gubernia	63,390	3,455,000
Kharkiv gubernia	54,490	3,417,000
Kherson gubernia	70,800	3,775,000
Kholm gubernia	10,460	842,000
Kiev gubernia	50,960	4,792,000
Kursk gubernia*	10,530	780,000
Kuban oblast*	53,160	1,764,000
Minsk gubernia*	19,950	470,000
Podilia gubernia	42,020	4,057,000
Poltava gubernia	45,890	3,792,000
Stravropol gubernia*	17,400	493,000
Tavriia gubernia*	35,060	1,224,000
Volhynia gubernia	71,740	4,189,000
Voronezh gubernia*	28,890	1,520,000
Subtotal	659,620	39,506,000
IN AUSTRIA-HUNGARY		
Bukovyna*	5,280	460,000
Galicia*	54,580	5,379,000
Transcarpathia	14,670	568,000
Subtotal	74,530	6,407,000
Total	734,150	45,913,000

*Only a part is considered.

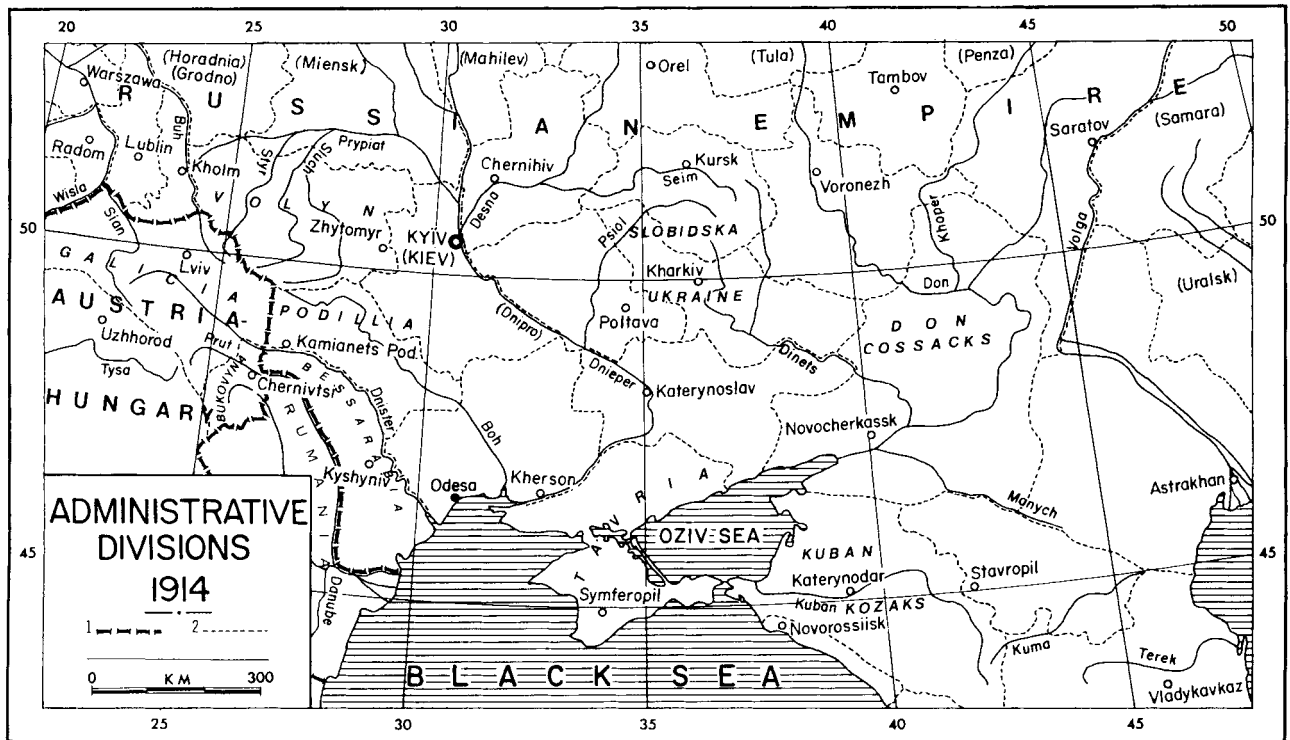

dominated Ukraine (in the Kholm region and Podlachia the smallest unit from 1815 was called a *gmina).

The Ukrainian lands belonging to Austria – Galicia and Bukovyna – were recognized as *crown lands and were divided into districts (*okruhy*) and later into counties (*povity*). Ukrainian lands belonging to Hungary were part of *komitats: Máramoros, Bereg (Berehove), Ugocsa, Ung (Uzhhorod), Zemplén, Sáros (Sariš), and Szepes (Spiš). These were subdivided into counties, which were further subdivided into communities (*hromadas).

Table 1 gives the 1914 area and population of each administrative division of the Ukrainian ethnic territories (omitting ethnically mixed areas) according to M. Korduba.

In the Ukrainian state of 1917–20 the old administrative division into gubernias and counties continued. The law passed by the Ukrainian Central Rada on 2 March 1918 provided for a new administrative division into 30 lands (*zemli*), but it was never put into effect. In the Western Ukrainian National Republic the old division into counties remained in force.

During the early Soviet period the old administrative division by gubernias was retained, but new gubernias were also formed: the Donets (capital: Bakhmut), Zaporizhia, and Kremenchuk gubernias. The northern part of Tavriia gubernia became parts of the Katerynoslav and Odessa gubernias (the former Kherson gubernia), and the southern part became the Crimean ASSR. In 1923 the counties and volosts (districts) were abolished, and

1. State borders 2. Gubernia boundaries

Soviet Ukraine was reorganized into 53 okruhas (regions), 706 raions (districts), and 9,307 rural soviets. In 1924 the Moldavian ASSR was created within the boundaries of the Ukrainian SSR. In 1925 the 9 gubernias were abolished, and the number of okruhas was reduced to 41, subdivided into 680 raions, 10,314 rural soviets, 70 city soviets, and 155 town soviets. The Tahanrih and Shakhty okruhas were transferred to the Russian SFSR. On 1 January 1929 the Ukrainian SSR consisted of the following okruhas: (1) in Polisia – Volhynia, Hlukhiv, Konotip, Korosten, and Chernihiv; (2) on the Right Bank – Berdychiv, Bila Tserkva, Vinnytsia, Uman, Kamianets-Podilskyi, Shepetivka, Kiev, Mohyliv-Podilskyi, Proskuriv, Shevchenko, Tulchyn; (3) on the Left Bank – Kremenchuk, Kupianka, Lubni, Nizhen, Izium, Poltava, Pryluka, Romen, Sumy, and Kharkiv; (4) in the south – Zinovivske, Mariupil, Melitopol, Mykolaiv, Odessa, Pervomaiske, Starobilske, and Kherson, and the Moldavian ASSR; (5) in the Dnieper Industrial Region – Dnipropetrovske, Zaporizhia, and Kryvyi Rih; (6) in the Donets Basin – Artemivske, Luhanske, and Staline. At the time there were 579 raions (the number changed often) in the Ukrainian SSR. Northern Caucasia was also divided into okruhas, of which the Armavir, Kuban, Maikop, Salske, Stavropol, Sunzha, Tahanrih, Terek, and Chornomore okruhas were in their entirety in Ukrainian ethnic territories, while only part of the Donets okruha, Adygei-Cherkess autonomous okruha, and Kabardino-Balkar autonomous okruha were. The Crimean ASSR had 10 small okruhas. In the Belorussian SSR parts of the Mozyr and Rechytsa okruhas were settled by Ukrainians. The Kursk and Voronezh regions were divided into okruhas only in 1928.

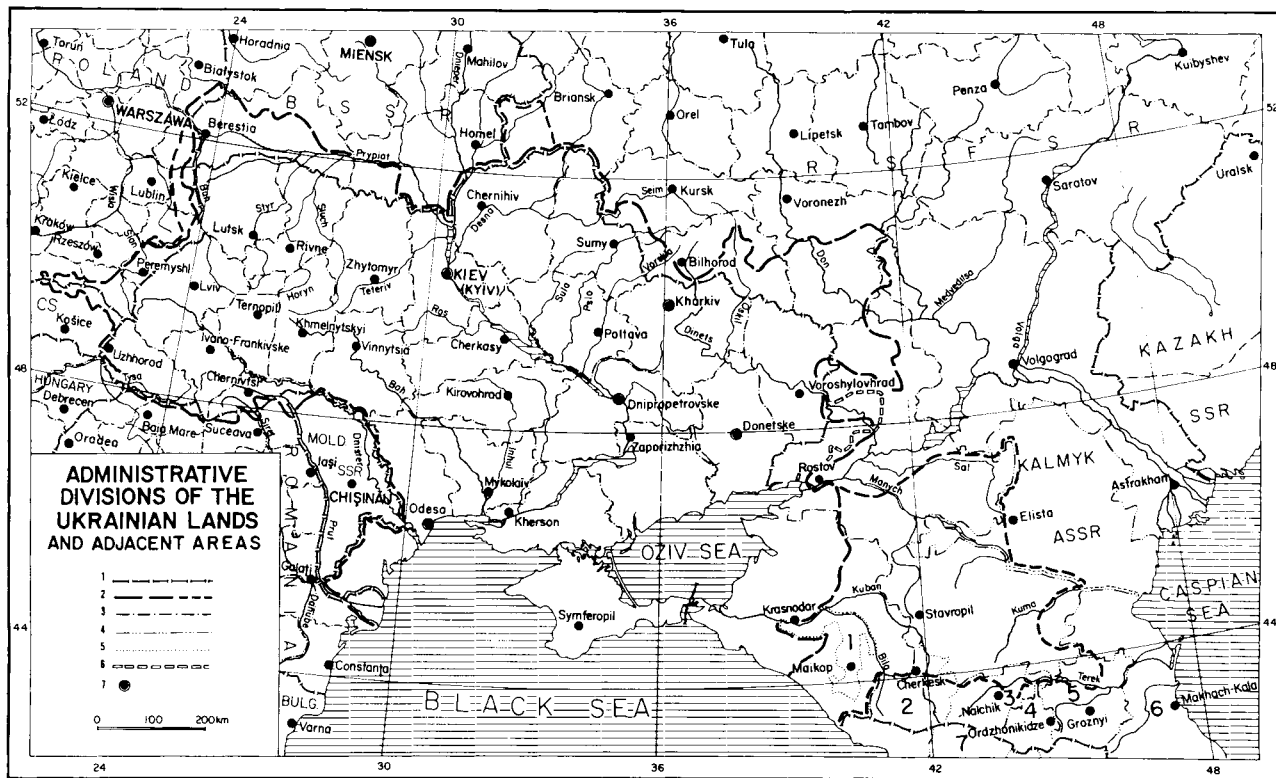

By the 1930 and 1932 decisions of the All-Ukrainian Central Executive Committee of the Ukrainian SSR, a new

division into *oblasts (provinces), raions, and rural soviets was introduced; this is still in effect. The Ukrainian SSR was first divided into five oblasts – Vinnytsia, Dnipropetrovske, Kiev, Odessa, and Kharkiv – and the Moldavian ASSR and into 358 raions. By 1938 the number of oblasts had increased to 13.

Western Ukraine, which was under Polish rule between the world wars, was divided into voivodeships, counties, and volosts. The territories under Rumania were divided into counties and communities (hromadas). Transcarpathia, which belonged to Czechoslovakia and embraced Subcarpathian Ruthenia and eastern Slovakia, was divided into counties and communities. Subcarpathian Ruthenia formed a semiautonomous unit (Subcarpatho-Ruthenian land).

The western Ukrainian territories that were incorporated into the Ukrainian SSR after the Second World War were organized into eight new oblasts. The Moldavian ASSR was separated from Ukraine in 1940 to form the Moldavian SSR. The last changes in the administrative territorial division of Ukrainian territories within the USSR occurred in the 1950s: in 1954 Izmail oblast was joined with Odessa oblast; in 1959 Drohobych oblast was joined with Lviv oblast; in 1954 Cherkasy oblast was formed, and Crimea oblast was incorporated into the Ukrainian SSR.

On Ukrainian ethnic territories outside the Ukrainian SSR, Belgorod oblast was formed between the Kursk and Voronezh oblasts in 1954. In the southern part of the Belorussian SSR, which is partly inhabited by Ukrainians, Homel oblast (1938) and Brest oblast (1939) were established. In 1982 the Ukrainian SSR had 25 oblasts, 479 raions, 8,579 rural soviets, 417 cities (139 of which were under republican or oblast jurisdiction), and 908

1. Boundaries of the Soviet republics and satellite countries
2. Limits of Ukrainian ethnic territories and of mixed ethnic territories
3. Boundaries of oblasts
4. Boundaries of autonomous republics
5. Boundaries of autonomous oblasts
6. Eastern boundary of the Ukrainian SSR up to 1925, now part of the RSFSR
7. Cities with a population of one million or more

towns (smt). Ukrainian ethnic territories also extend beyond the Ukrainian SSR into the Voronezh, Briansk, Kursk, and Rostov oblasts and the Krasnodar and Stavropol kraia of the Russian RSFSR. In 1981 the Ukrainian SSR was divided as indicated in table 2.

V. Kubijovyč

Admiralty settlements. Special colonies for state peasants established in the Russian Empire at the end of the 18th century. The inhabitants of the settlements were forced to work in farming and in enterprises of the naval department. In Ukraine such settlements existed near Mykolaiv and Kherson. In 1860 the admiralty settlements contained about 17,000 peasants, most of whom came from the central Russian gubernias. The colonies were also inhabited by voluntary settlers from Right-Bank Ukraine and escapes from serfdom.

Adrianova-Peretts, Varvara [Adrijanova-Peretc], b 12 May 1888 in Nizhen, d 6 June 1972 in Leningrad. Historian of Old Ukrainian and Old Russian literature, folklore, and theater; bibliographer; wife of V. *Peretts. She studied in the Kiev school of Higher Courses for Women in 1906–10 and taught there in 1911–14. From 1907 she was also active in V. Peretts's seminar in Russian philology and its research expeditions. After studying for her MA at Kiev University in 1912–14, Adrianova-Peretts moved to Petrograd to work in the manuscript division of the library of the Academy of Sciences and the public

Varvara Adrianova-Peretts

library. In 1917 she received the Lomonosov prize of the Academy of Sciences and became a professor of Russian literature at the Petrograd Pedagogical Institute. In 1917–21 she taught at the Samara Pedagogical Institute. In 1921–4 she was a member of the commission for the compilation of a bibliography on Old Rus' literature of the Russian Academy of Sciences; in 1921–7 she worked in the Institute for the Comparative Study of Western and Eastern Literatures at Leningrad University; and in 1921–30 she taught at the State Institute of Art History, as a full member and later as director of the folklore department.

In 1926 Adrianova-Peretts became a corresponding

TABLE 2
Area and population of the Ukrainian SSR, 1981

Oblast	Area in sq km	Population		% urban population	Population density per sq km
		Total	Urban

member of the Ukrainian Academy of Sciences. She was a senior research fellow of the Institute of Russian Literature of the Academy of Sciences of the USSR from 1934 to 1954, became a corresponding member of the academy in 1943, and in 1947–54 directed its sector of Old Rus' literature.

Adrianova-Peretts was the author and editor of numerous publications in her field of study and is recognized as a leading scholar in Old Ukrainian and Old Russian literary history, particularly of the Kievan Rus' period. Her major works on Ukrainian subjects are *Materialy dlia istorii tsen na knigi v Drevnei Rusi XVI–XVIII vv.* (Materials on the History of Prices for Old Rus' Books in the 16th to 18th Century, 1912), *Zhitie Alekseia Cheloveka Bozhiiia v drevnei russkoi literature i narodnoi slovesnosti* (The Life of Aleksei, a Man of God, in the Literature and Folklore of Old Rus', 1917), *Drevnerusskaia povest'* (The Narrative Tale of Ancient Rus', coauthor V. Pokrovskaia, 1940), *Slovo o polku Igoreve.* Bibliografiia izdaniia perevodov i issledovanii (The 'Tale of Ihor's Campaign': A Bibliography of Published Translations and Studies, 1940), and *Ocherki poeticheskogo stilia Drevnei Rusi* (Essays on the Poetic Style of Ancient Rus', 1947).

R. Senkus

Adventists. A religious community whose dogmas are similar to those of the *Baptists and which prophesies the Second Coming (*adventus*) of Christ. The sect was founded in the United States in the 1830s by William Miller. The largest Adventist body is that of the Seventh Day Adventists, whose observance of Saturday as the Sabbath

has gained them the name Sabbatarians (*subotnyky*). The doctrines of the Adventists reached Ukraine, and specifically Tavriia gubernia, by way of German colonists in the 1880s. During the Soviet period the Adventists established the Union of Seventh Day Adventists, which encompassed 300 groups and had its headquarters in Moscow. One hundred and fifteen Adventist groups, representing 9,000 members, were located in Ukraine, primarily in the Crimean, Donetske, and Chernihiv regions, and, after 1945, in Chernivtsi oblast. Some Adventist communities joined the All-Union Council of Evangelical Christian-Baptists; however most of them continued an illegal existence. The Adventists were persecuted during N. Khrushchev's anti-religion campaigns, and many of them (including M. Floreskul and O. Konoviuk) were imprisoned during the 1970s for giving their children religious instruction.

Adygei Autonomous oblast. Autonomous region within the borders of the Krasnodar krai with Maikop as its capital city. The oblast includes a part of the Kuban Lowland on the left bank of the Kuban and Laba rivers and a part of the northern Caucasian foothills. It covers an area of 7,600 sq km and had a population of 405,000 in 1980. The oblast is settled by Adygeians (21 percent), Russians, and Ukrainians.

Afanasev, Yurii [Afanas'ev, Jurij], b 1848 in Ufa, d 1925 in Belgrade. Historian and political figure of Russian descent. Afanasev completed his studies at the University of Odessa, where he was a lecturer in world history. He

later became director of the State Bank in Kiev. In 1918 he served as state controller in the Hetman government and as minister of external affairs (in November and December). He lived, as an émigré, in Yugoslavia.

Afanasiev, Vasyl [Afanas'jev, Vasył'], b 1 January 1922 in Kopichenskoe, Kustanai oblast, Kazakhstan. Art historian; graduate of the University of Leningrad in 1949; later on the staff of the Institute of Art History, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR. Afanasiev's works include *Stanovlennia sotsialistychnoho realizmu v ukrains'komu obrazotvorchomu mystetstvi* (The Development of Socialist Realism in Ukrainian Visual Art, 1967); *Rysy suchasnosti: Ukrains'ke obrazotvorche mystetstvo s'ohodni* (Outlines of the Present: Ukrainian Visual Art Today, 1973); monographs on the Ukrainian artists Yu. Bershadsky, V. Znoba, S. Hryhoriev, K. Kostandi, H. Ladyzhensky, M. Lysenko, and P. Nilus; a book about Odessa artists, *Maistry penzlia* (Masters of the Brush, 1960); and *Tovarystvo pivdenno-rosiis'kykh khudozhykiv* (Society of Southern Russian Artists, 1961).

Afanasiev, Viktor [Afanas'jev], b 2 January 1917 in Aktiubinsk, Kazakhstan. Organizer and director of puppet theaters. Afanasiev began his career in 1934 in the puppet theater of the Kharkiv Pioneer Palace. In 1937–40 he organized and worked as the artistic director of the Altai and Karaganda puppet theaters. From 1952 he has been the principal director of the Kharkiv Puppet Theater. Afanasiev has directed *Horbokonyk* (The Flying Horse), adapted from P. Yershov, in 1953; *Zaporozhets' za Dunaiem* (Zaporozhian Cossack beyond the Danube), by S. Hulak-Artemovskiy, in 1956; *Ukrains'kyi vertep* (Ukrainian Christmas Puppet Show) in 1976; and other shows.

Oleksander Afanasiev-Chuzhbynsky

Afanasiev-Chuzhbynsky, Oleksander [Afanas'jev-Čuzhbyns'kyj] (pseud of Oleksander S. Afanasiev), b 11 March 1816 in Iskivtsi, Poltava gubernia, d 18 September 1875 in St Petersburg. Romantic poet, ethnographer, and belletrist. Afanasiev-Chuzhbynsky graduated from the Nizhen Lyceum. His poems, written in Ukrainian, appeared in the almanacs *Lastovka* and *Molodyk* and in the journal *Osнова*. Some of his poems later became folk songs. A separate collection of poems entitled *Shcho bulo na sertsy* (What Lay on My Heart) appeared in 1885. In the 1850s Afanasiev-Chuzhbynsky visited Ukraine with an ethnographic expedition and subsequently described his journey in the book *Poezdka v Iuzhnuiu Rossiiu* (A Trip to Southern Russia, I–II, 1861). He published a great deal of Ukrainian ethnographic material in Russian journals.

Afanasiev-Chuzhbynsky's dictionary of the Ukrainian language (*Slovar' malorusskogo narechiia*) was published only in part (A–Z, 1855). His Russian prose dealt, to a great extent, with Ukrainian themes. In 1843–6 Afanasiev-Chuzhbynsky became acquainted with T. Shevchenko and published 'Vospominaniia o T.G. Shevchenko' (Reminiscences of T.H. Shevchenko) in *Russkoe slovo*, no. 5, 1861.

Agitation and propaganda (agitprop). An important method used by the Communist party to indoctrinate and control the population of the USSR. It was first used before the revolution by the Bolshevik party to influence the masses and to incite them to revolutionary action. V. Lenin proved to be an able organizer of agitation and propaganda. In a number of pamphlets and articles he expounded the theory and methodology of agitprop, drawing a distinction between agitation (a direct call to action, a simplified argument for the correctness of a position, an appeal to emotion, and even the use of demagoguery) and propaganda (popularization of the Party's goals, exposition of the theoretical foundations of Marxism and communism). In practice, however, the two forms are combined, and the Party relies on one or the other, as the situation demands. Besides oral persuasion and exhortation at meetings and debates, the Party always devoted much attention to the printed word – the press, pamphlets, and leaflets – and to posters, films, and slogans. Within the Party there are special agencies and institutions responsible for agitprop, and each member is bound by the Party constitution to perform such work. In 1924–30 there was a joint Department of Agitation and Propaganda (Department A) of the Central Committee of the All-Union Communist Party (Bolshevik). In 1930 it was split into the Department of Agitation and Mass Campaigns and the Department of Culture and Propaganda.

Before coming to power, the Russian Communist party carried on revolutionary propaganda in general; eventually it began to specialize in political, economic, cultural, and antireligious propaganda. The role of agitation in various political campaigns has been particularly emphasized; for example, in the campaign to democratize the army and the peace campaign before the October Revolution, the campaign for taking over the workers' soviets, the campaign against the Whites and 'bourgeois nationalism' in 1917–20, campaigns against various deviations in the Party, anticapitalist propaganda, then in the industrialization and farm-collectivization drives (agitation against the kulaks and middle peasants), and in election campaigns. Agitation sometimes takes the form of a 'nation-wide discussion,' in the official spirit, of government-imposed projects, Soviet foreign policy (antifascist or anticapitalist campaigns, disarmament propaganda), or a new constitution.

As early as the Civil War the Communist party had organized on the local level what were known as agitation points (*agitpunkty*), which continued to play a role in later years depending on the Party's needs. *Agitpunkty* were local centers of propaganda work that employed specially appointed agitators. Today propaganda work is conducted by special groups known as agitation collectives (*agitkolektyvy*), which consist of professional agitators and ad hoc appointees. Agitprop has used the theater and the other arts as auxiliary means. Small theatrical groups – the

agitbryhady – promote a production plan among workers and peasants and perform agitational skits before factory and collective-farm audiences.

Propaganda trains were popular in 1918–21, when collectives and brigades were sent out into certain areas with agitational literature, flags, slogans, and caricatures to organize meetings and mock trials of the counter-revolutionaries or the clergy. In 1920 the Lenin, Bilshovyk, and other agitation trains went through Ukraine. Short propaganda films, mostly on the victories of the Red Army, were also produced in this period. Several such films were produced in Ukraine: *Chervona zirka* (The Red Star, 1919), *Vse dlia frontu* (Everything for the Front, 1920), and *Serp i molot* (The Sickle and Hammer, 1921). Agitation theaters (*agitteatry*) also operated at the time.

Members of the Party and the Communist Youth League participated en masse in agitation and propaganda work, particularly in the struggle against religion and later in the collectivization drive. City-dwellers and workers were drawn in large numbers into agitation and propaganda work in the countryside during the anti-kulak campaign.

Special Party magazines were published for the mass agitator and propagandist. *Agitator* appeared two or three times monthly in Ukraine in 1925–32 (it was called *Agitatsiia i propaganda* in 1927–9). In 1932 it was replaced by two magazines – *Agitator dlia mista* (1932–4), for use among urban workers, and *Agitator dlia sela*, which in 1933–4 was called *Partrobota na seli*, for use in the village. During collectivization a special form of agitation arose: a network of village correspondents (*silkory*) to newspapers promoted “socialist competition” and the ‘shock work’ movement.

During the Nazi occupation agitprop was conducted by underground groups directed by the evacuated Central Committee of the CP[B]U. A special newspaper, *Za Radians'ku Ukrainu*, was published for the occupied territories. Radio propaganda was broadcast by the stations Radianska Ukraina and Partyzanka in Moscow and the Shevchenko radio station in Saratov. After the war the Soviet agitprop agencies organized a particularly vicious campaign in the annexed western-Ukrainian oblasts against the *Ukrainian Insurgent Army, the Ukrainian Catholic church, the émigrés, and propertied groups in the population. The main theme was ‘Ukrainian bourgeois nationalism’ and collaboration with the Nazi regime.

The agitprop journal *Pid praporom leninizmu*, a publication of the department for ideology of the CC CPU, has been appearing since 1969. It succeeded *Na dopomohu ahitoru* (1941–4) and *Bloknot ahitora* (1944–69). *Partiine zhyttia* was published in Kiev (1946–9) as a continuation of the journals *Partrobotnyk Ukrainy* (1933–41, 1945–6) and *Propahandyst i ahitor* (1944–6). The ideologically authoritative publication for agitation and propaganda work is the monthly of the CC CPU, **Komunist Ukrainy* (since 1952), which in 1924–52 was called **Bil'shovyk Ukrainy*. The biweekly *Agitator*, with a print-run of one million, has been published in Moscow since 1956 and provides general directives and instructions to the vast agitprop machine of the USSR. All Soviet newspapers, journals, and publishing houses have an agitprop function. Even scholarly journals such as *Ukrains'kyi istorychnyi zhurnal*, *Ekonomika Radians'koi Ukrainy*, and *Radians'ke pravo* contain a ‘to aid the propagandist’ section. A large number of

books and brochures published by the State Political Publishing House (Derzhpolitvydav), the Znannia society, and other publishers are propagandist in nature.

The Party apparat consists to a large extent of full-time propaganda workers. Agitprop has become a profession for thousands of individuals, most of whom have completed a Party education. The top propaganda cadres are trained at the higher Party schools of the CC CPU and the CC CPSU. The governing agencies of the CPSU examine periodically the state and tasks of agitprop, offer criticisms, and issue resolutions. After J. Stalin's death, and particularly with the introduction of a new Party program in 1961, ‘Communist upbringing’ has been emphasized. The main agitprop themes have been the formation of the material and technical basis for communism, the molding of the ‘Soviet man’ by the promotion of a ‘moral code of the builder of communism’ and the ‘socialist way of life,’ the strengthening of socialist internationalism, and the propagation of atheism. Because Soviet propaganda has permeated every area of life as an unchallenged state monopoly that utilizes state and public funds, it has alienated public opinion and has lost most of its effectiveness. Nevertheless, it continues to be used because it is one of the cornerstones of the Soviet totalitarian system.

Agitator (Agitator). Mass propaganda magazine, organ of the Central Committee of the Communist Party (Bolshevik) of Ukraine, the Kharkiv Okruha Party Committee, and the People's Commissariat of Education of the Ukrainian SSR. It was published in Kharkiv two or three times a month from 1925 to 1932. Until 1926 *Agitator* appeared in Russian. In October 1927 it merged with the magazine *Propagandyst* to become *Agitatsiia i propaganda*; in 1929 it reverted to the title *Agitator*. From March 1932 until 1934 it was published in two editions: *Agitator dlia mista* and *Agitator dlia sela*, which appeared under the title *Partrobota na seli* in 1933–4. The magazine was intended primarily for the use of party agitators in industry and agriculture.

Agrarian legislation. See Land law.

Agricultural education

Central and Eastern Ukraine. The horticultural courses at the *Nikita Botanical Gardens near Yalta, founded in 1823, and the beekeeping school established by P. *Prokopovych in 1828 on his estates in Mytchenky (Chernihiv region) may be considered the first agricultural schools in Ukraine. In 1844 a secondary school of agriculture and orchard culture was founded in Uman. Agricultural education began to develop rapidly at the end of the 19th century, but it remained backward, particularly for an agricultural country. In 1914 there were 15 higher agricultural schools in the Russian Empire, of which only four were in Ukraine: the Kharkiv Veterinary Institute, the Agronomy Department of the Kiev Polytechnical Institute, and the agriculture departments of Kiev Univer-

sity and Odessa University. An agricultural institute was established in Kharkiv only in 1915 – the Institute of Agriculture and Forestry, which was evacuated from Novo-Aleksandriia (now Pufawy) in Lublin gubernia during the First World War. There were five secondary agricultural schools, including the Uman school, opened in 1844; the Kharkiv school, established in 1890 in Derkachi (now Derhachi); and the Kherson school, founded in 1874. Each of these schools had a six-year program.

In the nine gubernias of Ukraine prior to 1917 there were 67 lower agricultural schools, which were either general or specialized (fruit growing, gardening, animal husbandry, viticulture, apiculture, etc). The general schools had programs of three years or more; the specialized schools had one- to three-year programs. Some lower and secondary agricultural schools owned large model farms where students acquired practical training. The agricultural schools were the responsibility of the Ministry of Agriculture.

Besides the schools, exhibitions (24 general and 52 special exhibitions in 1908), courses, and lectures provided some agricultural education. They were usually arranged by the zemstvos and agricultural societies (see *Agronomy, state and social).

During the period of Ukrainian independence several new agricultural schools were opened, and an agricultural department was established at the Kamianets-Podil'skyi Ukrainian State University.

In the Soviet period the entire educational system of Ukraine was reorganized according to the model proposed by H. *Hrynko. Several types of agricultural schools were established: institutes, which had four-year programs and graduated specialists with wider training; *tekhnikums, which had three-year programs and produced narrower specialists (agronomist-farmers, land-reclamation engineers, zootechnicians, etc); and agricultural vocational schools (*agroprofshkoly*), which in two years produced qualified agricultural workers. In 1928 the existing special schools were divided into narrower specialties and were made independent of the people's commissariats. These changes together with the political persecution of older, experienced teachers and the promotion of unqualified new teachers brought about a further decline in agricultural education. In the mid-1930s the agricultural educational system of Ukraine was integrated with the all-Union system. The number of schools was increased, and the quality of education was improved. According to some statistics, the number of agricultural institutes in Ukraine increased from 7 in 1928 to 20 in 1938, and the number of tekhnikums increased from 20 to 123.

After the Second World War the system of agricultural education in Ukraine was expanded and reorganized in accordance with a general restructuring on an all-Union scale. The accompanying table shows the development of higher and secondary agricultural education. Between 1960 and 1976 the number of graduates of higher agricultural schools increased from 6,100 to 11,100 and of secondary agricultural schools from 18,900 to 30,800. The number of specialists with a secondary diploma employed in agriculture increased from 105,600 in 1964 to 196,500 in 1973, and the number with a higher diploma, from 32,000 to 73,100.

The following higher agricultural schools existed in

Number of agricultural students in higher and secondary special education, 1960–77

Year	Number of schools	Number of students
HIGHER EDUCATION		
1960–1	18	45,600
1965–6	17	67,600
1970–1	17	65,600
1976–7	17	75,200
SECONDARY SPECIAL EDUCATION		
1960–1	148	123,800
1965–6	126	112,400
1970–1	126	110,400
1976–7	113	109,900

Ukraine in 1970: the *Ukrainian Agricultural Academy in Kiev; agricultural institutes in Bila Tserkva, Voroshyl'ovhrad, Dnipropetrovske, Zhytomyr, Kamianets-Podil'skyi, Symferopil, Lviv, Odessa, Poltava, Uman, Kharkiv, and Kherson; veterinary institutes in Lviv and Kharkiv; and institutes of agricultural mechanization and electrification in Kiev and Kharkiv. Almost half of their enrollment consists of night-school students and correspondence-school students. Their program takes four and one-half to five years to complete (six years for correspondence-school students). Higher agricultural schools also conduct some scientific research and publish their results. The Ukrainian Agricultural Academy and the Kharkiv Agricultural Institute have the right to grant doctoral degrees. Graduates of the higher agricultural schools receive the degrees of scientific agronomist, veterinary physician, engineer, etc.

Agricultural specialists of an intermediate level are trained at agricultural tekhnikums, state-farm tekhnikums, veterinary tekhnikums, irrigation-drainage tekhnikums, etc. Their program is designed for two to four years. Most of their students are night-school or correspondence students.

The system of *vocational-technical education prepares workers such as mechanizers, tractor-machine operators, electricians, farm-brigade leaders, gardeners, and veterinary assistants. In 1971, 58,000 people completed courses in lower agricultural schools in Ukraine. The system consists of one-year agricultural schools, agrotechnical courses at collective and state farms, and special brigades at general secondary schools. Specialists and workers-managers employed in agriculture improve their qualifications by enrolling at institutions of higher agricultural education.

Western Ukraine. Agricultural education was poorly developed in the part of Ukraine that was under Austro-Hungarian rule. The Farming Academy in Dubliany near Lviv was the sole higher school of agriculture, and the courses were conducted in Polish. In 1919 it became a department of the Lviv Polytechnic. The secondary agricultural school in Kitsman, Bukovyna, directed by Ye. Zhukovsky, was for a long time the only school of its type with courses in Ukrainian. Among the few lower agricultural schools were the school of horticulture at Zalishchyky, the schools organized by the Prosvita society in Myluvannia (Tovmach county) and in Uhertsy Vyniavskii (Rudky county), and the Maslosoiuz dairy school in Stryi.

These schools offered courses of several months' duration.

In the 1920s and 1930s the level of agricultural education in Ukraine under Poland was low. In 1939 there was 1 higher school, 2 lyceums, 1 secondary, and 27 lower agricultural schools. Among them were scarcely four schools that offered lectures in Ukrainian. One of these was the state agricultural lyceum in Chernytsia near Stryi, which opened in 1934. Agricultural education outside the school system was organized by the *Sil'skyi Hospodar society and developed rapidly.

In Bukovyna agricultural education declined under Rumanian rule and was completely Rumanianized. In Transcarpathia under Czechoslovakia, however, agricultural education, especially on the lower level and of short duration, developed satisfactorily.

Between the wars the *Ukrainian Husbandry Academy and the *Ukrainian Technical and Husbandry Institute in Poděbrady, Czechoslovakia, had agronomy and forestry departments. Their graduates worked for the most part in Western Ukraine.

Agricultural education developed rapidly in the Generalgouvernement. The Agronomy Institute in Dubliany had lectures in German, Ukrainian, and Polish. There were 10 secondary and 14 lower agricultural schools. After finishing elementary school, all peasant children were required to complete an agricultural course in one of 200 vocational schools.

Agricultural machine building. A branch of *machine building that specializes in agricultural machinery and equipment. Farm machines were first produced in Ukraine in the 1840s when D. Kandyba set up a farm-machine factory on his estates in Dmytrivka in Chernihiv gubernia in 1842. The industry expanded rapidly in the 1870s, so that from the end of the 19th century to 1914 it was the leading branch of the machine-building industry. This vigorous growth can be attributed to the strong demand for farm machinery resulting from a labor shortage in the farming regions of the steppe as well as to the availability of raw materials and fuel in the metallurgical centers. By 1912 there were 138 medium-sized and large farm-machine factories in Ukraine, producing about 40 percent of all the machines built in Ukraine and about 60 percent of all farm machines built in the Russian Empire. Their gross production was valued at 23.5 million rubles, and they employed about 17,000 workers. The main centers of farm-machine building were Odessa, Kharkiv, Yelysavethrad (now Kirovohrad), Bila Tserkva, Oleksandrivske (now Zaporizhia), and Berdianske. The factories were usually owned by foreign industrialists. The industry could not satisfy Ukraine's demand for farm machinery, however, and over 40 percent of farm machines had to be imported from abroad, mostly from Germany. After suffering a decline in 1917-21, the farm-machine building industry in Ukraine began to expand and returned to its

Farm machines produced in Ukraine

	1940	1965	1975	1979
Tractor plows	19.8 (51.6)	72.0 (43.5)	126.3 (61.6)	115.4 (54.2)
Tractor sowers	11.0 (51.5)	78.9 (30.2)	90.9 (50)	86.6 (41.9)
Row harvesters		26.3 (27)	75.3 (81.8)	74.4 (70.5)
Sugar-beet harvesters		11.0 (62.8)	17.1 (100)	10.6 (100)
Feed blenders		6.2 (34.6)	27.5 (74)	22.8 (81.4)
Automatic cattle feeders		1,354.9 (35.4)	710.1 (13)	313.5 (6.4)

prewar level by 1925. By 1937 the industry had grown by a factor of 3.4 compared to 1913 and accounted for 50 percent of the ussr's production of farm machines. This growth was largely the result of the mechanization of agriculture and the increasing demand for machinery from the collective and state farms; for example, compared to horses, tractors accounted for 3 percent of the draft power in 1927-8 and 82 percent by 1932. Because the growth rate of the farm-machine building industry has been slower than that of other branches of machine building, the proportion that farm machinery represents in the general machine-building industry has decreased.

Devastated in 1941-4, the farm-machine building industry returned to its prewar level of production by 1948 and grew rapidly from then on. Yet the industry's growth rate was lower in Ukraine than in other parts of the Soviet Union. In 1940-73 the production of farm machinery in Ukraine grew by a factor of 15, yet Ukraine's share in the total ussr production of farm machinery fell to 23 percent. However, the assortment of farm machines built in Ukraine increased; for example, in the second half of the 1960s 133 new types of machines were introduced. The main types of farm machines (in thousands of units) produced in Ukraine are given in the accompanying table (percentages of the ussr production are given in parentheses).

In 1973 the value of the farm machinery produced in Ukraine including spare parts was 1,020 million rubles at 1967 prices. Today the largest enterprises of the farm-machine building industry are located in Odessa (established in 1854), Kirovohrad (Chervona Zirka plant, 1874), Kharkiv (Serp i Molot plant, 1875), Lviv (Lvivsilmashyn plant, 1945), and Orikhiv (Orsilmashyn plant, 1929). Sugar-beet harvesters have been built in Kherson since 1909. The building of grain harvesters has been transferred from Dnipropetrovske to Rostov-na-Donu.

Agricultural organizations. The aim of agricultural organizations is to develop and improve agriculture in its various aspects, to organize agricultural labor, to publish professional books and journals, to develop agricultural education, and to help members in the rationalization of agriculture. Agricultural organizations have existed in Europe since the second half of the 18th century. The Imperial Free Economic Society, founded in 1765 in St Petersburg, can be considered the first agricultural organization in the Russian Empire. Its activities, like the

activities of the Imperial Moscow Agricultural Society, founded in 1819, embraced central and eastern Ukraine.

The Philotechnical Society of Kharkiv (1811–18), founded by V. *Karazyn, may be considered to have been the first agricultural organization in Ukraine. It emphasized the need to introduce new agricultural methods in Ukraine. The first purely agricultural organization in Ukraine was the *Society of Agriculture of Southern Russia, founded in Odessa in 1828. A similar society was established in Poltava in 1855. Societies of agriculture and of manufacturers of farm machinery were established in Kharkiv, Kiev, the Kuban, Katerynoslav, Chernihiv, etc. The activities of some agricultural societies encompassed whole gubernias, while the activities of others were only countywide. In the mid-1890s there were close to 20 agricultural organizations (including branches) in Ukraine. Although the agricultural societies were primarily organizations of the gentry, they made an important contribution to the development of agriculture.

When the authority to approve the establishment of agricultural organizations was transferred from the minister of agriculture to the provincial governors in 1898, the number of such organizations increased. It increased even further after the revolution of 1905 and the *Stolypin agrarian reforms. In 1900 there were approximately 100 agricultural organizations in Ukraine. By 1905 the number had increased to 513, and by 1915 to 1,020 (4,700 for the Russian Empire). Most of the societies were local in character and almost all of them were co-operative. They were established usually on the initiative of active Ukrainian members of co-operatives or zemstvos. In contrast to the agricultural organizations with a wider scope, the local societies served primarily the needs of the peasantry. Agricultural organizations that were not co-operative declined during the First World War and were eventually abolished by the Soviet government. Agricultural co-operatives grew rapidly in 1917–19 and during the NEP period (after declining under war communism).

Western Ukraine. The oldest agricultural organization in Galicia was the Galician Agricultural Society, founded in 1829 in Lviv. It was to serve the needs of both Ukrainian and Polish peasants, but in reality it came under the control of Polish landlords. For a brief period the *Halytsko-Ruska Matytsia fulfilled some functions of an agricultural organization. The *Prosvita society of Lviv fulfilled such functions for a much longer time (until 1909). The Agricultural-Industrial Society of Stanyslaviv, whose aim was to raise the peasants' standard of living, was founded in 1882 and existed briefly. The exclusively agricultural society *Sil'skyi Hospodar was established at the beginning of this century. In the mid-1920s it became a leading organization representing the Ukrainian peasantry. Ukrainian co-operatives (especially *Maslosoiuz) continued to work in the area of agriculture. The *Patrons of Agricultural Associations existed in Galicia until 1921.

In Bukovyna the cultural and educational society *Ruska Besida and the co-operative association *Selianska Kasa served some of the purposes of an agricultural organization. In Transcarpathia the Prosvita society played a similar role.

V. Kubijovyč

Agricultural periodicals

Central and eastern Ukraine until 1920. Before 1919 central and eastern Ukrainians subscribed mostly to journals published by Russian agricultural societies, primarily in St Petersburg. The first agricultural journal published in Ukraine was *Zapiski Imperatorskogo obshchestva sel'skogo khoziaistva Iuzhnoi Rossii* (1832–1915), a monthly that appeared in Odessa. Various agricultural societies and associations of the farm industry published their own periodicals: the Kiev society published its *Trudy* (1882–4) and then the weekly *Zemledelie* (1884–1904); the Kharkiv society published the biweekly **Khliborob* (1907–18) for the peasants. Agricultural periodicals in Ukrainian appeared only at the beginning of the 1910s, and their number was very small: the biweekly **Rillia* (1911–14 and 1917–18); *Ukrains'ke bdzhil'nytstvo* (1906–10); and *Ukrains'ke pasichnytstvo* (1917–18). The last two were edited by Ye. *Arkhypenko, and all three were published in Kiev.

Agricultural matters received much attention in the general periodical press in Ukraine, particularly in the various *Gubernskie vedomosti*. When the ban on Ukrainian publications was lifted in 1905, almost all Ukrainian periodicals devoted much space to agricultural questions, especially periodicals intended for the peasants, such as **Svitova zirnytsia* (1906), **Selo* (1909–11), the biweekly *Nasha kooperatsiia* (1913–14), and **Slovo* (1907–9). From 1917 to 1920 co-operative periodicals, particularly **Sil'skyi hospodar* (1918–19), published extensively on agricultural matters.

Ukrainian SSR 1920–41. The number of agricultural periodicals increased rapidly between 1920 and 1930, especially from 1922. From 1921 to 1940 about 360 such periodicals appeared in Ukraine; about 90 of them were journals. In 1920 there were no more than 9 periodicals and no journals. In 1925, 44 periodicals came out, and 12 of them were journals; in 1930, 74 periodicals (25 journals); in 1935, 25 periodicals (8 journals); in 1940, 33 periodicals (6 journals). The largest increase in agricultural periodicals occurred in the period of the New Economic Policy. Their number declined during collectivization and increased slightly at the end of the 1930s. From 1923 to 1932 agricultural periodicals were numerous but short-lived. They came out infrequently, in small printings, and changed titles often. With few exceptions these periodicals were in Ukrainian. Many of them were bulletins, reports, and newsletters. The publications of agricultural institutes, tekhnikum, scientific research institutes, and research stations had a scientific and practical significance. Their average duration of publication was 2.3 years, and their average frequency was 3.1 issues per year. The publications of (or financed by) the People's Commissariat of Agricultural Affairs, of its scientific research stations, and of the *Agricultural Scientific Committee of Ukraine received better support. The most important and long-lived among them (omitting journals) were *Materiialy doslidzhennia gruntiv Ukrainy* (13 vols, 1917–31), *Pratsi Polis'koï sil's'ko-hospodars'koï doslidnoi stantsii* (61 issues, 1928–36), *Trudy Ukrains'koho naukovo-doslidnoho instytutu zernovoho hospodarstva* (1935), *Trudy Ukrains'koho naukovo-doslidnoho instytutu sadivnytstva* (30 issues, 1931–41), and *Trudy Naukovoho instytutu svynovodstva* (30 issues, 1930–40). The transactions of the agricultural research stations of Poltava (73 issues, 1920–

30), Sumy (30 issues, 1920–31), and Myronivka (1924–31) were printed in Russian.

Journals, which were mostly monthlies, varied in character: some were scientific, some practical, some popular. Many of them were specialized. The more important scientific journals were *Agronom* (20 issues, 1923–6), published by the Agricultural Scientific Committee of Ukraine; the monthly *Visnyk sil's'ko-hospodars'koi nauky* (1922–9); *Agrotehnika* (1922–32); and *Biuletyn' Kharkivs'koi kraiovoi sil's'ko-hospodars'koi stantsii* (1925–9). Among professional scientific monthlies the following should be mentioned: *Ukrains'kyi agronom* and *Ukrains'kyi zemlevporiadnyk*, both published in Kharkiv in 1925–9 and replaced by *Spetsialist sil's'koho hospodarstva Ukrainy* (1930–2). Among the popular journals devoted to the mechanization of agriculture were *Mashyna na seli* (Kharkiv 1930–4) and *Za mekhanizatsiu sil's'koho hospodarstva* (Kiev 1935–7). Popular agricultural journals of a general nature included the biweekly *Poltavs'kyi selianyn* (Poltava 1925–9) and the monthly *Zernove hospodarstvo* (Kiev 1936–40). The cultivation of industrial crops was discussed in the popular monthlies: *Kolektyvni lany buriakostiannia* (Kharkiv 1930–4, with title changes), *Buriakivnytstvo* (Kiev 1936–8), *Za radians'ku bavovnu* (Kherson 1931–3), *Za tekhnichnu kulturu* (Kharkiv 1931–3), and *Tekhnichni kultury* (Kiev 1938–40). Two scientific practical journals were devoted to fruit-growing and gardening: *Visnyk sadivnytstva, vynohradnytstva ta horodnytstva* (1925–30, with title changes) and *Sad ta horod* (Kiev 1937–49). Monthlies dealing with animal husbandry were *Sotsialistychne tvarynnytstvo* (Kharkiv, Kiev 1931–49, with title changes and interruptions), *Ptakhivnytstvo Ukrainy* (1930–4); and *Kolhospne bzhil'nytstvo* (Kharkiv 1925–41, with title changes). *Ukrains'kyi myslyvets' i rybalka* (Kharkiv 1925–32) was devoted to hunting and fishing.

Western Ukraine until 1944. Before Ukrainian agricultural periodicals appeared in Galicia, German and Polish agricultural periodicals were widely read. Agricultural problems were constantly discussed in general Ukrainian periodicals such as **Pys'mo z Prosvity* and the co-operative press, especially **Economist*. The biweekly **Hospodar* (1869–72) and **Hospodar i promyshlennyk* (1879–87), which became **Hospodar* (1898–1913), were the first professional agricultural periodicals. The most widely read agricultural journal in the 1910s was the biweekly *Hospodars'ka chasopys'* (1910–18), published by the Silskyi Hospodar society. The central office of farmers' clubs published *Providnyk ril'nychykh kruzhkyv* (Lviv 1886–1914) three times a month. The **Patrons of Agricultural Associations* published monthly the bilingual (Polish and Ukrainian) *Chasopys dlia spilok ril'nychykh* (1904–14) and a separate Ukrainian edition (1915–21). In Bukovyna agricultural information was published in *Vistnyk Soiuzu ruskykh khliborobs'kykh spilok na Bukovyni*, *Selians'ka kasa* (1903–8), *Narodne bohatstvo* (1908–11), and particularly *Dobri rady* (1889–1914).

After 1918 no periodicals devoted solely to agriculture appeared in Galicia until the **Silskyi Hospodar* society began to flourish and revived its biweekly **Sil's'kyi hospodar* (1926–44). This association also published more specialized monthly journals: **Ukrains'kyi pasichnyk* (1928–39 and 1941–4) and *Praktychne sadivnytstvo* (1933–8), both edited by M. **Borovsky*; **Khliborobs'ka molod'* (1934–9); and *Sad i horod* (1939). **Ukrains'kyi agronomichnyi visnyk*

Agricultural periodicals of the Ukrainian SSR

No. of publications	52 (315)	6 (79)
No. of issues per year	231 (2,065)	66 (872)
No. of copies per year	2,275,000 (48,258,000)	222,000 (2,664,000)
Average no. of copies per issue	9,800 (23,400)	33,600 (30,100)

(1934–8) was a scientific quarterly. From 1923 to 1932, besides the journals of the Silskyi Hospodar society, **Sil's'kyi svit* was published in Lviv, Peremyshl, and Lutske. Transcarpathia had the monthly *Hospodar* (1923–5), edited by M. **Tvorydlo*, and *Podkarpats'ke pcholiarstvo* (1923–6).

Ukrainian SSR after the Second World War. There is a paucity of agricultural periodicals in the Ukrainian SSR, as is evident from the accompanying table for 1973 (figures in parentheses represent the RSFSR). The agricultural journals are monthlies published in Kiev; all are in Ukrainian. Among them is one scientific journal, *Visnyk sil's'ko-hospodars'koi nauky*, published since 1962 by the Ministry of Agriculture of the Ukrainian SSR and previously by the Ukrainian Academy of Agricultural Sciences. It has a printing of 5,100 (1973). The popular **Khliborob Ukrainy*, which has a printing of 55,800, contains little agricultural information and mostly propaganda. The main specialized journals are: *Tvarynnytstvo Ukrainy*, with a printing of 62,400; *Mekhanizatsiia sil's'koho hospodarstva*, which has been published since 1950 by the Council of Ministers of the Ukrainian SSR with a printing of 27,800 (cf the Moscow journal *Sel'skii mekhanizator*, which has a printing of over 700,000); and **Sil's'ke budivnytstvo*, with a printing of 27,800. Most of the other periodicals (serialized works, thematic collections, and bulletins) are published by agricultural institutes and scientific research institutes and do not appear frequently (3.7 times per year on the average). Their average printing is 1,244.

Although the number of agricultural periodicals and their print runs have increased (in 1950 there were 24 periodicals with an annual print run of 700,000), they do not meet the needs of Ukrainian farmers. This can best be demonstrated by the above statistics and the following comparison: in Ukraine there is one agricultural periodical for every 137,000 individuals employed in agriculture (and one journal for every 1.2 million employees in general), while in the RSFSR there is one periodical for every 39,000 agricultural employees (and one journal for every 155,000 general employees). Thus, in Ukraine each person employed in agriculture would receive 0.24 copies of an agricultural periodical, while in the RSFSR each employee would receive 0.52 copies. Ukraine is a more agricultural country than Russia, yet its farmers are obliged to use Russian agricultural periodicals, the more so since the latter are more attractive, better illustrated, and more readily available.

A. Kachor, V. Kubijovyč, S. Yaniv

Agricultural procurement. Compulsory, regulated deliveries of agricultural products and raw materials to state agencies for centralized distribution and redistribution among the population, industry, and other sectors, and for export. Deliveries of farm products are the state's means for expropriating without compensation a portion of the production of *collective and *state farms. In the Soviet economy the deliveries form one of the main sources of capital formation, not only in agriculture, but also in industry and government (see *National income). The quotas to be delivered and the prices paid for them by the state are determined by state planning. Any surplus that remains after the state and collective farms have met their delivery quotas is purchased by co-operative organizations, commercial enterprises, municipalities, and manufacturing concerns.

After the revolution farm products were procured by what was known as the *surplus appropriation system (*prodrozkladka*) (see *War communism). According to the government decree of 12 February 1919, the peasants were allowed to keep the seed and 14.5 poods (237.5 kg) of grain per person per year, while the rest of the harvest was requisitioned without compensation by the state. Because of peasant resistance to this policy in Ukraine and numerous peasant uprisings, the surplus appropriation system was replaced by the *tax in kind (*prodpodatok*) in 1921 (see *New Economic Policy). According to the new system only a part of the farm production was subject to compulsory delivery to the state. In 1924–7 the state purchased farm products largely on the open market, but in 1927 the advance contract system, under which peasants contracted to deliver certain amounts of farm products to the state in exchange for manufactured goods, was introduced.

With the introduction of *collectivization in 1929–32, compulsory grain deliveries, which had the force of taxation, were instituted and were implemented according to the strict quotas set in Moscow for all the republics, including Ukraine. At the same time the government introduced payment in kind – 20 percent of the harvest – for work performed by the *machine-tractor stations. The quotas for these compulsory grain deliveries were very high: in 1931 the state took 7 million t (38.5 percent) of the 18.2 million t harvested, and in 1933 it planned to take 6.6 million (50 percent) of the 13.2 t harvested. As a result of these high exactions *famine broke out. Consequently a new law on compulsory deliveries of farm products was issued on 19 January 1933, which set forth somewhat more reasonable delivery quotas – 3.1 centners per ha of land planned for cultivation for collective farms that were not served by machine-tractor stations and 2.5 centners per ha for collective farms that did use the stations. In 1935 the quotas were lowered to 2.4 and 2.3 centners per ha respectively, and in 1936 to 2.4 and 2.0 centners per ha. On 1 April 1940 the delivery quotas in Ukraine began to be calculated on the area of actually tilled or cultivated land. Deliveries of industrial crops and certain other farm products were conducted under the advance contract system. The grain delivery quotas differed in each raion, ranging from 20 to 210 kg per ha. For the 510 raions in Ukraine the average quota was 137 kg per ha. With certain modifications these quotas remained in force until 1955.

On 9 March 1955 the law 'On Changing the Agricultural Planning Procedure' was introduced. By the end of 1958

procurement prices for farm products were increased sharply, private subsistence plots farmed by individual households were freed from compulsory deliveries, and payments in kind for the services of machine-tractor stations were abolished. In 1961 the advance contract system was reintroduced. At first two- to three-year contracts were signed between procurement organizations and collective and state farms, and then, beginning in 1965, one-year contracts. Since 1965 the prices on deliveries have been raised several times to provide greater material incentives for the farmers and to deal with recurring agricultural crises and crop failures.

Not only grain but all farm products have been subject to compulsory deliveries. In 1940–57, for example, collective farms had to deliver 4.5 kg of meat per ha per year. In 1976–8, 2,260,000 t of meat were delivered to the state. In 1933–40 the milk delivery quotas were 470 L per collective-farm cow and 110 L per private cow. In 1966–70 the average annual delivery of milk to the state was 9,881,000 t; in 1976–8 it was 13,837,000 t.

The statistical data in the accompanying table are based on official information from the annual *Narodne hospodarstvo Ukrain's'koï RSR* (The National Economy of the Ukrainian SSR), and do not always reflect the full extent of the expropriation of Ukraine's farm production by the Soviet state. According to the estimates of some Ukrainian economists, particularly K. Kononenko, Ukraine's grain deliveries exceeded by 50 percent the deliveries of other parts of the USSR and especially of the Russian SFSR before the Second World War. In 1933–8 Ukraine delivered to the state 353.7 million centners of grain (deliveries, purchases, payments in kind to machine-tractor stations) out of a harvest of 778.6 million t (ie, 45.4 percent of its harvest), while the rest of the USSR delivered only 1,184,000,000 centners out of a total harvest (actual, not biological) of 3.791 billion centners (ie, only 32.1 percent). Moreover, this took place when Ukraine had a lower hectare/peasant ratio and productivity than did the rest of the USSR.

It should be pointed out that the state paid very low, monopoly prices, unrelated to the real value of the products, for deliveries and then resold the products to consumers at much higher prices (see *Prices). Thus, both the farmers and the consumers were exploited. The excessive profits of this legalized speculation, which sometimes reached 1,000 percent, were turned over to the state treasury in the form of the turnover tax (see *Taxation) and were used for industrialization, armaments, and maintaining the government bureaucracy. Until 1958 surplus farm products (after obligatory quotas had been met) were sold to the state at so-called above-quota incentive prices, which were much higher than the obligatory delivery prices. In 1939, for example, the obligatory delivery and above-quota prices per kilogram were 0.06 and 1.00 rubles for rye (ie, the above-quota price was 16.7 times higher), 0.10 and 1.20 rubles for wheat, 2.50 and 28.00 rubles for butter, and 0.15 and 2.10 rubles for milk. The difference between the two prices was considerably reduced after the war. In 1955–7, for example, the two prices per centner were 25 and 120 rubles for wheat, 55 and 135 rubles for milk, 905 and 1,450 rubles for butter, and 20 and 45 rubles for eggs (per 100). State farms delivered their products at the state-farm procurement prices (*zdavalni tsiny*), which were also considerably lower than the above-quota incentive prices.

Production and state purchases of basic farm products in Soviet Ukraine* (in thousands of tonnes and percentages)

Year	Grains			Wheat as part of grains			Sugar beets		
	Total harvest	Purchased by state	% purchased	Total harvest	Purchased by state	%	Total harvest	Purchased by state	%
1940	26,420	9,368	35.5	8,407	3,831	45.6	13,052	12,669	97.1
1946-50	16,908	7,728	45.7	5,408	3,028	56.0	8,776	8,261	94.1
1951-5	23,328	9,148	39.2	11,161	5,632	50.5	16,884	16,705	98.9

1976-80	43,190	14,030	32.5	21,967	8,994	40.9	53,563	45,828	85.6

*For period 1946-80 figures denote average for each 5-year period.

In 1958 the delivery and above-quota prices were replaced by uniform prices (*yedyni tsiny*), which were much higher than the general level of above-quota prices and especially obligatory delivery prices. In 1978 the government decided to establish a uniform, centralized delivery plan, beginning with the 11th Five-Year Plan in 1981. The compulsory deliveries of farm products have a detrimental effect on the development of agriculture. In spite of the various reforms, including the 1978 reform, the state continues to make very high and economically unjustified profits from reselling farm products. These profits are in fact a peculiar kind of rent that the collective and state farms must pay to the state for using the land.

Agricultural sciences. See Agronomy.

Agricultural Scientific Committee of Ukraine (Sil'sko-hospodarskyi naukovyi komitet Ukrainy). The committee was the center of scientific agricultural studies in Ukraine in the 1920s. It was formed in 1918 in Kiev out of the agricultural section of the Ministry of Agriculture of the Ukrainian National Republic and assumed prominence in 1922 when it became a key institution in the framework of the People's Commissariat of Agricultural Affairs of the Ukrainian SSR. The committee initiated and co-ordinated research in various branches of the agricultural sciences and supervised practical and educational work in agronomy. When the central office of the committee was moved to Kharkiv, some of its work (particularly publishing) continued to be done in Kiev. The committee was responsible to the presidium, whose first chairman was S. *Veselovsky and whose scientific secretary was O.*Yanata, and to the scientific council. Its work was divided among special committees and among sections such as those on farming, soil study, botany, animal husbandry, amelioration, meteorology, agricultural economics, and environmental protection. The committee

headed a network of branches in Kiev, Vinnytsia, Poltava, etc. It set up a chain of agronomic research stations, observation stations for migratory birds, etc. New scientific institutions such as the Ukrainian Institute of Applied Botany, the Ukrainian Institute for the Protection of Plants, and the Ukrainian Institute of Animal Husbandry were established with the committee's support. Some institutes of the All-Ukrainian Academy of Sciences and some individual scientists were supported by the committee in their theoretical research in agriculture. Outstanding contributions were made by the section on soil study, directed by H. *Makhiv, which published the first comprehensive map of the soils of Ukraine and ten volumes of *Materiialy doslidzhennia gruntiv Ukraïny* (Research Materials on the Soils of Ukraine), and by the botanical section, directed by O. Yanata, which issued *Botanichno-heohrafichne raionuvannia Ukraïny* (Botanical-Geographic Regionalization of Ukraine) in 1925 and began to publish **Flora URSR*. The committee published a series of journals: *Biuletën' Sil's'ko-hospodars'koho naukovoï komitetu Ukraïny* (Kiev 1921), *Visnyk sil's'ko-hospodars'koï nauky* (monthly, 1922-4 and 1927-9), *Trudy sil's'ko-hospodars'koï botaniky* (2 vols and 6 issues, 1926-9), *Agronom* (journal of the Kiev branch, 1923-6), *Visnyk pasichnytstva* (monthly, Kiev 1926-7), *Biuletën' borot'by z shkidnykamy sil's'ko-hospodars'kykh roslyn* (Kiev 1923-4), and others. The committee co-ordinated the research of almost all scientists in agriculture and related fields in Ukraine. Among them were, in addition to those already mentioned, agronomists Oleksander and Oleksii Fylypovsky; soil-scientists V. Krokos and O. Sokolovsky; geologists V. Riznychenko, P. Tutkovsky, and F. Polonsky; botanist Ye. Votchal; entomologist I. Shchoholiv; zoologist M. Sharleman; meteorologists and climatologists M. Danylevsky, A. Ohiiivsky, and B. Sreznevsky; and hydrologist Ye. Oppokiv (director of the amelioration section).

In 1928 the committee was abolished as an allegedly nationalistic institution. Some of its institutes and researchers, many of whom were eventually politically persecuted, were transferred to the *All-Ukrainian Academy of Agricultural Sciences, founded in 1926. Since then, the Agricultural Scientific Committee of Ukraine has never been mentioned in Soviet publications.

V. Kubijovyč

Agricultural scientific research institutions. Experimental fields began to appear in Ukraine in the 1880s. The first permanent experimental field was established in

1884 in Poltava. It was followed by the Kharkiv and Derebchyn fields in 1888. Eventually research stations were established: the Plotianska station on Prince N. Trubetskoi's estates in Podilia (1893), the Ivanivka station on Kharytonenko's estates in the Kharkiv region (1897), and the Poltava station (1910). Stations were also established at Kherson, Odessa, Kharkiv, Sumy, Nosivka, Uman, Smila, Myronivka, Nemerche, and elsewhere. Networks of experimental fields were organized for the investigation of the agronomic problems of larger agricultural areas. The best-known network belonged to the All-Russian Society of Sugar Producers, which consisted of 32 fields, 24 of them in Ukraine. With its center in Kiev, it functioned from 1900 to 1918 under the directorship of S. Frankfurt, O. Dushechkin, and others. Networks of experimental fields were established by gubernia agricultural societies: the societies of Kiev, Kharkiv, Podilia, Kherson, etc. Later the department of agriculture in St. Petersburg organized well-funded research stations in Kiev, Kharkiv, and Katerynoslav. (In the rest of the Russian Empire there were only two more stations.) Each of these stations covered a large region with its network of experimental fields. Furthermore, there was a large number of selection stations of a general or specialized nature (see *Selection). Some research was done at advanced schools and a few secondary schools (see *Agricultural education). Altogether in nine Ukrainian gubernias there were over 100 scientific research institutions, among them almost 20 research stations and over 40 experimental fields (approximately 50 percent of all fields in the Russian Empire).

After the revolution the activities of the scientific agricultural research institutions were revived and expanded. The work of research stations was co-ordinated through a single plan, and the number of stations was increased. A series of special institutes was created: for the study of sugar beets in Kiev, of new legume cultures in Hlukhiv, of grain cultures in Dnipropetrovske, etc. The work of the various agricultural research institutions was co-ordinated and stimulated by the *Agricultural Scientific Committee of Ukraine, and, after its abolition, by the *All-Ukrainian Academy of Agricultural Sciences. During the collectivization period, when Ukrainian scientists were persecuted, agricultural research declined, and the All-Ukrainian Academy of Agricultural Sciences was abolished. Some of its functions were taken over by the All-Union Academy of Agricultural Sciences.

The agricultural scientific research institutions declined again in 1941-5. At present complex research in agricultural production is carried on in most oblasts of the Ukrainian SSR by 20 oblast research stations. Theoretical questions and agronomical problems that are beyond the oblasts in scope fall under the jurisdiction of scientific research institutes: Land Tillage and Animal Husbandry of the Western Regions of the Ukrainian SSR, located in Lviv; Animal Husbandry of the Forest-Steppe and Polisia of the Ukrainian SSR, in Kharkiv; the Steppe Regions of the Ukrainian SSR, in Askaniia Nova. Some scientific research institutes are of Union scope and are responsible to Union agencies: the Institute of Winemaking and Viticulture in Yalta, of Essential-Oil Cultures in Symferopil, of Irrigation Farming in Kherson, of Corn in Dnipropetrovske, of Bast Fiber Cultures in Hlukhiv, of Selection and Genetics in Odessa, and of Sugar Beets in Kiev. Republican scientific research institutes include the Institute of Viticulture and

Agricultural institutions and scientists

	1967		1975	
	No. of institutions	No. of scientists	No. of institutions	No. of scientists
Ministry of Agriculture, Ukrainian SSR	80	3,211	28	1,285
Other ministries and agencies of the Ukrainian SSR	31	779	28	1,152
Ministry of Agriculture, USSR	31	3,818	28	5,295
All-Union Academy of Agricultural Sciences	17	539	67	3,371

Winemaking in Odessa, the Institute of Soil Research in Kharkiv, the Institute for the Protection of Plants, the Institute of the Economics and Organization of Agriculture, and the Institute for the Mechanization and Electrification of Agriculture in Kiev, the Institute of Vegetable and Melon Growing in Kharkiv, the Institute of Orchard- ing in Kiev, and the Institute of Hog Raising in Poltava. Scientific research institutes usually have their own research networks. In 1975 there were altogether 151 agricultural scientific research institutions in the Ukrainian SSR. Eleven of these had 11,100 scientists. The accompanying table demonstrates the growth of agricultural institutions and their increasing subordination to Union institutions.

The *Ukrainian Academy of Agricultural Sciences, which directed the work of most of the agricultural scientific research institutions in Ukraine, existed only from 1956 to 1962.

In Western Ukraine there were almost no agricultural scientific research institutions until 1950. There were some small research stations attached to agricultural schools (particularly in Dubliany). Until 1914 the Galician Provincial Executive and the Prosvita society established such stations. Between the two world wars research stations were set up by the Lviv Agricultural Chamber in the villages of Zarvanytsia and Shutromytsi, the *Silskyi Hospodar society, Maslosoiuz, and Ukrainian land-owners (A. Terpeliak, M. Lutsky, and M. Malysky). (See also *Agronomy.)

O. Arkhimovych

Agricultural technology. The system of methods or techniques used to control the growth and harvest of domesticated plants and animals in order to obtain the highest yields possible under existing soil and climatic conditions with the least investment of labor and capital. Agricultural technology includes such basic operations as tilling and fertilizing the soil; preparing the seed for sowing; sowing and planting; crop protection; harvesting; the control of weeds, pests, and plant diseases; irrigation; and protective afforestation.

The development of agricultural technology is closely linked not only to the development of the natural sciences and to technology in general, but also to the agrarian

system and the forms of land tenancy. The technological level of the agricultural system based on serf labor that existed in Ukraine at the end of the 18th and the first half of the 19th century was very primitive. The agrarian reforms of 1861 did not create the conditions for improved farming: the frequent redistribution of land by the village communes undermined any individual incentive to increase the productivity of the soil. Consequently the peasants maintained the traditional three-field system of cultivation. Thus, until the beginning of the 20th century most Ukrainian peasants were unaffected by the modern farming methods that were introduced on the large gentry estates or by the improvements in the three-field system that were made by the owners of small, private homesteads. With the development of beet growing, deep autumn plowing was introduced. Mineral fertilizers were used in Ukraine earlier than in any other part of the Russian Empire. At the end of the 1870s A. *Zaikevych studied the effect of fertilizers on farm crops and advocated the introduction of fertilizers into the rows during sowing. A. Izmailsky developed farming methods to fight droughts in the south – deep plowing, snow retention, forestation of gullies, and protective afforestation.

At the turn of the century modern farming methods came into wider use owing to the efforts of zemstvo agronomists (see *Agronomy, social and state), who popularized the agricultural sciences, established model crop fields, set up machine and seed-cleaning stations, provided credit for the buying of machinery and equipment, and later organized co-operative societies.

After the *Stolypin agrarian reforms (1906–10), which allowed peasants to leave the communes and set up private farms and homesteads, the peasants took advantage of the experience of the zemstvo agronomists and agricultural research stations. Because most of Ukraine's forest-steppe region and the entire steppe region receive little precipitation and have a short, dry spring and occasional droughts, methods of dry-land farming were developed. The work of most research stations, which have departments of plant selection, crop cultivation, and animal husbandry, was and continues to be devoted to the problem of accumulating and preserving moisture in the soil. Primary research was done on early fallow, the depth of plowing, and working the soil after harvesting (Poltava, Odessa, Plotianska, and Kherson agricultural research stations). Much attention was focussed on organic and mineral fertilizers, the accumulation of nitrates in the soil, and the effects of Leguminosae prior to the introduction of nitrogen, phosphorus, and potassium fertilizers (Plotianska, Poltava, Odessa, Kherson, Nosivka, and Novozybkov stations). The depth of the root systems of various cultures and the moisture retention of the root layer of soil were studied at the Odessa research station. The cultivation methods for various crops – wheat, sugar beet, cotton, and others – were also investigated by these research stations and the experimental fields of the All-Russian Society of Sugar Producers.

The application of agricultural technology in peasant farms before the First World War led to an increase in the better varieties of grain (chiefly wheat), the adoption of crop rotation with grass cultivation, the modernization of farming methods and equipment, the improvement of livestock, the wider use of chemical fertilizers, and greater weed control. This progress was arrested by the war and the revolution. The Soviet policy of *War

Communism seriously harmed agriculture. Some gains were made during the period of the *New Economic Policy, when co-operatives supplied the peasants with farm equipment and seed and the work of research and selection stations was stepped up. Technological progress in farming continued as long as private farms and individual initiative were permitted, ie, until 1929, when *collectivization began. Thereafter, agricultural technology was brought under centralized government planning.

The network of agricultural research stations and their work have undergone frequent changes, depending on the political aims of the Communist party, which sets the goals and technical norms of research. Since the Second World War the government decrees of 1948, 1953, 1966, 1968, and 1978 have regulated such technical tasks as protective afforestation, crop rotation together with grass cultivation, soil tilling and plant cultivation, the use of organic and mineral fertilizers, seed selection, sowing technique, the mechanization of harvesting, crop irrigation systems, and the improvement of animal husbandry. New farming methods such as vernalization, cross and concentrated planting, the use of granular fertilizer, and the forced ripening of certain cultures are prescribed by decree.

Much effort has been spent on improving the techniques of crop cultivation in the natural-economic zones of the Ukrainian SSR. Methods for cultivating the acidic podzolic soils of Polisia and the western oblasts, for draining and utilizing excessively wet soils, and for transforming grazing land of low productivity into cultivated hayfields and pastures have been developed. The techniques of raising lupines, potatoes, flax, winter wheat and rye, hemp, grasses, and other plants that grow in Polisia have been perfected. For the forest-steppe zone new methods of cultivating winter wheat, corn, sunflowers, and other crops and ways to control certain grain fungi have been introduced. A new technology of sugar-beet growing has been applied in Ukraine. In the steppe zone the clean fallow system is used, and the methods of growing rice and winter grains, particularly on irrigated lands, have been improved.

The Soviet government uses various incentives (honorary titles, prizes, etc) to raise agricultural productivity. But the Soviet system has deprived individual farmers of any interest in their work by appropriating their land and exploiting them mercilessly. Hence, technological improvements have had little effect on productivity. However, Ukrainian farmers have applied agricultural technology very successfully on their private cottage plots, and they produced in 1967–77, 28.2 percent of the national agricultural product on only 2.6 percent of the arable land.

In Western Ukraine contributions to agricultural technology were made by the research station of the faculty of agronomy and forestry of the Lviv Polytechnic (1856–1939), by the *Silskyi Hospodar society and the Prosvita society, which ran farming schools in *Myluvannia, Uhertsy Vyniavski, and elsewhere. In Bukovyna there was a secondary agricultural school in Kitsman. Outside Ukraine agricultural technology was studied at the *Ukrainian Husbandry Academy and the *Ukrainian Technical and Husbandry Institute in Poděbrady, Czechoslovakia. Their graduates helped to improve farming in Transcarpathia, Galicia, and Volhynia.

Agriculture. One of the principal branches of the national economy, which includes *crop cultivation and *animal husbandry. It supplies the population with food products and industry with raw materials.

Prehistoric times. Agriculture has been practiced on Ukrainian territories since the Mesolithic period. Along with hunting, fishing, and food gathering, animal husbandry and land cultivation expanded in the Neolithic period and particularly in the age of the *Trypilian culture (4500–2000 BC in Ukraine), which was widespread in most of Right-Bank and some of Left-Bank Ukraine. The Trypilians sowed barley, wheat, and millet and broke the soil for seeding with wooden hoes. They harvested the crops using a wooden sickle with a stone blade and threshed the sheaves with a wooden flail. The grain was ground into flour by means of a hand-stone. Only a small plot of land near the settlement could be cultivated by hoeing; hence, hoe cultivation was essentially a horticultural form of agriculture and was left mostly to the women. In the late stage of the Trypilian culture the seeded area increased, and plow cultivation or field agriculture arose. As the primitive wooden plow and draft animals replaced the hoe, men began to play a greater role in soil cultivation.

The agricultural *Lausitz culture, which was widespread in the 1st millennium BC, testifies to the growth of agriculture. In the middle of the 1st millennium BC Scythian tribes settled in the territories of present-day southern and southeastern Ukraine and later in the southern Crimea. The *Scythians were composed of two groups – farmers and nomads. The former, called plowmen by Herodotus, grew wheat, rye, millet, beans, hemp, onions, garlic, and other vegetable crops. The *long-fallow system of cultivation was already prevalent among the Scythians, who cultivated a tract of land for several years and turned to another when the soil became exhausted, returning to the old tract after a lengthy period, of up to 20 years. The principal instrument of cultivation was the wooden plow (*ralo*). Harvesting was done by means of an iron sickle. With time the farming culture of the ancestors of the Ukrainians grew richer through their absorption of the means of production and the agricultural knowledge of other tribes and peoples. From the Celts they borrowed the iron hoe, from the Goths they learned to build separate shelters for livestock, and from the Germanic tribes they acquired a plow fitted with metal shares. Beginning in the 7th century BC, the Greek colonies played an important role in this respect: they brought to the coast of the Black Sea better implements of soil cultivation and a relatively high agricultural culture, with a two-field system, fertilization

of the soil, winter and spring crop varieties, etc. Trade developed between the Greek colonies and the Scythians; wheat, fish, hides, and furs were exported in exchange for manufactured products and woven cloth. At the end of the 3rd century Scythian wheat exports declined considerably because of competition from Egypt and the Sarmatian invasion of Scythian territory.

In the 5th–6th century important changes took place in the technology of farming. Innovations and improvements in implements such as the plow were made, raising the productivity of labor and allowing for cultivation of heavier soils. The system of cultivation began to change: the two-field system began to replace the long-fallow system. All these changes in farming took place in the steppe and forest-steppe regions.

In the forest belt, however, a primitive method of farming based on tree cutting and burning ('slash and burn') survived for a long time. Brush and trees were cut down with iron axes, and the roots were pulled out and burned. The seed was scattered on the prepared soil and was then covered by means of a harrow consisting of an evergreen tree with its branches trimmed halfway. After a few years the plots of exhausted land were abandoned, and new ones were cleared.

Ancient and Princely eras. Numerous archeological finds, which demonstrate quite fully the level of farming not only of Kievan Rus' but of the earlier Cherniakhiv culture, the Antes, Sclavini, etc, indicate a well-developed system of agriculture among the ancient Slavs. Under Kievan Rus' the development of farming continued, and agriculture constituted the principal foundation of the economy at the time. Most scholars studying the structure and development of agriculture (B. Grekov, V. Dovzhenok, and others) defend the view that the prevalent system of soil cultivation in Kievan Rus' and particularly in Ukrainian territories was the *short-fallow system with two-field and three-field crop rotation which developed out of the long-fallow system as a more intensive form of cultivation. The long-fallow system could not be continued in the densely populated regions of the middle Dnieper where much of the land belonged to private landholders and infractions of land boundaries were punished severely by princely law. It was still retained, however, in the northern forest-belt regions, where slash and burn was used, and in the southern steppe regions.

Under the long-fallow system the fallow area of cleared land was always several times larger than the seeded area. Under the two-field system one-half of the cleared land was seeded. Under the three-field system the tract of land was divided into three parts, one of which was left unplowed (called a *par*); the two other parts were seeded – one with winter wheat or rye and the other with a spring crop (barley, oats, or wheat). Almost all the crops known in the agriculture of the period were grown in the Kievan state: spring and winter grains, beans, hemp, and garden produce. Iron sickles and scythes were used for harvesting. The cereals were stored in barns (*humny*), and hand-turned millstones were used for grinding the seed into flour. Watermills were first mentioned in historical sources of the 13th century, and it can be assumed that they were built before then. The basic implements for cultivating the land were the hooked plow (*sokha*) in the north, and, in the south, the wooden plow (*ralo*) and the metal share plow.

Land was privately owned, and state law (see **Ruskaia*

Pravda) protected ownership rights. Most of the peasants (*smerds) were freemen and owned their own land and draft animals (oxen and horses). Animal husbandry was an important branch of farming. Cattle, sheep, goats, hogs, and poultry were raised. According to the calculations of some scholars (V. Dovzhenok), a single peasant family cultivated on the average about 8 desiatins of land with a yield of about 50 poods per desiatin.

Beginning in the 11th century, the princely, boyar, and church estates, using much hired and some slave labor, grew rapidly in Ukraine. Continual internecine fighting among the princes and the invasions of nomadic hordes (see *Pechenegs, *Cumans) made it difficult for the central government to furnish the necessary military protection to the widely dispersed settlements of the farming population. To get adequate protection, some peasants were forced to abandon their land and to resettle in more secure areas, frequently obtaining direct protection from a princely or large boyar manor. As a result, the free peasantry became impoverished, and some formerly independent farmers were forced to hire themselves out as laborers on the larger estates. The question of the origin of feudal relations, or more precisely of economic feudalism, is connected with this process. After the demise of the Kievan state the beginnings of feudal relations are clearly discernible in the principality of Galicia-Volhynia. The manorial system of agriculture (see *Filvarok), consisting of princely and boyar farms that combined many branches of farming and used hired and often slave labor, arose first in Western Ukraine, where more productive farming methods such as soil fertilization were in use.

Lithuanian-Polish period. In the 16th century, as Western Europe's demand for grain grew, Ukraine's export of farm products, first by land through Lviv and then, beginning in the first half of the 17th century, by sea through Gdansk, increased considerably. The attachment of the peasantry to the land progressed rapidly, and corvée began to play a significant role, first in Galicia and then in the territories under Lithuania. This process of peasant exploitation was accelerated by the **voloka* land reform, which was introduced in 1557 and carried out on the estates of the Lithuanian grand prince Sigismund II August. As the political ties between Lithuania and Poland grew closer, Polish feudal law and the traditions of the Polish heartland began to spread to all Ukrainian territories. The large landowners were interested in extending their manorial estates and expanding agricultural production; hence, they gradually enserfed the peasants, violating the articles of the *Ruskaia Pravda* that for a long period had protected the peasantry in the Lithuanian-Ruthenian state.

The three-field system continued to be the dominant form of soil cultivation and had an average return of fivefold or sixfold on planted seed for peasants with draft animals and a much higher productivity for the manorial estates. Wheat, rye, oats, and other grains as well as fruits and vegetables mostly for personal consumption were grown. The processing of agricultural raw materials, particularly *flour milling powered by water, was well developed on the manorial estates. Animal husbandry was widely practiced, particularly in the Kiev, Bratslav, and Subcarpathian regions.

After the Union of *Lublin in 1569, which unified Poland and Lithuania into one state, the Polish gentry began to acquire large landed estates in Ukraine. The

estates of some families, such as the Zamojskis, Żotkiewskis, Koniecpolskis, Potockis, and the polonized Ostrozkys and Vyshnevetskys, encompassed dozens of towns and thousands of villages. The growth in internal trade that resulted primarily from the development of towns and the increasing demand for farm products in Western Europe and the growth of commodity-monetary relations became the direct stimuli for the formation of latifundia, on which, besides soil cultivation, cattle raising, flour milling, liquor distilling, brewing, and saltpetre-making were practiced. The gentry's desire to increase the income from their estates turned their attention to the practical aspects of farming and led to attempts at rational farming and to the publication of works on agronomy.

In the second half of the 16th century the settlement of the steppe lands was begun, mostly by peasants from Volhynia, Galicia, Podilia, and the northwestern Kiev region, who wished to avoid corvée. Finding refuge in less-settled areas – in the southern Kiev region (around Cherkasy and Kaniv) and the Bratslav region – these settlers formed a free, armed people known as the *Cossacks. As well as such steppe trades (*ukhody*) as hunting, fishing, and beekeeping, they also practiced farming. While bringing the virgin steppes under cultivation, they defended the region from continual Tatar incursions, thus providing large numbers of refugees from the economically more developed parts of Ukraine with the opportunity to settle the new lands. The gentry and the Polish administration followed the Cossacks and refugees and settled in the steppe regions. In 1590 the Polish Sejm permitted the sparsely populated steppe territories to be distributed to the gentry. During this colonization process the magnates seized lands from the former settlers, including Cossacks, who did not have written deeds to the land, and forced the population to pay dues and to perform corvée. The more daring of the settlers escaped to the *Zaporizhia, which to a large degree was independent of the Polish administration. The land was held to be the common property of the Zaporozhian Host. Every member of the host had the right to use the land and received from his battalion a 'passport' or 'deed' to a given tract of land. On numerous farmsteads known as winter quarters (*zymivnyky*), Cossack farmers specialized in cattle breeding and raised wheat, rye, barley, buckwheat, and vegetables. Because of the vast amount of available land, the long-fallow system and the iron plow were used. Grain was exported to various parts of Ukraine, Muscovy, and in large quantity to the Crimea. At the end of the 17th century there were about 4,000 winter quarters in the Zaporizhia region (according to V. Miakotin's and M. Slabchenko's research), and the larger of these exported about 4,000 poods of grain per year.

The Cossack Hetman state. During the *Cossack-Polish War the socioeconomic order underwent many changes. The position of the peasantry improved as a large proportion of the gentry's, and particularly of the Polish magnates', landholdings were abolished. Members of the gentry who recognized the hetman's authority were allowed to retain their estates. The peasants or common people (*pospolyti*) could now, with certain restrictions, sell and purchase land (see *Common peasants). Their standard of living improved considerably. According to the census books of 1666, 80–90 percent of the peasants in northern Left-Bank Ukraine owned draft

animals. As in earlier times the basic grain crops were winter and spring rye and wheat, spring oats, and buckwheat. The increasing demand on the home and foreign market for linen and hemp yarn caused an expansion in the area devoted to flax and hemp. Gardening and orchard growing developed on peasant farms, the largest orchards being located in southern Left-Bank Ukraine and in the vicinity of Kiev. The greatest harvests were obtained in the steppe regions – 8- to 10- or even 12-fold return on planted seed – while in the forest regions the yields were 5- or 6- to 10-fold. Cattle breeding was widely practiced. Ukrainian specialists in animal husbandry often traveled to Muscovy to improve this branch of farming there.

As a result of the Khmelnytsky wars, there was an enormous supply of land in Ukraine, consisting of the former Polish crown lands, as well as about 4,000 estates abandoned by the Polish gentry and Roman Catholic clergy who left Ukraine. Most of these lands were transferred to the treasury of the Zaporozhian Host, which was under the hetman's control. Starting with Khmelnytsky, the hetman's government granted estates from this land fund on various conditions to Cossack officers, Orthodox churches, towns, and worthy individuals.

Thus, there arose two basic forms of land possession: *rank estates (*rangovi maietnosti*), that is, lands that were held in connection with an office, and temporary grants or perpetual grants, which amounted to private ownership. At the end of the 17th and the beginning of the 18th century the estates that were not tied to an office were classified into perpetual or secure (*spokiine*) possession, based on the rights of ownership, and temporary possession, granted for an indefinite lease 'for the establishment of a house' or 'by favor of the host.' At the end of the 17th century the estates of officers began to expand rapidly at the cost of peasant farms and Cossack holdings.

After I. *Mazepa's unsuccessful rebellion the tsarist government prohibited land grants on terms of private ownership, but this had little effect on the trend to convert rank lands into private property. According to the *General Survey of Landholdings (1729–31), in 7 of the 10 regiments 35.2 percent of the land was owned privately, 11 percent were rank lands, 17.2 percent was owned by monasteries, and 35.8 percent belonged to free Cossacks. The Russian government disposed of the confiscated estates of Hetman Mazepa and his followers as it wished, and many Russian nobles acquired estates in the Hetman state. Some of these were very extensive, Prince A. Menshikov's, for example. The Russian landowners brought their own traditions of serfdom and treated their Ukrainian peasants much more harshly than did the local masters. Ukrainian peasants were essentially freemen prior to that time. Although they were obliged to perform certain types of labor and other services for their masters on the basis of 'obedience' (*poslushenstvo*), they could leave their masters. As the power of the tsar's government increased at the expense of the hetman's authority, serf-owning estates appeared and increased in Ukraine. The category of *landless peasants (*pidsusidky*) increased in numbers. At the same time peasants fled in ever larger numbers to Zaporizhia, Moldavia, Belorussia, and even Right-Bank Ukraine, which remained under Polish control. Gradually the peasants became bound to

the land, and the principle of free movement fell into disuse.

After the abolition of the Hetman state *serfdom was introduced. In May 1782, by manifesto of Catherine II, all the common peasants (*pospolyti*) were bound to the land, and on 12 December 1795, by Paul I's ukase, serfdom was extended to southern Ukraine. In 1782 the Cossack *starshyna* were legally given Russian noble status, while the ordinary Cossacks were demoted to a taxable estate, close in its juridical status to that of the *state peasants; thus they were required to pay taxes and to perform certain agricultural services. Ukraine and its agriculture were subordinated to the interests of the Russian Empire.

Slobidska Ukraine did not belong to the Hetman state. Settlement began there in the 16th century, but colonization did not reach mass proportions until after Khmelnytsky's reign. The settlers made their livelihood principally by farming and cattle breeding. The peasants were free. Large tracts of virgin land were available in Slobidska Ukraine, and the soil was very fertile. Large, heavy plows drawn by four and even eight oxen were used to break the soil. Because so much land was available, much of it was left idle, while some of it was seeded to grain and industrial crops as in other parts of Ukraine. Among the Cossacks of Slobidska Ukraine a stratum of wealthy officers with large landed estates soon arose. In the 18th century newcomers of the Russian nobility began to introduce corvée, and by the end of the century the peasants had to perform one to two days of corvée per week. In 1765 Catherine II abolished the Cossack social order and the Slobidska Ukrainian regiments and introduced Russian institutions.

From the end of the 18th century to 1917

Central and eastern Ukraine. At the beginning of the 19th century the Ukrainian territory that belonged to the Russian Empire was divided into the following regions: Left-Bank Ukraine (Chernihiv and Poltava gubernias), Right-Bank Ukraine (Kiev, Podilia, and Volhynia gubernias), southern or steppe Ukraine (Katerynoslav, Kherson, and Tavriia gubernias), and *Slobidska Ukraine (Kharkiv gubernia). Because of historical circumstances each of these regions differed somewhat from the others in its socioeconomic structure. In Left-Bank Ukraine most of the land (about 70 percent) was held by middle and small landowners. Slobidska Ukraine, whose economic life in many respects was reminiscent of the earlier Hetman state, was in a very similar situation. In Right-Bank Ukraine, which had been incorporated into the Russian Empire in 1793, most of the land (about 75 percent) belonged to the large estates of the nobles. Steppe Ukraine, which was undergoing vigorous colonization and had a lower population density than the other regions, had the lowest percentage of serfs: before the reforms of 1861 serfs accounted for 31.5 percent of the population of Katerynoslav gubernia, 31.3 percent of Kherson gubernia, and 6 percent of Tavriia gubernia. In contrast, the figures for Right-Bank Ukraine were: 59.5 percent of Podilia gubernia, 57.8 percent of Kiev gubernia, and 56.6 percent of Volhynia gubernia. Commercial grain growing developed more rapidly in the south, and hired labor was used.

At the beginning of the 19th century there were 5.4 million peasant-serfs (almost 40 percent of the population) and 4 million state peasants in the nine Ukrainian

gubernias. The largest number of state peasants was found in Left-Bank Ukraine. Towards the end of the 18th century corvée had reached intolerable proportions – often four to five and sometimes even six days a week – provoking riots among the peasants and hindering any rise in agricultural productivity. Various manifestos, such as Paul I's manifesto of 5 April 1797 limiting corvée to three days, had no practical effect.

The three-field system remained the basic form of soil cultivation. Its productivity of four- to five-fold return on planted seed on the average was low in comparison to the productivity of the crop-rotation system used in the countries of Western Europe. The low level of farm productivity was connected with the government's agrarian policy, which favored serfdom and encouraged the growth of the so-called land communities (*zemelni hromady*), modeled on the Russian *obshchina*. Because of its backwardness only a small proportion (about 10 percent) of agricultural activity was commercialized by the mid-19th century. With the growth of cities and industry commercial farming began to expand slowly in the second half of the 19th century. Market gardening began to develop more or less successfully in the vicinity of large cities and even acquired a degree of specialization. The peasants grew cabbage in the Kiev region, melons in the Chyhyryn region, and garlic and onions in the Myrhorod region. Commercial melon growing developed in Kharkiv gubernia, and sunflower crops increased noticeably in Tavriia and the Myrhorod region. In the Poltava and Chernihiv regions whole districts raised tobacco, while in the northern part of the Chernihiv region, which had long been famous for its hemp, 5 percent of the cultivated land was devoted to hemp in the mid-19th century. With the development of the *sugar industry* some peasants, particularly in Chernihiv, Poltava, Kharkiv, and Podilia gubernias, began to raise sugar beets for sale. Peasant *orcharding* and fruit growing became quite important commercially: fresh and dried fruit was exported from the Chernihiv, Kharkiv, and Poltava regions to the central provinces of Russia, the Don and Volga regions, and elsewhere. Peasant animal husbandry, particularly sheep raising, began to develop commercial ties. The *cottage industry* developed concurrently, particularly those branches that had been important in earlier times – tanning, fur dressing, and pottery. The *chumak* (wagoner's) trade prospered, and many impoverished peasants tried to earn a livelihood in this way.

The expansion of the internal market (see *Fairs*), the growth of industry and cities, and the increase in foreign trade encouraged the landowners and nobility not only to enlarge their farms at the expense of the peasant lands but also to introduce some agricultural rationalization. A number of prominent civic leaders in Ukraine, such as V. *Karazyn*, kept abreast of the latest developments in the agricultural sciences, agronomy, and agricultural technology. On some estates the antiquated three-field system was replaced by the five-field, six-field, or even eight-field system, combined with hired labor and farm machinery. In the mid-19th century almost 90 percent of the commercial grain, most of which was sold on the foreign market, was produced by the landowners. To increase profits, the landowners increased the land area devoted to industrial crops: more land was assigned to tobacco and hemp in Poltava and Chernihiv gubernias, to

flax in Katerynoslav and Kherson gubernias, and, beginning in the 1820s, to sugar beets in Right-Bank, Left-Bank, and Slobidska Ukraine. The rising demand on the internal and foreign markets for horses, cattle, and the products of cattle farming stimulated the development of animal husbandry, including *horse breeding* – mainly in steppe Ukraine and partly in Left-Bank and Right-Bank Ukraine – and *sheep farming*, which developed most successfully in steppe Ukraine.

Nevertheless, Ukraine's agriculture remained backward in comparison to that of Western Europe. It was based on serf labor and had a low productivity. Many landowners could not afford to develop their large farms with the help of modern technology and at the same time meet their tax obligations. Tax arrears amounted to a huge sum – 5 million rubles by 1856. Of the 22,700 estates in Ukraine in 1856, 6,600 (29 percent) were mortgaged for a sum of 77 million rubles. Lands of defaulting landowners were sold by public auction. Serfs too were offered as security on loans (1.3 million or 53 percent of the serfs [*revizki dushi*] by 1856). The contrived preservation of the obsolete system of farming based on serf labor and payment in kind (essentially a barter system) slowed down the development of modern industry and capitalist monetary relations. The unsuccessful *Crimean War* was a dramatic consequence of this state of crisis and served as an immediate incentive to the agrarian reform of 1861 and the abolition of serfdom. As a result of the land reform, of the 48.1 million ha of land in the nine Ukrainian gubernias, 21.9 million ha (45.5 percent) were allotted to peasants with suitable compensation, 22.5 million ha (46.8 percent) remained in the possession of landowners, and 3.7 million ha (7.7 percent) belonged to the state or the church. In the Ukrainian gubernias outside of Right-Bank and Left-Bank Ukraine the land was transferred to 'land communities,' not to individual peasants; the communities then distributed it among the households for their use.

The abolition of serfdom was followed by a modification of laws governing state peasants on 12 November 1866. In most cases the state peasants received larger shares of land at lower rates than did the serfs. Many peasants who had been employed by landowners as cottage workers or domestic help did not get any land allotments. This circumstance, along with other factors, led to a rising demand for land and a sharp rise in land prices: from 1861 to 1917 they increased fourteen-fold. In 1877 each peasant household had on the average 9.7 des (desiatins, 1 des = 1.09 ha) of allotted land and 0.6 des of purchased land. In 1905 the respective figures were 9.6 and 1.9. Prices and land sales increased after the founding of the *Peasant Land Bank* (1882), which provided loans to the peasants. As a result of the bank's activity the amount of land held by landowners was significantly reduced (by 32.5 percent between 1877 and 1905), particularly in steppe Ukraine (by 49 percent) and Left-Bank Ukraine (by 35 percent). In Right-Bank Ukraine the amount of land possessed by landowners diminished at a much slower rate and by 1905 accounted for 75 percent of all privately owned land.

These changes in land ownership did not lead to a significant increase in agricultural productivity and in some cases had a detrimental effect, particularly on animal husbandry. An increase in the seeded area brought about

a reduction in the area devoted to animal feed: between 1860 and 1887 the hayfield area diminished by a factor of 5 and in the south by a factor of over 11. The increase in the head of cattle fell behind the increase in cropland, and this had a negative effect on soil fertilization. Sheep raising is an apt illustration of the conditions existing at the time: until the 1880s this was one of the most highly developed branches of animal husbandry, particularly in the south, but the appearance on the market of cheap Australian wool and a reduction in the demand for wool on the home market because of frequent economic crises almost wiped out this branch. Between 1866 and 1908 the number of fine-fleeced sheep decreased by 90 percent, and in Kharkiv gubernia they almost completely disappeared. The land shortage and the growth in the farm population (86 percent population growth compared to a 41 percent increase in farmland in 1860–1900) led to agrarian overpopulation and mass migrations. At the end of the 19th century the surplus of labor in the villages of Right-Bank and Left-Bank Ukraine rose to almost 2.2 million people. Most of the landowners were in debt and lacked the capital to buy the necessary farm equipment and to hire farm labor (ie, to set up farming on sound business principles). For these reasons the 1905 revolution assumed a definite agrarian character in Ukraine.

The *Stolypin agrarian reform of 1906, which aimed at redistributing peasant lands and raising agricultural productivity, was a partial attempt to overcome this crisis. The reform abolished the compulsory form of the land commune and granted every peasant the right to leave the commune and to make his land into a fully private property. In Ukraine, where the commune was not very popular to begin with, 25 percent of the households that had belonged to farming communities seceded from them (42 percent in southern Ukraine, 16.5 percent in Left-Bank Ukraine, and 48 percent in Right-Bank Ukraine), and in 1906–17 peasants purchased, mostly from landowners, 7.2 million des of land. As a result of the co-operative movement, zemstvo agronomy, and greater interest in agricultural technology, farm productivity rose somewhat (20 percent in 1904–12). Although 65 percent of farmland was owned by peasants, the countryside continued to be overpopulated, and 32 percent of the peasants owned either no land or not more than 1 des of land. Because of the subdividing peasant farms became too small to support their owners and were sold to the rich peasants. Thus, the rural proletariat increased rapidly.

Before the First World War Ukraine had an exceptionally large area of land under cultivation. The quantity of arable land increased by 60 percent between 1860 and 1917 (by 119 percent in the steppe region). Two-thirds of Ukraine's land area was suitable for cultivation. The cultivated land was used in an inefficient manner: most of it (88 percent) was planted in grain crops, 3 percent in industrial crops, 5 percent in vegetable and melon crops, and potatoes, 3 percent in forage crops, and 0.7 percent in other crops (1913 figures). Given the backward state of technology, this concentration on grain crops led to soil exhaustion and a declining productivity. Furthermore, the preference for spring cultures, which occupied 71.0 percent of the grain area, often led to weed infestation and crop failure. Of the land devoted to grains, 23.4 percent was planted in spring wheat, 23.6 percent in barley, 18.3 percent in rye, 12.5 percent in winter wheat, and 11.8 percent in oats. In 1917, 45.5 percent of the

TABLE 1
Distribution of farmland in 1917
(as a percentage of rural population)

	Polisia	Right Bank	Left Bank	Steppe	Ukraine as a whole
Landless	9.7	13.5	18.6	19.1	16.0
Under 1 des	17.7	24.8	13.6	7.1	16.2
1–2 des	17.1	27.2	13.2	7.8	17.1
2–3 des	14.2	15.1	11.9	7.7	12.2
3–4 des	11.3	8.3	9.8	6.8	8.5
4–6 des	14.8	6.8	13.4	11.6	10.5
6–9 des	9.6	2.7	10.0	12.4	8.0
9–15 des	4.6	0.9	6.5	13.6	6.4
15 des and over	1.0	0.2	3.0	13.9	5.1

peasant farms had no draft animals, and 35.7 percent had no cows. The average peasant farm had 1.6 horses and 0.4 oxen. Only landowners and the richer peasants could afford improved farm implements and machinery; the poorer peasants continued to use primitive implements. In 1910 there were 224,900 hooked plows (*sokhy* and *kosuli*), 306,600 wooden plows, and 3,415,200 wooden harrows in Ukraine.

An indication of the backward state of agriculture was the low harvests, which, however, were higher in the Ukrainian provinces than in the other regions of the Russian Empire. The average yield of grains (in centners per hectare) was 9.4 in Ukraine (6.9 in the Russian Empire) in 1909–13, and, more precisely, 10.4 for winter wheat, 9.8 for winter rye, 7.0 for spring wheat, 9.3 for spring barley, 10.7 for oats, 9.9 for millet, and 11.2 for corn. In 1913 the total grain harvest was 18.3 million t or 27 percent of the grain harvest of the Russian Empire, including 3.6 million t of winter wheat and 400,000 t of legumes. In that year 8.5 million t of sugar beets (75.2 percent of the harvest of the whole empire), 71,000 t of sunflowers, 8.5 million t of potatoes, 577,000 t of fruits and berries, and 79,000 t of grapes were harvested. In general, agriculture was commercialized only to a small extent: the total agricultural output for 1909–13 is estimated at 2 billion rubles, including 833.7 million rubles in grains, 134.6 million rubles in industrial crops, 270.9 million rubles in other crops, and 406.3 million rubles in animal products. Commercial production in this period, on the other hand, amounted to only 694.3 million rubles, including 486.6 million rubles in plant products and 187.4 million rubles in animal products. Thus, almost two-thirds of the agricultural output was consumed by the peasants themselves.

The landowners and richer peasants were the main exporters of farm products. According to H. Kryvchenko's estimates in 1909–11, the nine Ukrainian gubernias exported annually on the average 257 million rubles' worth of grain (32.5 percent of the total export) and 110.7 million rubles' worth of flour (11 percent), mostly to Western Europe and Russia (about 20 percent). Ukrainian territories held a very important place in the Russian Empire's grain export, particularly in the export of wheat (43 million centners or 98 percent of the empire's export and 20 percent of the world export), rye (6 million centners or 75 percent and 21 percent respectively), barley (27 million centners or 73 percent and 43 percent respectively), oats (7 million centners or 84 percent and 10

percent respectively), and corn (7 million centners or 84 percent and 10 percent respectively).

Western Ukrainian territories. In eastern Galicia under Austria 72 percent of the population consisted of serfs. During the first half of the 19th century corvée was increased considerably, and by 1845 it constituted about 83 percent of a serf's obligations. In regions of developed grain farming, particularly in Podilia, corvée amounted to 156 days per year per *lan* (16.8 or 25 ha, depending on quality), and in regions of developed animal husbandry and forest industries it amounted to 12 days. Besides corvée there were dues in kind, amounting to about 10 percent, and monetary dues for meadows and cattle, amounting to 6 percent of a serf's obligations. The landowners' right of *propination, as it was known, placed a great burden on the peasants and hindered the growth of agricultural productivity. It was not until 1848 that the compulsory purchase of whiskey by the peasants was abolished.

The reforms of Maria Theresa and Joseph II brought about some improvements in the position of the peasantry. The first reform, known as the Urbarial regulation, was put into effect in Transcarpathia in 1766. Its purpose was to provide the peasants with a cottage and an allotment of land 18 to 30 golds (1 gold = 0.57 ha) in area, depending on the quality of soil. In Galicia serfdom was abolished in 1783, and a law passed in 1786 limited corvée to three days per week.

Pursuant to the decree of 2 April 1787, land ownership was divided into two categories: domanial (estate owners) and rustic (peasant owners). This law provided that all lands held by the peasants on 1 October 1786 remain in their hands for perpetual use, a provision that was also extended to Bukovyna.

The first official cadastre, introduced in 1819, showed that 19.5 percent of all peasant farms possessed less than 2 morgs (1 morg = 0.7 ha) of land and were thus economically non-viable. The subdividing of peasants farms continued, so that in the cadastre of 1847–59 the number of non-viable farms reached 27.3 percent. In 1844 domanial lands constituted 47.1 percent of the land fund in Galicia; rustic lands constituted 48.9 percent; and free lands belonging to urban communities, churches, etc., 4 percent. The peasants had at their disposal most of the plowed fields (70 percent) and meadows and pastures (66 percent) but only 0.7 percent of the forests. The landowners owned almost all the forests (98 percent), 33 percent of the meadows and pastures, and only 25 percent of the cultivated land. Most of the landowners' estates were large: in 1847–59 the average estate consisted of 755 morgs, while the average peasant farm consisted of 8.9 morgs.

Three stages may be distinguished in the development of Western Ukrainian agriculture: until 1815, from 1815 to the abolition of corvée, and from 1848 to the outbreak of the First World War. In the first period, during the Napoleonic Wars, the high demand for farm products encouraged attempts to rationalize production on the larger estates. New cultures – potatoes and clover – were adopted, the latter of which was used not only as animal feed but also to improve the soil. The role of hired labor in farming increased, particularly on the large estates. The estates of many absentee landlords were managed by lessees or stewards who sought to increase their profits by intensified peasant exploitation rather than agrotech-

nological advancement. Because of the worsening land shortage farm labor became very cheap. Peasants were paid at a scale of about 40 kreutzers a day during harvest and 20 kreutzers in winter, scarcely enough to support one adult.

In the second period the large estates found it difficult to sell their grain because of the competition from American and eastern Ukrainian grain on the international market. The situation improved only when the demand for meat began to rise as a result of the growth of industry in the western provinces of Austria and particularly in Bohemia. Fodder and industrial crops gradually became the main sectors of farming. In the mid-19th century Galicia supplied 13 percent of the grain, 23 percent of the flax fiber, 25 percent of the hemp, and 16 percent of the tobacco produced by the Austrian Empire. Potatoes, as the peasants' main staple, became a major crop, covering 13 percent of the cultivated land; Galicia's output accounted for 38 percent of the total output of Austria. Among the grains rye was most important, followed by barley and oats, with wheat only in fourth place.

With the abolition of corvée in Western Ukraine in 1848, the large landowners retained 2.4 million ha (44.4 percent), and the peasants received 3.1 million ha (55.6 percent) of the land, for which landowners were compensated from public funds. Forests and hayfields, however, still remained in the hands of the landowners, who no longer recognized the peasants' traditional right of usage (see *Servitudes). The imperial patent of 5 July 1853 was introduced to regulate the use of forests and pastures. The loss of servitudes was compensated partly with money (1.2 million florins) and partly with the so-called equivalents, by which peasant communities were granted 94,100 ha of forest and 67,000 ha of cultivated land and pastures. In regulating the servitudes, the servitude commissions usually shortchanged the peasants.

The growth of usury was a severe problem that plagued agriculture. Usurers, who were often local Jews, lent money at very high interest rates and seized lands and cottages from defaulting borrowers. By the beginning of the 1890s usurers had acquired 25 percent of the peasant lands in eastern Galicia and over 50 percent in some regions of Transcarpathia. The taxes on peasant farms rose steeply: by 770 percent in Galicia between 1862 and 1905 and by 470 percent in Bukovyna. Auction sales of peasant properties to recover unpaid taxes became common: between 1901 and 1910 about 18,000 peasant farms were auctioned off annually. As a result of these processes agrarian overpopulation and the subdividing of peasant farms increased. Peasant farms with up to 2 ha of land accounted for 42.7 percent of the total land area in Galicia, 56 percent in Bukovyna, and 51 percent in Transcarpathia. Difficult economic conditions sparked a massive *emigration movement at the beginning of the 1890s to countries overseas and migration to Western Europe for seasonal work (see *Migrant workers).

In these circumstances the level of agricultural production was very low, in spite of the fact that the three-field system had been replaced by the crop-rotation system in the mid-19th century. Using mostly homemade implements, the peasant farmers produced usually just enough to meet their own needs, and only a few richer individuals sold their small surplus, which was primarily animal products such as eggs, milk, poultry, and meat, in the

nearest towns. The large farms of the landowners were in difficulties too. They could not adapt to the new market conditions and in most cases were poorly managed and insufficiently mechanized (at the beginning of the 20th century there were only 217,000 farm machines in Galicia, most of them threshing machines). Large landowners carried excessive debts and sometimes tried to save themselves from bankruptcy by selling land to the peasants. Because of the division of the land into lots the proportion of large estates declined from 44.2 percent in the 1850s to 37.8 percent in 1912. The national factor was significant here: from 1857 to 1912 Ukrainian peasants acquired only 38,000 ha, while the bulk of the subdivided estates (237,000 ha) were bought mostly by Polish colonists from western Galicia. For the large landowners the main sources of income were liquor distilleries and feed barns for beef cattle, which supplied central Austria with meat. *Prosvita societies, co-operatives, and particularly the *Silskyi Hospodar association contributed to the improvement of the peasant's standard of living through educational work. But in spite of these efforts the level of agriculture in Western Ukraine was the lowest in Austria, and its degree of commercialization was one of the lowest in Europe.

Western Ukrainian territories, 1918–39. During the First World War and the war for Ukraine's independence agriculture suffered a significant setback, particularly in Galicia, where in a period of six years about 20 percent of the farm houses and buildings, 38 percent of the workhorses, 36 percent of the cattle, and 33 percent of the hogs were destroyed. On 14 April 1919 a land reform law was adopted in Stanyslaviv for the Western Ukrainian National Republic, but the reforms were not implemented. The Polish occupation of Galicia did not improve the state of agriculture; on the contrary, Polish economic policy noticeably aggravated national and social conflicts and hindered the development of farming. A number of laws regulating the purchase and sale of land that were passed by the Polish legislature promoted Polish agricultural colonization in Western Ukraine. The law of 15 July 1920, for example, encouraged the military colonization of Volhynia and Polisia, and the law of 28 December 1925 restricted the right of Ukrainian peasants to acquire land. In 1919–38 the government redistributed about 800,000 ha belonging to large estates. Most of this land was transferred to Polish colonists, who often resold it to Ukrainian peasants to discharge their debts.

In the mid-1930s the peasants owned about 50 percent of the land (84 percent of the arable land); the landowners, 23 percent; and the state and church, 18 percent. In Galicia and Volhynia 42 percent of the land was tied up in tiny farms (up to 2 ha); 39 percent in small farms (2–5 ha), 14 percent in middle-sized farms (5–10 ha), and only 5 percent in farms over 10 ha. Similar conditions prevailed in Bukovyna and Transcarpathia, where peasants owned only 36 percent of the land and tiny farms accounted for 45 percent of the land.

In spite of the land shortage and their low standard of living the Ukrainian peasants made significant progress in farming as a result of the growth of the co-operative movement (about 3,500 co-operatives, of which 2,000 handled agricultural products), the expansion of agricultural education (organized by the educational society Silskyi Hospodar), and improvements in agrotechnology. Despite the agricultural crisis in the 1930s farmers in-

creasingly changed over to industrial and feed crops and adopted more rational methods of cattle raising. The dairy co-operative known as *Maslosoiuz captured the domestic and to some extent the foreign markets. The co-operative network of the *Tsentrosoiuz, which supplied the market with meat and legumes, etc, was also very successful (see *Co-operative movement).

As a result of such efforts agricultural productivity rose somewhat in the 1930s. The average yield of wheat per hectare was 9.8 centners (9.8 in 1909–13), of rye 10.3 (7.8), of barley 10.8 (8.0), of oats 8.9 (8.0), and of potatoes 68.5 (67.4). This low productivity (on the average one-third of that in Western Europe) accounts for the inadequate diet of the peasant population and the dearth of surpluses for export. The grain surpluses in 1928–9 amounted to only 450,000 t or 14 percent of the gross farm production (excluding potatoes) and consisted mostly of wheat produced by the large estates. The average annual grain harvest in Western Ukraine in the period 1936–8 was as follows (in millions of tonnes): wheat 1.0, rye 1.5, barley 0.7, oats 0.9, and corn 0.5. Potatoes had the highest production per capita (526 kg) and were the main staple of the peasant diet; 226 kg of wheat and rye were produced per capita, and 198 kg of other grains. In comparison to the per capita production in central and eastern Ukraine, Western Ukraine produced only 54.7 percent of the rye and wheat but 289 percent of the potatoes and 68.7 percent of other kinds of grain.

Central and eastern territories, 1918–40. During the period of the UNR the Central Rada passed the land law of 18 January 1918, which emphasized the importance of peasant farms. Because of the war, however, this law was never put into effect. A similar fate befell the land reform projects of the Hetman government (return to private ownership and the preservation of large estates) and the 8 January 1919 land law of the Directory of the UNR. The Peace Treaty of *Brest-Litovsk bound Ukraine to provide Germany and her allies with agricultural products and had an important influence on the agricultural policy of the period.

When Soviet troops occupied Ukraine and the Ukrainian SSR was formed, agricultural policy in Ukraine became completely controlled by Moscow. During the period of *War Communism agricultural production declined by more than 50 percent, and grain was requisitioned with the assistance of the army in order to feed the population of Russia. Under the *surplus appropriation system (*prodrazkladka*) the Ukrainian peasants were to retain sowing seed and 14.5 poods of grain per capita per year. But the Soviet authorities did not respect this provision and in fact robbed the peasants of all discovered grain. Hence, when a drought hit Ukraine in 1921, the peasants were faced with *famine.

During the period of the *New Economic Policy the surplus appropriation system was replaced by the *tax in kind (*prodpodatok*), and the compulsory grain deliveries constituted only a part of the agricultural production. On 29 November 1922 the Land Code of the Ukrainian SSR was ratified. It granted the peasantry the right to use the land in perpetuity in parcels of 15–45 ha and abolished large landed estates. About 5–6 percent of all the land (1.4 million ha) belonged to the state. Collective farms in the form of *artels, *communes, and *associations for the joint cultivation of land (*tsoz*) (see *Collectivization) began to be organized.

The agricultural policy at the time emphasized the middle-sized farmer (*seredniak*) as the most productive unit and restored, within certain limits, market relations. The peasants were able to sell a part of their production. During this period the prewar level of agricultural production was almost attained. The area under cultivation expanded from 22.8 million ha in 1913 to 24.6 in 1928, with the area devoted to industrial crops, sugar beets, corn, and sunflowers increasing particularly rapidly: from 4 percent in 1913 to 9 percent in 1928. The main system of cultivation was four- and five-field rotation.

As a result of the work of research stations the level of agricultural technology improved. Agricultural education on the secondary and higher level expanded rapidly. The land fund of the peasantry increased to 23.5 million ha (15.7 in 1913) and encompassed 5.2 million individual peasant farms (3.5 in 1913). Machine building was not well developed in the NEP period, but the availability of farm implements slowly improved. In this respect co-operatives played an important role in Ukraine by organizing collective ways to use modern farm machinery (8,000 tractors in 1928). They also promoted the development of animal husbandry: in 1928 there were 5,607,500 horses, 7,611,000 head of cattle, 4,161,200 hogs, and 7,030,800 sheep and goats. In spite of these efforts the commercial production in 1925–8 amounted to only about 21–25 percent of the total output (33.7 percent in 1913), nor was the former level of export to foreign markets resumed. Before the war 80 percent of Ukraine's agricultural exports went abroad; now over half was shipped to other parts of the Soviet Union.

A basic change in the structure and development of agriculture was brought about by forced *collectivization, which was approved by the Plenum of the Central Committee of the All-Union Communist Party (Bolshevik) on 17 November 1929 and by the agencies of the Ukrainian SSR on 25 December 1929. The ruthless measures used by the authorities in carrying out collectivization provoked stubborn resistance from the Ukrainian peasantry and even some opposition from the government of Ukraine. The campaign caused a major decline in agriculture and finally a famine of mass proportions in the spring of 1933. By means of the collectivization the Soviet authorities intended not only to destroy the economic independence of the peasantry but also to consolidate the government's power in the countryside, previously confined to cities, and to channel the income earned in agriculture into industrialization. To accelerate the collectivization process and to break the resistance of the peasantry, the Soviet government issued a series of laws such as the law 'On the Protection of Socialist Property' (17 August 1932), which permitted capital punishment for pilfering collective-farm property or grain, and the law 'On Strengthening the Collective Farms' (30 January 1933), which allowed the authorities to confiscate the property of peasants who refused to join collective farms and to exile them to Siberia. At the same time political departments were set up at *machine-tractor stations and were given full administrative and political control over the countryside.

As a result of these measures, by 1 June 1934, 78 percent of all peasant farms and 90.6 percent of the land was collectivized. The collectivization drive actually ended in 1937 with 96.1 percent of the peasant farms and 99.7 percent of the land having been collectivized. In 1940 the

average collective farm in Ukraine had 141 peasant households (81 for the USSR), 768 ha of arable land (500 for the USSR), and 122 head of cattle (107 for the USSR). In spite of the larger dimensions of the collective farms in Ukraine in comparison to those in the USSR as a whole, Ukrainian agriculture suffered much greater losses from collectivization. In Ukraine the compulsory deliveries of farm products to the state were 50 percent higher than in other parts of the USSR, and the Ukrainian peasantry suffered proportionally greater losses because of its resistance. One of the more dramatic forms of resistance consisted of the mass slaughter of privately owned cattle to avoid its transference to the collective farms. As a result, the number of head of cattle in Ukraine declined between 1928 and 1932 from 8.6 million to 4.8 million, ie, by 44.2 percent.

In 1933–40 agricultural land increased by 1,201,000 ha while the area devoted to grain crops decreased by 3,232,000 ha. In 1928, 19.4 million ha or 78.9 percent of the sown land was devoted to grain, while in 1940 only 16.8 million ha or 66.4 percent of the sown land was devoted to grain crops. The area seeded to winter wheat, corn, and buckwheat was sharply reduced. Between 1928 and 1940, 1,117,000 fewer hectares were seeded with grist crops (millet and buckwheat), while the area devoted to industrial crops, vegetables and melons, and potatoes remained unchanged (17.3 percent in 1928 and 17.8 percent in 1940). Much more of the arable land, however, was assigned to feed crops – 2.7 percent in 1928 and 15.6 percent in 1940 – in order to expand animal husbandry that had been undermined by collectivization. Because of peasant apathy and the reduction in grain production, these efforts did not bring the desired results. In 1928 there were 8.6 million head of cattle, while in 1940 there were 7.7 million. The number of sheep and goats fell from 8.1 million in 1928 to 4.7 million in 1940. The collective farms owned only 31.2 percent of the cattle, 31.4 percent of the hogs, and 50 percent of the sheep and goats. The rest of the livestock was raised by peasants on their small *private plots, which constituted only 0.5 percent of the land belonging to collective farms.

The *state farms, which arose in the first years of the Soviet regime, mostly on the former estates of landowners, also played a role in agriculture. At the beginning of the First Five-Year Plan the state farms controlled 687,000 ha of arable land (2.8 percent), and by 1938 they possessed 4.3 million ha (9.7 percent), the average farm owning 5,500 ha.

In spite of large capital investments the profitability of the state farms not only failed to grow but constantly declined. The great progress in the mechanization of farming that was made possible by the collectivization and the five-year plans (88,500 tractors, 31,000 combines, and 50,000 trucks in Ukraine on the eve of the Second World War) was not matched by agricultural productivity and gross harvests, which increased only slightly or even declined in some cases, as in the case of the sugar beet.

These low harvests were due not only to the excessive bureaucratization of agricultural management, which undermined any private initiative, but also to the improper implementation of agrotechnical measures, such as the use of poor-quality seed, shallow tilling, inefficient crop rotation (in 1940 one-fifth of the arable land was left fallow), and insufficient application of mineral fertilizer (300,000 t in 1934 and 760,000 t in 1938). In 1938–40 the

TABLE 2
Agricultural productivity and gross harvests, 1913 and 1940

	Yield, centners/ha		Harvest, 1,000 t	
	1913	1940	1913	1940
Grain crops	9.4	12.4	23,157	26,420
Winter wheat	11.8	12.1		
Spring wheat	7.5	8.4		
Wheat harvest			7,970	8,407
Sugar beets	167	159	9,337	13,052

Ukrainian SSR produced 25 percent of the USSR's total grain harvest (21 percent of the wheat and 50 percent of the barley) and had an average productivity 3.7 centners/ha above that of the USSR. The proportion of commodity production to the total output in agriculture also declined significantly, from 21–25 percent in 1925–8 to 18–20 percent in 1938–40. Farm goods were exported from Ukraine to urban centers in Russia and other republics, while exports to foreign markets stopped almost completely. The total agricultural output of the Ukrainian SSR (at 1926–7 prices) amounted in 1917 to 12.6 billion rubles; in 1937 to 20.1 billion rubles, and in 1940 to 23.2 billion rubles, ie, about 20–22 percent of the USSR production.

1941–80. With the occupation of Galicia and Volhynia by the Soviet army in September 1939, and of northern Bukovyna in June 1940, the large landed estates in these territories were confiscated, and collectivization was begun. This process was arrested by the military developments in 1941, which brought all Ukrainian territories under German control.

In 1941–4 agriculture in Ukraine suffered a severe setback owing to Soviet evacuation measures and to the German occupation. Fifteen and a half million centners of grain (mostly from Left-Bank Ukraine), about 59 percent of the cattle, 82 percent of the sheep, 28 percent of the hogs, and 14 percent of the horses were shipped to the east from Ukraine. A large proportion of farm equipment was destroyed, and much of it (about 30 percent of the tractors and 15 percent of the combines according to Soviet statistics) was shipped out. German efforts to restore farm production were not very successful: in 1943, for example, grain production amounted to only 36 percent of prewar production. Preserving the collective-farm and state-farm system (renamed community farms and state estates) did not give the expected results, because the Ukrainian peasants wanted the reinstatement of private ownership. Using force, the German authorities exploited the farming population mercilessly. They imposed high delivery quotas (known as *kontingent*) for farm products in spite of the food shortages that were afflicting the local population. In 1941–3 about 12 million t of grain and other farm products, 7.8 million head of cattle, 7.3 million sheep, etc were shipped to Germany. Over a million farm workers were taken to Germany to do forced labor.

After the restoration of Soviet control in Ukraine in 1944 most branches of agriculture, and particularly grain growing, returned to their prewar level of production only at the beginning of the 1960s. Because of the chronic shortage of farm equipment and low work productivity, a policy of collective-farm consolidation was introduced in 1950–5. The number of collective farms decreased from

19,295 in 1951 to 13,395 in 1958, while the average allotment of land per collective farm increased from 2,644 ha to 3,272 ha. In order to prevent soil loss from dry winds, some efforts were made in 1948–52 to plant shelterbelts. Likewise, construction of canals and water reservoirs for the irrigation of the southern steppes was initiated (*Kakhivka Reservoir, 1956). The irrigation plan was only partly fulfilled: by 1967 there were only 598,700 ha of land under irrigation. More attention was devoted to this question in the 1970s, and, by 1980, 2,014,000 ha were under irrigation. The introduction of irrigation systems led to needless experiments in the cultivation of *cotton (455,400 ha in 1951), which proved a failure because of the unsuitable climate and were soon halted.

With N. Khrushchev's rise to power a number of reforms were made in agriculture, particularly by the law 'On Changing the Policy on Agricultural Planning' (9 March 1955) and the law 'On the Statute of the Agricultural Artel and the Means for Further Promoting the Initiative of the Collective Farmers in Organizing Agricultural Production and Managing the Affairs of the Artel' (6 March 1953). The collective farms received the right to determine, in the light of compulsory delivery quotas, the amount of land they would devote to each crop, the productivity of animal husbandry, and the number of animals of each species that they would raise. In 1958 the machine-tractor stations were replaced with tractor-repair stations. This decentralization of agricultural planning coincided with Khrushchev's decentralization of industry and the introduction of *regional economic councils. As a result of these reforms the land seeded to wheat in Ukraine diminished by 35.6 percent, in favor of larger plantings of feed corn and of certain industrial crops, particularly of sugar beets, long-fiber flax, hemp, and oil-yielding plants. Khrushchev's experiment in wheat growing on the virgin lands of Kazakhstan brought disappointing results and starting in the second half of the 1950s, the emphasis was again placed on expanding in Ukraine the land seeded to wheat by drastically reducing the area of fallow land (to 0.4 percent compared to 12.3 percent of the arable land in steppe Ukraine in 1940). This policy led to considerable soil erosion and to dust storms, which carried away the topsoil.

After Khrushchev's downfall in 1964 the usual proportion of fallow land was reinstated, and the corn plantings were reduced to a more rational size. Beginning in the latter half of the 1950s, large tracts of arable land were lost to industrial expansion, particularly to mining, to the construction of hydroelectric dams and highways, and to urban growth. Between 1955 and 1965 arable land in Ukraine diminished by 1.3 million ha. In 1980, of the 42.1 million ha of arable land, 34.2 million ha were under cultivation, 1.2 million were hayfields, and 4.8 million were pasture. Agricultural enterprises possessed 48.7 million ha, while the state controlled 0.18 million ha (including forest farms); that is, there is practically no unused arable land in Ukraine. The expansion of seeded land from 31.2 million ha in 1940 to 33.6 million in 1980 was achieved only by the reduction of the area of clear fallow from 3.9 to 1.1 million ha. Some increase in arable land is attributable to the amelioration of infertile soils, the drainage of wetlands (from 1,031,000 ha in 1956 to 2,539,000 ha in 1980), and the irrigation of arid lands. The chernozem, which has been until now the principal agricultural resource of Ukraine, requires chemical ferti-

lizers. In 1965 it was fertilized at the rate of 38 kg of mineral fertilizers per ha; in 1975, 109 kg per ha; and in 1980, 112 kg per ha. Compared to the levels used in Western Europe, the United States, and Canada, this level of fertilization is still inadequate.

To centralize agricultural planning, Soviet authorities have experimented to some extent with *agrotowns and since the second half of the 1960s have devoted much attention to organizing agroindustrial complexes, ie, to the territorial integration of certain branches of agriculture with the industrial processing and sale of the agricultural production. This kind of integration is realized most widely in those branches whose output must be processed or sold quickly. With integration transportation costs are minimized. Since 1965 the most common agroindustrial complexes in Ukraine have been the sugar-beet, grape-winemaking, hemp-alcohol-starch-hemp-products, and dairy complexes. In 1965 there were 488 such complexes, and in 1980 there were 1,549. The largest agroindustrial complexes are the winemaking complex *Masandra in the Crimea and the canning complex in the Kherson region.

Demographic changes in Ukraine's population (the farm population declined from 66 percent of the total population in 1940 to 37 percent in 1980) have a direct impact on the farm labor force, which is steadily decreasing both in absolute and relative terms. In 1965, 7.2 million people (38.9 percent of the total work force) were employed in agriculture in Ukraine: 6 million on collective and state farms and 1.2 million on private plots. For 1975 the corresponding figures were 6.4 million (26.2 percent), 5.0 million, and 1.4 million; and for 1980 they were 5.8 million (22.5 percent), 4.3, and 1.5 million. Thus, from 1965 to 1980 the farm work force fell by 1.4 million workers (20 percent) or almost 100,000 workers per year (particularly young people), who migrated to the cities or regions outside Ukraine. The reduction of the collective-farm work force has been particularly dramatic: in 1965 each collective-farm household provided 1.15 workers for work on the collective farm, while in 1980 each household provided only 0.94 workers. Today there are 8.3 workers per 100 ha of farmland, and each worker tills 5.8 ha (105 ha in the United States). In 1965, 3.9 workdays were required by the collective farms to produce 1 centner of wheat; in 1980 only 1.4 workdays were required to produce the same amount. For sugar beets the corresponding figures are 2.5 and 1.1 workdays and for potatoes 7.3 and 5.3 workdays.

Labor productivity is increasing but is still too low because of insufficient mechanization, irrational capital investment (preferential treatment for state farms), and relative agrarian overpopulation in Right-Bank Ukraine, Western Ukraine, and Transcarpathia. In the steppes and Left-Bank Ukraine, on the other hand, there is a slight shortage of farm labor, particularly at harvest time. Because of the seasonal nature of farm work the average collective-farm member works no more than 200–225 days per year (275 days for state-farm workers). This problem of underemployment is met to some extent by the agro-industrial complexes, which in 1970 employed 15,800 people, and in 1980, 156,300 people. A large part of the farm labor force has received little training: in 1980 only 218,200 collective-farm members (3.7 percent of the labor force) had obtained a higher technical education. Wages in agriculture are low, as is evident from the comparison in table 3. In

TABLE 3
Average monthly wages in Ukraine
(in rubles; % of national average in parentheses)

	All workers	Workers on collective farms	Workers on state farms
1965	93.9	48.9 (52.0)	71.8 (76.4)
1970	115.2	66.6 (57.8)	95.6 (82.9)
1980	155.1	103.6 (66.7)	133.7 (86.2)

1933–7 collective-farm members received on the average 33–75 kopecks and 1.3–3.5 kg of grain per workday. An important part of a farmer's income and the bulk of food for his family were derived from the private plot which was cultivated by the farmer in his spare time. In 1965 the wage for a workday was 2.69 rubles; in 1975, 4.11 rubles; and in 1980, 4.93 rubles. In spite of this rise in wages and the introduction of a small old-age pension after the war, farm workers continue to be the lowest-paid workers in the economy and continue to rely on their private plots (1.8 million ha or 0.4 ha per family in 1979) and temporary work in the cities to supplement their income. The state purchase prices on agricultural products (see *Agricultural procurement) are lower in Ukraine than in other parts of the USSR, and this depresses even further the already low standard of living of the Ukrainian farm population.

After the war the capital and depreciating production funds (buildings, machines, equipment, livestock) grew somewhat more rapidly in agriculture than in other sectors of the economy. This was the result of the chronic shortage of farm products for the consumer. The production fund at the disposal of the collective farms was valued at 12.4 million new rubles in 1965, 28.3 million in 1975, and 35.2 million in 1980. The growth in capital investments in Ukraine's agriculture (in relative prices) is shown in table 4. Thus, there is some transfer of capital from other branches of the economy, and particularly from construction, into agriculture. Because of a chronic food shortage in the USSR the relative weight of capital investment in Ukraine's agriculture as compared to the agriculture of the USSR as a whole has been increasing rapidly. This was particularly evident in the period from 1956 to the 1970s. In order to raise agricultural produc-

TABLE 4
Capital investment in agriculture in the Ukrainian SSR

Years of 5-yr plans	In millions of rubles	Percentage of all capital invested in	
		Ukr SSR	USSR
1929–32	137	8.7	8.8
1933–37	355	10.9	8.4
1938–41	293	9.9	7.5
1946–50	935	10.2	15.3
1951–55	2,304	15.5	26.5
1956–60	4,495	15.7	29.2
1961–65	6,985	16.9	28.3
1966–70	10,484	18.2	31.2
1971–75	16,597	21.1	31.1
1976–80	19,965	22.4	25.6

TABLE 5
Growth in stock of farm machinery in Ukraine
(in thousands of units)

End of year	Tractors	Grain combines	Trucks
1940	94.6	33.4	54.9
1955	136.4	50.7	102.3
1970	317.2	81.2	244.2
1980	408.8	90.0	317.9

tivity, more and more capital must be spent on machinery. About one-third of the capital allocated to agriculture (1,363 million rubles in 1980) is used to purchase and repair tractors and other farm machines. The growth in the stock of farm machinery in Ukraine (in thousands of units at the end of the year) is shown in table 5.

On collective and state farms only the harvesting of grain is fully mechanized. The harvesting of sugar beets is 90 percent mechanized; of potatoes, 50 percent; of hay, 55 percent. Cow milking is 81 percent mechanized; cattle feeding, 32 percent; and manure removal, 62 percent. Other types of labor continue to be performed manually, particularly the loading of grain (62 percent manual) and of sugar beets (45 percent manual). There is a shortage of reapers, tractor seeders, and small tractors, as well as storage facilities. Eight to 12 percent of the harvest is lost in transit, and some is lost during harvesting. The gross harvest of the most important agricultural products in Ukraine is presented in table 6 (in thousands of tonnes).

Ukraine's contribution to the total agricultural output of the USSR remains high: in 1966-70 it was 22.7 percent, and in 1976-80 it was 23.5 percent. In 1980 Ukraine produced 24.2 percent of the USSR's grain, 42.2 percent of the corn, 60.2 percent of the sugar beets, 27.8 percent of the potatoes, 22.2 percent of the cattle, 28.1 percent of the hogs, and 6.2 percent of the goats. For most agricultural crops Ukraine's crop yield is higher than the average for the USSR: in 1978 Ukraine's yield in grain crops was 30.3 centners per ha (18.5 for the USSR); in winter wheat, 35.2 (29.8); in winter rye, 20.6 (17.6); in corn, 32.2 (35.2); in barley, 31.6 (23.5); in oats, 23.0 (15.3); in legumes, 22.2 (15.2); in sugar beets, 310 (248); and in potatoes, 140 (122). Because of irrational policies and numerous crop failures

TABLE 6
Gross harvest in thousands of tonnes

	1940	1950	1960	1970	1980
Grains	26,420	20,448	21,790	36,392	38,100
Winter wheat	7,650	5,989	6,459	15,471	21,278

Silage corn	-	-	114,079	58,574	75,758
Livestock (thousands of head)					
Cattle	10,997	11,063	17,040	21,352	25,368
Hogs	9,186	6,999	16,452	20,746	19,783
Sheep and goats	7,325	5,798	11,601	8,971	9,051

in the 1970s, Ukraine's agriculture is incapable of meeting the demands of the Soviet economy for farm products, and particularly for animal feed. Hence, the USSR today imports from the United States, Canada, and other countries a large part of its feed as well as other farm products. Depending on the harvest (which decreased in Ukraine by 20 percent in 1979-80), 12-20 percent of Ukraine's agricultural output consists of commodities. Ukraine usually exports farm products to other regions of the USSR and to the satellite countries, such as Cuba and Poland.

Agronomy (agricultural sciences). The scientific foundations of agricultural production, the sum of theoretical and practical knowledge about the cultivation of plants, the raising of animals, the organization of production, and the primary processing of farm products. Agronomic knowledge has accumulated through the history of human activity: in Ukraine since the period of the *Trypilian culture. Practical knowledge on farming has been passed on in the form of technical prescriptions and advice. Agronomic information appears in the earliest written sources of Kievan Rus'. The scientific principles of farming were first worked out at the end of the 18th and the beginning of the 19th century. At the same time agronomy began to be divided into a number of independent sciences.

The earliest scientific research in agronomy in Ukraine was done by individual scholars such as V. *Karazyn, who worked mostly in the Kharkiv region, and by the *Nikita Botanical Garden in the Crimea. Agronomy developed rapidly in Ukraine at the turn of the 19th century and was closely tied to the development of sugar-beet farming and the organization of a network of agricultural research stations by the gubernia and county zemstvos. On the eve of the First World War there were 52 experimental fields and stations and 8 seed stations in Ukraine. An important contribution to agronomy was made by the Poltava Experimental Field, which was established in 1884, and the *Poltava Agricultural Research Station, which grew out of the former institution in 1910.

The methods of tilling and fertilization that were developed at these stations were adopted as the foundations of farming at the time and, along with the classification of fallow land, constituted an important advancement in agriculture. Other experimental fields and research stations were located in Nosivka, Uman, Kharkiv, Drabiv, Chartoryiske, Sarny, Nemerche, Kherson, Katerynoslav, and Odessa. Furthermore, there were two networks of experimental fields with headquarters in Kiev: the All-Russian Society of Sugar Producers and the Kiev Agricultural Society. In 1914 there were over 100 agricultural research institutions in the nine Ukrainian gubernias of the Russian Empire (see *Agricultural scientific research institutions). Two other societies in Ukraine were interested in agronomic research – the Imperial Free Economic Society, founded in 1765, and the Imperial *Society of Agriculture of Southern Russia, which was founded in 1828 and was active in the gubernias of

Bessarabia, Katerynoslav, Tavriia, and Kherson. There were also some gubernia agricultural societies, such as the Kiev, Poltava, Kharkiv, and Kherson societies (some of them organized agricultural exhibitions, conducted elementary courses on farming), and county or local societies (1,020 of these by 1915, the largest number of which were in Poltava gubernia). After the revolution these societies, as well as the All-Ukrainian Seed Society and the Ukrainian Central Agricultural Society in Kiev (reorganized in 1918 into the Central Agricultural Co-operative Union), which were active in the revolutionary period, were dissolved. Agronomy was studied at Kiev, Kharkiv, and Odessa universities, at the Kiev Polytechnical Institute, and at the Kharkiv Veterinary Institute. In Western Ukraine agronomy was taught at the higher agricultural school in Dubliany (founded in 1856, reorganized into an academy in 1900, and then into the Faculty of Agriculture and Forestry of the Lviv Polytechnical Institute in 1919) and at the Veterinary Academy in Lviv.

Important contributions to agronomy were made at the turn of the century by the following scientists in Ukraine: A. *Zaikevych (a pioneer in sugar-beet research), A. *Izmailsky (drought research in southern Ukraine), L. *Symyrenko (orchard growing), S. Vynohradsy (soil microbiology), B. Rozhdestvensky (agronomy professor at Kiev University), S. *Bohdanov (classification of ground waters), V. *Dokuchaev (chernozem, genesis of the steppe), K. *Gedroits (earth scientist), V. Kolkunov, S. Kulzhynsky (legume cultures and their effect on soil fertility), and A. *Sapiehin and A. *Dushechkin (sugar-beet nourishment).

Ukrainian agronomy advanced rapidly in the 1918–29 period prior to *collectivization. The Soviet government recognized the necessity to revitalize farming quickly, and Ukrainian researchers took advantage of the ample opportunities for scientific research. In this period planning was introduced into the various branches of agronomic research. A network of meteorological stations was established. Soil research culminated in the 1920s in the first synthetic map of the soils of Ukraine by H. *Makhiv and 10 volumes of *Materialy doslidzhennia gruntiv Ukraïny* (Research Materials on the Soils of Ukraine). Ukrainian selection specialists produced a number of valuable agricultural plant varieties. The scientific research stations, which by 1927 numbered 35, were governed by a single plan. Several nature reserves were organized: *Askania-Nova and the virgin steppe of the Starobilske region and of the Azov coast. The problem of drought in southern Ukraine and the assimilation of many new cultures received considerable attention. The development of agronomy was encouraged by the second division of the Ukrainian Academy of Sciences, the *Agricultural Scientific Committee of Ukraine, which issued a number of valuable publications, and, after its dissolution, by the *All-Ukrainian Academy of Agricultural Sciences and by the scientific research stations, some of which published reports. The association *Sil'skyi Hospodar in Lviv was active in practical agronomy and also made some theoretical contributions. It published over 180 books and pamphlets and farmers' newspapers. Outside Ukraine agronomy was studied at the *Ukrainian Husbandry Academy in Poděbrady, Czechoslovakia.

In the second half of the 1920s Ukrainian scholars in Soviet Ukraine began to be politically persecuted. The work of scientific institutions continued to be reorganized

as farming began to be collectivized. Beginning in 1929, agronomic research institutes in Ukraine were subordinated to the All-Union Academy of Agricultural Sciences in Moscow, first through the All-Ukrainian Academy of Agricultural Sciences and then directly. Scientific research focused on such practical tasks as producing new varieties of plants, controlling pests and weeds, planting shelterbelts, counteracting drought, increasing crop yields, and acclimatizing and promoting crops new to Ukraine, such as cotton, tea, and citrus fruits. The Party's strict, centralized control over research ruled out any possibility of free development for agronomy.

In 1945–6 the division of agricultural sciences under the chairmanship of M. *Hryshko was established at the Academy of Sciences of the Ukrainian SSR. In 1956 this division was reorganized into the *Ukrainian Academy of the Agricultural Sciences, which consisted of 5 departments, 21 scientific research institutes, a large network of research stations, and a central agricultural library. The academy published its *Dopovidi* and *Visnyk sil's'kohospodars'koï nauky*. In 1962 the academy was dissolved, and its scientific research institutes were transferred to the All-Union Academy of Agricultural Sciences in Moscow. Some agronomic research was conducted at the biology departments of universities and at the higher agricultural schools.

Today agronomic research in Ukraine is concentrated on developing new varieties of highly productive agricultural crops. V. Yuriev, F. Kyrychenko, and V. Remeslo have produced many valuable varieties of winter and spring wheat, rye, barley, oats, and other grains. P. Harkavy developed varieties of winter and spring barley that are suited to southern Ukraine and Moldavia. V. Kozubenko, B. Sokolov, P. Kliuchko, O. Musiiko, and others have developed highly productive corn hybrids and varieties with sterile seed. A monospermous sugar beet was produced by O. Kolomiets, V. Zosymovych, M. Bordonos, H. Mogan, I. Buzanov, and others. Many highly productive varieties of grain, legume, oil-bearing, essential-oil-bearing, fiber, feed, vegetable, and melon cultures, as well as potato, have been developed. S. *Melnyk, H. Borovykov, and others have developed the theoretical principles of grapevine grafting. The problems of seed science and agricultural ecology have been investigated by M. *Kuleshiv.

T. Strakhov, F. Nemiienko, V. Peresyppkin, V. Vasyliiev, D. Rudniak, M. Helent, and others are developing and improving biological and chemical methods for controlling agricultural plant diseases and pests.

Agronomy, state and social. The sum of the means used by voluntary civil organizations, agencies of local self-government, or the state to improve the level of agrotechnological culture. In principle these means are of an organizational and educational character, for in the final analysis the subject of agricultural activity is the individual farmer. It is only under the centrally planned economy of the Soviet Union that the measures used by state agronomy have assumed for the most part a coercive nature and have become an integral part of the state's agricultural policy.

In tsarist Russia there was sharp opposition between the government bureaucracy and society. As a result, the *zemstvos began to develop a zemstvo agronomy that became known as social or community agronomy and that was distinguished from the agronomic measures taken by the state authorities. In Western Europe there was no such gulf between the government and society; hence, such terms as social agronomy or state agronomy were not used. In Russia the state's interest in agronomy was channeled through the Ministry of Agriculture and State Properties, which carried out its responsibilities by employing government agronomists and instructors. Zemstvo agronomy in Ukraine originated at the end of the 1880s, when the Kherson zemstvo set up an institute of county and gubernia zemstvo agronomists. By 1 January 1914 there were 1,683 community (zemstvo and agricultural society) agronomists in the nine gubernias of Ukraine.

Among the purely agronomic measures pursued by the zemstvos priority was given to the purchase of farm machinery and implements and of seed and fertilizer. Relatively little was achieved in the area of formal agricultural education: in 1914 there were only 28 lower schools and one secondary agricultural school. Instead, much attention was devoted to extracurricular agricultural training – lectures, exhibits, visits to the villages by agronomists and instructors. In the final few years preceding the war the first agricultural societies and co-operatives were established in Ukraine. As these societies developed, the task of acquiring the necessary instruments and supplies for farming was removed from the zemstvo agronomic organizations, and the zemstvo agronomist increasingly became an organizer of agricultural activity. This tendency finally asserted itself at the All-Russian Agronomic Congress in Kiev in 1913. Zemstvo agronomists began to devote more and more time to scientific research and to demonstrations of new methods for the farmers. A whole new science of state and social agronomy developed from the zemstvo agronomy. The most prominent representative of this science among Ukrainians was Professor K. *Matsiievych.

In the 1920s, during the period of the *New Economic Policy, farming in Soviet Ukraine was largely in the hands of individual farmers, and farming co-operatives flourished. Hence, the role of the agronomist was not essentially different from what it was before the revolution. But the collectivization of 1929 radically changed this state of affairs and turned agronomy into an instrument of the state and Party apparatus. Social and state agronomy as it is here understood ceased to exist.

In Western Ukraine social agronomy took the form of the *Sil'skyi Hospodar society, which was active in Galicia and under the Polish regime in Volhynia (Lutske branch) as well. The Poles had their separate agricultural socie-

ties: in Galicia, for example, they had the Little Polish Agricultural Society. Under Austria state agronomy was the responsibility of the Galician and Bukovynian diets and was administered by county executives. There were no state agronomists. Under the Polish state agronomists were employed by provincial and county governments. Furthermore, the voivodeships had agricultural assemblies consisting of elected representatives who played the role of intermediaries between the producer, the farm industry, and the Ministry of Agriculture. They were also responsible for overseeing the activities of the institutions of social agronomy.

In the Ukrainian SSR the agronomic organizations have become parts of the state apparatus that governs the whole productive process of farming. The Union-republican Ministry of Agriculture (formerly the People's Commissariat of Land Affairs) directs this apparatus. Only the state farms do not come under this ministry but are the responsibility of a special Ministry of State Farms, which was a Union-republican ministry at first and then became a Union ministry. There are agricultural departments in the oblast (or krai) executive committees and agricultural commissions in the rural soviets. Furthermore, there are agricultural departments of the Central Committee of the CPSU and of the central committees of the various republics, as well as of the oblast and raion Party committees. The Soviet state and the Party machine employ a large number of specialists who have higher and secondary agronomic education. A special role in the implementation of the state's decisions on agriculture was played by the *machine-tractor stations, which were abolished in 1958. Support for the higher agricultural schools is provided for in the Union budget, while the lower and secondary schools are provided for in the republican budgets. However, almost all the expenditures for basic work in state agronomy – maintenance of research stations, demonstration points, and agronomic and zoo-technical networks and workshops; the organization of soil improvement and hydrotechnical projects that do not have a national significance; veterinary care; agro-educational work; and pest-eradication projects – are charged to local budgets.

Ye. Glovinsky

Agrotown (Ukrainian: *ahromisto*; Russian: *agrorod*). One of N. *Khrushchev's projects that was part of the planned 'transition of the village to Communist social relations.' Khrushchev first proposed the idea in 1949 when he was a secretary of the Central Committee of the Communist Party of the Soviet Union responsible for agriculture. The aim was to amalgamate several collective farms into larger economic units and to relocate the collective farmers in large urbanized settlements (rural cities) with socialized services, such as cafeterias and laundries, and cultural amenities. At the same time the

farmers were to give up their private plots and farm animals. The project was never officially approved, but some attempts were made in Ukraine to implement it as an experiment under the collective-farm consolidation plan. In 1957 Khrushchev, now the general secretary of the CPSU and the head of the government, returned to the agrotown project. Plans were made to reduce the number of villages in the Ukrainian SSR from 50,000 to about 15,000, which would have required enormous capital investments and technical reconstruction. The plan was not realized, however, and the limited experiments that were tried turned out to be economic and social failures. The goal of the project – the withering away of private farming – proved to be completely impractical. The agrotown plan was abandoned in the mid-sixties.

Ahibalov, Vasyl, b 21 April 1913 in Velyka Hnylusha, Voronezh region. A sculptor of monuments; graduate of the Kharkiv Art Institute (1942). In collaboration with other artists he has executed a series of monuments, primarily in bronze and granite, commemorating Soviet leaders and various events. These include monuments in Voroshylovhrad (*Lenin*, 1949), Krasnodon (*Young Guard*, 1954), Dnipropetrovske (*Eternal Glory*, 1967), Kharkiv (commemorating the proclamation of Soviet rule in Ukraine, 1975), and a number of busts. Ahibalov was awarded the Shevchenko State Prize in 1977.

Ahnit-Sledzevsky, Kazimir [Ahnit-Sledzevs'kyj], b 27 May 1898 in St Petersburg, d 6 September 1973 in Kiev. A graphic artist and caricaturist, Ahnit-Sledzevsky obtained his artistic education at the studios of O. *Murashko and I. *Seleznev (1906–16) and at the Polytechnical Institute (1916–22) in Kiev. In 1923 he began work as a caricaturist for the newspaper *Proletars'ka pravda* and the magazine *Hlobus*. From 1941 to 1945 he was a caricaturist for military newspapers and, beginning in 1944, worked for the satirical magazine *Perets'*. He executed graphic series (*Hitleriia*, 1944; *The Black Past*, 1957) and designed graphics for books, as well as propaganda posters and windows.

Aidar River [Ajdar]. Left-bank tributary of the *Donets, 264 km long, and with a drainage basin of 7,240 sq km. It is used mainly for irrigation.

Aide-de-camp. See Osaul.

Aihulske Lake [Ajhul's'ke]. Lake lying near the Perekop Isthmus in the Crimea. The lake is 18 km long, 4.5 km wide, and 0.1–0.3 m deep. It is fed by subterranean waters. In summer the lake's salinity reaches 23–27 percent, and during droughts the bed is covered with salt deposits.

Aiia [Ajja]. A promontory on the southwest coast of the Crimea. The rock rises steeply from the sea and attains a height of 557 m. A protected natural site – a grove of Stankevych pines and woody junipers – is found on the rock.

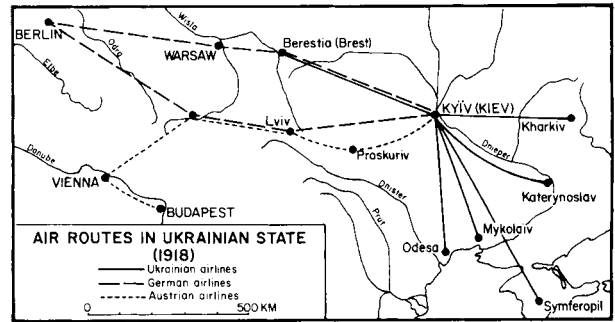

Ai-Petri [Aj-Petri]. One of the peaks of the main range of the Crimean Mountains. It reaches a height of 1,233 m and has a steep seaward slope. The mountain is located near the city of Alupka.

Ai-Petri in the Crimea

Air transport. The first regular transport flights in Ukraine were introduced by the German military administration in the occupied territories in 1918. Planes flew between Vienna and Kiev and Berlin and Kiev, stopping in cities on the way. The planes transported primarily cargo and mail, but also some passengers. After the war, from January 1920, there were irregular but quite frequent flights between Moscow and Kharkiv, using the Illia Muromets airplane, a reconditioned bomber. In the spring of 1923 the Society for the Advancement of Aviation and Aeronautics in Ukraine and the Crimea was founded in Kiev. Several prominent aircraft designers and pilots were among the society's founders: N. Delone, V. Bobrov, F. Anders, and H. *Kasianenko. In addition to its other activities, the society raised funds among the population for purchasing aircraft. Many airplanes were purchased with the funds collected. They were given purely Ukrainian names, such as Chervonyi Vartovyk Podilia, Yuzivskiy Proletar, Nezamozhnyk Odeshchyny, and Aeroplan Sumshchyny. All of these planes were foreign-built, mostly in France or in England. In 1924 the society's name was changed to the Society of Friends of the Air Fleet. In 1923 the Ukrainian Airline (Ukrpovitroshliakh) company was established. Its fleet consisted at first of such planes as the Farman F-30, Nieuport-17, 24 Bis, 21 Morane, and particularly the Dornier-Komet III-S with Rolls-Royce Eagle engines. In 1923 trial flights between Kharkiv and Kiev were initiated, and on 3 May 1924 more regular flights were introduced on the routes Kharkiv-Poltava-Kiev and Kharkiv-Pervomaiske-Odessa. Eventually, in 1925, new routes were established: Kharkiv-Kursk-Orel-Moscow and Kharkiv-Artemivske-Rostov. In February 1928 the first international route – Kharkiv-Baku-Pahlevi (Iran) – was introduced.

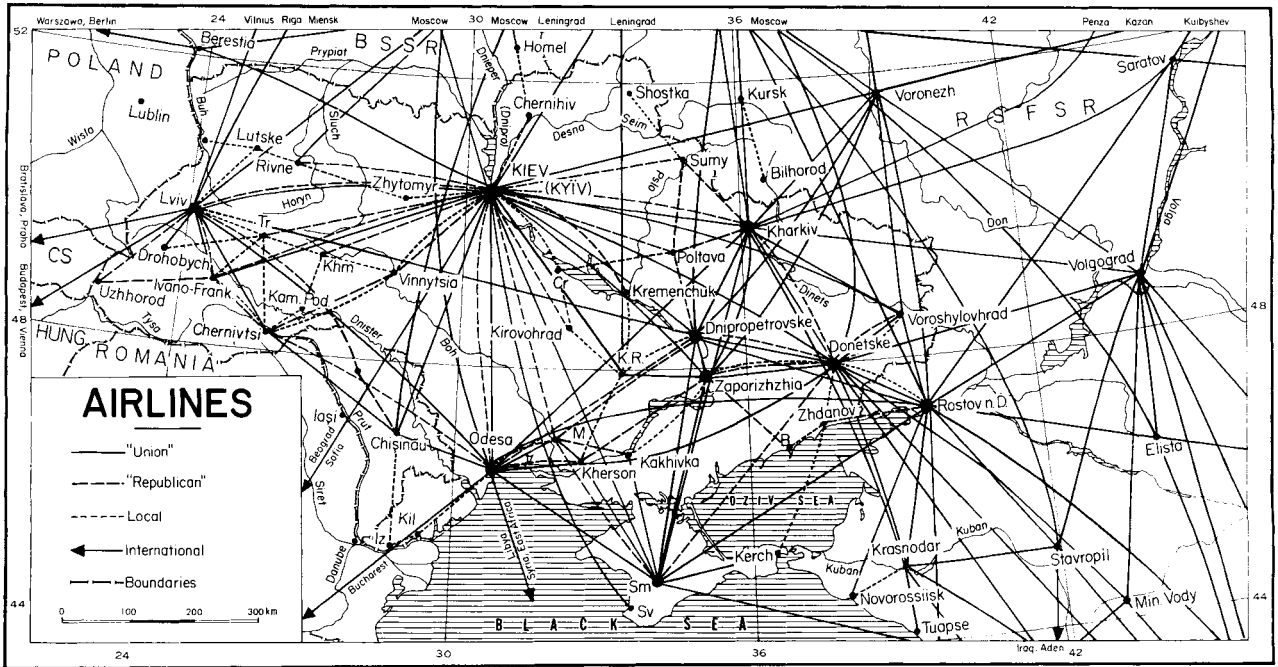

With the development of a national *aircraft industry during the first two five-year plans, Ukrainian-built planes were traversing Ukraine by the end of the 1920s. At first these were mail and passenger carriers – the G-2 and M-17 (150 km/hr), and then the K-4 and K-5 (designed by K. Kalinin), the KhAI (designed by Y. Neman), and the OKO-1 (designed by V. Tairov), which were built at the new Kiev and Kharkiv aircraft plants. The larger airports in Ukraine were also built in the early 1930s: the Kharkiv airport in 1930, the Odessa airport in 1931, and the Kiev airport (in *Brovary) in 1933. Planes built in this period, like the K-5 and KhAI-1, could attain speeds of 330 km/hr. In 1935–8 one of the largest Soviet passenger hydroplane lines (using the two-engine, twelve-passenger MP-1 and Stal-3 designed by Putilov in 1933) operated between

Odessa and Batumi. Night flights of mail carriers were introduced, and new regular routes were established: Kharkiv-Mariupol-Berdianske (240 km), Kharkiv-Dnipropetrovske-Odessa (625 km), and Kiev-Odessa-Kherson (445 km). Although in the first half of the 1930s most airplanes usually carried only eight to ten passengers, as early as 1931–5 K. Kalinin's engineering office worked on a design for a superliner with a capacity of over 100 passengers. The K-7, which had its initial flight on 11 August 1933, had a seating capacity of 120. Because there was no real market for such superliners, their production ended in 1935 with the construction of several prototypes. After Western Ukraine was occupied by Soviet forces in 1939, a regular route between Kiev and Lviv was opened. The number of flights on all routes increased steadily: from 188 in 1931 to 586 in 1935. The number of passengers also increased: from 12,000 in 1930 to 19,000 in 1937.

During the Second World War air transport was used almost exclusively for military purposes. Air communications were disrupted by the almost complete devastation of the airfields in Ukraine. Aircraft had to use temporary landing fields. Some air routes were restored in 1945–6. The airports of Kiev, Donetsk, Kharkiv, Voroshylovhrad, and Lviv were reopened, servicing 11 interrepublican and 37 interoblast air routes. Air communications returned to a normal state only in the 1950s with the introduction of new, postwar planes like the 8-passenger AN-2, the 30-passenger IL-12, and the 20-passenger IL-14, which replaced the fuel-inefficient IL-12. At this time the first helicopters were introduced on the Ukrainian routes: the MI-1 and the MI-4. Long-distance flights to Leningrad, Vladivostok, Murmansk, Alma-Ata, and elsewhere in Soviet Asia were begun. In 1958 a regular civilian helicopter service was introduced between Symferopil and Yalta.

In the 1960s air transport continued to develop in Ukraine. Another airport for Kiev was built near *Boryspil, and new air terminals were built in Odessa, Kharkiv, Zaporizhia, Ivano-Frankivske, Uzhhorod, and elsewhere. In the late 1960s and early 1970s a number of new liners were introduced in Ukraine: the TU-104 (for 70 passengers), the TU-114 (the intercity model for 220 passengers, the trans-Siberian model for 170, and the transcontinental model for 120), a second version of the AN-10 (for 100 passengers), the AN-24 (40 passengers), the TU-124 (68 passengers, and a different version with a first-class section of 44 seats for higher government officials and industrial directors), the TU-110 (a modification of the TU-104 and TU-134), and the YAK-40 (for 30 passengers). The AN-10, AN-24, and YAK-40 were built in

Note that republican and local flights are irregular.

Kiev, using the Ivchenko engine from Zaporizhia. Most new planes have jet engines, but a disproportionately large number of turboprops (IL-18 and AN-10) are still used. Besides the Mil helicopters, the larger Kamov helicopters are also used. At the end of the 1970s and the beginning of the 1980s the TU-104 jet was replaced by the 160-passenger TU-154. The 180-passenger IL-62, one of the largest long-range liners, is being gradually withdrawn from service because of several air accidents, the most recent in Moscow in July 1982. Plans have been made to introduce in the 1980s the short-range, 120-passenger YAK-42 and the 350-passenger airbus IL-86 (for travel to tourist resorts and for communications between large industrial centers).

Today all oblast capitals in Ukraine are linked by air routes that are part of the Soviet and the international air networks. Almost 40 percent of air traffic consists of flights within Ukraine. The international airports of Kiev, Odessa, and Lviv are linked with Belgrade, Warsaw, Bucharest, Prague, East Berlin, Vienna, Paris, Copenhagen, and other major world cities. Certain international routes that were used in the 1970s have been closed

down, however; for example, the Kiev-Zurich and Kiev-London routes. Of all the civil-aviation administrations in the USSR, Ukraine's has the largest number of routes and transports the largest number of passengers and cargo.

The Ukrainian Airline company (1923-31) merged in 1925 with the Transcaucasian civil-aviation company Zakavia and served not only Ukraine but all of Soviet Europe. In 1930 all Soviet civil aviation was centralized in the All-Union Alliance of the Civil Air Fleet, which in 1932 became the Chief Administration of the Civil Air Fleet (Aeroflot) of the Council of People's Commissars of the USSR. Since 1964 all civil aviation has been administered by the Ministry of Civil Aviation of the USSR, under which the Ukrainian Administration of Civil Aviation functions as a semi-autonomous agency. A special journal, *Kryl'ia Ukraïny*, is published in Russian for the employees of the Ukrainian administration.

Development of air transport in Ukraine (percentage of USSR in parentheses)

	1940	1960	1970	1979
Passenger volume (in million passengers/km)	14 (7.0)	675 (5.6)	7,950 (7.8)	13,354 (7.4)
Passengers carried (in thousands)	34 (8.5)	1,697 (10.6)	9,049 (12.7)	12,082 (12.7)
Cargo volume (in million t/km)	1 (4.3)	44 (7.8)	161 (8.6)	212 (7.7)
Cargo carried (in thousands of t)	4 (6.8)	63 (9.1)	181 (9.8)	212 (8.7)

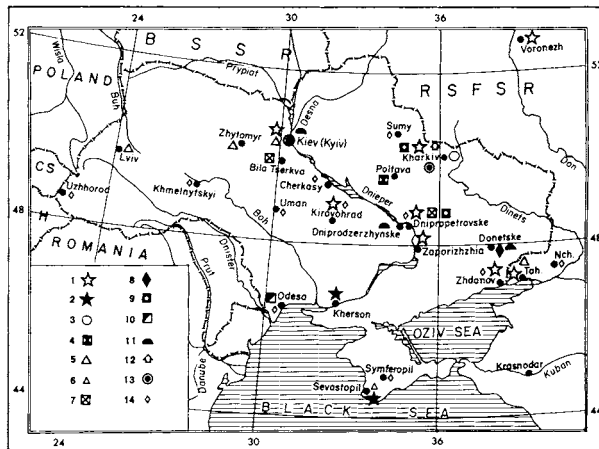

Aircraft industry. The origins of the aircraft industry in Ukraine date back to before the First World War. Just before the war A. Anatra, a wealthy banker, built an airplane plant near Odessa which produced Blériot-XI planes with Anzani engines. The large Third Kiev Aircraft Engine maintenance shops of the Russian army were located in Kiev. During the war these shops were housed in the Citadel Fortress in Pecherske. In 1916 about 2,000 workers were employed there. In 1916 the First Aircraft

Engine shops, which until then had been located in St Petersburg, were moved to Odessa. In 1923-4 all these shops were consolidated with the plant built by Anatra to form the Odessa Aircraft Plant. In 1925 planes for agricultural use, such as the Horbokonyk, began to be produced at the plant. The chief designer at the plant was V. Khioni.

In 1922 the former Third Aircraft Engine shops in Kiev were consolidated into the Rempovitria-6 aircraft plant under the directorship of V. Herasymenko. (He was later transferred to the People's Commissariat of Heavy Industry in Moscow.) In 1924 the κ-1 planes designed by K. Kalinin began to be produced there. In 1926 Kalinin's group was relocated to Kharkiv, where it set up large new aircraft shops of the Ukrainian Airline (Ukrpovitroshliakh) network. Shortly afterwards the shops were designated an experimental plant and began building the κ-2 and κ-3 planes. P. Riabchenko was director of the plant in 1926-36. In 1928-32 the plants began producing rescue (first-aid) and surveillance-cartographic aircraft. When new airports were constructed in Kiev (Brovary, 1933) and Kharkiv (Sokolnyky, 1934), the plant began to produce new and better planes (the κ-4 and κ-5 models) for civilian use.

In 1935-8 the government decided to transform the existing experimental plants into modern new plants that would also build military planes. Thus, the Kharkiv plant began to produce military transport planes of the Shch-2 model as early as 1940. In the late 1930s a plant for cargo airplanes was built in Zaporizhia and a plant for military airplanes in Tahanrih. Plane-assembly plants and repair plants were built in Odessa and Dnipropetrovske. The principal airplane-engine designers were S. Tumansky and A. Shvetsov. After K. Kalinin's transfer to Moscow, Y. Neman's design group, which included S. Zholkovskiy, L. Arson, and O. Bening, worked at the Kharkiv plant and produced the fast-flying KhA-1 and KhAI-5. These planes were produced in series. At the same time A. Liulka in Kharkiv designed the first turbojet engine in the USSR. At the Kiev plant the principal designers were K. Makovii and S. Horiunov.

During the Second World War the airplane plants in Ukraine were severely damaged or were disassembled by the retreating Soviet forces. In 1946-50 all the former airplane plants were rebuilt and modernized, and by the mid-1950s new planes began to roll off the assembly lines. O. Antonov's group designed planes for the Kiev plant. O. Ivchenko became the chief designer of the Zaporizhia aircraft-engine plant. The Kharkiv plant produced planes designed by A. Tupolev and A. Yakovlev (YAK-12). The Zaporizhia plant produced engines of the AI-20, AI-24, and AI-25 series. The Kiev plant produced the AN-2, AN-24, AN-26, AN-28, and AN-30 airplanes as well as the AN-10 (which was called 'Ukraine'), and the superplane AN-22 (Antei). The TU-104, TU-124, and TU-134 were produced at the Kharkiv plant, which in 1976-80, together with the Voronezh plant, was supposed to produce the supersonic plane TU-144. Both plants also began to produce helicopters designed by M. Mil and M. Kamov - MI-1, MI-3 and KA-18. There are plans to produce the AN-76 and YAK-42 at the Kiev plant and the IL-86 and IL-76 at the Kharkiv plant in the 1980s. The production of cargo planes and specialized planes is given precedence. Among military planes the emphasis is put on jet fighters with a speed of Mach 2 or higher.

AIRCRAFT INDUSTRY

1. Assembly plants for civil and military planes

At the end of the 1970s and the beginning of the 1980s the aircraft industry in Ukraine was reorganized, and huge production complexes were set up. The main ones are in Kiev and Kharkiv. These complexes encompass subdivisions of various plants and factories that specialize in the production of different parts, assemblies, and instruments used in airplane building. Some subdivisions of narrowly specialized plants are subcontracted to centers that produce military planes, for example, in Dniprovske, Zhdanov, Odessa, Kherson, and Kirovohrad.

The principal airplane subassemblies are produced as follows: parts of nickel-cobalt alloys, in Zhdanov; special parts of nickel or nickel alloys, in Kirovohrad; magnesium parts, in Uman; plastics for planes, in Donetsk; gyrostats, gyroscopes, and navigational devices, in Khmelnytskyi; cockpit instruments and telemechanical devices, in Sevastopol; electrotechnical parts, in Odessa; radio-technical communication devices, in Kiev, Lviv, and Zhytomyr; pneumatic pumps, in Sumy; aviological computers, in Kharkiv; automatic controls, in Symferopil and Dnipropetrovske; magnets, in Novocherkassk; semiconductors, in Odessa and Uzhhorod; remote-scanning devices, in Kharkiv; air-conditioning apparatus, in Odessa; optical instruments and radio-optical machines, in Dni-

propetrovske and Kharkiv; weaponry, in Kiev, Donetske, and Dniprodzerzhynske; turbomechanical assemblies, in Poltava; tires for planes, in Bila Tserkva. In many plants, particularly those that build precision instruments and automatic and telemechanical devices, there are special, autonomous shops with top-secret production programs and work regimes that supply only the plane-building plants of the civil and military sector. Most of these plants co-operate closely with the military airplane plants in Moscow, Kuibyshev, Ufa, Novosibirsk, and other centers of the USSR aircraft industry. The output of Ukraine's aircraft industry is large, but the figures remain unpublished.

Besides those mentioned above, the following prominent airplane designers work in Ukraine: A. Penkov, T. Bashta, V. Taranenko, V. Moskaliuk, L. Kerber, Yu. Vasylyv, Ya. Peiko, N. Martyniuk, E. Kuzmych, O. Bolbot, O. Biloshpetsky, V. Dominikovskiy, A. Baturumov, M. Trunchenkov, V. Yasko, D. Kushchak, M. Tiutiunyk, and others are specialists in airfleet management. Very many prominent Ukrainian designers work in the Soviet aircraft industry outside Ukraine.

Aiu-Dag [Aju-Dag] (Tatar: Bear Mountain). A mountain and promontory on the southern coast of the Crimea near the town of Hurzuf. Its altitude is 565 m. The mountain is a lacolith consisting of magma strata.

Ivan Aivazovsky, self-portrait (1873)

Naum Akhiezer

Aivazovsky, Ivan [Ajvazovs'kyj], also known as Hai-azovsky [Hajvazovs'kyj], b 29 July 1817 in Teodosiia, d 5 May 1900 in Teodosiia. Painter of seascapes. Aivazovsky was descended from a family of Galician Armenians who had settled in the Crimea. He obtained his artistic education at the St Petersburg Academy of Arts, becoming an academician in 1845 and an honorary member of the academy in 1887 (he was also a member of four other academies). In 1845 Aivazovsky settled in Teodosiia. A

member of the *Society of South Russian Artists, he exhibited his work in Odessa, Kiev, Kharkiv, Mykolaiv, and elsewhere. Aivazovsky produced some 6,000 paintings, depicting mainly scenes on the Black Sea and turbulent seascapes, including *The Ninth Wave*, *Black Sea*, *Amid the Waves*, *Universal Flood*, and *Storm on the Black Sea*. He also painted sea battles and Ukrainian landscapes. During his student years Aivazovsky often traveled in Ukraine with V. Shternberg. Among his paintings depicting Ukrainian scenes are the following: *Chumak Caravan*, *Reed-Bank on the Dnieper near the Town of Oleshia*, *Ukrainian Landscape*, *Mill on a Riverbank, Ukraine*, and *Wedding in Ukraine*. In 1880 Aivazovsky established an artists' studio and picture gallery in Teodosiia, which he donated later to the city. The Aivazovsky Teodosiia Picture Gallery houses some 400 of his works, as well as paintings by Crimean seascape artists and a small collection of seascapes by Western artists. A study on Aivazovsky by N. Barsamov was published in Moscow in 1967.

Aizenshtok, Yarema [Ajzenštok, Jarema], b 4 March 1900 in Yelysavethrad (now Kirovohrad), d 7 June 1980 in Leningrad. Literary scholar specializing in 19th-century Ukrainian literature. Aizenshtok graduated from the University of Kharkiv in 1921 and lectured in Kharkiv's institutions of higher learning. He devoted much time to the publication of T. Shevchenko's works, especially his *Shchodennyk* (Diary, 1925). He also published *Shevchenko-znavstvo – suchasna problema* (Shevchenko Scholarship – A Contemporary Problem, 1922) and *Iak pratsiuvav Shevchenko* (How Shevchenko Worked, 1940). A series of works by I. Kotliarevsky, H. Kvitka-Osnovianenko, Ya. Shchoholiv, M. Kotsiubynsky, and others was published under his editorship and with his commentaries. Aizenshtok's articles on 19th-century Ukrainian literature appeared in the journal *Za sto lit* (1927-30), a collection of essays published by the All-Ukrainian Academy of Sciences, and in *Zapysky Istorychno-filolohichnoho viddilu vUAN* (1919-31). When the persecution of individuals promoting Ukrainian culture began in Ukraine in the early 1930s, Aizenshtok moved to Leningrad, where, without abandoning his work in Ukrainian literature, he concentrated primarily on research in 19th-century Russian literature.

Akerovych, Petro [Akerovyč]. Metropolitan of Kiev from 1241 to 1245, descendant of a boyar family. Akerovych participated in the synod in Lyons in 1245, where he informed the Catholic West of the Tatar threat. He was hegumen of the Monastery of the Transfiguration in the Berestiv district of Kiev (mentioned in texts as early as 1172) and was employed by Prince Mykhailo Vsevolodovych of Chernihiv in diplomatic service. Nothing is known of Akerovych past the year 1245.

Akhiiezer, Naum [Axijezer], b 6 March 1901 in Cherykau, Belorussia. Mathematician, corresponding member of the Academy of Sciences of the Ukrainian SSR.

Akhiezer graduated from the Kiev Institute of Public Education in 1924 and then taught at the institute. In 1933 he joined the staff of Kharkiv University. He was elected president of the Kharkiv Mathematics Society. His works deal with the theory of functions.

Akhiezer, Oleksander [Axijezer], b 31 October 1911 in Cherykau, Belorussia. Physicist, full member of the Academy of Sciences of the Ukrainian SSR since 1964. In 1934 he graduated from the Kiev Polytechnical Institute. In 1938 Akhiezer was appointed a department chairman of the Kharkiv Physical-Technical Institute of the Academy of Sciences of the Ukrainian SSR. His works deal with such topics as nuclear physics, electrodynamics, kinetics, and the theory of solids. He is a founder of a school of theoretical physics.

Akimenko, Fedir. See Yakymenko, Fedir.

Akkerman. See Bilhorod-Dnistrovskiy.

Ak-Mechet. See Chornomorske.

Ak-Mechet burial site. A Scythian burial site of the 5th–4th century BC near Ak-Mechet (now Chornomorske) in the Crimea. Excavations, which began in 1885, uncovered a Scythian warrior buried in a stone tomb that contained gold ornaments engraved with animal motifs, arrowheads, and other objects.

Akordy (Chords). An anthology of Ukrainian lyric poetry since T. Shevchenko's death. Published in 1903 in Lviv and edited by I. Franko, with art work by Yu. Pankevych, it contains the works of 88 poets from eastern and Western Ukraine.

Aksenov, Aleksandr, b 13 October 1929 in Krotovo, Novosibirsk oblast, Russia. Scientist specializing in the study of materials, Soviet civil servant, corresponding member of the Academy of Sciences of the Ukrainian SSR. Aksenov graduated from the Kiev Institute of Civil Aviation Engineering, where he later taught. He became the institute's rector in 1975. From 1970 to 1975 he was deputy minister of civil aviation for the USSR. He has written studies on friction and the resistance of metals to fatigue.

Aksenteva, Zinaida [Aksent'eva, Zinajida], b 25 July 1900 in Odessa, d 8 April 1969 in Poltava. Geophysicist, corresponding member of the Academy of Sciences of the Ukrainian SSR from 1951. In 1951–69 Aksenteva served as director of the Poltava Gravimetric Observatory of the Academy of Sciences of the Ukrainian SSR, where she conducted long-term observations of gravitational oscillation. She took part in the gravimetric survey of Ukraine's territory.

Akta grodzkie i ziemskie (City and Land Acts). Collection of historical documents and materials from the Lviv archives of the Bernardines, published from 1868 to 1935 in 25 volumes. It is a valuable source for the study of the social and legal history of Western Ukrainian lands under Poland since the 14th century.

Aktovi knyhy. See Acts, Books of.

Akty, odnosiaschchiesia k istorii Iuzhnoi i Zapadnoi Rossii (Documents on the History of Southern and Western Russia). Collected and published by the Archeographic Commission in 15 volumes in St Petersburg, 1863–92. This collection of documentary materials pertains mostly to the history of Ukraine and to some extent Belorussia in the 13th–17th century (up to 1678). M. Kostomarov edited volumes 1–9 and 11–13 and G. Karpov edited volumes 10, 14, and 15. The documents were selected from the archives of the ministries of foreign affairs and justice (Dela Malorossiiskogo Prizakaza) in Moscow as well as from the *Lithuanian Register.

Akty, odnosiaschchiesia k istorii Zapadnoi Rossii (Documents on the History of Western Russia). A collection of documents on the history of Ukraine, Belorussia, Lithuania, and, partly, Muscovy for the period 1340–1699 but mostly for the 16th to 17th century that was collected and published by the Archeographic Commission in St Petersburg in 5 volumes (1846–53). The materials were selected from Ukrainian, Belorussian, and Lithuanian archives and libraries and were transferred to Russia. I. Grigorovich was the editor of the first four volumes.

Alans (also known as Alani). A nomadic, Iranian-speaking *Sarmatian tribe that in the 1st century AD inhabited the lands north of the Black Sea between the Urals and the lower Dnieper River and raised livestock. In the 4th century the Alans joined their conquerors, the *Huns, in their invasion of Europe. In the 7th century they came under the control of the *Khazars. The Alans were the ancestors of the Ossetes living in Caucasia. In the ancient chronicles they were known as Yasi.

Albanians. A people numbering 3.8 million in 1980, most of whom live in Albania. There are significant Albanian minorities in Yugoslavia, Greece, Italy, Rumania, Bulgaria, and southern Ukraine. At the beginning of the 19th century the descendants of the Orthodox Albanians who fled to Dobrudja from southern Albania to avoid forced Turkish conversion to Islam settled in southern Bessarabia. They established the village of Karakurt (today Zhovtneve), now in Bolhrad raion of Odessa oblast. In 1862 some Albanians settled along the coast of the Sea of Azov and founded three villages – Divnynske, Hamivka, and Heorhiivka – in Tavriia gubernia (now in Pryozivske raion, Zaporizhia oblast). Today there are about 5,000 Albanians in the Ukrainian SSR; in 1960, 75 percent of them still knew their mother tongue.

Alberta. One of the three Prairie provinces in Canada, in which the first colony of Ukrainians in the Edna-Star (Beaver Creek) district, east of Edmonton, was located in 1892. Today Alberta contains the largest Ukrainian bloc settlement in Canada, on both banks of the North Saskatchewan River. In 1971 the population of Ukrainian origin was 135,515 (8.3 percent), third in size after the British (761,665 [46.7 percent]) and the German (231,005 [14.19 percent]). The population of Ukrainian origin in the major centres is: *Edmonton, 62,655 or 12.6 percent; Calgary, 15,850 or 3.9 percent; Lethbridge, 2,020 or 4.9 percent; and Red Deer, 1,090 or 4.0 percent. Towns with high concentrations of population of Ukrainian origin include Vegreville (1,900 or 51.5 percent), Two Hills (925

of 74 percent), and Smoky Lake (670 or 76 percent). The Ukrainian Cultural Heritage Village, with its buildings and artifacts of Ukrainian life in Alberta prior to the 1920s, is 25 miles east of Edmonton.

Alchevska, Khrystia [Alčevs'ka, Xrystja], b 16 March 1882 in Kharkiv, d 27 October 1931. Poet, translator, and teacher, daughter of O. and Khrystyna Alchevsky. Alchevska completed her higher education in Paris in 1903 and taught French at the Kharkiv women's gymnasium. During the 1920s she was a member of the Ukrainian Society of Playwrights and Composers. She began her literary career in 1903 and published poems in the newspaper *Ridnyi kraj*, in *Literaturno-naukovyi visnyk*, and in *Ukrains'ka khata*. Alchevska was accused of nationalism by Soviet critics for her collections of lyric poems with patriotic themes – *Tuha za sontsem* (Longing for the Sun, 1907), *Sontse z-za khmar* (Sun from behind the Clouds, 1910), *Vyshnevyyi tsvit* (Cherry Blossoms, 1912), *Pisni sertsia i prostoriu* (Songs of the Heart and Open Spaces, 1914), and *Probudzhennia* (Awakening, 1917) – and for the dramatic poem *Luiza Michel* (1930). She translated works by P.J. Béranger, V. Hugo, J. Verne, and L. Tolstoy.

Khrystia Alchevska

Khrystyna Alchevska

Alchevska, Khrystyna [Alčevs'ka, Xrystyna], b 16 April 1841 in Borzna, Chernihiv gubernia, d 15 August 1920 in Kharkiv. Eminent pedagogue and organizer of Sunday schools, wife of O. *Alchevsky, mother of the poet Khrystia Alchevska, the composer H. Alchevsky, and the singer I. Alchevsky. She lived and worked in Kharkiv. Beginning in 1862, she maintained the Women's Sunday School (officially accredited in 1870) at her own expense. The school remained in existence some 50 years and was known for its highly developed methods of adult education. (B. Hrinchenko taught at the school as a young man.) In collaboration with the teaching staff, Alchevska compiled a methodological and bibliographical guide, *Chto chitat' narodu* (What the People Should Read, 3 vols, 1888–1906), which was awarded the grand prize at the Paris International Exhibition, and a teaching manual, *Kniga vzroslykh* (Book for Adults, 1899–1900). She also wrote a book of memoirs, *Peredumannoie i perezhitoe* (My Thoughts and Experiences, 1912), and numerous methodological articles on adult education. In the 1860s Alchevska's articles appeared in A. Herzen's journal *Kolokol*, under the pseudonym *Ukrainka*. A monograph by O. Mazurkevych on the educational work of Alchevska and her colleagues was published in Kiev in 1963.

Alchevsky, Hryhorii [Alčevs'kyj, Hryhorij], b 1866 in Kharkiv, d 1920 in Moscow. Son of O. and Khrystyna Alchevsky, voice and piano teacher, singer, and composer. Alchevsky graduated from the Moscow Conservatory of Music and wrote several textbooks for vocalists. He composed the symphony *Al'osha Popovykh* (1907), arrangements of Ukrainian and Russian folk songs, and a series of solo pieces to the words of T. Shevchenko, I. Franko, Lesia Ukrainka, and Khrystia Alchevska.

Ivan Alchevsky

Alchevsky, Ivan [Alčevs'kyj], b 15 December 1876 in Kharkiv, d 10 May 1917 in Baku, Azerbaidzham. Distinguished opera singer, son of O. and Khrystyna Alchevsky. Alchevsky was soloist with the Mariinsky Opera Theater in St Petersburg (1901–5), the Paris Opera (1908–10), and the Bolshoi Opera Theater in Moscow (1910–14). He performed in Odessa, Katerynoslav, Kharkiv, Baku, and in West European and American cities. Together with M. Donets, he organized, in 1909, and directed, until 1914, the musical and dramatic ensemble *Kobzar* in Moscow. When the Ukrainian opera theater performed in Moscow, Alchevsky sang the role of Petro in the production of M. Lysenko's *Natalka Poltavka*. In 1915 he succeeded in staging P. Hulak-Artemovskiy's *Zaporozhets' za Dunaieiu* (Zaporozhian Cossack beyond the Danube) at the Bolshoi Opera Theater. In 1916 he staged the same opera at the Odessa Opera, both times performing the role of Andrii. Alchevsky's European and American concerts, in which he promoted Ukrainian composers, especially M. Lysenko and Ya. Stepovy, were a great success. Reminiscences about Alchevsky, his correspondence, and other materials were published in a book edited by I. Lysenko and K. Myloslavsky (Kiev 1980).

Alchevsky, Oleksii [Alčevs'kyj, Oleksij], b 1835 in Sumy; d 1901 in Kharkiv. Mining engineer, industrialist, and banker, husband of Khrystyna Alchevska, and father of the composer H. Alchevsky, the singer I. Alchevsky, and the poet Khrystia Alchevska. Alchevsky owned the Kharkiv Southern Russia Commercial Bank and financed a number of coal-mining and metallurgical firms in the Donbas, including the Donetsko-Yuriivskiy metallurgical plant, today the metallurgical plant in Komunarske. Alchevsky committed suicide after being refused a government loan to save his bank and firms, which had gone into a slump following the Russian monetary reform of 1897.

Alcohol consumption and alcoholism. Beverages of low alcoholic content, such as beer, mead, kvass, and, to a lesser extent, wine have been consumed in Ukraine since the early Slavic period (before the 8th century AD). Wine was introduced by the Goths; however, until recent times it was an expensive import that could be afforded only by the upper classes. Whiskey (*horilka*) came to Ukraine from Western Europe and began to acquire popularity from the end of the 14th century. In the 16th century *braha* – a weak alcoholic beverage made from barley and rye and invented by the Chuvashes – was brought to Ukraine via Muscovy and Belorussia.

The concept of a public drinking place (*korchma*) appears to have already existed in the early Slavic period. Drinking was so much part of Rus' popular culture that Prince Volodymyr I the Great cited this as the reason he rejected the Volga Bulgars' invitation in 986 to accept Islam, which prohibits alcohol. During the Princely and early Polish-Lithuanian periods alcoholic beverages were produced at home to serve the family's own needs. At the end of the 15th century beer brewing began to assume commercial forms and passed into the hands of specialized guilds, which were granted concessions by the king. The manufacture and sale of whiskey was a privilege reserved for the gentry and sometimes burghers, who usually leased their taverns to Jews (see *Propination). After the establishment of the Cossack state in 1648, Cossack officers took over from the gentry and Jews the right to keep taverns.

In the 17th–18th century the Zaporozhian Cossacks and seminarians (known as beer-guzzlers [*pyvorizyl*]) enjoyed a reputation as heavy drinkers. West European writers of the 17th century, such as G. de Beauplan and A. Vimina, noted that the Cossacks drank heavily in peacetime but abstained from alcohol in wartime. S. Collins, an Englishman who visited Ukraine between 1659 and 1666, commented on the widespread drinking among all classes of the population. A directive of the Little Russian College on the whiskey industry issued in 1764 speaks about the 'unparalleled drunkenness' that prevailed among the common people of the Hetman state, destroying their 'incentive to work' and causing 'premature' death. O. Shafonsky in 1787 and V. Passek in 1839 testified that among the common people of eastern Ukraine even juveniles drank whiskey. Yet, 'wild drinking' (as I. Pryzhov described it), a practice among the masses in Russia, was not common in Ukraine. In the 1840s drinking took on a humorous, organized form among the nobility of Left-Bank Ukraine, who set up the society *Mochemordy. Members of the society were forbidden to drink ordinary whiskey and could drink only homemade liqueurs. The abolition of serfdom in 1861 led to a decline in alcohol consumption among the peasants of eastern Ukraine.

The situation in Right-Bank Ukraine and Galicia was different. Here, after the partition of Poland and the abolition of serfdom (1848 in Galicia, 1861 in Right-Bank Ukraine), the Polish gentry retained the right of propination. In Galicia, for example, the peasants had to accept a certain ration of whiskey from the landlord as payment for their labor. The suppression of the Uniate church in Right-Bank Ukraine by the Russian government in 1839 led to a rise in alcoholism among the people, because the Orthodox church could not mount as energetic a campaign against drunkenness as could the Catholic church

(according to V. Dmitriev's data). As a result, by about 1860 Right-Bank Ukraine had the highest alcohol consumption in the Russian Empire: 80 units per capita per year as compared to 75 in the former Hetman state, 50 in Lithuania and Belorussia, 37 in the Don Cossack oblast, 23 in Russia proper, and 21 in Siberia. After the Polish uprising in 1863–4 the Russian government limited the right of the Poles to sell liquor in Right-Bank Ukraine to cities and towns (1864, 1866, 1877) and then in 1896 established its own monopoly on liquor sales throughout the empire. Again this led to increasing alcoholism among the peasants, as state liquor shops (*monopolky*), stocked with whiskey, usually with an alcohol content of 45 percent, appeared in almost every village. Reports from the local authorities in Chernihiv, Kiev, Poltava, Kerch, etc show that public drunkenness increased. Beer consumption in Russian-ruled Ukraine was higher (0.35 bucket per capita [1 bucket or *vidro* = 12.3 L]) than the average for the empire (0.20).

In Galicia, after the abolition of serfdom, the Polish gentry could no longer force the peasants to buy whiskey, but it retained ownership of the taverns. In 1876 there were 23,264 taverns in Galicia, or 1 per 233 inhabitants. The per-capita whiskey consumption was 26 L, and 54 million gulden were spent on alcohol annually. In spite of the *temperance movement, in 1900–8 the Ukrainian population of Galicia still spent 20 million kronen (8.4 million gulden) per year on alcohol.

In 1919–39 the Polish government pursued a monopolistic liquor policy in Western Ukraine similar to that of the Russian government. Owing to the Ukrainian temperance movement, Ukrainians consumed much less liquor than the Poles; however, the consumption of beer was substantial, as is evident from the accompanying table.

During the Second World War a particularly demoralizing policy was introduced in the Ukrainian territories under the German occupation: peasants were compensated with whiskey for their compulsory deliveries of food products.

The Soviet government continued the traditional Russian state monopoly on liquor. The population circumvented this form of exploitation by moonshining. In 1950–60 alcohol consumption in the Ukrainian SSR doubled, and by 1966 it had risen by another 50 percent. By 1970 it was three times as high as in 1949. Between 1959 and 1967 the number of registered alcoholics increased fivefold. According to statistics for 1970, 20 percent of patients in psychoneurological institutions in Ukraine and 46 percent of the mentally ill found in villages were alcoholics. Treatment for alcoholism is not very effective: only 25 percent of the patients are permanently cured. Fatal accidents are frequently attributable to alcoholism: in 1967, 48.4 percent of fatal poisonings in cities and 49.2 percent of such poisonings in villages were the result of drinking. By 1968 these figures had increased to 56.0 and 52.2 percent. Workers comprise the largest percentage of chronic alcoholics (46.4 percent), followed by the unemployed (18.7 percent). In the Russian SFSR the problem of alcoholism is even more acute than in Ukraine.

Alcoholism in the Ukrainian SSR can be attributed to such factors as the lack of opportunity, demoralization, disillusionment with professed ideals, the suppression of self-expression, the impossibility of free participation in public life, and the unattainability of material goods and enjoyments.

Consumption of alcohol (A) and beer (B) in Poland, Western Ukraine, and Western Belorussia (t. per capita)

Alder (*Alnus*; Ukrainian: *vilkha*). A genus of deciduous trees or shrubs of the birch or Betulaceae family that have dark-green leaves and conelike seeds. The black or European alder (*Alnus glutinosa*), which attains a height of 25 m, is the most common species in Ukraine. The gray alder (*A. incana*) grows in the Carpathian Mountains and attains a height of 10 m. Alder wood is soft and reddens on contact with air. It is used for underwater construction, furniture, and veneer. The bark is used in tanning and paint-making. The tree grows in moist soil, particularly in Polisia, where it forms whole groves. The European green alder (*A. viridis*), which has small leaves similar to birch leaves and which attains a height of 2 m, grows in the subalpine belt together with the mountain pine.

Aldridge, Ira Frederick, b 1805 in New York City or Belair, Maryland, d 10 August 1867 in Łódź, Poland. Negro tragedian. In the 1820s Aldridge acted in amateur theaters in New York. After emigrating to England, he made a highly successful debut on the London stage in 1826 in the role of Othello. In the 1850s he performed mostly in Europe and won high acclaim, particularly in Russia. Aldridge's first performance in St Petersburg on 10 November 1858 in the role of Othello was witnessed by T. Shevchenko. Shevchenko and Aldridge became friends. Shevchenko admired the actor's talent and attended all his performances in the capital. He sketched a portrait of Aldridge in 1858. In 1861–6 Aldridge toured several cities in Ukraine – Kiev, Kharkiv, Odessa, Zhytomyr, and Yelysavethrad – and became acquainted with a number of prominent Ukrainians.

Aleksandrenko, Hlib, b 1 January 1899 in St Petersburg, d 22 January 1963. Jurist, son of V. Aleksandrenko. Aleksandrenko taught at various higher schools in Ukraine. From 1957 he worked in the state and law section of the Academy of Sciences of the Ukrainian SSR. He wrote several works on federalism and comparative law, including *Marksyzm-Leninizm pro derzhavnu federatsiiu* (Marxism-Leninism on State Federation, Kiev 1960) and *Burzhuaznyi federalizm* (Bourgeois Federalism, Kiev 1962).

Aleksandrenko, Vasyl, b 11 February 1861 in Nizhen, d 1909. Professor of international law at Warsaw University. Aleksandrenko published works on the history of English institutions and on Russian diplomatic history of the 18th and 19th centuries, as well as a collection of documents from foreign archives on Ukrainian political émigrés after the Battle of Poltava (published in *Sbornik Kievskoi komissii dlia razbora drevnikh aktov*, 1916).

'**Aleksandriia**' (also 'Oleksandriia'). Alexander romances – legends and myths about the life of Alexander the Great of Macedonia. The Alexander romances are among the most widespread epics in world literature and have appeared in more than 30 languages. In Kievan Rus' a translation of a later Greek version of the 2nd-century folk epic – the pseudo-Callisthenes – appeared in the 11th century and became a part of various Rus' narratives. In the 13th century the 'Aleksandriia' was modified with Christian elements. In the 15th–16th century a Serbian redaction of the romance, with an emphasis on the fantastic elements, reached Ukraine. Later, a Croatian redaction of an Italian version appeared but was not widely known. The 'Aleksandriia' had a considerable influence on the description of military events in Old Ukrainian literature and on folk epics. The texts of the romances were published by V. Istrin in *Aleksandriia russkikh khronografov* (The Aleksandriia of Rus' Chronographers, 1893) and by S. Haievsky in *'Aleksandriia' v davnii ukrains'kii literaturi* (The 'Aleksandriia' in Old Ukrainian Literature, 1929).

Aleksandrov, Ivan, b 1 September 1875 in Moscow, d 2 May 1936 in Moscow. Russian scientist, specialist in energetics and hydrotechnology, full member of the USSR academy of sciences. Aleksandrov designed the plans for

and supervised the construction of the *Dnieper Hydroelectric Station.

Aleksandrov, Stepan, b 1790s, d mid-1800s. Poet, father of V. *Aleksandrov, and village priest in the Kharkiv region. Aleksandrov wrote the poem 'Vovkulaka' (The Werewolf, 1848), in which he imitated the humor and parody of I. Kotliarevsky and P. Hulak-Artemovsky and made use of ethnographic and folkloric material and wedding and religious songs.

Volodymyr Aleksandrov

Aleksandrov, Volodymyr, b 2 July 1825 in the village of Buhaivka, Kharkiv gubernia, d 1 October 1894 in Kharkiv. Poet, playwright, translator, and ethnographer. Aleksandrov studied medicine at Kharkiv University and, after graduating in 1853, became an army doctor. In 1861 he began publishing poems in the journal *Osnova*, the almanac *Skladka*, the Galician *Zoria*, and other journals. He published *Narodnyi pisennyk z naikrashchykh ukrains'kykh pisen'* (A Folk Songbook of the Best Ukrainian songs, 1887), and the tales 'Ivashechko' (Little Ivas), 'Chyzykove vesillia' (The Finch's Wedding), and 'Kozadereza' (Billy Goat's Bluff). His operettas, *Za Neman' idu* (Beyond the Neman I Go, 1872) and *Ne khody, Hrytsiu, na vechornytsi* (Don't Go to Parties, Hryts! 1873), are well known from M. Starytsky's reworkings. Aleksandrov also translated works by H. Heine, A. Mickiewicz, M. Lermontov, and others.

Aleksandrovsky, Hryhorii [Aleksandrovskiy, Hryhorij], b 1873, d 1936? A literary scholar, professor at the school Higher Courses for Women in Kiev and later at the Lysenko Music and Drama School. From 1917 to 1919 Aleksandrovsky worked in the Ministry of Education. He contributed to the newspapers *Rada* and *Nova rada* and wrote studies of the Ukrainian theater of 1917–19.

Aleksandrovych, Mytrofan [Aleksandrovych] (pseud Mytro Olelkovych), b ca 1840 in the village of Kalyta, Chernihiv gubernia, d 1881 by suicide. Aleksandrovych was the author of ethnographic tales published in *Osnova* and separately in 1895 in *Ukrains'ki pysannia* (Ukrainian Writings), edited by I. Franko. He also wrote articles on Chernihiv gubernia and left an unfinished historical work on Oster county (1881).

Alekseev, Evgenii, b 10 October 1869, d 18 October 1930. Forestry specialist. Alekseev graduated from the Forestry Institute in St Petersburg. In 1914 he began to

work in Ukraine as a forest manager of the Kiev forest district. In 1923 he was appointed professor and dean of the faculty of forest engineering at the Kiev Polytechnical Institute. Alekseev was responsible for the establishment of the *Bilovezha Forest reserve. He did research on the types of forest found in Ukraine. Among his published works are *Typy ukrains'koho lisu* (Types of Ukrainian Forests, 1928), *Pro osnovni poniattia lisivnyts'koi typolohii* (The Basic Concepts of Forest Typology, 1927), and the textbook *Lesovodstvo* (Forestry, 1929).

Aleksiienko, Mykhailo [Aleksijenko, Myxajlo], b 1847 in Katerynoslav, d 1917. Lawyer and financial expert. Aleksiienko studied at Kharkiv University and abroad and in 1879 became professor of finance law and later rector of Kharkiv University. He was also active in the Katerynoslav zemstvo and was a deputy to the Third Russian State Duma (1907). Aleksiienko published works on taxation and credit: *Vzgliad na rozvittie ucheniia o naloge u Smita, Zh. B. Seia, Rikardo, Sismondi i D. S. Milla* (A Look at the Development of the Theory of Taxation in Smith, J.B. Say, Ricardo, Sismondi, and J.S. Mill, 1870), *Gosudarstvennyi kredit* (State Credit, 1872), *Podokhodnyi nalog i uslovii ego primeneniia* (Income Tax and the Conditions of Its Application, 1885), and others.

Aleksiiv, Mykola [Aleksijiv], b 19 March 1894 in Kiev, d 2 February 1934 in Leningrad. Graphic artist. Aleksiiv studied at the Kiev Art School under F. Krychevsky (1912–17); he was a master of book art and bookplates, a follower of Yu. Narbut. In 1917–18 he designed bank notes for the UNR and produced several designs for playing cards. In the 1920s he executed illustrations and cover designs for such Kiev publications as M. Rylsky's *Synia dalechin'* (The Blue Distance, 1922), the selected works of I. Franko (1925), Yu. Yanovsky's *Krov zemli* (Blood of the Earth, 1927), the works of Lesia Ukrainka (12 vols, 1926–31), and N. Gogol's *Mertvyje dushi* (Dead Souls, 1934).

Aleksinsky, Grigorii [Aleksinskij, Grigorij], b 16 September 1879 in Khunzakh, northern Caucasia, d 4 October 1967 in Paris. Russian Social Democrat, member of the Second Russian State Duma from 1907. Aleksinsky wrote articles on economics for the Ukrainian journals *Dzvin* (eg, 'Khutora ta odruby na Ukraini' [Farmsteads and Private Plots in Ukraine]) and *Literaturno-naukovyj vistykn* (eg, 'Selians'kyi bank na Kyivshchyni' [The Peasant Bank in the Kiev Region]). During the First World War he opposed the activity of the *Union for the Liberation of Ukraine. In 1919 he emigrated to Paris. In 1953 Aleksinsky became editor of the Russian émigré newspaper *Osvobozhdenie*, in which he supported the principle of independence for the oppressed peoples in the USSR, particularly the Ukrainians. He translated I. Bahriany's novel *Sad Hetsymans'kyi* (The Garden of Gethsemane) into French.

Alepsyk, Pavlo. See Paul of Aleppo.

Aleshko, Vasyl [Aleško], b January 1889 in Sumy, d? Poet and prose writer. Aleshko worked during the 1920s as a junior agronomist and on the editorial board of the newspaper *Pluh i molot* in Sumy. He was a member of the literary organization Pluh. He is the author of the poetry collections *Hromodar* (The Thunder's Gift, 1920), *Poezii*

(Poems, 2 vols, 1920), and *Stepy tsvitut'* (The Steppes Are Flowering, 1928); the anthologies of humor *Bozhestvenni repiakhny* (Divine Burdocks, 1925), *Ternytsia* (The Bramble Bush, 1925), and *Kyslytsi* (Crab Apples, 1927); and the story collections *Khlib* (Bread, 1930), *Motornyi* (The Lively Fellow, 1931) and *U boiakh za bavovnyk* (In Battles for the Cotton Shrub, 1934). He also wrote the play *Pozhar* (The Fire, 1935). Aleshko disappeared during the Stalin Terror.

Alexander I, b 23 December 1777, d 1 December 1825 in Tahanrih. Russian emperor in 1801–25, son and successor of *Paul I. In the first part of his reign Alexander introduced a number of liberal reforms as a result of the influence of the Enlightenment and of his friends and advisers, among whom were a number of Ukrainians (V. Kochubei, M. Speransky, V. *Karazyn, and others). He established government ministries and the Committee of Ministers in 1802, permitted non-nobles to purchase uninhabited lands in 1801, and issued an ukase on 'free farmers' in 1803. But a decade of exhausting wars with France, Sweden, Great Britain, and Turkey, and particularly the so-called Patriotic War with France in 1812, followed by the European campaigns of 1813–14 and the developing liberal-revolutionary movement within and outside the Russian Empire, turned Alexander towards a despotic, reactionary policy. On the international scene he supported the reactionary forces in Europe (Congress of Vienna, 1814–15), while at home he introduced the so-called *military settlements, particularly in Ukraine, prohibited *Freemasonry in 1822, and introduced reactionary cultural and educational policies.

Alexander's policy towards the non-Russian peoples of his empire adhered to traditional Russian imperialism and centralism. Ukraine's autonomy was increasingly restricted, and its distinctive features were increasingly eradicated: the *Little Russia gubernia was abolished, and the former territory of the Hetman state was divided into two gubernias – Chernihiv and Poltava – although both were governed by the same military governor; elective judicial and administrative offices for the nobles were abolished in 1802; education was Russified (the *Kievan Mohyla Academy was turned into a theological academy); Right-Bank Ukraine was regarded as a Polish land and was tied economically and administratively to the Polish Kingdom, which, through a personal union, became part of the Russian Empire. The Russian wars and conquests (Georgia, Finland, Bessarabia, Azerbaidzhan) drained Ukraine's population and economic resources. The harm that Alexander's policies inflicted on the Ukrainian people could not be compensated for by such favorable measures as permission of transit trade with Western Europe, the opening of the free port of Odessa, the founding of Kharkiv University and the lyceums of Nizhen and Odessa, and the restoration of Magdeburg law to Kiev. The policies of Russian centralism provoked a natural reaction in Ukraine. National consciousness began to rise and found expression in the activities of individual patriots (**Istoriia Rusov*), of sociocultural groups, such as the Masons, and of illegal political organizations, such as the *Little Russian Secret Society. Peasant unrest and revolts in the military settlements, as well as the growth of the liberal-revolutionary movement (the *Decembrist and Polish independence movements), led to a very tense political atmosphere. The effects of the

suppressed tensions became evident soon after Alexander's death, during the reign of *Nicholas I.

O. Ohloblyn

Alexander II, b 29 April 1818, d 13 March 1881 in St Petersburg. Russian emperor in 1855–81, son and successor of *Nicholas I. Alexander's reign began under difficult conditions: Russia's defeat in the *Crimean War, a crisis in the system of *serfdom, increasing peasant unrest, and social conflict. This forced Alexander to attend to important reforms: the emancipation of the peasants (1861), the introduction of limited self-government by the *zemstvos and partial westernization of the court system (1864), the overhauling of municipal government (1870), and the introduction of universal military training (1874). Alexander's foreign policy was based on an alliance with Prussia and Austria-Hungary and continued Nicholas I's policy of eastward expansion (the Russo-Turkish Wars of 1877–8, the conquest of Caucasia in 1864 and of Central Asia in 1865–76). After suppressing the Polish insurrection of 1863–4, the Russian government took decisive steps to eradicate Polish autonomy and influence and the power of the Catholic church in Right-Bank Ukraine, Belorussia, and Lithuania.

During Alexander's reign the Russification of Ukrainian culture and the suppression of the Ukrainian national movement intensified. In 1863 the Valuev circular declared that 'there was not, is not, and cannot be a Ukrainian language' and restricted Ukrainian publications. The Ukrainian Catholic church in the Kholm region and Podlachia was abolished in 1875. The *Ems Ukase of 1876 prohibited the Ukrainian printed word and theater. The growth of radical *populism, particularly in Ukraine, provoked government repressions, which in turn escalated antigovernment terrorism. Faced with this situation, the government prepared administrative and constitutional reforms that aroused hopes among Ukrainian liberal circles. But Alexander's assassination in St Petersburg by Narodnaia Volia revolutionaries put an end to these projects and hopes.

O. Ohloblyn

Alexander III, b 10 March 1845, d 1 November 1894 in the Crimea. Russian emperor in 1881–94, son and successor of *Alexander II. Alexander set himself as his main task the preservation and strengthening of the autocratic control of all areas of life under the Russian Empire, using increased police repression, censorship, religious persecution, and Russification. At the beginning of the 1880s Alexander III was forced by the circumstances that led to the assassination of his father to make minor concessions in favor of the peasantry. He abolished the poll tax and lowered the payments for land. However, it was not long before he began to restrict the liberal reforms of the 1860s–1870s, particularly those pertaining to the court system, zemstvos, municipal government, public education, and the universities. Bureaus for zemstvo affairs, comprised of governors and nobles, were introduced and granted wide powers over the peasantry. The Nobles' Land Bank was established to promote land ownership by the nobility. Alexander's foreign policy aimed at safeguarding Russia's position in Europe (through an alliance with France), in the Balkans (attempts at making Bulgaria a Russian satellite), in Central Asia, and in the Far East without disruptive conflicts and wars. Alexander III

continued his father's anti-Ukrainian policy, based on the *Ems Ukase.

O. Ohloblyn

Alexander Jagiellończyk, b 5 August 1461 in Cracow, d 19 August 1506 in Vilnius. Son of King Casimir IV Jagiellończyk of Poland; grand duke of Lithuania (1492–1506), and Polish king (1501–6). During Alexander's reign Ivan III of Muscovy and the Crimean Tatars encroached on the Ukrainian territories belonging to Lithuania. In 1490–1500 Muscovy invaded and took control of the lands of Chernihiv and Novhorod-Siverskyi. In 1499 the Vilnius treaty was concluded, providing for the military union of Lithuania and Poland, which was then ruled by Alexander's brother, Jan I Olbracht, as equal states. During Alexander's rule Ukrainian magnates headed by Prince M. *Hlynsky, a friend of the king, had considerable influence at the Lithuanian court. After Alexander's death the influence of Ukrainian magnates diminished.

Algirdas or Olgierd, b ca 1296, d May 1377. Prince of Krevo and Vitsebsk (1341–5) and grand duke of Lithuania (1345–77), son of *Gediminas. With the assistance of his brother Kęstutis, the prince of Żmudź, Algirdas unified the Lithuanian territories and waged war to enlarge his realm, making it one of the largest European states of his day. In 1345, after capturing Vilnius, Algirdas became the grand duke of Lithuania. Thereafter, he gradually annexed the larger part of the Ukrainian territories. At first, in about 1355, Algirdas won the lands of Chernihiv and Novhorod-Siverskyi from the Golden Horde. In 1363 he defeated the Tatar army at Syni Vody and annexed the Kiev land. Soon after he added Podilia and the Pereiaslav land to his domain. Algirdas waged a successful war over Volhynia against the Polish king Casimir III the Great and left him with only the Belz and Kholm regions in Ukraine. He also annexed the principality of Smolensk and extended his influence over Pskov and Novgorod. Algirdas led campaigns against Muscovy in 1368, 1370, and 1372 and helped his brother Kęstutis in the struggle against the Teutonic Knights.

Algirdas succeeded in unifying all of the Belorussian and most of the Ukrainian territories under the Grand Duchy of Lithuania. His respect for Ukrainian culture and the Ukrainian church won him the loyalty of the Ukrainian people as well as of the Ukrainian princes and magnates, who helped to administer the state. Algirdas left some of the Ukrainian territories he annexed under the care of the Ukrainian princes of the Riurykid line; others he granted to his relatives. During his reign the Ukrainian (Ruthenian) language became an official language of the Grand Duchy of Lithuania.

L. Wynar

Alibei Lake [Alibej]. Salt-water lake in southern Bessarabia near the Black Sea. The lake is 10 km long, 3–10 km wide, and has an area of 72 sq km.

Alimony. Legally imposed support payments made by one family member to another who is in need of material assistance. Under the Russian and Austrian law that prevailed in Ukrainian territories prior to the Soviet period (as well as under the UNR, the Hetman government, and the Polish regime), the principal form of

alimony was the support owed by parents to their dependent children, by grown-up children to their aged parents, and by husbands to wives. According to the Code on Marriage and Family of the Ukrainian SSR of 1969, the obligation of alimony arises out of marriage, family relations (parents towards children and vice versa, grandchildren towards grandparents and vice versa, etc), and adoption of children. The obligation also applies to stepparents and stepchildren. Illegitimate children were an exception: from 1944 to 1967 they had no right to support from the father. The mother's right to petition the courts to establish the identity of the father and to exact alimony from him for child support was also revoked; instead, the mother of an illegitimate child received a small allowance from the government. Since 1967 an illegitimate child has the right to alimony from the father who either admits paternity or has it established by the courts. Children can be released from their duty to support their parents if the courts determine that the parents did not fulfill their parental duties. The avoidance of alimony payments for children is punishable by law.

O. Yurchenko

Allegory. Sometimes regarded as an extended metaphor, allegory in literature is a representation of abstract or spiritual meaning in concrete form. It evokes an interest on the one hand in events and characters, and on the other in the corresponding ideas and meanings. Many Ukrainian morality plays of the baroque period were either religious allegories or displayed allegorical personages. Some of T. Shevchenko's poems ('Kosar' [The Reaper], 'Velykyi l'okh' [The Great Vault]) are allegorical, as are I. Franko's poems 'Kameniar' (Stone-cutters) and 'Moisei' (Moses). Allegory is frequently used in fables (L. Hlibov). Some modern writers (M. Kulish, O. Berdnyk) also use allegory in their works. Allegory is not to be confused with symbols or personification.

Alliance Nationale Ukrainienne en France. See Ukrainian National Alliance in France.

Allied Powers. See Entente.

All-Russian Constituent Assembly (Vserossiiskoe Uchreditelnoe Sobranie). The highest elected body on the territory of the former Russian Empire after the February revolution of 1917. The assembly was empowered to define the new political structure and to approve the constitution of the federated Russian state that was postulated by the Russian Provisional Government. In March 1917 a special council was created to prepare a law for elections to the assembly. By September the council had worked out its proposals, based on a universal, direct, equal, and secret vote. The Provisional Government designated 25 November 1917 as election day.

At first the Bolsheviks demanded that the assembly be convened, but after they seized power in November they were critical of the elections because the lists of party candidates had been selected in September or October. The Bolsheviks took part in the elections, however.

Ukrainian political circles expected that the assembly would legislate a democratic-republican political system and the national rights of the non-Russian peoples. In its first proclamation (22 March 1917) the Central Rada stated that the Provisional Government would soon convene a

constituent assembly. The *All-Ukrainian National Congress (17–21 April 1917) recognized the right of the assembly 'to establish the political structure of the Russian Republic,' but also called on the Ukrainians to lay the foundations for Ukrainian autonomy before the assembly was convened. The First Universal, issued on 23 June 1917, reiterated that the assembly should pass a law on Ukraine's autonomy. In its Second Universal (16 July 1917) the Central Rada promised to prepare a statute on Ukraine's autonomy and to present it to the All-Russian Assembly for ratification. The Third Universal (20 November 1917) stated that the assembly would determine the new state structure. Beginning in the second half of 1917, the Ukrainian parties and the Central Rada, seeking recognition for the sovereignty of the Ukrainian people, proposed the convening of the *Constituent Assembly of Ukraine in addition to the All-Russian Constituent Assembly.

Only 54 of the 79 electoral districts reported the results of the voting. In Ukraine the elections to the Russian assembly took place on 10–12 December 1917 in eight districts. The results of the voting in Podilia were not reported. The outcome was a reflection of the political attitudes of the population during the revolution. Out of 36,260,000 votes cast throughout the territory of the former Russian Empire the Russian *Socialist Revolutionaries (SRs) received 45.5 percent; the Bolsheviks, 24.9 percent; the *Ukrainian Party of Socialist Revolutionaries, 9.5 percent; the Constitutional Democratic party (Kadets), 5.1 percent; the *Russian Social Democratic Workers' party (Mensheviks), 1.8 percent; the Ukrainian Socialists (the name used at the front by the Ukrainian Socialist Revolutionaries and Social Democrats), 1.4 percent; and the Ukrainian Social Democratic Workers' party, 0.26 percent. In Ukraine the 7,580,000 votes cast were divided in the following way: the national groups (non-Russian parties) won 61.5 percent (among them the Ukrainian SRs won 45.3 percent); the Russian SRs, 24.8 percent; the Bolsheviks, 10 percent; and the Kadets, 3.7 percent. Of the 120 deputies elected in Ukraine, 71 were Ukrainian SRs, 2 were Ukrainian Social Democrats, 4 were from the national minorities (1 Pole, 2 Jews, 1 Moslem), 30 were Russian SRs, 11 were Bolsheviks, 1 was a Kadet, and 1 was from the Union of Landowners. In six districts where the bloc of Ukrainian socialist parties (SRs, the *Peasant Association, and Social Democrats) presented a single list of candidates, it won a clear majority of the votes: 77 percent in Kiev gubernia, 71 percent in Volhynia, 60 percent in Chernihiv gubernia, 60 percent in Poltava gubernia, 52 percent in Katerynoslav gubernia, and 33 percent in Tavriia gubernia. In the Kharkiv and Kherson gubernias the Ukrainian and the Russian SRs ran together; therefore the Ukrainian SRs received only 12 percent of the votes in the former and 25 percent in the latter gubernia.

Besides the eight districts in Ukraine, the Ukrainian Socialists had 11 deputies elected at the front.

Some of the elected Ukrainian delegates (50 in all) met in Kiev on 24 December 1917 and decided not to participate in the Russian assembly until the Constituent Assembly of Ukraine was convened.

The only session of the All-Russian Constituent Assembly took place in Petrograd on 18–19 January 1918. The Bolshevik-dominated All-Russian Central Executive

Committee set forth an ultimatum demanding the ratification of the decrees of the Second All-Russian Congress of Soviets on the transfer of all power to the soviets. When the assembly rejected this demand, the Bolsheviks dispersed the deputies and declared the assembly to be dissolved.

A. Zhukovsky

All-Ukrainian Academy of Agricultural Sciences (Vseukrainska akademiia silsko-hospodarskykh nauk). Official Soviet Ukrainian institution established in 1926. The staff of the academy included specialists from the *Agricultural Scientific Committee of Ukraine, which was abolished in 1928. In 1934 the academy comprised 15 scientific research institutes (including institutes of zootechny, veterinary medicine, agricultural chemistry, melioration, mechanization of agriculture, meteorology, forestry, intensive cultivation), 10 research stations, 200 research locations, and 3 land reserves. The president of the academy was O. Sokolovsky. After the founding of the All-Union Academy of Agricultural Sciences in Moscow in 1929, the All-Ukrainian academy was absorbed by the former in the mid-1930s.

All-Ukrainian Academy of Sciences (VUAN). See Academy of Sciences of the Ukrainian SSR.

All-Ukrainian Archeological Committee (Vseukrainskyi arkhеolohichnyi komitet or VUAK). A scholarly research body formed in 1924 out of the Archeological Commission of the historical-philological division of the Ukrainian Academy of Sciences. VUAK was active until 1933. It became a separate scholarly institution and the main authority on the preservation of Ukrainian cultural and archeological monuments. VUAK was divided into two departments – archeology and art – and had three special commissions. Most of the archeologists working in Ukraine were associated with it. Its president for many years was the art scholar and academician O. Novytsky. Its vice-president was the archeologist S. Hamchenko. Among its members and associates were M. Biliashivsky, D. Shcherbakivsky, M. Rudynsky, F. Ernst, M. Makarenko, P. Kurinny, I. Morhylevsky, O. Novytska, and V. Korsovka. The most important research projects undertaken by VUAK were excavations of the late Neolithic burial ground near Mariupil, the Trypilian settlements on the Dnieper and Dniester rivers, the Bilohrudivka culture sites near Uman, the Raikiv fortified settlement near Berdychiv, and the monuments of the Antes in Olbia and Berezan. Its expeditions to new construction sites were important: to the Dnieper Hydroelectric Station (1927–32), led by D. Yavornytsky; to the South Buh Hydroelectric Station (1930–2), led by F. Kozubsky; and to the Mariupil Azovstal Metallurgical Plant (1930–1), led by M. Makarenko.

N. Kordysh-Holovko

All-Ukrainian Association of Consumer Co-operative Organizations (Vseukrainska spilka spozhyvchykh kooperatyvnykh orhanizatsii or Vukopspilka [vuks]). A Soviet central association of Ukrainian consumer co-operatives that in 1920 replaced the *Dniprosoiuz central co-operative union and took over its assets. By 1928 the vuks network encompassed 41 raion unions (*raisoiuzy*), 351 workers' and urban co-operatives with 6,993 stores and 1,719,000 members, and 8,988 rural consumer societies with 14,000 stores and 3,065,000 members. vuks's gross sales in the 1927–8 fiscal year amounted to 531.1 million rubles. vuks purchased goods from the state trusts and syndicates and supervised the large deliveries of grain and other farm products to the state. In 1928 it ran market outlets for the raion unions in Kiev, Kharkiv, Odessa, and Rostov; purchase offices in Moscow and Baku; 15 mills with an annual production of 151,000 t; and over 20 vegetable-oil plants and other enterprises. The association's own capital in 1928 totaled 8.4 million rubles, and its shareholders' equity was worth 3.6 million rubles. Within its system of co-operatives vuks conducted important organizational and educational work. By 1933 the system included 23,396 rural trade depots and 7,888 urban stores.

In the first half of the 1930s the urban co-operatives were dissolved, and most of their organizers became victims of the Stalinist terror. The assets of these co-operatives were taken over by the state-run commercial system. The network of rural consumer co-operatives continued to operate, however. By 1941 vuks represented 9,403 co-operatives (757 of them raion unions), with a membership of 10,506,700 shareholders. It managed 51,926 stores, 8,636 warehouses, and 2,211 manufacturing enterprises. Its annual liabilities amounted to 359 million rubles. Under the German occupation vuks functioned for a brief period owing to private initiative. The difficult economic conditions after the war compelled the Soviet authorities to restore the entire system of consumer co-operatives. Today the central body of consumer co-operatives in Ukraine is *Ukoopspilka (Ukrainian Association of Consumer Societies), which is subordinated to the Central Union of Cooperative Societies (Tsentrosoiuz) in Moscow.

V. Markus, I. Vytanovych

All-Ukrainian Association of Marxist-Leninist Scientific Research Institutes (Vseukrainska asociatsiia marksystsko-leninskykh naukovo-doslidnykh instytutiv or VUAMLIN). An association of research institutes established in 1931 in Kharkiv by the merger of the philosophy-sociology, economics, and history sections of the Ukrainian Institute of Marxism-Leninism (founded in 1922). Like the Russian Institutes of Red Professors, VUAMLIN trained professors and researchers who were loyal to the Party to replace older, independent scholars in institutions of higher learning. Studies for a degree lasted three years, preceded by two preparatory years. There were 625 students in 1932 in six institutes – economics, philosophy and natural sciences, history, agriculture, law and Soviet construction and cadres, technology and technical policy – and two chairs – literature and arts, and the national question. In Kiev, Dnipropetrovske, and Odessa VUAMLIN branches were founded, each with three departments (philosophy,

economics, and history). Affiliated with VUAMLIN were professional associations of Marxist historians, economists, and other scholars. The Communist Academy in Moscow supervised VUAMLIN's academic activities, and policy guidance came from the Central Committee of the CP(B)U.

Presidents of VUAMLIN were O. *Shlikhter and, later, O. Dzenis; among the noteworthy heads of departments were M. *Skrypnyk, M. *Yavorsky, M. *Popov, S. *Shchupak, Yu. *Mazurenko, and V. *Yurynets. VUAMLIN published periodicals – **Prapor marksyzmu-leninizmu* (1931–4), **Pid marksysts'ko-lenins'kym praporom* (1934–6), and **Istoriya-bil'shoviyk* (1934) – and monographs. Its predecessor, the Ukrainian Institute of Marxism-Leninism, particularly from 1929, and VUAMLIN exerted pressure on the All-Ukrainian Academy of Sciences to adapt its scholarly work to the Party line, and under Party pressure the leading members of VUAMLIN were made academicians. In 1933–8 many VUAMLIN members fell victim to the Stalinist terror. In 1936 VUAMLIN was transferred to Kiev; soon after it was dissolved. Some of its work was taken over by the newly founded Ukrainian branch of the *Institute of Marx-Engels-Lenin, based in Moscow. The VUAMLIN Institute of the History of Ukraine became the Institute of History of the Academy of Sciences of the Ukrainian SSR.

M. Hlobenko

All-Ukrainian Association of Proletarian Writers (Vseukrainska spilka proletarskykh pysmennykiv or VUSPP). Writers' organization founded in January 1927 for the declared purpose of a 'decisive struggle for an international-class union of Ukraine's literature against bourgeois nationalism' and the creation of a 'proletarian constructive realism.' Its actual task was to counteract such Ukrainian literary groups as *Vaplite, the *Neoclassicists, Lanka, and *MARS, in whose work the Party detected 'nationalist' tendencies. VUSPP was a member of the *All-Union Alliance of Associations of Proletarian Writers (VOAPP) in Moscow and had a Russian and a Jewish section. VUSPP published the journal **Hart* and **Literaturna hazeta*, while its branches published the journals **Zoria* in Dnipropetrovske, **Stapeli* in Mykolaiv, **Metalevi dni* in Odessa, **Zaboi* in the Donbas, **Krasnoe slovo*, published by the Russian section, and **Prolit*, published by the Jewish section. Among VUSPP's numerous members (it favored 'mass' participation and in 1931 even called on 'shock workers' to join), the more important writers were I. Kulyk, I. Mykytenko, I. Kyrylenko, V. Koriak (the leaders of the organization), I. Le, D. Zahul, M. Terezhchenko, Ya. Savchenko, M. Dolengo, V. Sosiura, L. Pervomaisky, Ya. Kachura, K. Hordiienko, N. Zabala, S. Holovanivsky, V. Kuzmych, S. Zhyhalko, Yu. Zoria, V. Chyhyryn, P. Usenko, L. Smiliansky, S. Shchupak, B. Kovalenko, H. Ovcharov, and M. Novytsky. VUSPP's leaders strove to have it recognized as the writers' organization closest to the Party. Hence VUSPP devoted all its energies to the political struggle against other literary groups, and no outstanding literary works were produced by VUSPP's members. In 1931, after the forced dissolution of the *Prolitfront and the *Nova Heneratsiia groups, some of the members of these organizations joined VUSPP. The resolution of the Party's Central Committee of 23 April 1932 'On the Reconstruction of

Literary and Artistic Organizations' abolished VUSPP, as well as VOAPP and other similar literary organizations. In 1937–9 many former VUSPP members, including all its leaders, were arrested and deported to labor camps.

M. Hlobenko

All-Ukrainian Central Executive Committee (Vseukrainskyi Tsentralnyi Vykonavchyi Komitet or VUTsVK). From 1919 to 1937 the highest executive body of the Soviet Ukrainian state between sessions of the All-Ukrainian Congress of Soviets, which elected the members of VUTsVK. VUTsVK was responsible to the *All-Ukrainian Congress of Soviets for legislation and the general running of the state. It appointed members of the *Council of People's Commissars (Radnarkom) and of various VUTsVK committees, ratified economic plans and the state budget, and distributed state funds among central and local government agencies. Yet, in accordance with the VUTsVK decision of 14 March 1919 'On the Temporary Powers of the Council of People's Commissars in Legislative and General Executive Matters,' the Radnarkom, not VUTsVK, became the basic legislative and executive body of the Ukrainian SSR. VUTsVK convened at least three times a year, and its work was supervised by its presidium, which functioned as the highest legislative, executive, and administrative body of the Ukrainian SSR between VUTsVK sessions. When the third constitution of the Ukrainian SSR was adopted in 1937, the functions of VUTsVK were taken over by the *Supreme Soviet of the Ukrainian SSR.

A similar role in the structure of the USSR government was played by the All-Union Central Executive Committee in 1923–36. It consisted of two chambers: the Soviet of the Union and the Soviet of Nationalities. In the latter each Union republic or autonomous republic had five representatives. The work of the presidium of the central executive committee and of the sessions of both chambers was supervised in turn by the chairmen of the committee (four, then seven) who were elected from among the members of the presidium according to the number of Union republics then in existence. H. *Petrovsky, chairman of the All-Ukrainian Central Executive Committee, represented the Ukrainian SSR on the Presidium of the All-Union Central Executive Committee.

T.B. Ciuciura

All-Ukrainian Church Sobor (Vseukrainskyi Tserkovnyi Sobor). The first session of the sobor convened in Kiev on 7 January 1918 under the auspices of the *All-Ukrainian Orthodox Church Council. It was interrupted on 19 January by the advance of the Soviet army. The second session (20 June to 11 July 1918) was dominated by a Russophile majority, which expelled the initiators of the sobor from its membership (there were 198 votes for expulsion, 108 against). The initiators continued their work in co-operation with the Brotherhood of ss Cyril and Methodius. Because of opposition by Russian hierarchs to the strivings of nationally conscious Ukrainians, the minister of religion, O. *Lototsky, announced on behalf of the Hetman government at the autumn session of the sobor (12 November 1918) that the Ukrainian Orthodox church was to be autocephalous.

All-Ukrainian Congress of Soviets (Vseukrainskyi Zizd Rad). An assembly of workers', peasants, and Red

Army deputies, which in 1917–37 was considered to be the highest governing body of the Ukrainian SSR (art 7 and 10 of the 1919 Constitution of the Ukrainian SSR, art 22 of the 1929 constitution). The deputies were elected by gubernia (later okruha and oblast) and city congresses of soviets. The 1919 Constitution of the Ukrainian SSR did not specify the procedure for electing deputies, leaving this to the decision of the *All-Ukrainian Central Executive Committee (VUTsVK) (art 9). The VUTsVK ruled on 7 April and 26 May 1920 that the gubernia and city congresses could send one deputy for every (1) 1,000 Red Army soldiers (who were usually Russians from outside Ukraine), (2) 10,000 urban workers, and (3) 50,000 peasants. All the powers of the congress, apart from the right to adopt, change, or amend the Constitution of the Ukrainian SSR (art 10 of the 1919 constitution), to change the borders of the Ukrainian SSR, to elect the members of VUTsVK and the representatives of Ukraine to the Soviet of Nationalities of the All-Union Central Executive Committee, or to decide on Ukraine's secession from the USSR (art 7 of the revised 1925 constitution), belonged in the intercessional period to the VUTsVK elected by the congress.

Of the 14 congresses held, the following were the most important: the first in December 1917, which set up the first Soviet government of Ukraine; the second in 1918, which tactically declared the 'independence' of Soviet Ukraine; the third in 1919, which adopted the first Constitution of the Ukrainian SSR; the ninth in 1925, which changed the Constitution of the Ukrainian SSR to have it conform more closely to the USSR constitution of 1924; the eleventh in 1929, which adopted the second Constitution of the Ukrainian SSR; and the fourteenth in 1937, an extraordinary congress, which adopted the third Constitution of the Ukrainian SSR. In 1937 the functions of the All-Ukrainian Congress of Soviets were taken over by the *Supreme Soviet of the Ukrainian SSR.

On the all-Union level the Congress of Soviets of the USSR from 1923 to 1936 had a role comparable to that of the All-Ukrainian Congress of Soviets. It was the supreme governing body in the USSR, elected indirectly and by unequal vote: one deputy for every 25,000 urban voters or for every 125,000 rural inhabitants. Until 1927 the All-Ukrainian congress of Soviets and the All-Union Congress of Soviets convened every year; after 1927 they convened every two years.

T.B. Ciuciura

All-Ukrainian Congress of Workers', Soldiers', and Peasants' Deputies (Vseukrainskyi Zizd Rad Robotnychkh, Soldatskykh i Selianskykh Deputativ). Congress convened in Kiev on 17–19 December 1917 by the Bolsheviks and other left-wing parties as the supreme organ of the local soviets. However, the overwhelming majority of elected delegates did not endorse the Bolshevik line, which aimed at creating out of the congress a government opposed to the *Central Rada. Of the 2,500 delegates less than 100 sympathized with the Bolsheviks. The latter then left Kiev and met in Kharkiv on 24–25 December with the Congress of Soviets from the Donets and Kryvyi Rih basins as the All-Ukrainian Congress of Soviets, which proclaimed Soviet rule in Ukraine. The Kiev congress proceeded with its work and expressed its support for the Central Rada. The chairman of the Kiev congress was a Socialist Revolutionary, A. Stepanenko.

All-Ukrainian Council of Military Deputies (Vseukrainska rada viiskovykh deputativ). Elected by the Second *All-Ukrainian Military Congress (18–23 June 1917), the council consisted of 132 members and a presidium. At the Third All-Ukrainian Military Congress (2–12 November 1917) the number of members was increased to 158. The council was a representative body in the Ukrainian *Central Rada, together with the councils of peasants' and workers' deputies, party, municipal, and provincial representatives, and others. It worked closely with the Ukrainian General Military Committee, headed by S. Petliura. The council was involved in a constant struggle against the Russian Provisional Government and the soviets of soldiers' deputies.

All-Ukrainian Council of Peasants' Deputies (Vseukrainska rada selianskykh deputativ). Elected by the *All-Ukrainian Peasant Congress on 10–16 June 1917, the council consisted of 133 members, who became representatives on the Ukrainian *Central Rada. In the summer of 1917, county peasant congresses discussed the question of electing new members, ie, two representatives for each of the 98 counties. On 5–7 July 1917, the first session of the All-Ukrainian Council of Peasants' Deputies moved that the council direct the Ukrainian peasant movement in its entirety and proceeded to recall Ukrainian peasants' representatives from the Executive Committee of the All-Russian Association of Peasants' Deputies. In late July 1917, 212 peasants' deputies took part in the Central Rada. Fifteen of these members formed the Central Committee of the *Peasant Association. The second session of the council (15–18 September 1917) demanded that the Russian Provisional Government agree to an increase in the rights of the *General Secretariat of the Central Rada and to an expansion of that body's jurisdiction to include all Ukrainian ethnic territories. The third session (1–6 December 1917) spoke out against the Bolsheviks' attempts to seize power and, specifically, against their demands to hold a re-election of the Central Rada. The third session acclaimed the proclamation of the Central Rada's Third *Universal.

All-Ukrainian Council of Trade Unions (Vseukrainska rada profesiinykh spilok or vURPS). Formed in Kharkiv in 1924 at the second All-Ukrainian Congress of Trade Unions, vURPS encompassed all-Ukrainian industrial trade union committees. The council was established on the foundations laid by preceding central trade organizations. In May 1918 the All-Ukrainian Central Council of Trade Unions (Utsentrprof) was formed, composed primarily of representatives of anti-Bolshevik parties. At the 1919 trade union congress in Kharkiv the Utsentrprof was dissolved, and the Bolsheviks assumed the leadership of the trade union movement. The movement consequently became subservient to Moscow, which in 1920 created the Bureau for the South of Russia (Biuro Yuga Rossii), soon renamed the Ukrainian Bureau of the All-Union Central Council of Trade Unions (VTsSPS). In 1924 vURPS was established. By 1929 it represented over two million trade union members, and its presidium, which was subordinated to the VTsSPS in Moscow, directed the all-Ukrainian committees and district union councils. In 1937 the VTsSPS, with the aim of complete centralization, liquidated all republican, krai, and oblast trade union councils, including vURPS. Many vURPS trade union

leaders had been dismissed and exiled between 1933 and 1937. After the Second World War the central trade union institution, the Ukrainian Republican Council of Trade Unions (URRPS), was reinstated in Ukraine; oblast councils also resumed their activity. The central republican, oblast, raion, and municipal committees of member unions operate alongside the trade union councils. (See also *Trade union.)

All-Ukrainian Council of Workers' Deputies (Vseukrainska rada robotnychykh deputativ). Elected by the first *All-Ukrainian Workers' Congress (24–26 July 1917). The council consisted of 100 deputies (70 members from the Ukrainian Social Democratic Workers' party and 30 from the Ukrainian Party of Socialist Revolutionaries) and formed part of the *Central Rada, together with the *All-Ukrainian Council of Peasants' Deputies, the *All-Ukrainian Council of Military Deputies, and representatives of the national minorities.

All-Ukrainian Evangelical Baptist Fellowship (Vseukrainske Yevanhelsko-Baptystske Bratstvo). Association of Ukrainian Baptists outside Ukraine that was founded in 1950 at a convention in Cleveland, Ohio, by Ukrainian Baptist congregations in North America. Eventually, Ukrainian Baptist congregations in Britain, Australia, and South America joined the fellowship. By 1980 the fellowship represented about 10,000 organized Baptists. Ideologically, the fellowship is a continuation of a similar organization founded in 1918 in Ukraine and later dissolved by the Soviets. Today the fellowship supports an unofficial group of Baptists in the Soviet Union known as the 'Initiators' (*initsiatyvniky*), which is represented abroad by Pastor G. *Vins.

The fellowship holds its conventions every five years. Delegates of local congregations, missions, and women's and youth organizations participate in the conventions. The following pastors have been president of the fellowship: P. Kindrat (1949–59), G. Domashovets (1959–62), L. Zabko-Potapovych (1962–72), and O. Harbuziuk (1972–). The fellowship's missionary activities include publishing and radio broadcasting. It has its own publishing house for periodicals and books. Its central magazine is the bimonthly **Pislanets' pravdy* (since 1949). The bimonthly *Khrystyians'kyi visnyk* is published in Canada, and *levanhel's'ka zirka* is published in Argentina. Ukrainian Baptists have their own local radio programs in Canada and the United States. Since 1966 a radio program has been beamed to Soviet Ukraine. Besides the individuals mentioned above, the following have been prominent members of the fellowship: I. Dumych, J. Ivaskiv, I. Kovalchuk, A. Harbuziuk, Jr, S. Nishchyk, M. Podvorniak, and Z. Rechun-Panko. The fellowship has contacts with other central Ukrainian organizations and is a member of the *World Congress of Free Ukrainians. (See also *Baptists.)

V. Markus

All-Ukrainian Higher Holy Council (Vseukrainska Vyshcha Osviashchenna Rada). Formed after the UNR government ratified the law on the autocephaly of the Ukrainian Orthodox church (1 January 1919), the council briefly guided the activities of the revived church. Its members included the archbishop of Katerynoslav, A. Vyshnevsky; the bishop of Kremianets, D. Valedynsky; Archpriest V. *Lypkivsky; and other church leaders.

All-Ukrainian Insurance Union. See Strakhsoiuz.

All-Ukrainian Learned Association of Oriental Studies (Vseukrainska naukova asotsiatsiia skhodoznavstva). The association was founded in Kharkiv in 1926 and had branches in Kiev and Odessa. It had two departments: the department of politics and economics, with a Soviet section and a Far East section, and the department of history and ethnology, with art, archeological, linguistic, and historical-literary-economic sections. The association published a scholarly journal – **Skhidnii svit* (1927–30, called *Chervonyi skhid* in 1930–1) – and a series of works on the East. It organized a number of conferences (1927 and 1929), exhibitions, and expeditions, including an expedition to study the Greek settlers of the Mariupol region. Special attention was devoted to relations between Ukraine and Turkey in the 17th–18th century. In Kharkiv, Kiev, and Odessa the association ran the school Ukrainian Courses of Oriental Studies, which by 1929 had an enrollment of over 250 students. The association was headed by O. Shlikhter, O. Gladstern, Ya. Riappo, and L. Velychko. In 1927 its membership was 152, and included such scholars as P. Ritter, V. Buzeskul, S. Rudnytsky, A. Kovalivsky, A. Syniavsky (president of the Kiev branch), A. Thomson (president of the Odessa branch), A. Krymsky, F. Mishchenko, and V. Bozhko. By 1929 there were 193 full members (83 in Kiev, 60 in Kharkiv, and 50 in Odessa) and 158 associate members. In 1930 the association established the Ukrainian Research Institute of Oriental Studies, which had Turkish, Persian, and Arabic departments and commissions on Oriental ideology, national and colonial problems, and the history of Ukrainian-Turkish relations. The association was abolished in 1933, and a large number of its members suffered political persecution. (See also **Oriental studies*.)

All-Ukrainian military congresses (Vseukrainski viiskovi zizdy). The First All-Ukrainian Military Congress was held on 18–21 May 1917 in Kiev. Over 700 delegates represented about 1.5 million Ukrainian soldiers from almost all units of the Russian army and navy. The congress was chaired by S. Petliura, M. Mikhnovsky, V. Vynnychenko, and Yu. Kapkan. It recognized the Ukrainian Central Rada as ‘the only competent body empowered to decide all matters relating to all of Ukraine.’ The congress overwhelmingly supported the decisions of the **All-Ukrainian National Congress* (17–21 April 1917) and demanded that Ukraine’s national and territorial autonomy be recognized immediately and that Ukrainian military units of the Russian army and navy be separated and Ukrainianized. To direct the Ukrainian military movement, the congress created the Ukrainian General Military Committee, headed by S. Petliura.

The Second All-Ukrainian Military Congress was held on 18–23 June 1917 in Kiev. Over 2,500 delegates representing 1.7 million soldiers attended the congress, despite the fact that it was banned by the Russian Provisional Government’s minister of war, A. Kerensky. The congress declared this ban to be illegal. While supporting the Central Rada, which was struggling with the Provisional Government for its rights, the congress instructed the Rada ‘to begin at once a determined organization of the country’ without consulting the Russian government, and ‘to actually establish the foundations of an auton-

omous order.’ The second congress elected the **All-Ukrainian Council of Military Deputies*, consisting of 132 members, which became part of the Central Rada, and ordered the Ukrainian General Military Committee to prepare, among other measures for Ukrainianizing the armed forces, a plan for organizing the **Free Cossacks*. The First **Universal of the Central Rada* was read to the congress.

The Third All-Ukrainian Military Congress was held on 2–12 November 1917 in Kiev. About 3,000 delegates (1,100 at its opening) attended. This was a period of very strained relations with Russian circles. Because the command of the Kiev military district wanted to turn Ukraine into a stronghold of the Provisional Government against the Bolsheviks and the Central Rada as well, the congress interrupted its sittings for a few days to form the first Ukrainian Regiment For the Defense of the Revolution (commander: Col Yu. Kapkan). The congress demanded ‘from its highest revolutionary body – the Central Rada – the immediate proclamation of the Ukrainian Democratic Republic on Ukrainian ethnic territories,’ the strengthening of Ukrainian statehood, including the full Ukrainianization of the army and navy, and an immediate peace treaty. The resolutions of the third congress had a strong influence on the proclamation of the Ukrainian National Republic in the Third **Universal*. The congress elected a new All-Ukrainian Council of Military Deputies, consisting of 158 members, who also became part of the Central Rada.

A. Zhukovsky

All-Ukrainian National Congress (Vseukrainskyi Natsionalnyi Kongres). First major Ukrainian political forum after the February Revolution of 1917. Convened in Kiev on 17–21 April 1917 by the **Central Rada*, the congress was composed of over 1,000 representatives of political, cultural, and professional organizations (of workers, peasants, the intelligentsia, military, clergy, etc); delegates also came from the war front and Ukrainian centers in major Russian cities. The congress was chaired by the senior delegate, S. Erastov, representative of the Kuban region. M. Hrushevsky was elected honorary chairman. Keynote addresses concerning many aspects of Ukraine’s autonomy were delivered by D. Doroshenko, O. Shulhyn, F. Matushevsky, M. Tkachenko, F. Kryzhanivsky, V. Sadovsky, and others. Recognizing the **All-Russian Constituent Assembly’s* right of final approval of Ukraine’s new autonomous status, the congress nevertheless demanded a federative-democratic reorganization of Russia, immediate implementation of autonomist measures, delimitation of Ukraine’s borders in agreement with the people’s will, participation of Ukraine at a future peace conference, and repatriation of the Western Ukrainian population deported during the period of Russian military occupation.

The All-Ukrainian National Congress reorganized the Central Rada and elected its president (M. **Hrushevsky*), two vice-presidents (V. **Vynnychenko* and S. **Ye-*

fremov), and 115 members (out of 150 envisaged in the statutes), who represented gubernias, major cities, the Ukrainian communities of Moscow and Petrograd, and civil, political, and cultural organizations. The legal and political significance of the congress went beyond the anticipated goals; it became, in fact, the constituent forum of the first Ukrainian parliament – the Central Rada.

A. Zhukovskiy

All-Ukrainian Orthodox Church Council (Vseukrainska Pravoslavna Tserkovna Rada). The council was formed in 1917 at the St Sophia Cathedral in Kiev and consisted of representatives of the clergy and the laity from all parts of Ukraine. It was headed by well-known church leaders – Archbishop O. *Dorodnytsyn and Rev O. Marychev. The council was determined to put an end to the church's dependence on Moscow and summoned the *All-Ukrainian Church Sobor at the beginning of 1918. The council also devoted special attention to the Ukrainianization of the parishes and the liturgy. The first liturgy in Ukrainian was conducted in Kiev at St Nicholas's Cathedral on 9 May 1919. Through the efforts of the council, the Ukrainian Orthodox church declared itself to be autocephalous on 5 May 1920 in Kiev. In 1921 a sobor was summoned, and it established the hierarchy of the *Ukrainian Autocephalous Orthodox church (UAPTs). In 1928 the presidium of the council consisted of the chairman, Archpriest L. Yunakiv, and the following members: Archbishop I. Oksiuk, Metropolitan M. Boretsky, Archbishop K. Maliushkevych, Rev M. Hrushevsky, Rev Ya. Chulavsky, Archpriest L. Karpov, and laymen V. Chekhivsky and S. Kobzar.

The council was active, with a different membership, up to the forced dissolution of the Ukrainian Autocephalous Orthodox church in 1930. By 1937, of the church's 2,000 parishes none was left. Almost all of the council's members and staff, as well as the bishops and clergy of the UAPTs, died in Soviet concentration camps.

A council bearing the same name, but with a different structure and activity, existed for a short time in Kiev during the Second World War.

I. Korovytsky

All-Ukrainian peasant congresses (Vseukrainski selianski zizdy). The First All-Ukrainian Peasant Congress was held in Kiev on 10–16 June 1917. There were 2,200 delegates, all of them members of the *Peasant Association, of which about 1,500 were representatives of 1,000 volosts. The congress supported the demands of the Ukrainian *Central Rada and required of the Russian Provisional Government that they be immediately fulfilled. It instructed the Central Rada to draw up a project of autonomy for Ukraine within a federated democratic Russian republic, to call immediately a convention of representatives of all the peoples and lands that desired autonomy, and to Ukrainianize at once all state and civil institutions. Rejecting the principle of private ownership of land, the congress wanted a Ukrainian land fund controlled by a Ukrainian assembly and by county and volost land committees. It elected the Central Committee

of the Peasant Association (M. Kovalevsky, P. Khrystiuk, A. Stepanenko, V. Vynnychenko, M. Stasiuk, B. Martos, and others), which was to be the executive agency of the *All-Ukrainian Council of Peasants' Deputies (133 members). This committee sat on the Central Rada.

The Second All-Ukrainian Peasant Congress took place on 21–23 May 1918. The Hetman government banned the congress; hence, it convened secretly in the Hosiievor Forest near Kiev. After declaring its loyalty to the UNR, the congress adopted resolutions that were very critical of the Hetman government and German intervention in Ukrainian affairs.

All-Ukrainian Photo-Cinema Administration (Vseukrainske foto-kinoupravlinnia or vufku). A state monopoly established by the People's Commissariat of Education on 13 March 1922 to oversee film production, control, and distribution in the Ukrainian SSR. Film production was based initially on the nationalized private ateliers in Odessa and Yalta, which were transformed into film studios. In 1924 a state cinematography tekhnikum was opened in Odessa (transferred in 1930 to Kiev as an institute). The large *Kiev Artistic Film Studio was opened in 1928.

Film production got off to a slow start, owing to lack of equipment and qualified personnel. The first feature film produced was L. Kurbas's *Shveds'kyi sirnyk* (The Swedish Match, 1922). By the mid-1920s, however, vufku was producing an average of 20–25 artistic films per year, in addition to many more educational and propaganda films. The first Ukrainian film shown abroad, *Ukraziia*, was produced in 1925. Between 1922 and 1929 vufku produced 129 full-length films. In 1928 its capital was worth over six million rubles. By 1928 vufku managed 2,136 theaters and mobile cinemas and had exported about 30 films abroad.

vufku employed many prominent cultural figures: the directors V. Gardin, G. Tasin, V. Pudovkin, D. Vertov, M. Tereshchenko, O. Dovzhenko, L. Kurbas, Yu. Stabov, P. Chardynin, and I. Kavalieridze; the writers M. Bazhan, Yu. Yanovsky, O. Dosvitnii, O. Korniiuchuk, M. Irchan, H. Shkurupii, V. Maiakovskiy, D. Falkivskiy, D. Buzko, and I. Babel; the actors A. Buchma, M. Zankovetska, I. Zamyckovskiy, M. Nademskiy, V. Chystiakova, V. Hakebush, N. Uzhvii, M. Sadovskiy, M. Krushelnytsky, and Yu. Shumskiy; cinematographer D. Demutsky; and the artists (set designers) V. Krychevskiy and M. Simashkevych.

vufku played an important cultural and educational role in the 1920s. From 1925 it published *Kino*, a monthly avant-garde film journal that reported on foreign films and experiments and had foreign contributors, and the weekly film chronicle *Kinotyzhden'*. vufku produced the first Ukrainian sound film, D. Vertov's *Symphony of the Donbas*, in 1930. In that same year vufku's name was changed to Ukrainfilm, and the monopoly, which had taken greater chances on unknown artists and experimental projects than other Soviet studios throughout the 1920s, came under increasing control of the central

authorities in Moscow and the dictates of socialist realism. (See also *Film.)

R. Senkus

All-Ukrainian Postal-Telegraph Union (Vseukrainska poshtovo-telehrafna spilka). The union was established by the All-Ukrainian Postal-Telegraph Congress, which was held in Kiev on 2–4 September 1917 despite the opposition of the All-Russian Postal-Telegraph Union. The congress was prepared by an organizing bureau, which was created at the beginning of the revolution in Kiev. The congress gave its support to the *Central Rada. It elected a supreme council, consisting of 12 representatives of local organizations, to lead the rapidly expanding union. In May 1918 the Supreme Council joined the Ukrainian National State Union, which in August became the *Ukrainian National Union and took an active part in the uprising against the Hetman government.

All-Ukrainian railway workers' congresses (Vseukrainski zizdy zaliznychnykv). The first congress took place on 12–14 July 1917 in Kharkiv and was attended by 300 delegates representing 200,000 organized Ukrainian railway workers in 12 railway lines. The congress recognized the *Central Rada as the 'supreme body of the land' and elected an executive bureau to carry on organizational work. The second congress took place in Kiev at the beginning of September 1917. Together with the Congress of Highway and Waterway Workers it held an all-Ukrainian congress of railway and other road workers and of the association Pratsia. The congress discussed the problem of regulating the railways and other roads and elected the Council of Roads, the Executive Bureau of the congress, and the Supreme Railway Council, which was to oversee all railway organizations. The third congress took place in Kiev in May 1918. The leadership of the Ukrainian railway trade organization, the United Railway Council of Ukraine, joined the *Ukrainian National Union that led the struggle against the Hetman government. A. *Makarenko, a representative of the railway workers, became a member of the Directory of the UNR on 13 November 1918.

All-Ukrainian Revolutionary Committee (Vseukrainskyi revoliutsiinyi komitet). An anti-Bolshevik political-insurgency center that existed from April to July 1919. It was organized in Right-Bank Ukraine by the 'left-independent' faction of the *Ukrainian Social Democratic Workers' party (USDRP) consisting of Yu. *Mazurenko, A. *Rychytsky, M. *Avdiienko, A. *Drahomyrets'ky, and others, who had initially co-operated with the Bolsheviks. The purpose of the committee was to take advantage of the dissatisfaction among Ukrainian peasants with the Bolshevik occupation and, by promoting and co-ordinating local peasants' revolts against the Bolsheviks, to establish an independent Ukrainian Soviet republic, with a government in opposition to both the Directory of the UNR and to Soviet Russia. The organizers of the committee gained the support of other Ukrainian socialist groups. Alongside the committee, the Supreme Insurgent Council and the General Insurgent Staff (A. Rychytsky, Yu. Mazurenko) were created. The insurgent groups operated out of Skvyra in their attacks against the Red Army. In July 1919 the insurgents joined the UNR forces. Some members of the committee were

arrested in Kamianets on charges of plotting a coup against the Directory, but they were soon released. At this time the Central Committee of the USDRP left-independent faction decided to put a stop to anti-Bolshevik insurrection so as not to facilitate A. *Denikin's White offensive, and the committee was dissolved.

V. Markus

All-Ukrainian Teachers' Association (Vseukrainska uchytelska spilka or vus). A professional organization of teachers and activists in public education in Ukraine, formed in May 1906 in Kiev on the eve of the Convention of the All-Russian Teachers' Union in Finland. The founders of vus included B. Hrinchenko, V. Domanytsky, V. Durdukivsky, S. Yefremov, V. Strashkevych, V. Chekhivsky, and S. Cherkasenko. The purpose of vus was to establish a Ukrainian school system and to spread public education. As Russian internal politics became increasingly more reactionary, vus operated illegally for some time and then ceased to function.

At the outbreak of the revolution vus was re-established in Kiev in April 1917 as a professional association of elementary and secondary school teachers. It represented gubernia, county, and district unions of teachers. At the end of 1918 there were 78 unions, with a membership of 20,000. In August 1917 and January 1919 all-Ukrainian teachers' conventions were held and adopted a program for organizing Ukrainian schools and extramural education. The founders and most prominent members of vus were S. Rusova (president), A. Bakalinsky, O. Omshansky, L. Biletsky, A. Bolozovych, O. Doroshkevych, S. Romaniuk, T. Sushytsky, P. Kholodny, and S. Cherkasenko. vus played an important role in the struggle for Ukrainian statehood, Ukrainian schools, and culture. It published the journal **Vil'na ukrains'ka shkola*.

P. Polishchuk

All-Ukrainian Union of Landowners (Vseukrainskyi soiuз zemelnykh vlasnykv). A conservative, monarchist organization of middle and large landowners, formed in Ukraine in the spring of 1917 on the initiative of M. *Kovalenko. Originally, the union was a branch of the All-Russian Union of Landowners. Most of its members were opposed to the idea of Ukrainian independence. The union, together with the *Ukrainian Democratic Agrarian party, held a farmers' congress in Kiev on 29 April 1918 at which P. *Skoropadsky was proclaimed hetman. In October 1918 the union split into two groups: the large landowners, primarily Russian reactionaries (V. Purishkevich, I. Dusan, Nenarokhomov, et al), who demanded federation with Russia; and the middle and small landowners (M. Kovalenko, M. Chudyniv), who formed the All-Ukrainian Union of Landowning Farmers (Vseukrainskyi Soiuз Khliborobiv-Vlasnykv). The latter group demanded an independent Ukrainian state with a democratic, parliamentary system under the leadership of a hetman, the retention of land ownership on a limited scale (to be achieved by the compulsory repurchase of excess estates), and immediate agrarian reforms. Both alliances were dissolved after the fall of the Hetman government.

All-Ukrainian Union of Landowning Farmers. See All-Ukrainian Union of Landowners.

All-Ukrainian Union of Zemstvos (Vseukrainskyi soiuз zemstv). Union of provincial *zemstvos (local governing councils), organized in April 1918. The president of the union was S. Petliura, who also presided over the Kiev gubernia zemstvo. The union, like the majority of Ukrainian community organizations, was clearly opposed to the Hetman government. Its executive, together with the All-Ukrainian Congress of Zemstvos, held in June 1918, approached the Hetman P. Skoropodsky, his government, and the German envoy Baron A. Mumm von Schwarzenstein demanding changes in the Hetman's policy towards the zemstvos, an end to the repressive measures employed by the Hetman government, and a return to the prerevolutionary practice of elections. These demands were not met, however, and tensions continued until the fall of the government. Petliura was imprisoned for four months.

All-Ukrainian workers' congresses (Vseukrainski robotnychi zizdy). The First All-Ukrainian Workers' Congress took place in Kiev on 24–26 July 1917. It was called at the initiative of the Ukrainian faction of the Kiev Council of Workers' Deputies. About 300 delegates attended the congress. This attests to the weakness of ethnic Ukrainian labor organizations in Ukraine. The *Ukrainian Social Democratic Workers' party dominated the congress. V. Vynnychenko, M. Porsh, D. Antonovych, S. Veselovsky, M. Palamarchuk, and M. Yermiiv were among the members of the congress presidium. The Central Rada's General Secretariat members I. Steshenko, B. Martos, and V. Sadovsky participated in the congress. The congress recognized the autonomy of Ukraine, demanded peace and the distribution of land among the peasants, called on the workers to support the *Central Rada and its General Secretariat, and elected the *All-Ukrainian Council of Workers' Deputies, consisting of 100 members (70 Social Democrats and 30 Socialist Revolutionaries), who were seated on the Central Rada. It also elected three members to the Little Rada.

The Second All-Ukrainian Workers' Congress was held illegally in Kiev on 26–27 May 1918. Because of the Hetman government's ban only about 200 delegates attended. The congress declared its opposition to the Hetman regime, demanded a return to the principles of the Central Rada, and supported the independence of the UNR.

All-Union Alliance of Associations of Proletarian Writers (Vsesoiuznoe obiedinenie assotsiatsii proletarskikh pisatelei or VOAPP). A union of writers' organizations established in Moscow and active from 1928 to 1932. The purpose of VOAPP was to bring together the writers that were loyal to the Communist party. It encompassed proletarian writers' associations in Russia, Belorussia, Transcaucasia, Central Asia, and Ukraine that were organized to oppose the national writers' organizations in these republics. Of the writers' organizations in Ukraine the *All-Ukrainian Association of Proletarian Writers belonged to the Alliance. VOAPP was dissolved by a resolution of the Party's Central Committee adopted on 23 April 1932.

Alma River [Al'ma]. River in the Crimea, the upper portion of which flows through the Crimean mountains and the lower through the steppes. The Alma is 84 km

long, and its basin has an area 635 sq km. Its waters are used mostly for irrigation.

Title pages of early almanacs

Almanac. In the Middle Ages an almanac was a book showing the movements of the heavenly bodies. Later it became a calendar or a compendium of useful information. The first Ukrainian literary compendia or almanacs appeared in the 11th century (*Pchela, *Menaion). However, the almanac did not become widely used until the 19th century. In Ukraine the following almanacs contained exclusively literary pieces and played a role in the rebirth of Ukrainian literature: **Ukrainskii almanakh* (eds I. Sreznevsky and I. Rozkovshenko, 1831), **Utrenniia zvezda* (1833–4), **Rusalka dnistrovaia* (1837), **Ukrainskii sbornik* (ed I. Sreznevsky, 1838), **Kievlianin* (ed M. Maksymovych, 1840–1), **Lastovka* (ed Ye. Hrebinka, 1841), **Snip* (ed O. Korsun, 1841), **Molodyk* (ed I. Betsyk, 1843–4), **Vinok rusynam na obzhynky* (ed B. Holovatsky, 1846–7), **Iuzhnyi russkyi sbornik* (ed A. Metlynsky, 1848), **Zapiski o Iuzhnoi Rusi* (ed P. Kulish, 1857), **Zoria halitskaia* (ed B. Didytsky, 1860), **Khata* (1860), and **Dnistrianka* (1876). **Pershyy vinok*, an almanac by and about women, was published by N. Kobrynska and O. Pchilka in Lviv in 1887.

In the early 20th century modernist esthetic trends were reflected in the almanacs *Z nad khmar i dolyn* (ed M. Vorony, 1903), *Za krasoiu* (dedicated to O. Kobylianska, ed O. Lutsky, 1905), *Dubove lystia* (dedicated to P. Kulish, eds M. Cherniavsky, M. Kotsiubynsky, and B. Hrinchenko, 1903), *Z potoku zhyttia* (eds M. Kotsiubynsky and M. Cherniavsky, 1905), *Persha lastivka* (ed M. Cherniavsky, 1905), and *Bahattia* (ed I. Lypa, 1905). Also popular were almanacs of poetry and prose: *Rozvaha* (ed O. Kovalenko, 1905–6), *Dosvitni ohni* (ed B. Hrinchenko, 1906–14), *Ukrains'ka muza* (ed O. Kovalenko, 1908), and *Ternovi vinok* (O. Kovalenko, 1908). Early Soviet almanacs included *Literaturno-krytychnyi al'manakh* (1918) and *Hrono* (1920). The literary groups *Hart and *Pluh published almanacs in the 1920s. Later, several Soviet propaganda almanacs appeared (*Komsomoliia*, 1938; *Partiia vede*, 1958). A popular almanac during the Second World War was *Ukraina v ohni* (1942). Most Ukrainian newspapers outside Ukraine publish yearly almanacs. *Pivnichne siaivo* (ed Y. Slavutych) has appeared irregularly in Edmonton, Canada, since 1964.

Pavlo Aloshyn

Aloshyn, Pavlo [Al'ošyn], b 28 February 1881 in Kiev, d 7 October 1961 in Kiev. Architect and pedagogue. In 1904 Aloshyn graduated from the Institute of Civil Engineering and in 1917 from the Academy of Fine Arts in Petrograd. In 1918 he was appointed chief architect of Kiev. In 1923–30 he was professor at the Kiev Art Institute. He was a full member of the Academy of Architecture of the Ukrainian SSR in 1945–58 and an honorary member of the Academy of Construction and Architecture of the Ukrainian SSR from 1958. Aloshyn designed a number of prominent buildings in Kiev: the Kiev Pedagogical Museum built in 1909–13, which in 1917–19 housed the Central Rada and today houses a branch of the Lenin Central Museum; the St Olha Gymnasium in 1914–27, today the main building of the Academy of Sciences of the Ukrainian SSR; the Doctors' Building in 1927; and the buildings of the Myronivka Selection Station in 1923, which display characteristics of the Ukrainian folk style. He also designed the Kharkiv tractor plant in 1931 and other buildings and prepared numerous projects for other cities. Aloshyn was very active in the postwar reconstruction of Kiev. He was a functionalist who used modern forms and techniques. In his last years, however, Aloshyn was forced to adhere to Soviet classicist styles. He wrote articles on aspects of Ukrainian architecture. The monograph *Kyiv's'kyi zodchyi P.F. Al'ošyn* (The Kievan Builder P.F. Aloshyn) by V. Yasiievych was published in Kiev in 1966.

Alphabet. The modern Ukrainian alphabet consists of 33 letters; its present form is the result of a long evolution of

the Cyrillic alphabet. Specifically, in the 18th century, the Cyrillic alphabet was reformed into the *Hrazhdanka, which underwent further, secondary changes, providing the basis for the various writing systems. (See also *Drahomanivka, *Maksymovychivka, *Zhelykhivka, *Kulishivka, *Pankevychivka, *Yaryzhka, and *Orthography.)

Alphabet war (*azbuchna viina*). Name given by Galician Ukrainians of the time to the alphabet dispute of 1859–61, which was provoked by the attempt of the Austrian government (Minister of Education L. Thun) to impose the Latin alphabet on them in 1859. The project to Latinize Ukrainian writing was inspired by the governor general of Galicia, Count A. Gołuchowski, a Pole, and drawn up by J. Jireček, a Czech scholar. It required the approval of a commission consisting of prominent Ukrainians, two Austrian officials, Governor General Gołuchowski, and Jireček. Most of the Ukrainian members (Ya. Holovatsky, Y. Lozynsky, M. Malynovsky) opposed the plan as a potential means of Polonization. Finally, the commission adopted a reformed orthography based on Cyrillic script. Although this orthography was approved by the Ministry of Education in Vienna and prescribed in all schools and for the clergy by the governor general in Lviv, it was resisted by the Western Ukrainian community. In 1861 the Austrian government revoked all its decrees and allowed the Ukrainians to decide the matter of orthography themselves.

Aluminum industry. A branch of non-ferrous metallurgy in which aluminum is isolated and produced from various aluminum ores, primarily bauxite. The aluminum industry also produces crystalline flint, aluminum-flint alloys, metalline potassium, mineral fertilizers, and soda products. In Ukraine the aluminum industry originated in 1933 with the building of the *Dnieper Aluminum Plant in Zaporizhia, which utilized the cheap hydroelectric energy of the Dnieper Hydroelectric Station. In 1940 the plant produced almost 40,000 tonnes of aluminum (75 percent of the total Soviet production). In the postwar years until 1980 no new aluminum enterprises were established in Ukraine, despite the strong existing power base (the production of aluminum requires large amounts of hydroelectric energy) and the significant reserves of bauxite, which have not been exploited (bauxite is brought in from the Kola peninsula, RSFSR). The aluminum plant in Mykolaiv, at present the largest in Ukraine, began production in 1980. The output of aluminum in the USSR and in the Ukrainian SSR is not made public, as it is part of the aviation industry.

Alupka: Vorontsov's palace

Alupka. IX-15. City (1974 pop 11,400) on the southern coast of the Crimea, 17 km southwest of Yalta and under the administration of the Yalta city soviet. Alupka's climate makes it one of the best resort areas in the Crimea. The city has many sanatoriums and resort buildings. The former palace of Count M. Vorontsov, built in 1828-48 and designed by the English architect E. Blore in pseudo-Gothic style, with a Moorish portal and surrounded by a 40 ha park, has been converted into a museum containing 19th-century furniture, porcelain, bronze, crystal, and works by Western European, Russian, and Ukrainian artists (including K. Trutovsky and S. Vasylykivsky).

Alushta [Alušta]. IX-15. City (1974 pop 23,500) under the administration of the Crimean oblast, on the southern shore of the Crimea. Alushta has resorts, sanatoriums,

and beaches. It was founded in the 6th century AD on the site of the fortress Aluston, built during the reign of the Byzantine emperor Justinian. It was ruled by Genoa from the 14th century, by the Turks from 1475, and by Russia from 1783.

Alymov, Oleksander, b 30 September 1923 in Donetsk. Economist, full member of the Academy of Sciences of the Ukrainian SSR since 1973. Alymov began working in the Donbas in 1949, primarily at the Donetsk Coal Research Institute (1957-65). He has served as assistant director of the Institute of Economics of the Academy of Sciences (1965-69) and as director of the Institute of Industrial Economics of the academy (1969-72); since 1972 he has headed the academy's Council for the Study of the Productive Resources of the Ukrainian SSR. Alymov has written studies on industrial economics, particularly on the coal industry, on the economy of the Donbas, and on automated production-control systems.

Oleksander Alymov

Andrii Alyskevych

Alyskevych, Andrii [Alys'kevyč, Andrij], b 17 December 1870 in the village Zalukva, Stanyslav county, Galicia, d 1949 in Prague. A prominent pedagogue and organizer of the teaching profession in Galicia and Transcarpathia. Alyskevych was a Germanist by specialization; he studied in Lviv and Vienna. He served as director of the women's seminary in Lviv (1909-10) and of the gymnasiums in Peremyshl (1910-17) and Drohobych (1918-19). Alyskevych was an active member of the Ruthenian Pedagogical Society in Lviv and co-founder of the *Ukrainian Teachers' Mutual Aid Society. He emigrated to Bohemia and later to Transcarpathia, where he was the director of gymnasiums in Berehove, Uzhhorod (1922-38), and Velykyi Bychkiv and was active in the Plast Ukrainian scouting association. He was the author of German language textbooks and of works on German dialectology.

Ambodyk-Maksymovych, Nestor, b 7 November 1744 in the village of Vepryk, Poltava gubernia, d 5 August 1812, most probably in St Petersburg. Physician, encyclopedist. Ambodyk-Maksymovych graduated from the Kiev Theological Academy (1768) and the University of Strasbourg (1775), taught obstetrics in various teaching hospitals, and became director of the school of obstetrics in St Petersburg (1781). In 1797, at his initiative, a clinical obstetrics institute was established in St Petersburg.

Nestor Ambodyk-
Maksymovych

Ambodyk-Maksymovych was a founder of obstetrics and medical terminology in the Russian Empire, producing a number of medical studies, including translations. The most important were *Iskusstvo povivaniia, ili nauka o babich'em dele* (The Art of Swaddling, or the Science of Midwifery, 6 parts, 1784–6), *Fiziologiia, ili estestvennaia istoriia o cheloveke* (Physiology, or the Natural History of Man, 1787), and an encyclopedic treatise on medical botany, *Vrachebnoe veshchestvoslovie, ili opisanie tselitel'nykh rastenii v pishchu i lekarstvo upotrebliaemykh* (Doctor's Lexicon, or a Description of Plants Used in Food and Medicine, 3 vols, 1783–5).

American Carpatho-Russian Orthodox Greek Catholic church (Amerikanskaia Karpatorusskaia Pravoslavnaia Greko-Katolicheskaia Tserkov). The church came into existence in 1936 as a result of the controversy within the Byzantine Ruthenian Catholic church over the provisions of the Vatican decree 'Cum Data Fuerit,' issued in 1929. This decree sought to provide clear liturgical and administrative guidelines for the Byzantine Ruthenian church in the United States, and in particular it called for the enforcement of celibacy, the abolition of the parish trusteeship system of holding church property, and the end to interference in church affairs by fraternal organizations.

Several priests, led by Rev O. *Chornock (1883–1977), Rev S. Varzaly (1890–1957), and Rev P. Molchany (b 1902) and joined by laymen, including the powerful *Greek Catholic Union of the USA, protested vehemently the Vatican decree. The result of the 'anticelibacy movement' was a church council held in Pittsburgh in 1936, at which defenders of Eastern-rite liturgical tradition, guaranteed by the Union of *Uzhhorod (1646), founded the 'true,' or Orthodox Greek Catholic church.

The new church received its canonical authority from the Greek Orthodox archbishop in New York City, and in 1938 Rev Chornock was named bishop with a diocesan seat, first at his own parish in Bridgeport, Connecticut, and later in Johnstown, Pennsylvania. After numerous legal battles with the Byzantine Ruthenian Catholic church over property, the membership of the church stabilized, and in 1974 it had an estimated 60 priests, 65 churches, and 108,000 parishioners. The church has its own seminary in Johnstown (est 1954) and a bilingual weekly newspaper, *The Church Messenger* (*Tserkovnyi vistnik*, est 1944), and it is supported by the Greek Catholic Carpatho-Russian Benevolent Association Liberty in Perth Amboy, New Jersey. The church is at present headed by Bishop J. Martin (b 1931).

Because the church justifies its existence as a preserver of historical tradition, it has tried to put some emphasis on history, language, and culture in the training of its priests. Therefore, the diocese in Johnstown for several years offered courses in Carpatho-Ruthenian history and language. In terms of ethnic identity the church identifies itself as part of a supposed single Russian people, although it does emphasize the particular characteristics of the 'Carpathian branch' of the 'one Russian nationality.'

P.R. Magocsi

American Circle (Amerykanskyi kruzhok). A group of Ukrainian Catholic priests from Galicia who emigrated to the United States in the 1890s to work there in the religious, civic, and cultural spheres. The following priests were members of the circle: I. *Konstankevych, N. *Dmytriv, I. *Arđan, A. *Bonchevsky, S. *Makar, M. Pidhoretsky, M. Stefanovych, and P. Tymkevych. They organized Ukrainian parishes, defended the autonomy of Ukrainian church communities, and demanded a Ukrainian Catholic bishop (at the convention of clergy in Harrisburg, Pennsylvania, in 1902). They also established fraternal insurance associations – the Ruthenian National Association (renamed the *Ukrainian National Association in 1914) and the Ukrainian Workingmen's Association (renamed the *Ukrainian Fraternal Association in 1978) – and founded the newspapers **Svoboda* and **Narodna volia*, schools, and an educational system. The priests visited Ukrainian settlements in western Canada and laid the foundations for organized religious and cultural life there.

American Committee of Liberation (ACL). A private organization that had the official support of the United States government in promoting the political and cultural activities of exiles from the USSR. The ACL was founded in New York in 1951, with a branch office in Munich. The committee's objectives were to work for changes in the USSR in the spirit of democratization and self-determination. Initially the committee adopted a stance of 'non-predetermination' concerning the future of non-Russian peoples, which gave rise to criticism among many Ukrainian political organizations. As the committee modified its position in regard to Ukrainians, several Ukrainian groups and individuals started to co-operate in ACL-sponsored institutions, such as the *Institute for the Study of the USSR and *Radio Liberty (1953). The ACL supported the review *Peoples of the USSR*, in which representatives of the Ukrainian government in exile (UNR) were active. After it was dissolved in the late 1950s, some of its functions were taken over by the United States Information Agency.

American National Council of Uhro-Rusins (Amerikanska narodna rada uhro-rusinov). A representative body of Carpatho-Ruthenian (Transcarpathian) immigrants in the United States, founded on 23 July 1918 in Homestead, Pennsylvania with the purpose of influencing the political future of their native land. Its president was attorney H. *Zhatkovych (Zsatkovich). At its first convention in McKeesport, Pennsylvania, on 26 July 1918, the following possible options for Transcarpathia were considered: independence, union with Galicia and Bukovyna, or incorporation into another state with guaranteed autonomy. Eventually the leaders of the council opted for voluntary union with Czechoslovakia.

On 26 October 1918 they entered into an informal agreement (the 'Philadelphia agreement') with T. *Masaryk concerning Carpatho-Ruthenian autonomy in the future federal republic of Czechoslovakia. The agreement was approved by the council convention in Scranton, Pennsylvania on 12 November 1918, and was followed by a plebiscite in all Carpatho-Ruthenian parishes and organizations in the United States, with the following results: 67 percent for union with Czechoslovakia, 28 percent for union with Ukraine, 5 percent for union with other countries (Hungary, Galicia, Russia) or for independence. The decision of the council was approved by the *Central Ruthenian People's Council in Uzhhorod on 8 May 1919 and accepted by Prague. The council continued to exist for a few more years, with declining activity and influence. In 1920 and 1922 it launched protests against the Czechoslovakian government for failure to grant Carpatho-Ukrainian autonomy.

V. Markus

American Relief Administration. A United States agency founded in 1919 to administer aid in war-ravaged Europe and headed by H. Hoover. In 1921–3 it supplied food, clothing, medicine, and other necessities to Ukraine and southeastern Russia, which had been stricken by famine.

American Russian Messenger. See *Amerikanskii russkii viestnik*.

American Ruthenian National Council (*Amerykanska ruska narodna rada*). Consisting of representatives of parishes, religious organizations, and clerical circles, the council was founded on 8 December 1914 by Bishop S. *Ortynsky in Philadelphia. Its purpose was to aid the victims of war in the Ukrainian territories of Austria-Hungary and to voice the political aspirations of the Ukrainian population. In 1916, after the death of Ortynsky, the council, under the influence of the *Ukrainian National Association and the *Providence Association of Ukrainian Catholics, changed its name to the Ukrainian National Committee; however, it soon lost ground to the *Federation of Ukrainians in the United States.

Amerikanskii russkii viestnik (*American Russian Messenger* or *ARV*). The official organ of the *Greek Catholic Union of the USA, the *ARV* is the oldest Carpatho-Ruthenian newspaper in the United States. It was published weekly from 1892 to 1952 successively in Mahanoy City and Scranton, Pennsylvania, New York City, Pittsburgh, and Homestead, Pennsylvania. Since 1953 it has appeared as a weekly and most recently as a bi-weekly under the title *Greek Catholic Union Messenger*.

During the height of its influence until the Second World War, when in some years up to 100,000 copies per issue were printed, *ARV*, as the leading organ of the Carpatho-Ruthenian community, was concerned with the economic life of immigrants in the United States, relations with the homeland, and the development of the Greek Catholic or Byzantine Ruthenian Catholic church in America. With regard to the last two issues, the newspaper adopted varying positions. Its views on national identity have ranged from arguments that the group comprises a distinct Ruthenian or Rusyn (often spelled *Rusin*) or Uhro-Rusyn nationality to a belief that it is part

of the Russian nationality. During the early 1930s *ARV* was a leading opponent of the Byzantine Ruthenian Catholic church, because of the latter's full acceptance of the celibacy rule for priests.

The language of the newspaper has also varied; it has appeared in unstandardized forms of Subcarpathian dialects (both in the Cyrillic and Latin alphabets), in 'Slavish' (ie, eastern Slovak dialects), and in English, which has predominated since the 1950s. Among the leading editors was the paper's founder, P. Zhatkovych (1852–1916), Rev S. Varzaly (1890–1957), and M. Roman (b 1912), whose editorship from 1937 to 1981 witnessed improved relations with the Byzantine Ruthenian Catholic church and the propagation of Russophile ideas regarding national identity. The early years of the newspaper's contents have been analyzed by J.M. Evans, *Guide to the Amerikanskii Russkii Viestnik*, 1: 1894–1914 (Fairview, NJ 1979).

P.R. Magocsi

Ameryka (*America*). The first Ukrainian newspaper in the United States, which appeared from 15 August 1886 until 22 February 1890, at first irregularly as a biweekly and then as a weekly. *Ameryka*'s founder and first publisher was Rev I. *Voliansky; later it was published by the Ukrainian Catholic parish of Shenandoah, Pennsylvania. For a time the paper was edited by V. *Simenovych, and then by K. *Andrukhovych.

Front page of the first issue of *Ameryka*, 29 August 1912

Ameryka (*America*). A Ukrainian Catholic newspaper published in Philadelphia since 1912 by the *Providence Association of Ukrainian Catholics in America. At first *Ameryka* was a weekly, then during the First World War, a daily. From 1918 it appeared three times a week, and since 1951 it has been published five times a week. Its editors since 1912 have been Rev R. Zalitch, Rev O. Pavliak, A. Tsurkovsky, O. Nazaruk, L. Tsehelsky, V. Lototsky, B. Katamai, H. Luzhnytsky, Ye. Zyblykevych, M. Pasika, L. Shankovsky, and I. Bilynsky; currently the editor is M. Dolnytsky. Circulation has varied over the years, peaking at 10,000–12,000 readers in the 1950s to 1970s; at present it is approximately 5,000.

Amnesty. Complete or partial remission of punishment issued by a proper state authority to whole groups or categories of prisoners. Special occasions in public life or in the life of the head of state provide opportunities for the granting of amnesty. Traditionally the granting of

amnesty has been an act reserved for a head of state; however, it can also be granted by parliament. Russian tsars granted amnesty through their 'illustrious manifestoes.' However, only a very few condemned Ukrainians in the Russian Empire were granted amnesty. Polish presidents from 1920 to 1939 also exercised this privilege rarely in relation to Ukrainian political prisoners. In the USSR and the Ukrainian SSR the right of granting amnesty is reserved for the Presidium of the Supreme Soviet; the Ukrainian SSR rarely uses this authority. In fact, it is exercised solely by the USSR, which enacted a wide amnesty in 1955–6 and a limited one in 1967, 1977 (anniversaries of the October Revolution) and 1982; these amnesties contained various clauses restricting applicability and, although advertised as 'general' amnesties, benefited common criminals more than political prisoners. A special type of amnesty, known as *povyinna*, is aimed at the enemies of the Soviet regime, eg, insurgents and émigrés. To receive this amnesty, such persons must voluntarily give themselves up to the authorities with an admission of guilt. The government of the Ukrainian SSR decreed several such amnesties to the members of the *Ukrainian Insurgent Army and to political émigrés in the West in the 1940s and 1950s. There is also an act of individual amnesty known as pardon (*pomylyvannia*).

V. Markus

Amnesty International (AI). An international organization, founded in Great Britain in 1961, working for the release of prisoners of conscience imprisoned anywhere in the world. It has consultative status with the United Nations (ECOSOC and UNESCO) and the Council of Europe and observer status with the Organization of African Unity. In 1977 it was awarded the Nobel Peace Prize. Amnesty International has adopted numerous Ukrainian prisoners of conscience, among them V. *Moroz, Yu. *Shukhevych, L. *Pliushch, P. *Hryhorenko, V. *Chornovil, and M. *Rudenko. From 1970 to 1982 it published the English-language edition of the samizdat **Chronicle of Current Events* and in 1975 published the report *Prisoners of Conscience in the USSR* (rev ed, 1980). Political repression in Ukraine is extensively covered in its reports.

Mykola Amosov

Amosov, Mykola, b 19 December 1913 in Olgov, Vologda gubernia, Russia. Surgeon, full member of the Academy of Sciences of the Ukrainian SSR since 1969, and corresponding member of the Academy of Medical Sciences of the USSR since 1961. In 1952–68 Amosov was in

charge of the Clinic for Tubercular Heart and Artery Surgery and Breast Surgery at the Kiev Scientific Research Institute of Tubercular Lung Surgery, and in 1968 he became the institute's assistant director. Amosov is one of the founders of lung and heart surgery in the USSR. He is also a founder of the Ukrainian school of biological, medical, and psychological cybernetics. Amosov has written several novelistic works: *Dumky i sertse* (Thoughts and the Heart, 1964), *Zapysky iz maibutn'oho* (Notes from the Future, 1966), *Zapysky pol'ovoho khirurha PPH-2266* (Notes of Field Surgeon PPH-2266, 1974).

Amvrosiivka [Amvrosijivka]. VI-19, DB IV-4. City (1975 pop 25,200) in the southeastern part of the Donetsk Basin (est in 1869) and a raion center in Donetsk oblast. The city is an important center of the cement industry in Ukraine (the *Amvrosiivka Cement Complex). The city also has the reinforced-concrete factory Buddetal and a food and consumer-goods industry. There are large marl deposits in the vicinity.

Amvrosiivka Cement Complex (Amvrosiivskyyi tsementnyi kombinat). The largest cement manufacturing complex in the Ukrainian SSR, located in the city of Amvrosiivka in Donetsk oblast. It was formed in 1954 through the merger of five cement factories and four quarries. The first two plants were built in 1896–8, the third in 1914. In 1913 these plants produced 109,000 tonnes of cement. In 1925–32 the plants were radically reconstructed, and a fourth plant was built in 1932. After the war production reached the prewar level only in 1949. In 1953 the fifth cement factory, the Novoamvrosiivka factory, began production. In 1961–2 an asbestos pipe factory was added to the complex. Today it produces cement of various quality (3,900,000 t in 1975).

Amvrosiivka site. A late Paleolithic site discovered in 1935 near Amvrosiivka in Donetsk oblast. Excavations in the 1940s uncovered a thick layer of bones of about 1,000 bison that had been stampeded over a precipice by hunters. Spearheads and other flint and bone implements were also found. The discovery showed that collective hunting on a large scale occurred in the late Paleolithic era.

Analecta Ordinis S. Basilii Magni/Zapysky ChSVV (Transactions of the Order of St Basil the Great). Irregular scholarly publication of the *Basilian monastic order, first published in Zhovkva (now Nesterov) and Lviv (1924–39), then in Rome (as a second series, commencing in 1949). The first editor of *Analecta* was Rev I. Skruten. Six volumes were published by 1939. The second series of *Analecta*, under the editorship of Rev A. *Velyky, consisted of 103 volumes by 1979 and was divided into three sections: (1) works – monographs (40 vols); (2) transactions of the Order of St. Basil the Great – articles, reviews, bibliographies, and other materials (10 vols); (3) documents – a systematic publication of materials from the Vatican Archives (53 vols) concerning the history of Ukraine, including two large volumes entitled *Documenta Pontificum Romanorum historiam Ucrainae illustrantia 1075–1953* (1953–4).

Ananiv [Anan'jiv]. VI-10. City (1969 pop 18,900) located in the southeast of the Podilian plateau; a raion

center in Odessa oblast. Ananiv was founded in the mid-18th century and was part of the Ottoman Empire. In 1792 it came under Russian rule in accordance with the Treaty of Jassy. In 1834 it became a county town in Kherson gubernia. Ananiv has not developed because of its distance from railway lines (in 1926 its population was 18,200). The city has a food and consumer-goods industry.

Anapa. ix-18. City (1968 pop 23,000) on the Black Sea in the Krasnodar krai (RSFSR). This is a large children's resort, established in 1866, which features curative mud baths.

Anarchists. Proponents of the doctrine that rejects the state, private property, law, and external coercion. Anarchists in Ukraine were connected with various trends of Russian anarchism: anarcho-communism, anarcho-syndicalism, and anarcho-individualism. None of these movements had their beginnings in Ukraine, but were imported from Russia. The first groups of anarcho-communists were formed among Odessa workers at the end of the 19th century under the influence of the ideas of the Russian anarchist Prince P. Kropotkin. Some of these groups were suppressed by the police in 1902, and some disintegrated. After 1905 the anarchists stepped up their activity. They disseminated their propaganda, staged terrorist actions, and extorted state and private money, particularly in Odessa. In 1905–6 the anarcho-syndicalists attempted to form an organization in Kharkiv, but failed. Because of police infiltration and banditry, most of the anarchist groups disappeared by the end of 1907. In Odessa and Katerynoslav, where anarchist cells survived until 1908, many anarchists were punished by death.

In 1917 anarchist groups of different tendencies reappeared in a number of Ukrainian cities. At first they usually supported the Bolsheviks, but at times also opposed them. In Kiev O. Feofilaktov revived an anarcho-communist group that had been suppressed in 1910. (For some time he had co-operated with Yu. Piatakov, the leader of the Kiev Bolsheviks.) According to computations based on the anarchist press, there were various kinds of anarchist groups in about 25 cities and villages in Ukraine prior to 1917. The largest centers of anarchism were Katerynoslav, Kharkiv, Odessa, and Kiev. The members of these groups were Russians, Russified Ukrainians, and, to a large extent, Jews. Although an attempt was made in 1914 to set up a Ukrainian anarchist cell, it failed. In general the attitude of the anarchists in Ukraine towards the nationality question, specifically towards the Ukrainian question, was indifferent or negative, since they regarded nationalism as an essentially bourgeois ideology. In the spring of 1918 many detachments of anarchists, which became notorious for the looting of towns, retreated with the Red forces from Ukraine, mostly from the Donets Basin. At this time the Bolsheviks turned on the anarchists and disarmed them. Anarchists from Ukraine participated in organizing the assassination of the Moscow Committee of the Russian Communist party in September 1919 and were liquidated by the Cheka.

The Moscow anarchist group associated with the paper *Nabat* moved its operations to Ukraine in 1918 because of the increasing power of the Bolsheviks in Russia and the spreading peasant revolts against the Hetman govern-

ment in Ukraine. There it established ties with N. *Makhno. The group's leader was V. Eikhenbaum-Volin. In 1918–21 some of the peasant movements in Ukraine were led by anarchists, the most famous of which was Makhno's faction. The program of the Makhno movement was articulated by Russian anarchists; it consisted of an amorphous blend of anarcho-syndicalist ideas and slogans that appealed to the discontented peasantry – the will of the people, soviets without Communists, land distribution by local authorities, the free exchange of goods – and was directed against the agricultural communes, grain confiscation, and the Cheka terror. At Makhno's headquarters in Huliai-Pole near Zaporizhia there was a 'free people's soviet.' Its propagandists, including V. Volin, N. Popov, and P. Marin-Arshinov, published the anarchist periodicals *Put' k svobode* and *Nabat* as well as various pamphlets and leaflets. Anarchists, as well as leftist Socialist Revolutionaries, were among N. *Hryhoriiv's followers. They also served in the larger detachments of the Makhno movement as political officers.

Although anarchist propaganda in Ukraine paid little attention to the Ukrainian question, a potentially serious rift over the theory and practice of anarchism began to appear in the last years of the revolution between the Russian and Jewish urban anarchists and the Ukrainian peasant masses, who constituted the overwhelming majority of the Makhno movement and whose views were defended by Makhno himself. When the New Economic Policy was introduced and the Soviet attitude towards the peasants became more moderate in 1921, the remnants of the Makhno movement were eliminated. The last organized expression of anarchism in Ukraine was the Workers' Opposition that emerged in the Bolshevik party in 1920 and was led by A. Shliapnikov, S. Medvedev, and A. Kollontai. After the Workers' Opposition, which was described as 'an anti-Party anarcho-syndicalist group,' had been defeated at the Moscow Congress in 1921, some of its members joined the Trotskyists and were later liquidated with them during Stalin's Great Purge.

M. Kovalevsky

Anastasevych, Vasyl [Anastasevyč, Vasyl'], b 11 March 1775 in Kiev, d 28 February 1845 in St Petersburg. Bibliographer, journalist, civic leader. Anastasevych studied at the Kievan Mohyla Academy (1786–91). In 1811–12 he published the magazine *Ulei* (Beehive) in St

Petersburg. He was the first to propose the establishment of a state bibliographical registration system and the introduction of a bibliography of articles in the journals of the Russian Empire. He himself compiled a bibliography of serial publications for the years 1707–1824, which is a valuable source for research on Ukrainian publications. Anastasevych also published the *Lithuanian Statute in 1811.

Anastaziievsky, Mykola [Anastazijevs'kyj], b 14 August 1891 in Skala, Borshchiv county, Galicia, d 28 May 1974 in Minneapolis, Minnesota. Realist painter, graphic artist, and pedagogue. Anastaziievsky obtained his artistic education at the Cracow Academy of Art. His works include portraits, landscapes, still lifes, graphic works with Ukrainian folk motifs, and series of greeting cards depicting Ukrainian Christmas and Easter rites.

Anatolii [Anatolij], b in Volhynia. Artist of the second half of the 17th century, hieromonk of the Pochaiv Monastery. In 1675 he painted *The Siege of Pochaiv by the Turks*, which was preserved at the Pochaiv Monastery until the end of the 19th century. In 1704 N. Zubrytsky copied the painting in copper.

Ancestor worship. The cult of the ancestors was a basic feature of the ancient pagan world view of the Ukrainian people. Every feast of the folk calendar commemorated the dead and was believed to serve a practical agricultural purpose. According to popular belief the clan (*rid*) was an indivisible whole, consisting of the living, the dead, and the unborn. Death was viewed as a departure or displacement in space, which did not sever the ties between the dead and the living. The ancestors participated in all the affairs and the agricultural work of the family. Commemorative meals or feasts were held at certain times of the year. The ancestors were invited to them and left at the end of the festive cycles. Every commemorative feast consisted of a summoning-invitational ritual, a greeting ritual, a communal ritual meal for the living and the dead, and a farewell ritual.

Christmas Eve, which is the most important family holiday in Ukraine, is closely connected with the clan cult and the commemoration of the dead. During the evening meal three spoons of each dish are placed in a special bowl for the departed relatives. The Epiphany Eve meal (*holodna kutia*) also has a commemorative function. In the spring the dead are remembered on St Theodore's day, the first Saturday of Lent. The main commemorative rite is the 'sending-off' (*provody*) of the dead, which is held on the Monday after St Thomas's Sunday. Various foods, colored eggs, liquor, and wine are brought to the graves of the ancestors. The dead are also commemorated on the eve and day of Pentecost. In the fall the dead are honored on three commemorative Saturdays: St Demetrius's, St Cosmas's, and St Michael's.

P. Odarchenko

Ancient states on the northern Black Sea coast. City states existed on the northern pontic coast from the middle of the 1st millennium BC to the 3rd–4th century AD. They were founded as colonies of Greek city states, mainly Miletus and other Ionic states, on sites that had fertile land, were close to good fishing grounds,

and facilitated trade with such tribes as the Scythians, Sindians, and Maeotians. The oldest Greek colony in Ukraine was founded on *Berezan Island in the second half of the 7th century BC. The other colonies were founded mostly in the 6th century BC: *Tyras (now Bilhorod-Dnistrovskiy), *Olbia (on the Boh liman), and, in the Crimea, *Panticapaeum (now Kerch), Theodosia (now *Teodosiia), *Tiritaka, *Nymphaeum, and *Kerkinidias (now Yevpatoriia). *Chersonese Taurica, the only Doric colony, was built at the end of the 5th century BC in southwestern Crimea. In a short time these colonies all became independent, slave-owning poleis.

The economy of these states was based on agriculture (particularly viticulture), manufacturing (stonecutting, construction, metal-working, pottery-making, and jewelry-making), and trade with the neighboring tribes and the cities of Greece and Asia Minor. The colonies sold their own products and acted as intermediaries between Greece and the Black Sea tribes. Most of the states produced their own coins. They sold the local tribes wine, weapons, and such luxury items as sculptures, vases, and precious textiles, and exported grain, dried fish, other agricultural products, and slaves.

In political structure most of these states were, like their mother states, slave-owning republics. The *Bosporan Kingdom, established ca 480 BC, had a monarchical structure.

By the late 2nd century BC the states on the northern pontic littoral went into decline, mostly because of expansion by the Scythians and Taurians. In the middle of the 1st century BC they came under the protection of King Mithradates VI Eupator of Pontus and joined him in his wars with Rome. After Mithradates' defeat Roman garrisons were stationed in many of the states and remained there until the 3rd–4th century AD. Local tribes who settled there became hellenized and began to play an increasingly important role, leading to the creation of a Greco-Sarmatian culture.

In the 330s AD the states on the northern pontic littoral were economically ruined by the invasions of the *Ostrogoths; they were finally destroyed by the *Huns in the fourth century.

Anczewska-Wiśniewska, Elżbieta. See Wiśniewska, Elżbieta.

Anders, Władysław, b 11 August 1892 in Błoń, Poland, d 11 May 1970 in London, England. Polish general. Following the outbreak of the German-Soviet war and the signing of the Soviet-Polish agreement of 30 July 1941, Anders became commander-in-chief of a Polish army in the USSR. The army included some 2,000 Ukrainians, citizens of Poland who had been deported from Western Ukrainian territories by Soviet authorities. Following the end of the war and the dissolution of Anders's corps in

1945, most of the Ukrainians settled in England. As an émigré Anders supported Polish claims to eastern Galicia and Volhynia.

Andiievska, Emma [Andijevs'ka], b 19 March 1931 in Donetsk. Poetess and prose writer. An émigré since 1943, she at first lived in Germany (where she completed her higher education), then in France and the United States, and now again lives in Germany. Andiievska's work is highly original. To date she has published nine collections of verse: *Poezii* (Poems, 1951), *Narodzhennia idola* (Birth of the Idol, 1958), *Ryba i rozmir* (Fish and Dimension, 1961), *Kuty opostin'* (Corners on Both Sides of the Wall, 1963), *Pervni* (Elements, 1964), *Bazar* (Bazaar, 1967), *Pisni bez tekstu* (Songs without a Text, 1968), *Nauka pro zemliu* (Science of the Earth, 1975), and *Kavarnia* (Café, 1983); three collections of short prose: *Podorozh* (Journey, 1955), *Tyhry* (Tigers, 1962), and *Dzhalapita* (1962); and three novels: *Herostraty* (Herostrati, 1970), *Roman pro dobro liudynu* (Novel about a Good Person, 1973), and *Roman pro liuds'ke pryznachennia* (A Novel about Human Destiny, 1982). The reaction of critics to her works has been mixed and even contradictory.

The hermeticism of her poetry and the self-imposed and strictly adhered-to structural constraints of her prose do not lend themselves to easy comprehension. Andiievska's poetic world consists of surrealistic landscapes rooted in real descriptions of nature, which Andiievska views from various dimensions and to which she provides exquisite instrumentation. The multidimensional imagery produces an effect of simultaneity of events, coinciding with the notion of 'round time,' whose laws govern the multipisodic but monolinear (chainlike) novels.

D.H. Struk

Emma Andiievska

Halyna Andreadis

Andreadis, Halyna (Alicia) (birth name Mynaiv), b 22 June 1932 in Stravropil. Operatic contralto. Andreadis's family came from Zaporizhia. She studied under A. Cetera at the conservatory in Buenos Aires. Since 1960 Andreadis has been a soloist with the Teatro Colon opera in Buenos Aires. She has appeared in the United States and Canada with various opera companies and has given many concerts. The American record company RCA has produced three records of her singing.

Andreas, ?– ca 726. Archbishop of Crete, writer, preacher, and ecclesiastical poet. His *Velykyi Pokaiannyi Kanon* (Great Penitential Canon) was one of the best-known works of Old Ukrainian literature in translation.

Andreev, Konstantin, b 26 March 1848 in Moscow, d 29 October 1921 in Moscow. Mathematician, corresponding member of the St Petersburg Academy of Sciences. From 1873 to 1898 Andreev taught at Kharkiv University, where he was appointed professor in 1879, and then at Moscow University. He was an organizer and active member of the Kharkiv Mathematical Society. He published works on projective geometry and mathematical analysis.

Andrei Bogoliubskii [Andrej Bogoljubskij], b ca 1111, d 29 April 1174. Prince of Vladimir-Suzdal, son of *Yurii Dolgorukii, and grandson of *Volodymyr Monomakh. Andrei's father appointed him prince of Vyshhorod near Kiev, and Andrei participated in his father's struggle to take Kiev. In 1155 he left Vyshhorod and became ruler of Vladimir in the north. After his father's death in 1157, he became the prince of Rostov and Suzdal. Thus, he united the northeastern part of Rus' under his rule. From 1159 he tried to strengthen his influence in Novgorod. In 1169 he sacked Kiev. Andrei was murdered by the boyars, who resisted his autocratic policies.

Andreiko, Dmytro [Andrejko], 1869–1925. Pedagogue and educator in the United States (from 1907), organizer of schools, and member of the editorial board of the newspaper **Svoboda*. Andreiko compiled a primer and readers for Ukrainian church schools, edited the children's magazines *Tsvitok* and *Ridna shkola*, and published a collection of 600 folk songs, entitled *Zvuky Ukraïny* (Sounds of Ukraine, 1923).

Andreenko, Michel. See Andriienko-Nechytailo, Mykhailo.

Andrella, Mykhailo (pseud Orosvyhivsky [Orosvyhiv'sky]), b 1637 in Rosvyhove (Orosvyhove) in Transcarpathia, d 1710 in Iza, Transcarpathia. Writer, polemicist, and priest. Andrella studied at the universities of Vienna, Bratislava, and Trnava. During his travels abroad he became a Catholic, but on coming home (in 1669) he returned to Orthodoxy and wrote sharp attacks on Catholicism and Protestantism in *Logos* (1691–2) and *Obrona virnomu kazhdomu cheloviku* (Defense of Every Faithful Man, 1697–1701). Some scholars consider Andrella a follower of I. *Vyshensky, but he does not measure up to the great polemicist. His biography and a survey of his literary work can be found in M. Vozniak's *Istoriia ukrains'koi literatury* (A History of Ukrainian Literature, vol 3, 1924) and in V. Mykytas's *Ukrains'kyi pys'mennyk-polemist M. Andrella* (The Ukrainian Writer-Polemicist M. Andrella, 1960).

Andrew II, 1175–1235. Hungarian king. After the death of Prince Roman Mstyslavych in 1205, Andrew (Endre) tried to gain control of the principality of Galicia-Volhynia and adopted the title of king of Galicia and Lodomeria. He fought against Prince Danylo Romanovych and tried to win the Galician throne for his sons, Kálmán and Andrew.

Andrii [Andrij], b in Volhynia. Painter of the 15th century. Andrii painted frescos in the Chapel of the Holy Trinity in Lublin, Poland. *The Last Supper*, *Prayers over the Chalice*, *Descent from the Cross*, and *The Betrayal* are on the walls around the altar, and a depiction of Christ with Andrii's signature and the date 1418 is on the arch between the altar and the nave.

Andrii Pervozvannyi. See Saint Andrew.

Andrii Yuriiovych [Andrij Jurijovyč], ?–ca 1323. Prince of Galicia-Volhynia who ruled with his brother *Lev Yuriiovych from 1308 to ca 1323, son of *Yurii Lvovych. Andrii maintained close ties with the Teutonic Knights and Poland and waged war against the Tatars and Lithuanians. The deaths of Andrii and Lev while fighting the Tatars ended the dynasty of *Volodymyr Monomakh in Galicia.

Detail of 1418 fresco by Andrii in the Holy Trinity Chapel in Lublin, Poland

Mykhailo Andriienko-Nechytailo

Andriiashev, Oleksander [Andrijašev], b 1 September 1863 in Chernihiv, d 1939. Historian, archivist, archeographer. Andriiashev graduated from Kiev University in 1886 and worked in the archives of Riga, Revel, St Petersburg, and Kiev (especially in the Central Archive of Old Documents). He wrote *Ocherk istorii Volynskoi zemli do kontsa xiv veka* (A Historical Survey of the Volhynian Land to the End of the 14th Century, 1887) and 'Narys istorii kolonizatsii Kyivs'koï zemli do kintsia xv viku' (A Historical Survey of the Colonization of the Kievan Land to the End of the 15th Century) in *Kyïv ta ioho okolytsia v istorii i pam'iatkakh* (Kiev and Its Environs in History and in Monuments, ed M. Hrushevsky, Kiev 1926).

Andriiashyk, Roman [Andrijašyk], b 9 May 1933 in Korolivka, Ternopil county, Galicia. Writer. Andriiashyk studied physics and mathematics at Chernivtsi University and journalism at Lviv University. His works were first published in 1957. He is the author of five novels: *Liudy zi strakhu* (People out of Fear, 1966), *Poltva* (The Poltava River, serialized in the Kharkiv journal *Prapor*, 1969, nos 8–9), *Dodomu nema vorottia* (There Is No Way to Return Home, 1976), *Krovnna sprava* (A Matter of Blood, 1978), and *Sad bez lystopadu* (An Orchard without Falling Leaves, 1980). *Poltva*, a historical novel about the life of the

Galician intelligentsia during and after the struggle for Ukrainian independence, was sharply attacked by Soviet critics for nationalism and subsequently banned. It was republished in the émigré journal *Suchasnist'*, 1971, nos 2–5.

Andriichuk, Mykhailo [Andrijčuk], b 30 November 1894 in Slobidka, Tovmach county, Galicia, d 28 November 1938 in the United States. Journalist and short-story writer. Andriichuk emigrated to America in 1911. He was a member of pro-Communist Ukrainian-American organizations and editor of **Robitnyk*, at first in Cleveland and later in New York. He also edited the satirical journal *Smikh*, contributed to *Ukrains'ki shchodenni visti*, and edited *Svitlo*. Andriichuk depicted the life of the working class from a communist viewpoint. A selection of his writings was published in Ukraine in 1957.

Andriienko-Nechytailo, Mykhailo [Andrijenko-Nečytajlo, Myxajlo] (known in France as Michel Andreenko), b 29 December 1894 in Odessa, d 12 November 1982 in Paris. Painter and stage designer. In 1912–17 Andriienko-Nechytailo studied with M. Rerikh, M. Rylov, and I. Bilibin at the art school of the Imperial Society for the Promotion of the Arts in St Petersburg. In 1914–16 he exhibited the composition *Black Dome* and his first cubist works in St Petersburg. In 1914 he participated in an international graphics exhibition in Leipzig. In 1917–24 he devoted most of his time to designing stage sets for various theaters – in St Petersburg, Odessa, Prague, Paris, and for the Royal Opera in Bucharest. In Paris, where he lived from 1923, he also worked on sets for the films *Casanova* and *Sheherazade* and continued to paint in the cubist-constructivist style. In the 1930s Andriienko-Nechytailo produced a series of surrealist paintings. He switched to neorealism in the 1940s and painted a number of portraits as well as the cityscape *Disappearing Paris*. From 1958 he returned to constructivism and abstraction.

Andriienko-Nechytailo's work is characterized by a precision of composition that harmonizes subtly with color. His stage sets are remarkable for their laconic quality and architectural schematism, and his costume designs, for their richness. His paintings can be found in the City Museum of Modern Art and the Arsenal Library in Paris, the National Library in Vienna, the Victoria and Albert Museum in London, the Metropolitan Museum in New York, the Lviv State Museum of Ukrainian Art, and Ukrainian émigré museums and private art collections. Andriienko-Nechytailo is also the author of several short stories and articles on art.

S. Hordynsky

Andriievsky, Borys [Andrijevs'kyj], b 1898 in Bezsalj, Poltava gubernia, d 20 October 1962 in Cleveland, Ohio. Surgeon, brother of D. Andriievsky. Andriievsky was a professor of surgery at the Dnipropetrovske Medical Institute and, in 1943–44, at the Lviv Medical Institute. He wrote more than 30 scientific works. As an émigré in Germany he was one of the organizers of the Ukrainian Red Cross; in 1952 he emigrated to the United States.

Andriievsky, Dmytro [Andrijevs'kyj], b 27 September 1892 in Budky, Poltava gubernia, d 30 August 1976 in Dornstadt, West Germany. Political activist and publicist, engineer. Andriievsky was secretary of the UNR diplomatic mission in Switzerland (1919–20) and subsequently head of the Ukrainian Committee in Belgium. He was a member of the first Leadership Council of Ukrainian Nationalists (1928), a participant in the founding congress of the *Organization of Ukrainian Nationalists in 1929, and served afterwards in the OUN (Melnyk faction) leadership, in charge of external contacts. In 1944 he was imprisoned in the German concentration camp at Brätz. In 1948 he became a member of the *Ukrainian National Council and of its Executive Organ; he also served as its state controller. He was head of the senate of the OUN (Melnyk faction). Andriievsky wrote articles on the ideology of Ukrainian nationalism and on Ukrainian foreign policy and is the author of *Rosis'kyi kolonializm i soviets'ka imperiia* (Russian Colonialism and the Soviet Empire, 1958).

Dmytro Andriievsky

Oleksii Andriievsky

Andriievsky, Ivan [Andrijevs'kyj], b 1759 in the Chernihiv region, d 1809 in Moscow. Pioneer of veterinary science in the Russian Empire. Andriievsky studied at the Kievan Mohyla Academy and Moscow University, where he was later appointed to the chair of veterinary medicine. He wrote numerous studies in Latin and Russian, including translations from the French. The most important of these are *Kratkoe nachertanie anatomii domashnikh zhivotnykh* (Brief Outline of the Anatomy of Domestic Animals, 1804) and *Nachal'nye osnovaniia meditsyny veterinarii ili skotolecheniia* (Basic Fundamentals of Veterinary Medicine or the Healing of Animals, 1809).

Andriievsky, Oleksander [Andrijevs'kyj], b 15 August 1869 in Byryne, Chernihiv gubernia, d 15 June 1930. Ukrainian ethnographer and folklorist, high school teacher. From 1921 Andriievsky was associated with the *Ethnographic Commission of the Ukrainian Academy of Sciences. He compiled *Bibliohrafiia literatury z ukrains'koho folkl'oru* (Bibliography of Ukrainian Folklore, 1930).

Andriievsky, Oleksander [Andrijevs'kyj], b 26 August 1900 in Kharkiv, d 18 January 1976 in Lviv. Physicist. In 1955 Andriievsky was appointed professor at the Lviv Polytechnical Institute. His works deal with the physics of semiconductors and gases.

Andriievsky, Oleksii [Andrijevs'kyj, Oleksij], b 28 March 1845 in Kaniv, d 22 July 1902 in Kiev. Historian,

cultural figure, and pedagogue, who worked in Kiev, Katerynoslav, and Odessa. Andriievsky was editor of *Kievskie gubernskie vedomosti* and wrote for the periodical *Kievskaiia starina*. He produced articles on T. Shevchenko, 10 volumes of *Istoricheskie materialy iz arkhiva Kievskogo gubernskogo pravleniia* (Historical Materials from the Archive of the Kiev Gubernia Government, 1882–6), *Materialy dlia istorii Zaporozh'ia* (Materials for the History of Zaporizhia, 1893), and other works.

Andriievsky, Opanas [Andrijevs'kyj], b 1878 in the Uman region, d 16 May 1955 in Spittal an der Drau, Austria. Political figure, justice of the peace, and lawyer (in Kiev from 1905). Andriievsky was active in the Ukrainian Party of Socialists-Independents and the Ukrainian National Union. He became a member of the Directory of the UNR on 13 November 1918. After emigrating, he was professor of civil law at the Ukrainian Free University in Prague from 1924 to 1937.

Andriievsky, Petro [Andrijevs'kyj], 1880–? Veterinarian and biologist-bacteriologist. Andriievsky studied at the Kharkiv Veterinary Institute in 1899 and later worked in Kharkiv and Moscow. He was one of the founders of the *Revolutionary Ukrainian party. After emigrating he taught at the Ukrainian Free University in Prague and did scientific research at the Pasteur Institute in Paris and in the French Sudan. From 1933 to 1939 he was a professor of veterinary medicine at Warsaw University. During the German occupation of Western Ukraine he directed the Lviv Veterinary Academy.

Viktor Andriievsky

Andriievsky, Viktor [Andrijevs'kyj], b 11 November 1885 in Poltava, d 15 September 1967 in Dornstadt, Germany. Public figure, publicist, and pedagogue. Andriievsky worked in the Poltava provincial zemstvo, was a member of the Poltava Hromada, and held the post of Poltava gubernia commissioner of education in 1917–18. He co-founded the *Party of Agrarian Democrats in 1917. In 1920 he emigrated and lived in Poland, Czechoslovakia, and finally Germany. Andriievsky was the author of works and numerous anti-socialist newspaper articles. Among his writings are the following: *Z mynuloho* (From the Past, 2 vols, 1921–3); his memoirs, covering the years 1885 to 1917, entitled *Try hromady* (Three Communities, 2 vols, 1938); *M. Lysenko* (1942); and *M. Mikhnovs'kyi* (1950).

Andriievych, Marharyta [Andrijevych], b 9 October 1912 in the village of Moshny, Kiev gubernia. Playwright, translator, and actress. After completing her studies at

the Kiev Institute of Theater Arts in 1937, Andriievych worked as an actress in the Poltava and later the Chernivtsi theater. From 1954 to 1977 she was literary director of the Chernivtsi Ukrainian Music and Drama Theater. Her plays include *Ya viriu* (I Believe, 1958; co-authored with M. Akumenko), *Lesia* (1960), *Puhachivna* (1963), *Tytarivna* (The Sexton's Daughter, 1963), *U novorichnu nich* (On New Year's Eve, 1964), *Vid'ma* (Witch, 1964), *Marichka* (1965), *Kriz' roky* (Through the Years, 1966), and *Kara* (Punishment, 1975). Andriievych has also written stories and translations of literary works.

Andriivka [Andriijivka]. IV-17. Town smt (1976 pop 12,800) in Balakliia raion, Kharkiv oblast on the Donets River. The first mention of Andriivka dates back to 1627. Today it has a gas refinery, a clothing factory, and a factory producing reinforced-concrete products and concrete blocks.

Androkhovych, Amvrosii [Androxovyč, Amvrosij], b 5 October 1879 in Lysets, Stanyславiv county, Galicia, d 1942. Pedagogue and historian, full member of the Shevchenko Scientific Society, professor at the Greek Catholic Theological Academy in Lviv (1941–2), director of a teacher's seminary in Sokal, Galicia (1928–31), and of the Second State Woman Teachers' Seminary in Lviv (1931–4). Androkhovych wrote studies on the *Barbareum and the *Studium Ruthenum (*Zapysky Naukovoho Tovarystva im. Shevchenka*, vols 131, 132, 137, 146, Lviv 1921–9), as well as on the Greek Catholic Seminary in Lviv, and articles on the cultural history of Galicia, particularly on education in the late-18th and early-19th century.

Andropov, Yurii, b 15 June 1914 in Nagutskaiia, Stavropol gubernia, d 9 February 1984 in Moscow. Soviet Party and government leader; since 11 November 1982 fifth general secretary of the CPSU. By professional training a marine engineer, Andropov began working in the Party apparat early in his career, first in the Komsomol (1936–44) and then in the CPSU. In 1940–7 he worked in Karelia as the protégé of the Finnish Communist O. Kuusinen and from 1947 served as the second secretary of the CC CP of the Karelo-Finnish ASSR. In 1951 he was transferred to Moscow to work in the CC CPSU apparat. In 1954–7 he served as the Soviet ambassador to Hungary and faithfully carried out the Kremlin's policy of suppressing the 1956 Hungarian uprising and installing J. Kadar's puppet government. In 1957 Andropov returned to Moscow to head the department of relations with East European Communist parties of the Secretariat of the CC CPSU. In May 1967 he was appointed chief of the KGB, a post at which he served for 15 years. As KGB chief Andropov immediately became a candidate member of the Politburo of the CC CPSU. In April 1973 he was promoted to full member. In 1976 he was awarded the rank of army general.

Under Andropov the KGB strengthened its system of political repression and its foreign intelligence network, including its economic and technological intelligence gathering and disinformation operations. Within the USSR dissidents, particularly Ukrainian cultural figures and defenders of human rights, came under increasingly severe persecution. In 1972 the KGB conducted numerous arrests in Kiev and Lviv. There are suspicions that P. *Shelest was removed from his post of first secretary of

the CC CPSU and then from the Politburo of the CPSU because of KGB pressure. According to samvydav sources, the chief of the KGB in the Ukrainian SSR, V. Fedorchuk, denounced Shelest to his superiors in Moscow for failing to suppress the dissident movement in Ukraine. In 1977–80 under Andropov's leadership the *Ukrainian Helsinki Group and similar groups in other Soviet republics were crushed.

With the aging of the Secretariat of the Politburo in Moscow and the disclosure of corruption in L. Brezhnev's family, Andropov consolidated his position. After the death of M. Suslov, he became chief for ideological affairs in May 1982. After Brezhnev's death, on 12 November 1982 Andropov was elected the general secretary of the Party over Brezhnev's protégé, K. Chernenko. The Supreme Soviet of the USSR elected Andropov a member of its presidium in November 1982 and its chairman in 1983. As the new leader Andropov did not alter Brezhnev's domestic and foreign policies, but economic and administrative reforms were introduced in the USSR. During the last six months of his life Andropov was gravely ill, and the USSR was ruled 'collectively' by other members of the Politburo.

V. Markus

Andrukh, Ivan [Andrux], b 1892, d August 1921 in Kiev. Public and military figure. Andrukh helped organize the *Sich association of physical culture in Galicia and was a second lieutenant and then captain and commander of the First Infantry Regiment of the Sich Riflemen. He was a prominent figure in the anti-Bolshevik movement in Ukraine in 1920–1 and a member in Bolshevik-occupied Ukraine of the Supreme Collegium of the Ukrainian Central Insurgent Committee connected with the Ukrainian Military Organization. Andrukh was executed by a Bolshevik firing squad.

Andrukhovych, Kost [Androxovyč, Kost'], b?, d 1905 in Galicia. One of the first Ukrainian Catholic clergymen in the United States. Andrukhovych was born in Galicia and lived in the United States in 1889–91. He settled first in Kingston, and later Shenandoah, Pennsylvania, where for a short period he was editor of the newspaper *Ameryka*, replacing I. Voliansky. Later he published another newspaper, *Ruske slovo* (1891). Andrukhovych was also briefly involved in organizing consumer cooperatives for Ukrainians in the area. He was the author of a study of Ukrainians in the United States entitled *Z zhyttia rusyniv v Amerytsi* (On the Life of Ruthenians in the United States, Kolomyia 1904).

Andrushchenko, Yurii [Andruschenko, Jurij], b 11 August 1910 in Velykoseletske, Poltava gubernia, d 31 January 1975 in Poltava. Poet. Andrushchenko's first published works appeared in the 1920s. Four collections of his poetry have been published: *Tsvitut' zhyta* (The Rye Fields Are in Bloom, 1931), *Spivaiu molodist'* (I Sing of Youth, 1936), *Zhyvu toboiu* (I Live Through You, 1957), and *Vohon' dushi* (Flame of the Soul, 1963).

Andrushivka [Andrusivka]. III-10. City (1972 pop 11,200) in the Dnieper Upland on the Huiva River, a raion center in Zhytomyr oblast. Andrushivka was first mentioned as Andrusovka in 1683. Its population is employed mostly in the food industry (sugar refining and distilling) and in two brick factories.

Andrushkiv, Osyp [Andrušків], b 21 March 1906 in Horodok, Galicia. Mathematician. Andrushkiv studied at Lviv University and at the Ukrainian Free University in Munich. He was professor and head of the mathematics department at Seton Hall University in Newark, New Jersey. A full member of the Shevchenko Scientific Society in the United States, Andrushkiv has served as its president and vice-president and also as editor of the society's *Zbirnyk*, Section of Mathematics, Natural Sciences, and Medicine (1953–64).

Andrusiak, Mykola [Andrusjak], b 20 February 1902 in Perevolochna, Zolochiv county, Galicia. Historian, professor at the Ukrainian Free University, and full member of the Shevchenko Scientific Society. Since 1950 he has lived in the United States. Andrusiak's works include the following books: *Zv'iazky Mazepy z S. Lieshchyns'kym i Karlom XII* (Mazepa's Ties with S. Leszczyński and Charles XII, 1933), *Józef Szumlański* (1934), *Narysy z istorii halyts'koho moskvoofil'stva* (Essays on the History of Galician Russophilism, 1935), *Mazepa i Pravoberezhzhia* (Mazepa and Right-Bank Ukraine, 1938), *Heneza i kharakter halyts'koho rusofil'stva v 19 i 20 st* (The Genesis and Character of Galician Russophilism in the 19th and 20th Century, 1941), and various studies and articles on the history of the Principality of Galicia-Volhynia, the Cossack period, and the national awakening in Galicia in *Zapysky NTSh* and other historical journals.

Andrusiv, Mykola, b 19 December 1861 in Odessa, d 27 April 1924 in Prague. Geologist and paleontologist, professor at the universities in Dorpat and Kiev (1905–12), full member of the Russian Academy of Sciences and, from 1920, the Ukrainian Academy of Sciences. Andrusiv's principal works are on the stratigraphy and paleontology of the neogenesis of the Crimean, Caucasian, and Transcasian regions. He developed a stratigraphic schema of the neogenesis of the Ponto-Caspian Basin, drew paleogeographic maps of the Black Sea Basin in the neogenetic and anthropogenetic periods, and determined that the Black Sea Basin was polluted by hydrogen sulfide.

Andrusiv, Petro, b 2 July 1906 in the village of Kamenobrid, Lviv region, d 29 December 1981 in Riverhead, New York. Painter and graphic artist. Andrusiv studied at the Warsaw Academy of Arts, where he was a co-organizer of the artistic group Spokii (1927–39). From 1947 he resided in Philadelphia, where he worked as a city artist from 1955 to 1972. In 1952 he helped found the *Ukrainian Artists' Association in the United States. Andrusiv's work was shown at exhibitions arranged by Spokii in Warsaw (1928–33), by the *Association of Independent Ukrainian Artists in Lviv, by the Ukrainian Artists' Association in the United States, and by other groups. He created large compositions based on Ukrainian medieval and Cossack history, and illustrations for children's books and historical publications. He painted murals in a number of churches in the United States in a Byzantine-like style. His last major work was *The Baptism of Ukraine-Rus'*. A monograph on Andrusiv by S. Hordynsky was published in New York in 1980.

Andrusovo, Treaty of. A peace treaty between Poland and Muscovy, signed 13 January 1667 in the village of

Andrusovo near Smolensk, Muscovy, that remained in effect for thirteen and one-half years. It terminated the war that began in 1654. According to this treaty, Left-Bank Ukraine remained under Muscovite rule, while Right-Bank Ukraine was transferred to Poland. Kiev was to remain in Russian hands for two years, but the Russians kept it permanently. The Zaporozhian Sich came under the joint protection of Muscovy and Poland. This was the first partition of Ukraine, and it was confirmed by the so-called *Eternal Peace of 1686. The events leading to the Treaty of Andrusovo are analyzed in C.B. O'Brien's *Muscovy and the Ukraine from the Pereiaslav Agreement to the Truce of Andrusovo, 1654–1667* (Berkeley 1963).

Petro Andrusiv

Constantine Andrusyshen

Andrusyshen, Constantine [Andrusyšin, Kostjantyn], b 19 July 1907 in Winnipeg, Manitoba, d 13 May 1983 in Saskatoon, Saskatchewan. Literary scholar, linguist, and translator. Andrusyshen received his PhD in Romance languages from the University of Toronto in 1940, and until 1944 he edited the newspaper *Kanadiis'kyi farmer* in Winnipeg. In 1945 he became head of the Slavics department at the University of Saskatchewan, the first in Canada, remaining as chairman to 1975. His major works include the *Ukrainian-English Dictionary* (1955), with J.N. Krett, and two translations in collaboration with W. Kirkconnell, *The Ukrainian Poets 1189–1962* (1963) and *The Poetical Works of Taras Shevchenko* (1964). In 1964 Andrusyshen was elected a fellow of the Royal Society of Canada.

Andruzky, Yurii [Andruz'kyj, Jurij], b 8 June 1827 in Vechirky, Poltava gubernia, d? Community figure, poet. Andruzky studied at Kiev University. His poetry was influenced by T. Shevchenko. A member of the *Cyril and Methodius Brotherhood, he was arrested in 1847 and exiled to Kazan, then to Petrozavodsk. For his revolutionary convictions, expressed in the article 'Konstytutsiia respubliky' (Constitution of the Republic), he was again exiled, this time to the monastery on the Solovets Islands (1850–4). After his release he worked in Arkhangelsk.

Andrzejowski, Antoni, b 1785 in Varkovytsi, Volhynia, d 12 December 1868 in Stavyshe, Kiev gubernia. Polish naturalist. An adjunct professor at Kiev University, Andrzejowski was a teacher at the lyceums in Kremianets and Nizhen. From 1839 to 1841 he studied the flora of Volhynia, eastern Podilia, and Kherson gubernia;

he also studied the taxonomy and morphology of the plant family Cruciferae.

Anecdote. A very short narrative, usually of a humorous nature, with a culminating point. Ukrainian oral literature is full of anecdotes. Attempts to collect these were made by B. Hrinchenko (*Etnograficheskie materialy* [Ethnographic Materials], 1895–9), V. Hnatiuk (*Etnografichnyi zbirnyk* [Ethnographic Collection], vi, 1899), M. Levchenko, and V. Shukhevych. Anecdotes often provided the foundation for literary works, not only in the baroque period (*intermediia*) but also in the 19th (S. Rudansky) and 20th (Ostap Vyshnia) century. In oral literature anecdotes describe human types or situations, and in Ukraine today many of them reveal popular, dissenting views on Soviet life and institutions.

Anglicisms. Words and syntactical constructions borrowed from the English language. Anglicisms first appeared in the Ukrainian language in the early 20th century, but their usage grew significantly only after the Second World War. Originally, Anglicisms entered the Ukrainian language through Russian, Polish, and German; since the war they have been incorporated primarily from Russian in the USSR and from English in the West. Anglicisms are most common in technical terminology and urban slang (dress, popular dances, sex).

In the conversational language of Ukrainians in the United States, Canada, Australia, and England, Anglicisms are used to denote new concepts (developed since emigration), as well as proper geographical names, and to imbue the language with emotional coloring.

Metropolitan Antin
Anhelovych

Anhelovych, Antin [Anhelovyč], b 14 April 1756 in the village of Hryniv, Bibrka country, Galicia, d 9 August 1814 in Lviv. Greek Catholic metropolitan of Lviv. Anhelovych studied at the Barbareum and in 1793 became the first rector of the Greek Catholic Theological Seminary in Lviv. In 1794 he became professor of dogma and in 1796 rector of Lviv University. In 1795 he was appointed bishop of Peremyshl; in 1798, administrator of the Lviv eparchy; in 1804, administrator of the Kholm eparchy; and in 1805, administrator of both the Lviv and Kholm eparchies. In 1808 Anhelovych became the first metropolitan of the reinstated Galician metropolitanate in Lviv.

Animal husbandry. The main branches of animal husbandry in Ukraine are *cattle raising, *sheep farming, *hog raising, *poultry farming, *horse breeding, *goat

farming, *rabbit breeding, and to a lesser extent fish farming, *beekeeping, and silkworm breeding.

Animal husbandry has been practiced in Ukraine since Neolithic times. Cattle, sheep, pigs, and goats were kept, particularly by people of the Trypilian culture. Since the Bronze Age horse breeding has been important, especially among the steppe inhabitants. It was particularly important among the Scythians. In the Princely era animal husbandry was well developed, and horse breeding had a military significance. Beginning in the 15th century, Ukraine exported oxen to Western Europe, and then to Muscovy. Under the Hetman state oxen and sheep were exported from the Left Bank. Yet the primary purpose of animal husbandry was to satisfy the needs of the native population. Only by the end of the 18th century did animal husbandry in southern Ukraine assume a commercial character, with the exportation of wool and oxen. But when the steppes came under cultivation, sheep farming declined because of the feed shortage, and oxen, which were suitable for plowing thick, virgin soil, were replaced by horses.

Mid-1800s to 1914. In Ukraine animal husbandry was inseparable from *agriculture. The relationship between the two varied with different systems of farming. Under the *long-fallow system feed was plentiful, and much livestock was raised. Such conditions existed in the steppes in the first half of the 19th century: many sheep and oxen were kept. Under the three-field system, which predominated in the forest-steppe belt, the equilibrium between the two branches of farming was upset. The *feed base for livestock diminished, and so livestock numbers declined. At the same time land cultivation became more difficult because of the shortage of work animals and of animal fertilizer. The fertility of the soil decreased, and the development of agriculture was hampered. Such conditions prevailed in the forest-steppe belt, particularly on the Left Bank and from the 1860s in the steppe belt, after the decline of the long-fallow system. The number of livestock diminished, especially the number of sheep, not only relative to the increasing population but in absolute numbers. *Crop rotation, which increases the feed base and improves soil fertility, provided better conditions for animal husbandry, but this system prevailed only in Western Ukraine.

Thus, Ukraine had an inadequate feed base for livestock, except in the Carpathian Mountains and the forest belt, which had an abundance of hayfields and pastures, and Western Ukraine, where a tenth of the seeded land was devoted to fodder. The basic feed in winter was hay and straw; in summer, pasture vegetation. Oats and barley were used in much smaller quantity. The wastes of sugar and vegetable-oil production were used as feed, but most of these were exported as high-quality feed. The shortage of feed and the low quality of breeds account for the low productivity of milk (600–1,000 l. per year on the average per head) and of meat in Ukraine. Some progress in central and eastern Ukraine was discernible in the last few years before the First World War, owing to the efforts of the *zemstvos and large landowners. Measures were adopted to improve the quality of livestock, mainly by introducing better breeds.

The increase in livestock raising in the nine Ukrainian gubernias from 1882 to 1912 is presented in table 1 (in millions). The large decline in the number of sheep was caused by the cultivation of the steppes and the falling

TABLE 1

Year	Cattle	Sheep	Hogs
1882	5.4	15.2	5.0
1912	6.5	6.2	4.2

demand for wool abroad. The increase in the number of cattle was insignificant and did not match the increase in population, but the number of hogs did increase significantly. The number of horses also increased greatly; eg, in Kherson gubernia the number of horses increased from 329,000 in 1881 to 814,000 in 1913; for the entire Dnieper region it increased to 5.7 million. The increase was largely owing to the fact that horses replaced oxen as the main draft force, particularly in the steppes.

1914-41. In the first years of the war livestock reserves, especially cattle, increased in the Dnieper region, because the feed base grew as diminishing grain exports caused fields to be left fallow. The number of livestock decreased in the years of War Communism (reinforced by the 1921 drought) and increased again under the New Economic Policy, when the number of peasant farms increased, reaching an all-time high in 1928. Later *collectivization, which eradicated private farms, led to disastrous consequences for animal husbandry. The peasant farmers slaughtered much of their livestock rather than surrender it to the collective farms. Then poor management on the collective farms and the *famine of 1933 caused livestock reserves to shrink even further. In 1933, according to official statistics, scarcely 41 percent of the horses, 53 percent of the cattle, 40 percent of the hogs, and 38 percent of the sheep and goats that were kept before collectivization remained. From 1934 the livestock numbers began to grow, mainly because members of collective farms were allowed to raise domestic animals on private plots, but by 1940 they still had not reached the 1928 level. This growth is evident in table 2, showing the livestock reserves of the Ukrainian SSR (in millions).

From 1934 the Soviet government devoted increasing attention to the development of animal husbandry on the collective and state farms. At every collective farm two or three animal farms were set up. State animal farms were organized. Much work was done to improve animal breeds. From 1940 the quotas of animal products to be delivered to the state were determined according to sector. The production of the collective and state farms expanded at the expense of private owners: from 1938 to 1941 their share of cattle jumped from 31 percent to 49.5 percent, of hogs from 33.8 percent to 49.6 percent, and of sheep from 60.3 percent to 81.7 percent. The rest of the livestock was owned privately by collective farmers, workers, functionaries, and other private individuals.

Since 1941. The Soviet-German war and the German occupation of Ukraine brought about heavy losses of

TABLE 2

Year	Horses	Cattle	Hogs	Sheep and goats
1916	5.5	7.7	4.6	6.4

1936	2.5	6.1	6.0	2.3
1940	3.3	7.7	7.3	4.7

livestock. The animal reserves did not reach the prewar 1941 level until the beginning of the 1950s. In general the restoration of animal husbandry was much more difficult than that of other branches of farming, and this branch fell further and further behind the demands of the ever-increasing urban population. The feed base continued to be inadequate, and the collective farmers lacked any material incentive to improve animal husbandry. The Central Committee of the CPSU tried to overcome these shortcomings by its various plenum resolutions (September 1953, January 1955, June 1958, March 1965), congress decisions (23rd, 24th, 25th), and other Party and government measures. The amount of land devoted to feed corn, as well as the farm prices and retail prices of animal products, have been increased. Livestock breeds have been improved, and new breeds have been developed. New buildings and facilities have also been built.

The policies governing the development of animal husbandry in Ukraine, like the policies governing the economy as a whole, were and continue to be set in Moscow. N. Khrushchev called on the farmers to overtake the United States in per capita production of milk, meat, and eggs and advocated a large increase in the amount of land devoted to corn. Because of Ukraine's limited land fund, an increase in the land devoted to corn and silage brought about a decrease in that devoted to grasses and grain. As a result, the feed base was short on vitamins and protein. The production of milk increased, but the production of meat did not improve. Furthermore, a policy directed against private husbandry led to a decrease in the livestock raised on private plots, which had provided much of the meat.

Under L. Brezhnev an effort was made to increase the production of meat and eggs by means of industrialized feeding. Large interfarm feeding centers and modern equipment were intended not only to raise the workers' productivity and farm production, but also to undermine the private sector of animal husbandry. In Ukraine the private sector yields a higher proportion of animals and animal products than this sector does in all the other republics of the USSR combined, despite the shortage of feed and equipment. But industrialized feeding requires not only large capital investment, which is beyond the means of many collective farms in Ukraine, and a good transport and road system, but also various concentrated feed additives, such as minerals, vitamins, and antibiotics, which could not be supplied in sufficient quantities by industry. Thus, the projected economic effectiveness of the feed was not attained, and the government had to continue its compromise with the private sector, supplying it with feed for private animal husbandry. Even today private plots supplement the state's effort to meet the demand of the urban population for dairy products and eggs.

Although the ambitious projects to expand animal husbandry have been full of errors, this branch of farming has improved somewhat. According to official statistics, the number of cattle and pigs has increased, although the number of sheep and goats has remained nearly the same as in 1953 because of a pasture shortage. Because of the mechanization of farming, the number of horses and oxen has decreased. The details pertaining to the Ukrainian SSR are summarized in table 3 (in millions).

The increase in livestock applies only to collective farms and especially state farms. The number of animals raised

on small private plots is decreasing, slowly but steadily.

The main branches of animal husbandry in Ukraine today are cattle farming (particularly dairying) and hog raising, followed by sheep farming. Poultry farming is developing rapidly, while horse breeding has declined. Rabbit breeding (mainly private), beekeeping, silkworm breeding, fish farming, and fur-animal breeding are of secondary importance.

The output of animal products – meat, fat, milk, and wool – has increased more rapidly than have animal numbers. (Table 4 gives the growth in animal products from 1913 to 1977.) This growth is the result of higher animal productivity in the Ukrainian SSR. According to official statistics, the average annual production of milk per cow has increased from 1,358 kg in 1950 to 1,764 kg in 1960, 2,190 kg in 1970, and 2,467 kg in 1977. The average annual production of wool per sheep has increased from 2.6 kg in 1950 to 3.0 kg in 1970 and 3.4 kg in 1977. The average annual production of eggs per hen on collective and state farms has gone from 75 in 1960 to 152 in 1970 and 193 in 1977. These levels of productivity, particularly milk productivity, are far behind those in Western Europe, North America, and Australia, and even behind those in Poland, Hungary, Czechoslovakia, and the Soviet Baltic republics.

Ukraine's contribution to the animal husbandry of the USSR is considerable: with only 7.8 percent of the USSR's farm land and 2.4 percent of the hayfields and pastures, the Ukrainian SSR has 22 percent of the USSR's cattle, 28 percent of the hogs, 6 percent of the sheep, and 23 percent of the poultry. In 1978 Ukraine produced 23 percent of the milk and 23.4 percent of the meat in the USSR. In 1977, for each person in its population, Ukraine produced 70.1 kg of meat and fat, 255 kg of milk, and 266 eggs. The corresponding figures for the USSR were 57.7 kg, 366 kg, and 230 eggs.

The supply of animal products does not meet demand. According to scientifically determined dietary require-

TABLE 4

Product	1913	1940	1950	1955	1960	1970	1977
Meat and fat (in 1,000 t)	1,122	1,127	1,195	1,351	2,068	2,850	3,464
Milk (in 1,000 t)	4,667	7,114	6,804	9,670	13,995	18,712	22,467
Wool (in 1,000 t)	14.8	13.5	11.9	17.9	27.6	24.8	29.6
Eggs (millions)	3,005	3,272	3,490	4,292	7,187	9,202	13,154

ments for the USSR, each person should be provided with 81.8 kg of meat and fat, 433.6 kg of milk, and 292 eggs per year. Actual consumption, according to statistics, though increasing, is far from reaching these requirements. From 1965 to 1975 the per capita consumption of meat and fat in the Ukrainian SSR increased from 41 to 60 kg, of milk from 245 to 335 kg, and of eggs from 124 to 210. Even so, consumption of animal products in Ukraine remains lower than in the RSFSR, where the per-capita production of meat, milk, and eggs is somewhat lower than in Ukraine. Apparently the Ukrainian SSR exports annually an estimated 400,000 tonnes of meat and fat, almost three million tonnes of milk and dairy products, and almost two billion eggs to the RSFSR. This is accomplished through relatively higher state quotas of animal products in Ukraine, if calculated on an urban per capita basis, than in the RSFSR.

The Kuban (Krasnodar krai), now in the RSFSR, is better supplied with animals than Ukraine, as is evident from table 5 (in thousands).

Compared to the Ukrainian SSR and to the other republics and oblasts of the RSFSR, Krasnodar krai has the lowest proportion (31 percent in 1970) of cows among its cattle, that is, it has the highest specialization in meat production. Its production of animal products is given in table 6 (supplies per person given in kilograms, except for eggs, which are given in absolute numbers). Thus, Krasnodar krai surpasses the Ukrainian SSR significantly in the per-capita production of meat and eggs. It has large surpluses that it ships mainly to the industrial areas of the RSFSR.

Research in animal husbandry is carried on by the Ukrainian Scientific Research Institute of Animal Husbandry of the Steppe Regions in Askaniia-Nova, the Scientific Research Institute of Animal Husbandry of the Forest-Steppe and Polisia of the Ukrainian SSR in Kharkiv, the Scientific Research Institute of Land Cultivation and Animal Husbandry in the Western Regions of the Ukrainian SSR in Lviv, the Ukrainian Scientific Research Institute of Experimental Veterinary Medicine in Kharkiv, the Ukrainian Scientific Research Institute of Animal Physiology and Biochemistry in Lviv, the Poltava Scientific Research Institute of Hog Raising, the Ukrainian Scientific Research Institute of Poultry Farming in Kharkiv, the departments of various agricultural institutes, and research stations. The Southern Section of the Academy of Agri-

Anna Ivanovna, b 7 February 1693 in Moscow, d 28 October 1740 in St Petersburg. Russian empress in 1730–40, daughter of Tsar Ivan v and niece of Peter I. Anna restored the policies of Peter I in Ukraine and reduced Ukraine's autonomy even further. After the death of Hetman D. Apostol, the election of a new hetman was not permitted. The Russian *Governing Council of the Hetman Office was created to govern Ukraine. Under it the Ukrainian people were subjected to great exploitation and oppression. The construction of a new Ukrainian line of fortifications against the Tatars from the Dnieper River along the Orel River to the Donets River was begun in 1731 and continued into the 1740s. It cost Ukraine dearly in men and money. Ukraine had to take part in the War of the Polish Succession (1733–4) and the war with Turkey (1735–9), which ruined the economy of the Hetman state. In 1734 the Zaporozhian Cossacks were allowed to return home and to establish the *New Sich in preparation for the war with Turkey. During Anna's reign the Ukrainian Cossacks were divided according to wealth into the privileged *elect Cossacks and the poor *Cossack helpers.

Anna Yaroslavna, b 1024 or 1032 in Kiev, d after 1075. Daughter of *Yaroslav the Wise and queen of France from 1049. Henry I of France wanted to obtain the support of Yaroslav against the Holy Roman Empire and married Anna on 4 August 1049 in Rheims. After Henry's death in 1060, Anna ruled as regent while her son Philip I was a child. There is some evidence that Anna married Count de Valois et de Crépy in 1062, but the marriage was never legally recognized. Her signature has been preserved and is the oldest extant example of Old Ukrainian writing. A fresco in the St Sophia Cathedral in Kiev depicts Anna, and a sculpture of her is found in the portal of St Vincent's Church in Senlis near Paris.

Annals of the Ukrainian Academy of Arts and Sciences in the United States. Scholarly periodical published in New York from 1951 to the present. It deals with various aspects of Ukrainian studies. The first nine volumes, some of which had several issues, appeared regularly. M. Vetukhiv was the editor until 1959; G.Y. Shevelov was the editor in 1960–1. A special issue was devoted to M. Drahomanov (1952). Several issues constitute original monographs: *The Cathedral of St Sophia in Kiev* by O. Powstenko (1954); *The Settlement of the Southern Ukraine (1750–1775)* by N.D. Polonska-Vasylenko (1955); and *A Survey of Ukrainian Historiography* by D. Doroshenko, supplemented by O. Ohloblyn's study 'Ukrainian Historiography, 1917–1956' (1957). Since 1961, the *Annals* have appeared irregularly. Volume 14 was published in 1978–80. Individual volumes cover certain aspects of Ukrainian studies (linguistics, history, political science, economics) and have volume editors.

Annenkov, Nikolai, b 3 May 1819 in St Petersburg, d there 21 August 1889. Russian botanist who worked in Ukraine in 1863–75, director of the School of Horticulture and the Sofiivka Park in Uman. Annenkov compiled a botanical dictionary (1878), in which terms are given in Latin, French, German, English, and Russian; he also included many Ukrainian popular terms.

Annunciation, Cathedral of the (Blahovishchenskyi sobor). Church in Chernihiv, funded by Prince Sviatoslav III Vsevolodovych in 1183–6 and later destroyed. It was a large cruciform church with six columns and a central cupola. Three sides of the interior had two-story-high galleries. It was topped by five additional cupolas. On the main facade the pilasters were built of light-yellow brick, and the walls were of dark-red brick. The interior walls and the ceiling were decorated with frescoes, while the floor of the central nave and the transept consisted of a multicolored mosaic, which included a representation of a peacock (unusual for floors). The floor of the side sections consisted of yellow and green glazed ceramic tiles. The first traces of the church were discovered in 1876–8 by T. Kybalchych. Later, partial excavations were conducted in 1909 and 1946–7 by B. Rybakov.

Antes (Greek: Antae; Ukrainian: Anty). The name used by the Gothic historian Jordanes and by Byzantine writers of the 6th–7th century – Agathias, Procopius, Menander, Theophylactus, and others – for the east Slavic tribes of the 4th–7th century. Scholars disagree on the origin and meaning of this term, which was first used in the 3rd century. A. Shakhmatov argued that the name designated all the East Slavic tribes, while others held that it designated only their southern part. In the 4th–7th century the Antes formed a large tribal alliance that covered the territories between the Dnieper and the Dniester rivers and in some periods extended throughout most of the forest-steppe belt from the Carpathian Mountains and the lower Danube to the Sea of Azov.

Agriculture was the Antes' main occupation, in which they used the iron plow. The skilled trades, particularly pottery and ironworking, were highly developed among them. There is evidence that they also engaged in internal and foreign trade, especially with the Roman Empire, and that they used Roman silver coins. The basic unit of Antes society was the village commune. With time, individual land use, private land control, and farms appeared. Slavery was widely practiced; Byzantine historians wrote that the Antes took tens of thousands of war captives and turned them into slaves.

The tribal alliance of the Antes was extensive enough to support a large military force. Some sources mention the figure of 100,000 warriors, but this is probably an exaggeration. The alliance was led by princes and the tribal oligarchy. Jordanes and Byzantine sources of the 6th–7th century mention such princes as Boz (Bozh), Ardagast, and Peiragast and the generals Chilbudins and Dobrogast.

In the 4th century the Antes came into conflict with the *Goths, who wanted to establish hegemony over Eastern Europe. After several defeats the Gothic king Vinitharius captured, in 385, Prince Boz of the Antes, his sons, and 70 nobles. All of them were executed. The invasion of the *Huns, however, prevented the Goths from establishing a firm rule over the Antes. In the 6th century the Antes, together with the closely related Sclavini, began to attack the Balkan parts of the Byzantine Empire. At first they were interested only in booty and slaves, but by the second half of the 6th century the Antes began to settle in these lands. The Antes resettled so quickly that by the end of the 6th century the territories of contemporary Bulgaria and Yugoslavia were Slavicized.

From the end of the 6th century the Antes fought stubbornly against the *Avars, who established their khaganate in Eastern Europe. This war led to the disintegration of the tribal alliance and the disappearance of the Antes as a political force. From the beginning of the 7th century Byzantine writers no longer mention the Antes.

Anthem. The official song of a state or nation. In 1917 'Shche ne vmerla Ukraina' (Ukraine Has Not Yet Died) was officially recognized as the Ukrainian national anthem. The words were written by P. Chubynsky, the music by M. Verbytsky. It was published first in 1863, and in 1885 with the score. Before its official adoption it was widely sung throughout Ukraine.

In the second half of the 19th and in the 20th century, T. Shevchenko's 'Zapovit' (Testament) was treated as a national anthem in central and eastern Ukraine. In Galicia, in the 19th century Yu. Dobrylovsky's 'Dai Bozhe, v dobryi chas' (Grant Us, God, Good Fortune) had the status of a national anthem at first. Then I. Hushalevych's 'Myr vam, brattia, vsim prynosym' (We Bring All of You Peace, Brothers) was recognized in 1848 by the *Supreme Ruthenian Council in Lviv as the anthem of the Galician Ukrainians. Later I. Franko's 'Ne pora' (This Is Not the Time) achieved a similar status. In Transcarpathia O. Dukhnovych's 'Ia rusyn byl' (I Was a Ruthenian) and 'Podkarpats'kii rusyny' (Subcarpathian Ruthenians) were sung as anthems, and the latter was officially recognized as its anthem (1920–38). After the divine liturgy O. Konysky's 'Bozhe Velykyi Iedynyi' (O God, Great and Only) is often sung in Ukrainian churches as a combined religious and national hymn. Ukrainians in the United States have adopted 'Daleka Ty, ta blyz'ka nam' (You Are Far Away but Dear to Us) by V. Shchurat and 'Het' za morem' (Far beyond the Sea) by O. Hrytsai (music by S. Liudkevych) as their anthems.

In the Ukrainian SSR, as in the entire USSR, until 1944 the state anthem was 'The International,' words by E. Pottier, music by P. Degeyter, Ukrainian translation by M. Vorony, and later the anthem 'Soiuz nerushimy' (Unbreakable Union), words by S. Mikhalkov and G. Registan, music by A. Aleksandrov. On 1 January 1950 the Supreme Soviet of the Ukrainian SSR approved 'Zhyvy Ukraïno' (Live Ukraine), with words by M. Bazhan and P. Tychyna and music by A. Lebedynets, as the Soviet Ukrainian anthem. Revised lyrics were approved on 22 March 1978.

M. Hlobenko

Anthology. Literally 'a gathering of flowers,' an anthology is a selection of poetry or prose by various authors. The first anthology of modern Ukrainian literature was *Antolohiia rus'ka* (A Ruthenian Anthology, Lviv 1881), edited by I. Franko. Popular anthologies in the early 20th century were *Vik* (Century, 3 vols, Kiev 1902), **Akordy* (Chords, Lviv 1903), *Ukraïns'ka muza* (Ukrainian Muse, Kiev 1908), and *Struny* (Strings, Berlin 1922). Several major anthologies have been published in Soviet Ukraine: *Antolohiia Ukraïns'koï poezii* (Anthology of Ukrainian Poetry, 4 vols, 1957), *Ukraïns'ka radians'ka piesa* (The Soviet Ukrainian Play, 5 vols, 1949–55), *Antolohiia Ukraïns'koho opovidannia* (Anthology of the Ukrainian Short Story, 4 vols, 1960). An anthology of the works of Soviet Ukrainian poets repressed during the Stalin terror, *Obirvani struny* (Broken Strings, New York 1955), was edited by B. Kravtsiv. The most recent anthology is O. Zilynsky's *Antolohiia Ukraïns'koï liryky* (An Anthology of Ukrainian Lyric Poetry, Toronto, 1978). Several anthologies of Ukrainian poetry have appeared in foreign translation – Polish: *Antologia poezji Ukraïnskiej*, edited by F. Nieuważny and J. Plesniarowicz (Warsaw 1977); Russian: *Antologiiia Ukraïnskoï poezii*, 2 vols (Moscow 1958); En-

lish: *The Ukrainian Poets 1189–1962*, edited by C.H. Andrusyshen and W. Kirkconnell (Toronto 1963). (See also *Almanac.)

Anthropological studies. Anthropology is the science dealing specifically with man throughout history that studies his physical appearance and the development of diverse biological characteristics and defines the *races by those hereditary physical and psychological features that are common to a given group. The concept of anthropology as a comparative biology of man arose in the 18th century and prevails today in Ukraine and most of Europe. In the English-speaking world, however, anthropology is approached more broadly as the science of man from both a biological and cultural aspect and includes the theory and history of culture, prehistory, ethnology, ethnography, and, to some extent, sociology. As a result, two branches have developed – physical anthropology and cultural anthropology. This article describes the development of the study of physical anthropology in Ukraine. For an anthropological description of the Ukrainian population, see *Physical anthropology.

The earliest attempts at describing the racial composition of the population of Ukraine were made by *Herodotus, Hippocrates, and Aristotle. During the Middle Ages such descriptions were recorded by Byzantine and Arab travellers and historians. In modern times the subject has been studied by scholars from nearly every European nation, chiefly by ethnographers. Scientific studies on this subject have appeared only since the late 19th century, however.

The first anthropological studies of the Ukrainian people were written by P. *Chubynsky, a Ukrainian; A. Bogdanov, a Russian; I. *Kopernicki, a Pole; and E. Amy and J. Deniker, both Frenchmen. In recent times the most important anthropological work on Ukraine has been done by the Russian scholars D. Anuchin, A. Ivanovsky, and V. Bunak; the Poles J. *Talko-Hryniewicz and J. Czekanowski; and the Germans H. Günther and E. Eickstedt. Their studies, however, were not concerned primarily with Ukraine. The renowned Ukrainian F. *Vovk was the only scholar who conducted systematic anthropological research in all the Ukrainian ethnic territories.

After the First World War anthropological research in Ukraine was stepped up. It was conducted primarily by the scholars of the Ukrainian Academy of Sciences. The most prominent anthropologists were O. Omelchenko and O. Alesho, who was in charge of the Academy's *Cabinet of Anthropology and Ethnography (est as a museum 1921 and renamed a cabinet in 1922 under A. *Nosiv). In 1927 the cabinet was divided into separate cabinets of anthropology and ethnography. The Cabinet of Anthropology published, in 1928–31, four annual volumes of *Antropolohtia*, which contained archeological and anthropological materials on the inhabitants and ethnic groups of Ukraine. The Kiev school collected anthropological materials throughout Ukraine, including the Crimea and the Kuban region.

In the 1920s the Anthropological Cabinet of the Ukrainian Psycho-Neurological Institute in Kharkiv published *Materialy po antropologii Ukrainy*, a review edited by L. *Nikolaev. The Kharkiv school researched primarily the physical and social features of the various population

groups. Anthropological research in the 1920s to 1940s was also conducted by the anatomy departments of the universities and medical institutes of Soviet Ukraine.

Government interference and political repression made anthropological research in the 1930s extremely difficult. Research was resumed only in 1955 by the ethnographic section of the *Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR. Owing to the initiative of M. Rylsky, K. Huslysty, and H. Debets, a group devoted to anthropology was formed. In 1974 anthropological research was transferred from this institute to the *Institute of Archeology of the Academy of Sciences. In 1956–9 the Ukrainian Anthropological Expedition of the Institute of Ethnography conducted systematic research on the population of Ukraine, as well as a series of paleoanthropological investigations. Since 1960 the institute has published *Materialy z antropologii Ukrainy*. Some well-known contemporary Ukrainian anthropologists are Ye. Danylova, V. Diachenko, H. Zinevych, I. *Pidoplichko, and K. Sokolova.

In Western Ukraine anthropological research was conducted in Lviv in the 1920s and 1930s by I. *Rakovsky and later by R. *Yendyk, who also continued his work as an émigré. The Lviv school attempted primarily to reconstruct a synthetic picture of racial interrelations in Ukraine and of the racial differences between the Ukrainians and their neighbors (chiefly the Poles and the Russians).

In Soviet Ukraine today all areas of Ukraine's anthropology are studied. Soviet anthropologists attempt to prove that the Ukrainians are racially related to the Russians and Belorussians, and thus to refute the view of the Ukrainian 'nationalist school' (F. Vovk and the Lviv school) that the Ukrainians have some distinctive racial characteristics.

Anthroponymy. Inventory of personal names in the past and the present and the study of such names (the latter more appropriately called anthroponymics). Ukrainian anthroponymy includes Christian (baptismal) names (official church names together with their endearing and derogatory forms), patronymics with the suffixes *-ov*, *-yč*, and *-ivna*, surnames and nicknames (including vulgar and street nicknames), and finally general tribal-territorial names (*hucul*, *volynjak*) and national names (ethnonyms such as *poljak* [Pole] and *čex* [Czech]).

In early historical times the parents named a child at birth, and the name became socially recognized at the age of initiation (two to seven for boys). This custom held probably until the 16th century. Pre-Christian names carried inherent meaning: wishful (promptive) – Sudymyr (Judge of the World), Ljudmyla (Pleasing to People); descriptive – Biljak (Whitey), Vereščaha (Screamer), Ljut (Cruel), Tretjak (The Third One), Bažan (The Desired

One), Vovk (Wolf); or charming (intimidatory) – Prodan (Sold: the threat of being sold, used to frighten disobedient children). With Christianization, at baptism, the priest gave the child the name of a Christian saint, who became his/her heavenly patron. The name was determined by the child's birthdate, or day of baptism, or by parental wish. If a candidate was to take monastic or priestly vows, he/she changed his/her Christian name.

By the 14th–15th century the church had forced pre-Christian names out of use. Among the large number of biblical (Hebrew) or Greco-Latin Christian names, a few names of Ukrainian saints (Volodymyr, Borys, Hlib, Ol'ha) have been accepted from the Princely era. Phonetic and morphological adaptations of Christian names, which are typical of popular usage (Pylyp, Ivan, Vasja, Javdoxa), were not admitted in the church; in particular, such names could not be used by the clergy. Pre-Christian Slavic names (including a few Varangian names) became fashionable in the romantic period. They spread among the intelligentsia and subsequently, to some extent, even among the burghers and peasantry. Since the 17th–18th century Slavic translations of Greco-Latin names have appeared: Bohdan = Theodore, Ščasnyj = Felix. In the Soviet period newly invented, often abbreviational names in honor of Soviet leaders and revolutionary events became popular: eg, Integral, Oktiabryna, Vladlen, Vladlena, Kim. Following the custom of Western nobility and intelligentsia, Galicians in the 20th century began to give their children two names. In the 18th century the Bukovynians imitated the Moldavian-Greek fashion and used classical Greek names such as Sokrat (Socrates) and Artemida (Artemis) and classical Latin names such as Ovidij (Ovid) and Sil'vija (Sylvia). In Transcarpathia Hungarian forms of Christian names are widespread (Ilona, Marča), while Russian forms (Serjoža, etc) are common among the Russified intelligentsia and workers in eastern Ukraine. Roman Catholics in Galicia and Podilia use Polish church names and their diminutives: Stanslav – Stax, Stas'; Barbara – Basja.

From the early historical period two-, three-, and even four-name systems were used in addition to the one-name system consisting of the given name, particularly among the upper estates (princes, boyars, gentry), then among the burghers, Cossacks, and peasants. Certain elements of the name system became hereditary surnames, first among the gentry in the 14th–15th century and last among the peasants in the 18th–19th century. Finally, official surnames became fixed in Austria by the edict of 1786 and the edict of 1812 pertaining to peasants and Jews. In Russia they were fixed in 1826. Under Polish influence the two-name system (name, surname) became customary in Ukraine. In Russia the three-name system (name, patronymic, surname) was prevalent, and this system prevailed on virtually all Ukrainian territories in the USSR by the late 1930s.

The main types of secondary names that became surnames were as follows: (1) patronymics that from early times ended in a palatalized consonant or the suffixes *-yč*, *-ovyč*, *-evyč*, *-enj(a)* and, since the 15th century, also *-enok*, *-enk(o)*, *-uk*, *-jak*, *-čak*. Surnames ending in *-ovyč* and *-uk* are common in Volhynia, the *-enk(o)* suffix has been common in central and eastern Ukraine since the 15th century, and the *-enok* suffix has been common in north-eastern Ukraine since the 16th century; (2) possessive forms based on the paternal or maternal (in the case of

widows or illegitimate children) name, ending in *-iv*, *-yn*, *-yšyn*; (3) nicknames that first referred to personal appearance (Xromyj – Lame, Bakalo – Tub) or to objects of daily use (Makohin – Pestle), plants or animals (Lys – Fox, Burjak – Beet), place of residence or mode of settlement (Zadorožnyj – Beyond the Road, Osadčyj – Settled), place of origin (Bel'kyj – from Belz), nationality (Uhryn – Hungarian, Čex – Czech), or occupation (Čobotar – Bootmaker, Koškodav – Catstrangler).

The Zaporozhian Cossacks used humorous names that referred to a personal trait or special incident connected with the individual: Kryvonis (Crooked Nose), Ubyjvovk (Kill the Wolf), Varykaša (Cook the Gruel).

Women were usually named after their husbands and changed their names when they remarried. With the official sanction of surnames in the 18th–19th century, a woman was required to adopt her husband's surname when she married. After the revolution women were allowed to keep their maiden surnames.

Various social classes, particularly the gentry and burghers, were characterized by specific forms of surname (originally closer to nicknames). Following the Polish practice, besides surnames the gentry used patronymics ending in *-(ov)lyč*, and from the 14th century toponymic adjectives ending in *-(iv)s'k(yj)*, derived usually from the names of family estates. These family names were sometimes supplemented with specific names (*prydomoky*) derived originally from a (fighting) motto (Abdank), ancestral line (Sas, Kornyc), or the name of the coat of arms.

Among burghers, besides patronymics and matronymics, names based on professions (Čobotar – Bootmaker, Kožum'jaka – Tanner) or on place of origin (Bybel's'kyj – From Byblo) became widespread. Following the fashion among European humanists, the better-educated burghers of the 16th and 17th centuries used Greco-Latin translations of Slavic surnames (Zyzanij = Kukil' [Cockle]).

The secular clergy used surnames derived from the church feast of their village (Bohojavlens'kyj – of the Epiphany). Theology students of peasant origin and without surnames were often registered at seminaries under a religious or classical surname.

Polish, Russian, Hungarian, and then Rumanian clerks often imposed their own linguistic forms on Ukrainian surnames; thus, for example, Verbyc'kyj became Wierzbicki, Kovaliv became Kovalév. In some cases these forms have been retained to the present time: Jefremov, Doncov, Muxin.

Jews, who used only Hebrew names and patronymics like Ben-David (Son of David) under the Polish Commonwealth, were forced to adopt surnames by the Austrian government. These were often German surnames selected by functionaries according to (1) the place of birth or residence (Čortkiver – From Chortkiv); (2) the father's name (Šmulzon – Son of Schmul) or the mother's name (Rifkes – Son of Rifke [Rebecca]); (3) a plant or animal (Wolf – Wolf, Pfeffer – Pepper); (4) profession (Šuster – Shoemaker); (5) esthetic associations (Goldberg – Golden Mountain, Rosencweig – Rose Twig); or (6) vulgar and derogatory intent (Cwibel'duft – Onion Smell).

The study of Ukrainian personal names was begun by such ethnographers as M. Sumtsov (1885), V. Okhrymovych (1895), and I. Franko (1906), and historians such as E. Borschak (1952). V. Simovych laid the foundations of

linguistic anthroponymics in the 1920s. Anthroponymic research grew rapidly from the mid-20th century.

O. Horbach

Anti-Bolshevik Bloc of Nations (ABN). A co-ordinating center for anti-Communist émigré political organizations from Soviet and other socialist countries. The ABN attributes its existence and its ideological foundations to the underground conference of representatives of non-Russian peoples that took place on 21–22 November 1943 near Zhytomyr on the initiative of the *Organization of Ukrainian Nationalists (OUN), and at which the platform of joint revolutionary struggle against Russian communism was formulated. The goal of the ABN is the dismemberment of the Soviet Union into national states. Given an organizational structure in Munich in 1946, the ABN extended its scope of activity to include the Eastern European emigration. The following organizations have been members of the ABN since its inception or for varying periods of time: 'Free Armenia' Committee, Bulgarian National Front, Belorussian Central Council, Cossack National Liberation Movement, Croatian National Liberation Movement, Czech Movement for Freedom (Za Svobodu), Czech National Committee, Estonian Liberation Movement, Union of the Estonian Fighters for Freedom, Georgian National Organization, Hungarian Liberation Movement, Hungarian Mindszenty Movement, Latvian Association for the Struggle against Communism, Lithuanian Rebirth Movement, Slovak Liberation Committee, National Turkestanian Unity Committee, Ukrainian Hetman Union, and the Organization of Ukrainian Nationalists (Bandera faction). In the 1970s two anti-Communist organizations, For the Freedom of Vietnam and Cuba Libre, joined the ABN. Some local émigré organizations also belong to the ABN. In several countries (the United States, Canada, Great Britain) national ABN and ABN support groups, such as the American Friends of the ABN, are active; in others (Belgium, Italy, Australia, Argentina, etc) the organization is represented by branch offices and

groups. Youth sections of the ABN are active in Great Britain and the United States.

The ABN has been headed, since its origin, by Ya. *Stetsko, president of the Central Committee. The chairmen of the ABN Peoples' Council have included V. Berzins, V. Kajum-Khan, Ferdinand Ďurčanský, F. Farkas de Kisbarnak, and R. Ostrowski. The long-time general secretaries were N. Nakashidze and C. Pokorný.

The ABN conducts information-propaganda activity through its periodical and non-periodical publications in various languages, including the bimonthly **ABN Correspondence* (since 1950; initially in English, German, and French, later in English only; ed S. *Stetsko), and *Resistencia y Liberación* (Buenos Aires). Also associated with the ABN is the journal **L'est européen* (Paris).

The headquarters and cells of the ABN organize mass anti-Soviet rallies, protest demonstrations, press conferences, and international congresses, and the distribution of various memoranda. The ABN co-operates with the *World Anti-Communist League (WACL) and the European Freedom Council (EFC). Representatives from the ABN and related organizations participate in the congresses of the WACL and EFC.

Ukrainians form the most active group in the ABN (specifically, the OUN(B) and organizations of the *Ukrainian Liberation Front) and are also the main financiers of its activities. The headquarters of the ABN has, from the start, been in Munich.

Antiokh, Marko. See Vorony, Marko.

Antireligious propaganda. An integral part of and one of the main means of carrying out Soviet religious policy in Ukraine, which is aimed at the complete eradication of religion in society as a prerequisite for 'constructing communism' in the USSR. While derived from Marxist philosophical materialism, antireligious propaganda was elevated by V. Lenin to one of the primary tasks of the Party's ideological work. The 'right to antireligious propaganda' has been entrenched in all Soviet constitutions since 1918 (till 1929, together with the 'right to religious propaganda'). Having outlawed any religious instruction of minors outside the family, the Soviet regime has mobilized, especially since 1929, its entire Party and governmental apparatus, educational system, public organizations, and mass media for the purposes of antireligious propaganda.

The direction, intensity, and methods of such propaganda have varied during different periods of Soviet rule in Ukraine, depending on the larger political objectives of the regime. During the first year sporadic antireligious propaganda focussed mainly on the largest religious organization, the Russian Orthodox church (ROC), and featured the 'unmasking of clerical counterrevolution' and desecration of holy relics. Soviet confiscation of church valuables in the wake of the 1921 famine was accompanied by the first large-scale antireligious propaganda campaign, with the Komsomol staging antireligious 'festivals' on the main religious feast days, during which they ridiculed the beliefs and rites of all religions. Increasingly the *Ukrainian Autocephalous Orthodox church (UAOC) came to be attacked in Soviet antireligious propaganda. During the NEP period the Party found it expedient to lower the intensity of its propaganda, while

seeking to give it a more systematic and organized character. In 1925 it launched the antireligious, semi-monthly **Bezvirnyk*, which, by 1930, had attained a circulation of 37,000. Two years later a mass atheist organization – the Association of Atheists of Ukraine (SBU) – was established; it held its first congress in 1928, electing D. Ihnatiuk as its head.

The first stage of forcible collectivization in Ukraine (1929–30) was accompanied by a massive antireligious campaign directed against all religious groups, including the hitherto favored Synodal (Renovationist) Orthodox church. It was spearheaded by the **Association of Militant Atheists of Ukraine* (former SBU, which now added *voiovnychykh* [Militant] to its name [svbu]), its nominal membership increasing from 215,000 in 1929 to over 1.5 million by 1931. Apart from an upsurge in the number of antireligious publications, including a weekly, *Voiovnychyi bezvirnyk*, with a circulation of 100,000 by 1930, this campaign involved large-scale confiscation of church bells ('for industrialization'), the burning of icons and religious books, the terrorization of members of the clergy in order to force them to renounce the priesthood and even religion, the liquidation of all the remaining monasteries and convents, and the mass closing of churches, most of which were turned to secular uses. Some churches were transformed into antireligious museums (St Volodymyr's Cathedral in Kiev was made into an 'all-Ukrainian atheist museum' of the svbu). In the course of the 1929–30 campaign the secret police arrested numerous bishops, priests, and leading laymen in Ukraine, the main blow being directed against the UAOC, which was forced into 'self-dissolution' in January 1930. In the second, even more violent, wave of compulsory collectivization, which brought about the catastrophic 1933 famine, antireligious propaganda accused 'churchmen and sectarians' of all faiths of collusion with the 'kulaks,' anticollectivization agitation, and various 'counter-revolutionary' crimes, and most bishops and clergymen of all faiths were arrested or deported by the secret police. In the mid-1930s a number of ancient Ukrainian churches, including the 12th-century Cathedral of St Michael's Golden-Domed Monastery in Kiev, were demolished by the authorities. At the height of the Yezhov Terror (1937–8), all but a handful of ROC and Renovationist churches were closed in Ukraine. The svbu, its membership rapidly declining after 1931 and its two periodicals closing by 1935, also fell victim to the great purges, which decimated its leadership (Ihnatiuk was executed as a 'fascist spy' in 1937).

Though the svbu (its membership reduced to less than 250,000) resumed its activities, including the publication of the weekly *Bezbozhnyk* from 1938, and rapidly expanded its largely token membership, it was ordered to cease all antireligious propaganda following the German invasion of the USSR in June 1941 and soon afterward was quietly dissolved. Eager to mobilize the support of alienated believers for the Soviet war effort, Stalin proceeded to offer tactical concessions to the ROC and some other religious groups that had called on their followers to oppose the invading Nazis. By September 1943 a new *modus vivendi* between the Kremlin and the Moscow patriarchate crystallized in far-reaching legal, administrative, and economic concessions to the ROC. Meanwhile, in Ukraine, as in other German-occupied territories, a spontaneous revival of church life brought about the reopen-

ing of several thousand churches and a number of monasteries and convents, as well as the re-establishment of the UAOC. The latter attracted hostile propaganda from both the Soviet side and the Moscow patriarchate, and when the Red Army recaptured Ukraine, all Autocephalist parishes were forced into the ROC. By 1945 Soviet propaganda turned against the Catholic church, especially the **Ukrainian Catholic church* in Western Ukraine. Accused of 'Ukrainian nationalism' and 'collaboration' with the enemy, all Ukrainian Catholic bishops and several hundred clergymen were arrested during 1945–6, and the entire church was outlawed after the so-called reunion sobor in Lviv 'voted' to merge it with the ROC in March 1946 (in Carpatho-Ukraine the Uniate church was outlawed in August 1949).

Although the Party adopted a resolution ordering the resumption of antireligious propaganda under the guise of 'scientific-educational propaganda' as early as September 1944, it was not until 1947 that the propaganda assumed an organized character, when the main responsibility for it was vested in the Society for the Dissemination of Political and Scientific Knowledge (subsequently renamed the **Znannia Society of the Ukrainian SSR*). Until the end of Stalin's rule, however, antireligious propaganda focussed primarily on Catholicism – especially on the underground – the Ukrainian Catholic church, Judaism, and sectarianism, studiously avoiding any attacks on the hierarchy of the ROC. It was only after N. **Khrushchev* assumed Party leadership that comprehensive antireligious propaganda was resumed in 1954, escalating, by 1959, into a massive attack on all religious groups, especially in Ukraine, where the majority of Orthodox and sectarian congregations in the USSR are located. All party and state agencies, including the governmental council for the affairs of the ROC and that for other religious 'cults,' were pressed into this campaign. 'Loyal' ecclesiastical leaders were required by the authorities not only to abandon 'voluntarily' some concessions they had received during the 1940s, to restrict their activities, and to close most of their monastic and theological institutions as well as parishes, but also to make public denials of any governmental interference with freedom of conscience in the USSR. Guided by unpublished Party and state directives and co-ordinated by the ideological commission of the CC CPSU, Khrushchev's antireligious campaign reduced the number of Orthodox churches in Ukraine from the postwar total of 8,000 to 4,500 by 1966 and closed 29 of the 38 monasteries and convents and two of the three theological seminaries; the number of Evangelical Baptist congregations in the Ukrainian SSR was cut by half, to 1,100. The only Russian Orthodox periodical in Ukrainian, **Pravoslavnyi visnyk*, published since 1946, was discontinued in 1963 (it resumed publication only in mid-1968). The Znannia society played an important, but secondary role in this campaign; in 1960 it launched an antireligious monthly, *Voiovnychyi ateist*, renamed, in 1965, *Liudyna i svit*, as well as a series of monthly antireligious brochures, and organized large numbers of antireligious lectures, exhibits, courses, and conferences.

Khrushchev's removal brought about a significant abatement in the intensity of the antireligious campaign, though the long-range program of 'scientific-atheist' work developed by the Party's ideological commission in November 1963 has not been abandoned. Since 1965,

while continuing slowly to reduce the number of working churches, the regime has been emphasizing a 'complex,' 'scientific-atheist' education, as well as 'individual work with believers' and the fostering of ritual substitutes for religion. To train specialists in antireligious propaganda, chairs for 'scientific atheism' were established at a number of Soviet Ukrainian institutions of higher learning, beginning with Kiev University (1959). Since 1964 a course, Fundamentals of Scientific Atheism (which is now offered at all institutions of higher learning), was made compulsory for students attending universities as well as pedagogical, medical, and agricultural institutes. A department of atheism was established within the Institute of Philosophy of the Academy of Sciences of the Ukrainian SSR, and, in 1967, a branch of the Party's Institute of Scientific Atheism in Moscow was opened in Kiev. Since 1965 Kiev University has been publishing an interinstitutional yearbook, *Pytannia ateizmu* (Questions of Atheism, in Russian since 1978). Greater attention is now being given to survey research to examine the strengths and weaknesses of religious ideology, identify the distribution of believers in different regions of Ukraine, and monitor the effectiveness of antireligious propaganda. (See *Atheism.)

At the popular level, a number of agencies have been active under the guidance of the propaganda department of the CC CPSU, most notably the Znannia society of the Ukrainian SSR (690,000 members in December 1979); oblast and raion 'houses of atheism'; atheist museums (nearly 100 in 1978); evening schools and universities 'of atheism'; secondary school and postsecondary 'atheist circles'; antireligious television and radio programs, films, newspaper columns, atheist wall newspapers, etc. Special emphasis has been placed on the promotion of 'Soviet traditions, holidays, and rites,' under the auspices of special councils established at different government levels and presided over by a commission attached to the Council of Ministers of the Ukrainian SSR. Simultaneously, unofficial registration of and sanctions against young people resorting to baptism and religious wedding ceremonies have been instituted, while at the local government level commissions have been established to monitor 'observance of the legislation on cults,' that is, to police more effectively individual religious congregations and to combat the growing number of 'deregistered' or 'illegal' congregations. The struggle against religious dissent in Ukraine – in particular, against the banned Ukrainian Catholic church, the Council of Churches of the Evangelical Christians-Baptists, unregistered Pentecostal and Adventist communities, and Jehovah's Witnesses – has extended beyond the confines of antireligious propaganda, involving administrative harassment, trials and sentences, and selective police terror.

Soviet antireligious propaganda in Ukraine has failed to infuse the masses with militant atheism despite the huge investment of material and human resources by the state, as can be seen from a succession of published and classified Party and government resolutions, including the resolution of the Ukrainian Council of Ministers 'On the Strengthening of Control over the Observance of Legislation on Cults' (1 April 1969), the CC CPSU resolution 'On the Intensification of the Atheist Upbringing of the Population' (16 July 1971), and the most recent CC resolution, 'On the Further Improvement of Ideological and Political-Educational Work' (26 April 1979). While

drastic restrictions on the religious upbringing of youth and on proselytizing, discrimination against known believers, and, especially, modernization processes have contributed to widespread secularization, according to Soviet population surveys believers constitute at least 15 percent of the urban population and 30 percent of the rural population in central and eastern Ukraine, while in western Ukraine at least twice as many have retained their religious beliefs. In fact, the failure of the Soviet regime to fill the spiritual and moral vacuum created by the large-scale suppression of institutional religion and the widespread cynicism about official ideology have generated, since the 1960s, growing interest in Ukrainian national religious traditions, especially among the young Ukrainian intelligentsia. This explains the continuous outpouring of antireligious books and articles in the Ukrainian SSR directed against the 'non-existent' Ukrainian Catholic church and the UOC. These increasingly stress the interdependence between religious and national consciousness and urge all public socialization agencies to combine atheist and internationalist indoctrination as a means of integrating Ukrainians into a 'new historical community' of Russified 'Soviet people.'

B.R. Bociurkiw

Anti-Semitism. Until the 1940s Ukraine had for many centuries been the home of one of the world's largest populations of *Jews, who alternately thrived there and were the victims of prejudice as well as of intermittent, sometimes fierce, outbreaks of violence.

The first major outbreak of violence directed against the Jews of Ukraine occurred during the popular rebellion led by B. *Khmelnysky (1648). In discussions about anti-Semitism (A-s) some writers, eg, E. Wiesel in *Jews of Silence*, have tried to draw a parallel between the 17th-century massacres of Jews and Poles by the Ukrainians during the Khmelnytsky rebellion and the mass killings of Jews by the German Nazis. Such attempts at analogy have typically obscured more than illuminated, and they seem to originate in an inability to recognize a fundamental distinction, a shortcoming common to many writings about A-s, between hostile acts or sentiments directed at Jews that derive from prejudice (A-s) and such acts or sentiments that derive from other sources (eg, real and significant socio-economic or political conflicts rather than imagined or invented ones).

G. Allport's classic definition of ethnic prejudice, of which A-s is a species, defines it as antipathy based on faulty and inflexible generalizations. Whereas Nazi attitudes and practices clearly instantiate such antipathy, those of the 17th-century Ukrainian peasant masses do not. Jews were the principal administrators of a system of economic, religious, and national oppression imposed upon the enserfed Ukrainian peasantry by the colonialist Polish nobility. Thus, the mass killings of Jews and Poles during the rebellion, when tens of thousands perished, were prompted by objective conditions of oppression and probably had little to do with ethnic prejudice in the sense defined above. A similar analysis applies to the killing of Jews during the bloody *Haidamaka uprisings of the 18th century.

Though more terrible in outcome than the expulsions and most other acts of persecution that Jews have had to endure over the centuries in, eg, Western Europe or Russia, the massacres of Jews and Poles by Ukrainians

during the rebellions of the 17th and 18th centuries stand in important contrast to the many practices of persecution against Jews in the lands referred to above. The reason for this is that Jews constituted but a beleaguered and oppressed minority in Western Europe or Russia, while in Ukraine they were, vis-à-vis the Ukrainians, part of the ruling classes.

Unambiguous instances of widespread prejudice against the Jews of Ukraine appear at the end of the 18th century, a point by which Russia had consolidated control over most of Ukraine, with the institution of the Pale of Settlement by Russian tsarist authorities. Pale proscriptions not only forbade Jewish settlement in the ethnic Russian areas of the empire but also imposed various restrictions on Jews living in those areas of the Russian Empire that were open to them, ie, the Ukrainian, Polish, Belorussian, and Lithuanian territories. Classically anti-Semitic in motive and intent, the restrictions both served to discriminate against the Jews and to mark them in the eyes of the populace as an object class deserving of prejudicial treatment.

As is clear from the example of the Pale, any attempt to provide an account of A-s in Ukraine must carefully distinguish between genuinely Ukrainian A-s, ie, A-s manifested by Ukrainians, and A-s manifested within Ukraine but either not by Ukrainians or not at their initiative. The need for this distinction is the result of Ukraine's unusual political history, ie, its lack of sovereignty for centuries, and of the presence on its territory of large, politically and economically dominant colonies of non-Ukrainians (Russians and Poles) who inhabited the towns and cities. Thus, paradoxically, Pale restrictions, a paradigm example of A-s in Ukraine, were nevertheless a manifestation not of Ukrainian A-s but of Russian A-s.

The same holds true of the anti-Semitic pogroms of the 1880s in the Ukrainian and other Pale territories of the empire, which broke out following the assassination of Tsar Alexander II, insofar as these were the product of a campaign conducted by reactionary Russian circles, calculated to lay blame for the assassination upon the Jews. This state of affairs recurred between 1903 and 1906, when government provocateurs and protsarist groups and gangs such as the notorious Russian "Black Hundreds" carried out numerous bloody anti-Semitic pogroms, frequently under the rallying cry of "Beat the Yids, Save Russia," in order to deflect away popular discontent with tsarist absolutism by finding an alternate scapegoat for the empire's ills, namely the Jews.

Still another prominent example of Russian A-s as practiced in Ukraine was the M. Beilis blood-libel trial (see "Beilis affair"), which was instigated and conducted by the tsarist police and judicial apparatuses in Kiev between 1911 and 1913.

In contradistinction to the ready availability of examples of Russian A-s in Ukraine, examples of genuinely Ukrainian A-s are much more difficult to locate, though well-documented instances of specifically Ukrainian violence committed against Jews (the Khmelnytsky and Haidamaka rebellions) are, of course, not. One frequently alleged example of Ukrainian A-s is the pogroms carried out by UNR Directory forces in 1919. Another is the alleged widespread collaboration of Ukrainians with the Nazis in the extermination of the Jews during the Second World War.

Whereas there is little disagreement among historians

that some units of the Directory's army did commit pogroms, extant evidence does not seem to support the accusation, found in some of the literature, that the Ukrainian government ever promoted or condoned such excesses, although it is unclear whether or not, under the prevailing conditions of near anarchy, more could have been done to prevent them. What is, moreover, impossible to determine is why those units of the Directory's forces that committed the pogroms did so. Possible explanations include a general condition of civil war and anarchy, in which all armed forces fighting on Ukrainian soil – Ukrainian, White, Red, and Polish – engaged in pogroms; the Ukrainians' conviction that Jews were opposed to Ukrainian independence; or simply A-s – although even here it is unfortunately impossible to distinguish between an A-s with genuinely Ukrainian roots and one generated as the result of the cumulative effect of decades of officially sponsored tsarist Russian A-s prior to the revolution of 1917.

During the Second World War a small number of individual Ukrainians collaborated with the Nazis in victimizing the Jews. This, however, cannot really be considered a conspicuous example of Ukrainian A-s for three reasons: (1) similar or more systematic collaboration took place throughout Nazi-occupied Europe, including France, Hungary, and Poland; (2) the number of Ukrainians who collaborated with the Germans, estimated by some sources to be 11,000, represents but a small fraction of the total population, estimated at 36 million; and (3) the number of collaborators is simply dwarfed by the number of Ukrainians killed by the Germans, whether as civilian victims of the Nazi holocaust (3 million) or as some undetermined portion of the total Soviet prisoner-of-war population killed by the Germans (estimated at between 2.5 and 3 million) or during combat against the Third Reich as members of the Soviet Army or the forces of the Ukrainian Insurgent Army.

In the time since the war the situation with A-s in Ukraine has come to resemble that which prevailed during the period of the Russian Empire, insofar as a central governmental authority outside of Ukraine, in this case the Soviet authorities in Moscow, determines the official position taken in regard to Jews living not only within the Ukrainian SSR but within the Soviet Union as a whole. And, similarly, the official posture has not only shown itself to contain an endorsement of A-s but has also at various points included an active promotion of a particularly virulent strain of it, in some instances rivaling the A-s of Nazi Germany. A Ukrainian publication best representing this brand of especially vicious Soviet A-s is T. Kichko's *Judaizm bez prykras* (Judaism without Embellishment), a volume published under the official auspices of the Academy of Sciences of the Ukrainian SSR in 1963.

Although it is difficult to identify major instances of A-s, in the specific sense of prejudice and not simply hostility, that have a demonstrably Ukrainian character, and although there has never, for example, been a Ukrainian anti-Semitic organization or political party, it is nevertheless reasonable to assume the existence of Ukrainian A-s. But its depth or extent cannot be gauged. Native xenophobia, ignorance, Christian A-s, frictions deriving from economic competition, and a profound and reciprocal cultural and political alienation would be likely sources. Some of the writings of the 19th-century Ukrainian historian and polemicist M. Kostomarov are a good example of Ukrainian A-s.

To date, the subject of A-s in Ukraine has not had the benefit of much careful and scholarly analysis. Extant discussions, of which there are a fair number, are usually of a popular or semischolarly character and more often than not are marred by conceptual confusions about the very nature of A-s, a failure to recognize that A-s in Ukraine is not synonymous with Ukrainian A-s, and a tendency to apply conclusions pertinent to Western European or Russian A-s to interpretations of friction or hostility between the gentiles and Jews in Ukraine, a land where such conclusions are frequently inapplicable because of the very different role and status that Jews held there in earlier centuries, when they were part of and aligned with the ruling and oppressing non-Ukrainian classes.

B. Wytwycky

Antolohion. A *menaion for feast days, one of the liturgical books of the Eastern church, which was published by the press of the Kievan Cave Monastery. It was translated from the Greek by Y. Boretsky, Z. Kopystynsky, and P. Berynda. Berynda also wrote the afterword.

The Dormition, an illustration from *Antolohion* (1619)

Borys Antonenko-Davydovych

Antonenko-Davydovych, Borys [Antonenko-Davydovyč] (pseud of Davydov), b 5 August 1899 in Roman, Poltava gubernia, d ? May 1984 in Kiev. Writer, journalist, and an active participant in the post-1917 renaissance of Ukrainian culture. Antonenko-Davydovych studied natural science at the University of Kharkiv and philology at the Kiev Institute of People's Education. During the 1920s he was a member of the editorial board of the newspaper *Proletars'ka pravda*. His work began to be published in 1923 in the journals *Nova hromada*, *Zhyttia i revoliutsiia*, and *Chervonyi shliakh*, among others. He was a member of the literary group Lanka (later *MARS). His first works published separately were the drama *Lytsari absurdu* (Knights of the Absurd, 1924) and the collections of stories and short novels *Zaporosheni syluety* (Dusty Silhouettes, 1925), *Tuk-tuk* (1926), and *Synia voloshka* (The Blue Cornflower, 1927). Antonenko-Davydovych's novel *Smert'* (Death, 1928), which became very popular but was at the same time sharply criticized for nationalism, describes the then-current problem of the betrayal of his nation by a Ukrainian intellectual who becomes a Communist. Antonenko-Davydovych was again accused of nationalism for his book of travel vignettes, *Zemleiu ukrains'koiu* (Through the Ukrainian Land, 1930). He was arrested in 1935, imprisoned until 1956, and then exiled to Central Asia.

After being rehabilitated, he returned to Kiev. The following years saw the publication of his collections of stories and sketches *Zbruch* (1959), *V sim'i vol'ni, novii* (In the Free, New Family, 1960), and *Zoloty korablyk* (The Little Golden Ship, 1960), and the short novel *Slovo materi* (The Mother's Word, 1964). His best-known postwar novel, *Za shyrmoiu* (Behind the Screen, 1963), was also harshly criticized for deviating from the principles of socialist realism. The novel, set in contemporary Uzbekistan, raises the question of a humanitarian attitude towards people, and especially that of children towards their parents. Antonenko-Davydovych had two unfinished novels: *Sich-maty* (Mother Sich) and *Nashchadky pradiiv* (Descendants of Ancestors). Collections of his articles on literary topics and literary criticism – *Pro shcho i iak* (On What and How, 1962), *V literaturi i kolo literatury* (In Literature and around Literature, 1964), *Zdaleka i zblyz'ka* (From Far and Near, 1969) – and on linguistic themes – *Iak my hovorymo* (How We Speak, 1970) – also appeared. Antonenko-Davydovych had a significant influence on the literary generation of the 1960s. For his protests against Russification and his defense of Ukrainian dissidents he was again persecuted from the mid-1960s, and from the early 1970s publication of his works was suspended and his books were banned.

I. Koshelivets

Antonii [Antonij], ?–1391. Initially the bishop, then the metropolitan, of Halych (1371–91). He was appointed metropolitan by Philotheos, the patriarch of Constantinople. After Antonii's death the Halych metropolitanate went into decline once again.

Antonii Pechersky. See Saint Anthony of the Caves.

Antoniny. IV-7. Town smt (1970 pop 3,720) in Krasyliv raion, Khmelnytskyi oblast; until 1770 it was called Holodky. Antoniny has a sugar refinery, brick factory, baking plant, breeding farm, and forest reserve.

Zynovii Antoniuk

Antoniuk, Zynovii [Antonjuk, Zynovij], b 24 July 1933. Engineer, economist. Antoniuk was active in the dissident movement in Kiev during the 1960s and 1970s. He has written articles on historical and ethnographic themes. Arrested in 1972 and tried on a charge of collaboration with the samvydav journal **Ukrains'kyi visnyk*, Antoniuk was sentenced to seven years in a labor camp and three years' internal exile. From 1975 to 1978 he was incarcerated in Vladimir Prison following mass hunger strikes by prisoners in the Ural labor camp. Antoniuk and I. *Svitlychny were accused of organizing these strikes.

Antonivka. VII-13. Town smt (1968 pop 12,600) in Kherson oblast administered by the Kherson raion soviet and established in 1963. Its main industries are viticulture and wine-making.

Antonivka hoard. Also known as the Inhul hoard. An archeological hoard of the late Bronze Age, found in 1962 on the Inhul River near the village of Antonivka in Mykolaiv oblast. The hoard consists of bronze axes, sickles, ornaments, and weapons characteristic of the late period of the *Timber-Grave culture of the 13th–12th century BC. The hoard is preserved at the Odessa Archeological Museum.

Antonov, Oleg, b 7 February 1906 in Troitsa, Moscow gubernia. Prominent Soviet aircraft designer; full member of the Academy of Sciences of the Ukrainian SSR since 1967. Antonov has designed over sixty aircraft, including the propeller-driven AN-2 and AN-14; the turboprops AN-8, AN-10, AN-22, AN-24, AN-26, AN-28, and AN-30; the turbojet AN-72; and the single-frame sport gliders A-11, A-13, and A-15. He has been a member of the Central Committee of the CPU since 1966. In 1968, however, Antonov was one of 139 Soviet citizens who signed an open letter to the Soviet leaders protesting the arrests of Ukrainian cultural activists and governmental restriction of Ukrainian cultural development.

Antonov-Ovsiienko, Volodymyr [Antonov-Ovsijenko], b 21 March 1883 in Chernihiv, d 1938. Bolshevik leader who was commander in chief of the Bolshevik occupation

of Ukraine from December 1917 to May 1918. In March–April 1918 he was a member of the Soviet Ukrainian government. From November 1918 to June 1919 Antonov-Ovsiienko commanded the Soviet divisions (the so-called Ukrainian Front), which occupied Ukraine a second time. From 1924 to 1937 he was in diplomatic service as the plenipotentiary representative of the USSR to Czechoslovakia, Lithuania, Poland, and Spain. Antonov-Ovsiienko was executed by firing squad on the charge of being a Trotskyist. He was the author of *Zapiski o grazhdanskoj voine* (Notes on the Civil War, 4 vols, 1924–33), which contains valuable materials on the history of the Bolshevik occupation of Ukraine.

Antonovsky, Mykhailo [Antonovs'kyj, Myxajlo], b 11 October 1759 in Borzna, Chernihiv gubernia, d 1816 in St Petersburg. Antonovsky completed his studies at the Kievan Mohyla Academy (1772) and the University of Moscow (1779–83). He worked as a librarian at the public library in St Petersburg and wrote *Istoriia o Maloi Rossii* (History of Little Russia, 1799) on the basis of Ukrainian chronicles and manuscripts of the 17th–18th century. Antonovsky published H. Skovoroda's 'Nartsys' (Narcissus) in the book *Biblioteka dukhovnaia* (Spiritual Library, 1798). Antonovsky's memoirs were published in the journal *Russkii arkhiv* in 1885.

Antonovych, Danylo [Antonovyč] (real name Budko), b 22 December 1889 in Bilopillia, near Sumy, d 8 February 1975 in Kharkiv. Actor, graduate of the Lysenko Music and Drama Institute in Kiev. In 1919 he joined the Kiev Shevchenko Theater, in 1920–2 he worked with L. *Kurbas in the Kiev Drama Theater (Kyidramte), and in 1922–3 and 1926–34 in *Berezil. In 1923–6 he worked in Moscow in the First Russian Workers' Theater. From 1935 he acted in the Kharkiv T. Shevchenko Drama Theater. He began to lecture in 1949 and in 1957 was promoted to professor of the Kharkiv Theater Institute. His main roles included the following: Zalizniak in *Haidamaky* (based on T. Shevchenko's poem), Yaroslav in I. Kocherha's *Iaroslav Mudryi* (Yaroslav the Wise), Kryvonis in O. Kornii-chuk's *Bohdan Khmel'nyts'kyi* (and other plays by Kornii-chuk), Felix Grandet in H. Balzac's *Eugénie Grandet*, Othello in W. Shakespeare's tragedy. He played in the ethnographic plays of H. Kvitka-Osnovianenko, I. Karpenko-Kary, and others. He appeared in S. Eisenstein's films *Stachka* (Strike) and *Bronenosets Potemkin* (The Battleship *Potemkin*).

Antonovych, Dmytro [Antonovyč], b 15 November 1877 in Kiev, d 12 October 1945 in Prague. Son of V. *Antonovych, art and theater historian, political leader. Antonovych was one of the founders and leaders of the Revolutionary Ukrainian party (RUP) in 1900–5, and, from 1905, of the Ukrainian Social Democratic Workers' party (USDRP). He served as the editor of several party publications – the journals **Haslo* (1902–3) and **Selianyn* (1903–5) in Chernivtsi, and, in Kharkiv, the newspaper *Volia*. From 1912 he taught art history at the Kiev School of Arts and worked for the monthly journals **Dzvin* (1913–14) and **Staiivo* (1913–14). An active figure in the Ukrainian Central Rada in 1917–18, Antonovych held the portfolios of naval affairs and the arts. During the period of the Directory of the Ukrainian National Republic Antonovych was the president of the Ukrainian diplo-

Danylo Antonovych

Dmytro Antonovych

matic mission in Rome. He was an organizer and rector of the Ukrainian Free University in Vienna and Prague and a professor of art history there as well. Antonovych was the director of the Museum of Ukraine's Struggle for Independence in Prague for many years. From 1923 to 1945 he was president of the Ukrainian Historical-Philological Society, and director of the Ukrainian Studio of Plastic Arts, both in Prague. His works include *Estetychne vykhovannia Shevchenka* (Shevchenko's Aesthetic Education, 1914), *Ukrains'ke mystetstvo* (Ukrainian Art, 1923), *Trysta rokiv ukrains'koho teatru (1619–1919)* (Three Hundred Years of Ukrainian Theater [1619–1919], 1925), *T. Shevchenko iak maliar* (T. Shevchenko, the Artist, 1937), and *Deutsche Einflüsse auf die ukrainische Kunst* (1942).

Antonovych, Kateryna [Antonovyč] (birth name Serebriakova), b 1884 in Kharkiv, d 22 February 1975 in Winnipeg. Painter and professor of art history, wife of Dmytro *Antonovych. She studied in the Ukrainian National Academy of Art in Kiev under V. Krychevsky and M. Boichuk; from 1923 she was in Prague, where she worked in the Ukrainian Studio of Plastic Arts and the Museum of Ukraine's Struggle for Independence. Antonovych emigrated to Canada in 1945, and from 1954 directed her own drawing and painting school. Her portraits, landscapes, and still lifes were exhibited in Canada and in the United States.

Antonovych, Maksym [Antonovyč], b 9 May 1835 in Bilopillia, near Sumy, d 14 November 1918. Russian philosopher, publicist, literary critic, of Ukrainian descent. Antonovych graduated from the Kharkiv seminary and the St Petersburg Theological Academy. He later broke with his religious training and became a materialist and an atheist but eschewed Marxism. He popularized the theories of C. Darwin and criticized the mystical religious philosophy of the Kiev philosophers S. *Hohotsky and P. *Yurkevych. Antonovych was a proponent of peasant revolution.

Antonovych, Marko [Antonovyč], b 7 July 1916 in Kiev. Son of Dmytro *Antonovych, student organizer (*Zarevo), civic and political activist (member of the Melnyk faction of the Organization of Ukrainian Nationalists), historian, and publicist. He is the author of articles on the cultural renaissance of the 19th century in Ukraine, as well as *Narys istorii Tsentral'noho Soiuzu Ukrains'koho*

Studentstva, 1921–45 (An Outline of the History of the Central Union of Ukrainian Students, 1921–45, 1976). Antonovych edited the journal *Rozbudova derzhavy* (1949–54) and since 1964 has co-edited the scholarly journal *Ukrains'kyi istoryk*.

Antonovych, Mykhailo [Antonovyč, Myxajlo], b 20 November 1910 in Florence, d? Historian, son of Dmytro *Antonovych, research associate of the Ukrainian Scientific Institute in Berlin from 1936 to 1941, lecturer at Breslau University and at Vienna University. His writings include a PhD dissertation on Prince Reprnin, the Governor General of Saxony (1936), *Istoriia Ukraïny* (A History of Ukraine, 4 vols, 1941–2), *Studii z chasiv Nalyvaika* (Studies of the Times of Nalyvaiko, 1941), and *Pereiaslav-s'ka kampaniia 1630 r.* (The Pereiaslav Campaign of 1630, 1944). In 1945 he was seized by Soviet agents in Berlin and was deported to the USSR. There he was incarcerated in prison camps; his subsequent fate is unknown.

Volodymyr Antonovych

Antonovych, Volodymyr [Antonovyč], b 18 January 1834 in Makhnivka, Kiev gubernia, d 21 March 1908 in Kiev. Historian, archeographer, archeologist, professor of history at Kiev University from 1878, editor in chief of the publications of the *Kiev Archeographic Commission, patron and head (from 1881) of the *Historical Society of Nestor the Chronicler in Kiev, and organizer of archeological conferences in Ukraine. He collected, edited with introductions, and published the voluminous **Arkhiv Iugo-Zapadnoi Rossii* (in 8 series, 1859–1914), which deals with the history of Right-Bank Ukraine in the 16th–18th century. Antonovych's introductory articles to these volumes are concerned with the history of the Cossacks, Haidamakas, peasantry, nobility, gentry, towns and burghers, colonization, and the church: 'O proiskhozhdenii kozachestva' (On the Origin of the Cossacks, 1863); 'Ob okolichnoi shliakhte' (The Neighboring Gentry, 1867); 'Posledniia vremena kozachestva na pravom beregu Dnepra po aktam 1679–1716 g.' (The Last Days of the Cossacks on the Dnieper's Right Bank According to Documents of 1679–1716, 1868); 'O gaidamachestve' (On the Haidamaka Movement, 1876); 'O mnimom krest'ianskom vozstanii na Volyni v 1789 g.' (On the Supposed Peasant Uprising in Volhynia in 1789, 1902); 'O krest'ianakh v Iugo-Zapadnoi Rossii po aktam 1770–1798 gg.' (On the Peasants in Southwestern Russia According to Documents of 1770–98, 1870); 'O proiskhozhdenii shliakhtskikh rodov v Iugo-Zapadnoi Rossii' (On the Origin of Noble Family Lines in Southwestern Russia, 1867); 'O

gorodakh v Iugo-Zapadnoi Rossii po aktam 1432–1798 g.' (On the Towns of Southwestern Russia According to Documents of 1432–1798, 1870); 'Ob Unii i sostoianii Pravoslavnoi Tserkvi s poloviny XVII do kontsa XVIII v.' (On the [Church] Union and the State of the Orthodox Church from the Middle of the 17th to the End of the 18th Century, 1871).

Other important works by Antonovych are *Ocherki istorii Velikogo Kniazhestva Litovskogo do smerti v. kn. Ol'gerda* (An Outline of the History of the Grand Duchy of Lithuania up to the Death of the Grand Prince Algirdas, 1877–8); 'Kiev, ego sud'ba i znachenie v XIV–XVI st.' (Kiev, Its Fate and Importance from the 14th to the 16th Century), *Kievskaja starina*, no. 1 (1882); 'Uman'skii sotnik Ivan Gonta' (The Captain of Uman, Ivan Gonta) *Kievskaja starina*, no. 11 (1882); and *Monografii po istorii Zapadnoi i Iugo-Zapadnoi Rossii* (Monographs on the History of Western and Southwestern Russia, 1885).

Antonovych edited several collections of historical documents, such as *Sbornik materialov dlja istoricheskoi topografii Kiev i ego okrestnostei* (Collection of Materials for the Historical Topography of Kiev and Its Surrounding Areas, 1874); *Sbornik letopisei, otnosiashchikhsia k istorii Iuzhnoi i Zapadnoi Rossii* (Collection of Chronicles Pertaining to the History of Southern and Western Russia, 1888); *Memuary, otnosiashchiesia k istorii Iuzhnoi Rusi* (Memoirs Pertaining to the History of Southern Rus', 2 vols, 1890–6); 'Dnevnik Stanislava Osvetsima (1643–51)' (The Diary of Stanisław Oświęcim [1643–51]), *Kievskaja starina*, nos. 1–2, 5–6, 9–12 (1882), and separately. He was responsible for the historical annotations to M. Draho-manov's *Istoricheskie pesni malorusskogo naroda* (The Historical Songs of the Little Russian People, 1–II, 1874–5). His principal works in archeology are *Raskopki v zemle drevlian* (Excavations in the Derevlianian Land, 1893); *Arkheologicheskaja karta Kievskoj gubernii* (An Archeological Map of Kiev Gubernia, 1895); *Arkheologicheskaja karta Volynskoj gubernii* (An Archeological Map of the Volynian Gubernia, 1900); and *Opisanie monet i medalei, khraniashchikhsia v numizmaticheskom muzee Universiteta sv. Vladimira* (A Description of the Coins and Medals Preserved at the Numismatic Museum of St Vladimir University, 1896).

Antonovych was a representative of the populist school in Ukrainian historiography. He founded the so-called Kievan school of historians, which consisted of his students at Kiev University (among them, D. *Bahalii, P. *Holubovsky, M. *Hrushevsky, M. *Dovnar-Zapolsky, and I. *Lynnychenko). These historians laid the foundations of modern Ukrainian historiography. In his writings Antonovych avoided synthetic theories and concentrated on documentary research. Only in his more popular lectures, such as *Besidy pro chasy kozats'ki na Ukraïni* (Conversations on the Cossack Period in Ukraine, 1897; 2nd ed, *Vyklady pro chasy kozats'ki na Ukraïni* [Lectures on the Cossack Period in Ukraine], 1912), did Antonovych give a general survey of Ukrainian history from the origin of the Cossacks.

As a member of the *Khlopomany, Antonovych published a well-known article in reply to the Polish journalist Z. Fisz (pseud T. Padalica), entitled 'Moia ispoved' (My Confession), in *Osnova*, 1 (1862), in which he defended the ideology of the 'peasant lovers.' He was head of the Old Hromada of Kiev. Through his initiative the Poles and Ukrainians in the Galician diet reached an

agreement in 1890. He played an important role in Hrushevsky's move to Lviv and the city's emergence as an important center of Ukrainian learning and publishing. For almost half a century Antonovych played a leading role in Ukrainian civic and political life. He wrote over 300 scholarly studies.

O. Ohloblyn

Antonovych-Melnyk, Kateryna [Antonovyč-Mel'nyk], 1859–1942. Archeologist, historian, and community figure in Kiev; second wife of V. *Antonovych. She conducted archeological excavations in Volhynia, Podilia, Zaporizhia, and Slobidska Ukraine and studied neolithic, megalithic, and other monuments. She belonged to many archeological societies, was a full member of the Ukrainian Scientific Society in Kiev and of the Shevchenko Scientific Society, and helped establish museums at the University of Kiev and in Katerynoslav. Her works include *Sledy megaliticheskikh sooruzhenii v Iuzhnoi Rossii* (Traces of Megalithic Structures in Southern Russia, 1884) and *Maidanovi horodyshcha na Ukraïni* (Square-Type Ancient Towns in Ukraine).

Antonowycz, Myroslaw [Antonovyč, Myroslav], b 1 March 1917 in Dolyna, Galicia. Musicologist and conductor, lecturer at Utrecht University in Holland, founder and conductor of the *Byzantine Choir at Utrecht. His publications include *Die Motette Benedicta es von Josquin des Pre...* (1951), *Die byzantinischen Elemente in den Antiphonen (graduale) der ukrainischen Kirche* (1955), and *The Chants from Ukrainian Heirmologia* (1974). Antonowycz has contributed to Dutch and German music encyclopedias.

Antonych, Bohdan Ihor [Antonyč], b 5 October 1909 in the village of Novytsia in the Lemko region, d 6 July 1937 in Lviv. Poet, critic, and publicist. As a student in the arts and science faculty of Lviv University, Antonych assiduously studied the Ukrainian language and Ukrainian literature and wrote journalistic and critical articles under the pseudonym Zoil. He graduated in 1933. With V. Havryliuk and V. Lasovsky he co-edited the art journal *Karby*. Antonych edited the literary chronicle for the journal *Dazhbogh* and for a time was its editor in chief. According to his own admission, Antonych was 'a pagan in love with life,' 'a poet of spring intoxication.' His lyrical poetry deals with a wide range of philosophical themes and combines the principles of imagism with a unique form of pantheism rooted in Lemko folklore. His religious attitude to folk objects and his extensive use of alliteration fascinated his contemporaries and have influenced some of the young poets of today, for example, I. *Kalynets and M. *Horbal.

Myroslaw Antonowycz

Bohdan Ihor Antonych;
portrait by V. Lasovsky

During his lifetime the following collections of his poetry appeared in print: *Pryvitannia zhyttia* (Welcome to Life, 1931), *Try persteni* (Three Rings, 1934), *Knyha leva* (The Book of the Lion, 1936), *Zelena levanheliia* (The Green Gospel, 1938), *Rotatsii* (Rotations, 1938), and *Vybrani poezii* (Selected Poems, ed B. Romanenchuk, 1940) were published posthumously. In the 1960s there was renewed interest in Antonych's poetry. Various articles on and studies of his work appeared. Several annotated editions of his poetry were published: *Persteni molodosti* (The Rings of Youth, ed M. Neverly, Bratislava 1966), *Pisnia pro neznyshchennist' materii* (Song on the Indestructibility of Matter, introd D. Pavlychko, Kiev 1967), and *Zibrani tvory* (The Collected Works, ed S. Hordynsky and B. Rubchak, New York–Winnipeg 1967). The last collection includes, besides Antonych's poetry, his unfinished libretto *Dovbush*, fragments of the novel *Na tomu berezi* (On the Other Shore), his theoretical articles on art, journalistic articles, and book reviews. In the 1970s selections from his work were translated into Slovak (*Očareny pohan* [Košice 1976]) and into English (*Square of Angels* [New York 1977]).

D.H. Struk

Antratsyt [Antracyt]. v-20, DB III-6. City (1983 pop 65,000) in the southeast part of the Donets Basin and a raion center in Voroshylovhrad oblast. The town was founded at the end of the 19th century and was called Bokovo-Antratsyt until 1962. It is known for its anthracite mines and enrichment plants. Antratsyt has a tractor-parts plant, one of the largest greenhouses in Ukraine, a slag-block plant, an asphalt plant, and a mining technical school.

Antropolohiia (Anthropology). A scientific collection published annually in 1927–30 (4 vols) by the *Cabinet of Anthropology and Ethnology of the Ukrainian Academy of Sciences in Kiev. The collection contained articles on the ethnic and physical anthropology of Ukraine, paleo-anthropology, and archeology. The editors were A. Nosiv and M. Rudynsky.

Antropov, Aleksei, b 25 March 1716 in St Petersburg, d 23 June 1795 in St Petersburg. Russian painter of portraits. Antropov also painted churches and palaces: in 1752–5 he took part in painting St Andrew's Cathedral in Kiev (among other paintings, that of the Last Supper and the paintings of the cupola are his). The influence of

Ukrainian portrait painting of the 18th century is noticeable in his portraits, such as in the portrait of Archbishop S. Kuliabka and of Otaman F. Krasnoshchokov.

Anyshchenko, Kalistrat [Anyščenko], b 26 September 1885 in the village of Krasne, Kiev gubernia, d 28 March 1929 in Kharkiv. Writer and journalist. He began publishing in 1904. His collections of stories dealing with the lives of workers and peasants include *Opovidannia* (Stories, 1918), *Tkachykhy* (The Weaver's Wives, 1924), *Myronosnytsi* (The Balsam Bearers, 1926), *Balans* (The Balance, 1927), and *Pobachennia* (The Rendezvous, 1929); other works include the popular narrative *Mandrivka do pivdennoho bihuna* (Journey to the South Pole, 1929) and the children's novel *Piramidy proletariatu* (Pyramids of the Proletariat, 1929).

Apanovych, Olena [Apanovyč], b 23 March 1919. Historian specializing in the history of the Zaporozhian Sich and Ukrainian military history. Her works include *Zaporiz'ka Sich ta ii prohresyona rol' v istorii ukrains'koho narodu* (The Zaporozhian Sich and Its Progressive Role in the History of the Ukrainian People, Kiev 1954, co-author K. Huslysty), *Zaporiz'ka Sich u borot'bi proty turets'ko-tatars'koi ahresii 50-70-i roky XVII st.* (The Zaporozhian Sich in the Struggle against the Turkish-Tatar Aggression of the 1650s to 1670s, Kiev 1961), and *Zbroini syly Ukrainy pershoi polovyny XVIII st.* (The Armed Forces of Ukraine of the First Half of the 18th Century, Kiev 1969).

Apocryphal literature. Works about events and figures in religious history that were never officially recognized by the Christian church or accepted into the canon of the Holy Scriptures and thus are regarded as false or heretical. Apocryphal literature elaborates on events that are not mentioned or are mentioned only in passing in the Scriptures. The legends and oral traditions that grew up around the apocrypha often contradicted the teachings of the church. Heretics attempted to lend credibility to the apocrypha by attributing their authorship to the apostles or church fathers. References in literary monuments indicate that the apocrypha, together with lists of forbidden works (indexes), were known in Ukraine by the 11th century. The apocrypha, as well as other early works of *translated literature, reached Ukraine from Byzantium and the Holy Land via Bulgaria and were spread by means of oral and written communication. During the 17th–18th century apocryphal literature was replenished by new translations and legends of Western origin.

Apocryphal literature may be divided into several categories. Old Testament apocrypha include stories describing genesis, Adam and Eve, Noah and the Flood, Abraham, Moses, numerous tales about Solomon, and the so-called Testaments of the Twelve Patriarchs. New Testament apocrypha – the so-called gospels of Khoma (Thomas), Yakiv (Jacob), Nicodemus, and others – include tales of Christ's childhood, his trial and sufferings (the Passion), his journey to hell, and, also, of the Mother of God and the apostles. Apocryphal lives of the saints (Mykyta, Yurii, Iryna, Fedir, etc) emerged alongside the officially recognized *hagiography. The category of eschatological apocrypha (depicting the end of the world and life after death) includes perhaps the most popular Ukrainian apocryphal tale, 'Khozhdeniie Bohorodytsi po

mukakh' (The Mother of God's Journey through the Tortures).

Apocryphal motifs and plots were often incorporated into folk literature, particularly into folk tales and religious poems. Iconography has, similarly, adopted some apocryphal themes. Motifs derived from the apocrypha are found in the original Ukrainian literature of the Princely era (*chronicles, lives of saints, oratorical works, the pilgrimage of hegumen *Danylo, etc), and in works of the 17th–18th century (sermons, hagiographic stories, dramas, religious songs, and the 'Slovo o zburnenniu pekla' [Tale of the Destruction of Hell]). In 19th-century literature, the apocryphal tradition is reflected in the description of hell in I. Kotliarevsky's *Eneida* (Aeneid) and in *Baiky svitovii v spivakh* (Fables of the World in Songs) and *Baiky svitovii v opovidkakh* (Fables of the World in Stories). The apocryphal tradition in Ukraine and its influences on Ukrainian literature were studied by V. Peretts, M. Sumtsov, M. Petrov, M. Gudzii, and others. I. Franko in particular devoted much attention to the collection and research of apocrypha, compiling the finest existing collection of Ukrainian apocryphal works, 'Apokryfy i legendy z ukrains'kykh rukopysiv' (Apocrypha and Legends from Ukrainian Manuscripts), in *Pamiatky ukrains'koi movy i literatury* (Monuments of Ukrainian Language and Literature, vols 1–5, Lviv 1896–1910).

M. Hlobenko

Apokrisis. A polemical anti-Catholic work by Kh. Philalet, the pseudonym of M. Broniewski or Kh. Bronski according to some scholars. The work was published in Polish in Vilnius in 1597 and in Ukrainian Church Slavonic in 1598 in Ostrih. It is a reply from the Protestant viewpoint to P. *Skarga's *Synod Brzeski i jego obrona* (The Synod of Brest and Its Defense, 1597).

Apostol. A book containing the works and epistles of the apostles, which is read during the liturgy. The name Apostol also refers to the section of the liturgy preceding the reading of the Gospels.

Early Ukrainian editions of the Apostol were the Lviv edition published by I. *Fedorovych in 1574, the Kiev editions of the 17th–18th century (starting with 1630), the Lviv edition of 1639, the Uhertsi edition of 1620, the Lutske edition of 1640, and the Pochaiv, Zhovkva, and many other editions.

Apostol. Name of a Ukrainian noble family of Moldavian origin. Pavlo Yefremovych Apostol (ca 1617–18 to 1683) was the captain of the Khomutets Company in the Myrhorod Regiment (1657), the colonel of the Hadiache Regiment (1659–60) and of the Myrhorod Regiment (1659–64, 1672–83), and P. *Doroshenko's general aide-de-camp (1666). His son Danylo *Apostol was the hetman of Left-Bank Ukraine (1727–34). Danylo's first son, Petro *Apostol (d 1758), was the colonel of the Lubni Regiment (1728–57), and his second son, Pavlo (d 1736), was the colonel of the Myrhorod Regiment (1727–36) and died in a Crimean campaign. Petro Apostol's son Danylo was general flagbearer (1762–82) and a member of the *Little Russian Collegium (1767). His son Mykhailo was a colonel in the Russian army and the last male in the Apostol line (d 1816). The name and the large estate of this

First page from *Apostol*, Lviv 1574

Danylo Apostol; a medal by V. Masiutyn

family were passed on through its female members to I. Muravev-Apostol (1770–1851) and his descendants.

Apostol, Danylo, b 14 December 1654, d 28 January 1734 in Sorochyntsi, Myrhorod regiment. Colonel of the Myrhorod Regiment in 1683–1727 and then hetman of Left-Bank Ukraine in 1727–34. At first Apostol opposed I. *Mazepa, then supported him. In November 1708, however, he abandoned Mazepa and the Swedes and joined *Peter I. He took part in Russia's Prut (1711) and Persian (1722) campaigns. The martial law established in Ukraine by Peter I after his victory at Poltava, the rule of the *Little Russian Collegium, and other restrictions on Ukrainian autonomy persuaded Apostol to side with the Ukrainian officers under the leadership of Acting Hetman P. *Polubotok. Apostol was the initiator of the so-called *Kolomak petitions in 1723, which led to the imprisonment of Polubotok and a delegation of officers in St Petersburg and the deportation of Apostol and his associates. The influential Prince A. *Menshikov, however, supported Apostol for his own economic reasons and helped to secure his election as hetman on 1 October 1727.

The Authoritative Ordinances (Reshitelnye Punkty) imposed on Ukraine by the Russian government in 1728 limited the powers of the hetman considerably. Apostol's rule was characterized by a unique compromise between the old political arrangements and the new, which were more restrictive of Ukraine's autonomy. In the first few years as hetman Apostol accomplished a great deal. He improved the Cossack administration and reformed the judicial system (decree of 1730). To regularize social relations, he put an end to the transfer of Cossack officers' estates into improper hands. The *General Survey of Land Holdings was conducted in 1729–30 in all the regiments of the Hetman state. Apostol was a diligent landowner, merchant-exporter, and manufacturer. He defended the interests of Ukrainian merchants and tried to modify the commercial system that was imposed on Ukraine by Peter I, a system that favored the Russian merchants and the Russian state. Apostol opposed the Russian elements in the Hetman state administration, where a number of Cossack regiments (Starodub, Cher-

nihiv, Nizhen, Pereiaslav, Hadiache) were governed by Russians or other foreigners appointed by the tsar.

Krupnyts'kyi, B. *Het'man Danylo Apostol i ioho doba*
(Augsburg 1948)

B. Krupnytsky, O. Ohloblyn

Apostol, Petro, ?–1758. Son of Hetman D. *Apostol, colonel of the Lubni Regiment (1728–57); educated in St Petersburg. From 1726 to 1730 he was held hostage in Moscow by the Russian government as a means of exerting control over the politics of his father, the hetman of Ukraine. One of the most cultured figures of the Hetman period, Petro Apostol knew French, German, and Italian. His diary of 1725–7 was written in French. In 1895 O. Lazarevsky published the Russian translation of it in *Kievskaiia starina* (no. 7–8). The diary contains notes on Ukraine's past, interesting data about the events of 1725–7, and information on the socioeconomic history of Left-Bank Ukraine.

Apóstoles. Town (1980 pop 11,000, including about 3,000 Ukrainians) in the province of Misiones in northern Argentina. Apóstoles has the oldest Ukrainian colony in *Argentina, dating back to 1897. A Basilian monastery with a printing press, the editorial office of the monthly *Zhyttia* (published since 1948), a Ukrainian elementary school, and an Argentine-Ukrainian club are located in the town.

Apostolove (1818 to 1923: Pokrovske). vi-14. City (1969 pop 17,500) southeast of Kryvyi Rih, a raion center in Dnipropetrovske oblast. The city has a food industry and reinforced-concrete-products and automobile-repair factories.

Apple (*Malus*; Ukrainian: *yablunia*). A genus of the family Rosaceae; the most important fruit tree of the temperate latitudes. The tree grows to a height of 10–15 m and sometimes takes the form of a shrub. There are over 30 wild species of the apple tree, 3 of which grow in Ukraine: the wild crab or common apple (*M. sylvestris*), the *M. dasycarpa*, and the common or edible apple (*M. pumila*). There are about 100 varieties of the cultivated apple tree (*M. domestica*) in Ukraine, and they are of great economic importance. Apples contain sugars, organic acids, pectins, vitamins, and mineral salts. Some apple trees are decorative, but all apple trees are a source of honey. In Ukraine apple trees occupy about 65 percent of the land devoted to orchards. Their productivity reaches 400–500 kg per tree. The fruit is consumed fresh, dried, or processed into preserves, marmalade, and wine. In Ukraine the most common apple trees are the following: the Papirovka, Borovynka, and Doneshta, whose fruit ripens in the summer; the Common Antonivka, Pepinka, and Fall Putivka, whose fruit ripen in the fall; and the Snow Kalvil, P. Symyrenko's Renet, and Champaign Renet, whose fruit ripens in winter.

Apponyi, Albert, b 29 May 1846 in Vienna, d 7 February 1933 in Geneva. Hungarian count, politician, and minister of education in 1906–10 and 1917–18. He

introduced the law of 1907 that gave the Hungarian government the means to close the schools of the national minorities. According to this law, instruction in Hungarian had to be provided if the parents of 20 children, or of 20 percent of the children, in a school using a language other than Hungarian desired Hungarian to be used as the language of instruction. As a result of this law, all purely Ukrainian schools in Transcarpathia were closed. While in 1874 there were 571 Ukrainian schools, in 1907 only 107 mixed Ukrainian-Hungarian schools remained, and in 1915 there were only 18 mixed schools left.

Apricot (*Prunus armeniaca*; Ukrainian: *abrykosa*, *morelia*, or *zherdelia*). Fruit tree and sometimes bush of the family Rosaceae. The apricot tree is not discriminating about soils, but is sensitive to cold. In Ukraine the apricot is common in the steppe and the forest-steppe belts, particularly on the Azov coast and in Podilia and the Lower Dnieper and Boh regions. The most common varieties in Ukraine are the Red-cheeked (*chervonoshchoki*) and Sorochyntsi apricots.

Apsheronsk [Apšeronsk] (to 1947: Apsheronsk Outpost). ix-20. City (1968 pop 33,700) on the Pshekha River in the Kuban on the northwestern slopes of the Caucasus, a raion center in Krasnodar krai in the RSFSR. The city has forest and woodworking industries.

Apukhtin, Nikolai (Mykola) [Apuxtin, Nikolaj], b 20 May 1924 in Tashkent. Ballet master, performer, and teacher. In 1942 he graduated from the Leningrad School of Choreography. From 1945 to 1966 he was a ballet soloist of the Kiev Opera and Ballet Theater. Since then he has worked as a pedagogue with the Ukrainian SSR Dance Ensemble.

Arabat Bay. A bay in the southwestern part of the Azov Sea between the Kerch Peninsula and the Arabat Spit. Arabat Bay is 22 km long, up to 40 km wide, and 8–9 m deep.

Arabat Spit. A sandy spit dividing Syvash Lake from the Sea of Azov. It is almost 100 km long and from 270 m to almost 8 km wide.

Arable land. Excluding private plots, arable land constitutes 34.1 million ha or 53.3 percent of the territory of the Ukrainian SSR (with private plots, 36 million ha or 57.6 percent) and 80.3 percent of the total area used for agricultural purposes. In the Kuban (Krasnodar krai), arable land constitutes 4.5 million ha or 54 percent of the territory and 85.3 percent of the total area used for agricultural purposes. In all of the Ukrainian ethnic territories arable land (including private plots) constitutes about 60 million ha (59 percent of the territory) and 83 percent of the total area used for agricultural purposes.

The area of arable land has grown considerably over the ages, as a result of the cultivation of the steppes and the simultaneous deforestation. At the end of the 18th century, before the tilling of the steppes in southern Ukraine, arable land constituted over 30 percent of the entire area of the present-day Ukrainian SSR. By 1890 this percentage had grown to 60, and in the 1920s, to 68. Since that time, the area of arable land has been significantly

reduced by the use of vast areas of land for construction, industrial buildings, roads, and reservoirs. Ukraine's arable land is almost completely under cultivation (96 percent at present; 91 percent in 1940; and 81 percent in 1913).

The geographical distribution of arable land, being dependent on natural conditions, is not uniform. Arable land covers over two-thirds of the forest-steppe and steppe belts, one-third of the forest belt, and only 14 percent of the Carpathian Mountains. Over 70 percent of the area of the Kirovohrad, Mykolaiv, Zaporizhia, and Vinnytsia oblasts is arable; the oblasts with the least arable land are Transcarpathia (14 percent of total area), Rivne (31 percent), and Volhynia (34 percent).

V. Kubijovyč

Arabs. In the 9th–10th century the Arabs conducted a vigorous trade with Eastern Europe, some evidence of which is provided by discoveries of Arab coins ca 820 in Ukraine. Arab geographers, historians, and travelers of the time (some of whom were of Persian or Jewish origin) gave interesting information about the lands and customs of the eastern Slavs, including Kiev, and about the Rus' (Varangian) merchants and conquerors. They include the Persian *Ibn Khordādhbeh, *Ibn Faḍlān (known only from the adaptations of al-Iṣṭakhrī and Ibn Hawqal), Ibn al-Faqīh, al-Balādhurī, the Persian Ibn Rosta, al-Mas'ūdī, al-Balkhī, al-Iṣṭakhrī (known only from transcriptions), and *Ibn Hawqal, al-Ya'qūbī, Ibn Miskawaih, and the Jew Ibn Ya'qub. Data on Ukraine, particularly on the Crimea, are found in the later Arab writers: Ibn Yaḥyā and al-Bakrī of the 11th century, al-Idrīsī of the 12th, Abu al-Fidā' of the 13th, and Ibn Baṭṭūta of the 14th.

In the later Kievan Rus' era Ukrainians became acquainted with Arab literature through the mediation of the Byzantines and then of the Jews. In the 13th century the Indian story 'Kalila and Dimna' (Kalīla wa-Dimna), which reached Greece in the Arabic translation of Ibn al-Muqaffa' in the 9th century, was translated from Greek into Old Ukrainian under the title 'Stephanit and Ikhnilat.' In the 15th century, through Jewish mediation, there appeared in Ukrainian translation the political-moral treatise *Tainaia tainykh* (Mystery of Mysteries; Arabic: *Sirr al-asrār*), possibly a translation of Ibn Yaḥyā, and the logical-philosophical work *Rechi Moiseia lehyptiynyna* (The Discourses of Moses the Egyptian), by Moses Maimonides of the 12th century, which was a translation of the Arab-Persian philosopher al-Ghazālī of the 11th–12th century (*Maqāsid al-falāsifa* – The Tendencies of Philosophers). According to some conjectures this could have been the work of the Aristotelian philosopher al-Fārābī of the 9th–10th century.

Ukrainian contacts with Arab Christians of the Eastern rite, particularly with the Antioch and Jerusalem patriarchates, began in the 16th century. In 1586 *Joachim v, the patriarch of Antioch, visited Lviv; his voyage is described in a contemporary Arab poem. In the 1640s Metropolitan Jeremiah of Syria visited Ukraine; *Paul of Aleppo, the son of the Antioch patriarch Macarius III, who traveled through Ukraine on his way to Moscow in 1654, was hosted by B. Khmelnytsky and wrote in Arabic an account of his trip, which contains an important chapter on Ukraine. S. Tudorsky and I. Galiatovsky of the Kievan Mohyla Academy polemicized against the Koran in the 17th century. An Arabic edition of the

Gospels published in Aleppo at the beginning of the 18th century was funded by Hetman I. Mazepa. Accounts of travels to Palestine and the adjacent Arab countries were written by Macarius and Sylvester of Novhorod Siverskyi in 1704–7, I. Vyshensky of Chernihiv in 1707–9, Sylvester and Nykodym of Rykhly Monastery in 1722, and by V. Hryhorovych-Barsky, who spent over 20 years in the Near East. In the mid-19th century, descriptions of travels in Arabic lands begin to appear in the Ukrainian press: for example V. Terletsky (1856), L. Turiansky of Kolomyia (1886), P. Skaliuk (1906). Arab themes can be found in the writings of H. Skovoroda, L. Borovykovsky, S. Hulak-Artemovsky, P. Kulish, I. Franko, Lesia Ukrainka, and A. Krymsky (who also translated Arab literature into Ukrainian).

The first lectures on the Arab language and literature in Ukraine were given by B. Dorn at Kharkiv University (1829–32). M. Petrov and V. Nadler, both professors of Kharkiv University, wrote on Arab history. Many works in Arab studies were published by the prominent orientalist A. Krymsky and then by A. Kovalivsky, T. Kezma, and others. (See *Oriental studies.)

In 1925–30 the Ukrainian Eastern Chamber of Commerce in Soviet Ukraine promoted trade with Egypt and Palestine. In the 1960s Ukraine became the principal supplier of sugar to the Arab countries. In 1965–6 the Ukrainian SSR participated in the development of 18 industrial firms in Iraq, 16 in Egypt, 6 in Sudan, and 4 each in Syria and Tunisia. Many Arab students study in Soviet Ukraine: for example, in 1966–7 there were 205 students from Iraq, 129 from North Yemen, and 108 from Egypt.

Arandarenko, Mykola, 1795–1867. Historian, statistician, and ethnographer. In the 1840s he was director of the Poltava treasury and then governor of Arkhangelsk gubernia. He wrote *Zapiski o Poltavskoi gubernii, sostavlennye v 1846 godu* (Notes on the Poltava Gubernia Taken Down in 1846, 3 vols, 1848–52), which contains valuable historical information, economic data, and ethnographic material.

Arbeits- und Förderungsgemeinschaft der ukrainischen Wissenschaften. See Association for the Advancement of Ukrainian Studies.

Arbitration. A way of settling disputes between parties by a mutually agreed-upon arbitrator (third-party judgment). This way of resolving disputes has been used by every legal system that has functioned in the 19th–20th century in Ukrainian lands under Russian, Austrian, Polish, Rumanian, or Czechoslovak rule.

A special type of arbitration exists in the Ukrainian SSR as in all of the USSR – state arbitration. It was instituted in

1931 when the Soviet economy was being reorganized according to a single plan. Its purpose was to strengthen discipline in contracting and planning and accountability in enterprises and organizations. A state arbitration board was established under the Council of Ministers of the USSR and a similar board under the Council of Ministers of the Ukrainian SSR. Arbitration boards were also set up under the executive committee of each oblast soviet. Every arbitration body was responsible only to the agency under which it functioned. The Council of Ministers of the Ukrainian SSR created its own arbitration board, oversaw its activities, and could cancel or change its decisions. The board under the Council of Ministers of the USSR could not interfere in the affairs of the arbitration board under the Council of Ministers of the Ukrainian SSR. The boards of the executive committees of the oblast soviets were organized similarly to the board of the Council of Ministers of the Ukrainian SSR. The arbitration board of the Council of Ministers of the USSR settled the most important contractual disputes between enterprises that were of Union prerogatives or between enterprises that were located in different republics of the Union. All other disputes in the Ukrainian SSR were settled either by the arbitrators of the Council of Ministers of the Ukrainian SSR or by the arbitrators of the executive committees of the oblast soviets. The arbitration boards were appointed by the agencies under which they functioned, and they reached decisions unilaterally or with the participation of the disputants.

In the 1950s and 1960s the powers of the arbitration board under the Council of Ministers of the USSR were enlarged gradually to guarantee uniformity of decisions. This board was empowered to give instructions to the board under the Council of Ministers of the Ukrainian SSR.

The new statute of 1974 concerning state arbitration has introduced unity of all arbitration agencies throughout the USSR. In compliance with this decree, on 30 May 1974 the Council of Ministers of the Ukrainian SSR converted the arbitration board of the Council of Ministers of the Ukrainian SSR into a Union-republican agency and confirmed the new statute concerning the state arbitration boards of the Ukrainian SSR.

Since 1974 the arbitration board of the Council of Ministers of the USSR has had the right to review the decisions of the chief arbitrators in the republics and the decisions of their deputies. The principal task of the arbitrators is to settle economic disputes between the state and the co-operative firms and organizations (excluding collective farms).

There are also departmental arbitration boards, which investigate disputes between enterprises, organizations, and institutions under the same ministry. Awards are rendered by arbitrators who work in the juridical division of the ministry or the department.

A. Bilynsky

Arbuzynka. VI-12. Town smt (1980 pop 8,100), raion center in Mykolaiv oblast on the Harbuzynka River. Until 1946 it was called Harbuzynka. Arbuzynka has a food industry and a brick factory.

Archaisms. In the Ukrainian language these consist primarily of Church Slavonic words and word forms mostly designating abstract concepts related to church

tradition, and words designating *realia* (objects and notions pertaining to the folkways – obsolete occupations, titles and forms of address, etc) of the early and middle periods of Ukrainian history. Only a small number of archaisms stemming from the medieval period have survived in the Ukrainian language. They were initially ignored by populist literary trends, which concentrated primarily on the spoken language of the peasantry. During the Soviet period these archaisms have been viewed as 'nationalistic' and hence to be avoided. Authors who have incorporated archaisms into their style relatively freely include T. Shevchenko, P. Kulish, K. Hrynevych, M. Bazhan, Yu. Darahan, O. Stefanovych, O. Liaturynska.

Archeographic commissions. Three archeographic commissions played a key role in the development of Ukrainian archeography: (1) the *Kiev Archeographic Commission, founded in Kiev in 1843; (2) the Archeographic Commission of the Shevchenko Scientific Society, established in Lviv in 1895 at the initiative of M. Hrushevsky; and (3) the Archeographic Commission of the Ukrainian Academy of Sciences, established in Kiev in 1919. The main serial publications of the second of these were: **Zherela do istorii Rusy-Ukrainy* (1895–1924), **Pam'iatky ukrains'ko-rus'koi movy i literatury* (1896–1930), and **Ukrains'ko-rus'kyi arkhiv*, published from 1905. In 1921 the Kiev Archeographic Commission merged with the Archeographic Commission of the Ukrainian Academy of Sciences. The leading member of the commission in 1924–34 was M. Hrushevsky. Its main publications were **Ukrains'kyi arkhiv* (The Ukrainian Archeographic Collection, 3 vols, Kiev 1926–30) and **Ukrains'kyi arkhiv* (Ukrainian Archive, 3 vols, Kiev 1929–31).

Archeography. An auxiliary historical discipline whose function is to describe and publish ancient documents and to work out the methods of preparing and publishing literary monuments.

The first attempts to publish Ukrainian historical documents date back to the end of the 16th and the beginning of the 17th century. Such documents appeared in the works of H. Smotrytsky, S. Zyzanii, I. Potii, M. Smotrytsky, etc, in connection with the heated polemics between the Orthodox and the Uniate camps on the question of the union with Rome. Historical documents began to be published for a scholarly purpose only in the 18th century. In 1777 V. *Ruban published *Kratkaia letopis' Malyia Rossii s 1506 po 1776 g.* (A Brief Chronicle of Little Russia from 1506 to 1776), which was based in part on a transcription of *Kratkoe opisanie Malorossii* (A Brief Description of Little Russia), written in the 1730s. In 1793 F. Tumansky published B. Khmelnytsky's manifesto of Bila Tserkva and the chronicle of H. *Hrabanika in the journal *Rossiiskii magazin*.

During almost the entire 19th century Ukrainian historical documents were published by central Russian or local Ukrainian government bodies. The Archeographic Commission in St Petersburg began the important work of publishing the oldest materials (1811–22). The following publications were of particular importance: *Polnoe sobranie russkikh letopisei* (The Complete Collection of Russian Chronicles, 1843–71, repr 1908–10 and 1962); the photo-type editions of the *Laurentian (1872) and *Hypatian

(1871) chronicles; the series *Akty istoricheskie* (1841–3), **Akty, otnosiashchiesia k istorii Zapadnoi Rossii* (5 vols, 1846–53), and vols 16 and 17 of *Polnoe sobranie russkikh letopisei* containing the Lithuanian-Ruthenian chronicles of the 16th century (1889) and the 17th century (1907). In the 1860s M. Kostomarov began to work at the Archeographic Commission and edited vols 1–9 and 11–13 of the 15-volume series **Akty, otnosiashchiesia k istorii Iuzhnoi i Zapadnoi Rossii* (1863–92). Kostomarov's volumes were particularly rich in Ukrainian materials of the 14th–17th century. G. Karpov was the editor of the other volumes.

O. *Bodiansky's work as secretary of the Society of Russian History and Antiquities at Moscow University in 1845–8 and 1849–76 marked a new period in Ukrainian archeography. In the *Chteniia* of this society, which Bodiansky edited, he published *Litopys Samovydtzia* (**Samovydets Chronicle*, pub separately 1846); **Istoriia Rusov* (*History of the Rus' People*, pub separately in 1846); a Cossack chronicle of the 18th century, *Povest' o tom, chto sluchilos' na Ukraine* (*The Story of What Happened in Ukraine*, 1848); A. *Rigelman's *Letopisnoe povestvovanie o Maloi Rossii i ee narode i kazakakh vobshche* (*A Chronicle Account of Little Russia and Its People and the Cossacks in General*, 1847); P. *Symonovsky's *Kratkoe opisanie o kazatskom malorossiiskom narode i o voennykh ego delakh* (*A Brief Description of the Cossack Little Russian People and Its Military Affairs* [of 1765], 1847); and many other materials. Later he published M. *Khanenko's *Diariush* (*Diary* [of 1722], 1858), *Istochniki dlia malorossiiskoi istorii* (*Sources for Little Russian History*, 2 vols, 1858), and *Reestra vsego Voiska Zaporozhskogo* (*Register of the Entire Zaporozhian Host* [of 1649], 1875).

In 1843 the *Kiev Archeographic Commission was established under the name Temporary Commission for the Analysis of Ancient Documents. It was attached to the chancellery of the governor general. Its purpose was to publish old archival materials in order to justify the anti-Polish Russification policies in Right-Bank Ukraine. Dedicated scholars such as M. Maksymovych, M. Ivanyshev, and V. Dombrovsky, however, immediately gained control of the commission, and T. Shevchenko and P. Kulish worked as associates of the commission. The commission became a permanent one and made an important contribution to historical studies by publishing a wealth of source materials: *Pamiatniki* (*Monuments*, vols I–IV, 1845–59) and the chronicles of S. *Velychko (1848–64), Hrabianka (1852), and Samovydets (1878), etc. In 1863 V. *Antonovych joined the commission, and in the 1870s–80s he directed the work of many associates. The commission's main publication was the 35-volume (divided into eight series, some volumes in two parts) **Arkhiv Iugo-Zapadnoi Rossii*, 1859–1914. I. Novytsky published a name (1878) and geographical (1883) index to the publications of the Kiev Archeographic Commission. Among the commission's other publications the following should be mentioned: *Sbornik letopisei, otnosiashchiesia k istorii Iuzhnoi i Zapadnoi Rossii* (*A Collection of Chronicles Related to the History of South and West Russia*, 1888), edited by V. Antonovych; *Paleograficheskii izbornik* (*Paleographic Compendium*, 1909) compiled by I. Kamanin; and *Materialy po istorii russkoi kartografii* (*Materials on the History of Russian Cartography*), edited by V. Kordt. *Akty, izdavaemye Vilenskoiu arheograficheskoiu komissiei* (*Acts Published by the Vilnius Archeographic Commis-*

sion [a society founded in 1842]) were of some importance to Ukrainian historical studies.

Besides the commissions there were individual Ukrainians who edited and published historical materials: M. *Bilozersky published *Iuzhno-russkie letopisi* (*South Russian Chronicles*, 1856), and Oleksander *Markovych published a condensed and Russified version of *Dnevnye zapiski ... Ia. Markovicha* (*The Daily Notes ... of Ya. Markovych*, 2 vols, Moscow 1859).

An important place in Ukrainian archeography is held by **Kievskaia starina*, a scholarly journal of Ukrainian studies published in Kiev. In the course of its existence (1882–1906, and as **Ukraina* in 1907), this journal published the following materials: *pomianyky* (*Commemorative List*) of the Pustin–St Nicholas Cathedral (1895), the Synodicon of the St Sophia Cathedral in Kiev (1895), M. *Khanenko's 'Diariush' (1884–6), Ya. *Markovych's *Dnevnye zapiski* (*Daily Notes*, 1893–7), P. *Apostol's diary, a number of other old and recent memoirs, the correspondence of Ukrainian public figures, legal documents, etc. The *Historical Society of Nestor the Chronicler, founded in 1873, published some historical documents in its *Chteniia*, eg, the *pomianyky* of the Kievan Cave Monastery and St Michael's Monastery from the 16th–17th century.

O. *Lazarevsky, who was associated with *Kievskaia starina* for many years, prepared for publication selections from the family archives of the *Sulyma, Skorupa, Voitsiekhovych, and *Myloradovych families, as well as from the documents of the Pereiaslav Regiment in the 17th–18th century. His work was published in the 1880s–1890s in Kiev. Then, in 1902–12, the papers of the *Storozhenko family were published in eight volumes under the editorship of M. and A. Storozhenko. This is an important source for the history of the Hetman state in the 17th–18th century. In 1908–14 V. *Modzalevsky published *Malorosiiskii rodoslovnyk* (*Little Russian Genealogy*) in four volumes.

Gradually, more and more subjects and Ukrainian territories came under archeographical study. I. *Luchytsky published materials on the history of land ownership in Left-Bank Ukraine (1884), Oleksii *Andriievsky published documents from 18th-century archives of Hetman Ukraine, and D. *Bahalii published archival materials on the history of the settlement of Slobidska Ukraine in the 17th–18th century in **Sbornik Khar'kovskogo istoriko-filologicheskogo obshchestva* in the 1880s. D. *Yavornytsky published documents on the Zaporozhian Sich. P. Dmytrenko published *Sbornik materialov dlia istorii Kubanskogo kazach'ego voiska* (*Collection of Materials on the History of the Kuban Cossack Host*, 1896–8). M. *Dovnar-Zapolsky published the legal documents of the Lithuanian-Ruthenian state (1899). The *Kiev Theological Academy published *Akty i dokumenty, otnosiashchiesia k istorii Kievskoi akademii* (*Acts and Documents Relating to the History of the Kievan Academy*) in 1904–15, with M. *Petrov editing part two and F. *Titov editing part three.

Before the founding of the *Shevchenko Scientific Society, archeographic publications in Galicia were of an occasional nature. Among them were *Galitskii istoricheskii sbornik* (*Galician Historical Collection*), the *Lviv chronicle of the 17th century (1867), the *Galician-Volhynian chronicle (1871) edited by A. Petrushevych, and *Iubileinoe izdanie* (*Jubilee Edition*) of the *Lviv Dormition Brother-

hood (1886), containing its legal documents and correspondence. In 1868 the series **Akta grodzkie i ziemskie*, which published much material on Western Ukraine, began to appear in Lviv; it continued to do so until 1935. In the 1890s, when the Shevchenko Scientific Society increased its activities, M. *Hrushevsky helped to initiate a wide publishing program of historical materials, in which the series **Zherela do istorii Ukraïny-Rusy* played a key role; in 1895–1919, 11 volumes of documents from the 16th–18th century were published. The series was edited by the Archeographic Commission of the Shevchenko Scientific Society, which numbered among its members I. *Dzhydzhora, M. *Vozniak, V. *Herasyrchuk, O. *Kolesa, M. *Korduba, I. *Krypiakevych, K. *Studynsky, and S. *Tomashivsky. The commission also published **Pam'iatky ukraïns'ko-rus'koi movy i literatury*, (8 vols, 1896–1930). The historical-philosophical section of the society published *Ukraïns'ko-rus'kyi arkhiv*, which contained collections of short documents, descriptions of manuscripts, etc.

At the turn of the century archival commissions were organized: in Symferopil in 1887, Chernihiv in 1896, Poltava in 1903, Katerynoslav in 1903. One of their tasks was to publish archival materials, and they managed to produce such publications as *Aktovyie knigi poltavskogo gorodovogo uriada 17 v.* (The Statute Books of the Poltava Town Government in the 17th Century, 3 issues, 1912–14) and *Aktovaia kniga starodubskogo gorodovogo uriada 1693 g.* (The Statute Books of the Starodub Town Government in 1693, 1914). The *Ukrainian Scientific Society in Kiev published a collection of materials on the *Cyril and Methodius Brotherhood in *Zbirnyk pam'iaty T. Shevchenka* (Collection in Memory of T. Shevchenko, 1915). The Kiev Archeographic Commission, which continued to work on *Arkhiv Iugo-Zapadnoi Rossii*, published at this time *Sbornik materialov po istorii Iugo-Zapadnoi Rossii* (Collection of Materials on the History of Southwest Russia, 2 vols, 1911–16).

After the formation of the Ukrainian Academy of Sciences in 1918, the Archeographic Commission of the academy, with which the Kiev Archeographic Commission merged in 1921, became the principal center for Ukrainian archeography. Its first chairman was V. *Ikonnikov (1920–3), followed by M. *Vasylenko (1923–4) and M. Hrushevsky (1924–31). Under Hrushevsky its activities expanded greatly. Among its members and associates were the following scholars: M. Vasylenko, V. Herasyrchuk, Y. *Hermaize, O. *Hrushevsky, P. *Klymenko, V. Kordt, K. Lazarenko, V. *Romanovsky, Mykola *Tkachenko, P. *Fedorenko, and V. *Shcherbyna. The commission published three volumes of *Ukraïns'kyi arkhiv* (The Ukrainian Archive, 1929–31), which contained *Heneral'ne sliďstvo pro maietnosti 1729–31 rr.* (General Survey of Landholdings in 1729–31) of the Starodub (vol 1, 1929) and the Lubni (vol 3, 1931) regiments and *Kodens'ka knyha sudovykh sprav* (The Koden Register of Court Cases, vol 2, 1931); the first volume of S. Velychko's chronicle (1926); *Opys Novhorod-Sivers'koho namisnytstva 1779–81 rr.* (An Account of the Vicegerency of Novhorod-Siverskyi in 1779–81, 1931); *Perepysni knyhy 1666 roku* (The Census Books of 1666, 1933); *Tsekhova knyha ... Kam'iantsia Podil's'koho vid 1601 do 1803 r.* (The Guild Book ... of Kamianets-Podilskyi from 1601 to 1803, 1932). Some of the commission's publications had already been

printed but then were confiscated when M. Hrushevsky was exiled to Moscow in 1931. The All-Ukrainian Academy of Sciences was forcibly reorganized at the beginning of the 1930s. Several publications that were planned by the commission were never completed. Only the text of **Ruskaia Pravda*, which was prepared by S. Yushkov for the commission, was published by the Institute of Material Culture of the Academy of Sciences of the Ukrainian SSR in 1935.

In the 1920s and early 1930s documentary materials were also published in publications other than those of the Archeographic Commission: in the journal **Ukraïna* (1924–32); the collections **Za sto lit* and *Dekabrysty na Ukraïni* (The Decembrists in Ukraine, 2 vols, 1926–30); in **Zapysky Istorychno-filolohichnoho viddilu*; and other publications of the All-Ukrainian Academy of Sciences. The following collections were published separately: *Ukraïns'ki hramoty 14–15 vv.* (Ukrainian Legal Documents of the 14th–15th Centuries, Kiev 1928), prepared by V. Rozov; *Materialy do istorii ukraïns'koho prava* (Materials on the History of Ukrainian Law, vol 1, Kiev 1929), compiled by M. Vasylenko; and a number of historical-literary materials, particularly **Slovo o polku Ihorevi* (The Tale of Ihor's Armament, Kiev 1926), edited by V. Peretts; *Kyievo-pechers'kyi pateryk* (The Patericon of the Kievan Cave Monastery, Kiev 1930); T. Shevchenko's diary and correspondence (Kiev 1927), edited by S. Yefremov; *Materialy dia kul'turnoi i hromads'koi istorii Zakhidnoi Ukraïny* (Materials in the Culture and Civic History of Western Ukraine), the first volume of which was devoted to the correspondence between I. Franko and M. Drahomanov (Kiev 1928); and *Halychyna i Ukraïna v lystuvanni 1862–84 rr.* (Galicia and Ukraine in the Correspondence of 1862–84, Kiev-Kharkiv 1931), by K. Studynsky.

In 1930 an archeographic commission was set up at the Central Archives Administration (TsAU) of the Ukrainian SSR (then in Kharkiv). The commission provided work for scholars-archivists and financial resources for publishing collections of documents such as *Arkhiv Zaporoz'koi Sichy* (Archive of the Zaporozhian Sich). The intention was to have the commission of the TsAU concentrate on publishing documents of modern and recent Ukrainian history (19th–20th century), while the archeographic commission of the All-Ukrainian Academy of Sciences continued to publish older materials (up to the 19th century). The Archeographic Commission of the TsAU specialized for the most part in the history of the revolutionary movement, industry and labor, peasant movements, etc. It published the journal **Arkhiv Radians'koi Ukraïny*, of which eight issues appeared. It managed to publish the collection *Povstannia selian u seli Turbaiaakh (1789–93 rr.)* (The Peasant Revolt in the Village of Turbaiaakh [1789–93], Kharkiv 1932) and a description of the archives of the Zaporozhian Sich prepared by the *Kiev Central Archive of Old Documents and edited by Mykola Tyshchenko (Kiev 1930), but other collections that were ready for publication did not appear. During the repression of Ukrainian scholars in 1933–4, the Archeographic Commission of the TsAU was reorganized and eventually became a department of the NKVD. The persecution of the scholars and directors of TsAU led to the abolition of the Archeographic Commission of the Academy of Sciences.

In the 1930s the political situation was unfavorable for the development of Ukrainian archeography. It was abolished in Soviet Ukraine and could not develop in

Galicia or abroad because of a lack of financial resources and the dispersal of scholarly cadres. Only the *Ukrainian Scientific Institute in Warsaw managed to publish vol 1 of *Diarii het'mana Pylypa Orlyka* (The Diary of Hetman Pylyp Orlyk, 1936), under the editorship of Y. Tokarzhevsky-Karashevych; vol 1 of *Arkhiv M. Drahomanova: Lystuvannia Kyivs'koi Staroi hromady z M. Drahomanovym, 1870–1895* (M. Drahomanov's Archive: The Correspondence of the Kiev Old Hromada with M. Drahomanov, 1870–1895, 1938); P. Shandruk's collection of documents *Ukrains'ko-moskovs'ka viina 1920 r.* (The Ukrainian-Russian War of 1920, vol 1, 1933); the memoirs of O. Lototsky – *Storinky mynuloho* (Pages of the Past, 3 vols, 1932–4) and *U Tsarhorodi* (In Constantinople, 1939); and other memoirs. A host of materials in the history of Ukrainian emigration in the 18th century, mostly on the activities of P. and H. *Orlyk, were published by E. Borschak and B. Krupnytsky. The Second World War cut this work short.

Archeographic research and publication resumed in Ukraine and abroad only after the war. Soviet historians took advantage of the post-Stalin thaw in the 1950s to publish a series of valuable archeographic collections. The 1954 celebration of the 300th anniversary of the *Pereiaslav Treaty of 1654 provided the occasion for such publications. A collection of documents *Ukraina naperedodni vyzvol'noi viiny 1648–1654 rr.* (Ukraine on the Eve of the War of Liberation of 1648–1654) was published before then, in 1946. In 1953–4 the academies of sciences of the USSR and the Ukrainian SSR published the monumental *Vossoedinenie Ukrainy s Rossiei* (The Union of Ukraine with Russia) in three volumes, covering the period 1620–54. The anniversary inspired two other large collections, which were published later: *Dokumenty Bohdana Khmel'nyts'koho, 1648–1657* (The Documents of Bohdan Khmelnytsky, 1648–1657, Kiev 1961), prepared by the Institute of Social Sciences in Lviv and the Archival Administration of the Council of Ministers of the Ukrainian SSR and edited by I. Krypiakievych and I. Butych, and *Dokumenty ob osvoboditel'noi voine ukrainskogo naroda 1648–1654 gg.* (Documents on the Liberation War of the Ukrainian People in 1648–1654, Kiev 1965), a selection of Polish documents made by A. Baraboi, O. Kompan (associates of the Institute of History of the Academy of Sciences of the Ukrainian SSR), I. Butych, and A. Katrenko (associates of the Archival Administration). Moreover, the two institutions co-published such archeographic collections as *Otmena krepostnogo prava na Ukraine* (The Abolition of Serfdom in Ukraine, Kiev 1961); *Selians'kyi rukh na Ukraini (seredyina XVIII–persha chvert' XIX st.)* (The Peasant Movement in Ukraine [mid-18th–First Quarter of the 19th Century], Kiev 1970); *Haidamats'kyi rukh na Ukraini v XVIII st.* (The Haidamaka Movement in Ukraine in the 18th Century, Kiev 1970); *Obshchestvenno-politicheskoe dvizhenie na Ukraine v 1856–1864 gg.* (The Sociopolitical Movement in Ukraine in 1856–1864, 2 vols, Kiev 1963–4); *Grazhdanskaia voina na Ukraine 1918–1920* (The Civil War in Ukraine, 1918–1920, 3 vols, Kiev 1967); and many collections of materials on the recent history of Ukraine, most of which are not of a scholarly archeographic nature. For its part, the *Institute of Linguistics of the Academy of Sciences of the Ukrainian SSR published a number of scholarly works, including *Aktova knyha Zhytomyrs'koho mis'koho uriadu XVI st. (1582–1588 rr.)* (Statute Book of the Zhytomyr Town Government in the 16th

Century, [1582–1588], Kiev 1965); *Pam'iatky ukrains'koi movy XIV i XV st.* (Monuments of the Ukrainian Language of the 14th and 15th Centuries); and *Hramoty XIV st* (Legal Documents of the 14th Century, Kiev 1974).

Recent attempts to expand archeographic studies in Ukraine have ended in failure. In 1969 the Archeographic Commission of the Academy of Sciences of the Ukrainian SSR was established 'to co-ordinate and to expand documentary publications in the republic.' The commission's executive, headed by A. Skaba and including I. Hurzhii, K. Huslysty, V. Diadychenko, and V. Strelsky, prepared a plan to publish sources for the ancient and modern history of Ukraine. The project was to include a series of chronicles of the 17th–18th century, among them the Velychko, Hrabianka, and Samovydets chronicles. An annual collection, *Arkhoehrafia Ukrainy* (Archeography of Ukraine), was approved. But only *L'vivs'kyi litopys i Ostroz'kyi litopysets'* (The Lviv Chronicle and the Chronicle of Ostroh, Kiev 1970), edited by O. Bevzo, and *Litopys Samovydtsia* (Kiev 1971), edited by Ya. Dzyra, appeared. The subsequent repression of Ukrainian historical studies in 1972–3 put an end to the commission's activities. Although archeographical publications, mostly in recent Ukrainian history, appear from time to time, the development of scientific archeography in Soviet Ukraine is hampered by the lack of a single scholarly center, the dispersal of specialists, and most of all by the ideological-political censorship of the Soviet authorities and the Communist party.

Outside Soviet Ukraine, important scholarly archeographic publications by émigré specialists began to appear only in the 1950s. The two most productive institutions in the field have been two Ukrainian church centers in Rome. The Basilian order publishes materials on the history of Ukraine and the Ukrainian church from the Vatican archives in the series *Documenta ... ex archivis Romanis* under the editorship of Rev A. *Velyky (52 vols to date). The other center is the *Ukrainian Catholic University, which, under Cardinal Y. Slipy's sponsorship, publishes documents from Rome's archives in *Monumenta Ucrainae Historica* (15 vols, 1964–77).

In the United States the *Lypynsky East European Research Institute in Philadelphia has published a collection of documents from Vienna archives dealing with events in Ukraine in 1914–22 (4 vols, 1966–9), edited by Rev T. Hornykevych, and D. Doroshenko's and O. Nazaruk's correspondence with V. Lypynsky (2 vols, 1973–6), edited by I. Korovytsky and I.L. Rudnytsky.

Among archeographic publications devoted to the Cossack period the following should be mentioned: Rev A. Baran and G. Gajecky, *The Cossacks in the Thirty Years' War, vol 1: 1619–1624* (Rome 1969) and O. Subtelny's collection *On the Eve of Poltava: The Letters of Ivan Mazepa to Adam Sieniawski, 1704–1708* (New York 1975). Individual documents are also published in the journals **Ukrains'kyi istoryk* and **Harvard Ukrainian Studies*. In 1972 the *Harvard Ukrainian Research Institute reprinted the 1878 Kiev Archeographic Commission edition of *Litopys Samovydtsia*.

Archeology. Ukrainians have long been interested in their archeological monuments. As early as 1635 Metropolitan P. *Mohyla organized the first archeological excavations in Kiev. The Church of the *Tithes and the *Kievan Cave Monastery were excavated, and the uncovered artifacts were preserved in the *St. Sophia Cathedral.

More extensive archeological research began in the second half of the 18th century. The large Scythian *kurhans (burial mounds) and the remains of ancient cities on the northern littoral of the Black Sea were excavated. In 1763 A. Melgunov opened the Scythian kurhan *Lyta Mohyla of the 6th century BC near present-day Kirovohrad. In the first half of the 19th century more systematic excavations of the ancient cities of the *Bosporan Kingdom in the Kerch Peninsula, the capital *Panticapaeum and *Chersonese Taurica near Sevastopol, were begun. I. *Stempkovsky's excavation of the large Scythian kurhan Kul Oba near Kerch in 1830 uncovered a royal tomb with finely crafted Greek jewelry. This discovery stimulated the further archeological investigations of Scythian kurhans. The study of Kiev's historical-architectural sites began in the early 19th century: the ruins of the Church of the Tithes were investigated, and its floor plan was described by K. *Lokhvitsky; in 1832–3 the remains of the *Golden Gate of ancient Kiev were excavated.

The growth in archeological research stimulated the creation of museums. In 1806 a museum was established in Mykolaiv, in 1811 in Teodosiia in the Crimea, in 1825 in Odessa, in 1826 in Kerch, in 1849 in Katerynoslav, in 1890 in Kherson, and in 1899 in Kiev. In Lviv the museum of the *Shevchenko Scientific Society was established in 1893. The *Odessa Society of History and Antiquities, founded in 1839, became a center of archeological research and organized excavations throughout Ukraine; in its transactions (*Zapiski*), various archeological studies were published.

Kiev was another center for archeological research, which was promoted by the *archeographic commissions (1842–72), the Society of Church Archeology of the *Kiev Theological Academy (1872), and the *Historical Society of Nestor the Chronicler (1873). The historian V. Antonovych gave the first lectures on archeology at Kiev University.

Lviv, with its university and the archeological section of the Shevchenko Scientific Society, and Kharkiv were less important centers. Some archeological research in Ukraine was conducted by the gubernia *archival commissions, the central archeological institutions of Imperial Russia, and the Polish Academy of Sciences in Cracow.

Second half of the 19th and beginning of the 20th century. In this period the sites of various epochs were excavated. In 1871–3 the first Paleolithic site was discovered in the village of *Hintsy in Poltava gubernia, and F. Kaminsky began excavating it. These excavations stimulated further research on Paleolithic sites. V. Antonovych investigated the Studenytsia settlement on the Dniester River near Kamianets-Podilskiy in 1881. From 1893 to 1903 V. Khvoika researched the Paleolithic *Kyrylivska site in Kiev. The site at the village of *Mizyn on the Desna River near Novhorod-Siverskyi was investigated by F. Vovk, P. Yefymenko, L. Chykalenko, and others in 1908–10. In the Crimea the cave sites of Vovchyi Hrot and Siuren were excavated in 1879–80. In 1913 the site of Hlyniany near Lviv and in 1908–11 and the 1920s the sites of *Horodok near Rivne were excavated.

Very few Neolithic monuments were discovered in Ukraine during this period. M. Biliashivsky explored the dunes of the banks of the Dnieper River around Kiev in 1887–9. N. Veselovsky discovered the famous site of *Kamiana Mohyla near Melitopol in 1890. The sites of the Linear Spiral-Meander Pottery culture were investigated in Galicia: in the village of Torske near Zalishchyky by M. Antoniewicz in 1921, and in the town of Komarno near Lviv by Ya. Pasternak in 1936.

The monuments of the Copper-Bronze Age in Ukraine were investigated much more extensively. V. Khvoika uncovered early agricultural settlements near the village of Trypilia in Kiev gubernia and in the 1890s excavated several of them. Later similar settlements of the *Trypilian culture, from the Middle Dnieper to the Carpathians, were excavated by E. Shtern, A. Spitsyn, S. Hamchenko, M. Biliashivsky, F. Vovk, R. Kaendl, O. Kandyba, and others. In the mid-19th century the excavation of kurhans with the flexed and red-ochred skeletons of the nomadic pastoralists from the Copper-Bronze Age began in the steppe regions near Kherson and Zaporizhia. In 1901–2 V. Gorodtsov excavated the kurhans in the basin of the Donets River and divided the Copper-Bronze Age according to the internal burial construction he discovered into three temporal cultures – the *Pit-Grave, *Catacomb, and *Timber-Grave cultures. Sites of the Copper-Bronze Age were also investigated in Western Ukraine: M. Smishko uncovered the funnel-necked vessels of the Hrybovychi culture in the village of Mali Hrybovychi near Lviv in 1933, A. Kirkor and G. Ossowski excavated the megalithic Globular-Amphora culture in 1877 and 1891 respectively, and T. Sulimirski excavated the Corded-Ware Pottery culture and the *Komariv culture near Halych in 1936.

Archeologists devoted significant attention to the Scythian and Sarmatian tribes. The Scythian 'royal' kurhans are noted for their large dimensions and the richness of their funerary contents, which include a large number of Greek artifacts made from precious metals and of ceramics. The most famous discoveries were the *Chortomyk kurhan near Nykopol, which was excavated by I. Zabelin in 1862–3, and the *Solokha kurhan in the Melitopol region, which was excavated by M. Veselovsky in 1912–13. Large fortified settlements were excavated: the *Bilske settlement (of the 6th century BC) near Zinkiv in Poltava gubernia, discovered by V. Gorodtsov in 1900, and the *Nemyriv settlement (of the 8th–7th century BC) near Vinnytsia, discovered by A. Spitsyn. Fortified settlements in Right-Bank Ukraine were investigated by V.

Khvoika and in the lower-Dnieper region by V. Hoshkevych.

Much research was also devoted to the cities of classical antiquity in Ukraine. The remains of the Hellenic cities of the Bosphoran Kingdom were excavated by J. Blamberg, P. Diubriuks, and others. Chersonese Taurica was excavated by K. Kostsiushko-Voliuzhnych and others; *Olbia was excavated by A. Uvarov and B. Farmakovskiy; *Tyras on the Dniester Liman and the colony on *Berezan Island near the town of Ochakiv were excavated by E. Shtern.

V. Khvoika's excavation of large burial sites of the *Zarubyntsi culture near Pereiaslav and the *Cherniakhiv culture in the Kiev region in 1899–1901 were important. By cross-dating the uncovered remains with imported Greek goods, Khvoika dated them back to the 2nd century BC to 5th century AD and stated that they

belonged to the ancient eastern Slavs. Khvoika conducted many excavations of ancient Rus' sites in Kiev. He discovered the remains of the stone palaces of the Princely era and a pagan Slavic sacrificial altar near the Church of the Tithes. In 1894 he conducted excavations on Kyselivka Mountain. M. Biliashivsky investigated *Kniazha Hora on the Dnieper near Kaniv in 1891–3. Khvoika excavated the ancient town *Bilhorod (now the village of Bilohorodky) on Irpin River near Kiev in 1909–10. D. Samokvasov excavated many sites of the Siverianians – kurhans and fortified settlements in Chernihiv gubernia – in the 1870s. V. Antonovych investigated the sites of the Derevlianians in 1887, and K. Melnyk studied the sites of the Luchanians of Volhynia in 1897–8.

Six Russian archeological congresses took place in Ukraine: in Kiev in 1874 and 1899, Odessa in 1884,

Kharkiv in 1902, Katerynoslav in 1905, and Chernihiv in 1908. The results of archeological studies were published in the congresses' proceedings (*Trudy*) and in **Kievskaiia starina*, *Arkheologicheskaiia letopis' Iuzhnoi Rossii*, *Zapiski Odesskogo obshchestva istorii i drevnostei*, and other journals in Ukraine and Russia.

Since 1918. With the founding of the Ukrainian Academy of Sciences, its archeological institutions became the major center of archeological research. The first was the Commission for the Compilation of the Archeological Map of Ukraine, established in 1919 and later called the Archeological Commission (from 1923, Committee). In 1924 it was succeeded by the *All-Ukrainian Archeological Committee (VUAK), which until 1934 co-ordinated expeditions, research, and the protection of archeological monuments in Ukraine. Its archeological research was published in *Korotke zvidomlennia VUAK* (Kiev 1926 and 1927), *Trypil's'ka kul'tura na Ukraini* (Trypilian Culture in Ukraine, Kiev 1926), *Zapysky VUAK* (1930), *Khronika arkhelohii ta mystetstva* (3 issues, Kiev 1930-1), and other publications. In 1934-8 the academy's Institute of the History of Material Culture co-ordinated all archeological research in Ukraine. In 1938 it became the *Institute of Archeology of the Academy of Sciences of the Ukrainian SSR, which today co-ordinates all archeological research in Ukraine.

Archeological research is also conducted by the *Institute of Social Sciences in Lviv, the Odessa Archeological Society, the archeological departments of the universities of Kiev, Kharkiv, Odessa, Chernivtsi, Uzhhorod, and Donetsk, and the historical and archeological museums of Lviv, Odessa, Kharkiv, Dnipropetrovske, Uman, Kerch, Kherson, and elsewhere. The Institute of Archeology of the Academy of Sciences of the USSR, the State Historical Museum in Moscow, and the State Hermitage in Leningrad also carry out extensive archeological research in Ukraine.

In the last few decades archeology has been viewed as an important part of history, and much attention has been devoted to current theoretical and methodological problems. The rich store of archeological materials that has been gathered by numerous expeditions is an important source for the study of the history of various peoples in Ukraine. Archeological excavations can be conducted only with the approval of the Academy of Sciences of the Ukrainian SSR. Much archeological research and excavation takes place on the sites of large construction projects, particularly of water reservoirs.

For an understanding of the early stages of social development, it is important to study the settlements and dwellings of Paleolithic man. Many new sites from various stages of the Paleolithic age have been discovered and investigated in Ukraine, particularly the sites of the *Acheulean and *Mousterian cultures. Scholars such as I. Pidoplichko, S. Bibikov, M. Rudynsky, O. Chernysh, and I. Shovkopliias have explored various upper Paleolithic ethnocultural regions in Ukraine and traced the different origins and development of local Paleolithic cultures.

Much new material on the Mesolithic age has been found in Ukraine. Various groupings of Mesolithic sites have been defined on the basis of archeological sources. Three large Mesolithic burial sites on the Dnieper River north of Zaporizhia have attracted much attention and have been investigated by D. Telehin, O. Chernysh, and others.

The Neolithic period has been studied extensively. The Neolithic cultures in Ukraine developed usually out of autochthonous Mesolithic cultures and were influenced by the Neolithic crop-raising and stock-breeding civilizations of the Balkans of the 6th millennium BC. Archeologists have distinguished two groups of Neolithic tribal cultures, according to their principal occupation; the inhabitants of the southern and southwestern regions of Ukraine engaged mostly in primitive agriculture and cattle raising, while the inhabitants of the forests of Left-Bank Ukraine and Polisia lived by hunting, fishing, and gathering until the end of the Neolithic period. The archeological evidence shows that the neolithic tribes in Ukraine had diverse anthropological traits, pottery shapes, tools, and ways of life. Scholars such as S. Bibikov, M. Rudynsky, D. Telehin, and K. Chernysh have attempted to explain the appearance and disappearance of particular tribes, their distribution, cultural ties, and influence.

Sites of the Linear Spiral-Meander Pottery culture were uncovered on the territories of the Upper and Middle Dniester Basin and in western Volhynia. Artifacts were excavated near the villages of *Nezvysko (K. Chernysh, 1955) and Zveniachyn (Yu. Zakharuk, 1954, 1959; T. Passek, 1963; I. Sveshnikov, 1954, 1956; K. Chernysh, 1955, 1957, 1963) on the right bank of the Dniester River in Ivano-Frankivske and Chernivtsi oblasts.

Much research has been devoted to the monuments of the Trypilian culture, which were produced by the crop-raising, stock-breeding tribes of the Eneolithic Age. These tribes lived on the periphery of the oldest civilization of the Near East and Asia Minor. Noted archeologists in Ukraine and the West studied the rise of the Trypilian culture. In the 1930s and 1940s systematic excavations of Trypilian settlements were conducted at the sites *Kolomyishchyna I and Kolomyishchyna II near the village of Khalepia in Kiev oblast by S. Mahura, T. Passek, Ye. Krychevsky, N. Kordysh, and M. Makarevych, and near the village of *Volodymyrivka in Kirovohrad oblast by T. Passek, N. Kordysh, O. Chernysh, and others.

After the Second World War field work on the Trypilian culture was concentrated mainly in the Dniester Basin, where about 60 early Trypilian settlements had already been uncovered. They were scattered from the Rumanian Carpathians (the Seret River) to the Boh Basin, along the upper Dniester and Prut rivers. The most studied settlements of the Dniester Basin were *Luka-Vrublivetska (S. Bibikov, 1956), *Lenkivtsi (K. Chernysh, 1959), Soloncheny (T. Movsha, 1955; T. Passek, 1961), Bernovo-Luka and Holerkany (T. Passek, 1961). In 1952, on the left bank of the Dniester River near the village of Vykhvatnivtsi, T. Passek and K. Chernysh excavated a site of the late Trypilian period containing 61 burials. Much research was done on the tribes of the late Trypilian period who settled eastern Volhynia, the river banks of the Dnieper region, and the steppes northwest of the Black Sea coast in the second half of the 3rd millennium BC. There they came into contact with the tribes of other cultures. Archeologists have defined various tribal groups in this period, when almost all the traits of the Trypilian culture were gradually disappearing (S. Bibikov, M. Boltenko, F. Vovk, S. Mahura, M. Makarenko, T. Passek, I. Pidoplichko, M. Rudynsky, K. Chernysh, I. Shovkopliias, and others.)

In the western part of Lviv and Volhynia oblasts, excavations uncovered almost 40 sites of the Funnel-

Necked Vessel culture of the middle-4th to the second half of the 3rd millennium BC. The excavation from the 1920s to the 1960s of the graves of pastoral-nomadic tribes of the Pit-Grave culture, which spread from the steppes east of the Volga and Don rivers into the steppes of Ukraine and the forest-steppe of Eastern Europe in the 3rd and the beginning of the 2nd millennium BC, as well as the discovery and investigation of the settlement in *Mykhailivka in Kherson oblast, provided materials for a thorough description of the Pit-Grave culture in the Copper-Bronze Age in Ukraine.

From 1947 to 1962 over 20 kurhans were excavated in Ukraine and Belorussia. Many tribal settlements of the *Middle-Dnieper culture, which at the end of the 3rd and the beginning of the 2nd millennium BC was widespread in the large territory between the Oder and upper Volga rivers from the Baltic to the Dniester, were also uncovered. Many archeologists and linguists believe these tribes were the ancestors of the ancient Slavs, Balts, and Germans. According to these scholars, the Middle-Dnieper culture arose as a result of the assimilation of migrant peoples from the west by the aborigines near the end of the 3rd millennium BC.

In Volhynia I. Levytsky investigated the stone burial cists of the Globular-Amphora culture, which was contemporaneous with the late Trypilian cultures. The appearance of this culture in Ukraine is believed to be the result of migration from the middle and lower Oder Basin, where it originated.

The archeological sites of the pastoral-nomadic Timber-Grave culture have been studied. This culture arose east of the Volga and spread into the steppes of Ukraine, the Azov coast, and northern Caucasia from the 15th to the 8th century BC. There its tribes gradually forced out or assimilated the indigenous local cultures.

The Komariv culture of the developed Bronze Age (15th–12th century BC) in the middle and upper Dniester Basin was investigated after the war. In the 1930s the kurhans near *Komariv had been excavated by T. Sulimirski, in Bilyi Potik near Ternopil by J. Kostrzewski, and in *Nahiriany by L. Kozłowski and M. Smishko. After the war this research was continued by S. Bibikov, V. Gorodtsov, B. Grakov, V. Illinska, M. Rudynsky, D. Telehin, A. Terenozhkin, and others. In 1949 O. Lahodovska and I. Sveshnikov excavated the burial sites of this culture near the village of Voitsekhivka in Ivano-Frankivske oblast.

The pre-Scythian cultures in Ukraine have been increasingly studied, particularly in the last few decades. A Cimmerian steppe culture connected with the Timber-Grave culture has been discovered. Linguistic studies have led to the conclusion that the Cimmerians were an Iranian people. Sites of the *Chorny Lis culture, which is believed to be descended from the autochthonous inhabitants of the Bronze Age, have been discovered in the forest-steppe region between the Dnieper and Dniester rivers. Tribes closely linked to the ancient Thracians lived in the middle Dniester region and west of it.

The Scythians, Iranian tribes that came from Central Asia, partly destroyed the ethnocultural base and changed the composition of the population. In the steppes of Ukraine the pastoral crop-raising economy was replaced by pastoral-nomadic live stock breeding.

Numerous archeological expeditions have investigated the sites of the Scythian culture. Kurhans, fortifications,

and settlements have been excavated on the right bank of the Dnieper River. The large royal tombs in Ukraine – Haimanova Mohyla, excavated by V. Bidzilia in 1967–70, and Tovsta Mohyla, excavated by B. Mozolevsky in 1971 – contained unique articles of Scythian and Hellenic manufacture and have become famous around the world. Monuments of settled life, such as the large Kamianske fortified settlement near Kamianka Dniprovska, have been studied. Over 50 settlements on the Boh Liman, have been discovered. Several local Scythian cultural groups have been identified in Left-Bank Ukraine. Excavations of large Scythian fortified settlements, such as the *Bilske fortified settlement in Poltava oblast and the *Nemyriv settlement in Vinnytsia oblast, have been conducted. *Neapolis, the capital of the Scythian state of the 3rd century BC, now near Symferopil, was extensively excavated by P. Shults and A. Karasev in 1948–50.

Excavations of sites of the Sarmatians in southern Ukraine have thrown much new light on the ties between these tribes and the civilization of the Hellenic cities.

The ethnogenesis of the Eastern Slavs and their early history continue to be important archeological problems. The *Zarubyntsi and *Cherniakhiv cultures of the Iron Age, which are closely linked to the unresolved question of the origin of the Slavs, continue to be studied.

Extensive excavations of the monuments of the medieval period have been conducted in Kiev: near the Church of the Tithes and St Michael's Cathedral of the *Vydubychi monastery, and on Kyselivka Mountain. Such towns of ancient Rus' as Chernihiv, Pereiaslav, Bilhorod, Liubech, Vyshhorod, Putyvl, and Halych have been investigated. Ancient fortified settlements have been excavated: in Shestovytsi near Chernihiv, *Raiky near Berdychiv, Donetsk near Kharkiv, *Kolodiazyn near Zhytomyr, the settlement near Shepetivka, and others. The monuments of Kievan Rus' have been studied by such archeologists as M. Karger, T. Movchanivsky, Ya. Pasternak, V. Dovzhenok, V. Bohusevych, D. Blifeld, V. Honcharov, M. Artamonov, M. Makarenko, V. Petrov, M. Rudynsky, M. Smishko, P. Tretiakov, I. Shovkoplias, Yu. Asieiev, M. Boltenko, B. Rybakov, and others.

Excavations of ancient Greek colonies on the northern Black Sea coast – Chersonese Taurica, Panticapaeum, Olbia, Phanagoria, Tanais – have been continued and have provided new data about the history and culture of these cities as well as their influence on the Scythians, Sarmatians, Taurians, and other tribes with which they traded (V. Haidukevych, S. Dlozhevsky, M. Rostovtsev, B. Farmakovsky).

Many monographs, periodicals, collections, and twelve scholarly conferences have been devoted to the new discoveries. The Institute of Archeology of the Academy of Sciences has published since 1971 the journal *Arkheolohiia*; other periodicals, such as *Arkheolohichni pam'iatky URSR* (13 vols, 1949–63), and *Kratki soobshchennia Instituta arkheologii AN USSR* (12 vols, 1952–62), are no longer published. The collective work *Arkheolohiia Ukraini's'koï RSR* (archeology of the Ukrainian SSR, 3 vols) was published in 1971–5.

Archimandrite. Hegumen of an important monastery, appointed for life, with the right to carry a miter and crozier and with other privileges. There were several archimandrites in Ukraine. The most important ones were the archimandrites of the *Kievan Cave Monastery and those of Pochav Monastery. The most famous Ukrainian archimandrites were Polikarp (1174-82), the first archimandrite of the Kievan Cave Monastery; N. Tur (1593-9); Ye. Pletenetsky (1599-1624); Z. Kopystensky (1624-7); P. Mohyla (1627-47); I. Gizel (1656-83); I. Galiatovs'ky (1669-88); and H. Odorsky (1705-12).

The Basilian Monks in the Ukrainian Catholic church have maintained the title of archimandrite for the order's superior general (protoarchimandrite). The mother superior of the Basilian sisters has been called, since the 1960s, archimandrite (*archimandrynia*). The superiors of the Studite monks have also been known as archimandrites. Cardinal Y. Slipy has elevated a certain number of high-ranking monks and regular (unmarried) priests to the dignity of patriarchal archimandrite, a title that is subordinate to that of bishop but investing the bearer with certain episcopal insignia and special assignments or functions in the church.

Archipenko, Alexander [Arxypenko, Oleksander], b 30 May 1887 in Kiev, d 25 February 1964 in New York. Modernist sculptor, painter, pedagogue, and a full member of the International Institute of Arts and Literature

1

2

- 1) Alexander Archipenko with his *Shevchenko in Exile* (1933).
 2) A. Archipenko's *Repose*, wood and bakelite, 1957.

from 1953. Archipenko studied art at the Kiev Art School in 1902-5, in Moscow in 1906-8, and then briefly at the École des Beaux-Arts in Paris. His first one-man show took place in 1906 in Ukraine. In 1910 he exhibited his works with a group of artists from Ukraine at the Salon des Indépendants and then exhibited his works annually until 1914. His works appeared also at the Salon d'Automne. In 1912 Archipenko joined a new artistic group - La Section d'Or, which numbered among its members P. Picasso, G. Braque, J. Gris, F. Léger, R. Delaunay, R. de la Fresnaye, J. Villon, F. Picabia, and M. Duchamp - and participated in the group's exhibitions.

In 1912 Archipenko opened his own school of sculpture in Paris. At his individual exhibition at the Folkwang Museum in Hagen, Germany, in 1912, Archipenko displayed *Médrano 1*, the first modern sculpture made of various polychrome materials (wood, glass, and metal fiber). At this time he also created the first so-called *sculpto-peintures* (carved and painted plaster reliefs) and the first modern sculpture composed of concave forms contrasted with convex ones - *Walking Woman*. In 1913 his works appeared at the Armory Show in New York, and he held his first individual exhibition in Berlin. In the following year he participated in a cubist exhibition in Prague. During the war he lived in Nice; he returned to Paris in 1918. In 1919-21 Archipenko's works were

exhibited in many cities throughout Europe. In 1920 he was given a separate pavilion at the Venice Biennale, and his work appeared at the exhibitions of the Section d'Or in Paris and Brussels and then, in 1921, in Rome and Geneva. In 1921 Archipenko moved to Berlin, where he established a school of sculpture. He held a retrospective exhibition at Potsdam and his first individual exhibition at the Museum of Modern Art in New York.

In 1923 Archipenko moved to the United States. He established a school in New York and in the following year moved it to Woodstock, New Jersey. In this period he created the changing picture known as *peinture changeante* or Archipentura. Besides working at his art, Archipenko devoted much time to teaching. He was in constant contact with various universities, among them the universities in Oakland, Los Angeles, Seattle, and Chicago (the New Bauhaus School). In 1927 an exhibition of his works was arranged in Tokyo. In 1933 his work appeared in the Ukraine Pavilion at the Century of Progress Exposition in Chicago. The Nazi regime confiscated 22 of Archipenko's sculptures in German museums in the 1930s. In 1947 Archipenko created the first sculptures out of transparent materials (plastics) with interior illumination (modeling light) – *l'art de la réflexion*. In 1952–3 his work was exhibited in São Paulo, Brazil, and in Guatemala. In 1955–6 his exhibitions toured Germany. In 1956 Archipenko tried his hand at moving figures (*figures tournantes*), which were mechanically rotating structures built of wood, mother of pearl, and metal. In 1960 his largest monograph, *Fifty Creative Years, 1908–1958*, appeared. Parts of it had been published previously in Ukrainian art journals. In 1962 Archipenko was elected to the Department of Art of the National Institute of Arts and Letters in the United States. His last works were two large bronzes, *Queen Sheba* (1961) and *King Solomon* (1964), and 10 lithographs entitled *Les formes vivantes*. In 1963 large retrospective exhibitions of Archipenko's sculptures, drawings, and prints were held in Rome, Milan, and Munich. In 1967–9 posthumous retrospective exhibitions of his work were organized by the University of California (Los Angeles) at 10 American museums and by the Smithsonian Institution at various European museums, including the Rodin Museum in Paris.

Archipenko's cubist style utilized interdependent geometrical lines and introduced new concepts and methods into sculpture. Although cubism formed the basis of his art, it was not its exclusive style. Archipenko's purpose was to discover the laws of formal relationships through a precise examination of the great historical styles and to preserve the old foundations of the plastic arts while transforming them in his own way. His creative and logical thought was also opposed to his dynamic personality, and this dramatic conflict endowed his art with an intriguing vitality.

Archipenko never severed his ties with his countrymen. During his first years in Paris he was a member of the Ukrainian Students' Club; in Berlin, a member of the *Ukrainska Hromada*, and in the United States, a member of the Ukrainian Artists' Association in the United States. His works appeared at the association's exhibitions. He belonged to the Ukrainian Academy of Arts and Sciences in the United States and the Ukrainian Institute of America in New York. Among his works many have Ukrainian themes, eg, the relief *Ukraine* (1940), four busts of T. Shevchenko (one of them in the Park

of Nationalities in Cleveland), busts of I. Franko and Prince Volodymyr the Great, and portraits of Ukrainian public figures. Some of Archipenko's exhibitions, such as the one at the Century of Progress Exposition in Chicago, were sponsored by Ukrainian groups.

In Soviet Ukraine Archipenko's name had never been mentioned before his death. Five of his sculptures and paintings at the of Lviv Museum of Ukrainian Art were destroyed in the 1950s. Although his name began to appear in the artistic press during the post-Stalin Thaw, V. Korotych's monograph about him has been suppressed.

Architecture. Ukrainian architecture has a rich history and occupies an important place in the history of European art. Extant architectural monuments testify to the high state of the art in Ukraine. They display originality, functionality of construction, and attentiveness to form. While assimilating the engineering and artistic principles of antiquity, old Ukrainian builders refined them and supplemented them with local characteristics; at the same time they influenced and enriched the architecture of neighboring countries.

The prehistoric and early period. Architectural con-

structions in Ukraine date back to the Paleolithic period. By the end of the Neolithic period (8,000–3,000 BC) the *Trypilian culture had developed among the tribes inhabiting Right-Bank Ukraine. In the first millennium BC Greek colonies (eg *Olbia, *Teodosiia, *Chersonese Taurica, *Panticapaeum) appeared on the coast of the Black Sea. Their buildings were constructed according to Greek style and were enriched by vaults of wedged stone, which were unknown in Greece itself. In the 6th–3rd century BC many fortified settlements were built by the Scythian tribes. The ruins of the Scythian capital, *Neapolis, near Symferopil have been well preserved to this day. The indigenous population in the Crimea built cave settlements such as *Eski-Kermen, Manhup, and *Chufut-Kaleh. Stone cult figures, or megaliths, on Mount Kishka near Simeiz in the Crimea and in the lower Dnieper region were erected in the first millennium AD. As Christian religious architecture evolved, stone building, based on the Greek-cross form, the principal form of Byzantine church architecture, developed on the ruins of the Greek colonies. Excavations have also uncovered ground plans of rotundas and Roman-type basilicas, fortifications such as the Kharaks fort, and other structures.

The Princely Era. Byzantine culture flourished under the Macedonian dynasty (867–1057). During this period the Kievan state adopted Byzantine Christianity and its rich architectural traditions. Drawing on their own tradition of wooden architecture and on certain Western influences, the architects of Kievan Rus' adapted the Old Christian and Byzantine styles to local conditions and created their own synthesis. This original and creative interpretation permits one to speak of a Ukrainian style.

The Kievan grand prince Volodymyr the Great built the first famous stone church – the Cathedral of the Holy Mother of God, or the Church of the *Tithes (989–96). Only its foundations have survived, but its plan and construction were repeated in a host of churches in Rus'. Under Yaroslav the Wise Kiev became one of the important capitals of Europe. The prince encircled the city with defensive walls. Of the three city gates only the remains of the *Golden Gate, which was topped by the Church of the Annunciation, have been partly preserved. The masterpiece of the Princely era is, however, the *St Sophia Cathedral (1037–54). The original structure was a monumental, rectangular temple with five naves and five apses on the eastern side; its prototype was the Hagia Sophia in Constantinople. It had a balcony on three sides and was topped by thirteen cupolas in a pyramidal arrangement. Of the many palaces built in the 11th–12th century only the foundations remain, but many Kievan churches and monasteries from the period survived until the mid-1930s (when many of them were demolished by the Soviet authorities). The more important among them were the Cathedral of *St Michael's Golden-Domed Monastery (1108, destroyed in 1934); the *Dormition Cathedral of the Kievan Cave Monastery (1078, destroyed in 1941); St Michael's Church of the *Vydubychi Monastery (1088); the Holy Trinity Church built above the gate of the Kievan Cave Monastery (1108); *Transfiguration Church in the Berestiv District of Kiev (mid-11th century); the Church of Our Lady of Pirohoshcha (1138, destroyed in 1926); the Church of *St Cyril's Monastery (1146); and the Church of the *Three Saints (1185, destroyed in the mid-1930s). Chernihiv ranks second in the number of churches

3

preserved from the Princely era: the Cathedral of the *Transfiguration (1036); the Dormition Cathedral of the *Yeletskyi Monastery (12th century); *ss Borys and Hlib Cathedral (12th century); *St Elijah's Church (12th century); and the Church of *Good Friday (early 13th century). The most important churches that have been preserved (and partly reconstructed) in other towns are *St Basil's Church (late 12th century) in Ovruch; the *Dormition Cathedral (1160) in Volodymyr-Volynskyi; St George's Church (1144) in Kaniv; and *St Panteleimon's Church (pre-1200) in Halych (which survives in its original state with a carved Romanesque portal of great artistic value). Excavations of Halych in 1935–7 uncovered the foundations of the majestic Cathedral of the Dormition built by Prince Yaroslav Osmomysl at the site of the princely residence in *Krylos. Only fragments, such as the foundations or details of the capitals, remain of the magnificent churches built by King Danylo Romanovych in Kholm and Peremyshl (eg, St John's Cathedral of the 12th century).

After the Mongol-Tatar invasion (second half of the 13th to the 16th century). After the Tatar invasion construction was restricted to small buildings, and these were built mostly in the western territories (known as the Principality of Galicia-Volhynia until the middle of the 14th century). Some *castles and a few fortified churches have been preserved from this turbulent period. The foundations of the castle-fortresses varied, depending on the terrain. Their towers, turrets, galleries, and parapets were of a monumental, severe appearance. The best examples of medieval castles are located in Zinkiv in Podilia, Sataniv on the Zbruch, Lutske, Terebovlia, Zbarazh, Kremianets, and Khotyn. The imposing fortress in Kamianets-Podilskyi (15th–16th century) was reconstructed beginning in the 17th century. Church building adhered to the style of the Princely era and was influenced by the tradition of wooden architecture. An outstanding example of this is the church-fortress of the Holy Protectress (1467) in Sutkivtsi, Podilia. Like many

other buildings of the time it was designed for defense. The wooden belfries, which have often preserved their archaic forms, probably served as models for gate towers. As time passed, the master builders made them ever more elaborate. The finest examples of wooden belfries are located in Galicia: Potelych, Drohobych, Yamna, Mykulychyn, Tysmenytsia, Topilnytsia, Yasenytsia Zamkova, and Turka.

The Renaissance. The Renaissance style of architecture was adapted to the Byzantine-Ukrainian heritage and to the Ukrainian character. The style developed mainly in towns that were built on the Western European pattern. Italian and then German, French, and native architects constructed new churches and private and municipal buildings and reconstructed castle-fortresses, finishing them in the new style. The castles in Ostrih, Stare Selo near Lviv, Buchach, Olesko, and Kamianets-Podilskiy acquired picturesque attics. Castle-palaces like the one in *Pidhirtsi (1636–40) in Galicia, which was influenced by French palace architecture (G.V. de *Beauplan and A. de l'Aqua), are good examples of this style. The best examples of Renaissance architecture are found in Lviv. Most of them were built by masters of Italian origin, such as P. *Rymliany, A. *Prykhylny, and V. *Kapynos. They created the architectural masterpieces of the Renaissance period: the Lviv brotherhood's *Dormition Church, also known as the Wallachian Church (1598–1631, by P. Rymliany); its tower of Korniakt (1578, by P. *Barbone); and the Lviv brotherhood's Chapel of the Three Saints (1590–1671). The *Black Building, the *Korniakt building, and the chapel-mausoleum of the Kampian family (1619) on the outside wall of the Latin Cathedral deserve mention.

The Crimea. The architecture of the Crimea is unique and complex. It was tied to the traditions of the local population, which descended from the Taurians, Scythians, Sarmatians, and other tribes, and later from the Italian traders and colonists. Genoese fortresses in Sudak, Teodosiia, and Balaklava, Armenian monasteries and churches (eg in Surb-Khach near Staryi Krym), and Tatar mosques (eg, in Yevpatoriia in 1552 by Koca Sinan) were built in this period. The main architectural monument is the Crimean khan's palace in *Bakhchesarai (16th–18th century).

The baroque period. The architecture of the late Renaissance displayed certain features of the early *baroque: dynamism, spiral lines, mannerisms, decorativeness. The Boim family chapel (1609–11) and the Church of *Good Friday (both in Lviv) are examples of the late Renaissance, while the church built by Hetman B. Khmelnytsky in *Subotiv (1653), with its imposing front, already belongs to the early baroque. The baroque was an expression of 17th- and 18th-century European culture. Its vigorous growth in Ukraine marked a golden age of the arts, similar to that of the Princely era. The center of artistic life shifted again to the Dnieper region, dominated by Kiev, and the new patrons were Hetman I. *Mazepa, who built four churches and restored about twenty, and the Cossack senior officers. The synthesis of West European baroque and Byzantine-Ukrainian tradition produced an original fusion of the three-nave, Greek-cross church with the basilica. Having elaborate decorative elements, which were often borrowed from wooden architecture, this style was spontaneously called the 'Cossack baroque' or the 'Mazepa baroque.' Because it

1

2

BAROQUE ARCHITECTURE 1) St Nicholas's Cathedral in Kiev; built in 1690 with the support of Hetman I. Mazepa, demolished by Soviet authorities in 1934. 2) St Cyril's Church in Kiev (12th century); present view after the addition of a baroque exterior.

was a truly original adaptation of the baroque, this style is generally called the 'Ukrainian baroque.'

The best evidence for the adaptation of the baroque can be found in the princely churches that were reconstructed mostly under Metropolitan P. Mohyla – St Sophia Cathedral, the Dormition Cathedral of the Kievan Cave Monastery, and the churches of St Michael's Monastery and Vydubychi Monastery. Their principal feature was the form and architectural composition of the gilded cupolas. The general appearance of a city was often defined by its monasteries, which included many secular buildings, such as the metropolitan's residence at the St Sophia Cathedral in Kiev (1758); the regimental chancellery in Chernihiv (1680–90, reconstructed in 1758); and the residence of V. Kochubei in Baturyn. In the 18th century the typical church was cruciform; this was the second peculiarity of the Ukrainian baroque. Three-domed and five-domed structures, built on a central plan borrowed from the wooden churches of Ukraine, represent the highest achievement in artistic expression and purity of form. The following are examples of such churches: the 12th-century Transfiguration Church in Kiev's Berestiv district, reconstructed in 1638–43; the Cathedral of the Holy Protectress in Kharkiv (1689); St George's Church of the Vydubychi Monastery (1696); the Church of All Saints above the Economic Gate of the Kievan Cave Monastery (1696–8); the cathedral of the *Mhar Monastery near Lubni (1684–92, built by I. Battista and M. Tomashevsky); and the church of the *Kiev Epiphany Brotherhood Monastery (1693) and *St Nicholas's Military Cathedral (1696) in Kiev, both funded by Hetman Mazepa and destroyed in the 1930s.

Wooden architecture. Wooden churches in Ukraine deserve particular attention because of their beautiful contours, proportions, and functionality. The oldest preserved churches (16th–17th century) are mostly in the Carpathian Mountains, particularly in the Boiko region. The church in Trochany (Tročany) in Transcarpathia is an example of the oldest style. The tripartite (or three-frame) construction, in which each frame is topped by a tiered pyramidal roof, is typical of Ukrainian architecture. The Boiko style of building progressed from the two-tiered top, as found in the churches in Topilnytsia, Lenytsia,

1

3

WOODEN CHURCH ARCHITECTURE 1) Belfry of St George's Church in Drohobych (18th century). 2) Belfry of the Struk church in Yasynia (1923). 3) Church in the village of Husne in Transcarpathia (1759), one of the oldest types of wooden church architecture.

Potelych, and Drohobych, to three-tiered and four-tiered tops, as in the churches in Borynia near Turka, in Studene, Vyzhnie, and elsewhere. Churches of seven stories are located in Kryvka (moved to Lviv in 1930), Vysotske, Vyzhnia, Matkiv, Rosokhach, and Komarnyky. While they share certain common features, the various schools of Ukrainian wooden architecture have their peculiar traits. Thus, St Nicholas's Church in Kryvka (1763) is characteristic of the Boiko school; St Nicholas's Church in Chernivtsi (1607) and the church in Poliana (1648) – of the Bukovynian school; the churches in Vorokhta, Kosmach, and Nadvirna (all of the 18th century) – of the Hutsul school; the church in Steblivka (1643) – of the Lemko school; the churches in Mukachiv (1777) and Kanora (18th century) – of the Transcarpathian school; the church in Zhovkva (now Nesterov, 1705) – of the Galician school; the church in Rozvazh (1782) – of the Volhynian school; and the churches in Korsavary (1799) and Kamianets-Podilskyi – of the Podilian school. The Trinity Church in Novoselytsia (1773–8, by Ya. *Pohrebniak) belongs to the Dnieper school and is a wonder of Ukrainian wooden architecture, having nine frames with nine cupolas and a height of 65 m.

The Ukrainian builders of baroque wooden churches strived to create an impression of great inner height. Modern architects and engineers believe that the wooden

1

2

ROCCO ARCHITECTURE 1) St Andrew's Church in Kiev, designed by B. Rastrelli in 1747–53. 2) St George's Cathedral in Lviv, built by architect B. Meretyin in 1745–60.

constructions of this period, which approached 50 m in height, attained the limits of the medium's possibilities and are unique in world architecture. To create the illusion of height the walls were inclined inwardly, and each higher tier was made narrower than the one below. The best examples of the Cossack baroque were the churches in Pakul (1710), Novi Mlyny (mid-18th century), Berezna (1759), Artemivka (1761), Verkhniy Byshkin (1772), and Chervonyi Oskil (1779). All these churches were destroyed by the Soviets.

Jewish synagogues, which were built by Ukrainian masters as well, deserve special mention. Some of the best examples of this type of architecture have been preserved in Ukraine. Among them are the synagogues in Zabludiv (16th century), Brody, Pechenizhyn, Rozdil, Zhydachiv, Khodoriv, and Kaminka Strumilova (now Kamianka-Buzka). Secular town architecture, consisting of town halls, inns, taverns, and burghers' residences possessed such elements of folk building as porches, vestibules, many-layered roofs, and richly carved columns.

Rococo. In the mid-18th century the influences of a more decorative style – the *rococo – made themselves felt. Colorful examples of this style are *St George's Cathedral in Lviv (1744–64, built by B. *Meretyin (Merderer), the town hall of Buchach (1751), and *St Andrew's Cathedral in Kiev (1747–53, designed by B. *Rastrelli). Among the last rococo examples are the belfries of St Michael's Monastery and of the St Sophia Cathedral in Kiev, both ornamented with floral motifs in stucco, and the famous belfry of the Kievan Cave Monastery by G.J. Schädel (1731–45).

Classicism. The calmness and coldness of classicism replaced the restlessness of the baroque in the form of the official *Empire style. City planning reflected classicism in its geometric, regular street layout, symmetric arrangement of buildings, and an orderly reconstruction of old cities such as Kiev, Chernihiv, Kharkiv, and Poltava. After the Turks had been expelled from the Black Sea region and the Crimea, the towns of Kherson, Mariupol, Mykolaiv, Odessa, Sevastopol, etc developed rapidly. Many industrial buildings (a wooden cloth and silk factory in Katerynoslav), municipal buildings (the city hall in Mykolaiv), and educational institutions (Nizhen Lyceum, Kiev University [1803, by A. *Melensky], Odessa University [1804–9, by T. de Thomon]) were

erected in the new style. Some famous classical constructions were built in Poltava and Odessa: the Prymorskyi Boulevard, *Vorontsov palace, the Potemkin steps in 1841 by F. Buffon. The finest examples of classicism are the palaces of Hetman K. Rozumovsky in Pochep (1796) and Baturyn (1799, by C. Cameron), the palace of P. Zavadovsky in Lialychi (1794, by G. *Quarenghi), the Galagan palace in Sokyryntsi (1829, by P. Dubrovsky); the 'Oleksandriia' park-garden in Trostianets, the 'Sofiivka' gardens in Uman, and Vorontsov's palace and park in Alupka. Most of the architects were foreigners; hence their work rarely bore any relation to Ukrainian architectural traditions.

More churches built in the Empire style have been preserved in the Kharkiv and Poltava regions than elsewhere. Usually they have a central plan, like the cathedral in Khorol (1800) and the belfry of the Kharkiv cathedral (1844). Urban architecture, particularly the city halls in Kharkiv, Poltava, Kiev, and Lviv (1827–35, by J. Markl and F. Tresther), reflected this style. Architecture, which reflected the utilitarianism and commercialism of its times, became influenced increasingly by an official standard. By the end of the century it developed according to the then-fashionable European eclectic diversity of

styles. Examples of eclecticism are the Gothic Catholic church in Kiev (1897–1900, by V. *Horodetsky); the residence of the metropolitan of Bukovyna, now the University of Chernivtsi (1864–82, by Y. Hlavko); the pseudo-Byzantine Cathedral of St Volodymyr in Kiev (1862–82, by A. *Beretti); and the Trinity Cathedral in Pochaiv (1906, by O. Shchusev, built in the Old-Rus' style).

Revival of a Ukrainian style (Ukrainian modern). At the beginning of the 20th century, as the Ukrainian national movement grew in strength, artists sought to revive a Ukrainian style. V. *Krychevsky became the pioneer and champion of this trend. His first successful work in this style was the provincial zemstvo building in Poltava (1905–9), now an ethnographic museum, which gave rise to many imitations and variations. Among the prerevolutionary architectural experiments the most remarkable were the Pedagogical Museum (1911–13, by P. Alosyn), now the Kiev branch of the Central Museum; the Public Library (1914–29, by V. Osmak), now the Central Scientific Library of the Academy of Sciences of the Ukrainian SSR; and the tsar's palace in Livadiia in the Crimea (1910–11, by M. Krasnov).

In 1918 the Society of Ukrainian Architects and the Ukrainian Architectural Institute were established in Kiev through the initiative of such Ukrainian architects as D. Diachenko, V. Krychevsky, V. Sichynsky, M. Kravchuk, and O. Verbytsky. Using baroque motifs and elements of wooden folk building, Ukrainian architects managed to create a fresh synthesis and built many structures in the new style. In the 1920s and 1930s P. Holovchenko, K. Kunytsia, P. Yurchenko, and others continued to develop the national style and designed workers' settlements, collective-farm clubs, etc. Many of them were accused later of propagating a 'national style' and persecuted.

The Soviet period. During the time of industrialization and the collectivization of agriculture (1925–32), many new cities and giant industrial complexes were built: New Zaporizhia and the *Dnieper Hydroelectric Station (1927–32, by architects B. Vesnin, M. Colli, and S. Andriievsky); the settlement of the Kharkiv tractor factory (1931–3, by P. Alosyn); etc. The most important of the public and industrial buildings were the State Industrial Complex (Derzhprom) in Kharkiv built in the constructivist style by S. Kravets and S. Serafimov, the Railroad Workers' Palace of Culture in Kharkiv (1928–32, by O. Dmytriiev) and the Kiev Artistic Film Studio (1927–30, by V. Rykov). These large projects were usually entrusted to architects from Russia.

The search for new ideas in architecture provoked wide discussion. Even the most functional and constructivist tendencies, which were prompted by faith in technology and expressed the spirit of the times, were criticized. The architects of 1934–41 turned mostly to the classical heritage and created on its basis a pompous Stalinist style. The new style combined elements of the St Petersburg Empire style with a historical eclecticism and an inclination towards pseudomonumentalism. Examples of this style are the building of the Supreme Soviet of the Ukrainian SSR (1936–9, by V. Zabolotny and N. Chmutina); the Commercial Institute in Kiev, by D. Diachenko; and the building complex of the Commercial Academy in Kiev, by Ye. Nakonechny, S. Hrabovsky, and S. Liuba.

Much was expected of the new Academy of Architec-

ture of the Ukrainian SSR in Kiev (1945), renamed in 1956 the *Academy of Construction and Architecture of the Ukrainian SSR, directed by V. Zabolotny. In the postwar reconstruction of Kiev, Kharkiv, and other cities, the Stalinist eclecticism was particularly evident. The principal boulevard of Kiev, Khreshchatyk, was rebuilt in this manner by the architects O. Vlasov, B. Pryimak, V. Zabolotny, A. Dobrovolsky, and others. The style was abandoned in 1955, but modernization and the application of Western architectural ideas in Ukraine began only in the 1960s, owing partly to younger, postwar architects.

The finer buildings of the Soviet period are the huge sports stadiums in Kiev – Dynamo (for 30,000 spectators, 1934-6, by V. Osmak and B. Bespaly) and the Sports Palace (for 100,000 spectators, 1958-60, by M. Hrechyna, A. Zavarov, and V. Repiakh); the sanatoriums in the Crimea – Chornomore in Yalta, Sea Pioneer Camp in Artek (1961, by A. Poliansky and D. Vitukhin); the hotel Tarasova Hora in Kaniv (1961, by L. Guseva, A. Zubok, N. Chmutina, and V. Elizarov); the stations and surface

buildings of the Kiev subway (1960-8); and the concert and film hall Ukraina in Kharkiv (1963, by V. Vasilev, Yu. Plaksiev, and V. Reusov). The outstanding buildings of recent years are the Kiev Pioneers' and School Children's Palace (1965-7, by A. Myletsky and E. Bilsky) and the airport in Boryspil (1961-5, by A. Dobrovolsky, O. Malynovsky, and D. Ponenko), which is based on contemporary American reinforced steel-and-concrete construction.

Today many buildings, particularly schools, day-care centers, cinemas, restaurants, and clubs, are decorated with murals, mosaics, and sculpture. Architects pay more attention than before to the building's relation to its surroundings and to the requirements of urban planning.

Archival commissions. Gubernia archival institutions, established at the end of the 19th or the beginning of the 20th century, whose purpose was to preserve, systematize, describe, study, and publish archival materials. They also served as custodians of old monuments. The following archival commissions existed in Ukraine (in chronological order by date of establishment): (1) The Archival Commission of Tavriia, established in 1887 in Symferopil and active until 1920. It published its own *Izvestiia* (57 issues, 1887–1920). Its main collaborators were A. Markevych and F. Lashkov. (2) The Archival Commission of Chernihiv, established in 1897. It published its *Trudy* (12 issues, 1897–1915, 1917). Its main collaborators were V. Modzalevsky, P. Dobrovolsky, A. Verzylov, and P. Doroshenko. (3) The Archival Commission of Poltava, active from 1903 to 1917. It published its *Trudy* (15 issues, 1905–17). Its main collaborators were I. Pavlovsky, L. Padalka, M. Astreb, V. Parkhomenko, and V. Shchepotiev. V. Modzalevsky, V. Barvinsky, and P. Fedorenko also participated in its work. (4) The Archival Commission of Katerynoslav, active from 1903 to 1915. It published *Letopis' Ekaterinoslavskoi gubernskoi uchenoi arkhivnoi komisii* (10 issues, 1904–15). The main collaborators were A. Syniavsky, Ya. Novytsky, V. Bidnov, D. Doroshenko, and V. Picheta.

Some commissions, mainly the Chernihiv and Poltava commissions, also published separate monographs on history, archeology, archeography, bibliography, etc. Kiev and Kherson also had archival commissions, but they were less active and had no publications of their own.

Archives. In Kievan Rus' the more important documents were preserved in the princely archives or the episcopal archives (of the Church of the Tithes and the St Sophia Cathedral in Kiev), in monasteries (the Kievan Cave and Vydubychi monasteries), and probably in private (boyar) archives. During the Lithuanian-Polish period the main depositories of archival documents were the city, county, and *pidkomorskyi* courts as well as the central state collection located in Cracow and known as the *Lithuanian Register until 1569 and the Crown Register after the

Union of Lublin. Various town and church institutions had their archives, as did individuals, but most of them perished in wars, rebellions, fires, and the like.

In the Cossack-Hetman period of the 17th–18th century, the first efforts were made to centralize archives in Ukraine. Besides the archives of the various governing institutions of the Zaporozhian Host, from the time of B. Khmelnytsky the Hetman archive was located in Chyhyryn. Its principal documents were taken to Poland by Hetman P. Teteria (1665) and to Moscow by P. Doroshenko (1676). The losses of the state archives during the Period of Ruin (1670s) were covered to some extent by the church archives, such as the archive of the Kievan Cave Monastery. Under hetmans I. Samoïlovych and I. Mazepa the archive of the *General Military Chancellery became the central state archive and was overseen by the general secretary.

The archive of Mazepa's government was seized and largely destroyed by A. Menshikov during his destruction of Baturyn in 1708. It is possible that some of the more important documents of this archive were taken abroad by Mazepa and found their way into Hetman P. Orlyk's hands. Even before this a new central state archive attached to the General Military Chancellery was set up in Hlukhiv. Known as the Little Russian General Archive, it had its own archivist during K. Rozumovsky's rule. Archivists were usually highly educated individuals who were particularly interested in history and literature, such as S. Divovych and M. Tumansky. The archive suffered extensive losses during the great fires of 1748 and 1784 in Hlukhiv. Remnants of the general archive, along with the archives of various institutions, particularly monasteries, found their way first to the gubernia archive of Novhorod-Siverskyi and then to the archives of Chernihiv, Poltava, and Kiev.

Eventually, in the 19th century, they were transferred to the archives of Kiev and Kharkiv, and a part of them was shipped to Russia (where they survived as late as the 1920s) or found their way into private collections such as that of M. Markevych in Moscow.

In the absence of a central state archive in Ukraine, many archival materials were scattered, destroyed, or lost in the 19th century. Some were preserved in the archives of state institutions (administrative, judicial, military, financial, etc); churches and monasteries; civic, estate, and scholarly institutions; private collections; etc. The lack of suitable facilities, funds, and proper care and protection from theft, fire, and atmospheric influences resulted in the loss of many materials, and often of entire important holdings. Furthermore, the centralist policies of the Russian government, beginning with Peter I, were seriously detrimental to the development of Ukrainian archives. Many Ukrainian archival documents were taken out of Ukraine on orders from the tsarist government or local authorities and ended up in Russian state archives or in private collections. Only a small part of this material was recovered after the 1917 revolution.

In the mid-19th century Ukrainian scholars and civic leaders introduced measures to preserve and consolidate old archives. In 1852 the Central Archive of Old Documents was established at Kiev University. It had several thousand (5,883) volumes of records and other documents, such as city, land, and *pidkomorskyi* court documents and monastery documents from Right-Bank Ukraine of the 16th–18th century. In 1880 a historical archive was set

up at Kharkiv University to preserve 17th- and 18th-century documents.

These archives, together with the gubernia learned *archival commissions, which were established at the end of the 19th and the beginning of the 20th century, made an important contribution to the improvement of archives and the advancement of historical and archeographical research (see *Archeography).

Ivan Ardan

Ardan, Ivan, 1871–1940. Ukrainian Catholic priest, cultural and community leader in the United States, to which he immigrated from Galicia in 1895. Ardan helped organize the *Ukrainian National Association and the *Ukrainian Fraternal Association, serving as the latter's first president. He edited the newspapers **Svoboda* (1900–7) and **Narodna volia*. He was one of the organizers of the First Ukrainian Soim (Assembly) in America (1915) and was active in the *Federation of Ukrainians in the USA. From 1919 to 1921 he worked with the missions of the Ukrainian National Republic and the Western Ukrainian National Republic in the United States.

Argentina. Since 1810 an independent federated republic (1983 pop 29,630,000) composed of 23 provinces and one federal capital district and covering an area of 2,791,800 sq km. Buenos Aires is the capital city.

There is evidence that people with Ukrainian surnames (eg, Vozniak, Doroshenko, Chaikovsky) have lived in Argentina as early as the latter part of the 17th century; however, the first documentation of the arrival of Ukrainians in Argentina dates from 1897, when 12 Ukrainian families from Galicia came as permanent settlers to Apóstoles, in the province of Misiones. The immigration of Ukrainians to Argentina covers a span of about 50 years, from 1897 to the 1950s, and may be divided into three distinct periods: 1897–1914, 1922–39, and 1946–50. The settlers of the first wave were almost exclusively Galician peasants who emigrated with their families, often coming equipped with the essential agricultural implements and even with seed. This first group emigrated with the intention of settling in the United States, but because of difficulties with the United States Department of Immigration they applied for and were granted entry into Argentina. Here they were sent to the northernmost province of Argentina – Misiones – an almost unpopulated region of subtropical forest and pampa, which required cultivation. The new settlers were each sold 50 ha of government land and were allotted food supplies, seed, agricultural implements, and received other forms of assistance. Some of

the Ukrainian immigrants settled in Buenos Aires and its environs, particularly in the town of Berisso. The greatest influx of Ukrainian immigrants to Argentina in this period occurred between 1900 and 1903, and by the First World War they numbered upwards of 10,000.

The second wave of immigrants (1922–39) was a more varied one. It consisted of Ukrainians from Galicia (about 28,000 between 1922 and 1930), Volhynia and Polisia (together about 20,000), Transcarpathia (2,000), and Bukovyna (1,000), as well as political émigrés from central and eastern Ukraine. Members of the intelligentsia, especially former military personnel, immigrated with the peasantry. During this period existing colonies in Misiones, Buenos Aires, and Berisso grew, and new communities developed in the provinces of Chaco, Mendoza, Formosa, Córdoba, Entrè Ríos, Santa Fè, Río Negro, etc.

The last period of Ukrainian immigration to Argentina (totaling about 6,000 between 1946 and 1950) was made up of displaced persons from camps in Germany and Austria. A large percentage of them were well-educated and professional people. However, because of the economic crisis of 1950–2 and the consequent difficulties in finding work in some fields, a number of these immigrants departed to the United States and Canada. A movement back to the Ukrainian SSR, encouraged by the Soviet Union, also took place in the late 1940s among members of the Sovietophile Ukrainian community. The resulting decreases in the Ukrainian population of Argentina were partially balanced by the resettlement of Ukrainians from the neighboring countries of Paraguay and Uruguay (where living conditions were much harsher), and by the return from the Ukrainian SSR of a number of disillusioned Sovietophiles who were fortunate enough to obtain the Soviet government's permission to leave.

A lack of statistical data makes it difficult to establish precisely the numerical strength of the Ukrainian population of Argentina. The first period of immigration brought about 10,000–14,000 settlers; the second, about 50,000. Of the immigrants of the third period there remain about 5,000. The overall Ukrainian population of Argentina (including natural population growth, which was very high), could be estimated at 180,000–200,000. As a result of internal migrations, Ukrainians now inhabit almost all of the Argentinian provinces, with the greatest numbers in the following: *Buenos Aires (the capital and the surrounding towns of La Plata, *Berisso, Verónica, Punta Indio), about 100,000; *Misiones (*Apóstoles, Oberá, Posadas, Leandro N. Alem, Las Tunas, etc), about 40,000; *Chaco (Sáenz Peña, Villa Ángela, Las Breñas, San Bernardo, etc), about 20,000; Mendoza (Boven, La Escandinava, Colonia Rusa, etc), about 10,000. There are smaller populations in the provinces of Formosa, Río Negro, Córdoba, Santa Fè, etc.

Religious life. Approximately two-thirds of the Ukrainians in Argentina belong to the Ukrainian Catholic church and less than one-fourth to the Ukrainian Orthodox church. The remainder are Evangelical Baptists, adherents of various sects, or do not specify their religion. Active participation in organized religious life is relatively low, especially in urban areas and in the provinces that had no congregations for an extended period of time.

The Ukrainian Catholics had no clergy of their own during the first 10 years of their settlement in Argentina.

The Ukrainian Catholic church in Apóstoles, Argentina

The Prosvita society building in Berisso, Argentina

The Poles and Russians took advantage of this situation by attempting to convert Ukrainians to Roman Catholicism or to the Russian Orthodox faith; they were partially successful. Numerous immigrants who refused to change their faith did not baptize their children or get married or buried by the church. Instead, with their own resources, they built churches and chapels where they gathered for communal prayers. In March 1908, the Basilian priest Rev K. Bzhukhovsky came to Argentina from Brazil at the instruction of Metropolitan A. Sheptytsky. He was replaced one year later by Rev Ya. Karpiak. These two priests succeeded in laying the foundations of an organized church life in the province of Misiones, and their work was continued by Rev I. Senyshyn (1910–25) and Rev. S. Vaprovych (1927–35). The organization of church life in the province of Buenos Aires was initiated by Rev I. Maika (1940–50) and continued by the *Basilian monastic order (OSBM) with the help of the secular clergy (Rev. I. Baluk and Rev M. Kunytsky). In 1968 the Vatican created an exarchate for Ukrainian Catholics in Argentina under Bishop A. *Sapeliak, and in 1978 raised it to the status of an eparchy.

In 1979 the Argentinian eparchy of the Ukrainian Catholic church consisted of 11 parishes, 22 priests (10 Basilian Fathers, 5 Salesians, 2 Franciscans, 1 Orionist, and 3 secular priests), and 90 nuns (*Basilian order of nuns – 75; *Sisters Servants of Mary Immaculate – 10; Catechist Sisters – 5).

Ukrainian immigrants of the Orthodox faith similarly lacked religious guidance for many years. The first Orthodox center, in the community of Tres Capones in Misiones, was formed by Ukrainian Galicians who converted to the Orthodox church in 1908. Their parish priest, until 1943, was Rev. T. Hnatiuk from Volhynia. The Ukrainian Autocephalous Orthodox church was formally established only in 1946, when a large group of Orthodox immigrants, together with its clergy, arrived in Argentina. Organizational efforts, including the formation of the Orthodox Brotherhood of the Holy Protectress, were begun by Rev I. Yaroslavsky and continued by Rev B. Ariichuk and others. The Ukrainian Orthodox church in Argentina fell under the successive jurisdictions of Metropolitan P. Sikorsky in Europe, and Archbishop I. Huba and Metropolitan I. Teodorovych of the United States. For a time it formed part of the South American eparchy under I. Skakalsky, a hierarch of the Ukrainian Orthodox Church in the USA. The Orthodox church in Argentina consists of four parishes.

The Ukrainian Evangelicals originally belonged to the

Slavic Union of Evangelical Christians and Baptists. In 1955, however, on the initiative of M. Bakhor and other pastors, they formed the independent Ukrainian Alliance of Evangelical Christians and Baptists. In early 1979 this association represented three evangelical communities and had its headquarters in Oberá, in the province of Misiones (also the home of the Ukrainian Biblical Institute).

Cultural and political life. In Misiones priests were active in the organization of community life. Rev Ya. Karpiak established the first educational society – the Shashkevych Reading Room in Apóstoles in 1910. E. Ananevych established a similar society in Azara in 1912 and a social club named Ukraina in Apóstoles, which has been intermittently active to the present day (now known as the Ukrainian Social Club). Community groups and institutions were organized in other localities throughout Misiones. Such activity gradually decreased, with only sporadic resurgences such as the erection of T. Shevchenko monuments in Apóstoles and Oberá. Ukrainians in the province of Buenos Aires began an organized community life with the formation of various groups, such as the Moloda Ukraina dramatic ensemble, formed in Berisso in 1924 and renamed the Prosvita society in the same year. A second Prosvita society was organized at the same time in Buenos Aires, and the two groups joined to form a larger organization which subsequently established branches throughout the province of Buenos Aires as well as in several other provinces. This society could not meet all the needs of the community; hence other groups were formed: in 1931, the Sokil society, devoted to sports and paramilitary activities, and in 1933, the Ukrainian Riflemen's Hromada, with a paramilitary and political (nationalist) character. Both of these organizations established branches and in 1938 joined together to form the *Vidrodzhennia society (until 1939 – the Organization for the Rebirth of Ukraine). Prosvita and Vidrodzhennia were the two major Ukrainian organizations; other groups formed, but they were relatively short-lived.

The last immigration strengthened the two existing societies and imbued them with differing political orientations: Prosvita became associated with the *Organization of Ukrainian Nationalists (Bandera faction), Vidrodzhennia with the Organization of Ukrainian Nationalists (Melnyk faction). New organizations were also created, and the following are still in existence today: the Brotherhood of the Holy Protectress and the Ukrainian Catholic Alliance; the youth organizations Plast, the Ukrainian Youth Association (SUM), and the Organization of Ukrainian Youth (OUM); the Ukrainian Veterans Association (SUV), the Brotherhood of Former Soldiers of the First Ukrainian Division of the Ukrainian National Army and the Symon Petliura Legion; the cultural organization – Ukrainian Information and Publishing Institute; the political organization – Society of Friends of the Ukrainian National Council; women's organizations – the *Ukrainian Women's Association of Argentina, the Alliance of Prosvita Women, and the Organization of the Ukrainian Women of Vidrodzhennia; and professional organizations – the Association of Ukrainian Merchants, Businessmen, and Professionals, and the Society of Argentinian-Ukrainian Graduates. Each of these organizations, with headquarters in Buenos Aires, and the Sokil society in Cordoba, are represented in the Ukrainian Central Representation, an official umbrella organi-

zation established in 1947 at the first congress of Ukrainians in Argentina. The activities pursued by some of these groups are often very limited. The most varied and dynamic work is done by the two larger societies, Prosvita and Vidrozhennia. They organize schools, libraries, theatrical groups, choirs, resorts, credit co-operatives, and so on. The Sovietophile Ukrainians in Argentina also developed their own organizations, including the Shevchenko Society, the Franko Society, and later the Ostrovsky Society and the Maiakovsky Club. There has been little or no contact between the Sovietophile and nationalist groups.

Economic life. Early settlers in Misiones suffered great hardships in adapting to the unfavorable subtropical climate, fighting banditry, and the like. Nevertheless, in a short time they were actively involved in agriculture and cattle raising, activities initially geared only to the fulfillment of basic family needs. With time, however, a more monocultural type of market farming was developed. Today Ukrainian farmers in Misiones cultivate primarily tea (*yerba maté*), rice, oranges and lemons, and, in some areas, sugar cane and cotton. The provinces of Chaco and Formosa produce cotton, sorghum, and corn; forestry is also important there. In the province of Mendoza, the primary agricultural activities are viticulture and fruit cultivation; in Río Negro, fruit cultivation, forestry, and the cultivation of hops; and in the provinces of Buenos Aires, Santa Fe, and Entre Ríos, the cultivation of wheat, corn, and other grains.

In urban areas immigrants initially worked either in the most physically demanding manual jobs (in railroad, subway, and port construction or as unskilled factory labor), or as janitors, domestics, seasonal laborers, etc. In a relatively short time many of them acquired the necessary qualifications for better jobs. The number of skilled and professional people increased significantly with the last immigration. Ukrainian industrial and commercial enterprises were established, and service agencies of various kinds appeared.

Many young Ukrainians have taken advantage of the fact that Argentina provides free university education, and the Ukrainian community has produced a significant number of graduates in professional fields.

Schools and education. Ukrainian schools in Argentina are mostly supplementary Saturday or Sunday schools. There are only four full-day schools (two in Apóstoles, one in Posadas, one in Berisso), under the administration of the Basilian Fathers; the language of instruction is Spanish, and recently no Ukrainian subjects have been offered. Most of the supplementary Ukrainian schools are sponsored and operated by Prosvita and Vidrozhennia and by the church parishes. The first Ukrainian school was organized in 1910 by Rev I. Senyshyn in Apóstoles. In 1967 there were about 300 children enrolled at the elementary level in about 20 schools in metropolitan Buenos Aires and in Berisso. The courses are taught by laymen, priests, and nuns. In 1979 the number of schools in Buenos Aires dropped to 15, and enrollment to 200. Ukrainian studies at the secondary and higher levels have been offered at the Buenos Aires branch of the Ukrainian Catholic University since 1967.

The youth organizations engage in some educational work. The main activities of these organizations are periodic meetings, summer camps, sports programs, folk-dancing instruction, and the like.

Ukrainian publications in Argentina

The Ukrainian press in Argentina

Press, publishing, radio. Since 1927 about 20 Ukrainian newspapers and periodicals have appeared in Argentina, the most important of which have been the following: the weeklies *Ukrains'ke slovo* (ed H. Holiian) and **Nash klych* (eds Ye. Onatsky and M. Fesolovych); the religious monthlies **Zhyttia* (ed Rev V. Kovalyk), **Dzvin* (ed Rev B. Ariichuk), and *Yevanhel's'ka zirka* (ed M. Bakhor); the community and literary monthlies **Ovyd* (ed M. Denysiuk) and **Porohy* (ed I. Kachurovsky); the humorous and satirical montly **Mitla* (ed Yu. Serediak); and irregular periodicals such as *Ucrania Libre* (a Spanish-language review, ed Martínez Codo). Only *Ukrains'ke slovo* and *Nash klych* have survived, as the official organs of the societies Prosvita and Vidrozhennia respectively. The M. Denysiuk Publishing Co was active from 1949 to 1960; at present the Yu. Serediak Publishing Co is most prominent. Newspaper and journal editorial boards have put out occasional publications, as have various other institutions.

The first Ukrainian radio program 'Vil'na Ukraina' was established through the efforts of V. and L. Ivanytsky. Subsequently, other programs appeared, among them Ukrainian cultural programs, aired on the national radio station. Today 'Vil'na Ukraina' (run by R. Zinka) is still on the air, as are several Ukrainian radio programs in Oberá, Misiones, and San Bernardo (Chaco province). Initially Ukrainian-language programming was permitted; however, a bill passed later by the government allowed Spanish-language broadcasting only.

Art, literature, scholarship. Few Ukrainians were active in the arts or scholarship in Argentina before 1947, with the exception of the prominent graphic artist, painter, and caricaturist V. Tsybmal, who came to Argentina with the first wave of immigrants. A significant number of artists and scholars settled in Argentina between 1947 and 1949, but the majority of them either emigrated or died soon after. Among the individuals who were active in the arts were the painters B. Kriukov, O. Klymko, V. Lasovsky, L. Hrytsai, O. Hurska, V. Kaplun, A. Sokil; the sculptors K. Buldyn, P. Kapshuchenko, M. Holodyk; and the architects Yu. Shulminsky and V. Hrynenko. Literary figures of note included Yu. Tys-Krokhmalik, A. Halan, O. Satsiuk, I. Kachurovsky, and Ye. Onatsky; personalities in Ukrainian theater included H. Hryhorenko, V. Maksymets, A. Kabantsiv, T. Lykholai, O. Khlebych, H. Andreadis, M. Holodyk; and in music the pianists T. Mykysha and V. Suprun and the violinists the Chumachenko brothers. In choral art the choir Surma (director V. Vasylyk) and the National Choir (director I. Kopitović, a Croatian) are worthy of mention. The Prosvita society sponsors a folk-dance ensemble.

The following were prominent in the area of scholar-

ship in Argentina: Yu. Poliansky, a professor of geology at the University of Buenos Aires; B. Halaichuk, a professor of international law at the Catholic University in Buenos Aires; the literary scholar and folklorist Ye. Onatsky; and the soil scientist I. Bandura. There were other university professors: Yu. Shulminsky, M. Livsha, M. Vasylyk, I. Lypynsky, and I. Shyian. In the 1950s the majority of individuals involved in the arts or sciences were members of the Association of Ukrainian Scholars, Writers, and Artists.

Ukrainians in the economic and social life of Argentina. In cultivating the virgin lands, the Ukrainian immigrants made a great contribution to the development of the Argentinian national economy, especially in the provinces of Misiones, Chaco, and, to a lesser extent, Mendoza. Their contribution to industrial development was small, however.

Participation in the social and political life of the country is evident primarily in the provinces of Misiones and Chaco, where Ukrainians were involved in the local government. Among these public figures were the long-time mayors of Apóstoles Rev I. Senyshyn and O. Varenytsia, the mayor of San Bernardo (in Chaco) A. Baluk, the senator R. Hnatiuk, and the Roman Catholic bishop L. Kruk. B. Halaichuk was an advisor in the Ministry of Foreign Affairs.

The assimilation of Ukrainians in Argentina, though less complete than that of the Poles and Italians, has been quite pronounced. The consequences of this process are seen primarily in the decline of Ukrainian culture and in the lack of participation in organized forms of ethnic life. Recently, a renewed ethnic consciousness has been evident among Ukrainians, particularly in the Catholic community.

Argo. A literary collection published in Kiev in 1914, with many poems dedicated to the sea. Among the contributors were H. Hryhorenko, N. Kybalchych, O. Pchilka, H. Khotkevych, M. Cherniavsky. The most important piece was a draft of an unfinished dramatic poem by Lesia Ukrainka 'Na predmisti Aleksandrii' (On the Outskirts of Alexandria).

Arians. See Socinians.

Arka (Ark). A monthly journal of literature, art, and criticism published in Munich from July 1947 to February 1948 by the publishers of **Ukraïns'ka trybuna* in cooperation with the publications committee of the artistic-literary organization *MUR. Eight issues of the journal appeared. In 1947 *Arka's* editorial board consisted of the following: V. Petrov, Yu. Kosach, B. Nyzhankivsky, Z.

Tarnavsky, and G. Shevelov (Sherekh), with J. Hnizdovsky as artistic designer. In 1948 Shevelov became editor in chief. *Arka* maintained a high level of artistic and theoretical quality, informing the Ukrainian reader about Western creative trends.

Arkan. An age-old Ukrainian folk dance, common to the *Hutsul region. The arkan is danced exclusively by men in a closed circle or semicircle. The rhythm of the dance is 2/4.

Mykola Arkas

Arkas, Mykola, b 7 January 1853 in Mykolaiv, d there 26 March 1909. Arkas was an active figure in the areas of culture and education; he was a composer and an amateur historian. After graduating from Odessa University, he worked in the Mykolaiv Naval Office (1875–99). Later he lived on his estate in the villages of Khrystoforivka and Bohdanivka, Kherson gubernia, where he established, at his own cost, a Ukrainian-language elementary school. The school was closed by the authorities after two years of operation. Arkas was one of the founders, and president for life, of the Prosvita society in Mykolaiv. He recorded and arranged about 80 Ukrainian folk songs and composed romances and duets. His major work was the opera *Kateryna* (1891), with his own libretto, based on the poem by T. Shevchenko. *Kateryna* was first staged in Moscow in 1899 by M. Kropyvnytsky, and the piano score was first published in 1897. Arkas was the author of the popular *Istoria Ukraïny* (History of Ukraine, St Petersburg 1908) and wrote lyric poetry. His life and activities are described in L. Kaufman's *Mykola Arkas* (Kiev 1958).

Arkas, Zakharii, b 1793 in Litókhon, Greece, d 4 April 1866. Historian and archeologist of Greek descent. Arkas graduated from the military school in Mykolaiv, served in the Russian navy, and attained the rank of lieutenant general. He was a full member of the Odessa Society of History and Antiquities and the director of the naval library in Sevastopol. Arkas did research on the Greek colonies along the northern Black Sea coast and on the history of the Black Sea fleet. He published a number of works in *Zapiski Imperatorskogo Ódesskogo obshchestva istorii i drevnosti*.

Arkhangelsk Gospel. A Church Slavonic text of 178 folios, found in northern Russia, but written (copied from an Old Church Slavonic original) by several (four?) scribes at the end of the 11th century in Ukraine. Most important for the study of Old Ukrainian phonetics is the second part (sheets 77–175), which was transcribed by

the scribe Mychka. The third part is dated 1092. The language of the Arkhangelsk Gospel was studied by A. Diuvernua, E. *Karsky, R. Trautmann, M. Sokolova, N. Durnovo, P. Buzuk, and others. The manuscript, which was published in 1912 using photozincography, is preserved in the Lenin Library in Moscow.

Arkhangelsky, Andrei [Arxangel'skij, Andrej], b 8 December 1879 in Riazan, Russia, d 16 April 1940 in Moscow. Arkhangelsky was a renowned Russian geologist and a member of the Academy of Sciences of the USSR. His geological studies of Eastern Europe include works on the geology of the Black Sea, the northwest regions of the Donbas, the Kerch Peninsula, and the Chernihiv region.

Arkharov, Volodymyr [Arxarov], b 27 February 1907 in Odessa. Physicist, full member of the Academy of Sciences of the Ukrainian SSR since 1965. In 1972 Arkharov joined the Donetsk branch of the Institute of Problems of Material Science of the Academy of Sciences of the Ukrainian SSR and Donetsk University. His works deal with the physics of solids and the structure of metals.

Arkheologicheskaja letopis' Iuzhnoi Rossii (Archeological Chronicle of Southern Russia). A periodical published in Kiev, first as a monthly supplement to **Kievskaja starina* (1899–1901) and then (1903–5) as a separate bimonthly journal edited by M. *Biliashivsky. The journal was devoted to studies of historical monuments and of applied art.

Arkheolohiia (Archeology). A publication of the *Institute of Archeology of the Academy of Sciences of the Ukrainian SSR which was issued in Kiev in two series: in 1947–70 (24 vols) and since 1971 (36 issues by 1981). The serial contains materials about archeological discoveries in Ukraine, theoretical and methodological articles on archeological research, and studies of Ukraine's prehistoric and ancient history.

Arkhimovych, Lidiia [Arximovyč, Lidija], b 26 October 1916 in Kiev. A musicologist, in 1947 Arkhimovych became a research associate at the musicology department of the *Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR in Kiev. In 1969 she became director of the theater arts department of the same institute. Her works include *Ukraïns'ka kliasychna opera* (Ukrainian Classical Opera, 1957) and *Shliakhy rozvytku ukraïns'koï radians'koï opery* (The Development of Ukrainian Soviet Opera, 1970). She also co-authored *M.V. Lysenko. Zhyttia i tvorchist'* (M.V. Lysenko: His Life and Works, 1952); *Muzykal'naia kul'tura Ukrainy* (The Musical Culture of Ukraine, 1961); and *Narysy z istorii ukraïns'koï muzyky* (Essays on the History of Ukrainian Music, 2 vols 1964).

Arkhimovych, Oleksander [Arximovyč], b 23 April 1892 in Novozybkov in Chernihiv gubernia (now Briansk oblast, RFSR), d 19 January 1984 in Rosendale, New York. Botanist specializing in plant cultivation and selection, graduate of Kiev University (1918) and the Kiev Polytechnical Institute (1922). Arkhimovych worked as a researcher at the Ukrainian Academy of Sciences (1919–23) and taught at institutes of agriculture in Kiev, Bila Tserkva, and

Oleksander Arkhimovych

Zhytomyr (1934–43). He emigrated to Germany, where he taught at the Ukrainian Technical and Husbandry Institute (1945–8), then to Spain (1948–52), and in 1953, to the United States. Arkhimovych was a full member of the Shevchenko Scientific Society and the Ukrainian Academy of Arts and Sciences in the United States (president of the academy, 1962–70). In the 1950s and 1960s he worked closely with the Institute for the Study of the USSR in Munich. He has published studies on plant biology, the cultivation and selection of field crops (particularly sugar beets), the geography of field crops in Ukraine, and agriculture in the Soviet Union.

Arkhiv Iugo-Zapadnoi Rossii (Archive of Southwestern Russia). Published by the Temporary Commission for the Analysis of Ancient Documents in Kiev in 1859–1914. The *Arkhiv* is divided into eight parts or series. The first part consists of twelve volumes of materials on the history of the church, edited by O. Levytsky, T. Lebedyntsev, S. Ternovsky, S. Golubev, and V. Antonovych. The second part consists of eight volumes of documents pertaining to the nobility's self-rule and was edited by M. Ivanyshchyn, I. Kamanin, and M. Storozhenko (publ 1861–1910). The third part consists of six volumes of materials on the Cossacks and Haidamakas, edited by V. Antonovych, I. Kamanin, and N. Molchanovsky (publ 1863–1914). The fourth part, edited by V. Antonovych, is one volume (1867) of documents on the family histories of the nobility. The fifth part deals with towns and is in two volumes (1869–91), edited by V. Antonovych and I. Kamanin. The sixth part consists of two volumes (1870–6) of materials about the peasantry, edited by V. Antonovych and I. Novytsky. The seventh part deals with the colonization of Right-Bank Ukraine up to the end of the 17th century and consists of three volumes (1886–1905), edited by M. Vladimyrsky-Budanov. The eighth part consists of six volumes (1893–1911) of materials on the administration and internal affairs, edited by M. Hrushevsky, O. Levytsky, M. Vladimyrsky-Budanov, and M. Dovnar-Zapolsky. I. Novytsky prepared an index of personal names (1878) and an index of geographical names (1883).

Arkhiv Radians'koï Ukrainy (Archive of Soviet Ukraine). A journal of the Central Archival Administration of the Ukrainian SSR published in 1932–3 in Kharkiv as a successor to *Radians'kyi arkhiv* and *Biuletyn' Tsentral'noho arkhivnoho upravlinnia URSR*. Eight issues of the journal were published.

Arkhivna sprava (Archival Affairs). A journal published in Kharkiv by the Central Archival Administration of the Ukrainian SSR in 1926–31 (15 issues). The journal published articles about the theory and problems of managing archives, and documents and materials on the history of the 19th- and 20th-century revolutionary movement in Ukraine. It was succeeded by *Radians'kyi arkhiv* (1931–2).

Arkhivy Ukraïny (Archives of Ukraine). Since 1960 a bimonthly bulletin of the Chief Archival Administration of the Council of Ministers of the Ukrainian SSR. From 1947 to 1965 it was called *Naukovo-informatsiyni biuleteni' Arkhivnoho upravlinnia URSR*. The bulletin publishes documents, historical articles, bibliographies, and materials about archeography, historical sources, and archives. In 1949–57 the bulletin was published in Russian.

Arkhypenko, Oleksander. See Archipenko, Alexander.

Arkhypenko, Yevhen [Arxypenko, Jevhen], b 15 September 1884 in Kaharlyk, Kiev gubernia, d 14 July 1959 in Dornstadt, Germany. Agronomist. Arkhypenko published the journals *Ukrains'ke bdzhil'nytstvo* (St Petersburg 1906–9) and *Rillia* (Kiev 1910). In 1919 he was minister of agriculture of the UNR. From 1921 he lived in Volhynia, where he published *Ukrains'ke pasichnytstvo* until 1928. He wrote several textbooks on beekeeping. In 1944 he emigrated to Germany.

Armashevsky, Petro [Armaševs'kyj], b 1851 in Novozybkov, Chernihiv gubernia, d 1919. Geologist and petrographer, professor at Kiev University from 1885. Armashevsky drew a geological map of the Chernihiv and Poltava regions and determined Paleozoic sedimentation in Volhynia (1898) and the exact stratigraphy of the Paleogenic sedimentation of Ukraine (1903). He was the first to put forward the hypothesis concerning the aqueous origin of loess; he studied soil erosion in the region of Kiev and did research in hydrogeology.

Armavir. ix–22. City (1981 pop 165,000), founded 1848, now under the regional administration of Krasnodar krai of the RSFSR. It is situated at the mouth of the Kuban River at the foot of the Caucasus. The city is a railroad junction and has food, machine-building, woodworking, and light industries. There is also a pedagogical institute affiliated with the Krasnodar Polytechnical Institute, a theater, and a regional museum.

Armed forces. See Military formations.

Armenian Cathedral in Lviv. A cathedral built in 1363–70 and designed by the architect Dorko (aka Doring) from Kaffa in the Armenian church style of the 14th century, but with Romanesque, Gothic, and old Galician architectural elements. The cathedral is part of a complex of buildings consisting of the former monastery of the Armenian Benedictine monks, a cemetery, an archbishop's residence from the 16th century, and a printing press. The original cathedral had three apses and a twelve-sided tent-shaped dome. The vault and windows are bow-shaped. On the south side there is an open gallery in the Renaissance style, and on the east side, a portal. In 1570–71 a belfry in the Gothic-Renaissance style was added by the architect P. Krasovsky. In the 17th

century a sacristy with tomb monuments on the walls was built on the west side. In 1630 the main nave of the church was added; in 1723 it was restored in the European baroque style. In 1726 a decorative bas-relief in wood, entitled *Golgotha*, was added to the exterior. In 1908 the third part of the building – the western facade – was completed in a pseudo-oriental style by the architect F. Menchynsky.

In the 1920s the church was extensively restored. In the process fragments of Byzantine frescos of the 15th–16th century by Ukrainian painters were discovered in 1925. New murals were painted by Ya. Rozen. In the 1960s the cathedral, one of the most interesting architectural monuments in Lviv, was converted into a repository for the icons of the Lviv Museum of Ukrainian Art.

S. Yaniv

Armenians. Armenian settlements first appeared in the territory of present-day Ukraine in the 11th century. Before that time Armenians came to Ukraine only occasionally, as merchants, physicians, or interpreters. In the second half of the 11th century the attacks of the Seljuk Turks on Armenia gave rise to periodic waves of Armenian emigration to Ukraine. By the middle of the 11th century there was an Armenian colony in Kaffa (present-day Teodosiia), and in the latter part of that century a colony arose in Kiev, which grew into a community of considerable importance in the 12th century. At the time an Armenian physician named Agapit gained fame in Kiev and treated Prince Volodymyr Monomakh. The capture of eastern Armenia by the Tatars in 1243 led to a mass exodus of Armenians to the Crimea. Kaffa, then an autonomous Genoese city-state, continued to be the major center of the Armenian people. Other Armenian centers in the Crimea were Soldei (Surozh in ancient Ukrainian, now Sudak) and Solkhat (now Staryi Krym). When the Crimean peninsula fell under Tatar rule, Armenian merchants continued to be tolerated. New Armenian immigrants to the Crimea adopted the Cuman language of the local Armenians and subsequently brought it to Ukraine. By the 13th–14th century the Armenians represented such a large percentage of the Crimean population that the peninsula came to be known as Armenia Maritima or Armenia Magna.

The fall of the Armenian state in Cilicia in 1375, the persecution of Armenians in the Crimea after the Turkish conquest of 1475, and the religious persecution of Armenians in Moldavia in the mid-1500s contributed to the expansion of Armenian emigration to Ukraine, primarily to Galicia, Podilia, and Volhynia. This periodic influx of Armenians continued until the 18th century. During the 13th and 14th centuries new communities developed in Kamianets-Podilskyi, Bar, Seret, Lviv, Bilhorod, Volodymyr, Lutske, and Zamostia, and close to Ukraine, in Suceava; from the 15th to the 17th century – in Uman, Stanyslaviv, Pidhaitsi, Horodenka, Buchach, and Brody; during the first half of the 18th century – in Mohyliv-Podilskyi, Rashkiv, Obertyn, and Kut; during the second half of the 18th century – in Odessa and Balta. At least 70 Armenian colonies are known to have existed on the territory of present-day Ukraine.

The greatest concentration of the Armenian population was in Lviv, where in the mid-1600s they numbered almost 2,500, or one-tenth of the total population. The second largest community was in Kamianets-Podilskyi.

The Armenian colonies in Ukraine usually had their own community organizations and their own priests and bishops of the Armenian rite. Lviv, having been the seat of the Armenian bishopric since 1365, was the center for Armenian religious life. In Lviv the Armenian community was self-governing until 1469; in Kamianets-Podilskiy, until 1787; and in most other communities, until the end of the 18th century. The larger Armenian communities exercised self-rule on the basis of a common-law system called the Armenian Statute, which was approved in 1519 with minor changes by the Polish king Sigismund I and remained in force until 1780–1. The Armenians brought an organization of charitable and ecclesiastical brotherhoods to their communities in Ukraine. The Armenian bishop in Lviv was subordinate to the catholicos-patriarch in Echmiadzin until 1667, when Bishop M. Torosovych (Torosowicz) agreed to a union with Rome. The Armenian Uniate church retained its own rite. During the second half of the 17th century the Armenian communities throughout Galicia and Podilia accepted the union.

Merchants and artisans constituted the majority of the Armenian population in Ukraine. In the 16th and 17th centuries the merchant class belonged to the wealthiest stratum of Ukrainian society. For centuries Armenian merchants acted as middlemen in the trade of Ukraine and Poland with Turkey and Persia. The artisans occupied themselves primarily with goldsmithing, manufacture of weaponry, weaving, and embroidery.

The Armenians developed a lively cultural life in their communities. During the 16th and 17th centuries literature and chronicling (in Armenian and Cuman), linguistics, medicine, and the artistic transcription of books flourished. The monumental architecture of the Armenians is best represented by the *Armenian Cathedral in Lviv, the church in Teodosiia (11th century), and the Surb-khach monastery in the Crimea (14th century). The Armenians also had their own theaters and schools. There was an Armenian college in Lviv from 1664 to 1781, where the languages of instruction were Latin and Armenian until 1701 and Armenian and Ukrainian from that time on.

From the mid-17th century the Armenians in Ukraine were rapidly becoming Polonized, a process that was partially influenced by the church union with Rome. The new influx of Armenian-speaking immigrants, primarily from the Balkans, in the 18th century had little effect in altering the tendency towards Polonization. Increased Jewish activity in trade caused the decline of the Armenian merchant class. In spite of assimilation several thousand Armenians preserved their church rite, and an Armenian Catholic archeparchy continued to exist in Lviv until 1939.

Just prior to the Second World War the Armenian population in the Ukrainian SSR numbered close to 25,000. This was primarily an urban population, half of which resided in the Crimea. The Armenian population in all Ukrainian ethnic lands, including Subcaucasia, approached 150,000. The largest concentrations of Armenians were to be found in Yevpatoriia, Symferopil, Yalta, Kiev, Kharkiv, Odessa, the Donbas, Sochi, Krasnodar, Armavir, the vicinity of Maikop, Terek oblast, and the town of Kuty in Galicia.

After the Second World War the majority of Galician and Volhynian Armenians emigrated to Poland. In 1970 there were 33,400 Armenians in the Ukrainian SSR (as

compared to 28,000 in 1959), and 90 percent of this population was located in urban areas. Only 33.4 percent preserved their native tongue; 11.1 percent spoke fluent Ukrainian.

Arms. Various means of assault and defense. The basic types of weapons are cutting and thrusting weapons, firearms, nuclear weapons, rockets, defensive armor, and the instruments of chemical, biological, and psychological warfare.

Cutting and thrusting weapons – the sword, saber, battle-ax – and defensive armor – helmet, cuirass, shield, etc – appeared long ago. Before gunpowder was discovered and firearms were invented in the 13th–14th century, the same purpose was served by the sling, bow and arrow, and such assault engines as the ballista, catapult, and battering ram. The bow in its improved forms was used not only as a hunting weapon, but also as a military weapon until the 18th century. Ballistic military engines were used for two millenniums and gave way to the new form of fired artillery only in the 14th century. Projectiles of different types were used for different purposes: rocks, logs, and arrows for smashing; pitch in barrels for burning; scorpions, snakes, and decaying corpses for poisoning.

The development of arms in Ukraine during the Princely era was influenced by the steppe hordes, Varangians, and Byzantines. Offensive and defensive weapons consisted of slings, spears under various names (*kopiie, sulytsia, rohatyna, oskep*), swords, sabers, battle-axes, bows and arrows, and maces. Defensive arms consisted of helmets (sometimes with visors), hauberks or suits of armor, and shields. War engines of the catapult and battering-ram type were used and were known as *porok* and *vozhrada*.

Beginning with the 14th century, firearms came gradually into use in Ukraine. Heavy firearms – field and fortification artillery – appeared first. Much later small firearms appeared. The bow in its advanced forms of the *arbalest* and *kushcha* (cross-bow) was used up to the 18th century in Ukraine.

The arms of the Cossacks consisted of rifles, pistols, piolettes, bows, sabers, spears, battle-hammers (*kelepy*), and battle-picks (*chekany*). In contrast to Western European armies, the Cossack Host used no defensive arms such as the helmet or armor. Only the Cossack officers wore them, and then only for ceremonial functions. The first cannons were imported into Ukraine in 1394, and by 1580 the Cossacks were making their own at the Zaporozhian Sich. The various types of cannon were called *pushka*, *tarasnytsia*, *shrubnytsia*, *serpentyna*, *petriera*, *falkon*, *kartavna*, etc.

In the Princely era and the Cossack period the more complicated and advanced arms were imported into Ukraine from Byzantium, Western Europe, Turkey, the Near East, and, after 1654, Muscovy. But local craftsmen made arms too: swords, sabers, bows, arrows, muskets, cannons, etc. The first cannon foundry was established in Lviv in 1468. Under the rule of B. Khmelnytsky and I. Vyhovsky cannons were made in Korsun and probably in Pereiaslav. In the Hetman state the main centers of gun-making were Hadiache, Baturyn, and Hlukhiv. Hetman I. Mazepa paid particular attention to developing his artillery.

During the struggle for Ukraine's independence in 1917–21 Ukrainian armies used mostly the arms that formerly belonged to the Russian or Austro-Hungarian armies. In mid-1919 all Ukrainian artillery regiments were armed with Russian cannons, mostly three-inch guns, which were considered to be the best in Europe at the time.

In the Second World War Ukrainian military formations such as the Division Galizien used mostly German arms, while the Ukrainian Insurgent Army used both German and Soviet arms.

Armstrong, John Alexander, b 4 May 1922 in St Augustine, Florida. Political scientist. Armstrong received his doctorate from Columbia University. He has taught comparative politics at the universities of Colorado and Columbia and since 1954 has been a professor at the University of Wisconsin in Madison. Armstrong writes extensively on Soviet government and politics and is the author of *Ukrainian Nationalism 1939–1945*, (1955; 2nd edn 1963) and *The Soviet Bureaucratic Elite: A Case Study of the Ukrainian Apparatus* (1959).

Army chaplains. Christian and non-Christian chaplains today serve in all armed forces except those of the Communist countries.

Chaplains served in the armies of the Princely era and the Cossack state. A parish with several clergymen existed for two centuries at the Holy Protectress Church of the Zaporozhian Sich. The regiments of town Cossacks, the hetman guard, and the light-cavalry regiments had their own chaplains and mobile churches.

Ukrainian soldiers in the Austro-Hungarian, Polish,

and Czechoslovakian armies had their own chaplains, who were Ukrainian Catholic or Orthodox clergymen.

The Legion of the Ukrainian Sich Riflemen in 1914–18 had five chaplains: M. Izhak and A. Pshepiursky at first and then A. Bazylevych, Ye. Kushlyk, and Yu. Fatsiievych from 1917. The first Orthodox chaplains in the armed forces of the Ukrainian National Republic were P. Pashchevsky, M. Marynych, and A. Mateiuk, who began to serve in 1917. The principal chaplains of the Army of the Ukrainian National Republic were the Orthodox protopresbyter A. Mateiuk from 1919 and, after his death, the archpriest P. Pashchevsky, who headed the Supreme Office of Army Chaplains, established in 1920. About 20 clergymen served with various divisions and regiments of the army. The future metropolitan of the Ukrainian Orthodox church in the United States, I. Teodorovych, served as the field chaplain of the Eastern Kiev Group under Gen. Yu. Tiutiunnyk. The Ukrainian Galician Army had about 80 chaplains who were headed by A. Kaliata, I. Dydyk, and M. Izhak, and then by the vicar-general of the army, V. Laba, an appointee of Metropolitan A. Sheptytsky. The chaplain of the Carpathian Sich self-defense organization in Khust in 1938–9 was S. Sabol-Zoreslav. The Division Galizien had 19 chaplains (1943–5). V. Laba was the vicar-general of the division. The principal chaplains of the division were, in chronological order, S. Nahaievsky, O. Stasiuk, and M. Levenets. A number of clergymen served in the Ukrainian Insurgent Army as army chaplains. Several of them died in battle.

Z. Stefaniv

Army of the Ukrainian National Republic. The armed forces of Ukraine during the struggle for independence in 1917–21. Unlike the *Ukrainian Galician Army, the regular armed forces of the Western Ukrainian National Republic, the Army of the UNR was never a regular, well-structured organization, but was made up of various armed volunteer units. The history of the UNR army can be divided into three main phases: the periods of the *Central Rada, the *Hetman government, and the *Directory of the UNR, although the formation of its units in all phases was to a large degree spontaneous and chaotic.

During the Central Rada period the UNR army was formed in three ways: (1) by spontaneous detachment of Ukrainian units from the Russian army, forming, on the western front, the *Haidamaka Cavalry Regiment; in Moscow, three Shevchenko regiments; in Symferopil and Chernihiv, the Doroshenko regiments; in Kiev, the *Polubotok Regiment, the *Khmelnytsky Regiment (Bohdanivtsi), and other smaller units; (2) through Ukrainization of Russian army units (at first without, but later with, the consent of the Russian army command); (3) through the reorganization of former army units (eg, the *Sich Riflemen company was formed out of Austrian prisoners of war in Russia) or the creation of new units out of various army personnel (eg, the *Bluecoats were formed out of Ukrainian prisoners of war in German camps and the *Graycoats were formed out of Ukrainian prisoners of war in Austrian camps).

The formation of Ukrainian units in the Russian army was part of the process of general disintegration of the multinational Russian army along national lines that had begun at the front and in the rear immediately after the

February Revolution. Soviets of soldiers' deputies were elected by separate units. In units with a significant number of Ukrainian soldiers, separate Ukrainian soldiers' soviets were formed in parallel with the general soviets (in the rear they were called also soldiers' clubs, assemblies, and committees). Apart from the spontaneous national awakening, an important role in the formation of Ukrainian units was played by the *Ukrainian Military Club (formed in Kiev on 22 February on the initiative of Lt M. Mikhnovsky), which formed the Ukrainian Military Organizing Committee, whose task was to organize Ukrainian volunteer units. The appeals of the committee were very successful and stimulated the first manifestation of Ukrainian military strength during the *All-Ukrainian military congresses in Kiev (the first on 18–21 May 1917, the second on 18–23 June, the third on 2–12 November), which supported the Central Rada unconditionally, called for the separation of Ukrainian units from the Russian army and elected the first military leadership – the *Ukrainian Military Committee.

Instances of spontaneous Ukrainianization on the front became widespread (on the northern front, the 21st Corps; on the Rumanian front, the 10th and 11th corps; on the western front, part of the 9th Corps). In units that were nationally mixed, the Ukrainian soldiers formed their own subunits, in which both discipline and fighting ability were superior and resistance to the Bolshevik appeals for demobilization was stronger than in other subunits. Because of this and the demands of the representatives of the organizing committee, the Russian commander in chief, Gen A. Brusilov, agreed to the official Ukrainianization of some units: the two-division 34th Russian Corps under the command of Gen P. *Skoropadsky (renamed the 1st Ukrainian) and the 6th Russian Corps (renamed the 2nd Sich Zaporozhian Corps) under the command of Gen Mandryka. Of 4 million Ukrainians in the Russian army in 1917, only 1.5 million were Ukrainianized, and the majority of these declared themselves neutral when it came to fighting the Bolsheviks or demobilized under the influence of Bolshevik agitation.

The Central Rada itself had no clear plans concerning military organization and did not recognize the need for a standing army based on compulsory military service. Instead, the concept of *Free Cossacks, a volunteer, territorial, national militia, won out and was ratified by the Rada on 13 November 1917. As a result, on the eve of the Bolshevik invasion, the Central Rada announced the demobilization of the regular army (16 January 1918). Instead of building a standing army the government began recruitment for the national militia, for which uniforms and insignia were already designed. The Ukrainian-Bolshevik war convinced the Central Rada that Ukraine needed a regular standing army. A recruitment plan was worked out for an army that was to be made up of eight infantry corps and four cavalry divisions. Before these plans could be realized the Central Rada was overthrown by the Germans and replaced by the Hetman government. Before the downfall of the Central Rada, the Army of the UNR consisted of the *Zaporozhian Corps (four infantry regiments, one cavalry regiment, and two light-artillery detachments), the Sich Riflemen Regiment, the Bluecoats, the Graycoats (in the process of formation), plus an indeterminate number of Free Cossacks, for a total of approximately 15,000 soldiers.

After the First All-Ukrainian Military Congress, the command of the Army of the UNR was taken over by the Ukrainian Military General Committee, headed by S. *Petliura. After the proclamation of the Ukrainian National Republic on 20 November 1917, a General Secretariat of Military Affairs was formed (general secretary, S. Petliura; chief of the general staff, O. *Hrekov). After the proclamation of the independence of Ukraine on 22 January 1918 the Ministry of Military Affairs of the UNR was formed (M. *Porsh, A. Nemolovsky, and Col O. *Zhukovsky were ministers) and, under its auspices, the Military General Staff was created (headed by Gen O. Hrekov, Gen B. Bobrovsky, and Col O. *Slyvynsky). At first the general staff had several departments (organization, liaison, supplies, training, and artillery), whose number was reduced to only two – the organizational department and the quartermaster's department – after a reorganization by O. Slyvynsky.

During the period of the Central Rada the Army of the UNR was in a constant state of organization. Units that were formed at the front continued to serve there until the armistice, leaving the defense of Kiev and the government mainly to the units of the Kiev garrison (the *Haidamaka Battalion of Slobidska Ukraine, commanded by Otaman S. Petliura, the Galician battalion of the Sich Riflemen, 16 small battalions of Free Cossacks under M. *Kovenko, and the auxiliary student battalion of the Sich Riflemen under Capt Omelchenko, which was routed in the Battle of *Kruty). Such a weak force could not hold Kiev, and the Bolsheviks occupied the city on 8 February 1918. Only at the end of the month, after the Peace Treaty of *Brest-Litovsk and the signing of the armistice with the Central Powers, were the Ukrainian forces, under Gen K. *Prisovsky and Otaman S. Petliura and with the help of the Austro-Hungarian and German armies, able to repel the Bolsheviks. In addition to the battles for Kiev, the Ukrainian forces (the Zaporozhian Corps under Gen *Natiiv and the detachments of Otaman P. *Bolbochan and Otaman V. *Sikevych) occupied the Crimea and the Don region. But the Germans forced the Ukrainian army to leave the Crimea because it was not part of the UNR and, on the eve of the establishment of the Hetman government, reduced the Army of the UNR to the Zaporozhian Corps after disarming the Bluecoats and the Sich Riflemen Regiment.

The Hetman government. Although the government and even the name of the country were changed (to the Ukrainian State), plans for establishing a regular army continued to be pursued. On 24 July 1918 the Council of Ministers passed a law establishing compulsory military service and ratified plans for the organization of the army (formerly proposed under the Central Rada), military courts, and medical services and supplies. In peacetime the army was to consist of 310,000 military personnel in eight territorial corps, with a budget of 1,254 million *karbovantsi* annually. A uniform was not established for the Ukrainian army, but military ranks and insignia were to be based on the German model, and the trident was ratified as the insignia for the cap (it remained so after the fall of the hetman). On 16 October 1918 by proclamation of the hetman, the Cossack organizational system, based on territorial units (several regiments in each unit) and otaman commanders under the hetman, was revived. The Cossacks were to be governed by the Great Cossack Council (with 32 members, some of whom were elected

and others appointed). Although the otaman commanders were appointed, the Cossack system could not be put into effect before the November uprising against the hetman.

Apart from the units that remained from the period of the Central Rada (the Zaporozhian Corps, renamed the Zaporozhian Division; the Zaporozhian and the Black Sea garrisons), some units were formed during the Hetman government: the *Serdiuk Guard Division (in July 1918, 5,000 men), the Graycoats (begun in Austria under the Central Rada), the Sich Riflemen unit (revived as a separate detachment of the Sich Riflemen at the end of August 1918). In the autumn of 1918 commissioned and non-commissioned officer corps and cavalry divisions were formed. In October 1918 the Special Corps was formed of Russian officers, and in the larger cities Russian volunteer-officer companies were formed as part of the Ukrainian army. The armed forces were acquiring a Russian character through the 'State Guard' (Derzhavna Varta), whose composition made it a continuation of the tsarist police, and the district special companies, which had been used for punitive expeditions. In November 1918 the Army of the Ukrainian State numbered 60,000 and was under the authority of the War Ministry. Gen A. *Rogoza, a Russian, was appointed minister by the hetman; Col Kakurin was appointed chief of the general staff; Gen Drozdovsky and Gen Prokhorovych were appointed chief quartermasters.

Although Ukraine was not at war between July and October 1918, the Hetman government took an active interest in the army. However, the Army of the Ukrainian State did not develop beyond the organizational phase, although it did receive a good organizational foundation. Its development was hindered by the officers who were often indifferent or hostile to the Ukrainian movement (to become an officer one had to have a record of active service before the war and many who did were Russians) and by the German high command, which feared a sizable Ukrainian armed force. The situation improved slightly as a result of the personal visit of the hetman to the kaiser in Berlin, but the continuing revolts of the populace against the oppression of the Hetman government and the arbitrariness of the Russian Whites, tolerated by the hetman, forced him to appoint as chief commander of the armed forces Gen F. *Keller, who, on 11 November, abrogated all Ukrainian army regulations and replaced them with Russian ones. Only the November uprising against the hetman, organized by the *Ukrainian National Union (which later designated the Directory of the UNR) saved the Army of the UNR from Russification and the Ukrainian state from absorption into the Russian anti-Bolshevik movement.

The period of the Directory. Although many independent insurgent units (eg, the Dnipro Division, which fell apart after the occupation of Kiev, and the Black Sea Division, which was crushed in battle by the Bolsheviks) took part in the uprising against Hetman P. Skoropadsky, the main part of the Army of the UNR was at first made up of those units that crossed from the hetman's side to the Directory: the Zaporozhian Division, the Graycoats, and the Sich Riflemen Regiment, which expanded into a two-division corps incorporating the Serdiuk units and others and was renamed the *Siege Corps of the Sich Riflemen. Later, on the orders of the Directory, other units were formed: the Volhynia Division (composed of the

hetman's Nalyvaiko Regiment, the Galician Regiment, the Czech-Ukrainian Regiment, and others) and the Podilia Division (made up of various revolutionary groups that were active in Podilia – the Karmeliuk, Zalizniak, Blackhoods [Chornoslychnyky] and other regiments). In December 1918 the General Council (Heneralna Bulava) of the Ministry of War organized the UNR Army into four groups, in accordance with the demands of the front: Left Bank (under Otaman P. Bolbochan, in charge of the Bolshevik front), North Right Bank (under Otaman V. *Oskilko, in charge of the Bolshevik-Polish front), Southern (under Gen O. Hrekov, in charge of the front against the Entente), and Dniester (on the Rumanian front). In February 1919 the Southern and Dniester groups were disbanded, and their units transferred to the Bolshevik front.

Apart from the regular units there were also partisan detachments, commanded by politically inexperienced officers lacking any national consciousness. They willingly rose up against Skoropadsky, but in battles with the Bolsheviks succumbed to their propaganda, declared themselves neutral, and often, in critical moments, would cross over to the Bolshevik side (N. *Makhno, N. *Hryhoriiev, and *Zeleny; see *Partisan movement in Ukraine 1918–22). After the retreat to the Right Bank (spring 1919), the UNR army was again reorganized: small units were amalgamated into 11 divisions (each consisting of three infantry, one artillery, and one cavalry regiment) and divided into five independent detachments: the Sich Riflemen (three divisions) under Col Ye. *Konovalets, the Zaporozhian Group (three divisions) under Col V. *Salsky, the Volhynia Group (two divisions) under Col V. *Petriv, a division under Col O. *Udovychenko, and two divisions under Otaman V. *Tiutiunnyk.

In mid-July 1919 the Ukrainian Galician Army crossed the Zbruch River and, although it continued to exist as a separate unit under its own command, co-ordinated its actions with the UNR army under a common operational command – the supreme otaman's staff. At this time the armed forces of the Ukrainian state consisted of three Galician corps (50,000 men) and five formations of the UNR army (30,000 men). The total fighting strength of the united armies, together with the partisan detachments (N. Makhno in the Katerynoslav region, Anhel in the Chernihiv region, Zeleny in the south, Ya. Shepel in the Lityn region, M. Hryhoriiev in the Kherson region, and others), was about 100,000 personnel (including 35,000 combat troops), 335 cannons, 1,100 machine guns, two air regiments, and armored trains and motor vehicles.

UNR army command. With the establishment of the Directory, military affairs were taken over by S. Petliura. He was designated supreme otaman (commander in chief) and under his authority were put the Ministry of War (headed, in turn, by the generals O. Hrekov, V. Petriv, and V. Salsky) and the acting otaman (Gen M. *Osetsyky), who directed army operations and the general staff. The general staff was again reorganized into a two-quartermaster system (an operational section under Gen Drozdovsky and an organizational section under Gen Kakurin), with appropriate departments (operations, intelligence, foreign relations, etc). After the retreat from Kiev the command of the UNR army was assumed by the staff of the acting army, which consulted with S. Petliura only on crucial decisions. The staff of the acting army was headed by Otaman A. *Melnyk, with V. Tiutiunnyk as second in

command. Gen V. *Sinkler was general quartermaster, Col M. *Kapustiansky was operations chief, and Col M. *Chebotariv was chief of intelligence. After the operational union of the two armies (Galician and UNR), a supreme otaman's staff was created. It was made up of personnel from both armies (Gen M. *Yunakiv was chief of staff, Gen V. *Kurmanovych was general quartermaster, Lt Col K. Dolezhal was in charge of operations, and Lt Col Hrytsiv was in charge of intelligence).

From the First Winter Campaign to the end of the war for independence, the command of the UNR army consisted of Gen M. *Omelianovych-Pavlenko, commander in chief; Col P. *Lypko, chief of staff; and Gen V. *Kushch, general quartermaster. The Ministry of War was headed by Gen O. *Halkyn and then Col V. Salsky. The restored general staff was headed by Gen V. Sinkler, and Gen M. Yunakiv was head of the Supreme Military Council of the UNR.

From December 1918 to the fall of the Directory warfare continued uninterrupted. The front shifted, and at the same time units were re-formed and renamed. After a difficult retreat in the fall of 1919, the UNR army found itself near Chortoryia in Volhynia, surrounded by Polish troops, by the Bolsheviks, and by Denikin's army, without any possibility of maintaining a regular front. It was forced to resort to guerrilla warfare, and on 6 December 1919 the UNR army set out on the First *Winter Campaign. In this campaign the following divisions took part: Zaporozhian, Volhynian, Kiev (Peasant), and some detachments of the Sich Riflemen. In May 1920, 2,680 men returned from the campaign, and they took part in the continuing Ukrainian-Soviet war. In January 1920 the 6th Division, under Col M. Bezruchko, and the revived *Third Iron Rifle Division, under Col O. Udovychenko, were formed from Ukrainian prisoners of war interned in Poland. They were attached to the 3rd and 6th Polish armies, remaining there through the Polish-Ukrainian campaign against the Bolsheviks. At the beginning of the joint Polish-Ukrainian effort, the UNR army was composed of the following divisions: the Zaporozhian, Volhynian, Third Iron Rifle, Kiev, Kherson, and Sich (each made up of three infantry brigades with artillery, one cavalry regiment, and one technical regiment); there was also a separate cavalry division. At the end of the Polish-Ukrainian war in October 1920, the UNR army had 23,000 men. After the Polish-Bolshevik armistice the staff of the UNR army prepared an anti-Bolshevik offensive, but the Red Army began its own offensive, and after intense battles (11–12 November 1920) the Ukrainian army retreated westward. On 21 November the UNR army crossed the Zbruch River and was interned by the Polish authorities.

The war in Ukraine continued, fought by guerrilla detachments under the Revolutionary staff, headed by Gen Yu. *Tiutiunyk. At the beginning of November 1921 the Revolutionary staff ordered a partisan raid on the Right Bank (the so-called Second Winter Campaign) to be carried out by two groups – a Podilian unit and a Volhynian unit, made up of 1,500 volunteers from among the interned soldiers of the UNR army. The Bolsheviks routed both groups. The Volhynian unit was surrounded and defeated near Novyi Bazar; 359 soldiers were executed (23 November 1921).

After a lengthy and difficult confinement in internment camps in Poland (Wadowice, Piotrków, Tuchola, Aleksan-

drów Kujawski, Łańcut, Strzatkowo, Kalisz, Szczypiorno), the interned soldiers of the UNR army were granted the status of émigrés. The staff of the UNR army continued to exist as an institution subordinate to the UNR government in exile. The military traditions of the UNR army were preserved by various Ukrainian veterans' organizations, the most active of which was the Ukrainian Military Association of Former Soldiers of the UNR in France (est 1927).

General characteristics of the UNR army. Having been formed basically by Russian army personnel, the UNR army followed Russian organizational and tactical models. Because of the frequent changes of the front, regimes, and military commands, because of the anarchy created by guerrilla detachments, and because of German and Austrian opposition, the UNR army was never able to complete its organization through conscription or general mobilization and hence remained essentially an army of volunteers. The army had no durable home front and hence no permanent base from which to draw human and material resources. Organization, training, uniforms, arms – all the elements of a normal army – were in the process of organization and subject to the vicissitudes of the Ukrainian revolution (1917–1920).

Arnold, Vladimir [Arnol'd] b 1872, d 1918 in Kherson. A zemstvo statistician. From 1896 to 1899 Arnold headed the agricultural office of the Kherson county zemstvo, where he conducted a study of 124 peasant farmsteads. From 1899 to 1901 he was director of the statistical division of the Kharkiv gubernia zemstvo. In 1904 Arnold published in Odessa the book *Politiko-ekonomicheskie etiuudy* (Politico-Economic Studies), in which he defended the stability of the small farm economy.

Arrest. An action of official authority – deprivation of liberty, apprehension, or taking into custody – with the purpose of bringing a person to justice, securing his/her appearance in court, or forcing him/her to perform some obligation. As a punishment, arrest was not known in the ancient and Kievan Rus' periods. It first appeared during the Lithuanian-Ruthenian period, when a statute permitted incarceration from three weeks to one year and six weeks for insult, violation of home security, and physical injury. Later, during the Hetman state (17th–18th century), imprisonment developed into a common form of

punishment. It continued as such throughout later Ukrainian history under Russian, Polish, and Austrian domination.

In the Ukrainian SSR (and the USSR as a whole) imprisonment stands at the head of the list of punishments provided by the criminal law (Ukrainian Criminal Code of 1961, arts 23 and 25). It is the most common form of punishment applied for serious offenses. Deprivation of liberty, as it is called, can be assigned for a period of up to ten years, and for especially grave crimes and especially dangerous criminals, up to fifteen years. There are no life terms. There are two basic forms of imprisonment: 'colonies (camps) of correctional labor' and prisons; and a combination of both can be imposed. Prisons have two regimes: general and strict. The labor camps, which are spread over remote northern Russian and Siberian areas, many close to the Arctic Circle, have ordinary, intensified, strict, and special regimes. The law provides that the punishment 'shall not have the purpose of causing physical suffering or of degrading human dignity' (Ukrainian Criminal Code, art 22).

At present in the Ukrainian SSR, arrest is also used extensively by the organs of preliminary investigation during pretrial proceedings and by the courts during trial up to the imposition of the sentence (Ukrainian Code of Criminal Procedure of 1961, art 155). According to law, arrest is permitted only by approval of the prosecutor or on his/her or the court's direct order. If no indictment is presented to the arrested person within 10 days, such person should be set free (a principle often violated). The law provides that the preliminary arrest can last not more than two months, or up to three months on the approval of the oblast prosecutor, up to six months on the approval of the republican prosecutor, and up to an additional three months (ie, up to nine months altogether) in exceptional cases on the approval of the USSR prosecutor general. It is known, however, that these limitations are rarely observed, especially in regard to political prisoners. (See also *Criminal procedure.)

Yu. Starosolsky

Arsenal. The center of an armed Bolshevik uprising in Kiev against the Ukrainian government of the Central Rada. On 29 January 1918 the Russian and Jewish workers of the Kiev plant Arsenal, led by A. Ivanov, staged a revolt under the influence of Bolshevik propaganda. They captured some strategic points of the city, such as the Arsenal, Pecherske, and Podil districts, the freight station, and Old City in their attempt to encircle the Central Rada. The rebels were met by units of the Free Cossacks under the command of M. Kovenko, the newly formed Galician-Bukovynian Battalion of the Sich Riflemen led by Ye. Konovalts, and units of the Haidamaka Battalion of Slobidska Ukraine under the command of S. Petliura and M. Shynkar. After fierce fighting the uprising was suppressed by 4 February 1918, and some of the Arsenal rebels were captured. On 8 February when the Red Army under the command of M. Muravev advanced on Kiev, the Central Rada and the Ukrainian troops abandoned the city and retreated to Zhytomyr.

Arsenii of Elasson [Elasons'kyj, Arsenij], b 1549 in Greece, d 1626. Ecclesiastical figure, teacher. After serving as bishop of Elasson, Arsenii settled in Ukraine, where he was rector of the school of the Lviv Dormition

Brotherhood. Together with his students, Arsenii compiled a Greek-Slavonic grammar entitled **Adelphotes* (1591). A description of his journey to Muscovy was published in Paris in 1749.

Jaroslaw Arsenych

Arsenych, Jaroslaw [Arsenyč, Jaroslav], b 24 September 1887 in Berezhiv, Galicia, d 29 June 1953 in Dauphin, Manitoba. Lawyer, judge, and community leader. Arsenych immigrated to Canada in 1904. After attending the Ruthenian Training School in Brandon, Manitoba, he taught in Manitoba and Saskatchewan until 1913. He became a lawyer in 1917, was appointed King's Counsel in 1935, and became a district court judge in Dauphin, Manitoba, in 1947 – all firsts among Ukrainians in Canada. A founder of the Ukrainian Publishing Company (later Trident Press Ltd) and its president for thirty-four years, he was the first rector of the Adam Kotsko Institute in Winnipeg and, during the First World War, the head of the Ukrainian Canadian Citizens' Committee and general secretary of the Ukrainian Red Cross in Canada. He helped to establish the Ukrainian Greek Orthodox church in Canada (serving later on the Consistory), the Ukrainian Self-Reliance League, and the Union of Ukrainian Community Centres (serving on numerous executives). In 1940 Arsenych became the first secretary general of the Ukrainian Canadian Committee, representing the Ukrainian Self-Reliance League.

Art. Art in Ukraine developed under the influence of different internal and external factors in different periods. As a result of historical circumstances and its geographic location between Europe and Asia, Ukraine came into contact with various foreign influences, which were either absorbed into its culture or rejected. For this reason it is important to distinguish between Ukrainian art, ie, art that is linked to the Ukrainian people in spirit and style, and art in Ukraine, ie, art that encompasses all the artistic phenomena that arose on Ukrainian territory.

In ancient times *Greek art and *Scythian art interacted in Ukrainian territory, producing an original style. Later, Byzantine masters, who often settled in Ukraine and became assimilated, were the leading producers of art. During the Renaissance Italian artists immigrated to Ukraine, as did German artists during the baroque period. In the 18th–19th century numerous Polish and Russian artists worked in Ukraine. Today much of the art in Ukraine is produced by non-Ukrainians. Similarly, many Ukrainian artists of the 18th and 19th centuries

contributed to Polish or Russian art and today contribute to the art of the countries to which they have immigrated. These factors must be taken into consideration in defining the nature and the boundaries of art in Ukraine.

The origins of Ukrainian art can be traced back to the Paleolithic age. Carved mammoth tusks from this period have been uncovered in Kiev and other localities in Ukraine. Figures of animals and birds and distorted representations of women, often decorated with curvilinear incisions, were found at the same sites. Drawings of mammoths and stags in stone caves date back to the same time. The type of meander incision found on the mammoth tusks in *Mizyn is unique in Europe and is much older than that found in China or Mexico. The development of art is even more evident in the Neolithic period, when pottery developed particularly rapidly in Ukraine. The ceramic and terra-cotta figurines of humans and animals that belong to the Trypilian culture are ornamented with a carved or painted spiral. The Bronze and Iron ages in Ukraine had a greater impact on the production of ordinary implements and arms than on art. In the middle of the 1st millennium BC Scythian art established itself in Ukraine and, blending with the culture of the Greek colonies in southern Ukraine, produced gold jewelry whose artistry surpassed even that of Greece.

After the decline of the Roman Empire the migrating tribes (Goths, Huns, etc) that crossed Ukraine on their way from Asia to Europe left many traces of their cultures behind. The local cultures in Ukraine differed from the cultures of the migrating peoples, as is evident from discoveries such as that of the silver hoard from the 6th century AD in *Martynivka near Kiev.

From the 10th century Byzantine art and culture came to play an important role in Kievan Rus'. Its influence was particularly strong in the Crimea, where many Christian churches were in existence in *Chersonese Taurica by the middle of the 1st millennium AD. Prince Volodymyr the Great imported icons and builders from Chersonese to construct churches in Kiev.

The Princely era (10th–14th century) in Ukraine was a period of intense cultural growth. During this time such monumental structures as the Church of the *Tithes, the *St Sophia Cathedral, and the *Dormition Cathedral of the Kievan Cave Monastery were erected in Kiev. Many grand buildings, such as the Cathedral of the *Transfiguration, were built in Chernihiv. Fine churches also appeared in other cities; however, only a few of them survived to modern times, and many of those that did were destroyed by the Soviet authorities. The art forms that came to Ukraine together with the Byzantine rite became localized as the apprentices of Greek masters became masters in their turn. Byzantine art had an inclination towards large, decorative, monumental forms and towards vivid colors, particularly gold. The expensive art of the mosaic became well rooted in Ukraine but remained unknown in the northern regions such as Novgorod and Suzdal, which at that time were vassals of Kiev. Other art forms also developed in Kiev – miniature painting, jewelry, the mosaic, the fresco, and the icon. Having absorbed and developed the Byzantine forms of art, Kiev itself became an art center for Eastern Europe. (For details see *Byzantine art.)

Since culture is closely related to political conditions, the culture of Kievan Rus' flourished only as long as Kiev

had the power to resist the invasions of the nomadic Asian hordes. Rus' sheltered the West European countries from many of the invasions, thus making it possible for these countries to develop their arts. But at the beginning of the 13th century Kiev's military might and culture began to decline under the onslaught of the Golden Horde. Kievan culture flourished for another century in the western parts of Ukraine, in the principality of Galicia-Volhynia, but even these territories, weakened by repeated invasions, fell under Polish domination in the mid-14th century and eventually became part of the Polish Commonwealth. In Western Ukraine only fragments of the artistic monuments from this period have been preserved, while in Poland under more favorable political conditions entire fresco ensembles painted by Ukrainian masters of the 14th–15th century have survived.

The dominance of Byzantine art in Ukraine was overcome in the 16th century by the impact of Renaissance and then baroque art. The new movements gave rise to new genres such as portraiture, although in Ukrainian art they manifested themselves more forcefully in architecture than in painting or sculpture. The baroque developed in Ukraine during the time of Cossack wars with Turkey and Poland; hence, in Ukrainian art this style is known as the Cossack *baroque. The finest examples of this style were produced during the reign of Hetman I. Mazepa. With his defeat at the Battle of Poltava in 1709, Kiev was replaced by St Petersburg as the cultural center of Eastern Europe. The new capital attracted artists from Ukraine and a group of talented Ukrainian classicists, which included the painters D. *Levytsky and V. *Borovykovsky and the sculptor I. *Martos, worked there. These artists contributed to the Europeanization of Russian art, but at the same time their absence from Ukraine led to a marked decline and provincialization of Ukrainian art.

In the first half of the 19th century *realism began to replace *classicism in Ukraine, although various academic (see *Academism) and eclectic movements continued to flourish, as in other parts of Europe, almost to the end of the century. The rebirth of Ukrainian art is connected with T. *Shevchenko, the national bard of Ukraine, who was a painter and engraver by profession. In the 1840s he turned from the academism of St Petersburg to a more realistic depiction of scenes from the daily life of the peasantry, Ukrainian history, and landscape. A number of his followers adopted this approach, giving rise to a Ukrainian ethnographic school of art. Today certain scholars regard this school as narrow and provincial, but considering the period, in which not a single Ukrainian-language school or periodical was permitted in Russian-ruled Ukraine, this art group was an important cultural phenomenon.

At the turn of the 19th century the academic tendencies in Ukrainian art gave way to *impressionism. Ukrainian artists, who had formerly studied at the St Petersburg Academy of Arts, the only academy of its kind in the Russian Empire, began to visit Western academies in Cracow, Munich, and Paris and to return home with new ideas about art. Ukrainian art exhibits began to be held, first in Lviv (under Austrian control) and then in Kiev and other cities. A reaction against impressionism and ethnographism began early in the first decade of the 20th century, and the influence of new movements in world art became evident in Ukraine. Certain artists, such as A.

Boichuk: *Apple Picking*, tempera (1919; now in the Kiev Museum). 5) M. Butovych: *Cossack Musicians*, oil (1956). 6) V. Balias: *Nike*, metal sculpture (1971). 7) P. Andrusiv: *Hetman Ivan Mazepa Meeting Otaman Hordiienko*, oil (1968; courtesy of N. Wojtowych). 8) M. Dolnytska: *Last Judgment*, enamel (courtesy of J. Salisnjak).

*Archipenko, became the co-founders of new stylistic trends, while others, such as M. *Boichuk and members of his school, combined the new artistic ideas with older traditional forms, particularly with the Byzantine style. Boichuk's school raised anew the problems of composition and re-established the monumental style in contemporary Ukrainian art. From the historical perspective this was one of the more interesting phenomena in 20th-century East European art. At the beginning of the 20th century there was also an effort to revive a Ukrainian style in architecture based on the Cossack baroque and on folk architecture.

One of the first actions that was taken by the new Ukrainian National Republic was to establish the Ukrainian Academy of Arts in Kiev, in December 1917. The academy's faculty consisted of many prominent artists and professors. After the Soviet occupation of Ukraine in 1920 the academy was renamed the *Kiev State Art Institute. Various higher schools of art were also established in Kharkiv, Odessa, and Dnipropetrovske.

In the 1920s five artists' associations with varying artistic and ideological profiles existed in Soviet Ukraine, but by 1932 all of them were disbanded and eventually replaced by the *Union of Artists of the Ukrainian SSR, which was a branch of the USSR Union of Artists based in Moscow. In the 1920s Ukrainian artists had their own section in the Soviet pavilion at the Venice Biennale, but this also was eventually prohibited. The Soviet style of *socialist realism was imposed on all artists in the 1930s, and many works that did not conform to the style were destroyed, while their authors were persecuted for 'nationalism' and 'formalism.' Because of this policy numerous artists from Soviet Ukraine sought refuge in the West before and after the Second World War, first in Western Ukraine and then in the displaced persons camps in Germany and Austria, from which they were resettled in the countries of Western Europe, the United States, Canada, South America, and Australia.

Since 1945 the development of art in Soviet Ukraine has been marked by the constant struggle between socialist realism and the desire for freedom of expression. Although the artists of Ukraine have not been able to present an exhibit outside the Soviet bloc countries of the caliber of their exhibit at the Venice Biennale, they did succeed in publishing the six-volume *Istoriia ukrains'koho mystetstva* (The History of Ukrainian Art, 1966–70). In this work the ancient Ukrainian icon, which as late as the 1950s was rejected as idealist and bourgeois, was rehabilitated as part of folk art. Overstepping the bounds of socialist realism, the Ukrainian artists of the Soviet bloc have scored their main achievements in graphics and decorative painting – mosaics, majolica, and ceramics – where the materials used do not permit realistic representation and allow for simplification and stylization.

After the initial economic and cultural difficulties of resettlement, the Ukrainian artists in the West began to participate in the artistic life of their new homelands. At present the Ukrainian artistic community abroad consists of three generations of artists: those born and trained in Ukraine, those born in Ukraine and trained in the West, and those born and trained in the West. These artists have their own associations, art schools, institutes, and galleries. Although their contributions are not recognized officially in Soviet Ukraine, many of them deserve a lasting place in the history of Ukrainian art. (See *Archi-

ture, *Graphic arts, *Painting, and *Sculpture for additional information and bibliography.)

S. Hordynsky

Art education. Professional training in the various forms of visual art and its supporting disciplines, including the theory and history of art. In Ukraine, as in other European countries, art education at first consisted of the master's handing on his experience to his pupils. The first teachers of drawing and miniature painting in Ukraine were probably Bulgarian, and the first teachers of stone architecture, mosaic and fresco painting, iconography, and woodcarving were Greek. A few names of monks who specialized in the arts have been preserved. The iconographer and mosaicist Alimpii (d 1114) of Kiev studied with masters in Constantinople (to 1084) and founded an iconographic school at the Kievan Cave Monastery. The miniaturist Deacon Spirydonii, who drew 300 miniatures in the *Psaltyr* of 1397, was a member of the Kiev school. The monk Petro Ratensky (d 1326), painter and architect, and eventually the metropolitan of all Rus' (1308–26), belonged to the Galician-Volhynian school.

In the 15th century the arts were studied within the system of religious brotherhoods and guilds, which developed particularly rapidly in Galicia. The requirements for a master were raised: besides iconography, a master had to know portraiture, multi-figured painting, battle painting, and genre painting and had to be acquainted with the artistic centers of other countries. Familiarity with the contributions of Western Europe had a positive influence on the artists of the Lviv and Zhovkva schools, such as I. Rutkovich, M. Rutkevych, and V. and M. Petrakhnovych. By the end of the 16th century the students of brotherhood schools were being taught to draw and paint. During the 17th century and the first half of the 18th century the iconographic studio of the Kievan Cave Monastery was the artistic center of Ukraine. In the second half of the 18th century so-called supplementary classes in architecture and painting were set up at the Kharkiv Theological Collegium (directed by academician I. Sabluchok in 1768–73, and then by his students until 1798); the *Kievan Mohyla Academy (from 1784); the *Nizhen Lyceum (directed by K. Popov, 1820–39); Kiev University (directed by the same K. Popov in 1839–46 and then by H. Vasko until 1863); the *Kremianets Lyceum in Volhynia (1819–32); and the Kiev Institute for Daughters of the Nobility.

In the middle of the 19th century the first private schools of art appeared in Ukraine. In Kiev N. Buialsky's Public School of Painting existed in 1848–63. In Odessa the Society for the Promotion of the Fine Arts sponsored the School of Painting (1865–99). In Kharkiv M. Raievska-Ivanova's School of Drawing was in operation in 1869–96 and in 1912. M. Murashko's *Kiev Drawing School was founded in 1875 and existed until 1901. The last three schools mentioned were of an academic character, and at the beginning of the 20th century they were transformed into art schools under the direction of the St Petersburg Academy of Arts. Their graduates attained a level of education above the secondary level and had the right to enter the Academy of Arts.

In the 19th century and the beginning of the 20th century the first schools of industrial art were established in Ukraine. The best known among the schools in central

and eastern Ukraine before 1914 were the Mezhyhiria School (1826–74, part of the *Mezhyhiria Faience Factory); the N. Gogol School in Myrhorod (established in 1896 and directed by O. Slastion); the school in Kamianets-Podilskyi (founded by V. Rozvadovsky in 1905); and the Opishnia School in the Poltava region. The schools of industrial art were funded by zemstvos or by private individuals. Most of the schools of *kilim weaving depended on private support: the school in the village of Dihtiari (founded in 1898); the schools in Skoptsi and Reshetylivka (both directed by Ye. Prybylska in 1910–16); the school in Shylovychi; the school in the village of Olenivka in the Kiev region (supported by V. Khanenko, directed by F. Krychevsky); etc. In Galicia there was a secondary school of industrial art in Lviv that was established in 1890 and several lower schools: of wood-carving and kilim weaving in Kosiv, of woodworking in Yavoriv, of pottery in Kolomyia, of ceramics in Lviv. Some schools were associated with factories: the kilim factories in Tovste (school founded by V. Fedorovych in 1887), in Hlyniany (1894), and in the village of Zoziv (school founded by H. Levkovych in 1905). In Transcarpathia there was a ceramics school in Khust. In 1903–18 the Kiev Graphics and Printing School was associated with V. Kulzhenko's printing press.

To obtain an advanced education in art, Ukrainians had to attend foreign academies, and went primarily to the St Petersburg Academy of Arts (est 1757), which was the sole academy in Eastern Europe. Among its graduates were such artists as A. Losenko, D. Levytsky, V. Borovykovsky, and T. Shevchenko. The Cracow Academy of Art (est in 1900) produced a group of impressionist landscape painters: O. Novakivsky, I. Trush, M. Burachek, etc. M. Boichuk and members of his group studied at the Paris Academy of Fine Art in the 1910s. Others attended academies in Rome, Vienna, Munich (M. Drak, V. Meller), Berlin, and other places. Art-history chairs were set up at the universities of Kiev (H. Pavlutsky), Kharkiv, Odessa, and Lviv.

It was not until a Ukrainian government came to power that the *Ukrainian State Academy of Arts was established by the law of 5 December 1917. Its first rector was V. Krychevsky, Sr. The Kiev Architectural Institute, under the direction of D. Diachenko, was set up in 1918. A chair and a department of the history of Ukrainian art, headed by O. Novytsky, were established at the All-Ukrainian Academy of Sciences (VUAN). The Art School of Odessa was turned into an institution of higher learning. In the Soviet period the Ukrainian Academy of Arts became the Institute of Plastic Arts in 1922–3 and a year later the *Kiev State Art Institute. In 1924, when the Architectural Institute was abolished, a department of architecture was added to the Kiev State Art Institute. During the 1920s and the early 1930s the three main art schools in Kiev, Kharkiv, and Odessa were subject to frequent reorganization into industrial-art schools, an art-polytechnical school (Odessa), an art-professional school, an institute of proletarian artistic culture (Kiev), or an art-technical school (Kharkiv). In 1928 they were finally designated art institutes of higher education and operated as such until 1934, when severe repression of Ukrainian culture began. The reforms of 1934, which were designed to adapt education to the needs of industry, demoted the Kharkiv and Odessa institutes to the secondary school level. Only one higher school of art

– the Kiev State Art Institute – was preserved. The best industrial-art schools – in Kamianets-Podilskyi and Mezhyhiria – were closed. Education was placed under strict Party control, and many art teachers suffered political persecution.

In Western Ukraine, then under Poland, there were chairs of art at the University of Lviv and at the Greek Catholic Theological Academy (V. Zalozetsky-Sas and I. Svientsitsky in 1928–44). In 1922–35 there was also O. Novakivsky's art school in Lviv, which was supported by Metropolitan A. Sheptytsky. The Studite monks operated a school of iconography in Univ. During the German occupation the Higher Painting Studio directed by V. Krychevsky was opened in Lviv.

In the Ukrainian SSR today the only higher art school is the Kiev State Art Institute, which contains the following faculties: painting (including workshops on stage design, pictorial and monumental art restoration), graphics, sculpture, architecture, and art history and theory (which also has a correspondence division). A secondary industrial-art school, the T. Shevchenko School, with an 11-year curriculum, comes under the institute. There are two higher schools of industrial art: the Lviv State Institute of Applied and Decorative Arts and the Kharkiv State Industrial-Art Institute, which used to be the Kharkiv Art Institute. Each institute has two faculties: the Lviv Institute has a faculty of decorative-applied art and a faculty of interior and furniture design, while the Kharkiv Institute has a faculty of industrial art and a faculty of interior and furniture design. Each has a five-year curriculum.

A chair of art exists only at the Kiev State Art Institute. Ukraine has no academy of arts; such an academy exists only in Russia. In 1947 the USSR Academy of Arts was established in Moscow. It is an institution of higher learning and graduates artists with the highest qualifications. Five Ukrainian art schools at a secondary level with a five-year curriculum admit students who have not yet graduated from high school; these are located in Dnipropetrovske, Voroshylovhrad, Odessa, Symferopil, and Kharkiv. There are also four secondary schools of applied art in Vyzhnytsia, Kosiv, Lviv (the I. Trush School), and Uzhhorod, and an industrial-art high school in Kiev. These schools prepare specialists of an intermediate level, among whom are secondary school teachers of painting and drawing. Qualified workers in the applied or decorative arts are trained at technical-art schools, which have a three-year program. Secondary school students with exceptional artistic talent can (since the 1950s) attend supplementary four-year art schools.

There is a wide network of voluntary organizations for individuals, particularly young people, with artistic interests. Art instructors and consultants at palaces of culture, homes of culture, and amateur clubs promote art among the public.

Outside Ukraine, in Prague, a higher school of art – the *Ukrainian Studio of Plastic Arts – was directed by D. Antonovych in 1923–44. Chairs in the history of Ukrainian art were held at the Ukrainian Free University by D. Antonovych and at the Ukrainian Higher Pedagogical Institute by V. Sichynsky. The sculptor A. Archipenko directed his own school in Berlin (1921–3) and then in various cities of the United States. Beginning in 1945 various art schools and studios were set up in the displaced persons camps in West Germany. The main

schools were in Karlsfeld and Berchtesgaden (E. Kozak, S. Lytvynenko, M. Anastaziievsky, M. Hotsii, et al). In the 1950s several art schools were established by Ukrainian artists in the United States and Canada, including the Ukrainian Art Studio in Philadelphia (directed by P. Mehyk since 1952), M. Radysh's school and L. Kuzma's school in New York, P. Sydorenko's school in Toronto, and K. Antonovych's school in Winnipeg.

S. Hordynsky, V. Pavlovsky

Art studies and research. Studies of the various branches of art began to develop in Ukraine in association with the study of archeology, history, and ethnography. In the second half of the 19th century a number of articles on the subject of art appeared in different collections and journals – in the publications of the Kiev Archeographic Commission, in various *Eparhial'nye vedomosti*, in the proceedings of archeological conferences, and particularly in *Kievskaiia starina*. Their authors were investigators of ancient Ukraine such as V. Antonovych, D. Bahalii, F. Vovk, V. Horlenko, O. Lazarevsky, P. Lebedyntsev, M. Petrov, M. Sumtsov, and D. Yavornytsky. Ukrainian scholars were interested primarily in folk art. In 1876 the first album of Ukrainian embroidery was published by O. Pchilka. In 1879 P. Lytvynova's *luzhnorusskii narodnyi ornament* (South Russian Folk Ornament) appeared in print, followed in 1899 by S. Kulzhynsky's *Opisanie kolleksii narodnykh pisanok* (A Description of a Collection of Folk Easter Eggs). Ukrainian historians concentrated on the Cossack period, while the Princely era was studied mostly by Russian historians, who considered its art to be part of Russian art.

Ukrainian art research became a scholarly discipline at the beginning of the 20th century. In central and eastern Ukraine this research was concentrated in the departments of art history at Kiev and Kharkiv universities, the Association of Church Archeology, the museum of the Kiev Theological Academy, the Ukrainian Scientific Society in Kiev (art section), the Society of History and Antiquities, the Historical-Archeological Museum in Odessa, the museums in Kamianets-Podilskyi, Kharkiv, Poltava, Chernihiv, and other cities, and the journal *Iskusstvo i pechatnoe delo* (1909–10), later called *Iskusstvo* and then *Iskusstvo v luzhnoi Rossii* (1913–14). At that time much attention was devoted to wooden, mainly church, architecture by Yu. Sitsinsky in Podilia; F. Vovk in Volhynia; V. and D. Shcherbakivsky in the Kiev and Poltava regions, Bukovyna, and Galicia; M. Biliashivsky in the Kiev region; D. Yavornytsky in Zaporizhia; O. Novytsky in Galicia; I. Hrabar in Transcarpathia; and H. Pavlutsky. Some important works of this period were I. Hrabar's *Dereviannye i kamennye khramy* (Wooden and Stone Churches, 1905) and his survey of baroque architecture in Ukraine in the large *Istoriia russkogo iskusstva* (The History of Russian Art, 1905–15). The architectural monuments of the Princely era, particularly in the Kiev and Chernihiv regions, were studied by F. Ernst, H. Pavlutsky, F. Shmit, author of *Kievskii Sofiiskii Sobor* (Kiev's St Sophia Cathedral, 1913), M. Makarenko, M. Petrov, and others. V. Shcherbakivsky attempted to define the distinctive features of Ukrainian architecture in *Arkhitektura u riznykh narodiv i na Ukraini* (Architecture among Various Peoples and in Ukraine, 1910), as did V. Krychevsky in *Pro rozuminnia ukrains'koho arkhitekturnoho stiliu* (On the Meaning of the Ukrainian Architectural

Style, 1914) and others, such as O. Novytsky, M. Shumytsky, Yu. Lukomsky, and H. Pavlutsky. Ye. Kuzmyn presented a survey of Ukrainian painting in I. Hrabar's *Istoriia russkogo iskusstva*, and M. Makarenko wrote a survey of the graphic arts. K. Shyrotsky, O. Novytsky, O. Slastion, V. Antonovych, and others investigated T. Shevchenko's work as a painter. M. Hrushevsky gave the first survey of Ukrainian art up to the 16th century in his *Istoriia Ukrainy-Rusy* (A History of Ukraine-Rus').

Art scholarship expanded rapidly from the period of Ukrainian independence to the early 1930s. Its main centers were the department of art history at the Ukrainian Academy of Sciences; the art department of the *All-Ukrainian Archeological Committee; museums, such as the museum of the Kievan Cave Monastery, which published the collection *Ukrains'kyi muzei* (The Ukrainian Museum); and departments of art studies at Kiev, Kharkiv, and Odessa universities as well as at art institutes. The following journals were devoted to art research: **Nashe mynule* (1918–19), **Mystetstvo* (1919–20), *Shliakh mystetstva* (1921–3), and **Nova heneratsiia* (1927–30). Many articles on art appeared in *Chervonyi shliakh, Ukraina*, and *Zhyttia i revoliutsiia*.

In this period art scholars attempted to explain the genesis, development, and national distinctiveness of Ukrainian art. A popular sketch of Ukrainian art, *Ukrainskoe iskusstvo* (Ukrainian Art), was written by V. Modzalevsky in 1917. The art of the Princely era was investigated by F. Shmit, H. Morhylevsky, O. Novytsky, K. Shyrotsky, and others. F. Ernst devoted himself mostly to the art of the 17th–18th century. S. Taranushenko concentrated on the art of Slobidska Ukraine. M. Makarenko, Ye. Kuzmyn, and others studied sculpture. H. Pavlutsky wrote a valuable book, *Istoriia ukrains'koho ornamentu* (A History of Ukrainian Ornamentation, 1927). Shyrotsky (1919) and Ernst (1930) composed guidebooks to Kiev. Book art was studied at the Ukrainian Scientific Institute of Bibliology, which was headed by Yu. Mezhenko. Contemporary art was investigated by S. Kholostenko, who wrote *Monumental'ne mystetstvo Radians'koi Ukrainy* (The Monumental Art of Soviet Ukraine, 1931), and Yu. Mykhailiv, the author of *Nove ukrains'ke riz'barstvo* (New Ukrainian Sculpture, 1931). In 1926 a collection of articles on Yu. Narbut was edited by F. Ernst and Ya. Steshenko, and a monograph series on individual artists was published by Rukh publishers in 1929–32.

At the beginning of the 1930s the Soviet regime suppressed Ukrainian art research and Ukrainian art in general. It was replaced by what is known as Soviet art scholarship. In 1932 all Ukrainian art organizations were abolished, and whatever was distinctively Ukrainian in art was banned. Soviet art scholars rejected Ukrainian artistic traditions and ties with Western artistic movements. I. Vrona, a theoretician and Party director of the Kiev State Art Institute, who defended to some extent avant-garde tendencies and the right of Ukrainian artists to learn from European artists, came under severe criticism. Formal experimentation was condemned as fascist. At the same time art scholars such as F. Ernst, M. Makarenko, S. Taranushenko, K. Moshchenko, and B. Butnyk-Sivsky were arrested. A number of valuable articles disappeared from the museums, and then architectural monuments began to be destroyed. The most important of these was the St Michael's Golden-Domed Monastery in Kiev, built in the 11th–12th century. The

publication of scholarly art research almost ceased in 1933–40.

In Western Ukraine the earliest art research by Ukrainian scholars such as D. Zubrytsky, I. Vahylevych, Ya. Holovatsky, I. Sharanevych, P. Skobelsky, and A. Petrushevych was published in the second half of the 19th century. An important contribution to the scholarship on Galician art was made by Polish researchers such as W. Łoziński, W. Dzieduszycki, who in the 1880s defined the concept of 'Ruthenian art,' M. Sokołowski, K. Mokłowski, A. Czołowski, and W. Podlacha. Ukrainian art studies reached a relatively sophisticated level in the interwar period. In Galicia the centers of Ukrainian art scholarship were: the National Museum, opened in 1905 in Lviv and directed by I. Svientsitsky; the Shevchenko Scientific Society's Cultural-Historical Museum; the department of art history and the museum of the Greek Catholic Theological Academy (1928), with its periodical collection *Mystetstvo i kul'tura*; the *Association of Independent Ukrainian Artists (1932–9); the journal *Mystetstvo* (1932–5); and abroad, the Museum of Ukraine's Struggle for Independence and the department of art history at the Ukrainian Free University in Prague, both chaired by D. Antonovych.

The first complete surveys of the history of Ukrainian art were published in Galicia or abroad: D. Antonovych's *Skorochenyi kurs istorii ukrains'koho mystetstva* (An Abridged Course on the History of Ukrainian Art, 1932) and M. Holubets's contribution to *Istoriia ukrains'koï kul'tury* (A History of Ukrainian Culture), published by I. Tyktor in 1937. V. Sichynsky published the book-album *Monumenta Architecturae Ucrainae* in 1940. There were many works on architecture, particularly on wooden churches in Western Ukraine: V. Shcherbakivsky's 'Derev'iani tserkvy na Ukraïni i ikh typy' (Wooden Churches in Ukraine and Their Types, *ZNTSh*, 74, 1906) and his *Ukrains'ke mystetstvo* (Ukrainian Art, 2 vols, 1913, 1926), O. Lushpynsky and V. Sichynsky's *Derev'iani tserkvy i dzvinytsi Halyts'koï Ukraïny 16–19 st.* (Wooden Churches and Belfries of Galician Ukraine in the 16th–19th Century, 1925), M. Dragan's *Ukrains'ki derev'iani tserkvy* (Ukrainian Wooden Churches, 1937), and V. Zalozetsky-Sas's *Gothische und barocke Holzkirchen in den Karpathenländern* (1926). The architectural monuments of Lviv were investigated by B. Karpovych (Janusz), M. Holubets, and V. Sichynsky; of Halych, by Ye. Pelensky and Ya. Pasternak. The history of painting was studied by the Polish scholar W. Podlacha; M. Holubets, who wrote *Halyts'ke maliarstvo* (Galician Painting, 1926); and D. Antonovych, who wrote on T. Shevchenko as a painter. Many works on engraving were published, among them V. Sichynsky's *Istoriia ukrains'koho graverstva XVI–XVII st.* (The History of Ukrainian Engraving in the 16th–17th Century, 1937). Galician iconography was the speciality of I. Svientsitsky, author of *Ikonopys Halyts'koï Ukraïny XV–XVI st.* (The Iconography of Galician Ukraine in the 15th–16th Century, 1928); Ya. Konstantynovych, author of *Ikonostasis* (1939); V. Peshchansky; and P. Kholodny, Sr. Folk and applied art was investigated by V. Shukhevych, the author of *Hutsul'shchyna* (The Hutsul Region, 5 vols, 1899–1908); V. Sichynsky, the author of *Narysy z istorii ukrain'koï promyslovosti* (Essays on the History of Ukrainian Industry, 1936); V. Shcherbakivsky, (the ornamentation of Ukrainian Easter eggs); V. Peshchansky (kilims); the Polish scholar T. Seweryn (ceramics); I. Hurhula

(embroidery and Easter eggs); and V. Svientsitska (wood-carving). The Association of Independent Ukrainian Artists published a series of monographs on O. Kulchytska. M. Nechytailo-Andriienko, M. Hlushchenko, O. Hryshchenko, and L. Gets, and a collection, *Ekslibris* (Bookplates, 1932).

Since the Second World War art research in Ukraine has been carried on at the *Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR; the Scientific Research Institute of the History, Theory, and Future Problems of Soviet Architecture; the *Kiev State Art Institute; the Kharkiv Institute of Arts; the Lviv Institute of Decorative-Applied Art; and the museums of Ukrainian art in Kiev and Lviv as well as the Lviv State Museum of Ethnography and Artistic Handicrafts. In 1968 there were about 200 qualified art scholars, most of whom belonged to the postwar generation and a few who had returned from exile (B. Butnyk-Siversky, I. Vrona, S. Taranushenko). The Institute of Fine Arts, headed by M. Rylsky, and the State Museum of Ethnography and Artistic Handicrafts in Lviv published a series of monographs on folk and applied art. In 1954–63 the collection *Materialy z etnografii ta mystetstvoznavstva* (Materials in Ethnography and Art Studies) appeared in eight volumes. The State Publishing House of Visual Art and Musical Literature of the Ukrainian SSR published five albums, entitled *Ukrains'ke narodne mystetstvo* (Ukrainian Folk Art), between 1960 and 1974. The Institute of the History and Theory of Soviet Architecture published, in 1957–62, *Narysy istorii arkhitektury Ukrains'koï RSR* (Essays on the History of the Architecture of the Ukrainian SSR), the collection *Arkhitekturni pam'iatky* (Architectural Monuments), *Pytannia istorii arkhitektury ta budiveln'noi tekhniki* (Problems in the History of Architecture and Building Techniques), etc. Wooden architecture in Ukraine was the specialty of P. Yurchenko and V. Samoilovych, who wrote *Narodna tvorchist' v arkhitekturi sil'skoho zhytla* (Folk Art in the Architecture of Peasant Dwellings, 1961). P. Makushenko and Z. Petrova studied the folk architecture of Transcarpathia. A number of works on the architecture of particular cities or buildings were written. B. Butnyk-Siversky published large general works on Soviet Ukrainian folk art in 1966 and 1970. Lviv University published *Narysy z istorii ukrains'koho dekoratyvno-prikladnoho mystetstva* (Essays on the History of Ukrainian Decorative-Applied Art, 1969) and *Narodni tradytsii v ukrains'kii khudozhnii promyslovosti* (Folk Traditions in Ukrainian Artistic Handicrafts, 1975).

The development of the different branches of visual art has been studied by the following scholars: Ya. Zatenatsky and P. Hovdia (painting); V. Kasiian and Yu. Turchenko (graphics); A. Nimenko, L. Sak, O. Charnovsky, and M. Mozdyr (sculpture). The Naukova Dumka publishing house published several large monographs in the 1970s: M. Drahan's *Ukrains'ka dekoratyvna riz'ba XVI–XVIII st.* (Ukrainian Decorative Carving in the 16th–18th Century 1970), M. Petrenko's *Ukrains'ke zolotarstvo XVI–XVIII st.* (Ukrainian Goldsmithing in the 16th–18th Century, 1970), I. Spasky's *Dukaty i dukachi Ukraïny* (Ducats and Gold Coins of Ukraine), O. Matsiuk's *Papir ta filihrani na ukrains'kykh zemliakh XVI–pochatku XX st.* (Paper and Watermarks in Ukrainian Territories in the 16th to the Beginning of the 20th Century, 1974).

A number of monographs on individual artists have appeared. The most important of these is the first com-

plete collection of T. Shevchenko's artistic legacy, published in 1961–4 by the Institute of Fine Arts, Folklore, and Ethnography under the title *Taras Shevchenko: Mystets'ka spadshchyna u chotyrokh tomakh* (Taras Shevchenko's Artistic Legacy in Four Volumes). In the anniversary years of 1961–4 various books devoted to Shevchenko's art appeared. Studies of the following known artists have also appeared: Yu. Narbut (by P. Biletsky, 1959), O. Kulchytska (I. Senev, 1961), I. Rutkovych (V. Svientsitska, 1966), F. Krychevsky (P. Musiienko, 1966), Krychevsky's memoirs and documents (1972) and his album (1980), I. Trush (Ya. Nanovsky, 1967), A. Petrytsky (I. Vrona, 1968), V. Orlovsky (P. Hovdia, 1968), O. Novakivsky (V. Ostovsky, 1973), K. Trutovsky (Z. Lashkul, 1974), O. Tarasevych (D. Stepovyk, 1975), H. Levytsky and Ukrainian engraving (V. Fomenko, 1976), and S. Vasylykivsky (I. Ohiiivska, 1980). Many popular albums have also been published.

In the 1960s and 1970s several important large works appeared in print: M. Kresalny's *Sofiis'kyi zapovidnyk u Kyievi: Arkhitekturno-istorychnyi narys* (The Sophia Museum in Kiev: An Architectural and Historical Sketch, 1961); H. Lohvyn's *Po Ukraïni* (Through Ukraine, 1968) and *Sofia Kyivs'ka* (St Sophia [Cathedral of] Kiev, 1971, published also in English and Russian); P. Biletsky's *Ukraïns'kyi portretnyi zhyvopys XVII–XVIII st.* (Ukrainian Portrait Painting in the 17th–18th Century, 1969); L. Miliiaieva's *Stinopys Potelycha* (The Wall Paintings of Potelych, 1969); P. Yurchenko's *Derev'iana arkhitektura Ukraïny* (Ukraine's Wooden Architecture, 1970); S. Taranushenko's *Monumental'na derev'iana arkhitektura Livoberezhnoi Ukraïny* (Monumental Wooden Architecture in Left-Bank Ukraine, 1976); H. Lohvyn, L. Miliiaieva, and V. Svientsitska's *Ukraïns'kyi seredn'ovichnyi zhyvopys* (Ukrainian Medieval Painting, 1977); and P. Zholtoivsky's *Ukraïns'kyi zhyvopys XVII–XVIII st.* (Ukrainian Painting in the 17th–18th Century, 1978) and *Khudozhnie zhyttia na Ukraïni v XVI–XVIII st.* (Artistic Life in Ukraine in the 16th–18th Century, 1983).

In the late 1960s the Academy of Sciences of the Ukrainian SSR published the encyclopedic *Istoriia ukraïns'koho mystetstva* (The History of Ukrainian Art, 6 vols [7 books]). The chief editor was M. Bazhan, and over a hundred scholars took part in the project. The sections on ancient Ukrainian art are of a high quality. In 1973 *Slovnnyk khudozhnykiv Ukraïny* (Dictionary of the Artists of Ukraine), containing about 2,500 biographies, was published.

In 1966–72 the Institute of Fine Arts published six issues of *Ukraïns'ke mystetstvoznaavstvo* (Ukrainian Art Studies), a republic interdisciplinary collection.

After the Second World War the Ukrainian art scholars who found themselves in the West belonged to such learned societies as the Shevchenko Scientific Society, the Ukrainian Academy of Arts and Sciences, the Ukrainian Free University, and the Ukrainian Catholic University. Among these scholars were V. Zalozetsky-Sas, D. Horniatkevych, K. Moshchenko, O. Povstenko, V. Sichynsky, V. Shcherbakivsky, the archeologist Ya. Pasternak, P. Kurinny, V. Pavlovsky, S. Hordynsky, I. Keivan, P. Mehyk, and B. Stebelsky. They continued their work in spite of the inaccessibility of source materials. Such works as O. Povstenko's monograph *Katedra sv. Sofii v Kyievi* (The St Sophia Cathedral in Kiev, 1954), V. Sichynsky's *Istoriia ukraïns'koho mystetstva. I. Arkhitektura* (A History of Ukrainian Art, 1: Architecture, 1956) and S. Hordyn-

sky's *Ukraïns'ka ikona* and *The Ukrainian Icon* (parallel Ukrainian and English publications, 1972, and German 1981) were of a higher standard than similar Soviet publications. V. Karmazyn-Kakovsky and A. Varyvoda published works in the history of Ukrainian folk architecture. The monographs on a number of artists are an important contribution to art scholarship: on S. Lytvynenko, M. Butovych, V. Sichynsky, M. Radysh, J. Hnizdovsky, M. Osinchuk, V. Tsymbal, B. Kriukov, P. Andrusiv, V. Krychevsky, M. Andriienko, M. Dolnytska, H. Mazepa, and others. Several monographs in European languages have appeared: A. Archipenko's automonograph, *Fifty Creative Years, 1908–1958* (1960); a monographic catalogue of J. Hnizdovsky's woodcuts, *Woodcuts 1944–1975* (1976); W. Kurelek's album *The Passion of Christ* (also in French and Ukrainian, 1975); O. Hryshchenko's *Alexis Gritchenko, sa vie, son œuvre* (1948, 1967); I. Keivan's *Taras Schewtschenko – Rembrandt des Ostens* (1964); and works by M. Andriienko, H. Kruk, T. Virsta, V. Makarenko, and L. Mol. The catalogues of numerous exhibits that present a survey of the work of Ukrainian artists abroad are valuable also. An interesting publication, *Knyzhkovyi znak shestydesiatnykiv* (Bookmarks of the Sheshtydesiatnyky, 1972), contains explanatory notes in Ukrainian, English, French, German, and Spanish.

Artel (from the Tatar *orta* = community, *ortak* = common). A small voluntary association of individuals who come together for a limited or indefinite period for the purpose of performing some economic activity. The members of an artel donate labor, tools, and even capital and divide the profits according to the amount and quality of the labor they contribute.

As a communal-economic institution the artel has been known for a long time. Fishing and hunting artels (*lovchi druzhyny*) existed in Ukraine as early as the 12th–13th century. Since the 16th century a traditional and widely practiced form of artel in farming was the *supriaha* – an association of peasants who, individually lacking the necessary draft power, plowed, harvested, and threshed together. In some areas this type of artel lasted until the Soviet period, that is, until private farms were abolished. In the 16th–18th century artels of wagoners (*valky chumakiv*), ferrymen, hunters, and fishermen (*zabrodchyyky*) were common. In the 19th century seasonal or permanent workers' artels were organized. Workers such as haycutters, threshers, carpenters, bricklayers, or loaders banded together to sell their labor and to divide the earnings among themselves. In the Carpathians artels of woodcutters were common. The members had to accept the basic principle of the artel: one for all and all for one. Until recent times artels were formed on the basis of an

unwritten agreement and were governed by customary law. In 1902 Russian law recognized workers' artels as legal entities. With the spread of the *co-operative movement in Ukraine before the First World War, M. *Levytsky, 'the artel father,' devoted much energy to the organization of 'co-operative artels,' particularly farmers' artels.

After the revolution, artels were widespread in the Soviet Union, particularly in the cottage industry. Members of the various trades – tailors, shoemakers, seamstresses – formed their own artels. Some artels were organized for special groups of people such as invalids or pensioners. These artels were classified as industrial artels. Agricultural artels, in contrast, included the collective farms and the fishing artels, which are now called collective fish farms. The agricultural artels permitted much more freedom than collective farms do now. In 1959 there were 139 fishing artels, 1,439 industrial artels, 376 artels for invalids, and 15 manufacturing-collective farms in Ukraine. The artels in the Soviet Union gradually lost the main features of this form of economic association, namely voluntariness and self-government.

On 11 October 1960 the Communist Party of the Soviet Union abolished the industrial artels in Ukraine. The former fishing artels and all farming artels are now governed by the Collective Farm Statute of 1969.

V. Markus

Artem (Communist party pseud of Fedor Sergeev), b 18 March 1883 in Glebovo, Kursk region, Russia, d 24 July 1921 in an air disaster, buried in Moscow. Russian revolutionary and Soviet official. From 1903 to 1906 Artem did propaganda and organizational work for the Bolsheviks in the eastern industrial centers of Ukraine. A follower of V. Lenin, he spent the years 1910–17 in Australia. On the outbreak of the revolution in 1917 he returned to Ukraine; he led the Bolshevik faction in the Kharkiv Soviet of Workers' and Soldiers' Deputies and became secretary of the oblast committee of the Bolshevik organizations in the Donets Basin and the Kharkiv and Katerynoslav regions. He was also a member of the People's Secretariat (the first Soviet government in Ukraine), serving as People's Commissar of Industry and Trade. At the beginning of 1918 Artem headed the Council of People's Commissars of the Donets-Kryvyi Rih Soviet Republic. In 1918–19 he was vice-chairman of the Provisional Workers' and Peasants' Government of Ukraine; in 1920 he became head of the Executive Committee of Donets gubernia as well as a member of the cc cp(б)у and of the All-Ukrainian Central Executive Committee. Late in 1920 he was transferred to Party and government work in Moscow. Many towns, cities, schools, and factories in the Ukrainian SSR have been named after Artem.

Artem Communist University (Komunistychnyi universytet imeni Artema). An institution of higher learning in the Ukrainian SSR for training higher Party, trade-union, and government officials. The university was established in 1922 out of the reorganized Higher Party School of the cc cp(б)у in Kharkiv. The university's program took three years to complete. In 1932 the university was reorganized into the Higher Communist Agricultural School.

Artemiuk, Platon [Artemjuk], b 18 December 1891 in the village of Nosiv in Podlachia, d 5 August 1951 in Toronto. A leading figure in the Orthodox church and an educator. Artemiuk was the director of the Ukrainian school in Berestia. From 1935 he was a priest in Volhynia, and from 1942 he was bishop of the *Ukrainian Autocephalous Orthodox church in Rivne. After emigrating Artemiuk was the secretary of the Episcopal Synod of the Ukrainian Autocephalous Orthodox church.

Artemivka. IV-16. Town smt (1969 pop 6,900), established 1903–5; now in Chutove raion, Poltava oblast. The town has a food industry.

Artemivske [Artemivs'ke] (Soviet Ukrainian: Artemivsk). V-19. City (1976 pop 14,100) in Pereval'ske raion, Voroshylovhrad oblast. Its major industry is coal mining. The city was founded in 1910 and was called Katerynivka until 1921. It was classified a city in 1961.

Artemivske [Artemivs'ke] (Soviet Ukrainian: Artemivsk). V-19, DB II-4. City (1981 pop 89,000) under oblast administration in Donetsk oblast. Called Bakhmut until 1924, this is the largest centre of salt production in Ukraine. Deposits in Artemivske and surrounding areas yield gypsum, dolomite, chalk, and refractory clay. Mention of Artemivske dates from 1571, when the Bakhmut guard (or Bakhmut Cossacks), on the orders of the government in Moscow, defended the saltworks from Tatar attack. In 1703 the fortress of Bakhmut was built on the orders of Tsar Peter I, and in 1783 Bakhmut became a county town of Katerynoslav gubernia. In 1782 the saltworks were closed because of competition with Black Sea salt. In 1870 development of the deposits of rock salt in the area surrounding Bakhmut was begun, and production has increased steadily ever since (21,000 t in 1887 and nearly 4 million t in 1970, which constitutes more than half of the total salt production in the USSR). (See also *Artemivske rock salt deposits and *Salt industry.) Industries in Artemivske include the production of non-ferrous metals (since 1954 the main products have been copper and brass bars and sheets, firebrick, and ceramic tiles), food industries (especially winemaking; a champagne distillery was built in 1950 and in 1970 produced 8.2 million bottles), and light industries. The All-Union Research Institute for the Salt Industry, an industrial association (Artemheolohiia), and museums of regional history and geology are found here.

V. Kubijovyč

Artemivske rock salt deposits. Rock salt deposits in Artemivske raion in Donetsk oblast. Since the 16th century salt has been produced from these by the evaporation method. In 1881 it began to be mined. On 1 January 1976 the existing salt reserves were estimated at 5.2 billion t, extending over 170 sq km. The Artemivske rock salt deposits are the largest in the Ukrainian SSR and form one of the largest salt fields in the USSR. The deposits are associated with strata from the Permian period. The salt is found in layers that alternate with other types of deposits at a depth of 80–525 m. Currently, three layers are being mined. The extracted salt is of a high quality: 97.5–98.5 percent sodium chloride. In 1979 the annual production of salt was 90 percent of Ukraine's total output of salt and 40 percent of the USSR output. The

principal forms of salt produced here are table salt, iodized table salt, and salt as feed for livestock. Since 1976 the salt in Artemivske has been mined by the enterprise Artemsil.

Artemovsky, Semen [Artemovs'kyj]. See *Hulak-Artemovsky, Semen.

Artillery. The first cannon appeared on Ukrainian territories in 1394 in Lviv. By 1468 a foundry had been established there, and it produced guns for all Ukraine. At the time artillery was used for fortifications; field artillery was produced later. The Cossack host began to use artillery in 1580, mainly at Zaporizhia. B. Khmelnytsky's troops used over one hundred guns in the Battle of Berestechko. Under Hetman I. Mazepa, who studied in Holland as a young man, the artillery was greatly improved. It was directed by the Saxon engineer F. von Königsek. Among the master smiths who cast guns the military casters Y. And K. *Balashevych were renowned. In 1708 A. Menshikov captured over 70 cannons in Baturyn, and Peter I confiscated the rest after the Battle of Poltava in 1709. Hetmans D. Apostol and K. Rozumovsky rebuilt the Cossack artillery, but it never attained the strength it had under Mazepa.

Artillery played an important role in the Ukrainian armies during the struggle for national independence (1917–20). In the Army of the Ukrainian National Republic the *Zaporozhian Corps and the *Sich Riflemen had complete artillery units, with 180 cannons between them. Other formations of the Ukrainian army had smaller artillery units. In general there was a shortage of cannons, munition wagons, and carriages. The Ukrainian Galician Army had 12 artillery regiments, which had 40 light batteries, 1 mountain and 1 cavalry battery, 6 light howitzer (10 cm) batteries, 172 cannons, and 1 battery of long-range (122 mm) mortars. The joint armed forces that marched on Kiev in August 1919 had among their artillery units 321 light and 37 heavy cannons as well as the guns on armored railway cars and the guns assigned to infantry and cavalry regiments.

L. Shankovsky

Artobolevsky, Volodymyr [Artobolevs'kyj], b 4 August 1874 in Symbukhovo, Penza gubernia, Russia, d 9 October 1952 in Kiev. Zoologist, zoogeographer, and popularizer of biology. A graduate of Kiev University (1901), Artobolevsky was appointed professor there in 1924. His major works were devoted to bird fauna, including those birds found in the Kiev and Chernihiv regions.

Artsyz [Arcyz]. VIII-10. City (1969 pop 14,600) on the Kohlynyk River in southern Bessarabia, a raion center in Odessa oblast. A railway junction, Artsyz was founded in 1816 as a German colony named Leipzig. The city has a food industry and a reinforced-concrete-products factory.

Artymiw, Lidia [Artymiv, Lidiia], b 9 September 1954 in the United States. Pianist, graduate of the Philadelphia Musical Academy where she studied under G. Graffman. She has performed with the symphony orchestras of Baltimore, Philadelphia, Boston, and Buffalo, has performed in concerts at the John F. Kennedy Arts Center in

Washington and the Metropolitan Museum in New York, and appeared at the Marlboro Music Festival in 1972. She was awarded first prize at the Chopin competition of the Kosciuszko Foundation in New York in 1972.

Ahenor Artymovych

Artymovych, Ahenor [Artymovyč], b 30 August 1879 in Velykyi Kuchuriv, Bukovyna, d 21 October 1935 in Prague. A classical and general linguist. Artymovych studied at the universities of Chernivtsi and Vienna, later becoming a teacher in a gymnasium in Bukovyna and docent at the University of Chernivtsi. After Rumania occupied Bukovyna in November 1918, he went to Galicia, where he became the secretary of education and religion in the state secretariat of the Western Ukrainian National Republic. From 1920 Artymovych was professor of classical philology at the Ukrainian Free University in Vienna and Prague. He was a full member of the Shevchenko Scientific Society. He published articles in Ukrainian and German on general linguistics (regularities of language, the appropriation of foreign words, the relation between writing and speech, and potentiality and realization), on comparative linguistics (Indo-European guttural consonants), and on classical linguistics and metrics.

Artystychnyi visnyk (The Artistic Herald). A journal devoted to the plastic arts and music, published in Peremyshl and Lviv in 1905–7, edited by S. *Liudkevych and I. *Trush. Among its contributors were O. Berezhnytsky, I. Bilykovsky, A. Vakhnianyn, F. Kolessa, and I. Franko. Ten issues of the journal appeared.

Arutiunov, Aleksandr [Arutjunov], b 3 January 1904 in Yerevan, d 5 June 1976 in Moscow. Neurosurgeon, member of the Academy of Medical Sciences of the USSR. In 1945 he was put in charge of the neurosurgical clinic in Kiev, and in 1951–64 he was director of the Kiev Scientific Research Institute of Neurosurgery. In 1964 he moved to Moscow. Arutiunov was a student of N. Burdenko and the founder of the Ukrainian school of neurosurgery. He made important contributions to the study of the fundamental problems of neurosurgery. He was also honorary president of the World Federation of Neurosurgical Associations.

Asbestos-cement industry. A branch of the *building-materials industry. Its main products are covering materials (slate), water and sewer pipes, facing tile, wall panels, electroinsulated panels, etc. Asbestos is imported from the Russian SFSR. The asbestos-cement industry arose in

Ukraine during the period of the First Five-Year Plan when slate plants were built in Kramatorske (1929) and Kiev (1932). In 1950 a slate plant in Kharkiv began production. In 1954 the production of asbestos-cement pipes began at the Kiev slate plant, the first production of such pipes in Ukraine. In 1959–79 asbestos-cement plants were built in Amvroziivka (see *Amvroziivka Cement Complex), Zdolbuniv, Balakliia, Ivano-Frankivske, and Zaporizhia. In 1977 Ukraine produced 1,086 million slate tiles and 9,300 km of asbestos-cement pipes (200 mm diameter).

Asceticism (from the Greek *askēsis* [training in virtue]). The religious practice of denying material, physical, and psychological desires in order to attain various spiritual goals and an ideal, moral life, based on the teachings of the Gospel (following the historical Christ). Originally practiced by hermits and mystics, particularly in the East, asceticism was brought to Ukraine by Greek monks before the official conversion to Christianity. The *Kievian Cave Monastery became the center and model of ascetic life. Having at first an eremitic character, asceticism soon became a communal, monastic practice, whose exponents dedicated themselves to the improvement of their fellow man and their surroundings. Nevertheless, individual asceticism, particularly living the life of a 'holy fool for Christ's sake,' eremitism, fasting, and voluntary solitary confinement in caves, cliffs, and wildernesses continued.

In Ukraine asceticism was generally practiced in a moderate way both inside and outside monasteries and avoided the extremes known in the Greek and Russian religious traditions. It was saved from excess by its practitioners' ties with the external world and society at large. The life of I. *Vyshensky exemplifies the conflict between the social and strictly individual forms of asceticism practiced in Ukraine. (See also *Monasticism, *Hermitage.)

A. Velyky

Ash (*Fraxinus*, Ukrainian: *yasen*). A genus of broad-leaved trees of the olive (*Oleaceae*) family. In Ukraine four species of ash are found. Most widespread is the common European ash (*F. excelsior*), which reaches a height of 40 m. It likes light and warmth, grows quickly, and can be found everywhere in deciduous forests. It is used mostly in furniture-making and building. The red ash (*F. pensylvanica*), white ash (*F. americana*), and green ash (*F. lanceolata*) are cultivated for decorative purposes in parks and gardens.

Ashkarenko, Hryhorii [Aškarenko, *Hryhorij*], 1839–1922. Entrepreneur, manager of Ukrainian-Russian theater companies in the 1870s and 1880s, and character actor. In 1881, for the first time since the prohibition of Ukrainian theater in 1876, Ashkarenko staged Ukrainian plays with M. *Kropyvnytsky. He wrote 'Spomyny pro pershu ukrains'ku trupu' (Memoirs of the First Ukrainian Troupe), which appeared in *Ridnyi kraj* (1908, no. 15).

Asieiev, Yurii [Asjejev, *Jurij*], b 26 December 1917 in Kiev. Architect and art scholar, graduate of the Kiev Building Institute (1941). In 1953 Asieiev began to lecture at the Kiev State Art Institute, and was promoted to full professor in 1972. He is an authority on ancient Ukrainian architecture, having published the following works:

Ornamenty Sofii Kyiv's'koï (Ornaments of the St Sophia Cathedral in Kiev, 1949), *Mystetstvo starodavn'oi Rusi* (The Art of Ancient Rus', 1963), *Arkhitektura Kyiv's'koï Rusi* (The Architecture of Kievan Rus', 1969), *Mystetstvo starodavn'oho Kyieva* (The Art of Ancient Kiev, 1969), *Podorozh v antychnyi svit* (A Trip to the Ancient World, 1970) and *Rozpovidi pro arkhitekturni skarby* (Stories about Architectural Treasures, 1976). He has also co-authored many works, eg, *Narysy istorii arkhitektury URSR* (Essays on the History of Architecture of the Ukrainian SSR, 1957), *Narysy z istorii ukrains'koho mystetstva* (Sketches from the History of Ukrainian Art, 1966), *Istoriia ukrains'koho mystetstva* (History of Ukrainian Art, 6 vols, 1966–70; main editor of vol 1).

Askaniia-Nova [Askaniija-Nova]. VII-14. Town smt (1972 pop 3,625) in Chaplynka raion, Kherson oblast. Although there have been settlements in the vicinity since the late Bronze Age, documentary sources first mention a town only in 1822. The original name was Chapli, but the present name has been used since 1841. Located nearby is the *Askaniia-Nova Nature Reserve.

The steppe at Askaniia-Nova; in the foreground, a tawny eagle on a stone *baba*

Askaniia-Nova Nature Reserve. A state reserve in the steppe of the Chaplynka raion in Kherson oblast. A zoo was established there in 1875 by a Prussian colonist, F. Falz-Fein, on the lands of his father, a wealthy landowner. He acclimatized wild animals from Asia, Africa, America, and Australia that were related to extinct species of steppe fauna. In 1910 Professor I. Ivanov worked at the reserve and conducted experiments in acclimatizing the Przewalski wild horse and the European bison, and in crossing the European bison with the buffalo, the bison-buffalo with horned cattle, the zebra with the domesticated horse, and so on. During the revolutionary period a local peasant, K. Siianko, who was a self-taught zoologist and Falz-Fein's assistant, saved the reserve from complete ruin. On 8 February 1921 the Council of People's Commissars of the Ukrainian SSR declared Askaniia-Nova a national nature reserve under government supervision. An experimental station, zoo, botanical garden, zootechnical station, and breeding farm were set up at the enlarged reserve in 1921–5 under M. *Ivanov. In 1932 the All-Union Scientific-Research Institute for the Acclimatization and Hybridization of Animals was established there. In 1956 the institute was renamed the M.F. Ivanov 'Askaniia-Nova' Ukrainian Scientific-Research Institute for the Fauna of the Steppe Regions.

Today the Askaniia-Nova Nature Reserve consists of a 11,200 ha section of virgin fescue-feather-grass steppe, a 23,000 ha research farm, an acclimatization zoo, and a

Askaniia-Nova Nature Reserve; stone *baba* at the reserve

botanical park. The task of the reserve is to preserve and study the virgin steppe with its wild flora and fauna and to acclimatize, study, and breed plants, birds, and animals that have agricultural value. In the reserve there are about 270 species of wild bird (the steppe eagle among them), roebucks, hare, Askanian steppe bucks, bats, moles, squirrels, rock martens, and other animals. The zoo contains a unique collection of wild animals: antelopes, bison, buffalos, zebras, Przewalski horses, etc. Among the wild birds are ostriches, flamingoes, American rheas, and casuari. Experiments in hybridization are performed in the zoo. In the botanical garden the acclimatization of various trees and bushes that are suitable for foresting the dry regions of southern Ukraine is studied. About 150,000 tourists visit Askaniia-Nova every year.

Askold and Dyr. Semilegendary figures mentioned in the Primary Chronicle as members of *Riuryk's cohort in Novgorod. Leaving Riuryk, they captured Kiev from the *Khazars and established themselves as its princes. In 860

Askoldova Mohyla, painting by I. Izhakevych

(862 according to other sources) they led an unsuccessful campaign against Constantinople. In 882 Prince *Oleh had them murdered and used the fact of their non-princely origin as justification. Askold and Dyr are said to be buried on Uhorska Hill in Kiev at a site marked by the monument called *Askoldova Mohyla.

Askoldova Mohyla (Askold's Mound). Part of a picturesque park in Kiev on the right bank of the Dnieper River. According to old legends, Askold (see *Askold and Dyr) is buried here. Until 1809 a wooden church stood at the site of Askold's mound. In 1810 the architect A. Melen'sky replaced this church with a brick church-rotunda. In 1937 the church was rebuilt into a pavilion.

Aspanfut. See Association of Panfuturists.

Aspen, European (*Populus tremula*; Ukrainian: *osyka*). A tree of the family Salicaceae. It reaches 25 m in height. It grows in mixed and deciduous forests and flood plains. The aspen is common in Polisia and in the forest-steppe belt. It covers an area of 90,000 ha in Ukraine. Aspen wood is light, soft, and low grade. It is used in carpentry and lathe work and for matches and paper. Its bark is used in tanning.

Aspys or **Asotsiatsiia pysmennykiv** (Association of Writers). A writers' association in Kiev in 1923–4. Among its member were H. Kosynka, V. Pidmohylny, Yu. Mezhenko, B. Antonenko-Davydovych, Ye. Pluzhnyk, M. Halych, M. Ryl'sky, M. Zerov, M. Mohyliansky, M. Ivchenko. In 1924 it disintegrated, and most of its members formed the group Lanka and later *MARS.

Assimilation in language. Assimilation in modern Ukrainian operates automatically in certain consonant clusters. Hard dentals assimilate to the subsequent soft consonants in palatalization (excepting final consonants of prefixes: *pisnja* [song] is pronounced *pí[s'n]ja*, but in *zdiisnyty* [realize] the *z* preserves its hardness). Voiceless consonants assimilate to the subsequent voiced ones in voicing (*molot'ba* [threshing] is pronounced *molo[d'b]lá*). Palatals become dentals before dentals and vice versa (*ptašci* [bird], dat sing, is pronounced *ptá[s'c]li*; *pisok* [sand] as opposed to *piščynka* [grain of sand]). All these are cases of regressive assimilation (the subsequent sound assimilating the preceding one). Progressive assimilation is not typical of the Ukrainian language now and was not typical earlier, save in a few individual cases (eg, *bdžola* [bee] from the older *bčela*). The modern type of assimilation stabilized in Ukrainian from approximately the 15th century on. Before the loss of **jers* (the mid-12th century), a limited number of consonant clusters were admitted in Proto-Ukrainian; the regressive assimilation within those admitted operated in voicing both before voiced, as now, and before voiceless (*lěsti* [climb] – modern Ukrainian *lizty*), and partly in palatalization (*mysl* [thought] as opposed to *rozmysljati* [think]). In Middle Ukrainian (14th–16th century) there was a tendency to introduce assimilation in the vowel of the pretonic syllable to that accented: *o* to *a*, *o* to *u*, *e* to *y*, *y* to *e* (partial vowel harmony: compare Old Ukrainian *bogatyi* with modern Ukrainian *bahátyj* [rich]; Old Ukrainian *kožux* with modern Ukrainian *kuzúx* [spelled *kožux*] [sheepskin coat]; and Old Ukrainian *nesi* [carry] impera-

tive with modern Ukrainian *nysyj* [spelled *nesyj*]), but the changes $o > a$ and $o > u$ in modern Ukrainian affect individual words only and are unproductive.

G.Y. Shevelov

Association for the Advancement of Ukrainian Culture (Asotsiatsiia diiachiv ukrainskoi kultury). Association of Ukrainian writers, artists, actors, journalists, and scholars outside Ukraine that was organized by contributors to Ukrainian culture associated politically with the organizations of the Ukrainian Liberation Front. The association has national organizations in the United States and Canada and branches or representations in Western Europe, Argentina, and Brazil. Its membership numbers over 100. The association has published two collections of *Estafeta* (The Relay Message) in Toronto and collections of poetry by various authors. Its magazine, **Terem*, appears irregularly in Detroit under the editorship of Yu. Tys-Krokhmaluk (seven issues by 1982), and its 'Literatura i mystetstvo' (Literature and Art) appears as a monthly supplement in the weekly paper *Homin Ukraïny*. The executive of the association is located in Toronto. In 1970 B. Stebelsky succeeded Mykhailo Kushnir as president of the association. Some of its prominent members are V. Davydenko, V. Dovhaniuk, R. Kukhar, V. Lasovsky, L. Poltava, B. Romanenchuk, M. Sosnovsky, and M. Cheresnovsky.

Association for the Advancement of Ukrainian Studies (Arbeits- und Förderungsgemeinschaft der ukrainischen Wissenschaften). Founded in 1962 in Munich, the association represents three Ukrainian learned societies – the *Ukrainian Free University, the *Shevchenko Scientific Society, and the *Ukrainian Technical and Husbandry Institute; it co-ordinates their activities and fosters contacts with German learned societies. Its presidents have been R. Yendyk, D. Pelensky, and H. Vaskovych. The executive is assisted by the Learned Council, which consists of Ukrainian and German scholars and has been headed by O. *Kulchytsky and since 1978 by V. *Yaniv. The board of trustees, which includes representatives of the German federal government and the Bavarian government, has the task of soliciting funds for the association. R. Lüder, J. Maurer, V. Yaniv, and H. Singbart have presided over the Curatorium, and A. Figol has been its financial officer. The association's annual publication, *Mitteilungen*, contains, besides scholarly articles in Ukrainian studies, Slavic studies, Eastern studies, and Sovietology, materials on the history of the societies represented by the association. R. Yendyk and H. Vaskovych have served as editors of the journal.

Association for the Joint Cultivation of Land (Tovarystvo spilnoi obrobky zemli or tsoz). Voluntary association practicing a form of co-operative or collective farming in the early years of Soviet rule in Ukraine and other parts of the USSR. Such associations held and worked the land in common; farm equipment remained in private hands, although all members of the collective used it freely. Homes, home gardens, and farm animals were also privately owned. The activities of the associations for the joint cultivation of land were conducted in accordance with the statute of 1924 that provided for the distribution of income among the members of the associations according to each member's contribution in land,

labor, means of production, and sometimes the size of his family. Part of the income was used for purchasing equipment. The government encouraged such associations and gave them financial support. Although they rapidly became the most popular form of collective farming, accounting for 2.5 percent of all collective farms in Soviet Ukraine in 1923–4, 43.3 percent in 1925–6, and already 73.8 percent in 1928, they constituted only 1.3 percent of all farms by the end of 1928. Under the so-called total *collectivization drive the farm artel became the basic form of the *collective farm, and the associations for the joint cultivation of land ceased to exist.

Association of American Youth of Ukrainian Descent in the USA. See Ukrainian Democratic Youth Association.

Association of Artists of Red Ukraine (Asotsiatsiia khudozhnykiv chervonoï Ukraïny), 1926–32. A conservative association of artists in the Ukrainian SSR that strove to produce the popular, realistic art demanded by Soviet officialdom. The association, which was linked with the Association of Artists of Revolutionary Russia, aroused the opposition of other Ukrainian artistic societies, notably the *Association of Revolutionary Art of Ukraine. The Association of Artists of Red Ukraine had 14 branches (in Kiev, Kharkiv, Odessa, Chernihiv, Poltava, and elsewhere), studios in Kiev and Kharkiv, a workshop for the production of political posters, and a publishing house. Among its members were V. Averin, I. Buriachok, I. Izhakevych, I. Khvorostetsky, M. Kozik, F. Krychevsky, Yu. Mykhailiv, P. Nosko, M. Prakhov, H. Svitlytsky, K. Trokhymenko, I. Shulha and M. Zhuk. The association arranged many exhibitions, especially traveling exhibits. In 1929 a group of leading artists left the association and formed the Ukrainian Artistic Alliance. In 1930 the association was renamed the All-Ukrainian Association of Proletarian Artists, which existed until 1932.

Association of Canadian Ruthenian Farmers (Tovarystvo ruskykh farmeriv u Kanadi). The association was formed in Rosthern, Saskatchewan, in 1910. It published a newspaper, *Novyi krai*, expanded Ukrainian political consciousness, and encouraged the Ukrainian co-operative movement. A strong faction of the Liberal party controlled the executive and newspaper. With the bankruptcy of the co-operative stores and the collapse of *Novyi krai* in 1913, the association disappeared.

Association of Contemporary Music (Asotsiatsiia suchasnoi muzyky or ASM). ASM (1924–32) was a branch of an international society of contemporary music. It united composers who were oriented towards innovative movements in Western music, such as expressionism, constructivism, and jazz, and who propagated those trends. The president of ASM in Ukraine was B. Liatoshynsky. The association was dissolved by a resolution of the Central Committee of the All-Union Communist Party (Bolshevik) on 23 April 1932.

Association of Independent Ukrainian Artists (Asotsiatsiia nezalezhnykh ukrainskykh myststiv). Association of Western Ukrainian artists of various stylistic tendencies, active in Lviv from 1930 to 1939. It was headed by M. *Osinchuk and Ya. *Muzyka. The associa-

tion organized 13 group and individual exhibitions, including an exhibition held in 1931 with the participation of Ukrainian artists from Paris: M. Andriienko, O. Hryshchenko, M. Hlushchenko, and V. Perebyinis. Emigré artists also took part in exhibitions of graphic art held in Lviv, Prague, Rome, and Berlin. The association published five issues of the journal **Mystetstvo* under the editorship of P. Kovzhun between 1932 and 1936, as well as monographs on O. Sakhnovska, M. Andriienko, O. Kulchytska, O. Hryshchenko, M. Hlushchenko, and L. Gets, and the collection *Ekstlibris* (Bookplates). The association was dissolved by the Soviet authorities.

Association of Militant Atheists of Ukraine (Spilka voiovnychkh bezvirnykh Ukrainy). A republican branch of the Union of Militant Atheists of the USSR (known as the Union of Atheists of the USSR in 1925–9). The association was established in 1927; until 1929 it was called the Association of Atheists of Ukraine. It operated until the Second World War. Under the direction of the department of agitation and propaganda of the Communist Party (Bolshevik) of Ukraine the association organized mass antireligious campaigns, which included atheist agitation and propaganda, harassment of clergy and believers, the closing of churches and monasteries, and the destruction of icons, liturgical books, and other church items and property. It published the magazine **Bezvirnyk* (1925–35), the newspaper *Voiovnychyi bezvirnyk* (1929–35?), and the weekly *Bezbozhnyk* (1937–41), as well as non-periodical antireligious literature. The association's membership reached about 1.4 million in 1932, but most of the members were inactive. In subsequent years the organization suffered a decline, and in 1937, during the Yezhov terror, its leading cadres, headed by D. Ihnatiuk, were severely decimated. In 1947 responsibility for antireligious propaganda was assigned to the republican Society for the Propagation of Political and Scientific Knowledge, which in 1963 was renamed the Znannia Society of the Ukrainian SSR. Since 1960 this society has published an antireligious monthly, *Voiovnychyi ateist*, which in 1965 was renamed *Liudyna i svit*, and antireligious books. In 1979 the society had 28,366 branches with a membership of 684,700.

B.R. Bociurkiw

Association of Panfuturists (Asotsiatsiia panfuturystiv or Aspanfut). A literary group founded in Kiev in 1922 by M. Semenko, O. Slisarenko, G. Shkurupii, and others. It later became the Association of Communist Culture (ASKK). The work of Aspanfut is characterized by a superficial experimentalism masked by declarations to put art at the service of revolutionary propaganda. The group disintegrated in 1924–5, but many of its members came together again in **Nova Heneratsiia*.

Association of Proletarian Musicians of Ukraine (Asotsiatsiia proletarskykh muzykantiv Ukrainy or APMU). APMU was created in Kharkiv in 1928 with a mandate to combat 'bourgeois music and *malorosiishchyna* (Little Russianness)' and to create 'proletarian music.' The association was dissolved on 23 April 1932 by a resolution of the Central Committee of the All-Union Communist Party (Bolshevik).

Association of Revolutionary Art of Ukraine (Asotsiatsiia revoliutsiinoho mystetstva Ukrainy or ARMU). One of the largest artistic associations in the Ukrainian SSR, established in Kiev in 1925 and dissolved by the Soviet authorities in 1932. There were branches of the association in Kharkiv, Odessa, Dnipropetrovske, the Donbas, and elsewhere. Its members included artists of various tendencies, but the nucleus of the association was the group of *boichukisty* (see M. *Boichuk), which cultivated monumentalist art in the national tradition and fostered modernist experimentation. The theorists of the association were V. Sedliar and I. Vrona; its members included O. Bohomazov, M. Boichuk, M. Burachek, M. Hlushchenko, K. Yeleva, V. Yermilov, V. Kasiian, B. Kratko, V. Meller, I. Padalka, V. Palmov, Ye. Sahaidachny, A. Taran, V. Tatlin, and, later, K. Hvozdyk, O. Pavlenko, and M. Rokytsky. The association held several exhibitions, including the Republican Exhibition in Kharkiv in 1927 and the Exhibition of Engravings and Drawings in Kiev in 1928. It resisted official pressure from Moscow, opposed the line taken by the **Association of Artists of Red Ukraine*, and consistently endured harsh criticism of its alleged 'nationalist tendencies and formalism.' In 1927 those artists who oriented themselves towards modern Western trends – suprematism and expressionism – left the association and established the Alliance of Contemporary Artists of Ukraine. Another group of artists, which hoped to replace representational art with industrial production, established the association **Zhovten* in 1930. Some members of ARMU and Zhovten established the All-Ukrainian Association of Proletarian Artists in 1931.

S. Hordynsky, V. Sichynsky

Association of Revolutionary Composers of Ukraine (Asotsiatsiia revoliutsiinych kompozytoriv Ukrainy or ARKU). Formed in 1927 and dissolved in 1932, this association united young composers. Its president was V. *Kostenko.

Association of Ruthenian Church Communities in the USA and Canada (Tovarystvo ruskykh tserkovnykh hromad v ZDA i Kanadi). An association of clergy and church communities (15 in all) founded on 30 December 1901 at a convention in Shamokin, Pennsylvania, for the purpose of co-ordinating religious life in the first Ukrainian immigrant parishes and of campaigning for a Ukrainian bishop in America. The association was headed by the **Sacerdotal Council*, consisting of five priests (chaired by Rev I. Konstankevych), and the *Supreme Council*, consisting of three priests and three laymen. At an important convention in Harrisburg, Pennsylvania, in March 1902, the association adopted some radical resolutions against the dependency of Ukrainian church communities on the Roman Catholic hierarchy in the United States. The association, which included clergy from Galicia only, existed until 1907, when the first Ukrainian bishop, S. *Ortynsky, arrived in the United States.

Association of Ukrainian Businessmen, Manufacturers, and Professionals (Tovarystvo ukraïnskykh kuptsiv, promyslovtsiv i profesionalistiv). Founded in Chicago in 1974 at a conference of local societies and groups of Ukrainian businessmen and manufacturers for

the purpose of representing and promoting the private sector of the economy. The organizers of the association were mostly manufacturers and businessmen who had immigrated to the United States after the Second World War. Its first president was T. Yatskiv, who was followed in 1977 by R. Kobyletsky. The association continues the work of the Association of Ukrainian Businessmen which was founded in 1942 and eventually dissolved. In 1975 the association published a periodical, *Visnyk*, and in 1977 V. Nestorovych's *Ukrains'ki kuptsi i promyslovtsi v Zakhidnii Ukraini 1920-1945* (Ukrainian Merchants and Manufacturers in Western Ukraine 1920-45).

Association of Ukrainian Lawyers (Tovarystvo ukrainskykh pravnykiv). Organization of post-Second World War émigré lawyers in the United States founded in 1949. Initially its membership was confined to lawyers in the United States but after 1955 it was extended to lawyers in other countries as well, especially in Canada. The membership of the association is between 150 and 200. The association's presidents were L. Hankevych, B. Dzerovych, V. Savchak, and I. Novosivsky. The association publishes the irregular journal *Pravnychiy visnyk* (4 vols, 1955-79) and participates in the Conference of Ukrainian Academic and Professional Organizations.

Association of Ukrainian Sports Clubs in North America (Ukrainska sportova tsentralia Ameryky i Kanady or USTsAK). An umbrella organization for Ukrainian sports clubs and associations in the United States and Canada founded in 1955. The organization is divided into three sections: USA-East, USA-North, and Canada. In 1981 it had a membership of 20 sports clubs and associations and about 2,500 individual members. The first president of the USTsAK Council was E. Zharsky and the first executive director was I. Krasnyk, who in 1972 was succeeded by R. Kutsil. USTsAK promotes sports and organizes competitions. In 1980 it organized the Free Olympic Games in Toronto at which athletes from Ukrainian, Lithuanian, Latvian, Estonian, and Armenian clubs in the United States and Canada competed.

Association of Ukrainian Women in Great Britain (Orhanizatsiia ukrainskykh zhynok u Velykii Brytanii). The association was formed in 1948 as a section of the *Association of Ukrainians in Great Britain. It has branches in almost every city with a Ukrainian community. In 1982 its membership was 2,800. Among its founders were O. Karpynets, M. Dublianytsia, and A. Hortynska. Besides educational work (preschool day care), the association is engaged in charitable, cultural, and publishing activities. It has set up a department of folk art at the Shevchenko Museum in London. Since 1955 it has published 'Zhynocha storinka' (Woman's Page) in the weekly **Ukrains'ka dumka*. A. Ostapiuk was the association's president for 18 years.

Association of Ukrainian Writers for Young People (Obiednannia pratsivnykiv literatury dlia ditei i molodi im. L. Hlibova). Association of émigré writers, poets, illustrators, and pedagogues for promoting Ukrainian literature for children and young people. The association was founded in Munich in 1946. In 1951 its head office was moved to New York and in 1954 to

Toronto. By the mid-1960s it had over 200 members. In 1980, 42 of its 154 members were writers. Of its 10 branches the most active was in Australia. The following writers served as presidents of the association: B. Hoshovsky (its founder), Yu. Tyshchenko-Siry, L. Khraplyva, O. Mak, and I. Bodnarchuk. R. Zavadovych is honorary president. The association has published the magazine **Mali druzy* (1947-8) and *Iuni druzy*, books for children and youth (over 80 titles by 1981), the non-periodical collections *My i nashi dity* (We and Our Children), and some textbooks. It also sponsors literary competitions, public readings, exhibits of children's books, children's festivals, and lectures.

Association of Ukrainians in Great Britain (Soiuz ukraintsiiv u Velykii Brytanii or SUB). The oldest and largest Ukrainian organization in Great Britain, founded in 1945-6 by Ukrainians who served in the Canadian, Polish, and other armed forces. By the late 1940s most of its membership consisted of postwar Ukrainian refugees (former *Ostarbeiter* and members of the Division Galizien). SUB involves itself in cultural-educational, publishing, charitable, and business activities. It informs the non-Ukrainian public about Ukrainian affairs and represents the Ukrainians in Great Britain before the British authorities. The ruling bodies of SUB are the general assembly, the council, the presidium of the council, and the central executive. The head office is in London. Since the early 1950s SUB has been dominated by the *Organization of Ukrainian Nationalists (Bandera faction).

In 1981 SUB had four autonomous sections: the *Association of Ukrainian Women in Great Britain, the Ukrainian Students' Aid Commission (KODUS), the Association of Ukrainian Teachers and Educators (est 1954), and the Shevchenko Library and Museum (est 1961 in London). It also had 3 permanent commissions and 73 local branches. Within the association's system there were 32 Ukrainian Saturday schools under the sponsorship of the Association of Ukrainian Teachers and Educators, with an enrollment of about 2,000 children.

In 1981, of about 33,000 Ukrainians in Great Britain, 17,322 were members of SUB. At first the association was based only on individual membership, but since 1980 it has had the right to accept corporate members, of which there were five in 1981: the *Ukrainian Former Combatants in Great Britain, the *Ukrainian Youth Association, the *United Hetman Organization, the Ukrainian Information Service, and the Ukrainian Publishers, Ltd. SUB owns two resorts for the disabled and for retired senior citizens, a students' residence in London, and 55 buildings (2 of which have concert halls) that serve as community centers. By the end of 1981 SUB had assets totalling £1,640,000.

SUB has published the weekly paper **Ukrains'ka dumka* since 1947, a children's magazine *Iuni druzy* since 1956, and a quarterly in English, *Ukrainian Review*, since 1954. It also runs a bookstore and publishes books, pamphlets, and postcards. Since 1949 the choir Homin and the dance ensemble Orlyk have been working under SUB's sponsorship. About 30 other choir, dance, and music groups receive support from the association.

D. *Skoropadsky was the honorary president of SUB from 1949 until 1957. Its presidents have been M. Bura, G. Panchuk, O. Fundak, V. Lisevych, D. Levytsky, M. Bily-Karpynets, Ya. Havryliv, R. Lisovsky, V. Vasylenko,

and I. Dmytriv (since 1979). M. Oparenko, Yu. Yenkala, T. Danyliv, Ye. Birchak, B. Tarnavsky, T. Kudlyk, I. Dmytriv, S. Fostun, and I. Ravliuk (since 1979) have served as the secretaries.

The association is a member of the European Freedom Council, the British Council for Refugee Relief, the *World Congress of Free Ukrainians, and the Central Co-ordinating Committee of Ukrainian Organizations in Europe.

Association of United Ukrainian Canadians (Tovarystvo obiednanykh ukrainskykh kanadtsiv or AUUC). Pro-Communist organization of Ukrainians in Canada, incorporated in 1946 to replace the Association of Canadian Ukrainians (est 1942) and its predecessor the *Ukrainian Labour-Farmer Temple Association, banned in 1940. After the wartime popularity of the pro-Communist movement the AUUC declined steadily. It was severely criticized by the third wave of Ukrainian immigrants and negatively affected by the Cold War, N. Khrushchev's revelations concerning Stalin at the 20th CPSU Congress in 1956, Russification in Ukraine, and the increasing socioeconomic integration of Ukrainian Canadians. The AUUC has been most active in Ontario, Alberta, and Manitoba, with Toronto, Edmonton, and Winnipeg the largest centers; currently its headquarters are in Toronto. Through its network of workers' centers, libraries, and its resort in Palermo (near Toronto), the association carries on a modicum of cultural activity, maintaining choirs, theater groups, Ukrainian language courses, etc. The AUUC runs a bookstore and merchandising outlet, *Ukrainska Knyha*, and the travel agency *Globe Tours*, both of which are associated with Soviet foreign-trade institutions. It has sponsored Soviet Ukrainian delegations and performers in Canada and has regularly sent students to study in Kiev. Liaison between the AUUC and the *Communist Party of Canada (CPC) has been maintained by key AUUC functionaries, who have also been members of the central organs of the CPC. In 1965 the two pro-Communist weeklies **Ukrainske zhyttia* and **Ukrainske slovo* merged to form *Zhyttia i slovo*; the monthly *Ukrainian Canadian* serves English-language readers. The AUUC has one fraternal subsidiary, the *Workers' Benevolent Association. Its most important members have been A. Bilecki, J. Boyd (Boichuk), P. Krawchuk, J. Navis (Navizivsky), J. Weir, P. Prokop, M. Shalutsky, and M. Skrypnyk.

F. Swyrypa

Association of Writers. See Aspys.

Astriab, Oleksander [Astrjab], b 3 September 1879 in Lubni, Poltava gubernia, d 18 November 1962 in Kiev. Mathematician, specialist in teaching methods for mathematics, representative of the Kiev methodological school. A graduate of Kiev University, Astriab taught mathematics and the principles of mathematics instruction at the school of Higher Courses for Women in Kiev and at pedagogical courses in Lubni and Kiev. From 1917 to 1919 he contributed to the journal *Vil'na ukrains'ka shkola*. In the 1920s he was a professor at the Kiev Institute of People's Education. From 1930 to 1957 he taught at the Kiev Pedagogical Institute and headed the section for mathematics teaching methods of the Scientific Research Institute of Pedagogy. He published numerous studies and manuals on mathematics instruction.

Oleksander Astriab

Astronomical Observatory, Main (Holovna astronomichna observatoriia). A scientific-research institute established in 1944 through the initiative of O. *Orlov, an academician of the Academy of Sciences of the Ukrainian SSR. The observatory is located at Holosiivce, 10 km south of Kiev, and is equipped with a reflector 70 cm in diameter, a vertical Wanshaft disc with a lens 19 cm in diameter, a double astrograph with a lens 40 cm in diameter, and solar and other telescopes. The basic areas of research are problems of astrometry, physics of planetary atmospheres, solar physics, lunar physics, and stellar physics. The observatory publishes an annual collection, *Astrometriia i astrofizyka*, and *Korotkyi astronomichniy kalendar*. (See also *Astronomy.)

Astronomy. For several centuries cosmography – a non-mathematical and non-empirical theory based on Byzantine sources – was studied in Ukraine. A few Ukrainians who studied in Western Europe, (eg, Yu. *Drohobych, a teacher of astronomy at the University of Bologna at the end of the 15th century) were acquainted with the latest theories in astronomy. At the *Kievan Mohyla Academy only the Ptolemaic theory was taught. Ye. *Slavynetsky in the 17th century mentioned Copernicus's theory in his *Kosmohrafiia* (Cosmography).

Astronomy began to develop in Ukraine only at the beginning of the 19th century and was closely tied to the construction and activity of observatories which were usually affiliated with universities. The first observatory was founded at Kharkiv University in 1808 (since 1923 it has been known as the Kharkiv Astronomical Observatory). Besides investigating the planets and the sun, it specializes in astrometrics and celestial mechanics. The school of M. *Barabashov in the field of planetary studies and particularly in the physics of the moon has a prominent place at this observatory. Among the better-known Ukrainian astronomers who worked at the Kharkiv Astronomical Observatory were B. Herasymovych, M. Yevdokymov, H. Levytsky, L. Struve, B. Ostashenko-Kudriavtsev, and V. Fesenkov. Today the observatory publishes three periodicals – *Publikatsii*, *Trudy*, and *Tsyrkuliar*.

A second observatory was established in 1821 in Mykolaiv. At first its purpose was to train naval officers. In 1912 it became the southern branch of the Pulkovo Observatory of the Imperial Russian Academy of Sciences and in 1926 an independent institution. Now it is again subordinated to the observatory in Pulkovo. An important contribution of the Mykolaiv observatory is *Catalogue de 5,945 étoiles*, published in Leipzig in 1900.

The observatory of Kiev University was founded in 1845. Since 1922 it has been an independent institution. Its school of theoretical astronomy, which was organized by M. *Khandrykov and is continuing under S. Chorny, is widely known. A. Yakovkin specializes in theoretical research in the physics of the sun, stars, and interstellar space. M. Dychenko worked here. Among the better-known astronomers who do their research there are S. Vsekhsviatsky, O. Bohorodsky, and A. Horynia. The observatory publishes *Annaly, Pratsi, Publikatsii, and Tsyrykuliari*.

An observatory was established at Odessa University in 1871 to study principally the known stars and to prepare accurate catalogues (M. Tsimmerman), to photograph and observe new planets, and to study sunspots. The research on the mutating stars of type RR Lira, which is conducted by V. Tseseyvych, is particularly important. At one time O. Kononovych directed the observatory. Now M. Mykhal'sky and B. Novopashenny, among others, do research at the observatory. The observatory publishes its own *Zbirnyk, Biuleten', and Izvestiia*.

At the beginning of the 20th century an observatory (astronomical institute) was set up at Lviv University. Research on the evolution of stars and stellar photometry (E. Rybka) was begun as early as the 1930s. S. Kaplan, V. Stepanov, M. Eihenson, et al conduct theoretical research here. The observatory's publications were *Prace, Astronomicheskii sbornik, and Tsyrykuliari*.

The most important astronomical research in Ukraine is done today at three observatories: in Symeiz in the Crimea (founded in 1908), in Poltava (1926), and in Holosivievo near Kiev (1944). The *Crimean Astrophysical Observatory of the Academy of Sciences of the USSR, which has the largest telescope-reflector in Europe (2.6 m. in diameter), has organized a broad research program on solar physics. A. Severny has studied the sun's magnetic fields here. Some prominent astronomers have worked here in the past: S. Beliaivsky, who discovered 37 minor planets and a comet, which was named after him, in 1911; and H. Shain, whose work on spectral analysis is continuing today.

The *Poltava Gravimetric Observatory of the Academy of Sciences of the Ukrainian SSR investigates the revolution and the tidal deformation of the earth, which provides one of the key methods for unlocking the inner structure of the earth. O. *Orlov initiated this work and was the main theoretician of the motion of the poles. Extending Orlov's theories and using observations of the horizon stars at Poltava (visible daytime and nighttime), N. Popov first discovered the slight oscillation of the earth's axis. Under the direction of Z. Aksenteva, the station organized research into latitude changes and the motion of the poles as well as the tidal deformation of the earth that is connected with them. Other associates of the Poltava Station continued their research at the Main *Astronomical Observatory of the Academy of Sciences of the Ukrainian SSR in Holosivievo. Ye. Fedorov, for example, worked out the nutation of the earth's magnetic poles from 1890 to 1970 by applying his own methods of analysis to measurements of latitude made by different observatories. But the principal role of the Main Observatory is to co-ordinate the work of all the astronomical institutions in Ukraine. Continuing the cataloguing work of the Odessa Observatory, the Main Observatory has prepared several very accurate catalogues; eg, a catalogue of the declination of the fundamental stars, prepared by

O. Korol on the basis of 12,000 absolute observations, and a catalogue of 'latitude stars' by A. Kharin based on 16,000 observations by the differential method.

The research begun by A. Yakovkin at the observatory of Kiev University on the structure of the moon is continuing at the Main Observatory. On the basis of Yakovkin's theoretical speculations on the libration of the moon, A. Horynia succeeded in determining the precise inclination of the lunar axis to the ecliptic and some other constants that are very important in the theory of lunar libration. Building on the work of Barabashov in the field of planetary research, I. Koval and O. Morozhenko of the Main Observatory determined the atmospheric pressure at the surface of Mars and speculated on the elasticity of the planet's surface. At the observatory I. Havrylov prepared a catalogue of the selenocentric co-ordinates of 500 basistic points on the lunar surface, V. Konoplova studies the physics of comets, and I. Kolchynsky investigates the dimensions of atmospheric irregularities. The Main Astronomical Observatory published *Izvestiia* in 1947-66, the collection *Astronometriia i astrofizyka* since 1963 and *Korotkyi astronomichnyi kalendar* since 1955.

Most scientific works on astronomy are published in Ukraine only in Russian.

Atamaniuk, Vasyl [Atamanjuk, Vasyli'] (pseud Yablunenko), b 14 March 1897 in Yabluniv, Stanyslaviv county, Galicia, d 1940. Writer and political activist. Atamaniuk studied law at Lviv University. After the Revolution he emigrated to the Ukrainian SSR and joined the *Borotbist party. He belonged to the literary organization *Zakhidnia Ukraina and edited its journal of the same name. He began to publish in 1915. His collections of poetry include *Chary kokhannia* (Enchantments of Love, 1921), *Khvyli zhyttia* (The Waves of Life, 1922), *Zhovten'* (October, 1924), and *Halychyna* (Galicia, 1925). He also produced a collection of short stories, *Duma pro Stepana Mel'nychuka* (Duma about Stepan Melnychuk, 1924). Atamaniuk was also a literary critic, scholar, and translator. In 1930 he was expelled from Zakhidnia Ukraina and shortly afterwards arrested. The circumstances of his death are unknown.

Atanasii, K. [Atanasij] (monograms: A., A.A., A.K., K.A.). Engraver of the second half of the 17th century. Atanasii worked in Lviv (1663-5) and Kiev (1674-87). About 200 of his engravings are known. Among them are illustrations and inserts for the books *Triodia* (Triodion, 1663) and *Akafist* (Acathist, 1674) and engravings of the Kievan Cave Monastery (1677) and the Last Judgment.

Atheism (from the Greek α - negative prefix, $\theta\epsilon\acute{o}s$ - God). Godlessness, the conviction that there is no God or supernatural or divine ground for nature and human life. In practice atheism rejects the need to bring individual and social life into conformity with the demands of religion.

Materialism as a philosophical school, in denying the existence of supernatural powers, encouraged atheism. The atheistic world view began to spread with the

progress of natural science in the 17th–18th century and the increasing criticism of established religion and church authoritarianism. The French Encyclopedists, and later the German materialist philosophers, removed the spiritual and divine element from their theoretical speculations. Yet, not all of them were active atheists: some of them merely claimed that nothing could be known about God and remained indifferent to religion (agnosticism). K. Marx's historical and dialectical materialism denied the existence of God, and his political program presupposed an atheistic world outlook.

V. Lenin claimed that the struggle against religion was an integral part of the revolutionary transformation of the social order. He criticized the attempts of certain Social Democrats to explain the phenomenon of religion by the theory of 'god building' and its various fideistic interpretations. Regarding religion as part of the superstructure built on the socioeconomic base, which undergoes dialectical changes, Marxist-Leninists assert that belief in God is incompatible with the development of socially productive relations under socialism and communism and that religion is a vestige of former social relations that interferes with the building of communism ('religion is the opium of the people'). From the beginning active atheism was an important element of the Communist party program, and particularly of the Bolshevik program. To be a militant atheist and unrelenting enemy of religion is one of the duties of a member of the CPSU.

To magnify the role of the atheistic tradition in Russia and Ukraine, Bolshevik writers exploited the publications of certain journalists and scholars who were critical of religion or the church. In Ukraine the views of such literary figures as I. Kotliarevsky, T. Shevchenko, I. Franko, P. Myrny, P. Hrabovsky, M. Kotsiubynsky, and Lesia Ukrainka, who were either indifferent to religion or positively inclined and critical of religious practices, have often been presented in a biased and even perverted manner. The latest works of Soviet Ukrainian scholars on atheism detect elements of atheism even in H. Skovoroda and the scientific speculations of certain teachers of the Kievan Mohyla Academy, not to mention the writings of such Enlightenment thinkers as Ya. Kozelsky and S. Desnytsky.

In the 19th century a number of Ukrainian journalists and writers who were influenced by positivism and socialism (M. Drahomanov, I. Franko, M. Pavlyk) were proponents of secularism rather than atheism and criticized the church for supporting the ruling classes and the status quo. There was practically no organized and open atheism in Ukraine. Even the free thinker and agnostic V. Vynnychenko was tolerant towards religion. Only under the Soviet regime has atheism been adopted as a scientific theory, and antireligious propaganda and the struggle against church organizations have become an integral part of the government's program. The Soviet constitution recognizes the fundamental right of each citizen to conduct antireligious propaganda and at the same time the right to practice his religious beliefs, but not the right to conduct religious propaganda (article 50 of the USSR Constitution of 1977 and of the Ukrainian SSR Constitution of 1978).

The principal authors of atheistic publications in Ukraine in the 1960s–1970s were D. Ostrianyn, Ye. Duluman, O. Onyshchenko, A. Yeryshev, B. Lobovyk, V. Voitko, and P. Yarotsky.

St Elijah's Church and Monastery on Mt Athos

Athos, Mount (Hagion Oros). Holy mountain at the eastern end of the Chalcidice Peninsula in the Aegean Sea, Greece (about 2,032 m in height). Mount Athos is the center of Orthodox monastic life and was inhabited by monks as early as the 6th century. The first monastery was established in AD 963. In time Mount Athos came to house 20 monasteries, many hermitages, and a great number of monks' cells, together forming the so-called monastic republic, self-governed by the clerics under the leadership of the protohegumen. Several thousand monks inhabited Athos (in 1917 they numbered over 9,000; in 1968 – 1,580). The monks have primarily been Greeks, but a certain number came from the Balkan and East European countries. Mount Athos gave birth to the monastic movement throughout the Orthodox countries. The Athos monasteries have rich libraries, containing valuable archival materials (about 10,000 manuscripts) and treasures of religious art. Mount Athos is an important center for Orthodox pilgrimages.

Ukrainian monks have lived at Mount Athos since the 11th century. Among them were St Anthony of the Caves (first half of the 11th century; his cave is located in the Esphygmen monastery), I. Vyshensky (ca 1590–1621), Khrystofor and Feodul (early 17th century), Y. Kniahynytsky (d 1621), I. Boryskovych (d 1641), V. Hryhorovych-Barsky (1723 and 1747), P. Velychkovsky (1746–68), the hermit Platon, and others. The Pantelimon monastery (Rossikon), established in 1169 (and still housing some monks from Transcarpathia) has ties with Ukraine, as does the Ukrainian St Elijah Hermitage (belonging to the Pantokrator monastery), established in 1757 by P. Velychkovsky. Ukrainian monks conducted religious and literary work at Mount Athos.

Atroshchenko, Vasyl [Atroščenko, Vasyl'], b 3 July 1906 in Yuzivka (now Donetsk). Chemist, full member of the Academy of Sciences of the Ukrainian SSR since 1972. Atroshchenko graduated from the Odessa Institute of Chemistry and Technology in 1931. In 1935 he became a professor at the Kharkiv Polytechnical Institute. He has produced studies on the kinetics of catalytic and absorptive processes and on the technology of nitrogen fixation.

Audit Union of Ukrainian Co-operatives (Reviziyni soiuz ukrainskykh kooperatyv or RSUK). The major umbrella organization of Ukrainian co-operatives in Galicia under Austria and eventually in all Ukrainian territories under Polish rule. The union, which was known at first as the Provincial Audit Union (Kraiovyi Soiuz Reviziyni or KSR), was founded in Lviv in 1904 to carry out, as the law required, periodic audits of all co-operative organizations in Galicia.

KSR inherited from the Provincial Credit Union (est 1898, see *Tsentrobank) organizational responsibility for all co-operatives. It also broadened its tasks to include the fostering of the growth of co-operative associations, the founding of new co-operatives and the promotion of their economic ties, the improvement of management methods, and the propagation of co-operative ideas among the public. The council of KSR, consisting of twelve elected members, represented the union between annual sessions of the general meeting of the delegates of associated co-operatives, the supreme body of KSR. The day-to-day affairs of the union were managed by the executive board (*vydil*), which from 1912 was known as the Permanent Executive Committee, and by the director of the union's head office, who was appointed by the executive board. The president of the council in 1904–14 was K. *Levytsky. The vice-president, head of the executive board, and chief theorist of the co-operative movement was K. *Pankivsky. Until 1908 Pankivsky edited the monthly journal of KSR, **Ekonomist*. He was succeeded by A. *Zhuk, who had been the editor of the popular monthly of KSR, *Samopomich* (1909–14). Until 1914 O. *Saievych served as director of the head office and senior auditor. The first full-time auditors were B. Dutkevych, O. Skrentovych, and M. Pavliuk, and later I. Fylypovych, P. Glodzinsky, I. Sterniuk, and V. Olkhovy. In 1912 KSR represented 557 co-operatives, 339 (61 percent) of which were credit unions. In 1914 KSR represented 609 co-operatives.

After the First World War the co-operative movement in Galicia was revived. After Polish co-operative legislation was passed in 1920, the movement developed rapidly, owing to the efforts of the major civic organizations and their executive body the Provincial Committee of Co-operatives. The scope of KSR's operations and its importance in the co-operative movement increased as the number of co-operatives grew. In 1928 the union was reorganized and assumed a new name – the Audit Union of Ukrainian Co-operatives. A new statute defined the roles of its key bodies: the general meeting, the council and its presidium, and the three-member board of directors. The general meeting received and approved the

reports of the executive bodies, defined new goals and policies, and elected the council of RSUK. The council monitored the implementation of the statutory resolutions of the associated co-operatives and of the resolutions of the general meeting, received audit reports, and issued instructions to various constituent bodies in the organization. The presidium, consisting of a president, two vice-presidents, a secretary, and a treasurer, acted as the day-to-day agency of the council. All important decisions in RSUK were made jointly by the council and the board of directors. Yu. *Pavlykovsky served for many years (1922–44) as president of the council and its presidium. The council and the presidium were advisory bodies to the board of directors, which was elected by the general meeting. Each director was in charge of one of the three main departments of RSUK – financial-administrative, auditing, and organizational.

The financial-administrative department, directed by I. Fylypovych and, from 1943, by R. Levytsky, was responsible for the internal affairs of RSUK, implementing the budget, and administering the union's publications. The audit department, directed by M. Kapusta (1929–44) and his assistants, I. Hrabar and then T. Mysak, was responsible for periodically auditing all co-operatives (at least once every two years). In 1938 there were fifty auditors in this department; in 1943, seventy. Until 1934 the auditors were appointed by the council. Thereafter, in accordance with the new Polish law, auditors had to pass a special examination to be certified by the State Co-operative Council. Usually, auditors had a higher education in economics. Besides examining records, the auditors also worked as organizers and instructors in the co-operatives of their region.

As the co-operative movement grew, special groups of auditors for the different branches of the movement were set up in the auditing department under experienced inspectors. The group for credit co-operatives was headed by I. Olkhovy; for dairy co-operatives, by O. Zybenko; for urban consumer co-operatives, by D. Kvasnytsia; for agricultural marketing co-operatives, by I. Hrabar; and the others, by Z. Petriv and I. Sterniuk.

The organizational department, which was headed by O. *Lutsky (1929–39) and I. Hrabar (1941–4), was the largest department. It was responsible for organizing new co-operatives and forming district and county unions and provincial economic associations; for coordinating their work, their legal incorporation, and legal counsel; for improving management's qualifications; and for increasing membership. Special inspectors chosen from the auditing department formed the central organizational collegium of officers, responsible for organizing the various branches of the co-operative movement. They participated in the conferences of territorial organizational collegiums, in which the representatives of all the branches and levels of the co-operative movement in a given district participated. The organizational department included the following bureaus: co-operative promotion (chief – Z. Pelensky); liaison with the co-operative guild of the *Union of Ukrainian Women, which was also a member of the International Co-operative Guild (chief – I. Hladka); co-operative training and schooling; and co-operative periodicals (the monthlies **Koopratyvna respublika* and **Koopratyvna rodyna*, and the weekly **Hospodars'ko-koopratyvnyi chasopys*) and book publishing. RSUK also had a statistical bureau, directed by A.

Zhuk, and a legal department, directed by M. Korchyński and, from 1937, by D. Brechka.

RSUK tried to represent in its organizational network all the Ukrainian territories under Polish rule in 1920–39. As early as 1921 it established close ties with the bureau of Volhynian Co-operatives in Kremianets, and in 1927 it established an inspection office in Lutske for the north-western regions. (The key officers of RSUK in Lutske were L. Kobylansky, A. Lobachevsky, and M. Stefanivsky.) New Polish legislation on co-operatives in 1934 restricted the operations of RSUK to the three eastern Galician voivodeships. RSUK thus lost 430 co-operatives. By 1939 RSUK represented 3,455 co-operatives. Of these 2,360 (69 percent) were agricultural marketing co-operatives organized under 27 county and district unions represented by *Tsentrosoiuz; 143 were raion dairy unions represented by the central union, *Maslosoiuz; 115 were larger branches of the *Ukrainbank; 573 were *Raiffeisen village credit co-operatives and other loan associations represented by Tsentrobank; and 194 were urban consumer co-operatives represented by *Narodna Torhovia. The other co-operatives were manufacturing, publishing, construction, health (in Remeniv, Bodnariv, Tsebliv), and women's co-operatives (the latter were part of the *Ukrainske Narodne Mystetstvo co-operative union.)

After the first Soviet occupation of Galicia in 1939, the authorities dissolved RSUK. Under the Nazi occupation (1941–4) the union was restored, but its activities were restricted. Eventually, the auditing departments in Lublin (directed by M. Melnychuk) and in Cracow (directed by I. Fostakivsky) were supervised by RSUK. By 1944 RSUK represented 4,624 co-operatives with their county, district, and central associations. After the postwar Soviet incorporation of Galicia, RSUK ceased to exist.

RSUK was a member of the International Co-operative Alliance, and its representatives took part in international co-operative conferences. See also *Co-operative movement.

Augustus II, Frederick, b 12 May 1670 in Dresden, d 31 January 1733 in Warsaw. Elector of Saxony (1694–1733) and the first Polish king of the Saxon dynasty (1697–1733). Augustus signed the Treaty of Karlowitz with Turkey in 1699, by which Poland regained Podolia and Right-Bank Ukraine. In 1704 his government suppressed the rebellion of S. Pali. Augustus's alliance with Peter I during the Great Northern War (1700–21) subjected Poland to extensive Russian influence. As a result of the Swedish victory over the Polish army in 1704 Augustus was forced to renounce the throne in favor of Stanislaus I *Leszczyński, the man preferred by *Charles XII of Sweden. Augustus regained the throne after the Battle of *Poltava (1709). In 1719–20 Augustus II and his government maintained close relations with P. *Orlyk and other followers of Mazepa.

Auly. v-15. Town smt (1977 pop 5,200) in Krynychky raion, Dnipropetrovske oblast, on the right bank of the Dnieper. The majority of its population works in nearby Dniprodzerzhynske, 12 km away.

Aurochs (*Bos taurus primigenius* or *Bos primigenius*; Ukrainian: *tur*). Extinct wild ox that was common at one time in Europe, Asia Minor, Caucasia, and North Africa. Ancestor of European domestic cattle. In Ukraine the aurochs inhabited the steppe, the forest-steppe, and the mixed forests. It was hunted and became extinct by the 17th century. G. de *Beauplan mentions seeing some aurochs in Ukraine in the mid-17th century. Numerous geographical names and references in the folk tradition attest to the fact that the aurochs was quite common in Ukraine.

Aussem, Volodymyr, b 1879, d ?. Bolshevik leader in Ukraine. In 1904–6 Aussem was a member of the Ukrainian Social-Democratic Association *Spilka and in 1918 became a member of the *People's Secretariat, the first Soviet government in Ukraine. In 1921–3 he was an accredited representative of the Ukrainian SSR in Berlin, and then a counselor at the embassies of the USSR in Berlin and Vienna. In 1925 he became head of the All-Ukrainian Economic Council. He disappeared in the purges of 1930s.

Australia. Commonwealth of six federated states covering the Australian continent, Tasmania, and some small islands of the Indian and Pacific oceans. Its area is 7,686,849 sq km; in 1982 Australia had a population of 15 million, including over 30,000 Ukrainians.

History of Ukrainian settlement. Only a few Ukrainians are known to have lived in Australia before the Second World War. According to an agreement with the International Refugee Organization (IRO), Australia admitted a certain number of war refugees and displaced persons from western and southern Europe, Asia, and Africa. In 1948–51 about 21,500 Ukrainians emigrated to Australia. The immigrants were obliged to work for two years at locations assigned by the government. After a short stay at transfer camps they were dispersed in small groups throughout Australia to meet the postwar demand for unskilled labor. Work was assigned without regard for the immigrant's general education or professional training. It was forbidden to change residence or work on one's own. After two years immigrants automatically received the right of permanent residency and the right to choose their work. After five years they became eligible for Australian citizenship. Upon fulfilling their contracts, most immigrants moved to the large cities where they could find better jobs in industry and could participate in Ukrainian community life. In later years few Ukrainians emigrated to Australia; those who did were mainly from England, Yugoslavia, and the Far East. The number of Ukrainian immigrants entering Australia was practically equal to the number leaving: 346 people entered, and 498 left in 1952–61.

Demographic data. Many Ukrainians in Australia were assigned to other national groups (Russian, Polish, German, etc) in the official statistics because of their place of birth or citizenship. Hence, the number of early settlers that is given above should be increased by 10–20 percent. Because of very low mortality and a high birth rate (over 4 percent per year in the first few years), the number of Ukrainians grew rapidly. The number cannot be made precise because there were many mixed marriages and because, in the official statistics, new births were counted as Australian. According to the estimates of the Federa-

tion of Ukrainian Organizations in Australia there were about 37,500 Ukrainians in Australia in 1965. Other estimates, based on data from churches and a more thorough evaluation of available statistics, provide a figure of 30,000–34,000. According to the 1961 census, the distribution of Ukrainians was the following: New South Wales, 34.8 percent; Victoria, 32.6 percent; South Australia, 16.7 percent; Western Australia, 7.3 percent; Queensland, 5.8 percent; Tasmania, 1.5 percent; Australian Capital Territory, 1.5 percent. About 75 percent of the Ukrainians live in state capitals, 22 percent in provincial cities and towns, and 3 percent on farms. According to the Federation of Ukrainian Organizations the number of Ukrainians living in state capitals is approximately as follows: Sydney, 10,000; Melbourne, 9,000; Adelaide, 5,800; Perth, 1,600; Brisbane, 1,500. In the first immigration men outnumbered women six to four. For this and other reasons there were many more mixed marriages than endogamous marriages. Marriages of the second generation follow a similar pattern.

Social and political life. Ukrainians are one of the best-organized ethnic groups in Australia. As early as the beginning of 1949 they began to form non-political civic associations in areas of Ukrainian concentration. The purpose of these organizations was to represent the Ukrainian community in a given locality, to organize its cultural life, to provide aid to members, and so on. In time these organizations acquired their own buildings, usually with concert halls, where most Ukrainian cultural, political, and academic events take place today. In 1950 a congress of representatives from Ukrainian state associations and national organizations set up a federal umbrella organization called the Alliance of Ukrainians in Australia to coordinate activities and to represent Ukrainians at the federal level. In 1953 the alliance became the *Federation of Ukrainian Organizations in Australia. Its leaders are elected every two years by a general congress. Since 1949 a number of social, political, sports, and youth associations of a local or national character have also been established. The *Ukrainian Women's Association of Australia, (est 1949) has 16 branches and about 700 members today. It publishes the quarterly *Nashe slovo*. There are two youth organizations – *Plast and the *Ukrainian Youth Association – each with about 800 members and its own camping grounds in New South Wales, Victoria, and South Australia. For veterans there is a general organization – the Union of Ukrainian Veterans – and two narrower organizations – the *Brotherhood of Former Soldiers of the First Ukrainian Division of the UNA and the Symon Petliura Legion. Sports clubs exist in the larger cities. Several political parties and organizations have branches in Australia. Most active among them is the Organization of Ukrainian Nationalists (Bandera faction) and the Ukrainian Anti-Bolshevik League (known until 1965 as the Ukrainian Delegation of the *Anti-Bolshevik Bloc of Nations). The Ukrainian National Council is represented in Australia by a national office of its executive body and supported by the Society of Friends of the Ukrainian National Council. Among less-active organizations are the Ukrainian Revolutionary Democratic party and the United Hetman Organization.

Religious life. According to the 1961 census, about 50 percent of the Ukrainians are Catholic, 45 percent are Orthodox, and 5 percent belong to other faiths. The

Ukrainian Catholic churches in Australia: 1) Church of St Olha in Wodonga-Albury (1962); 2) Cathedral of ss Peter and Paul in North Melbourne (1963); 3) Church of St Mary the Protectress in Brisbane (1961); 4) Dormition Church in Ardeer (1966); 5) Church of St Andrew in Sydney (1961)

well-organized Ukrainian Catholic church was initially under the jurisdiction of the Australian Roman Catholic church. On 19 May 1958, by papal decree, a separate apostolic exarchate for Ukrainians in Australia and New Zealand was established. It was responsible directly to the apostolic see and was headed by Bishop I. Prashko. In 1982 the exarchate was raised to the status of an eparchy. In 1978 the Ukrainian Catholic church had 8 parishes with 14 churches, 13 priests, 1 deacon, and 11 nuns. Church organizations and brotherhoods are consolidated in the Alliance of Ukrainian Catholic Organizations in Australia. The church's publishing house, Prosvita, issues a weekly newspaper of general interest, *Tserkva i zhyttia*. The larger parishes publish their own church bulletins.

The Orthodox church has undergone a series of changes and jurisdictional splits. Since 1978 it has been divided into two churches with about the same number of members: the *Ukrainian Autocephalous Orthodox church, headed by Metropolitan M. Skrypnyk of the United States; and the *Ukrainian Orthodox church, headed by Metropolitan A. Metiuk of Canada. Each church has its own parishes, consistory, and administration. Owing to the deaths of local bishops – I. Danyliuk, V. Solovii, S. Haievsky and D. Burtan – the church has no episcopate of its own. Altogether there are 17 parishes and as many churches, 16 priests, and 4 deacons. Ukrainians of other faiths (Baptists, Lutherans, Pentecostals, etc) so far do not have their own national organizations, although there have been some efforts to create them.

Education and cultural life. The government has not hindered the development of Ukrainian life and ethnic culture. In the last few years it has even encouraged such development within the framework of the policy of multiculturalism. For this reason Ukrainians were able very quickly to establish schools and organize social, artistic, and scholarly activities. In early 1950 various associations, churches, and the women's organizations established a number of Saturday schools to teach the Ukrainian language and provide some general knowledge about Ukraine. In 1952 school councils for the states of Victoria and New South Wales were set up to coordinate education in these states. The first national teachers' convention (1956 in Melbourne) established the

Ukrainian Central School Council, which oversees education in Ukrainian schools throughout Australia. Its officers and head-office location (Melbourne and Adelaide until now) are selected every three years. Parents' committees supervise individual schools. The basic seven-year program is limited to religion, Ukrainian language, history, and geography. Larger schools provide day-care centers, preschool classes, one- and two-year teacher's training, and exam-preparation courses for matriculating students. The number of schools, students, and teachers has fluctuated, reaching a maximum in 1959 (39 schools, 2,072 students) and leveling out in 1973–7 at 18 schools, 150 teachers, and 1,150 students. Dance groups, choirs, and reading circles also exist at the schools. There are no Ukrainian-language courses in public high schools, although Ukrainian is recognized as a matriculation credit in certain states.

In 1983 a lectureship in the Ukrainian language was established at Monash University in Clayton, Victoria. In 1984 a chair of Ukrainian studies was established at Macquarie University, owing to the efforts of the Ukrainian Studies Foundation in Australia (est 1974).

There are several amateur theater groups and drama circles, usually attached to associations. Among the best choirs are Boian in Sydney (conductor, V. Matiash), Chaika in Victoria (conductor, S. Korin), Homin in South Australia (conductor, Y. Klish), and the Cathedral choir in Melbourne (conductor, O. Tarnavska). There are also some good smaller choirs supported by various organizations. E. Pavlovska, T. Taras, H. Korin, V. Matiash, and Ya. Lishchynsky are well-known singers, and K. Skrypchenko, A. Miroshnyk, and O. Tarnavska are prominent pianists. Every large Ukrainian community has a dance group.

Literary-artistic circles and clubs are found in Sydney, Melbourne, and Adelaide. Today the most productive writers and poets are Z. Kohut, D. Nytchenko, V. Onufriienko, and P. Vakulenko. The best-known painters are: M. Kmit, V. Savchak, L. Denysenko, V. Tsybulsky, M. Chornii, and T. Mesak.

Ukrainian scholars are organized in the Australian branch of the Shevchenko Scientific Society, with centers in Sydney, Melbourne, and Adelaide. The branch has been headed by Ye. Pelensky, P. Shulezhko, I. Rybchyn, T. Liakhovych, and I. Vashchyshyn (since 1977). Ukrainian engineers belong to the Society of Ukrainian Engineers in Australia (est 1954), and Ukrainian physicians belong to the Ukrainian Medical Association (est 1976). In 1979 the Ukrainian Australian Graduates Association was established.

Press. The first Ukrainian newspapers – *Vil'na dumka* of Sydney and *Iednist'* of Adelaide – began publication in 1949. In 1956 **Ukrainets' v Avstralii* and in 1960 *Tserkva i zhyttia* appeared in Melbourne. All except *Iednist'* are still published each week with a circulation of 1,500–2,000. Among book publishers the best known is the Society for Promoting M. Zerov's Work, in Adelaide. Works of local Ukrainian writers are sometimes published in Australia and sometimes in other countries.

Economic life. In spite of the peasant origin of most Ukrainian immigrants, according to the 1961 census only 2 percent of them worked on farms. Fifty percent worked in industry (mostly in unskilled or semiskilled jobs). The rest worked in transportation, commerce, administration, etc. Among professional groups the European degrees

only of engineers, architects, and teachers were recognized. Physicians and lawyers were required to complete long internship training. Most of them took jobs outside their profession or else emigrated. In recent years many young people have been completing higher education and are strengthening the professional ranks of the Ukrainian community.

The Ukrainians in Australia have attained a relatively high standard of living. A number of credit unions have been established to render material help: Dnister, Odesa, and Postup in Melbourne; Dnipro and Karpaty in Sydney; Hoverlia in Adelaide; and Kalyna in Perth. Since 1973 they have been united in the Ukrainian Co-operative Council of Australia and control a capital of over 14 million dollars.

Future prospects. Tendencies towards assimilation are apparent among the youth born in Australia and uninvolved in Ukrainian life. As the older generation dies out and no new immigrants arrive from Ukraine, Ukrainian life in Australia is threatened with gradual decline. Hence, the central problem facing the Ukrainian community on this continent is how to preserve itself and transmit its national consciousness and cultural heritage to the younger generation.

R. Olesnytsky

Austria. A federal republic in Central Europe and the former nucleus of the Austrian Empire. Austria is composed of nine states (Länder); it has an area of 83,853 sq km and a population of 7.6 million (1982). About 5,000 Ukrainians live in Austria. The country's capital is *Vienna.

Relations between Ukraine and Austria were sporadic until 1772, but trade relations between the Kievan state and cities on the middle Danube are known to have existed since the 10th century. The chronicles refer to contacts between the Galician prince Yaroslav Osmomysl and the Austrian margrave Heinrich Jasomirgott. When the male heirs to the Austrian Babenberg dynasty died out, Prince Danylo attempted to place his own son, Roman, on the throne of the Austrian duchy by marrying him to the heiress to Austria, Gertrude of Babenberg (1252). In the 16th century Ukrainian Cossacks became involved with Austria when the Hapsburgs attempted to enlist their support against the Turks. In 1594 E. Lassota (Lassota von Steblau), an emissary from Emperor Rudolph I, conducted talks with the Zaporozhian Cossacks concerning their participation in the war with Turkey and left an interesting diary of his trip to Ukraine. During the Thirty Years' War many Cossacks served in mercenary units of the emperor's army. Austria's foreign policy during the time of B. Khmelnytsky included mediating between Ukraine and Poland, especially during the Swedish-Polish war. In 1657 Archbishop P. Parchevich, ambassador of the Austrian emperor Ferdinand III, conducted negotiations in Chyhyryn with Khmelnytsky concerning a truce with Poland, offering Austria's assistance as a mediator. Ukrainian Cossacks formed part of the Polish Commonwealth army during the defense of Vienna against the Turks in 1683. The Austrian emperor Leopold I made

Hetman I. Mazepa a prince of the Holy Roman Empire. Hetman P. Orlyk spent a period of time in Austria as an émigré. The Cossack Hetman state in the 18th century engaged in lively trade relations with countries of the Austrian Empire, exporting cattle and agricultural products (primarily to Schleswig) and importing scythes (from Styria). Cultural ties, stimulated by the presence of Ukrainian students in Austrian universities, developed between Austria and Ukraine in the 18th century. The presence of Ukrainians, some of whom occupied high diplomatic posts (ambassador A. Rozumovsky; embassy spokesman H. Poletyka), in the Russian embassy in Vienna contributed to better understanding between the two countries.

With the annexation of Galicia in 1772 and Bukovyna in 1774 by the Austrian Empire, relations between Ukraine and Austria became more involved. (Transcarpathia was affected by Austria to a much lesser extent and then only until 1867.) Under Austria Western Ukraine experienced a political and cultural revival, which stimulated the rapid development of a national consciousness and which later, during Russia's oppression of central and eastern Ukraine, enabled Galicia to assume the role of spokesman for all Ukraine (see *Galicia, *Bukovyna). Ties with Austria fostered the spread of German cultural influences among Ukrainians (see *Germany). The Ukrainian question was an internal problem for Austria and assumed international implications only in periods of conflict between Austria and Russia (see *Russophiles). Austria exhibited greater interest in the Ukrainian problem only during the First World War when in 1914 the *Union for the Liberation of Ukraine came into being under the patronage of Austria and Germany. The union supported the Central powers in their war effort against Russia. In 1918 Austria-Hungary entered into relations with the newly formed Ukrainian state and, on 9 February 1919, signed the Peace Treaty of *Brest-Litovsk. Austrian armies occupied part of Ukraine. Austria-Hungary and Ukraine established diplomatic relations and exchanged ambassadors (Austria's Count J. Forgách in Kiev; Ukraine's A. Yakovliv, and subsequently V. Lypynsky, in Vienna). The newly created Western Ukrainian National Republic (ZUNR) had a diplomatic mission in Austria (under M. Vasylo, later V. Singalevych), and from 1919 until March 1923 the ZUNR government-in-exile was based in Vienna.

Ukrainians in Austria proper. With a few exceptions, Ukrainians began to come to Austria proper only after the incorporation of Galicia and Bukovyna into the Austrian Empire. They came as soldiers of the Austrian army; theology students of the *Barbareum and of other institutions of higher learning (in 1868 the student society *Sich was organized in Vienna); members of parliament; political leaders; civil servants; and finally as workers and domestics. Before the First World War, in addition to the military, about 3,000 Ukrainians lived in Austria, most of them in Vienna. Ukrainian student groups were formed in Vienna, Graz, Innsbruck (mostly theology students), and Leoben (the home of the Mining Academy). Ukrainian organizations were concentrated primarily in Vienna, where a Greek Catholic parish had existed since 1784 at St Barbara's Church.

The number of Ukrainians in Austria increased considerably with the influx of refugees from Galicia and Bukovyna during the First World War: in 1914-15 in

Vienna alone there were about 15,000 Ukrainians, thousands were interned, under the pretext of Russophilism, in the camp in *Talerhof near Graz, and many were held in refugee camps in *Gmünd, Wolfsberg (7,200 in 1915), Grödig (4,000-5,000). In Freistadt (upper Austria) there was a camp for Ukrainian rows from the Russian army. Both in Vienna and in the camps there were Ukrainian schools and large-scale cultural and charitable activities. In 1914-15 Vienna was the center of Ukrainian political activity.

After the retreat of the Russian armies from Galicia and Bukovyna in 1915, the majority of the Ukrainians in Austria returned home. During the breakup of the Austrian Empire (1918), the Ukrainian colony in Austria decreased further. Late 1919, however, saw an increase with the arrival in Vienna of the ZUNR government-in-exile headed by President Ye. Petrushevych. From 1920 to 1923 Vienna, along with Prague, was the principal center of Ukrainian political émigrés. After the incorporation of Galicia into Poland and the dissolution of the ZUNR government, the Ukrainian Galician émigrés for the most part returned to their native land. Only some 3,000 remained (primarily former army personnel, pensioners, workers, and a small group of students, residing mostly in Vienna).

After the annexation of Austria by Nazi Germany (1938), only those Ukrainian organizations approved by the authorities were allowed to exist: the *Ukrainian National Alliance (UNO), the Ukrainian Hromadas, and branches of the *Ukrainische Vertrauensstelle in the German Reich. In 1939-40 many Ukrainian refugees from territories occupied by the USSR came to Austria, together with a number of students (to Vienna, Graz, and Innsbruck). Later on Ukrainians were brought forcibly to Austria as laborers by the Germans. With the defeat of the German armies on the eastern front in 1944, Austria was deluged by a new wave of some 100,000 Ukrainian refugees, 10,000 in Vienna alone. Upon their occupation of Vienna and a part of Austria, the Soviet authorities deported a great number of Ukrainians and suppressed Ukrainian organizations and institutions in Vienna. Some Ukrainians living on Austrian territory occupied by the Western Allies were also repatriated to the USSR. By 1946 about 30,000 Ukrainians remained in the Western zones of Austria.

The new Ukrainian emigration in Austria, as in Germany, was now concentrated mainly in the *displaced persons camps under the administration of the UN welfare organizations UNRRA (United Nations Relief and Rehabilitation Administration) and later IRO (International Refugee Organization). Fifteen percent of the entire new Ukrainian emigration settled in Austria. The major concentrations of Ukrainians arose in Salzburg (the American zone); Innsbruck, Landeck, Kufstein in the Tirol, and Bregenz in Vorarlberg (the French zone); and Villach, Spittal in Carinthia, Judenburg in Styria, and Lienz in the Tirol (the British zone). Salzburg and Innsbruck became the main centers of Ukrainian life. The Ukrainian Central Relief Alliance in Austria was active in Innsbruck and then, from 1951, in Salzburg, and Ukrainian elementary and secondary schools were established. From 1946 to 1949 Ukrainian cultural and organizational life in the camps thrived, with the establishment of schools, publishing houses, newspapers, and theaters (a theater studio organized by Y. Hirniak and O. Dobrovolska in

Landeck and the theater of H. Sovacheva in Salzburg). Almost 500 Ukrainian students attended higher educational institutions in Austria, particularly the universities of Innsbruck and Graz.

As Ukrainians emigrated to other European countries and, from 1948, to overseas countries the number of Ukrainians in Austria decreased from about 12,000 in 1948 to 4,000 in 1950. The majority of those who stayed behind in the camps were the aged and the unemployable. Salzburg continued to be the center of Ukrainian life. The religious needs of the remaining Ukrainians (about 60 percent Ukrainian Catholic, 40 percent Orthodox) were met by five Ukrainian Catholic priests under the vicar-general Rev M. Hornykevych and by Rev B. Vyshyvany of the Ukrainian Autocephalous Orthodox church.

After the departure of the Soviet army from eastern Austria in 1955, Vienna again became the center of Ukrainian life. The central representative body for Ukrainians in Austria was the Union of Ukrainians in Austria, later renamed the Union of Austrians of Ukrainian Descent, under the leadership of V. Zalozetsky-Sas (until 1965) and then Yu. Kostyuk. In 1967 all Ukrainian organizations joined to form the Coordinating Council of Ukrainian Organizations of Austria. At present there are about 5,000 Ukrainians in Austria; 1,000 of them are in Vienna, and smaller groups exist in Salzburg, Kufstein, Innsbruck, Graz, Klagenfurt and Villach. Almost 90 percent have become Austrian citizens. The Ukrainian Catholic parishes in Vienna, Salzburg, and Innsbruck are under the jurisdiction of the Austrian Roman Catholic church. The Orthodox Ukrainians are organized in the Ukrainian Orthodox Brotherhood.

Austria-Hungary. A dual monarchy, formed in 1867 as the result of an agreement between the Austrian government and Hungarian politicians. The Austrian Empire was reorganized in the form of two equal states on the basis of the so-called *Realunion*. Although the sovereign possessed two distinct titles (emperor of Austria and king of Hungary), the two states conducted a common foreign policy and maintained a joint army and economy (with a single currency and customs union). Each state had its own bicameral parliament. Austria-Hungary comprised the lands of the Austrian Empire (including the Kingdom of Galicia and Lodomeria and the crown land of Buko-

vyna, both partially settled by Ukrainians), the lands of the Kingdom of Hungary (there was a Ukrainian population in Transcarpathia), and the territories of Bosnia and Herzegovina, annexed in 1908. Austria-Hungary had a joint territory of 676,100 sq km and a population of 51,390,000, including 4,180,000 Ukrainians and more than 400,000 Ukrainians of Roman Catholic faith and Ukrainians assimilated to the Slovak nationality.

Like the other minorities, the Ukrainians were dissatisfied with the Austro-Hungarian compromise and pressed for the reorganization of Austria-Hungary as a federation of nationalities. The defeat of Austria-Hungary in the First World War brought about its collapse. It was succeeded by the independent states of Austria, Hungary, and Czechoslovakia, while other territories of Austria-Hungary were annexed by Yugoslavia (the kingdom of the Serbs, Croats, and Slovenes), Italy, Rumania, and Poland. In 1918-19 the Ukrainian territories of Austria-Hungary were consolidated to form the *Western Ukrainian National Republic. After a brief period of independence it was occupied by Poland (Galicia), Rumania (Bukovyna), and Czechoslovakia (Transcarpathia).

Autocephaly (from the Greek *αὐτός* [self] and *κεφαλή* [head]). One of the basic principles of the Orthodox church, ensuring the organizational and ritual independence (self-government) of local (state, national) church entities. Autocephaly is derived from the holy canons adopted at the Fourth Ecumenical Council, which require that the management of church affairs conform to the accepted political and civil forms (rule 17).

Autocephalous churches have their own internal structure, a hierarchy independent of other local churches, their own local customs and religious rites, and their own legislation and church judiciary. There are no special canons for the introduction of autocephaly, only some principles based on precedent: the presence of at least three ruling bishops in a separate political-administrative entity, the consent of the other autocephalous churches to the independence of the new church, and the establishment of canonic communion between the new church and existing churches. The autocephalous movement grew as the patriarchate of Constantinople declined.

The Ukrainian people constantly desired autocephaly for their church. During the Princely era and the Lithuanian-Ruthenian period the church in Ukraine enjoyed a broad autonomy, de facto if not de jure. Self-government came to an end in the *Ukrainian Orthodox church with the decline of the Hetman state. In 1686 the Ukrainian church was subordinated to the patriarchate of Moscow. The Ukrainian Orthodox church established itself as an autocephalous church only during the period of Ukrainian independence in 1917-20 and strived to gain formal, canonical recognition of its autocephaly. The government of the Ukrainian National Republic declared on 12 November 1918 that 'the Ukrainian church should be autocephalous under the direction of the metropolitan of Kiev and in canonical communion with the other independent churches,' and on 1 January 1919 issued a decree proclaiming 'the Ukrainian Autocephalous church with its council and spiritual hierarchy' to be independent of the patriarch of Moscow. The resolutions of church conferences and associations (*All-Ukrainian Orthodox Church Council) at the time aimed at auto-

cephaly for the Ukrainian Orthodox church, and on 14 October 1921, under Soviet rule, the All-Ukrainian Orthodox Sobor in Kiev, which represented the patriotic church movement, approved in a 'revolutionary' manner the canons of the *Ukrainian Autocephalous Orthodox church. The Soviet government suppressed this church in 1930.

In Polish-ruled Western Ukraine the Orthodox Church of Poland was recognized by the patriarch of Constantinople as an autocephalous church on 13 November 1924. This church initiated the restoration of the autocephalous church of Ukraine during the Second World War. Today the Ukrainian Autocephalous Orthodox church is banned in the Soviet Union, and autocephalous Ukrainian churches survive only in the West.

Autocracy. A form of government in which a monarch or a group of individuals headed by a supreme ruler possesses absolute power. Autocracy (*samoderzhavie*) became a specific phenomenon in Russia. Its roots can be traced back to the Grand Principality of Muscovy and the prince's struggle against the boyar oligarchy; it was further developed theoretically under the Russian Empire. Autocracy is also associated with the theory of Moscow as the *Third Rome. Ivan IV (1546–84) was the first ruler of Muscovy to elevate autocracy to a political craft based on divine right. The main promoters of theocratic absolutism were the archpriests Joseph of the Volokolamsk Monastery and Philotheus of Pskov and the secular writer I. Peresvetov. With the decline of the boyar duma, the idea of autocracy was left unchallenged. Subsequently Peter I adopted autocracy as the official doctrine of his empire. The tsar was proclaimed 'the absolute monarch,' who did not have to account for his actions to anyone. T. *Prokopovych, former professor of the Kievan Mohyla Academy, in his *Pravda voli monarshei* (The Justice of the Monarch's Will) summed up the arguments in favor of autocracy. Self-coronation, which was practiced by the Russian monarchs from 1742 instead of consecration by the highest church hierarch, enhanced the status of the autocrat, especially in relation to the church. In theory and practice the tsar became the head of the Orthodox church, and, after abolishing the patriarchate in 1721, Peter administered the church through the *Holy Synod. Under *Nicholas I autocracy was proclaimed in the official motto of the Russian Empire – 'Orthodoxy, autocracy, and nationality' (in the sense of Russian nationalism). The concept of 'official nationality' was elaborated by Count S. Uvarov, minister of education and president of the St Petersburg Academy of Sciences. Among other promoters of autocracy were Prince V. Kochubei, a Ukrainian by origin, who served as a Russian diplomat and president of the council of ministers, and the jurist K. Pobedonostsev.

Historians point to several sources of the Russian concept of autocracy: the Byzantine political theory of Caesaropapism, the Mongol heritage of oriental despotism, and European enlightened absolutism. Some scholars also emphasize the geopolitical factors (the perpetual

striving for improved security and Russia's economic development), which find expression even today in Russian *imperialism. For these reasons personal freedoms were sacrificed to autocracy.

The Soviet Russian regime, which was forced upon many other nations, including the Ukrainians, is in fact a variation on tsarist autocracy. Its essential features are the embodiment of the supreme power in the person of the party leader and a small circle of the highest Communist party leadership; government through decrees rather than the legislative process, in which the key role would lie with the elected, representative bodies; and the extreme centralization of political and economic administration. Traditional tsarist autocracy was organically assimilated by Soviet totalitarianism. The continuity of tsarist autocracy with the present Soviet political system under the leadership of the party and its general secretary is described by A. Toynbee, K. Wittfogel, T. Szamuely, K. Friedrich, Z. Brzezinski, J. Reshetar, and others. The brief interruptions in this process came at the Time of Troubles (1605–13) and in the few years after the October Revolution in 1917. The Ukrainian *Hetman state of the 17th–18th century fell victim to Russian autocracy, and the national-cultural renaissance of the 19th century and the liberation movements of the 20th century suffered on its account.

Autocracy as a form of government did not exist in Rus' or Ukraine. The power of the prince, the hetman, and then the head of the state (1917–20) was kept in check by other bodies.

Automotive industry. A major branch of the machine-building industry, specializing in the manufacture of passenger cars, trucks, buses, trailers, and spare parts for these vehicles. The industry also encompasses the manufacture of motorcycles, scooters, and mopeds. The automotive industry had its beginnings in Western Europe at the end of the 19th century and by the early 20th century had reached a significant level of development. In territories under Russian rule, however, the industry did not develop until after the First World War.

The first automotive plant in Ukraine was the Odessa

Motor Vehicle Assembly Plant (1945), which assembled trucks from imported components. By 1958 this plant had produced about 100,000 GAZ-93 dump trucks. In 1945 construction of the Lviv Motor Vehicle Assembly Plant began, and in 1957 the plant was converted to the production of buses. The plant put on the market the first LAZ-695 bus and since then has produced many other models, the most recent being the LAZ-695N and LAZ-695R suburban buses, the LAZ-697R and LAZ-699R excursion buses, and the LAZ-4202 transit bus. The Lviv Bus Plant is the largest motor vehicle plant in Ukraine and Europe. It produces 20 percent of the buses in the Soviet Union and has substantial exports.

A number of motor vehicle plants were built in Ukraine in 1958–65. The Kremenchuk Motor Vehicle Plant (1958) builds heavy diesel trucks, such as the 12 t, all-purpose KrAZ-257, the 30 t truck tractors KrAZ-258 and KrAZ-255v, and the 12 t dump truck KrAZ-256b. The Zaporizhia Komunar Automobile Plant was set up in 1958 and in 1963 began to mass-produce the four-passenger subcompact car Zaporozhets (ZAZ-965). In 1968 it introduced the ZAZ-966v. In 1979 it produced the ZAZ-986A, ZAZ-968, and four automobile models for the handicapped. The Zaporizhia plant is the major enterprise of the AvtoZAZ production association, which also includes various plants producing automotive motors and parts in Melitopil and Dnipropetrovske. Since 1967 the Lutske Motor Vehicle Plant has manufactured the smallest vans made in the USSR – the LuAZ-969 – which can carry two passengers and 250 kg of freight. This plant also produces catering trucks and trailers and refrigeration trucks and trailers. Other specialized vehicles are built by the Luhanske Motor Vehicle Assembly Plant (ambulances) and the Pryluka Fire-Fighting Equipment Plant (fire engines).

The Melitopil Motor Plant began production of motors for subcompact cars in 1959. A number of other plants were set up to manufacture automobile parts and mechanical systems: for example, the Kherson Drive-Shaft Plant; the Poltava Systems Plant, which produces brake systems for large trucks; and the Dnipropetrovske Automobile Springs Plant. Ball bearings are made in plants located in Kharkiv and Vinnytsia. A number of plants build motorcycles (the Kiev Motorcycle Plant), motorized bicycles and mopeds (the Kharkiv Bicycle Plant and a specialized plant in Lviv), and automotive cranes and forklifts (the Lviv Motorized Crane Plant).

By 1967 there were 35 automotive-industry plants in Ukraine, compared to 6 in 1957; the industry's gross production increased 11-fold during this period. In 1968 the automotive industry in Ukraine produced 69 models of motor vehicles.

Motor-vehicle production

Year	Trucks and buses	Passenger cars
1950	18,270	–
1955	19,139	–
1960	6,955	537
1965	18,018	40,590
1975	38,341	135,201
1980	45,414	160,742

The growth in the production of the main types of motor vehicle in the Ukrainian SSR is presented in the

accompanying table. The production of other types of vehicles by the automotive industry in Ukraine has increased rapidly. The following production figures were achieved by 1967 (1958 figures in parentheses): trailers, 4,800 (1,800); semitrailers, 16,200 (none); motorcycles and motorized bicycles, 235,000 (40,800); and bicycles, 687,100 (734,000).

Scientific research for the automotive industry is conducted in Moscow by the Scientific Automotive Institute and the Institute for Planning Automotive Plants. In Ukraine some research for the industry is done by the departments of the Kiev and Kharkiv institutes of highway transportation, the Lviv and Kharkiv polytechnics, and the Zaporizhia Machine-Building Institute.

Autonomists' Union (Soiuz avtonomistiv). An organization representing the peoples of the Russian Empire that was established during the 1905 revolution and demanded the decentralization of the empire on the basis of national autonomy and federalism. The union was launched by a congress in St Petersburg in November 1905 headed by J. *Baudouin de Courtenay and attended by representatives of the Azerbaidzhanians, Belorussians, Armenians, Georgians, Estonians, Jews, Kirghizians, Lithuanians, Latvians, Poles, Tatars, and Ukrainians. An autonomist faction was formed at the First Russian State Duma, and on 11 May 1906 it adopted a program of 'mutual aid and defense, as well as the realization of the idea of autonomy on democratic principles.' The Autonomists' Union consisted of 120 members of the State Duma. The leader of the faction was A. Lednicki, a Pole, and the vice-chairman was I. Shrah. With the dissolution of the First Duma the union ceased to exist. Attempts to re-establish the union during the Second State Duma and then in 1910 did not go beyond the preparatory stage. The idea of an autonomists' union resurfaced in 1917 when the *Congress of the Peoples of Russia was convened in Kiev.

Autonomous oblast. An oblast in the Soviet Union that belongs to one of the Union republics and is populated by a national minority. The autonomy actually consists of the right of the given minority to use its language in the schools and in civil life. There are no autonomous oblasts on the territory of the Ukrainian SSR. On the border of Ukrainian ethnic territories in Subcaucasia lie the *Adygei Autonomous oblast, which is part of the *Krasnodar krai, and the *Karachai-Cherkess Autonomous oblast, which is part of the *Stavropol krai.

Autonomous Soviet Socialist Republic (ASSR). A territory that is part of a Union republic of the Soviet Union and is settled by a national minority and has Soviet autonomy (mainly the right to use the minority language). Within the Ukrainian SSR the Moldavian ASSR was such a republic in 1924–40, and within the Russian SFSR the Crimean ASSR was such a republic in 1920–46. There is an autonomous republic on the Ukrainian ethnic border in Subcaucasia – the Kabardino-Balkar ASSR.

Autonomy. A condition under which a sociopolitical entity determines its own laws. Absolute autonomy is the same as independence, but usually the term autonomy refers to a limited right of legislation and self-rule. Normally the autonomous status of an entity is defined by

a constitution and respected by the dominant state. From the political viewpoint, the autonomous entity can be a state, in which case the system is a federative one, or an administrative territory. Other types of organizations or societies can enjoy a certain kind of autonomy also; for example, a national church (in relation to the world church), national minorities, estates, institutions (universities), professional associations, and commercial organizations. According to social theory, the right to autonomy is based on the consciousness of group interests and distinctions in a section of society and on the striving for self-preservation and self-expression by certain groups (see *Self-determination). The desire for autonomy among subjugated peoples gave rise to the autonomist movement, which played an important role in modern Ukrainian history.

The various principalities (lands) of the Kievan state were autonomous in a certain sense. Until the end of the 14th century the Ukrainian principalities within the Grand Duchy of Lithuania possessed certain attributes of autonomy. In the period before B. Khmelnytsky's rebellion, the Cossacks had limited self-rule (liberties) and in some cases actual control of the northern part of the Kiev voivodeship. This enabled them, along with the Ukrainian clergy and burghers, to conduct their own church and cultural policy.

The Ukrainian Orthodox church enjoyed a certain autonomy in relation to the patriarch of Constantinople before it was incorporated into the Moscow patriarchate in 1686. Similarly, the Uniate church reserved for itself certain autonomous rights in the Church Union of *Berestia, but later it gradually lost these rights.

The Treaty of *Pereiaslav between the hetman and the tsar of Muscovy in 1654 marked the beginning of a long struggle for Ukraine's political autonomy in relation to its neighbors. Although Muscovy regarded the treaty as a union that guaranteed Ukraine a certain autonomy, it continuously tried to erase the characteristic features and specific rights of the Ukrainian government. Besides attempting to restore Ukraine's full independence (I. Mazepa), the Ukrainian side put forth a number of projects for an autonomous Ukrainian state allied with a different neighbor: I. Vyhovsky's Treaty of *Hadiache with Poland in 1658, Yu. Khmelnytsky's treaty with Poland in 1660, P. Doroshenko's Peace Treaty of *Buchach with Turkey in 1672, and P. Ivanenko-Petryk's treaty with the Crimea in 1691. The *Zaporozhian Sich was autonomous in relation to both the Polish-Lithuanian Commonwealth and the Hetman government until it was destroyed by the Russian army in 1775.

Having defeated Mazepa in 1709, Russia made stronger efforts to limit Ukraine's autonomy. Among the most important measures were the appointment of a resident general, representing the tsar, to watch over Hetman I. Skoropadsky; the formation of the *Little Russian Collegium in 1722; the reduction of the hetman's prerogatives by means of the so-called administrative ordinances (*reshitelnye punkty*) under D. Apostol; and the introduction of the *Governing Council of the Hetman Office (1731–50). After a brief restoration of autonomy under K. Rozumovsky (1750–64), government was handed over to the Little Russian Collegium, headed by I. Rumiantsev. The regimental system in Slobidska Ukraine was abolished, and the Slobidska Ukrainian and New Russian gubernias were created in 1764. The Zaporozhian Sich was sacked and

burned down. Russian administration was introduced into Ukraine in 1781. Cossack formations were disbanded, and the *Cossack *starshyna* and Ukrainian gentry were absorbed into the Russian nobility in 1785. The peasants became serfs. Later on even the names of the Little Russian gubernia and the Slobidska-Ukrainian gubernia (1835) were abolished, and the last traces of Ukraine's autonomy vanished.

These measures did not suppress the desire for autonomy in Ukraine, which was forcefully expressed in the instructions for the Ukrainian deputies to the commission for drafting the New Statutes in 1767. In 1791 V. Kapnist traveled to Prussia to look for support for Ukraine's liberation. Autonomist sentiments can be found in the writings of a number of public figures from the end of the 18th to the beginning of the 19th century; for example, in A. Chepa, V. Poletyka, T. Kalynsky, A. Khudoba, and the anonymous author of the popular **Istoriia Rusov*, which for a long time constituted the program of Ukrainian autonomy. A group of Ukrainians in Novhorod-Siverskyi (see *Novhorod-Siverskyi patriotic circle) actively propagated the idea of autonomy for Ukraine. Its leading members came from the earlier Cossack officer class, the Ukrainian gentry, the clergy, and the nascent intelligentsia. Most of them were graduates of the *Kievan Mohyla Academy. The group's political and cultural activities had a considerable influence on the literary renaissance of the 19th century.

In the 1820s the *Little Russian Secret Society, organized by V. Lukashevych, was active in Left-Bank Ukraine. In contrast to the Decembrists, who wanted a centralized Russian republic, this society chose the restoration of autonomy to Ukraine as its goal. The *Society of United Slavs – one of the branches of the Decembrist movement in Ukraine – drafted a plan for a Slavic federation, but did not provide for an autonomous Ukraine. The Ukrainian renaissance of the mid-19th century, which at first was a literary and cultural movement, found in T. Shevchenko a champion of Ukraine's political rights. M. Kostomarov's *Knyhy bytitiia ukrains'koho narodu* (The Books of the Genesis of the Ukrainian People), which was a programmatic statement of the *Cyril and Methodius Brotherhood (1845–7), did not go as far as Shevchenko, who was accused of advocating 'separatism' by the Russian government, but it did raise the issue of Ukraine's lost autonomy and envisioned Ukraine as a free republic in a federative union with other Slavic nations.

During the *Spring of Nations in Austria, the Ukrainians of Galicia demanded territorial autonomy. This project was not fulfilled, but remained the minimal political program of the Ukrainians in Galicia until 1918. In 1861, however, the Austrian government granted extensive autonomy to all Galicia (including the western part inhabited by the Poles). Galicia got its own diet, a provincial executive in Lviv, and subordinate agencies of local self-government. The Poles had a majority in the diet and the administration. The official language was German and then, after 1867, Polish, but the Ukrainian members of the diet had the right to address the diet and write petitions in Ukrainian. The Ukrainians waged a long political struggle for the partitioning of Galicia into Ukrainian and Polish parts, believing this to be the only way of settling the differences between the two nations. In the first half of the 19th century Bukovyna was part of Galicia, but in 1861 it became a separate province and was

granted autonomous institutions similar to those in Galicia. In Bukovyna, unlike Galicia, the county councils and assemblies were directly responsible to the provincial executive in Chernivtsi. The official language was German, but Rumanian and Ukrainian were allowed in government institutions. The political program of the Bukovynian Ukrainians demanded unification with Galicia into a separate autonomous territory within the Austrian Empire.

In 1848 A. Dobriansky, the delegate from Transcarpathia in the *Supreme Ruthenian Council in Lviv, suggested that Galicia, Bukovyna, and Transcarpathia be unified into one autonomous region. But, like various projects of church organization at the end of the 18th century, this idea did not develop beyond the planning stage. In 1849, however, a separate Ruthenian district was set up in Transcarpathia. Most of the district's inhabitants were Ukrainians, and they enjoyed extensive autonomy in education and government. The constitution of 1860, which abolished the districts, and the introduction of the dualistic system in the Austro-Hungarian monarchy in 1867 put an end to Transcarpathia's autonomy.

After convicting the members of the Cyril and Methodius Brotherhood in 1847, the tsarist government adopted a stricter policy against the movement for autonomy in Russian-ruled Ukraine; the most repressive measures came in the 1870s–1890s. Some sporadic manifestations of Ukrainian autonomism appeared in the relatively liberal period at the end of the 1850s: a group of nobles from the Katerynoslav region presented a memorandum to the assembly of nobility proposing local autonomy as a means of raising the people's standard of living. The zemstvo reform of 1864 and the reform of municipal self-government did not lead to genuine autonomy, because the agencies of self-government were closely controlled by the governors and the ministry of internal affairs. While 'separatism' was repressed, the Ukrainian *hromadas conducted mostly scholarly and cultural-educational work. In 1873 Ukrainian students in St Petersburg organized a circle of socialist-federalists with a program of autonomy. M. Drahomanov, in his work *Vil'na spilka* (Free Association, 1884) presented a program of political freedom for Russia based on autonomous communities, counties, and provinces. Ukraine was to be divided into four autonomous provinces. The writer T. Zinkivsky also advocated the idea of autonomy and federation.

By the end of the 19th century some Ukrainian circles went beyond the demand for autonomy, which they considered insufficient for the development of the Ukrainian people. In 1895 the *Ukrainian Radical party, at its congress in Lviv, adopted a declaration on independence, which was largely influenced by Yu. Bachynsky's book *Ukraina irredenta*. A students' conference in Lviv adopted the same position. The *Revolutionary Ukrainian party, which was established in Kharkiv in 1900, proposed the idea of Ukraine's secession from Russia and the union of all Ukrainian territories in its programmatic brochure *Samostiina Ukraina* (Independent Ukraine), written by M. Mikhnovsky. But in 1903 the party abandoned this goal for tactical reasons and limited itself to the demand for autonomy and a separate legislative assembly, even when it became the *Ukrainian Social Democratic Workers' party in 1905. The idea of independence was defended only by the *Ukrainian People's party.

In spring 1905 the Ukrainian delegates to the All-Russian Congress of Journalists in St Petersburg demanded autonomy for Ukraine. A similar demand was made at a zemstvo congress by I. Shrah on behalf of the zemstvo leaders of Kiev, Chernihiv, Kharkiv, Poltava, Odessa, Vinnytsia, and other cities, and at a conference of the Liberation Alliance. It was rebuffed by all Russian political parties. The Ukrainian deputies to the Duma in 1906–7 demanded national autonomy for Ukraine. Together with other non-Russian deputies (120 in all) they formed the *Autonomists' Union in the First Duma. The alliance advocated that Russia be restructured on the principles of autonomy and federation. The *Society of Ukrainian Progressives, which was active in Ukrainian civic and cultural life in 1908–17, accepted autonomy as a basic principle.

Except for two right-wing parties with little influence – the *Ukrainian Party of Socialists-Independentists (formerly the Ukrainian People's party) and the *Ukrainian Democratic Agrarian party – both of which demanded independence, the Ukrainian political parties entered the revolutionary period in 1917 with an autonomist program. The Central Rada's First and Second Universals led to a conflict with the Russian Provisional Government on the issue of autonomy. Eventually the Provisional Government consented to the formation of a general secretariat as the highest body of government in Ukraine. The Petrograd government regarded the two universals as 'preparatory steps to autonomy,' while Ukrainian circles regarded them as its formal ratification. According to the Provisional Government the general secretariat was to be responsible to the Russian government; according to Ukrainians it was to be responsible to the Central Rada. When the Bolsheviks came to power in Russia in November 1917, events took a new turn. The Bolsheviks proclaimed the slogan 'self-determination up to and including separation,' but at the same time vehemently attacked the Central Rada. Ukrainians were no longer content with autonomy. The Third Universal of the Central Rada, published on 20 November 1917, spoke of 'federative ties with Russia,' but was really a declaration of a separate Ukrainian National Republic. The war with Soviet Russia, the declaration of independence in the Fourth Universal of 22 January 1918, and France's, Britain's, and then the Central Powers' recognition of the government of the UNR made an anachronism of the autonomist program.

The secret agreement between the government of the UNR and Austria, which formed a part of the Peace Treaty of *Brest-Litovsk, provided for a separate crown province consisting of Ukrainian Galicia and enjoying an extensive legislative and administrative autonomy. This agreement, however, was revoked by Austria. Beginning in October 1918, the Ukrainians of Galicia and Bukovyna struggled for self-determination that went beyond autonomy and outside the Austrian Empire (see *Western Ukrainian National Republic [ZUNR]).

Even before the Poles occupied all of Galicia, they were obligated by the Peace Treaty of Versailles (28 June 1919) to respect the autonomous rights of the national minorities. The *Conference of Ambassadors approved the incorporation of Galicia into Poland, but at the same time guaranteed Galicia's autonomy, which was to be put into effect under the supervision of the League of Nations. Being uncertain of the ultimate intentions of the international community in regard to Galicia, the Poles inserted

these guarantees into the constitution of 17 March 1921. But the concept of autonomy was vague here and permitted various minimalist interpretations. The autonomous provincial agencies and local self-government that Galicia had enjoyed under Austria were abolished by the Polish government as early as 30 January 1920. The law passed by the Polish Sejm on 26 September 1922 introduced self-government in three voivodeships – Lviv, Ternopil, and Stanyslaviv – and some rights for the Ukrainian population there, including bilingualism. But this law was formally revoked in 1933, and a year later Poland renounced the agreement to protect the rights of minorities.

Ukrainian political leaders did not recognize the legality of Galicia's occupation by Poland and hence never raised any demands for autonomy in the 1920s. Only in 1932 did the *Ukrainian National Democratic Alliance (UNDO) voice a demand for the territorial autonomy of all Ukrainian regions under Polish rule, and this was done out of tactical considerations. The Ukrainian parliamentary delegation proposed a suitable act to the Sejm, but it was defeated, for the Polish majority was not prepared to accept such autonomy.

The Treaty of Saint-Germain (10 September 1919) guaranteed Transcarpathia (Subcarpathian Ruthenia) autonomy in matters of language, education, and religion and a separate legislative diet within the framework of the Czechoslovak Republic. Yet the promised autonomy was only partly realized: a governor was appointed, certain linguistic rights were respected, schools were established, but elections to the diet were not held. Political activity in Transcarpathia in the 1920s–1930s was centered on the struggle for autonomy and gave rise to special parties such as the Autonomous Agrarian Alliance. During the international crisis in October 1938 Transcarpathia was given a wider autonomy than was provided for in the Treaty of Saint-Germain: an autonomous government was formed with a number of ministries that were responsible for various internal matters and economic and cultural development. Foreign affairs, defense, finance, and the legal system were common with Czechoslovakia. The governor's post was abolished, and the Carpatho-Ukrainian state was represented by the prime minister. In reality the autonomous state of Transcarpathia was something like a member of a federation that was being formed. In March 1939 the Hungarian occupation put an end to Transcarpathia's autonomy. Hungary recognized only some linguistic rights and a minimum of other rights in the region.

The Ukrainian state in 1917–20 dealt with two important issues concerning autonomy: (1) the union of the ZUNR and the UNR on 22 January 1919, and (2) the rights of national minorities. The government agencies and armed forces of the ZUNR retained their de facto autonomy on its territories. As for the minorities, the Central Rada granted them, by the law of 22 January 1918, national-personal autonomy. This was the most far-reaching and progressive solution to the problem of national minorities. Territorial autonomy was not the issue; rather, it was one of cultural rights and self-government for a whole society regardless of residency, for not one minority (Russian, Polish, Jewish, etc) inhabited a distinct region of Ukraine. In 1918 the Hetman government explored the possibility of granting autonomy to the Crimea and the Kuban should these regions join the Ukrainian state.

At a time when the Orthodox church in Ukraine was striving for independence from Moscow, the leaders of the Russian Orthodox church and the local pro-Russian authorities offered autonomy instead of autocephaly (see *Ukrainian Autocephalous Orthodox church). This occurred at all-Ukrainian Orthodox congresses in 1918 and in 1942 during the German occupation. The German authorities legalized the autonomous Orthodox church as well as the Ukrainian Autocephalous Orthodox church. The attempts of Ukrainian Catholics in the 1960s–1970s to introduce a synodal system and win recognition for their own patriarchate can be viewed as a movement for church autonomy within the framework of the Catholic church.

Marxist-Soviet ideology does not regard autonomy as a political solution to the nationality problem. Marx and, at first, Lenin favored centralized states and the assimilation of small nations. Even as late as 1913, when the Russian Social-Democratic Workers' party (of Bolsheviks) accepted the theoretical right to 'self-determination up to and including separation,' the Bolsheviks thought that there was no need for a federation or for cultural-national autonomy (see *Nationality policy of the CPSU). They were compelled to change this position in the course of the revolution in 1917–20 and recognized the possibility of a federation, but a federation based on the principle of autonomy of its component parts. Thus, the Russian SFSR was created, composed of autonomous republics and autonomous oblasts. J. Stalin, who headed the Commissariat for National Minorities in the Soviet government, insisted that the 'independent' Soviet republics, which had been set up to counteract the national governments of these countries, be annexed to the Russian SFSR on the basis of autonomy. Two conflicting tendencies emerged in the process of the USSR's formation in 1922–3 – the autonomist idea, defended by the Russian Communist party (of Bolsheviks), and the confederalist idea, defended by the Communists of Ukraine and Georgia. Lenin's intervention led to a compromise – the federalist formula (see *Federalism).

The principle of autonomy was applied to the smaller nations within the Russian SFSR and in other national republics with an ethnically varied population. There are three types of autonomous entities in the Soviet Union: autonomous soviet socialist republics (ASSR), autonomous oblasts (AO), and autonomous raions. All these entities are based on the presence of a certain nationality in a given territory.

The Soviet theory of state law distinguishes two forms of autonomy: political autonomy, which applies to the autonomous republics, which have a 'state character' (their own constitution and state institutions), and administrative autonomy, which applies to the autonomous oblasts and raions, which have only their own administrative agencies. The autonomous entities in the Soviet Union came into being not through agreement, but through unilateral decision, and their status was in some cases modified or abolished in the same way. Infringements of autonomy cannot be challenged politically or judicially.

Within the Ukrainian SSR there was only one autonomous republic – the Moldavian ASSR – in 1924–40. In the 1920s–1930s there were a number of unique administrative entities – national raions and national rural soviets – in which, besides Ukrainian, the language of the minority was used in government and the schools. These entities,

however, were not autonomous (see *National minorities). Today the Ukrainian SSR is a unitary Soviet state.

Because the Soviet state is fully centralized and every facet of life is controlled by the CPSU, the very idea of certain national and territorial entities enjoying self-governing status is incompatible with the Soviet system. For the same reason, it is impossible to speak of an autonomous Academy of Sciences of the Ukrainian SSR, or of autonomous universities and other institutions (see also *Federalism and the bibliography there).

V. Markus, O. Shulhyn

Avangard (Vanguard). Illustrated youth magazine. Initially, from December 1946, it was a monthly published in Munich by the central executive of the *Ukrainian Youth Association (SUM). In 1947–9 it was a supplement to the magazine *Pu-Hu* in Augsburg, Germany; then again a separate magazine in Munich (1949–51) and London (1952–3 and 1960–3). Since 1964 it has been published every two months in Brussels, Belgium. *Avangard* contains materials on educational subjects, Ukrainian history and culture, and reports on youth activities, especially those of SUM. The editors of *Avangard* have been P. Kizko, P. Karpenko-Krynytsia, M. Kushnir, V. Shulha, O. Kalynnyk, I. Krushelnysky, V. Lenyk, O. Koval, A. Haidamakha (1973–8), and R. Zvarych (since 1979).

Avanhard (Avant-garde). An organization of leftist writers that existed in Kharkiv in 1926–9 and was closely associated with futurism. It was headed by V. *Polishchuk and published *Biuletyn' Avanhardu*. Its members included P. Holota, H. Koliada, O. Levada, R. Troianker, L. Chernov, and the painters V. Yermilov and H. Tsapok. When the group dissolved most of its members joined *Nova Heneratsiia.

Avanhard (Vanguard). A sports association founded in 1957 in Soviet Ukraine for members of industrial trade unions. It has over 3,000 sections and clubs and 2 million members engaged in various forms of sport. The soccer teams Metalurh from Zaporizhia, Zoria from Voroshylovhrad, Stal from Dnipropetrovske, and Sudnobudivnyk from Mykolaiv, and the Kiev basketball team Budivelnik are among the better known teams in the USSR. From the ranks of Avanhard have come a number of Olympic, world, and European champions.

Avars (known as Obri in Rus' chronicles and Abaroi or Varchonitai in Byzantine sources). A large union of Turkic tribes. The Avars appeared in the steppes west of the Caspian Sea in the middle of the 6th century AD. After moving westward through the territories of today's Ukraine, they stopped for a time in the region north of the Black Sea. Here they persuaded the *Alans and Ugrians to join their alliance. In the 560s on their way to the middle Danube the Avars and their allies invaded the *Antes. The Avars conquered and brought into their alliance a number of Slavic tribes. At the end of the 560s they established a khaganate on the middle Danube with a capital in Pannonia. From there the Avars made successful raids on the Slavs, Franks, Lombards, and Byzantium. As a result they controlled the territories from the Elbe River to Transcaucasia and from the Don to the Adriatic Sea. The empire, however, lacked any organic political or economic unity, and when the Avars suffered a crushing

defeat at Constantinople in 626, a series of revolts began among the subjugated tribes. The most important uprising – the uprising of the western Slavs – was led by Samo, and resulted in the founding of a Slavic state on the territory of present-day Czechoslovakia. The rise of the Bulgarian Kingdom in 680 and the victory of Charlemagne in 797 put an end to the Avar empire.

Avdiienko, Mykhailo [Avdijenko, Myxajlo], dates of birth and death unknown. Revolutionary, participant in the Petrograd coup in March 1917, deputy to the Ukrainian Central Rada from the All-Ukrainian Council of Soldiers' Deputies, and member of the Central Committee of the Ukrainian Social-Democratic Workers' party. In 1918 he joined the 'independentist' faction of the Ukrainian Social-Democratic Workers' party, whose platform called for an independent Soviet Ukraine. In 1919, together with this faction, he joined the *All-Ukrainian Revolutionary Committee, which waged an armed struggle against the Bolshevik government of Kh. Rakovsky. Avdiienko became a member of the Central Committee of the Ukrainian Communist party in 1920, later joining the Communist Party (Bolshevik) of Ukraine. He became director of its central statistical office. In the 1930s he was sent into exile.

Avdiievsky, Anatolii [Avdijev's'kyj, Anatolij], b 16 August 1933 in Znamianka, Kirovohrad oblast. Choir conductor, graduate of the Odessa Conservatory (1958). He conducted the Zhytomyr and the Cherkasy folk choirs. In 1966 he became the conductor and artistic director of the *Verovka State Choir.

Avdiivka [Avdijivka]. v-18. City (1975 pop 34,600) in Donetsk oblast under the administration of the city soviet of Yasynuvata. Avdiivka was founded as a village in 1884. The city now has a coke-chemical plant, established in 1963; a reinforced-concrete-products factory; a building-supplies factory; and rail-transport companies.

Avdykovych, Orest [Avdykovyč], b 16 February 1877 in the village of Soroky in the Ternopil region, d 28 October 1918 in Vienna. Pedagogue, gymnasium teacher in Peremyshl, writer. Avdykovych wrote sketches and short stories tinged with light satire and pessimism, which were typical of the writers of *Moloda Muza. His stories were published in the following collections: *Poeziia i proza* (Poetry and Prose, 1899), *Metelyky* (Butterflies, 1900), *Netli* (Moths, 1900), *Demon ruiny* (The Demon of Ruin, 1901), *Moia popularnist'* (My Popularity, 1905), *Na zharyshchakh* (At the Burned-out Remains, 1914). He also published a novel, *Narys odnoi doby* (A Sketch of an Age, 1899), and a mystery novel, *Oi u ridnomu kraiu ta na dykomu poli* (Oh, in the Native Land and on the Wild Field, 1918). Avdykovych wrote two literary studies: *Ohliad literaturnoi diial'nosti O. Konys'koho* (A Survey of the Literary Activity of O. Konysky, 1908) and *Forma pysan' Markiiana Shashkevycha* (The Form of Markiian Shashkevych's Writings, 1911).

Avenarius, Mikhail, b 19 September 1835 in Tsarskoe Selo near St Petersburg, d 16 September 1895 in Kiev. Physics professor at Kiev University in 1866–91 and director of its meteorological observatory, corresponding member of the Imperial Academy of Sciences (from 1876)

Mikhail Avenarius

Vasyl Avramenko

and the Berlin Physics Society. Avenarius was the founder of the Kiev school of experimental physics. He was the author of over 30 works on molecular physics, electricity, and thermoelectricity. He proposed the Avenarius formula for determining the electromotive power of a battery and invented an original system for dividing the alternating currents used in P. Yablochkov's electric candles, for which he was awarded the French Legion of Honor.

Averin, Viktor, b 18 October 1885 in Chepeli, Kharkiv gubernia, d 27 December 1955 in Kharkiv. A zoologist and community leader. He graduated from Kharkiv University and in 1913 became director of the entomological bureau in Kharkiv, the first of its kind in Ukraine. In 1925 he became the director of the Division for the Protection of Flora of the People's Commissariat of Lands of the Ukrainian SSR and from 1930 held the chair of zoology and entomology of the Kharkiv Agricultural Institute. He published nearly 340 papers in entomology, ornithology, pisciculture, and conservation. He was one of the first organizers of plant conservation in Ukraine.

Averin, Vsevolod, b 20 February 1889 in Chepeli, Kharkiv gubernia, d 3 September 1946 in Kharkiv. Graphic artist and painter specializing in animals; brother of Viktor *Averin. He executed the lithographs for the album *Zviri zooparku* (Animals of the Zoo, 1929) and *Teliata* (Calves, 1936) and produced book illustrations (particularly illustrations for children's stories), landscape series in watercolors – *The Crimea* and *Through Osssetia* – and portraits (T. Shevchenko).

Avramenko, Vasyl, b 22 March 1895 in the village of Stebliv, Kiev gubernia, d 6 May 1981 in New York City. Choreographer, popularizer of Ukrainian folk dance, actor in the theater of M. *Sadovsky. Avramenko organized many dance schools and ensembles, beginning at the interned Ukrainian soldiers' camp in Kalisz, Poland, in 1921 and subsequently in Western Ukraine, Czechoslovakia, and Germany. In 1926 he emigrated to Canada and later to the United States, where he founded numerous dance ensembles and a school of folk dance in New York. Avramenko published the manual *Ukrains'ki natsional'ni tantsi, muzyka i strii* (Ukrainian National Dances, Music, and Costumes, 1946). He made many successful appearances with the Ukrainian dance ensemble

and the Koshyts chorus at the Metropolitan Opera in New York (1931), the Century of Progress Exposition in Chicago (1933), and the White House in Washington (1935). In 1936–7 he established a sound-film studio, producing with the Koshyts chorus the operas *Natalka Poltavka*, *Zaporozhets' za Dunaiei* (Cossack beyond the Danube), and *Marusia*. Avramenko trained many teachers of folk dance in Western Ukraine and abroad. The Avramenko Fund has been established in New York to preserve his heritage.

Avtomatyka (Automation). A bi-monthly scientific-technical journal published by the Institute of Electromechanics in 1956–63 and then by the *Institute of Cybernetics of the Academy of Sciences of the Ukrainian SSR in Kiev. The journal is devoted to theoretical and practical problems of automatic control. Its editor in chief is O. Ivakhnenko. At first the journal was published in Ukrainian, but since 1979 it has appeared in Russian. An English translation is published in the United States under the title *Soviet Automatic Control*.

Avtomonov, Pavlo, b 10 July 1922 in Oleksandrivka, Kharkiv oblast. A writer and journalist. After the war he was a correspondent for the newspapers *Vil'na Ukraina* in Lviv and *Sotsialistychna Kharkivshchyna*. In 1953 he completed the Higher Party School of the CC of the CPV. His works, written in the official Party spirit, have been published since 1947. They include the novelettes *V Kurliands'komu kotli* (In the Kurland Cauldron, 1947), *Bez mezhi* (Without End, 1951), *Viktor Koshyk* (1954), *Lis shumyt'* (The Forest Rustles, 1955), *Ioho prizvoyshche nevidome* (His Name Is Unknown, 1958), *Shchastia daiet'sia nelehko* (Happiness Is Not Easily Given, 1959), *Nedopysana anketa* (An Unfinished Inquiry Form), and *Avtohraf serzhanta Tsybuli* (Sergeant Tsybulia's Autograph, 1959); his novels include the trilogy *Koly rozluchaiut'sia dvoie* (When Two Are Parting, 1959), *Tak narodzhuvalys' zori* (Thus the Stars Were Born, 1963), *Kashtany na spomyin* (Chestnuts in Remembrance, 1975), and *Druhyyi front* (The Second Front, 1980). He has also written sketches, short stories, and literary criticism.

Azbukovnyk. A reference book in which information is arranged in alphabetical order. At first, and as late as the 18th–19th century, these were handwritten dictionaries of foreign (Greek, ancient Hebrew) and little-known words. Eventually *azbukovnyky* expanded to include various branches of knowledge and assumed an encyclopedic character. In Ukraine the first printed *azbukovnyk* appeared in 1627 – P. *Berynda's *Leksikon slavenorosskii i imen' tl'kovanie* (Slavic-Ruthenian Lexicon and Interpretation of Names). *Azbukovnyky* were very popular in the 16th–17th century; their authors were anonymous, usually members of the Lviv brotherhood school. About 200 copies of various *azbukovnyky* have been preserved.

Azov. See Oziv.

Azov, Sea of (Latin: Palus Maeotis; Greek: Μαίωτις [Maeotian Swamp or Maeotian Sea]; old Rus': Surozke more; Ukrainian: Ozivske more). A shallow branch of the Black Sea, connected to it by the *Kerch Strait. It covers a part of the *Black Sea Depression lying between the

*Donets Ridge and the *Azov Upland in the north and the foothills of the Crimean Mountains and the Caucasus in the south. The Sea of Azov is located between mainland Ukraine in the north, the *Crimea in the west, and the Kuban region in the east. In the northeast it is bordered by the Don region. The large rivers that flow into the Sea of Azov – the Don and Kuban rivers – connect it with the continental heartland. The Sea of Azov now lies within the borders of the Ukrainian SSR and the Russian SFSR.

Geography. The Sea of Azov is 40,000 sq km in area. The average volume of water is 320 cu km, and the average depth is 8 m, the greatest depth being 14.5 m (opposite the Kerch Strait). The bottom is flat and covered with sand and coquina. The horizontal divisions are not very numerous. Among the bays the largest is *Tahanrih Bay, which cuts deeply into the shoreline and forms the estuary of the Don. The other, smaller bays are Arabat, Obytochna, Berdianske and Temriuk. In the west the shallow, saltwater *Syvash Lake (the Putrid Sea) is separated from the Sea of Azov by the long and narrow Arabat Spit. Sand-coquina spits are characteristic of the Sea of Azov: Fedotova, Obytochna, Berdianske, Bilosarai, Kryva, Yeiska, and Dovha spits. The shoreline is low and generally uniform. The south shore from the Kerch Strait to the Arabat Spit is high and quite steep. The north shore is steep. The lowest shore is the southeastern one, of which almost 100 km consists of the Kuban Delta.

Besides the Don and the Kuban, many small rivers flow into the Sea of Azov: the Obytochna, Berda, Kalmiuis, Miius, Yeia, and others. Some of the rivers form estuaries (limans) such as Syvash, Utliuk, Miius, and Beisuh (Beisug). Some of these limans are separated from the sea by spits and have become lakes: Molochna Lake, Khansk Lake, Dovhyi Liman and others. There are few islands in the Sea of Azov, and all of them are close to the coast, low, and small, eg Byriuchy Island, Cherepakha Island, Dovhyi Island, and the Pishchani Islands.

The hydrological pattern of the Sea of Azov is determined by its inland location, its shallowness, the large influx of fresh water from the rivers, the exchange of waters with the saltier Black Sea and Syvash Lake, and the wind currents above the sea. The average annual influx of fresh water into the Sea of Azov is 40.7 cu km, of which 28.5 cu km comes from the Don and 11 cu km from the Kuban. Annual rainfall is 15.5 cu km. Evaporation losses are 31 cu km. The Sea of Azov loses 66.2 cu km of water to the Black Sea and receives from it 41 cu km annually.

The climate of the Sea of Azov is continental. The usual annual atmospheric temperature is 9–11°C. In July the usual temperature is 23.5–24.5°C, and in January 0–6°C. During the year 220–500 mm of rainfall. Because the Sea of Azov is shallow and small, its waters are displaced quickly, even down to the bottom. Hence there is little difference in temperature and salinity from the surface to the bottom. The average annual temperature of the surface waters is 11–12°C. In the warmest months the average surface temperature is 25–30°C, and in winter it is below 0°C. In winter the Sea of Azov freezes over for from two months (at the Kerch Strait) to four months (at Tahanrih). The normal salinity is 11–13 percent. In the northeastern part, where the fresh waters of the Don empty, the salinity barely reaches 2–3 percent, but in the southern and western parts, which receive the saltier waters of the Black Sea and Syvash Lake (which has a

salinity of 60 percent), the salinity rises to 17.5 percent. The water in the Sea of Azov is murky.

The water level of the Sea of Azov varies greatly, depending on the wind and the influx of waters from the rivers. Sometimes offshore winds drive the waters away from shore and significantly depress the water level there. The surface currents near the coast of the Sea of Azov fluctuate, depending on the direction of the winds. In the middle of the sea a circular current flows anticlockwise. The waves in the Sea of Azov are on the average 16 m long and 1.2 m high.

Organic life flourishes because the waters of the Sea of Azov are warm in the summer and the rivers supply organic and mineral nutrients. The sea is rich in plankton (up to 100 or even 200 g per cu m) and benthos. The variety of animal species, however, is relatively small (up to 350), though quantities are large. There are 79 species of fish, mostly Mediterranean, in the Sea of Azov; 21 percent of the fish are freshwater species. The average catch is 80 kg per ha, the highest yield of all Soviet seas. The fish with the greatest commercial value are anchovies, perch, sturgeon, bream, whitefish, herring, plaice, carp, mackerel, and mullet. After the Second World War the supply of fish in the Sea of Azov diminished because of excessive and rapacious fishing, especially of perch and sturgeon.

History. The Sea of Azov was important in ancient times when Greek colonies were founded on its shores. *Panticapaeum and *Phanagoria, both founded in the 6th century BC, and other colonies controlled the entrance to the Sea of Azov through the Kerch Strait. The entrance from the other side was controlled by *Tanais, built at the mouth of the Don in the 7th century BC. These city-states belonged to the *Bosporan Kingdom, which eventually gained control of other city-states on the Azov coast. In the 1st–3rd century AD these city-states were vassals of Rome. The Greek city-states traded with the inhabitants of the interior – *Scythians, *Maeotians, *Sarmatians, and others – and supplied Greece, and later Italy, with fish and grain. The ancient city-states on the Azov coast fell to the invading Huns in the 4th century. (See *Ancient states on the northern Black Sea Coast.)

During the period of migrations in the 3rd–9th century, when the Huns, Avars, Bulgars, and other hordes crossed the steppes from east to west and the *Goths moved in from the northwest, the city-states on the Azov coast were devastated. The *Antes were the first Slavic people to settle in the Azov area (4th–7th century). Later a Slavic tribe, the *Siverianians, occupied this land. For some time (8th–10th century) the influences of three states converged at the Sea of Azov: the *Byzantine Empire, which controlled, among others, the city-states on the Kerch Strait; the Khazar Khaganate; and *Kievan Rus'. In the 10th–12th century the *Tmutorokan Principality, which belonged to the Kievan state, flourished in the Azov region until it was conquered by the Cumans, who put an end to the Rus' colonization of the Azov steppes. In the 13th–15th century the Genoese colony of *Tana on the Sea of Azov was of some commercial importance. In the 13th century the Azov region was conquered by the Mongols and annexed by the *Golden Horde. During the disintegration of the Golden Horde in the mid-fifteenth century, the region came under the control of the *Crimean Khanate, which shortly thereafter became a vassal of Turkey. The Sea of Azov remained

under Turkish domination for 300 years. In the 17th century the Zaporozhian and the Don Cossacks conducted campaigns on the Sea of Azov. One of the routes used by the Zaporozhian Cossacks to reach the Black Sea went through the Sea of Azov: it followed the Dnieper, the Samara, Vovchi Vody, the Kalmiuis, the Sea of Azov, to the Kerch Strait. This route was used, for example, in the 1615 campaign against Trabzon and Constantinople. The Turkish outpost of Azov was turned into a strong fortress by the Turks at the end of the 15th century. Muscovy, which acted as the overlord of the Don Cossacks at the end of the 17th century, gained temporary access (1696–1711) to the Sea of Azov. Russia finally conquered the northern Azov coast in 1739. At this time the lands controlled by the *Zaporozhian Sich also extended to the Sea of Azov. After the Russian-Turkish peace treaty of *Küçük Kaynarca in 1774 and the liquidation of the Crimean Khanate in 1783, the entire coast of the Sea of Azov belonged to the Russian Empire. After many centuries the colonization of the Azov region by Ukrainians resumed. At first Ukrainian settlers moved into the area north of the sea. From 1792 the Kuban region was settled as the *Black Sea Cossacks migrated to the lands east of the Sea of Azov. Then some parts of the Crimea were settled by Ukrainians. Thus the Sea of Azov became to some extent an interior (inland) Ukrainian sea. (See *Southern Ukraine.)

Transportation. Transportation on the Sea of Azov became important in the 19th century as the steppes around it became settled. In the second half of the century, when railways connected the Sea of Azov with the interior of the continent, grain began to be exported in large quantities from its ports. By 1913 one-third of the grain exported from the Russian Empire by sea came from these ports. Even before 1917 Mariupil and Tahanrih, because of their proximity to the Donbas, became important coal- and metals-exporting ports.

Today freight ships on the Sea of Azov carry mostly hard coal (from the Donbas), iron ore (from Kerch), building materials, metals, fish, grain, wood, and salt. The sea is also used for the transportation of passengers. The importance of the Sea of Azov rose when the Volga-Don Canal was completed, and the Don, the Volga, the Caspian Sea, Moscow, etc became directly accessible by water. The main ports on the Sea of Azov are *Rostov-na-Donu, *Zhdanov (the former Mariupil), and *Tahanrih. Smaller ports are Berdianske, Yeisk, Henicheske, etc. Man-made harbors make the main ports accessible to large ships. Icebreakers keep the ports open throughout the year. Freight and passenger ships are administered from the city of Zhdanov by the Sea of Azov Steamship Authority.

Because of the dry, warm summer and sandy beaches, the Azov coast is important for its sanatoriums and holiday resorts. Some of the sanatoriums, such as Berdianske and Yeisk, have curative mud.

Azov Cossack Host (Ozivske kozatske viisko). A military formation organized by the Russian government and consisting of the descendants of the Zaporozhian *Cossacks, who settled in the Turkish lands of the Dobrudja region after the destruction of the *Zaporozhian Sich in 1775 and formed the Danubian Sich. During the Russo-Turkish war (1828–9) about 1,500 Danubian Cossacks, led by Otaman Y. *Hladky, joined the Russian side and fought the Turks as a separate Danubian Cossack regiment. After the war the Russian government settled these Cossacks along the coast of the Sea of Azov between Berdianske and Nohaiske. In 1831 they were renamed the Azov Cossack Host. Other units were later added to the host. Y. Hladky was the acting hetman, responsible to the governor general of New Russia. The main task of the host was to protect the coast of the Sea of Azov with an armed flotilla of small vessels. In 1862–4 the Russian government began to resettle the Cossacks by force in the Kuban and northern Caucasia. As a result the Cossacks revolted and were suppressed in 1865. Over six thousand Cossacks were demoted into peasants.

Azov-Don Bank (Ozivsko-donskyi bank). The most influential private bank in prerevolutionary Ukraine. It was founded in Tahanrih as a commercial joint-stock bank in 1871 and continued to operate until 1917. From 1903 its head office was located in St Petersburg. It was the third largest bank in the Russian Empire and the largest in Ukraine. The bank had 73 branches, of which 23 were in Ukraine. With 8–43 percent of the shares, it controlled 94 companies engaged in metal, coal, and oil production, cement-making, sugar refining, and glassmaking, as well as insurance and railroad companies. The total worth of its holdings (on 1 January 1917) was 562 million rubles. The Azov-Don Bank was closely associated with the cartels *Prodamet (1902) and *Produgol in Ukraine. In 1910–13 the bank helped Prodamet to crush its competitor, the Russian syndicate Krovliia, in the Urals. The bank's credit operations financed the foreign trade in Ukrainian grains and sugar. Sixteen percent of its stock, which was worth 60 million rubles, was controlled by French banks, and 13 percent by German banks.

Azov gubernia. An administrative-territorial entity formed by the Russian government in 1708 out of the lands of the central Black Sea zone, the domain of the Don Cossacks, and a part of *Slobidska Ukraine. Voronezh became the center of Azov gubernia in 1711 when the Treaty of Prut ceded Azov to Turkey. In 1725 Azov gubernia was renamed Voronezh gubernia. Azov gubernia was re-established in 1775 out of Azov and Bakhmut gubernias. In 1783 it was abolished and incorporated in the Katerynoslav vicegerency.

Azov Lowland. A part of the *Black Sea Lowland, bordering in the north on the *Azov Upland and in the south on the Sea of *Azov. It is bound on the west by the *Molochna River and on the east by the *Miius River. The Azov Lowland extends, in the east, into the *Lower-Don Lowland. The length of the Azov Lowland is about 200 km; its width ranges from 40 km in the west to 10–20 km in the east. It is composed of Miocene and Pliocene deposits covered with thick layers of loess. The surface of the Azov Lowland is slightly undulating, with a gradual overall decline from north to south. It breaks off abruptly with

the steep entry into the Sea of Azov (20–70 m). The Azov Lowland is dissected by the river valleys of the Obytochna, Berda, Kalmius, Hruzkyi Yelanchyk, and Miius rivers, and others. There are few ravines or gullies. A narrow sandy strip stretches along the sea, with spits of land (the Obytochna, Berda, Bilosarai, and Kryvyi spits) separated by gulfs. The climate of the Azov Lowland is warm, continental, and dry; the average temperature in January ranges from -4°C to -6°C and, in July, from 22°C to 23°C . Atmospheric precipitation ranges from 320 mm in the west to 420 mm in the northeast. The soils and vegetation vary according to the humidity: chestnut soils with salt marshes and wormwood steppe are found in the driest, western part and on the spits; poor-humus southern chernozems with feather-grass and fescue-feather-grass steppe in the central part; and ordinary chernozems with mixed herbaceous, fescue-feather-grass steppe in the northeast part. The entire steppe is under cultivation.

V. Kubijovyč

Azov Upland. A plateau in southeastern Ukraine that corresponds to the southeastern part of the *Ukrainian Crystalline Shield (the Azov Crystalline Massif). In the north the Azov Upland borders on the *Dnieper Lowland; in the northeast, on the *Donets Ridge; in the southwest, on the *Black Sea Lowland; in the south, on the *Azov Lowland (an extension of the Black Sea Lowland). The foundation of the Azov Upland is composed of crystalline formations – granites, gneisses, syenites, migmatites, basalts, etc – and is covered primarily with loess and loesslike loam. The crystalline foundation is exposed both in river valleys and on watersheds. The watershed located between the basin of the Dnieper and the tributaries of the Sea of Azov forms the highest part of the Azov Upland. This is a gently undulating, monotonous plain with an elevation of between 200 and 250 m. Rising above the plain are mounds or *mohyly*, denudated remnants, composed of crystalline formations, that resisted erosion. They are oval-shaped, with gently sloping sides. The highest of these is Belmak-Mohyla or Horyla (327 m); others are Korsak-Mohyla, Tovmak-Mohyla (307 m), Mohyla Hancharykha, and Kamiani Mohyly, which rise 100 m or more over the surrounding plain. Burial mounds, erected throughout the ages, also cover the watershed. The slopes of the Azov Upland, and in particular the southern slopes, are dissected by rivers that cut deeply into the crystalline formations and create rapids and waterfalls. The river banks, gouged by ravines and gullies, make a picturesque granite landscape.

The climate of the Azov Upland is temperate-continental, similar to that of the neighboring Donets Ridge. Temperature and atmospheric precipitation (400–500 mm annually) depend also on the elevation of the locality. The soils are ordinary medium-humus and poor-humus chernozems. The natural vegetation is that of a mixed herbaceous, fescue-feather-grass steppe. The area is

Mykola Azovsky, *The Swineherd* (1931)

now almost entirely under cultivation. The original vegetation is preserved at the *Kamiani Mohyly Nature Reserve.

V. Kubijovyč

Azovsky, Mykola [Azovs'kyj], b 2 October 1903 in Kiev, d 31 October 1947 in Buenos Aires, Argentina. Expressionist painter. In 1928 he graduated from the Kiev Art Institute, having studied with F. Krychevsky and M. Boichuk. He worked in Kharkiv, the Donbas, and Kiev. In 1939 he moved to Lviv, in 1945 to Rome, and in 1947 to Buenos Aires. His works include landscapes (Ukrainian and Italian), portraits (Cardinal E. Tisserant, Bishop I. Buchko, S. Hordynsky, and others), still lifes, stage sets, etc. Azovsky also designed Ukrainian tapestries.

Azovstal. See Zhdanov Azovstal Metallurgical Plant.

Azov-Syvash Game Preserve (Ozivo-syvashske zapovidno-myslyvske hospodarstvo). Located in the area of the Sea of Azov and Lake Syvash, the reserve covers an area of 6,850 ha including sandy Byriuchy Island and the loess islands of Kuiuk-Tuk and Churiuk. The reserve was formed in 1957 out of a reservation established in 1927. The steppe vegetation includes about 240 species. The red deer and the pheasant have been acclimatized on Byriuchy Island, and the buck and the wild goat have been reacclimatized. The purpose of the reserve is to protect the steppe and coastal flora, particularly waterfowl during their southward migration and wintering.

B

Babai [Babaj]. iv-17. Town smt (1976 pop 8,400) in Kharkiv oblast, 9 km south of Kharkiv. An automobile-rebuilding factory is located there.

Babak, Renata, b 4 February 1939 in Kharkiv. Operatic mezzo-soprano. She studied at the Leningrad (1955–8) and Kiev (1958–61) conservatories. She was a soloist with the Lviv Opera and Ballet Theater (1961–4) and the Bolshoi Theater in Moscow (1964–71). With the latter she toured Poland, Hungary, Bulgaria, East Germany, and Italy in 1973. In Milan, Italy she asked for asylum. Since 1974 she has lived in Canada and the United States and she now resides in Washington, DC. Her principal roles have been Carmen in G. Bizet's opera; Amneris, Eboli, and Azucena in G. Verdi's *Aida*, *Don Carlos*, and *Il Trovatore*; Marina and Marfa in M. Mussorgsky's *Boris Godunov* and *Khovanshchina*. Babak gives recitals and performs with symphony orchestras.

Babakov, Ivan, b 18 October 1890 in the town of Oleksiivka in Kursk gubernia, d 8 February 1974 in Kharkiv. Specialist in mechanics. Babakov graduated from Kharkiv University and in 1917 began to teach in higher educational institutions in Kharkiv. Babakov's scientific research dealt with oscillation theory and stability with regard to mechanical systems.

Babenko, Heorhii, b 19 February 1909 in Odessa, d 13 May 1977 in Kiev. Screen and stage actor specializing in heroic roles. He began his career in 1929 as a member of the Odessa State Ukrainian Drama Theater (since 1930 the October Revolution Theater). From 1954 he worked in the Kiev Ukrainian Drama Theater.

Babenko, Oleksander, b 25 May 1881 in the village of Yasynuvatka in Kiev gubernia, d 30 September 1959 in Kiev. Physicist, specialist in teaching methodology. Babenko graduated from Kiev University in 1907. From 1907 to 1929 he taught in Vinnytsia and thereafter in the institutions of higher education in Kiev. Babenko is the author of works on electromagnetic induction, sound, and vibration and waves, and coauthored a three-volume book of essays on teaching physics.

Babenko, Vira, b 1902, d 7 September 1921 in Katerynoslav. Liaison officer of the Ukrainian insurgents, responsible for liaison between the Katerynoslav district insurgent staff and the UNR government in exile in Tarnów, Poland. After returning to Ukraine in the spring of 1921 she was seized by the Cheka and, together with insurgent staff officers, tortured to death.

Babii, Adam [Babij], b 1898 in Pochapyntsi, Kiev gubernia, d ? Musicologist. From 1926 to 1937 he lectured at the Lysenko Music Institute in Kiev and belonged to

Vira Babenko

Borys Babii

the Leontovych Music Society. From 1925 he researched musical terminology of the *Institute of the Ukrainian Scientific Language at the All-Ukrainian Academy of Sciences. Babii is the author of *Osnovni elementy muzychnoi hramoty* (The Basic Elements of Musical Literacy, 1930) and *Mystetstvo khorovoho spivu* (The Art of Choral Singing, 1937). In the 1920s–1930s he also contributed on various musical topics to the magazines *Muzyka* and *Muzyka masam*. He was arrested in 1937, and his subsequent fate is unknown.

Babii, Borys [Babij], b 25 July 1914 in the village of Hurivka, Podilia gubernia. A scholar of law and full member of the Academy of Sciences of the Ukrainian SSR. Babii graduated from the faculty of law at the University of Kiev in 1940. In 1949 he became an associate at the Institute of State and Law of the Academy of Sciences; in 1966 he was made assistant director, and, in 1974, director of the institute. Babii headed delegations from the Ukrainian SSR to international conferences on space research (1968), on the problem of racism (1971), and on relations between nations and international organizations (1975). His works on the theory of the state and on state law include *Ukrains'ka Radians'ka derzhava v period vidbudovy narodnoho hospodarstva (1921–1925 rr.)* (The Ukrainian Soviet State in the Period of Economic Reconstruction [1921–25], Kiev 1961); *Soiuz RSR i rol' Ukrainy v ioho utvorenni* (The USSR and the Role of Ukraine in Its Creation, Kiev 1972); *Pravovye issledovaniia v AN USSR, 1919–1973* (Legal Research in the Academy of Sciences of the Ukrainian SSR, 1919–73, Kiev 1974).

Babii, Ivan [Babij], b 5 March 1893 in the village of Dobromirka, Zbarazh county, Galicia, d 25 July 1934 in Lviv. Classicist, teacher, lieutenant in the Ukrainian Galician Army. In 1931 he became director of the Aca-

demic Gymnasium of Lviv. He was an active member of the Ukrainian Catholic Action, the director of its Archepiscopal Institute, and one of the main organizers of the Ukrainian Youth for Christ festival. Babii was assassinated by an OUN student member for his strong anti-nationalist speeches to the gymnasium students.

Babii, Ivan [Babij], b 6 January 1896 near Yelysavethrad in Kherson gubernia, d 1945? Painter of the neoclassical school. Babii studied in Kiev, at the Berlin Academy of Arts (1921–3), and in Paris (beginning in 1925). He was a member of the *Association of Revolutionary Art of Ukraine. Babii specialized in portraits and still lifes, exhibiting his work in Berlin and in Paris. He worked at first in the style of the German *neue Sachlichkeit*; in Paris he turned to neoclassicism, producing such works as *Adam and Eve*, *Card Game*, *Woman in Red*, *Woman in Black*, and *Self-portrait*.

Babii, Mykhailo [Babij, Myxajlo], b 24 August 1899 in Kornychi, Rava Ruska county, Galicia, d 30 June 1976 in Cleveland, USA. Painter. In the 1920s he worked in Kiev. After the Second World War he moved to the United States. His work is realist with an impressionist tendency. Babii specialized in portraits, landscapes, still lifes, and carpet design. He also wrote articles on art.

Oles Babii

Babii, Oles [Babij, Oles'], b 17 March 1897 in Serednie, Kalush county, Galicia, d 2 March 1975 in Chicago. Teacher, poet, writer, journalist, playwright, and critic. In 1922 he was one of the Galician symbolist poets grouped around the journal *Mytusa*, after which he switched to the writing of nationalist poems and prose. Persecuted by the Polish authorities for his involvement with the Ukrainian Military Organization, Babii moved in 1924 to Prague, where he received his PhD in literature in 1929 from the Ukrainian Pedagogical Institute. After returning to Lviv, he was arrested in 1931 and spent four years in prison. After the Second World War he lived briefly in Munich and then emigrated in 1949 to the United States. Babii is the author of the poetry collections *Nenavyst' i liubov* (Hatred and Love, 1921), *Poetii* (Poems, 1923), *Hutsul's'kyi kurin'* (The Hutsul Kurin, 1927), *Perekhrestia* (Crossroads, 1930), *Za shchastia omanoiu* (After the Delusion of Happiness, 1930), *Pozhnyv'ia* (After the Harvest, 1937), *Zhnyva* (The Harvest, 1946), *Svit i liudyna* (The World and Man, 1947), and *Povstantsi* (The Insurgents, 1956). His prose includes the sketches *Shukaiu liubovy* (I Search for Love, 1921), the story collection *Hniv* (Anger, 1922), and the short war novels *Pershi stezhi* (First

Patrols, 1937), *Dvi sestry* (Two Sisters, 1938), and *Ostanni* (The Last Ones, 1938). Babii also wrote three plays and many articles of literary criticism, including studies on M. Yevshan (1930) and W. Shakespeare (1965).

Babii, Zenovii [Babij, Zenovij], b 27 January 1935 in the village of Pidsadky, Pustomyty county, Galicia. A dramatic tenor, Babii studied at the Kiev Conservatory and performed with the Kiev Opera and Ballet Theater (1957–60) and the Lviv Opera and Ballet Theater (1960–3). He has been a soloist with the Belorussian Opera and Ballet Theater since 1963. Babii is also an active concert performer.

Babiiivna, Hanna [Babijivna], b 1898 in Ternopil, d 1979 in Kharkiv. Actress of L. *Kurbas's school. In 1920 she began appearing on the stage of the Kiev Drama Theater, and in 1922–34 she worked in the *Berezil Theater. Then she worked in the Kharkiv Ukrainian Drama Theater. In 1937 she became a victim of the Stalinist terror, but in 1942 was able to return to the Kharkiv theater. Among her main roles were Lisa in U. Sinclair's *Jimmy Higgins*, Tania in I. Dniprovsky's *Iablunevyi polon* (Apple Blossom Captivity), and Olka in V. Yaroshenko's *Shpana*.

Babko, Anatolii, b 15 October 1905 in the village of Sudzhensk, near Toms, Russia, d 7 January 1968 in Kiev. Chemist, full member of the Academy of Sciences of the Ukrainian SSR from 1957. He wrote much on the physical chemistry of complex compounds and their use in analytical chemistry, on quantitative analysis, on photometric and luminescent methods of analysis, etc. Among his works are several textbooks and monographs.

Babuhan Yaila [Babuhan Jajla]. The highest part of the main range of the Crimean Mountains (the Roman-Kosh peak is 1,545 m high). It is a steep limestone massif with a plateau-like top. Its southern slopes are covered with pine and elm forests, and its northern slopes with beech forests. The southeastern part of the Babuhan Yaila belongs to the Crimean Game Preserve.

Babuk, Volodymyr, b 5 February 1910 in the village of Kroty, Poltava gubernia. Specialist in mechanized farming, corresponding member of the All-Union Academy of Agricultural Sciences since 1956. Since 1943 he has worked at the Ukrainian Scientific Research Institute of the Mechanization and Electrification of Agriculture.

Babychev, Fedir [Babyčev], b 28 February 1917 in the village of Bobrykove in the Donets Basin. Chemist, since 1973 full member of the Academy of Sciences of the Ukrainian SSR and since 1978 its vice-president. Since graduating from Kiev University in 1944, Babychev has worked at the university. His main works are devoted to the chemistry of heterocyclic compounds. With A. Kipriianov he discovered the alkylation reaction for the methylene foundations of thiazole, benzothiazole, and benzoselenazole by means of halogen alkyls. He developed methods of synthesizing various benzothiazoles and derivatives and has made important contributions to the chemistry of isoelectronic analogues of indizine, quinolizine, and isoindole. Babychev has succeeded in synthesizing many new heterocyclic systems around the nitrogen atom.

Babyn Yar Memorial Park

Babyn Yar. A ravine forming a natural boundary around the northwest section of Kiev, where the Germans, during their occupation of Ukraine from 1941 to 1943, executed a large part of the local population, primarily Jews, but also Soviet prisoners of war, partisans, Ukrainian nationalists, gypsies, and anyone they regarded as a threat to German authority. After the first mass execution on 29–30 September 1941, when over 3,000 Jews were killed, Babyn Yar was enclosed by barbed wire and declared a restricted zone. By the end of the German occupation of Kiev, over 150,000 people had been executed there. The Germans, before their retreat from Kiev, hoped to destroy the evidence of their crimes by digging up the mass graves and burning the corpses. After the war Babyn Yar acquired political significance. With the intensification of official anti-Semitism, Soviet propaganda conspicuously avoided mention of the execution of the Jews and was limited to general statements about the loss 'of the peaceful Soviet populace and prisoners.' The site of the executions has since been leveled, and a housing complex and highway have been constructed on it. The 25th anniversary of the executions at Babyn Yar in 1966 was marked by a joint Jewish-Ukrainian demonstration, which was addressed by I. Dziuba and B. Antonenko-Davydovych. In 1966 A. Kuznetsov's documentary novel *Babii Iar* was published abroad. In 1976 a monument was erected in memory of the 'Soviet citizens' who died at Babyn Yar, again with no reference to the annihilation of the Jews. In 1968 the German court in Darmstadt sentenced six former SS officers to varying terms of imprisonment for their participation in the executions at Babyn Yar.

Babynets, Andrii [Babyneč', Andrij], b 13 December 1911 in Kiev, d 1 November 1982 in Kiev. Hydrogeologist, corresponding member of the Academy of Sciences of the Ukrainian SSR. From 1950 he worked at the Institute of Geological Sciences of the Academy of Sciences of the Ukrainian SSR. He specialized in theoretical and regional hydrogeology and the maritime geology of Ukraine.

Babyntsi [Babynci]. III-11. Town smt (1971 pop 2,900) in Borodianka raion, Kiev oblast. This is a resort town located in the pine-forest country northwest of Kiev. It has a glass factory and a peat-production industry.

Babyskhin, Oleh [Babyskin], b 4 November 1918 in Pereiaslav. A literary and film scholar, professor at Kiev University since 1965, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1945. Babyskhin is the author of a great deal of literary criticism, which is marked by its official, Party slant. His books include *Ol'ha Kobyljans'ka* (1952), *Iurii Ianoivs'kyi* (1957), *Mykhailo Stel'makh* (1961), *Borot'ba za realizm v ukraïns'kii literaturi kintsia XIX-pochatku XX st.* (The Struggle for Realism in Ukrainian Literature of the Late 19th–Early 20th Century, 1961), *Dramaturhiia Lesi Ukraïnky* (The Dramas of Lesia Ukrainka, 1963), *Volodymyr Samiilenko* (1963), *Ahatanhel Kryms'kyi* (1967), and *Oles' Honchar* (1968). His books on film include *Ukraïns'ka literatura na ekrani* (Ukrainian Literature on the Screen, 1966), *Suchasne kinomystetstvo Zakhodu* (Contemporary Cinematic Art in the West, 1968), *Kinomystetstvo s'ohodni* (Cinematic Art Today, 1972), and *Radians'ke bahatonatsional'ne kinomystetstvo* (Soviet Multinational Cinematic Art, 1974).

Bacha, Yurii [Bača, Jurij], b 13 May 1932 in the village of Kečkovce, Bardejov county, Slovakia. Ukrainian poet, writer, scholar, and literary critic in Czechoslovakia. He studied at Bratislava University, worked as a translator in the Prešov Pedagogical Institute, and then pursued graduate studies at Kiev University in 1957–60, after which he became a lecturer in literature at Prešov University. In the 1960s Bacha was a leading Ukrainian cultural figure in the Prešov region, where he published his poetry, stories, and literary and social criticism in periodicals. His major work is *Literaturnyi rukh na Zakarpatti seredyny XIX stolittia* (The Literary Movement in Transcarpathia in the Mid-19th Century, 1961). After the Soviet invasion of Czechoslovakia in 1968, Bacha was arrested and later imprisoned for two and a half years. Nothing by him has been published since the early 1970s.

Bachka. See Bačka.

Bachynska, Olha [Bačyns'ka, Ol'ha] (birthname Tyshynska), b 5 June 1875 in the town of Suceava, Bukovyna, d 5 July 1951 in Stryi, Galicia. Community leader in the Stryi region and one of the first women active in the economic field in Galicia. She was director of the Maslosoiuz dairy union in Lviv in 1924–39. Bachynska was a collector of, and an expert on, the Ukrainian folk

Olha Bachynska

Teofilia Bachynska

embroidery of Bukovyna and Galicia. Her collections are now in the Lviv Museum of Ukrainian Art and the Stryk regional museum.

Bachynska, Teofilia [Bačyns'ka, Teofilja] (née Liutom-ska), b 1837 in Vilnius, Lithuania, d 17 January 1906 in Sambir, Galicia. Wife of Omelian Bachynsky, actress and singer of heroic roles. In 1853–63 she worked in Russian, Ukrainian, and Polish troupes in Kiev, Kamianets-Podilskyyi, and Zhytomyr. From 1864 to 1867 she acted in the Ruska Besida Theater in Lviv and then (1868–75) in the Ukrainian-Polish troupes of her husband. Her main roles were Halia in T. Shevchenko's *Nazar Stodolia*, Olia in I. Hushalevych's *Pidhiriany*, Marusia in an adaptation of H. Kvitka-Osnovianenko's *Marusia*, and Prakseda in J. Korzeniowski's *Karpaccy górale* (The Carpathian Mountaineers).

Andrii Bachynsky

Lev Bachynsky

Bachynsky, Andrii [Bačyns'kyj, Andrij], b 14 November 1732 in the village of Beniatoryna, Transcarpathia, d 19 December 1809 in Uzhhorod. Church and cultural leader in Transcarpathia. He was ordained a Catholic priest in 1756 and served in the parish of Hajdudorog, Hungary. In 1769 he became the vicar general to the bishop in Mukachiv and the bishop's deputy to the royal court in Vienna. His efforts to gain canonical recognition for the Mukachiv eparchy succeeded in 1771. In 1773 he became the bishop of Mukachiv and organized an eparchial chapter. He established an eparchial seminary (1778), archive, and library and developed the Ruthenian church-school system, which embraced over 300 parish schools. Bachynsky took great interest in the cultural growth of Transcarpathia's Ukrainians. From 1789 he was a member of the upper chamber of the Hungarian parliament and from 1780 an imperial privy counsellor. Bachynsky planned to incorporate the Mukachiv eparchy in the Halych metropolitanate and was a candidate for the office of metropolitan.

Bachynsky, Edmund [Bačyns'kyj], b 13 June 1880 in the village of Kalyny, Transcarpathia, d 1947. A community leader and judge in Transcarpathia. He worked for the Hungarian administration until 1921 and in 1923 became mayor of Uzhhorod, a member of the regional government, and a higher-court judge in Košice. He was

active in the Czechoslovakian Agrarian party and, as a member of that party, was elected a representative to the Czech national assembly (1925–9) and served as a senator (1929–38). An activist of the Russophile orientation, he was head of the Dukhnovych Society from 1927 to 1936, head of the Provincial Co-operative Association, and the publisher of several newspapers. In October 1938 he was minister of domestic affairs in the autonomous government of Carpatho-Ukraine. Arrested by the Soviet authorities in 1945, he died in prison.

Bachynsky, Leonyd [Bačyns'kyj], b 28 February 1896 in Katerynoslav. Pedagogue. Bachynsky organized the Plast youth association in Transcarpathia in 1923–9, edited the magazine *Plastun* in Uzhhorod, and wrote various Plast manuals. He taught in and directed various secondary schools in Western Ukraine in the 1920s – 1940s. He is the author and compiler of over 45 works, many of them on farming and biology. In 1952 he founded the Ukrainian Museum and Archive in Cleveland, Ohio.

Bachynsky, Lev [Bačyns'kyj], b 14 July 1872 in Serafyntsi, Horodenka county, Galicia, d 4 October 1930 in Grimmenstein, Austria. A politician and lawyer; leader of the Ukrainian Radical party in Galicia (1918–30); member of the Vienna parliament (1907–18); vice-president of the General Ukrainian Council in Vienna (1915–16); and vice-president of the Ukrainian National Rada of the Western Ukrainian National Republic (ZUNR). He authored the constitutional law of 3 January 1919 regarding the unification of the ZUNR with the UNR, as well as the land reform law. From 1928 to 1930 Bachynsky was a member of the Polish Sejm.

Bachynsky, Nicholas [Bačyns'kyj, Mykola], b 16 September 1887 in Serafyntsi, Horodenka county, Galicia, d 14 August 1969 in Fisher Branch, Manitoba. Politician and community figure. Bachynsky immigrated to Canada in 1906. A graduate of the Ruthenian Training School in Brandon, Manitoba, he taught briefly, served as editor of *Kanada*, and after 1918 was active in the Ukrainian Red Cross in Canada. In 1922 he was elected to the Manitoba legislature as a Liberal-Progressive, representing the Fisher Branch constituency until 1958. In 1950 he was the first Ukrainian in Canada to be elected speaker of the Manitoba assembly.

Bachynsky, Oleksander [Bačyns'kyj], 1844–1933. Canon and vicar general of the Ukrainian Catholic metropolitan chapter in Lviv, rector of the Lviv Seminary (1883–93), church writer, translator of the Old and New Testaments, editor of *Bohoslovs'ka biblioteka* (Theological Library). His works include: *Bohosloviie dohmatychnye* (Dogmatic Theology, 1899), *Bohosloviie moral'ne* (Moral Theology, 1899), *Pravo tserkovne* (Church Law, 1901), *Praktychnyi propovidnyk* (Practical Preacher, 1901), *Bohosloviie pastyrs'ke* (Pastoral Theology, 1902), and *Novyi Zavit* (The New Testament, 1903).

Bachynsky, Omelian [Bačyns'kyj, Omeljan], b 1833 in the village of Zhukotyn, Turka county, Galicia, d 10 July 1907 in Sambir. Actor, director, and entrepreneur. He began his acting career on the Polish stage in 1852 in Lviv. In 1857–63 he worked in Polish, Russian, and Ukrainian

Omelian Bachynsky

Yuliiian Bachynsky

troupes in Kiev, Kamianets-Podilskyi, Zhytomyr, etc. In 1864 he became the director of the first professional Ukrainian theater in Galicia – which was part of the Ruska Besida society in Lviv – and he held this post until 1867, and again in 1873 and 1880. In 1868–75 (with interruption) he directed his own Ukrainian and then (1875–94) Ukrainian-Polish troupes in Galicia. He appeared in many roles, including Nazar in T. Shevchenko's *Nazar Stodolia*, Antos in J. Korzeniowski's *Karpaccy góralsi* (Carpathian Mountaineers), Stetsko in H. Kvitka-Osnovianenko's *Svatannia na Honcharivtsi* (The Marriage Engagement in Honcharivka), and Flen in F. Suppe's *Happy Schoolboys*.

Bachynsky, Volodymyr [Bačyns'kyj], b 25 May 1880 in Sambir, d 25 May 1927 in Lviv. Lawyer, politician, and community figure. He was a distinguished member and organizer of the National-Democratic party, a member of the Galician diet (1913–18), and a member of the Austrian parliament. In 1920–4 he was head of the Interparty Council, which included all the Galician political parties.

Bachynsky, Volodymyr [Bačyns'kyj], b 1936 in Galicia. Artist. Bachynsky has painted church murals in Yugoslavia, Rome, and Toronto. He is a realist with a liking for detail, but some of his paintings also have surrealist elements. He has painted a series of portraits of North American Indians. He operates his own art school in Woodstock, New Jersey.

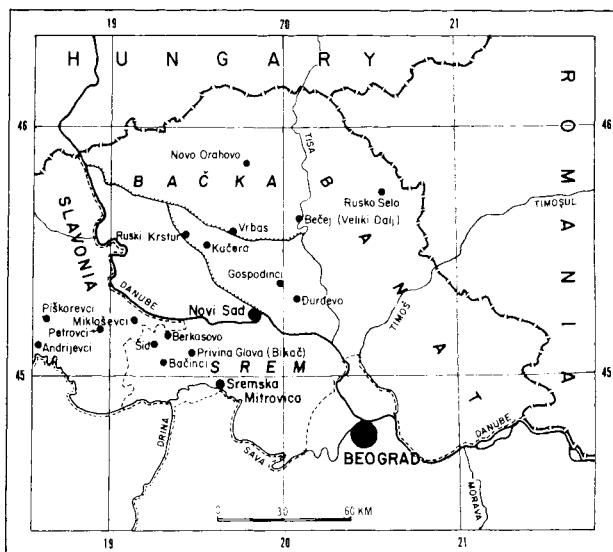

Bachynsky, Yevhen. See Batchinsky, Evhen.

Bachynsky, Yuliiian [Bačyns'kyj], Julijan], b 1870 in Lviv, d ? A community and political leader, journalist, son of Reverend O. Bachynsky, and a leading member of the Ukrainian Radical party. In 1896 he published *Ukraina Irredenta*, in which he advocated the necessity of creating a united, independent Ukrainian state. Bachynsky visited Canada and the United States in 1905–6 to study Ukrainian immigrant life, and his findings were published in the book *Ukrains'ka immigratsiia v Z'iedynenykh Derzhavakh Ameryky* (The Ukrainian Immigration in the United States of America, 1914). In 1918 he became a member of the Ukrainian National Rada in Galicia, and in 1919–21 UNR representative in Washington. In 1929 he returned to the Ukrainian SSR where he worked on the editorial board of the Ukrainian Soviet Encyclopedia. In 1934 he was imprisoned on the Solovets Islands; his

further fate is not known. Bachynsky is also the author of *Podil Halychyny* (The Partition of Galicia, 1897), *Vzaimni vidnosyny sotsial-demokratychnykh partii, ukrains'koi i pol's'koi, v Skhidnii Halychyni* (Relations between the Ukrainian and Polish Social-Democratic Parties in Eastern Galicia, 1911), and *Bol'shevyts'ka revoliutsiia i ukrainsi* (The Bolshevik Revolution and the Ukrainians, 1928).

Bačka [Bachka]. A fertile lowland between the Danube River and the lower Tisa River, the greater part (8,650 sq km) of which has belonged to Yugoslavia since 1918. Along with the Yugoslavian regions *Banat and *Srem it has formed, since 1946, the Autonomous Region of Vojvodina within the People's Republic of Serbia.

The population of Bačka is mixed and includes about 19,000 Ukrainians who call themselves Rusini or Rusnatsi. Ukrainians settled in Bačka in the mid-18th century. Shortly after Austria defeated the Turks and annexed Bačka and Banat by the Passarowitz Treaty of 1718, the Austrian government settled the vacant area with Serbs seeking refuge from the Turks. But these Serbs were unhappy with Austrian policy and emigrated from Bačka in the 1730s–1750s. The government replaced them with Hungarian, German, Croatian, Slovak, and Ukrainian immigrants from the Prešov region (Zemplén and Borsod komitats). The resettlement movement gave rise to the first Ukrainian colonies in Bačka: *Ruski Krstur (1746) – first called Bączkeresztur – which became the center of Bačka Ukrainians, Kočura (1765), and Novi Sad (1784). In the originally mixed (Orthodox and Greek Catholic) communities the Catholics gained the leading role. Their parishes came under the jurisdiction of the Croatian Greek Catholic eparchy in *Križevci, and this saved them from Magyarization, for the church maintained parish schools taught by teachers from Transcarpathia. The first settlers got state lands on condition that they would pay tithes to the state and work on state properties. Later settlers (19th century) were seasonal farmhands who managed to buy land. The Ukrainians quickly improved agriculture in Bačka. In the 19th–20th century they spread out from Krstur and Kočura to Vrbas (1849), Djurdjevo (1870), Gospodinci (1930), Gunaraš/Novo

----- Borders of Vojvodina and other provinces

Orahovo (1946), and from Srem and Slavonia to Šid (1802), Petrovci (1834), Berkasovo (1850), Mikloševci (1850), Bačinci (1850), Piškorevci (1900), Andrijevi (1903), and Dalski Rit (1920). The sociocultural influence of the Bačka population was strong enough to assimilate linguistically the Lemko migrants from the Prešov region (Sáros komitat). Ukrainians were saved from Croatianization by having their own church and parish schools, but a number of small, isolated Bačka Ukrainian villages that were spread through Srem and Slavonia became Croatianized.

First the priests and then the teachers as well were the only members of the intelligentsia who were closely tied to the people. Until 1918 the teachers usually came from Transcarpathia (Hornica). It was from there that the Ukrainians of Bačka got their press and their political, Russophile orientation, which was closely related to the question of literary language (*yazychiie*). In 1890–1939 closer ties were established with Galicia. Theology students did their studies in Lviv; in 1897 V. *Hnatiuk collected ethnographic materials in Bačka, and their publication drew the attention of scholars to the problem of the Bačka Ukrainians; the Ukrainian populists increased in strength. In 1904 H. *Kostelnyk began to create a Bačka Ukrainian literary language based on the popular dialect, and this language gained predominance. Bačka's annexation by Yugoslavia in 1918 put an end to Hungarian influence in education. In 1919 the *Ruthenian People's Enlightenment Society was established in Novi Sad, with branches in various villages. It published the newspaper **Ruski novini* and annual almanacs (1921–41). The Ukrainian students in Zagreb helped in the artistic, cultural, and educational work. In 1927 the Union of Ruthenian Students was organized. With the co-operation of the Ukrainian student community in Zagreb the bimonthly **Dumka* was published. In 1933 the Cultural-National Union of Ruthenians in Yugoslavia – a Russo-philic organization with Serbo-Orthodox tendencies – was established in Kočura. It published the weekly *Russkaia zaria* and yearly almanacs. With Yugoslavia's defeat in 1941, Bačka was occupied by Hungary, and all cultural and publishing activities ceased. Srem and Slavonia became part of the Croatian state. About 1,500 Bačka Ukrainians fought on Tito's side.

After 1945 Ukrainians found themselves in very difficult circumstances. The Greek Catholic church, which until then had preserved the Bačka Ukrainian culture, faced strong repression. The new government encouraged the development of a distinct Bačka 'Ruthenian' culture within Vojvodina, but only within official guidelines.

Ruski Krstur and Novi Sad are publishing centers. Published in Ruski Krstur are the following: since 1945 the weekly **Ruske slovo*, since 1947 the children's monthly *Pionirska zavrada*, since 1952 the literary and art quarterly *Shvetlosts*, since 1969 *Khrystyians'kyi kalendar* of the Križevci eparchy, and since 1976 the annual *Vysnik kul'tury*. Edited in Novi Sad since 1972 is the monthly for youth *Mak*, and since 1975 the annual literary almanac *Tvorchosts*. Between 1945 and 1980, 72 'Ruthenian-Ukrainian' school textbooks were published. At present there are six Ruthenian-Ukrainian elementary schools in the Bačka region, and one high school, established in Ruski Krstur in 1945. Ruthenian-Ukrainian is taught at Novi Sad University. Amateur cultural circles exist in the villages. Seminars and workshops in folklore and language are

held occasionally. Since 1949 a regular Ruthenian-Ukrainian radio program has been broadcast from Novi Sad. The Section for Ruthenian Cultural-Educational Work of the Union of Cultural and Educational Societies of Vojvodina co-ordinates all cultural and educational activities.

The Bačka Ukrainians have attained a high level of socioeconomic development: 20 percent of the population has a technical education; 40 percent has a secondary education. Now only 30 percent of the population is engaged in agriculture, compared with 90 percent in 1945.

Cultural activity is flourishing in the following areas: literature (Ya. Feisa, M. Vinai, D. Paparhai, M. Budynsky, M. and H. Nad, M. Skuban, A. Prokop, M. Kovach, M. and E. Kochish, M. Koloshnai, Sh. Chakan, V. Kostelnyk, D. Latiak, M. Kaniukh, and others); art (Y. Kochish, M. Mudra, H. Syva); scholarship (H. Nad, F. Labosh, M. Kochish, R. Miz, and Ya. Sabadosh); journalism (E. and D. Varga, S. Salamon, V. Nota, and others); and music (O. and I. Tymko). Since 1970 the Druzhestvo society, with 370 members, has prepared textbooks and dictionaries and has preserved the cultural monuments of the Bačka Ukrainians. Ruske Slovo publishers in Novi Sad publishes up to 10 books annually in various fields. The Bačka Ukrainians actively support the cultural life of Ukrainians in *Bosnia and *Croatia.

Bačka dialect. The language of Ukrainian settlers in the provinces of *Bačka and *Srem in Yugoslavia. The dialect, used since 1904 in *Ruski Krstur, the cultural center of Bačka, became the basis for the distinct Bačka (Ruthenian) literary language. It gained in popularity after the First World War. Like other dialects stemming from the *Zemplén komitat (in the 18th century, when the settlers left the area, part of Hungary; now, part of Slovakia), the Bačka dialect is a transitional and mixed one, combining Ukrainian, Polish, and Slovak (with a predominance of Slovak elements) and incorporating many Hungarian, German, and recent Serbian borrowings, especially in the vocabulary. The most important peculiarities of the dialect include: (1) the preservation of the Common Slavic clusters *dl*, *tl*, *gv*, *kv*, and the initial *je* – *vedol*, *vedla* (Standard Ukrainian: *viv*, *vela* [led]), *hvizda* (Standard Ukrainian: *zirka* [star]), *ješen'* (Standard Ukrainian: *osin'* [autumn]), but *ozero* (Standard Ukrainian: *ozero* [lake]); (2) *c*, *dz* in place of the Common Slavic clusters *tj*, *kt'*, *dj* – *noc* (Standard Ukrainian: *nič* [night]), *medzi* (Standard

Ukrainian: *miž* [between]), and in place of the palatalized *d'*, *t'* – *šedzic* (Standard Ukrainian: *sydity* [to sit]); (3) non-pleophonic forms of the type *štređn'i* (Standard Ukrainian: *serednij* [middle]), *krava* (Standard Ukrainian: *korova* [cow]), *mladi* (Standard Ukrainian: *molodyj* [young]), alongside forms such as *mlodi* (groom), *solovej* (nightingale); (4) palatal pronunciation of dental consonants before the reflexes of Common Slavic *ę*, *ě*, *e*, *i*, *ь* – *n'esc* (Standard Ukrainian: *nesty* [to carry]); (5) *i* in place of the Common Slavic *y* and *i* – *sin* (Standard Ukrainian: *syn* [son]); (6) the group *ar* in place of the Common Slavic *ř* – *karčma* (Standard Ukrainian: *korčma* [tavern]); (7) the groups *ol*, *ou*, *lu* in place of the Common Slavic *l* and *l'* – *polni* (Standard Ukrainian: *povnyj* [full]), *voŭk* (Standard Ukrainian: *vovk* [wolf]), *dluhi* (Standard Ukrainian: *dovhyj* [long]); (8) traces of Slovak quantity in reflexes of the Common Slavic *ę*, *ě*, *e*: the long vowels (with original neo-acute pitch) are represented here by: *ja*, *i*, *i* respectively – *pjati* (Standard Ukrainian: *p'jatyj* [fifth]), *bili* (Standard Ukrainian: *bilyj* [white]), *pirko* (Standard Ukrainian: *perce* [feather]), and the corresponding short vowels all by *e* – *pejc* (Standard Ukrainian: *p'jat'* [five]), *belavi* (Standard Ukrainian: *biljavyj* [whitish]), *pero* (Standard Ukrainian: *pero* [pen]); (9) *u*, *o*, *e* in place of the Common Slavic *o* and strong *jers* (*ъ*, *ь*) – *dup* (Standard Ukrainian: *dub* [oak]), *son* (Standard Ukrainian: *son* [dream]), *dzen'* (Standard Ukrainian: *den'* [day]); (10) *š*, *ž* in place of the palatalized *s'*, *z'* – *šerco* (Standard Ukrainian: *serce* [heart]); (11) the loss of *-t'* in verb forms of the third person present – *čita*, *čitaju* (Standard Ukrainian: *čytaje*, *-jut'* [he reads, they read]); (12) accent on the penultimate syllable of a word; (13) sandhi phonetics of the type *zrop to* (Standard Ukrainian: *zrobtyce* [do this]), *snob žita* (Standard Ukrainian: *snip žyta* [sheaf of rye]); (14) endings: *-ox* in the genitive plural of nouns – *sinox* (Standard Ukrainian: *syniv* [of the sons]), *ženox* (Standard Ukrainian: *žinok* [of the women]), *mestox* (Standard Ukrainian: *mis'c'* [of places]); *-em*, *-am*, *-im* in the first person singular present tense – *vjažem* (Standard Ukrainian: *v'jažu* [I tie]), *čitam* (Standard Ukrainian: *čytaju* [I read]), *robim* (Standard Ukrainian: *roblju* [I work]); *-me* in the first person plural – *čitame* (Standard Ukrainian: *čytajemo* [we read]); and forms of the past tense of the type *čital som*, *-ši*, *čital*, *čitali zme*, *-sce*, *čitali* (Standard Ukrainian: *ja čytav* [read], etc.); (15) the loss of gender distinction in the plural of adjectives.

O. Horbach

Badan, Oleksander, 1895–1933. Political figure and lawyer born in Galicia, a cofounder of the Communist party in Transcarpathia during the 1920s, delegate to the Ninth CP(B)U Congress in Kharkiv in 1925. Banished by the Czechoslovakian government, he emigrated to the Ukrainian SSR in 1928, where he worked with M. Skrypnyk. He was learned secretary of the People's Commissariat of Education and an associate of the Chair of the National Question at the Ukrainian Institute of Marxism and Leninism. After the fall of Skrypnyk Badan was purged as a 'national Communist.' He wrote *Istoriia sotsiial'noho rukhu* (The History of the Social Movement, 1923) and *Zakarpats'ka Ukraina: Sotsiial'no-ekonomičnyj narys* (Transcarpathian Ukraine: A Socioeconomic Survey, 1929).

Badeni, Kazimierz, b 14 October 1846 in Surochów, Poland, d 9 July 1909 in Busk, Galicia. Polish politician, count, governor of Galicia (1886–95), prime minister of Austria-Hungary, and minister of the interior in 1895–7. In 1890, on the instigation of the Austrian government, he arranged an agreement with the Ukrainians in Galicia by means of minor concessions (the so-called 'New Era'). Because of pressure from the Polish nobility he changed his politics. The elections of 25 September 1895 to the Galician diet were marked by great abuses on the part of the administration. Of 150 representatives, only 14 Ukrainians, discounting Russophiles, were elected. During the parliamentary elections of 1897, which became known as the Badeni elections, an anti-Ukrainian campaign of terror, using police and the army, was waged. Eight people were killed, 29 wounded, and nearly 800 arrested. Of 63 elected representatives, only 3 were Ukrainians.

Badzo, Yurii [Badz'o, Jurij], b 25 April 1936 in the village of Kopynivtsi in Transcarpathia. Philologist, literary critic, translator, and dissident writer. Badzo studied at Uzhhorod University (1954–7) and worked as a teacher in the Mukachiv raion (1958–61). He did graduate work in literary theory at the Institute of Literature of the Academy of Sciences of the Ukrainian SSR in Kiev (1961–5) and contributed to Soviet Ukrainian literary journals. In 1965 Badzo was expelled from the institute for his association with Ukrainian dissidents. In 1970 he wrote an open letter to the Writers' Union of Ukraine, criticizing its official organ, *Literaturna Ukraina*. From 1972 to 1979 he worked privately on a 4,000-page manuscript, 'Pravo zhyty' (The Right to Live), a democratic-socialist critique of the Soviet system and nationality policy. This work was confiscated by the KGB. On 21 December 1979 Badzo was sentenced to seven years in strict-regime labor camps and five years' internal exile. Badzo's views were summarized in an open letter to Soviet leaders (published in New York in 1980) and an open letter to Soviet historians (*Suchasnist'*, 1980, no. 11). Badzo's wife, S. Kyrychenko, has also suffered political persecution for writing letters in his defense.

Bagge, John Picton, b 19 October 1877, d 23 December 1967. British diplomat who, in 1905–18, served as consul to Russia. During the First World War he was stationed in Odessa. In December 1917 he was appointed the British representative to the government of the UNR. From 1918 to 1921 he was the British commercial secretary in Russia.

Bagritsky, Edvard [Bagrickij] (actual surname, Dziubin), b 3 November 1895 in Odessa, d 16 February 1934 in Moscow. Russian constructivist poet, Bolshevik partisan in Ukraine during the revolution. His collections of poetry include works on Ukrainian themes: 'Ukraina' (1924), 'Odessa' (1924), and 'Duma pro Opanasa' (Duma about Opanas, 1926, adapted as an opera libretto in 1932), in which he depicts the tragedy of a Ukrainian insurgent. Bagritsky published translations of works by M. Bazhan, V. Sosiura, and other poets.

Bahalii, Dmytro [Bahalij], b 7 November 1857 in Kiev, d 9 February 1932 in Kharkiv. Ukrainian historian; full member of the All-Ukrainian Academy of Sciences from 1919, lecturer, professor (from 1887), and rector (1906–10)

Yurii Badzo

Dmytro Bahalii

at Kharkiv University. He made an important contribution to the university's development and to the Ukrainian content of its research. Bahalii was a representative of the universities at the State Council in St Petersburg in 1906 and 1910–14. He was active in public affairs in Slobidska Ukraine and headed the city council of Kharkiv in 1914–17. He helped establish the Kharkiv public library and the Literacy Association. He was one of the most important associates of the Kharkiv Historical-Philological Society and the organizer of the Kharkiv historical archives. In 1918 Bahalii was a member of the founding committee of the Ukrainian Academy of Sciences and became the first chairman of the academy's historical-philological division. In the 1920s he presided over the Kharkiv Scientific Society, affiliated with the All-Ukrainian Academy of Sciences, directed the Institute of the History of Ukrainian Culture and the Shevchenko Institute, held the Research Chair of the History of Ukraine at Kharkiv University, and served as the director of the Ukrainian Central Archive. The most important of Bahalii's numerous (over 200) works are devoted to the history of Slobidska, Left-Bank, and southern Ukraine: *Istoriia Severskoi zemli do poloviny XIV v.* (A History of the Siverskyi Land to the Mid-14th Century, 1882); *Ocherki iz istorii kolonizatsii i byta stepnoi okrainy Moskovskogo gosudarstva* (Outline of the History of the Colonization and Daily Life of the Steppe Frontier of the Muscovite State, 1887); *Kolonizatsiia Novorossiiskogo kraia i ego pervye shagi po puti kul'tury* (The Colonization of the New Russia Territory and Its First Steps on the Path of Culture, 1889); *Magdeburgskoe pravo v Levoberezhnoi Malorossii* (The Magdeburg Law in Left-Bank Little Russia, 1892, Ukrainian translation in *Rus'ka istorychna biblioteka*, xxiv); *Ukrainskaia starina* (Ukrainian Antiquity, 1896); *Opyt istorii Khar'kovskogo universiteta* (A Study of the History of Kharkiv University, 2 vols, 1893, 1904); *Istoriia goroda Khar'kova* (A History of the City of Kharkiv, co-authored with D. Miller, 1905–6); *Istoriia Slobids'koi Ukraïny* (A History of Slobidska Ukraine, 1918); *Narys ukrains'koi istoriografii* (An Outline of Ukrainian Historiography, 2 vols, 1923–5); *Ukrains'kyi mandrovanyi filosof H.S. Skovoroda* (The Ukrainian Wandering Philosopher H.S. Skovoroda, 1926); and the officially criticized *Narys istorii Ukraïny na sotsiial'no-ekonomichnomu grunti* (An Outline of the History of Ukraine from a Socioeconomic Standpoint, 1928).

O. Ohloblyn

Bahattia (Bonfire). Ukrainian literary and artistic almanac edited by I. Lypa and published in Odessa in 1905. It included contributions by more than 30 authors, including I. Franko, P. Myrny, O. Kobylanska, O. Makovei, B. Hrinchenko, P. Karmansky, and B. Lepky.

Bahdanovich, Maksym [Bahdanovič], b 9 December 1891 in Minsk, Belorussia, d 25 May 1917 in Yalta. Belorussian poet and literary scholar. Bahdanovich wrote a number of articles on Ukrainian literature and culture, including articles on T. Shevchenko and his poetry; the depiction of Galicia in belles-lettres; and articles on V. Samiilenko and H. Chuprynka. Bahdanovich published translations from the work of T. Shevchenko, I. Franko, M. Kotsiubynsky, and V. Stefanyk. His essays and articles were published in the journal *Ukrainskaia zhizn'*.

Bahliuk, Hryhorii [Bahljuk, Hryhorij], 1905–38. Writer and journalist, member of the Donbas literary group Zaboï and editor of its journal, *Zaboï (Literaturnyi Donbas* from 1932). Bahliuk published poetry, short stories, and a novel, *Horyzonty* (Horizons). In 1933 he was arrested, along with many other Ukrainian writers of the Donbas. He was executed in March 1938, together with 1,200 other prisoners of the Vorkuta concentration camp.

Bahmut, Ivan, b 7 June 1903 in the village of Babaïkivka, Katerynoslav gubernia, d 20 July 1975 in Kharkiv. Writer. Bahmut began his literary career in 1927. Before the Second World War he wrote mainly travel books, including *Podorozh do nebesnykh hir* (Journey to the Heavenly Mountains, 1930), *Prerüamy ta dzhungliamy Birobidzhana* (Through the Prairies and Jungles of Birobidzhan, 1931), *Kareliia* (1933), and *Verkhivtsi zasnizhenykh tundr* (The Peaks of the Snow-Covered Tundras, 1935). After the war he wrote books for children, including five collections of stories; five short novels, and two plays. An edition of his selected works, *Vybrane*, appeared in 1964.

Bahmut, Yosyp, b 17 April 1905 in Babaïkivka, Katerynoslav gubernia, d 26 August 1968. Linguist, teacher, editor, associate of the Institute of Linguistics of the Academy of Sciences of the Ukrainian SSR. Bahmut translated political works, particularly the works of V. Lenin, into Ukrainian. In his writings on the theory and practice of translation and on the problem of standardizing the contemporary literary language, as well as in his translations, he actively pursued the policy of bringing Ukrainian closer to the Russian language.

Ivan Bahriany

Bahriany, Ivan [Bahrjanyj], b 2 October 1907 in the village of Kuzemyn in Kharkiv gubernia, d 25 August 1963 in St Blasien, Germany. Writer, political leader. At first Bahriany was known as a poet connected with the Kiev writers' group *MARS. His poems began to appear in 1926 in such journals as *Hlobus*, *Chervonyi shliakh*, and *Zhyttia i revoliutsiia*. In 1927 he published the poem *Monholiia* (Mongolia) and, in 1929, *Ave Maria*. His first collection of poetry, *Do mezh zakazanykh* (To the Forbidden Limits), appeared in 1927. His poetry ranges from elegiac, lyric poetry and philosophical meditation to biting satire and bitter invective. His first collection of short stories, *Krokvy nad taborom* (Rafters over the Camp), was published in 1931. In the following year Bahriany was arrested, and his works were forbidden in Soviet Ukraine. In 1944, as a refugee in Germany, he became active in Ukrainian political life: he assumed the leadership of the *Ukrainian Revolutionary Democratic party. In 1947 he became vice-president of the party. In 1954 he was elected acting president of the *Ukrainian National Council. At the same time he returned to writing, and in 1946 he published a collection of poetry – *Zoloty bumerang* (The Golden Boomerang). Ten years later his satirical novel in verse, *Anton Bida – heroi truda* (Anton Bida – Hero of Labor), came out. But his creative energies were devoted mainly to prose: in 1944 he published an adventure novel, *Zvirolovy* (Animal Hunters), which was revised and published in 1946 under a new title, *Tyvrolovy* (Tiger Hunters). The novel was translated into Dutch (*Vlucht in de Taiga*, 1959), English (*The Hunters and the Hunted*, 1956), and German (*Das Gesetz der Taiga*, 1961). In 1948 he published *Rozhrom* (The Rout) and in 1950 the novel *Sad Hetsymans'kyi* (The Garden of Gethsemane), dealing with the Yezhov terror in Ukraine, which was translated into French under the title *Le jardin de Gethsemani* (1961). *Vohniane kolo* (The Fiery Circle, 1953) deals with the battle of Brody in 1944, in which the Ukrainian Division Galizien was crushed. *Marusia Bohuslavka* (1957) is a novel about young people under the Soviet regime. The novel *Liudyna bizhyt' nad prirvoiu* (A Person Runs at the Edge of a Precipice) was published posthumously in 1965. The plays *Morituri* (1947) and *Heneral* (The General, 1948) exposed the Soviet system of terror in Ukraine. Of Bahriany's journalistic works the brochure *Chomu ia ne khochu povertatysia na rodinu* (Why I Do Not Wish to Return to the 'Homeland,' 1946) was particularly popular.

I. Koshelivets

Bahrii, Oleksander [Bahrij], b 23 April 1891 in Letychiv, Podilia gubernia, d 22 June 1949 in Baku, Azerbaijan. Literary scholar and bibliographer, a student of V. Peretts at Kiev University, professor at the University of Baku. Bahrii was the author of several studies of Shevchenko, including *Shevchenko v literaturnoi obstanovke* (Shevchenko's Literary Milieu, *Izvestiia Azerbaidzhanskoho universiteta. Obshchestvennye nauki*, 1925, vols 2–3) and *T.H. Shevchenko, I–II* (1931–2).

Bahrii, Petro [Bahrij], b 25 November 1925 in the village of Topolivka, Vinnytsia oblast. Economist, statistician, and full member of the Academy of Sciences of the Ukrainian SSR since 1973. Bahrii was director of the academy's Institute of Economics from 1971 to 1976. From 1961 to 1965 he worked for the statistical section of the socioeconomic department of the United Nations. He has written about 60 works on economic statistics and demography, and on theoretical problems and economics in the Ukrainian SSR and the USSR. The most notable of these are *Dinamika i struktura obshchestvennogo proizvodstva pri sotsializme* (The Dynamics and Structure of Social Production under Socialism, 1971), and *Ekonomicheskie problemy razvitoogo sotsialisticheskogo obshchestva* (Economic Problems of a Developed Socialist Society, co-author, 1977).

Baidarska Gate (Baidarski vorota). A pass through the main range of the Crimean Mountains from the Baidarska Valley to the Black Sea coast, at an elevation of 527 m. The Yalta-Sevastopol highway runs through this pass.

Baidarska Valley (Baidarska dolyna). A valley in the southwestern part of the Crimean Mountains, 17 km in length and 8 km in width. It is watered by the Chorna River and is densely populated.

Baidebura, Pavlo [Bajdebura], b 1 March 1901 in the village of Nerubaika, Kherson gubernia. A writer and journalist, Baidebura graduated from the faculty of journalism at Kharkiv Communist University in 1930 and worked as a newspaper and book editor. He was a correspondent during the Second World War. He began publishing in the 1920s in the journals *Zaboi* and *Hart*. His collections of stories and sketches, which draw their themes from coalminers' life, include *Vuhil'ni dni* (Coal-Mining Days, 1933), *Opovidannia pro druziv* (Stories about Friends, 1959), and *Vohon' zemli* (Fire of the Earth, 1967). His novelettes for children include *Taiemnytsia stepovoho shurfu* (The Secret of the Excavation in the Steppe, 1956) and *Iskry hniivu* (Sparks of Anger, 1974).

Baiko (Bajko). Surname of three sisters – Danyila, b 20 August 1929; Mariia, b 2 March 1931; Nina, b 25 August 1933 – from the village of Ruska Yablunytisia in Brzozów county, Poland. The Baiko sisters are singers who have formed a vocal trio since 1953. They graduated from the Lviv Conservatory in 1958. Their repertoire consists mainly of folk songs (particularly Lemko songs) and popular songs. The sisters have made concert tours abroad.

Baiurak, Vasyli [Bajurak, Vasyli], b 1722 in the village of Dora in the Hutsul region, d 25 April 1754 in Stanyslaviv. Member of O. *Dovbush's band of *opryshoks and from 1745 leader of his own band. Its center of operations was

the Hutsul village of Dovhopillia. Baiurak's opryshoks were active in Pokutia and Bukovyna. After being captured, Baiurak was publicly drawn and quartered.

Bakalo, Ivan, b 12 February 1898 near Myrhorod in Poltava gubernia, d 8 April 1972 in New York. An economist and pedagogue, Bakalo worked in Myrhorod and Kharkiv. He emigrated to Germany in 1944 and became assistant director of the Institute for the Study of the USSR in Munich in 1954. He emigrated to the United States in 1961. Bakalo published works on agricultural economics, pedagogy, and the history of the USSR, including *Modernization and Diversity in Soviet Education with Special Reference to Nationality Groups* (with J. Pennar and G. Bereday, 1971) and *Natsional'na polityka Lenina* (Lenin's Nationality Policy, 1974).

Bakh, Oleksii [Bax, Oleksij], b 17 March 1857 in Zolotonosha, Poltava gubernia, d 13 May 1946 in Moscow. Biochemist and revolutionary. Bakh was founder of the Soviet biochemical school and a full member of the Academy of Sciences of the USSR from 1929. He studied at Kiev University and was expelled from it in 1878 for revolutionary activity. After serving a term of exile, he returned to Kiev and continued his revolutionary work in the organization Narodnaia Volia in 1883. In 1885 he emigrated and worked in biochemical laboratories in France from 1894 and later in Geneva. In 1917 he returned to Russia. In Moscow he founded and directed the L. Karpov Physics and Chemistry Institute, the Biochemistry Institute of the People's Commissariat of Public Health of the USSR, and the Biochemistry Institute of the Academy of Sciences of the USSR, which is named after him. Bakh wrote over 100 works, dealing mostly with photosynthesis, oxidation processes in cells, and fermentation.

Bakhchesarai (Bakhchysarai) [Baxčesarai]. IX-14. City (1926 pop 10,000, of which 72 percent were Tatars; 1974 pop 19,500) in the Churuk Valley on the northwestern slope of the Crimean Mountains; a raion center in Crimea oblast. The city has a food industry and an institute of construction technology. From the end of the 15th century to 1783 Bakhchesarai was the capital of the *Crimean Khanate. It is a typically oriental city, with narrow, winding streets, fountains, and mosques. Its most famous architectural landmark is the group of buildings that once constituted the khan's palace (16th–18th century), now the *Bakhchesarai Historical and Archeological Museum. The most interesting buildings are the Golden Cabinet (18th century), the Hall of Assembly (16th–18th century), and the Fountain of Tears (built by master Omer in 1764). Not far from Bakhchesarai are the ruins of the medieval underground fortress town *Chufut-Kaleh. In 1681 Muscovy concluded a peace treaty with Turkey and the Crimean Khanate in Bakhchesarai (see *Bakhchesarai, Treaty of).

Bakhchesarai, Treaty of. Treaty signed on 13 January 1681 by Muscovy, Turkey, and the Crimean Khanate. They agreed to a 20-year truce and accepted the Dnieper as the demarcation line between the Ottoman Empire and Moscow's domain. Both sides promised not to settle the territory between the Boh and the Dnieper rivers. The Tatars retained the right to live as nomads in the southern steppes of Ukraine, while the Cossacks retained the right

to fish in the Dnieper and its tributaries, to obtain salt in the south, and to sail on the Dnieper and the Black Sea. Turkey recognized Muscovy's sovereignty in Left-Bank Ukraine and the Zaporozhian Cossack domain, while the southern part of Kiev province, Bratslav province, and Podilia were left under Turkey's control.

Bakhchesarai Historical and Archeological Museum (Bakhchysaraiskyi istoryko-arkheolohichnyi muzei). Established in 1955. The museum occupies the former mosque (rebuilt in 1740) and the former palace (built in the 16th–18th century) of the Crimean khans. It is divided into archeological and historical sections. There are more than 65,000 artifacts in the museum, of which 3,800 are on display. The museum contains material on the archeology, history, and ethnography of the Crimea; paintings and sculptures by masters of the 18th and 19th century; and paintings by modern artists.

Bakhmach [Baxmač]. II-13. City (1972 pop 16,300), a raion center in Chernihiv oblast, and an important railway junction on the Kiev-Moscow line. It began as a settlement in the 1860s and 1870s when the railway was under construction. In January 1919 it was the site of battles between the Bolsheviks and the Chornomorska Division under Otaman Polishchuk, which was attempting to keep Left Bank Ukraine under the control of the armies of the Directory of the UNR. Bakhmach has a factory that builds machines for the chemical industry and a food industry.

Wolf Hunt, a ceramic tile by Oleksa Bakhmatiuk, ca 1875

Bakhmatiuk, Oleksa [Baxmatjuk], b 10 December 1820 in Kosiv, Galicia, d 15 March 1882 in Kosiv. Potter. Bakhmatiuk made original household and decorative pottery, tiles, and tile stoves, which were decorated with engraved plant and geometric designs, depictions of animals, and various figural scenes. His works are preserved in the Ukrainian Museum of Ethnography and Industrial Art in Lviv and elsewhere. An album of his works was published in Kiev in 1976.

Bakhmut [Baxmut]. See Artemivske.

Bakhmutka River [Baxmutka]. A right-bank tributary of the *Donets River. Also known as the Bakhmut River, the Bakhmutka is 88 km in length, and its basin covers 1,680 sq km. Its water is used for consumption and irrigation. The city of *Artemivske is located on the river.

Bakonchytsi [Bakončyci] (Polish: Bakończyce). Village in Peremyshl county, now belonging to Poland (Rzeszów

voivodeship). In 1919 the Poles established a prisoner of war camp for the soldiers of the Ukrainian Galician Army at Bakonchytsi. Because of poor conditions many prisoners perished there.

Bakota. v-7. Formerly a fortified town in the Principality of Galicia-Volhynia, Bakota was first mentioned in the Hypatian Chronicle under the year 1240. It is located in the Dniester valley in eastern Podilia. It is now a village in Kamianets-Podilskyi raion, Khmelnytskyi oblast. Bakota has an ancient Orthodox cave monastery with frescoes and paintings dating back to the 12th–14th century. Near the village there is a paleolithic archeological site.

Bakovetsky, Yosyp Mokosii [Bakovec'kyj, Josyp Mokosij], 17th century. Church leader, archimandrite of Zhydychn, and then Uniate bishop of Volodymyr (1632–52). He rebuilt the cathedral in Volodymyr and saved the eparchy from decline by reforming the schools, among other measures.

Baksheiev, Mykola [Bakšev], b 14 May 1911 in the village of Starykovo, Kursk gubernia, d 3 October 1974 in Kiev. Obstetrician-gynecologist, corresponding member of the Academy of Medical Sciences of the USSR. In 1933 he graduated from the Kharkiv Medical Institute. In 1950–9 he served as professor at Uzhhorod University and from 1959 at the Kiev Medical Institute. His writings are devoted mostly to the physiology and pathology of the motor functioning of the womb and to child gynecology.

Bakul, Valentyn [Bakul'], b 11 August 1908 in the village of Chernyshivka in eastern Podilia. Metallurgical engineer, specialist in synthetic processes. In the 1930s Bakul devised a series of special-grade, superhard alloys and developed a hard-alloy work tool for percussive machine drilling. Until 1961 he worked in plants and research institutions, developing superhard alloys. In 1961–2 he discovered a technique of producing synthetic diamonds. From 1961 to 1977 Bakul served as director of the Institute of Superhard Materials of the Academy of Sciences of the Ukrainian SSR (until 1972 the Ukrainian Scientific Research Institute for the Structure and Technology of Synthetic Superhard Materials and Tools).

Balaban, Arsenii (Marko), birth and death dates unknown. Bishop of Lviv in 1549–69, the second bishop after the restoration of the Halych-Lviv eparchy. He struggled to cast off the protectorate of the Roman Catholic archbishop of Lviv and defended the rights of his office and his clergy from the Polish nobility.

Balaban, Borys, b 21 December 1905 in Kharkiv, d 8 March 1959 in Kiev. Actor, director, and playwright. In 1922–34 he worked in the Berezil theater and then in the theaters of Moscow, Leningrad, Kharkiv, and Lviv. In 1948 he became the director of the Kiev Ukrainian Drama Theater. He staged M. Irchan's *Pliatsdarm* (Place d'armes), Ya. Bash's *Chotyry chamberleny* (Four Chamberlains) and *Profesor Buiko*, J. Offenbach's *Orphée aux enfers*, and other plays and wrote propaganda plays and short stories.

Balaban, Dionisii, b?, d 10 May 1663 in Korsun. Orthodox church leader. Having studied at the Kievian

Metropolitan Dionisii Balaban

Mohyla Collegium, he became the bishop of Kholm (1650–2), then of Lutske (1655), and finally metropolitan of Kiev (1657–63). He supported I. *Vyhovsky. His election was secured by Constantinople in opposition to Moscow.

Coat of arms of Bishop Hedeon Balaban

Balaban, Hedeon (Hryhorii), b 1530, d 10 February 1607 in Lviv. Son of A. Balaban and bishop of Lviv (1569–1607). He was a defender of the Orthodox church from the Polish Catholics, particularly from the Roman Catholic archbishop of Lviv. Balaban resisted introduction of the Gregorian calendar (1582) and struggled against the *Lviv Dormition Brotherhood on behalf of episcopal authority. From 1590 he participated in negotiations over the union with the Catholic church, but at the Council of Berestia in 1596 he joined Prince K. *Ostrozky in opposing the union. He held fast to this decision until his death. Balaban became the exarch of the patriarch of Jerusalem. In 1599 he established a Greco-Slavic printing press with his nephew Fedir Balaban, first in Striatyn, then in Krylos. Church books such as *Sluzhebnyk* (Missal, 1604), *Uchytel'noie ievanheliie* (Didactic Gospel, 1604), and *Trebnyk* (Euchologion, 1606) were published there. Balaban also supported *brotherhood schools.

Balabyne. vi-16. Town smt (1970 pop 6,200) in Zaporizhia raion, Zaporizhia oblast, by the Kakhivka reservoir. The town's inhabitants are employed in the factories of Zaporizhia.

Balahurak, Ivan, b 29 June 1922 in Kosiv, Galicia. Master of bas-relief sculpture. He has executed plates, chests, flasks, etc, and specializes in furniture (he has

Balance of payments of the Ukrainian sssr, 1966 (million rubles)

Types of transaction	Exports and other transactions representing inpayments	Imports and other transactions representing outpayments	Net inpayments (+), or net outpayments (-)

contributed a set of Hutsul furniture to the Ethnographic Museum of the Peoples of the ussr in Leningrad). Balahurak has participated in artistic competitions and international art fairs.

Balaklava. ix-14. City raion of Sevastopol, located on a deep bay of the same name. Until 1957 it was a separate city in Crimea oblast and a health resort. In the middle of the first millennium BC Plakii (Palakii), a settlement of the Taurians, was located here; afterwards it became a Greek colony. It was conquered in 1357 by the Genovese, in 1475 by the Turks (with whom the name Balaklava originated), and in 1783 by the Russians. During the Crimean War (1853-6) the British troops landed here.

Balakliia [Balaklija]. iv-17. City (1976 pop 31,500) on the Donets River, a raion center in Kharkiv oblast. It was founded in 1663 as a defense outpost against the Tatars. The city has cement and slate production complexes and a food industry.

Balance of payments. A comprehensive account of transactions between a country and the rest of the world during a period of time, usually one year. For Ukraine, which is part of a larger economic entity, such an account has to encompass trade and financial transactions with the rest of the Soviet Union and with outside countries.

In the 1966 balance of payments, shown in the accompanying table, the aggregate account consists of two parts. The first part is the current account (or balance of trade), which pertains to exports and imports of goods and services. Ukraine's current-account balance in 1966 was positive, since exports exceeded imports by 8,060

million rubles. As part of that total, Ukraine had an export balance of 484 million rubles with socialist countries, 86 million rubles with developed capitalist countries, and 55 million rubles with less developed countries. These external surpluses combined with net exports of 2,383 million rubles to the other Soviet republics, so that a total net export represented an unrequited loss of about 7.5 percent of the republic's national product of 40.1 million rubles in 1966. In addition to the above, Ukraine delivered 5,052 million rubles' worth of goods (or 12 percent of her national product) to Union authorities in conjunction with Union defense and administrative expenditures in Ukraine.

The second part of the balance of payments is the capital or financial account that encompasses payments made to and received from the sources outside Ukraine in connection with taxes, profits, loans, and grants. In 1966 such capital outpayments by Ukraine exceeded inpayments by 8,060 million rubles. After 1966 the share of profits paid by the enterprises in Ukraine as the republic's contribution to the Union budget significantly increased.

As shown in the table, the positive export surplus representing inpayments in the current account is equal to the net negative balance representing outpayments in the capital account. Thus, the surplus of funds extracted from Ukraine and not returned through the budgetary process is being used to make payments for the excessive deliveries that the republic must make to outside countries, the rest of the ussr, and the Soviet military-administrative establishment in Ukraine.

Within the Russian Empire, before the First World War Ukraine generated export surpluses both with other parts

of the empire and with outside countries. Such positive trade balances reflected Ukraine's strong export position in agricultural products and industrial raw materials. Net foreign-currency earnings of the Ukrainian gubernias were used to service French, Belgian, and British investments in mining and heavy manufacturing in Ukraine. Before the First World War Galicia's trade within the Austrian Empire was not large and tended to be balanced. The Kuban region in tsarist Russia enjoyed a strong export balance as a result of exports of grains and oil. During the period of Ukrainian statehood, 1917-20, foreign trade was impeded, although the conclusion of several commercial treaties with European countries and Soviet Russia anticipated Ukraine's strong export capability and import needs.

Under Soviet rule, Ukraine's trade was diverted away from external partners and towards Soviet regions. Agricultural external exports declined, while the share of industrial raw materials and manufactures increased as part of Soviet development plans. In reaction to Moscow's growing exploitation of Ukraine, in the late 1920s M. *Volobuiev criticized Moscow's excessive collection of profits and taxes as well as the corresponding requisition of Ukraine's export surpluses for the benefit of the rest of the USSR. Although Ukraine had some autonomy in foreign trade during the 1920s, comprehensive trade data were not published. However, there is evidence that requisitioned grain continued to be exported from Ukraine even during the infamous *famine of 1933.

The evidence shows that from 1960 to 1980 Ukraine suffered perennial uncompensated losses of export surpluses. The accompanying model demonstrates that Ukraine's trade with outside countries such as Poland is indirect and involves the mediation of the Moscow-controlled Foreign Trade Monopoly (FTM). When Ukraine's export surpluses are absorbed by the FTM, this

Exports (X), imports (M), and implied trade balances between Ukraine, the rest of the USSR, and third countries, 1966 (in millions of rubles)

allows the rest of the USSR to receive more imports from abroad. If Ukraine were not an exploited trading partner, export surpluses to outside countries and the rest of the USSR would allow the republic to accumulate external investments and enjoy repayments with interest in future years. The unrequited losses of resources through the process of planned confiscation of export surpluses by Moscow diminishes the standard of living in Ukraine, impedes its economic development, and contradicts the spatial efficiency of resource allocation in the Soviet Union as a whole. The unfavorable features of Ukraine's balance of payments are explained by the exploitation of the republic in a planned command economy. The problem should be studied in conjunction with the republic's

budget, economic planning, foreign trade, and investments.

The historical record of Ukraine's balance of trade has been studied by Yu. Kryvchenko, K. Kononenko, and V. Holubnychy. The financial aspects of payments pertaining to budgetary transactions between the republic and the Union have been investigated by M. Volobuiev, A. Richytsky, Z.L. Melnyk, and H.J. Wagener.

Balashevych [Balaševyč]. Surname of a family of master founders who worked in Hlukhiv during the second half of the 17th and the first half of the 18th century. In the 1690s Yosyp Balashevych produced cannon with plant ornaments, animal scenes, cartridge boxes with coats of arms, and inscriptions. Karpo Balashevych (d 1735) continued his father's traditions. Among his known works are bells executed for the former monastery at Dumeny, ornamented with the portrait and coat of arms of I. Mazepa (1699), and cannon, richly decorated with plant ornaments and depictions of animals and fantastic creatures, produced for Col I. Chernysh (1713) and Col M. Myklashevych (1717). His works are preserved in museums in Chernihiv, Leningrad, and Moscow. The works of both masters bear their names.

Balavensky, Fedir [Balavens'kyj], b 31 December 1864 in the town of Liubotyn near Kharkiv, d 8 November 1943 in the village of Lianozovo in Moscow oblast. Sculptor and pedagogue. He graduated from the Kiev Drawing School in 1896 and the Academy of Arts in St Petersburg in 1903. Balavensky lectured at art schools in Kiev (1907- 22) and at the Ceramic Technical School in Myrhorod (1922-30). Among his works are busts of T. Shevchenko, M. Lysenko, I. Kotliarevsky, and P. Kulish; the Shevchenko monuments in Kiev (which won second

Fedir Balavensky

Stepan Balei

prize in a 1911 international contest and was demolished by A. Denikin's troops in 1919), Lubni, Zolotonosha, and Myrhorod (1924–6); and the bronze gravestone bust of M. Kropyvnytsky in Kharkiv (1914). In Kiev Balavensky executed a number of allegorical statues on the Red Cross building (1913), co-sculpted the bas-relief *Triumph of Phryne* on the Iserlis building (1909), and designed the hippodrome (1916). In his sculptures Balavensky combined classicism with Ukrainian folk elements. A study of Balavensky by H. Bohdanovych was published in Kiev in 1963.

Balei, Stepan [Balej], b 4 February 1885 in Velyki Borky, Ternopil county, Galicia, d 13 September 1952 in Warsaw. Pedagogue, psychologist, and neurologist, full member of the Shevchenko Scientific Society and the Polish Academy of Sciences. Balei studied at the universities of Lviv, Berlin, Vienna, and Paris. From 1908 he taught, with interruptions, in the Academic Gymnasium in Lviv. In 1913 he received his PhD in psychology. In 1922–5 he was professor of philosophy and psychology at the Lviv (Underground) Ukrainian University. Balei contributed many articles to Ukrainian scholarly journals. His major early works include *Z psichologii tvorchosty Shevchenka* (On the Psychology of Shevchenko's Creativity, 1916); *Narys psichologii* (An Outline of Psychology, 1922), the first Ukrainian textbook in psychology published in Galicia; and *Narys lohiky* (An Outline of Logic, 1923). Receiving his medical degree in 1926 and becoming a professor of educational psychology at Warsaw University in 1927, Balei turned to studying non-Ukrainian subjects. His main works after 1927 were *Zarys psichologii w związku z rozwojem psichiki dziecka* (An Outline of Psychology in Relation to Children's Psychological Development, 1933); *Psychologia wieku dojrzewania* (The Psychology of Adolescence, 1935); *Psychologia wychowawcza* (Educational Psychology, 1938); and *Drogi samopoznania* (The Paths to Self-discovery, 1946).

Baley, Virko [Balej], b 21 October 1938 in Radekhiv, Galicia. Composer, pianist, and pedagogue. Baley graduated from the Los Angeles Conservatory of Music and Arts and is a professor at the University of Nevada in Las Vegas. His works include *Tropes* for cello and piano, *Partita for Trombone, Piano, and Tape*, and *Woodcuts* for string music, as well as music for piano. His articles on Soviet Ukrainian composers and music have been published in various music journals. In 1977 Baley produced the record *20th Century Ukrainian Violin Music* in collaboration with E. Grativich and B. Turetzky. He is also the music director of the Las Vegas Symphonic and Chamber Music Society.

Balias, Volodymyr [Baljas], b 29 August 1906 in Rohatyn, Galicia, d 18 April 1980 in San Diego, California. Graphic artist and painter. Balias obtained his artistic education at the Academy of Arts in Warsaw (1933–9), then taught graphic art at the Industrial Art Institute in Lviv (1939–44) and subsequently in Germany, Canada, and the United States. He took part in exhibitions in Lviv, Kiev, and Moscow (1940), in Munich (1947), and in the major cities of Canada and the United States. Semi-abstract forms are dominant in Balias's paintings and mosaics, while his graphic compositions have a strong psychological and dramatic accent, for example, in *The*

Volodymyr Balias

Dream, The Blind Men, The Drunken Beggars, The End of the Journey. Balias also produced book art and bookplates. His works are to be found in the Library of Congress in Washington; the Museum of Art in Hollywood, Florida; Ukrainian museums; and private collections.

Ballad. In Ukrainian literature the ballad arose out of the folk lyric-epic song with a tragic ending. The oldest recorded folk ballads appeared in the 16th–18th century: 'Stefan Voievoda' (Voivode Stefan), 'Oi, ne khody, Hrytsiu' (Don't Go to Parties, Hryts), 'Pisnia pro Bondarivnu' (Song about the Cooper's Daughter), etc. Some ballads can be found among the written poetry of the 17th–18th century: several legends in verse by D. Tuptalo, and certain poems by Klymentii and others. The late classicists and the romantics wrote ballads: P. Hulak-Artemovsky's 'Rybalka' (The Fisherman) was patterned on J. von Goethe; L. Borovykovsky's 'Marusia' was a Ukrainianized 'Lenore' (by G. Bürger). The Kharkiv romantics M. Kostomarov and A. Metlynsky composed and translated ballads. The Ukrainian ballad reached its height in the works of T. Shevchenko: 'Prychynna' (The Bewitched Girl), 'Utoplenu' (The Drowned Girl), 'Khustyna' (The Kerchief), and others. In his ballads Shevchenko abandoned the strophic structure, thus bringing them closer to folk songs. In length his ballads are sometimes similar to romantic poems. Besides historical and fantastic ballads that are typical of the romantic tradition, Shevchenko also wrote sociopolitical ballads. After Shevchenko many other poets wrote ballads, including P. Kulish, S. Rudansky, M. Starytsky, I. Manzhuza, S. Vorobkevych, I. Franko, and Ya. Shchokoliv. In modern Ukrainian poetry the ballad merges with other types of poetry, and its boundaries become unclear. But balladlike poems can be found in the works of many modern writers such as M. Rylsky, P. Tychyna, Ye. Malaniuk, and particularly the futurists M. Semenko, H. Shkurupii, and early M. Bazhan. The term ballad is used by contemporary poets (I. Drach and his contemporaries) in their titles in an even broader sense.

D. Chyzhevsky

Ballet. One of the performing arts in which a story or an idea is presented in a designed setting by means of stylized dance and mime. It is usually accompanied by music. The term 'classical ballet' refers to the dance system that originated in the 16th century in Italy and was developed in the 17th century in France to encompass the classical techniques of movements and positions. The

ballet spectacle is the work of a librettist, composer, choreographer, and designer (scenographer).

Classical ballet in Ukraine was introduced in the 18th century as theatrical entertainment at the manors of K. Rozumovsky, H. Ilinsky, and other noblemen, who used their serfs to perform native dances and dance forms imported from the West, particularly from France. In the 19th century folk dance was used in the ethnographic Ukrainian operas and operettas such as *Zaporozhets' za Dunaiem* (Zaporozhian Cossack beyond the Danube), *Oi ne khody Hrytsiu* (Do Not Go to Parties, Hryts), and *Natalka Poltavka* (Natalka from Poltava). Ballets proper were presented in the theaters of Kiev, Kharkiv, and Odessa, but they were imitations of the Russian classical ballet, which, owing to the Dane C. Johansson and Italian and French ballet masters, particularly E. Cecchetti and M. Petipa, reached a high level of excellence. In the second half of the 19th century and at the beginning of the 20th century many Ukrainians achieved recognition in Russian classical ballet, but they did not work in Ukraine and thus did not help to develop Ukrainian ballet. For a long time ballet performances in Ukraine consisted of the Russian and world repertoire: P. Tchaikovsky's *Swan Lake*, A. Glazunov's *Raymonda*, L. Delibes's *Coppélia*, A. Adam's *Le corsaire*, etc. After the 1917 revolution, although the opera in Ukraine was Ukrainized, ballet continued to imitate Russian models. At the end of the 1920s Moscow's avant-garde experiments, such as S. Vasilenko's *Iosif Prekrasnyi* (Joseph the Beautiful) and R. Glière's *Red Poppy*, were added to the ballet repertoire imported into Ukraine. The first ballets by Ukrainian composers were staged in 1930: B. Yanovsky's *Ferendzhi* (*Vohon' nad Gangom*) (Ferenji [Fire along the Ganges]) in Kharkiv and V. Femelidi's *Karman'iola* (Carmagnole) in Odessa. These ballets lacked any Ukrainian content or elements, however. In 1931 V. Lytvynenko staged in Kharkiv, and in 1932 in Kiev, the first ballet with Ukrainian content – M. Verykivsky's *Pan Kan'ov's'kyi* (The Nobleman Kanovsky), which combined classical ballet with folk dance.

In the 1930s and 1940s opera and ballet theaters in Ukraine continued to stage classical and new Soviet ballets, which, in conformity with socialist realism, imitated the form of classical ballet while tendentially politicizing the libretto; for example, B. Asafev's *Flame of Paris* and *Fountain of Bakhchisarai*, S. Vasilenko's *Gypsies*, and A. Krein's *Laurençia*. Certain classical ballets, such as P. Tchaikovsky's *Sleeping Beauty*, E. Grieg's *Peer Gynt*, and N. Rimsky-Korsakov's *Sheherazade*, were revived.

V. Nakhabin's Ukrainian comedy ballet *Mishchanyn z Toskany* (The Burgher from Tuscany) was staged in 1936 in Dnipropetrovske (choreographed by P. Virsky and M. Bolotov). But it was only on the eve of the Second World War, and particularly in subsequent years, that ballets on Ukrainian themes accompanied by music by Ukrainian composers were produced in Ukraine: K. Dankevych's *Lileia* (The Lily, Kiev 1940), based on a poem by T. Shevchenko; M. Skorulsky's *Lisova pisnia* (The Forest Song, Kiev 1946, 1958), based on Lesia Ukrainka's play; A. Svechnikov's *Marusia Bohuslavka* (Kiev 1951); H. Zhukovsky's *Rostyslava* (Kiev 1955); A. Kos-Anatolsky's *Khustka Dovbusha* (Dovbush's Kerchief, Lviv 1953), and *Soichyne krylo* (The Jay's Wing, Lviv 1956); V. Homoliaka's *Sorochyns'kyi iarmarok* (The Sorochynsi Fair, Donetske 1955), based on N. Gogol's story; Yu. Rusynov's *Po syn'omu*

(*moriu* (On the Blue Sea, Odessa 1955); and V. Nakhabin's *Tavriia* (Kharkiv 1959), based on O. Honchar's work. During this period the creators of ballet strove to develop a genre of popular-heroic drama with a national coloring.

In the 1960s psychological drama acquired an important place in Ukrainian ballet. The following works belong to this genre: V. Kyreiko's *Tini zabutykh predkiv* (The Shadows of Forgotten Ancestors, Lviv 1960, 1963), based on M. Kotsiubynsky's novel, and V. Hubarenko's *Kaminnyi hospodar* (The Stone Master, Kiev 1969), based on Lesia Ukrainka's play. The latter ballet represented a turning-point in the development of Ukrainian ballet; attention was drawn to the dramatic significance of stage design and costumes (designed by Ye. Lysyk in the Kharkiv production and by M. Arnaudova in a Bulgarian production).

The fairy-tale genre of children's ballets based on well-known fairy tales has rarely been performed on the Ukrainian stage, however. Among these ballets were V. Homoliaka's *Kit u chobotakh* (Puss in Boots, Donetske 1961), based on C. Perrot's story; Yu. Rusynov's *Diuimovochka*; Zh. Kolodub's *Pryhody vesnianky* (Adventures of a Snowdrop), based on a story by H.C. Andersen; and I. Kovach's *Pivnichna kazka* (The Northern Fairy Tale), based on S. Lagerlöf's story. Certain ballets produced by choreography schools and amateur groups that combined realism with fantasy have also been staged. They include A. Kolomiets's *Ulianka*, Yu. Rozhavsky's *Korolivstvo kryvykh dzerkal* (The Kingdom of Distortion Mirrors), M. Silvansky's *Nadzvychnyi den'* (An Exceptional Day), and A. Mukha's *Mriia* (The Daydream). Ballets written to order on contemporary Soviet and war themes – for example, D. Klebanov's *Svitliana*, Yu. Znatokov's *Urok zhyttia* (The Lesson of Life), Yu. Shchurovsky's *Pisnia pro druzhbu* (Song about Friendship), O. Sandler's *Sertse divoche* (The Girl's Heart), Yu. Rusynov's *Olesia*, A. Kos-Anatolsky's *Orysia*, B. Yarovytsky's *Poema pro Marynu* (A Poem about Maryna), and B. Buievsky's *Pisnia syn'oho moria* (The Song of the Blue Sea) – have gained some popularity.

Among ballets depicting contemporary life and particularly the life of Soviet young people, V. Homoliaka's *Chorne zoloto* (Black Gold, Donetske 1957, and Kiev 1960), which was choreographed by P. Virsky and designed by A. Petrytsky, made the strongest impression on the public.

The revival of ballet with a universal-symbolic content by members of the Leningrad School of Choreography marked a return to the traditions of the avant-garde theater of the 1920s. In Lviv in 1967 a cyclic trilogy consisting of L. Dychko's *Dosvitni vohni* (Dawn Fires, based on Lesia Ukrainka's work) and M. Skoryk's *Kamniari* (The Stone Cutters, based on I. Franko's poem) and *Vid'ma* (The Witch, based on T. Shevchenko's poem) was staged. The trilogy did not catch on, but one-act ballets became effective vehicles for philosophical and symbolic works. In 1975 V. Tymofiiu attempted to stage in Kiev a cyclical trilogy – *V im'ia zhyttia* (In the Name of Life), using the symphonic works of A. Shtoharenko (*Partyzans'ki kartyny* [Partisan Scenes]), B. Liatoshynsky (*Voz-z'iednannia* [Unification]), and D. Shostakovich (the finale of the 5th Symphony) – choreographed by A. Shekera and G. Maiorov. This example of patriotic eclecticism was not a success. One of the outstanding one-act ballets – *Svitankova poema* (The Dawn Poem) – based on the piano

pieces of V. Kosenko (orchestral transcription by L. Kolodub) was produced in 1973 and choreographed by G. Maiorov. In 1974 a new Ukrainian classical ballet – Yu. Znatokov's *Svichchynne vesillia* (Svicha's Wedding), based on I. Kocherha's work and choreographed by I. Chernishov – was staged in Odessa. In the same year the heroic opera-ballet *Volz'ka balada* (The Volga Ballad), consisting of H. Zhukovsky's opera with the same title and his symphonic poem *Obelisk*, was performed at the Kharkiv Opera. M. Leontovych's unfinished opera *Narusalchyn velykden'* (The Water Nymphs' Easter) was completed in the form of the opera-ballet *Rusal'chyni luky* (The Water Nymphs' Meadows), and staged for the first time in 1977. To commemorate the 1,500th anniversary of Kiev, the ballet *Ol'ha*, based on Ye. Stankovych's epic, was staged in Kiev in 1982.

By the 1980s Ukrainian composers had produced about 50 ballets that became part of the theater repertoire. The synthesis of classical ballet with the national folk dance is characteristic of Ukrainian choreography. Ballets from the world repertoire and from other Soviet republics continue to be performed in Ukraine. In 1965 members of the Kiev Opera and Ballet Theater took part in the international dance festival in Paris and won a gold medal.

In Ukraine there are six opera-and-ballet theaters – in Kiev, Lviv, Kharkiv, Odessa, Donetsk, and Dnipropetrovske. Each has a ballet school affiliated with the Kiev State School of Choreography. The most prominent Ukrainian ballet composers are M. Verykivsky, K. Dankevych, V. Homoliaka, A. Kos-Anatolsky, D. Klebanov, V. Nakhabin, A. Sviechynkov, M. Skorulsky, V. Femelidi, L. Dychko, and M. Skoryk. The best-known choreographers are H. Berezova, P. Virsky, V. Vronsky, M. Zaslavsky, V. Lytvynenko, I. Moisieiev, S. Sergeev, N. Skorulska, M. Trehubov, B. Tairov, and A. Shekera. The following designers have won recognition: V. Meller, A. Petrytsky, O. Khvostenko-Khvostov, I. Kurochka-Armashvsky, Ye. Lysyk, F. Nirod. The outstanding ballet soloists are V. Dulenko, O. Havrylova, A. Yarygina, O. Sobol, O. Stalinsky, A. Vasilieva, N. Apukhtin, O. Potapova, Ye. Yershova, N. Slobodian, V. Ilinska, V. Kalynovska, A. Havrylenko, A. Lahoda, S. Kolyvanova, V. Kruglov, T. Popesku, L. Harasymchuk, R. Khylyk, and V. Fedotov.

In 1960 the artistic sport-and-ballet ensemble Ballet on Ice was created in Kiev. It has about 100 members and an orchestra and has performed abroad. Its repertoire includes spectacles with Ukrainian themes such as *Christmas Eve* (based on N. Gogol's story), *Dawn near Khortytsia* by O. Zaitsev, and *Shadows of Forgotten Ancestors* (based on M. Kotsiubynsky's story). The Ballet on Ice has been directed by V. Vronsky (1961–73), R. Kliavin (1973–5), and O. Hodnychak (since 1976).

Ukrainian dancers, choreographers, and teachers have contributed to classical and modern ballet outside Ukraine. Beginning in the 1920s V. Zavarykhyn ran his own classical ballet studio in Paris and staged such ballets with Ukrainian themes as *Cossack Children*, *Revukha*, *Children of the Dnieper*, *Mazepiad*, and *Carpathian Ukraine*. Beginning in 1933 D. Chutro, who had studied and taught opera and ballet in Moscow, organized a Ukrainian theater ensemble in Philadelphia, which has toured North America. Chutro has staged such Ukrainian ballets as F. Yakymenko's *Krynytsia* (The Well), V. Sokalsky's *Nalukakh* (In the Meadows, 1946), and P. Uhlytsky's *Lehin'*

(The Young Buck, Winnipeg 1977). O. Gerdan-Zaklynska has combined modern and classical techniques in her ballet creations, which have been staged in Europe and Canada. R. Pryima-Bohachevska's creations are stylizations of Ukrainian folklore (*The Witch*, *The Water Nymph*, *The Highland*, *The Woman Reaper*) and dance (*The Icon*); they have been staged in Europe and North America. All of the above choreographers had or have their own schools. The most prominent émigré ballet master has been V. *Pereiaslavets, a former prima ballerina in Ukraine, who began teaching in major American and British ballet schools in 1949.

Ukrainians have also been prominent dancers in foreign troupes: A. Zavarykhyna-Indzilova in St Petersburg and Paris (she ran her own school in Toronto beginning in 1950); and B. Pope (Popovych), L. Biloshytska, H. Samtsova, and M. Slota in the National Ballet of Canada; T. Vozhakivska in the Garden State Ballet in the United States; O. Voinovska, and Ye. Stashynska.

Mykola Ballin

Ballin, Mykola, b 6 September 1829 in St Petersburg, d 1904 in Kharkiv. A civic leader in Katerynoslav and Kharkiv, co-operative organizer, philosopher, and founder of the first consumers' association in Kharkiv in 1866. He hoped to transform society by means of co-operatives. He established co-operative libraries and people's homes for enlightening the masses. Ballin was one of the first co-operative leaders in central Ukraine, along with O. Kozlov and H. Galagan. His book *Pervaia pamiatnaia knizhka russkikh potrebitel'nykh obshchestv* (The First Commemorative Book of Russian Consumers' Societies, 1870) forms part of the earliest co-operative literature in Ukraine and contains information on the origin of the Ukrainian co-operative movement. His memoirs have been published in part in *Revoliutsionnaia situatsiia v Rossii v 1859–1861 gg.* (The Revolutionary Situation in Russia in 1859–61), vol 5 (1970).

Balta. VI-10. City (1969 pop 20,000) on the Kodyma River (a tributary of the Boh); a raion center in Odessa oblast. Balta has existed since the 16th century. It belonged to Turkey until 1791 and later, in accordance with the Treaty of Jassy, to Russia. In 1797 it became a county town of Podilia gubernia. It was known for its wheat-trading markets. In 1865 the first railroad in Dnieper Ukraine was built; it connected Balta with Odessa. In 1880, 80 percent of its population was Jewish. In 1924–9 it was the capital of the Moldavian ASSR. The city has a furniture, a brick, and a clothing factory, and a food industry.

Baltarovych, Volodymyr [Baltarovyč], b 8 June 1904 in Zolochiv, Galicia, d 11 October 1968 in Prague. Composer and a physician by profession. He completed his music studies in Prague. In the 1930s he arranged songs for and accompanied the female quartet Bohema in Lviv. He composed the following operettas and musical comedies: *Dva sertsia v 3/4 taktu* (Two Hearts in 3/4 Time), *Mefestiiada* (libretto by M. Chyrsky), *Zhaburynnia* (Water Weeds), and *Podruzzhia u dvoikh meshkanniakh* (Marriage in Two Apartments, libretto by H. Luzhnytsky). He also wrote choral and solo music with Ukrainian motifs, as well as popular songs.

Baltimore. Important port city on the Atlantic coast in the State of Maryland, United States. The population in 1980 was 790,000, of whom about 13,000 were Ukrainian by origin. Ukrainians began to settle in Baltimore in the 1890s. Two Ukrainian Catholic churches, one Byzantine Catholic church for the Carpatho-Ukrainians, and one Ukrainian Orthodox church were built. From 1906 to 1941 Ukrainian (Ruthenian) candidates for the priesthood were educated at St Mary's Roman Catholic Seminary. There are about twenty Ukrainian organizations, three national homes, and one Ukrainian Saturday school in Baltimore. Since the mid-1950s the *Smoloskyp Ukrainian publishing house has been located in the city. In 1975 the city council agreed to have Baltimore and Odessa become fraternal cities. In 1977 the Ukrainian Educational Society of Maryland published the book *Ukrainians of Maryland*.

Baluhiansky (Baludiansky), Mykhailo [Baluh'jan-s'kyj (Baludjans'kyj), Myxajlo], b 26 September 1769 in the village of Vyshnia Olshava in eastern Slovakia, d 15 April 1847 in St Petersburg. Economist and lawyer. Baluhiansky studied in Vienna and Budapest and was a law professor at the Nagyvárad academy in Transylvania. In 1804 he was invited to take up the position of professor of political economy at the St Petersburg Pedagogical Institute. In 1819–21 he was the first rector of St Petersburg University. From 1804 Baluhiansky sat on the government commission that compiled the Code of Laws of the Russian Empire. Under his direction the Code of Laws of the Western Gubernias [ie, of Ukraine and Belorussia] was published in 1838. In political outlook Baluhiansky was a moderate liberal and an advocate of peasant reforms. He maintained contacts with the cultural figures of Transcarpathia. Baluhiansky's works deal mostly with economic problems, such as the distribution of national wealth. His biography, by T. Baitsura, was published in Prešov in 1968.

Baluk, Maria, b 1935 in Argentina. Opera and chamber singer, soprano. Baluk is a soloist of the state opera in

Buenos Aires. Her repertoire includes works by W. Mozart, R. Schumann, G. Verdi, G. Puccini, P. Tchaikovsky, M. Lysenko, O. Nyzhankivsky, and V. Hrudyn.

Balyka. Surname of an influential Kiev family of the late 16th and early 17th century. Yakiv Balyka (d 1613) was mayor of Kiev from 1592 and led the Orthodox citizens' opposition to the seizure of their churches by the Uniate Catholics. He had three sons: Denys succeeded his father as mayor, but the Polish voivode S. Zołkiewski did not confirm his election; Sozon was burgomaster and supervised the restoration of the Dormition Cathedral of the Kievan Cave Monastery; Bozhko (Bohdan), who also became mayor, wrote a memoir of his participation in the campaign against Moscow in 1612.

Balzac, Honoré de, b 20 May 1799 in Tours, d 18 August 1850 in Paris. Eminent French realist writer, author of more than 100 novels in the series *La Comédie humaine*, which was intended as a vast epic of French life. Balzac twice visited Ukraine; these visits included a stay in Kiev. In 1847 he stayed in the village of Verkhivnia in Volhynia on the estate of the Polish noblewoman E. Hanska, whom he married in Berdychiv in 1850. Balzac's travel notes on Ukraine appeared in his *Lettre sur Kiev* (1847, first published in 1927). The building in which he lived at Verkhivnia was made into a museum in 1959. Many of Balzac's works have been translated into Ukrainian, especially in the 1920s and 1930s. N. Rybak's novel *Pomyłka Onore Bal'zaka* (Honoré de Balzac's Mistake) was filmed in 1969; the script was prepared by M. Zarudny.

Balzer, Oswald Marian, b 23 January 1858 in Khorodiv, Galicia, d 11 January 1933 in Lviv. A famous Polish historian of law, professor at the University of Lviv from 1887, president of the Polish Learned Society of Lviv from 1912, and a full member of the Shevchenko Scientific Society from 1926. Balzer investigated the government and administration of medieval Poland and the law of other Slavic nations. He published *Corpus iuris Polonici*, vols 3–4 (1906, 1910); legal documents of the Armenian colonies; sources on the Lemko opryshok movement; and other works. These books contain valuable historical materials on the Ukrainian territories under Poland.

Banach, Stefan [Banax], b 30 March 1892 in Cracow, d 31 August 1945 in Lviv. Noted mathematician, professor at Lviv University in 1924–45, corresponding member of the Academy of Sciences of the Ukrainian SSR. Banach was one of the founders of modern functional analysis and helped develop the theory of topological vector spaces. His major work was *Théorie des opérations linéaires* (1932).

Banat. The land bounded by the Danube River, lower Tisa River, Mureş River, and the Transylvanian Alps. It is flat towards the west and mountainous towards the east. Until 1919 this area belonged to Hungary. Then it was divided between Yugoslavia (9,310 sq km) and Rumania (18,715 sq km). The population is composed of Rumanians, Serbs, Hungarians, and Germans (until 1945). Ukrainians, numbering about 10,000, belong to the minority groups and live in the Rumanian part of the Banat, around the city of Lugoj (Timișoara province). Two of the 11 villages in which Ukrainians live – Copăcele and Zorile

– are exclusively Ukrainian. Ukrainians came here from western Transcarpathia in the 18th century as colonists after the Banat was liberated from the Turks and annexed by Austria in 1718. Under Hungarian rule the Banat Ukrainians were Magyarized to some extent and then Rumanianized. In 1785 some of the Danube Cossacks who recognized Austrian sovereignty (8,000 people) settled in the Banat, but they returned to the Danube delta in 1812. In the 1930s the Banat Ukrainians maintained ties with the Ukrainians in Bukovyna and had Ukrainian priests. Some of the Ukrainians were Greek Catholics, some Orthodox. In 1948 many of them were resettled in the Ukrainian SSR. In the 1950s and 1960s the Banat Ukrainians had their own schools, which were closed down in the 1970s. Today only church services are conducted, in Old Church Slavonic.

O. Horbach, A. Zhukovsky

Stepan Bandera

Bandera, Stepan, b 1 January 1909 in Uhryniv Saryi, Kalush county, Galicia, d 15 October 1959 in Munich. Revolutionary, politician, and ideologue of the Ukrainian nationalist movement. Born into a clerical family, Bandera took an active part in community affairs, joining the youth association Plast while in high school. As an agronomy student at the Lviv Polytechnical Institute, Bandera became a member of the *Ukrainian Military Organization in 1927 and of the *Organization of Ukrainian Nationalists in 1929, in which he soon attained positions of authority. In 1931 he became chief of propaganda in the OUN national executive, in 1932–3 he was second in command, and in June 1933 he became head of the national executive in Galicia. During his tenure Bandera expanded the OUN's network in Western Ukraine, directing its struggle both against Poland and against Soviet Russian imperialism (in 1933 M. *Lem'yk assassinated an official of the Soviet consulate in Lviv). Putting a stop to expropriations, Bandera turned the OUN's militancy against the Polish officials who were directly responsible for anti-Ukrainian policies. He also devoted attention to organizing mass campaigns against Polish tobacco and liquor monopolies and against the denationalization of Ukrainian youth. Arrested in June 1934, Bandera was tried twice: at the Warsaw trial concerning the assassination of the minister of internal affairs, B. *Pieracki, and at the Lviv trial of the OUN national executive. Bandera's death sentence was commuted to life imprisonment.

Released from prison on the fall of Poland in 1939, Bandera soon moved to the Generalgouvernement, where,

after a falling out with the head of the OUN leadership, A. *Melnyk, he headed an opposing faction. In 1940–1 the faction developed into a separate organization (popularly known as the *Banderites). On the eve of the German-Soviet war Bandera initiated the formation of the *Ukrainian National Committee in order to consolidate Ukrainian political forces. He cultivated German military circles favorable to Ukrainian independence, initiated the formation of a Ukrainian military legion, organized expeditionary groups, and prepared the proclamation of a Ukrainian state in Lviv on 30 June 1941. For his refusal to rescind the proclamation, Bandera was arrested and spent the period from July 1941 to September 1944 in German prisons and concentration camps.

Elected a member of the OUN leadership in 1945 and head in 1947, Bandera held consistently to the principles of integral nationalism. In May 1953 he was elected leader of the sections of the OUN abroad. Following unsuccessful attempts in February 1954 to reconcile a dissenting faction, which later constituted itself as the OUN Abroad, Bandera remained the leader until his death. He was killed by the Soviet agent B. Stashynsky. At Stashynsky's trial in the Federal Republic of Germany (8–19 October 1962), it was established that the assassination had been directed personally by the head of the KGB, A. Shelepin.

In the memory of his followers Bandera became a symbol of the revolutionary struggle for a Ukrainian state. His political positions were defined in a series of articles collected in a posthumously published book.

Bandera, Volodymyr, b 11 December 1932 in Stryi, Galicia. Economist specializing in the comparative study of economic systems, international trade, and finance. Bandera was educated at the universities of Connecticut and California (Berkeley) and has been a professor at Boston College (1960–72) and at Temple University (Philadelphia, since 1972). He has written over 30 works in English and Ukrainian, including *Foreign Capital as an Instrument of National Economic Policy: A Study Based on the Experience of East European Countries between the World Wars* (1964), and co-edited, with Z. Melnyk, *The Soviet Economy in Regional Perspective* (1973).

Banderites (Banderivtsi). Colloquial term for members and supporters of the faction of the OUN led by S. *Bandera. This term is used pejoratively in Soviet propaganda to denote the Ukrainian underground during and after the Second World War, as well as all Ukrainian nationalists and all those in Ukraine opposed to Soviet nationality policy. See *Organization of Ukrainian Nationalists (Bandera faction).

Bandrivsky, Dmytro [Bandrivs'kyj], b 23 December 1897 in Horodyshe, Sambir county, Galicia. Writer and dialectologist. Bandrivsky graduated from Lviv University in 1931. After 1945 he became an associate of the Lviv

branch of the Institute of Social Sciences of the Ukrainian Academy of Sciences. Bandrivsky began publishing his stories, poetry, and articles in the Lviv press in the 1920s. His works include the poetry collection *Na iasnyi shliakh* (On the Bright Road, 2 parts, 1922–3); the collections of stories *Shchastia* (Happiness, 1960) and *Soniashni slidy* (Sunny Traces, 1980); the short novel *Tse bulo nedavno* (This Was Not Long Ago, 1951), *Zapysky neznaiomoho* (Notes of a Stranger, 1966), and *Pid synimy horamy* (Beneath the Blue Mountains, 1955); and the collections of essays *V kraiu orliv* (In the Land of the Eagles, 1967), *Kriz' pryzmu lit* (Through the Prism of Years, 1969), and *Dvi iasni zirnytsi* (Two Bright Little Stars, 1972). Bandrivsky is also the author of articles on Ukrainian dialectology, literature, folklore, and ethnography.

Bandura

Bandura. A Ukrainian musical instrument similar in construction and appearance to a lute. The bandura has 32–55 strings: the 8–14 bass strings (*bunty*) are stretched along the neck, and the 24–43 treble strings (*prystrunky*) run along the side of the soundboard. Before the 10th century the bandura had various shapes and tunings (basically diatonic), but in recent times it has been standardized. The modern bandura is usually chromatic, with a basic tuning in G major/E minor; the range is from AA to g³. The Chernihiv bandura is 10 cm by 51 cm in size. The bandura differs from other lutelike instruments by the presence of the *prystrunky*, on which the melody is performed (the *bunty* are used only for accompaniment), and the absence of frets. Each string produces only one note.

The body (*koriak*) of the bandura is usually made from sycamore, cherry, maple, or red willow. The treble nut (*obychaika*) and pin collar (*strunnyk*) are made from maple or beech, and the sound board (*deka*) from spruce. In the modern bandura steel strings are used, the lower ones being wound with copper, brass, or bronze. Until the 20th century wooden turning pegs were used, but these have been replaced by metal pins for greater tonal stability.

The more popular Chernihiv bandura is placed in the lap of the bandura player (*banduryst*) at an angle to the body. The melody is played with the right hand, the

accompaniment with the left. In the Kharkiv (Zinkiv) method the bandura is placed in the performer's lap parallel to the body, the left hand reaches over the *obychaika* to play on the *prystrunky*, and the right hand plays on the *bunty*. These methods require somewhat different instruments.

The oldest record of a banduralike instrument in Ukraine is an 11th-century fresco of court musicians (*skomorokhy*) in the St Sophia Cathedral in Kiev. This lutelike instrument is probably the ancestor of the bandura and the *kobza. The two instruments were related, but distinct. The kobza was smaller in size and had fewer strings, but these were fretted. Around the 16th century *prystrunky* were added to the bandura, and from that time only one note was obtained from each string. During the 17th and 18th century the bandura was very popular at the Zaporozhian Sich, among the common people, and at the gentry manors. In the 18th century the bandura displaced the kobza, and both names are now used synonymously. Old banduras were symmetrical. Their shape limited the number of *prystrunky* and thus the range of the instrument. In 1894 H. *Khotkevych designed an asymmetrical bandura, thus increasing its range.

Many attempts were made in the 20th century to turn the bandura into a chromatic instrument. Some banduras, such as the Chernihiv bandura, use an additional set of strings for the semitones; others use a mechanism for retuning individual strings by a semitone; and some banduras employ both devices. V. Herasymenko, O. Korniiievsky, I. Skliar, S. Snihyriov, V. Tuzychenko, and others have contributed to the technical improvement of the instrument. For larger ensembles, banduras of different ranges have been designed – the *pryma* (piccolo), alto, bass, and contrabass. Owing to the efforts of M. Lysenko, H. Khotkevych, and others, bandura playing began to be studied in the 20th century at music schools and other educational institutions. Instrumental-vocal ensembles and kapellen were organized at the same time.

A. Hornjatkevyč

Bandurysts (*bandurysty*). Also known as kobzars, these were folk musicians who performed their songs and recitatives to the accompaniment of a *bandura. In Ukraine the first mention made of them is in historical documents of the 16th century. Bandurysts or kobzars were wandering folk bards who originally composed and performed their own lyric-epic historical songs (see *duma) in the recitative style and later added songs of various other genres (religious and humorous songs, dance melodies) to their repertoires, which were passed on to their students. Bandurysts were held in high esteem by the Zaporozhian Cossacks, as well as by the general populace. Hetmans and members of the upper nobility often kept bandurysts at their courts.

In the 19th century the best-known banduryst was the

Banduryst by Opanas Slaktion

blind O. *Veresai (it should be noted that bandurysts were very often blind men); others who gained prominence were M. *Kravchenko, T. *Parkhomenko, F. Kholodny, A. Shut, I. Kravchenko-Kriukovsky, T. *Bilohradsky, and I. Kukharenko. During the 19th century the bandurysts, primarily those in the cities, were persecuted by the Russian government, and the art began to wane.

In the early 20th century bandura playing revived and was actively pursued on both an amateur and a professional level. Professional bandurysts, educated at music schools and conservatories, performed as concert soloists (H. *Khotkevych, V. *Yemets, H. *Kytasty, V. *Kabachok). By the mid-20th century the individual art of the wandering folk bandurysts had disappeared completely, giving way to organized banduryst ensembles and kapellen. The first Ukrainian banduryst ensemble was organized in Kiev in 1918. In the 1950s bandura playing was introduced into the curriculums of music schools, and banduryst kapellen were formed both independently and by oblast philharmonic orchestras. Bandurysts, as representatives and bearers of the Ukrainian folk tradition, were persecuted by the Soviet regime, as they had been in the tsarist period (they were prohibited from appearing in public places, etc). In the 1930s many renowned bandurysts were repressed and deported (V. Kabachok, H. Khotkevych, D. Balatsky, et al); some were even executed.

In past centuries the art of bandura playing was an exclusively male domain. In the 20th century women became involved as well (for example, women's banduryst trios became popular; a women's oblast banduryst kapelle was formed in Poltava). The more noteworthy contemporary ensembles include the *State Banduryst Kapelle of the Ukrainian SSR of Kiev and the Ukrainian

Bandurist Chorus of Detroit, USA. Contemporary composers such as A. *Kolomyiets, K. Miaskov, and H. *Kytasty have provided new repertoire for the bandura.

Banishment and seizure (*potok i rozhrableniie*). Severe form of punishment meted out in Kievan Rus' for serious crimes such as murder in the course of robbery, arson, and horse stealing (according to the *Ruskaia Pravda*). *Potok*, derived from the verb *potochyty* or *zatochyty* (to deprive), consisted of the loss of personal rights, expulsion from the clan, and sometimes even exile. *Rozhrableniie* was the loss of the right to own property. The two punishments were applied together. A person thus punished was deprived of the protection of the laws and could become a slave. Part of his confiscated property was used to compensate the victim, and the rest was transferred to the prince. The deprivation of the rights arising from banishment and seizure applied also to the convict's family. Some historians of law claim that this institution was borrowed from Byzantine law.

Banja Luka. City (1980 pop 90,000) in northern Bosnia, Yugoslavia, on the Vrbas River. Some 1,000 Ukrainians settled in Banja Luka after 1900. From 1914 to 1924 the city was the seat of the apostolic administration for Ukrainian Greek Catholics in *Bosnia. The Ukrainian cultural society Matytsia was active in Banja Luka until 1945. After the Second World War the Taras Shevchenko Cultural and Educational Society was established, and Ukrainian-language radio broadcasts were initiated. In the 1970s the Ukrainian Cultural Council for Bosnia was organized here.

Banking system. The establishment of a group of financial institutions which foster a flow of credit and money to facilitate orderly economic growth. Early banking systems served mainly as depositories for funds, whereas more modern systems have considered the supplying of credit their main purpose. Through its ability to create an elastic money supply (including emission of currency) as well as through its control of credit and other financial transactions, the banking system decisively influences economic policy and the balance of payments (see *Budget).

During the course of history the banks of Ukraine were completely dependent on either the central banking systems of the Russian or Austro-Hungarian empires. By implementing the directives of these central systems, the banks contributed in large measure to the economic exploitation of Ukraine. Today this state of affairs continues, with the total subordination of all financial operations in Ukraine to the central banking system of the USSR.

Banks in central and eastern Ukraine prior to 1917. While in Western Europe the banking system had evolved in the 16th–17th centuries, banks in Ukraine – as

in Russia – were created only at the end of the 18th century. Prior to this time no orderly credit system existed, and credit transactions were for the most part handled by usurers. Later, however (from 1775), credit obligations were granted by means of the so-called departments of public welfare (*prikazy obshchestvennogo prizreniia*), which existed in all the gubernias of the Russian Empire. Financing for the large estates was provided by the Imperial Land Bank for the Nobility, established in St Petersburg, which from the year 1783 had the right to grant loans to the 'Little Russian' estates. Trade was financed by the Loan Bank, founded in 1769, which in 1786 became the State Loan Bank with headquarters in St Petersburg and branch offices in Odessa (1819), Kiev (1839), Kharkiv (1813), and other cities in Ukraine. As a result of the credit reform of 1860 all existing banks in the Russian Empire were abolished, and a central State Bank was created. (In 1896 it became the central bank for the emission of currency.) The network of the central State Bank included the State Bank for the Nobility (1885), which provided long-term credit to large landowners, and the Peasant Land Bank (1882), which helped peasants to purchase land from the large estates. These banks had branches in the larger cities of Ukraine; for example, the State Bank had offices in Kiev, Kharkiv, Odessa, and in 24 other cities as well.

Beginning in the 1870s, 12 private commercial banks were established in Ukraine. Included in that number were Kiev's Commercial Bank (1868) and Industrial Bank (1871), Kharkiv's Trade Bank (1868), Odessa's Commercial Bank (1870) and Discount Bank (1879), Mykolaiv's Commercial Bank (1872), and the Commercial Bank in Katerynoslav (1872). These were small banks, whose basic capital amounted to only 1.5 percent of the total funds of the Russian Empire. Most of them (with the exception of Kiev's Commercial Bank and Odessa's Discount Bank) folded at the beginning of the 20th century, because they could not compete with the branches of the central Russian banks. At the outbreak of the First World War Ukraine numbered 22 branches of the State Bank, 55 branches of the International Bank of St Petersburg, 31 branches of the United Bank, 23 branches of the Azov-Donets Bank, 5 branches of the State Bank for the Nobility, and 2 branches of the Peasant Land Bank. The needs of the Ukrainian population were served to some extent by the network of credit co-operatives (337 mutual credit associations), several small land and mortgage banks, and 69 small city banks. Ukraine's share in the banking system of the Russian Empire amounted to 36.5 percent of mutual credit associations, 21.1 percent of city banks, and 20.9 percent of branches of commercial banks. It should be noted that the State Bank had a rather inadequate number of offices and branches in Ukraine, with a share of 15.9 percent.

Western Ukraine before 1939. The banking system in Western Ukraine was also created only at the end of the 18th century. Here the central role was played by the Austro-Hungarian State Bank and its branches in Galicia, Bukovyna, and Transcarpathia. Eventually some private – mainly commercial – banks also appeared. Jewish banks, in particular, were formed as a result of the establishment in 1855 of the credit bureau of the Rothschilds in Vienna, which had branches in Ukraine and financially supported smaller Jewish institutions. The first private Ukrainian banks were founded in Galicia at the end of the 19th

century. Among them the most prominent were the Vira savings bank in Peremyshl (1894), the co-operative bank *Dnister in Lviv (1895), and the Regional Credit Union in Lviv (1898). After the First World War, in addition to the branches of the Polish State Bank, private Ukrainian banks continued to operate in Galicia and Volhynia. The largest of these were the Land Mortgage Bank (1910), *Tsentrobank (1924), and *Prombank (1935), all located in Lviv. In the years 1920–39 the Transcarpathian region was served by a private joint-stock bank known as the Subcarpathian Bank, which had 12 branches. However, after the Soviet occupation of Western Ukraine all these banks were closed, and their capital was transferred to the Soviet banking network.

The years 1917–80. With the formation of the Ukrainian state, private Ukrainian banks, particularly co-operatives (there were 3,300 savings associations and small credit unions in 1918), began to play a major role. These savings institutions and credit unions were co-ordinated by the central bank, *Ukrainbank, established in 1917 by the Ukrainian government. Ukrainbank continued to operate in the 1920s under Soviet rule. On 6 January 1918 the Ukrainian government converted the branch of the Russian Imperial State Bank into the State Bank of the UNR with a separate Ukrainian State Land Bank. However, because of the war, these banks were not able to extend their operations.

With the onset of Soviet rule all Ukrainian banks were brought under the State Bank of the Russian SFSR by the decree of 27 April 1917. During the NEP period the banking institutions of Ukraine acquired some degree of autonomy. On 12 October 1921 the All-Ukrainian Office of the State Bank of the USSR was established in Kharkiv with branch offices in Kiev, Odessa, Katerynoslav, Mykolaiv, Poltava, Vinnytsia, and other cities. The Ukrainbank continued to be one of the most powerful credit institutions in Ukraine; in 1928 it had 28 branches and co-ordinated the financial activities of the Ukrainian co-operatives. The national economy was financed by special branch banks such as the Russian Trade and Industrial Bank (est 1922), the Elektrobank (1924), and the Tsekombank (1925). These and other such banks had autonomous offices in Ukraine, for example, the All-Ukrainian Office of the Trade and Industrial Bank (1922), the All-Ukrainian Office of the Foreign Trade Bank (1924), a branch of the All-Russian Co-operative Bank (1923), and the Ukrainian Agricultural Bank (Ukrsilhospbank, 1923) with seven branches and 442 credit associations. In 1930, in connection with collectivization and the introduction of the five-year plans, credit reforms aimed at the total centralization of the banking system were brought about in the USSR. All the banking institutions of the NEP period were abolished, and the position of the all-Union institutions in Moscow was greatly strengthened. The State Bank of the USSR (Gosbank) became the central banking institution responsible for all short-term credit and the emission of treasury notes and currency, as well as the clearinghouse for cash exchange in the USSR. Prior to the Second World War Ukraine had one republican office of the State Bank in Kiev and 25 oblast offices, as well as 783 local branches and bureaus in the smaller towns.

Long-term credit was provided by the Prombank (which financed capital investments in industry and energy resources), the Agricultural Bank, the Trade Bank,

and the Tsekombank (which financed municipal and residential housing construction), all of which had branches in Ukraine. The credit co-operatives and mutual loan associations, which had numbered close to 10,000 during the NEP period, were dissolved. In 1931 the All-Union Agricultural Co-operative and Collective Farm Bank and its branches in Ukraine were closed down, and their operations were taken over by the State Bank of the USSR. In 1936 the Ukrainbank was also closed down. During the repressions of the Stalin regime many Ukrainian bank employees were arrested, some executed and others sent to Siberia. Losses were particularly heavy among the Ukrainian co-operative employees, who were the most nationally conscious, as well as among the associates of H. *Hrynko, the former chairman of the State Planning Committee of the Ukrainian SSR and the people's commissar of finance of the USSR, who was executed in 1938.

After the Second World War the republic office as well as the oblast, regional, and local branches of the State Bank of the USSR were restored in Ukraine (in 1955). In 1957 the Trade Bank was dissolved, and its activities were divided between the Agricultural Bank and the Tsekobank. The latest in a series of bank reforms in 1959 led to the closing of the Agricultural Bank, the Tsekobank, and the local municipal banks. The Industrial Bank was renamed the All-Union Bank for Capital Construction (Budbank). Today the banking system of the USSR consists of the State Bank (which has a republic office, 25 oblast offices, 1 municipal city office, and 655 branches in Ukraine), the Bank of Capital Construction (which has 1 republic office, 25 oblast offices, 97 branches, and 99 local bureaus in Ukraine), and the Foreign Trade Bank (which has 3 branch offices in Ukraine). The Ukrainian republican office of the State Bank oversees a network of savings associations (around 15,000 in Ukraine with total deposits of 24.3 billion rubles). In 1980 the volume of credits in Ukraine's national economy was 51.9 billion rubles (or 15.1 percent of the all-Union expenditures). (In 1965 the figure had been 12.4 billion rubles or 16.7 percent, and in 1975, 31.9 billion rubles or 15.6 percent.) This trend indicates the obvious underdevelopment of credit transactions in Ukraine in relation to Ukraine's share of the population and especially the output of Ukraine's national income.

B. Wynar

Bantysh-Kamensky, Dmytro [Bantyš-Kamens'kyj], b 16 November 1788 in Moscow, d 6 February 1850 in St Petersburg. Historian, administrator of the office of N. Reprin, the Kiev military governor (1816–21), governor

Dmytro Bantysh-Kamensky

of Tobolsk (1825–8) and Vilnius (1836–7), and son of Mykola. He wrote the following works based on a wealth of archival material: *Istoriia Maloi Rossii so vremen pri-soedineniia onoi k Rossiiskomu gosudarstvu pri tsare Aleksee Mikhailoviche* (A History of Little Russia from the Time of Its Union with the Russian State under Tsar Aleksei Mikhailovich, 4 vols, 1822); *Slovar' dostopamiatnykh liudei russkoi zemli* (A Dictionary of Memorable People of the Russian Land, 5 vols, 1836; 3 supplements, 1847); and *Istochniki malorossiiskoi istorii* (Sources for Little Russian History, 2 vols, 1858–9).

Bantysh-Kamensky, Mykola [Bantyš-Kamens'kyj], b 27 December 1737 in Nizhen, d 1 February 1814 in Moscow. Archeographer and historian. A graduate of the Kievan Academy and Moscow University, from 1762 Bantysh-Kamensky worked, and later became director, at the Moscow archives of the College of Foreign Affairs. Among his numerous works the most important are *Istoricheskoe izvestie o voznikshei v Pol'she unii* (Historical Information on the [Church] Union That Occurred in Poland, 1805); *Sobranie gosudarstvennykh gramot i dogovorov, khramiashchikhhsia v Gosudarstvennoi Kollegii Inostrannykh Del* (A Collection of State Documents and Treaties Preserved in the State College of Foreign Affairs, 1813); 'Perepiska mezhdu Rossiei i Pol'shei po 1700 god, sostavlennaia po diplomaticheskim bumagam' (The Correspondence between Russia and Poland until 1700 Based on Diplomatic Papers), in *Chteniia Obshchestva istorii i drevnostei rossiiskikh pri Moskovskom Universitete* (1860, no. 4; 1861, no. 2; 1862, no. 4); and *Diplomaticheskoe sobranie del mezhdu rossiiskim i pol'skim dvorami ... po 1700 g.* (A Collection of Diplomatic Acts between the Russian and Polish Courts ... to 1700, 5 vols, 1780–4). He also cataloged the archives of the Kievan Cave Monastery.

Baptist, Johann, b first half of 1600s, d 1700. German builder, master from Vilnius. He built the Trinity Cathedral in Chernihiv in 1679–95 and the Cathedral of the Transfiguration at the *Mhar monastery near Lubni in the Poltava region (1684–92). In the latter project he was assisted by M. Tomashevsky and A. Pyriatynsky, who finished the work after Baptist's death. Both churches were built in the Ukrainian baroque style.

Baptists. Christian religious denominations that practice adult baptism, reject certain dogmas, rites, and sacraments of other Christian churches, and profess free interpretation of the Bible. Baptists reject ecclesiastical hier-

archy: every Baptist congregation, headed by a presbyter, is formally autonomous. The first Baptist congregation was formed in Holland in 1609; the faith then spread primarily to English-speaking countries. German colonists brought the doctrine to Ukraine, and the first Baptist congregation was formed in the Kherson region in 1869. The Union of Russian Baptists was established at a convention in Novovasylyvka, Kherson gubernia, in 1884. Baptists (including Evangelicals and Seventh-Day Adventists) were known in Ukraine as stundists; the name was derived from the German *Stunde* (hour, because the Baptists set aside an hour a day for reading and interpreting the Bible). Baptists were most numerous in the Kherson, Katerynoslav, and Kiev regions, as well as in Volhynia. Baptists were persecuted by the Russian government and the Russian Orthodox church until 1905, when the tsarist government's Act of Religious Toleration allowed them to conduct their activities in greater freedom. In 1918 Ukrainian Baptists established the Baptist Brotherhood, which was later dissolved by the Soviet authorities.

Following the revolution of 1917, two Baptist groups were active: the Union of Baptists and the Union of Evangelical Christians. In 1944 they united to form the All-Union Council of Evangelical Christians and Baptists, with headquarters in Moscow. The council is recognized by the Soviet government and has more than half a million members. According to 1960 figures, more than half of these resided in Ukraine: there were some 170 congregations in Kiev oblast, 56 in Kharkiv oblast, 73 in Donetsk oblast, and 72 in Chernihiv oblast. In the early 1960s the radical wing of the Baptists, the so-called *initsiiatyvnyky* (initiators), broke away from the All-Union Council in protest against the Soviet government's interference in church affairs. They established the illegal Council of Evangelical and Baptist Churches, which has been severely persecuted by the Soviet authorities. Many of the leading *initsiiatyvnyky* in Ukraine have been imprisoned, including Pastor G. Vins of Kiev, who was allowed to emigrate to the United States in 1979, and B. Zdorovets of Kharkiv oblast.

In the diaspora, Ukrainian Baptists are most active in the United States: stundists from the Kiev region settled in North Dakota in 1899. The first Ukrainian Baptist congregation in the United States was organized in Pennsylvania, and the Ukrainian Evangelical Baptist Convention, which includes 22 congregations in the United States, has been active since 1922. It is a member of the *All-Ukrainian Evangelical Baptist Fellowship, which is currently headed by Pastor O. Harbuziuk. There are 45 congregations in Canada, South America, and Australia. According to the census of 1961, there were 6,100 Ukrainian Baptists in Canada. They publish the journals *Doroha pravdy* in Toronto and *Khrystyians'kyi visnyk* in Winnipeg. (See also *Evangelical Christians.)

V. Borovsky

Bar. iv-8. City (1972 pop 13,500) in eastern Podilia on the Riv River (a tributary of the Boh), a raion center in Vinnytsia oblast. Bar is first mentioned as Rov in 1425; in 1537 it was renamed Bar by the Polish queen Bona, and a fortress was constructed there. In the 1630s G. de Beauplan built a castle there. Because of its location on the border between Poland and Turkey, it was the site of frequent battles. In 1768 Bar saw the inception of the Polish con-

federation (see Confederation of *Bar). When it belonged to the Russian Empire, it was a town in Mohyliv county. In March 1919 Bar was the site of battles between the Zaporozhian Corps of the UNR army and Bolshevik forces. In the summer of 1919 it was the headquarters of the general staff of the Ukrainian Galician Army. The city has grown slowly (1860 pop 8,100; 1897 pop 10,000; 1968 pop 12,000). It has a machine-building factory, sugar refinery, distillery, and clothing and furniture factories.

Bar, Confederation of. A union or confederation established by Polish nobles on 29 February 1768 in the town of Bar in Podilia. Its purpose was to defend the independence of Poland and the traditional rights of the nobility against King Stanisław Poniatowski and Russia. The initiative for the confederation came from J. Puławski and others. The confederates rejected equal rights for the Orthodox church in the Polish Commonwealth, which Russia demanded. The antipeasant and anti-Orthodox policies of the Confederation of Bar sparked revolt of the Ukrainian population on the Right Bank against the nobility (see *Haidamaka movement). The Russian troops, which were invited by King Stanisław Poniatowski, captured Bar and defeated the confederation, but at the same time put down the popular revolt.

Barabash, Ivan [Barabaš], ?–1648. *Osaul* (adjutant) of the registered Cossacks. In 1646 Barabash negotiated with King Władysław IV of Poland concerning war against the Turks, obtaining a number of privileges for the Cossacks in the process. In spring 1648, together with I. *Karaimovych, he led a detachment of registered Cossacks sent to quell an uprising at the Zaporozhian Sich. In May 1648, however, the registered Cossacks rebelled against Barabash, killed him, and joined forces with B. Khmelnytsky.

Barabash, Yakiv [Barabaš, Jakiv], ?–1658. Otaman of the Zaporozhian Sich after B. Khmelnytsky's death. Supported by Moscow, he and the colonel of Poltava, M. *Pushkar, organized an uprising against Hetman I. Vyhovsky, who wanted to end the alliance with Muscovy. After their defeat and Pushkar's death at Poltava on 11 June 1658, Barabash was captured in August and was executed by order of the hetman.

Barabash, Yurii [Barabaš, Jurij], b 10 August 1931 in Kharkiv. Literary scholar and journalist. Barabash graduated from Kiev University in 1955 and worked as editor of the journal *Prapor* in Kharkiv and associate editor of *Literaturnaia gazeta* in Moscow. From 1965 to 1973 he was director of the Institute of World Literature of the Academy of Sciences of the USSR. Since 1977 he has served as first deputy minister of culture of the USSR. Barabash began publishing in 1954. His works include *Poet i chas* (The Poet and Time, 1958), *Krylatyi realizm* (Winged Realism, 1961), *Chyste zoloto pravdy* (The Pure Gold of Truth, 1962), *Dovzhenko* (1968), and *Voprosy estetiki i poetiki* (Questions of Esthetics and Poetics, 1973).

Barabashov, Mykola [Barabašov], b 30 March 1894 in Kharkiv, d 21 April 1971 in Kharkiv. Astronomer, professor at Kharkiv University, director of the university's observatory (1930–65), and full member of the Academy of Sciences of the Ukrainian SSR from 1943. Barabashov

Mykola Barabashov

Stepan Baran

studied the surface of planets and the physics of the moon and wrote over 150 works, mainly in astrophysics. He was one of the editors of an atlas of the other side of the moon and constructed a spectrohelioscope for investigating the sun.

Barącz, Sadek, b 29 April 1814 in Stanyславiv, d 2 April 1892 in Pidkamin, Brody county, Galicia. A Polish historian and Dominican monk of Armenian origin. Barącz was the author of works on the history of Galician towns and cities (Brody, Buchach, Stanyславiv, Zhovkva, and others), and on the history of Armenians in Ukraine. He also published a collection of Ukrainian folk tales.

Barącz, Tadei, b 24 March 1849 in Lviv, d 12 March 1905 in Lviv. Sculptor of Armenian descent. He produced the following busts: *Ukrainian Girl* (1873), *Ukrainian Peasant Woman* (1877), and *Taras Shevchenko* (1877), one of the first busts of Shevchenko produced in Western Ukraine. Barącz also sculpted groups of Ukrainian peasants, thematic compositions, grave monuments, statues, and medals.

Barahura, Volodymyr, b 8 November 1910 in Nemyriv, Galicia. Pedagogue and journalist, now living in Wood Haven, New York. Barahura has written articles on pedagogy, psychology, literature, and general themes, as well as stories for school-age children and young people, some of which were published in his collection *Mech i knyha* (Sword and Book, 1954). After studying at Lviv University, he taught at Stryi and Yavoriv gymnasiums and contributed to various Galician periodicals in the 1930s. Since 1954 Barahura has edited the children's magazine *Veselka*. A collection of his essays, *Na kaly-novomu mosti* (On the Viburnum Bridge), was published in 1982.

Barakov, Petro, 1858–1919. An organizer of agricultural research in Ukraine. Barakov was professor at Odessa University and at the Novooleksandrivske Agricultural Institute. He was in charge of the agricultural research station in Bohodukhiv from 1886 and co-founder of the agricultural research stations in Odessa in 1893 and Plotiany in 1894. He is the author of a two-volume textbook on agriculture (1903).

Baran, Alexander (Oleksander), b 28 March 1926 in Kontsove, Transcarpathia. Ukrainian Catholic priest and historian; full member of the Ukrainian Academy of Arts and Sciences and the Shevchenko Scientific Society; professor of history at the University of Manitoba in Winnipeg. Baran studied in Prague and Rome and received his PH D in 1965. He is the author of works on the history of the Ukrainian church (particularly in Transcarpathia) and the Cossacks, including *Metropolia Kioviensis et Eparchia Mukačoviensis* (1960), *Eparchia Maramorosiensis eisque Unio* (1962), *Iepyskop Andrii Bachyns'kyi i tserkovne vidrodzhennia na Zakarpatti* (Bishop A. Bachynsky and the Rebirth of the Church in Transcarpathia, 1963), *The Cossacks in the Thirty Years War. Vol 1: 1619–1624* (1969, with G. Gajecy), and articles in theological-scholarly and historical periodicals.

Baran, Mykhailo, b 1884 in Skala-Podilska, Ternopil county, Galicia, d 4 November 1937. Ukrainian civic and educational leader. In 1920 he was vice-chairman of the Galician Revolutionary Committee, commanded the first brigade of the Red Ukrainian Galician Army, and was a member of the Politburo of the Communist Party of Western Ukraine. Later he was a research associate of the Ukrainian Academy of Sciences and rector of the Kiev Institute of the National Economy. He was arrested in 1933 during the Stalinist purges and died in exile.

Baran, Stepan, b 25 January 1879 in the village of Krukenytsi, Mostyska county, Galicia, d 4 June 1953 in Munich. A politician, journalist, community leader in Galicia, and a lawyer by profession (practicing mainly in Ternopil). Baran was a distinguished member of the Ukrainian National Democratic party (later Alliance); a member of its National Committee from 1913–18; a member of the presidium of the Ukrainian Supreme Council (later the General Ukrainian Council), and, during the First World War, its representative in the Balkans in 1915. From 1918 to 1919 he was a member of the Ukrainian National Rada of the Western Ukrainian National Republic and secretary of agriculture in K. Levytsky's first government. From 1928 to 1939 he was a member of the Polish Sejm. In 1944 Baran emigrated to Germany. From 1951 to 1953 he was head of the executive of the *Ukrainian National Council in exile. He was for many years defense counsel in political trials. He defended Ukrainian interests in educational and agrarian matters and advocated the rights of the Orthodox church in the Polish state. In the course of fifty years he wrote articles for newspapers such as *Dilo* (1902–39); *Svoboda* (Vienna), of which he was editor in chief from 1914–18; and *Krakovs'ki visti* (1940–5). He was a full member of the Shevchenko Scientific Society and an author of works on Galician schools and agrarian and religious affairs in Galicia. The more important of these include *Statystyka seredn'oho shkil'nytstva u Shkidnii Halychyni v rr. 1848–98* (Statistics on Secondary Schooling in Eastern Galicia 1848–98, 1910); *Novyi kraievyyi statut i nova vyborcha ordynatsiia do halyts'koho soimu* (The New Land Statute and the New Electoral System to the Galician Diet, 1914); *Istoriia ukrains'koï advokatury* (History of Ukrainian Law Practice, 1913); *Po nevoli – vyzvolennia* (After Captivity – Liberation, 1940); *Zemel'na sprava v Halychyni* (The Land Question in Galicia, 1947); *Mytropolyt Andrei Sheptyts'kyi* (Metropolitan Andrei Sheptytsky, 1947); and *Z moikh*

spohadiv pro Ivana Franka (My Reminiscences about Ivan Franko, 1952).

Baranetsky, Yosyp [Baranec'kyj, Josyp], b 1843 in Hrodna gubernia, d 20 April 1905 in Kiev. Plant physiologist and anatomist, corresponding member of the St Petersburg Academy of Sciences from 1897, and first professor of plant anatomy and physiology at Kiev University (1873–98). Together with A. Famintsyn he determined the complex nature of lichens. He also studied osmosis in plants, photosynthesis, and plant growth.

Baraniuk, Ivan [Baranjuk], d ca 1860. Potter who worked in Kosiv in the first half of the 19th century. Baraniuk made painted bowls, candlesticks, tiles, and tile stoves engraved with animal and geometric motifs as well as scenes of mountain life. His son, Mykhailo Baraniuk (1834–1902), and grandson, Yosyf Baraniuk (1868–1942), carried on the tradition of ceramic production in Kosiv.

Baranivka. III-8. Town smt (1973 pop 10,600) on the Sluch River in eastern Volhynia, a raion center in Zhytomyr oblast. It has a porcelain factory, a brick factory, and a food-production complex.

Barannykov, Oleksii, b 21 March 1890 in Zolotonosha, Poltava gubernia, d 5 September 1952 in Leningrad. Noted specialist in Indian literature, full member of the Academy of Sciences of the USSR. Barannykov studied modern Indian languages and literatures at Kiev University. From 1922 he taught at Leningrad University. He pioneered the study of gypsy dialects in Ukraine and of Ukrainian influences on these dialects (*Ukrains'ki tsyhany* [Ukrainian Gypsies], Kiev 1931), translated the works of Prem Chand and other modern Indian writers into Ukrainian, and wrote on Indian literature and language.

Baranovsky, Anatolii [Baranovs'kyj, Anatolij], b 7 February 1906 in Kiev. Soviet government official and economist. In 1940–1 he headed the State Planning Committee. In 1941–53 he was vice-president of the Council of Peoples' Commissars of the Ukrainian SSR. In 1952–4 he served as minister of foreign affairs of the Ukrainian SSR and as head of the Ukrainian delegation to the UN General Assembly. In 1954–7 he returned to the posts of chairman of the State Planning Committee and vice-president of the Council of Ministers of the Ukrainian SSR. In 1961 he was appointed minister of finance of the Ukrainian SSR. Since 1952 he has been a member of the Central Committee of the CPU. He has also served several terms as a deputy to the Supreme Soviet of the Ukrainian SSR.

Baranovsky, Khrystofor [Baranovs'kyj, Xrystofor], b 19 December 1874 in Nechipryntsi, Berdychiv county, Kiev gubernia, d 1941 in São Paulo, Brazil. Outstanding civic and co-operative leader. Baranovsky was a founder and director of the Kiev Credit Union Bank – the central Ukrainian institution for small credit (1907–17) – and one of the main organizers of the co-operative movement in Ukraine. In 1917 he became president of the *Ukrainbank. In 1919 he became the chief adviser to the Tsentral Ukrainian agricultural co-operative union and the *Strakh-soiuz co-operative insurance union. In the first General Secretariat of the Central Rada (1917), Baranovsky served

as secretary of finance. In 1920 he was finance minister in the UNR government led by V. Prokopovych. He edited the co-operative paper **Muraveinyk-Komashnia* and wrote many works on co-operatives. In 1920 he emigrated and lived, briefly, in France, and then in Brazil.

Baranovsky, Roman [Baranovs'kyj], b 12 June 1905 in Halych, Galicia. Veterinarian, civic leader. Baranovsky immigrated to the United States in 1949. He was president of the Ukrainian Veterinary Medicine Association in 1950–1 and 1961–3 and the editor of the association's *Informatyvnyi lystok* in 1950–63, and since 1973 he has been president of the Ukrainian American Association.

Baranovsky, Yaroslav [Baranovs'kyj, Jaroslav], b 7 July 1906, d 11 May 1943 in Lviv. Political leader, member of the Ukrainian Military Organization and the Organization of Ukrainian Nationalists (OUN). In 1926 Baranovsky was imprisoned by a Polish court for his revolutionary activities. In 1930 he escaped abroad and represented the Galician OUN at the headquarters of the OUN leadership (PUN) in Geneva. In 1933–9 he was president of the Central Union of Ukrainian Students in Prague and Vienna. In 1933 he was elected secretary of the PUN. He was murdered by political opponents.

Archbishop Lazar Baranovych

Baranovych, Lazar [Baranovyč], 1593–1694; according to other data, 1620–93. Ecclesiastical, political, and literary figure, professor (1650) and rector of the Kievan Mohyla Collegium, and archbishop of Chernihiv from 1657. He founded schools and monasteries. In 1674 he established a press in Novhorod-Siverskyi, which in 1679 was moved to Chernihiv. He defended the independence of the Ukrainian clergy from the patriarch of Moscow. His sermons, written in a baroque style, were published in *Mech dukhovnyi* (The Spiritual Sword, 1666) and *Truby sloves propovidnykh* (The Trumpets of Preaching Words, 1674). He is the author of several polemical works against Catholicism in Polish and Ukrainian; of a poetry collection in Polish, *Lutnia Apollinowa* (Apollo's Lute, 1671); and of a large correspondence. M. Sumtsov gives a detailed account of Baranovych's life and work in *K istorii iuzhno-russkoi literatury xvii stolettiia*. Vyp. 1. *Lazar Baranovich* (Towards a History of South Russian Literature in the 17th Century, no. 1: Lazar Baranovych, 1884).

Baranovych, Oleksa [Baranovyč], b 1892 in Starokostiantyniv, Volhynia gubernia, d 3 May 1961. A historian, Baranovych graduated from Petrograd University in 1916 and, from 1920 to 1930, was an associate of the All-Ukrainian Academy of Sciences. From 1934 he worked in

Moscow. He was the author of studies on the socio-economic history of Right-Bank Ukraine in the 16th–18th century, such as *Z istoriï zaselennia pïvdnia Volyni* (A History of the Settlement of Southern Volhynia, 1925); *Narysy mahnat's'koho hospodarstva pïvdnia Volyni* (Notes on the Magnate Economy of Southern Volhynia, 1926); *Zaliudnennia Ukraïny pered Khmel'nychchynoiu. Volyn's'ke voievodstvo* (The Population of Ukraine before the Khmelnytsky Era: Volhynia Voivodeship, 1931); and *Ukraina nakanune osvoboditel'noi voïny serediny xvii v.* (Ukraine on the Eve of the War of Liberation in the Mid-17th Century, 1959).

Baranyk, Vasył, b 1883 in Kobylivolyky, Terebovlia county, Galicia, d 1941 in Kharkiv. A Galician lawyer and community leader, influential in organizing the political, economic, and educational life of Zalishchyky region. He was a senator from the *Ukrainian National Democratic Alliance in Warsaw in 1928–30. He was arrested and deported by the Soviet authorities in 1939 and died in prison in Kharkiv.

Barbar, Arkadii, 1879–? Physician, scientist, and political figure. Under the Hetman government and the Directory of the UNR he headed a department of the Ministry of Health. Subsequently he was a professor at the Kiev Medical Institute and a research worker at the All-Ukrainian Academy of Sciences. In 1930 Barbar was convicted at the trial of the *Union for the Liberation of Ukraine. He was transferred from Yaroslav Prison to the Solovets Islands in 1937; his fate is unknown.

Barbareum. Greek Catholic seminary founded by Empress Maria Theresa in 1774 at *St Barbara's Church in Vienna to train priests in the Austrian Empire. The regulations of the seminary were modeled on those of the Greek Collegium in Rome. The first rector of the seminary was Rev J. Bastajić. The Barbareum was closed in 1784 by Emperor Joseph II and was replaced by a crown boarding school (1808–93) opened by Francis I. A number of Galician and Transcarpathian religious leaders (including six bishops) were educated at the school. Its history is documented in W. Plöchl's *St. Barbara zu Wien: die Geschichte der griechisch-katholischen Kirche und Zentralpfarre St. Barbara* (2 vols, 1975).

Barbarisms. In the broad sense, loan words; in the narrower sense, foreign words not entirely adapted to the prevailing rules of a given language. In modern Ukrainian, barbarisms in the narrow sense are identifiable by phonetic, morphological, and semantic criteria. The phonetic criteria include the use of certain sounds (*f*, *g*, except in onomatopoeic forms); the use of certain sounds in specific combinations or positions (eg, palatalized labials and postdentals before *u* [bjuró, kapjušón, žjuri]; the non-palatalized *c* at the end of a word and before the endings *a* and *u* – *palác, macá* as opposed to native *pálec', krýcja*); clusters at the end of most words of the type consonant + resonant and of the type plosive + spirant, as *tembr, šedévr, cykl, fil'm, binókl', keks, boks* (but not the clusters labial + *l'* – cf *Putýol'*); the use of certain consonantal clusters not admitted in native words (eg, *fél'Dšer, buteRBRód, muNDŠTúk, poRT'Jéra*); and the sequences of vowels outside morphological boundaries (eg, *aúl, baobáb, ideál*). The morphological features of barbarisms include

the use of certain affixes (eg, prefixes *de-, eks-, inter-, re-*; suffixes *-acij(a), iz(uvaty)*; semantic emptiness of certain morphemes (eg, *ekspozYCIJa*); lack of inflection in substantives and adjectives (eg, *tángo, kolíbri, kakadú, ekspozé, xáki, bež*); and, especially, structures of roots untypical of native words (primarily trisyllabic and longer roots, as well as disyllabic roots with different vowels in the two syllables (eg, *matemátyka, ešelón, inicijátýva, ananás, ténor*). The semantic criterion for singling out barbarisms is association with objects, customs, and habits clearly unknown or not practiced in Ukraine or practiced only under foreign influence (eg, *ramadán, džýnsy, máfija, dólar*).

All these criteria are not, however, absolute, primarily because barbarisms, and even some specific features of them, may be naturalized. This is most obvious in the application of foreign affixes to native words (eg, *vojenizuváty, sovjetyzáCIJa*). This fluidity in the delineation of barbarisms is, however, not objectionable because it corresponds to the reality of the language: the tendency to adopt barbarisms to the native stock either by adapting them to the pattern of the language (eg, *kondensácija* is morphologically analyzed into *kon-dens-ácij-a*, even though the prefix *kon-* and the root *-dens-* in this word are semantically obscure) or by accepting some of their features into the repertory of the features of the language. An extreme manifestation of this tendency is folk etymology. Particularly difficult is the identification of borrowings from other Slavic languages, which, again, reflects the fact that they are more easily included in the apparently native stock of the Ukrainian language than are non-Slavic borrowings.

G.Y. Shevelov

Barbarych, Andrii [Barbaryč, Andrij], b 27 August 1903 in Oster, Chernihiv gubernia. Botanist working in dendrology, floristics, phytogeography, and conservation. His work has been devoted to the flora and vegetation of Ukraine. He co-authored the publications *Flora URSS* (Flora of the Ukrainian SSR), *Vyznachnyky roslyn Ukraïny* (Characteristics of the Vegetation of Ukraine), *Buriany Ukraïny* (Weeds of Ukraine), and others.

Barbone, Pietro di (Barbona), b?, d 1589 in Lviv. Italian architect who lived and worked in Lviv. With the assistance of P. Romanus (Romano) he built the belfry of the Brotherhood Church in 1572–8. Barbone designed the Tower of Korniakt and the *Korniakt building (in the Venetian Renaissance style of the 16th century) that today houses the Lviv State Historical Museum.

Bardakh, Yakiv [Bardax, Jakiv], b 1857 in Odessa, d 17 July 1929. Microbiologist, graduate of Odessa University and the St Petersburg Military-Medical Academy (1883). In 1886 Bardakh, I. Mechnikov, and M. Hamaliia organized the first Russian bacteriological station, in Odessa. Bardakh was appointed lecturer in 1894 and then professor (1917–29) at Odessa University, and in 1903 he founded the first emergency medical station in Ukraine. Bardakh wrote about 40 scientific works on the theory of immunity and various infectious diseases (rabies, dysentery, typhus). In 1891–4 he developed an antidiphtheria serum independently of the German scientist E. Bering and the French bacteriologist E. Roux.

Barenboim, Isak [Barenbojm], b 21 October 1910 in Voznesenske, Kherson gubernia. Civil engineer specializing in bridges and roads. Barenboim graduated from the Odessa Building Institute. Since 1934 he has worked in Kiev. He drew up the plans for reinforcing the right bank of the Dnieper in Kiev. In 1950 he became director of the Mostobud trust in Kiev, which has constructed many bridges in Ukraine and Moldavia. Barenboim has written several books on bridge building.

Bariakhtar, Viktor [Barjaxtar], b 9 August 1930 in Mariupol, Donetsk oblast. Physicist, since 1978 full member and presidium member of the Academy of Sciences of the Ukrainian SSR. Bariakhter worked at the academy's Kharkiv Physical-Technical Institute from 1954 to 1973 and then at the academy's Donetsk Physical-Technical Institute. In 1978 he became chairman of the Donetsk Scientific Center of the Academy of Sciences. His basic research has been devoted to the theory of magnetism, the physics of metals and plasma, and superconductivity. In 1956 he discovered the phenomenon of magneto-acoustic resonance together with O. Akhiezer and S. Peletminsky.

Vasyl Barka

Barka, Vasyl (pseuds: Ivan Vershyna, Ocheret), b 16 July 1908 in the Poltava region. Poet, writer, literary critic, translator. An émigré since 1943, he lived in Germany till 1949 and subsequently settled in the United States. Barka is a prolific and orphic author, requiring intuitive rather than logical comprehension. Drawing on the early works of P. Tychna for his pantheistic descriptions of nature and for his folkish idiom, Barka derives his originality from extreme abstraction, intensified metaphor, and a unique revitalization of accepted folk imagery through sudden and unexpected juxtapositions. His collections of poems seem to develop and grow in stature from the early lyrical collections *Shliakhy* (Pathways, 1930), *Tsekhy* (Guilds, 1932), *Apostoly* (Apostles, 1946), and *Bilyi svit* (The White World, 1947), through a biblically inspired intensification in *Troiandnyi roman* (The Rose Novel, 1957) and *Psalom holubynoho polia* (The Psalm of the Dovelike Field, 1958), through the syncretic *Okean* (Ocean, 1959), to the monumental 4,000-strophe epic novel in verse *Svidok dlia sontsia shestykrylykh* (The Witness for the Sun of Seraphims, 1981), addressed to the theme of reconciliation between 'Man and the Creator.' In 1968 he published a collection of selected poems, *Lirnyk* (Lyrist). Barka's prose is marked by lyrical and folkish idiom with a rather

static narrative flow. His first novel, *Rai* (Paradise, 1953), deals with the Soviet 'paradise,' and his second, *Zhovtyi kniaz'* (The Yellow Prince, 1962, 1968), is devoted to the great famine in Ukraine in the 1930s. The latter has been translated into French (*Le prince jaune*, Paris 1981). Barka's Ukrainian translation of *King Lear* appeared in 1969. His literary criticism consists of the weighty essays *Khliborobs'kyi orfei abo kliarnetyzm* (The Agrarian Orpheus or Clarinetism, 1961) and *Pravda Kobzaria* (The Kobzar's Truth, 1961), as well as two collections, *Zhaivoronkovi dzherela* (The Sources of the Lark, 1956) and *Tvorchist'* (Creativity, 1968).

D.H. Struk

Barladianu, Vasyl [Barladjanu, Vasyl'], b 1939 in Moldavia. Art historian and critic of Moldavian descent. Barladianu joined the dissident movement in the 1970s. He was head of the seminar of art history at the University of Odessa, from which he was dismissed in 1974 on a charge of 'Ukrainian and Rumanian nationalism.' He signed various dissident documents. Barladianu worked briefly at the Museum of Folk Architecture and Culture in Kiev. In 1976 he was an associate of the Odessa Museum of Western and Eastern Art. He was arrested in March 1977 and sentenced to three years' imprisonment in a labor camp. In 1980 he was sentenced to an additional three years.

Barley (*Hordeum*; Ukrainian: *yachmin*). An annual and perennial cereal plant of the grass family. There are 18–30 species of barley, of which 5 are grown in Ukraine. Only one species of barley, *Hordeum sativum*, is cultivated, and it has two forms – spring and winter barley. Winter barley is rare in Ukraine. In the past barley was used for bread, but now it is used mostly for grits, animal feed, and as a coffee substitute. Barley is the basic raw material in brewing. Because of its short vegetative period, barley matures in dry regions before the onset of drought. Hence it is widespread in the steppe belt of Ukraine, which is too dry for oats.

Barley, along with millet and wheat, was cultivated in Ukraine as early as the Trypilian period. At the end of the 19th century barley took third place among the grains after wheat and rye. In 1913, 5,845,000 ha were devoted to barley (23.6 percent of the land devoted to grain). It was cultivated mostly in the steppes, particularly along the sea coast, where it was second only to wheat. There it was the main feed grain. It was also exported, particularly to breweries in Germany. After the First World War the area devoted to barley was reduced, but it continued to make up 20 percent of the grain area and to place second to wheat. In 1940, 4,104,000 ha (19.5 percent) of the area under cultivation was devoted to barley; in 1950, it was 2,756,000 ha (12.5 percent); in 1960, 2,543,000 ha (18.5 percent); in 1970, 3,370,000 ha (21.7 percent); and in 1981, 3,996,000 ha (20 percent). Since the 1950s winter barley has also been grown in Ukraine. In 1981, for example, 18 percent of the land devoted to barley was sown with winter barley. Today barley is grown not only in the steppe, but also in the forest-steppe (and in Kuban beyond the Ukrainian SSR). The gross production of barley in the Ukrainian SSR was as follows (in millions of centners): 54.4 in 1913, 57.9 in 1940, 21.6 in 1950, 45.3 in 1960, 82.9 in 1970, and 106.4 (annually) in 1976–80. The land devoted to barley in Ukraine is 10 percent of the

barley-seeded area in the USSR, and the gross production is 22 percent of the USSR's production of barley. The main varieties of spring barley in Ukraine are Hanna Loosdorf, Heine Hahv, Illinois 43, Nosivka 2 and 6, Steppe, Donets 4, Uman, and Southern.

V. Kubijovyč

Barnych, Yaroslav [Barnyč, Jaroslav], b 30 September 1896 in Balyntsi, Kolomyia county, Galicia, d 1 June 1967 in Cleveland, Ohio. Composer, conductor, and pedagogue. He worked in Galicia, Transcarpathia, and, from 1950, in the United States. His training in music was completed in Lviv at the conservatory. He worked as conductor for the Ukrainska Besida theater in Lviv (1917–23) and the Prosvita theater in Uzhhorod (1923–5). In 1939–41 he conducted the Stanyславiv symphony orchestra, and in 1941–4 he was the conductor of the Lviv opera. He composed the following operettas in the Viennese style: *Sharika, Pryhody v Cherchi* (Adventures in Cherche), *Hutsulka Ksenia* (Ksenia the Hutsul Girl), and *Divcha z Maslosoiuzu* (Girl from Maslosoiuz), providing his own librettos for the first two. He also composed music for plays, choral music, orchestral music, and solo songs.

Baroque. A movement in art that originated in Italy at the end of the Renaissance in the 16th century and spread throughout Europe in the 17th century. The baroque period was a period of grand projects and complex ideas and designs, which gave rise to artistic forms that were intended to lift the spectator above daily existence to lofty and esoteric experience.

The baroque in art and architecture. The works of the period, particularly the architectural works, are marked by rich, flamboyant forms, filled with pathos and a striving for the supernatural and spiritual. In baroque architecture luxuriant, decorative portals, fronts, and gates, overloaded with unrestrained ornamentation, are common.

In Ukraine the baroque style emerged during the Cossack period and assumed some distinctive features. For this reason it is known as the Ukrainian baroque or the Cossack baroque (end of the 17th to the beginning of the 18th century). Ukrainian baroque architecture, in contrast to the predominantly decorative style of Western Europe, was more constructivist, more moderate in ornamentation, and simpler in form. Numerous examples of church and secular architecture in the Ukrainian baroque have survived: the buildings of the *Kievan Cave Monastery; *Zaborovsky Gate near the St Sophia Cathedral in Kiev; the plaster decorations of the main church of the Kievan Cave Monastery; the church of A. Kysil in Nyskynychi in Volhynia; the palaces in Zbarazh, Berezhany, and Bar; the military chancellery from I. Mazepa's period in Chernihiv; D. Apostol's residence in Sorochyntsi; and many others. The carvings of the baroque period are represented by such examples as the Bohorodchany iconostasis from the *Maniava Hermitage and the iconostases of the main church of the Kievan Cave Monastery and *St Michael's Monastery in Kiev. The best examples of baroque painting are the church paintings in Holy Trinity Church of the Kievan Cave Monastery, *Paradise* in the Elevation of the Cross Church of the Cave Monastery, as well as iconostases and portraits. During the period of the Ukrainian baroque, engraving underwent rapid development. It utilized a complex system of symbolism,

allegories, heraldic signs, and sumptuous ornamentation. In the applied arts and in ornamentation folk motifs were used, giving the ornamentation a particular originality.

The baroque in literature. The main features of the literary style known as baroque are a great emphasis on originality and an overabundance of stylistic devices, particularly metaphors, hyperboles, and antitheses. The purpose of a literary work was to move the reader and to evoke strong emotions in him/her. The baroque world view combined the religiosity of the Middle Ages with the ideas of the Renaissance (the interest in nature, history, and the individual). Literature flourished during the Ukrainian baroque period. Baroque literature began in the first quarter of the 17th century with M. *Smotrytsky, K. T. *Stavrovetsky, and partly even I. *Vyshensky and ended with the close of the 18th century (H. *Skovoroda). In the mid-17th century (the period known as late baroque), the number and refinement of the stylistic devices increased. Ukrainian baroque is peculiar in that the religious works created in the period outnumbered the secular works. The latter consisted, and only partly at that, of verse poetry, epos, tales, and historical chronicles, while sermons, dramas, and treatises remained almost exclusively religious. This was owing to the fact that writers at the time were mostly members of the clergy and lay patrons were few, that there were no secular schools of higher learning, and that certain circles of Ukrainian readers turned to Latin or Polish literature for their literary needs. These conditions led to an emphasis on religious works among both the Greek Catholics and the Orthodox; for example, I. *Potii's *Bohohlasnyk* (a religious songbook), I. *Galiatovsky's and A. *Radyvylovsky's sermons, and D. *Tuptalo's *Chet'i-Minei* (Monthly Readings). The literary language of the period lacked any set norms, since there was no authoritative intellectual center. The language of the church was the Ukrainian redaction of Church Slavonic. The language of non-religious works absorbed some foreign, mainly Polish, elements. Each author determined what elements of the vernacular or foreign languages he would use. But there were secular works written in Church Slavonic and religious works written almost in the vernacular (H. *Dometsky). In the 18th century various elements of Russian entered the literary language. The literature of the Ukrainian baroque had a great influence on Russian literature from the first third of the 17th century up to the mid-18th century. Russian church language changed under the influence of Ukrainian Church Slavonic. Ukrainian baroque literature also had an influence on the Southern Slavs (M. Kozachynsky) and left some traces in Polish literature.

Barsky, Ivan. See Hryhorovych-Barsky, Ivan.

Barsov, Nikolai, b 9 May 1839 near Orlov, Russia, d 5 December 1889 in Warsaw. Historian, professor at Warsaw University. Barsov's studies in historical geography include *Materialy dlia istoriko-geograficheskogo slovaria drevnei Rusi* (Materials for a Dictionary of the Historical Geography of Old Rus', 1865) and *Ocherki istoricheskoi geografii: Geografiia pervonachal'noi letopisi* (Outlines of Historical Geography: The Geography of the Primary Chronicle, 1878). Barsov also wrote studies in the history of education, including *Shkoly na Volyni i Podolii* (Schools in Volhynia and Podilia, 1863) and *Narodnye uchilishcha v Iugo-Zapadnom krae* (Public Schools in the Southwestern Territory, 1864).

Bartoshevsky, Ivan [Bartoševs'kyj], b 18 January 1852 in Lviv, d 13 December 1920 in Lviv. Theologian, ecclesiastical writer, preacher, professor at Lviv University from 1885, and honorary canon of the Greek Catholic clerical chapter. His publications include *Propovidi strasni i voskresni* (Sermons for Holy Week and Easter, 1891), *Propovidi nedil'ni* (Sunday Sermons, 1892–7), *Komentar do Sviatoho Pys'ma* (Commentary on the Holy Scriptures, 1900–8), *Teolohiia pastyrs'ka* (Pastoral Theology, 1902), manuals, and articles on theology in ecclesiastical journals.

Barvinkove. v-18. City (1976 pop 15,600) on the Sukhyi Torets River (a tributary of the Donets), a raion center in Kharkiv oblast. Barvinkove was founded in 1680. Until 1917 it was a large village with a population of 10,000; as a result of its proximity to the Donets Basin it became a manufacturing city. Since the 1930s it has had a machine-building factory, a food-processing plant, and light industry. The city has a regional ethnographic museum.

Barvinok (Periwinkle). An illustrated monthly magazine of art and literature for younger school children. It has been published since 1945 in Kiev by the Central Committee of the Communist Youth League of Ukraine. It comes out in Ukrainian and, since 1950, in Russian.

Barvinok, Hanna (pseud of Oleksandra Bilozerska-Kulich), b 5 May 1828, d 6 July 1911. Writer, wife of P. *Kulich. She was born into a landowner's family in the village Motronivka in Borzna county, Chernihiv gubernia. She began her literary career in 1858 and wrote stories on themes drawn from peasant life, which concentrated on the fate of the peasant woman. These appeared in the almanac *Khata* and the journals *Osnova*, *Pravda*, *Literaturno-naukovyi vistnyk*, and others. Her works were published in the collections *Opovidannia z narodnykh ust*

Hanna Barvinok

Oleksander Barvinsky

(*Stories Told by the People*, 1902), *Opovidannia* (Stories, 1919), and *Vybrani tvory* (Selected Works, 1927).

Barvinska, Teodosiia [Barvins'ka, Teodosija], b 11 June 1899 in Sumy, d 12 October 1966 in Kiev. Actress specializing in heroic roles. She began her acting career in 1913 in O. Sukhodolsky's troupe. In 1921–58 she was the leading actress of the Kiev Ukrainian Drama Theater. Her main roles were Oksana in *Haidamaky* (The Haidamakas, after T. Shevchenko), Mavka in Lesia Ukrainka's *Lisova pisnia* (The Forest Song), Laurencia in L. de Vega's *Fuente-ovejuna*, Mirandolina in C. Goldoni's *La Locandiera*, Cherubino in P. Beaumarchais's *Le Mariage de Figaro*, and Lida in O. Korniiuchuk's *Platon Krechet*.

Barvinsky, Bohdan [Barvins'kyj], b 15 July 1880 in Ternopil, d 1962(?) in Lviv. Son of the scholar O. *Barvinsky; historian, full member of the Shevchenko Scientific Society, and expert on libraries and archives. Among his works are *Istorychni prychynty: Rozvidky, zamitky i materialy do istorii Ukrainy-Rusy* (Historical Contributions: Studies, Comments and Materials on the History of Ukraine-Rus', 2 vols, 1908–9), *Istorychnyi rozvii imeny ukrains'ko-rus'koho narodu* (The Historical Development of the Name of the Ukrainian-Ruthenian People, 1909), *Kraiovyi arkhiv aktiv grods'kykh i zems'kykh u L'vovi* (Provincial Archive of City and Land Acts in Lviv, 1917), and studies on Galician-Volhynian and Lithuanian-Ruthenian history.

Barvinsky, Martyn [Barvins'kyj], 1784–1865. Church leader, professor and rector of Lviv University. He was cantor of the Lviv Greek Catholic chapter and a deputy to the Galician diet (1835–60).

Barvinsky, Oleksander [Barvins'kyj], b 8 June 1847 in Shliakhtyntsi, Ternopil county, Galicia, d 25 December 1926 in Lviv. Noted pedagogue, historian, and civic and political leader. He began to work in civic organizations, especially in the Lviv Hromada, as a young man. He became a secondary school teacher at the gymnasium in Berezhany in 1868 and later in Ternopil. From 1888 he taught at the Lviv teachers' seminary. From 1891 to 1907 he served as a deputy to the parliament in Vienna and to the Galician diet (1894–1904). From 1893 to 1918 he was a member of the Galician School Council. In 1917 he became a member of the Austrian upper chamber. From 1867 he was a contributor to the journal *Pravda*. Under the in-

fluence of P. Kulish, Barvinsky prepared a series of textbooks for Ukrainian schools, including *Vyimky z ukrains'ko-rus'koi literatury* (Excerpts from Ukrainian-Ruthenian Literature) and *Istoriia ukrains'koi literatury* (A History of Ukrainian Literature, I-II, 1920-1). He wrote numerous articles on pedagogy, which were published in *Dilo*, *Shkil'na chasopys'*, and *Hazeta shkol'na*. As a member of the Provincial School Council he defended Ukrainian interests in the school system. The introduction of phonetic orthography in the schools and the use of the term Ukrainian-Ruthenian in textbooks were largely the result of his effort. Barvinsky began to publish the series *Rus'ka Istorychna Biblioteka* (The Ruthenian Historical Library) in 1886.

Barvinsky was an active member of several organizations: *Ruska Besida*, *Prosvita* (vice-president, 1889-95), the Ukrainian Pedagogical Society (president, 1891-6). With his participation the Shevchenko Society was reorganized as the Shevchenko Scientific Society, of which he was a full member from 1899. Although strongly opposed to Russophilism, Barvinsky maintained close ties with Dnieper Ukraine (through trips to Kiev) and Bukovyna. He informed foreigners (Czechs, Serbs, Germans in Austria) about the Ukrainian movement. As a political leader he supported the so-called New Era policy in 1890, which was intended to bring about an understanding between the Poles and Ukrainians in Galicia and to create the conditions for their political-social and cultural-economic development. The policy was unsuccessful, however. Barvinsky stood firmly by his position. He founded the Christian Social party, which he led and whose daily *Ruslan* he edited (1897-1914). In 1918 Barvinsky was secretary of education and religious affairs in the First State Secretariat of the Western Ukrainian National Republic. After the Poles captured Lviv, Barvinsky retired from political life. His memoirs were published in two volumes in 1912-13.

E. Borschak

Barvinsky, Vasyl [Barvins'kyj, Vasyl'], b 20 February 1888 in Ternopil, d 9 June 1963 in Lviv. Son of O. *Barvinsky; composer, pianist, and musicologist. Barvinsky first studied at the Lviv Conservatory and from 1908 to 1914, in Prague under V. Novak. From 1915 to 1939 Barvinsky taught at and was director of the Lysenko Institute of Music in Lviv. From 1939 to 1941 and from 1944 to 1948, he was a professor at the Lviv Conservatory. He was an organizer of the musical life of Lviv, a member of the editorial board of the journal **Ukrains'ka muzyka*, and president of the Union of Ukrainian Professional Musicians (SUPROM). Barvinsky taught many pianists and composers. In 1948 he was sentenced by the Soviet authorities to ten years' imprisonment. Barvinsky was a neoromantic composer who leaned towards impressionism, and his work was always characterized by a soft lyricism. He cultivated primarily instrumental forms. Among his works are *Ukrainian Rhapsody* for orchestra; string quartets; a sonata, variations, and a suite for the cello; violin pieces; and a concerto, two trios, preludes, miniatures, a sextet, the cycle *Love*, and *Ukrainian Suite* for piano. He also wrote the vocal solos 'Oi, polia' (Oh, Fields), 'Psalm Davyda' (David's Psalm), and songs to the poetry of I. Franko. Among his choral works are *Zapovit* (Testament), several cantatas, and arrangements of folk songs. He was the author of 'Ohliad istorii

Vasyl Barvinsky

Volodymyr Barvinsky

ukrains'koi muzyky' (A Survey of the History of Ukrainian Music) in *Istoriia ukrains'koi kul'tury* (History of Ukrainian Culture, 1937) and of various reviews and articles.

Z. Lysko

Barvinsky, Viktor [Barvins'kyj], b 1885 in Chuhuiv, Kharkiv gubernia, d 1940. Historian and archivist, professor at Kharkiv University, and director of the Kharkiv Central Historical Archive. His works deal with Ukraine in the 17th-18th century. They include *Krest'iane v Levoberezhnoi Ukraini v XVII-XVIII vv.* (The Peasants in Left-Bank Ukraine in the 17th-18th Century, 1909) and *Iz istorii kozachestva Levoberezhnoi Ukrainy* (On the History of the Cossacks of Left-Bank Ukraine, 1910), Barvinsky was exiled in the 1930s.

Barvinsky, Volodymyr [Barvins'kyj], b 25 February 1850 in Shliakhtyntsi, Zbarazh county, Galicia, d 3 February 1883 in Lviv. Civic leader, publicist, lawyer, and writer; brother of O. *Barvinsky. He was one of the founding members of the *Prosvita* society and the *Ridna Shkola* society in 1868. He co-edited and then edited (1876-80) the journal *Pravda*. He founded and edited the political newspaper *Dilo* (1880-3). On 30 November 1880 he organized the first Ukrainian public rally in Lviv, which passed resolutions on the legal-political rights of Galicia's Ukrainians, as well as on economic and educational matters. Barvinsky tried to establish an understanding between the Populists (see Galician *Populism) and the *Old Ruthenians. He had ties with M. Kostomarov, P. Kulish, and M. Drahomanov. He published many articles in *Pravda* and *Dilo* on political, civic, scholarly, and literary subjects. *Prosvita* published his books for the peasantry. He wrote the following short novels: *Skoshenyi tsvit* (Mown Flowers, 1877), under the pseudonym Vasyl Barvinok; *Sonni mary molodoho pytomtsia* (Dream Visions of the Young Seminarian, 1884); and *Bez talanne svatannia* (Unhappy Marriage, 1880). He also wrote stories and literary articles and reviews.

Baryshivka [Baryshivka]. III-12. Town smt (1971 pop 6,800) on the Trubizh River, a raion center in Kiev oblast. In 1921-2 Baryshivka was a center for the activities of the Neoclassicists M. Zerov, O. Burghardt, and V. Petrov.

Basarab, Matei, ?-April 1654. Wallachian hospodar (1632-54) who with George II Rákóczi of Transylvania

defeated the Cossack-Moldavian forces led by T. Khmelnytsky and V. Lupul, the Moldavian hospodar, in Finta in 1653.

Basarab, Olha (née Levytska), b 24 July 1899 in Pidhoroddia, Rohatyn county, Galicia, d 13 February 1924. Civic and political activist. She was a member of the first women's platoon of the *Sich Riflemen in Lviv. Basarab did charitable and educational work on the Committee to Aid the Wounded and the Interned in Vienna and on the Committee to Aid the Civilian Population. Her work was recognized by the International Red Cross. She helped organize soldiers that the Austrian army demobilized into Ukrainian military units. Basarab was on the executive of the Ukrainian Women's Union in Vienna, and in 1923 she became a member of the supreme executive of the Lviv branch of the Union of Ukrainian Women. The Polish police arrested her for belonging to the *Ukrainian Military Organization and tortured her to death during interrogation on the night of 12–13 February 1924. Her martyr's death had a great impact on the interwar generation of Galicia's Ukrainians.

Olha Basarab; drawing by Petro Andrusiv

Mariia Bashkirtseva

Basarabiia. See Bessarabia.

Bash, Yakiv [Baš, Jakiv] (real surname Bashmak), b 8 August 1908 in the village of Mylove in Kherson gubernia. Writer. In 1928–32 he worked on the construction of the Dnieper Hydroelectric Station and devoted two collections of stories – *Doba horyt'* (The Era Is Burning, 1931) and *Dni nastupu* (The Days of Advance, 1933) – the short novel *Syla* (Strength, 1934), and the novel *Na berehakh Slavutycha* (On the Banks of the Slavutych, 1940) to the subject. During the war he worked for the central headquarters of the Soviet partisan movement, to which he devoted the short novel *Profesor Buiko* (Professor Buiko, 1946) and the play *Dniprovi zori* (Dnieper Stars, 1953). The Second World War is also the theme of *Nadiia* (Hope, 2 vols, 1960–7). His writings have been collected in *Tvory* (Works, 2 vols, 1968) and *P'iesy* (Plays, 1958).

Bashkirtseva, Mariia [Baškirceva, Marija], b 11 November 1860 in Havrontsi, Poltava gubernia, d 31 October 1884 in Paris. Painter. After 1870 she lived in Nice, France. In 1877 she began studies with R. Julian and J. Bastien-Lepage; beginning in 1880, she exhibited her work in Paris. Bashkirtseva left some 150 paintings, including compositions, portraits, études, and genre

paintings. Her works are on permanent display at the art museum in Nice and in other museums. Her diary was published in Paris in 1887 under the title *Journal de Marie Bashkirtseff*; her letters were published in 1902.

Bashtanka [Baštanka]. II-13. Town smt (1980 pop 8,900), raion center in Mykolaiv oblast. Until 1928 it was called Poltavka. The town is involved primarily in food production.

Basilian monastic order. A monastic order established by St Basil the Great and governed by his rule, which was codified in approximate AD 362 and consisted of 55 'longer' rules and 313 'shorter' rules. These rules became the foundation of organized monastic life in the Eastern church and partly in the Western church. St Basil's rules, with some later additions (such as the Constitution of St Theodore Studite), were put into practice mainly in Byzantium and from there were introduced into Ukraine along with monasticism in the 11th century. The Basilian monasteries were not organized into a single system but were subordinated to local bishops or, in some exceptional cases (Stauropegion monasteries), directly to the patriarch of Constantinople.

After the Church Union of *Berestia (1596) the metropolitan of Kiev, Y. *Rutsky, with the assistance of Archbishop Y. *Kuntsevych, organized the monasteries in the Ukrainian-Belorussian eparchies that had adopted the union with Rome into one Congregation of the Holy Trinity under a common leadership and prescribed a rule for them. He made the Basilian monasteries independent of the bishops and subject to the protoarchimandrite. The monasteries were governed by hegumens, who were appointed for four years, and by archimandrites, who by this time were nominated by the king or other patrons and were appointed by the metropolitan. The appointments were for life and conferred special privileges and insignia. General assemblies were to be called every four years. The monastic code was modeled on the codes of Western orders. In 1624 the new rule of the Basilian order was confirmed by the Congregation for the Propagation of Faith and, in 1631, by Pope Urban VIII. The order became in part directly subordinate to the metropolitan and the pope. Until 1675 the metropolitans were protoarchimandrites for life. Afterwards, monks were appointed protoarchimandrites for four years. The Basilian novitiate was in Vilnius, then in Byten, Volhynia; the philosophical studies were taken in Zhyrovichy, Belorussia, and the theological studies were taken in Western Europe, where the Basilians had 22 scholarships at papal colleges. In the 17th century the congregation was centered in Belorussia (because the Galician eparchies adopted the union only later, in about 1700), and it was an effective agent of the union. By the papal decree of 1635 the Catholic bishops of the Eastern rite had to be Basilians.

The Basilians were active in missionary work, education, and publishing. (They had a special missionary method, and missionaries had special privileges.) They devoted much energy to the teaching of Church Slavonic, especially to students of Polish colleges in order to keep them in the Eastern rite. In 1615 Metropolitan Rutsky got permission from Pope Paul V to establish schools, and almost every monastery had a Basilian school. In 1626 the Synod of Kobryn put the Basilians in charge of the eparchial seminary in Minsk.

General Curia of the Basilian Fathers, Aventine, Rome; entrance to the monastery

The 18th century was the most active period of the order. In 1720 the Synod of Zamostia ordered all Catholic monasteries that were governed by the old Eastern rule to join the Basilian order. As a result, in 1739 a new Congregation of the Protection of the Mother of God, also called the Ruthenian congregation, was created in Lviv and took its place beside the Congregation of the Holy Trinity, known also as the Lithuanian congregation. In 1743, by the order of Pope Benedict XIV, the two congregations merged into one Basilian order at the assembly of the hierarchy and monastic representatives at Dubno. From that time all the monks in the Lithuanian province (mostly Belorussian territories within the Grand Duchy of Lithuania) and the Ruthenian province (Ukrainian territories within the Polish Kingdom) were subordinated to the Basilian protoarchimandrite. In 1780 at the general assembly in Tarakaniv, Volhynia, the Basilian order was divided into four provinces: Lithuanian, Belorussian, Crown (or Ruthenian), and Galician. The order then had 155 monasteries and 1,235 monks, of whom 950 were priests. The protoarchimandrite was chosen in turn from each province for four and then for eight years. The provinces were governed by protohegumens, the larger monasteries by archimandrites appointed for life, and the smaller ones by hegumens appointed for four years.

The Basilians were especially active in education and publishing at this time. They were in charge of colleges for young men in Uman, Hoshcha, Liubar, Sharhorod, Buchach, and Volodymyr-Volynskyi (the most famous one), and schools for the sons of the impoverished gentry. The Basilians took over Jesuit schools, among them the famous Ostrih School.

The main publishing center was Pochaiv in Volhynia, then Suprasl in Belorussia and Univ near Lviv. In 1733–1800 Pochaiv produced (besides Latin and Polish books) over 100 publications, including liturgical books, sermons, and *Bohohlasnyk* (a religious songbook) in 1791. The Basilians also built churches, such as those in Pochaiv and Zhyrovichy and St George's Cathedral in Lviv.

After the partitions of Poland, when all the Basilian provinces except Galicia became part of the Russian Empire, the Basilian order began to suffer persecution. Catherine II reduced the hierarchy and subordinated the Basilian monasteries to the archbishop of Polotsk. Relations with church authorities outside Russia were forbidden. After some improvements under Paul I, Alexander I abolished the office of protoarchimandrite in 1804, and Nicholas I abolished the offices of protohegumens, subor-

inating them to the eparchial consistory in 1832. In 1839, after the abolition of the Uniate church in Ukraine and Belorussia, the Basilian monasteries were finally closed down. Some of the monks were exiled; others were imprisoned in monasteries. Five Basilian monasteries remained in the Kholm region, but in 1864 the Russian authorities closed down four of them and soon afterwards closed down the last one in Warsaw.

The Basilian order survived only in the Galician Province of the Holy Savior, which was under Austrian rule. During Maria Theresa's reign the province developed well, but Joseph II closed down all the monasteries that did not provide social services and subordinated the rest to local bishops. He almost eliminated the vow of poverty. These actions led to the decline of the monasteries: of the 50 monasteries and 329 monks in Galicia in 1772–3, scarcely 15 monasteries and 40 monks remained. Then, in 1882, Pope Leo XIII consented to entrust the reform of the Basilian order to the Jesuits. This gave the order new life. In 1904 the first protohegumen was elected – Rev P. Filias. In 1931, when the order had several provinces (Galician, Transcarpathian, American-Canadian, and the Brazilian vice-province), Rev D. Tkachuk was elected as its first archimandrite. He was succeeded by Rev T. Halushchynsky, Rev P. Myskiv, Rev A. Velyky, and Rev I. Patrylo (the last three with the title of protoarchimandrite). All of them, with their advisers, have resided in Rome.

After the reform, the Basilian order renewed its missionary work only among Ukrainians. The following were prominently involved in this work: Rev A. Sheptytsky (later metropolitan), P. Filias, S. Ortynsky, M. Lonchyna, I. Tysovsky, L. Manko, I. Chepil, I. Luchynsky, Ya. Senkivsky, V. Bairak. The Basilians had an influence on young people through the Marian societies (with over 20,000 members). After 1918 the Basilians ran a seminary in Lviv (to 1926) and Zagreb (1924–55), lectured at the seminaries in Peremyshl and Stanyslaviv, and ran a junior gymnasium and student residence in Buchach. They are still in charge of the St Josaphat Pontifical Seminary in Rome. Zhovkva was their publishing center in Galicia. There they published the monthly *Misionar*, *Nash pryiatel'* for young people, and the scholarly journal *Zapysky Chyna sv. Vasyliia Velykoho* (see *Analecta Ordinis S Basilii Magni*). The scholarly works of Rev T. Halushchynsky, I. Skruten, D. Holovetsky, R. Lukan, T. Kostuba, A. Velyky, M. Voinar, M. Solovii, and others won recognition.

The Basilians of Galicia became active in Transcarpathia in 1921 by reforming monasteries there that previously had had no relation with the Basilians. The following priests worked in Transcarpathia: Ye. Malytsky, P. Bulyk, H. Kinakh, S. Reshetylo, and the poet Zoreslav – Rev S. Sabol. The Basilians published the periodicals *Blahovisnyk* and *Misionar* in Uzhhorod and opened a gymnasium in Uzhhorod and a novitiate in Mukachiv. This work contributed to the awakening of national consciousness in Transcarpathia. Rev L. Dolhy and others expanded their activities into the monasteries of Hungary, with the center in Mariapócs, while Rev A. Maksym worked in Rumania, where the Basilians established missions and their own press. At the end of the 19th century the Basilians began to minister to the needs of Ukrainian immigrants overseas. In 1897 the first Basilians arrived in Brazil (S. Kizyma and Martyniuk). Besides ministering to the Ukrainian colonies in Brazil, the Basilians, whose

headquarters were in Prudentópolis, ran a boarding school, novitiate, and courses for monks, and published *Ukrains'kyi misionar u Brazylii* and the weekly *Pratsia*. In 1932 the Brazilian subprovince was established, and in 1948 it became a province. In 1934 the Basilians expanded from Brazil into Argentina. In 1948 Argentina became a subprovince with a boarding school, novitiate, and occasional courses. The monthly *Zhyttia* is published there. The first Ukrainian Catholic bishop in Brazil, Y. Martynets (1958–78), and his successor, E.B. Krevey, are members of the order.

In 1902 Revs P. Filias, S. Dydyk, and A. Strotsky began their work in Canada. While ministering to the faithful, the Basilians there still run a novitiate, monasteries, and a high school. They have established their own publishing house in Toronto and publish the journal *Svitlo*. Several bishops in Canada were and are Basilians: V. Ladyka (1929, Winnipeg, later archbishop), N. Savaryn (1943, Edmonton), Ye. Khymii (1974, British Columbia), and M. Datsiuk (1983, auxiliary bishop of Winnipeg). In the United States the Basilians centered their work in New York, Chicago, and Detroit parishes. The first bishop of the Ukrainians in the United States was the Basilian S. Ortynsky (1907). Since 1926 Revs Ye. Teodorovych, S. Zhuravetsky, H. Trukh, and later A. Senyshyn (from 1942 as auxiliary bishop and 1961 as metropolitan) have worked there. In 1932 the American-Canadian province was established, and in 1948 it was divided into two provinces. The Basilians in the United States have a novitiate in Glen Cove, New York. The bishop responsible for the Ukrainian Catholics in England since 1961, A. Horniak, is also a Basilian.

Before the Second World War the Basilian order had three provinces: the Galician (378 monks), the Transcarpathian (163 monks, of whom 100 were in Transcarpathia, 20 in Hungary, and 43 in Rumania), and the American-Canadian (93 monks). With the 24 monks in the Brazilian subprovince, this made a total of 658 monks.

Since the abolition of the Ukrainian Catholic church by the Soviets in 1945, 250 Basilian monks have worked freely only in the Americas, where there are three provinces – the Canadian, American, and Brazilian – as well as the Argentinian subprovince. There is also a province in Poland.

Basilian order of nuns. The women's branch of the *Basilian monastic order, with a common 1,600-year history in the Eastern churches of the Near East, Greece, southern Italy, and the Slavic countries. In Ukraine women's monasticism dates back to 1037, when Yaroslav the Wise built the women's cloister of St Irene. Later, in 1086, Prince Vsevolod Yaroslavych built the famous Yanchyn convent for his daughter Yanka. From Ukraine convents spread to Belorussia (the Convent of St Princess Yevfrosiniia in Polotsk among others). After the Church Union of Berestia and the reform of the Basilian order under Metropolitan Y. Rutsky and Y. Kuntsevych, convents governed by the monastic rule introduced by Rutsky began to spread. In the mid-17th century the Basilian sisters had 10 convents in Ukrainian-Belorussian territories (in Pynske, Dubno, Ostrih, Kholm, etc). The order suffered a decline in the Khmelnytsky period, but afterwards it opened new centers, mainly in the new eparchies of Lviv, Peremyshl, and Lutske. By the beginning of the 18th century there were 34–40 Basilian convents (while there were 12 Orthodox convents). The Synod of *Zamostia (1720) considered the problem of uniformity of rule among the convents, but its decisions to introduce stricter cloisters and greater educational activity brought almost no results, because the nuns lived mostly outside towns and supported themselves by manual labor and charity. For this reason, the bishops tried to group the nuns in larger convents. By 1772, the Basilian sisters had only 25 centers and 200 members. After the partitions of Poland (1772–95) and during the reign of Catherine II, the Basilian nuns lost most of their convents under Russia. The rest of the convents were closed down by force in 1832–9 under Nicholas I. The nuns who resisted were either exiled to the monastic prison of Miadzolia Staryi in Belorussia or forced to disperse. In Galicia, as a result of Joseph II's reforms, only 2 out of 12 convents remained – in Slovita (Lviv eparchy) and Yavoriv (Peremyshl eparchy). Both convents ran girls' schools (from 1881 in Lviv).

Only when, in 1897, Metropolitan S. Sembratovych instructed the Basilians to reform the order of nuns were new convents and educational institutions established, not only in Galicia, but also in the United States (1911), Yugoslavia (1915), Transcarpathia (1921–2), and Argentina (1939). In 1938–9, excluding Argentina, the order had 26 convents and over 300 members, who ran 6 secondary schools, 7 vocational schools, 10 girls' institutes and dormitories, and orphanages, kindergartens, and child-care centers. Some convents were subordinate to local church authorities, but in general they were under Metropolitan Rutsky's rule, which was modified to meet new conditions by Metropolitan A. Sheptytsky in 1909 and by general assemblies of the order.

After the Soviet occupation of Western Ukraine and the Communist take-over in Czechoslovakia, the Basilian sisters were disbanded, and some of them were exiled or imprisoned. They continue to some extent to lead a monastic life only in Yugoslavia (six centers) and Poland (four centers). However, the Basilian sisters have two provinces in the United States with centers in Philadelphia (24 convents, 140 nuns, 2 junior colleges, 3 secondary schools and 16 parish schools) and in Uniontown near Pittsburgh (23 convents, 143 nuns, 19 schools). They have one province in Argentina (4 convents, 50 nuns, and 4 schools), and two convents in Australia and Brazil. Since

1951 all Basilian nuns have belonged to a single order, which is independent of local church authorities and is governed by one rule that was approved by the Apostolic See. The order is administered by the superior general and her council at the mother house in Rome.

M. Vavryk

Basketball. A game played by two teams who compete in throwing a ball into each other's elevated basket. The game was invented by a Canadian, J. Naismith, in the United States in 1891. In Ukraine the sport was first practiced in 1910–12. A competition was held in Kiev in 1913. In 1922 the first basketball league in Ukraine was set up in Chernihiv. In 1925 women's basketball teams competed for the Kiev championship. In 1927 city teams competed for the first time for the basketball championship of the Ukrainian SSR, and in 1937 club teams began to compete for the championship of Ukraine. At the beginning of the 1920s basketball began to spread among the schools in Western Ukraine.

In the Soviet Union republic and all-Union competitions in basketball are held. Ukraine's women's team won the USSR championship in 1950–1. Among the members of USSR teams that have won the Olympic championship in basketball were the Ukrainians A. Palyvoda and S. Kovalenko in 1972 and N. Klymova in 1976. Soviet basketball teams that have won the world championship included the Ukrainian players F. Orel-Kocherhina, I. Pyvovarova, N. Nazemblo, and O. Salnykov. Almost 700,000 people in Ukraine play basketball (1976). The best teams are Budivelnyk, a men's team, and Dynamo, a women's team, both from Kiev.

Abroad, basketball is played in the various Ukrainian youth organizations, in Ukrainian sports clubs, and in students' clubs. Competitions for championships of cities or countries are held among Ukrainian basketball teams. In the United States many Ukrainians have distinguished themselves as members of college or professional basketball teams.

E. Zharsky

Bass viol (*basolia*). A Ukrainian stringed folk instrument of the bass register. In its form and dimensions it is similar to a violoncello. It has four strings tuned in fifths. The bass viol is used in folk instrumental ensembles, such as trios of folk musicians called **troisti muzyky*.

Bastarnae. Warlike Celtic (Germanic, according to certain archeologists) tribe that inhabited the Carpathian region (hence Ptolemy called the Carpathians the Alps Bastarnidae) from the upper Dniester valley to the Danube delta. The principal monument that the Bastarnae left is a settlement in Mukachiv, where iron implements and weapons were manufactured on a large scale. The tribe appeared in about 230 BC in southern Ukraine and the lower Danube region, where for a long time it raided Greek colonies and Roman territory. In AD 279 the Roman emperor Probus transplanted about 100,000 Bastarnae to Thracia south of the Danube, after which their name disappeared from history.

Bass viol

Basystiuk, Olha [Basystjuk, Ol'ha], b 1951 in Holokhvosty, Khmelnytskyi oblast. Soprano and graduate of the Lviv Conservatory. She won first prize at the international vocalist competition in Rio de Janeiro in 1975, as well as the Grand Prix and the H. Villa-Lobos medal.

Batchinsky, Evhen [Bačyns'kyj, Jevhen], b 24 August 1885 in Katerynoslav, d 30 October 1978 in Bulle, Switzerland. Civic and religious leader, journalist, and editor. Imprisoned for revolutionary activities in St Petersburg in 1908, Batchinsky escaped to Western Europe. He was active in the Paris Ukrainian Hromada from 1909 to 1912. Batchinsky was a correspondent for several Ukrainian newspapers in this period. In 1914 he moved to Geneva and founded the Ukrainian Hromada there. In 1915–17 he was the representative of the *Union for the Liberation of Ukraine and editor of its organ, **La revue ukrainienne*. In 1917–19 he contributed to the weekly **L'Ukraine* in Lausanne; in 1918 he was appointed consul of the UNR there. From 1922 he was also the official representative of the Ukrainian Autocephalous Orthodox church in Western Europe. From 1939 to 1950 he directed the Ukrainian Red Cross in Switzerland. In 1955 Batchinsky was consecrated bishop of the Ukrainian Autocephalous Orthodox Conciliar church. His personal archive, at Carleton University in Ottawa, is a valuable source for the study of Ukrainian political history and Ukrainian émigré life from the late 1890s.

Batih, Mykola, b 26 November 1922 in the village of Kuhaiv, Lviv county, Galicia. Graphic artist, book-cover designer, and art historian. Batih graduated from the University of Lviv in 1958. He is the author of *Iov Kondzelevych i Bohorodchans'kyi ikonostas* (Yov Kondzelevych and the Iconostasis of Bohorodchany, 1957) and *Dmytro Kravych* (1968), and has written articles on the history of Ukrainian art.

Batih, Battle of. On 23 May 1652 the army of B. Khmelnytsky defeated the Polish army, led by Hetman M. Kalinowski, near Batih Hill in southeastern Podilia. In order to prevent a military alliance between Ukraine and Moldavia, Polish forces, over 30,000 strong, had intercepted the Cossack regiments that were marching to Moldavia. Expecting reinforcements, the Polish troops encamped at the foot of Batih Hill. They were encircled by Khmelnytsky's army and its Tatar allies. On the morning of 23 May the Cossacks attacked the Polish camp, pierced the defense lines, and by the end of the day destroyed almost the whole Polish army, including Kalinowski and a large part of his staff. The Battle of Batih was one of Khmelnytsky's greatest victories and overturned in fact the harsh terms of the 1651 Treaty of *Bila Tserkva. But the battle did not abolish the threat of new Polish incursions into Ukraine.

Batiuk, Antin [Batjuk], b 11 June 1894 in Zbarazh, Galicia, d 23 October 1978 in Scranton, Pennsylvania. Community leader. Batiuk arrived in the United States in 1922. He was active in the Democratic party and worked in state and municipal institutions. He was also active in the Defense of Ukraine Society, the Ukrainian Workingmen's Association, in which he served as president from 1946 to 1973 and then as honorary president, and the Ukrainian Congress Committee of America.

Batiuk, Porfyrii [Batjuk, Porfyrii], b 11 March 1884 in Zinkiv, Poltava gubernia, d 19 April 1973 in Kiev. Composer, folklorist, and pedagogue. Batiuk studied music at the court choir in St Petersburg and in Moscow. He taught music in Zinkiv (1913–20), Okhtyrka (1926–33), and Kharkiv (1933–41). In 1944–6 he was a senior research associate at the Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR. He collected and arranged many folk songs and composed choir music, including some for children, and piano pieces.

Batiushkov, Pompei [Batjuškov, Pompei], 1810–92. Russian leader in the field of education, author of historical, archeological, and ethnographic studies, of which many are devoted to northwestern Ukraine: *Atlas narodonaseleniia Zapadno-russkogo kraia po veroispovedaniiam* (Atlas of the Population of the Western Russian Land by Religion, 1862); *Pamiatniki russkoi stariny v zapadnykh guberniakh* (Monuments of Russian Antiquity in the Western Gubernias, 8 vols, 1865–86); *Kholmskaia Rus'* (Kholmian Rus', 1887); *Volyn'* (Volhynia, 1888); *Podoliia* (Podilia, 1891); and *Bessarabiia* (1892).

Bat'kivshchyna (Fatherland). Publishing house of the *Front of National Unity (FNYE) in Lviv, which in 1933–9 published the popular daily *Ukrains'ki visti* and the weekly *Bat'kivshchyna*, both edited by D. Paliiv, and an ideological quarterly, *Peremoha* (ed M. Shlemkevych). It also published three book series – *Ukrains'ka Kul'turna Skarbnytsia* (Ukrainian Cultural Treasury), *Politychna Biblioteka FNYE* (Political Library of the FNYE), and *Praktychna Biblioteka* (Practical Library) – and the annual almanac *Bat'kivshchyna* (beginning in 1936).

Bat'kivshchyna (Fatherland). Popular political and economic newspaper for peasants, founded in Lviv on

the initiative and with the support of Yu. Romanchuk. It was published from 1879 to 1896. Although *Bat'kivshchyna* adopted a moderate position on political issues, it became the object of interparty rivalry (from 1888 to 1889 it was edited by the Radical party leader M. Pavlyk).

Bat'kivshchyna (Our Country). An émigré, conservative, hetmanite-monarchist newspaper established in Toronto in 1955 as a successor to **Ukrains'kyi robotnyk* and **Nasha derzhava*. Until 1980 the newspaper was a bi-weekly; it now appears monthly and has a circulation of about 1,500. The editors have been M. Hetman, M. Pironiuk, and M. Korolyshyn.

Batsutsa, Yakiv [Bacuca, Jakiv], b 1854 in the village of Adamivka, Podilia gubernia, d there in 1932. Potter, master of ceramic art. Batsutsa made ceramic pottery and toys, maintaining the ancient tradition of decoration on unglazed earthenware. He decorated his pottery with geometrical and plant designs. His work is preserved in museums in Lviv and Leningrad.

Ceramic vases made by Yakiv Batsutsa, early 20th century

Batu Khan, ?–1255. Mongol khan (from 1227) and general, son of Juji Khan, and grandson of Genghis Khan. Batu led the Mongol-Tatar armies that ravaged Eastern Europe in 1236–43. In 1237 he invaded Rus'. In 1239 he sacked Pereiaslav and Chernihiv; in 1240, Kiev. In the following year his army penetrated into Galicia, Poland, and Hungary and reached Dalmatia. In 1242 Batu returned to the Volga, where he established the domain of the *Golden Horde.

Baturyn. II-13. Town smt (1972 pop 3,800) in Bakhmach raion, Chernihiv oblast, 19 km north of the railway station of Bakhmach. The earliest references to Baturyn date back to 1625, when it was granted to the Polish chancellor J. Ossoliński. In 1648 it became a Cossack company center, and in 1669–1708 it was the Left-Bank hetman's capital. Russian troops, commanded by A. Menshikov, sacked and burned Baturyn at the beginning of November 1708, because it supported Hetman I. Mazepa. The town was rebuilt and expanded in the 1750s and served as the capital of Hetman K. Rozumovsky in 1750–64. In the 19th century it declined. Its main architectural monuments are V. Kochubei's park and building (17th century) and the half-ruined Rozumovsky palace. The Prokopovych Museum of Apiculture, established in 1924, is located in Baturyn.

Ruins of Ivan Mazepa's building in Baturyn; an old engraving

Baturyn Articles. The 1663 agreement between Hetman I. *Briukhovetsky and the Muscovite government. The Baturyn Articles confirmed the provisions of the *Pereiaslav Treaty of 1654 and supplemented them with three new conditions: the hetman agreed to return escaped peasants to Russian landowners, to forbid Ukrainian merchants to sell whiskey and tobacco in Russia (the tsar had a monopoly on them), and to feed the Russian troops in Ukraine. In 1665 the Baturyn Articles were superseded by the *Moscow Articles.

Baudouin de Courtenay, Jan, b 13 March 1845 in Radzymin, Poland, d 3 November 1929 in Warsaw. Outstanding Polish linguist; professor at the universities of Kazan, Tartu, Cracow, St Petersburg, and Warsaw; full member of the Cracow Academy of Sciences and the Shevchenko Scientific Society; and corresponding member of the St Petersburg Academy of Sciences. Baudouin de Courtenay created and elaborated the theory of phonemics in linguistics and founded the psychological (the so-called Kazan) school of linguistics. He was a staunch defender of the free development of all languages

Jan Baudouin de Courtenay

and of national independence, including that of Ukraine. His political activities, particularly during his stay in St Petersburg (1900–18), where he had close ties with the Ukrainian Club, provoked repression from the Russian

government. He was arrested and imprisoned in 1913 for his brochure *Natsional'nyi i territorial'nyi priznak v avtonomii* (The National and Territorial Indicator of Autonomy, 1913). In the 1922 presidential elections in Poland, the representatives of the national minorities, including Ukrainian delegates to the diet and senate, demonstratively proposed Baudouin de Courtenay as a candidate. His article 'Kilka ogólników o obiektywnej i subiektywnej odrębności Ukrainy' (Several General Remarks on the Objective and Subjective Distinctiveness of Ukraine, *Zapysky NTSh*, vols. 141–3) presents a defense of the Ukrainian language and nationality.

Bavaria (Bayern). A German land, which has historically been an autonomous or independent political entity; a kingdom between 1806 and 1918. Since 1949 Bavaria has been the largest state of the Federal Republic of Germany, with an area of 70,547 sq km and a population in 1981 of 11 million. *Munich is the capital.

Ukraine's ties with Bavaria date back to the medieval period. Kiev had commercial relations with Regensburg, where the Monastery of ss Jacob and Gertrude was built with financial support from the Kievan grand prince, Volodymyr Monomakh. The Riurykids of Rus' were related to the Bavarian dynasty of Wittelsbach through the Hungarian house of Arpad (13th–14th century). As to political ties, in the 17th–18th century the Zaporozhian Cossacks fought under the elector Maximilian I in the Thirty Years' War, and the exiled hetman P. *Orlyk planned an anti-Russian coalition with the elector Charles Albert. Since the 16th century, some Ukrainians have received their higher education in Bavaria, first at Dillingen and Ingolstadt, and later at Munich, Erlangen, and Würzburg. Bavarian artists – for example, P. Labenwolf (1493–1563), who created the Herbut monument in Lviv, H. Holbein the Elder (ca 1470–1524), and the sculptor F. Tietz (1710–77) – have had some influence in Ukraine. In recent times some prominent Ukrainian artists have worked in Munich: the graphic artist Yu. Narbut, the painter O. Murashko, and the sculptor M. Parashchuk.

After the Second World War Bavaria received the largest number of Ukrainian political refugees. Most of them lived in *displaced persons camps near Munich, Augsburg, Regensburg, Mittenwald, Berchtesgaden, Aschaffenburg, Bayreuth, and Kaufbeuren. In 1946 there were up to 100,000 Ukrainians in Bavaria. In 1955 about 10,000 remained, while there were about 25,000 in all of West Germany. Among German cities, Munich has the largest number of Ukrainians and of Ukrainian institutions.

In 1945–50 the major Ukrainian churches became widely active in Bavaria, as did the Ukrainian press and Ukrainian publishing houses. Ukrainian elementary and secondary schools, the Ukrainian Free University, the Ukrainian Technical and Husbandry Institute, a Ukrainian Catholic seminary, and the Theological Academy of the Ukrainian Autocephalous Orthodox church were established in Bavaria. The Shevchenko Scientific Society resumed its activities, and the Ukrainian Academy of Arts and Sciences was established. Ukrainian theater groups and choirs performed before Ukrainian and German audiences. As Ukrainians emigrated in large numbers across the ocean, Bavaria's significance for Ukrainian refugees diminished. Yet Ukrainian political, social, and cultural institutions in Bavaria continue to function, and

Munich has remained a center of Ukrainian émigré activity in Western Europe. (See also *Germany.)

Bazar. II-10. Village in Narodychi raion, Zhytomyr oblast. Here 359 UNR Army soldiers were executed by the Bolsheviks on 22 November 1921 (see *Winter campaign).

Bazarko, Ivan, b 6 October 1910 in Dovzhniv, Sokal county, Galicia. Jurist and civic leader. Bazarko fled from Ukraine at the end of the Second World War and was subsequently the administrator of several DP camps in Germany. In 1949 he settled in New York. He served as secretary and chairman of the United Committee of Ukrainian American Organizations in New York (1959–66) and as executive director of the Ukrainian Congress Committee (1966–80). From 1981 to 1983 he was president of the Secretariat of the World Congress of Free Ukrainians.

Bazavluk River. A right-bank tributary of the lower Dnieper that flows into the Kakhivka Reservoir. It is 157 km long, and its basin covers 4,200 sq km. The river is shallow and often dries up.

Bazhan, Mykola [Bažan], b 9 October 1904 in Kamianets-Podilskyi, d 23 November 1983 in Kiev. Poet, writer, translator, and Soviet Ukrainian political and cultural figure; full member of the Academy of Sciences of the Ukrainian SSR from 1951. One of the most prominent representatives of the literary renaissance of the 1920s, he wrote screenplays, edited the journal *Kino*, and was associated with the literary groups VAPLITE and Nova Heneratsiia and the journal *Literaturnyi iarmarok*. Bazhan's poems were first published in 1923, but he gained recognition for the collections *17-i patrol'* (The 17th Patrol, 1926). With *Riz'blena tin'* (The Sculptured Shadow, 1927), and especially *Budivli* (Buildings, 1929), Bazhan abandoned futurism and constructivism and emerged as a romantic expressionist, whose poems were characterized by dynamism, unusual imagery, monumentalism, and frequent references to the Ukrainian past.

In the poem 'Budivli' Bazhan treats historical themes, seeking a link between the modern era, the Middle Ages, and the Ukrainian baroque of the Cossack state. 'Budivli' and the poems 'Rozмова serdets' (Heart-to-Heart Talk), in which he presented an unusually harsh assessment of Russia, 'Hofmanova nich' (Hoffman's Night, 1929), 'Sliptsi' (The Blind Beggars, 1933), 'Trylohiia prystrasty' (Trilogy of Passion, 1933), and others display an original poetic style: a bold statement of theme, a rich vocabulary replete with archaisms, syntactic complexity, an abundance of metaphor, and inventive rhyme. These poems, as well as the collections *Doroĥa* (The Road, 1930) and *Poezii* (Poems, 1930), aroused harsh criticism of Bazhan: he was accused of 'detachment from Soviet reality,' 'idealism,' and nationalism.

During the terror of 1934–7 Bazhan wrote the trilogy *Bezsmertia* (Immortality, 1935–7), which was dedicated to S. Kirov, and entered the company of poets enjoying

official recognition. His later works, written in the spirit of Stalinist patriotism, all belong to the corpus of official Soviet poetry. These include the collections *Bat'ky i syny* (Fathers and Sons, 1938), *Iamby* (Iambs, 1940), *Klych vozhdia* (The Call of the Leader, 1942), and *V dni viiny* (In the Days of War, 1945); the collections awarded the Stalin Prize – *Kliatva* (Oath, 1941), *Danylo Halyts'kyi* (Danylo of Halych, 1942), *Stalinhrads'kyi zoshyt* (Stalingrad Notebook, 1943), and *Anhliis'ki vrazhennia* (English Impressions, 1948); and the collections *Virshi i poemy* (Poetry and Long Poems, 1949), *Bilia Spas'koï vezhi* (Near the Savior's Tower, 1952), *Ioho im'ia* (His Name, 1952), *Honets* (The Chaser, 1954), *Iednist'* (Unity, 1954), *Tvoiry* (Works, 1946–7), and *Vybrane* (Selected Works, 1951, from which poems of the early period were omitted). After J. Stalin's death Bazhan did not take part in the cultural renaissance launched by the *Shestydesiatnyky (poets of the sixties); his later collections and poems, *Iasa* (1960), *Italiis'ki zustrichi* (Meetings in Italy, 1961), *Polit kriz' burii* (Flight through the Storm, 1964, for which he received the Shevchenko Prize), *Umans'ki spohady* (Memories of Uman, 1972), *Nichni rozdumy staroho maistra* (Nocturnal Reflections of an Old Master, 1976), and others, were also written in the spirit of Party ideology. Bazhan's translation of S. Rustaveli's poem *Vytiaz' u tyhrovii shkuri* (The Knight in the Tiger Skin, 1927) was published to great critical acclaim, and he has produced many masterful translations from Georgian, Russian, and Polish, as well as of the poetry of R.M. Rilke. Bazhan is also the author of literary studies, reviews, and memoirs.

With the outbreak of war in 1941 Bazhan emerged as a leading political figure. He was editor of the newspaper *Za Radians'ku Ukrainu!*, deputy chairman of the Council of Ministers of the Ukrainian SSR (1943–8), a long-term member of the Central Committee of the CPU and deputy of the Supreme Soviet of the Ukrainian SSR and of the USSR, and head of the Writers' Union of Ukraine (1953–9). From 1958 he headed the editorial board of the Ukrainian Soviet Encyclopedia publishing house and served as editor-in-chief of many of its publications.

Bazhansky, Mykhailo [Bažans'kyj, Myxajlo], b 6 February 1910 in Sniatyn, Galicia. A journalist, poet, and public activist, now residing in Detroit, Michigan. Bazhansky is the author of a collection of short stories, *U vyri zhyttia* (In the Whirlpool of Life), and of memoirs from his days in German concentration camps, *Mozaika kvadriv viaznychnykh* (A Mosaic of Prison Quarters, 1946).

Bazhansky, Porfyrii [Bažans'kyj, Porfyrij], b 24 February 1836 in Beleluia, Sniatyn county, Galicia, d 29 December 1920 in Lviv. Self-taught composer, folklorist, music theorist, and Ukrainian Catholic priest. Bazhansky received his music education at the Lviv Theological Seminary. He collected folk songs, some of which he published or used in his compositions. Among his works

Mykola Bazhan

Porfyrii Bazhansky

are 'folk' melodramatic operas, music for the liturgy (1869), music for mixed choirs, and two song collections: *Halyts'ko-bukovyns'ki narodni melodii* (Galician-Bukovynian Folk Melodies, 1890–1906) and *Rus'ko-halyts'ki narodni melodii* (Ruthenian-Galician Folk Melodies, 1905–12). He wrote articles on melodies and harmony and collected and arranged folk songs, in which he utilized M. *Dylets'ky's unpublished writings.

Bazylevych, Anatolii [Bazylevyč, Anatolij], b 7 June 1926 in Zhmerynka, Vinnytsia okruha. Graphic artist. Bazylevych studied at the Kharkiv Art Institute, graduating in 1953. He specializes in book art and has illustrated several books, including Marko Vovchok's *Zapysky prychetnyka* (Notes of a Sexton, 1954), employing half-tone drawings and watercolors; H. Kvitka-Osnovianenko's *Pan Khaliavs'kyi* (Mr Khaliavsky, 1961); I. Kotliarevsky's *Eneida* (Aeneid, 1968); S. Rudansky's *Spivomovky* (humoristic poems, 1974); collections of Ukrainian folk tales (1970, 1974); and the works of J. Hašek and M. Sholokhov. An album of his paintings was published in Kiev in 1976.

Bazylevych, Inna [Bazylevyč], b 11 December 1907 in Yelysavethrad. Actress of the L. *Kurbas school. She began to act in 1927 and appeared on the stage of such theaters as the *Berezil, Veselyi Proletar, the Theater of the Revolution and Komsomol, and, after 1945, the Ukrainian Music and Drama Theater in Ivano-Frankivske. One of her most memorable roles was that of the mother in M. Starytsky's *Marusia Bohuslavka*.

Bazylevych, Ivan [Bazylevyč], b 1899 in Siltse, Volhynia, d 1965. Therapist-clinician, gerontologist, and professor at the Kiev Medical Institute. In 1941–3 Bazylevych was in charge of the therapy clinic of the Central Kiev Hospital. In 1943 he emigrated and worked in various clinics in Germany and then in the United States. From 1948 he was a member of the Ukrainian Academy of Arts and Sciences in the United States and, from 1958, a member of the American Gerontological Association. Bazylevych wrote on clinical diagnostics, fermentology, cardiology, pulmonology, gerontology, and geriatrics.

Bazylevych, Vasyl [Bazylevyč, Vasyl'], 1893–1942. Historian, professor at the Kiev Archeological Institute, and researcher at the All-Ukrainian Academy of Sciences. Bazylevych published articles on the history of the

Decembrists in Ukraine, the history of medieval Kiev and its monuments, and other subjects. In the 1930s he was exiled to eastern Siberia. In 1940 he was director of research at the Tahanrih Museum. He was executed by the Germans.

Bazylovych, Yoanykii [Bazylovyč, Joanykij] (Basilovits, Joannicio), b 6 June 1742 in Hlyvištia, eastern Slovakia, d 18 October 1821 in Mukachiv. Church historian, protohegumen of the Mukachiv monastery, and the first historian of Transcarpathian Ukraine. Bazylovych is the author of *Brevis Notitia Foundationis Theodori Koriatovics, olim Ducis de Munkacs pro Religiosis Ruthenis Ordinis S. Basilii M., in Monte Csernek ad Munkacs* (Brief Information about the Basilian Monastery on the Monks' Mountain near Mukachiv Founded by Prince Fedir Koriatovych, 2 vols, 1799–1805). In this work he attempted to prove the authenticity of the founding charter of the Mukachiv monastery; this was later proven to be a falsified document.

Bear, brown (*Ursus arctos*; Ukrainian: *buryi vedmid.*) An omnivorous mammal up to 2.5 m in length, 1.25 m high in the withers, and 750 kg in weight. Indigenous to Europe, it is now very rare in Ukraine and is protected as an endangered species in the forests of Polisia, the Carpathian Mountains, and the Caucasus.

Beauplan, Guillaume Le Vasseur de, b ca 1600 in Normandy, d 6 December 1673. French army engineer, architect, and cartographer. From 1630 to 1648 he was a captain in the artillery of the Polish army and was ordered to Ukraine. In 1637–8 he took part in S. Koniecpolski's campaign against P. Pavliuk and Ya. Ostrianyn; in 1639 he rebuilt the fortress *Kodak, which had been destroyed by the Cossacks. He also built many castles and fortresses (including those at Bar, Brody, and Kremenchuk). Beauplan, one of the most famous 17th-century cartographers, drew the first descriptive map of Ukraine in 1639; in 1654 in Danzig he published a specialized (scale of 1:452,000) and a 'general' (scale of 1:1,800,000) map of Ukraine, both engraved by the famous Dutch engraver Hondius (V. Hondt). Following their publication in Rouen, France, in 1660, these maps were duplicated many times in various European countries (they were reproduced, moreover, by V. Kordt in *Materialy po istorii russkoi kartografii* [Materials for the History of Russian Cartography, 1–2, 1899–1910]). In 1662 Beauplan anonymously published a map of the lower Dnieper in Amsterdam. His book *Description of Ukraine* was widely known in Europe (*Description des contrées du Royaume de Pologne*, 1650; 2nd, enlarged edn, titled *Description d'Ukraine*, 1660; 3rd edn 1661). It includes geographical and economic information about Ukraine, describes the Ukrainian peasantry and other social classes, and gives a detailed description of the Dnieper Rapids. The *Description*, which was the first to describe Ukraine, was received with great interest in Europe (English translation, 1704; German, 1780; Polish, 1822; Russian, 1832; a partial translation also appeared in Ukrainian).

Beaver, Old World (*Castor fiber*; Ukrainian: *bobr.*) A large aquatic rodent, up to 1.2 m in length and 30 kg in weight. It is prized for its fur. In historical times the beaver was widespread in Ukraine, even far to the south. In the Princely era its fur was in high demand in Western Europe and served as a medium of exchange. The princes set up special beaver reserves for hunting. The species was threatened with extinction and is now under strict protection. The beaver now thrives on reserves in Polisia near Pynske; on the Ovruch, Uzh, Brahynka, Horyn, Teteriv, and Desna rivers; and in the Liubech region of Chernihiv oblast. In 1924 the Canadian beaver (*C. canadensis*) was acclimatized on the Styr River near Lutske.

Beck, Mary [Bek, Mariia], b 29 February 1908 in Ford City, Pennsylvania. Lawyer, politician, civic figure, patron of the arts. She was the first woman elected to the Detroit Common Council, serving as its president from 1952 to 1962 and as acting mayor of Detroit from 1958 to 1962. She served on many local-government committees and has been active in Ukrainian cultural and women's organizations. In 1933–4 she managed the Ukrainian pavilion at the Century of Progress Exposition in Chicago. She edited the women's magazine *Zhinochyi svit* in 1932–4. In the 1970s she was active in the Ukrainian government in exile as vice-president of its executive.

Mary Beck

Bedrylo, Stepan, b 4 January 1932 in the village of Bartativ, Horodok county, Galicia. Economist and geodesist. Bedrylo graduated from the Lviv Agricultural Institute and from 1959 to 1969 was an associate of the Scientific Research Institute of Agriculture in Kiev. He has been persecuted by the Soviet authorities for criticizing the policy of Russification, propagating samvydav materials, and reporting on V. Makukh's self-immolation. In 1970 he was sentenced to four years' imprisonment and served his sentence in the labor camps of Mordovia, where he was gravely ill. From the camps he wrote an appeal 'To the Peoples of the World,' which appeared in samvydav (*Ukrains'kyi visnyk*, nos 1–2).

Bedzyk, Dmytro, b 1 September 1898 in Vilkhivka, Sianik county, Galicia (today part of Poland). Writer and playwright. From 1915 he lived in eastern Ukraine. Bedzyk belonged to the writers' groups Pluh and Zakhidnia Ukraina. During the Second World War he worked as a special correspondent for the paper *Radians'ka Ukraina*. His writings deal with the October Revolution, the building of communism, and the Second World War according to the officially prescribed line. Bedzyk's plays include *Liude! Chuiete?* (People! Do You Hear?, 1924), *Shakhtari* (The Miners, 1924), *Chornozem ozhyv* (The Chernozem Has Come to Life, 1925), *Za kulisamy tserkvy* (In the Wings of the Church, 1925), *Khto koho?* (Who to Whom? 1927), *Prorok* (The Prophet, 1930), and *Arsenal' tsi* (Arsenal Guards, 1939). His stories and sketches were published in the books *Do sontsia* (Towards the Sun, 1926), *Korsun'-Shevchenkivs'ke poboishche* (The Korsun-Shevchenkivskiy Battlefield), and *Plem'ia neskorymykh* (The Tribe of the Invincible, 1949). He also wrote several novels, including *Dnipro horyt'* (The Dnieper Is Burning, 1948), *Khliboroby* (The Farmers, 1956), *Sertse moho druha* (The Heart of My Friend, 1964), and *Pidzemni hromy* (Underground Thunder, 1971).

Bee (Ukrainian: *bdzhola*). An insect of the bee family of the Hymenoptera order. The central European gray bee (*Apis mellifica*) is common in Ukraine. A variety of this species – the Ukrainian bee (*A. mellifica* var *ucrainica*) – produces much honey and survives the winter well. Among other species the black northern bee and the gray Caucasian bee are known in Ukraine. Hybrids of the named species, sometimes crossed with the Italian bee, prevail throughout Ukraine.

Beech (*Fagus*; Ukrainian: *buk*). A tree of the beech family, 30–40 m in height. It is discriminating about soil and climate and requires much atmospheric moisture. The beech grows only in Western Ukraine and the Crimea, mixed in with other trees: in the Carpathians it grows alongside fir, spruce, as well as hornbeam, maple, ash, and elm. In certain regions, particularly in Transcarpathia, beech forests are found. In the Carpathians the tree grows at altitudes up to 1,300 m. Beech wood is dense and has a reddish-brown color. It is used for firewood, tools, musical instruments, railway ties, parquet floors, bent furniture, and dry distillation in the chemical industry.

Beekeeping. Beekeeping has been widespread in Ukraine since prehistoric times, when the primitive method of obtaining honey by robbing wild hives was replaced by beekeeping. The oldest method involved keeping bees in hollow logs or gums (*borti*). Beekeepers made the gums and later began to place them high up in trees. This method (called *bortnytstvo*) was practiced until the mid-18th century, and in some areas – the forests of Volhynia, the northern Chernihiv region, and the northern Kiev region – it endured to the beginning of the 20th century. *Bortnytstvo* was replaced by *pasichnytstvo*, which involved placing hives on tree trunks in forest clearings or orchards. This method is mentioned in documents of the 14th century.

Honey and wax were important items of domestic consumption and were paid as tribute to princes. Beekeeping was protected by the law – the *Ruskaia Pravda*

BEAUPLAN'S MAP

This page intentionally left blank

and the Lithuanian Statute. Honey and wax were important also in foreign trade. In the 15th–16th century the wax warehouses (*voskovi komory*) of Lviv (established in 1496), Lutske, Volodymyr, Berestia, and Bilske were famous. In the 16th–17th century beekeeping developed rapidly. It spread to Slobidska Ukraine and the Zaporozhian lands. Most of the honey was used for beverages, but some of it and some of the wax were exported.

With the spread of serfdom and the cultivation of the virgin steppes in the 18th–19th century, beekeeping declined. Sugar making undermined the export of honey. For this reason, by the end of the 18th century the Russian and Austrian governments exempted beekeepers from taxes. Some of the gentry, clergy, monasteries, Cossacks, and wealthier peasants continued to keep bees. In the first half of the 19th century beekeeping was revived. In 1814 P. *Prokopovych, a landowner in the Chernihiv area, invented the first frame hive and thus initiated the modern period of apiculture. He also organized industrial beekeeping and advocated progressive apiculture, particularly at his beekeeping school, which he founded in 1826 in the village of Palchyky near Baturyn.

Prokopovych's work was continued by S. Velykdan (1819–79), V. Vashchenko (1850–1918) (inventor of an improved hive), V. Shymanovsky (author of the text *Metody pasichnykuvannia* [Methods of Beekeeping]), V. Riznychenko, Ye. Arkhopenko, I. Korabliv, and others. In Galicia Yu. Liubinetsky, L. Treshchakivsky, Rev. Doly-novsky, and M. Mykhalevych were prominent apiarists.

In 1910 there were 1.6 million hives in the nine Ukrainian gubernias (6.3 million in the whole Russian Empire and 2.5 million in all Ukrainian ethnic lands), 90 percent of which belonged to peasants. As a result of the First World War and the revolution, beekeeping in Ukraine declined (in 1920 only 800,000 hives remained in Dnieper Ukraine. It recovered in the NEP period (1923–1.1 million hives; 1927 – 1.3 million hives, 52 percent of which were frame hives). The development of apiculture was encouraged through professional journals, research stations, etc. in both eastern and Western Ukraine. Such apiarists as M. Borovsky, V. Pylypchuk, and I. Martsinkiv were active in the latter region.

Collectivization and the Second World War resulted in the decline of beekeeping (in 1939 the Ukrainian SSR had 1.3 million hives, and in 1944 scarcely 121,000). After the war it recovered. Large bee farms, inter-collective-farm beekeeping associations, and special state farms for industrial apiculture were formed. In 1967 there were over 2.5 million hives in the Ukrainian SSR, of which almost 1 million belonged to collective farms, 132,000 to state farms, and 1.2 million to individuals. In 1975 there were 2.9 million hives. The annual production of honey was 12–16 million kg (4.1–5.5 kg per hive), including 6–7 million kg of honey for industrial use. Apiculture is most developed in the forest-steppe region, where almost half of the hives are located, and in the steppe region, where over one-third of the hives are located.

M. Borovsky

Beet (*Beta*; Ukrainian: *huriak*). Annual, biennial, and perennial plants, cultivated form of the *Beta vulgaris* of the Chenopodiaceae family, which have a fleshy taproot for which they are valued. The main types of beet are the garden beet; the mangel-wurzel, beet used as livestock feed; and the sugar beet. The garden beet is grown as a

vegetable throughout Ukraine. The most popular varieties are the Skvyra oblate beet, the Early Wonder, the Nosivka oblate, and the Bordeaux 237. The mangel-wurzel has a yellow or red root and contains 4–10 percent sugar. Before the First World War it was grown in Western Ukraine and on the estates of landowners. Today it is grown throughout Ukraine. The most popular varieties are the Ekendorf Yellow beet and the Poltava White beet.

The sugar beet is the most important industrial crop in Ukraine. Its root weighs as much as 500 g and has a sugar content of 19–22 percent. It is used as the raw material for the sugar industry. In the sugar-refining process other valuable by-products such as molasses and beet pulp are produced from the beet. The beet foliage serves as nutritious feed.

Beilis affair. The trial of Mendel Beilis, a Jew, held in Kiev in September–October 1913 and provoked by the propaganda spread by the *Black Hundreds. In March 1911 the Russian rightist press conducted an inflammatory campaign against Beilis, accusing him of the ritual murder of a Christian boy – A. Yushchynsky. The Black Hundreds tried to use Beilis's trial to mobilize public opinion against the Jews in Russia. The lack of evidence against Beilis and the obvious anti-Semitic tendency of the proceedings provoked a reaction from the liberal and progressive intelligentsia: the author V. Korolenko, Prof V. Vernadsky, and others spoke out in defense of Beilis. The jury, which was composed of Ukrainian peasants, pronounced the accused not guilty in spite of pressure from the Ministry of Justice and the Ministry of the Interior.

Beisuh River (Beisug). A small river in the Kuban Lowland. It flows into the Beisuh Liman, which empties into the Sea of Azov. The river is 243 km long, and its basin is 5,200 sq km in area. Its tributaries are the Beisuzhok Livyi and the Beisuzhok Pravyi.

Beketov, Nikolai, b 13 January 1827 in the village of Alferevka, Penza gubernia, Russia, d 13 December 1911 in St Petersburg. Physical chemist, member of the St Petersburg Academy of Sciences. In 1849 Beketov graduated from Kazan University. He worked at Kharkiv University from 1855–87 and, beginning in 1887, at the St Petersburg Academy of Sciences. In 1864 he organized the department of physical chemistry at Kharkiv University and taught the first course in physical chemistry as an independent discipline. Beketov determined the activity series in metals, formulated the law of reactive masses, and laid the foundations of aluminothermy. The work of Beketov and his students created the basis of the Kharkiv school of physical chemistry.

Beketov, Oleksii, b 3 March 1862 in Kharkiv, d 23 November 1941 in Kharkiv. Architect and pedagogue, academician from 1894, and professor from 1898. Beketov was the son of N. *Beketov. He graduated from the St Petersburg Academy of Arts and worked in Kharkiv, where he built over 60 public and private buildings. Among his works are the buildings of the Law Institute (1892), the Medical Society (1911, now home of the I. Mechnikov Scientific Research Institute), the Agricultural Institute (1907–12), and the Korolenko Public Library. His buildings, which are in the modern style, can also be

Oleksii Beketov

found in Lubni, Symferopil, Alushta, Dnipropetrovske, the Donbas, and elsewhere.

Beklemishev, Hryhorii [Beklemišev, Hryhorij], b 4 February 1881 in Moscow, d 5 February 1935 in Kiev. Pianist and pedagogue. He graduated from the Moscow Conservatory in 1900 and in 1913 became a professor at the Kiev State Conservatory. In 1923 he became a professor at the Kiev Music and Drama School. He was the author of many piano transcriptions, including *Three Piano Pieces on Folk Songs* (1930).

Beklemishev, Vladimir [Beklemišev], b 15 August 1861 in Katerynoslav gubernia, d January 1920 in Novorzhev, Pskov gubernia, Russia. Russian sculptor, full member and professor of the St Petersburg Academy of Arts from 1892. Beklemishev studied in Kharkiv and St Petersburg and produced a number of works on Ukrainian themes, including peasant life (*Peasant Love*, 1896), a commemorative bust of T. Shevchenko in Kharkiv (1899), and a model for a commemorative statue of Shevchenko, which was awarded a prize at a competition in Kiev in 1910.

Ivan Belei

Yakov Belevtsev

Belei, Ivan [Belej], b 1856 in Voinyliv, Stanyslaviv county, Galicia, d 20 October 1921 in Lviv. Journalist and writer (pseud: Roman Rozmaryn) in Galicia. In 1881–2, with I. Franko, Belei published the magazine *S'vit* and a series of popular books, *Dribna Biblioteka*, in which 14 volumes were published. From 1884 to 1902 he was editor

in chief of the newspaper **Dilo* and simultaneously editor of the series *Biblioteka Naiznamenytishykh Povistei*, in which some 60 volumes appeared. Belei also produced translations and articles on literature.

Belevtsev, Yakov [Belevcev, Jakov], b 20 April 1912 in the village of Orekhovo, Kursk gubernia. Geologist, full member of the Academy of Sciences of the Ukrainian SSR from 1967, and graduate of the Dnipropetrovske Mining Institute. He was a professor at Kiev University from 1953 to 1962 and from 1953 to 1969 administered a division of the Institute of Geological Sciences of the Academy of Sciences of the Ukrainian SSR. From 1969 he directed the metallogenics section at the Institute of the Geochemistry and Physics of Minerals of the Academy of Sciences of the Ukrainian SSR. His fundamental work is devoted to the study of the geology and genesis of iron ores in the Kryvyi Rih Iron-ore Basin and the study of Precambrian mineral-ore deposits.

Belgium (French: Belgique; Flemish: België). A West European country populated by two principal nationalities, the Dutch-speaking Flemings and the French-speaking Walloons, as well as by about 700,000 immigrants, including 3,000 Ukrainians. Since 1830 Belgium has been a constitutional monarchy. Its 30,521 sq km had a population of 9,860,000 in 1981. The capital is Brussels.

The first contact between Belgium and Ukraine was made by the Fleming W. van Ruysbroeck, who in 1253–5 traveled through Ukraine and left an account of his travels. The Principality of Galicia-Volhynia had commercial relations with Flanders through Prussia and the Baltic Sea (a letter of 1324 from the townsmen of Volodymyr mentions the importation of woolen cloth from Ypres [Ieper], Doornik [Tournai], and Poperinge into Ukraine). The documents of Prussian merchants in Lviv at the end of the 14th century and the beginning of the 15th century show that Lviv received not only woolen cloth, but also amber, in exchange for furs, silk, and eastern spices. The wars between Poland and the Teutonic Order (1409–66) interrupted this trade for a long time. Later on, trade was resumed, and in the 16th–17th century, when Flanders flourished economically and culturally, Flemish and Walloon merchants, tradesmen, and monks visited Ukraine. Flemish engravers left many portraits of prominent Ukrainians, cartographers marked the territories of Ukraine on their maps, and the Flemish press took a keen interest in news from Ukraine.

After the creation of the Belgian kingdom (1830) Belgian industry expanded, and Belgian capital reached Ukraine. At the end of the 19th century Belgian firms participated in mining ozocerite and oil in Boryslav, Galicia. The Russo-Belgian Company was one of the largest industrial organizations in Russian Ukraine. The Belgian company Cockerill was the main partner in the South-Russian Dnieper Metallurgical Company, which was established in Katerynoslav in 1887. A Belgian company owned the machine plants built in 1896 in Sumy. At the end of the 19th century Belgian capital financed the building of several foundries in the Donbas. From 1897 on, a Belgian firm owned the light-machine plant Progress in Berdychiv. The Belgians also had interests in the cement industry and urban development (streetcars, the telephone system in Odessa, the electrical network in Symferopil, etc). In the 1880s and 1890s Belgian investments in

Ukraine reached a billion Belgian francs, but fell to 600 million during the economic crisis. The Belgians who had visited Ukraine instilled an interest in Ukraine in the Belgian intelligentsia. The geographer E. Reclus devoted much space to Ukraine in his *Nouvelle géographie universelle* (1880). The *Redemptorists established a Ukrainian branch at the beginning of the 20th century.

At the same time Ukrainians became interested in Belgian literature, mainly that written in French. In 1900–10 a series of M. Maeterlinck's works were translated. In 1922–45 E. Verhaeren was published in the Ukrainian SSR, and in 1937 C. de Coster was published.

Ukrainians in Belgium. Before the First World War only a small number of Ukrainians (workers, students) lived in Belgium. They organized the Ruthenian Neutral Circle (Cercle Neutre Ruthène) in Liège. In 1919–23 the diplomatic mission of the UNR to Belgium and the Netherlands, headed by Professor A. Yakovliv, was stationed first at the Hague and then in Brussels.

Between the two world wars almost 300 Ukrainian political refugees (among them, D. *Andriievsky), workers, and students (at Louvain, Liège, and Ghent) lived in Belgium. The Society of Former Ukrainian Soldiers (1934–40, renewed in 1948) was the most active Ukrainian organization in Belgium.

During the Second World War most Ukrainians left. However, new Ukrainian émigrés began to arrive in 1945. The first to come were about 2,000 refugees (mostly women) who had done forced labor in Germany and were fleeing the Russians. In 1945 the Ukrainian Relief Committee was formed in Brussels to defend the interests of Ukrainians and to provide material help for them. Its first chairman was M. Hrab. By 1947 the number of Ukrainians in Belgium increased to 10,000 as refugees from displaced persons camps in Germany accepted work under two-year contracts. On the completion of their contracts some of them returned to Germany, and some left for the United States and Canada. In 1948–9 there were over 200 members of the Ukrainian intelligentsia in Belgium. In 1955 there were about 5,000 Ukrainians in Belgium, and in 1977 there were about 4,000. Most of them are concentrated in the coal region of central Belgium, particularly in the provinces of Hainaut, Limburg, and Liège.

Ukrainian refugees in Belgium were remarkably active in 1946–9, when the Ukrainian Relief Committee had 29 branches. Prewar organizations such as the Society of Former Ukrainian Soldiers and the National Union of Ukrainian Students resumed their activities. Through the help of the Apostolic See and Archbishop I. Buchko, the Ukrainian Student Home was established in Louvain. In 1947 the Ukrainian Learned and Educational Society was formed. Other organizations – the Ukrainian Youth Association (SUM) with 21 chapters in 1949 and a summer camp in Ardennes since the 1970s, the Union of Ukrainians in Belgium (1949) with headquarters in Brussels, and the Union of Ukrainian Workers in Belgium – were established. A co-operative society, Dnipro, existed in the 1950s in Brussels; it had local branches elsewhere. To co-ordinate the activities of all organizations, the Supreme Council of Ukrainian Civic Organizations in Belgium was formed in 1948. It was chaired by Rev I. Bachynsky (until 1972), Rev H. Fukanchyk, and P. Zeleny. Since the 1950s these organizations have gradually become less active as many Ukrainians have emigrated across the ocean.

Since 1947 the Ukrainian Catholic church has constituted a separate general vicariate of the apostolic visitation for Ukrainian Catholics (the visitator in 1974–83 was Bishop M. Marusyn). Rev M. Van de Malle, Msgr J. Perridon, Rev H. Fukanchyk, and Rev D. Dzvonik have served as vicars-general. Since 1983 Ukrainian Catholics in Belgium have been administered by the exarch in France, Msgr M. Hrynchshyn.

The Ukrainian Autocephalous Orthodox church was headed in 1948–50 by Archbishop M. Khoroshy, then by Rev I. Bachynsky until 1972, and since then by Rev B. Khainevsky.

Since 1945 the periodical *Visti* has been published in Brussels by the Ukrainian Relief Committee, and the Catholic religious review *Holos Khrysta Cholovikoliubtsia* has been published in Louvain.

Besides those already named, the following individuals have been active in the Ukrainian community in Belgium: S. Bozhyk, Z. Vytiaz, Rev M. Hermaniuk, M. Demchuk, A. Kishka, Rev. I. Kit, O. Koval, M. Kohut, and V. Popovych.

S. Bozhyk

Belgorod (Ukrainian: Bilhorod). III-17. City (1979 pop 240,000) on the Donets River, formerly in northern Slobidska Ukraine. It is now the center of *Belgorod oblast in the RSFSR, which borders on the Kharkiv and Sumy oblasts. Bilhorod was first mentioned in medieval chronicles in 1237. From 1596 it was a fortress town and the center of a 300 km line of fortifications known as the Bilhorod Line. The town was often attacked by the Crimean Tatars. At the end of the 17th century the metropolitan's cathedral was located in Bilhorod, but it was abolished by Peter I. Its industry produces cement, building materials, machines, metal products, and food products.

Belgorod oblast. An oblast in the southern part of the central chernozem region of the Russian SFSR bordering on the Ukrainian SSR. In the past most of the oblast was a part of Slobidska Ukraine. Belgorod oblast was formed on 6 January 1954. Its area is 27,100 sq km, and its 1982 population was 1,316,000, of which 737,000 (56 percent) was urban and 579,000 (44 percent) was rural. The oblast has 18 raions, 9 cities, 18 towns (smt), and 303 rural soviets. According to the Soviet census of 1979, Russians constitute 94 percent of the population, and Ukrainians account for 4.8 percent. These statistics have been doctored, however, for the purpose of demonstrating that the political border between Ukraine and Russia coincides with the ethnic border. According to the generally reliable census of 1926, the territory of present-day Belgorod oblast was then inhabited by 642,000 Ukrainians (40.2 percent) and 948,000 Russians (59.4 percent) out of a total population of 1,596,000. Ukrainians were in the majority in 7 out of the 18 raions, Russians in 6, and the numbers were about equal in 5. The southwest and the southeast parts of Belgorod oblast are in Ukrainian ethnic territory. In the past these two parts belonged to the Slobidska Ukrainian regiments, while the central part of the oblast, including *Belgorod, was colonized mostly by Russians. The Ukrainian part of Belgorod oblast covers 14,500 sq km and in 1926 had a population of 770,000, of which 460,000 (59.7 percent) was Ukrainian and 307,000

(39.9 percent) was Russian. In 1926, 182,000 Ukrainians lived in the rest of the oblast.

The territory of present-day Bilhorod oblast was colonized in the 17th–18th century. After the Slobidska Ukrainian regiments were abolished by Catherine II in 1765, the present territory of the oblast was incorporated into Slobidska Ukraine gubernia, which was divided in 1835 among Kharkiv, Kursk, and Voronezh gubernias. After the Soviet occupation of Ukraine Kharkiv gubernia became part of the Ukrainian SSR, while Kursk and Voronezh gubernias became part of the Russian SFSR. In 1934 these gubernias were turned into oblasts. Belgorod oblast was formed out of the southern part of Kursk oblast and the outlying regions of Voronezh oblast.

(For the Ukrainian history, population, and economy of Belgorod oblast see *Slobidska Ukraine.)

V. Kubijovyč

Belgrade (Serbo-Croatian: Beograd). Capital (1981 pop 1,200,000) of the Socialist Federal Republic of Yugoslavia and major city of Serbia. There was a small Ukrainian colony in Belgrade before the First World War; the Prosvita and Ukrainska Hromada societies were active during the 1920s and 1930s. Today there are more than 1,000 Ruthenians (Ukrainians) in Belgrade, most of whom have come to the city from the *Bačka region. The Greek Catholic Parish of the Blessed Virgin was established in 1930, and Archbishop H. *Bukatko lived in Belgrade from 1961 to 1980.

Belinsky, Vissarion [Belinskij], b 11 June 1811 in Sveaborg, Finland, d 7 June 1848 in St Petersburg. Leading Russian literary critic of the 1830s and 1840s, who considered Ukraine to be culturally and historically a part of Russia. Consequently, Belinsky was opposed to the development of Ukrainian literature, since he believed it would have to limit itself to the description of peasants and would have no readers. However, Belinsky praised H. Kvitka-Osnovianenko's Ukrainian stories and admired Ukrainian songs and customs. His belief that Ukrainians could not develop a high culture and an independent literature (see his review of Y. Hrebinka's *Lastivka*, 1841) was most apparent in his attitude to T. Shevchenko, whose *Haidamaky* (The Haidamakas) he attacked in 1842 and on whose arrest he wrote a scurrilous letter to P. Annenkov. Soviet scholars (V. Spiridonov, F. Pryima) attempted to attribute to Belinsky a mildly favorable, anonymous review of Shevchenko's *Kobzar* in *Otechestvennyye zapiski* (1840). Two British scholars (V. Swoboda, R. Martin) refuted this claim. During the Soviet era Belinsky's attitude to Ukraine has been grossly distorted (I. Bass) in order to show his 'beneficent' influence on Ukrainian literature.

G.S.N. Luckyj

Belitser, Volodymyr [Belicer], b 30 September 1906 in Riazan, Russia. Biochemist, graduate of Moscow University (1930), full member of the Academy of Sciences of the Ukrainian SSR since 1957. In 1944 Belitser was appointed chairman of a department at the Institute of Biochemistry of the Academy of Sciences of the Ukrainian SSR. His works deal with glycolysis, proteins, etc. The protein blood substitute ВК-8, which was discovered by Belitser and K. Kotkova in 1948–51, is widely used in medicine.

Belladonna or Deadly nightshade (*Atropa belladonna*). A perennial grass of the Solanaceae family. It grows up to 2 m in height and prefers mountain meadows. It is very poisonous. Because of its use in medicine, belladonna is cultivated, mainly in the Poltava region and the Kuban. It also grows wild in the Carpathian Mountains and in Subcarpathia, as well as in the Crimean Mountains. Once known in Ukraine as 'the bad herb,' it was used in folk magic.

Belorussia (Belarus'). A country in the watershed of the upper Dnieper, Dvina, and Neman rivers populated mainly by Belorussians and called today the Belorussian Soviet Socialist Republic. The Belorussian SSR has a population of about 10 million and an area of 207,600 sq km. In 1939, before the annexation of western Belorussia (then part of Poland) by the USSR, the Belorussian SSR had an area of 126,000 sq km and a population of 5,570,000. The western boundaries of the country generally correspond to the ethnic borders (about 300,000 Belorussians live in Latvia; smaller numbers live in Lithuania and Poland). In the east, Belorussian ethnic territories are part of Pskov, Smolensk, and Briansk oblasts of the Russian SFSR. Because of the existence of transitional ethno-linguistic groups and the strong impact of Russification on Belorussians living outside their republic, it is difficult to define the Russian-Belorussian ethnic boundary.

In 1980 the Belorussian SSR had a population of 9,532,516, of which 79.4 percent was ethnically Belorussian, 11.9 percent was Russian (living mostly in the cities), 2.4 percent was Ukrainian (living mostly in the south), 4.2 percent was Polish, and 1.4 percent was Jewish (before the Second World War Poles and Jews each comprised 10 percent of the population). Belorussian ethnic territory is estimated at 240,000 to 300,000 sq km; the number of Belorussians on this territory is estimated to be 9 to 13 million.

The Belorussian SSR contains a sizable territory inhabited by Ukrainians. The ethnic boundary between Ukrainians and Belorussians is difficult to define, because there are, in Polisia and the northern Chernihiv region, transitional dialects that have scarcely been studied, and the population's national affiliation is unclear. The area south of the line Narva River–Pruzhany–Bereza-Kartuzka–Vyhonovske (Vyhanouskae) Lake–Liusyn (Liusina)–Turiv – which is west of Mozyr and north of Ovruch – and then the official Soviet Belorussian-Ukrainian and Russian-Ukrainian borders are generally accepted as the Belorussian-Ukrainian ethnic boundary. Southern Belorussia – the southern parts of Brest and Homel oblasts – has a Ukrainian population of up to one million, although this fact has been doctored in the Soviet censuses of 1959, 1970, and 1979. In the past the northern Chernihiv region (once the territory of the Starodub Cossack Regiment, then the northern counties of Chernihiv gubernia, and now the southern part of Briansk oblast in the Russian SFSR) constituted the Ukrainian-Belorussian-Russian borderland. It is now for the most part Russified.

In the course of its history Belorussia for a long time had firm and direct ties with Ukraine. According to the chronicles, northern Belorussia in the 10th century was ruled by Varangian dynasties that were unrelated to the Kiev princes who unified the East Slavic territories. At the end of the 9th century the *Krivichians of the Smolensk

region and the *Radimichians came under the rule of Kievan Rus'. In the 10th century Kiev gained control over the *Drehovichians. At the end of the century Volodymyr the Great conquered west Krivichian Polatsk (see *Polatsk principality) and introduced Christianity into Belorussia. Kiev was the seat of the common metropolitanate. Later, Volodymyr gave the principality to his son by the Polatsk Princess *Rohnida, Prince *Iziaslav Volodymyrovych. While the Ukrainian-Belorussian principalities of Smolensk and *Turiv-Pynske maintained close ties with the Kievan state, the descendants of Iziaslav, who ruled Polatsk-Minsk, particularly Vseslav (1044–1101), pursued a separatist policy. Belorussia developed a lively trade with Ukraine and Western Europe.

As the Belorussian principalities were subdivided and the Kievan state declined, the Lithuanian prince *Mindaugas (d 1263) annexed the Polatsk region and gained control of western Belorussia, known as *Chorna Rus', which included Navahrudak and Hrodna. This action provoked war between Prince *Danylo of Galicia-Volhynia and Lithuania, which ended with Danylo's annexation of Chorna Rus' in 1254. The struggle over Chorna Rus' continued, however, and under the reign of the Lithuanian prince *Gediminas (1316–41) this territory, as well as other Belorussian (Minsk) and Ukrainian lands (the Berestia land, Volhynia, the Turiv-Pynske land, and the northern Kiev region) was taken by Lithuania. Prince *Algirdas (1345–77) captured the Belorussian territories of Vitebsk and Smolensk and the Ukrainian territories of Novhorod-Siverskyi, the central Kiev region, and eastern Polisia. The unification of Belorussian and Ukrainian lands within the *Lithuanian-Ruthenian state sustained a common Ruthenian (Ukrainian-Belorussian) identity, tradition, and literary language and postponed the national differentiation of Ukrainians and Belorussians for several centuries.

The Belorussian and Ukrainian territories, which constituted nine-tenths of the Grand Duchy of Lithuania, were culturally dominant at first. At the time of their conquest of the Ruthenian lands the Lithuanians did not yet have their own literature. The 'Ruthenian language,' that is, the Belorussian-Ukrainian literary language, based on Church Slavonic, was the officially recognized language of state acts, diplomatic correspondence, legislation, jurisprudence, and cultural life to the middle of the 16th century. The Lithuanian princes used the *Ruskaia Pravda*, which had an influence on the legislation of the Lithuanian-Ruthenian state, codified in the *Sudebnik* (Code of Law) of 1468. The Lithuanian Statute was written in Ruthenian. The Belorussian (known as Lithuanian or West Ruthenian) chronicles of the 15th–16th century continued the tradition of the Ukrainian-Kievan chronicles.

Belorussian architectural monuments of the 12th–13th century, the frescoes of the Polatsk churches, jewelry, etc testify to Belorussia's close association with the traditions of Kievan Rus'. The Kiev metropolitanate administered religious life in both Ukraine and Belorussia. Thus, for example, in 1149–54 the metropolitan was *Klym Smoliatych of Smolensk. When a separate Moscow metropolitanate was established, the Russian Orthodox church was finally separated from the Ukrainian-Belorussian church. In the 16th century the Kiev metropolitans resided with increasing frequency on Belorussian territory in Vilnius

and Navahrudak rather than in Kiev, which was exposed to Tatar attack.

After the Union of *Krevo in 1385, and particularly after the Union of *Lublin in 1569, Polish influence grew in Lithuania. Although almost all the Ukrainian territories belonging to the Grand Duchy of Lithuania were transferred to Poland by the Union of Lublin, while the Belorussian lands stayed with the duchy, Ukrainian-Belorussian ties remained close. The Belorussian Orthodox brotherhoods in Mahiliou, Orsha, Vitebsk, Niasvzh, Navahrudak, etc, together with the Ukrainian brotherhoods, resisted Polish and Catholic influences. Books printed in Zabludiv (on the Ukrainian-Belorussian border), Vilnius, Yevie (Vevis) near Trakai in Lithuania, Kuteinsky Monastery near Orsha, Mahiliou, etc were known throughout Ukraine. Many Belorussians studied at the Ostrih Academy, the Lviv Dormition Brotherhood school, and the Kievan Mohyla Academy. The religious polemical literature was common to Ukrainians and Belorussians whether it was written by Orthodox, Protestant, or Catholic authors. At the end of the 15th century and particularly in the 16–17th century, translations of religious and secular literature became widespread in Belorussian and Ukrainian territories. Because Ukrainians and Belorussians shared a common culture and literature, it is sometimes difficult to classify a given work as belonging to one or the other people.

Since the grand duke's power was centered in Navahrudak in Belorussia (or Chorna Rus') or in Vilnius, which is near Belorussia, Belorussia had to some extent a cultural advantage over Ukraine until about 1580. F. *Skoryna, S. *Budny, V. Tsiapinski, and others were active in Belorussia, while the cultural renaissance had not yet spread widely in Ukraine. Developments such as the founding of the Ostrih Academy in 1577–80, the organization of the Lviv Dormition Brotherhood (1586), Metropolitan M. *Rahoza's re-establishment of the Orthodox metropolitan residency in Kiev in 1589, the founding of the Kievan Mohyla Academy in 1632 (its prefect was the Belorussian S. *Kosiv and its prominent Belorussian graduate was S. *Polotsky), and the rapid development of the Cossacks at the end of the 16th century shifted the focus of the shared cultural-national life of the Ruthenian culture from Belorussia to Ukraine. After the Church Union of *Berestia in 1596 divided the Kievan metropolitanate between the Uniate and the Orthodox church, the former was dominant in Belorussian and northwestern Ukrainian territories in the 17th century, while the latter had its seat in Kiev and controlled the eparchy of Mstsislau in Belorussia as well as Belorussian Orthodox monasteries in Vilnius, Slutsk, Orsha (Kuteinsky), etc. Most of the members of the *Basilian monastic order, which was a champion of the Uniate church, were of Belorussian descent – Bishop Ya. Susha, P. Ohilevych, and others – and the order's most active monasteries were in Vilnius, Suprasl, Zhyrovichy, Polatsk, and Minsk.

The Cossack rebellions in Ukraine sent reverberations through Belorussia. In 1590 Cossacks took part in the Belorussian rebellion near Mahiliou and Bykhau, and in 1596 Belorussian rebels collaborated with S. *Nalyvaiko. Cossack units fought on the side of Belorussian peasants in 1601–3. In 1648 the *Cossack-Polish War spread through almost all of Belorussia. Numerous rebel groups were organized and fought alongside the Cossack troops

in 1649 during I. Holota's operations at Rechytsa, S. Podobailo's activity, and M. Krychevsky's battle of Loev. In 1654 I. *Zolotarenko, the colonel of Nizhen, gained control of southeastern Belorussia and set up the Cossack administrative system under the sovereignty of the Zaporozhian Host. The *Belorussian Regiment, which encompassed the counties of Chausy (Chavusy), Mahiliou, Mstsislau, and Bykhau, was commanded after Zolotarenko's death by B. Khmelnytsky's son-in-law, I. Nechai, in 1655-9. Nechai bore the title of acting hetman, and many of his officers were Belorussian.

Yet, Belorussian Cossacks had their own national goals. They were led by an Orthodox nobleman from the Mogilev region named K. *Paklonski, who maintained ties with the government of Hetman Ukraine and had lived in Ukraine for a time. Paklonski's aim was to create a Belorussian Cossack state with the help of Ukraine or Muscovy. He fought off the Polish-Lithuanian armies in 1654, first with Zolotarenko's aid and then with Russian support. The tsar gave him the title of colonel of Belorussia. But in the struggle 'of the two Rus'es for the third Rus', there was no room for a separate Belorussian state. Hetman B. Khmelnytsky did not support Paklonski's plans, and the violence inflicted on the Belorussian population by Muscovite troops forced Paklonski to turn to the Lithuanians and the Belorussian Orthodox clergy and burghers for help against Moscow.

In this situation the Belorussian autonomists, particularly on the Ukrainian-Belorussian border, preferred to come under the rule of the Zaporozhian Host (in the northern Chernihiv region) or under its protection (in the Bykhau, Pynske, and Slutsk regions). Members of the nobility and wealthy burghers from eastern Belorussia migrated in increasing numbers along the old trade routes to the Starodub region. In Chyhyryn on 20 June 1657 a delegation from the Pynske region signed a treaty of alliance and took an oath of loyalty to the Zaporozhian Host and its hetman. Eight days later Khmelnytsky issued a proclamation binding himself and his successors to protect the autonomy of the Pynske region and the privileges of its nobility and the Catholic church and, if necessary, to provide military help for the defense of the region. The hetman and the Zaporozhian Host established a similar protectorate over the principality of Slutsk at the request of its ruler, Prince B. Radvilas (Radziwiłł) (B. Khmelnytsky's letter of 17 November 1656). On 15 March 1657 Khmelnytsky declared the town of Staryi Bykhau under the 'authority and protection of the Zaporozhian Host.' Hetman I. Vyhovsky continued Khmelnytsky's policies towards Belorussia. He had family ties with the Belorussian nobility: his wife, O. Stetkevich, was the daughter of B. Stetkevich, the castellan (governor) of Navahrudak, and several of Vyhovsky's relatives were colonels in Belorussia. The Treaty of Hadiache, signed by Ukraine and Poland in 1658, guaranteed the rights of the Orthodox church in Belorussian lands and promised to establish one of two academies of the Great Ruthenian Principality in Belorussia. Although the treaty was never realized, the tradition of Ukrainian-Belorussian territorial unity persisted in Ukraine to the time of I. Mazepa, who, according to the 1708 treaty with S. Leszczyński, was to accept the voivodships of Vitsebsk and Polatsk under his control. In the 1760s Prince Liubetsky (Pynske delegate to the Sejm) proposed that the Treaty of Ha-

diache be reinstated in the Ukrainian and Belorussian territories of the Polish Commonwealth.

According to the terms of the peace treaty of *Andrusovo in 1667 and the *Eternal Peace of 1686, Belorussia was to remain part of the Polish Commonwealth, except for the Smolensk region, which was annexed by Muscovy. The dismemberment of Belorussia and the separation of its main part from the Cossack state inhibited Belorussian-Ukrainian relations, particularly in the political realm. But they persisted, nevertheless. The nobility, burghers, and commoners of Mstsislau province petitioned Hetman D. *Mnohohrishny in 1671 to take the province under his rule. In the following year a similar petition was submitted by Homel, Mazyr, and Rechytsa counties. Mnohohrishny accepted these petitions, but the Muscovite government would not approve them. In 1684 Cossack forces, led by Y. Samoilovych, the colonel of Starodub, occupied a large part of Mstsislau province and introduced the Cossack system of administration. But Muscovy ordered the hetman to withdraw his Cossacks from these lands. In 1690 V. Krasynsky, the head of Propoisk (Prapoisk) and Homel counties, proposed to Hetman Mazepa that he incorporate all of Belorussia into the 'Little Russian Country,' beginning with the Homel and Propoisk territories. Mazepa, who was a friend of Krasynski, supported the proposal, but Muscovy again rejected it on the grounds of its 'eternal peace' with Poland. The movement for the annexation of Belorussia, or at least its eastern part, to the Hetman state continued and surfaced during S. Pali's rebellion against Poland in the 1690s, then again at the beginning of the 18th century when Ukrainian Cossacks helped Belorussian burghers and peasants against the nobility and the Polish state, and also in the 1740s in Krychau county of Prince J. Radvilas during a rebellion led by V. Vashchila, who called himself the 'grandson of Bohdan Khmelnytsky' and adopted the title of 'Ataman and Great Hetman' in 1744.

The economic relations between Hetman Ukraine and the Belorussian lands were more important than political relations. Trade between the two countries continued, particularly the transit trade with the Baltic countries, although Russia and Poland put up various obstacles to it, and the landowning magnates and gentry imposed various tariffs and restrictions.

Religious and cultural relations were even more important. The Belorussian Orthodox church, headed by the archeparchies of Mahiliou and Mstsislau, came under the jurisdiction of the Russian synod in the 18th century, but had ecclesiastical-religious ties with the Kiev metropolitanate, which was in charge of the monasteries on Belorussian territory. In church matters only the Smolensk region was under the direct control of St Petersburg. Many of the Belorussian Orthodox bishops and higher clergy were graduates of the Kievan Mohyla Academy and frequently of Ukrainian origin, as, for example, Archbishop H. *Konysky, who was born in Nizhen. These circumstances made for even closer ties between the Belorussian Orthodox church and Kiev. Many clergy in the northern region of the Hetman state were Belorussian. The Belorussian Uniate church was under the jurisdiction of the Kiev Uniate metropolitanate (in the second half of the 18th century the metropolitan's residence was at Radomyshl in the Kiev region). Belorussians played a role equal to that of Ukrainians in the Uniate hierarchy and in the Basilian order.

Cultural relations between Ukraine and Belorussia in the 18th century were not limited to the ecclesiastical sphere. The children of Ukrainian nobles and Cossack officers (including the Isrytsky, Novytsky, and Poletyka families) also studied in Belorussia, at the Jesuit colleges in Polatsk and Orsha, at Vilnius University, and elsewhere. There were ties between the two countries in the realm of art, particularly in architecture, painting, and engraving. Western influences in architecture and engraving reached Ukraine through Vilnius and Belorussia. The famous Ukrainian engravers of the Mazepa period, O. and L. Tarasevych, who received their professional training in Western Europe, were born and worked for some time in Belorussia. Some Ukrainian musicians of the 18th century were of Belorussian origin (for example, the composer A. Rohynsky). In general there were close family ties and contacts between the Ukrainian nobility, Cossack officers, and the Belorussian nobility. Many Left-Bank nobles and Cossack officers were of Belorussian origin. Hetman P. Orlyk serves as a prime example of this.

The religious and cultural ties between Ukraine and Belorussia helped the latter to withstand the pressures of Polonization, which increased beginning in the late 17th century (for example, the 1696 prohibition of the Ruthenian language in the courts, persecution of the Orthodox church).

The relations between the Hetman state and the Smolensk region, which became part of the Russian Empire in the 18th century, were particularly enduring. They were all the more important because they were not limited to cultural or economic interests but repeatedly expanded into political relations (see *Smolensk nobility).

After the partitions of Poland in 1772–95 all Belorussian territories were annexed by Russia. The policies of the Russian government in Belorussia were inconsistent. Catherine II granted estates confiscated from magnates to Russian and sometimes to Ukrainian nobles, filled administrative and judicial posts with Russian and Ukrainian (Hetman) officials while transferring Belorussian officials to Ukraine or Russia, and restricted the rights of the Uniate church. Under Paul I, and particularly under Alexander I, who considered Belorussia as well as Right-Bank Ukraine to be Polish lands, the social and cultural supremacy of the Polish and Polonized Belorussian nobility was reinstated, and the Uniate church was tolerated for a period. During the reign of Nicholas I, however, and particularly after the Polish rebellion of 1830–1, the estates of the rebels were confiscated, while the rebels were exiled to Russia. Polish schools were closed, and in 1839 the Uniate church in Belorussia was abolished. In 1840 Nicholas prohibited the use of the name Belorussia, replacing it with 'the Northwest land' (*Severno-zapadnyi kraj*). Henceforth Moscow conducted a policy of Russification in Belorussian territories similar to that in Ukraine. The restrictions and prohibitions against the Ukrainian language introduced in 1863 and 1876 were applied also to the Belorussian language.

The Belorussian national and cultural renaissance of the 19th and early 20th centuries was connected with the Ukrainian national movement. *Eneida navyvarat* (The *Aeneid* Inside Out), written in the first quarter of the 19th century by an unidentified author, shows the influence of I. Kotliarevsky's *Eneida*. From 1839 T. Shevchenko had ties with the literary circle of the Belorussian writer Y.

Barshcheuski in St Petersburg. The poet F. Bahushevich (1840–1900), who lived for some time in Ukraine and graduated from the Nizhen Lyceum, was influenced by Shevchenko's writing. In 1881 M. Drahomanov published a Belorussian translation of S. Podolynsky's *Pro bahatstvo i bidnist'* (On Wealth and Poverty) in Geneva. In 1885 I. Franko and M. Pavlyk drew up plans for a Ukrainian-Polish-Lithuanian-Belorussian brotherhood. In 1889 an illegal leftist students' organization – the Circle of Polish-Lithuanian, Belorussian, and Little Russian Youth – was set up under the leadership of A. Hurynovich, a Belorussian and a translator of Franko. In the 20th century various noted Belorussian writers have translated the works of Shevchenko. Ya. *Kupala (1882–1942), one of the most prominent Belorussian poets and proponents of the national-cultural renaissance, was not only influenced by Shevchenko's poetry, but was the first translator of Shevchenko's works and dedicated several poems to Shevchenko and the Ukrainian people. Some influences of Shevchenko's writings can be found in Ya. *Kolas (1882–1956), another prominent Belorussian writer, as well as in A. Tsiotka (1876–1916), who in the 1900s lived as an émigré in Galicia. One of the first translators of Ukrainian literature into Belorussian was A. Hurlo (1892–1928). The poet M. *Bahdanovich (1891–1917) translated Ukrainian poetry. M. Starytsky's troupe was the first Ukrainian theatrical group to visit Belorussia, in the 1890s, and it was followed by other groups. Belorussian amateur troupes in the prerevolutionary period often staged plays by Ukrainian playwrights.

Scholarly contacts between Belorussia and Ukraine, particularly in history, historiography, church history, the history of literature, and folklore were quite lively in the 19th and at the beginning of the 20th century. Ukrainian scholars studied Belorussian problems, while Belorussian scholars worked in Ukraine. The following Ukrainian scholars contributed to the study of Belorussia: the historians V. Antonovych, M. Hrushevsky, O. Levytsky, M. Vasylenko, O. Hrushevsky, V. Danylevych, O. Yefymenko, O. Terletsky, and D. Doroshenko; the historians of law M. Vladimirsky-Budanov, F. Leontovych, M. Maksymeiko, M. Yavynsky, Y. Malynovsky, and F. Taranovsky; the church historians S. Holubiev, M. Petrov, F. Titov, and V. Bidnov; the archeologists K. Kharlampovych and V. Zavitnevych; the historian of literature P. Vladymyrov; the philologists A. Krymsky and I. Svientsitsky (author of the first history of Belorussian literature); and many others. Some scholars, such as the historians M. Dovnar-Zapolsky and P. Holubovsky and the church historians P. and S. Ternovsky, were of Belorussian origin. The Galician historian Ya. Holovatsky was chairman of the Vilnius Archeographic Commission. The Kiev Archeographic Commission published materials on the history of Belorussia. This collaboration between Ukrainian and Belorussian scholars continued after the revolution of 1917.

In the 19th and at the beginning of the 20th century there were ties in the field of art, particularly painting, between Ukraine and Belorussia. The Belorussian painter V. Bialynitski-Birulia (1872–1957) studied in Kiev with M. Murashko and worked in Ukraine for an extended period.

Before the First World War contacts were established between I. Lutskevich, a participant in the Belorussian

renaissance, and Metropolitan A. Sheptytsky, who in 1907 visited Belorussia.

The revolution of 1917 led to the creation in March 1917 of the Belorussian National Rada (patterned after the Ukrainian Central Rada) in Minsk. The Rada demanded autonomy and in December 1917 formed the first government. But first the Bolsheviks and then the Germans, who occupied the country, did not permit this government to assume power. The border between Ukraine and Belorussia became an issue. The Central Rada extended its activities in 1917 to the ethnically Ukrainian Berestia and Pynske regions as well as to the predominantly Belorussian regions of Mazyr and Rechytsa. Under the Hetman government of P. Skoropadsky the Belorussian Homel region was annexed by Ukraine for strategic reasons. When the Belorussian National Rada proclaimed an independent Belorussian National Republic in March 1918, the Hetman government granted it recognition. Belorussian consulates were opened in Kiev, Odessa, and Rostov, and the Belorussian Trade Chamber was set up in Kiev. Even prior to 1917 many Ukrainian and Belorussian circles proposed a federation of the two countries. M. Hrushevsky, in particular, was a strong advocate of a Black Sea–Baltic federation consisting of Ukraine, Belorussia, and Lithuania.

On 1 January 1919 the Bolsheviks proclaimed a Belorussian Soviet Republic federated with Russia. After the Peace Treaty of Riga on 18 March 1921, Western Belorussia and Western Ukraine were annexed by Poland. Ukrainian-Belorussian co-operation was particularly evident in 1922 and 1928, when the two peoples, together with the Jews and the Germans, formed common blocs of national minorities during elections to the Polish Sejm and Senate. The blocs were successful because of the solidarity among the participants. The parliamentary Ukrainian-Belorussian Club was formed in 1923 and functioned for some time. In 1929 a Ukrainian-Belorussian committee was set up to work out a common strategy towards the Polish government and the Polish parties. In 1930 the only independent Belorussian representative to the Sejm, Yaremich, was elected as part of the Ukrainian caucus. Ukrainians and Belorussians also worked closely together in student organizations in Warsaw and Vilnius and at the Greek Catholic Theological Academy in Lviv, which also trained Belorussian priests. In the cities of central Poland, where there were few Belorussians, the Belorussians belonged to Ukrainian civic organizations.

In Kaunas, the capital of Lithuania, Ukrainians and Belorussians organized common cultural events. Belorussian students, organized into a separate union, studied at the Ukrainian Husbandry Academy in Poděbrady, Czechoslovakia.

In the Soviet era, Ukrainian-Belorussian relations have been mainly in the fields of culture and scholarship. Since the 1920s Belorussian theater groups have toured Ukraine and Ukrainian groups have toured Belorussia. Exchanges among writers were frequent. The suppression of the Belorussian literary group *Uzvyshsha* (1926–30), whose ideologists included U. Dubouka, Ya. Pushcha, and A. Babareka, coincided with the Soviet campaign against **VAPLITE*. The charges against both organizations were the same: nationalism, a Western orientation, and rejection of Moscow's influence. The Soviet persecution of the Belorussian 'national democrats' and Ukrainian political and cultural leaders took place at the

same time (1929–30) and had the same dire consequences for both nations.

The following Belorussian authors are among those who have been translated into Ukrainian: F. Bahushevich, Ya. Kupala, Ya. Kolas, K. Krapiva, K. Chorny, A. Kulashou, I. Shamiakin, Ya. Bryl, P. Brouka, M. Tank, V. Taulai, P. Panchanka, and H. Pestrak. In 1929 the first Soviet anthology of Belorussian poetry was published in the Ukrainian SSR under the title *Nova Bilorus'* (The New Belorussia). Further anthologies were published in 1948, 1969, and 1971. Collections of Belorussian stories, songs, and humor have also been published in Ukraine. Ukrainian poets in Ukraine, such as P. Tychyna, M. Rylsky, and V. Sosiura, and those abroad, such as L. Poltava, I. Kachurovsky, Y. Slavutych, and B. Oleksandriv, have translated Belorussian literature. The works of T. Shevchenko, P. Tychyna, M. Rylsky, M. Bazhan, A. Malyshko, O. Honchar, S. Tudor, N. Rybak, V. Mynko, Yu. Zbanatsky, V. Bychko, N. Zabala, O. Donchenko, and others have been published in Belorussian. A large anthology, *Ukrainskaia savetskaia poeziia* (Ukrainian Soviet Poetry), has appeared in Belorussian. From 1917 to 1966 many Belorussian books were translated and published in Ukraine, and 114 Ukrainian books were translated and published in Belorussia. In the 'liberal' period of 1928–32, 20 Belorussian books were published in Ukraine, and 43 Ukrainian books were published in Belorussia.

Direct scholarly ties between Ukraine and Belorussia expanded after the revolution, particularly in the 1920s. The main institutions involved were the Ukrainian and the Belorussian academies of sciences. The contacts between the academies, the participation of their members in scientific conferences, particularly those dedicated to the anniversaries of D. Bahalii and M. Hrushevsky, and their collaboration on publications were quite extensive. In 1929 the Belorussian historian U. Ihnatouski and the poet Ya. Kupala were elected to the All-Ukrainian Academy of Sciences. The Ukrainian linguist P. Buzuk moved to Minsk in 1925 and became director of the Institute of Linguistics of the Belorussian Academy of Sciences. Among the most active members of the Commission for the Study of the History of West Ruthenian and Ukrainian Law of the All-Ukrainian Academy of Sciences, chaired by M. Vasylenko, were the Belorussians L. *Okinshevich and S. *Borysenok. The former's works were important contributions to the history of Ukrainian law. M. Tratseuski, a Belorussian, worked at the Institute of Demography of the All-Ukrainian Academy of Sciences. The academy published *Narysy z istorii kul'turnykh rukhiv na Ukraïni ta Bilorusi v XVI–XVIII vv.* (Essays on the History of Cultural Movements in Ukraine and Belorussia in the 16th–18th Century, Kiev 1929) by A. Savich, who was of Belorussian origin. The Soviet purge of Ukrainian and Belorussian scholars in the 1930s put an end to contacts and relations between them for a long time. These relations were renewed only after the war, both in the Ukrainian SSR (eg, D. Pokhylevych's works on the socioeconomic history of Belorussia) and abroad (eg, L. Okinshevich's and G. Shevelov's works on the Ukrainian side and Yan Stankevich's on the Belorussian side).

Economic relations between Ukraine and Belorussia date back to the distant past. Ukraine imported, via the Dnieper and its tributaries, lumber and wood products from Belorussia and exported grain and, since the 19th

century, sugar to Belorussia. Since the second half of the 19th century the export of coal and ferrous metals from Ukraine has expanded. Today the Ukrainian SSR supplies Belorussia with almost all its coal, rolled ferrous metals (727,000 t in 1972), natural gas, pipes, most of its cement, buses and trucks, cranes, boilers, metal-working instruments, chemical products, building stone, as well as other products. Among the products Belorussia sells Ukraine are potassium fertilizer (880,000 t in 1979), potato harvesters, transport trucks, machine tools, transformers, and electric motors.

According to the 1926 Soviet census, 34,900 Ukrainians lived in Belorussia, accounting for 0.7 percent of the population. In 1959 the figure was 150,000 or 1.8 percent, in 1970, 190,800 or 2.1 percent, and in 1979, 230,985 or 2.4 percent of the country's population. Most Ukrainians live in the cities: 64.7 percent in 1959 and 78.8 percent in 1970. In 1979, 100,192 Ukrainians or 43.4 percent gave Ukrainian as their mother tongue, 117,844 or 51.0 percent gave Russian, and 12,919 or 5.6 percent gave Belorussian. There were 45,668 Ukrainians who used in Ukrainian as their second language, 93,993 who used Russian, and 27,006 who used Belorussian. These figures indicate that the Ukrainian population, particularly in the cities of Belorussia, is becoming Russified.

According to 1979 statistics, Ukrainians are scattered through all the oblasts of Belorussia. The Ukrainians are a small minority even in those oblasts that belong largely or partly to formerly Ukrainian ethnic territories: in the Brest oblast, there are 40,600 Ukrainians (3 percent); in the Homel oblast, 54,000 (3.4 percent). The real number of people of Ukrainian origin in Belorussia is estimated at 800,000–900,000. After the incorporation of a purely Ukrainian part of Polisia into Belorussia in 1939, Soviet statisticians have manipulated the data to prove that the official boundaries of Ukraine and Belorussia coincide with the ethnic borders.

Neither the Ukrainians nor their language have any rights in Belorussia. There are no Ukrainian schools, presses, or cultural institutions. These factors facilitate the Belorussification and, even more, the Russification of the Ukrainians.

Belorussian Regiment. An administrative-territorial and military entity of the Hetman state, established in June 1654 under the command of Acting Hetman I. Zolotarenko in Chavusy (and known also as the Chavusy or Mahiliou Regiment). The regiment's territory included the counties of Mahiliou, Mstislau, and Bykhau. After Zolotarenko was killed in 1655, the regiment was commanded by Col I. *Nechai. The regiment was dissolved by Hetman Yu. Khmelnytsky in November 1659, and the region became part of a Muscovite voivodeship.

Belorussians in Ukraine. Belorussians are scattered throughout the Ukrainian SSR. Most of them have come in the last few decades and settled in the larger cities and industrial regions. According to the 1926 census there were 76,000 Belorussians (0.4 percent of the population) within the Ukrainian SSR's boundaries at that time, and 48 percent of them lived in cities. The Crimea had 3,800 Belorussians, while northern Caucasia had 50,000. The largest concentrations of Belorussians were in Kiev with 5,400, in Dnipropetrovske with 4,300, in Krasnodar with 3,000, in Odessa with 2,500, in Dniprodzerzhynske with 2,100, in Kharkiv with 1,500, and in Donetsk with 1,400. Fifteen thousand lived in the Donbas. There were several Belorussian peasant colonies in the steppes, most of which were established in the first half of the 19th century: Maliivka, Barshevo, and Yavkivno in the Mykolaiv region, and Surske and Lytvoske in the Dnipropetrovske region. The Belorussians assimilated quickly in Ukraine, as is evident from the fact that of 76,000 Belorussians only 16,000 used Belorussian as a working language.

The number of Belorussians in the Ukrainian SSR increased to 291,000 in 1959 (0.7 percent of the total population), 386,000 in 1970 (0.8 percent), and 406,100 in 1979 (0.8 percent), owing to large-scale immigration to the industrial regions of Ukraine, the Crimea, and the large cities. In 1970, 76.6 percent of the Belorussians in Ukraine lived in urban areas. Their largest concentration in 1970 was in the Donbas with 109,368 (114,000 in 1959), the Dnieper Industrial Region with 63,000 (11,600 in 1926, 46,000 in 1959), the Crimea with 39,700 (3,800 in 1926 and 21,700 in 1959), and Kiev with 17,500 (5,400 in 1926 and

13,200 in 1959). But Belorussians can be found in almost every oblast. They are fewest in Western Ukraine.

Although most of the Belorussians have come to Ukraine in the last few decades, they are Russified to a great extent. In 1970 most of them (56 percent) used primarily the Russian language, and only about 9 percent used Ukrainian. In 1979, of 406,100 Belorussians in Ukraine, 142,700 gave Belorussian as their mother tongue and 55,000 gave Belorussian as their second language. There were 227,300 who gave Russian as their mother tongue. Only 36,000 gave Ukrainian. In 1970, 317,100 Belorussians (82 percent) used Russian in everyday speech or spoke it fluently; only 199,000 (52 percent) used Belorussian in everyday speech, and only 87,700 (23 percent) used Ukrainian.

V. Kubijovyč

Belorussian-Ukrainian linguistic contacts. These go back to prehistoric times. Although Ukrainian is not part of the Baltic linguistic group, while Belorussian has, since ancient times, exhibited linguistic traits similar to those of that group, the two languages nevertheless have much in common in their vocabularies, accentuation, and phonetic and morphological developments. These common elements have resulted only in part from borrowings; they stem also from periods of common development, conditioned by historic circumstances.

Linguistic and some archeological data indicate that in prehistoric times three basic dialectal groups existed on the territory of present-day Ukraine and Belorussia: the south Ukrainian group, the north Belorussian group, and, between them, a third group in the area between Kiev and Minsk which may conditionally be called the Kievo-Polisian dialectal group. Among the specific developments of the last group are the change of the unstressed ξ into e , the dispalatalization of r' , and the preservation of the cluster kv before \dot{e} , sai . This group developed separate linguistic traits probably during the era of Khazar domination over the Polianian, Siverianian, Viatician, and other tribes and still later into the era of the Kievan state. Some of the changes occurring during this period are: (1) the change of \dot{e} into the diphthong ie ; (2) the palatalization of h , k , and x before $ы$ (12th century); (3) the diphthongization of e and o in newly closed syllables; (4) the appearance of new vowels in syllables with sonorants (of the type $ir\dot{z}a$, $kryvavyj$, from the old $r\dot{z}a$, $kr\dot{v}av-$); (5) the change of \dot{z} and \dot{b} before j to $y(i)$ (except in the genitive plural); (6) the alternation of i and j , and u and v ; (7) somewhat later, the change of g into h , and, still later (in the 15th century), the change of l after o from \dot{z} into w . Some of these features extended beyond the limits of the Kievo-Polisian dialectal group to affect all Belorussian or all Ukrainian dialects, primarily as a result of the 'bilateral erosion' of the Kievo-Polisian dialectal group between the Ukrainian and the Belorussian languages, a process that was basically completed at the time of the existence of the Grand Duchy of Lithuania.

During the period of the Lithuanian-Ruthenian state the literary language of Kievan Rus' (with its Kievan linguistic base) influenced the literary language of the Grand Duchy of Lithuania, while, at the same time, the influence of the spoken Belorussian language spread far to the south. *Akanje*, a feature of Belorussian, became prevalent in northern Polisia, and, in individual words (of the type *bahatyj*, *harjačyj*), spread as far down as the

then current boundary between Lithuania and Poland (according to O. Kurylo). The influence of the Belorussian language on the literary language, particularly in its official and legal genres, was particularly strong. The resulting 'Ruthenian' language was based on Belorussian, but certain phonetic substitutions were admitted in it in various localities (most obviously in the case of \dot{e} : it was not differentiated from e in North Belorussian, was differentiated only in the unstressed position in the Polisian area, and preserved its identity in South Ukrainian). In the spoken language the process of bilateral erosion of the Kievo-Polisian dialect group proceeded in such a way that its northern dialects, under the powerful influence of such cultural and administrative centers as Polatsk, Navahrudak, and Vilnius, progressively lost their ties with the southern and were gradually subsumed into the orbit of dialects north of Minsk. Contemporary Belorussian arose out of the synthesis of the original dialects north of Minsk (the Palotsk-Smolensk group) and the northern dialects of the Kievo-Polisian group. At the same time, the ties of the southern dialects of the Kievo-Polisian group with the south grew stronger; this led eventually to the creation of the Ukrainian language in the modern sense of the term.

During the Cossack period and the establishment of the Hetman state in the 17th century, there occurred a new wave of Ukrainian influences on the Belorussian literary and spoken language. In the 19th and 20th centuries the Belorussian literary language adopted certain Ukrainianisms (found, for example, in the writings of M. Bahdanovich).

Synchronically, common Ukrainian-Belorussian traits are numerous and originate from various historic periods. A large percentage of them are of Common Slavic origin (such features are generally seen in other Slavic languages as well). Other common traits came about as a result of the erosion of the Kievo-Polisian group of dialects between Ukraine and Belorussia. It may be assumed that borrowings, in the narrow sense of the word and primarily from the Ukrainian side, began in the period of Kievan Rus'; however, a scarcity of Belorussian sources from this time makes it impossible to identify them precisely. During the period of the Lithuanian state the Ukrainian language was strongly influenced by Belorussian. This influence is now evident both in Lithuanianisms in the Ukrainian language (which entered Ukrainian through Belorussian), such as *kiuś* (scoop), *klunja* (threshing barn), *putrja* (cooked barley), *skyrta* (stack, rick), *tvan'* (slime), *žlukto* (vat), and in direct Belorussianisms, which are nevertheless difficult to identify as such because of the proximity of the two languages. Some of them are apparent because of their Belorussian phonetic features, for example, *bad'oryj* (cheerful), *bucim* (as though), possibly *d'ohot'* (tar) – the Ukrainian forms would have been ^+bodryj , ^+bucym , $^+dehot'$; but frequent phonetic and morphological substitutions make this type of borrowing difficult to identify (eg, *veremija* [tumult] from the Belorussian $^+varmija$ [army]; the surname *Ševel'*, which is probably based on the Lithuanian place name *Šiauliai*, or on *šaulys* [shot]).

G.Y. Shevelov

Belousov, Volodymyr, b 25 July 1895 in Kursk, d 25 May 1971 in Kharkiv. Pediatrician, corresponding member of the USSR Academy of Medical Sciences. From 1938

to 1965 Belousov was a professor at the Kharkiv Medical Institute. He published works on the treatment of tubercular meningitis, the preparation of diets for schoolchildren, the treatment of children at health resorts, and other medical topics.

Beltsi [Bel'ci] (Rumanian: Bălți). vi-8. City (1976 pop 121,000) on the Reut River in northern Bessarabia, under the administration of the Moldavian SSR. Under the Russian Empire and Rumanian rule Beltsi was a county town, located on Rumanian ethnic territory, which contained a sizable minority of Ukrainians (14.5 percent in 1941). In 1920 an internment camp for soldiers of the Army of the UNR was located there.

Beluga (*Huso huso*; Ukrainian: *biluha*). A valuable commercial fish of the sturgeon family. Belugas are over 4 m in length and reach up to 1,000 kg in weight. They live in the Black and Azov seas and in the spring lay their eggs in the limans. In the 18th century belugas swam up the Dnieper River as far as the Prypiat and Desna rivers.

Belz in 1428; an engraving

Belz. III-5. City (1968 pop 3,000) on the Solokiiia River in Sokal raion, Lviv oblast. Belz was first mentioned in the chronicles under 1030, when it was an appanage of the principality of Galicia-Volhynia. As a fortified town, Belz withstood several Polish sieges. In 1388 it was captured by the Poles, and in 1462–1772 it was a voivodeship center. With the first partition of Poland Belz came under Austrian rule in 1772. In the first half of 1919 the Western Ukrainian and Polish armies fought several battles there. In 1919–39 it was a town belonging to Poland. In 1939 it was occupied by the German army and became part of the Generalgouvernement. In 1944 Belz was taken by the Soviet army and belonged to Poland until 1951 when, according to a treaty between Poland and the Soviet Union, it was incorporated into the Ukrainian SSR.

Belz land. A historical region beyond the Buh River and the Sian River, extending from Hrabovets and Horodlo in the north to Liubachiv and Buzke in the south. In 1170 this territory separated from the Volodymyr principality in Volhynia to become the Belz principality. It was ruled by princes Vsevolod Mstyslavovych (1170–95) and Oleksander Vsevolodovych (1195–1234), who waged war against Danylo Romanovych of Halych. Danylo captured Belz principality and incorporated it, along with Kholm principality, into Halych principality in 1234. From the end of the 14th century to 1462 the Belz principality was ruled by the princes of Mazovia. From 1462 to 1772 the territory was a voivodeship in Poland and was divided into four counties: Belz, Buh, Hrabovets, and Liubachiv.

After the partition of Poland in 1795 the southern part of Belz land, including the town of Belz, was annexed by Austria and became part of Galicia. The northern part belonged to the Polish Kingdom and constituted the southern part of the Kholm region.

Belza (Doroshchuk), **Ihor**, b 26 January 1904 in Kielce, Poland. Musicologist, composer, and pedagogue. A graduate of the Kiev Conservatory (B. Liatoshynsky's class), Belza taught there and at the Kiev Institute of Cinematography. He was director of the Ukrainian department of the Kiev Film Studio (1930–7). In 1938–41 he worked in the Mystetstvo publishing house and collaborated with the journal *Radians'ka muzyka*. In 1942–9 he was a professor at the Moscow Conservatory. Belza's writings deal with the history of music and the culture of Slavic countries, particularly Czechoslovakia and Poland. He is the author of *Ukrainskaia muzyka v roky voyny* (Ukrainian Music during the War Years, 1946) and *B. M. Liatoshyns'kyi* (1947). Belza's compositions include five symphonies; orchestral, chamber, and piano pieces; vocal solos; and film music.

Bem, Mariia, b 16 April 1908 in the village of Zults in Kherson gubernia. Singer, lyric soprano. In 1930 Bem graduated from the Odessa Conservatory. She sang as soloist at the theaters of opera and ballet in Odessa (1931–41) and Kiev (1941–56).

Ben (Bendiuzhenko), **Stepan**, b 19 October 1900 in the village of Lozovatka, Kiev gubernia, d 1939 in Siberia. Poet, member of the writers' association Pluh. Ben worked as a teacher. His poetry was published in journals beginning in 1921. In 1929 his collection of polished, impressionistic poetry, *Solodkyi svit* (Sweet World), was published. Ben was arrested in 1939 and exiled to Siberia, where he died in unknown circumstances. In the 1950s he was officially rehabilitated.

Benardos, Mykola, b 8 August 1842 in the village of Benardosivka, Kherson gubernia, d 21 November 1906 in Khvastiv. Inventor in the field of electrical welding. Beginning in 1865, Benardos patented over 100 inventions in such fields as transport and energetics. In 1881 he invented a method of arc welding, which he patented (1885–6) in Russia and other countries. He also developed methods of underwater and contact welding.

Bendery (Tiahynia; Rumanian: Tighina). vii-10. City (1981 pop 108,000) in Bessarabia, now in the Moldavian SSR, a port on the Dniester and a major railway junction. In the past it was an important strategic point for crossing the Dniester. In the 12th century the Genovese built a fortress on the location of the Slavic settlement, and at the beginning of the 16th century Bendery came under Turkish rule. In 1812 Bendery came under Russian rule and was a county market town and fortress; in 1918 it came under Rumanian rule; and in 1940 it became part of the USSR. Bendery is known for its involvement in the Cossack campaigns of the 16th century and the Russo-Turkish wars of the 18th and 19th century. In 1709 I. Mazepa died in the nearby village of Varnytsia, and that same year, as a result of the election of Hetman P. *Orlyk, the Constitution of *Bendery was proclaimed. In March 1919, with the permission of the Entente, the Zaporoz-

zian Corps and part of the southeastern contingent of the Army of the UNR forded the river there in order to reach Volhynia by traversing Rumania and Galicia. Bendery was largely destroyed in 1941 and 1944. In 1941 the city was made up of Ukrainians (9 percent), Rumanians (60 percent), Russians (9 percent), and Gagauzy (18 percent). Since the war Bendery has grown considerably; in 1930 it had a population of only 31,000. The city has machine-building, construction-supply, and food-production industries, as well as light industry. One of its architectural monuments is a Turkish fortress.

Bendery, Constitution of. A covenant signed on 16 April 1710 in Bendery by the newly elected Hetman P. *Orlyk with his officers and the Zaporozhian Cossacks. The title of the document, *Pacta et Constitutiones Legum Libertatumque Exercitus Zaporoviensis*, indicates that the treaty was modeled on the *pacta conventa* that the Polish nobility made with their newly elected kings. The document consisted of 16 articles, which can be divided into four thematic groups. Articles 1–3 dealt with general Ukrainian affairs. They proclaimed the Orthodox faith to be the faith of Ukraine and independent of the patriarch of Moscow, designated the Sluch River as the boundary between Ukraine and Poland, and recognized the need for an anti-Russian alliance between Ukraine and the Crimean Khanate. Articles 4–5 reflected the interests of the Zaporozhian Cossacks, who constituted the overwhelming majority of the Bendery emigration. They obligated the hetman to expel, with the help of *Charles XII of Sweden, the Russians from Zaporozhian territories, to grant the town of Terekhtymyryv to the Zaporozhians to serve as a hospital, and to keep non-Zaporozhians away from Zaporozhian territories. Articles 6–10 limited the powers of the hetman and established a unique Cossack parliament, similar to an extended council of officers, which met three times a year. The council was to consist not only of the general staff and the regimental colonels, but also of 'an outstanding and worthy individual from each regiment.' Articles 11–16 protected the rights of towns, limited the taxation of peasants and poor Cossacks, and restricted the innkeepers. In the introduction to the constitution, Ukraine's independence of Russia and Poland was stipulated as a precondition. Charles XII, who was present in Bendery at the time, confirmed these articles, as 'the protector of Ukraine.'

O. Subtelny

Benedict XV (Giacomo Della Chiesa), b 21 November 1854 in Pegli, Italy, d 22 January 1922 at the Vatican. Benedict XV was pope from 1914 to 1922. Sympathizing with the Ukrainian struggle for independence, he received a mission of the UNR, headed by Count M. Tyshkevych, at the Vatican (1919–20) and sent a visitator, G. Genocchi, to study conditions in Ukraine and to organize relief.

Beneš, Edvard, b 28 May 1884 in Kožlany, Bohemia, d 3 September 1948 in Sezimovo Ústí. Czechoslovakian statesman and political leader. In 1918–35 he served as minister of foreign affairs, in 1921–2 as prime minister, and in 1935–8 as president of Czechoslovakia. At the Paris Peace Conference in 1919 Beneš and T. *Masaryk persuaded the victorious powers to give Transcarpathia to Czechoslovakia. Beneš viewed Transcarpathia as Czechoslovakia's bridge to Rumania and eventually to the Soviet Union. Beneš was the organizer of the *Little Entente. In 1935 he signed a mutual-defense pact with the USSR. After the Munich Conference in 1938 he resigned his presidency, and in 1939 he headed the Czechoslovakian government in exile. In 1943 he again established close ties with the Soviet government, and in 1945 he ceded Transcarpathia to the Ukrainian SSR. In 1948 Beneš resigned his presidency for a second time because he refused to sign the new constitution after the Communist coup. Beneš was a Russophile, and his concessions to the USSR gave him a reputation as an opportunistic realist.

Bentov, Mirtala (pseud: Kardynalovska), b 29 April 1929 in Kharkiv. Sculptor and poet, daughter of S. *Pylypenko. Bentov has lived in the United States since 1947. In 1956 she graduated from the art school of the Boston Museum of Fine Arts and in 1965 from Tufts University. Since 1959 she has had many individual exhibits and has participated in group shows in the United States. Her work consists of semiabstract compositions in bronze. Some of her works are in the collections of Harvard University, Tufts University, and the Ford Motor Company. A monograph on her sculpture, including translations of her poetry, appeared in English under the title *Thought-Forms* (1975) and in Ukrainian under the title *Raiduzhnyi mist* (Rainbow Bridge, 1976).

Mirtala Bentov

Mykola Bentsal

Bentsal, Mykola [Bencal'], b 24 May 1891 in Kurivtsi, Ternopil county, Galicia, d 9 September 1938 in Kolomyia. Actor and director of the Ruska Besida theater in Lviv in 1910–14 and 1921–4 and of Ternopilski Teatralni Vechory in 1915–17. In 1925–38 he appeared in various Galician theaters. In 1929 he became head of the Tobilevych Theater in Stanyslaviv. Bentsal was a versatile actor, experienced in all the genres. He appeared in the leading roles of ethnographic plays – as Hryts in *Oi, ne khody Hrytsiu* (Don't Go to the Party, Hryts) and as Martyn in I. Tobilevych's *Martyn Borulia*; of historical plays – as Hetman Doroshenko in L. Starytska-Cherniakhivska's tragedy of that title; of the plays of N. Gogol, I. Franko,

and Lesia Ukrainka; and of European plays – as Rosmer in H. Ibsen's *Rosmersholm*.

Bentsal, Olena [Bencal'] (née Simnytska), b 27 May 1902 in Medzhybizh in eastern Podilia. An operetta and drama actress; the wife of M. Bentsal. In 1920–44 she worked in Galician theaters (the Ukrainska Besida theater in Lviv in 1921–3, the Tobilevych Theater in Stanyslaviv in 1930–8, and the Lviv Opera Theater in 1941–4). In 1944 she emigrated and appeared in plays in Germany and then the United States. Her best dramatic roles were Rebecca in H. Ibsen's *Rosmersholm*, Ivha in V. Vynnychenko's *Moloda krov* (Young Blood), and Motria in B. Lepky's *Baturyn*. She also appeared in operettas – as Ilona in F. Lehár's *Zigeunerliebe*, Sophie and Arsena in J. Strauss's *Der Zigeunerbaron*, Ksenia and Sharika in Ya. Barnych's *Hutsulka Ksenia* (Ksenia the Hutsul Girl) and *Sharika*, and others.

Berda River. A small river that dissects the Azov Upland and Azov Lowland and flows into the Sea of Azov. It is 130 km long, and its basin is 1,720 sq km. in area. The river's water is used for domestic consumption and irrigation.

Berdianske

Berdianske [Berdjans'ke] (Soviet Ukrainian: Berdiansk). VII-17. City (1982 pop 127,000) in Zaporizhia oblast, raion center and port on the northern shore of the Sea of Azov. From 1939 to 1958 it was called Osypenko. Berdianske was founded in 1827 on the site of the Nogai-Tatar village of Kutur-Ohla near the Berda River. A port from 1836, in 1842 it became a county town of Tavriia gubernia. As a result of trade (it became an important wheat-exporting port), it grew considerably – from a population of 10,100 in 1860 to 26,500 in 1897. After a decline during the revolution (1926 pop 26,400, of which 63 percent were Russians and 22 percent Ukrainians), there was a period of significant growth in the 1930s as a result of industrialization (1939 pop 52,000, 1959 pop 65,000, and 1970 pop 100,000). The city has a cable factory (the Azovkabel factory), an agricultural machine plant, a construction and road-building machine plant, a hydraulic machinery plant, a petroleum byproducts and petrochemical plant; as well as a shoe, a clothing, and a food-processing (specializing in seafood) plant. It also has a pedagogical institute (founded in 1932, with 1,400 students in 1975–76); an airport; machine-building, grape-growing and winemaking, and medical tekhnikums; a regional mu-

seum (founded in 1930); and an art museum. It is also a port of call for the Azov steamships. There is an important health resort 5 km from Berdianske, which features mud baths, salt water, and grape cures.

Berdianske Spit (Berda Spit). A sandy spit, 20 km in length, on the north shore of the Sea of Azov near the mouth of the Berda River.

Oles Berdnyk

Berdnyk, Oles, b 25 November 1927 in the village of Vavylove, Mykolaiv oblast. A writer and dissident, Berdnyk studied at the Kiev Ukrainian Drama Theater and worked as an actor from 1945 to 1949. He spent seven years (1949–56) in labor camps in the far north and in the Kazakh SSR. From 1956 Berdnyk was engaged in literary work in Kiev. He specialized in science fiction, and his stories have been published in the collections *Poza chasom i prostorom* (Beyond Time and Space, 1957) and *Martians'ki zaitsi* (Martian Hares, 1962). His novels include *Liudyna bez sertsia* (A Human Being without a Heart, co-authored with Yu. Bedzyk, 1958), *Za charivnoiu kvitkoiu* (In Search of the Enchanted Flower, 1959), *Shliakhy tytaniv* (Paths of the Titans, 1959), *Pryvyd ide po zemli* (A Phantom Haunts the Earth, 1959), *Strila chasu* (The Arrow of Time, 1960), *Sertse vsesvitu* (Heart of the Universe, 1962), *Syni Svitovyda* (The Sons of Svitovyd, 1963), *Dity bezmezzhzia* (Children of Infinity, 1964), *Khto ty?* (Who Are You?, 1966), *Rozbyvaiu hromy* (I Shatter Thunder, 1967), *Podvyh Vaivasvaty* (The Feat of Vaivasvata, 1967), *Chasha Amrity* (Amrita's Chalice, 1968), *Pokryvalo Izidy* (Izida's Veil, 1969), *Okotsvit* (Eye-Flower, 1970), and *Zoriany korsar* (Stellar Corsair, 1971). From 1972 Berdnyk was harshly criticized for his most recent works, for his public lectures on the problems of space travel and futurology, and for his defense of religion. In May 1973 he was expelled from the Writers' Union of Ukraine. In 1976 he co-founded the *Ukrainian Helsinki Group and, after the arrest of M. Rudenko, in February 1977, he became its head. In March 1979 Berdnyk was arrested on a charge of anti-Soviet agitation and propaganda and on 21 December was sentenced to six years' imprisonment and three years' internal exile. In the West four collections of his samvydav works have been published: *Zoloti vorota* (Golden Gates, 1975), *Blakytynyi koval'* (The Azure Smith, 1975), *Ukraina Sichi vohnianoï* (Ukraine of the Fiery Sich, 1977), and *Sviata Ukraina* (Sacred Ukraine, 1980).

7. Refinery

Berdychiv. iv-9. A city (1981 pop 82,000) on the Hnylopiata River, a tributary of the Teteriv River, in the northwest part of the Dnieper Upland. It is a raion center in the Zhytomyr oblast. Berdychiv is first mentioned in a historical document of 1545. In 1569 the city changed from Lithuanian to Polish rule, and in 1593 a fortress was erected around it. In 1630 the Kievan voivode J. Tyszkiewicz built a church and fortified monastery in Berdychiv for the Polish Carmelite monks. The city thus became an important Polish religious center, attracting pilgrimages to the icon of the Virgin Mary, as well as a cultural center, with a school and, from 1760, a publishing center. These institutions and facilities were suppressed by the Russian government in 1866. Berdychiv grew in importance in the first half of the 19th century, when it became a center for wholesale and market trade (grain, cattle) and for light industry (dry goods, footwear). Berdychiv's population grew in response to commercial and industrial development (2,000 in 1789, 19,000 in 1838, and 51,500 in 1860), and it became Ukraine's fourth largest city after Odessa, Kiev, and Lviv (but before Kharkiv). Berdychiv had a large Jewish population (80–90 percent) and was an important Hasidic center. With the decline of the market trade and with the construction of railroads, Berdychiv's growth ceased temporarily (in 1897 the population was 56,000), coming to life again at the beginning of the 20th century (in 1914 – prior to the war – the population was 80,000). From 1917 to 1920 Berdychiv was, for the most

part, under Ukrainian rule, but in the summer of 1920 the Soviets took control of the city.

By 1920, as a result of the war and the revolution, the population of Berdychiv had decreased to 42,000. By 1926 it had risen to 55,000, with the following ethnic composition: Jewish, 55.4 percent; Ukrainian, 26.4 percent; Polish, 8.5 percent; Russian, 8.3 percent. During the Soviet period industry began to develop in place of trade. At present the main branches of industry are as follows: machine building (in the Prohres chemical plant and the Komsomol machine-tool construction plant), food (sugar-refining factories, etc), and light industry (footwear). Recent population statistics are as follows: 62,000 in 1939, 53,000 in 1959 (ethnic composition: Ukrainian, 55 percent; Russian, 19 percent; Polish, 14.5 percent; Jewish, 11.5 percent), and 71,000 in 1970. The city has a machine-building tekhnikum, medical and pedagogical colleges (a pedagogical institute existed there until 1971), and a school of music. A Ukrainian dramatic theater was active until 1977. Berdychiv's architectural landmarks include the fortress and a Roman Catholic church (formerly Carmelite), designed by J. de Witte and constructed in 1739.

V. Kubijovyč

Bereg komitat. A former Hungarian county in central Transcarpathia. In 1910 it covered an area of 3,800 sq km and had a population of 237,000 people, of whom 101,000 were Ukrainian. In 1918 part of the *Bereg komitat* remained in Hungary, while the larger, northern part was transferred to Czechoslovakia and existed as Bereg county (*Berezhska zhupa*) until 1927. *Berehove was the center of the county.

Berehove (Hungarian: Beregszász). v-3. A city (1969 pop 27,500, of which Ukrainians made up 25 percent and Hungarians 57 percent), located in the Tysa Lowland; raion center in Transcarpathia oblast. Founded as a Saxon colony in the 11th century AD, Berehove is situated in Hungarian ethnic territory (before the Second World War Ukrainians constituted 10 percent of the population in Berehove [Bereg] county). Under Czechoslovakian rule it was a center of Ukrainian cultural life in southern Transcarpathia. A Ukrainian gymnasium was situated here. Berehove has furniture, clothing, brick-and-tile, and ceramics plants and a wine and food industry. Vineyards are located nearby. A 15th-century Calvinist Gothic church is located in the city.

Berehovy, Heorhii [Berehovyj, Heorhij], b 15 April 1921 in Fedorivka, Poltava oblast. Soviet pilot and astronaut, general, graduate of the Air Force Academy. In 1968 Berehovy piloted the spaceship *Soiuz 3* and carried out maneuvers involving the pilotless spaceship *Soiuz 2* in outer space.

Bereka River. A small river that flows into the Donets River from the right bank above Iziium. Its length is 102 km, and its basin is 2,680 sq km in area.

Berendey. Nomadic Turkic tribes. From 1097 to the end of the 12th century the Berendey are mentioned in the chronicles as part of the *Chorni Klobuky. By permission of the Kievan princes the Berendey settled in the southern parts of the Kiev and Pereiaslav regions mostly

beyond the Ros River. In return the Berendeys promised to help the princes in their military campaigns. They furnished the princes with cavalry in the struggle against the Cumans. In the mid-13th century, after the Mongol invasion of Rus', a part of the Berendeys migrated to Bulgaria and Hungary; the remainder was integrated into the Golden Horde.

Viliam Berenshtam

Berenshtam, Viliam [Berenštam, Vil'jam], b 22 November 1839 in Kiev, d 23 November 1904 in Kiev. Pedagogue and community figure. After completing his studies in history and philology at Kiev University, Berenshtam taught in the secondary schools of Kiev and Kamianets-Podilskyi. He was among the organizers of the Sunday schools and took part in the founding of the southwestern section of the Russian Imperial Geographic Society. He was a member of the Kiev Hromada and a contributor to *Kievskii telegraf* and *Kievskaja starina*, in which he published a work on T. Shevchenko and memoirs of M. Kostomarov.

Berestechko [Berestečko]. III-6. A city (1970 pop 2,500) in Horokhiv raion, Volhynia oblast, on the Styr River. In 1547 the town was granted Magdeburg law. The Battle of *Berestechko (1651) took place nearby. A memorial church was built on the graves of the Cossacks in 1912–14 by the architect B. Maksimov, with frescoes by I. Izhakevych and H. Schneider; nearby stands a wooden church, built in 1650, which was transferred from the village of Ostriv. A monastery once located near Berestechko was razed by the Soviet army. From 1795 until the 1917 Revolution Berestechko was part of the Russian Empire; from 1921 to 1939 it was part of Poland.

Stone crosses on Cossack graves at Berestechko

Berestechko, Battle of. A great battle between the Cossack army, led by B. Khmelnytsky, and the Polish

army near the town of Berestechko in Volhynia on 18–30 June 1651. Both sides had gathered huge forces: the Polish army, led by King Jan Casimir, numbered 150,000, while the Ukrainian troops numbered almost 100,000 and their allies – the Crimean Tatars, under Khan Islam Girei – consisted of almost 50,000 cavalry (all figures are estimates). On the day of the decisive battle, 30 June, the Crimean Tatars unexpectedly abandoned the field of battle and seized B. Khmelnytsky. He was released a few days later for a large ransom. The leaderless Ukrainian army was encircled by the Poles. Colonels F. Dzhalalii, M. Hladky, and I. Bohun directed the defense of the Cossack encampment for 10 days. Finally, on 8 July, Bohun successfully led the major part of the army through the swamps and out of the encirclement, but most of the artillery and supplies were lost. As a result of this defeat, Khmelnytsky was forced to sign the Treaty of *Bila Tserkva.

Berestia. See Brest.

Berestia, Church Union of. An agreement, proclaimed in 1596, between the Ruthenian (Ukrainian-Belorussian) Orthodox church in Poland and Lithuania and the Holy See. The recognition of the pope as the head of the church and the implications of this position for the faith, morals, practices, and church administration (defined by the Council of Florence in 1439) were accepted by the Orthodox clergy. For his part, the pope agreed to the retention of the Eastern rite and confirmed the administrative-disciplinary rights and autonomy of the *Kiev metropolitanate.

Various circumstances brought about a crisis in the Ukrainian Orthodox church in the second half of the 16th century: the Turkish conquest of the seat of the patriarch of Constantinople in 1453; difficulties in the Ukrainian-Belorussian Orthodox church, such as declining discipline; the creation of the Moscow patriarchate in 1589; Protestant influences; and the Polonization of the Ukrainian upper classes. The Orthodox bishops worked out a plan for establishing ties with Rome at their councils in 1590–4. The initiators of the plan hoped to gain not only ecclesiastical benefits from the union, but also an end to the Polonization of the upper classes and equality for the Orthodox church and its clergy in the Polish-Lithuanian state. The union was supported by leading Polish circles because it was politically and religiously advantageous to them. Roman Catholic clerics, particularly the Jesuits P. Skarga, B. Herbest, A. Possevino, P. Arcudius, and B. Maciejowski, and the Orthodox bishops, especially I. *Potii, the bishop of Volodymyr, who tried to gain the support of Prince K. Ostrozky, all worked to bring about a union. Prince Ostrozky, however, insisted on the participation of the Byzantine and the Muscovite churches in the talks. This would have prolonged the negotiations; hence, the union advocates decided to act without him. On 22 June 1595 all nine Orthodox hierarchs signed a letter to Pope Clement VIII declaring that they were ready to enter into negotiations on church unification and authorizing bishops K. *Terletsky and I. Potii to act for them in Rome. In September Potii and Terletsky left for Rome and, after long talks, set forth their confession of faith before the papal curia on 23 December 1595.

The union was announced by the papal bull *Magnus Dominus* on 23 December 1595. In January and February of

1596 the rights and privileges of the Uniate church were worked out and were guaranteed by the bull *Decet Romanum Pontificem* of 23 February 1596. The pope took the necessary steps to get the consent of the Polish government to the civil guarantees of the agreement, such as senatorial seats for the bishops, aid for the clergy and churches, and security of church property. After Potii and Terletsy returned from Rome, a sobor was called in Berestia for 16–20 October 1596. The sobor split into two groups – for and against the union with Rome – and thus two councils went on concurrently. Prince Ostrozky led the opposition. He persuaded the bishop of Lviv, H. Balaban, and the bishop of Peremyshl, M. Kopystensky, as well as many clergymen and noblemen to support his position. Representatives of the patriarchates of Constantinople (the protosyncellus Nicephorus) and Alexandria (the protosyncellus C. Lucaris) participated in the Orthodox sobor. The union was accepted by Metropolitan M. *Rahoza and five bishops, the hegumens, archimandrites, and part of the clergy and gentry. Each group condemned and anathematized the other. The sobor favoring the union, which was joined by most of the hierarchy, confirmed the union and proclaimed it before the people in a pastoral letter. The Polish king Sigismund III issued a proclamation in support of the union. The Apostolic See was represented at the sobor by the Roman Catholic bishops of Lviv, Lutske, and Kholm, and the Polish government and crown were represented by several senators. The Jesuit P. Skarga made the closing speech on 20 October.

The Church Union of Berestia split the Ruthenian church and the faithful in two and led to a long and bitter domestic struggle. The schism deepened as new Orthodox bishops were consecrated in 1620 and as the union became one of the key issues in the political and social conflict between the Cossacks and the Poles and in the 1654 Treaty of *Pereiaslav with Muscovy. The union eventually won the adherence of the Uzhhorod (1646), Peremyshl (1692), Lviv (1700), and Lutske (1702) eparchies. In the 18th century Uniate Catholicism became dominant in Right-Bank Ukraine, Galicia, and Transcarpathia. When these territories were annexed by Russia, Ukrainian Catholicism was forcibly liquidated: under Catherine II on the Right Bank and in Volhynia, under Nicholas I in the rest of these territories (1839), and under Alexander II in the Kholm region (1875). The Uniate church in Galicia and Transcarpathia survived under Austro-Hungarian rule (1772–1918), but was abolished in 1946–50 by the Soviet government, which orchestrated the sobors of Lviv, Mukachiv, and Prešov. Today the Ukrainian Catholic church survives officially only in the West, the Prešov region of Slovakia, Poland, and Yugoslavia.

A. Velyky

Berestia land. The northwestern part of Ukrainian ethnic territory, bounded by the Buh, Prypiat, Yaselda, and Narva rivers. Its main cities were Berestia, Dorohychyn, Kobryn, and Kamianets. From 1080 to 1150 the land belonged to the principality of Turiv and Pynske, later to the principality of Volhynia, and after 1320 to the Grand Duchy of Lithuania. From 1569 to 1795 it constituted the Brest-Litovsk voivodeship of the Polish Commonwealth. After the third partition of the Commonwealth (1795), the territory was annexed to the Russian Empire.

Berestova River. A right-bank tributary of the Orel River in the Dnieper Basin. Its length is 102 km, and its basin covers an area of 1,810 sq km. The water of the Berestova flows slowly and is derived mostly from snow and rain.

Beretti, Aleksandr, b 1816 in St Petersburg, d 1895 in Kiev. Architect, academician from 1840, and the son of V. *Beretti. Beretti studied from 1827 at the Academy of Arts in St Petersburg, became a full member in 1840, and taught the history of architecture at Kiev University. In 1850 he built the first Kievan gymnasium, which today houses the humanities faculty of Kiev University. He was also the co-designer of St Volodymyr's Cathedral in Kiev (1850–96) and designed a number of school buildings in the cities of Ukraine.

Vincent Beretti

Beretti, Vincent, b 14 June 1781, d 18 August 1842 in Kiev. Architect. In 1798–1804 Beretti studied at the St Petersburg Academy of Arts. In 1809 he became a member of the academy and in 1831 a professor. With T. de Thomon he built the stock exchange in St Petersburg. Beretti prepared a project for reconstructing a part of Kiev and constructed several buildings there, including the university buildings (1837–43), the observatory (1840),

and the Institute for Daughters of the Nobility (1839–43). All of his buildings are designed in the classical style.

Bereza Kartuzka (now Biaroza). 1-5. City (1969 pop 7,500) on the Yasolda River in northwest Polisia, a raion center in Brest oblast in the Belorussian SSR located on the border between Ukrainian and Belorussian ethnic territory. In 1920–39 Bereza belonged to Poland, and between 1933 and 1939 it was the site of an infamous Polish concentration camp, in which hundreds of Ukrainian patriots were inmates, including members of the OUN. The camp commander was Col K. Biernacki; his subordinates were B. Grefner and I. Kamalia.

Berezan [Berezan']. III-12. Town smt (1971 pop 12,000) in Baryshivka raion, Kiev oblast. The town has a garment factory and a food-processing industry as well as a reinforced-concrete-products factory and asphalt and brick factories.

Berezan Island. VII-12. Island in the Black Sea at the estuary of the Dnieper and Boh rivers, 850 m in length, 200–850 m in width. This was the site of the oldest Greek (Ionian) colony in southern Ukraine, founded in the second half of the 7th century BC. Called Borysthen or Borysthenida, it existed until Roman times. During the period of Kievan Rus' there was a Slavic settlement at Berezan. The Zaporozhian Cossacks used it as a fortress during their campaigns against Turkish settlements.

Berezan Liman. The liman is located on the north coast of the Black Sea, west of Ochakiv. It is 25 km in length and 2 km in width on the average. The Berezan River, which is 64 km long and dries up in the summer, flows into the liman.

Berezansky, Yurii [Berezans'kyj, Jurij], b 8 May 1925 in Kiev. Mathematician, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1964. A graduate of Kiev University (1948), since 1951 Berezansky has worked at the Institute of Mathematics of the Academy of Sciences of the Ukrainian SSR. His major research is concerned with functional analysis and its application, the theory of differential equations, and applied mathematics.

Berezhany [Berežany]. IV-5. City (1973 pop 13,500) in Podilia on the Zolota Lypa River, a raion center in Ternopil oblast. The first written mention of Berezhany occurs in 1375; in 1530 it was granted Magdeburg law by the Polish king Sigismund I. For 200 years it belonged to a noble Polish family, the Sieniawskis, and later to the Lubomirski and Potocki families. In 1574 M. Sieniawski built a fortified castle there, which withstood the Turkish siege of 1675–6. As a result of its location on the trade route from west to east Berezhany developed commercially during the 17th and 18th centuries. (The town's Armenian colony was engaged in vigorous trading.) Under Austrian (from 1772) and Polish (from 1919) rule it was a county town and seat of the regional court. In 1789 a gymnasium was established, where the language of instruction was at first German and later Polish; in 1905 teaching in Ukrainian was introduced. Among the teachers were K. Luchakovsky, O. Barvinsky, B. Lepky, S. Tomashivsky, I. Zilynsky, and A. and M. Krushelny-

tsky, who were instrumental in the development of Ukrainian cultural life. The city's economic activity involved trade and manufacturing. Before the Second World War Ukrainians constituted 22.3 percent of the 12,700 inhabitants (86 percent in 1959); Poles, 42.2 percent; and Jews, 35.5 percent. The city has a minor food-processing industry, a glassworks, a furniture factory, three brick factories, and a mechanized-agriculture tekhnikum. Architectural landmarks include a three-story castle (rebuilt at the end of the 16th and the beginning of the 17th century), with a large pentagon-shaped courtyard enclosed by walls and towers; the wooden Church of St Nicholas (1691); two Roman Catholic churches (a Gothic one from the end of the 16th century and a baroque one built between 1630 and 1683); an Armenian church dating from 1750; and a park dating from the 17th century, located in the neighboring village of Rai. Not far from Berezhany is the mountain *Lysonia, the site of battles between the Ukrainian Sich Riflemen and the Russian army on 2–4 September 1916.

Berezil (March). A modern Ukrainian theater established in 1922 in Kiev by the drama association Berezil as an experimental studio under the direction of L. *Kurbas. Recognized as a national theater, Berezil was located in Kiev until 1926 and then moved to Kharkiv. Berezil's purpose was to synthesize speech, movement, gesture, music, light, and decorative art into one rhythm or a simple, dramatic language, based on the belief that the theater shapes rather than reflects life. Hence, in spite of essential differences from the expressionist theater ('a committed, reflective theater' was Berezil's motto), Berezil used the formal devices of the expressionist theater in staging the plays of G. Kaiser, E. Toller, and U. Sinclair. Classic and modern dramas, such as W. Shakespeare's *Macbeth*, F. Schiller's *Die Verschwörung des Fiesco zu Genua*, V. Hugo's *Le Roi s'amuse*, P. Mérimée's *La Jacquerie*, F. Crommelynck's *Tripes d'or*, Gilbert and Sullivan's *Mikado*, I. Tobilevych's *Khaziain* (The Master) and *Sava Chalyi*, M. Starytsky's *Za dvoma zaitsiamy* (After Two Hares), V. Yaroshenko's *Shpana* (Riff-raff), M. Yohansen, M. Khvylovy, and Ostap Vyshnia's *Allo na Khvyli 477* (Hello on Frequency 477), K. Burevii's *Chotyry chemberleny* (Four Chamberlains), and S. Bondarchuk and L. Kurbas's *Proloh* (Prologue) were staged according to new principles of experimental presentation. M. Kulish's plays *Narodnyi Malakhii* (The People's Malakhii), *Myna Mazailo*, and *Maklena Grasa* were particularly successful.

Berezil embraced many noted actors, such as M. Krushelnytsky, Y. Hirniak, N. Uzhvii, A. Buchma, I. Marianenko, V. Chystiakova, N. Tytarenko, S. Shahaida, L. Serdiuk, D. Antonovych, H. Babiivna, O. Dobrovol'ska, P. Samilenko, and H. Ihnatovych. Besides Kurbas, Ya. Bortnyk, F. Lopatynsky, B. Tiahno, V. Skliarenko, B. Balaban, and others worked as directors. Because of its well-defined national and artistic character Berezil was constantly attacked by Soviet critics for nationalism and resistance to the Party line. At the end of 1933, after Kurbas's arrest, Berezil was reformed and renamed the Shevchenko Theater, which, under the directorship of M. *Krushelnytsky, conformed to the official policy of socialist realism.

Berezivka. VI-11. City (1969 pop 11,700) on the Tylihul River, a raion center in Odessa oblast. The first mention of Berezivka occurs in 1802. The city has a food-production industry.

Berezivka Mineral Springs. A mineral-springs resort located 25 km from Kharkiv. Its hydrocarbonate-calcium-magnesium water has certain curative powers, which are

of benefit in illnesses affecting the digestive organs, liver, and bile ducts. Water therapy, mud therapy, and turf therapy are practiced in Berezivka.

Berezna. II-12. Town smt (1972 pop 6,600) in Mena raion, Chernihiv oblast. Before the First World War it was known for its shoemakers (the town had nearly 1,000 of them). It is now involved in food production. The town has been known since 1152.

Berezne. III-7. Town smt (1973 pop 7,600) on the Sluch River in the Volhynian part of Polisia, a raion center in Rivne oblast. The town has a food industry and a linen factory.

Bereznehuvate. VI-13. Town smt (1980 pop 7,200) on the Vysun River (tributary of the Inhulets), a raion center in Mykolaiv oblast. The town has a food and consumer-products industry and a brick factory.

Berezovsky, Amvrosii [Berezovs'kyj, Amvrosij], 1875-? Galician civic and educational figure and for many years a teacher at and director of the Ukrainian Prosvita School of Commerce in Lviv. Berezovsky did educational work among the people of Lviv. He was head of the Organization of Ukrainians of the City of Lviv and an active member of the Ukrainian Labor party. He was exiled by the Soviet authorities in 1941.

Berezovsky, Maksym [Berezovs'kyj], b 16 October 1745 in Hlukhiv, d 22 March 1777 in St Petersburg. A prominent composer, one of the creators of the Ukrainian choral style in sacred music. Berezovsky studied at the Kievan Mohyla Academy and sang in the court choir in St Petersburg, where he also studied composition under F. Zoppis. From 1759 to 1760 he performed as soloist with the Italian opera company in Oranienbaum near St Petersburg. From 1765 to 1774 he studied in Bologna, Italy, under G.B. Martini, and in 1771 gained the title of *maestro di musica* and became a member of the Bologna Philharmonic Academy. In 1775 he returned to St Petersburg, where, as a result of court intrigues and difficult circumstances, he committed suicide. Berezovsky was the first representative of the early classical style in Ukrainian music. He was the composer of the opera *Demofonte*, which was staged in Leghorn, Italy, in 1773; of a sonata for violin and harpsichord; and of a series of sacred works (12 concertos and a full cycle of liturgical chants), of which only a few have been preserved. His most outstanding works are the concerto *Ne otverzy mene vo vremia starosty* (Do Not Foresake Me in My Old Age), liturgical music for 'Otche nash' (Lord's Prayer) and 'Viruii' (Credo), and four communion hymns - 'Chashu spaseniia' (Chalice of Salvation), 'V pamiat' vichnuui' (In Eternal Memory), 'Tvoriai anhely svoia' (Let the Angels Create), and 'Vo vsiu zemliu' (Over All the Land) - which are musically related to Ukrainian folk songs and to the tradition of Kievan church singing.

Berezynsky, Yurii [Berezyns'kyj, Jurij], b 1912, d 30 November 1932 in Horodok, Galicia. Member of the Ukrainian Military Organization. On 22 March 1932 he assassinated E. Czechowski, the Polish police commissioner in Lviv. Berezynsky was killed while engaging in an act of political expropriation at a Polish post office.

Berg, Lev, b 14 March 1876 in Bendery, Bessarabia, d 24 December 1950 in Leningrad. A noted Russian geographer and biologist, professor at St Petersburg University, and full member of the USSR Academy of Sciences. In his works – *Priroda sssr* (The Natural World of the USSR, 1937) and *Geograficheskie zony sssr* (The Geographical Zones of the USSR, 1947–52) – he devoted much attention to Ukraine. He wrote several works on Bessarabia, including *Bessarabiia. Strana – liudi – khoziaistvo* (Bessarabia: The Country, People, and Economy, 1918) and *Naselenie Bessarabii, etnograficheskii sostav i chislennost'* (The Population of Bessarabia, Its Ethnic Composition, and Size, 1923).

Berhomit (Berehomet). v-6. Town smt (1972 pop 9,400) on the Seret River in the Bukovynian Carpathians of Vyzhnytsia raion, Chernivtsi oblast. The town has a woodworking complex (the area of the forest surrounding the town is 43,500 ha) and a furniture factory.

Berisso. City in Argentina, now a suburb of La Plata near Buenos Aires. In 1980 Berisso had a population of 65,000, including about 10,000 Ukrainians and their descendants. Ukrainians began to settle in Berisso in the 1900s. There is a Ukrainian Catholic parish in Berisso, a monastery, a novitiate of the Basilian sisters with an elementary school, a Ukrainian Orthodox parish, and branches of the cultural-educational societies Vidrodzhennia and Prosvita, with their own buildings.

Berkos, Mykhailo, b, 3 September 1861 in Odessa, d 20 December 1919 in Kharkiv. Landscape painter. Berkos obtained his artistic education at the Odessa Painting School (1877) and the St Petersburg Academy of Art (1878–89); he taught at the Kharkiv Painting School from 1904. Among his paintings are *Flax in Bloom* (1893), *Street in Uman* (1895), *Thistles* (1898), *Happy Village* (1901), *June* (1913), *Landscape with Willows* (1915), and *Apple Tree in Bloom* (1919).

Berladnyk, Ivan Rostyslavych, ?–1162. Having lost his appanage principality in Zvenyhorod after the unification of the principality by Prince *Volodymyrko, Prince Ivan tried unsuccessfully to seize the principality from Volodymyrko in 1144 and then fled to the Danubian town of Berlad (whence his name) in Moldavia. From 1145 he served at the courts of princes Vsevolod and Sviatoslav Olhovych of Kiev and at the courts of other Rus' princes. In 1158 Ivan returned to the Danube region, where he organized a force of 6,000 *Berladnyky (peasant rebels) and began attacking Galician towns. In 1159 he was defeated by the Galician prince Yaroslav Osmomysl near Ushytsia in Podilia and eventually fled to Greece. Historians disagree on the authenticity of the Berlad Charter, which was granted by Ivan to the merchants of Mesem-

bria in 1134. According to some sources, Ivan was poisoned in Thessaloniki.

Berladnyky (or *Byrladnyky*). Peasant (*smerd*) or burgher refugees in Kievan Rus' who in the 12th century settled in the lower Danube region between the Seret and Prut rivers near the town of Berlad (Birlad). The *Berladnyky* are first mentioned in the Hypatian Chronicle for 1159 in connection with the attack of a 6,000-man force led by the exiled prince Ivan Rostyslavych *Berladnyk on Kuchelemyn and Ushytsia, cities of Halych principality. In 1160 the *Berladnyky* captured the city of Oleshia on the Dnieper River but were defeated eventually by the Kievan prince Rostyslav Mstyslavych near the town of Dtsynia. After the 13th century the *Berladnyky* are no longer mentioned in the chronicles.

Berlin. Capital of Prussia and, from 1871 to 1945, of Germany. Located now in the territory of East Germany, the city is divided politically and physically into East Berlin (the East German capital), and West Berlin (a state and city of West Germany). In 1982 the combined estimated population of metropolitan Berlin was about 4 million.

Before 1914 Berlin played no role in Ukrainian life. During the First World War many Ukrainians in Berlin banded together around the *Union for the Liberation of Ukraine. In 1918 a UNR diplomatic mission was created in Berlin; it remained in operation until 1921. In 1921–3 the Ukrainian SSR had a diplomatic mission there. The Ukrainians connected with the non-Soviet institutions founded a colony, which became a major center of Ukrainian political immigration. Until the end of the Second World War two political centers were active in Berlin. They were the leadership of the hetmanite movement and the group allied with the Ukrainian Military Organization, which from 1929 became part of the OUN. The former hetman, P. *Skoropadsky, as well as Col Ye. *Konovalts and Y. *Petrushevych, president of the Western Ukrainian National Republic, lived for a time in Berlin. Among the national organizations in Berlin were the Ukrainian Hromada, established in 1919, at first as a non-partisan organization but later allied with the Hetmanite leadership; and the *Ukrainian National Alliance, founded in 1933, which was under the influence of the OUN from 1937 and became a powerful national organization.

Berlin was the center of such student organizations as the Association of Ukrainian Students in Germany (from 1921), the Zarevo association of Ukrainian academic societies (from 1931), the Academic Hromada of the *Ukrainian Scientific Institute, the *Union of Ukrainian Student Organizations in Germany and Danzig (from 1925), and, in 1939, the *Nationalist Union of Ukrainian Student Organizations in Germany. There was a Ukrainian Catholic parish in Berlin, which later became an apostolic administration (under Rev P. Verhun), and an Orthodox parish. In the early 1920s two publishing houses were active: *Ukrainske Slovo* and Ya. *Orenstein's printing house in Berlin and Leipzig. Some of the smaller publishing houses included *Ukrainskyi Prapor*, *Khliborobska Ukraina*, *Ukrainska Molod*, and *UNO publishers* (from 1936). Periodicals published included *Ukrains'ke slovo* (weekly in 1921–3 and daily in 1923–4), *Litopys* (1922–3), and **Osteuropäische Korrespondenz* (1926–30). During the 1920s the nationalist *Ukrainischer Presdienst* provided information for the Ukrainian press.

The Ukrainian Scientific Institute in Berlin served as a central cultural institution, with impressive scholarly connections, including some from outside Germany, until 1945. During the Second World War the number of Ukrainians in Berlin increased greatly, a branch office of the *Ukrainian Central Committee in Cracow was established, and the *Ukrainische Vertrauensstelle was organized by the German authorities for Ukrainian workers in Germany. The following newspapers were published: the nationalist *Ukrains'kyi visnyk* (1936–45), the hetmanite *Ukrains'ka diisnist'* (1940–5), *Holos* (1940–5), and a number of other publications for workers, soldiers, and prisoners of war. Berlin's libraries, especially the Prussian State Library, contained a great deal of Ukrainian material. After the end of the war and the Soviet occupation of Berlin very few Ukrainians remained in the city.

I. Mirchuk

Berlo, Arsenii (secular name, Andrii), d 7 June 1744 in Pereiaslav. Orthodox churchman descended from a line of Cossack officers. Berlo studied in Kiev and Lviv and then became a professor at the Kievan Mohyla Academy, the archimandrite of the Kiev Mezhyhiria Monastery (1722–9), and the bishop of Mahiliou and Belorussia (1729–32), although the Polish king August II refused to recognize him in this position. In 1733 Berlo became the bishop of Pereiaslav, and in 1738 he founded *Pereiaslav College.

Berlynsky, Maksym [Berlyns'kyj], b 6 August 1764 in Nova Sloboda near Putyvl in the Chernihiv region, d 6 January 1848. A historian and archeologist, Berlynsky graduated from the Kievan Mohyla Academy in 1786 and taught in Kiev from 1788 to 1834. In 1834 he became the chief administrator of Kiev University. Among his works are 'Istoricheskoe obozrenie Malorossii i goroda Kiev' (A Historical Survey of Little Russia and the City of Kiev) in the almanac *Molodyk* (1844), *Kratkoe opisanie goroda Kiev* (A Short Description of the City of Kiev, 1820), and articles in *Kievskaiia starina* and scholarly periodicals.

Berneker, Erich, b 3 February 1874 in Königsberg, d 15 March 1937 in Munich. German linguist, representative of the neogrammarian school, and professor at the universities of Prague and Munich. His *Die Wortfolge in den slavischen Sprachen* (1900) includes material pertaining to Old Ukrainian texts and the language of Ukrainian folklore. His most important work for Ukrainian linguistics is *Slavisches etymologisches Wörterbuch* (from *a* to *mor-*, 1908–13).

Bernshtein, Mykhailo [Bernštejn, Myxajlo], b 16 January 1911 in Tokmak, Tavriia gubernia. Literary critic, historian, and senior associate of the Academy of Sciences of the Ukrainian SSR. He is the author of the monographs *Ukrains'ka literaturna krytyka 50–70kh rr. XIX st.* (Ukrainian Literary Criticism of the 1850s–1870s, 1959) and *Zhurnal 'Osnova' i ukrains'kyi literaturnyi protses kintsia 50-kh-pochatku 60-kh rokiv XIX st.* (The Journal *Osnova* and Ukrainian Literary Development in the Late 1850s and Early 1860s, 1959).

Bernshtein, Samuil [Bernštejn], b 3 January 1911. Russian linguist, Slavist, director of the Chair of Bul-

garian Language at Odessa University (1934–8). Since 1939 he has lived in Moscow, and in 1947 he became the director of the Chair of Slavic Linguistics at Moscow University. Bernshtein studied Bulgarian dialects in Ukraine, which resulted in the publication of his *Atlas bolgarskikh govorov sssr* (Atlas of Bulgarian Dialects in the USSR, 1958). He used Ukrainian data in his *Ocherk sravnitel'noi grammatiki slavianskikh iazykov* (An Outline of the Comparative Grammar of the Slavic Languages), vol 1: *Fonetika* (Phonetics, 1961); vol 2: *Cheredovaniia, imennye osnovy* (Alternation, Nominal Stems, 1974). This book is written in a neogrammarian spirit. Since the early 1960s Bernshtein has been interested in the Ukrainian dialects of the Carpathians and has organized a number of expeditions to this area. He edited *Karpat'skii dialektologicheskii atlas* (The Carpathian Dialectological Atlas, 1967). Many of Bernshtein's works, however, are marred by his biased view that there were specific prehistoric Balkan-Carpathian linguistic ties.

Serhii Bernshtein

Bernshtein, Serhii [Bernštejn, Serhij], b 5 March 1880 in Odessa, d 26 October 1968 in Moscow. Mathematician, full member of the Academy of Sciences of the Ukrainian SSR from 1925 and of the Academy of Sciences of the USSR from 1929, professor at Kharkiv University in 1907–33, founder of a school of mathematics. Bernshtein was the founder of the Ukrainian Institute of Mathematical Sciences in Kharkiv and its director in 1930–3. He worked on differential equations, the theory of the closest convergence of functions, and the theory of probability. His main work is *Teoriia veroiatnostei* (Theory of Probabilities, 1946).

Berries. Both wild and cultivated berry patches are widespread in Ukraine. Berry cultures occupy about 2 percent of the land devoted to fruit and berry cultivation. Strawberries are the dominant cultivated crop, followed by black currants and raspberries. Gooseberries and red currants are also grown. The largest berry patches are in Polisia, in the Carpathians, and in the vicinity of large cities.

Bershad [Beršad']. v-10. City (1972 pop 11,400) on the Dokhna River (right-bank tributary of the Boh) in south-eastern Podilia, a raion center in Vinnytsia oblast. The city has a food industry (a food-processing complex), a metal-products factory, and furniture and clothing factories.

Bershadsky, Serhii [Beršads'kyj, Serhij], b 31 March 1850 in Berdianske, Tavriia gubernia, d 5 March 1896 in St

Petersburg. Historian of the philosophy of law, professor at St Petersburg University. Bershadsky devoted his life to the study of the 'Jewish question' and published important works on Jews in the Grand Duchy of Lithuania – *Dokumenty i registry k istorii Litovskikh evreev ...* (Documents and Registers for the History of Lithuanian Jews ..., 1883) and *Litovskie evrei, istoria ikh iuridicheskogo i obshchestvennogo byta ot Vytovta do Liublinskoi unii s 1388–1569* (The Lithuanian Jews, a History of Their Juridical and Social Life from Vytautas to the Union of Lublin, 1388–1569, 1883) – and on the Lithuanian Statute: *Litovskii Statut i pol'skie konstitutsii* (The Lithuanian Statute and Polish Constitutions, 1893). He also contributed to the journal *Kievskaiia starina*.

Bershadsky, Yulii [Beršads'kyj, Julijan], b 21 January 1869 in Tyraspil, Kherson gubernia, d 26 September 1956 in Sverdlovsk, Russia. Realist painter. Bershadsky graduated from the St Petersburg Academy of Arts (1899), where he studied with I. Repin, maintained his own studio in Odessa (1907–28), and taught at the Odessa Art Institute (1928–41). Among his paintings are *Widowhood* (1893), *Interesting Story* (1902), *Woman Revolutionary* (1906), *Fishermen* (1934), *Holiday at a Collective Farm* (1937), and *Self-Portrait* (1954).

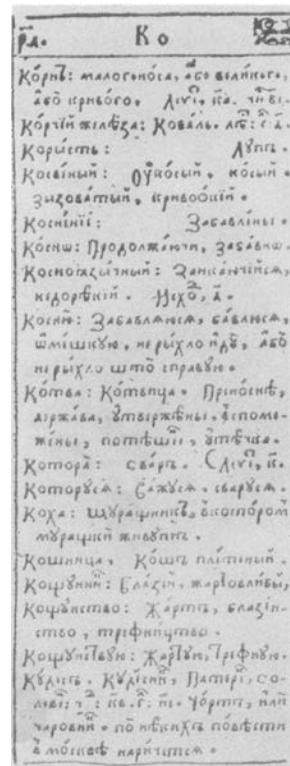

Berthélemy Mission. A subcommission formed by the International Commission of the Allied Powers on 15 February 1919 to bring about an armistice on the Polish-Ukrainian front and consisting of Gen J. Berthélemy (France), Gen A. Carton de Wiart (Great Britain), R.H. Lord (United States), and Maj Stabile (Italy). It arrived in Lviv on 17 February 1919 and on 22 February it called on the government of the *Western Province of the Ukrainian National Republic (zo UNR) to arrange a ceasefire with the Poles as a condition for peace negotiations. Although the situation at the front was favorable to the Ukrainian side, the government of the zo UNR accepted the proposal on 25 February, and on that day a Ukrainian delegation arrived in Lviv for armistice negotiations. On 27 February the Berthélemy Mission met with S. Petliura in Khodoriv to discuss the possible role of the Army of the UNR in the war against Soviet Russia. On its return to Lviv on 28 February the mission presented a peace proposal to the Ukrainian and Polish delegations: hostilities were to be suspended until the peace conference settled the question of eastern Galicia. Ukrainian troops were to retreat to a demarcation line known as the Berthélemy Line, abandoning almost 40 percent of eastern Galicia, including Lviv and the Drohobych oil fields, to the Poles. A separate agreement bound the Polish side to deliver a certain amount of crude oil and petroleum products to the Ukrainian government. Petliura advised the government of the zo UNR to accept the terms of the armistice, but the Ukrainian public in Galicia was opposed to them. The Ukrainian supreme command immediately called an end to the ceasefire but did not reply to the mission's ultimatum. On 4 March 1919 the State Secretariat of the zo UNR sent a formal rejection to the allied powers. After the failure of the Ukrainian offensive in the Lviv-Peremyshl corridor, the Polish side declared on 27 March that it was ready to accept peace on the terms proposed by the mission; the Ukrainian delegation, however, again rejected it. On 13 May the Ukrainian delegation accepted in principle the terms of armistice proposed by the Inter-

Allied Commission headed by Gen L. *Botha. This proposal was rejected by the Polish side, however.

Bervinchak, Nik [Bervinčak], b 4 December 1903 near Minersville, Pennsylvania, d there 29 June 1978. Amateur artist and engraver. Bervinchak decorated churches, painted icons, carved iconostases, executed series of engravings on the life and work of miners, and painted portraits and watercolors. He exhibited his work in many galleries in the United States, as well as in Milan and Stockholm. His work is to be found in the National Gallery and the Smithsonian Institution in Washington and in the collections of presidents F. Roosevelt, D. Eisenhower, and L. Johnson.

A page from Pamva Berynda's *Lexsykon*

Berynda, Pamva, b 1570s in Bukovyna, d 23 July 1632 in Kiev. An outstanding Ukrainian lexicographer and poet of the baroque tradition. His *Lexsykon slavenorosskyi al'bo imen tolkovanyie* (A Slavonic-Ruthenian Lexicon and Explanation of Proper Names, 1627; 2nd edn Kuteinsky Monastery, Belorussia, 1653) grew out of his work as a proof-reader and editor with Ukrainian printers, particularly at the press of the Kievan Cave Monastery, where he was invited from Lviv in 1616. His dictionary contains 6,982 Church Slavonic words and foreign terms used in Church Slavonic texts, for which it supplies equivalent terms from the literary Ukrainian of the time and occasional etymolo-

gies and explanations. Berynda's intention in compiling the dictionary was to revive the Church Slavonic tradition of the literary language and thus to counteract the influence of Polish Catholicism and Polish culture. The composition and the language of the dictionary have been studied by P. Zhytetsky, Z. Veselovska, S. Witkowski, O. Horbach, and others. Berynda's *Leksykon* was edited with an introduction by V. Nimchuk and reprinted by photoffset in Kiev in 1961.

In 1616 Berynda published a Christmas dialogue entitled *Na Rozhdestvo Hospoda Boha i Spasa nasheho Iysusa Khrysta virshi dlia utikhy pravoslavnym khrystyianam* (Poems for the Enjoyment of Orthodox Christians on the Occasion of the Birth of Our Lord and Savior Jesus Christ). It consisted of a prologue, speeches by seven boys, an epilogue, and poems on religious themes.

G.Y. Shevelov

Berynda, Stepan, date of birth unknown, d after 1634. Ukrainian printer, engraver, and poet. Berynda printed some 10 books at the Kievan Cave Monastery between 1621 and 1634, including *Leksykon slavenorosskyi al'bo imen tolkovanyie* (Slavonic-Ruthenian Lexicon and Explanation of Proper Names, 1627), compiled by his brother, P. *Berynda, and *Sluzhebnyk* (Missal, 1629). Berynda executed two engravings that bear his initials, one in *Akafisty* (Acahisti, 1629), the other in *Paramifii* (1634, dated 1629). He also wrote poetry (one of his poems is dedicated to P. Mohyla).

Beryslav. VII-14. City (1972 pop 14,900) and steamer port on the Kakhivka reservoir; raion center in Kherson oblast. In the early 15th century there was a Lithuanian fortress and tollhouse here (the Vytantas tollhouse); in the mid-15th century the Tatars built here the fortress of Kazi-Kermen, which closed the Dnieper highway to the Zaporozhians and defended the Crimea. The name Beryslav was introduced after the Russian conquest at the end of the 18th century. Beryslav has a machine-building factory, brickmaking and construction-supply factories, and a food industry. The city also has a historical museum and an 18th-century Zaporozhian church.

Beryslav excavations. Archeological excavations conducted near the city of Beryslav in Kherson oblast. In 1925 a hoard of the middle Bronze Age (2,000 BC), consisting of heavy bronze castings, sickles, and axes of southern Caucasian origin, was discovered there. In 1951-3 near Beryslav, at Slobidka, an expedition of the Institute of Archeology uncovered traces of a settlement and kurhans from the Bronze Age to the early medieval period. In the first centuries AD the region was inhabited by the Scythians and Sarmatians, and later by Slavic tribes. Remnants of large stone buildings were excavated. The kurhans revealed graves with articles characteristic of the *Cherniakhiv culture. The Beryslav excavations have been studied by O. Leskov, Ye. Makhno, and V. Mizin.

Beskyd. A weekly newspaper of the Peremyshl eparchy published in Peremyshl between 1928 and 1933 and edited by Ye. Zyblykevych.

Beskyd, Antin, b 16 September 1855 in the village of Hankivtsi (Hanigovce) in the Prešov region, Slovakia, d 16 June 1933 in Uzhhorod. Politician and lawyer in

Transcarpathia who from 1910 to 1918 represented the opposition People's party in the Hungarian parliament. In 1918-19, as head of the Ruthenian People's Council in Prešov he strove for the unification of Transcarpathia and Czechoslovakia; he was a member of the Czech delegation to the Paris Peace Conference (September 1919). In October 1919 Beskyd became head of the Russophile faction of the Central Ruthenian People's Council in Uzhhorod and co-founder of the Subcarpathian Bank. He was the first president of the Dukhnovykh Society. In 1923 he was made governor of Subcarpathian Ruthenia by the government of Czechoslovakia; he retained this prestigious but nominal post (the power was in fact in the hands of the Czech deputy governor) to the end of his life.

Beskyds. The name of the outer flysch belt of the *Carpathian Mountains, built of chalk and Paleogene sandstones, shale, and limestones. The Beskyds in Ukrainian ethnic territories are divided into the Western Beskyd, reaching to the Biala and Topl'a rivers in the east; the Low Beskyd, to the Oslava and Liaborets rivers; the Middle Beskyd, to the Boryslav-Turka-Sianky Pass - Uzh River line; the High Beskyd, to the Mizunka River; and the Gorgany, to the Prut River and the Hutsul Beskyd. The High Beskyd and the Gorgany are separated from the Polonynian Beskyd by the Middle Carpathian Depression.

Bessarabia or **Basarabiia**. Region bounded by the middle and lower Dniester River in the north and east, the Prut River in the west, and the mouth of the Danube and the Black Sea in the south. The area of the region is 45,600 sq km. Until the beginning of the 19th century the name Bessarabia referred only to the southern part of Bessarabia; later it was used for the entire region. Today Bessarabia is a part of the *Moldavian SSR, except for the northern part (the Khotyn region) and the southern part (the Akkerman region), which are settled by Ukrainians and comprise 14,400 sq km of the Ukrainian SSR.

Because of its location between Ukraine and Rumania and between Poland and the Balkans, Bessarabia has always served as a route between the west and the east. This fact has influenced its history and the composition of its population. Southern Bessarabia is strategically important, as it controls the mouth of the Danube and access to the Black Sea.

Geography and economy. Bessarabia is a continuation of the *Pokutian-Bessarabian Upland and the *Black Sea Lowland. It consists of Tertiary strata (older strata appear only at the Dniester River) and is covered mainly by chernozem and loess. Except in its southern part, Bessarabia is hilly. From north to south it can be divided into four natural regions: (1) the Khotyn region, which reaches 465 m in elevation and is covered with beech forests; (2) the Beltsi Plain, a woodless, chernozem plain with an elevation up to 180-200 m; (3) the central region, which is a higher part of Bessarabia, reaching 430 m in the forested Kodry Upland; and (4) the Budzhak (Bugeac) Lowland, which extends to the Black Sea and the Danube. The climate of Bessarabia is of the Black Sea type: the temperature rises as one moves southward, with an average annual temperature of 7.5-10.5°C (19-23°C in July, and -5°C to -2°C in January); the rainfall diminishes from 600 mm in the north to 300 mm in the south (the

Budzhak Lowland suffers from drought). Forests cover only 5 percent of the land (in the north, in the Kodry Upland, and on the Dniester). The rest of the land is cultivated steppe and forest-steppe.

Bessarabia is an agricultural land; 80 percent of its area is under cultivation, and 72 percent of the cultivated land (2.9 million ha) is devoted to the growing of grain (corn, wheat, barley) and sunflowers. Grape and orchard cultivation are well developed, especially in the Dniester Valley. Fishing is important in the south. Industry was poorly developed until the 1950s.

Population. Bessarabia is divided into two bands: (1) the northern and central, which has long been settled by Ukrainians and Rumanians, and (2) the southern (Budzhak), which has been settled permanently by various nationalities since the end of the 18th century only. After Russia annexed Bessarabia in 1812, the population of Bessarabia increased rapidly, to a large extent because of immigration. The population was 340,000 in 1812, 492,000 in 1816, 873,000 in 1850, 1,935,000 in 1897, 2,631,000 in 1919, 2,864,400 in 1930, and 2,734,000 in 1941. From 8 people per sq km in 1812 the population density rose to 64 people per sq km in 1930. Thirteen percent of the population lived in towns in 1930, mainly in Kishinev (Chişinău), the capital of Bessarabia (115,000), Bilhorod-Dnistrovskiy (formerly Akkerman, 34,000), Bendery (Tighina, 31,384), Beltsi (Bălți, 30,570), Soroky (Soroca, 15,001), Izmail (Ismail, 24,998), Orhiiv (Orhei, 15,279), and Khotyn (Hotin, 15,334). In 1930 most of the population consisted of Rumanians or Moldavians (about 1,430,000 or 50 percent) and Ukrainians (about 645,000 or 22.5 percent; no differentiation between Russians and Ukrainians), according to L. Berg's calculations. According to the Rumanian census of 1930, there were 1,610,757 Rumanians (56.2 percent), 314,211 Ukrainians (11 percent), and 351,912 Russians (12.3 percent). According to the 1941 census the figures were 1,794,000 Rumanians (65.6 percent) and 448,000 Ukrainians (16.4 percent).

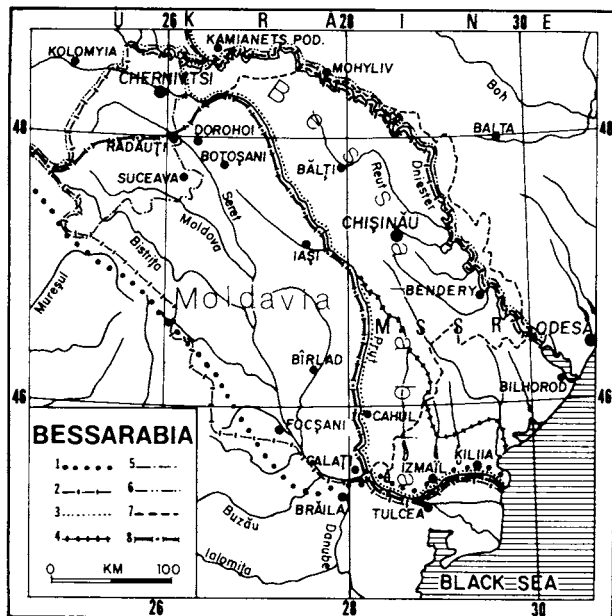

Rumanians have inhabited Bessarabia since the 13th century and constitute an overwhelming majority in the central part, which is now the Moldavian SSR. Although the descendants of ancient *Ulychians and *Tivertsians inhabited this land, other Ukrainians have migrated to Bessarabia since the 13th century, mainly from Galicia. At the end of the 17th century many Ukrainians from Right-Bank Ukraine, fleeing the persecutions of Peter I, found refuge in Bessarabia. With the destruction of the Zaporozhian Sich, Cossacks settled the virgin lands in the southern Budzhak (see *Danubian Sich). Many Ukrainian peasants went there after Russia annexed Bessarabia in 1812. Other nationalities settled mainly in southern Bessarabia at the end of the 18th and the beginning of the 19th century: the Bulgarians (177,000 or 6.5 percent according to the 1941 census); the *Gagauzy, who are Orthodox although they speak a Turkic dialect (115,000 or 4.2 percent in 1941); the Germans (80,000 or 2.8 percent in 1930); the Russians, some of whom had been townspeople since the times of Russian domination, and some who were peasants and Old Believers who had fled religious persecution and military service (162,000 or 6 percent in 1941); the Jews, coming mostly from Western Ukraine (206,000 or 7.2 percent in 1930; in 1941 almost none remained); and small groups of Poles (in the Khotyn area), Armenians, Greeks, French, and Gypsies (altogether 35,000 or 1.3 percent in 1941).

The Ukrainians formed the majority in the north in the Khotyn area (79 percent) and in the south in the Akkerman (Bilhorod) area, where they had intermarried with Bulgarians, Moldavians, Germans, and Russians and constituted 36.5 percent of the population. These two parts of Bessarabia were incorporated into the Ukrainian SSR, and today they belong to the Chernivtsi and Odessa oblasts. In the central part of Bessarabia there are pockets of Ukrainians, the largest being in Bendery and Beltsi counties (nearly 10 percent). Since 1940 this part of Bessarabia has belonged to the Moldavian SSR.

After the Second World War the composition of the population changed somewhat: most of the Jews died or were killed during the war, and the Germans left (see also *Southern Ukraine and *Odessa oblast).

History. As a result of its location and historical circumstances, Bessarabia never formed a separate state. It was always a peripheral part of neighboring states. In early times Bessarabia was inhabited by the Thracian tribes of the Dacians and Getae, which set up their own state at the beginning of the 1st century. With the Roman conquest of Dacia in the 2nd century, southern Bessarabia became part of the Roman Empire (the defensive earthworks called Trajan's Wall remain from this period). From the 4th century Bessarabia was settled by the east Slavic *Antes, and from the 9th century by the Tivertsians and Ulychians. In the 10th–11th century Bessarabia belonged to the Kievan Rus' state. During the next two centuries it was part of the Principality of *Galicia-Volhynia; extensive trade between Halych and lands on the Danube and the Black Sea was at that time carried on through Bessarabia. The Mongol-Tatar invasion of 1241 weakened and then terminated Galicia's influence over Bessarabia. At the same time the ancestors of the present-day Rumanians began to migrate from Wallachia and Transylvania (Siebenbürgen) into the partially deserted Bessarabian lands. In the mid-14th century Bessarabia became part of the Moldavian principality, which recognized at first the supremacy of Hungary, and then, at the end of the 14th century, the (nominal) supremacy of Poland. At the end of the 15th century the Ottoman Turks occupied southern Bessarabia, including the ports of Bilhorod (from then to 1944 called Akkerman) and Kiliia (which, with other towns such as Bendery, had been under Genoese control in the 14th century). By the beginning of the 16th century Moldavia and all of Bessarabia were under Turkish domination. Southern Bessarabia around the Budzhak Lowland did not belong to Moldavia but was granted to the *Nogay Tatars (the Bilhorod or Budzhak Horde) by the Turkish sultan.

Until the end of the 16th century the official language of the state, the church, and the boyars in Bessarabia, as in all of Moldavia, was Church Slavonic–Old Ukrainian. It was replaced by Rumanian only in the second half of the 17th century. After that time much of the Ukrainian population became Rumanianized. The Ukrainian Cossacks played an important role in Bessarabian history. Under D. Vyshnevetsky (in 1553 and 1563), I. Svyrhovsky (in 1574), and I. Pidkova (in 1577), they conducted campaigns in Bessarabia. In 1594 S. Nalyvaiko captured Kiliia. In 1621 P. Sahaidachny helped the Poles to defeat the Turks at *Khotyn. In 1632, under I. Sulyma's leadership, the Cossacks again took Kiliia. B. and T. *Khmelnitsky led campaigns in Bessarabia in 1650 and 1652. When the

Zaporozhian Sich was destroyed by Catherine II, many Cossacks settled in southern Bessarabia.

At the close of the Russo-Turkish War (1806–12), the Ottoman Turks ceded Bessarabia to Russia in the Bucharest Peace Treaty. In 1818 the Russian government turned Bessarabia into an oblast, with Kishinev as its capital. The Moldavian boyars participated in the Supreme Council, which was a provisional government of the province. In 1828 the council became merely an advisory body, while the Bessarabian oblast and its governor were subordinated to the governor-general of New Russia gubernia. In 1873 the Bessarabian oblast became a gubernia. By the Treaty of Paris, which ended the Crimean War in 1856, the southwestern part of Bessarabia became part of the Moldavian principality, but it was returned to Russia at the Berlin Congress in 1878. Under Russian domination the population of Bessarabia increased through the influx of Russians (many of them officials), Ukrainians, Bulgarians, Germans, and Jews. The government, schools, press, and the church attempted to Russify the people. The national consciousness of the Ukrainians here was poorly developed.

The Russian revolution of February 1917 gave life to new social and national movements in Bessarabia: the peasants demanded a redistribution of land, and the Rumanians and Ukrainians raised the question of national self-determination. In July 1917 the General Secretariat of the Central Rada of Ukraine declared its pretensions to Bessarabia. At the request of Ukrainian organizations in Bessarabia, the Central Rada sent its commissioner, I. Liskun, to Khotyn. The Rumanians too became politically active and established parties. A military congress of

Bessarabians, which convened in Kishinev on 21 October 1917, declared Bessarabia to be autonomous and set up the 120-member National Council (Sfatul Ţarei) as the country's national assembly.

On 2 December 1917 the National Council declared Bessarabia to be the Moldavian Democratic Republic, federated with Russia, but when Rumanian troops occupied Bessarabia in January 1918, Bessarabia was declared an independent Moldavian republic. On 15 March M. Hrushevsky, the president of the Central Rada, declared Ukraine's claim only to northern and southern Bessarabia, since these areas were inhabited mostly by Ukrainians. When Bessarabia was annexed by Rumania on 27 March 1918, the Ukrainians of northern Bessarabia protested and sent a delegation to the Central Rada in Kiev to request that Ukrainian troops and state officials be dispatched to Bessarabia and that Bessarabia be annexed by Ukraine. On 12 April 1918 the Central Rada protested Rumania's annexation of Bessarabia and demanded self-determination for the Ukrainian population. The same demand was repeated by the government of Hetman P. Skoropadsky in a memorandum to the Rumanian government of 25 June 1918. Subsequent events in Ukraine made it impossible to change the status of Bessarabia.

On 25 November 1918 the National Council renounced the autonomy of Bessarabia (by a vote of 38 to 8 when only 46 of the 162 deputies were present) and then dissolved itself. The pro-Rumanian policies of this council were opposed by the leader of the peasant faction, representative V. Tsyhanko. Members of the National Council who took an anti-Rumanian position were arrested (among them were Ukrainians – P. Chumachenko, Pantsir, Prichnitsky) and tried. Among anti-Rumanian actions in Bessarabia the Khotyn rebellion is particularly important. On 5–20 January 1919 Ukrainian insurgents under I. *Maievsky took control of the Khotyn region and set up the Bessarabian Directory, which began negotiations with the Directory of the UNR. While suppressing this rebellion, the Rumanian troops carried out a pacification campaign among the Ukrainian population. In September 1924 the people of Tatarbunary and neighboring villages in the Akkerman region rebelled against the Rumanian administration; in order to suppress the rebellion, the militia needed the support of the army and the Dniester fleet. In 1925, 283 of the rebels were tried in Kishinev.

At the peace conference in Paris in 1919, both H. Sydorenko, the head of the UNR delegation, and Kh. Rakovsky, the head of the Soviet Ukrainian government, opposed the annexation of Bessarabia by Rumania. Yet on 28 October 1920, Britain, France, Italy, and Japan, according to the Treaty of Trianon, recognized the right of Rumania to Bessarabia. The USSR and the Ukrainian SSR never accepted this decision, which led to further tensions in their relations with Rumania and to a policy of non-recognition.

The Rumanian government kept Bessarabia at a low cultural and economic level for 22 years. At the same time an intense effort was made to denationalize the Ukrainian population: Rumanian became compulsory in the government, courts, and schools. Ukrainians carried on some cultural activities in the Khotyn region (O. Yalovy and H. Bolbochan were the most active leaders) and in the Akkerman region (M. *Halyn, I. Havryliuk, V. Hetmanchenko, and the Chernukha family were most active). Prosvita groups, reading rooms, theater groups, and co-opera-

tives were organized. In 1920 there were nine Ukrainian representatives from Bessarabia in the Rumanian parliament, while in 1929 there was only one (from the county of Khotyn). In 1935 the Ukrainians of the Akkerman region suffered famine, which was caused by a drought. The Bessarabian Relief Committee, organized in Bukovyna, manifested the solidarity of all Ukrainians who lived under Rumania.

On 28 June 1940 the USSR forced Rumania, under threat of war, to cede Bessarabia and northern Bukovyna. By its decision of 2 August 1940, the Supreme Soviet of the USSR annexed the counties of Akkerman, Izmail, and Khotyn to the Ukrainian SSR. The rest of Bessarabia became a part of the Moldavian SSR, which was created out of the Moldavian ASSR (hitherto a part of the Ukrainian SSR). During the Soviet retreat from Bessarabia in July 1941, many nationally conscious Ukrainians were liquidated, among them V. Hetmanchenko. When Rumanian and German troops occupied Bessarabia, it was restored to Rumania and incorporated into a Generalgouvernement with Kishinev as capital. Its administration was responsible to a special agency of the Rumanian government – the Military-Civilian Cabinet for the Administration of Bessarabia, Bukovyna, and Transnistria. Rumanian officials and militia established a police regime in Bessarabia. Former social and economic conditions were restored, and Rumanianization was enforced. Any resistance was severely punished by incarceration in jails and concentration camps. Jews and Gypsies were particularly persecuted. Soviet partisan activity resulted in further repression and executions of civilians.

In August 1944 Soviet armies reoccupied Bessarabia and restored the 1940–1 order. The Paris Peace Treaties of 1947 recognized the USSR's right to Bessarabia on 10 February 1947. (For current conditions in Bessarabia see *Moldavian SSR, *Chernivtsi oblast, and *Odessa oblast.)

V. Kubijovyč, A. Zhukovskyy

Besser, Willibald, b 18 July 1784 in Innsbruck, Austria, d 23 October 1842 in Kremianets. Botanist and naturalist at the Kremianets lyceum, from 1834 to 1838 first professor of botany at Kiev University. Besser compiled a valuable herbarium for Kiev University. This is now in the Central Natural Science Museum of the Academy of Sciences of the Ukrainian SSR. He also wrote about the flora of Galicia (2 vols, 1809) and Right-Bank Ukraine (1822).

Volodymyr Bets

Bets, Volodymyr [Bec], b 26 April 1834 in Oster, Chernihiv gubernia, d 12 October 1894 in Kiev. Anatomist, histologist, pedagogue, and community figure. From 1868 to 1889 he was a professor at the University of Kiev. Bets wrote more than 50 scientific works, including *Atlas chelovecheskogo mozga* (Atlas of the Human Brain, 1890). His studies concern the structure of the cerebrum, particularly variations in the detailed structure of its various parts. He discovered the motor area of the cortex and, in 1874, described the large, pyramidal nerve cells that bear his name. Together with V. Antonovych he wrote *Istoriicheskie deiateli Iugo-zapadnoi Rossii* (Historical Figures of Southwestern Russia, 1883), which was regarded in official circles as a protest against Russian policy. Because of this, Bets was obliged to leave the University of Kiev.

Betsky, Ivan [Bec'kyj], 1818–90. Publisher and translator in Kharkiv. He published four volumes of the almanac **Molodyk* (1843–4), which contained works by T. Shevchenko, M. Kostomarov, Ya. Shchoholiv, and H. Kvitka; among others; translations of A. Barbier and V. Hugo; and articles on Ukrainian ethnography and folklore.

Bevzenko, Stepan, b 7 August 1920 in Stanyslavivka, Kirovohrad oblast. Dialectologist and historian of the Ukrainian language. He taught at the University of Uzhhorod and then at the University of Odessa. Bevzenko is the author of *Istorychna morfolohiia ukraïns'koi movy* (A Historical Morphology of the Ukrainian Language, 1960), which is a rather derivative work, and of a reverse dictionary of the Ukrainian language (published in fascicles in Odessa). He has also written some studies on the dialects and old texts of Transcarpathia and on the geographic distribution of syntactic features in Ukrainian dialects.

Bezborodko [Bezborod'ko]. Surname of a family of landowning officers of burgher-Cossack descent from the Pereiaslav region. Yakiv Bezborodko (d ca 1730) was a fellow of the banner in the Pereiaslav regiment from 1724 to 1730. His son Andrii (1711–80) was the general chancellor of the Hetmanate in 1741–2 and 1750–62 and, from

1762, a general judge in retirement. Andrii was the virtual head of the Ukrainian government during the hetmancy of K. *Rozumovsky. His sons were Prince O. *Bezborodko (1747–99), a well-known statesman in the Russian Empire during the latter half of the 18th century, and Count Illia Bezborodko (1756–1815), a participant in the Russo-Turkish wars of 1768–74 and 1787–91, who became lieutenant general in 1795 and later a privy councillor to the tsar and senator. Illia was the founder of the *Nizhen Lyceum in 1820. The Bezborodko lineage died out during the first half of the 19th century. The huge family estate and the title of count were inherited by the descendants of I. Bezborodko – the counts Kushelevych-Bezborodko.

Bezborodko, Mykola [Bezborod'ko] 1883–1937. Geologist and petrographer, professor at the universities of Kiev and Kamianets-Podilskyi, and later the head of the division of petrography at the Institute of Geology of the Academy of Sciences of the Ukrainian SSR. In 1935 Bezborodko drew up a stratigraphic scheme of the Ukrainian Crystalline Massif.

Bezborodko, Oleksander [Bezborod'ko], b 14 March 1747 in Hlukhiv in the Chernihiv region, d 6 April 1799 in St Petersburg. A leading figure in the Hetman state and later in the Russian Empire, a diplomat, and a Russian prince from 1797. Bezborodko studied at the Kiev Academy. He was a fellow of the standard from 1765 to 1772 and a member of the general court in 1767–68, after which he was in the service of the Russian Empire. Bezborodko commanded several Cossack regiments during the Russo-Turkish war (1768–74) and became the colonel of Kiev in 1774. In 1775 Bezborodko became secretary of petitions to Catherine II. In the 1780s he became a member of the College of Foreign Affairs and was promoted to postmaster general. In 1784 he became a member of the Russian Academy of Sciences. In 1797 Bezborodko was made chancellor of the Russian Empire. He initiated the annexation of the rest of southern Ukraine and the Crimea from Turkey to Russia and was instrumental in the second and third partitions of the Polish Commonwealth. The Treaty of Iași between Russia and Turkey (1792) was devised primarily by Bezborodko. In 1796, under Paul I, Bezborodko succeeded in reinstating the general court and several other institutions of the Hetmanate that had been abolished under Catherine II. To assist him in the planning and realization of his far-reaching program, he assembled a group of talented and educated advisers from among his countrymen, and, not infrequently, from his own family (P. Zavadovsky, D. Troshchynsky, M. Myklashevsky, H. Myloradovych, and others). Bezborodko was the co-author with V. Ruban of *Kratkaia letopis' Malyia Rossii* (A Short Chronicle of Little Russia, 1777) and, in the opinion of some scholars, of *Istoriia Rusov*.

O. Ohloblyn

Bezborodko Lyceum. See Nizhen Lyceum.

Bezkorovainy, Vasyl [Bezkorovajnyj, Vasyl'], b 12 January 1880 in Ternopil, d 5 March 1966 in Buffalo, New York. A composer, conductor, and pedagogue, Bezkorovainy studied music at the Lviv Conservatory and taught at the gymnasium in Ternopil. He was an organizer of the Ternopil branch of the Lviv Institute of Music and, in

Oleksander Bezborodko

Kuzma Bezkrorny

1930, of the Zolochiv branch. He emigrated in 1944 and lived in the United States from 1950. Bezkorovainy wrote the children's operetta *Kazka pro Chervonu Shapochku* (Little Red Riding Hood, with a libretto by L. Poltava), numerous choral and instrumental works, and music for the theater (eg, to accompany M. Kulish's play *Myna Mazailo*).

Bezkrorny, Kuzma [Bezkrornyj, Kuz'ma], b 1876, d 6 December 1937. Economist, political and community figure in the Kuban, member of the Revolutionary Ukrainian party, founding member of the Ukrainian Credit Society in Kharkiv. During the revolution of 1917–20 Bezkrorny was a member of all the Kuban councils and served as minister of domestic affairs in the cabinet of P. Kurhansky. As an émigré he was a lecturer at the Ukrainian Husbandry Academy in Poděbrady, Czechoslovakia. He wrote many articles, textbooks, and memoirs, some of which were published by the Ukrainian Scientific Institute in Warsaw.

Bezpal'ko, Oleksii [Bezpal'ko, Oleksij]. Linguist at the Pedagogical Institute of Ukrainian Linguistics in Luhanske. He is the author of compilatory surveys of the historical morphology of the Ukrainian language (in the collectively written *Istorychna hramatyka ukraïns'koi movy* [Historical Grammar of the Ukrainian Language, 1962]) and Ukrainian syntax (*Narysy z istorychnoho syntaksysu ukraïns'koi movy* [Essays on the Historical Syntax of the Ukrainian Language, 1960]).

Yosyp Bezpal'ko

Bezpal'ko, Yosyp [Bezpal'ko, Josyp], 1881–? Political figure and publicist in Bukovyna. From 1906 to 1918 Bezpal'ko was leader of the Ukrainian Social Democratic

party in Bukovyna and editor of its newspaper, *Bor'ba*, in Chernivtsi (1908–14). In 1918 he became a member of the Ukrainian National Council of Bukovyna and, in the same year, served as mayor of Chernivtsi. He was a member of the Ukrainian National Rada of the Western Ukrainian National Republic and of the Labor Congress in 1919; in 1919–20 he served as UNR minister of labor in I. Mazepa's cabinet. As an émigré Bezpalko lectured at the Ukrainian Technical and Husbandry Academy in Poděbrady, Czechoslovakia, and became head of the Union of Ukrainian Sich Societies (1938). Bezpalko wrote many political articles and studies on German-Slavic relations in the early 19th century. He was exiled by the Soviet authorities in 1947.

Bezpaly, Ivan [Bezpanyj], ?–1718. Cossack officer in the Uman Regiment; acting hetman (1658–9), chosen by the pro-Russian Cossack officers, who opposed the pro-Polish hetman I. Vyhovsky. When Yu. Khmelnytsky was elected hetman in 1659, Bezpaly became his general judge (1659–60). In 1668 he was a general quartermaster under Hetman I. Briukhovetsky.

Bezperchy, Dmytro [Bezperčyj], b 30 October 1825 in the village of Borysivka, Kursk gubernia, d 30 September 1913 in Kharkiv. Painter and pedagogue. Born a serf, Bezperchy obtained his freedom in 1843 and received his artistic education at the St Petersburg Academy of Arts, studying with K. Briullov from 1841 to 1846. He taught painting at the Nizhen Lyceum and in Kharkiv high schools (1850–1900). Among his students were V. Beklemishev, S. Vasylykivsky, P. Levchenko, M. Tkachenko, and H. Siemiradzki. Bezperchy painted portraits, including a self-portrait (1846); genre paintings, including *Village Landscape*, *Matchmaking at Honcharivka*, *Banduryst*, and *From the Field*; Crimean landscapes; etc. The influence of T. Shevchenko is evident in Bezperchy's work.

Dmytro Bezperchy

Marko Bezruchko

Bezruchko, Marko, b 31 October 1886 in Velykyi Tokmak, Tavriia gubernia, d 10 February 1944 in Warsaw. Military tactician, general ensign in the Army of the UNR. Bezruchko graduated from the General Staff Academy in St Petersburg in 1914 and fought in the First World War. In 1918 he was chief of operations of the general staff of the Army of the UNR, and in April 1919 he became the chief of staff of the Sich Riflemen Corps. From January 1920 he commanded the 6th Sich Riflemen Division and participated in the Kiev campaign and the defense of Kiev. He distinguished himself in the battles against the

Soviet army on the Vistula (particularly in the defense of Zamostia). During the August and September offensive in 1920 he commanded the center group of the Army of the UNR. In 1920–4 he held the posts of defense minister, deputy minister, and chairman of the Supreme Military Council of the UNR in exile. In 1931–5 Bezruchko served as president of the Ukrainian Military-Historical Society in Warsaw. He is the author of *Ukrains'ki Sichovi Stril'tsi v borot'bi za derzhavnist'* (Ukrainian Sich Riflemen in the Struggle for Statehood, 1932).

Bezsonov, Mykola (monastic name: Nikon), b 1868, d 1919 in Odessa. Orthodox bishop of Kremianets from 1909 and later the bishop of Krasnoiarsk. Bezsonov was a member of the Fourth Russian State Duma, in which he defended the right to education in Ukrainian. During the First World War his articles in the press strongly condemned Russian policy in Galicia. In 1917 he returned as a civilian from Siberia to Ukraine. He served as a director of the religious affairs department in the Ministry of the Interior of the UNR. His articles appeared in the Kievian **Nova Rada*.

Bezuhly, Danylo [Bezuhlyj], b 23 December 1914 on the estate of Ivanivka, Poltava gubernia, d 29 January 1977 in Kiev. Painter. Bezuhly obtained his artistic education at the Kiev Institute of Art, from which he graduated in 1942. He painted the series *Dnieper Hydroelectric Station* (1946), *The Land of Transcarpathia* (1946), *In the Carpathians* (1947); a series of paintings devoted to T. Shevchenko: *Shevchenko among the Kazakhs* (1948), *Taras Shevchenko in Exile* (1964), *Shevchenko on the Shore of the Aral Sea* (1965); and other works. Many of his subjects are taken from his travels in Czechoslovakia, India, China, and elsewhere.

Bezviryk (Unbeliever). Popular antireligious magazine published semiweekly in Kharkiv from 1925 to 1935. Initially, until 1926, *Bezviryk* was published by the Central Committee of the CP(B)U and by the General Committee on Political Education of the Ukrainian SSR. It then became the organ of the Central Council of the **Association of Militant Atheists of Ukraine*. *Bezviryk* was revived as a weekly in Kiev from 1937 to 1941 under the name *Bezbozhnyk*.

Biała Podlaska (Ukrainian: Bila Pidliaska). 1-4. County city (1969 pop 24,400) on the Krna (Krzna) River in southern Podlachia in Lublin voivodeship, Poland. Founded in the 15th century, Biała was, from the early 1600s, a possession of the **Radziwiłł* family, one of the larger towns in southern Podlachia, and a center of Ukrainian religious life. It has a baroque church, the Church of St Cyril, which belonged to a former Basilian monastery; the relics of St Yosaphat Kuntsevych were preserved here until 1915. Beginning in the 1860s, many members of the Ukrainian intelligentsia were educated in the Russian gymnasium and teachers' seminary. In 1917–18 Biała was the center of the cultural activity of the Ukrainian Hromada and the center of a Blue Coats military unit; the first Ukrainian newspaper in Podlachia, *Ridna shkola*, was published here. From 1940 to 1944 the Ukrainian Relief Committee was active here, and there was also a school of commerce. Until the Ukrainians were resettled in 1945–7 the eastern part of Biała county was Ukrainian ethnic territory. The population of Biała county consisted in

1939 of Ukrainians (16 percent), Polonized Ukrainians (about 33 percent), Poles (41 percent), and Jews (10 percent).

Białystok voivodeship. Administrative unit in north-eastern Poland, having an area of 23,200 sq km and a population of 1.2 million (1974). The southeastern part of the province includes northern Podlachia (ie, the southern portions of Siemiatycze, Hajnówka, and Bielsk counties), which, until the expulsion of the Ukrainian population in 1945–7, was Ukrainian ethnic territory (2,700 sq km; pop 80,000).

Biberovych, Ivan [Biberovyč], b 1854, d 15 November 1920 in Kolomyia. Stage actor, who usually played heroic roles, and director. He began his career on the stage of the Ruska Besida theater in Lviv in 1874. In 1882–92 he was director at the theater (along with I. Hrynevetsky until 1888). From 1902 he worked in amateur theater in Kolomyia. He appeared in the following roles: Petro in I. Kotliarevsky's *Natalka Poltavka* (Natalka from Poltava), Hryts in M. Starytsky's *Oi ne khody, Hrytsiu* (Don't Go to Parties, Hryts), and Pavlo Polubotok in I. Barvinsky's play of that title. He staged many Western European plays.

Ivan Biberovych

Ivanna Biberovych

Biberovych, Ivanna [Biberovyč] (birth name Koralevych), b 30 December 1861 in Falysh, Stryi county, Galicia, d 7 September 1937 in Kolomyia. Spouse of I. *Biberovych, a dramatic actress, she used the stage name Lianovska. She played heroic and lyric roles on the stage of the Ruska Besida theater in Lviv in 1876–92, and such roles as Rohnida in K. Ustyianovych's *Iaropolk*, Ruta in his *Oleh*, Marusia in P. Myrny's *Lymerivna* (The Saddler's Daughter), and Adrienne in E. Scribe and G. Legouvé's *Adrienne Lecouvreur*.

Bibikov, Dimitrii, b 1792, d 6 March 1870 in St Petersburg. Russian political figure and general. From 1837 to 1852 Bibikov was military governor of Kiev and governor general of Kiev, Podilia, and Volhynia gubernias; from 1852 to 1855 he was minister of the interior. He conducted a policy of Russification in Right-Bank Ukraine, extended the network of Russian schools, restricted the privileges of the Polish landlords and gentry, confiscated the properties of the Catholic clergy, and annulled the Lithuanian Statute. He was particularly active in the destruction of the *Cyril and Methodius Brotherhood. In 1847–8 he introduced regulations defining peasant work

obligations and payments. He founded the Central Archive of Ancient Documents in Kiev.

Bibikov, Serhii, b 14 September 1908 in Sevastopol. Archeologist, from 1958 a corresponding member of the Academy of Sciences of the Ukrainian SSR, director of its Institute of Archeology in 1955–7, and since then the head of the institute's department of primitive society.

Serhii Bibikov

Among his works dealing with the early Trypilian period and the Stone Age in Ukraine are: *Drevnii kamennyi vek v Krymu* (The Old Stone Age in the Crimea, Leningrad 1940); *Verkh'n'opaleolitychni znakhidky na Seredn'omu Podnistrov'i* (Upper Paleolithic Discoveries in the Middle Dniester Region, 1949); *Rannetripol'skoe poselenie Luka-Vrublevetskaia na Dnestre* (The Early Trypilian Settlement of Luka-Vrublivetska on the Dniester, 1953); *Issledovanie tripol'skikh pamiatnikov na Srednem Podnistrov'e* (The Investigation of Trypilian Monuments in the Middle Dniester Region, 1955).

Bible. Holy Scripture, a collection of religious writings, regarded as divinely inspired, on which the doctrines of Judaism and Christianity are based. The Bible is divided into the Hebrew Old Testament, which dates from the pre-Christian period and comprises 47 books (in the so-called Alexandrian canon, a Greek translation of the Septuagint dating from the 2nd–3rd century BC), and the New Testament, which comprises 27 books on the life and teachings of Jesus Christ written by the apostles during the second half of the 1st century AD. Included in the Old Testament are the 16 books of the Apocrypha, whose divine inspiration has been challenged at various times. It is still rejected by the Protestant churches and, in part, by the Orthodox church.

The Bible, written in Hebrew, Aramaic, and Greek, was partially translated into Old Church Slavonic in the 9th–10th century AD, primarily for liturgical use, and in this form, together with Christian doctrine, it made its way from Bulgaria to Kievan Rus'. Accordingly, the oldest books of the Bible preserved from the Princely era, beginning with the *Ostromir Gospel (1056–7), are readings from the Old Testament, Gospels, and Apostol (Acts of the Apostles) intended for use in church services. In the process of transcription, these texts, like the complete translations of the Bible that later made their appearance in Ukrainian territory, took on the characteristics of the Ukrainian language. However, the full text of the Bible did

not become available in Ukraine until the printing of the monumental *Ostrih Bible (1581), the first such publication in Old Church Slavonic, which followed the Alexandrian canon and, in part, the Latin Vulgate. Later, under the influence of the Reformation, parts of the Bible (eg, the *Peresopnytsia Gospel [1556–61], the *Krekhiv Apostol [1560]) were translated into the vernacular 'for the greater enlightenment of the common Christian people.' However, with the subordination of Ukraine to Russia, such translations were forbidden: the Orthodox church in Ukraine was allowed to use only Old Church Slavonic translations and was obliged to employ the Russian pronunciation.

It was only in the 19th century that new attempts were made to translate the Bible into standard Ukrainian: these were initiated by M. *Shashkevych in Galicia in 1842 (the Gospels of John and Matthew, 1–5) and P. *Morachevsky in eastern Ukraine in 1862 (the four gospels and the Acts). Since the synod of the Russian Orthodox church rejected Morachevsky's translation and opposed the printing of the Bible in Ukrainian, the following translations appeared outside the Russian Empire: the Pentateuch, translated by P. *Kulish (Lviv 1869); the New Testament, translated by Kulish and I. *Puliui (Vienna 1871); and the Bible, translated by Kulish, Puliui, and I. *Nechui-Levytsky (Vienna: British Bible Society 1903). The translation of 1903 did not include the Apocrypha, nor did the translation by I. *Ohiienko from the Hebrew and Greek text (1962), which is now employed by the Ukrainian Orthodox and Protestant churches. A complete translation of the Bible into Ukrainian, based on a version by Rev. I. Khomenko, was prepared by the biblical commission of the Basilian order (1956–62), working from the original Hebrew, Aramaic, and Greek texts (published in Rome in 1963). The Ukrainian text of the Bible is currently proscribed in Ukraine both by the Soviet government and by the Russian Orthodox church, which does not recognize Ukrainian as a language of divine service and demands that the Bible be read in churches in the Russian redaction of the Old Church Slavonic translation.

Bibliographic journals. Periodical publications devoted to the history, theory, and practice of bibliography, the registration of current book and periodical production, the review and recommendation of literature, etc. In Ukraine bibliographic journals appeared only after the revolution of 1917. Early ones included **Knyhar* (1917–20), *Holos druku* (1921), *Knyha* (1923–4), and **Nova knyha* (1924–5). The National Library of Ukraine in Kiev published *Bibliotechnyi zhurnal* (1925–7) and *Zhurnal bibliotekoznavstva ta bibliografii* (1927–9). The Bibliographic Commission of the All-Ukrainian Academy of Sciences published *Ukrains'ka bibliografiia* (1928–30), and the Book Chamber of the Ukrainian SSR published **Litopys ukrains'koho druku* (1924–30). All these bibliographic journals were terminated as ideologically harmful, and journals meeting the requirements of Soviet ideology took their place. In 1935 *Litopys druku URSR* began publication. It was divided into separate series: *Litopys knyhy*, a

continuation of *Litopys ukrains'koho druku*; *Litopys zhurnal'nykh stattei* (from 1936); *Litopys hazetnykh stattei* (from 1937); *Litopys retsenzii* (from 1936); *Litopys obrazotvorchoho mystetstva* (1937–8, then from 1952); *Litopys muzychnoi literatury* (from 1954); *Ukrains'ka RSR u vydanniakh respublik Radians'koho Soiuzu* (from 1956); and the bulletin *Novi knyhy* (from 1958).

Outside the Ukrainian SSR, in Stanyslaviv the journal **Knyzhka* was published with the supplement *Vseukrains'ka bibliografiia* (1921–3). The Bibliographic Commission of the Shevchenko Scientific Society in Lviv published eight volumes of **Materialy do ukrains'koi bibliografii* (1909–39) and the journal *Ukrains'ka knyha* (1937–9). Two bibliographic journals have been published since the Second World War in the United States: *Biblos* in New York (1955–79) and *Ukrains'ka knyha* in Philadelphia (since 1971).

Bibliography. Bibliographic work in Ukraine originated in the compiling of indexes of books that should be read and of books that should not be read. Such an index appears in the **Izbornik* of Sviatoslav of 1073, which, however, was not compiled but only copied in Ukraine. Ukrainian books started to appear in indexes in the 15th century, at which time the first known book catalog of a monastic library was prepared as well. With the introduction of printing, indexes of works and book-price catalogs were compiled and published. Indexes of recommended works and library catalogs grew in number and size in the 17th century, when subject bibliographies, such as a musical bibliography published in Lviv in 1697, also started to appear.

After the Battle of Poltava in 1709 book publishing in Ukraine was restricted. As Ukraine's political and cultural independence was being steadily eroded, many Ukrainian scholars served the Russian Empire. Some of them, like M. *Bantysh-Kamensky and V. *Anastasevych, became pioneers of Russian bibliography. Since Russian bibliographers included Ukrainian books in their bibliographies, the works of V. Sopikov, I. Karataev, and V. Undolsky can be considered important contributions to the bibliography of Ukrainian books published before 1865.

One of the founders of modern Ukrainian bibliography was M. *Maksymovych, author of *Knizhnaia starina iuzhnorusskaia* (South Russian Book Antiquity, 1849–50) and other bibliographies. Another significant contributor was Ya. *Holovatsky, author of *Dopolneniia k ocherku slaviano-russkoi bibliografii V.M. Undol'skogo* (Additions to the Outline of the Slavic-Russian Bibliography by V.M. Undolsky, 1874). Holovatsky also prepared several other bibliographies, including 'Bibliografiia halytsko-ruskaia s 1772–1848 hoda' (Galician-Ruthenian Bibliography from 1772 to 1848), in *Halychanyn*, vol 1, nos 3–4, 1863). In Western Ukraine the most noted bibliographer was I. *Levytsky. His main work, *Halytsko-ruskaia bibliografiia XIX-ho stolittia s uvzhliadnieniem ruskykh izdaniia poiavyvshykhsia v Uhorshchyni i Bukovyni* (Galician-Ruthenian Bibliography of the 19th Century Including Ruthenian Publications That Appeared in Hungary and Bukovyna), was arranged chronologically for the years 1801–86 and was published in two volumes in Lviv in 1888–95. Because of his death, *Ukrains'ka bibliografiia Avstro-Uhorshchyny za roky 1887–1900* (Ukrainian Bibliography in Austria-Hungary for the Years 1887–1900) appeared in

only three volumes, covering the years 1887–93; it was published by the Shevchenko Scientific Society in Lviv in 1909–11 in vols 1–3 of **Materialy do ukrains'koi bibliografii*. The Shevchenko Scientific Society also published his 'Halyts'ko-rus'ka bibliohrafiia za roky 1772–1800' (Galician-Ruthenian Bibliography for the Years 1772–1800) in its *Zapysky*, vol 52 (1903).

In Ukraine under Russia the historian O. *Lazarevsky compiled his *Ukazatel' istochnikov dlia izuchenia Malorosiskogo kraia* (Guide to Sources for the Study of the Little Russian Land, St Petersburg 1858), which was a revised edition of his previous work published in *Chernigovskie gubernskie vedomosti* in 1853. Another historian, H. *Myloradovych, supplemented Lazarevsky's work by publishing 'Inostrannye sochineniia o Malorossii' (Foreign Works on Little Russia) in *Chernigovskie gubernskie vedomosti* (1859, nos 24–31). In the same paper Lazarevsky began publishing in 1855 a current Ukrainian bibliography from the year 1854, which in 1856–8 appeared under the title *Ukrainskaia literaturnaia letopis'* (Ukrainian Literary Chronicle). In 1860 it was continued by H. Myloradovych and in 1861, in *Poltavskie gubernskie vedomosti*, nos 3–8, by the ethnographer P. *Yefymenko.

A bibliography of books and articles on Ukraine for the years 1858–60 and a guide to Ukrainian literature in Galicia for the years 1837–62 were compiled by a Russian bibliographer, V. *Mezhov, and published in the Ukrainian periodical *Osnova* in St Petersburg in 1861 and 1862 respectively.

The Valuev circular of 1863 and the *Ems ukase of 1876 against the Ukrainian language hindered the work of Ukrainian bibliographers. Nevertheless, lists and surveys continued to appear in **Kievskaia starina*, published in Kiev in 1882–1906, and in almanacs, as well as in periodicals published in Lviv: *Pravda*, *Zoria*, *Zhytie i slovo*, *Literaturno-naukovyi vistnyk*, and *Zapysky NTSh*.

In the almanac *Rada* (Kiev 1883), M. *Komarov published his *Bibliografichnyi pokazhchik novoi ukrains'koi literatury 1798–1883 r.* (Bibliographic Guide to Modern Ukrainian Literature 1798–1883). When he died in 1913 Komarov left a manuscript titled 'Bibliografichnyi pokazhchik ukrains'kykh avtoriv' (Bibliographic Guide to Ukrainian Authors). Komarov also compiled the guide *Ukrains'ka dramaturhiia* (Ukrainian Dramaturgy, Odessa 1906), which covered the years 1815–1906, and a supplement, *Do 'ukrains'koi dramaturhii'* (On 'Ukrainian Dramaturgy,' Odessa 1912), covering the years 1906–12. Also thematically interesting was B. *Hrinchenko's *Literatura ukrainskogo fol'klora 1777–1900* (Literature of Ukrainian Folklore, 1777–1900, Chernihiv 1901).

The independent Ukrainian National Republic institutionalized bibliographic studies in Ukraine: such new institutions as the Ukrainian Academy of Sciences, the National Library of Ukraine, and the Supreme Book Chamber took charge of national bibliography. Under the Soviet regime these and many other, newly created institutions were allowed to continue their work. The problems of bibliography were discussed in such publications as *Bibliolohichni visti* (Kiev 1923–30) of the Ukrainian Scientific Institute of Bibliology; *Biblioteknyi zbirnyk* (1926–7) and *Zhurnal bibliotekoznavstva ta bibliografii* (1927–30), of the National Library of Ukraine in Kiev; *Ukrains'ka bibliohrafiia* (no. 1, Kiev 1928), of the Bibliographic Commission of the All-Ukrainian Academy of Sciences (nos 2–3, 1929, were devoted to personal bibliographies);

Zapysky (1–4, 1928–30) of the Ukrainian Bibliographic Society in Odessa; and *Pratsi* (1–4, 1927–33) of the Odessa Central Scientific Library.

In this period several important guides appeared: *Desiat' roki ukrains'koi literatury, 1917–1927* (Ten Years of Ukrainian Literature, 1917–1927, 2 vols, Kharkiv 1928) by A. *Leites and M. Yashek; *Bibliohrafiia literatury z ukrains'koho fol'kloru* (Bibliography of Literature on Ukrainian Folklore, Kiev 1930) by the ethnographer O. *Andriievsky; *Materialy do kraieznavchoi bibliografii Ukrainy, 1847–1929* (Materials on the Bibliography of Regional Studies of Ukraine, 1847–1929, 1930) by F. *Maksymenko; *Bibliohrafiia ukrains'koi presy, 1816–1916* (Bibliography of the Ukrainian Press, 1816–1916, Kharkiv 1930) by V. *Ihnatiienko; *Systematychnyi kataloh vydan'*, 1918–1929 (Systematic Catalog of Publications, 1918–1929, Kiev 1930) of the All-Ukrainian Academy of Sciences, with two supplements for 1930–1, published in 1931–2; and others.

The Supreme Book Chamber in Kiev was renamed the Ukrainian Book Chamber and transferred to Kharkiv in June 1922. In 1924 it began publishing **Litopys ukrains'koho druku*, supplements to which also included Ukrainian publications published outside the Ukrainian SSR.

In the early 1930s all bibliographic institutions were either abolished or reorganized, and bibliographic publications were discontinued by the Soviet regime. Even *Litopys ukrains'koho druku*, the organ of state bibliography in Ukraine, ceased to appear in October 1930. The Ukrainian Book Chamber was reorganized into the State Bibliographic Institute and later became the *Book Chamber of the Ukrainian SSR, subordinated to the All-Union Book Chamber in Moscow. The organ of state bibliography started to appear again in 1935 as *Litopys druku URSR*. In 1936 four volumes of *Litopys druku URSR: Knyhy*, covering the years 1931–4, were published. The Book Chamber of the Ukrainian SSR also began publishing bibliographies of book reviews (1936), periodical articles (1936), newspaper articles (1937), and reviews of pictorial art (1937).

In interwar Western Ukraine under Polish rule, bibliographic studies were centered in the Shevchenko Scientific Society and its bibliographic commission, which continued to publish *Materialy do ukrains'koi bibliografii*, vols 1–8, 1909–39. Bibliographic materials appeared also in the journals **Knyzhka* (Stanyslaviv 1921–3) and *Ukrains'ka knyha* (vols 1–3, Lviv 1937–9; vols 4–5, Cracow 1942–3). Important contributions to Ukrainian bibliography were made by I. *Kalynovych and V. *Doroshenko, and especially by Ye. *Pelensky, author of *Bibliohrafiia ukrains'koi bibliografii* (Bibliography of Ukrainian Bibliography, 1934).

In Czechoslovakia those active in the field of bibliography included the historian D. *Doroshenko, compiler of *Pokazhchik literatury ukrains'koiu movoiu v Rosii za 1798–1897 roky* (Guide to Literature in the Ukrainian Language in Russia for the Years 1798–1897, 1917; rev edn, 1925); P. *Zlenko, compiler of *Bibliografichnyi pokazhchik naukovykh prats' ukrains'koi emigratsii za rr. 1921–31* (Bibliographic Guide to Scholarly Works by Ukrainian Emigrés for the Years 1921–31, 1932); S. *Siropolko, editor of the journal **Knyholiub* (1927–32); A. *Zhyvotko, a bibliographer of the Ukrainian press; L. *Bykovsky, later active in Poland, Germany, and the United States; and others. In Warsaw the historian M. *Korduba compiled *La littérature historique ukrainienne en Pologne et dans l'émigration ukrainienne*

(1929) and *La littérature historique soviétique ukrainienne. Compte-rendu 1917-31* (1938). In Paris the historian E. *Borschak published *L'Ukraine dans la littérature de l'Europe occidentale* (1935).

After the Second World War the State Public Library of the Ukrainian SSR prepared the guide *Sorok rokiv radian-s'koi vlady na Ukraïni* (40 Years of Soviet Rule in Ukraine, 1958) and sponsored *Ukraïns'ka Radians'ka Sotsialistychna Respublika, 1917-67* (The Ukrainian Soviet Socialist Republic 1917-67, 1969) compiled by M. Rud. The Book Chamber of the Ukrainian SSR published *Khudozhnia literatura vydana na Ukraïni za sorok rokiv, 1917-1957* (Belles Lettres Published in Ukraine in the Last Forty Years, 1917-1957, 2 vols, 1958-60) and *Ukraïns'ka radians'ka kul'tura za sorok rokiv, 1917-57* (Ukrainian Soviet Culture during the Last Forty Years, 1917-57, 1957-60), prepared jointly with the Kharkiv State Scientific Library.

The Institute of History of the Academy of Sciences of the Ukrainian SSR published the guide *Radians'ki vydannia dokumental'nykh materialiv z istorii Ukraïny 1917-1968* (Soviet Publications of Documentary Materials on the History of Ukraine, 1917-68, 1970). K. Kovalenko and P. Vysotska compiled the guide *Fyzychna heohrafiia URSR 1840-1958 rr.* (Physical Geography of the Ukrainian SSR, 1840-1958, 1970). I. Shovkopljas prepared *Rozvytok radians'koi arkheolohii na Ukraïni 1917-1966* (The Development of Soviet Archeology in Ukraine, 1917-1966, 1969), and V. Mashotas compiled the guide *Komunistychna partiia Zakhidnoi Ukraïny* (The Communist Party of Western Ukraine, 1969) for the years 1919-67. The guide *Ukraïns'ka mova* (Ukrainian Language, 1963), covering the years 1918-61 was prepared by L. Holdenberh and N. Koro-levych. Holdenberh also prepared *Ukraïns'ka radians'ka literaturna bibliohrafiia* (Ukrainian Soviet Literary Bibliography, 1971) and *Bibliohrafichni dzherela ukraïns'koho literaturoznavstva* (Bibliographical Sources of Ukrainian Literary Scholarship, 1977). I. Boiko compiled *Ukraïns'ki literaturni al'manaky i zbirnyky XIX - pochatku XX st.* (Ukrainian Literary Almanacs and Collections of the 19th and Beginning of the 20th Century, 1967). Significant for literary bibliography is the biobibliographic guide *Ukraïns'ki pys'mennyky* (Ukrainian Writers, 5 vols, 1960-5), edited by O. Biletsky and others.

In the neglected field of the history of Ukrainian bibliography, contributions were made by I. Kornieichyk, author of *Istoriia ukraïns'koi bibliohrafii. Dozhovtnevyi period* (History of Ukrainian Bibliography before the October Revolution, 1971), and M. Humeniuk, author of *Ukraïns'ki bibliohrafy XIX - pochatku XX stolittia* (Ukrainian Bibliographers of the 19th and Beginning of the 20th Century, 1969). A useful addition to the bibliography of old books is F. *Maksymenko's union catalog *Kyrylychni starodruky ukraïns'kykh drukaren', shcho zberihaiut'sia u l'voiv'kykh zbirkakh, 1574-1800* (Cyrillic Old Printings of Ukrainian Presses Preserved in Lviv Collections, 1574-1800, 1975). A contribution to retrospective bibliography is S. Petrov's catalog *Knyhy hrazhdans'koho druku, vydani na Ukraïni XVIII - persha polovyna XIX stolittia* (Books in the Hrazhdanka Type Published in Ukraine in the 18th and First Half of the 19th Century, 1971), which annotates publications of the years 1765-1860. The Central Scientific Library of the Academy of Sciences published the guide *Vydannia Akademii nauk URSR, 1919-1967* (Publications of the Academy of Sciences of the Ukrainian SSR, 1919-1967, 3 vols, 1969-71) and the annual for 1968, *Vydannia*

Akademii nauk URSR: Shchorichnyk 1968 (1971). It also published a catalog of its prerevolutionary newspaper holdings, *Kataloh dorevoliutsiinykh hazet, shcho vydaovalysia na Ukraïni, 1822-1916* (Catalog of Prerevolutionary Newspapers Published in Ukraine, 1822-1916, 1971). In 1974 it began publishing a quarterly, *Ukraïns'ka RSR u bratnii sim'i radians'kykh narodiv: Bibliohrafichni pokazhchyk*.

The Book Chamber of the Ukrainian SSR contributed to the bibliography of serials by publishing *Periodychni vydannia URSR: Zhurnaly 1918-1960* (Periodical Publications of the Ukrainian SSR: Journals, 1918-60, 1956-64) and *Periodychni vydannia URSR: Hazety 1917-1960* (Periodical Publications of the Ukrainian SSR: Newspapers, 1917-60, 1965). It also printed on a rotary press *Knyha Ukraïns'koi RSR, 1917-1923: Bibliohrafiia* (The Book in the Ukrainian SSR, 1917-1923: A Bibliography, 1959).

At the present time the Book Chamber of the Ukrainian SSR publishes the following bibliographic serials: *Litopys knyh* (monthly since 1924); *Litopys retsenzii* (monthly since 1936), *Litopys zhurnal'nykh statei* (biweekly since 1936), *Litopys hazetnykh statei* (biweekly since 1937), *Litopys obrazotvorchoho mystetstva* (semiannually since 1937), *Litopys muzychnoi literatury* (semiannually, 1937-8 and since 1952), *Ukraïns'ka RSR u vydannakh respublik Radians'koho Soiuzu i kraïni sotsialistychnoi spivdruzhnosti* (annually since 1956), *Novi vydannia URSR* (every ten days since 1958), *Litopys periodychnykh vydan' URSR* (once in 1934 and annually since 1972). It has also published the annual *Knyhy vydavnytstv Ukraïny* (Books of Publishing Houses in Ukraine) since 1961. All bibliographic publications are issued in small quantities. Retrospective bibliographies have a discernible political bias and are often incomplete, since they exclude works on or by various 'enemies of the people.'

Ukrainian bibliographers abroad, deprived of access to libraries and archives in Ukraine, concentrated chiefly on Ukrainian publications appearing abroad and on foreign-language publications dealing with Ukraine and Ukrainians. Among the most noted works are Ye. Pelensky's *Ucrainica*, a select bibliography of Ukraine in Western European languages, published by the Shevchenko Scientific Society in its *Zapysky*, vol 158 (1948); R. Weres's *Ukraine: Selected References in the English Language* 1961, rev edn 1974; and A. Sokolyszyn's *Ukrainian Selected and Classified Bibliography in English* (1972). A significant contribution to Ukrainian bibliography has been made by B. Romanenchuk, compiler of *Bibliohrafiia vydan' ukraïns'koi emigratsiinoi literatury, 1945-1970* (Bibliography of Publications of Ukrainian Emigré Literature, 1945-70, 1974) and editor of *Ukraïns'ka knyha*, a quarterly journal of bibliography and bibliography.

Current Ukrainian publications were recorded in the journal *Biblos*, published by M. Sydor-Chartoryisky in New York in 1955-79. Annuals of Ukrainian emigré bibliography were compiled by M. Sydor-Chartoryisky (1956), O. Danko and M. Labunka (1957), and R. Weres (1973-5). R. Weres also compiled an *Index of the Ukrainian Essays in Collections Published outside the Iron Curtain* for the years 1951-71 (1967-72). V. Doroshenko compiled *Reister ukraïns'kykh periodychnykh vydan' u vil'nomu sviti za rr. 1961-62* (Register of Ukrainian Periodical Publications in the Free World for the Years 1961-62, New York 1963); and O. Fedynsky has compiled annuals of *Bibliohrafichni pokazhchyk ukraïns'koi presy poza mezhamy ukraïny* (Bibliographic Guide to the Ukrainian Press outside the Boun-

daries of Ukraine, vols 1–12, Cleveland 1967–79). Others who have been engaged in the field of Ukrainian bibliography are M. Boiko (Volhynia), M. Borovyk (the press), B. Budurowycz (Slavic collections in Canada), L. Bykovsky (the press), I. Chaikovsky (the press, memoirs), N. Chaplenko (women's publications), A. Gregorovich (Ukrainians in Canada), M. Kravchuk (the press), B. Kravtsiv (general bibliography), Yu. Lavrynenko (communism), G. Liber and A. Mostovych (dissent), L. Lutsiv (literary bibliography), V. Lutsiv (the press), S. Ripetsky (the military), L. Shankovsky (the military underground), Y. Slavutych (language and literature), L. Wynar (the press and dissertations), and O. Pidhainy (the Ukrainian National Republic).

Biblioteka dla Molodi (Library for Young People). Publishing house founded in Lviv in 1886 by the *Ridna Shkola pedagogical society. It published belles lettres and popular scientific books until 1906 (118 publications in all).

Biblioteka dla Ruskoï Molodezhy (Library for Ruthenian Youth). A series of popular brochures written in the so-called *iazychiie* (mixture of Ukrainian and Russian). It appeared in Kolomyia under the editorship of Yu. Nasalsky; 82 volumes were published (1894–1913).

Bibliothèque Ukrainienne Simon Petlura. See Petliura Ukrainian Library.

Bibrka. IV-5. Town smt (1968 pop 3,100) in Peremyshliany raion, Lviv oblast. A county town under Austria (1772–1919) and Poland (1919–39), it has a food industry and a brick factory. First mentioned in the Galician-Volhynian Chronicle under the year 1211, it had the Magdeburg law from 1569. From 1944 to 1963 it was a raion center.

Bida, Constantine, b 24 September 1916 in Lviv, d 11 April 1979 in Ottawa, Canada. Literary scholar, full member of the Shevchenko Scientific Society. Bida received his PhD in Slavic Studies from the University of Vienna in 1943, and from 1952 he taught in the Department of Slavic Studies at the University of Ottawa. His

works include *Soiuz Het'mana Ivana Mazepy z Karlom XII* (The Alliance of Hetman Ivan Mazepa with Charles XII, 1959), *Lesya Ukrainka: Life and Work* (1968), *Ioanikii Galiatovs'kyi i ioho 'Kliuch' razumiennia* (I. Galiatovsky and His 'Key to Understanding,' 1975), and numerous articles, especially on the influence of W. Shakespeare on Slavic literature. Bida headed the Ukrainian Shakespearean Society.

Bidermann, Hermann Ignaz, b 3 August 1831 in Vienna, d 25 April 1892 in Graz. Austrian historian of law. Bidermann studied the nationalities of the Austro-Hungarian Empire, including the Ukrainians, and had a high regard for Ukrainian cultural creativity. His major works are *Die ungarischen Ruthenen, ihr Wohngebiet, ihr Erwerb und ihr Geschichte* (2 vols, 1862–7) and *Die Bukowina unter österreichischer Verwaltung* (1876).

Bidnov, Vasyl, b 2 January 1874 in the town of Shyroka, Kherson gubernia, d 1 April 1935 in Warsaw. Church historian, educator, and civic leader. Bidnov graduated from the Kiev Theological Academy in 1902. In 1910 he lectured at the Katerynoslav seminary, conducted historical research, edited and contributed to the *Letopis* of the Katerynoslav Archival Commission, which was devoted to the history of Cossack Ukraine, and directed the local Prosvita society. In 1911 he was appointed professor at the Kiev Theological Academy and Kharkiv University, but because of his civic activities the Russian authorities refused to confirm the appointment. In 1918–20 Bidnov was a professor at the Ukrainian State University in Kamianets-Podilskyi, and in 1922–9 he was professor of church history at the Ukrainian Free University in Prague and professor of history at the Ukrainian Husbandry Academy in Poděbrady. He was a founding member of the Ukrainian Historical-Philological Society in Prague. In 1929–35 he was professor of church history at the University of Warsaw. Bidnov was a full member of the Shevchenko Scientific Society and the editor of **Pravoslavna Volyn'* abroad. He wrote almost 70 scholarly works on the history of the church and of education in Ukraine. His most important contributions are *Materialy po istorii tserkovnago ustroistva na Zaporozhe* (Materials on the History of the Church Structure at Zaporizhia, 1907), *Pravoslavnaia Tserkov v Pol'she i Litve* (The Orthodox Church in Poland and Lithuania, 1908), and *Tserkovna sprava na Ukraïni* (The Church Question in Ukraine, 1921).

Vasyl Bidnov

Fedir Bieliankin

BIBLIOGRAPHY

Pam'iaty Professora Vasyliia Bidn'ova (Prague 1936)

Bieliiankin, Fedir [Bjeljankin], b 6 January 1892 in Nizhen, d 21 May 1972 in Kiev. Specialist in the strength of materials, full member of the Academy of Sciences of the Ukrainian SSR from 1948. In 1922 Bieliiankin began to work at the Institute of Mechanics of the academy and in 1944–58 served as its director. At the same time he taught in postsecondary schools. His main works deal with the strength of boiler and bridge steel, lumber, and wood constructs.

Bielish, Martha Palamarek, b 20 October 1915 in Smoky Lake, Alberta. Canadian senator. Active in various women's organizations, including the Federated Women's Institute, Bielish served on the Alberta Citizens' Advisory Board to study the recommendations of the Royal Commission on the Status of Women. She received the 1975 Alberta Woman of the Year award. On 27 September 1979 she was the first woman of Ukrainian descent to be summoned to the Senate of Canada.

Bielsk Podlaski. 1-4. A county town, known in Ukrainian as Bilske (1960 pop 10,000), in northern Podlachia, located in Białyostok voivodeship, Poland. The town was the former capital of the Bilske land, which was famous from the 13th century and was of some importance in the 16th to mid-17th century. Bielsk county lies on the Ukrainian-Polish-Belorussian ethnic border. The Ukrainian population, part of which was forcibly resettled in 1945–6, lives in the eastern part of the county and in the neighboring counties of Siemiatycze (Semiatychi) and Hajnówka (Hainivka). There is a low level of national awareness in the county, and it is officially considered ethnically Belorussian.

Bielski, Marcin, b ca 1495 in Biała (Sieradzkie), Poland, d 18 December 1575. Polish historian and writer, author of one of the first historical works written in Polish, *Kronika wszystkiego świata ...* (Chronicle of the World, 1551). His son Joachim (b ca 1540 in Biała, d 8 January 1599 in Cracow) reworked and revised his father's work as a history of Poland, *Kronika polska ...* (Chronicle of Poland, 1597). Basing himself on a wide range of sources and particularly on the chronicles, Joachim presented the history of Kievan Rus', the Principality of Galicia-Volhynia, and other principalities and provided valuable information on the Cossack-peasant anti-Polish revolts. The Bielskis' histories were used by 17th- and 18th-century Ukrainian writers.

Bieszczady. The Polish name for the High and Middle *Beskyds.

Bihanych, Luka [Bihanyč], b 10 August 1927 in the village of Volosate in the Boiko region, now part of Poland. Sculptor. Bihanych studied art at the Lviv Institute of Applied and Decorative Art. He did busts and statues of Lesia Ukrainka (1959), M. Zankovetska (1962), O. Kobylanska (1963), S. Krushelnytska as Aida (1966), U. Kravchenko (1973), B. Khmelnytsky, and others. He also produced the compositions *There is Nothing More Beautiful Than a Young Mother* (1961) and *Ukrainian*

Barcarole (1967) and a bust of V. Hnatiuk for Hnatiuk's memorial in Lviv (1971).

Bihdai, Yakym [Bihdaj, Jakym], 1850–ca 1910. Ukrainian community leader in the Kuban. Bihdai collected the songs of the Kuban Cossacks, which he published in *Pesni kubanskikh i terskikh kazakov* (Songs of the Kuban and Terek Cossacks, 1896–8). The collection contained 555 songs in Ukrainian and Russian and was published in 14 issues. Bihdai set some Ukrainian poetry to music, particularly the poems of T. Shevchenko. Using Ya. Kukharenko's play, Bihdai, with P. Makhrovsky, wrote the operetta *Chornomorskii pobyt* (Black Sea Folkways).

Bihun, Mykola, b 1900 in Stryi, Galicia, d 25 March 1978 in Kerhonkson, New York. Member of the Ukrainian Military Organization from 1921 and its military liaison officer for the Stryi region. A leading OUN member from 1929, Bihun was a political prisoner under the Polish and Nazi regimes. In 1941–4 he was a member of the national executive of the OUN (Melynyk faction). Bihun lived in the United States from the 1950s.

Biiuk-Karasu River [Bijuk-Karasu]. A small right-bank tributary of the Salhyr River in the Crimea. The Biiuk-Karasu is 86 km long and has a basin 1,160 sq km in area. Some of its water is used for irrigation.

Bila River. A left-bank tributary of the Kuban River. It is 273 km long and has a basin area of 6,000 sq km. In its upper course it flows through forested mountains, in its lower course, through the Kuban Lowland steppes. Its major tributaries are the Pshekha and the Kurdzhyps.

Bila River. A right-bank tributary of the Luhanka River in the Donets Basin. It is 88 km long and has a basin area of 755 sq km. It is used for water supply and irrigation. The river is also called the Bila Luhan.

Bila Tserkva [Bila Cerkva]. iv-11. City (1983 pop 170,000); a raion center in Kiev oblast, situated in the Dnieper Upland on the Ros River. It was built on the site of Iuriev, a town founded in 1032. In the mid-16th century, when Bila Tserkva belonged to the Grand Duchy of Lithuania, a fortified castle was built; under Polish rule it was an important county town and in Cossack times the seat of the Bila Tserkva Regiment (1648–74, 1702–12). In 1651 B. Khmelnytsky signed the Treaty of *Bila Tserkva with the Poles. In 1702 Bila Tserkva was the center of an anti-Polish uprising led by S. *Palii. In 1793 it became part of the Russian Empire. Its population was 17,200 in 1860 and 35,400 in 1897. Before 1914 the city was involved in food production, artisanry, and trade, particularly in agricultural products and sugar. Under the Central Rada the leaders of the *Free Cossacks were stationed in Bila Tserkva; in 1918 a detachment of Sich Riflemen was formed here, and the uprising against Hetman P. Skoropadsky was initiated.

Under Soviet rule Bila Tserkva began to develop after the Second World War – the population was 39,000 in 1926, 47,000 in 1939, 71,000 in 1959, 109,000 in 1970, and 146,000 in 1978. Today the city manufactures farm machinery (the factory was established in 1850 and in 1957 began to specialize in building machines for the

Bila Tserkva on the banks of the Ros River

production of feed for livestock), electrical capacitors, tires, rubber-asbestos products, shoes, clothing, furniture, and reinforced-concrete products. The city has an institute of agriculture, which began as a polytechnical institute in 1920. It had 4,000 students in 1968 and publishes scientific papers. The city also has an ethnographic museum, an oblast dramatic theater, the Saksahansky Theater, and Oleksandriia Park, which has an area of 2,000 ha. Its notable architectural monuments are St Nicholas's Church (1706) and the market stalls (1809–14).

Bila Tserkva, Treaty of. Signed on 28 September 1651 between B. *Khmelnysky and the Polish hetman M. Potocki. The treaty resulted from the defeat of the Ukrainian Cossack forces and their Tatar allies at *Berestechko. The treaty was less advantageous to Ukraine than was the Treaty of *Zboriv: the number of registered Cossacks was reduced by half, to 20,000. Only the Kiev voivodeship was to remain autonomous, while the Bratslav and Chernihiv voivodeships were to come under royal administration again. The Polish magnates and landowners got the right to return to their lands. Khmelnytsky promised to end the alliance with the Crimean khan and to desist from independent relations with foreign powers. The Treaty of Bila Tserkva provided a respite before new preparations for war. In 1652 Khmelnytsky resumed war against Poland, thereby annulling the treaty.

Bilai, Vira [Bilaj], b 12 July 1908 in Nykopol. Botanist and mycologist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1961. Bilai's work has been devoted to the study of toxigenic microfungi. Together with M. Pidoplichko she discovered the antibiotic microcidin.

Bilak, Vasil [Biljak, Vasył'], b 11 August 1917 in the village of Krajny Bystra, Prešov region. Communist leader of Ukrainian descent in Czechoslovakia. Bilak worked as a tradesman and trade unionist until 1945, when he joined the Communist party. He attended the Party College of the Central Committee (cc) in Prague in 1951–3 and assumed positions of authority in the Communist Party of Slovakia: executive secretary of the Prešov

Regional Committee (1956–8); member of the cc (1955–71) and its presidium (1962–8); and first secretary of the cc (January–August 1968). Since 1968 he has been a prominent cc secretary of the Communist Party of Czechoslovakia, responsible for international economic and political relations and ideology. During and after the Prague Spring of 1968 Bilak supported the orthodox, pro-Soviet faction in the Party leadership and is considered Moscow's 'strong man' in Prague. In the 1950s and 1960s he was active in educational and cultural affairs and promoted cultural Ukrainianization in the Prešov region while attacking 'Ukrainian bourgeois nationalism.'

Bilaniuk, Olexa [Bilanjuk, Oleksa], b 15 December 1926 in the village of Sianichok in the Lemko region. A physics professor, full member of the Shevchenko Scientific Society. Bilaniuk studied at Université Catholique de Louvain in Belgium (1947–51) and at the University of Michigan, where he received his PhD (1956). He has done research in nuclear spectroscopy and has taught at the University of Rochester (1958–64) and, since 1964, at Swarthmore College in Pennsylvania. He has worked as a visiting scholar in many countries and has written extensively on nuclear structure and the theory of relativity. With V.K. Deshpande and E.C.G. Sudarshan he challenged the view that Einstein's theory of relativity rules out the possible existence of particles that are faster than the speed of light.

Bilaniuk, Petro [Bilanjuk], b 4 August 1932 in Zalizshchyky, Galicia. A Catholic theologian and priest, he emigrated to Canada in 1949. Bilaniuk studied in Montreal, Rome, and Munich and became professor of theology and religious studies at St Michael's College, University of Toronto, in 1962. His major works are *De Magisterio Ordinario Summi Pontificis* (1966), *The Fifth Lateran Council (1512–1517) and the Eastern Churches* (1975), and a collection of essays – *Studies in Eastern Christianity*, 2 vols (1977, 1982). He was the editor of *Za ridnu tserkvu* (1966–72).

Vasyl Bilas; drawing by A. Lysianska

Bilas, Vasyl, b 17 September 1911 in Truskavets, Drohobych county, Galicia, d 23 December 1932 in Lviv. Member of the Ukrainian Military Organization and the OUN. Bilas took part in political expropriation raids on Polish banks and post offices and participated in the assassination of T. Holówko in August 1931. For raiding the post office in Horodok on 30 November 1932 he was sentenced to death by a Polish court and hanged along with D. *Danylyshyn.

Bilash, Oleksander [Bilaš], b 6 March 1931 in Hradyzk, Poltava oblast. Composer, graduate of the Kiev Conservatory. He wrote the opera *Haidamaky* (text based on the poem by T. Shevchenko, 1965); the one-person opera *Balada viiny* (Ballad of War, libretto by I. Drach, 1970); the operetta *Chysta krynytsia* (The Clear Well, 1975); some orchestral, vocal-instrumental, choral, and solo works; music for plays and films; and over 200 songs.

Bilenky, Yadur. See Strypsky, Hiiador.

Biletska, Mariia [Bilec'ka, Marija] (née Bilynska; Lisetska by her first marriage), b 1864 in Ternopil, d 31 December 1937 in Lviv. Civic and educational figure. To 1908 Biletska was the organizer and director of the T. Shevchenko School, the first Ukrainian private school for girls, and the St Olha Institute in Lviv. She was also an organizer of Trud, a women's manufacturing cooperative, which provided vocational training and general education; the long-time head of the Club of Ruthenian Women and the Women's Hromada; a member of the National Committee of the National Democratic party, and a founding member of the Ukrainian Labor party.

Biletska, Vira [Bilec'ka], b 11 August 1894 in Okhlytyrka, Kharkiv gubernia, d 1933. An ethnographer and folklorist, Biletska was the author of studies on Ukrainian songs. Her works include *Ukrains'ki sorochnyky, ikh typy, evoliutsiia i ornamentatsiia* (Ukrainian [Embroidered] Shirts, Their Types, Evolution and Ornamentation, 1929), and articles in *Etnohrafichnyi visnyk* (Kiev), vols 2, 3, 5, and 8 (1926–9).

Biletsky, Andrii [Bilec'kyj, Andrij], b 12 August 1911 in Kharkiv. Son of O. *Biletsky; philologist specializing in classical Greek and Latin, professor at Kiev University since 1953. Biletsky's special interest is onomastics in the inscriptions of ancient Olbia and of Greek names in the mosaics of the St Sophia Cathedral in Kiev. He elucidated the problems connected with these inscriptions in a broader context of theoretical onomastics and etymology in his *Leksikologiya i teoriia iazykoznavniia* (*Onomastika*) (Lexicology and Theoretical Linguistics [Onomastics], 1972) and *Pryrodna mova i znakovi systemy* (Natural Language and Systems of Signs, 1976).

Biletsky, Leonyd [Bilec'kyj], b 5 May 1882 in Lytvynivtsi, Kiev gubernia, d 5 February 1955 in Winnipeg, Manitoba. Literary historian and critic, specialist on the life and works of T. Shevchenko. Biletsky graduated from Kiev University in 1913 and began his teaching career as a docent at Kamianets-Podilskyi Ukrainian State University in 1918. From 1923 to 1933 he taught in Prague at the Ukrainian Higher Pedagogical Institute and from 1925 at the Ukrainian Free University. He received a PhD from Charles University in Prague in 1938. In 1945 he emigrated to Ulm, Germany, and in 1949 to Winnipeg, where he worked at the Ukrainian Cultural and Educational Centre and as an editor of *Ukrains'kyi holos*. Biletsky was a member of the Shevchenko Scientific Society and vice-president of the Ukrainian Academy of Arts and Sciences in Canada. He is the author of many articles on literary theory and Ukrainian writers and scholars. His books include: *Osnovy literaturno-naukovoi krytyky* (Foundations of Literary-Scholarly Criticism, 1927), *Istoriia ukrains'koi*

literaturny (History of Ukrainian Literature, 1947), *Viruiichyi Shevchenko* (Shevchenko the Believer, 1949), and *Try syl'vetyky* (Three Silhouettes, on Marko Vovchok, O. Kobylianska, and Lesia Ukrainka, 1951). He also edited and annotated Shevchenko's *Kobzar* (4 vols, 1952–4).

Leonyd Biletsky

Oleksander Biletsky

Biletsky, Oleksander [Bilec'kyj], b 2 November 1884 near Kazan, Russia, d 2 August 1961 in Kiev. Literary scholar, full member of the Academy of Sciences of the Ukrainian SSR from 1939 (vice-president 1946–8) and of the Academy of Sciences of the USSR from 1958. Biletsky studied at Kharkiv University, and from 1907 he taught literature in Kharkiv. After the revolution he became a professor of literature at Kharkiv University. His numerous writings include works on Aristotle, Juvenal, Ovid, Aeschylus, Dante, Shakespeare, Goethe, Swift, Lesage, Dickens, Pushkin, Dostoevsky, Turgenev, and many other Western European and Russian writers. He devoted most of his attention to the history of Ukrainian literature, investigating the works of T. Shevchenko, I. Nechui-Levytsky, I. Franko, M. Kotsiubynsky, Lesia Ukrainka, B. Hrinchenko, P. Tychyna, M. Rylsky, V. Sosiura, and many other Ukrainian writers. The following are Biletsky's principal works: *Legenda o Fauste v sviazi s istoriei demonologii* (The Legend of Faust in Relation to the History of Demonology, 1912), *Starinnyi teatr v Rossii* (Classical Theater in Russia, 1923), *V masterskoi khudozhnika slova* (In the Workshop of the Literary Artist, 1923), *Dvadtsiat' rokov novoi ukrains'koi liryky* (Twenty Years of New Ukrainian Lyric Poetry, 1924), *Ivan Franko: Zhyttia i tvorchist'* (Ivan Franko: [His] Life and Works, 1956; co-authors I. Bass and O. Kyselov), *Ukrains'ke literaturoznavstvo za sorok rokov* (1917–1957) ([Soviet] Ukrainian Literary Scholarship in the [Last] Forty Years (1917–57), 1957), *Taras Hryhorovych Shevchenko: Literaturnyi portret* (Taras Shevchenko: A Literary Portrait, 1958; co-author O. Deich), *Shliakhy rozvytku dozhohtnevoho ukrains'koho literaturoznavstva* (The Paths of Development of Ukrainian Literary Scholarship before the October Revolution, 1958), and *Ukrains'ka literatura sered inshykh slov'ians'kykh literatur* (Ukrainian Literature among the Other Slavic Literatures, 1958). Biletsky also compiled and edited many anthologies and textbooks of classical, Western European, and Ukrainian literature. In his writings on Ukrainian literature, he stressed its relationship to other Slavic and Western literatures. Because many Ukrainian writers have been proscribed in the USSR, he focussed his work on general studies of the

literary process. As director of the Institute of Literature of the Academy of Sciences of the Ukrainian SSR in 1944–61, Biletsky was at the forefront of Soviet Ukrainian literary scholarship and the mentor and teacher of many younger literary scholars. His works have been collected in *Vid davnyyny do suchasnosti* (From Antiquity to the Present, 2 vols, Kiev 1960) and, posthumously, in *Zibrannia prats' u p'iaty tomakh* (Collected Works in Five Volumes, 1965–6).

Biletsky, Platon [Bilec'kyj], b 11 November 1922 in Kharkiv. Painter, specializing in portraits, and art scholar; son of O. *Biletsky. In 1949 Biletsky graduated from the Kiev Art Institute and in 1959 began to teach there. In 1971 he was promoted to professor. His main works are *Heorhii Ivanovych Narbut* (1959), *Kozak Mamai – ukrains'ka narodna kartyna* (The Cossack Mamai – A Ukrainian Folk Image, 1960), *Ukrains'kyi portretnyi zhyvopys xvii–xviii st.* (Ukrainian Portrait Painting of the 17th–18th Century, 1969), *Mova obrazotvorchykh mystetstv* (The Language of the Pictorial Arts, 1973), and *Skarby netlinni: Ukrains'ke mystetstvo v svitovomu khudozhn'omu protsesi* (Unperishable Treasures: Ukrainian Art in the World Art Process, 1974). He has also written studies of Chinese and Japanese art. Among his paintings are portraits of I. Franko, N. Gogol, and Yu. Shumsky.

Pavlo Biletsky-Nosenko

Biletsky-Nosenko, Pavlo [Bilec'kyj-Nosenko], b 27 August 1774 in Pryluka, Poltava gubernia, d 23 June 1856 in Pryluka. A fabulist, poet, ethnographer, educator, grammarian, and lexicographer. After completing his education at the St Petersburg boarding school for the nobility, Biletsky-Nosenko joined the military. He retired from military service in 1798 and settled in the village of Lapyntsi near Pryluka. He compiled dictionaries, wrote textbooks on logic and ethics, and translated foreign works. As a writer he was an epigone of I. Kotliarevsky. He wrote a travesty poem, 'Horpynda,' which was published posthumously in 1871, as well as tales and ballads (eg, 'Ivha,' one of the early reworkings of 'Lenore' by G.-A. Bürger). He also compiled a collection of sayings, *Prykazky* (I–IV, 1871) and, in the 1830s, a dictionary entitled *Slovar' malorossiiskogo ili ugo-vostochnorusskogo iazyka* (A Dictionary of the Little Russian or

Southeast Russian Language), which was lost in manuscript form, but compiled anew in 1838–43. Based on dialects of the Poltava region, it also included words excerpted from literary works, some from the Middle Ukrainian period. At 380 pages it was the largest Ukrainian dictionary in the first half of the 19th century, yet it was published only in 1966 (edited by V. Nimchuk) and therefore exerted no influence on the development of Ukrainian lexicography. A grammar of the Ukrainian language by Biletsky-Nosenko remains unpublished and possibly lost. Biletsky-Nosenko was also interested in the history of the Ukrainian language; he stated his views on this subject in the introduction to his dictionary. A collection of his poetry, entitled *Poezii* (Poems), was published in Kiev in 1973.

G.Y. Shevelov

Bilhorod. III–11. Historic town on the Irpin River, near Kiev; today the village of Bilohorodka. The first mention of Bilhorod occurs in 980; in 991 a fortress was built there to protect Kiev against nomads (it was attacked in 997 by the Pechenegs). From the 11th century until the mid-13th century Bilhorod was a temporary residence of Kievan princes and bishops and a military outpost. Bilhorod was razed by the Tatars in 1240. The remains of the town and its fortifications cover some 85 ha in Bilohorodka. Archeological excavations conducted by V. *Khvoika (1909–10) uncovered fortifications, foundations of churches, remains of tradesmen's shops, dwellings, implements, multicolored majolica, and other objects.

Bilhorod-Dnistrovskyy [Bilhorod-Dnistrovs'kyj] VII–11. City (1976 pop 69,300) in southern Bessarabia on the right bank of the Dniester Liman, 18 km from the Black Sea; a raion center in Odessa oblast. In 600 BC this was the site of the Greek colony of *Tyras. In the 9th century AD it was a city of the Tivertsian and Ulychian tribes named Bilhorod; in the 13th century it became part of the Principality of Galicia-Volhynia. In the 14th century it was ruled by the Genoese (and renamed Montcastro), and for a time in the 15th century was part of the Moldavian principality. In 1484 the city was captured by the Turks and in 1503 renamed Akkerman (White Rock); during the 17th and 18th centuries it was the seat of the *Bilhorod Horde. In 1812 it came under Russian rule; from 1918 to 1940 it belonged to Rumania and was called Cetatea Albă. In 1940 it became part of the USSR; in 1944 it was renamed Bilhorod-Dnistrovskyy. Between the two world wars the

Fortress at Bilhorod-Dnistrovskyy

city was the center of Ukrainian cultural life in southern *Bessarabia. Its region is inhabited by Moldavians, Russians, and Bulgarians, as well as Ukrainians. The city has a food industry, with an affiliate of the fish-canning association Antarktika; and a reinforced-concrete-products, a furniture, and a clothing factory. It also has an ethnographic museum, founded in 1934, which contains among its exhibits archeological finds from the city of Tyras. The city's architectural monuments include the well-preserved fortress (built in 1438–54 by Master Fedorko), with 26 turrets, 4 gates, and a citadel whose walls are almost 2 km long, and a restored church built during the 14th and 15th centuries. The city also has a seaport, constructed in 1970.

Bilhorod Horde, Budzhak Horde, Budzhak Tatars.

One of the *Nogay Tatar hordes that lived as a protectorate of the Crimean Khanate and Turkey. In the 17th century it migrated from the Caspian steppes to the steppes of the *Budzhak. The Bilhorod Tatars (20,000–30,000) were nomadic herdsmen. They made forays for slaves and loot into Right-Bank Ukraine and Moldavia. In 1770 the horde became a protectorate of Russia and soon after was dispersed through resettlement in the Azov steppe. From there its remnants emigrated to Turkey during the Crimean War.

Biliaivka [Biljajivka]. VII-11. Town smt (1969 pop 12,500) in southern Bessarabia, a raion center in Odessa oblast; established in the late 18th century. It has a food industry.

Biliak, Stepan [Biljak], 1890–1950. Lawyer, civic and political figure in Galicia. In 1918–19 Biliak was secretary of the Ukrainian National Rada of the Western Ukrainian National Republic and in 1919–20 secretary to the dictator of the Western Ukrainian National Republic. In 1928 he was elected as a candidate of the Ukrainian National Democratic Alliance to the Polish Sejm. Biliak served as defense counsel at political trials. He was a member of the central executive of the Ridna Shkola society. In 1941–2 Biliak was mayor of Lviv. He died in the United States.

Mykola Biliashivsky

Biliashivsky, Mykola [Biljašivs'kyj], b 24 October 1867 in Uman, d 21 April 1926 in Kiev. Archeologist, ethnographer, and art historian. Biliashivsky was a full member of the All-Ukrainian Academy of Sciences and the Shevchenko Scientific Society. He studied at Kiev and Odessa universities. From 1902 to 1923 he served as director of the Kiev Museum of History, now the State Historical Museum of the Ukrainian SSR. In 1906 he was a

member of the first Russian State Duma and belonged to its Ukrainian club. During the First World War the Russian Academy of Sciences entrusted him with the preservation of cultural monuments in Galicia and Bukovyna. From 1917 he presided over the Central Committee for the Preservation of Antiquities and Art Monuments in Ukraine. He edited *Arkheologicheskaia letopis' Iuzhnoi Rossii* in 1899–1905. From 1887 Biliashivsky was involved in researching the cultural and artistic monuments from the Stone Age to the early Middle Ages. His most important archeological excavations unearthed a Rus' settlement at *Kniazha Hora near Kaniv (1891–2), Slavic settlements and graves in Volhynia, and Trypilian settlements in the Uman and Kiev regions (specifically, at the village of Borysivka, Kiev region, in 1904). Some of the artifacts recovered in these excavations went to the Shevchenko Scientific Society museum in Lviv. Biliashivsky is the author of *Monetnye klady Kievskoi gubernii* (Caches of Coins in Kiev Gubernia, 1889) and of articles on Ukrainian archeology, many of them in *Kievskaja starina*.

Vynnyts'kyi, A. *Mykola Teodotovych Biliashivs'kyi* (Kiev 1926)
Ya. Pasternak

Bilinsky, Yaroslav [Bilyns'kyj, Jaroslav], b 26 February 1932 in Lutske, Volhynia. Political scientist. Bilinsky completed his studies at Harvard and Princeton universities and is a professor at the University of Delaware. Since 1979 he has been vice-president of the Ukrainian Academy of Arts and Sciences in the United States. His writings deal particularly with the Communist party and the nationalities problem in the USSR. Bilinsky is the author of *The Second Soviet Republic: The Ukraine after World War II* (New Brunswick, NJ 1964) and of numerous articles in scholarly publications.

Bilodid, Ivan, b 29 August 1906 in Uspenske, Kherson gubernia, near Kremenchuk, d 21 September 1981 in Kiev. Linguist specializing in the standardization of the Ukrainian literary language, stylistics, and lexicography; full member of the Academy of Sciences of the Ukrainian SSR from 1957, and of the Academy of Sciences of the USSR from 1972. Bilodid graduated from Kharkiv University in 1932. During the war he taught at higher educational institutions in Kharkiv and Lviv. From 1946 he taught at Kiev University and was an associate of the Institute of Linguistics of the Ukrainian Academy of Sciences; he was the institute's director, as well as the academy's vice-president, in 1962–78. In 1957–62 Bilodid was minister of education of the Ukrainian SSR, and in 1960–6, candidate member of the Central Committee of the CPU. He edited and contributed to many collectively written publications, such as *Kurs istorii ukrains'koï literaturnoi movy* (A Course in the History of the Ukrainian Literary Language, 2 vols, 1958–61) and *Suchasna ukrains'ka literaturna mova* (The Contemporary Ukrainian Literary Language, 5 vols, 1969–73). He also edited *Movoznavstvo*, the bi-monthly journal of the Institute of Linguistics, from 1967. The most typical feature of Bilodid's writings is their conformity to the Party line on linguistic and other questions, with little respect for facts.

G.Y. Shevelov

Bilohiria [Bilohir'ja] (known, to 1946, as Liakhivtsi). IV-7. Town smt (1971 pop 4,700), a raion center in Khmel-

nytskyi oblast, on the Horyn River. First mentioned in 1441, from the 16th to the 18th century Bilohiria was a Socinian center. Ruins of the castle walls remain.

Bilohirske [Bilohir'ke] (known, to 1945, as Karasubazar). VIII-15. City (1926 pop 7,500, of which one-third were Tatars; 1974 pop 12,700), near the Crimean Mountains; a raion center in Crimea oblast. Bilohirske has eastern characteristics, with ruins of caravansaries and fortresses from the time of the Crimean Khanate, when it was one of the larger trading towns in the Crimea. The city has a food industry.

Bilohradsky, Tymofii [Bilohrads'kyj, Tymofij]. Banduryst and singer of the 18th century. He studied the lute and singing in Dresden. In 1739-41 and later, up to 1767, he served as a court musician in St Petersburg. Bilohradsky had a successful concert tour in Western Europe.

Bilohrud, Ihor, b 17 December 1916 in Romen, Poltava gubernia. Composer and teacher. He studied with L. Revutsky and V. Hrudyn at the Kiev Conservatory, and at the higher school of music in Heidelberg. Since 1950 he has had his own music studio in Chicago. Bilohrud has composed the following works: the opera *Olha of Kiev* (libretto by L. Poltava), the symphony *Steppe*, music for chamber groups, choral works, two cycles of variations on Ukrainian folk songs, piano duets (1959), and over 60 solo vocal pieces, most of them to the words of Lesia Ukrainka.

Bilohrudivka culture. An archeological culture of the pre-Scythian period (1100-1000 BC) in the Right-Bank forest-steppe, discovered by B. Bezvenhliński and P. Kurinny in 1918 in the Bilohrudivka forest near Uman. The inhabitants buried their dead in a crouched position under stone slabs with human figures carved into them. Excavations of kurhanlike mounds called *zolnyky* uncovered pottery, Eneolithic flint-and-bone tools and weapons, and molds for pouring bronze articles. The culture is believed to be either proto-Slavic or Thracian in origin.

Bilohryts-Kotliarevsky, Leonyd [Bilohryc'-Kotljarevs'kyj], 1855-1908. Jurist specializing in criminal law, professor at Kiev University. His works include *O vorovstve-krazhe po ruskomu pravu* (On Theft and Larceny in Russian Law, 1880) and *Kurs ugolovnoho prava* (Course in Criminal Law, 1898).

Bilokamianske [Bilokam'jans'ke]. IX-14. City in the Crimea on the coast of the Black Sea. In 1976 Bilokamianske was established out of the northern part of Balaklava city raion of the city of Sevastopol. Bilokamianske has a wall-materials and a reinforced-concrete-products plant and a winery.

Bilokolos, Dmytro, b 5 February 1912 in the village of Yehorivka in Katerynoslav gubernia. Soviet Party and government official. Bilokolos graduated from the Donetsk Pedagogical Institute in 1948 and the Academy of Social Sciences of the CC CPSU in 1955. He was secretary of the Donetsk oblast committee of the CPU in 1957-62 and 1965, secretary of the Donetsk oblast industrial committee (CPU) in 1963-4, minister of foreign affairs of the

Ukrainian SSR (1966-70), and candidate member of the CC CPU (1966-71). He headed Ukraine's delegations to the UN General Assembly and to various international conferences. From 1970 to 1976 he served as the USSR's ambassador to Zambia and Botswana.

Bilokonsky, Ivan [Bilokons'kyj], b 6 June 1855 in Chernihiv, d 7 February 1931 in Kharkiv. Pedagogue, civic and cultural-educational leader, member of the Kharkiv Literacy Society. In 1880-6 Bilokonsky was exiled to Siberia because of his ties with the organization Narodnaia Volia. Eventually he worked for the zemstvos in Zhytomyr, Kursk, and Kharkiv. From 1905 he collaborated with the Russian Constitutional Democratic party. He published articles on pedagogical subjects, memoirs, and zemstvo history and edited the 10-volume *Narodnaia entsiklopediia nauchnykh i prikladnykh znanii* (The People's Encyclopedia of Scientific and Applied Knowledge, 1912).

Kateryna Bilokur

Bilokur, Kateryna, b 7 December 1900 in the village of Bohdanivka, Kiev gubernia, d 10 June 1961 in Bohdanivka. Self-taught master of decorative folk art. Bilokur painted flowers and fruits in gardens, orchards, and fields; still lifes; and several portraits and self-portraits. Her paintings display originality, vivid coloring, and great attention to detail. Her work is preserved at the State Museum of Ukrainian Decorative Folk Art in Kiev. Albums of her paintings were published in Kiev in 1959 and 1975.

Bilokuraknye. IV-19. Town smt (1976 pop 7,600) on the Bila River (a tributary of the Donets); a raion center in Voroshylovhrad oblast. The town was originally a settlement, established in 1700.

Bilon, Petro, b 4 January 1879 in Vasylkiv, Kiev gubernia, d 7 August 1959 in Pittsburgh, Pennsylvania. Archpriest of the Ukrainian Orthodox church, community figure. Bilon was a chaplain at the internment camp for soldiers of the UNR in Szczypiorno, Poland, where he edited *Relihiino-naukovyj visnyk*. He emigrated to Canada in 1924, and to the United States in 1930. He became deputy head of the consistory of the Ukrainian Orthodox Church in the United States and editor of its organ, **Dnipro*. His publications include *950-litni rokovyny khryshchennia Rusy-Ukrainy* (The 950th Anniversary of the Christianization of Rus'-Ukraine, 1938), *Pravdyia tserkva ukrains'koho narodu* (The True Church of the Ukrainian

People, 1947), *Spohady* (Memoirs, 1952–6), and *Ukrainians and Their Church* (1953).

Bilopillia [Bilopillja]. II-15. City (1973 pop 18,880) on the Vyr River (a tributary of the Seim), a raion center in Sumy oblast. Bilopillia was founded in 1672 by Cossack emigrants from Right-Bank Ukraine. Before 1765 it was a free settlement of the Sumy Regiment. In the 19th century a brisk trade was carried on here in agricultural products and bread. Today the town has a machine-building and a repair plant, a furniture factory, and a food industry. The A. Makarenko Museum is located here.

Biloskursky, Osyp [Biloskurs'kyj], b 17 June 1883 in Kolomyia, d 26 March 1943. A master of ceramic art, Biloskursky made decorative vases and bowls, ceramic plates for architectural facings (eg, for Dnister society building, the Academic Hromada building, the railway station – all in Lviv), and other objects. He wrote the books *Keramichna tekhnolohiia* (Ceramic Technology, 1928) and *Kakhiarstvo* (Ceramic-Tile Making). His work is preserved in museums in Lviv, Myrhorod, and Kiev.

Bilostotsky, Anatolii [Bilostoc'kyj, Anatolij], b 15 September 1921 in Odessa. Realist sculptor, son of Yu. *Bilostotsky. He graduated from the Kiev Institute of Art in 1952. Among his works are a portrait of M. Rylsky (1952); a composite sculpture, *Fathers and Sons* (1967); and commemorative statues of I. Franko (Kiev 1956) and T. Shevchenko (Odessa 1966), both in collaboration with O. Suprun.

Bilostotsky, Yukhym [Bilostoc'kyj, Juxym], b 28 June 1893 in Yelysavethrad, d 2 October 1961 in Kiev. Sculptor. Bilostotsky obtained his artistic education at the Odessa Art School. Among his works are portraits of M. Zankovetska (1936), P. Tychna (1937), B. Khmelnytsky (1954), the tombstone of M. Lysenko in the Baikove Cemetery in Kiev (1939), and numerous statues commemorating V. Lenin, M. Shchors, G. Kotovskyy, and other leaders and events in Soviet history.

Bilous (Bielousov), Mykola, 1799–1854. Born and raised in Kiev, Bilous became a professor of juridical sciences at the Nizhen Lyceum in 1825. There he taught the philosophy of law according to I. Kant and J. Fichte. In 1830 he was dismissed for reading lectures on natural law, which were not permitted.

Bilous, Oleksa, b 1868, d 5 July 1929 in Paris. Physician, Ukrainian civic leader, military doctor, and medical inspector. Bilous worked in the Kharkiv region, Podilia, and Bessarabia. He was known for his leadership in organizing campaigns against epidemics. In 1919 Bilous became director of the Ministry of Public Health of the UNR, and in 1920 he served as a diplomatic representative of the UNR in Bucharest. Later he lived in Prague (1922), and Transcarpathia (1924–7). He was a founder of the Association of Ukrainian Physicians (Prague 1922) and, in the 1920s, headed relief work for Ukrainian émigrés.

Bilous, Teodor, 1828–92. Civic leader, historian, and teacher. Bilous directed the Kolomyia gymnasium and was a member of the Galician diet in 1861–7 and 1870–6. He is the author of *Rod kniaziei Ostrozhsikh, zashchi-*

shchatelei iugo-zapadnoi Rusi (The Family of the Princes Ostrozky, Defenders of Southwestern Rus', 2 vols, 1883–4) and *Tserkvi russkie v Galitsii i na Bukovine* (Ruthenian Churches in Galicia and Bukovyna, 1877).

Bilousiv, Mykola, 1863–? Physiologist, professor at Kharkiv University and the Kharkiv Institute of People's Education. He wrote a series of works on comparative physiology and histology. Among the topics he studied were digestive fermentation and fish respiration.

Bilousov, Oleksii, 1848–1908. Noted Ukrainian anatomist, professor at Kharkiv University from 1890. He wrote many works in the field, particularly on nerve cells (1889), and published synoptic anatomical tables of the nervous system in 1904.

Bilovezha Forest [Bilovez'ka pušča] (Polish: Białowieża; Belorussian: Belavezha). The Bilovezha Forest is the largest stretch of forest in the Central European Lowland. It lies on the border of Podlachia and Polisia, on the watershed between the Narva (Narew) and the Yaselda rivers. It overlaps Ukrainian, Belorussian, and Polish ethnic territories. The forest covers about 1,250 sq km. The eastern part (740 sq km) belongs to the Belorussian SSR; the western part, to Poland. The Bilovezha Forest is a gently undulating plain at an elevation of 150–170 m. The climate is moderately cold. The average annual temperature is 7.4°C. The annual precipitation is 670 mm. Snow lies on the ground for 70 days. The soil is of glacial origin and consists of sands and clays. There are many swamps. About 82 percent of the Bilovezha Forest is virgin forest, mostly evergreen. The predominant trees are pine, spruce, oak, birch, alder, aspen, maple, ash, and linden. Swamps and peat bogs cover 10 percent of the area. Over 900 plant species grow here. Over 55 animal species inhabit the forest, among them the European bison, elk, wild boar, deer, lynx, wolf, beaver, otter, marten, and squirrel. At the beginning of this century elk could still be found; in the 19th century, wild horse and bear; and in the 17th century, aurochs. Over 212 bird species live here, including the great grouse, woodcock, hazel grouse, and black crane.

For centuries the forest received some protection as the hunting grounds of the Polish kings. Under Russian rule the forest was state land, and from 1820 any kind of exploitation of it was prohibited. In 1889 the Bilovezha Forest became the property of the tsar's family, who hunted there from time to time. For this reason the forest was well protected, and many animal species survived there (1,575 European bison in 1860; 700 in 1910). During the First World War the animals were left unprotected, and the European bison were killed off. Between the two wars the Bilovezha Forest was in Polish hands and was moderately exploited, except for a large reserve that was named a national park (46 sq km). In 1929 a few European bison were purchased and kept on an animal reservation (52 ha). In 1939 the number of bison increased to 17. Today the Bilovezha Forest is divided between Poland, which possesses the reserve Białowieża National Park (5,069 ha, of which 4,700 ha are fully protected), and the Belorussian SSR, which in 1957 set up a hunting preserve (8,750 ha) and a natural museum called the Belavezha Forest Museum.

Bilovodske [Bilovods'ke]. iv-20. Town smt (1976 pop 9,830) on the Derkul River (a tributary of the Donets); a raion center in Voroshylovhrad oblast. The town has a food industry.

Bilozerka. vii-13. Town smt (1972 pop 6,200), 14 km from Kherson; a raion center in Kherson oblast. The town has a building-materials factory and a historical museum.

Bilozerka settlement. A settlement of the late Bronze Age (11th–early 8th century BC) on the northern bank of the Bilozerka Liman near Kamianka-Dniprovska in Zaporizhia oblast. Remains of a large dwelling with three hearths, bronze knives and awls, flint arrowheads, and fragments of clay pottery were unearthed in 1946–7. The settlement is considered to belong to the late *Timber-Grave culture, and its inhabitants are believed to have been related to the *Cimmerians.

Bilozerske [Bilozers'ke]. v-18. City (1968 pop 20,600) in Donetsk oblast, under the administration of the Dobropillia city soviet. Established in 1950, the city produces asphalt-concrete products and mineral water, and processes raw minerals.

Bilozersky, Mykola [Bilozers'kyj], b 1833 in the Chernihiv region, d 1896. An ethnographer and folklorist, brother of V. *Bilozersky. He published *Iuzhnorusskie letopisi* (South Russian Chronicles) in Kiev in 1856 and collected Ukrainian historical and ethnographical materials. Bilozersky collected valuable materials to T. Shevchenko's biography.

Vasyl Bilozersky

Bilozersky, Vasyl [Bilozers'kyj, Vasyl'], b 1825 in Motronivka, Chernihiv gubernia, d 4 March 1899 in St Petersburg. Civic and cultural figure, journalist, and pedagogue. Bilozersky authored a program for peasant schools and a memorandum on the statutes of the *Cyril and Methodius Brotherhood, to which he belonged as a moderate. For his involvement with the brotherhood he was exiled to Petrozavodsk (Olonets gubernia), where he served in the governor's chancellery. From the 1850s he lived in St Petersburg, where he published the journal **Osnova* (1861–2). He maintained contacts with Galician figures and contributed to the Lviv periodicals *Meta* and *Pravda*.

Bilshivtsi [Bil'shivci]. iv-5. Town smt (1970 pop 2,300) in Halych raion, Ivano-Frankivske oblast, near the juncture of the Naraivka and Hnyla Lypa rivers. The town has a minor food industry.

Bil'shovyk (Bolshevik). Daily newspaper, organ of the Central Committee and the Kiev Gubernia Committee of the CP(B)U, published in Kiev from April 1919 to June 1925 with minor interruptions. The newspaper mobilized workers and peasants in support of the Soviet regime. Subsequently, *Bil'shovyk* was merged with the newspaper **Proletars'ka pravda*.

Bil'shovyk (Bolshevik). Daily newspaper, organ of the Kiev City Committee of the CP(B)U and of the Kiev city soviet, published from 1932 to 1939 as a continuation of the Russian-language newspaper *Vechernii Kiev* (1927–30).

Bil'shovyk Ukraïny (Bolshevik of Ukraine). Biweekly periodical of the Central Committee of the CP(B)U in Kharkiv from 1926 to 1934 and thereafter in Kiev. Its purpose was to interpret the Party's policy directives in Ukraine. There were frequent changes in the editorial board as the Party's policies shifted, and founders of the journal (M. Skrypnyk, D. Zatonsky, A. Rychytsky, A. Khvyliya, V. Yurynets) were liquidated during the 1930s. At the end of 1952 the journal's name was changed to **Komunist Ukraïny*.

Bilske. See Bielsk Podlaski.

Bilske fortified settlement. A large fortified settlement from the 6th century BC to the 3rd century AD on the banks of the Vorskla River near the village of Bilske in Kotelva raion, Poltava oblast. The settlement was excavated and investigated in 1906 and 1958–76. It consisted of three separate settlements unified by a common wall and moat. The total area was 3,868 ha. Excavations revealed large pit dwellings and several ash pits. The inhabitants were basically farmers and herders, but they were also engaged in copper smelting, blacksmithing, and weaving and traded with the ancient states on the northern coast of the Black Sea.

Bilsky [Bil'skyj] or **Belsky, Fedir**, b ?, d ca 1506. A prince of the Algirdas lineage in the Smolensk region of Belorussia. Together with the Ukrainian princes Mykhailo Olelkovych and Ivan Holshansky, Bilsky plotted to assassinate Grand Duke Casimir IV of Lithuania and to incorporate their lands (Ukrainian-Belorussian ethnic territory) into Muscovy. The plot was uncovered; Bilsky fled to Moscow, while Olelkovych and Holshansky were beheaded.

Bilsky, Stepan [Bil's'kyj], b 8 January 1866 in Borzna, Chernihiv gubernia, d 7 May 1943. Graduate of the St Petersburg Mining Institute (1894) and from 1919, professor at the Zhytomyr Pedagogical Institute. Bilsky became a senior member of the Ukrainian Geological Research Trust in 1929. He did geological research in Volhynia and discovered deposits of topaz, morion (smoky quartz), and ilmenite (titanic iron ore).

Bily, Mykhailo [Bilyj, Myxajlo], b 12 November 1922 in the village of Moskali, Chernihiv oblast. Physicist, specialist in optics, since 1969 corresponding member of the Academy of Sciences of the Ukrainian SSR. Bily graduated from Kiev University in 1948 and in 1970 became its rector. His main works deal with the luminescence of hard and soft compounds, electrolytes and the spectral regularities of their luminescence, and luminescent analysis, particularly of pure, inorganic compounds.

Bily, Volodymyr [Bilyj], b 27 October 1894 in Katerynoslav gubernia, d ? Ethnographer and literary scholar, research associate of the Ethnographic Commission of the Ukrainian Academy of Sciences. Bily specialized in the folklore of the Katerynoslav region and participated in the archeological excavations near Nykopol. He contributed to the collections *Dniprovs'ki lotsmany* (Dnieper Boatmen, 1929) and *Chumaky* (The Chumaks, 1931), and wrote articles on the history of Ukrainian literature and ethnographic research, and studies of H. Skovoroda, K. Zynoviev, and others, which were published in various periodicals of the Ukrainian Academy of Sciences. He was arrested in 1937, and all trace of him is lost.

Bilyi Kolodiaz [Bilyj Kolodjaz']. III-18. Town smt (1976 pop 7,100), in Vovchanske raion, Kharkiv oblast. It has an automobile-repair plant and a sugar refinery.

Bilykovsky, Ivan [Bilykovs'kyj], b 8 October 1846 in Babyn, Sambir county, Galicia, d 1922. Self-taught composer and music teacher. He taught voice and founded and conducted the choir of the *Boian society in Stanyславiv. He wrote church and secular choral music, including 'Hamaliia,' 'Dumy moi' (My Thoughts), 'Oi try shliakhy' (Oh Three Roads), 'Oi hlianu ia podyvliusia' (Oh I Shall Gance), and 'Sontse zakhodyt' (The Sun Is Setting), all to the poems of T. Shevchenko. Bilykovsky also published school songbooks.

Bilyky. IV-15. Town smt (1968 pop 7,600) in Kobeliaky raion, Poltava oblast, on the Vorskla River. It has a sugar refinery, a milk-canning plant, and a cattle-fattening complex.

Bilynnyk, Petro, b 14 October 1906 in Okhtyrka, Kharkiv gubernia. Singer, lyrical tenor. Bilynnyk studied at the Kharkiv Conservatory. In 1936-40 he was a soloist with the Bolshoi Theater in Moscow. In 1941-2 he was a soloist with the Kharkiv Opera and Ballet Theater, and since 1942 he has been a soloist with the Kiev Opera and Ballet Theater. The main roles in which Bilynnyk appeared were those of Petro in M. Lysenko's *Natalka Poltavka* (Natalka from Poltava), Levko in his *Utoplena* (The Drowned Girl), Andrii in S. Hulak-Artemovskyy's *Zaporozhets' za Dunaem* (Zaporozhian Cossack beyond the Danube), Tiulenin in Yu. Meitus's *Moloda gvardiia* (The Young Guard), Lohengrin in R. Wagner's opera by that name, Faust in C. Gounod's opera by that name, and the clown in R. Leoncavallo's *I Pagliacci*.

Bilynsky, Andrii [Bilyns'kyj, Andriij], b 1916 in Chernivtsi. Jurist, student of Soviet law, publicist. Bilynsky was arrested in Poland in 1934 and 1939 as a member of

the OUN. He served in the Division Galizien, was taken prisoner in 1944, and spent several years in Soviet prison camps for being a Ukrainian political activist. In 1955 he was deported to Germany. In 1961 he became an associate of the Institut für Ostrecht and, since 1967, he has taught Soviet economic law at the University of Munich. Bilynsky has published more than 100 studies, articles, and reviews, primarily in German journals. His major publications are *Die Organisation der sowjetischen Anwaltschaft* (1958), *Das sowjetische Eherecht* (1961), and *Das sowjetische Wirtschaftsrecht* (1968). His Ukrainian-language books include the memoir *V kontstaborakh SRSR* (In the Concentration Camps of the USSR, 1961), the political treatise *Svit i my* (The World and We, 1963), and the study *Hromads'ki orhanizatsii v SRSR* (Civic Organizations in the USSR, 1969). As a journalist and publicist Bilynsky published articles in the Chicago newspaper *Ukrains'ke zhyttia* criticizing émigré Ukrainian political programs and policies and stressing the need for a 'constructive attitude' to the Ukrainian SSR.

Bilynsky, Mykhailo [Bilyns'kyj, Myxajlo], b 4 November 1888 in Poltava gubernia, d 17 November 1921 in the village of Mali Minky in the Zhytomyr region. Ukrainian military figure. In 1919 Bilynsky served as minister of the navy in the UNR government and as chief of the naval general staff. In 1920-1 he was the minister of domestic affairs in the same government. He died in battle during the Second *Winter Campaign.

Bilytske [Bilyc'ke]. V-18. City (1976 pop 12,700) in Donetsk oblast administered by the Dobropillia city soviet. The city, founded in 1956, has a coal-mining industry and a mineral-processing plant.

Biochemistry. Science dealing with the chemical composition of living organisms and the chemical processes connected with their vital functions. Biochemistry began to develop in Ukraine in the 19th century at Kharkiv University. In 1847 O. Khodnev wrote a textbook on the subject. O. *Danylevsky published the first biochemical periodical to appear in the Russian Empire, *Fiziologicheskii sbornik* (Physiological Collection, 1888-91). V. Gulevich and V. *Palladin investigated the biochemistry of plants. At Kiev University V. Kistiakivsky studied glycogen. At Vienna University I. *Horbachevsky, a Ukrainian, synthesized uric acid in 1882. In the 1900s biochemical research was taken up by the chemistry departments of medical faculties. In the 1920s a number of biochemistry departments were created within the biological faculties of the higher educational institutions, and scientific research institutes were established. In 1925 the *Institute of Biochemistry was founded at the All-Ukrainian Academy of Sciences. The Association of Physiologists, Biochemists, and Pharmacologists, which had branches in the larger cities, promoted the development of biochemistry.

Research publications by Ukrainian biochemists have covered all the main areas of biochemistry. Among the better-known contributors have been O. *Palladin, R. *Chahovets, V. *Belitsker, O. *Nahorny, V. Zosymovych, G. Bulankin, H. Saenko, S. Serebriany, L. Lytvynenko, K. Leutsky, Ya. Parnas, P. Kostiuk, V. Lyshko, D. Ferdman, and L. Bend. They investigated the biochemis-

try of protein, ferments, vitamins, muscle tissue, the nervous system, and hormones (V. *Komisarenko and A. Utevsy). M. *Huly, in his monograph *Osnovnye metabolicheskie tsikly* (The Basic Metabolic Cycles, 1968), summed up the research on metabolism. The nucleic acids DNA and RNA, which are the central subject of biochemistry today and the key to the mechanism of heredity and the synthesis of protein, are studied by H. Matsuka, S. Hershenzon, E. Skvyrska, O. Chepinoha, I. Kok, and others.

At the turn of the century Ye. *Votchal (Kiev Polytechnical Institute), A. Okanenko, D. *Tovstolis, and others devoted themselves to the biochemistry of plants. Since the 1920s M. *Kholodny (Academy of Sciences of the Ukrainian SSR), A. Liubynsky, V. *Liubymenko, Ye. Buslova, and A. *Kuzmenko, and in more recent times A. Manoryk, P. *Vlasiuk, V. Lobov, L. Grodzinsky, A. Okanenko, P. Mushak, L. Einor, V. Myroniuk, N. Tupyk, S. Pyrozhenko, and many others, have studied the biochemistry of transpiration, photosynthesis, growth and development, and so on. The department of the biochemistry of the lower plants, which was established at the *Institute of Botany of the Academy of Sciences of the Ukrainian SSR in 1958, carries on research on the lower water weeds. The results have been summed up in a monograph by O. Sudin and others, *Biokhemiia syn'ozelenykh vodorostei* (The Biochemistry of Blue-Green Algae). E. Rashba and I. Zakharova have produced monographs on mushrooms and micro-organisms.

Biochemical research is currently conducted at many scientific research institutes. The most important of these are the institutes of the Academy of Sciences of the Ukrainian SSR – the Institute of Biochemistry, the Institute of Molecular Biology and Genetics, the Institute for the Problems of Oncology, and the Institute of Physiology – and the Kiev Scientific Research Institute of Endocrinology and Metabolism under the Health Ministry of Soviet Ukraine.

*Ukrains'kyi biokhimichnyi zhurnal has been appearing since 1925, first in Ukrainian and since 1979 in Russian. A periodical collection entitled *Biokhimiia zhivotnykh i cheloveka* (The Biochemistry of Animals and Man) is also published.

Biochemistry, Institute of the Academy of Sciences of the Ukrainian SSR. See Institute of Biochemistry of the Academy of Sciences of the Ukrainian SSR.

Biological station. A scientific institution where research on biological phenomena under specific conditions is conducted. There are various biological stations: marine, river, lake, freshwater, forest, desert, steppe, mountain, etc. The first biological station in Ukraine was created by I. Mechnikov and A. Kovalevsky in 1871–2 in Sevastopol. Its purpose was to study the biological phenomena of the Black Sea. In 1907–14 the Karadag station near Teodosiia was created, and then, in 1954, the Odessa station. Out of these three biological stations the *Institute of the Biology of Southern Seas was established in 1963. The Kherson Hydrobiological Station belongs to

the Academy of Sciences of the Ukrainian SSR. In 1919 the Agricultural Committee of Ukraine initiated a system of biological stations at natural reservations.

Biology. A complex science of living nature that deals with life in all its manifestations and levels of organization from the molecular or subcellular to the supraorganic or population level.

The beginnings. Biological information about Ukraine's flora and fauna can be found in the works of ancient and medieval writers, the travel accounts of the 16th–17th century (S. Herberstein, M. Kromer, M. Litvin, G. de Beauplan, and others), medical manuals, and herbals. Later, the biological works of German, Austrian, and Polish scholars (B. Haquet, H. Junker, G. Ronczynski, and others) gave some information about Ukraine and paved the way for the more systematic scientific works on biology written in the 18th century by such authors as M. Terekhovskiy, P. Pallas, S. Gmelin, and J. Gildenstädt. In the 19th century the development of biology in Ukraine was assured by the formation of new universities and scientific research institutions in Kiev, Kharkiv, Odessa, and Lviv.

Biology was the responsibility of the departments of natural sciences at Kiev University and the Kiev Polytechnical Institute. The *Kiev Society of Naturalists was established at Kiev University in 1869, where it published its *Zapiski*. In 1896 the Bacteriological Institute was founded in Kiev. At the turn of the century several noted biologists worked in Kiev: the anatomist and histologist V. Bets; the cytologist S. Navashin; the histologists O. Ivakin and F. Lomynsky; the microbiologists H. Minkh, A. Krainsky, and T. Yanovsky; the physiologist O. Leontovych; the pathologists-anatomists V. Vysokovych, P. Kucherenko, and S. Kushakevych; the botanists O. Rohovych, I. Schmalhausen, Sr, and M. Tsinger; the founder of zootechny in Ukraine, M. Chervinsky; the embryologist A. Kovalevsky; and S. Zernov, who described the biocenosis of the Black Sea.

In Kharkiv, biological research was conducted at the university, the Veterinary Institute, the Society of Naturalists, the Society of Scientific Medicine and Hygiene, the Medical Association, the Bacteriological Station (established in 1887), the Pasteur Institute (1887), which became the Bacteriological Institute in 1908, and elsewhere. A number of prominent scientists worked in Kharkiv: the botanist-microbiologist L. Tsenkovsky, who laid the foundations of the theory of bacterial mutation; the plant physiologist V. Zalesky; the embryologist Z. Striltsov; the pathologists-anatomists V. Krylov and M. Melnykov-Razvedenkov; the biochemist O. Danylevsky; the endocrinologist and parasitologist V. Danylevsky; the bacteriologists K. Yelenevsky and S. Kotsevaliv; the botanist and parasitologist A. Krasnov; the anatomists O. Bilousov and V. Vorobiov; the histologist M. Kulchytsky; the pathologist-anatomist-zoologist O. Ostapenko; and others.

Odessa University and its society of naturalists, which published *Zapiski*, boasted several famous biologists among their members: Professor I. Mechnikov (the author of the theory of phagocytes and later the director of the Pasteur Institute in Paris) and the microbiologists M. Hamaliia (author of well-known works in virology and immunology, discoverer of bacteriophage, organizer of the Odessa Bacteriological Station in 1886 – first of its kind in the Russian Empire [see *Pasteur stations] – and

of the Odessa Bacteriological and Physiological Institute), Ya. Bardakh, O. Veryho, Ye. Brusylovsky, M. Zilynsky, and others.

The botanists J. Sziwerek and I. Szultes and the zoologists B. Dybowski and J. Nusbaum-Hiliarovych worked at Lviv University, while the botanist O. Voloshchak worked at the Lviv Polytechnic. The Ukrainian biochemist I. Horbachevsky synthesized uric acid from urea and glycine in 1882 and studied the exchange of purines at Vienna University and later worked at Prague University.

1920s–1930s. Biology in Ukraine kept pace with the general development of the life sciences and reached a significant level during this period. Along with the work of numerous departments of various higher schools such as universities and medical, zootechnical, veterinary, and agricultural institutes, an important role was played by the Botanical Section of the Agricultural Scientific Committee (1919–27), which was directed by O. Yanata. Biological research at the Ukrainian Academy of Sciences began in 1919: the Institute of Microbiology, the botanical and zoological sections, and the chairs of agricultural biology and experimental zoology were established. The Ukrainian Biochemical Institute, which published *Naukovi zapysky* from 1925, the Ukrainian Protozoology Institute (Kharkiv 1923), the Ukrainian Institute of Pathology and Anatomy (Kharkiv 1925) with its Ukrainian Association of Pathologists (1926), the Ukrainian Sanitary-Bacteriological Institute, and a number of other scientific research institutions, particularly in applied botany and zootechny, worked in conjunction with the academy.

An important role in the development of biology in Ukraine was played by the *biological stations, particularly the Dnieper station (1909) and the Sevastopil station (1871), and by the research conducted at nature reserves and at *zoological and *botanical gardens, which led to the systematic investigation of the flora and fauna of Ukraine and of the biological processes in particular regions having specific characteristics. This work became increasingly tied to experimental research in applied biology, particularly in pomology, plant acclimatization, and genetics. In the 1920s and early 1930s the Institute of Linguistics of the All-Ukrainian Academy of Sciences published S. Panochini's *Slovnnyk biolohichnoi terminolohii* (Dictionary of Biological Terminology, 1931), Kh. Polonsky's *Slovnnyk pryrodnychoi terminolohii* (Dictionary of Naturalist Terminology, 1928), and a series of zoological, botanical, medical, and agricultural dictionaries that contained a great deal of biological information.

Beginning in the mid-1930s, the scientific research institutions in Ukraine were restructured. Research in biology was concentrated basically in the institutes of the Academy of Sciences of the Ukrainian SSR: the division of biological sciences included the institutes of botany, zoology, hydrobiology, biochemistry, clinical physiology, and microbiology. In this period academic freedom was curtailed, and scientific work was subjected to Party directives and to Marxist-Leninist ideology. The methodology of dialectical materialism was adopted as the foundation of scientific work. Much attention was devoted to the problems of Darwinism and the theory of evolution, particularly to the main tendencies, laws, and facts of the evolutionary process. According to Party instructions, scientific research was subjected to a practical, utilitarian approach.

The most important publications in biology of the

Academy of Sciences were **Ukrains'kyi botanichnyi zhurnal* (known in the 1930s as *Zhurnal instytutu botaniky vUAN*), *Ukrains'kyi zoolohichnyi zhurnal*, *Zbirnyk prats' Zoolohichnoho muzeiu vUAN* (Collection of the Works of the Zoological Museum of the All-Ukrainian Academy of Sciences), *Zbirnyk prats' Biolohichnoho instytutu im. F. Omel'chenka* (Collection of the Works of the F. Omelchenko Biological Institute), *Zbirnyk prats'* (Collection of Works) of the Dnieper Biological Station and the *Trudy* of other biological stations, *Mikrobiolohichnyi zhurnal*, and **Ukrains'kyi biokhimichnyi zhurnal*.

The more outstanding biologists who worked in Ukraine during this period and were associated with the Ukrainian Academy of Sciences were the microbiologists O. Korchak-Chepurkivsky, D. Zabolotny (one of the founders of the International Association of Microbiology), M. Neshchadyenko, L. Tarasevych, L. Hromashevsky (epidemiologist), P. Savytsky, V. Drobotko, B. Isachenko, M. Revo, O. Bershova, and O. Sydorenko; the morphologists M. Melnykov-Razvedenkov, V. Vorobiov, O. Cherniakhivsky, P. Kucherenko, M. Lysenko, and O. Smyrnova-Zamkova; the geneticists H. Karpechenko (winner of the Rockefeller Award), T. Dobzhansky, and I. Ahol; the physiologists O. Bohomolets, V. Danylevsky, M. Strazhesko, O. Krontovsky, V. Chahovets, M. Pavliv, O. Nahorny, D. Svyrenko, R. Kavetsky, O. Leontovych, V. Radzymovska, N. Medvedieva, and Ye. Zankevych; the biochemists O. Palladin, M. Hatsaniuk, S. Gzhytsky, and V. Kovalsky; the botanists V. Lypsky, O. Yanata, M. Kholodny (developer of the phytohormonal theory of tropisms), V. Liubymenko, A. Fomin, Ya. Vysotsky, Ye. Lavrenko, D. Zerov, and M. Popov; the paleobotanists A. Kryshchovych and M. Persytsky; and many others. The physiologist Ye. Votchal worked in agricultural biology, and Volodymyr Symyrenko and M. Kashchenko (embryologist and acclimatizer) worked in pomology and acclimatization. A. Sapiehyn developed new varieties of wheat. T. Lysenko was famous for his experiments in genetics and selection. The better-known zoologists were I. Schmalhausen, M. Sharleman, L. Lebedynsky, D. Beling, O. Nykolsky, V. Khramevych, O. Myhulin, O. Brauner, P. Svyrydenko, M. Hryshko, and Ya. Roll. O. Bilanovsky, S. Paramoniv, L. Reinhard, T. Zabudko-Reinhard, and A. Shevchenko (who studied blood-carrying mosquitoes and malaria) were noted entomologists. O. Markevych, V. Myronova, M. Malevytska, and others specialized in parasitology. M. Ivanov developed new varieties of sheep and hogs.

The 1920s in Western Ukraine also witnessed a rapid development in biological sciences. Scientists in the field were organized in the Mathematical – Natural Science – Medical Section and the Natural Science Museum of the Shevchenko Scientific Society. Among the museum's scientists were the botanist M. Melnyk and the entomologist V. Lazorko. The following biologists worked at the Bacteriological-Chemical Institute of the Shevchenko Scientific Society: M. Muzyka, L. Maksymenko, V. Shchurovsky, Yu. Kordiuk, and P. Kholodny. Some important zoologists were V. Brygider, O. Tysovsky, R. Vaigel, Ya. Hirshler, and E. Zharsky. Among the botanists, S. Kulchynsky, O. Mryts, and H. Kozii deserve to be mentioned. The anatomist and etiologist A. Starkov and biologist V. Harmashiv worked as émigrés in Latvia and Czechoslovakia, and the entomologist A. Granovsky worked in the United States.

After 1945. In 1945 biologists resumed their work at the various institutions in Soviet Ukraine. The science departments at universities, the scientific research institutes, and the departments of the Academy of Sciences were expanded. Ukrainian biologists participated in international conferences and in the development of various international biological programs with such themes as 'Man and the Biosphere.' An important contribution to marine biology was made by the Sevastopol Biological Station, which in 1963 was reorganized into the *Institute of the Biology of Southern Seas, encompassing also the Kara Dag and Odessa stations. The following hydrobiologists worked at the institute: V. Greze, V. Zaik, T. Petip (productivity of marine ecosystems), K. Hailov, A. Kovaliv, E. Bytiukov (bioluminescence), M. Kysileva, A. Hutnyk (bottom flora and fauna), and Yu. Zaitsev. The Kara Dag Biological Station conducts research on dolphins. In 1961 electron-microscopic research began at the Ukrainian Academy of Agricultural Sciences and then at other scientific research institutes. It was conducted by O. Suliaeva, S. Lebedev, Ye. Kordium, I. Ostrovska, and others. In 1972 the Institute for the Problems of Cryobiology and Cryomedicine was established at the Academy of Sciences of the Ukrainian SSR; M. Pushkar, A. Bilous, and V. Luhovy worked at the institute. J. Watson's and F. Crick's discovery of the structure of deoxyribonucleic acid (DNA) led to the founding of the Institute of Molecular Biology and Genetics at the Academy of Sciences of the Ukrainian SSR in 1973. H. Matsuka, V. Vasylenko, V. Osyka, S. Serebriany, S. Gershenzon, V. Lishko, V. Belitser, and M. Huly investigate the structure and function of DNA and RNA, the processing of genetic information, etc. at this institute.

Genetic research, which was constricted in 1940–60 by the imposed theories of I. Michurin and T. Lysenko, is expanding again. Lysenko believed that inheritance is determined by external factors – changes in the environment and the breeding conditions – and, furthermore, that humans are capable of transforming nature; this belief coincided with Communist ideology and satisfied the demands of the Party. The theories of G. Mendel and T. Morgan were condemned as 'unscientific and idealistic,' and the laboratories of cytology, histology, and embryology at the Academy of Sciences and other scientific research institutions were abolished because of their 'un-Michurinian approach to the problems of biology.' Ukrainian geneticists who did not accept these beliefs were persecuted and destroyed, among them, H. Karpechenko, L. Symyrenko, M. Vavylov, K. Fylypchenko, A. Levytsky, I. Ahol, and A. Lazarenko.

With the removal of T. Lysenko from the presidency of the Academy of Agricultural Sciences and the directorship of the Genetics Institute in Moscow in the 1960s, the concepts of Western geneticists became current in Ukraine among such scientists as V. Zosymovych, T. Borysenko, I. Shevtsov, N. Navalakhina, S. Mashtalir, and B. Matseliukh. Genetic engineering is developing and is represented by such researchers as A. Aleksandrov, S. Maliuta, B. Levenko, V. Morhun, and V. Kordium. An important contribution to the development of biology was made by the botanists and specialists in floristics: D. Zerov, Ye. Bordzylivsky, Ye. Lavrenko, M. Kotov, O. Visiulina, M. Klovov, D. Dobrochaeva, A. Barbarych, Ye. Wulf, V. Chopyk, M. Smyk, O. Lypa, K. Malynovsky, H.

Bilyk, and O. Stoiko; their work is summed up in the classic 12-volume *Flora URSR* (The Flora of the Ukrainian SSR, 1926–65) and the guides to the plants of Ukraine (1965), the Crimea, the Carpathians, etc. The algologists O. Topachevsky, N. Kondrateva, and Z. Asaul, as well as the mycologists M. Pidoplichko, Ye. Koval, I. Dudka, S. Oksiuk, N. Masiuk, and V. Bilal, deserve to be mentioned for their contributions to biology.

Other scientists who advanced the development of the biological sciences are the microbiologists D. Zatul, V. Smyrnov, E. Andreiuk, L. Rubenchyk (soil microbiology), K. Beltiukova, R. Hvozdiak (phytopathogenic microbes), and Yu. Malashchenko; the virologists A. Bobyr and S. Moskovets; the hydromicrobiologists A. Rodina and O. Bershova; the cytologists Ya. Modylevsky, E. Kordium, P. Sydorenko, V. Maliuk, Kh. Rudenko, and I. Ostapenko (ultrastructure); the embryologists R. Bannykova, A. Dzevaltovsky, V. Soroka, Z. Kots, D. and A. Grodzinsky, A. Okanenok, and L. Ostrovsky; the agricultural chemists O. Dushechkin, P. Vlasiuk; and the ecologists Yu. Sheliakh-Sosonko, H. Poplavska, Ye. Kondratiuk, and M. Holubets. The problems of exobiology are investigated by K. Sytnyk, O. Uvarova, and M. Nechytailo. The leading contributors to the science of zoology in Ukraine are M. Savchuk, V. Kasianenko, V. Topachevsky, M. Bily, V. Dombrovsky, H. Himmelraikh, S. Manzi, I. Pidoplichko (the moving force behind the monumental 40-volume *Fauna Ukrainy* [The Fauna of Ukraine]); the ornithologists O. Kistiakivsky, I. Volchanetsky, and F. Strautman; the ichthyologists V. Movchan, O. Ambroz, and F. Zambryborshch; the entomologists I. Bilanovsky, V. Sovynsky, Ye. Savchenko, Ye. Zvirozomb-Zubovsky, and V. Vasyliiev; the hydrobiologists Ya. Tseeb, L. Sirenko, V. Kuzmenko, V. Vodianytsky (productivity of the Black Sea), V. Zats (water restoration), V. Maliuk, H. Zuiev, and H. Shkorbatov (ecophysiology of freshwater animals); and the parasitologists O. Markevych, V. Trach, V. Zdun, and I. Bezpalny.

The Institute of Zoology of the Academy of Sciences of the Ukrainian SSR is becoming the main center for parasitology in the whole Soviet Union. The phytohelminthologist O. Ustinov, the physiologists O. Makarchenko, P. Kostiuk (electromicroscopic research), S. Kryshal, M. Shuba, V. Skok, V. Storozhuk, M. Hurevych, P. Bohach, V. Nikitin, and A. Yemchenko, and the ecologists P. Svyrydenko, M. Voistvensky, I. Sokur, M. Kalebukhov, M. Beskrovny, and M. Akimov are well-known specialists in their fields.

Biological research is conducted at the various institutes of the Academy of Sciences of the Ukrainian SSR: biochemistry, physiology, microbiology and virology, molecular biology and genetics, problems of cryobiology and cryomedicine, botany, zoology, hydrobiology, the physiology of plants, the biology of southern seas. Furthermore, work in biology is carried on at botanical gardens and *botanical museums, the *Ukrainian Agricultural Academy, biological research institutes, universities, the All-Union Genetic Selection Institute in Odessa, and agricultural, veterinary, and medical institutions.

The following scientific journals are published in Ukraine: **Ukrains'kyi botanichnyi zhurnal*, *Vestnik zoologii*, *Tsitologiya i genetika*, *Molekuliarnaia biologiya*, *Mikrobiologicheskii zhurnal*, *Fiziologicheskii zhurnal*, *Neirofiziologiya* (also published in English in the United States), *Gidrobiolo-*

logicheskii zhurnal, Biologiia moria, Fiziologiia i biokhimiia kul'turnykh rastenii, Introduktsiia ta aklimatyzatsiia roslyn na Ukraïni, and Zakhyst roslyn na Ukraïni.

Abroad the following émigré scientists continue to work in their areas of specialization: the plant developers O. and K. Arkhimovych and O. and V. Savytsky; the pathophysiologicalist I. Bazylevych; the ichthyologists F. Velykokhatko, Ye. Slastenko, and Yu. Rusov; the geneticist M. Vetukhiv; the cytologist L. Zafiiovska; the zoologist E. Zharsky; the entomologist D. Zaitsev; the protistologist S. Krashennikov; the botanist N. Osadcha-Yanata; the entomologist S. Paramoniv; the pathologist I. Rozhin; the microbiologist V. Panasenko; and the specialist in applied biology P. Shumovsky. These scientists publish in *Zapysky Naukovoho Tovarystva im. Shevchenka*, the *Annals of the Ukrainian Academy of Arts and Sciences in the U.S.*, and in non-Ukrainian journals.

Biology of Southern Seas, Institute of the Academy of Sciences of the Ukrainian SSR. See Institute of the Biology of Southern Seas of the Academy of Sciences of the Ukrainian SSR.

Birch (*Betula*; Ukrainian: *bereza*). A genus of trees and some shrubs, distinguished by its white or silver bark. It is not discriminating about soil or climate and grows everywhere, in copses and forests. Two main forms are found in Ukraine: the European white birch (*B. verrucosa*), which reaches a height of 25–28 m and grows separately or mixed with other species; and the pilose or swamp birch (*B. pubescens*), which reaches 20 m and grows in wet, swampy areas. Both species are very common in Polisia, the northern forest-steppe belt, and the lower ranges of the Carpathian Mountains. The wood of the white birch is elastic and makes good firewood, furniture, and wooden objects. The twigs are used for brooms, and the bark is used in tanning and making birch oil and tar. Birch charcoal is made into black powder and filters for the paint industry. Birch sap is consumed as a beverage in the spring, and tea made of birch leaves, buds, and sap is used in folk medicine as a cure for stomach ailments and rheumatism. The white birch is also grown in protective belts against the wind, along highways for decoration, and on slopes to prevent erosion. Some forms of the birch, such as the weeping birch, are valued as decorative trees. In the south the Dnieper birch (*B. borysthena*) is endemic to the sandy soils of the lower Dnieper and Boh rivers. The low birch (*B. humilis*) reaches a height of 2 m and grows in the swamps of Polisia, the Opillia Upland, and on the high slopes of the Carpathian Mountains.

Birchak, Volodymyr [Birčak], b 1881 in Liubynsi, Stryi county, Galicia, d 1945. Writer and community figure,

Volodymyr Birchak

and teacher in Galicia, from 1920 in Transcarpathia, and from 1939 in Prague. Birchak studied in Lviv and Cracow and taught in gymnasiums in Lviv, Drohobych, Sambir, and Uzhhorod. He was an active member of Plast, the Prosvita society, the Shevchenko Scientific Society, and the literary group *Moloda Muza. He wrote short historical novels, including *Vasyl'ko Rostyslavych* (1922), *Volodar Rostyslavych* (1930), *Proty zakonu* (Against the Law, 1936), and *Velyka peremoha* (The Great Victory, 1941); two collections of short stories, *Prytcha* (The Parable, 1931) and *Zolota skrypka* (The Golden Violin, 1937); and scholarly works on literature, including *Literaturni stremlinnia Pidkarpats'koi Rusy* (Literary Trends in Subcarpathian Ruthenia, 1921, 1937). His memoirs are entitled *Karpats'ka Ukraïna: Spomyny i perezhyvannia* (Carpatho-Ukraine: Reminiscences and Experiences, 1940). Birchak also wrote textbooks for secondary schools in Transcarpathia and edited many journals (including *S'vit) and newspapers. He was arrested in Prague in 1945 and died in a Soviet prison.

Birth, folk customs connected with. Such customs have survived since ancient times. When a child was born, a ritual nativity banquet was held. The church tried to suppress these feasts for many centuries, but they have survived with all the old rituals. When labor began, the husband summoned a midwife. On entering the patient's house, the midwife bowed 30 times and performed an introductory ritual while uttering her prayers. If the delivery was difficult, those in attendance would open the doors, windows, and chests and untie any knots to facilitate the birth.

A godfather (*kum*) and godmother (*kuma*) were invited for the baptism. The newborn infant was carefully protected from all kinds of evil by being kept behind a veil, out of sight not only of strangers but even of family members. The baptism was a ritual salvation of the infant from the forces of evil. Forty days after birth the mother submitted to a cleansing ritual, and the child was admitted to the church: the mother brought the infant to church and waited in the women's vestibule until after the cleansing prayers were read over her. A year or more after birth the child underwent a ritual haircutting. All the customs surrounding birth originated in pre-Christian times but were assimilated by the church.

P. Odarchenko

Birzula. Ancient name of the city of *Kotovske.

Bishop (Ukrainian: *yepyskop*; ancient Greek: *episcopos*; used from apostolic times to mean superintendent or overseer). The third and highest order of priesthood (after deacon and priest) in the Christian churches. In Ukraine a bishop is also called *arkhyierei* (literally, arch-priest) and bears the title of *vladyka* (ruler). In the Orthodox church a bishop, before consecration, has to become a monk. The most noted Orthodox bishops are given the title of archbishop (*arkhyiepyskop*), and the bishops in national ecclesiastical capitals bear the title of metropolitan (*mytropolyt*). In the Catholic church the title of archbishop is given to bishops administering archeparchies (archdioceses). A bishop has the right to ordain deacons and priests, to consecrate (with other hierarchs) bishops, and to bless churches, the myrrh, and the antimensation. The bishop's authority consists of the power to ordain, to teach and preach, and to govern. His administrative power is limited to the territory of his *eparchy – hence the name ordinary or ruling bishop (ie, having jurisdiction of his own right or by virtue of his office), as opposed to one without administrative power.

Bishops appeared in Ukraine with the coming of Christianity. Most of them were Greek and were appointed by the patriarch of Constantinople. It is assumed that the first bishop of Kiev was Nastas of Korsun, who was not Greek. The Greek bishops were gradually replaced by local people, mostly by monks from the Kievan Cave Monastery. Bishops were elected by a council of bishops headed by the metropolitan and were approved by the prince. Eventually the custom was established for the prince and representatives of the church community to elect the bishop. The metropolitan then merely consecrated him. In the 14th century the council of bishops sometimes elected three candidates, one of whom was consecrated by the metropolitan. Under Lithuanian and Polish rule the princes, and later the king, together with the boyars, priests, and even Orthodox lay leaders of the eparchy, had a considerable influence on the selection of Ukrainian bishops. Under foreign rule and the absence of Ukrainian princes the bishop became the recognized representative of the Ukrainian people in a given territory.

In the 16th–17th century Orthodox and Catholic bishops were usually members of gentry or noble families. Some of them led very worldly lives and devoted too much attention to their personal gain. The authority of the bishops declined, particularly when the so-called right of patronage became widely accepted in Lithuania and Poland. This right gave the temporal rulers control of the clergy, including the bishops. The Polish king's practice of granting bishoprics went against the tradition of electing bishops. The procedure of nominating bishops was a point of contention between secular and church authorities. Sometimes competition among candidates for the bishop's office escalated into armed conflict.

In the Russian Empire, the *Holy Synod (1721–1917)

maintained the exclusive right to nominate bishops. Under Austria-Hungary and then Poland and Czechoslovakia the bishops of the Ukrainian Catholics were nominated by the Holy See, with the participation of the government, according to the established tradition or concordat.

The bishop administered the eparchy with the help of the cathedral curia (*klyros* – an administrative-judicial, collegial body composed of presbyters) and his co-adjutors, who served at the cathedral or in the outlying areas. The bishop or his co-adjutor presided over the church court and convened eparchial pastoral councils. In 1721 the *consistory replaced the cathedral curia as the bishops' administrative agency in the Orthodox church. In the 18th–19th century chapters replaced the curiae in the Ukrainian Catholic eparchies (see **kapitula*).

At first there were only ordinary bishops in Ukraine: auxiliary bishops (vicars-general) appeared later – in the 17th century in the Catholic church and in the 18th century in the Orthodox church. The number of auxiliary bishops increased at the beginning of the 20th century, when the Kiev metropolitan eparchy had 4, and the Khereson eparchy, 3. In 1917 there were 10 ordinary and 22 auxiliary bishops in central and eastern Ukraine; in Western Ukraine there were 8 Ukrainian Catholic bishops. Since then the number of Ukrainian bishops has grown. This is largely owing to the fact that the Orthodox church in Ukraine and outside Ukraine has split into several competing wings.

In 1945–50 all 10 bishops of the Ukrainian Catholic church in Ukraine were arrested, and most of them died in prison. Officially, within the Ukrainian SSR there were 1 metropolitan-exarch of the Russian Orthodox church, 2 metropolitans, 4 archbishops, 6 bishops, and 1 auxiliary archbishop in 1981. Outside Ukraine the Ukrainian Orthodox church had 3 archbishops-metropolitans, 5 archbishops, and 4 bishops in 1981, while the Ukrainian Catholic church (including the Byzantine Rite Catholics in the United States) had 1 archbishop major, 3 archbishops-metropolitans, 2 archbishops, and 23 bishops.

A number of Ukrainian bishops have played an important role in the religious, cultural, and political life of the Ukrainian people. In the 19th–20th century some Ukrainian Catholic bishops in Western Ukraine have made important contributions to the national awakening of the people. During this period the Orthodox bishops in central and eastern Ukraine were mostly Russian and hostile to the Ukrainian movement. Only in the 1920s–1940s did Ukrainians attain the office of bishop in the *Ukrainian Autocephalous Orthodox church (in 1924 there were 30 bishops). Some Ukrainians served as bishops in the Autocephalous Orthodox church in Poland. Bishops of both churches who had proved themselves as church leaders, theologians, and pastors became victims of Soviet terror.

I. Korovytsky

Bison, European or Wisent (*Bison bonasus*; Ukrainian: *zubr*). A bovine, herbivorous mammal having a large head, heavy forequarters, relatively light hindquarters, a large hump on the withers and back, and a shaggy, chestnut-colored coat. It is the largest animal in Europe – up to 3.5 m in length, 2 m in height, and 1,000 kg in weight. At one time the bison inhabited almost all the forests of Eurasia. In Ukraine it was found in the forest

and forest-steppe belts of the Carpathian Mountains, the Crimea, and northern Caucasia (*Bison bonasus caucasicus*). It was almost exterminated and up to 1914 survived in a wild state only in the *Bilovezha Forest (700 head) and northwestern Caucasia, owing to the efforts of the Russian government. After the First World War only 48 bison remained. It was declared an endangered species and kept on preserves, and consequently their number increased. Small herds were established in 1965 and 1967 in Lviv, Volhynia, Kiev, and Rivne oblasts. The bison has been crossbred with the American bison (buffalo) in the *Askaniia-Nova Nature Reserve.

Biss, Yeva, b 18 June 1921 in Stara Lubovna, eastern Slovakia. A Ukrainian painter, playwright, and writer in Czechoslovakia; the wife of O. *Zilynsky. At first Biss wrote in Russian, but since the 1950s all her work has been in Ukrainian. She began as a dramatist, writing *Druzia i vragi* (Friends and Foes, 1951), *Barlih* (The Den, 1954), *Nastala vesna* (Spring Arrived, 1959), *Bilyi vovk* (White Wolf, 1962), and *Ester* (1965). She is the author of two collections of short stories, *Sto sim modnykh zachisok* (One Hundred Seven Modern Hairdos, 1967), which attracted wide attention, and *Apartament z viknom na holovnu vulytsiu* (Apartment with a Window Facing the Main Street, 1969). Political circumstances since 1969 have not allowed her work to be published. Biss paints mostly landscapes and portraits.

Biuletyn Polsko-Ukraiński (Polish-Ukrainian Bulletin). Illustrated weekly on Polish-Ukrainian affairs established in Warsaw in 1932 under the editorship of W. Bączkowski. Works by Polish specialists on Ukraine and Ukrainophiles, as well as by Ukrainian writers, were published in the weekly, of which some 290 issues appeared. In January 1939 it was replaced by the monthly *Problemy Europy Wschodniej*.

Alfred Bizanz

Bizanz, Alfred [Bizanc], b 1890 in Liubin Velykyi near Lviv, d 1950. Officer of German origin in the Austrian army, later lieutenant colonel in the Ukrainian Galician Army and the Army of the UNR. He commanded the group South II and the *Lviv Brigade of the Ukrainian Galician Army. He was one of the initiators and principal leaders of the *Chortkiv offensive. In June 1919 he commanded an attack group in the battles near Berezhany and distinguished himself in battle during the march on Korosten. During the Second World War he was the officer for

Ukrainian affairs in the German administration of the Generalgouvernement and in the Galician district. He was also head of the military staff of the *Division Galizien. In 1945 he was seized by Soviet agents in Vienna and deported.

Biziukov, Onufrii [Bizjukov, Onufrij], b 24 June 1897 in Velizh, Smolensk gubernia. Monumentalist painter. Biziukov graduated from the Kiev Art Institute (1930), where he studied with M. Boichuk. He was a member of the Association of Revolutionary Art of Ukraine. He painted landscapes, still lifes, and thematic works in a cubist-expressionist style marked by vivid, decoratively applied colors. Among his works are *Sawyers* (1931), *On the Banks of the Dnieper* (tempera, 1964), and the landscapes *Old Kiev* (1947) and *In the Kiev Hills* (1960–70).

Black Building (Chorna kamianytsia). A residential building in the market square in Lviv; an architectural monument built in 1577 by P. Krasovsky in the Renaissance style. In 1675–7 its attic and portals were restored, and in 1884 a fourth story was added. The facade and the corner pilasters are built of carved stone that has turned black with time; hence the name of the building. The facade is decorated with ornamentation and carved figures. Today the Black Building houses a historical museum.

Black Council. See Chorna Rada.

Black grouse (*Lyrurus tetrrix*; Ukrainian: *teterev*). A bird of the Galliformes order and Tetraonidae family. The average weight is 1.7 kg for the male and 1.3 kg for the female; the average length is 60 cm. It is commonly found in the forest and forest-steppe belts of Europe and Asia. At the beginning of the 19th century it was common throughout Ukraine, but it was killed off and survives now only in Polisia and in some areas of the Carpathian Mountains. The black grouse is a valuable commercial bird.

Black Hats. See Chorni Klobuky.

Black Hundreds (chernye sotni). The popular designation for a number of Russian monarchist and chauvinist, ultranationalist organizations that appeared after the 1905 revolution. The *Union of the Russian People, led by the physician A. Dubrovin in St Petersburg, was the most important of these. The union was organized by reactionary landlords, bureaucrats, intellectuals, and clergy. A mass membership was recruited from the urban and rural population. The union was supported by the government and collaborated with the tsarist secret police, popularly known as the Okhrana.

According to their program, the Black Hundreds stood for autocracy, the concept of an all-Russian nationality (refusal to recognize Ukrainians and Belorussians as separate nations), and the indivisibility of the Russian Empire. They resisted democratic and social reform, constitutionalism, and the influence of non-Russian groups, particularly Jews (they were openly anti-Semitic), on society. They staged massive rallies, called 'patriotic' demonstrations, against liberal and progressive movements and even assassinated their opponents.

In Ukraine the Black Hundreds were well organized and found their support among Russified Ukrainians, particularly the nationally unconscious urban and rural

elements and the pro-Russian Orthodox clergy (mainly in Volhynia). The following were the main centers of the movement: Odessa, where the local branch of the Union of the Russian People was headed by Count A. Kokovnitsyn, had a membership of 22,000, mostly of the urban population, in 1907, and published *Za tsaria i rodinu*; Kiev, where M. Myshchenko was the leading activist; Kharkiv, where Kotov-Konoshenkov headed the local branch; Yelysavet, where I. Fomenko published the paper *Glas naroda*; and the *Pochaiv Monastery in Volhynia, where Archimandrite V. Maksymenko directed the movement and the papers *Volynskaia zemlia* and *Pochaevskii listok* propagated its ideas. The Black Hundreds had their own battle groups (*druzhyny*), which in 1906–7 staged Jewish pogroms in Kiev, Odessa, Yalta, etc. The Russian Assembly, although somewhat more moderate, was close to the Black Hundreds in outlook and spirit. It had branches in Kharkiv, Kiev, and Odessa. Its *Mirovoi trud* was published in Kharkiv under the editorship of Prof A. Viazigin, the leader of the rightist faction in the Third State Duma. In 1906 the Odessa Union of Russian People was formed. It was headed by M. Rodzevich and had 10 branches in southern Ukraine.

At a congress in October 1906 in Kiev the Black Hundreds set up a common front, called the United Russian People. In 1907–8 a similar front in Odessa, known as the Russian (White) Two-Headed Eagle, was headed by V. Belikovitch. The Black Hundreds and other rightist organizations took advantage of the anti-Polish feeling among the peasantry of Right-Bank Ukraine in the election campaign to the Third State Duma (1907) and won all the seats for the Kiev and Volhynia gubernias. At the beginning of 1908 a group led by V. Purishkevich broke away from the Union of the Russian People and formed the *Union of the Archangel Michael, with branches in Kiev, Odessa (headed by B. Pelikan and publishing *Iuzhnyi bagatyr*), Kherson (organizer, I. Fomenko), etc. In 1910 another Black Hundred organization appeared in Odessa – the Southern Monarchist Union, led by Zaichenko. In 1913 the Black Hundreds, primarily members of the Union of the Archangel Michael, gained control of the municipal government in Odessa through fraudulent elections and closed down the Ukrainian Prosvita society there.

Using as an excuse the trial of M. Beilis, who was charged with the ritual murder of a Christian boy, the Black Hundreds organized an anti-Semitic campaign in 1913. Beilis's release by a Kiev jury was a moral blow to the reactionaries (see *Beilis affair). The Black Hundreds were still active during the war, but after the February revolution of 1917 they dissolved or were formally abolished.

Black locust (*Robinia pseudoacacia*; Ukrainian: *bila akatsiia*). A deciduous tree of the leguminosae family which grows up to 25 m in height. It is not discriminating about soils and grows rapidly. Because of its resistance to drought, it is widely used in steppe forestation and in erosion control, sometimes combined with pine. It is also grown for ornamental purposes. Its heavy, hard, rot-

resistant, and durable wood is used in shipbuilding, in turning, and for fuel.

Black Route (Chornyi shliakh). One of the strategic routes used by the Tatars in their raids on Right-Bank Ukraine, Galicia, and Poland in the 16th–17th century. It began at the Perekop Isthmus and went through the Zaporozhian steppe north along the watershed, leaving the Mokra Sura River on the right and the Tomakivka, Solona, Bazavluk and Saksahan rivers on the left. The Black Route turned west from the upper Inhulets, Inhul, and Tiasmyn rivers in two branches: the northern branch went past Korsun, Bohuslav, Lysianka, Zhashkiv, Tetiiv, and Lypovets, and the southern branch passed near Shtola, Talne, Uman, and Dashiv and rejoined the northern branch at Lypovets. From there the Black Route went west towards Khmilnyk, Ternopil (where it intersected the *Kuchmanskyi Route), Lviv, and Warsaw. Other routes which branched off from the Black Route eastward towards the Dnieper River were used by the Tatars in raiding central Ukraine. At the end of the 17th century the Tatars stopped their incursions into Ukraine.

Black Rus'. See Chorna Rus'.

Black Sea (Chorne more). An interior sea connected to the Atlantic Ocean by several straits and the Aegean and Mediterranean seas. It lies between the East European massif in the north and Asia Minor in the south, between *Caucasia in the east and the Balkan Peninsula in the west. The coasts of the Black Sea and the Sea of *Azov form the natural boundary of the Ukrainian territories in the south. Today the Black Sea coast is divided among the Ukrainian SSR, the Russian SFSR, the Georgian SSR, Turkey, Bulgaria, and Rumania.

The Black Sea is the only natural boundary of Ukraine. It also links Ukraine with the world. Since ancient times economic, political, and cultural influences from the south have reached Ukraine via the Black Sea. They easily penetrated to the interior of Ukrainian territory along the rivers that flow into the sea: the Danube, Dniester, Boh, and particularly the Dnieper. The Dnieper and the Varangian routes were the main arteries of Kievan Rus' and linked the Black and Baltic seas. Most of the ancient cities of the Kievan state were located along the Dnieper and its tributaries.

For many centuries three expansion routes intersected on the north coast of the Black Sea. The peoples that inhabited Ukraine tried to reach the Black Sea, while the Mediterranean peoples – Greeks, Byzantines, Italians – strove to occupy its most northerly coast. But the steppes along the northern coast were continually invaded by nomadic hordes from Asia, who sought to push back from the Black Sea the inhabitants of the steppes, such as the Cimmerians and Taurians, and wanted to destroy the colonies of the Mediterranean peoples. The struggle for the northern coasts of the Black Sea and the Sea of Azov lasted for centuries. For this reason the Ukrainian people established a permanent boundary on the Black Sea fairly late – only at the close of the 18th century.

The present ethnic boundary of the Ukrainian people on the Black Sea can be divided into four sections: from the mouth of the Danube to the Crimea, the Crimean region up to the Kerch Strait (both these sections belong to the Ukrainian SSR), the Kuban region up to the town of

Dzhubga (this section belongs to the *RSFSR*), and from Dzhusbga to the city of Gagra (a mixed Russian-Ukrainian region, which is now Russified).

The Black Sea was known under various names in the past. The ancient Greeks called it at one time Pontos Axeinos (the Hostile Sea), because of its storminess and lack of islands. After colonizing its coast, the Greeks renamed it Pontos Euxeinos (the Hospitable Sea). Arab travelers and writers called it the Rus' Sea. The Kievan Chronicle referred to it as the Pontic or Ponetian Sea. Eventually, various nations adopted the name Black Sea, usually translated into their own language (for example, Karadeniz in Turkish). The name may have been derived from the color of the water at great depth or from the sea's storminess.

The Black Sea has a more or less oval shape. Its longitudinal axis is about 1,150 km long, and its latitudinal axis is 611 km. The sea surface has an area of 423,000 sq km. The average depth is 1,300 m, and the greatest depth is 2,245 m. The volume of the Black Sea is 547,000 cu km.

Geological history. The Black Sea is considered to be a residual basin of the Central European Tethys Sea, which existed from the end of the Paleozoic era to the Middle Tertiary period. As a result of alpine orogenic movements in the Tertiary period, the Tethys Sea became divided into a series of basins. One of them was Pontus, stretching from Moldavia in the west to the Aral Sea in the east. At the end of the Tertiary period this basin separated from the Caspian Sea and shrank to the dimensions of the present Black Sea.

During the Ice Age of the Pleistocene epoch, the level of the Black Sea rose, and the sea was connected to the Mediterranean and Caspian seas several times. But in the postglacial period the Black Sea contracted, became a freshwater sea, and its water level fell below that of the ocean. The Strait of Bosphorus was formed 6,000–8,000 years ago. The salt water of the Mediterranean Sea entered the Black Sea and filled its basin. It destroyed the freshwater fauna of the Black Sea, which came to be replaced by the saltwater fauna of the Mediterranean Sea. The sea level rose, and the salt water flooded the lower parts of the river valleys, creating estuaries.

Morphology. The submarine relief of the Black Sea consists of three concentric rings: the continental shelf, the continental slope, and the basin's core.

The continental shelf is the outer, coastal ring, less than 200 m in depth. It slopes gently away from the coast and is covered with terrigenous deposits from mountains. It covers about one-quarter of the sea's area and is widest in the northwest and at the Kerch Strait.

The continental slope is the ring separating the continental shelf and the basin's core. The incline of the slope usually varies between 5° and 6°. At a depth of about 2,000 m the incline of the slope suddenly decreases, and the slope merges with the basin bottom. The surface of the slope is usually very uneven and is covered with a layer of sticky mud, black on top and light gray underneath. The color is due to ferrous sulfide, which is deposited in the form of very fine grains or thin needles.

The basin's core, the deepest part of the sea, covers about one-third of the sea's area. It is a flat and featureless plain that descends very gradually to its lowest point of 2,245 m in depth. It is constructed of Precambrian deposits interlaid with layers of basalts and granites and covered with a thin layer of very fine silts.

There are scarcely any islands in the Black Sea. *Dovhyi Island, *Berezan Island, near the liman of the Dnieper River, and *Zmiinyi Island, near the delta of the Danube River, are tiny in size.

The coast. The coastline of the Black Sea is quite even, except for the Crimean Peninsula, which juts out from the northern coast towards the south and divides the sea into a western and an eastern section. The northwestern coast of the Crimea and the southern shore of the continent enclose the only large bay – Karkinit Bay. The other bays are Kalamitska Bay, on the southwestern coast of the Crimea, and Teodosiia Bay, on the southeastern coast of the Crimea.

The northwestern coast of the Black Sea is low and intersected by rivers, the largest of which are the Danube, Dniester, Boh, and Dnieper. The Danube Delta is low and muddy. Steep cliffs of the *Black Sea Lowland, intersected by ravines and limans, stretch north from the Danube to the mouth of the Dnieper. The largest limans are those of the Dniester, Boh, and Dnieper rivers, and they are connected with the sea. Smaller limans lose so much water by evaporation that they form closed saline lakes. East of the Dnieper Liman the cliffs gradually diminish and turn into gently sloping sand beaches. On this part of the coast the largest spit – Tendra – is located. The northwestern coast of the Crimea is low and abounds in lakes and lagoons. The southwestern coast of the Crimea runs perpendicular to the *Crimean Mountains. It is partly submerged and forms a picturesque riss shore. The southeastern coast of the Crimea runs parallel to the mountains, which fall steeply into the sea. A narrow beach stretches between the mountains and the sea and widens out somewhat at the mouths of mountain streams. The eastern coast of the Black Sea is at first low and flat along the *Taman Peninsula and then becomes mountainous towards the south.

Climate. The climate of the Black Sea is predominantly continental. Only the southern coast of the Crimea and the northwestern coast of Caucasia are protected by mountains from the cold north winds and are visited by the mild winds of the Black Sea. Hence, they have a mild Mediterranean climate. The Atlantic Ocean has a great influence on the climate of the Black Sea. In winter northeast winds usually prevail over the sea, lowering the temperature and causing frequent storms. On the northeastern coast, near Novorossiisk, cold and violent mountain winds develop. The temperature of the northern part of the Black Sea averages about –3°C in January, but it occasionally falls as low as –30°C. The coastal waters freeze up for a month or more, while the shallow bays, river mouths, and limans freeze up for two to three months. During this season the southern coast of the Crimea and the sheltered eastern coast enjoy a temperature of 6–8°C, well above the freezing point. The average July temperature in the north is 22–23°C and, in the south, 24°C. The northwestern coast has the lowest annual precipitation (300 mm), and the Caucasian coast has the highest (up to 1,500 mm).

Sea water. The average volume of water in the Black Sea is 547,000 cu km. The volume changes depending on the following factors: precipitation, which is usually 230,000 cu km; the inflow from the continent – 310,000 cu km; the flow from the Sea of Azov – 25,000 cu km; evaporation loss – 357,000 cu km; and outflow through the Strait of Bosphorus – 208,000 cu km.

BLACK SEA

1. Limits of water freezing
2. Direction of surface currents
3. Depth in meters
4. Projected dam between the Black Sea and the Sea of Azov

Because of the Black Sea's relatively young geological age and the huge inflow of fresh water from the rivers and semifresh water from the Sea of Azov, the salinity of the Black Sea is almost 50 percent lower than the salinity of the ocean. It is lowest in the northwest (13 parts per thousand) and increases to 17–18 parts per thousand elsewhere. The salinity varies also: it is lowest at the surface and increases with depth to about 23 parts per thousand at 730 m, beyond which it remains almost constant.

By temperature the waters of the Black Sea are divided into two unequal layers: the upper layer, which extends to a depth of about 500 m, and the lower layer, from 500 m to the bottom. The lower layer maintains an almost constant temperature of 9°C. In winter the temperature of the upper layer increases with depth, and in summer it decreases with depth. The vertical temperature changes are uneven. At the surface the temperature is lowest in February: from –0.5°C in the north, where the coastal waters freeze 10–20 km offshore, to 5–8°C in the south. The waters reach their highest temperature in August – from 20°C in the north to 25°C or more in the south. In the Sea of Azov the waters reach 26–27°C, and even 30°C in the limans.

The water density depends on salinity and temperature. It is lowest at the mouths of rivers and the Kerch Strait – 1.010–1.014 g/cc on the average – and increases towards the open sea and downward – it is 1.017 g/cc on the average at a depth of 150 m and almost constant below that depth.

Oxygen is the most important gas in the seawater for it supports organic life. In the upper layer it reaches 4–7 cc per liter. The quantity of oxygen decreases rapidly with depth: at 200 m only 0.5 cc is found in a liter of water. This is not sufficient to sustain life, and hence only a few bacteria (*Microspira aestuarii*) live at this depth. Another obstacle to life below 200 m is the high concentration of hydrogen sulfide, which increases to 6–7 cc per liter at a depth of 2,000 m.

The transparency of the water in the Black Sea is 16–22 m of depth on the average. It is lowest near the

shore (2–3 m) and highest at the middle of the sea (20–27 m).

Water movements. The surface of the Black Sea is usually quiet, but waves arise in windy weather, particularly in wintertime. During storms the waves can reach a height of 15 m or more and present a threat to small vessels. The tide is almost imperceptible, for it reaches scarcely 10 cm in height.

There are two types of sea currents in the Black Sea: the surface currents, caused by the cyclonic pattern of the winds, and the double currents in the straits of Bosphorus and Kerch, caused by the exchange of waters with adjacent seas. The surface currents form two closed circles. The width of the western circle, opposite the Danube Delta, reaches 100 km and decreases towards the south. The velocity of the current is about 0.5 km per hour. The width of the eastern circle varies between 50 and 100 km, and the velocity is 1 km per hour.

The double current of the Strait of Bosphorus consists of the exchange of waters between the Black Sea and the Sea of Marmara. The less saline and lighter waters of the Black Sea flow as a surface current into the Sea of Marmara at a velocity of 1–2 m per second. In exchange the more saline and denser waters of the Sea of Marmara flow at a depth of 50–120 m into the Black Sea at a rate of 4–6 m per second. In the Kerch Strait the surface current flows from the Sea of Azov to the Black Sea at 1–2 m per second, while the lower current flows in the opposite direction at a depth of about 5 m.

Besides horizontal currents there are also vertical currents, which are limited to the surface waters down to 200 m.

Flora and fauna. The most peculiar feature of the Black Sea is the absence of marine life at depths beyond 150–200 m, except for a few anaerobic bacteria. Living organisms are concentrated in the shallow waters of the continental shelf and river mouths along the northwestern coast.

The plant world consists of phytoplankton (350 unicellular species occur), bottom macrophytes (280 species), several grass species, and sea herbs. The *Phyllophora rubens* herb, which covers over 15,000 sq km of the sea bottom and is harvested in quantities of over five million tonnes, has commercial value. The *Zostera* sea grass, which is consumed by fish, grows on the silt and sand bottoms of quiet bays.

The number of animal species in the Black Sea is small in comparison to the number in the Mediterranean Sea: 350 species of simple creatures, 650 species of crustaceans, over 200 species of molluscs, about 180 species of fish, and 4 species of mammals (the seal and 3 species of dolphin). The mammals and fish are of commercial value. The fishing industry brings in rich catches of sturgeon, mackerel, sardine, herring, anchovy, gray mullet, and other fish.

History. The northern coast of the Black Sea has had ties with the Mediterranean countries since prehistoric times. As early as the 2nd millennium BC the Phoenicians sailed the Black Sea. At the beginning of the 1st millennium ancient Greek pirates and traders visited the Black Sea and eventually set up trading posts on the northern coast. In the 6th–5th century BC these posts became city states, such as *Tyras, *Olbia, Kerkinitis (*Yevpatoriia), *Chersonese Taurica, *Phanagoria, and *Tanais. The region north of the Black Sea was then settled by the

*Scythians, who were eventually forced out by the *Sarmatians. The economy of the *ancient states on the northern Black Sea coast was based on trade in agricultural products, mainly wheat, which were exported to Greece in exchange for wine, oil, and luxury items for the Scythian upper class. The influence of the advanced Greek culture penetrated through these Greek cities to the interior of the East European land mass (for more detail see *Greeks). The Greek cities and settlements on both sides of the Kerch Strait formed the *Bosporan Kingdom with *Panticapaeum as capital in the 6th–5th century BC. In the 3rd–2nd century BC they became part of the *Pontic Kingdom and in the 1st century BC part of the Roman Empire. Under Roman protection the region north of the Black Sea enjoyed its second period of economic and cultural prosperity.

The invasion of the Goths in the 3rd century AD and the massive migrations of the Turkic-Mongolian tribes from Asia into the Black Sea steppes, as well as the decline of the Roman Empire, led to the destruction of almost all of the Greek cities. The Huns, in the mid-4th century, inflicted the heaviest losses on the cities, and they were followed by the Bulgars, Avars, Khazars, and Ugrians. In the 9th century the *Byzantine Empire gained control over the rebuilt former Greek cities in the Crimea.

In the early period of Ukrainian history the western part of the Black Sea region was settled by the ancestors of the eastern Slavs, the *Antes, followed by the *Ulychians and *Tivertsians, who are mentioned in the chronicles. The first Kievan rulers – Askold, Oleh, Ihor, Olha, Sviatoslav, and Volodymyr the Great – gained and expanded access to the Black Sea and even tried to expand their power by sea by attacking Constantinople in AD 860, 912, and 945. These campaigns led to trade treaties favorable to Rus'. To keep their access to the sea secure, the princes built a number of fortified towns: Oleshnia, at the mouth of the Dnieper; *Peresichen (probably on the lower stretch of the Dniester and Prut); a port at the mouth of the Don; and Tmutorokan, at the mouth of the Kuban (at the end of the 9th century), which became the capital of the *Tmutorokan principality. Sviatoslav's attempt to set up another foothold at the mouth of the Danube during his struggle with Bulgaria and Byzantium did not succeed. Volodymyr tried to capture the southern Crimea from Byzantium. He succeeded in taking Chersonese but did not retain control of it. Yet the Kievan state did gain a natural sea boundary for itself (the first natural boundary of the Ukrainian people), secured trade between Rus' and Byzantium, and opened the door to Byzantine cultural influence in Rus'.

The link between the Kievan state and the Black Sea was weakened by the nomadic hordes that entered the steppes from the east – at the beginning of the 10th century the Pechenegs, then a little later the Torks, and in the mid–11th century the Cumans (Polovtsians). It was difficult for Kiev to maintain communications with the Black Sea via the Dnieper. By the mid-12th century Tmutorokan was annexed by Byzantium. Halych principality and then the principality of Galicia-Volhynia had better communications with the sea through the ports of Bilhorod and Malyy Halych (Galați).

The invasion of the Tatars and Mongols in 1240–1 cut off Ukraine from the Black Sea, although traces of Ukrainian settlement remained on the coast. Genoese and Venetian colonies appeared on the northern coast of the

Black Sea: Kaffa (*Teodosiia) and *Sudak in the Crimea; *Tana at the mouth of the Don; *Bilhorod-Dnistrovskiy (Moncastro, Mauro Castro) at the mouth of the Dniester. Not only West European goods, but also cultural influences, entered Ukrainian territories through these outposts. The Italian cities recognized the authority of the Golden Horde, the new ruler of the Crimea and the steppes along the coast.

At the end of the 14th century the Lithuanian prince Vytautas took advantage of the declining power of the Mongols and extended his realm to the Black Sea by annexing a part of southern Ukraine. Ukrainian colonization efforts were renewed. The new strongholds and customs towns – St John's Fort on the lower Dnieper, forts on the Dniester and Boh, the port of Khadzhybei, etc – attracted most of the settlers. These gains were soon lost, however, when the Golden Horde disintegrated and more aggressive hordes such as the Great Horde and especially the *Crimean Khanate came to power in the mid-15th century. The khanate established its control over the Crimea and most of the territory along the northern coast. In 1478 it recognized the suzerainty of the new power – the Ottoman Empire (Turkey). In 1453 the Turks took Constantinople and by the end of the century established their control over the Black Sea, which for almost 300 years remained an internal Turkish sea. Turkey ruled the Italian colonies and had suzerainty over Moldavia. The new sea power established the fortresses of Akkerman (now Bilhorod) and Ochakiv on the Black Sea coast. The Tatars built fortifications on the lower Dnieper. The Black Sea was no longer a window to the world for Ukraine. Because of Tatar incursions a part of the Ukrainian forest-steppe lay desolate, and the line of Ukrainian settlement moved farther from the Black Sea than ever before. To defend themselves the Ukrainian people relied on the Cossacks and particularly the Zaporozhian Sich (est ca 1552). The Cossacks managed not only to defend their territory from Tatar incursions, but also to take the offensive (particularly from 1589 to 1621) and to attack in their light boats (*chaiky*) the coastal Tatar and Turkish cities: Yevpatoriia, Sinop, Trabzon (Trebizond), and the fortresses at the mouth of the Danube – Akkerman, Kiliia, and Izmail. The Cossacks even sacked the outskirts of Constantinople.

At the end of the 17th century radical political changes took place in the Black Sea basin. Taking advantage of Turkey's decline, Russia waged a series of wars against Turkey and finally gained access to the Black and Azov seas and annexed the Turkish territories along the northern coast of the Black Sea. At first, in 1695, Russia captured the Turkish-Tatar fortresses on the lower Don, then the fortress of Azov, which was briefly returned to Turkey in 1711. After three wars – 1735–9, 1768–74, and 1787–91 – and particularly the Treaty of *Küçük Kaynarca in 1774, Russia got control of the territory north of the Black Sea and the Crimean Khanate. In 1812 Russia also annexed the lands between the Dniester and the Danube (Bessarabia). The fall of the khanate paved the way for the swift colonization of the Crimea by Ukrainians, Russians, Bulgarians, Germans, and Greeks. At the same time Ukrainian ethnic territories expanded greatly with the annexation of southern Ukraine and the Kuban. After many centuries the Ukrainians won a permanent foothold on a natural sea boundary and a sea link with the rest of the world.

In the 19th century the most important historical event in the Black Sea region was the *Crimean War. In 1918 the new Ukrainian state included the Black Sea coast from the mouth of the Dniester to Mariupol on the Sea of Azov. The Army of the UNR occupied the Crimea in April 1918 but abandoned it in response to German demand. This led to Ukraine's loss of the *Black Sea Fleet in Sevastopol, which had already raised the Ukrainian flag. During the existence of the Hetman state the Crimea recognized Ukrainian suzerainty, but further events made it impossible to put this suzerainty into effect.

From the end of 1918 to the end of 1920 the northern coast of the Black Sea was the battlefield between the Army of the Ukrainian National Republic (only in 1918), the Bolsheviks, the French expeditionary force, A. Denikin's army, P. Wrangel's army, and Ukrainian insurgents. By the end of 1920 the whole coast was in Bolshevik hands. The coast was incorporated into the Ukrainian SSR, while the Crimea and the Caucasian coast became part of the Russian SFSR. Rumania occupied the coastal region between the Danube and the Dniester (Bessarabia) and held it until 1940, when it was annexed by the USSR.

During the German-Soviet War of 1941–4, the lands north of the Black Sea were held by German and partly Rumanian forces from 1941–2 to the first half of 1944. In 1954 the Crimea was incorporated into the Ukrainian SSR.

For a long time the international legal status of the Black Sea straits – the Bosphorus and the Dardanelles – and the Sea of Marmara, which connect the Black and the Aegean seas, was undecided. In accordance with the Treaty of Küçük Kaynarca in 1774, Turkey permitted the Russian commercial fleet to use the straits freely. In 1821 all other states got this right. Only Russian and Turkish naval vessels could use the straits. After the Crimean War the Treaty of Paris of 1856 deprived Russia and Turkey of the right to maintain a navy on the Black Sea. With time the naval vessels of the Black Sea countries and, with some restrictions, vessels of other countries appeared on the sea. The status of the straits was determined, with slight changes since then, by the Montreux Convention of 1936. It provided free access to the Black Sea for commercial fleets and, within some limits, for the navies, of countries that do not border on the sea.

Transport. Transport on the northern part of the Black Sea developed at the end of the 18th century, after Russia annexed the northern coast and began to colonize this region. A number of ports were built: *Kherson in 1778, *Sevastopol in 1784, *Mykolaiv in 1788, *Izmail in 1790, and *Odessa in 1794. In 1828 the first steamships appeared on the Black Sea and ran between Odessa and Yevpatoriia. In 1838 the Black Sea Steamship Association was formed, and in 1856 the Russian Sea Transport Company was founded. The coming of the railway had a great impact on the development of sea transport in the 1860s. Railroads connected Eastern Europe with the sea, and with the opening of the Suez Canal in 1867 the Indian Ocean became accessible to Russian ships. The Russian Black Sea (and Azov) fleet consisted in 1913 of 416 ships, 807 sailing vessels, and 82 motor vessels, with a total gross weight of 473,000 tonnes (42 percent of the total Russian tonnage). Ukrainian ports served mostly foreign ships, particularly Greek ships. Eighty-seven percent of the cargo consisted of exports and scarcely 13 percent of imports, which were brought mainly to Odessa. The main

export was grain (45 percent of the total shipped), followed by coal (20 percent), ores (8 percent), sugar (2 percent), metals (2.6 percent), and construction materials.

The revolution and civil war of 1917–21 led to the almost total destruction of the Black Sea fleet: in 1922 it had only 66 ships (5 percent of its prewar number), and in 1925 a total of 2.1 million tonnes of freight was carried (19 percent of the prewar amount transported). Shipping on the Black and Azov seas in 1922 was put under the jurisdiction of the Central Administration for Sea Transport in Moscow. Later the agency was renamed the State Black Sea – Azov Commercial Fleet, and in 1930 it became known as the Black Sea Shipping Administration. After the war, in 1954, it was completely reorganized and was placed under the Ministry of Sea Transport of the USSR. During the five-year plans the Black Sea fleet was partly restored and modernized. In 1938 it consisted of 167 vessels with a total tonnage of 469,000 tonnes and 200 vessels for local transportation. The freight carried increased from 5.8 million tonnes in 1938 to 10.3 million tonnes in 1940. Up to two million passengers were carried. The proportion of exports to imports increased after the revolution, while foreign trade accounted for one-third of the total (in 1914 it was one-half). The nature of the freight changed: anthracite coal was in first place, oil was second, and grain third, followed by ores, metals, lumber, salt, building materials, etc.

During the Second World War half of the Black Sea fleet was destroyed, particularly in Odessa and Sevastopol. The fleet recovered its prewar strength only in 1950. Since then the capacity of the freight and passenger fleet has been constantly increasing: 19 million tonnes in 1960, 29 million in 1965, 38.2 million in 1970, and 50.3 million in 1978 (ie, 33 percent of the USSR's total shipping and 2 percent of the world total). The fleet is fully modernized. Modern vessels are built at the shipyards of Odessa, Mykolaiv, Kherson, and Kerch (see *Shipbuilding) and also in foreign ports. The ports have been modernized, and a large port – Illichevske – has been built near Odessa. Foreign shipping has increased and is carried on by the Black Sea fleet, with Odessa as the main port. The growth of shipping is evident from the following figures: 16.6 billion tonne-miles were reached in 1960, 95.0 billion in 1972, and 100.5 billion in 1978. As before the war, Greek, British, French, Italian, and other ships participate in the shipping on the Black Sea. The Dnieper–Black Sea–Danube water route is very important. In the small cabotage the carrying to Odessa of coal from Zhdanov, as well as oil and manganese from the Caucasian ports of Poti, Tuapse, and Batumi is particularly significant. Odessa is the leading port for passenger transportation. It is connected by ship via the Black Sea to all the great ports, such as Marseilles, Venice, and Beirut and, via the Danube, with Budapest, Belgrade, and Vienna.

Odessa has been the largest port since the beginning of the 19th century. In 1973 it handled almost 20 million tonnes of cargo, half of which consisted of imports or exports. The largest cargo consists of oil and oil products, followed by ores, coal, metals, and chemicals. Twenty-five kilometers from Odessa lies the second largest port – Illichevske – which was built in 1950 as a branch of Odessa but since 1963 has been independent. These two ports handle one-sixth of the freight in the Soviet Black Sea ports. The third largest port is Kherson, at the mouth

BLACK SEA, SOUTHERN PORT

Within circle, Southern Port and ammonia production center with chemicals warehouse: 1, ammonia pipeline; 2, chemical plant and warehouse

of the Dnieper. It is a transfer point for Dnieper sea and railway freight as well as an important passenger terminal. From Mykolaiv manganese ore, iron ore, and coal are shipped. Mykolaiv and Sevastopol serve as naval bases. Also important are the Crimean ports of Kerch, Teodosiia, and Yevpatoriia. The ports of Izmail and Reni are located at the mouth of the Danube. On the north Caucasian coast, outside the Ukrainian SSR, the main port is Novorossiisk, which handles mostly oil and cement. The construction of a long water reservoir and hydroelectric station on the Dniester near Sokyriany, Chernivtsi oblast, will open the Subcarpathian region to Black Sea shipping.

The shipping of oil and its products and the dumping of industrial and residential wastes have created a pollution problem in the Black Sea. To solve this problem and to ease the work of the existing ports, two new ports are under construction: one on the Hryhoriivskiy Liman, 30 km west of Odessa, to handle chemicals and gases, and one in Lazurne (formerly Novooleksiivka) on the sea coast in Kherson oblast.

Natural resources of the Black Sea and its coastal region. The Black Sea basin is rich in biological resources. Fish is the most important one, with the annual catch reaching one million tonnes (see *Fishing industry). The main fish species are anchovy, sturgeon, beluga, mackerel, mullet, salmon, herring, sardines, flounder, and bullhead. Some iodine-yielding water plants have an industrial use. Some mollusc species are used as feed for domestic fowl. Food-processing and light industries have developed on the basis of these resources. The fish-canning industry has plants in Odessa, Mykolaiv, Kherson, Izmail, and Kerch.

The waters of the limans and shallow bays contain a high concentration of sodium, calcium, and magnesium salts, which are utilized by the Saky Chemical Plant in the Crimea. The saline limans such as Kuialnyk Liman and Khadzhybei Liman contain deposits of curative muds.

Because of its climate, sandy beaches, picturesque

scenery, and curative muds the Black Sea coast is the principal health resort and tourist area of Ukraine and the whole USSR. Ten to twelve million people visit this area each year. The most important resort belts are the *Crimean southern shore with Yalta as its center, the Odessa resort region, the Yevpatoriia region in the Crimea, and the Caucasian coast.

The proximity of coal in the Donbas, iron ore in the regions of Kryvyi Rih and Kerch, and manganese ore near Nykopol, as well as the low transportation costs of other raw materials, account for the rapid industrial development and the high concentration of population on the sea coast. The largest industrial center is Odessa with a population (in 1983) of 1,097,000, followed by Mykolaiv (474,000), Kherson (337,000), Sevastopol (328,000), Kerch (163,000), and, outside the Ukrainian SSR, Novorossiisk (162,000 in 1980).

The Black Sea in Ukrainian political thought, research, and culture. Interest in the problem of the Black Sea developed in Ukraine in the 19th–20th century. At the time of the 1905 revolution the idea of an autonomous Black Sea republic with Odessa as capital was popular in south Ukrainian bourgeois circles. During the First World War Ukrainians raised the question of the straits linking the Black and Mediterranean seas. M. Sumtsov, for example, took the position that Ukraine 'can be compensated only with the Strait of Bosphorus and the Dardanelles, even without Constantinople' (1917). In leading Ukrainian political circles plans to set up a federation of the states that are connected by the Black Sea were discussed (M. Hrushevsky's 'Oriientatsiia chornomors'ka' [The Black Sea Orientation] in his *Na porozhi novoi Ukrainy* [On the Threshold of a New Ukraine, Kiev 1918]).

The geopolitical importance of the Black Sea for Ukraine was discussed by S. Rudnytsky in *Ukrains'ka sprava zi stanovyschcha politychnoi heohrafiï* (The Ukrainian Question from the Position of Political Geography, 1923). Yu. Lypa wrote *Chornomors'ka doktryna* (The Black Sea Doctrine, 1940) and with L. Bykovsky and others set up the Ukrainian Black Sea Institute, which in the 1940s published a number of works, including *Chornomors'kyi zbirnyk* (The Black Sea Collection).

The history of the Black Sea was studied by Ukrainian historians, archeologists, and economists, such as A. Skalkovsky, M. Slabchenko, S. Dlozhevsky, M. Miller, A. Kotsevalov, and M. Tyshchenko. The *Odessa Society of History and Antiquities and the *Tavrian Scholarly Archival Commission made important contributions to this field. In the 1920s the Odessa Society of Regional Studies and the Odessa Scientific Society of the All-Ukrainian Academy of Sciences continued to develop this field.

Today various scientific institutions conduct research on the Black Sea and its resources, including the Institute of the Biology of Southern Seas of the Academy of Sciences of the Ukrainian SSR, the Marine Hydrophysical Institute of the same academy (both institutes located in Sevastopol), the Azov–Black Sea Scientific Research Institute for Fish Husbandry and Oceanography in Kerch, the Sevastopol branch of the State Oceanographic Institute, and the Black Sea branch of the All-Union Scientific Research Planning Institute of Marine Flora.

The Black Sea has been a subject in the works of such poets and writers as T. Shevchenko, O. Oles, M. Kotsiubynsky, Yu. Yanovsky, and Z. Tulub and such painters

as I. Aivazovsky, A. Kuindzhi, S. Vasytkivsky, and O. Hryshchenko.

Black Sea Cossacks. A military formation organized by the Russian government out of the former Zaporozhian Cossacks (see *Zaporizhia and *Cossacks). After the destruction of the *Zaporozhian Sich in 1775, some of the Cossacks migrated to Turkish territory and founded the *Danubian Sich, but most of the Cossacks remained at Zaporizhia and were registered as treasury peasants. In the 1780s the Russian Gen G. Potemkin tried to re-establish Cossack units on a voluntary basis and to use them for the defense of southern Ukraine against the Turkish threat. With the outbreak of war with Turkey (1787–91) the Russian government began to organize the Zaporozhian Cossacks and established, by the ukase of 2 February 1788, the Army of Loyal Cossacks under the leadership of the Zaporozhian officers S. Bily and Z. Chepiha. The army's headquarters was located in Oleshky, where almost 12,000 Cossacks were organized. These units fought against the Turks under the leadership of Gen A. Suvorov. In 1788 they were renamed the Black Sea Cossack Host. This host had the same organizational structure as the Zaporozhian Host, the same dress, etc. In 1790 the Russian government began to resettle the Cossacks on the land between the Boh and Dniester, thus giving rise to the *Boh Cossack Army with headquarters in Slobodzeia on the Dniester.

At the end of the war the Russian government did not want the Cossack host to be settled close to the center of Ukraine and to the Danubian Sich, so in 1792 it resettled the Black Sea Cossacks in the Kuban region, along what was known as the Black Sea frontier, which extended along the right bank of the Kuban from the mouth of the Laba River to the Sea of Azov. By 1795 about 25,000 Cossacks as well as some Russians had settled there. They were granted an area of about 30,000 sq km between the Kuban and the Yeia rivers and were given self-government. But as early as 1800 the right of the Black Sea Cossacks to elect officers was revoked. Acting otamans were appointed by the Russian government. In the first half of the 19th century (1809–11, 1821–5, 1848–50) new settlers, consisting of former Cossacks from the Cher-

nihiv, Poltava, and Kharkiv regions and of Ukrainian peasants escaping from social oppression in Left-Bank Ukraine, enlarged the host. The administrative organization of the Black Sea Host was based on the Zaporozhian system. There were 40 *kurins, 38 of which were named after kurins that formerly existed within the Zaporozhian Sich. In the 1840s the kurins of the Black Sea Host were renamed *stanytsias, and these were organized into four military districts: Taman, Katerynodar, Beisuh, and Yeia. The headquarters of the host was located in Katerynodar, which was built in 1794 and is now known as *Krasnodar. The host was assigned the task of defending the Black Sea frontier along the Kuban River and of participating in the Caucasian campaigns. Besides doing military service, the Cossacks engaged in farming, animal husbandry, and fishing. In 1860 the Black Sea Host was amalgamated with the western part of the *Frontier Army (six brigades) and was renamed the *Kuban Cossack Host. The Black Sea Host perpetuated for almost a century, although in a slightly altered form, the traditions of the Zaporozhian Cossacks.

Black Sea Depression. A large geological formation in southern Ukraine. It is a foredeep located on the southern side of the *Ukrainian Crystalline Shield. Its boundaries encompass the *Kuban, *Crimean, *Black Sea, and Lower Don lowlands, the Sea of Azov, and the shallow north-western part of the *Black Sea. In the south the Black Sea Depression is bounded by the Dobrudja Hercynian and the Crimean and Caucasian folded structures; in the east, by the Stavropol submerged plate; in the north by the Precambrian Ukrainian Crystalline Shield and the Hercynian structure of the *Donets Ridge; in the west, by the alpine mountain structure of the *Carpathians. In the northwest the Subcarpathian Depression is a continuation of the Black Sea Depression. Morphologically the Black Sea Depression is divided into the Black Sea Depression proper and the Azov-Kuban Depression.

The Black Sea Depression is an alpine syncline, with a gently sloping (platform) northern limb and a steep (geosynclinal) southern limb of over 4,000 m. The depression has no common axis. The crystalline bed of the depression is broken into separate plates. Its sedimentary complex contains the deposits of various systems from the Carboniferous to the Anthropogene periods. Along its axis the sedimentary complex is over 2,000 m in depth and is composed mainly of sand, clay, and chalk. The tectonics of the Black Sea Depression is mainly of a fractural-folded character. The present depression of the Black Sea area developed in the Cretaceous period. Among the useful resources of the depression, iron and manganese ore, oil, gas, gypsum, and salt are the most important.

Black Sea Fleet. Name of the Ukrainian section of the navy under the Russian tsarist and Soviet regimes.

Traditionally Ukrainians were recruited to the navy (in 1917 80 percent of it was Ukrainian), but since 1965 Ukrainians have been a minority in it. The Black Sea Fleet began to be organized in the 1780s by Prince G. Potemkin, and it played an important role in the Turkish-Russian war of 1787–91. The Azov, Dnieper (later Liman), and Danube flotillas came under the Black Sea Fleet. The Azov flotilla consisted mostly of Don Cossacks, while the Dnieper and Danube flotillas consisted mostly of Zaporozhian Cossacks. As a result of the Crimean War and the Treaty of Paris of 1856, Russia was deprived of the right to maintain a navy on the Black Sea. However, the Black Sea Fleet was reestablished in 1871, after the restrictive clauses of the Treaty of Paris were denounced by Russia.

On the eve of the First World War the Black Sea Fleet had eight battleships (in three brigades), one brigade of cruisers, one brigade of hydrocruisers, one division of destroyers, one division of submarines, and a number of ships for special functions. The fleet was manned by 36,667 officers and sailors (68,286 in 1914 after mobilization). Sevastopol was the fleet's main base. After the February Revolution of 1917 the Ukrainian independence movement spread to the Black Sea Fleet. Ukrainian military councils were organized on various ships and supported the Central Rada. After the proclamation of the Third Universal, a department of naval affairs was established in the General Secretariat of the UNR; it was headed by D. Antonovych, who was assisted by M. Bilynsky and O. Kovalenko. In January 1918 the department became a ministry. In December 1917 the Ukrainian Military-Naval Council and the Ukrainian Naval General Staff, headed by Captain Yu. Pokrovsky, were formed in Kiev. Since the Crimea did not belong to the UNR the main base of the Black Sea Fleet lay outside the jurisdiction of the Central Rada. The Central Rada did not claim all of the Black Sea Fleet, but only the section that declared itself to be Ukrainian – the cruiser *Pamiat Merkurii* and the destroyer *Zavidnyi*. At the time there was complete chaos on the ships of the fleet: Ukrainian, tsarist, red, and even black anarchist flags were raised on different ships depending on the prevailing sentiment of the crews. Antonovych ordered the crews of *Pamiat Merkurii* and *Zavidnyi* to sail for Odessa and Mykolaiv, that is, into Ukrainian waters. *Pamiat Merkurii* participated in the battles for Odessa between Ukrainian and Bolshevik forces in January 1918.

After the Ukrainian forces marched into the Crimea, M. Bilynsky organized the raising of the Ukrainian flag on all the ships of the Black Sea Fleet on 29 April 1918. But on the next day the Germans took control of Sevastopol and declared the whole fleet to be their war booty. A part of the fleet left for Novorossiisk and raised the Russian tsarist flag, but a part returned to Sevastopol, as the Germans demanded, where its crews were interned. Other ships, led by a second dreadnought, were sunk by Bolshevik crews on V. Lenin's orders. Only on 11 November 1918 did the Germans cede the Black Sea Fleet to the Hetman government.

In mid-December 1918 the Entente intervened militarily in southern Ukraine, and France interned the Black Sea Fleet at its naval base in Bizerte (Tunisia). Eventually some of the fleet's ships were included in the French navy, and others were sold for scrap.

The Soviet government completed its restoration of the Black Sea Fleet by 1928. In 1935 the naval forces of the Black and Azov seas were renamed the Black Sea Fleet of

the USSR. In spite of the great losses that this fleet suffered in the first days of the German-Soviet war at the hands of the German air force, the Black Sea Fleet played an important role in the war. It defended coastal cities, supported evacuation and marine landings, etc.

Since the war the Black Sea Fleet has increased in size according to plan. The fleet's main task is to display the USSR's naval power in the Mediterranean Sea, where the US 6th Fleet is stationed. At present the Black Sea Fleet consists of 29 submarines, 79 warships (cruisers and destroyers), 35 large and 50 small mine carriers, 5 amphibious ships for landing marines, over 200 non-combat ships for various functions, 30 reconnaissance ships, 110 warplanes and 110 transport planes, and one brigade of marines. The helicopter carrier *Leningrad* belongs to the Black Sea Fleet, as does the Caspian flotilla. The Black Sea Fleet has been commanded since 1974 by Vice Admiral N. Khovrin.

L. Shankovsky

Black Sea Lowland. A great low plain in southern Ukraine, extending from the chain of uplands in the north (*Bessarabia, *Podilia, *Dnieper Upland, and *Zaporozhian Ridge) and the northeast (*Azov Upland and *Donets Ridge) to the Black Sea and the Sea of Azov in the south; from the Danube in the west to the lower Don Lowland in the east. The northern boundary of the Black Sea Lowland is not definite: it is defined by the line of the extreme outcroppings of the layers of the *Ukrainian Crystalline Shield. The *Crimean Lowland is a part of the Black Sea Lowland. The width of the Black Sea Lowland varies from 50 km in the west and the east to 180 km in the middle. The eastern part of the lowland – the *Azov Lowland – narrows down to 10–20 km. The Black Sea Lowland lies wholly within the boundaries of the historical-geographical region known as *southern Ukraine and comprises almost a half of its territory.

By its tectonic structure the Black Sea Lowland is a part of the *Black Sea Depression, which consists of thick, almost horizontal layers of sediment, mostly Paleocene and Neocene sea deposits (various clays, sands, limestones, sandy clays, and sandy limestones) overlaid with continental deposits of the Anthropogene period (reddish-brown clays, loess usually over 20 m deep, and loessial loams). Tertiary deposits are exposed only in river valleys and in some places on the sea coast. The Black Sea Lowland was covered by the Pontic Sea as recently as the Lower Pliocene. Eventually it became dry land, dissected by a few small rivers. This process was cut short by the uplifting of the sea, which flooded the river mouths and caused estuaries to form.

Now the Black Sea Lowland is an accumulative, weakly divided plain, which gradually slopes towards the Black Sea and the Sea of Azov (from 160 m in the north to 10–15 m in the south) and usually meets the seas by a steep drop. The lowland is dissected by a fairly thin network of river valleys of the Dniester, Boh, Inhul, Inhulets, Dnieper,

Molochna, and lesser rivers. The depth of the valleys varies from 80 m in the north to 20–25 m in the south. The river valleys are broad and distinct, with three to five accumulative terraces. Landslips have developed on the steep right slopes of the valleys. The mouths of the rivers that enter the sea widen out and form limans. Broad swampy terraces or floodplains are characteristic of the valleys of the larger rivers, such as the Dnieper, Danube, and Dniester.

The valley slopes are cut by many gullies and ravines. The gullies have a southerly direction and cut into the intervalley plains. The most dissected surface is the western part of the lowland, between the Danube and the Boh; somewhat less dissected is the middle part between the Boh and the Dnieper; and the least dissected is the part between the Dnieper and Molochna rivers. The extensive intervalley plains are infrequently and weakly complicated by shallow, closed depressions called **pody*, which fill with meltwaters in the spring, and by smaller, saucerlike steppe hollows. These two formations are prevalent in the eastern part of the lowland and are also found in the central part. Numerous burial mounds rise up to 10 m above the flat steppe.

A unique landscape is presented by the alluvial plain on the left bank of the lower Dnieper called **Oleshky Sands* (a waterless, sandy plain that was once the Dnieper delta), and by the area on both sides of **Syvash Lake*, which was formed as the sea advanced on the dryland. The most variegated landscape is found on the sea coast, and it results from the interaction of various forces on the sea-land borderline.

Black Sea Nature Reserve (Chornomorskyi zapovidnyk). A state preserve located on the sandy banks of the lower Dnieper and the coast and the islands of Tendrivska and Yahorlytska bays of the Black Sea. The preserve was established in 1927. It covers 9,421 ha of dry land and 24,700 ha of water (in 1976, 64,806 ha). It was created to protect nesting, wintering, and migrating birds and to preserve the natural environment. The steppe section of the preserve – the Yahorlytskyi Kut Peninsula and Potiiivka – consists of the remains of the Black Sea steppes and is inhabited by such rare birds as the great bustard (*Otis tarda*), the little bustard (*Tetrax tetrax*), and the white-tailed eagle (*Haliaeetus albicilla*) and smaller animals such as the acclimatized bobac (*Marmota bobak*).

In the first-steppe sections are found the remains of island forests and small groves (*kolky*) of oak, birch, and willow trees. The pheasant and the Japanese deer (*Cervus nippon*), which was brought in 1957 from the Askaniia-Nova Nature Reserve, are acclimatized here. Numerous gulls (genus *Larus*), swallows, snipe, ducks, and grouse nest here. Whooper and mute swans (*Cygnus cygnus*, *Cygnus alor*) and ducks in large flocks winter in the inlets. Among the migratory birds that pass through the reservation are numerous geese of various species, such as the white-fronted goose and the lesser white-fronted goose (*Anser albifrons*, *Anser erythropus*).

Black Sea Shipyard (Chornomorskyi sudnobudivnyi zavod). A large plant in Mykolaiv that originated in 1907 from the merger of a Belgian and a Russian shipyard constructed in 1895–7. The first minesweeper in the world (the *Krab*) and the first turbine torpedo boat in Russia were built here. During the interwar Soviet period 43 merchant and war ships and the first Soviet icebreakers (beginning in 1935) were built here. Rebuilt after the Second World War, the shipyard has built, since 1951, large dry-cargo carriers, large refrigerated fishing trawlers, scientific exploration ships, and excursion boats. In 1957–61 it built two of the largest whaling factory ships in the world – the *Radianska Ukraina* and the *Sovetskaia Rossiia*. In 1970 the large scientific exploration ship *Akademik Serhii Korolov* was built here. The shipyard is extensively mechanized and automated and employs over 10,000 workers.

Black Sea turbot (*Rhombus maeoticus*; Ukrainian: *kalkan chornomorskyi*). A valuable commercial fish of the Scophthalmidae family and the Pleuronectiformes order. It attains 1 m in length and 15 kg in weight. It is common in the Black Sea. A smaller turbot (*R. torosus*) is found in the Sea of Azov.

Black Tysa River (Chorna Tysa). See Tysa River.

Blacksmithing. The first articles in Ukraine produced by blacksmiths appeared in the Eneolithic period (2500–1800 BC). Evidence of their local production consists of blacksmith's tools (hammers, anvils) uncovered by archaeologists and the availability of copper ore in Transcarpathia and the Donets Basin. Since the Iron Age (800–500 BC, the Hallstatt period) blacksmithing has been associated only with ironworking. The extensive production of iron farm implements (scythes, sickles, shares, axes) began with the arrival of the Celts in Transcarpathia. In the Roman period (1st–4th century AD) the first iron forges appeared in Ukraine. In the Princely era blacksmithing was an important branch of manufacturing, and iron implements, most of which were similar to today's implements, were the preferred types of farm tools. The blacksmith was called *kovach*, *kuznyk*, or *kuznets* in those days. The bellows and steel weapons were already known. In later centuries blacksmiths learned to produce artistic products such as church door ornaments, crosses for churches, and church padlocks.

Blackthorn (Ukrainian: *teren*). A small tree or shrub of the rose family. It grows up to 5 m in height, is densely branched and thorny, and thrives in forest clearings, brushland, and the steppes. It is resistant to drought, and honey is made from its flowers. Three species of blackthorn are common in Ukraine: the common blackthorn (*Prunus spinosa*), which grows in Transcarpathia, western Polisia, and the forest-steppe belt; the steppe blackthorn (*P. stepposa*), which thrives in the steppe and the Crimea, and the Moldavian blackthorn (*P. moldavica*), which is found in the Dniester region, the western steppe region, and the Crimea. The deep blue fruits are used in making confectioneries and flavoring liquor and are preserved by drying or canning. The flowers and fruits are used in folk remedies.

Blahovisnyk (Good News Herald). A religious monthly in Transcarpathia, published by the Basilian Fathers in Uzhhorod (1921–38 and 1940–4), Khust (1938–9) and Prešov (1946–9).

Blahovydova, Olha (Blagovidova, Olga), b 29 May 1905 in St Petersburg, d 23 October 1975 in Odessa. Singer, mezzo-soprano. In 1921–5 she studied at the Odessa Institute of Music and Drama. Then she sang as a soloist at the Bolshoi Theater in Moscow (1928–31), Tbilisi (1931–2), and the Odessa Opera and Ballet Theater (1932–48). Among her many roles were the Countess in P. Tchaikovsky's *Pikovaia dama* (Queen of Spades), Carmen in G. Bizet's opera by that name, Terpelykha in M. Lysenko's *Natalka Poltavka* (Natalka from Poltava), Aksyniia in I. Dzerzhynsky's *Tikhii Don* (The Quiet Don), and Liubasha in N. Rimsky-Korsakov's *Tsareva nevesta* (The Tsar's Bride). In 1933 she became lecturer and in 1951 professor at the Odessa Conservatory.

Blakytyn, Vasyl [Blakytynij, Vasyl'] (pseud of Vasyl Ellansky), b 12 January 1894 in Kozly, Chernihiv gubernia, d 4 December 1925 in Kharkiv. Ukrainian revolutionary and political figure, writer, poet, and journalist. Blakytyn became involved with the revolutionary underground as a student at the Chernihiv seminary and later the Kiev Commercial Institute and joined the Ukrainian Party of Socialist Revolutionaries in 1917. In 1918 he was one of the founders of the *Borotbists and edited the newspaper *Borot'ba*. He advocated the merger of the Borotbists with the CP(B)U in 1920. In 1920 he became a member of the Central Committee of the CP(B)U, and in 1921 the director of the State Publishing House of Ukraine and the editor in chief of **Visti VUTsVK*. He was also one of the founders of the literary organizations *Borotba and *Hart. Blakytyn published most of his poetry, stories, satire, parodies, and journalistic articles in Ukrainian journals. He also published under the names Valer Pronoza, Markiz Popeliasty, Vasyl Ellan, A. Ortal Hart, and Pronoza Mriinyk. In the 1930s his works were declared nationalist and proscribed, and his monument in Kharkiv was destroyed. Blakytyn was rehabilitated after Stalin's death, and his selected works and poetry were republished in 1958 and 1964.

Blank, Ber, b 20 June 1897 in Liepaja, Latvia, d 19 July 1957 in Kharkiv. Graphic artist, graduate of the Kharkiv Art Institute (1929), and member of the Association of Revolutionary Art of Ukraine. Blank produced primarily woodcuts and line drawings for books such as F. Panfiorov's *Bruski* (1934), J. Swift's *Mandry Gulivera* (Gulliver's Travels, 1935), C. de Coster's *Legenda pro Tilia Ullenspiegel* (Legend of Till Ulenspiegel, 1935), M. Moikher-Sforim's *Fimka Kryvyi* (Fimka the Lame, 1936), and W. Shakespeare's *Vindzors'ki vytyvnytsi* (The Merry Wives of Windsor, 1949). In the 1930s he was criticized for 'Boichukism' (see M. *Boichuk) and 'formalism.'

Blavatsky, Volodymyr [Blavac'kyj] (stage name of V. Trach), b 15 November 1900 in Kolomyia, d 8 January 1953 in Philadelphia. Prominent actor, director, and theatrical figure in Galicia and, after emigration, in Germany and the United States. He began his acting career in 1919 in the Ukrainska Besida theater. In 1921–4 he worked in O. *Zaharov's troupe in Lviv and then in the

Vasyl Blakytyn

Volodymyr Blavatsky

traveling troupes of Y. Stadnyk and V. Demchyshyn. He was art director for the Liudovyi Teatr theater in Lviv. In 1927–8 he acted with the *Berezil troupe in Kharkiv and then returned to the traveling theaters in Galicia. In 1933–8 Blavatsky headed the Zahrava experimental theater and then the I. Kotliarevsky Theater, which in October 1939 became the Lesia Ukrainka Theater. He was a co-founder and then the art director (1941–4) of the Opera Theater in Lviv. As an émigré he directed the Ensemble of Ukrainian Actors in Germany in 1945–9. In 1949 he settled in Philadelphia. His main roles were Hamlet in W. Shakespeare's *Hamlet* (first Ukrainian performance in 1943), Christ in H. Luzhnytsky's *Holhota* (Golgotha), Judas in Lesia Ukrainka's *Na poli krovy* (On the Field of Blood), and Stakanchyk in M. Kulish's *Narodnyi Malakhii* (The People's Malakhii). His most successful plays as a director were *Zemlia* (The Soil), based on the story by V. Stefanyk; *Baturyn*, based on the novel by B. Lepky; *Narodnyi Malakhii*; and J. Anouilh's *Antigone*.

Blazheiovsky (Blazejowskyj), Dmytro [Blazejovs'kyj], b 21 August 1910 in the village of Vyslik in the Lemko region. Ukrainian Catholic priest and church historian. Blazheiovsky was ordained in 1939 and served as a priest in the United States from 1948 to 1973. His published works include *De Potestate Metropolitanium Kioviensium in Clerum Regularem, 1595–1805* (1943), *The Ukrainian and Armenian Pontifical Seminary of Lviv, 1665–1784* (1974) and *Byzantine Kyivan Rite Metropolitanates, Eparchies and Exarchates: Nomenclature and Statistics* (1980).

Bloch, Marie (née Mariia Halun), b 1 December 1910 in Komarno, Galicia. American writer of children's literature who emigrated to the United States as a child. Bloch has devoted herself to writing children's stories in English, including stories on Ukrainian themes: *Marya* (1957), *Aunt America* (1963), *The Two Worlds of Damyan* (1966), *Ivanko and the Dragon* (1969), *Bern, Son of Mikula* (1972), and *Displaced Person* (1978). She also translated and edited *Ukrainian Folk Tales* (1964). Altogether Bloch has published over 20 books.

Blokh, Eleonora (Eleonor) [Blox], b 24 April 1881 in Kremenchuk, d 17 January 1943 in Alma-Ata. Sculptor and pedagogue. Blokh studied at the school of the Society for the Promotion of the Arts in St Petersburg and at A.

Rodin's studio in Paris (1898–1905). From 1917 she worked in Kharkiv and was professor of the Kharkiv Art Institute in 1935–41. Her works include *A Girl's Head* (1917); busts of A. Rodin, Leonardo da Vinci (1921), Michelangelo (1939), and M. Kotsiubynsky; the compositions *The Joy of Motherhood* and *Working Youth*; and the monuments to T. Shevchenko in Bohodukhiv and V. Korolenko in Poltava (draft, 1940). Blokh's memoirs are entitled *Iak uchyv Rodin* (How Rodin Taught, Kiev 1967).

Head of Michelangelo by Eleonora Blokh (plaster, 1938–9)

Yurii Blokhyn

Blokhyn, Yurii [Bloxyn, Jurij] (pseud Yurii Boiko), b 25 March 1909 in Mykolaiv. Literary scholar, community figure, and publicist; full member of the Shevchenko Scientific Society and the Ukrainian Academy of Arts and Sciences. Blokhyn graduated from the Odessa Institute of People's Education in 1931 and completed his graduate studies in 1935 at the Taras Shevchenko Institute of Literature in Kharkiv. He taught Ukrainian language and literature at higher educational institutions in Kharkiv. Beginning in 1930, he published articles in the journals *Zhyttia i revoliutsiia*, *Literaturna krytyka*, *Literaturnyi zhurnal*, and *Literaturnaia ucheba*. As an émigré in West Germany, he has been a professor at the Ukrainian Free University (1949–74) and, since 1962, at the Ludwig Maximilian University in Munich. Blokhyn is the author of *Taras Ševčenko, sein Leben und Werk* (1965), *Vybrane* (Selected Works, 3 vols, 1971–81), and *Gegen den Strom* (1979).

Bluecoats (Synozhupannyky). The popular name, named after the color of the coats of the soldiers, of the First Cossack Volunteer Division. The Bluecoats were actually two Ukrainian divisions formed under the auspices of the *Union for the Liberation of Ukraine from Ukrainian prisoners of war in German camps after the Peace Treaty of Brest-Litovsk on the basis of the agreement between the Ukrainian peace delegation and Germany. Each division consisted of four infantry regiments (1,200 men including officers) and one artillery regiment. The first division, under Gen V. Zelinsky, was formed in Kovel, Volhynia. In the middle of March 1918 it was transferred to Kiev, where it was disarmed and demobilized by the Germans on the eve of Hetman P. Skoropadsky's coup (29 April 1918). The second division, formed in Holobakh, Volhynia, was demobilized even before its transfer to

central Ukraine. Many Bluecoats joined other military formations. An attempt to re-form the divisions by the Directory of the UNR led to the formation of the Seventh Blue Regiment in the Third Iron Riflemen Division.

Blyzniuk, Petro [Blyznjuk], 1881–? Ukrainian public figure, co-operative organizer, commissar of the Central Rada in Tavriia, in 1921–2 a member of the Kiev committee charged with organizing an anti-Bolshevik uprising, and an active member of the Ukrainian Autocephalous Orthodox church. In 1930 he was sentenced at the trials of the *Union for the Liberation of Ukraine to 16 years' imprisonment as the leader of the Mykolaiv group. His subsequent fate is unknown.

Blyzniuky [Blyznjuky]. v-17. Town smt (1976 pop 4,650), a raion center in southern Kharkiv oblast. The town has a food industry.

Blyznychenko, Andrii [Blyznyčenko, Andrij], b 18 April 1888 in Kharkiv, d 14 October 1938. Soviet Party official. Blyznychenko, who lived in the United States in 1905–10, was active in the Bolshevik movement in Ukraine in 1917–20. He served as the Bolshevik commissar of the Donets railway in 1917–18 and organized national railroad strikes against the Hetman government in 1918. In 1919–20 he was deputy commissar of highways of the Ukrainian SSR. In 1921–2 he worked in Soviet trade missions in Berlin and Montreal. From 1929 he was a member of the Presidium of the Supreme Economic Council and directed various Soviet economic institutions.

Blyznytsia [Blyzncyja]. The highest peak (1,883 m) of the Svydovets mountain group in the Polonynian Beskyd Mountains.

Boar, wild (*Sus scrofa*; Ukrainian: *dykyi kaban*). Mammal of the Suidae (swine) family, up to 2 m long, 1 m high, and 180 kg in weight. The wild boar lives in forests and thickets. Formerly it was common throughout Ukraine, but today it can be found only west and north of the line from the mouth of the Dniester River to Mohyliv, Vinnytsia, Kiev, and Chernihiv and in the foothills and mountains of Caucasia. The boar is destructive of gardens and seeded fields.

Boarding school (*pansion*). A private educational institution providing instruction at the secondary level to young people of both sexes and predominantly of noble birth. The first boarding schools in Ukraine were established in the second half of the 18th century; they were most widespread between 1800 and 1830. Most were established and staffed by foreigners, usually French or German. The major subjects of instruction were foreign languages, literature, music, singing, art, and dancing, with special attention placed on the acquisition of good manners and refined deportment. According to a directive handed down in 1828 by the Russian Ministry of Education boarding schools were to offer the same program of instruction as did state schools. After 1828 boarding schools were established in central and eastern Ukraine as gymnasium residences; they served as boarding institutions that supplemented the gymnasium curriculum. (See *Bursas and Student Residences. On women's boarding schools [especially institutes for daughters of the nobility] see *Education of Women.)

In the Ukrainian SSR the following types of closed educational-training institutions are maintained: *shkoly-internaty* (boarding schools, since 1956), *child-care institutions (since 1919), *Suvorov army cadet schools (since 1943), and Nakhimov naval cadet schools (since 1944).

The *shkoly-internaty* are seven-year or ten-year elementary-and-secondary general schools. The pupils engage in special projects or work at their residences (gardening, work in a school-related enterprise, services at the residence). In 1957 the Ministry of Education of the Ukrainian SSR issued statutes on boarding schools. In the 1958–9 school year there were 89 such schools, with 23,400 pupils; in 1970–1, 444 schools, with 170,000 pupils; and in 1980–1, 352 schools, with 113,000 pupils. Since 1964, when there were 545 schools and 221,000 pupils, there has been a gradual decline in the number of such schools in the Ukrainian SSR.

Certain Ukrainian Catholic secondary schools in the West function as boarding schools.

Bobac (*Marmota bobac*; Ukrainian: *bobak*). A marmot, rodent of the squirrel family, up to 60 cm long and 5–6 kg in weight. At one time the bobac inhabited the whole steppe belt, but since the steppe has been put under cultivation, the bobac has survived only in individual colonies in eastern Ukraine. The species is under government protection.

Ivan Bobersky

Bobersky, Ivan [Bobers'kyj], 1873–1947. Pedagogue, organizer of the *Sokil and *Sich movements and fitness programs in Western Ukraine. He studied in Lviv, Vienna, and Graz and traveled through Europe to study new methods of physical education. In 1900 he began to teach at a gymnasium in Lviv. In 1908–14 he presided over the Sokil Batko Society. His initiative led to Sokil's purchase of a large athletic field in Lviv. During the revolutionary period he was a member of the Military Directorate (Boiova Uprava) and the Secretariat of Military Affairs of the Western Ukrainian National Republic (ZUNR). In 1919 he left for the United States and Canada on assignment for the ZUNR and stayed there for several years, participating in the life of the Ukrainian community. From 1932 until his death he lived in Tržič, Yugoslavia. In 1910–14 he was editor of *Visti Zaporozha* and of *Sichovi visti*. He wrote a number of textbooks on physical education: *Zabavy i hry rukhovi* (Play and Active Games, I–II, 1904–5), *Kopanyi miach* (Soccer, 1906), *Znachennia rukhankovykh tovarystv* (The Role of Fitness Associations, 1909). Bobersky educated many instructors of physical education in Western Ukraine.

Bobolynsky, Leontii [Bobolyns'kyj, Leontij], b second half of the 17th century – beginning of the 18th century.

Priest and monk of the Trinity-St. Elijah Monastery in Chernihiv and graduate of the Kievian Mohyla Academy. He wrote the chronicle *Letopisets sii iest' kronika z roznykh avtorov i historikov mnohikh, dialektom ruskim iest' napisana ...* (This Chronicle Is a Chronology by Various Authors and Many Historians, Written in the Ruthenian Dialect, 1699). The book deals with events of world history from ancient times and Ukrainian history and contains a petition from I. Kopynsky to Ya. Vyshnevetsky and a description of the Chyhyryn campaigns of 1677–8. Bobolynsky's chronicle is based on a 16th–17th century Ukrainian redaction of a chronology and is remarkable for its closeness to the common language. The chronicle was first printed in 1853 as a supplement to *Litopis' Hryhorii Hrabianka* (Chronicle of Hryhorii Hrabianka). Some scholars reject Bobolynsky's authorship.

Bobretsky, Mykola [Bobrec'kyj], b 1 June 1843 in Troianka in eastern Podilia, d 24 September 1907 in Kiev. Darwinian zoologist, student of A. Kovalevsky. He graduated from Kiev University in 1866 and worked there for the rest of his life, becoming a professor in 1877. He concentrated on the study of the embryology of crustaceans, insects, and gastropod and cephalopod mollusks. Bobretsky wrote the first Russian textbook on zoology for universities, *Osnovaniia zoologii* (Foundations of Zoology, 3 vols, 1884–91).

Bobrinsky, Aleksei [Bobrinskij, Aleksej], 1852–1927. Russian statesman and archeologist. In 1885 he became president of the Imperial Archeological Commission. At his own expense he excavated over 600 graves and settlements from the Bronze Age and the Scythian period, particularly near the town of Smila in the Kiev region. His works – *Khersones Tavricheskii* (Chersonese Taurica, 1905), *Kurgany i sluchainye arheologicheskie nakhodki bliz mestechka Smely* (Kurhans and Fortuitous Archeological Finds near the Town of Smila, 3 vols, 1887–1901) – pertain to Ukrainian archeology. Bobrinsky represented Kiev gubernia at the Third Russian State Duma and in 1916 was appointed minister of agriculture. He emigrated in 1919.

Bobrovtsyia [Bobrovycja]. III-12. City (1972 pop 10,300), raion center in southwestern Chernihiv oblast. The city has a food industry and a sugar refinery.

Bobrynets [Bobryneč']. v-13. City (1972 pop 12,400) and raion center in southern Kirovohrad oblast. Bobrynets was founded in the mid-18th century. From 1829 to 1865 it was a county town in Kherson gubernia; because of its distance from the railway line (54 km) it did not develop quickly (1860 pop 9,600; 1897 pop 14,200). The town was involved in agriculture, crafts, and trade. During the 1860s two leading directors of the Ukrainian theater, M. Kropyvnytsky and I. Karpenko-Kary, established an amateur theatrical troupe here. The city has a minor food industry and an agricultural tekhnikum.

Bobrzyński, Michał, b 30 September 1849 in Cracow, d 3 July 1935 in Poznań. Polish historian, jurist, and conservative politician. As vice-president of the Austrian Board of Education in Poland in 1891–1901 he promoted Polonization in Galicia. In 1908–13 he was vicegerent of Galicia. In combating Russophilism he attempted to bring about an understanding between the Ukrainians and the

Poles on elections to the Galician diet and the founding of a Ukrainian university. The agreement that he prepared was rejected in 1913 because of resistance from the Polish hierarchy in Lviv and the Polish National Democratic party. Bobrzyński resigned over this. He wrote several books, among them *Dzieje Polski w zarysie* (Polish History in Outline, 1879) and *Wskrzeszenie Państwa Polskiego* (The Resurrection of the Polish State, 1920–5). His memoirs were published in Warsaw in 1957.

Bobynsky, Vasyl [Bobyns'kyj, Vasyl'], b 11 March 1898 in Krystynopil, Sokal county, Galicia, d 2 January 1938, Poet, translator, and journalist. Bobynsky served with the Ukrainian Sich Riflemen during the Ukrainian-Polish War and edited the soldiers' newspaper *Strilets*. In 1921 he belonged to the Lviv group of symbolist poets who published *Mytusa*. In the early 1920s he left the democratic camp and joined the Communist Party of Western Ukraine. In 1925 he began publishing in Lviv the weekly **Svitlo*, which he edited until April 1927. Bobynsky was one of the organizers and editors of the left-wing journal **Vikna* in 1927 and a founder of its affiliated writers' group, **Horno*. In 1930 he emigrated to Soviet Ukraine and lived in Kharkiv, where he belonged to the writers' organizations **Zakhidnia Ukraina* and the All-Ukrainian Association of Proletarian Writers. He is the author of the poetry collections *V prytoivri khramu* (In the Temple's Atrium, 1919), *Nich kokhannia* (Night of Love, 1923), *Taina tantsiu* (The Secret of Dance, 1924), *Smert' Franka* (The Death of Franko, 1927), *Poezii 1920–1928* (Poems 1920–8, 1930), *Povernuty shtyky na kativ* (Turn the Bayonets on the Executioners, 1932), and *Poemy i pamflety* (Poems and Pamphlets, 1933). Bobynsky was imprisoned in a concentration camp in the Solovets Islands in 1934 and was executed there. He was rehabilitated posthumously during the post-Stalin thaw. A selection of his poetry was published in 1960.

Vasyl Bobynsky

Olgerd Ippolit Bochkovsky

Bochkovsky, Olgerd Ippolit [Bočkovs'kyj, Ol'gerd], b 1884 in Dolynske, Kherson gubernia, d 9 November 1939 in Prague. Ukrainian sociologist specializing in the study of nationalism, publicist, and political figure. He emigrated to Czechoslovakia in 1905 and during the struggle for independence he served as a member of the Ukrainian diplomatic mission in Prague. He lectured at the Ukrainian Husbandry Academy in Poděbrady. In 1933 he headed the so-called Famine Committee, which aided victims of the famine in Ukraine, and wrote an

'Open Letter' on 5 May 1933 to the French premier, E. Herriot, who denied that there was famine in Ukraine. Bochkovsky's main works are *Ponevoleni narody tsars'koi imperii, ikh natsional'ne vidrozhennia ta avtonomne priamuvannia* (The Captive Nations of the Tsarist Empire: Their National Rebirth and Striving for Autonomy, 1916), *Natsiolohiia i natsiohrafia* ('Nationology' and 'Nationography', 1923), *Borot'ba narodiv za natsional'ne vyzzvolennia* (Nations' Struggle for National Liberation, 1932), and *Vstup do natsiolohii* (Introduction to 'Nationology,' 1934). He wrote many other works, which were published in various languages.

Bociurkiw, Bohdan [Bociurkiv], b 3 September 1925 in Buchach, Galicia. Political scientist. Bociurkiw immigrated to Canada in 1947 and received his PhD in political science from the University of Chicago in 1961. He has taught at the University of Alberta (1956–69) and at Carleton University, Ottawa (1969–), where he directed the Institute of Soviet and East European Studies (1969–72). He has published extensively on politics, religion, government, and dissent in Soviet Ukraine and in other communist countries and is the co-editor of *Religion and Atheism in the USSR and Eastern Europe* (Toronto-London 1974). Bociurkiw has served as a consultant to national and international groups concerned with contemporary Eastern Europe. In 1979–82 he was an associate director of the Canadian Institute of Ukrainian Studies.

Bodarevsky, Mykola [Bodarevs'kyj], b 24 November 1850 in Odessa, d 1921. Painter. Bodarevsky graduated from the St Petersburg Academy of Arts in 1873 and became an academicien there in 1908. He worked mostly in Odessa, producing works on biblical themes, scenes of daily life in Ukraine and portraits. In the 1880s he took part in the exhibits of the **Peredvizhniki* and from 1900 was a member of the Society of South Russian Artists.

Bodenstedt, Friedrich, b 22 April 1819 in Peine, Hannover, d 18 April 1892 in Wiesbaden, Germany. German writer, translator, professor of Slavic languages in Munich. In 1840–5 Bodenstedt traveled through Russia, Ukraine, Caucasia, and Persia. He translated Eastern literary works. In 1845 he published a collection of Ukrainian folk songs in German translation – *Poetische Ukraine* (Stuttgart).

Bodiansky, Osyp [Bodjans'kyj], b 12 November 1808 in the town of Varva in Chernihiv gubernia, d 18 September 1877 in Moscow. A Slavist, historian, ethnographer, and one of the originators of the field of Slavistics in the Russian Empire. Bodiansky graduated from the University of Moscow in 1834, and from 1837 to 1842 traveled on scholarly research missions to various Slavic countries (he spent some time in Prague). From 1842 to 1868 he was a professor at the University of Moscow. In 1846–8 and 1858–77 Bodiansky was the editor of the journal *Chteniia v Imperatorskom obshchestve istorii i drevnosti Rossiiskikh*, in which he published many materials valuable to Ukrainian historiography, including *Istoriia Rusov*; the Samovydet's Chronicle; the works of P. Symonovsky, A. Rigelman, and Zarubsky; and D. Khanenko's diary. As a result of Bodiansky's efforts a collection of Ya. Holovatsky's ethnographic materials entitled *Narodnye pesni Galitskoi i Ugorskoi Rusi* (Folk Songs of Galician and Hungarian

Osyp Bodiansky

Rus') was published in Moscow in 1878. Bodiansky unfailingly defended the independence of the Ukrainian language and literature. Under the pseudonym Zaporozhets Isko Matyrynka he published *Nas'ki ukrains'ki kazky* (Our Own Ukrainian Tales, 1835); under the pseudonym M. Boda-Varvynets he published his Ukrainian poems in Russian journals; and under the pseudonym I. Mastak he published a survey of Ukrainian literature entitled *Malorossiiske povesti, rasskazyvaemye Grits'kom Osnovianenom* (Little Russian Stories, as Told by Hryhorii Osnovianenko, 1834). Bodiansky was a friend of T. Shevchenko, with whom he carried on a correspondence. In 1848, and again in 1868, Bodiansky was censured because of his liberal views.

Bodnarchuk, Anatolii [Bodnarčuk, Anatolij], b 31 May 1940 in Starokostiantyniv, Khmelnytskyi oblast. Track-and-field athlete. Bodnarchuk established several European and world records in the hammer throw. In 1972 he won the gold medal at the Olympics with a throw of 75.5 m.

Bodnarovych, Osyp [Bodnarovyč], 1895–1944. Galician journalist, literary critic. In the 1920s Bodnarovych was a leading student activist. He was president of the Union of Ukrainian Nationalist Youth and editor of its monthly journal, **Smoloskypy*, (1927–8). Subsequently he worked for the Lviv daily newspaper *Novyi chas*, edited the literary semimonthly *Nazustrich* (1934–9) and the large-circulation newspaper *Iak na doloni*, and wrote for the newspaper *Dilo*. Beginning in 1941 he edited the daily newspaper *L'vivs'ki visti*.

Bodrug, Ivan, b 7 April 1874 in Verkhni Bereziv, Kolomyia county, Galicia, d 2 June 1952 in New York City. Religious leader, educator, author (pseud: Ivan Irshcheny and I. Berezovsky), and translator. A teacher in Galicia, Bodrug came to Canada in 1897 and assisted Presbyterian school efforts among Ukrainians in rural Manitoba. Ordained by Bishop Serafym, he founded the Ruthenian Independent Greek Orthodox church in 1904 and led it until 1908, refusing to follow it into the Presbyterian church in 1913. Although he remained within the Ukrainian evangelical movement in eastern Canada, he was largely inactive after 1923. In 1905 he became the first editor of the Presbyterian-funded newspaper *Ranok* in Winnipeg. He wrote several plays, a Ukrainian grammar, a Ukrainian-English dictionary, and a Protestant catechism, and translated J. Bunyan's *Pilgrim's Progress*

and about 200 hymns into Ukrainian. His memoirs, *Independent Orthodox Church ... 1903 to 1913*, were published in Toronto in 1980.

Bogoliubov, Nikolai [Bogoljubov, Nikolaj], b 21 August 1909 in Nizhnii Novgorod, Russia. Mathematician, theoretical physicist, specialist in mechanics, since 1948 a full member of the Academy of Sciences of the Ukrainian SSR, and since 1953 a full member of the Academy of Sciences of the USSR. In 1936–50 Bogoliubov taught at Kiev University and served as head of the chair of mathematical physics at the Institute of Mathematics of the Academy of Sciences of the Ukrainian SSR. In 1950 he moved to Moscow, and in 1965 he was appointed director of the Joint Institute for Nuclear Research in Dubno. With M. *Krylov Bogoliubov founded non-linear mechanics. His basic works deal with the theory of dynamic systems, approximation methods of mathematical analysis, mathematical physics, statistical physics, and quantum field theory. Bogoliubov worked out the mathematical foundations of a consistent microscopic theory of superfluidity (1947) and constructed a mathematical theory of superconductivity (1958). He established a school of non-linear mechanics in Kiev and a school of theoretical physics in Moscow.

Bogoroditsky, Vasilii [Bogorodickii, Vasilij], b 19 April 1857 in Tsarevokokshaisk, d 23 December 1941 in Kazan. Russian linguist, professor at Kazan University. He corresponded with K. Mykhalchuk on the problems of the history of the Ukrainian language. In 1901 he investigated the southern Poltava gubernia dialect in the village of Sushky, providing many phonetic observations of interest.

Boh Cossack Army. Military formation of the late 18th and early 19th century based in the lower Boh River region in southern Ukraine. The origin of the Boh Cossacks is associated with a Cossack regiment formed in 1769 during the Russo-Turkish war (1765–74) that included Ukrainian Cossacks and with the *arnauty*, that is, Moldavian, Wallachian, Albanian, Bulgarian, and Serbian volunteers in the Russian military service during the war. In 1785–6, on the orders of Prince G. Potemkin, two regiments of Boh Cossacks were recruited; in 1787 these were attached to the *Katerynoslav Cossack Army. In 1788 the regiments were combined, and 3,800 southern Ukrainian peasants were assigned to the unit. The Boh Cossack Army was demobilized in 1797 and recalled to service in 1803 with a strength of 6,400 men (in 1811, this number rose to 9,400). The army took part in Russia's wars with Turkey (1787–91, 1806–12) and France (1812–14). In 1817 the Boh Cossacks were reduced to military settlers; this sparked a revolt that was ruthlessly suppressed by the tsarist authorities.

Boh River (ancient Greek: *Hipanis*; now called Buh Pivdennyi or Pivdennyi Buh [Southern Buh] in the Ukrainian SSR to differentiate it from the *Buh River, a tributary of the Vistula and now called Zakhidnyi Buh [Western Buh]). One of the largest rivers of Ukraine, 857 km in length (792 km to the liman). Its drainage basin covers an area of 63,740 sq km (including the Inhul River, which empties into the Boh Liman). In its upper section in the Podilia Upland the Boh flows slowly through a wide,

muddy valley (slope: 0.37 m/km). Its middle section cuts into a crystalline massif, and the gradient increases (up to 0.92 m/km) as it flows between craggy banks. Rapids appear and are most concentrated in the 70 km stretch between the town of Pervomaiske and the village of Oleksandrivka, where the steep banks reach a height of 90 m (here the Myheiski, Bohdanivski, and other rapids are found). Below the rapids the river flows through Tertiary limestone and sandstone of the *Black Sea Lowland. It spreads out to 800 m (2–3 m deep) and enters the deep Boh-Dnieper Liman near the town of Nova Odesa. Atmospheric precipitation (rain and snow) serves as the main source of water for the Boh. The Boh's water volume varies significantly throughout the year. The Boh generally freezes in December and thaws in March, but these conditions do not always prevail. The Boh's tributary system is poorly developed, especially on the right bank, because most of Podilia's rivers flow into the Dniester. The right-bank tributaries of the Boh are the Vovk, Zhar, Riv, Savranka, Kodyma, and Chychykleia rivers. The left-bank tributaries are the Bozhok, Snyvoda, Sob, Syniukha with Hirnyi Tykych, Mertvovod, and Inhul (the largest tributary) rivers.

Because of the rapids, uneven gradient, and small water volume, only the lower Boh is navigable, from the town of Voznesenske to the sea (156 km). The river is open to navigation for about 250 days of the year. The main ports are Voznesenske and Mykolaiv, and the cargo consists mostly of grain and building materials. The middle section of the river has large hydroelectric resources (101,038 kw), which so far remain largely unused. The main cities located on the Boh are Khmelnytskyi, Vinnytsia, Pervomaiske, and Mykolaiv.

V. Kubijovyč

Bohach, Petro [Bohač], b 30 January 1918 in the village of Stara Sokolivka in eastern Podilia, d 23 June 1981. Physiologist and biophysicist, full member of the Academy of Sciences of the Ukrainian SSR from 1978. Bohach worked at Kiev University from 1939. His works deal mostly with the functions of the digestive system, the role of various parts of the main brain in regulating digestion, and the biophysics of muscular contraction.

Metropolitan
Konstantyn Bohachevsky

Bohachevsky, Konstantyn [Bohačevs'kyi], b 17 June 1884 in Manaievo, Zolochiv county, Galicia, d 6 January 1961 in Philadelphia, Pennsylvania. Church leader, Ukrainian Catholic metropolitan in the United States. Bohachevsky

studied theology at the universities of Lviv, Innsbruck, and Munich and attained the degree of doctor of theology. Ordained in 1909, he served as prefect of the Lviv Seminary (1911–14), adviser and deputy of the Lviv consistory, military chaplain (1916–17), pastor of the Peremyshl cathedral from 1918, vicar-general and apostolic protonotary (1923), titular bishop of Amisus and apostolic exarch of the Ukrainian Catholics in the USA from 1924, titular archbishop of Beroe (1954), and the first metropolitan of the Philadelphia Ukrainian Catholic metropolitanate from 1958. He improved the religious, educational, national, organizational, and economic level of the American exarchate. He was a patron of Ukrainian scholarly and cultural institutions.

Bohachevsky-Chomiak, Martha [Bohačevs'ka-Xomjak, Marta], b 24 June 1938 in Sokal, Galicia. Professor of Russian and Ukrainian history at Manhattanville College in New York. She received her PhD in 1968 from Columbia University. Her works include *The Spring of a Nation: The Ukrainians in Eastern Galicia in 1848* (1967), *Sergei N. Trubetskoi: An Intellectual among the Intelligentsia in Prerevolutionary Russia* (1976), and articles in scholarly journals.

Bohaievsky, OvkSENTii [Bohajevs'kyj, OvkSENTij], b 8 January 1849 in the village of Ustypin, Poltava gubernia, d 5 December 1930 in Kremenchuk. Noted zemstvo surgeon and medical expert. After graduating from the medical faculty of Kiev University in 1874, Bohaievsky worked in Myrhorod and then from 1883 in Kremenchuk. He was known as an innovative surgeon. He founded a school of practicing surgeons and wrote scientific works on various problems of surgery and on public health.

Bohatsky, Oleksii [Bohac'kyj, Oleksij], b 25 August 1929 in Odessa, d 19 December 1983 in Kiev. Chemist, full member of the Academy of Sciences of the Ukrainian SSR from 1976. Bohatsky graduated from the University of Odessa, whose department of organic chemistry he headed from 1959. He served as the university's rector in 1970–5. From 1975 he headed the Southern Research Center of the Academy of Sciences of the Ukrainian SSR; from 1977 he was the director of the academy's Institute of Physics and Chemistry. His major studies are concerned with dynamic stereochemistry and conformation analysis of heterocycles, the chemistry of physiologically active compounds, biochemistry, and methods of organic synthesis.

Bohatsky, Pavlo [Bohac'kyj], b 17 March 1883 in Kupyn, Podilia gubernia, d 22 December 1962 in Thirroul, New South Wales, Australia. Journalist, literary scholar and critic, bibliographer, and civic leader; full member of the Shevchenko Scientific Society. Bohatsky founded the journal **Ukrains'ka khata* in Kiev in 1909 and edited it until 1914, when he was arrested and exiled to the Naryn region in Kirghizstan. In 1917 he was appointed chief of the militia in Kiev, and under the Directory of the UNR he was the city commander and otaman of the Battalion for the Defense of the Republic. He emigrated to Prague in 1922, where he edited the journal **Nova Ukraina* and, in 1926, directed the Ukrainian Public Publishing Fund. From 1930 he taught at the Ukrainian Sociological Institute. He began writing in 1906, and his work was

Oleksii Bohatsky

Pavlo Bohatsky

published in many Western Ukrainian and émigré journals. He is the author of two collections of short stories – *Kamelii* (Camellias, 1919) and *Na shliakhu do osvity* (On the Road to Education, 1941) – and of a short novel, *Pid bashtoiu iz slonovoi kosty* (Under the Ivory Tower). He also compiled bibliographies, including *Materialy do krytychnoho vydannia tvoriv Hryhoriia Chuprynky* (Materials for a Critical Edition of the Works of Hryhoriia Chuprynka, 1926). In 1949 he emigrated to Australia, where he was active in the Ukrainian community as a journalist and lecturer.

Bohatyrov, Semen [Bohatyr'ov], b 15 February 1890 in Kharkiv, d 31 December 1960 in Moscow. Musicologist and pedagogue. After graduating from Kharkiv University (1912) and the Petrograd Conservatory (1916) he taught at and was the director (from 1935) of the Kharkiv Conservatory. Among his students were D. Klebanov, M. Koliada, Yu. Meitus, M. Fomenko, V. Nakhabyu, Yu. Oransky, and A. Shtoharenko. In 1943 he became a professor at the Moscow Conservatory. Bohatyrov edited and finished P. Tchaikovsky's Symphony no. 7 (1956), which was premiered by the Philadelphia Philharmonic Orchestra.

Bohdan. v-5. Town smt (1970 pop 3,700) in Rakhiv raion, Transcarpathia oblast, located on the Bila Tysa River. The town is one of the centers of the Transcarpathian Hutsul region. The forest industry is the main source of income.

Bohdanov, Fedir, b 16 October 1900 in the village of Yelionka, Chernihiv gubernia, d 27 March 1973 in Kiev. Orthopedist and traumatologist, corresponding member of the USSR Academy of Medical Sciences from 1951, assistant director of the Institute of Orthopedics, and professor at the Kiev Institute for the Upgrading of Physicians from 1958. Bohdanov conducted research on diseases of the joints, flawed development of long tubular bones, and bone regeneration.

Bohdanov, Serhii, b 1859, d 1920 in Kiev. Agronomist. A graduate of Kiev University, Bohdanov began to lecture there in 1885 and became a professor in 1890. Through his initiative the Derebchyn Experimental Farm in Podilia was founded in 1888. Bohdanov studied various problems of agronomy and plant physiology. He

devised a classification system for groundwaters and a method of determining the inert reserve of water in the soil. Bohdanov wrote a three-volume textbook on agronomy (1909–11) and an illustrated agricultural dictionary (1895). From 1887 he edited the journal *Zemledelie*.

Bohdanovykh-Zarudny, Samiilo [Bohdanovyč-Zarudnyj, Samijlo]. Cossack diplomat and general judge of the Zaporozhian Host. A registered Cossack, he defected to B. Khmelnytsky's side at Korsun in 1648. In 1650 he conducted negotiations in Warsaw, and he headed the Cossack delegations to Moscow (1652), Turkey (1653), and again Moscow (1654), to conclude the Treaty of *Pereiaslav. In 1654 he was appointed general judge. In 1657 he went to Transylvania to help negotiate the Treaty of *Hadiache, which was signed with Poland in 1658. He was made a noble in the following year. After I. Vyhovsky's fall he joined Yu. Khmelnytsky and participated in drawing up the Treaty of *Slobodyshe. In 1664 he fought on the Polish side against I. Briukhovetsky.

Boh-Dniester culture. A Neolithic culture that was widespread in Right-Bank Ukraine and Moldavia from the late 7th millennium to the 4th millennium BC. Its members practiced farming, animal husbandry, fishing, and hunting. The culture was first discovered in 1949 by the Kiev archeologist V. Danylenko. Over 60 small settlements have been located in Ukraine. The remains of ground and semipit dwellings, farming implements such as hoes made of bone and stone and wooden sickles, and pottery have been unearthed. The Boh-Dniester culture was a forerunner of the *Trypilian culture.

Bohemia (Czech: Čechy). The historic land of Bohemia in western Czechoslovakia is bounded by Austria in the southeast, Moravia in the east, Poland in the north, and West and East Germany in the west and northwest. Along with Moravia and Czech Silesia it is settled by the Czechs. Today these territories form the Czech Socialist Republic, which is part of the federated Czechoslovak Socialist Republic. The Czech republic has an area of 78,860 sq km, and its population in 1975 was 10,063,000. Historically, Bohemia was the principal territory of the Czech monarchy.

Bohemia was inhabited by Slavic tribes as early as the 5th century AD. The first west Slavic state existed there under Prince Samo in 623–58. In the 9th–10th century Bohemia belonged to the great Moravian empire and then became an independent principality. In 845 the Czechs adopted Western Christianity. The Byzantine missionaries ss *Cyril and *Methodius arrived in Moravia in 863 and laid the foundations of the Slavic liturgy and the Church Slavonic language. Slavic-Byzantine Christianity did not take root among the Czechs, but it did leave a strong tradition of self-reliance and ties with the Slavic East. In the 9th–10th century the Přemyslid dynasty of the Prague principality consolidated its rule over the Czechs. Under Prince Boleslav I Bohemia became part of the Holy Roman Empire in 950 but retained internal autonomy. In 1198 Bohemia became a kingdom under Ottocar I, and in 1230 a hereditary monarchy. In the 13th century it expanded into German and Polish territories in areas from the Adriatic to the Baltic. In 1306 the Přemyslid dynasty died out, and the crown passed to the Luxemburgs until 1437. Eventually the Jagiellonians

(1471) and the Hapsburgs (1526) occupied the throne of Bohemia. In the 15th century the Hussites manifested the desire of the Czechs for independence from German domination during the Hussite Wars. After the Czech Protestants lost the battle of Bílá Hora in 1620, Bohemia was demoted from a constituent kingdom to a Hapsburg crown land for 300 years.

In the 17th and 18th century the Czech aristocracy was denationalized, and Czech culture was persecuted. Under the influence of the French Revolution a national renaissance began among the Czechs at the end of the 18th century. As a result of the work of J. Dobrovský, J. Jungmann, P. Šafařík, F. Palacký, K. Havlíček-Borovský, and others, this movement assumed a modern cultural and political character, which manifested itself clearly in Austro-Slavism (the struggle for the political autonomy of the Slavs within Austria-Hungary) and in pan-Slavism. After developing culturally, politically, and economically in the relatively liberal circumstances of Austria in the latter half of the 19th and the beginning of the 20th century, the Czech people won their independence at the end of the First World War and, together with the Slovaks, formed the Czechoslovak Republic (see *Czechoslovakia).

Bohemia and Ukraine until the end of the 18th century. Although Bohemia did not share a border with Kievan Rus', the two states had some dynastic, economic, and cultural ties. The great Moravian state maintained trade relations with Kievan Rus' and the Black Sea. In 992 Prince Oldřich sent his legates to Kiev. Two wives of Volodymyr the Great were Czech, and they gave him three sons – Vysheslav, Sviatoslav, and Mstyslav Volodymyrovych. King Danylo Romanovych of Halych conducted a campaign against the Czechs. His son Lev Danylovych signed a peace treaty with the Bohemian king, Vaclav II. The trade route between the East and Western Europe ran through Rus' and facilitated contacts with Bohemia. This is proved by the Czech coins discovered in Ukraine.

The influence of Cyrillo-Methodian Christianity reached Ukraine even before Kiev officially adopted the Christian faith, and eventually literary-religious ties with Bohemia were established; for example, the lives of ss Wenceslaus and Ludmilla were known in Rus'. In the 14th–15th century Ukrainian and Belorussian students from the Grand Duchy of Lithuania had their separate group at Prague University. The Hussite movement had an impact on Ukraine: among J. Žižka's forces there were supposed to be Ukrainians, and after their defeat some Hussites settled in Ukraine. The religious *brotherhoods of the 16th–17th century were reminiscent of the social ideals of the Bohemian Brethren. J. Comenius's pedagogical teachings had a noticeable influence on the brotherhood schools in Ukraine, and Comenius himself was familiar with the charters of these schools. The Slavonic Bible, which was translated by the Belorussian F. *Skoryna and published in Prague in 1517–19, preserved the Czechisms that were adopted from one of his sources (the Czech Bible of 1506). The first publication of a piece of Ukrainian folklore – the text of the 'Song about Stefan the Voivode' – is found in the Czech grammar of J. Blahoslav of 1571. The official language of the Lithuanian period contains many Czechisms in its legal terminology, and the Czech influence is conspicuous in P. Berynda's *Leksykon slavenorosskyi al'bo imen tolkovanyie* (Slavonic-Ruthenian Lexicon

and Explanation of Proper Names). Works of Czech origin, such as the tales about Taudal and Sibylla and the *Lucidarius*, were known in Ukraine.

In the 16th century individual Cossacks or Cossack units of the Polish army came to Bohemia. Other Cossacks served the Hapsburgs as mercenaries. In 1594–5, during the reign of Rudolf II, a legate of the Zaporozhian Sich, S. Khlopytsky, visited Prague. At the beginning of the 17th century several Moravian cities and individual noblemen hired Cossacks to protect them from the incursions of the Transylvanian prince S. Bocskay. There is evidence that Ukrainians took part in the so-called Wallachian colonization of eastern Moravia and the southern Těšín region in the 16th–17th century.

There were continuous economic relations between Ukraine and Bohemia, although, because of the distance and transportation problems, they were not very intense. Cattle (mostly from Podilia), wax, hides, and some grain were exported to Bohemia, whole cloth and spices from the East were imported via Ukraine to Bohemia. The main imports from Bohemia were textiles, glass articles, metals, and, most important of all, arms. This trade was directed mostly to and from the northern Czech regions. Lviv was the main transit center in this trade.

At the end of the 18th century the Czech scholar V. F. Durych corresponded with the bishop of Mukachiv, A. Bachynsky. J. Prač collected melodies of Ukrainian folk songs in the Dnieper region, which were published in collections in St Petersburg in 1790 and 1815. This was the first publication of the music of Ukrainian songs. There is evidence that H. Skovoroda visited Prague briefly during his travels in Central Europe.

Czech-Ukrainian relations in the 19th–20th century. Since the Czech and Ukrainian peoples lived under similar conditions of subjugation and were undergoing a national renaissance, their relations in this period were primarily cultural. Czech democrats and progressives, in contrast to the pro-Russian conservatives, sympathized with Ukrainian aspirations under the Austrian and Russian regimes. Generally, the Czech renaissance of the mid-19th century acted as a stimulus for the cultural-political movement among the Ukrainians. There were some personal contacts among the leading cultural figures on both sides: P. Šafařík corresponded with I. Mohyl'nytsky, I. Vahylevych, and Ya. Holovatsky and informed the Czechs about Ukrainian culture and affairs. M. Shashkevych was inspired by the works of J. Kollár, J. Jungmann, and V. Hanka. O. Bodiansky and I. Sreznevsky visited Bohemia and corresponded with Czech leaders, acquainting them with Ukrainian folklore and literature. At the same time they popularized Czech and Slovak literature in Ukraine and Russia. A. Metlynsky published the first translations of Czech literature (the poetry of F. Čelakovský). K. Zap, J. Koubek, F. Jachim, and K. Pichler, some of whom lived for an extended period in Ukraine, made important contributions to the strengthening of Ukrainian-Czech relations. K. Havlíček-Borovský, who as early as 1846 regarded the Ukrainian question as a question of a separate nation between Russia and Poland, did much to inform the Czech public about Ukraine. Even before then, in 1830, F. Palacký defended the identity of the Ukrainian people in *Časopis Českého muzea*. Common circumstances of life within the boundaries of the same state and within the sphere of influence of the same cultural and scholarly center (Vienna), as well as personal

contacts with individual Ukrainians, account for the very positive effect that Czech leaders had on the national movement in Western Ukraine.

Czech leaders took a friendly attitude regarding the demands of the Galician and Transcarpathian delegates to the *Slavic Congress in Prague in 1848. The influence of Czech thinkers (J. Kollár, P. Šafařík, and V. Hanka) on the ideology of the Cyril and Methodius Brotherhood is evident. T. Shevchenko dedicated to Šafařík his poem 'Jan Hus,' accompanied by a personal 'Poslaniie slavnomu Shafarykovi' (Epistle to the Famous Šafařík). The first complete, uncensored edition of Shevchenko's *Kobzar* was published in Prague in 1876. At the same time translations of Shevchenko and of N. Gogol's novels were published for the Czech reader. In 1865 J. *Frič wrote the play *Ivan Mazepa*. R. *Jesenská, J. Hudec, and E. *Jelínek (the author of stories on Ukrainian themes) translated the works of Shevchenko, P. Kulish, Marko Vovchok, Yu. Fedkovych, and I. Franko, as well as Ukrainian songs and folk tales. Ukrainian folklore was studied by L. Kuba, J. Hanuš, and F. *Řehoř. Řehoř lived in Galicia for over 10 years and became a prominent popularizer of Ukrainian culture in Bohemia. A. *Jedlička investigated folk melodies and wrote compositions on Ukrainian motifs (for example, the music for I. Kotliarevsky's *Natalka Poltavka*).

In the 1860s–1870s O. Potebnia, M. Kostomarov, and P. Kulish visited Bohemia. Prague and Lviv exchanged publications. By the end of the 19th century Ukrainian-Czech collaboration in the fields of literature and scholarship became more systematic. A number of Czech scholars were elected full members of the Shevchenko Scientific Society, among them J. Bidlo, L. *Niederle, J. *Polívka, Z. *Nejedlý, and K. Chodounsky. The Czech Academy of Sciences elected M. Hrushevsky as a corresponding member. V. Hnatiuk became a member of the Czechoslovakian Ethnographic Society. I. Puliui and I. Horbachevsky taught at higher educational institutions in Prague. The decision of the Czech Academy of Sciences that the language and people of Transcarpathia in 1919 had a Ukrainian character had a great cultural impact on this region. Mutual understanding between the two peoples was promoted by the Ukrainian delegation to the Czech industrial exhibition in Prague in 1891 (which included the Boian Choir) and by the ethnographic exhibit in Prague in 1896. At the beginning of the 20th century, when Ukrainian students quit Lviv University, several hundred of them enrolled in Prague's university and colleges. The Czech organization Sokol served as a model for the Ukrainian organizations *Sich and *Sokol. The co-operative movement in Galicia learned a great deal from the Czech experience; Czechs also worked as instructors in the Galician agricultural societies.

At the end of the 19th century the greatest practical contribution to Ukrainian-Czech relations was made by I. Franko. He published articles on Czech subjects in the Ukrainian press and translated the works of Czech writers. At the same time his articles on Ukrainian problems appeared in Czech publications, including *Ottův slovník naučný*. Franko's works were translated into Czech by F. Hlaváček, J. Rozvoda, and R. Jesenská, and his play *Ukradene schchastia* (Stolen Happiness) was produced as an opera in Prague. The works of other Ukrainian writers – M. Kotsiubynsky, Lesia Ukrainka, V. Stefanyk, O. Kobylianska, and B. Lepky – were translated into Czech.

P. Hrabovsky translated Czech poetry into Ukrainian. M. Sadovsky's production of B. Smetana's opera *Prodaná nevěsta* (The Bartered Bride) in Kiev in 1907 was a great success. In the summer of 1919 the Ukrainian Republican Chorus, conducted by O. Koshyts, presented concerts in over 20 Czech cities and received flattering reviews and public applause.

In the interwar period Ukrainian-Czech relations intensified. In *Prague many Ukrainian émigré cultural institutions were established. In Lviv Ukrainian leftist circles popularized progressive Czech literature. In Kharkiv an international congress of revolutionary writers, including pro-Communist Czech writers, took place in 1930, and a number of translations from Czech were published in the Ukrainian SSR. The works of P. Tychna and Yu. Yanovsky were translated into Czech. The plays of O. Korniiichuk appeared on the Czech stage. M. Marčanová was active in the field of Ukrainian translation. The writers and artists of Soviet Ukraine visited Czechoslovakia in the 1920s. Transcarpathia, which was then part of Czechoslovakia, received much attention from the Czechs. A Transcarpathian research section was set up in the Slavic Institute in Prague, and a number of Czech researchers worked in the region. Three wooden churches from Transcarpathia were moved to Bohemia and conserved. Transcarpathian themes appeared in I. *Olbracht's *Nikola Šuhaj, loupežník* (Nikola Šuhaj, the Robber) and his travel accounts *Hory a staletí* (Mountains and Centuries) and *Golet v údolí* (Exile in the Valley); in V. Káňa's *Zakarpatsko* (Transcarpathia); in the novels of J. Vrba (*Duše na horách* [Soul of the Mountains]), V. Vančura (*Poslední soud* [The Last Judgment]), and K. Čapek (the trilogy *Hordubal*); and in S. Neumann's cycle of poems 'Karpatské melodie' (Carpathian Melodies) in *Bezodný rok* (The Abyssal Year).

After 1945 translations increased. New translations from Ukrainian literature included works of Shevchenko, the Ukrainian realists of the 19th–20th century, and Soviet writers such as Yu. Yanovsky, A. Holovko, N. Rybak, M. Stelmakh, and O. Honchar, whose trilogy *Praporonosci* (The Standard-bearers) includes a part entitled *Zlata Praha* (Golden Prague). Translations of the poetry and prose of representative Ukrainian writers of the 1960s appeared. At the same time many translations from Czech literature appeared in Soviet Ukraine. Czech studies in Ukraine are conducted at the Slavic chairs of Kiev, Lviv, and Uzhhorod universities and at the Academy of Sciences of the Ukrainian SSR. Ukrainian studies in Czechoslovakia were pursued at Charles University in Prague by I. Zilynsky, I. Pankevych, M. Zatovkaniuk, K. Genyk-Berezovsky, and V. Židlický, and at the Ukrainian section of the Slavic Institute of the Czechoslovak Academy of Sciences by J. Dolanský (director of the section), O. Zilynsky, V. Hostička, and A. Kurymsky. Cultural and academic institutions in Prešov also promote Czech-Ukrainian cultural ties. In 1956 a conference on Czechoslovak-Ukrainian relations was held in Prešov, followed in 1967 by a large international symposium on the theme of 'October and Ukrainian Culture.' The Ukrainian writers of the Prešov region have translated numerous Czech literary works.

Ukrainians in Bohemia. Before the 20th century Ukrainians did not emigrate to Bohemia in large numbers. In the 19th century some Ukrainian students, soldiers of the Austrian army, civil servants, and seasonal workers

lived in Bohemia. The first Ukrainian organization there was the Ukrainian Hromada, formed by the students in Prague in 1902. At the beginning of the First World War some refugees from Galicia settled with their families in Bohemia. In 1914 a Ukrainian elementary school was set up in Nusle, near Prague. The largest concentration of these refugees was the Svatobořice camp, which numbered 1,200 refugees by 1917–18. A gymnasium and other cultural and educational institutions operated there.

In May 1919 the soldiers of the Ukrainian Galician Army began to cross the Czechoslovak frontier and were interned, mostly in Bohemia, particularly in the camps at *Deutsch-Gabel (over 5,000), *Liberec (over 1,000), and later (until 1926), *Josefov (4,000). For a time these soldiers formed the Twelfth Ukrainian Mountain Brigade of the Ukrainian Galician Army and hoped to fight on behalf of the government of the Western Ukrainian National Republic against the Poles. They were led by General A. Kraus. Intensive cultural work was conducted at the internment camps: secondary and trade schools were set up, and Ukrainian newspapers were published (*Ukrains'kyi strilet*' and *Ukrains'kyi skytalets*'). In the spring of 1920 the Czechoslovak government began to disband the camps. Some of the internees volunteered to join the auxiliary defense units that were stationed in various cities of Bohemia – Pardubice, České Budějovice, Plzeň, Prague, Hradec Králové, Litoměřice, Lipník, Terezín, Olomouc, and Opava – and also in Slovakia and Transcarpathia. The other internees joined the Ukrainian émigrés who had left Galicia and eastern Ukraine for economic and political reasons. Czechoslovakia offered the most favorable conditions for the émigrés: it was a Slavic country with a democratic system, and many of its citizens and government officials were sympathetic toward the Ukrainians. Ukrainian schools and scholarly institutes were established in Bohemia, mostly in Prague: the *Ukrainian Free University (moved from Vienna in 1921), the *Ukrainian Higher Pedagogical Institute (1923), the *Ukrainian Studio of Plastic Arts (1923), the Ukrainian Institute of Social Sciences (1924), the *Ukrainian Historical-Philological Society (1923), the *Museum of Ukraine's Struggle for Independence (1925), and the *Ukrainian Gymnasium in Czechoslovakia (1925). In 1922 the *Ukrainian Husbandry Academy was established in Poděbrady. The students in these schools were émigrés, but they were eventually joined by students from Galicia and Transcarpathia. Ukrainian academic institutions and students received financial assistance from the Czechoslovak government until the beginning of the 1930s. The Czechoslovak-Ukrainian Committee for Assistance to Ukrainian and Belorussian Students distributed the scholarships. With time the student numbers diminished: some émigrés returned to Galicia or to Soviet Ukraine; others emigrated to Western Europe or the Americas. Yet Bohemia remained the most active Ukrainian émigré center until 1945.

At the beginning of the 1920s there were up to 20,000 Ukrainian émigrés in Bohemia. Most of them were educated and of a mature age. They differed sharply in their political views, occupations, and regional origins. Some of them quickly integrated into the new country and even became Czechoslovak citizens. At first the Ukrainian socialists dominated émigré life; they set up the *Ukrainian Civic Committee in Czechoslovakia (1921–5), which was subsidized by the government. Eventually its work

was assumed by the *Ukrainian Committee in Czechoslovakia, which was no longer government-supported. In the 1930s the Union of Ukrainian Emigrant Organizations in the Czechoslovak Republic co-ordinated the work of the various Ukrainian organizations.

The Ukrainian émigré community in Czechoslovakia was small but quite diverse and dynamic, though splintered into many groups. The students were the best organized group. In 1925 up to 2,000 students received government financial assistance. Besides the general student societies that represented the students in Prague (*Ukrainian Academic Hromada, est 1919), Brno, Poděbrady, Příbram, and Mělník, there were also clubs attached to the Ukrainian institutions of higher learning and faculty-based clubs of medicine, engineering, law, commerce, science, agronomy, and apiculture students. There were also women's sports clubs, art groups, and politically oriented societies such as the Drahomanov Hromada of Socialist Youth and the Free Hromada; the nationalist students' organizations, the *Group of Ukrainian National Youth in Prague and the *Legion of Ukrainian Nationalists in Poděbrady; and the Sovietophile students' organization, the Working Alliance of Progressive Students. In 1922 the *Central Union of Ukrainian Students was founded to represent most of the student organizations abroad and in Western Ukraine; its central office was in Prague until 1935.

Several professional associations were established by Ukrainian émigrés: the Association of Ukrainian Physicians in Czechoslovakia, the Ukrainian Lawyers' Society in Bohemia, the Ukrainian Pedagogical Society, and the Society of Ukrainian Engineers in Prague, which, with a number of other technical and agricultural associations, formed the *Union of Ukrainian Engineers' Organizations Abroad in 1930 (head office in Poděbrady). The following scholarly institutions were established in Prague: the *Ukrainian Academic Committee, the *Ukrainian Scholarly Association, and the *Ukrainian Society of Bibliophiles. Two Ukrainian scholarly congresses were held in Czechoslovakia in 1926 and 1932; they attracted scholars from outside the country.

Among the women's organizations, the most representative was the *Ukrainian Women's Union, which was founded in 1923. Among the youth organizations, the Ukrainian Sich Union, a sports association founded in Prague in 1927, had several branches. Several dens of the physical-education society Sokil formed for a brief time the Union of Ukrainian Sokil Associations Abroad and maintained friendly relations with the Czech Sokol. In 1921 the Ukrainian scouting association Plast began to organize groups in Czechoslovakia, but did not grow significantly. In 1930 the Union of Ukrainian Plast Émigrés was founded in Prague. Bohemia was also an important center of publishing, with such publishers as the Ukrainian Public Publication Fund, Siach, Kolosy (owned by H. Omelchenko), and Yu. Tyshchenko's publishing firm.

Ukrainian religious life was poorly organized in Bohemia. There were no Ukrainian Orthodox parishes and only one Greek Catholic parish in Prague, at St Clement's Church. This parish was established in 1930 under the care of Rev B. Hopko and served mostly the Transcarpathian Ukrainians in Bohemia. Ukrainian theology students from Galicia and Transcarpathia studied in Olomouc, Moravia.

In the 1930s the number of Transcarpathian Ukrainians

in Bohemia began to increase. These were mostly students, soldiers, and civil servants, but an increasing number of workers began to arrive. The Transcarpathian students had their own organizations – the *Union of Subcarpathian Ukrainian Students and the Russophile Vozrozhdenie. After March 1939 political émigrés from Transcarpathia, among them members of the government of Carpatho-Ukraine, headed by Rev A. Voloshyn, came to Bohemia and joined Ukrainian organized life there.

During the German protectorate over Bohemia and Moravia in 1939–45, organized Ukrainian life there declined considerably. Most of the Ukrainian institutions were dissolved, while others barely managed to exist. The Ukrainian newspaper *Ukrains'kyi tyzhden'* (1933–8) ceased publication. Only the *Ukrainian National Alliance and the Ukrainian Hromada received official recognition. The journal *Proboiem* continued to appear, and the newspaper *Nastup* began publication. Both periodicals were nationalist and were closed down by the Germans in 1943. The gymnasium in Modřany and the Ukrainian Free University continued to operate throughout this period.

When Soviet troops arrived in May 1945, organized Ukrainian life in Bohemia came to an end. Most of the émigrés fled to West Germany and then to other countries of Europe or the Americas. The Transcarpathian Ukrainians who served in General L. Svoboda's brigade and were demobilized came to Bohemia to avoid returning to the USSR. They were joined by Ukrainians from the Prešov region who came to work or study among the Czechs. Most of them settled in Prague or in the towns and villages along the border from which the Germans were resettled. Some stayed in the Czechoslovakian army, and a few were promoted to a higher rank, including that of general. After the war there were 5,000 Ukrainians in Prague and over 25,000 in the Czech territories, including about 500 students. Workers from the Prešov region continued to arrive, settling mostly in the larger cities and assimilating quickly. In 1947–8 about 500 Ukrainians from two villages in the Banat region of Rumania settled in compact groups in the districts of Tachov and Znojmo and in the city of Chomutov.

At first the Russophile students' union *Vozrozhdenie*, with its journal *Koster*, continued to operate in Prague. All Ukrainian institutions were dissolved under the pretext that they were 'bourgeois nationalist.' The Ukrainian Museum was the last to be closed (1948). Many Ukrainian activists were arrested, and some were deported to the USSR.

In 1950 the Orthodox church of Czechoslovakia took charge of the Greek Catholic parish in Prague. Today this church has a complete organizational structure with a metropolitan, a bishop, and over 10 priests in Bohemia and Moravia. Although most of its members are Ukrainian, judging from its publications and liturgical language, this church has a Czech and Russian character. In 1968 a Greek Catholic parish was restored in Prague; it has several priests and serves the whole of Bohemia.

Efforts to establish a separate Ukrainian cultural organization in Bohemia similar to the *Cultural Association of Ukrainian Workers in the Prešov region have not succeeded. Only Ukrainian amateur art circles are permitted to exist at the buildings of culture in Prague and Karlovy Vary. In the 1960s and 1970s O. Prykhodko and P. Shchurovska-Rossinevych conducted a fine Ukrainian mixed choir in Prague, which presented Shevchenko

concerts. Occasionally Ukrainian ensembles from Soviet Ukraine or the Prešov region visit Bohemia.

V. Markus

Bohodukhiv [Bohoduxiv]. III-16. City (1976 pop 18,300) and raion center in northeastern Kharkiv oblast, on the Merlia River (a tributary of the Vorskla). It was first mentioned in 1571 as Diakiv citadel, a defense post against Tatar raids. The Bohodukhiv fortress was built in 1662. Bohodukhiv became a town in 1681 and a county center of Kharkiv vicegerency (later Kharkiv gubernia) in 1780. The city has a repair plant, a food-processing industry, and a medical school.

Bohohlasnyk. A collection of Ukrainian religious songs published by the Uniate Catholic press in Pochaiv in 1790. It contained 247 songs and went through many reprintings in Pochaiv, Kiev, Lviv, Kholm, and elsewhere up to the 20th century. The *Bohohlasnyk* was studied by V. Peretts, P. Zhytetsky, I. Franko, M. Vozniak, and others.

Bohomazov, Oleksander, b 26 March 1880 in Yampil, Kharkiv gubernia, d 3 June 1930 in Kiev. Painter. Bohomazov graduated in 1911 from the Kiev Art School, where he studied under O. Murashko. In 1914 he organized the

Sharpening of Saws by Oleksander Bohomazov (oil, 1926)

artistic group Kiltse (Circle) in Kiev. In the 1920s he was a member of the Association of Revolutionary Art of Ukraine and worked as an instructor at the Kiev Art Institute from 1922 to 1930. His works display a tendency towards monumentalism, dynamism, and cubo-futurist composition. Among them are the following: *Prison* (1914), *Bazaar* (1914), *Repairing Saws* (1926), *Sawyers* (1927), *Kiev Landscape* (1928), and *The Work of Sawyers* (1929). He wrote an unpublished avant-garde treatise, 'The Art of Painting.'

Bohomolets, Oleksander [Bohomolec'], b 24 May 1881 in Kiev, d 19 July 1946 in Kiev. Prominent pathophysiological and scientific administrator, full member of the Academy of Sciences of the Ukrainian SSR from 1929 and its president in 1930–46, full member of the Academy of Sciences of the USSR from 1932 and its vice-president from 1942, full member of the Academy of Medical Sciences of the USSR from 1944, full member of the Academy of Sciences of the Belorussian SSR from 1939, and honorary member of the Academy of Sciences of the Georgian SSR from 1944. Bohomolets graduated from the medical faculty of Odessa University in 1906 and worked as a lecturer there. In 1911–25 he served as professor at Saratov University in Russia and in 1925–31 as professor of pathophysiology at Moscow University; he was also director of the Institute of Hematology and Transfusion in Moscow (1928–31). In 1931 he moved to Kiev, where he founded the Institute of Experimental Biology and Pathology of the People's Commissariat of Health of the Ukrainian SSR and the Institute of Clinical Physiology of the Academy of Sciences of the Ukrainian SSR (in 1953 the O. Bohomolets Institute of Physiology of the Academy of Sciences of the Ukrainian SSR was formed out of these two institutes).

Oleksander Bohomolets

Ivan Bohun

Bohomolets was the founder of a large school of pathophysiologicals who worked on the problems of general pathophysiology, endocrinology, the autonomic nervous system, the theory of constitution and diathesis, metabolism, immunity, shock, allergy, oncology, blood transfusion, the physiology and pathology of connective tissue, longevity, and other areas. He developed the hypothesis that the course of a disease and recovery depend not only on the causal agent, but also on the resistance of the organism, which depends primarily on the condition of the nervous system and the connective tissue. He demonstrated that connective tissue has a protective function in the organism and plays a role in

its nourishment. He discovered an effective method of changing the condition of connective tissue by means of the antireticular cytotoxic serum, a stimulant discovered by him which gained him worldwide fame. Bohomolets wrote many works in biology, physiology, and pathology, among them the textbook *Osnovy patolohichnoi fiziologii* (Foundations of Pathological Physiology, 2 vols, 1933–6), which he co-authored, *Vstup do nauky pro konstytutsiiu i diatezy* (Introduction to the Science of the Constitution and Diathesis), *Kryza endokrynolohii* (The Crisis in Endocrinology), *Pro vegetatyvni tsentry obminu* (On Vegetative Exchange Centers), and *Prodovzhennia zhyttia* (The Prolongation of Life, Kiev 1940). His selected works were published in Kiev in 1969.

Bohorodchany [Bohorodčany]. v-5. Town smt (1971 pop 2,709), a raion center in Ivano-Frankivske oblast on the Bystrytsia Solotvynska River. It was a county town under Austrian rule.

Bohorodsky, Oleksander [Bohorods'kyj], b 11 September 1907 in Horlivka. Astronomer, professor at Kiev University since 1963, and director of the Kiev Astronomical Observatory in 1953–72. Bohorodsky has written works on the general theory of relativity and on astrophysics.

Bohosloviia (Theology). A scholarly theological quarterly published by the *Ukrainian Theological Scholarly Society in Lviv in 1923–39 (one issue in 1943) and edited by Y. *Slipy. The most prominent specialists in theology and the history of the Ukrainian Catholic church were associated with this journal: Y. Slipy, T. Halushchynsky, H. Kostelnyk, A. Ishchak, V. Laba, M. Chubaty, I. Skruten, and others. In 1962 *Bohosloviia* was revived by Archbishop Major Y. Slipy in Rome as the journal of the Ukrainian Theological Scholarly Society. Today it is edited by Rev. I. Khoma, and its contributors are mostly professors of the Ukrainian Catholic University: M. Marusyn, I. Muzychka, I. Hrynokh, V. Lev, W. Lencyk, O. Horbach, and others. The journal is more literary-historical in character than before.

Bohuchar [Bohučar] IV-21. Town smt (1968 pop 6,300), located 8 km above the mouth of the Bohuchar River, which flows into the Don River; a raion center of the Voronezh oblast in the RSFSR. Bohuchar (Russian: Boguchar) was established at the beginning of the 18th century, and in 1779 it became a county center. It lies on the ethnic Ukrainian-Russian border; in 1926, 80 percent of Bohuchar raion's population was Ukrainian. Because of its distance (60 km) from a railroad line, the town has not developed. It has a small food industry.

Bohun, Ivan, d February 1664. Colonel of Kalnyk (Vinnytsia) (1649–58), one of the most important leaders of the Khmelnytsky period; a descendant of the Ukrainian

petty nobility. In 1648 Bohun fought against the Poles in the Bratslav region. He took part in all the main battles fought by B. Khmelnytsky, playing an outstanding role in the Battle of *Berestechko in 1651 when the Crimean khan Islam Girei III betrayed the Cossacks and took Khmelnytsky captive. The Cossack army found itself encircled by the Poles and elected Bohun acting hetman. As a result of his inventiveness and decisiveness, most of the Cossack army succeeded in breaking out of the encirclement. Bohun was opposed to Polish control of Ukraine and to a Russian orientation (he accused Yu. Khmelnytsky of pushing through the Treaty of *Pereiaslav in 1654). After Hetman I. Vyhovsky signed the Treaty of *Hadiache with the Poles in 1658, Bohun led an uprising in 1659 in Right-Bank Ukraine against Vyhovsky. In 1662 the Poles imprisoned Bohun in the fortress of Marienburg, but a year later King Jan II Casimir, at the start of his campaign in Left-Bank Ukraine, released him and transferred to him command of the Pavoloch Cossack Regiment under the Right-Bank hetman P. Teteria. The king hoped to use Bohun's military talents and his popularity among the Ukrainian people in the campaign. In February 1664 Bohun was executed by the Poles near Novhorod-Siverskyi on suspicion of conspiring with Left-Bank Cossacks and Russians against the Poles.

BIBLIOGRAPHY

Petrovs'kyi, M. *Ivan Bohun* (Saratov 1942)

Bohuslav. IV-11. City (1971 pop 12,300) on the Ros River in the Dnieper Upland; a raion center in Kiev oblast. The city was known in 1195 as a defense post on the southern border of Kievan Rus'; from 1685 to 1712 it was the center of the Bohuslav Regiment. From 1796 to 1837 it was a county center in Kiev gubernia. In the late 19th and early 20th century it had many merchants and artisans; its population was 11,200 in 1860 and 16,000 in 1897. It has a fabric factory; a crafts factory, which was founded at the end of the 19th century and which manufactured decorative tapestries (eg, the 'Bohuslav' tapestry, with folk motifs); a furniture factory; a food industry; and a building-materials industry. Bohuslav also has a music school, a regional historical museum, and a museum dedicated to the artist I. Soshenko.

Bohuslavsky, Kostiantyn [Bohuslavs'kyj, Kostjantyn], b 21 May 1895 in the village of Pavlivka, Kharkiv gubernia, d 7 December 1943 in exile. Composer, singer (bass), and conductor. Bohuslavsky studied at the Kharkiv Conservatory. In 1922–33 he conducted the Red Army Officers' School Choir. He wrote over 300 choral works, a string quartet based on the folk song *The Mosquito*, the children's operas *Andriiko the Cossack* and *The Clock*, musical comedies, and arrangements of folk songs. He was exiled in 1933.

Boian (Bard). The name of music and song societies established in Galicia and Bukovyna on the initiative of the association *Ruska Besida. The first Boian society was established in 1891 in Lviv (headed by V. Shukhevych) and Peremyshl (headed by T. Kormosh). Other branches were established in Berezhany (1892), Stryi (1894), Kolomyia and Stanyslaviv (1895), Chernivtsi (1899), Sniatyn and Ternopil (1901), and elsewhere. Boian branches were even organized for a short period in Kiev (1904, headed

by M. Lysenko) and Poltava (ca 1910, headed by F. Popadych). Aside from giving concerts, Boian published the *Muzychna biblioteka*, beginning in 1892, and maintained a publishing concern, Reference Library of the Lviv Boian. The Boian library in Lviv contained manuscripts of works by Ukrainian composers, as well as a museum of Ukrainian folk instruments (from 1894). The Union of Song and Music Societies that superseded Boian was instrumental in founding the first Ukrainian school of music in Lviv – the Lysenko Music Institute (1903). The Boian societies played a major role in promoting musical culture and popularizing Ukrainian folk songs and works by Ukrainian composers (especially M. Lysenko and P. Nishchynsky). The local Boian societies were meeting places for the intelligentsia and townspeople. After the Soviet occupation of Galicia in 1939, the societies were abolished.

Boiarka [Bojarka]. III-11. City (1971 pop 29,000) in Kyievo-Sviatoshynskyi raion of Kiev oblast, known until 1956 as Boiarka-Budaivka. It is located 22 km southwest of Kiev, among pine forests. The city originated in 1868 when the Kiev-Khvastiv railway line was built. Today it has a clothing factory and a machine-building plant. A tuberculosis sanatorium, rest homes, a children's sanatorium, and a forest research station are also located there.

Boiarska, Yevdokiia [Bojars'ka, Jevdokiia] (née Bohemska), b 13 March 1861 in Mohyliv-Podilskyi, d 19 April 1900 in Chita, Siberia. Actress specializing in heroic roles in folk drama, trained in the school of M. Kropyvnytsky. In 1880 Boiarska began to act in M. Maksymovych's troupe in Odessa. In 1884–9 she worked with M. Starytsky, and in 1899 she played in F. Korsh's theater in Moscow. Her main roles were *Natalka* in I. Kotliarevsky's *Natalka Poltavka* (*Natalka from Poltava*), *Oksana* in M. Kropyvnytsky's *Doky sontse ziide ...* (*By the Time the Sun Rises ...*), and *Kharytyna* in I. Tobilevych's *Naimychka* (*The Servant Maid*).

Mykola Boichenko

Boichenko, Mykola [Bojčenko], b 1896 in Kiev, d 1946 in Bucharest. Musicologist and composer. Boichenko graduated from the Kiev Institute of Music in 1918 and from the Kiev Conservatory in 1919. In 1919–22 he taught harmony and was director of the Kiev Conservatory. In 1922–3 he conducted the Ukrainian choir in Kishinev. In 1924–9 he taught the theory of harmony and composition at the Santa Cecilia Conservatory in Rome. In 1932 he moved to Chernivtsi, where he directed a school of music and drama (1932–6) and conducted the city choir known as Bukovynskyi Kobzar. In 1938 he moved to Bucha-

rest. Boichenko composed vocal and choir music (*Songs in Praise of Spring*), piano music (*Ukrainian Rhapsody*), a symphonic poem (*Ukraine*), an orchestral overture (*The Forest Song*), and music to the poems of Yu. Fedkovych. He published a collection of 150 Bukovynian folk songs. Boichenko is the author of the textbook *Nuovi principi della composizione musicale* (Rome 1928).

Boichuk, Ivan [Bojčuk], b in Yasen near Kosiv. Leader of a band of opryshoks who were active in the mid-18th century in the Kolomyia region. The band consisted of local peasants, as well as Zaporozhian Cossacks and fugitives from Moldavia and Hungary. In 1759 Boichuk's band came to the Zaporozhian Sich and joined the Haidamaka uprisings. Together with other haidamakas Boichuk's men attacked the nobility's estates near Berdychiv and Liubar.

Mykhailo Boichuk

Boichuk, Mykhailo [Bojčuk, Myxajlo], b 30 October 1882 in Romanivka, Ternopil county, Galicia, d 1939(?). Monumentalist painter and pedagogue. He graduated in 1905 from the Cracow Academy of Fine Arts and studied at the Munich and Vienna academies of arts. His work was exhibited in 1905 at the Latour Gallery in Lviv and in 1907 in Munich. Thereafter, Boichuk studied in Paris with F. Vallotton, P. Sérusier, and M. Denis. In 1910 he and a group of his students held an exhibit at the Salon des Indépendants on the theme of the revival of Byzantine art. In 1910–11 Boichuk traveled through France and Italy. During the First World War he lived in Kiev and took part in organizing the Ukrainian State Academy of Arts (later the Kiev Art Institute), where he worked as a

professor and where, briefly, he was rector. In 1919 he painted the murals of the Lutske Barracks in Kiev and, in 1928, those of the Peasant Sanatorium in Odessa. With his students Boichuk executed the frescoes of the Chervonozavodskyi Theater in Kharkiv in 1933–5, working this time in the compulsory style of socialist realism. After being arrested in the mid-1930s on the charge of being an 'agent of the Vatican,' Boichuk was shot, along with his wife, S. Nalepinska.

The works of Boichuk and his school (T. Boichuk, I. Padalka, V. Sedliar, O. Pavlenko, M. Ivanov, M. Rokytsky, O. Myzin, and K. Hvozdyk) are an important contribution to Ukrainian, as well as to world, art. At the end of the 1910s Boichuk witnessed in Paris the birth of modern art and attempted to blend it with traditional forms. He developed the style of simplified monumental forms. In his compositions surfaces are rhythmically integrated with lines. This style became known as Boichukism, and its followers were members of the 'Association of Revolutionary Art of Ukraine, which was often attacked by the official critics for 'nationalism.' After the association was disbanded and Boichuk was executed, all of his frescoes and paintings were destroyed, not only those found in Kiev and Kharkiv museums, but also those found in Lviv museums after the war. Yet the principles of Boichukism are still known today and are often followed by talented artists in Ukraine.

S. Hordynsky

Boichuk, Tymofii [Bojčuk, Tymofij], b 1896 in Romanivka, Ternopil county, Galicia, d 1922 in Kiev. Monumentalist painter and graphic and poster artist, brother of M. *Boichuk. He painted murals in the Lutski Barracks in Kiev (1919) and decorated the Kiev Opera Theater for the All-Ukrainian Congress of Rural District Executive Committees (1919). Among his paintings are the following, all of which were executed in 1919–20: *Seed Dealers*, *Planting Potatoes*, *In the Pasture*, *In the Cobbler's Shop*, *Feeding Hogs*, and *By the Apple Tree*.

Boidunyk, Osyp [Bojdunyk], b 8 December 1895 in Dolyna, Galicia, d 7 April 1966 in Munich, Germany. Political figure. An officer in the Ukrainian Galician Army, Boidunyk became a founding member of the Ukrainian Military Organization in 1920. From 1920 to 1929 he studied engineering in Prague. In 1930 he became a member of the OUN's three-member senate. He was imprisoned by the Polish regime in 1931–5, and in 1936–8 founded and edited the weekly *Holos natsii*. From 1939 to 1940 he was active in the *Ukrainian Central Committee in Cracow and in 1942 helped found the *Ukrainian National Council in Kiev. In 1944 he was imprisoned in the Sachsenhausen concentration camp. After the war Boidunyk promoted the establishment of the Ukrainian National Council (1948), which he headed for two terms from 1954. He was the author of *Natsional'nyi solidaryzm* (National Solidarity, 1945), *Ukraïns'ka unutrishnia poli-*

Osyp Boidunyk

tyka (Ukrainian Internal Politics, 1948), and the unfinished memoirs *Na perelomi* (At the Turning Point, 1967).

Boieslav, Marko [Bojeslav]. Pseudonym of an underground poet and journalist of the Ukrainian Insurgent Army (UPA), born in Galicia. In 1947–50 Boieslav was in charge of OUN propaganda in the Stanyslaviv region. He co-edited the underground UPA magazine, *Chorni lis* (11 issues), and wrote several collections of sketches and poetry. In 1951 a selection of over 100 of his poems, *Nepokirni slova* (Unsubmissive Words), was published in London. Boieslav's fate after 1950 is unknown.

Boikiv, Oleksander [Bojkiv], b 28 August 1896 in the village of Ispas, Kolomyia county, Galicia, d 29 September 1968 in Paris. Political and community figure, publicist. As an émigré Boikiv lived in Prague, Geneva, and Paris. In the 1920s he was active in student affairs, heading the Ukrainian Academic Hromada in Prague and taking part in the activities of the Central Union of Ukrainian Students. In the 1930s he served as secretary of the leadership (PUN) of OUN under Colonel Ye. Konovalts. Boikiv was a founding member and vice-president of the Ukrainian National Alliance in France and the first editor of the newspaper *Ukrains'ke slovo* in Paris in 1933–4.

Boikivshchyna (Boiko Region). An ethnographic society established in Sambir in 1928 to study the history and culture of the Boiko region of Ukraine (see *Boikos). Among the society's most prominent members were V. Hurkevych (president), V. Kobilynyk, A. Kniazhynsky, and I. Fylypchak. In 1929 the society opened the Boikivshchyna museum under the direction of I. Fylypchak; in the same year it began publication of the journal *Litopys Boikivshchyna* under the editorship of A. Kniazhynsky and V. Skoryk (11 issues had been published by 1939). In 1940, under Soviet rule, the museum was closed; some of the exhibits were taken to eastern Ukraine, while others were housed in the oblast museum in Drohobych.

Boikivshchyna was revived in the emigration in 1968, with headquarters in Philadelphia. The first president was Rev S. Dasho; since 1973 the society has been headed by M. Utrysko. In 1981 it had a membership of 600. It maintains a museum collection and continues the publication of *Litopys Boikivshchyna* (the 33rd issue was published in 1981) under the editorship of O. Berezhytsky and M. Utrysko. The society has also published the collection *Literaturna Boikivshchyna* (The Literary Boiko Region, 1969) and the collection *Boikivshchyna* (1980).

Boiko, Hryhorii [Bojko, Hryhorij], b 5 September 1923 in Olenivka, Donetsk oblast, d 1978. Poet. Boiko wrote poetry mostly for children and published the following collections, among others: *Moia Donechchyna* (My Donets Region, 1950), *Shakhtarochka* (The Small Girl Miner, 1956), *My zbyraemos' v polit* (We Are Preparing to Fly, 1961), *Pro didusia Tarasa* (About Grandpa Taras, 1964), and *Dyvo, dyvo, dyvyna* (How Strange, 1970).

Boiko, Ivan [Bojko], b 30 September 1899 in Volodkova Divytsia, Chernihiv gubernia, d 5 June 1971. Historian, research associate of the Institute of History since 1956 and of the Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR since 1965. His works (over 80 publications) deal with Ukraine's socioeconomic and cultural history. His most important contribution is *Selianstvo Ukraïny v druhii polovyni XVI–pershii polovyni XVII st.* (The Peasantry of Ukraine in the Second Half of the 16th–the First Half of the 17th Century, 1963). Boiko has also co-edited several volumes of articles on the history of the Ukrainian SSR, the Ukrainian peasantry, agricultural technology, and Ukraine's 'unification' with Russia in 1654.

Boiko, Ivan [Bojko], b 2 November 1908 in the village of Nova Hreblia near Romen in Kharkiv gubernia, d 25 April 1970 in Kiev. Bibliographer and writer. Boiko is the author of the poetry collection *Paruiut' zemli* (The Lands Are Steaming, 1931) and the story collections *Chumchyryk* (1931) and *Novely zrostu* (Stories of Growth, 1932). From 1938 he was the chief bibliographer of Ukrainian literature in the library of the Academy of Sciences in Kiev. He produced bibliographic guides – *Pavlo Tychyna* (1951), *Leonid Ivanovych Hlibov* (1952), *Hohol' i Ukraïna* (Gogol and Ukraine, 1952), *Ivan Franko* (1954, 2nd rev edn 1956), *Korolenko i Ukraïna* (Korolenko and Ukraine, 1957), and *Ukrains'ki literaturni al'manaky i zbirnyky XIX–pochatku XX st.* (Ukrainian Literary Almanacs and Collections of the 19th and Early 20th Century, 1967) – and contributed to the guide *T.H. Shevchenko* (2 vols, 1963).

Boiko, Maksym [Bojko], b 12 February 1912 in Pochaiv, Volhynia. Bibliographer, librarian, and researcher of Volhynia. Boiko was a co-founder and secretary (1950–60) of the Research Institute of Volyn in Winnipeg. He founded the Volhynian Bibliographic Center (Bloomington, Indiana) in 1967 and published a number of bibliographical works, articles on history and culture, and monographs on Volhynia.

Boiko, Vasyl [Bojko], 1892–1938. Literary scholar. Boiko wrote works on modern Ukrainian literature, such as his historical-literary study *Marko Vovchok* (Kiev–Leipzig 1918) and his studies on the life and work of H. Kvitka-Osnovianenko. In the 1930s he was exiled from Ukraine and was a professor at the Ural Pedagogical Institute in Sverdlovsk.

Boiko, Yurii. See Blokhyn, Yurii.

Boiko dialect. One of the southwestern Carpathian-Ukrainian dialects, spoken by the Ukrainian highlanders, the *Boikos. The territory where the dialect is spoken is south of the line the upper Limnytsia River – the towns of Bolekhiv and Sambir – the Oslava River – the Carpathian

mountain ridge, and extends even farther south in the region of Uzhok, Nyzhni Veretsky (Nyzhni Vorota), and Volove (Mizhhiria).

The main characteristics of the Boiko dialect include the following: (1) the preservation of the distinction between the proto-Slavic *u* and *i* as *ы* (retracted and lowered *y*) and *y* (*сьм* [son], *сьн'ы* [blue]); *ы*, if preceded by a labial or velar, is articulated farther back (*быкы* [bull]; sometimes it is labialized (*бѡла* – standard Ukrainian: *bula* [she was]); (2) the retention of *ǰ* from the proto-Slavic *ǰi* (*меж'а* – standard Ukrainian: *meža* [boundary]); (3) the palatalization of postdentals (*з'аба* [frog]); (4) the preservation of palatalized *r* in the word- and syllable-final position (also in place of the proto-Slavic **r*) (*млын'ар* [miller], *в'єр'х* [top]); (5) the use of the tense *ê*, *ô*: *ê* before palatalized consonants *j* and *e*, and *ô* in the following syllable (*т'єп'єр* [now], *ôт'єс* [father]); (6) the palatalization of dentals before *i* from the proto-Slavic *o* in closed syllables (*н'ис* [nose]); (7) the loss of the intervocalic *j* (*маю* – standard Ukrainian: *maju* [I have]); (8) the labio-velarization of *a* in the sequence *аў* as *аў*, *оў* (*доў* – standard Ukrainian: *dav* [gave]); (9) the absence of the lengthening of consonants of the type *з'ыт'а* – standard Ukrainian: *zyttja* [life]; (10) the change of the cluster *-n'k-* to *-jk-* (*б'ат'є* [father, dim], *-ск-* to *-ѣк-* (*ѣкода* [damage]), *-н-* to *-нн-* (*р'инный* [native]); (11) the influence of the endings of the hard nominal declension on the soft: *в'ит'ôвы* (father, dat sing), but the preservation of various endings of both types in the locative singular of nouns: *на с'т'ил'ц'ы* ('on the chair'), *на п'ôлы* ('in the field'), *в душ'ы* (in the soul); (12) the preservation of archaic endings in masculine and neuter plural nouns: nominative – *в'ôўс'ы* ('wolves'); dative – *п'ан'им*, *п'анум* (to the gentlemen); instrumental – *з быкы* ('with the bulls'); locative – *в к'ôn'ox* (in the horses); (13) the verb forms *ѣ'ытам*, *-аš* *-ат*, *-âме*, *-âут* ('read') in the present tense, *ѣ'ыт'аў'єм*, *-jês*, *ѣ'ыт'ал'ы'sme*, *-s'te* in the past tense, and *б'уду ѣ'ыт'аў* in the future tense.

O. Horbach

Boikos (Ukrainian: *boiky*). A tribe or ethnographic group of Ukrainian highlanders who inhabit both slopes of the middle Carpathians, now in the Lviv, Ivano-Frankivske, and Transcarpathia oblasts. The name *boiko* is thought to be derived from the frequent use of the particle *boiie* by the population. The Boikos are believed to be the descendants of the ancient Slavic tribe of White Croats who came under the rule of the Kievan state during the reign of Prince Volodymyr I the Great. Before the Magyars occupied the Danube Lowland this tribe served as a direct link between the Eastern and Southern Slavs. Some of the early Slav specialists, such as P. Šafařík and F. Rački, interpreted the remark of the Byzantine king Constantine

vii Porphyrogenitus (10th century) that the 'Boiky' locality situated beyond Turcia (ie, Hungary) was the homeland of the White Serbs as a reference to the present Boiko region. This hypothesis is possibly true, but unproved. Any connection between the name of the Boikos and the Celtic tribe of Boii is not supported by any evidence, according to Ya. Pasternak. Sometimes the Boikos reject their name, regarding it as derogatory, and call themselves highlanders (*verkhovyntsi*). In Transcarpathia the name *boiko* is rarely used.

The Boiko region occupies all of the High Beskyd, the eastern part of the Middle Beskyd, the western part of the Gorgany, and the Middle Carpathian Depression south of these mountains. In the north the limits of the Boiko region coincide with the borderline of the Carpathians; in the south the region borders on the Middle Carpathian territory, inhabited by the lowlanders (*dolyniaky*), whose dialect is considered the archaic Boiko tongue. In the west the Boiko population extends as far as the Solyinka River, which is a tributary of the Sian and marks the border with the *Lemkos, and in the east it extends to the Limnytsia River Valley. There are transitional belts – the valleys of the Oslava and Bystrytsia Solotvynska rivers – on the western and eastern borders of the Boiko region, which have resulted from the influence of the Boikos on the neighboring tribes. The area of the Boiko region is about 8,000 sq km, and it has a population of 400,000, composed mostly of Boikos. Most Boikos live in the Middle Carpathian Depression, which encompasses the towns of Turka, Borynia, Nyzhni Veretsky (now Nyzhni Vorota) and Volove (Mizhhiria). Beyond the depression the towns of Skole and Synevidsko are inhabited by Boikos. The towns of Staryi Sambir, Sambir, Boryslav, Drohobych, Bolekhiv, Dolyna, and Kalush lie on the border with the foothills.

The Boikos differ from their neighbors in language (the *Boiko dialect), dress, architecture, and customs. Until recent times the Boikos wore domestically made clothes: linen trousers and shirts, sheepskin vests (the *bunda*), short coats (the *kyptar*) or woolen overcoats (the *serdak*), coarse woolen coats of a gray or brown color (the *hunka*), wide-brimmed hats (the *bryl*), light but strong leather shoes (*khodaky*), and wide leather belts. The women wore shirts, fancy skirts (the *maliiovanka*), and white linen wrap-arounds. The Boiko shirt was embroidered with a geometric pattern and sometimes with a plant ornament of one (black or red) or two colors (black and red or red and blue). The same colors appear on Easter eggs with archaic ornamentation consisting of crosses or rhombuses. In architecture a unique type of house with a porch has been preserved in the Boiko region, as have the three-domed Boiko churches with their peculiar arcade, for example, the church in Silets in Sambir county, St George's Church in Drohobych (15th–16th century), and the church in the village of Botelka in Turka county (16th century). Ancient icons have been found in the old churches and are preserved at the Lviv Ukrainian Art Museum and the Boiko Regional Museum in Sambir. Frescoes of the 15th–16th century have been discovered, some of them during the reconstruction of the Basilian monastery in Lavriv, now in the Staryi Sambir raion of Lviv oblast. The Boikos have preserved many ancient customs and rituals that have disappeared in other parts of Ukraine. Certain legends, such as the story of Prince Sviatoslav's grave and the story of King Danylo, indicate that the Boiko region played a role in Ukrainian history.

In the old days the Boikos supported themselves mostly by animal husbandry. Their settlements were governed by the so-called *Wallachian law and were exempted from corvée. Instead, they paid their lords tribute in kind, consisting of animal and forest products. The main military and trade route from Ukraine to Hungary and Western Europe ran through their territory. In more recent times the Boikos have been engaged mostly in agriculture (growing oats and potatoes) and dairying (formerly sheep grazing and ox breeding). They find supplementary work in lumbering, in the petroleum industry, and in gathering and selling mushrooms and berries. Orchards are well developed in the Verkhnie Synovydne (Synevidsko) area in Lviv oblast. Certain settlements close to the trade route that crossed Boiko territory and ran through the mountain passes practiced trading for centuries. In the past the Boikos carried salt (Staryi Sambir was once called Stara Sil, or Old Salt) to Galicia and Volhynia. Then, when the Austrian government established a monopoly on salt, a trade in fruit developed. Boiko fruit merchants could be encountered up to 1914 not only in the towns of Galicia but also in St Petersburg, Budapest, Bucharest, and even on the French Riviera. In the 20th century the Ukrainian national awakening took place in these enterprising Boiko urban circles, and the Boiko region produced a large number of Ukrainian cultural and political figures.

Among the famous individuals born in the Boiko region are the following: Yu. Drohobych (Georgius Drohobicz de Russia), professor and rector at the University of Bologna (1478–82), and then a professor at Cracow University from 1487; the 16th-century writer Gregorius Vigilantius Samboritanus Ruthenus; Hetman P. Sahaidachny; M. Tsmailo-Zhmailo-Kulchytsky; and a general judge under B. Khmelnytsky, I. Krekhovetsky. More recently there have been a number of writers who were born in the Boiko region or wrote about it, including M. Ustianoych, A. Mohylnytsky, Ya. Holovatsky, S. Kovaliv, Yu. Kmit, O. Markiv, O. Pavliv, A. Chaikovsky, M. Zubrytsky, B. Lepky, I. Fylypchak, S. Parfanovych, and I. Franko, the best-known writer from this region. In some of the works by these writers the peculiarities of the Boiko dialect are preserved, particularly in the works of Kmit, Markiv, Zubrytsky, and Parfanovych.

In the 1930s research on the Boiko region was conducted by the *Boikivshchyna society museum in Sambir.

Bokarius, Mykola, b 31 March 1869 in Odessa, d 23 December 1931 in Kharkiv. Noted forensic physician and one of the founders of forensic medicine and criminology in Ukraine. Bokarius graduated from the medical faculty of Kharkiv University in 1895. In 1910 he became profes-

sor of forensic medicine at Kharkiv University, today the Kharkiv Medical Institute. His department was well equipped and renowned throughout the USSR. In 1923 he established the Scientific Research Institute of Forensic Medicine, which today bears his name. From 1928 he was the leading forensic medical expert of the Ukrainian SSR. Bokarius was the founder and editor of two journals, *Arkhiv kryminolohii i sudebnoi medytsyny* (1926–7), and *Pytannia kryminalistyky ta naukovo-sudebnoi ekspertyzy* (1931). Bokarius wrote more than 130 scientific works and a number of large textbooks, including *Sudebno-meditytsinskie, mikroskopicheskie i mikrokhimicheskie issledovaniia veshchestvennykh dokazatel'stv* (Forensic, Microscopic, and Microchemical Investigations of Material Evidence, 1910), *Sudebnaia meditsina v izlozhenii dlia iuristov* (Forensic Medicine Interpreted for Jurists, 1915), and *Naruzhnyi osmotr trupa na meste proisshestviia ili obnaruzheniia ego* (The External Examination of the Corpse at the Scene of the Crime or the Place of Its Discovery, 1925). He also invented special methods of analysis and forensic medical instruments.

Yosyp Bokshai

Bokshai, Yosyp [Bokšaj, Josyp], b 2 October 1891 in the village of Kobyletska Poliana in Transcarpathia, d 19 October 1975 in Uzhhorod. Realist painter with an inclination towards impressionism, pedagogue, corresponding member of the USSR Academy of Arts from 1958. Bokshai graduated in 1914 from the Budapest Institute of Visual Arts. In 1918 he began teaching at the Uzhhorod gymnasium. In 1927 he helped organize the Public School of Art and, in 1931, the Society of Subcarpathian Painters. In 1951–7 he lectured at the Lviv Institute of Applied and Decorative Art, and in 1958–72 he worked at the Uzhhorod Regional Museum. Among Bokshai's works are monumental paintings on the walls of many Transcarpathian churches, particularly the iconostasis in the church of the Máriapócs monastery and the Elevation of the Cross in the Uzhhorod cathedral; portraits (*Self-portrait*, 1929); and landscapes and genre paintings, such as *Market in Uzhhorod* (1927), *Winter* (1927), *Khust Castle* (1942), *Polonyna Rivna* (1946), *Bokorashi* (Loggers, 1947), *Uzhhorod Castle* (1955), *Meeting on the Mountain Meadow*, (1957), and *Synevir Mountain Pastures* (1967). Bokshai's paintings are preserved in the museums of Ukraine, and about 50 are found in the United States: in the Ukrainian Institute in New York, in the Museum of Slavic Heritage in Pittsburg, and in private collections.

Personal'na vystavka tvoriv zaslužnenoho diiacha mystetstv URSR Io. Bokshai: Kataloh (Uzhhorod 1954)
 Ostrovskii, G. *Iosif Iosifovich Bokshai* (Moscow 1967)

Bolbochan, Petro [Bolbočan], b 5 October 1883 in the village of Hytets, d 28 June 1919 in Balyn near Kamianets-Podil'ski. Colonel in the Army of the UNR. In the fall of 1917 Bolbochan became commander of the First Ukrainian Republican Regiment of the Second Serdiuk Division. In 1918, as commander of the First Zaporozhian Division, which was stationed in Kharkiv, he participated in the Crimean campaign. Under the Hetman regime Bolbochan was commander of the Second Zaporozhian Regiment. The Directory of the UNR appointed him in the fall of 1918 commander of the Zaporozhian Corps and of the entire UNR army in Left-Bank Ukraine. After the army retreated to Right-Bank Ukraine, he was relieved of his command and sent to Galicia (January 1919). Charged with insubordination for attempting to take over the command of the Zaporozhian Corps in Proskuriv on 9 June 1919, he was found guilty by a military court and executed.

Bolekhiv [Bolexiv]. IV-4. City (1971 pop 9,500) on the Sukil River (a tributary of the Svicha) in Dolyna raion, Ivano-Frankivske oblast. Bolekhiv has been known from the 14th century as a salt-producing town. It has a forest-products industry, a tannery, and a salt factory.

Boleslav Troidenovich. See Yurii II Boleslav.

Bolesław I the Brave, 967–1025. Polish prince (992–1025) and first Polish king (1025). He waged long and successful wars against the Holy Roman Empire in defense of Poland's independence and completed the unification of Polish lands. Bolesław maintained relations with Prince Volodymyr the Great. As Prince Sviatopolk's ally, he fought against Yaroslav the Wise and in 1018 marched on Kiev. On his way back to Poland Bolesław captured the *Cherven towns, which Yaroslav regained in 1031.

Bolesław II the Bold, 1039–81. Polish prince (1058–77) and king (1077–9). He was involved in the wars among the Kievan princes and, as a supporter of Iziaslav Yaroslavych, made two campaigns into Ukraine (1069 and 1077). In the course of the first he occupied Kiev, but was forced to retreat in the face of an uprising by the citizens of that city.

Bolharyn, Hryhorii II, 1400–73. Metropolitan of Kiev, student of Metropolitan Isidore with whom he lived in Rome for a period. In 1458 he was appointed by Pope Callistus III and consecrated metropolitan of Kiev by the patriarch of Constantinople, Gregory Mammias, who supported the union with Rome. The metropolitan had authority over nine Ukrainian and Belorussian eparchies. Bolharyn's appointment was related to the separation of the Moscow and Kiev metropolitanates (the latter was under Lithuanian rule). His appointment was confirmed in 1460 by the diet in Berestia. In 1470 Bolharyn successfully petitioned Dionysios, the patriarch of Constantinople, to recognize him as the metropolitan of Kiev.

Bolharynovych, Yosyf I [Bolharynovyč, Josyf], Church leader. In 1494 he became bishop of Smolensk, and from 1498 to 1501 he was metropolitan of Kiev. He was appointed metropolitan by the Grand Duke of Lithuania, Alexander, who in 1499 granted the church under Bolharynovych self-rule and independent ecclesi-

astical courts. Bolharynovych supported the Union of *Florence. Pope Alexander VI adopted one of his proposals and in a separate bull recognized baptism in the Eastern Orthodox rite as valid in the Catholic church.

Bolhrad. VIII-9. City (1969 pop 16,100) founded in 1821 at the mouth of the Yalpukh River where it flows into Lake Yalpukh in southern Bessarabia; a raion center in Odessa oblast. Bolhrad is located in a region that is involved in intensive fruit growing. The city and its surroundings are populated mainly by Bulgarians, who settled there at the turn of the 19th century.

Bolkhovitinov, Evgenii [Bolxovitinov, Evgenij] (secular name: Evfimii), b 29 December 1767 in Voronezh, d 7 March 1837 in Kiev. Church leader, metropolitan of Kiev (1822–37), historian, archeographer, and bibliographer. Among his bibliographic works were *Slovar' russkikh 'svetskikh' pisatelei* (Dictionary of Russian Secular Writers, 2 vols, 1845) and *Slovar' istoricheskii o byvshikh v Rossii pisateliakh dukhovnogo china ...* (Historical Dictionary of Past Clerical Writers in Russia ..., 2 vols, 1818 and 1827). Bolkhovitinov also wrote books on the history of the Ukrainian church and Kiev, including *Opisanie Kiev-Sofiiskogo sobora i Kievskoi ierarkhii* (A Description of the Kiev St Sofia Cathedral and the Kievan Hierarchy, 1826, 1831) and *Opisanie Kiev-Pecherskoi Lavry* (A Description of the Kievan Cave Monastery, 1826). K. Lokhvytsky excavated the foundations of the Church of the Tithes and the Golden Gate in Kiev under Bolkhovitinov's direction and sponsorship.

Bolokhovians (Ukrainian: *bolokhy*). Slavs who lived along the upper reaches of the Boh, Horyn, Sluch, and Teteriv river basins. Their name derives from the Rus' city Bolokhiv (first mentioned in 1150). Their lands bordered on the principalities of Galicia-Volhynia and Kiev. Between 1232 and 1236 the Bolokhovian princes were allies of the Galician boyars in their struggle with Prince Danylo Romanovych and resisted efforts to annex them to the Principality of Galicia-Volhynia. During Batu Khan's invasion they surrendered to his forces, becoming *tatar-s'ki liudy* (the Tatars' people). Consequently, Danylo Romanovych led campaigns against the Bolokhovians in 1241 and 1254–5, annexing their lands to his principality.

Bolozovych, Avksentii [Bolozyovych, Avksentij], 1881–? Leader in the co-operative movement, professor at the Kiev Co-operative Institute in 1918–19, a prominent member of the All-Ukrainian Teachers' Associations, and one of the founders of the All-Ukrainian Teachers' Publishing Society. Bolozovych organized the Ukrainian sugar co-operatives Ukrsiltsukor and Ukraintsukor. In 1928 he was imprisoned on the Solovets Islands for three years. In 1930 he was sentenced at the show trial of the *Union for the Liberation of Ukraine to five years' imprisonment. After serving his sentence, he was forced to live in exile in Siberia.

Bolshakov, Oleksander [Bol'shakov], b 12 September 1909 in Odessa. Chemist. In 1946 Bolshakov began teaching at higher educational institutions in Odessa and in 1954 was promoted to the rank of professor. His main works deal with the processes and equipment of chemical

technology and applied physical chemistry. He discovered a new way of producing bitumen.

Bolsheviks. See Communism, Communist Party of the Soviet Union, Communist Party of Ukraine.

Boltenko, Mykhailo, b 14 January 1888 in Osowiec, Poland, d 6 May 1959 in Odessa. Archeologist, historian, and philologist. Boltenko worked at the Odessa Archeological Museum and Odessa University. He investigated and wrote about the Usatove settlement and burial mounds, the ancient Greek settlement on Berezan Island, and the Greek colonies of Olbia and Tyras.

Bonch-Bruevich, Vladimir [Bonč-Brujevič], b 10 July 1873 in Moscow, d 14 July 1955 in Moscow. Russian Communist Party and government leader and historian of religious movements. He did research on the history of sects and published some works of Ukrainian sectarians such as the stundists and the Malovantsi in his *Materialy k istorii i izucheniu russkogo sektanstva* (Materials for the History and Study of Russian Sectarianism, 1909). He also published the works of H. Skovoroda, without the censorship excisions found in D. Bahalii's edition of 1894, in *Sobranie sochinenii* (Collection of Works, 1 (1912)). Bonch-Bruevich translated some of I. Franko's works into Russian. In 1945 he was appointed director of the Museum of History of Religion and Atheism of the Academy of Sciences of the USSR.

Bonchevsky, Antin [Bončevs'kyj], b 1871 in Uhniv, Galicia, d 25 January 1903 in Ansonia, Pennsylvania. Ukrainian Catholic priest. Bonchevsky arrived in the United States in 1897. He was an active organizer of religious, educational, and cultural life among the immigrants and a member of the *American Circle. Bonchevsky wrote for the weekly newspaper *Svoboda* and from 1900 to 1902 served as president of the Ruthenian National Association. He helped organize Prosvita societies, established a publishing house for popular books, which after his death became known as Bonchevsky Press Slovo, and founded a scholarship fund for students in Lviv.

Bonch-Osmolovsky, Gleb (Bonč-Osmolovskij), b 3 November 1890 in Blon, Belorussia, d 1 November 1943 in Kazan, Russia. Russian archeologist who worked in Leningrad. He did research on the excavated Paleolithic settlement of Kiik-Koba in the Crimea in 1924–5 and presented it in a three-volume work, *Paleolit Kryma* (The Paleolithic Period in the Crimea, 1940–54) and in numerous articles.

Bondar, Mykola, b 21 November 1931. A lecturer in philosophy at the University of Uzhhorod, Bondar was arrested in November 1970 for his participation in a demonstration protesting the Soviet occupation of Czechoslovakia. In May 1971 he was sentenced by the Kiev oblast court to seven years' imprisonment and three years' exile. He served his term in the Mordovian and Perm prison camps and in Vladimir prison, where he participated in hunger strikes and protests by political prisoners.

Bondarchuk, Serhii [Bondarčuk, Serhij] (Sergei), b 29 September 1920 in Bilozerka, Kherson oblast. Prominent

postwar Soviet screen actor and director. An amateur actor from boyhood, he studied in the late 1930s at the Rostov Drama School. During the Second World War he was in front-line Red Army theatrical ensembles. In 1945–8 he studied at the All-Union Institute of Cinematography in Moscow and made his screen debut in S. Gerasimov's *Young Guard* (1948). He made an auspicious debut as a director with *The Fate of a Man* (1959), for which he received the grand prize at the Moscow Film Festival. This warm treatment of a Soviet prisoner of war who tries to build a new life after the war was a remarkable breakthrough in Soviet cinema after J. Stalin's time and encouraged others to re-examine Soviet history on film. Bondarchuk had directed five other films by 1979: the epical, four-part *War and Peace* (1966–7), in which he also played Sokolov and Pierre Bezukhov; the Italian-Soviet-British production of *Waterloo* (1970); *They Fought for Their Homeland* (1975); The Yugoslav film *The Peaks of Zelengore* (1976); and *The Steppe* (1978). In 1960 he became the first Soviet actor since the 1930s to appear in a foreign film, the Italian *Era notte a Roma*. Bondarchuk has had roles in over 20 major films, including the lead roles in *Taras Shevchenko* (1951) and *Ivan Franko* (1956).

Serhii Bondarchuk

Stepan Bondarchuk

Bondarchuk, Stepan [Bondarčuk], b 6 August 1886 in the village of Kodnia near Zhytomyr, d 4 December 1970 in Odessa. Theater director and actor, co-founder of L. Kurbas's Molodyi Teatr theater in Kiev (1916–19). Bondarchuk was a director at the Zhytomyr Independent Theater in 1920–2, at the Berezil theater in 1922–6, and at the First Workers' Theater in Kiev (1930–2). Exiled as a political prisoner to Uzbekistan, he headed a theater in Bukhara in 1937–41. He wrote several plays, including *Proloh* (Prologue), with L. Kurbas, and two plays based on T. Shevchenko's poems, *Varnak* (The Convict) and *Vid'ma* (The Witch).

Bondarchuk, Volodymyr [Bondarčuk], b 11 August 1905 in the village of Denyshti near Zhytomyr. Prominent geologist, full member of the Academy of Sciences of the Ukrainian SSR since 1951. After graduating from the Volhynian Institute of People's Education in 1924, Bondarchuk worked for the Ukrainian Geological Administration until 1938. In 1930 he began teaching in higher educational institutions. In 1944–51 he was rector of Kiev University and in 1951–3 vice-chairman of the Council of Ministers of the Ukrainian SSR. In 1953–63 he directed the Institute of Geological Sciences of the Academy of Sciences. Bondarchuk developed the theory of the insular

Volodymyr Bondarchuk

Yevhen Bondarenko

tectonic-volcanic origin of the earth's crust and founded a new trend in tectonics – tecto-orogeny – which deals with the formation of the structure and relief of the earth's crust. His works include *Heolohichna struktura URSR* (Geological Structure of the Ukrainian SSR, 1946), *Tekto-roheniia* (Tecto-orogeny, 1946), *Heolohichna budova URSR* (Geological Formation of the Ukrainian SSR, 1947), *Kurs zahal'noi heolohii* (Course on General Geology, 1947), *Heomorfolohiia URSR* (Geomorphology of the Ukrainian SSR, 1949), *Radians'ki Karpaty* (The Soviet Carpathians, 1957), *Heolohiia Ukrainy* (Geology of Ukraine, 1959), *Heolohiia rodovyskhch korysnykh kopalyn Ukrainy* (Geology of the Deposits of Useful Minerals in Ukraine, 1966), and *Obrazovanie i zakony razvitiia zemnoi kory* (The Formation and the Laws of Development of the Earth's Crust, 1975).

Bondarenko, Hryhorii, b 11 February 1892 in the town of Novoheorhiivske, Kherson gubernia, d 31 January 1969 in Kharkiv. Landscape and graphic artist. The subjects of his lithographs are drawn from sites associated with B. Khmelnytsky (*On Bohdan's Hill* and *Subotiv*), from the life of T. Shevchenko (*Shevchenko among the Peasants*, *Shevchenko in the Orsk Fortress*, and *Shevchenko at Engelhardt's*), and I. Franko, as well as from Kharkiv and the Donbas. Bondarenko taught at the Kharkiv Art Institute.

Bondarenko, Ivan, b in the village of Hruzke in the Kiev region, d 19 August 1768 in Chornobyl. Haidamaka chief who operated in the regions around Brusyliv, Makariv, and Radomyshl. He was noted for his bravery. Bondarenko was captured by the Poles and executed.

Bondarenko, Viktor, b 15 September 1907 in the village of Kriukiv near Rostov. Economist, agriculture specialist. In 1935 Bondarenko began to teach at institutes in Kiev. In 1941 he was appointed to the Institute of Economics of the Academy of Sciences and in 1966 to the Kiev Institute of the National Economy. Bondarenko published about 50 works in economics, the most important being *Sotsialisticheskoe sel'skoe khoziaistvo Sovetskoi Ukrainy* (The Socialist Agriculture of Soviet Ukraine, 1939), *Narysy rozvytku narodnoho hospodarstva Ukrain's'koi RSR* (Outlines of the Development of the National Economy of the Ukrainian SSR, coauthor, 1949), *Ocherki razvitiia narodnogo khoziaistva Ukrain's'koi SSR* (Outlines of the Development of the National Economy of the Ukrainian SSR, 1954), and *Baliansovyi metod vyvchennia rozvytku narodnoho hospodarstva* (The Balance Method of Studying the Development of the National Economy, 1974).

Bondarenko, Yevhen, b 17 January 1905 in Kharkiv, d 1977 in Kharkiv. Comic actor of the L. Kurbas school. In 1924 he played in the Kharkiv Theater of Working Youth. In 1927–33 he worked in the *Berezil theater. From 1934 he worked in the Kharkiv Drama Theater. His main roles included Svichkohas in I. Kocherha's *Iaroslav Mudryi* (Yaroslav the Wise), Omelko in I. Karpenko-Kary's *Martyn Borulia*, Malvolio in W. Shakespeare's *Twelfth Night*, the knight in C. Goldoni's *La locandiera*, and Dovbnia in P. Myrny's *Poviiia* (The Whore). He also acted in films, playing the role of Dravchyna in O. Dovzhenko's *Poem about the Sea*. From 1948 he taught at the Kharkiv Institute of Art.

Bondarykha culture. An archeological culture of the late Bronze Age, discovered between 1951 and 1953. This culture was widespread in the forest-steppe zone of Left-Bank Ukraine. Its ceramic artifacts have an original style. Settlements of the Bondarykha culture, which tended to be small, unfortified, and situated on mounds, consisted of earthen huts. In the earliest stages these tribes based their existence on hunting, fishing, and primitive animal husbandry; in the late stages they evolved towards an agrarian-pastoral economy and lived in small settlements based on kinship. Archeologists have found stone molds used to make bronze celts, as well as flint, clay, iron, and bone implements. The Bondarykha culture dates from the late second millennium to the 8th century BC. The disappearance of its tribes in the 6th century BC was caused by the incursions of Scythian tribes, which took over the entire forest-steppe zone of Left-Bank Ukraine.

Boniak. Cuman khan who led invasions on Kievan Rus' in 1096–1107 (see *Cumans). In 1096 Boniak attacked Kiev, burned down the princely palace in Berestove, and plundered the Kievan Cave Monastery. In 1107 he was defeated by the Rus' princes' forces near Lubni.

Bonkáló, Sándor [pseud: O. Rakhivsky], b 1880 in Rakhiv, Transcarpathia, d 1959 in Budapest. Slavic philologist and literary scholar. He studied in Budapest, Leipzig, and St Petersburg with O. Shakhmatov and J. Baudouin de Courtenay. In 1919–24 and 1945–8 he held the chair of Ukrainian and Russian languages at Budapest University. His work in Ukrainian dialectology and the history of literature and cultural processes includes *A ráhoi kisorosz nyelvjárás leíró hangtana* (A Descriptive Phonetics of the Ruthenian Dialect in Rakhiv, 1910), *Vyimky z uhors'ko-rus'koho pys'menstva xvii–xviii v.* (Selections from 17th- and 18th-Century Hungarian-Ruthenian Literature, 1919), *A kárpátalji rutén irodalom és művelődés* (The Literature and Culture of the Carpathian Ruthenians, 1935), and *A magyar rutének (ruszinok)* (The Hungarian Ruthenians, 1940). He was a supporter of the vernacular-language orientation, but politically pro-Hungarian.

Bonkovsky, Denys [Bonkovs'kyj], b 1816 in Berdychiv, d ?. An amateur poet and composer. The following are some of the songs for which Bonkovsky wrote both the lyrics and the melodies: 'Handzia,' 'Hei ia kozak, zovus' Volia' (Hey, I Am a Cossack Called Freedom), 'De shliakh chornyj' (Where the Road Is Black), 'Kari ochi' (Dark Eyes), 'Kozak-ukrainets' (A Ukrainian Cossack), 'Nud'ha kozacha' (Cossack Melancholy), 'Tropak' (a Ukrainian dance).

Bonn, Franz Xavier, 1882–1945. Belgian, one of the first members of the Redemptorist order, which adopted the Eastern rite in 1911 in Galicia. In 1918 Bonn served as chaplain of the Ukrainian Galician Army. In 1919 he was a member of the Ukrainian delegation that negotiated the Polish-Ukrainian armistice with the Allied powers. In 1919–20 Bonn served as chief of the UNR diplomatic mission at the Vatican (succeeding M. Tyshkevych). Later he served as a priest in the United States.

Book Chamber of the Ukrainian SSR (Knyzhkova palata URSR im. I. Fedorova). A bibliographical institution formed in 1922 in Kharkiv under the name Ukrainian Book Chamber. It was organized on the basis of the Supreme Book Chamber, established in Kiev in 1919, and of the Central Bibliographical Department of the All-Ukrainian State Publishing House (see *State Publishing House of Ukraine) in Kharkiv. A subsidiary of the Ukrainian Book Chamber was the *Ukrainian Scientific Institute of Bibliology in Kiev. The chamber received and registered all works printed in Soviet Ukraine and many Ukrainian works published outside Ukraine. The results of its work were published in the journal *Knyha* and its supplement *Bibliograficheskii biulleten' Ukrainkoi knizhnoi palaty* (4 issues, 1923), in **Nova knyha* (1924–5), and principally in **Litopys ukrains'koho druku* (1924–30). *Kartkovyi repertuar* was published separately, while *Knyzhkovi novyny URSR*, *Rekomendatsiini spysky*, and *Biuletyn' retsenzii na knyzhkovo-zhurnal'nu produktsiiu URSR* came out as a supplement to **Radians'kyi knyhar*. The Ukrainian Scientific Institute of Bibliology published *Bibliografichni visti* (1923–30).

In 1935 the Book Chamber of the Ukrainian SSR was subordinated to the All-Union Book Chamber. *Litopys ukrains'koho druku* was revived under the name *Litopys druku URSR*; it now appears as a number of specialized publications: *Litopys knyh* (since 1924), *Litopys zhurnal'nykh statei* (since 1936), *Litopys hazetnykh statei* (since 1937), and others. The chamber also publishes an annual catalog, *Novi vydannia URSR*; and retrospective bibliographic guides; conducts numerous statistical studies on Ukrainian publishing; and serves as a center for bibliographical and bibliological research. Currently its archives contain over eight million items.

Book publishing. Books in manuscript form appeared in Ukraine with the coming of Christianity in the second half of the 10th century. These were translated liturgical books, lives of saints, and the writings of the fathers of the church. By the end of the 11th century original books appeared in Kievan Rus'. They were artistically transcribed in the monasteries, principally in Kiev. After the invention of printing, its use was developed in Ukraine in the second half of the 16th century. This greatly increased book production, although the industry still required manual labor, making large printings impossible for several centuries. Only at the beginning of the 19th century, when the manual press was replaced by the printing machine, did book printing become an important branch of industry (see *Polygraphic industry).

End of the 18th to the beginning of the 20th century. The first book in modern Ukrainian – I. Kotliarevsky's *Eneida* (Aeneid) – was printed in St Petersburg in 1798, and the first Ukrainian publication printed in Ukraine – P. Hulak-Artemovskyy's *Solopii ta Khivriia* (Solopii and

Khivriia) – appeared in Kharkiv in 1819. By 1847 the works of H. *Kvitka-Osnovianenko, M. Kostomarov, I. Kotliarevsky, A. Metlynsky, and others (about 100 works in all) had been published in Kharkiv. From then on, however, the tsarist government imposed various restrictions and bans on Ukrainian publications. As a result, the number of books published in Ukrainian hardly increased: it rose from 3 in 1848 to 41 in 1862, and then fell to 5 by 1865 and 1870 as the result of P. *Valuev's circular. In 1875 the number rose to 30, only to fall again to 2 in 1877 as a result of the *Ems ukase. In 1880 not one Ukrainian book was published in Russian-ruled Ukraine.

Given such repressive conditions under Russia, from the 1860s Galicia, and particularly Lviv, became increasingly the center of Ukrainian publishing. As early as 1875 more books were published in Galicia (62, 42 of them in Lviv) than in Russian-ruled Ukraine. In 1894, 177 books were published in Galicia (136 in Lviv), compared to 30 in eastern and central Ukraine. After the Revolution of 1905 conditions under Russia eased somewhat, and, in 1913, 246 Ukrainian books were published. That same year 326 books appeared in Galicia (238 in Lviv). Thus, until the outbreak of the First World War, Galicia led Ukraine in the production of Ukrainian books. In Bukovyna books from Galicia were read, although in the 1870s local publishers began to produce general educational literature and belles lettres in Ukrainian. By 1918 about 270 titles had been published in Bukovyna. In Transcarpathia publishing in Ukrainian developed later. Four books were published there in 1875, 3 in 1894, and 22 in 1913.

During this period most of the books published in Russian-ruled Ukraine consisted of belles lettres and popular books 'for the people.' Most scholarly books were published in Galicia.

During the period of independent Ukrainian statehood the production of books increased rapidly. In central and eastern Ukraine 747 books were published in Ukrainian in 1917, and 1,084 in 1918, but only 665 in 1919 because of the invasion of Ukraine by the Russian White and Red armies.

1920–45. A completely new period in the history of Ukrainian publishing began with the Soviet occupation of Ukraine and particularly in 1921, when the economy, including the book market, stabilized. By the mid-1920s all private publishing houses were finally eliminated, and all book production became concentrated in state publishing houses, mainly in the *State Publishing House of Ukraine and the *Knyhospilka Ukrainian co-operative publishing union. Not only belles lettres but also books in every branch of science and technology were published on a large scale. A disproportionately high number of publications were devoted to political propaganda. The growth in book production in the Ukrainian SSR (excluding the Crimea and Western Ukraine) is presented in table 1. It is evident from these figures that during the years of *Ukrainization the general production of books increased and the proportion of books in Ukrainian also increased, so that in 1930 it reached almost 80 percent. But with the official campaign against Ukrainian culture and with increasing Russification the production of books and the proportion of Ukrainian books began to decline from 1932, accompanied by a corresponding increase in Russian book production. The proportion of Ukrainian books produced in the Soviet Union was considerably lower than the proportion of the Ukrainian population in

TABLE 1
Book production in Ukraine, 1920–39

Year	Total no. of titles published	Ukrainian titles	% Ukrainian titles
1920	1,013	397	39
1921	987	205	21
1922	1,975	331	17
1923	2,567	459	18
1924	3,262	1,061	32
1925	5,718	1,935	34
1927	5,156	2,431	47
1928	5,920	3,220	54
1931	8,669	6,455	74
1934	5,267	2,536	48
1939	4,573	1,895	41

the USSR (16.5 percent): 9.3 percent in 1928, 11.7 percent in 1931, and only 4.3 percent in 1939.

During this period, and particularly in the late 1920s, valuable publications of the classics of Ukrainian literature appeared. Many works of contemporary writers, which were later to a large extent proscribed, and translations were published. The All-Ukrainian Academy of Sciences produced many valuable scholarly publications. The production of scientific and technical books grew rapidly, but from the 1930s they were increasingly published in Russian. Books in Ukrainian studies became prevalently tendentious and permeated with Russian chauvinism.

In Galicia the production of books in the interwar period outstripped that of the prewar period (362 titles in 1913) only at the end of the 1920s – 195 titles appeared in 1924, 321 in 1927, 450 in 1928, and 391 in 1929. In 1930–8 the average annual production was 366 titles. In 1938 it reached 476 titles, that is, 22 percent of Soviet Ukraine's production of Ukrainian books. A number of valuable books in history, in particular the history of the struggle for independence, and in geography were published in Galicia. The first encyclopedia in Ukraine – **Ukrains'ka zahal'na entsyklopediia* (The Ukrainian General Encyclopedia) – appeared there, as did many publications that could not be published or were prohibited in Soviet Ukraine.

In Bukovyna after the First World War Rumanian censorship caused the production of Ukrainian books to decline rapidly. In 1921–8 only 39 titles were published. In Transcarpathia, which was under Czechoslovakian control, conditions were much more liberal, and over 1,000 Ukrainian titles (including books in so-called Carpatho-Ruthenian) were published between the two world wars.

The Second World War practically wiped out the production base and the market for Ukrainian books, particularly on the territory of the Ukrainian SSR, where during the German occupation almost nothing except for occasional local publications was published. Only the **Ukrainske Vydavnytstvo* publishers in Cracow, which later had a branch in Lviv, published Ukrainian textbooks as well as popular and scholarly books.

After 1945. After the Second World War it took 16 years for book production in Ukraine to reach the 1940 level of 4,836 titles. While in 1945 only 1,028 titles appeared, in 1978 the number of books and pamphlets published was 8,259. In general, the number of pam-

phlets (publications having between 5 and 48 pages) published in the Soviet Union is high; this plays a major role in the Soviet statistics. In the years 1966–75, for example, pamphlets constituted 45 percent of all publications printed in Ukraine. Furthermore, a large portion of the Soviet publications are not for sale.

In 1978 only 2,288 books and pamphlets or 27 percent of all publications printed in Ukraine were in Ukrainian, while publications in Russian numbered 5,636 titles or 68 percent. In addition, 19 titles appeared in the other languages of the USSR, and 316 in the languages of countries outside the Soviet Union. Only 5 titles were published in Ukrainian in the USSR outside Ukraine. While 2,293 Ukrainian titles in a press run of 101,190,300, including 328 translations from 34 languages, were published, 66,623 Russian titles in a press run of 1,459,721,400, including 2,288 translations from 91 languages, appeared in the USSR in 1978. There appeared 54,182 titles in a press run of 1,406,227,400 (14,752,741,200 printed folios) in the Russian SFSR and 8,259 titles in a press run of 157,946,300 (1,499,003,200 printed folios) in the Ukrainian SSR in 1978. This indicates that in the Russian SFSR 10.26 books were printed per capita, while the ratio in the Ukrainian SSR was only 3.18. Considering only books in Ukrainian, the ratio was 2.04 books per person. In the Russian SFSR each book contained an average of 14.6 printed folios; in the Ukrainian SSR it had only 13.

In addition to 3,115 pamphlets, 5,144 book titles appeared in Ukraine in 1978. Table 2 shows the distribution of these titles by subject and by the type of publication.

Less than half of the publications (4,066 titles, 142,259,000 copies) were published by the 23 publishing houses located in Kiev (16) and in 7 other cities, subordinated, with the exception of 2 publishing houses, directly or indirectly to the State Publishing Committee of the Ukrainian SSR.

The number of books and pamphlets published by oblast in 1978 was as follows: Kiev – 5,884, Kharkiv – 838, Lviv – 275, Donetsk – 259, Odessa – 207, Dnipropetrovske – 173, Crimea – 160, Voroshylovhrad and Transcarpathia – 98 each, Mykolaiv – 69, Kirovohrad – 51, Chernivtsi – 32, Zhytomyr – 18, Zaporizhia – 15, Sumy and Volhynia – 14 each, Cherkasy and Ternopil – 11 each, Poltava – 10, Ivano-Frankivske – 9, Chernihiv – 6, Rivne – 5, Khmelnytskyi and Kherson – 1 each. Not one publication appeared in Vinnytsia oblast.

In the period 1946–75, 190,693 books and pamphlets were published in Ukraine, 18,046 of which were translations. Publications in Ukrainian amounted to 83,319 titles, including 13,030 translations from 94 languages. Scholarly works numbered 26,430 titles, 9,332 of which were in Ukrainian, 16,413 in Russian, and 685 in other languages. There were 20,278 titles in literature, distributed as follows: Ukrainian literature – 11,625 titles, Russian literature – 5,585, other literatures – 3,068 titles. In 1918–78 there appeared in the Soviet Union 160,426 works (press run of 9,571,304,200) of Russian literature and only 23,973 works (press run of 842,502,100) of Ukrainian literature.

It is difficult to analyze precisely the entire production of books in the Ukrainian SSR. It is evident from the number of titles in each subject for 1978, however, that the number of political and socioeconomic books (23.3

TABLE 2
Book production in Ukraine in 1978

percent of all titles that year) is disproportionately large. These publications consist mostly of propaganda – the materials of Party congresses, Party and government resolutions, antireligious brochures, etc – and are usually published in Ukrainian. The more valuable books in the natural and mathematical sciences, economics, medicine, etc, are usually published in Russian. The classics of Ukrainian literature, though they appear in large press runs, are almost never published in their entirety and rarely contain objective commentaries, annotations, and full bibliographies. The works of some important writers are still proscribed (for example, P. Kulish). As for the works of contemporary Soviet writers, of which many titles appear in large press runs, their artistic level is usually low and to a large extent can be regarded as ideological propaganda. Their only value lies in the fact that they sustain the daily use of the Ukrainian language. Very few translations of Western writers are published; most of the translations are of old, well-known classics. Of the contemporary Western writers, mostly Communist writers are translated. Books in Ukrainian studies (literary scholarship, language, history, etc) are usually tendentious, with a Russian chauvinistic bias.

Outside Ukraine. Before 1914 Ukrainian books did appear outside Ukraine but only sporadically – in St Petersburg, Vienna, Geneva, New York, Philadelphia, Jersey City, Winnipeg, etc. During the First World War Vienna became an important Ukrainian publishing center, but Ukrainian books were also published in Geneva and in the prisoner-of-war camps in Germany (Rastatt, Salzwedel, Wetzlar). After the war Ukrainian books were published in the main Ukrainian émigré centers – Berlin, Leipzig, Prague, Warsaw, Poděbrady, Paris, and Harbin. Books were also published by non-political immigrants in the United States and the Bačka region in Serbia. During the Second World War Cracow, Prague, and Berlin were the centers of Ukrainian publishing and produced over 500 titles in 1939–41.

After the Second World War Ukrainian books were published briefly in the new émigré centers in Germany and Austria and to a lesser extent in France, Belgium, Switzerland, and Italy. According to I. Luczkiw, 2,104 Ukrainian books, including 96 in foreign languages, were published in Western Europe in 1945–50: 577 of them dealt with sociopolitical subjects, 557 were literary works or literary studies, 295 were religious books, 172 dealt

with history or geography, 135 were devoted to science or applied science, and 98 to linguistics. When most of the Ukrainian refugees emigrated from Europe, the USA (New York, Philadelphia, Chicago), Canada (Toronto, Winnipeg, Yorkton, Edmonton), Argentina (Buenos Aires), and to a lesser extent Brazil (Prudentópolis and Curitiba) and Australia became the centers of Ukrainian publishing. But Ukrainian publishing firms continue to operate in Europe (Munich, Neu-Ulm, Paris, London, and Rome). Small Ukrainian publishing centers have been established in Ruski Krstur in Yugoslavia, Warsaw, and Prešov in Slovakia.

Sale and distribution. The first popularizers of books were the publishers and printers themselves. The monasteries and schools played an important role in distributing books. Beginning in the 17th century, the Lviv Dormition Brotherhood disseminated religious books throughout Ukraine and in the Christian countries of the Slavic East. In the 18th century this function in eastern Ukraine was taken over by the bookshop of the Kievian Cave Monastery. Private printing shops and bookstores began operation. In 1779–80 F. Tumansky, a publisher and statistician, planned to open a central academic bookstore in Hlukhiv.

In the 19th century Odessa became an important book center in Ukraine. In 1846 Odessa had 6 bookstores, but they sold non-Ukrainian books. The journal *Osnova* in St Petersburg distributed the few Ukrainian books that were published, employing student salesmen to sell books at fairs and festivals. The first bookstores in Kiev to sell Ukrainian books were established in the 1870s by M. Levchenko and L. Inytsky. At the time there were about 20 bookstores in Kiev. In 1884 a well-run Ukrainian bookstore was set up by the Kievskaiia Starina publishing house. Some bookstores in Odessa and Chernihiv specialized in Ukrainian books. Musical literature was distributed by L. Idzikowski's publishing firm and bookstore in Kiev.

A number of Ukrainian bookstores in Russian-ruled Ukraine were run after 1905 by private individuals, associations, and publishers. The largest among them was the bookstore of *Literaturno-naukovyi vistnyk* in Kiev, which also distributed Galician publications. In Galicia book-distribution networks were organized by the Staurpogion Institute (formerly the Lviv Brotherhood), the Prosvita society, and the Shevchenko Scientific Society in Lviv. Small Ukrainian bookstores operated in the provincial towns of Galicia.

In 1920 the Soviet regime nationalized all privately owned bookstores but permitted co-operative bookstores to operate side by side with the state distributing firms. The distribution systems of the State Publishing House of Ukraine and of the Knyhospilka union in Kharkiv encompassed about 6,000 bookstores throughout Soviet Ukraine. The Sel-Knyha joint-stock society also distributed books. This network was replaced by an exclusively state system in 1930.

The Ukrainian Book Center (Ukrknyhotsentr) had a monopoly on book distribution and was subordinated to the Council of People's Commissars of the Ukrainian SSR. The name of the agency was changed to the Ukrainian Book Trade (Ukrknyhotorhivlia) in 1934 and to the Ukrainian Book and Cultural Trade (Ukrknyhokulttorh) in 1938. In 1949 the Ministry of Culture was put in charge of the book distribution conducted by the Ukrknyhokult-

torh. In 1956 the Ukoopspilka association of consumer societies was made responsible for the sale of books in raion centers. The all-Union publishers send their publications directly to Ukrainian bookstores or else run their own bookstores (Soiuzpechat, Voenknyga, etc). In 1956 there were 1,097 bookstores and 2,785 bookstands in the Ukrainian SSR. Village libraries receive books from the raion distribution centers. Ukrainian books are exported abroad by the Ukrainian Book Trade (Ukrknyhtorh) through International Book (Mezhdunarodnaia Kniga) in Moscow. Ukrainian Book (Ukrainska Knyha) stores in Canada sell Soviet Ukrainian publications in co-operation with International Book. The Society of Bibliophiles of the Ukrainian SSR, which is part of an all-Union association, works without commercial motives to popularize books in Ukraine.

In 1920–39 book sales in Western Ukraine were handled not only by publishers and the bookstores of the Shevchenko Scientific Society, the Prosvita society, and the Ridna Shkola society in Lviv, and their branches in the counties, but also by private bookstores. Some publishers set up an effective network of booksellers. Several Ukrainian bookstores operated in Transcarpathia and in the larger émigré centers – Prague, Berlin, Vienna, and Paris.

The large immigrant population in North America established Ukrainian bookstores under church, institutional, or private control. One of the first was the Ukrainian Bookstore in Edmonton, which was founded in 1914 and is still in operation. Publishers take care of their own distribution, but usually on a small scale. Almost every large Ukrainian immigrant center has at least one store; in 1980 there were about 80.

Bibliology. The *Ukrainian Scientific Institute of Bibliology in Kiev (1922–36, director Yu. *Mezhenko) was one of the few research institutions that studied the production of books in Soviet Ukraine. Today bibliological research is conducted at the institutes of culture and the Ukrainian Polygraphic Institute in Lviv. The Book Chamber of the Ukrainian SSR has been responsible for registering and preserving books since 1922. In 1972 the Book and Book Printing Museum of the Ukrainian SSR was established in one of the buildings of the Kievian Cave Monastery to preserve rare books and incunabula. Information about new books published in Soviet Ukraine appears in the weekly **Druh chytacha* and the catalog *Novi vydannia URSR*. (See also *Bibliography, *Libraries, and *Publishers.)

Bookplate (ex libris). Artistic label, containing a drawing, coat of arms, or other device, an inscription, and the name of the owner, which is pasted on the inner cover or flyleaf of a book. Bookplates first appeared in Germany between 1450 and 1470. The oldest known bookplate in Ukraine dates from 1601 and appears in a book owned by the guildmaster S. Samborsky of Kamianets-Podilskyi. The bookplates of O. Bezborodko, F. Tumanski, M. Fankovych, and of the Basilian monastery library in Kholm are typical examples of 18th-century bookplates. In the mid-18th century the engraver I. Fylypovych designed the bookplate of the Zalusky family library. In the 19th century the larger book collections displayed bookplates with coats of arms. At the beginning of the 20th century the bookplate tradition was developed by Yu. *Narbut. Since then such artists as M. Sosenko, O. Kulchytska, V. Krychevsky, and many others have produced bookplates. In the 1920s–1930s P. *Kovzhun, the most distinguished Ukrainian bookplate designer, contributed to the development and popularity of the art form. As a result of his efforts a book on Ukrainian bookplates with numerous reproductions was published in Lviv in 1932. During this period the following artists designed bookplates: M. Butovych, I. Padalka, O. Sakhnovska, P. Kholodny, Jr, N. Khasevych, L. Khyzhynsky, V. Tsymbal, S. Hordynsky, M. Osinchuk, Ya. Muzyka, and V. Sichynsky. After 1940 the art form was perpetuated outside Ukraine by such artists as J. Hnizdovsky, V. Balias, Yu. Kulchytsky, M. Bilynsky, M. Levytsky, and L. Hutsaliuk. E. Tyrs-Venhrynovych of Cracow produced over 200 woodcut bookplates. In the Ukrainian SSR such graphic artists as K. Kozlovsky, V. Stetsenko, V. Masyk, O. Hubariev, M. Kurylych, H. Malakov, V. Kutkin, S. Gebus-Baranetska, and H. Davydovych have produced well-designed bookplates. The art attained a particularly high standard in the 1960s at the hands of V. Perevalsky, M. Malyshko, N. Denysova, M. Pavlusenko, O. Zalyvakha, H. Sevrak, and B. Soroka. An album of their bookplates was published in the United States in 1972.

The collecting of bookplates developed together with book printing and the growth of libraries at the end of the 18th and the beginning of the 19th century. Special bookplate collections are found at the Library of the Academy of Sciences of the Ukrainian SSR in Kiev, the Kiev Museum of Ukrainian Art, the Lviv Museum of Ukrainian Art, and in private collections, mainly in Kiev and Lviv. In the United States valuable bookplate collec-

tions are owned by Metropolitan M. Skrypnyk, M. Kuzmovych, and S. Hordynsky.

Severyn Borachok

Borachok, Severyn [Boračok], b 1898 in Sorotsko, Ternopil county, Galicia, d 8 July 1975 in Richmond, Virginia. Painter, postimpressionist. Borachok studied at the Cracow Academy of Arts in 1921–4 with J. Pankiewicz and at its branch in Paris from 1925 on. He was a member of a group of 10 artists known as the *Comité Parisien*. A jury that included R. Dufy and P. Bonnard awarded the first prize in an academy competition to Borachok. In 1937 Borachok moved to Munich and in 1962 to the United States. Exhibits of his paintings were held in Lviv, Warsaw, Cracow, Paris, Geneva, Munich, New York, and elsewhere. In his work Borachok used various techniques and materials. His latest works consisted of mosaics made of Venetian glass. Borachok's creative imagination expressed itself through color and light, with much attention given to detail. His main works were compositions with female figures, landscapes, still lifes, and, at the end of his life, icons. An iconostasis by him is installed in the Ukrainian chapel in Mackwiller, France.

Borbists (Borbisty). A group of Russian Socialist Revolutionaries in Ukraine that supported the Bolshevik regime. It originated from the split in the Russian party of left Socialist Revolutionaries in Ukraine and took its name from the title of its Russian-language periodical *Bor'ba* (The Struggle). The group existed from May 1919 to July 1920, when it dissolved itself and joined the CP(B)U of Ukraine. In the 1920s some former Borbists held important positions in the government of the Ukrainian SSR, includ-

ing Ye. Terletsky, V. Kachynsky, S. Mstislavsky (who vehemently opposed Ukrainization in 1926), procurator O. Malytsky, I. Alekseev, and G. Besedovsky.

Borduliak, Tymotei [Borduljak, Tymotej], b 2 February 1863 in Borduliaky, Brody county, Galicia, d 16 October 1936 in Velykyi Khodachkiv (also known as Velyka Khodachka), Berezhany county. Greek Catholic priest in Galicia, prose writer, and translator. Borduliak wrote for *Zoria* and other journals. A realist writer, he depicted the life of the contemporary Galician peasantry in his short stories. His collection *Blyzhni, obrazky i opovidannia* (Neighbors: Sketches and Stories, 1899) was republished in Kiev under the title *Opovidannia z halyts'koho zhyttia* (Stories of Galician Life, 1903). He later published the following stories in almanacs and periodicals: 'Prokhor Chyzh,' 'Zhura' (Grief), 'Perervanyi straik' (Interrupted Strike), 'Vistka' (News), 'Perednivok' (Time before the Harvest), 'Maister Fed' Tryndyk' (Master Fed Tryndyk), 'Iuviliat' (Jubilarian). He published nothing after 1916. Later republishations of his work include *Opovidannia* (Stories, 1927), *Vybrani tvory* (Selected Works, 1930), *Vybrani opovidannia* (Selected Stories, 1953), and *Tvory* (Works, 1958).

Tymotei Borduliak

Bishop Isidore Borecky

Bordzylovsky, Yevhen [Bordzylovs'kyj, Jevhen], b 10 September 1875 in Kiev, d 8 November 1948 in Kiev. Botanist, corresponding member of the Academy of Sciences of the Ukrainian SSR from 1939. His work centered on floristics and the systematics of plants. He edited the first volume of **Flora URSR* (Flora of the Ukrainian SSR), a project he initiated.

Borecky, Isidore [Borec'kyj, Isydor], b 1 October 1911 in the village of Ostrivets, Terebovlia county, Galicia. Ukrainian Catholic bishop. Educated at theological seminaries in Lviv (1932–6) and Munich (1936–8), Borecky was ordained in 1938, the year he emigrated to Canada. He served initially at Canora, Saskatchewan, and from 1939 to 1948 at Brantford, Ontario. In 1948 he was appointed bishop of Amathus and consecrated exarch of eastern Canada; since 1956 he has been bishop of the Toronto eparchy. Borecky is a member of the synod of Ukrainian Catholic bishops and actively supports the concept of the Ukrainian Catholic patriarchate.

Boretsky, Mykola [Borec'kyj], b 19 December 1879 in Sarny, Volhynia, d? Metropolitan of the Ukrainian Autocephalous Orthodox church (UAOC). Boretsky grad-

uated from the Kiev Theological Seminary (1901) and was ordained an orthodox priest in 1904. In 1921 Boretsky joined the UAOC and in 1922 was consecrated bishop of the Haisyn region. In October 1927, the Second All-Ukrainian Orthodox Sobor elected him metropolitan of Ukraine. As primate of the UAOC Boretsky chaired several church conferences and pastoral meetings under adverse political conditions (governmental pressure), co-ordinated the work of 12 Kiev parishes, and published many articles in the UAOC journal *Tserkva i zhyttia*. Boretsky's fate after his arrest and exile to Medvezha Hora in 1930 is unknown.

Boretsky, Yov [Borec'kyj, Jov], d 2 March 1631 in Kiev. Outstanding church leader and educator, defender of the Orthodox faith, the Orthodox metropolitan of Kiev (1620–31). His family came from Bircha in Galicia. He was educated at the Lviv Dormition Brotherhood school and abroad. He worked as a teacher and rector at the Lviv Dormition Brotherhood School (1604–5) and was the first rector of the Kiev Epiphany Brotherhood School (1615–18). In 1620 he helped found the Lutske Brotherhood School. In 1619 he became hegumen of St Michael's Golden-Domed Monastery of Kiev. In August 1620 the patriarch of Jerusalem, Theophanes III, ordained Boretsky metropolitan of Kiev. Boretsky had a strong influence on the Cossacks under P. Sahaidachny's hetmancy. As metropolitan Boretsky composed a petition in defense of the Orthodox hierarchy entitled **Protestatsiia* (1621). Along with the Uniate metropolitan Y. *Rutsky, he favored a general reconciliation within the Ukrainian church, but failed to gain the support of the Cossacks for his plans. A prolific translator, Boretsky also wrote poems honoring saints, petitions, prefaces, and edicts. **Perestoroha* is attributed to him. He was the coauthor of *Apolleia Apolohii* (A Refutation of 'A Defense,' 1628) and the translator of **Antolohion* from the Greek (1619).

Boriskovsky, Pavel [Boriskovskij], b 27 May 1911 in St Petersburg. Russian archeologist, professor at Leningrad University since 1959, and associate of the Institute of Archeology of the Academy of Sciences of the USSR. Boriskovsky conducted archeological excavations in Ukraine. In 1938–9 he excavated a Paleolithic dwelling at the *Pushkari site in Chernihiv oblast, and in 1946 he discovered one of the oldest archeological monuments in Ukraine – the *Luka Vrublivetska site on the Dniester River. He has written several works on the Paleolithic period, including *Paleolit Ukrainy* (The Paleolithic Period in Ukraine, 1953) and *Paleolit basseina Dnepra i Priazov'ia* (The Paleolithic Period in the Dnieper Basin and the Azov Region, 1964).

Boriso, Inokentii, b 1800 in Yelets, Orlov gubernia, Russia, d 1857. Orthodox theologian, bishop of Chyhyryn from 1836, archbishop of Kharkiv from 1843 and of Kherson and Tavriia from 1847, famous preacher. Borisov studied at the Kiev Theological Academy and was its rector in 1830–36. He improved the level of instruction there. As a theologian he favored the historical-comparative method. He founded the weekly *Voskresnoe chtenie* in Kiev and wrote a number of works on church history and the Holy Scriptures, including *Istoricheskoe obozrenie bogosluzhbovykh knig Greko-Rossiiskoi Tserkvi* (A Historical Survey of Liturgical Books of the Greco-Russian Church,

1836–43). His sermons and other works were published in 12 volumes in 1901 in St Petersburg.

Boritiesia – Poborete (Struggle – You Shall Overcome). Non-periodic organ of the foreign delegation of the *Ukrainian Party of Socialist Revolutionaries, published in Vienna from 1920 to 1922. *Boritiesia-Poborete* was edited by M. Hrushevsky, in close collaboration with M. Shrah, M. Chechel, M. Shapoval, and others. The journal's political line was one of acquiescence to a Soviet political order in Ukraine and to Ukraine's federal association with other Soviet socialist states. Ten issues of *Boritiesia-Poborete* were published; the sixth issue was devoted entirely to a draft program of the Ukrainian Party of Socialist Revolutionaries.

Borivske [Boriv's'ke]. v-19. Town smt (1976 pop 9,300) in Lysychanske raion, Voroshylovhrad oblast, situated on the Donets River.

Borkaniuk, Oleksa [Borkanjuk], b 11 January 1901 in Yasinia, Transcarpathia, d 3 October 1942 in Budapest. Journalist and political figure in Transcarpathia. In 1929 Borkaniuk became first secretary of the Komsomol committee in Transcarpathia and editor of the newspaper *Pratsiuiucha molod'* (1930–6). He edited **Karpats'ka pravda* from 1931 to 1933. In 1933 he became first secretary of the Communist Party of Transcarpathian Ukraine and was a member of the Czechoslovak parliament from 1935 to 1938. In 1939 he fled to the USSR. Parachuted into Transcarpathia in order to do underground work in March 1942, he was captured by the Hungarians and executed.

Borkovsky, Ivan [Borkovs'kyj], b 8 November 1898 in Galician Podilia, d 17 March 1976 in Prague. Archeologist. In the early 1920s Borkovsky lived in Prague, where he completed his university education. In 1933–45 he was a professor at the Ukrainian Free University, serving as its rector in 1939–40 and 1941–3. He did archeological research on the Corded-Pottery culture, the Hradčany castle of Prague, and several other Czech cities.

Borkovsky, Oleksander [Borkovs'kyj], 1841–1921. One of the pioneers of the Galician renaissance. Borkovsky was a journalist, teacher, editor of *Zoria* (1886–97), and *Dilo*, and a co-founder of the Prosvita society.

Borkowski-Dunin, Piotr, 1890–1949. Polish count, political figure, journalist. He had large landholdings in Galicia and in 1926 became the voivode of Lviv. He opposed the partition of Galicia, holding that the province was historically a mixed region of Ukrainians and Poles. He also spoke out against Polish colonization and the Pacification (1930) in eastern Galicia. A series of his articles, entitled 'O punkt wyjścia w sprawie ukraińskiej' (On the Basic Point of the Ukrainian Question), was published in *Droga* (Warsaw 1931).

Borodai, Vasyl [Borodaj, Vasyl'], b 18 August 1917 in Katerynoslav. Sculptor. Borodai studied at the Kiev Art Institute (1947–53). In 1966 he became lecturer, and in 1971 professor, at the institute. He has been a full member of the Academy of Arts of the USSR since 1973 and was chairman of the Union of Artists of the Ukrainian SSR from 1968 to 1973. Among his sculptures are the following

compositions: *Youth* (1951), *Ivan Bohun* (1954), *Lesia Ukrainka* (1957), and *Bandura Player* (1960). He also completed portraits of P. Panch (1960), P. Tychyna (1963), L. Revutsky (1963), and T. Yablonska (1974), as well as the series *Through Egypt* (1961–4) and some monuments – busts of J. Słowacki in Kremianets (1969) and of T. Shevchenko in Arrow Park, New York (1970). Borodai's works usually meet the demands of socialist realism. His most interesting sculptures are adaptations of the ancient Egyptian style (eg. *Silence*). Monographs on Borodai by B. Lobanovsky (Kiev 1964) and Z. Fogel (Moscow 1968) have been published.

Vasyl Borodai

Serhii Borodaievsky

Borodaievsky, Serhii [Borodajevs'kyj, Serhij], b 1870 in Okhtyrka, Kharkiv gubernia, d 1942 in Prague. Scholar and leading theoretician of the co-operative movement. After graduating from Kharkiv University, Borodaievsky worked in St Petersburg and published a collection of articles on small credit. In 1910 he became vice-director of a department in the Ministry of Trade and Industry and was a lecturer at the St Petersburg Polytechnical University. From 1917 he helped to establish Ukrainian central co-operative institutions, and in 1919 he became president of the All-Ukrainian Union of Manufacturing Co-operatives. *Trudosoiuz in Odessa. In 1918 he was deputy-minister of trade and industry in the Hetman government. Borodaievsky emigrated in 1919 and lectured at the International Academy in Brussels. In 1921–2 he taught at the Sorbonne in Paris, and from 1923 he was a professor at the Ukrainian Free University and the Ukrainian Technical and Husbandry Institute in Prague. His works include *Istoriia kooperatyvnoho kredytu* (The History of Co-operative Credit, 1923), *Istoriia kooperatsii* (The History of Co-operatives, 1925), *Teoriia i praktyka kooperatyvnoho kredytu* (The Theory and Practice of Co-operative Credit), and *Prynysypy kooperatyvnoho zakonodavstva* (The Principles of Co-operative Legislation). A number of his articles appeared in foreign journals.

I. Vytanovych

Borodavka (Nerodych), Yatsko, ? – 1621. Hetman of the Zaporozhian Cossacks, elected in late 1619 by the unregistered Cossacks. When war began with Turkey in 1620, Borodavka made a temporary truce with P. Sahaidachny and the leaders of the registered Cossacks. At a general council in June 1621 the registered and unregistered Cossacks entrusted Borodavka with the command

of a Cossack army of 40,000 men. Blamed for a defeat in Moldavia, Borodavka was deposed and beheaded at Khotyn in 1621. Sahaidachny was chosen as the new hetman.

Borodianka [Borodjanka]. III-10. Town smt (1971 pop 5,100) on the Zdvyzh River, a raion center in Kiev oblast. In January 1918 the Sich Riflemen and the Left-Bank Haidamaka Battalion, defending Kiev, fought the Bolsheviks near Borodianka.

Borolych, Yurii [Borolyč, Jurij], b 28 February 1921 in Velykyi Bereznyi, Transcarpathia, d 7 January 1973 in Prague. Ukrainian writer in Czechoslovakia. In 1940 Borolych fled from the Hungarians to the Soviet Union and was imprisoned, and in 1943 he joined the Czechoslovak Brigade as a journalist. In 1953–5 he edited the Prešov journal *Duklia*. He published several collections of prose on contemporary themes: *Darunok* (The Gift, 1953), *Storinka zhyttia* (A Page from Life, 1956), *Pid odnym nebom* (Under One Sky, 1958), *Pisnia zhyttia* (Song of Life, 1960), *Khoral Verkhovyny* (Highland Chorale, 1964), *Z ridnykh berehiv* (From Native Shores, 1966), and *Ioho den' sered nas* (His Day among Us, 1970). Three volumes of his works were published in Soviet Ukraine.

Borotba (Struggle). A group of writers who were members or followers of the *Borotbists. Created in 1918, the group included many contributors to the newspaper *Borot'ba*, among them V. Blakytny, A. Zalyvchy, H. Mykhailychenko, and V. Chumak. These writers were the first to advocate the idea of 'proletarian literature.' In 1919 they published the almanacs *Zshytky borot'by* (Notebooks of Struggle) and *Chervonyi vinok* (The Red Garland). After Zalyvchy's and Chumak's deaths in 1919 the remaining members of the group were instrumental in publishing the magazine **Mystetstvo* (1919–20).

Borotbists (Borotbisty). The Ukrainian Party of Socialist Revolutionaries-Borotbists (Communists) was the left faction of the *Ukrainian Party of Socialists Revolutionaries (UPSR). At the fourth party congress on 13–16 May 1918 this faction gained control of the Central Committee of the UPSR. It advocated a form of government based on workers' and peasants' councils and demanded co-operation with the Bolsheviks. These views were propagated by its weekly *Borot'ba*, edited by V. Ellan-Blakytny. After the Bolshevik occupation of Ukraine at the beginning of 1919, the Borotbists collaborated with the Bolsheviks, and several Borotbists participated in Kh. Rakovsky's workers' and peasants' government (M. Poloz, H. Mykhailychenko, M. Panchenko, M. Lytvyenko, and M. Lebedynets). At the fifth party congress on 8 March 1919 in Kharkiv the Borotbists adopted a communist but independentist platform and changed their name to the Ukrainian Party of Socialist Revolutionaries (Communists). Then in August 1919, after merging with a left group known as the Ukrainian Social Democratic Workers' party (Independentists), they founded the Ukrainian Communist party (of Borotbists) and demanded admission to the Communist International as an independent 'national communist' party. Their application was rejected, however. At this time the Borotbists had 15,000 members. Because the Borotbists had a strong following among the peasants, V. Lenin accepted a

compromise: he promised an independent Ukrainian SSR if the Ukrainian Communist party (of Borotbists) voluntarily abolished itself by merging with the CP(B)U. In March 1920 the Borotbists joined the CP(B)U. They played an important role in promoting *Ukrainization in the 1920s. In the 1930s former Borotbist members were politically persecuted and many were executed.

The leaders of the Borotbists were H. *Mykhailychenko, L. *Kovaliv, O. *Shumsky, V. Ellan-Blakytny, A. *Prykhodko, A. *Zalyvchy, V. *Chumak, M. *Poloz, P. *Liubchenko, O. *Lisovyk, H. *Hryenko, M. *Panchenko, and O. *Dovzhenko.

Borova. III-11. Town smt (1971 pop 9,100) on the Stuhna River in Khvastiv raion, Kiev oblast. The Motovylyvskyy Woodworking Complex and the Kiev Research Station of the Ukrainian Scientific Research Institute of Potato Cultivation are located there.

Borova. IV-18. Town smt (1976 pop 4,905), a raion center in Kharkiv oblast. The town has a food industry, a brick factory, and a poultry incubation station.

Taras Borovets

Borovets, Taras [Borovec'] (pseud: Bulba), b 9 March 1908 in the village of Bystrychi in Volhynia, d 15 May 1981 in New York. Civic, political, and military leader. Under the interwar Polish regime Borovets was imprisoned in the concentration camp at Bereza Kartuzka. During the first Soviet occupation of Western Ukraine (1939–41) he began organizing a Ukrainian underground in Polisia, which, with the outbreak of the German-Soviet war, appeared as the *Polisian Sich and fought Soviet, and later German, military units. In December 1941 it adopted the name *Ukrainian Insurgent Army and on 20 July 1943 changed its name to the Ukrainian People's Revolutionary Army. Borovets led the revolutionary and military struggle according to the directives of the chiefs of staff of the Ukrainian National Republic in exile and put forth a democratic program. He was arrested in Berlin in late 1943 while negotiating with the Germans and was imprisoned in the Sachsenhausen concentration camp. As an émigré in West Germany after the war, he organized the Ukrainian National Guard and published its organ, *Mech i volia* (1951–3). He emigrated eventually to the United States,

where he led the life of a private citizen. Borovets's memoirs, *Armii bez derzhavy: Slava i trahediia ukrains'koho povstans'koho rukhu* (An Army without a State: The Glory and the Tragedy of the Ukrainian Insurgent Movement), were published in Winnipeg in 1981.

Borovsky, Mykhailo [Borovs'kyj, Myxajlo], b 15 November 1891 in Zubrivka, Podilia. Agronomist, expert practitioner and propagator of beekeeping and orchard cultivation in Western Ukraine. Borovsky studied at the universities of Kamianets-Podilskyi and Warsaw and the Prague Polytechnical Institute. He edited the journals *Ukrains'kyi pasichnyk* (1928–39), **Sil's'kyi hospodar* (1932–9), and *Praktychne sadivnytstvo* (1933–8) in Lviv and wrote various handbooks. He was a lecturer at the Ukrainian Technical and Husbandry Institute in Poděbrady, Czechoslovakia, in 1934–44. He has lived since 1949 in Winnipeg, Canada. Borovsky is the author of 19 monographs and more than 200 essays and articles, including *Atlas roslyn* (An Atlas of Plants, 1927), *Oliini roslyny* (Oil-Producing Plants, 1935), and *Poradnyk pasichnyka* (A Beekeeper's Handbook, 1942).

Borovsky, Volodymyr [Borovs'kyj], b 18 January 1907 in Zinkiv, Podilia gubernia. Protestant activist and journalist. Borovsky studied at the Protestant seminary in Vandsburg, Germany. He served as pastor in the *Ukrainian Evangelical Reformed church in Volhynia. In 1947 he immigrated to the United States, where he has served as executive secretary of the *Ukrainian Evangelical Alliance of North America since 1955 and editor of *Ievanhel's'kyi ranok* since 1961. Borovsky is a co-author and editor of *Istoriia ukrains'koho ievanhel's'ko-reformovanoho rukhu* (A History of the Ukrainian Evangelical Reformed Movement, 1980).

Volodymyr Borovsky

Dmytro Borovyk

Borovyk, Dmytro, 1876–1920. Ukrainian community figure in the Far East. Exiled to Siberia for political reasons, Borovyk lived in Vladivostok after 1916, editing and publishing the first Ukrainian newspaper in that region, *Ukrainets' na Zelenomu Klyni* (1917–18). He served as secretary of four Far Eastern Ukrainian congresses and was one of the founders of the Ukrainian independence movement in the Far East.

Borovyk, Leonyd, 1897–1942. Actor and stage designer. He graduated from the St Petersburg Academy of Arts and worked in various theaters in Galicia, particularly

in the Zahrava Theater in 1933–8 and in the Kotliarevsky Theater. He distinguished himself in various roles, including Nero in an adaptation of H. Sienkiewicz's *Quo Vadis* and Shulika in H. Luzhnytsky's *Oi, Moroze, Morozenku* (Oh, Moroz, Morozenko). He adapted V. Stefanyk's *Zemlia* (The Soil), B. Lepky's *Baturyn*, H. Luzhnytsky's *Holhota* (Golgotha), and other works for the stage.

Borovyk, Yevhen, b 24 April 1915 in Petrograd, d 7 February 1966 in Kharkiv. Physicist, corresponding member of the Academy of Sciences of the Ukrainian SSR from 1961. In 1945 Borovyk began working at the Physical-Technical Institute of the Academy of Sciences of the Ukrainian SSR in Kharkiv. His works deal with solid-state physics, plasma, and the heat conductivity of rarified gases.

Levko Borovykovsky

Borovykovsky, Levko [Borovykovs'kyj], b 22 February 1806 in the village of Myliushky in Poltava gubernia, d 6 December 1889 in Myliushky. Romantic poet, writer, translator, and folklorist. After graduating in 1830 from Kharkiv University, Borovykovsky taught in a Kursk gymnasium and from 1839 in the Poltava Institute for Daughters of the Nobility. In 1852 he became a gymnasium inspector in Poltava gubernia and retired a few years later. His works were first published in 1828, and he was one of the first poets of the Kharkiv Romantic school. Of his numerous poems, the most notable is the ballad 'Marusia' (1829), a free reworking of V. Zhukovsky's 'Svetlana.' During his lifetime only one collection of his writings was published, *Baiky i prybaiutky* (Fables and Sayings, 1852), which brought him recognition as a storyteller. He also translated the poetry of Horace, A. Pushkin, and A. Mickiewicz, compiled a Ukrainian dictionary, and collected Ukrainian folklore. Borovykovsky's collected works – *Tvory* (Works, 1957) and *Povne zibrannia tvoriv* (Complete Collected Works, 1967) – were published in Kiev.

Borovykovsky, Oleksander [Borovykovs'kyj], b 26 November 1844 in Poltava, d 3 December 1905. Jurist specializing in civil law and process, judge, folklorist, son of L. *Borovykovsky. In 1887–94 he was a lecturer at Odessa University. Among his writings are *Otchet suddi* (Judge's Report, 3 vols, 1891–4), a commentary on the civil law code (1909), and *Zhenskaia dolia po malorusskim pesniam* (Woman's Fate as Reflected in Little Russian Songs, 1867). He wrote poetry in Russian.

Borovykovsky, Volodymyr [Borovykovs'kyj], b 4 August 1757 in Myrhorod in the Poltava region, d 18 April

1825 in St Petersburg. Iconographer and portrait painter, son of Luka Borovyk (d 1775) who was a Cossack fellow of the banner and an iconographer. Borovykovsky was trained in art by his father and uncle and then in 1788 went to study portrait painting under D. Levytsky at the St Petersburg Academy of Arts. In 1793 he became an academician there. Until 1787 Borovykovsky lived and worked in Ukraine. During his career he painted many churches, icons, and iconostases, only some of which have been preserved: the icons of Christ (1784) and the Virgin Mary (1784 and 1787), now in Kiev, the icon of ss Thomas and Basil (1770s, in Myrhorod), the iconostases and wall paintings in the village churches in Kybyntsi in the Poltava region and Ichnia in the Chernihiv region, several icons in the Church of St Catherine in Kheron, the religious painting *King David* (1785), now in Leningrad, and the iconostasis in the Church of the Holy Protectress in the village of Romanivka in the Chernihiv region (1814–15). Borovykovsky's religious art departed from the established norms of Byzantine iconography in the Russian Empire and tended towards a realistic approach.

Borovykovsky painted about 160 portraits, among them Ukrainian public figures, including the Poltava burgo-master P. Rudenko (1778), O. Kapnist (1780), O. Bezborodko with his daughters (1803), Bishop M. Desnytsky, the mayor of Kiev P. Borshchevsky (1816), D. Troshchynsky (1819), and A. Rodzianko (1821). Among the large number of official portraits he painted are the full-figure portraits of Catherine II (1794) and Paul I (1800), Prince A. Kurakin, and the Russian poets G. Derzhavin and V. Zhukovsky. At the beginning of the 1790s Borovykovsky began to paint miniatures and portraits of women in the Ukrainian iconographic style. Adhering to the spirit of classicism, he promoted West European traditions through his art. The largest number of Borovykovsky's works can be found in the museums of Leningrad and Moscow. In Ukraine they can be seen in the museums of Kiev, Kharkiv, Odessa, Poltava, Dnipropetrovske, Kheron, and Symferopil. A few of his paintings are in the United States.

S. Hordynsky

Borschak, Elie [Borščak, Il'ko], b 19 July 1892 in Kheron gubernia, d 11 October 1959 in Paris. Historian and civic figure in France, full member of the Shevchenko Scientific Society. Borschak studied law and history at the universities of Kiev, St Petersburg, and Odessa. He went as secretary of the UNR delegation to the Paris peace conference in 1919 and remained in France thereafter. In France he discovered the papers of H. Orlyk and the diary of Hetman P. Orlyk in 1920, P. Orlyk's 'Deduction des droits de l'Ukraine' and the 1710 Constitution of 'Bendery in 1922, and Voltaire's notes to his history of Charles XII. An adherent of the democratic left, Borschak helped organize the Union of Ukrainian Citizens in France and

Elie Borschak

edited its newspaper *Ukrains'ki visty* (1926–9). From 1939 to 1957 he taught at the Ecole Nationale des Langues Orientales Vivantes in Paris. From 1949 to 1953 he edited the Paris-based journal of Ukrainian studies, **Ukraina*. Borschak wrote over 400 studies and articles, primarily on 18th-century Ukraine and on Franco-Ukrainian relations. His important works are *Le mouvement national ukrainien au XIXe siècle* (1930); *La vie de Mazepa* (with R. Martel, 1931); *Velykyi mazepynets' – Hryhor Orlyk* (The Great Mazepist – Hryhor Orlyk, 1932); *Ivan Mazepa* (1933); *Shevchenko u Frantsii* (Shevchenko in France, 1933); *L'Ukraine dans la littérature de l'Europe occidentale* (1935); *Napoleon i Ukraina* (Napoleon and Ukraine, 1937); *Karpats'ka Ukraina v mizhnarodnii hri* (Carpatho-Ukraine in International Diplomacy, 1938); *L'Ukraine à la Conférence de la Paix 1919–1923* (1938); *Voinarovs'kyi, sestriuk Ivana Mazepy* (Voinarovsky, the Nephew of Ivan Mazepa, 1939); *Lectures ukrainiennes* (1946); and *Hryhor Orlyk, France's Cossack General* (1956).

Borshchiv [Borščiv]. v-7. City (1973 pop 8,600) and raion center in southeastern Ternopil oblast on the Nichlava River. Borshchiv was first mentioned in historical documents in 1456. In 1629 it received the right to be governed by Magdeburg law. From 1867 to 1939 it was a county town. Borshchiv has a food industry, an office-supplies factory, and a tekhnikum of mechanized agriculture. The remains of a fortress with a dungeon and of a 17th-century castle are found there.

Borshosh-Kumiatsky, Yulii [Boršoš-Kumjats'kyj, Julij], b 8 July 1905 in the village of Velyki Komiati in Transcarpathia, d 9 April 1978 in Uzhhorod. Poet and teacher. After graduating from the Uzhhorod seminary Borshosh-Kumiatsky taught in village schools. He began writing poetry in 1924. His collections of poetry include *Vesniani kvity* (Spring Flowers, 1928), *Z moho kraiu* (From My Country, 1929), *V Karpatakh svitaie* (The Dawn Is Breaking in the Carpathians, 1935), *Krov klyche* (Blood Calls, 1938), *Dvi doli* (Two Destinies, 1948), *Na vysokii polonyni* (At the High Mountain Pasture, 1956), *Hrai, trembita* (Play, Trembita, 1958), *V orlynomu leti* (In the Eagle's Flight, 1961), *Bahriani akordy* (Purple Chords, 1967), *Shovkova kosytsia* (Silk Braid, 1971), and *Piznia krasa* (Late Beauty, 1975).

Borsuk. Surname of a family with several branches, first chronicled in the mid-17th century. Many of its members

served as officers in Cossack regiments. In the Nizhen Regiment Marko Borsuk served as colonel (1674–7) and quartermaster (1688); Ivan Borsuk, as captain of the Fifth Company (1649–54); Artym Borsuk, as captain of the Second Company (1716–18); Matvii Borsuk, as captain of the Prokhory Company (1725); Petro Borsuk, son of Matvii, as captain of the Divytsia Company (1775); and Tymish (1674–85), Maksym (1701), and Ivan Borsuk, son of Petro (1783), as flag-bearers.

In the Kiev Regiment, Petro Borsuk served as captain of the Kozelets Company (1701–2) and as acting colonel (1706); Zynovii Borsuk, as chancellor (1748–54), judge (1754–65), and quartermaster (1767); and Yakiv Borsuk as aide-de-camp (1729).

Yakym Borsuk was translator at the College of External Affairs and colonel of the Starodub Regiment (1757–9), and Fedir Borsuk was a fellow of the banner in the same regiment (1718).

Dmytro Bortniansky

Bortniansky, Dmytro [Bortnjans'kyj], b 1751 in Hlukhiv, d 10 October 1825 in St Petersburg. A prominent composer and conductor. Bortniansky became a member of the court choir in St Petersburg in 1758. In 1764 he performed a solo part in H. Raupach's opera *Alceste* in St Petersburg. During this period he studied composition under B. Galuppi. From 1769 to 1779 Bortniansky studied in Italy, where he composed several operas to Italian librettos: *Creonte* (1776) and *Alcides* (1778), staged in Venice, and *Quinto Fabio* (1779), staged in Modena. Bortniansky also wrote liturgical works to Latin and German texts, including an 'Ave Maria' for two voices and orchestra. On his return to St Petersburg Bortniansky became a court composer, teacher, and conductor. During this period he composed his French operas: *La fête du seigneur* and *Le faucon* in 1786 and *Le fils rival* in 1787. At the same time Bortniansky wrote a number of instrumental works (piano sonatas and a piano quintet with harp) and a cycle of songs to French texts. In 1796 he became the director of the court choir, which was composed mostly of Ukrainians and which he raised to a new level of excellence. During this period Bortniansky composed over 100 choral religious works, including 35 concertos for four-part mixed choir, 10 concertos for double choruses, 14 panegyric hymns, and a number of liturgical works for three and four voices and for double choruses.

In his choral liturgical works Bortniansky combined the age-old traditions of Ukrainian choral art with the achievements of late 18th-century European music. The influence of Ukrainian folk-song melodies is clearly discernible in these works. Concentrating exclusively on the purely vocal a capella style, Bortniansky achieved a high level of technical proficiency in his sacred music, simultaneously imbuing it with a deep spiritual mood. Bortniansky's choral concertos are characterized by the use of the fugue form in the final movement. The musical language of his instrumental works (piano sonatas, chamber music, symphonies) and operas reflects certain features of early classicism. While Bortniansky's operas and instrumental works remained popular only among small circles of music lovers, his choral works contributed to the spread and elevation of choral art in Ukraine. Bortniansky's works had a special significance for Western Ukraine, where they stimulated the rebirth of a national musical life in the early 19th century.

W. Wytwytsky

Bortnyk, Yanuarii, b 3 May 1897 in the village of Ozerna, Zboriv county, Galicia, d 1938. Drama director, one of the representatives of the Berezil theater directing school. In 1915 he began to appear on stage in the Ternopil Teatralni Vechory theater and in 1922 he joined the Berezil theater. In 1925–8 he was the director of one of its major studios and directed the following plays: V. Yaroshenko's *Shpana* (Riff-raff), I. Dniprovsky's *lablun-evyi polon* (Apple Blossom Captivity), O. Vyshnia's *larmarok* (The Market), and F. Schiller's *Die Verschöpfung des Fiesko zu Genua*. In 1927–30 he worked in the Kharkiv Veselyi Proletar theater of light drama, and then in the Kharkiv Theater of Musical Comedy, where he staged J. Offenbach's *La Périodole*. In 1933–6 he was director at the Shevchenko Theater in Dnipropetrovske, where he put on O. Korniiuchuk's *Platon Krechet*. In 1936–7 he worked at the Revolution Theater in Kharkiv, where he directed I. Mykytenko's *Solo na fleiti* (The Flute Solo). Bortnyk was executed during the Yezhov terror.

Bortnyks (*bortnyky*). Peasants who were dependents of the princes or boyars in Kievan Rus' and paid their dues with the honey they gathered from wild bees. In the 18th century these peasants became serfs under the Russian Empire. The term *bortnyk* is derived from *bort*, which means a hollow tree trunk housing a beehive.

Borynevych, Anton [Borynevych], b 20 July 1855 in Odessa, d 3 December 1946 in Odessa. Statistician and demographer. Borynevych worked in the statistical bureau of Odessa, where he directed the local censuses of 1892, 1897, 1915, and 1917. His major work was *Mista Odes'koï gubernii* (Cities of Odessa Gubernia, 1922).

Boryslav oil fields, early 20th century

Borys, Ivan, b 4 May 1869 in Drohobych, d 12 November 1923 in Lviv. Civic figure and prominent merchant in Galicia. Borys established several businesses in Pere-myshl, which were managed after his death by his sons Teodor, Yevhen, and Volodymyr. Borys organized the first congress of Galician and Bukovynian merchants in Lviv in 1906. He was active in the Burghers' Brotherhood and several Galician co-operative societies, and directed the Burghers' Bank in Pere-myshl.

Borys, Yevhen, b 19 May 1904 in Peremyshl. Entrepreneur and civic figure. From 1923 to 1939 Borys owned and directed several commercial firms in Peremyshl. In 1945–8 he headed the Ukrainian Committee in Wels, Austria. From 1952 to 1975 he was president of a large bakery, Dempster's Bread Ltd, in Toronto. Since 1966 he has been president of the Patronage of the Shevchenko Scientific Society, which solicits funds for and promotes publication of the Ukrainian-language *Entsnyklopediia ukraino-znavstva* (Encyclopedia of Ukrainian Knowledge).

Borysenko, Valentyn, b 2 May 1929 in Ozeriany, Chernihiv oblast. Sculptor. Borysenko graduated in 1953 from the Lviv Institute of Applied and Decorative Art. Among his works are the sculptures *Oleksa Dovbush* (1960), *Danylo of Halych* (1961), the triptych *Earth* (1963–4), *Harvest* (1969), and *Cosmos* (1974).

Borysenok, Stepan, b 17 May 1891 in Kiev, d ? Historian of Ukrainian and Belorussian law, associate of the All-Ukrainian Academy of Sciences, and professor at the Kiev Institute of the National Economy. Borysenok published articles on the penal character of the *potok* in the *Ruskaia Pravda*, on customary law in the Lithuanian-Ruthenian state, on the creation of the legal profession in the Lithuanian duchy, and on the Lithuanian Statute in the journals of the commissions studying the history of Ukrainian law and customary law. He was imprisoned in 1937 during the Yezhov terror and his further fate is unknown.

Boryshchenko, Viktor [Boryščenko], b 3 February 1914 in Kharkiv. Singer, lyrical-dramatic tenor. From 1935 to 1950 he was a soloist at the Kiev Opera and Ballet Theater. His principal roles include Bohun in K. Dankevych's *Bohdan Khmel'nyts'kyi*, Petro and Andrii in M. Lysenko's *Natalka Poltavka* (Natalka from Poltava) and *Taras Bul'ba*, Faust in C. Gounod's *Faust*, and Jenik in B. Smetana's *Prodaná nevěsta* (The Bartered Bride).

Borysiak, Nykyfor [Borysjak], b 27 March 1817 in the village of Rih, Poltava gubernia, d 30 March 1882 in the village of Zolotonosha, Poltava gubernia. Geologist and professor at Kharkiv University. His major works were concerned with the geological structure, useful minerals, and soils of Ukraine, especially of the Donets Basin. He also studied the Urals. He wrote *Sbornik materialov, otnosiashchikhsia do geologii Iuzhnoi Rossii* (A Collection of Materials on the Geology of Southern Russia, 1867). He was the first to put forward and substantiate the theory about the existence of hard-coal deposits beyond the old Donbas farther to the west (in the Great Donbas).

Borysiak, Oleksii [Borysjak, Oleksij], b 3 August 1872 in Romen, d 25 February 1944 in Moscow. Geologist and paleontologist, professor at the St Petersburg Mining Institute in 1911–30, and then director of the Paleontological Institute of the Academy of Sciences of the USSR, of which he became a full member in 1929. In 1897–8 he conducted geological research in the Donbas and the southeastern part of the Kharkiv region, and in 1900–13, in the Crimea.

Borysivka (Borisovka). III-17. Town smt (1968 pop 13,000) on the upper Vorskla River and a raion center in Belgorod oblast, RSFSR. The town was built by Cossacks at the end of the 17th century. In 1926 Ukrainians constituted two-thirds of the raion's population.

Boryskovych, Isaakii [Boryskovyč, Isaakij], ?–1641. Orthodox church leader and educator. For some time he lived at Mount Athos. He was the founder and hegumen (1602) of Derman Monastery, then the hegumen of Cherychi Monastery, and one of the organizers of the Lutske Brotherhood of the Elevation of the Cross (1617). He lectured at the brotherhood school. In 1620 he received the Stauropegion privilege for the brotherhood from Theophanes III, the patriarch of Jerusalem, and in 1621 Theophanes III consecrated him bishop of Lutske and Ostrih. The Polish king, Sigismund III, did not, however, recognize the consecration. Boryskovych participated in all the Orthodox sobors, including the Sobor of 1640.

Boryslav. IV-4. City (1968 pop 32,500) in Lviv oblast, on the Tysmenytsia River in the foothills of the High Beskyd. A center of the petroleum industry, Boryslav was formed by amalgamating the towns Boryslav, Tustanovychi, Volianka, and Mraznytsia. The growth of industry carried with it a corresponding growth of population (1880

pop 15,500: 28 percent Ukrainians, 10 percent Poles, 62 percent Jews; 1931 pop 41,000: 23 percent Ukrainians, 48 percent Poles, 28 percent Jews). In the first half of the 19th century petroleum was extracted manually; exploratory drilling was carried out in 1892. The exploitation and sale of wells was chaotic. The largest yield was in 1905–6 at a drilling depth of up to 2,000 m (80 percent of the entire Carpathian yield). Thereafter the yield significantly decreased. The city experienced several miners' strikes throughout its history, most notably in 1904. As an industrial center Boryslav produces petroleum and its by-products, ozokerite, gasoline, natural gas, chemicals, porcelain, clothing, shoes, synthetic materials, wood products, food, and consumer goods. A museum of the petroleum and gas industry is located there. I. Franko used Boryslav as the setting for his novels *Boa Constrictor* (1878) and *Boryslav smiietsia* (Boryslav Is Laughing, 1881), and for *Boryslav: Kartyny z zhyttia pidhirs'koho* (Boryslav: Pictures of Foothill Life, 1877). (See also *Drohobych-Boryslav Industrial Region.)

V. Kubijovyč

Boryslav oil fields. See Drohobych-Boryslav Industrial Region.

Borysohlibska, Hanna [Borysohlibs'ka], stage name of H. Sydorenko-Svyderska, b 7 January 1868 in Sebezh, Pskov gubernia, Russia, d 26 September 1939 in Kiev. Noted actress of M. Kropyvnytsky's school. From childhood she played in amateur drama groups in Slovianske. Her professional career in the theater began in 1888 in Kropyvnytsky's troupe. From 1902 to 1906 she was part of P. Saksahansky's and I. Karpenko-Kary's troupes, and from 1907 to 1917 she played in M. Sadovsky's theater in Kiev. After the revolution she was a leading member of the Kiev State Drama Theater (1918–19) and then of various troupes and theaters in Galicia (1920–5). In 1925 she returned to the Kiev Ukrainian Drama Theater. Borysohlibska's strongest roles were those of elderly women in Ukrainian ethnographic plays, such as Ryn-dychka and Hapka in Kropyvnytsky's *Po revizii* (After the Inspection) and *Zaidyholova* (The Dreamer) and Sekleta in M. Starytsky's *Za dvoma zaitsiamy* (After Two Hares), and others. In Soviet dramas she played Mariia in O. Kornii-chuk's *Platon Krechet*, Usachykha in I. Kocherha's *Maister chasu* (Master of Time), Oryna in M. Kulish's *97*, and other roles. She also appeared in the film *Koliivshchyna* (1933).

Borysov, Petro, b 1800 in Sevastopil, d 12 October 1854 in Malaia Razvodnaia, Siberia. Officer in the Russian army, member of the Ukrainian petty gentry, and a Decembrist. Borysov organized secret groups of the Society of Friends of Nature among the officers in Reshetylivka, Poltava gubernia, in 1818. He was the founder and president of the *Society of United Slavs, which was organized in 1823 in Zviahel, Volhynia, and in 1825 merged with the *Southern Society. Borysov participated in the revolt of the Chernihiv Regiment and was sentenced for this action in 1826 to hard labor for life. Eventually the sentence was changed to a lighter one. In 1839 he was resettled in Siberia. Petro's brother, Andrii (1798–12 October 1854), helped organize the secret military societies mentioned above. See *Decembrist movement.

Borysov, Valentyn, b 20 July 1901 in Bohodukhiv, Kharkiv gubernia. Composer and music pedagogue. Borysov graduated from the Kharkiv Music and Drama Institute in 1927. Among his compositions are the symphonic poem *Karmeliuk* (1927); two symphonies (1957, 1963); *Ukrainian Suite* (1949); *Celebration Overture* (1969); a piano concerto (1971); the cycle *Music for Strings* (1975); the cantata *Guarding the Dnieper Hydroelectric Stations* (1932); the oratorio *Wedding Feast* (1972); chamber-instrumental works; works for choral and vocal ensembles; and songs to the words of T. Shevchenko, P. Tychyna, V. Sosiura, and others. He also wrote the book *Chaikovs'kyi i Ukraina* (Tchaikovsky and Ukraine, Kiev 1955).

Borysovets, Valentyn [Borysovec'], b 15 January 1910 in Vladivostok. Stage and set designer, graduate of the Kiev Art Institute (1931). He has designed the sets of numerous plays in the theaters of Kiev, Lviv, Dnipropetrovske, Poltava, Zhytomyr, and Zaporizhia.

Boryspil [Boryspil']. III-11. City (1970 pop 30,600) and raion center in Kiev oblast 35 km east of Kiev. Kiev Airport is located there. In 1918 it was the site of battles between Otaman D. Zeleny's Trypilian Division and the Hetman government army during the uprising of the UNR Directory; later it was the site of battles between local partisans and the Bolsheviks. The city has a food industry, a reinforced-concrete-products factory, a clothing factory, and a woolen mill.

Borysthene. Name for the *Dnieper River in the works of ancient Greek and Roman writers. The word is not of Greek, but of local, origin.

Hanna Borysohlibska

Ivan Borysykevych

Borysykevych, Ivan [Borysykevych], b 1815 in Uvysla, Ternopil county, Galicia, d 31 January 1892. Landowner, lawyer, community and cultural leader during the Galician renaissance. In 1848 he became vice-president of the *Supreme Ruthenian Council and authored its statute. He was a delegate to the *Slavic Congress in Prague, an initiator and active participant of the *Congress of Ruthenian Scholars, and during the 1860s a member of the Galician diet.

Borzakovsky, Pylyp [Borzakovs'kyj]. Clerk of the General Military Chancellery in the Hetman state. Borzakovsky was one of the authors of the 'Diariiush' (Diary)

of this chancellery from 13 July 1722 to 10 March 1723. In it he described the policies adopted by the tsarist government to limit the autonomy of Ukraine and the struggle against those policies on the part of the Cossack *starshyna*, led by P. Polubotok, who demanded the reinstatement of the political privileges of the Cossack officers and the abolition of the first Little Russian Collegium. Diary excerpts were published by O. Lazarevsky in *Chteniia v Istoricheskom obshchestve Nestora Letopistsa* (vol 12, 1898).

Borzenko, Serhii, b 2 July 1909 in Kharkiv, d 19 February 1972 in Moscow. Writer and journalist, graduate of the Kharkiv Electrotechnical Institute, member of the writers' group Prolitfront. His first collection of stories was entitled *Narodzhennia komunistu* (Birth of a Communist, 1933). During the Second World War he was a correspondent for the newspaper *Pravda*. His books about the war include *Desant u Krym* (Landing in the Crimea, 1941), in Russian, and *Skoraiachys' zakonam vitchyzny* (Submitting to the Laws of the Fatherland, 1949). After the war he moved to the Far East and wrote mostly in Russian.

Borzhava (Berezhava) [Boržava (Berežava)]. A mountain group in the Polonynian Beskyd of the Carpathian Mountains between the Vovcha and Velyka Rika rivers in Transcarpathia. The Borzhava is a wide, level ridge covered with large pastures. Its steep slopes are covered, with beech forests and dissected by valleys up to 1,000 m in depth. The upper forest line lies at 1,100–1,200 m. The slopes are marked by hollows, the traces of glaciation. The highest peak in the Borzhava is Stih (1,677 m).

Borzhava River [Boržava]. A small right-bank tributary of the Tysa River in Transcarpathia. It is 106 km long and has a basin area of 1,360 sq km. The river originates in the *Borzhava. The upper stretch is mountainous, and the lower stretch is flat.

Borzhkovsky, Valerian [Boržkovs'kyj, Valerijan], 1846–1919. Ethnographer, archeologist, and statistician. His articles were published in *Kievskaiia starina* and *Materiialy do ukraïns'ko-rus'koi etnolohii*. During Ukraine's independence he was a commissar in Vinnytsia. He was killed by the Bolsheviks.

Borziak, Dmytro [Boržjak], b 6 November 1897 in the village of Pyshchyky, Poltava gubernia, d 1938. Short-story writer. Borziak studied medicine at Kiev University. He was a member of the All-Ukrainian Association of Proletarian Writers. His first story, 'Pid doshch' (Into the Rain) appeared in *Vsesvit* (1925, no. 20). His later stories – 'Varen'ka,' 'Tovarysh Andrii' (Comrade Andrii), 'Buket proliskiv' (A Bouquet of Anemones), 'Chynovnyk' (The Functionary), 'Buzkovyi kushch' (The Lilac Bush), and 'U manastyr' (Into the Monastery) – appeared in *Zhyttia i revoliutsiia* (1925, nos 10, 11; 1926, no. 6; 1927, nos 1, 3, 5). He was arrested in 1929 and tortured for belonging to the *Union for the Liberation of Ukraine and later exiled to a political-isolator camp in Siberia. The circumstances of his death are unknown; it is thought that he was executed or committed suicide.

Borzna. II-13. City (1970 pop 12,200) founded in 1633, raion center in Chernihiv oblast. Because of its distance from the railway (14 km), it has not grown (1897 pop

12,000). In 1782 it became a county town in Chernihiv gubernia. The city has a brick factory, a lumber-processing factory, and a food industry.

Borzov, Valerii, b 20 October 1949 in Sambir, Lviv oblast. Athlete, runner. Borzov won gold medals in the 100 m and 200 m races at the 1972 Olympic Games and several European and USSR running championships.

Bosh, Yevheniia [Boš, Jevhenija], b 1879 in Ochakiv, d 1925 in Moscow. Bolshevik activist of Jewish descent. In 1917 Bosh prepared a military uprising against the Central Rada in Kiev and Vinnytsia. In 1917–18 she was the people's secretary of internal affairs in the Soviet government of Ukraine and commanded Bolshevik battalions in Ukraine. Bosh wrote *Natsional'noe pravitel'stvo i sovetskaia vlast' na Ukraine* (The National Government and Soviet Power in Ukraine, 1919) and *God bor'by* (A Year of Struggle, 1925).

Boshko, Volodymyr [Boško], b 7 April 1885 in the village of Ivanivka, Kherson gubernia, d 10 August 1949. Jurist and professor of law. Boshko graduated from Kiev University in 1914 and became a law professor there in 1937. His works deal with the history of law and with civil and family law. His most important works are *Rodynnopodruzhnne pravo* (Family-Marriage Law, 1929), *Narysy rozvytku pravovoi dumky* (Essays on the Development of Legal Thought, 1927), and *Narysy radians'koho simeinoho prava* (Essays on Soviet Family Law, 1952).

Bosnia. With Hercegovina, Bosnia forms one of the republics of Yugoslavia. It has an area of 51,564 sq km. The local Ukrainians, who numbered about 10,000 in 1914 and about 8,000 in 1980, settled in Bosnia during Austria-Hungary's colonization efforts in 1890–1913, which followed its annexation of Bosnia in 1878. Most of the Ukrainian settlers came from Galicia, but there were some from Transcarpathia as well. They settled mostly in Prnjavor, Derventa, Prijedor, Bosanska Gradiška, and Banja Luka counties.

As soon as the settlers arrived, Greek Catholic parishes began to be organized, and priests were sent from Galicia. In 1907 Rev Y. Zhuk was appointed vicar general for the Ukrainian settlers and was attached to the Roman Catholic archdiocese of Sarajevo, the capital of Bosnia. In 1908 Metropolitan A. Sheptytsky established a Studite monastery in Kamenica. In 1922, however, the Studites were forced to leave Bosnia. Two years later the apostolic administration, which had been set up in Banja Luka in 1914 and was headed by Rev O. Baziuk, was abolished, and all Greek Catholic parishes in Bosnia were placed under the jurisdiction of the Križevci eparchy. The 1920s were marked by a strenuous struggle with the Orthodox movement, which was supported by Russophiles and the Serbian authorities. In the 1930s a number of Prosvita reading rooms, savings associations, and co-operatives were established. The Ukrainian student colony in *Zagreb helped in the cultural work. In 1932–40 the weekly paper **Ridne slovo* was published, as well as some almanacs. Yet, because of the lack of Ukrainian schools, denationalization made strong headway.

The Second World War undermined the development of Ukrainian life in Bosnia, which at the time was part of the Croatian state. In 1942–6 the Greek Catholic church

was headed by the Croatian Greek Catholic bishop J. Šimrak, who was imprisoned in 1945 and then died in prison. Many Ukrainians left Bosnia because of persecution for having belonged to the Ukrainian legion of the Croatian army and for having fought against the Serbian Chetniks and Tito's partisans. Some of these refugees settled in *Srem, Slavonia, and *Bačka, while others emigrated to Silesia in Poland, to Australia, and to the United States. Ukrainian cultural and educational life began to revive only in the 1950s and was co-ordinated by the Shevchenko Cultural and Educational Society in Prnjavor and Banja Luka. The first school textbooks were published: *Bukvar* (Primer) in 1957 and readers for grades one, three, and four in 1978. There is only one Ukrainian school – the Shevchenko Elementary School – which was built with the aid of funds provided by the United Ukrainian American Relief Committee in 1972 after the earthquake in Devjatina. The Ukrainian language is studied on a voluntary basis, although the government pays for the instruction. Summer seminars in the Ukrainian language, songs, and folklore are organized for those children who live outside the main centers of Ukrainian life by the Union of Ruthenians-Ukrainians of Croatia and the Ukrainian Cultural Council in Banja Luka. Among the Ukrainians in Bosnia are writers who write in Ukrainian, including M. Petrov-Hardovy, B. Hraliuk, I. Terliuk, P. Holovchuk, and V. Petrovsky. A Ukrainian radio program is broadcast from Banja Luka. In the last few years the Ukrainians in Bosnia have worked closely with the Bačka Ukrainians, who are more numerous and better organized, in the fields of culture, education, religion, and publishing. Since 1980 there has been a separate vicariate for Ukrainian Catholics in Bosnia within the *Križevci eparchy.

Bosporan Kingdom. An ancient state on the northern coast of the Black Sea, founded ca 480 BC through an alliance of existing Greek city-states. The kingdom's capital was *Panticapaeum (present-day Kerch). It was ruled by the Archaeanactid and then by the Spartocid dynasty, which endured for over 300 years. In the 4th–3rd century BC the Bosporan Kingdom was at the height of its economic and cultural development. It controlled the Taurian Peninsula, the lower Kuban region, and the eastern Azov steppes, which were settled by Maeotian tribes. The king's power was almost unlimited. Grain growing, orcharding, viticulture, fishing, the skilled trades (particularly artistic metalworking), and trade (particularly in grain) were highly developed. Its manufactured goods were sold to the neighboring Scythians and Sarmatians.

In the second half of the 2nd century BC the Bosporan Kingdom was shaken by a socioeconomic and political crisis. Threatened by the Scythians, who had captured almost all of the Crimea, the Bosporan king Paerisades v decided ca 107 BC to seek the protection of the Pontic king Mithradates VI, but the local Scythians under the leader-

ship of Saumacus revolted and killed Paerisades. The revolt was put down by Mithradates' general, Diophantus, and the Bosporan Kingdom was annexed by the *Pontic Kingdom. When Mithradates was defeated by the Romans in 63 BC, the kingdom came under Roman rule.

Under Roman rule the Bosporan Kingdom experienced another period of economic and cultural prosperity in the 1st–2nd century AD. The old cities were rebuilt, and new cities were established. Many Sarmatians settled in the kingdom, and this caused its culture to become somewhat Sarmatianized. In the 1st century BC the kingdom was ruled by the Tiberius Julius dynasty, which was descended from Mithradates VI, but Rome held the right to appoint new kings. One of them, Sauromates II (AD 174–210), gained a decisive victory over the Scythians and enjoyed some independence from Rome. Yet, in the middle of the 3rd century, the kingdom's economic and political power was seriously undercut by the invasion of the Goths. In the 370s the Huns put an end to the Bosporan Kingdom.

Boston. Capital and major city (1980 metropolitan pop 2,712,982) of Massachusetts. The first Ukrainians, from Austrian-Hungary, settled in Boston in the 1880s and in larger numbers after 1905. The Greek Catholic Brotherhood of ss Peter and Paul was founded in 1894 and was the first Ukrainian organization in the city. In 1914 a Ukrainian Catholic parish was established in the city, and in 1918 an Orthodox parish. In 1927 most of the Catholics joined the Orthodox church. The influx of new immigrants from Ukraine after the Second World War revitalized the Catholic church in Boston, so that by 1952 two parishes were formed (merged in 1968). In 1955 the two Orthodox parishes were merged. After an early period of growth from 4,000 in 1914 to 6,000 in 1933, the Ukrainian community in metropolitan Boston had diminished by 1970 to about 2,000 Ukrainian-speaking members. The *Harvard Ukrainian Research Institute was established in Cambridge, near Boston, in 1973.

Bosy, Volodymyr [Bosy], b 21 May 1899 in Yasel, Sianik county, Galicia, d 3 January 1979 in Montreal, Quebec. Community leader. Bosy came to Canada in 1924 and in 1931 settled in Montreal. He played a central role in the *Canadian Sich Organization and the *United Hetman Organization. He was editor-publisher of three short-lived conservative newspapers, *Probiti* (1924), *Kanadiis'ka Sich* (1928–30), and *Sich* (1939). He was also briefly editor of *Kanadiis'kyi ukraïnets'* in the 1920s and *Ukraïns'kyi robitnyk* in the 1950s. Bosy was active on behalf of the education and rights of Canadians of non-French and non-Anglo-Celtic origins in Quebec.

Botanical garden. A scientific research institution that studies plants and vegetation, promotes the teaching of botany at universities and other higher schools, popular-

izes the science, and fulfils practical assignments in areas such as acclimatization and hydridization. In Ukraine 'apothecary gardens' (*aptekarSKI horody*), where medicinal herbs were grown, were the precursors of botanical gardens. The first garden of this type was created in Lubni in 1714. Botanical gardens began to be organized as scientific institutions in the 19th century at universities: at Kharkiv University in 1805, Kiev University in 1836–41 (the university took over the collection of the Kremianets Lyceum, closed in 1831), Lviv University in 1823, Odessa University in 1867, Chernivtsi University in 1877, and Dnipropetrovske University in 1930. Research is also conducted at the *Nikita Botanical Garden in Yalta, which was established in 1812, and at the Donetsk Botanical Garden of the Academy of Sciences of the Ukrainian SSR. In 1936 the *Central Republican Botanical Garden of the Academy of Sciences of the Ukrainian SSR was established in Kiev; it has become the main center of botanical research in Ukraine.

Botanical museum. A scientific research institution that collects, preserves, and studies plant collections and at the same time popularizes the achievements of botany. In Ukraine the best-known botanical museum is the Museum of the Institute of Botany of the Academy of Sciences of the Ukrainian SSR, which was established in 1921 as the Botanical Cabinet and Herbarium at the academy and in 1966 became part of the Central Museum of Natural Science of the academy.

Botany

Origins. The earliest descriptive information about the flora of Ukraine is found in ancient Greek, Roman, Arab, and Byzantine sources. In more recent times such information appeared in the works of traveling scholars of the 16th–17th century, such as M. Kromer, M. Lytvyn, and G. de Beauplan. Botany was first studied at the Kievan Mohyla Academy. N. Ambodyk-Maksymovych, who graduated from the academy, compiled the first Russian botanical dictionary (1795) and wrote *Pervonachal'nye osnovaniia botaniky* (The Original Foundations of Botany, 1796). O. Maslovsky, a professor at the academy, published a systematic description of plants in 1798. German scholars who worked in the St Petersburg Academy of Sciences in the 18th century – J. Gldenstdt, P. Pallas, S. Gmelin, and M. Biberstein – described the flora of Ukraine in their writings.

Professors of universities founded in Ukraine at the beginning of the 19th century wrote on the flora of Ukraine and its distribution. The first professors of Kharkiv University (at which a botanical garden was established in 1805) studied the plants of Slobidska Ukraine: F. Deliavin set up a herbarium of 6,000 species, and V. Cherniaev maintained a large herbarium and studied the flora of lower plant species in Ukraine. In 1869 a society of naturalists was formed at Kharkiv University and began publishing its *Trudy*. A. Pitra conducted the first algological and mycological research and published works on plant anatomy. L. Cienkowski, the founder of ontogenetic morphology of the lower plants and a professor at the universities of Odessa (1865–72) and Kharkiv (1872–87), made important contributions to botany. Many of his students worked on plant morphology, evolutionary history, and systematics. Among them, L. Rainhard and V. Arnoldi, the founder of the Kharkiv school of

algologists, gained distinction. A. Krasnov studied phyto geography, particularly the plants of the Kharkiv, Poltava, and southern steppe regions. V. Taliev, who later became a professor in Moscow, also specialized in phyto geography. A. Potebnia's contributions to mycology are well known: he was the first in Ukraine to use pure cultures in research. His students – T. Strakhov, A. Trofymovych, and others – specialized usually in phytopathology. Most of V. Butkevych's and V. Zalesky's works were devoted to plant physiology.

At Kiev University W. Besser, the first professor of botany, published studies of the flora of Galicia (1809) and of Right-Bank Ukraine (1822). His students – A. Andrzejowski, E. Trautfetter (who was also instrumental in the development of the Kiev University botanical garden), and O. Rohovych – continued Besser's work in this area (Rohovych also studied the flora of the Chernihiv and Poltava regions). The fungi and algae of the Chernihiv region and the algae of the Kiev region were investigated by I. Borshchov, who also worked in other branches of botany. The paleobotanist I. Schmalhausen, who wrote *Flora Iugo-Zapadnoi Rossii* (The Flora of Southwestern Russia, 1886) and *Flora Srednei i Iuzhnoi Rossii, Kryma i severnogo Kavkaza* (The Flora of Central and Southern Russia, the Crimea, and northern Caucasia, 1895–7), made an important contribution to botany, as did the algologist and mycologist Ya. Walz, the pioneer in phytophysiology Y. Baranetsky, and the plant physiologist K. Puriievych. The prominent cytologist and embryologist S. Navashin published basic works on the structure of the nucleus and chromosomes. Others who should be mentioned alongside these figures are M. Kholodny, M. Tsinger, Ya. Modylevsky, V. Finn, L. Delone, and P. Oksiiuk. Navashin's successor to the chair of botany at Kiev University, O. Fomin, expanded the university's botanical garden and the *Institute of Botany of the Ukrainian Academy of Sciences. His students were the renowned botanist D. Zerov and the dendrologist O. Lypa. The mosses were studied by Z. Sapielin, the author of *Mokhy hirs'koho Krymu* (The Mosses of the Crimean Mountains). Ye. *Votchal, professor at the Kiev Polytechnical Institute, made important contributions to plant physiology and founded the Ukrainian school of plant physiologists, which included A. Oksanenko, V. Kolkunov, O. Tabenetsky (known for his atlas of the sugar beet), I. Tolmachov, A. Kekukha, A. Levshin, and others. The *Kiev Society of Naturalists was affiliated with Kiev University and the Polytechnical Institute.

In southern Ukraine, Odessa University, which was established in 1864, and its New Russia Society of Naturalists, which began publishing its *Zapiski* in 1872, boasted among their members such botanists as the mycologist A. Yanovych, the morphologists-systematists I. Koshut, Ye. Delaroux, F. Kamensky, and V. Khmelevsky, and the physiologists V. Rotert and his student F. Porodko. G. Tanfilev specialized in the interrelationship between plants and soils and authored one of the first collections of geobotanical research. The New Russia Society, in its *Zapiski*, published, among other works, J. Paczoski's (one of the founders of phytocoenology) studies of southern Ukraine's flora. The algae of the Black and Azov seas were studied by the Sevastopol Biological Station (est 1871) of the New Russia Society.

In Galicia and Bukovyna under Austria, botanical research was conducted by J. Sziwerek, I. Szultes (of Lviv

University), E. Tangl, K. Linsbauer, and S. Porsche (of Chernivtsi University). O. Voloshchak, professor at the Lviv Polytechnic, studied the flora of Galicia. I. Verkhratsky and M. Melnyk compiled Ukrainian botanical vocabulary and nomenclature for the publications of the Shevchenko Scientific Society. The flora of Western Ukraine was studied by the German scholar F. Pax, the Polish specialists H. Żapałowicz, J. Rostański, A. Regman, W. Szafer, and S. Kulczyński, and the Ukrainian botanists O. Mryts, H. Kozii, Ya. Ivanytsky, and others.

In 1918, with the founding of the Ukrainian Academy of Sciences, the botanical section of the Second Division of the academy and the *Ukrainian Botanical Society at the academy were established. They included among their members most of the botanists in Ukraine. In 1921 the Botanical Cabinet and Herbarium of the academy were established under O. Fomin. In the same year the journal *Ukrains'kyi botanichnyi zhurnal began publication; in 1924 *Visnyk Kyivs'koho botanichnogo sadu* appeared. Botanical research in Ukraine became well systematized in the 1920s and 1930s, which made possible the publication of the monumental 12-volume **Flora URSS* (The Flora of the Ukrainian SSR) beginning in 1936. Its first editor was O. Fomin, and its contributors included Ye. Bordzylovsky, E. Visiulina, M. Klovov, M. Kotov, Ye. Lavrenko, O. Yanata, and D. Zerov. In 1927 Ye. Vulf initiated the publication of *Flora Krymu* (The Flora of the Crimea; by 1966, nine volumes had appeared). At the same time important work was done in collaboration with the Institute of Ukrainian Scientific Language to standardize botanical terminology: published were N. Osadcha-Yanata's *Slovyk botanichnoi nomenklatury* (A Dictionary of Botanical Nomenclature, 1928) and V. Vovchanetsky and Ya. Lepchenko's *Slovyk botanichnoi terminolohii* (Dictionary of Botanical Terminology, 1932).

The botanical section of the Agricultural Sciences Committee of Ukraine was established in 1919 in Kiev and headed by O. Yanata. It was closely tied to a large network of institutions, primarily of agricultural botany, and co-ordinated the work of many scientists and scientific societies. Before its abolition in 1928 in Kharkiv, where it had been transferred in 1927, the committee had many accomplishments to its credit. Eventually it was replaced by the Ukrainian Institute of Applied Botany. Botanical research in Ukraine was conducted and published by the following bodies: the Kiev Society of Naturalists with its *Zapysky*; the Natural Science Section of the Kharkiv Scientific Society with its *Visnyk pryrodознаvstva*; the Kharkiv Scientific Research Chair of Botany with its *Naukovi zapysky*; and the Ukrainian Committee for the Protection of Natural Monuments with its series *Okhorona pam'iatok pryrody na Ukraïni* and *Materiialy okhorony pryrody na Ukraïni*.

In the 1930s a shift in Soviet government policy led to the reorganization of all scientific institutions, including those devoted to botany. Institutions of applied botany were subordinated to the All-Union Academy of Agricultural Sciences in Moscow, while institutions specializing in other areas of botany became parts of various institutes of the Academy of Sciences of the Ukrainian SSR. In 1931 the Institute of Botany of the Academy of Sciences of the Ukrainian SSR replaced the Botanical Museum and Herbarium and became the center for botanical research in Ukraine. During the Stalinist terror many prominent Ukrainian botanists were exiled. After 1933 botanical

terminology was extensively Russified, and scientific research came under strict government and Party control to ensure consistency with official ideology and subordination to production goals. The preparation of materials for *Flora URSS* continued, however. During this period a critical survey of Ukraine's flora was prepared by M. Klovov. Ye. Lavrenko and Yu. Kleopov wrote a series of works on phytogeography and florigenesis and studied endemism and the problem of relicts from a historical aspect. Much attention was given to the plant resources of Ukraine – fodder, industrial crops, and medicinal plants – by researchers such as M. Kotov.

Since the 1950s many botanists have continued to devote themselves to floristics and systematics; in 1950 and 1965 *Vyznachnyk roslyn URSS* (Field Guide to the Plants of the Ukrainian SSR) was published under the editorship of D. Zerov; M. Rubtsov's *Vyznachnyk vyshchyykh roslyn Krymu* (Field Guide to the Higher Plants of the Crimea) was published in 1972, and V. Chopyk and M. Kotov's *Vyznachnyk roslyn Ukrains'kykh Karpat* (Field Guide to the Plants of the Ukrainian Carpathians) was published in 1977.

In the 1960s and 1970s, besides the classical morphological-geographical method, the experimental-morphological method was applied with increasing frequency in the systematics of the higher plants by such Kharkiv biosystematists as Yu. Prokudin, O. Vovk, and K. Yermolenko. The monograph *Zlaki Ukrainy* (Gramineae of Ukraine, 1977) is notable in this respect. Scholars such as V. Chopyk and B. Smyk have analyzed the flora of the basic geographical regions. S. Fodor produced an inventory of Transcarpathian flora in 1974. The genesis of biomorphostructures in taxons has been investigated by V. Kolishchuk and S. Zysman. The staff of the Donetsk Botanical Garden (Ye. Kondratiuk and others) study the problems of applied botany. In the last two decades in the area of applied floristics flowering weeds have been inventoried, and essential oil plants, honey-nectar-yielding plants, fodder plants, poisonous plants, and medicinal herbs have been studied by such scholars as O. Lypa, O. Barbarych, S. Ivchenko, and S. Moroziuk.

Since 1931 research on lower plants have been co-ordinated by the Institute of Botany. The results of algological research were published in *Vyznachnyk prysno-vodnykh vodorostei URSS* (Field Guide to Freshwater Algae in the Ukrainian SSR, 1938–77). Among the contributors were O. Korshykov, D. Svyrenko, V. Myroniuk, O. Topachevsky, P. Oksiiuk, Ya. Roll, O. Matvienko, I. Pohrebniak, T. Volkova, P. Masiuk, and S. Kuzmenko. Algae of the Black Sea and the Sea of Azov are studied by the members of the Institute of the Biology of Southern Seas of the Academy of Sciences of the Ukrainian SSR in Sevastopol: N. Morozova-Vodianytska, A. Kaluhina-Hutnyk, and others. In the 1960s and 1970s, ecological-coenological research on algae was conducted mainly by the Institute of Botany and the Institute of Hydrobiology of the Academy of Sciences. Morphological-systematical and evolutionary-phylogenetic studies were written by A. Topachevsky – *Pytannia morfolohii i tsytolohii vodorostei* (Problems of the Morphology and Cytology of Algae, 1962) – and D. Zerov – *Narys fitohenezy besudynnykh roslyn* (An Outline of the Phytogenesis of Non-vascular Plants, 1972).

Mycoflora have been studied by M. Tselle, M. Pidoplichko, O. Salunsky, V. Bilai, M. Hrebenuk, and S.

Vasser. In 1967–79 the five-volume *Vyznachnyk hrybiv Ukraïny* (Field Guide to the Fungi of Ukraine) was produced by such botanists as S. Morochkovsky, M. Zerova, I. Dudka, Z. Levitska, H. Radziievsky, and M. Smitska. Pathogenic fungi and fungi-producing antibiotics are studied at the Institute of Microbiology and Virology. Ecological groups of fungi are studied by M. Koval and H. Andreeva. M. Litvinova and I. Dudka specialize in the research methods for aquatic fungi. A. Oksner has studied the lichen flora of Ukraine and is the author of the two-volume *Flora lyshainykyv Ukraïny* (The Lichen Flora of Ukraine, 1956–8). M. Makarevych wrote *Analiz likhenoflory Ukraïns'kykh Karpat* (An Analysis of the Lichen Flora of the Ukrainian Carpathians, 1963). D. Zerov devoted his attention to mosses and published *Torfovi mokhy Ukraïny* (Peat Mosses of Ukraine, 1928) and *Flora pechinochnykh i sfahnovykh mokhiv Ukraïny* (Flora of the Liverworts and Sphagnidae of Ukraine, 1964). L. Partyka, A. Lazarenko, H. Vachura, M. Slobodian, V. Melnychuk, and K. Ulychna have also studied mosses.

The natural vegetation of Ukraine has been investigated quite thoroughly in respect to natural regions and types of vegetation. At the turn of the century a number of works on the vegetation of the steppe and forest-steppe belts were produced by G. Tanfilev, A. Krasnov, H. Vysotsky, and J. Paczoski. At first descriptions of natural vegetation were of a phytogeographic nature. In the 1930s descriptions of associations and general studies began to appear; their authors were K. Malynovsky, M. Holubets, V. Kolishchuk, S. Stoiko, S. Belhard, and others.

Ye. Lavrenko, Yu. Kleopov, M. Shalyt, S. Ilchevsky, and others have studied the vegetation of the steppes. Yu. Sheliah-Sosonko and H. Kukovytsia have studied the steppes of Podilia; N. Chernova and L. Pryvalova have studied the Crimean steppes. Research results are found in *Roslynnist' zasolenykh hruntiv* (The Vegetation of Saline Soils, 1963) and *Stepy, kam'ianyisti vidslonennia, pisky* (The Steppes, Stony Ground, Sands, 1973) by F. Hryn, V. Osychnyk, M. Kosets, and V. Tkachenko.

The vegetation of the Dnieper floodplains has been studied by R. Yelenevsky, O. Sokolsky, A. Alekseev, D. Afanasev, and O. Belhard. The meadow vegetation of Left-Bank Ukraine and northern Ukraine have been investigated by S. Muliarchuk, H. Bilyk, A. Alekseev, and V. Tkachenko; the meadows of the Rivne region by M. Buvaltsev; the southern steppe by I. Hryhora; Podilia by I. Shipova and I. Amelin. The meadows of the Carpathians, their foothills, and Transcarpathia have been studied in detail by the geobotanists of Lviv: H. Kozii, K. Malynovsky, I. Artemchuk, I. Bilyk, Ye. Bradis, and V. Horbyk.

The bogs of Ukraine have been studied by Ye. Lavrenko, D. Zerov, S. Bradis, I. Bachuryrna, I. Hryhora, and L. Kucheriava. Their topology has been elaborated by Ye. Bradis, A. Kuzmichov, and T. Andriienko.

Much attention has been devoted to the forests of Ukraine. V. Povarnitsyn, S. Muliarchuk, and Yu. Sheliah-Sosonko have studied the forests of Polisia; M. Kosets and F. Hryn, the Volhynian-Podilian Upland and Galicia; M. Popov and I. Yakymchuk, the Carpathians; O. Horokhova, Bukovyna; M. Kosets, the beech forests; M. Kotov, V. Miakushko, F. Hryn, and V. Osychniuk, the forest steppe; O. Belhard, Yu. Sheliah-Sosonko, and I. Bilyk, the steppe belt; H. Poplavska, L. Makhaeva, and Ya.

Didukh, the Crimea; P. Berehovy, D. Afanasev, and V. Tkachenko, the forests in river floodplains. S. Hensiruk, B. Ostapenko, V. Dan'ko, and Z. Herushynsky described in detail the typology of Ukraine's forests. Yu. Sheliah-Sosonko examined the evolution of oak forests, and A. Kuzmovych, alder forests. H. Makhiv and P. Kozhevnikov have specialized in ecology. B. Ivanytsky made an important contribution to the study of forests and forestry.

The problem of the structural-functional organization of phytocoenoses and of natural vegetation has received attention from scientists such as J. Paczoski, P. Pohrebniak, D. Lavrynenko, M. Shalyt, V. Miakushko, V. Osychniuk, and S. Zysman. Phytocoenotic analysis, which was introduced by H. Vysotsky and J. Paczoski, has been continued by H. Poplavska and Yu. Sheliah-Sosonko. Ecological study is developing in new directions such as comparative ecology and biogeocoenology. The ecological properties of various plant species, their reaction to environmental change, and variation under different ecological influences are studied at the Institute of Botany and the *Central Republican Botanical Garden of the Academy of Sciences, as well as at other botanical gardens, where the introduction and acclimatization of plants are also studied.

Radioecology, ecomorphology, and ecological genetics are also being researched. Materials on energy transformation, chemical changes, and water and biomass changes in various ecological systems have been compiled by M. Voistvensky, K. Malynovsky, and many others. Work on mathematical models of ecological processes has been begun by M. Holubets and Ya. Odynak. Ecosystem research is conducted at the Institute of Botany and its Lviv branch, which specializes in the structural-functional organization of steppe and Carpathian ecosystems; at Dnipropetrovske University, which concentrates on forest and steppe ecosystems; and elsewhere. The botanical gardens, with scientists such as A. Hrodzinsky and Ye. Kondratiuk, are working on the reclamation of mined-scarred land and the establishment of artificial biogeocoenoses on it.

Ye. Lavrynenko and Yu. Kleopov began mapping the vegetation of Ukraine, but only *Lehenda do karty roslynnosti URSR* (Legend to the Map of Vegetation of the Ukrainian SSR, 1938) has been published. This work has been continued by H. Bilyk, Ye. Bradis, and M. Kosets. In 1977 *Heobotanichne raionuvannia Ukraïns'koi RSR* (The Geobotanical Regions of the Ukrainian SSR) was published.

Paleobotanical research was begun in the middle of the 19th century. I. Schmalhausen studied the Paleogene and Devonian flora of Ukraine. M. Zalesky specialized in the Carbonaceous flora of the Donbas (1902–28), and A. Kryshstofovych in the Sarmatian flora of the Krynka River in the Donbas (1916). D. Zerov first applied the spore method to the study of the flora of the Quarternary period. He also investigated the interglacial flora of Ukraine and analyzed the Holocene. Owing to numerous studies by scholars such as K. Novyk (1931–54), O. Shchokoliv, T. Ishchenko, and others, the fossilized flora of the Carbonaceous period in the Donbas and other regions is better known; E. Migachova, N. Pimenova, L. Kononenko, S. Vosanchuk, A. Lapteva, V. Hlushko, and Yu. Pelypenko have studied other periods in the various regions of Ukraine. Stratigraphic works on the various layers of Paleogene and Neogene deposits have been

written by A. Mikhelis, A. Kruzina, and T. Hubkina. The Holocene is the most investigated period, owing to the studies of Ye. Lavrenko, O. Artiushenko (steppe and forest-steppe), S. Kulczyński, H. Pashkevych, O. Mryts, W. Tymrakiewicz, M. Cherevko (Subcarpathian foothills), H. Kozii, S. Tolpa, and D. Zerov (Polisia and the Ukrainian Carpathians). S. Siabrai has studied the marine palinology of the Black Sea and the Sea of Azov; O. Berchenko and A. Ishchenko have studied fossilized marine plants.

Cytological and embryological research is conducted at the Chair of Higher Plants of Kiev University (V. Finn), at the Department of Cytology and Embryology of the Institute of Botany (Ya. Modylevsky), at the Chair of Biology of the Kiev Medical Institute (M. Chernoiarov), and at several other schools. Chromosome morphology has been studied by M. Delone, M. Chernoiarov, H. Levvitsky, L. Zafiovska, Ye. Kordium, and P. Oksiiuk. The results of this research appeared in a chromosome atlas of the mosses of the Soviet Union edited by A. Lazarenko (1971). The process of meiosis has been studied by Ya. Modylevsky, M. Chernoiarov, A. Sapiehin (X-ray mutants), N. Zaikovska, and O. Yarmoliuk. K. Sytnyk developed the cytophysiological method of research. Electron-microscopic research on plant cells was begun in 1961 by O. Siliaeva and S. Lebedev at the Ukrainian Agricultural Academy.

In the 1930s the initial morphological-descriptive method was superseded by the experimental method in cytoembryology, and in the last decade the structural-functional approach was introduced. V. Finn's research in the development of male gametes of the higher plants has been supplemented by M. Chernoiarov, K. Kostriukova, and Yu. Rudenko. The peculiarities of the development of the male generative sphere have been investigated by Ya. Modylevsky, P. Oksiiuk, and M. Khudiak; their ultrastructure has been analyzed by Ye. Kordium and H. Iliashchenko (1977). Female gametophytes have been studied by Ya. Modylevsky and his students. S. Navashin, Ya. Modylevsky, L. Dziubenko, and others have studied fertilization. P. Oksiiuk, and M. Khudiak have specialized in the embryogenesis and endospermogenesis in Gramineae; N. Zaikovska and O. Yarmoliuk have studied it in other species. Embryonic development of angiosperms growing high in the Carpathians have been studied by Kh. Rudenko and V. Mandryk.

Various types of asexual reproduction have been studied by A. Dzevaltovsky, A. Radionenko, and H. Romanova. Data on species incompatibility have been published in Khudiak's *Endosperm pokrytonasinnykh roslyn* (The Endosperm of Angiosperms, 1965) and Bannykova's *Tsytoembriolohiia mizhvaydovoi nesumisnosti u roslyn* (The Cytoembryology of Species Incompatibility in Plants, 1975). The cytoembryological aspects of the sexual reproduction of angiosperms have been investigated by Kordium and Hlushchenko. O. Tabenetsky and M. Moiseeva have done extensive work in plant anatomy, particularly on the physiological functions of plants.

Research in plant physiology is conducted at the Institute of Plant Physiology of the Academy of Sciences of the Ukrainian SSR as well as at universities and various institutes. The problems of plant nutrition, water regime, and transpiration under field conditions have long been at the center of attention. Ye. Votchal and then his students A. Okanenko, L. Maksymchuk, and others

specialized in these areas. The organic-mineral plant nutrition system and the physiological effects of various microelements have been studied by P. Vlasuk, O. Lushchkin, T. Demydenko, F. Matskov, Z. Klymovytska, A. Makaryk, E. Rudakova, and others. The exchange of substances in plant respiration has been studied by S. Hrebinsky and others. Winter resistance and salt resistance in plants have been studied by D. Protsenko, L. Polishchuk, I. Bilokin, and O. Biletska. The radioactive isotope method for locating substances in a plant has been used by D. Hrodzinsky, Yu. Porutsky, and Z. Klymovytska. Physiologists from various research institutes are involved in the study of frost and cold resistance in plants.

The effect of the sun on plant physiology was described by V. Liubymenko in his *Fotosynteza i khemosynteza* (Photosynthesis and Chemical Synthesis 1933) and by A. Okanenko, Ye. Bruslova, Ya. Romashko, and many others. The photochemistry of chlorophyll was analyzed by V. Dain and I. Dilung. The biosynthesis of chlorophyll and carotin was studied by S. Sudina and her co-workers. The exchange of energy between plants and the environment has been studied by H. Ilkun and H. Samokhvalov. D. Hrodzinsky, M. Bidzilia, and B. Huliev have introduced the biophysical approach to photosynthesis research.

The problem of plant growth and development was M. Kholodny's speciality. He developed the hormonal theory of tropisms. The effect of phytohormones on fruit development was studied by O. Sereisky. M. Moiseeva researched the production of these hormones in various tissues and organs. P. Lysenko, A. Sapiehin, and others have studied the stages of growth. M. Liubynsky studied the vegetative multiplication of plants. A. Zakordonets and K. Sytnyk investigated the dependence of the interrelationship between subsurface and surface plant organs in various environments. H. Semenenko studied the biosynthesis of the nucleic acid exchange in relation to the growth of higher plants. The biochemical approach to studying plant growth was described by O. Boichuk, Ya. Dudynsky, L. Musatenko, and R. Protsko in *Fiziolohobiokhimichni osnovy rostu roslyn* (The Physiological-Biochemical Bases of Plant Growth, 1966). The problem of polarity in metabolism and plant development has been studied by H. Molotkovsky. A. Hrodzinsky, in his *Osnovy khimichnoi vzaemodii roslyn* (Foundations of the Chemical Interaction of Plants, 1973), described the role of allelopathetic interaction in natural and artificial coenosis. The effect of industrial pollution on plant metabolism has been studied by plant physiologists at the Donetsk Botanical Garden and other scientific institutes.

The transfer and storage of substances and the biochemistry of the tissues of vascular bundles and parenchyma have been studied by I. Vyvalko and V. Lempytska. Since 1977, under K. Sytnyk's direction, research in cryophytophysiology has been conducted in order to develop methods of protecting the viability of plant organisms at low temperatures and of preserving plants cryonically.

Biochemical research on plants has branched out in various directions: P. Mushak and M. Cheren have studied the dynamics of the contents and the interrelationship between nucleic acids and protein, as well as their molecular composition; L. Einor and V. Myroniuk have studied fermentation and the reaction of oxygen exchange in respiration; I. Drokova and N. Tupyk have

studied pigments and vitamins; Ye. Shiukova and S. Pyrozhenko have studied the nature of structural and stored polysaccharides; V. Parshikov has studied lipids and their structure.

Botanists belong to the Ukrainian Botanical Society, which is part of the All-Union Botanical Society. Scientific papers are published in **Ukrains'kyi botanichnyi zhurnal*. In Galicia the Shevchenko Scientific Society in Lviv published *Zbirnyk Matematychno-pryrodopysno-likars'koi sektsii* in 1897–1939 and *Zbirnyk Fiziohrafichnoi komisii* in 1931–9.

The following Ukrainian botanists pursued or still pursue their research outside Ukraine: B. Ivanytsky, I. Vakulenko, O. Arkhimovych, N. Desiatova-Shostenko, L. Zafiiovska, Ye. Zankevych, Ye. Kleopova, R. Maksymovych, H. Makhiv, N. Osadcha-Yanata, and M. Persyds'ky.

Botany, Institute of the Academy of Sciences of the Ukrainian SSR. See Institute of Botany of the Academy of Sciences of the Ukrainian SSR.

Botha, Louis, b 27 September 1862 in Greytown, Natal, d 28 August 1919 in Rusthof, Transvaal. General, South African statesman. Botha was appointed by the Supreme Council of the Peace Conference in Paris on 2 April 1919 to head the Allied commission charged with arranging an armistice between Poland and the Western Ukrainian National Republic (ZUNR). The commission decided to limit the size of both armies to 20,000 each and drew a line of truce (the Botha line), giving the Ukrainians the Galician oil fields and the Poles Lviv and the territory to the west of the Lviv-Sokal line. On 13 May 1919 the ZUNR government accepted the commission's decisions, but the Polish delegation to the peace conference (R. Dmowski and others) rejected them on the pretext that there were 'Bolshevik elements' in the Ukrainian Galician Army.

Botsian, Yosyf [Bocjan, Josyf], b 10 March 1879 in Buzke, Galicia, d 21 November 1926 in Lviv. Religious leader and rector of the Lviv Greek-Catholic Theological Seminary from 1910 to 1914. He was ordained the bishop of Lutsk by Metropolitan A. Sheptytsky in 1914 in Kiev, but was prevented from taking charge of his eparchy by being exiled to Siberia and then by a prohibition from the Polish government. In 1925 he was nominated auxiliary bishop of Lviv. He wrote *De Modificationibus in Textu Slavico Liturgiae Sancti Ioannis Chrysostomi apud Ruthenos Subintroducitis* (1908) and a commentary to 60 pastoral letters of Metropolitan Andrei (*Bohosloviia* 1926). He also translated the *Imitation of Christ* by Thomas à Kempis.

Botsian co-edited the journals *Nyva*, *Bohosloviia*, and **Katolyts'kyi vskhid*, in which he published articles on the history of the Greek Catholic church.

Bovanenko, Dmytro, b 10 September 1900 in Kaniv, d ? Economic historian, research associate at the All-Ukrainian Academy of Sciences until 1934, professor at the Kiev Institute of Food Industry until 1938. Bovanenko produced studies of the economic history of Ukraine in the 19th and 20th century as well as studies of the history of Ukrainian economic thought (especially on M. Ziber and S. Podolynsky). In 1938 he was arrested and exiled to Kolyma, and his extensive monograph on Podolynsky remains unpublished.

Bovshiv settlements. An archeological site consisting of three multilayered settlements near the village of Bovshiv in Ivano-Frankivske oblast. The remains of semipit dwellings and agricultural structures of the 6th–7th century AD as well as above-ground dwellings of the 12th–13th century were discovered at the site. Vessel fragments, metal domestic and farm tools, household objects, pottery, and ornaments were found. Beneath the layer of the early Slavic culture, traces of the **Cherniakhiv* and **Lypytsia* cultures were also discovered. The Bovshiv settlements were excavated in 1960–4 by an expedition of the Institute of Social Sciences of the Academy of Sciences of the Ukrainian SSR in Lviv. V. Baran, L. Krushelnytska, and other scholars participated in the investigation.

Boxing. Sport in which combatants fight each other with gloved fists. Boxing has been part of the Olympic Games since 1904. A form of boxing was practiced in ancient Greece. The Christian church condemned fistfighting, yet it continued throughout the Princely era and the Cossack period. The modern form of boxing, which is governed by precise rules, originated in England and from there was introduced into the Russian Empire. Boxing has been known in Kiev since the end of the 19th century. In 1915 Hryshchenko, a Ukrainian, was runner-up to the boxing champion of Russia. In Galicia boxing appeared in the 1920s. In 1925 the first boxing teams appeared in Soviet Ukraine. Over 30,000 individuals participated in boxing in the Ukrainian SSR in 1960, and over 40,000 did so in 1975, mostly in the large cities. In the 1940s the Ukrainian boxers L. Sehalovych and H. Yershko and others won the USSR and the Ukrainian championships. In the 1950s B. Nazarenko and B. Holubenko were champions. V. Zasytko (1973, 1975), O. Tkachenko (1973, 1975), V. Savchenko (1977), and L. Shaposhnykov (1977) won European championships. Abroad, boxers of Ukrainian origin compete in the clubs of their countries of residence. S. Halaiko won the United States championship of the Amateur Athletic Union in the middleweight category and received a silver medal at the 1932 Olympics.

Boyar Council (Boiarska Rada). The council of boyars and higher clergy was, from the 10th century, one of the three agencies – along with the prince and the assembly (**viche*) – of the central government of Kievan Rus'. Together with the prince, the council discussed and decided important matters of internal and foreign policy, religion, and legislation. Sometimes it even ruled on the division of princely domains and sat as a court in

judgment on princes and members of their families. The Boyar Council was a permanent political-judicial body, which was based on the prince's obligation to confer with the boyars of his domain.

As boyar landownership increased and as the principalities became more numerous, smaller, and weaker, the power of the Boyar Council increased. Its power was determined to a great extent by local conditions, the traditions of the local principality, and its location. The Boyar Council of Galicia had a particularly great and often detrimental influence on state affairs. It even went so far as to elect a boyar of non-princely lineage to the throne, a unique event in the history of Ukraine.

Beyond the Ukrainian principalities, in Suzdal and Vladimir, the Boyar Council was only a voluntarily called, advisory body to the ruler. In Muscovy the council, which was called the Boyar Duma (1547–1711), was an advisory body of the absolute monarch and conducted itself according to the principle 'the ruler has indicated his wish, and the boyars have passed sentence.' Only when there was no tsar did the дума exercise its legislative and other powers independently. The *Council of Lords in the Grand Duchy of Lithuania was modeled on the Boyar Council.

Ya. Padokh

Boyars. The upper ruling class of Kievan Rus'. The class consisted of landed boyars and senior members of the princes' armed retinues and courts (ie, the boyar-warriors). This distinction disappeared in the 11th century as the warrior nobility acquired estates and the landed nobility served in increasing numbers at the princes' courts. Yet differences in social status gave rise to a new distinction between the older and the younger armed retinue. The boyars never constituted a separate estate with its own special privileges. Membership in the group was open to anyone who held a high post at court or in the administration or who had amassed a large fortune. The boyars formed their own council (*Boyar Council), which, together with the prince and the popular assembly (**viche*), composed the supreme power of a principality or a territory.

After the decline of the Kievan state the wealthier and hereditary part of the boyars entered the closed estate of the Polish and Lithuanian nobility. The poorer boyars lost some of their privileges and were reduced to the status of a seminoble estate called the *putni* boyars (branch nobles), who administered parts of the prince's land, and later even to the status of peasants. In the Polish-Lithuanian period the upper stratum of the boyars adopted the title of lord (*pan*) or landowner (*zemian*), while the old title of boyar was used by petty officials. The lower stratum of the boyars and the petty nobility struggled for their rights for a long time. When the *Lithuanian Statutes were published in 1529 and 1584 and the Polish-Lithuanian union was concluded, the petty boyars won equality before the law with the rich nobles and the right to trial in the nobility's *land courts on an equal footing with the lords (*pany*). This lasted to the end of the 18th century on Ukrainian territories ruled by Poland. The surviving members of the Ukrainian boyar class who switched their allegiance to the Cossack state and the Zaporozhian Host received only the rights based on military service, regardless of lineage. The title of boyar in the Russian

Empire was abolished by Peter I. By that time most of the boyars had been reduced to peasants.

Ya. Padokh, A. Yakovliv

Boychuk, Bohdan [Bojčuk], b 11 October 1927 in the village of Bortnyky, Buchach county, Galicia; now residing in New York. Poet, member of the *New York Group, literary critic, and translator. His published poetry includes *Chas boliu* (The Time of Pain, 1957), the long poem *Zemlia bula pustoshnia* (The Earth Was a Wasteland, 1959), *Spomyny liubovy* (Memories of Love, 1963), *Virshy dlia Meksiko* (Poems for Mexico, 1964), *Mandrivka til* (The Journey of Bodies, 1967), *Podorozh z uchytelem* (Travels with the Teacher, 1976), and *Virshi, vybrani i peredostanni* (Poems, Selected and Next to the Last, 1983). He is also the author of *Dvi dramy* (Two Dramas, 1968). Boychuk has translated Spanish and American poetry into Ukrainian, Ukrainian poetry (the poetry of B.I. Antonych and I. Drach) into English, and has edited several books of Ukrainian poetry and memoirs.

Boyd, John [Bojčuk, Ivan], b 26 January 1913 in Edmonton, Alberta. Communist figure and editor. Boyd worked in the youth section of the *Ukrainian Labour-Farmer Temple Association, editing *Svit molodi* (1930–2). An organizer of the Young Communist League (1933) and editor of its organ, *The Young Worker* (1934), Boyd joined the Communist Party of Canada (CPC) in 1936, served as secretary of the Canadian Slav Committee, was a member of the national committee of the Labour Progressive party, and edited the CPC organ, *The Canadian Tribune*, as a member of the party's central executive. He was twice elected a trustee of the Toronto Board of Education. He left the Communist party after witnessing the Soviet invasion of Prague (1968).

Bozh [Bož] (Boz, Bus), d ca 375. Prince of the Antes. According to the 6th-century Byzantine historian Jordanes, Bozh led the Antes against the Ostrogoths in the 4th century. He was taken captive and crucified by order of King Vinitar, together with his sons and 70 of his closest nobles. It is believed that the name Bozh was known to the author of *Slovo o polku Ihorevi* (The Tale of Ihor's Armament).

Bozhenko, Vasyi [Boženko, Vasyi'], b 1871 in the village of Berezhyinka in Kherson gubernia, d 21 August 1919 in Zhytomyr. Bolshevik trade unionist and military leader in Ukraine. Bozhenko commanded Red partisan detachments and later the Tarashcha Regiment in the First Ukrainian Soviet Division, commanded by M. Shchors, which fought against the UNR army, the German army, and the Whites in 1918–19.

Bozhii, Mykhailo [Božij, Myxajlo], b 20 September 1911 in Mykolaiv. Portrait painter of the socialist realist style, member of the USSR Academy of Arts. Most of Bozhii's portraits are of military or political leaders or 'heroes of labor.' His best-known works are *The Nurse* (1955) and the portraits of T. Shevchenko (1960), V. Lenin (1967), and L. van Beethoven (1969). Bozhii has received many awards. A monograph about him by F. Shaposhnykov was published in Kiev in 1963.

Bozhko, Sava [Božko], b 24 April 1901 in the village of Krutoiarivka in Katerynoslav gubernia, d 27 April 1947 in Slovianka, Dnipropetrovske oblast. Writer, journalist, and teacher. Bozhko edited the Kharkiv newspaper *Chervonyi Kordon*. He was a member of the literary organization Pluh from 1923. From 1932 he lived in Kherson and taught political economy and Party history at the agricultural institute. Exiled between 1938 and 1942, after the Second World War he returned to Kherson and worked for the newspaper *Naddnyprians'ka pravda*. Bozhko's first publications were popular historical accounts: *Kozachchyna (Rozмова z selianamy)* (The Cossack Period [A Conversation with Peasants], 1922) and *Khmel'nychchyna* (The Khmelnytsky Period, 1922). Later he wrote the historical novels *Nad kolyskoiu Zaporizhzhia* (At the Cradle of Zaporizhia, 1925), *Chabans'kyi vik* (The Shepherd's Age, 1927), and *V stepakh* (In the Steppes, 1930).

Bozhyk, Panteleimon [Božyk, Pantelejmon], b 26 April 1879 in Onut, Bukovyna, d 20 November 1944 in Winnipeg, Manitoba. Poet, author, and religious leader. Bozhyk immigrated to Canada in 1900. In 1908 he enrolled at the Russian Orthodox seminary in Minneapolis, Minnesota. Ordained in 1911, he was sent to the Russian Orthodox mission in Alberta. In 1920–21 he edited and published the Winnipeg newspaper *Bukovyna*. In 1924 he became a Greek Catholic priest in Winnipeg, where he was also active in cultural and educational work. Bozhyk's collected poems were published as *Kanadiis'ka muza* (Canadian Muse, 1935). He also wrote *Tserkov ukraïntsv v Kanadi* (The Ukrainians' Church in Canada, 1927), a pioneer history of Ukrainian-Canadian religious life.

Bozhyk, Volodymyr [Božyk], b 27 December 1908 in Rava Ruska, Galicia. Choir conductor and singer. He received a teaching certificate from the Lviv Conservatory in 1931 and graduated in music from Lviv University in 1935. From 1936 he appeared as a professional soloist, sang in ensembles (the Warsaw radio quartet until 1939), and directed various choirs. In the 1940s he was the musical director of the Stanyславiv Theater. In 1945, together with H. *Kytasty, he organized and directed the Shevchenko Bandurist Chorus. He emigrated to the United States in 1949 and conducted a choir and children's orchestra in Rochester, New York, in the 1950s. In the 1960s he conducted the Ukrainian National Choir and a church choir in Los Angeles. He is the author of various musical and choir arrangements of Ukrainian songs.

Bradach, Ivan [Bradač], b 14 February 1732 in the village of Torysky in the Prešov region of eastern Slovakia, d 5 July 1772 in Mukachiv. Church leader in Transcarpathia. Bradach was a professor at the theology school in Mukachiv. He later became the auxiliary bishop and, in 1768, the bishop of Mukachiv. Bradach fought for the independence of the Mukachiv eparchy from the jurisdiction of the Hungarian Roman Catholic bishop of Eger. In 1771 Pope Clement XII, in the papal bull 'Eximia Regalium,' established the independent Mukachiv eparchy, and Bradach was appointed its first bishop on 19 April 1772. Bradach published in Vienna a Ruthenian primer (1770) and a breviary, *Sbornik tserkovnykh molenii* (Collection of Church Prayers, 1771).

Brahinets, Andrii [Brahinec', Andrij], b 14 December 1903 in the village of Mali Kanivtsi, Kiev gubernia, d 27 April 1963. Marxist philosopher. Brahinets completed his studies at Kharkiv University, where he taught from 1937 to 1939. He headed the department of philosophy at Lviv University in 1939–41 and after 1946. Brahinets published studies on the history of philosophy and sociopolitical thought in Ukraine, including *Filosofs'ki i suspil'no-politychni pohliady Ivana Franka* (The Philosophical and Sociopolitical Views of Ivan Franko, 1956).

Mykhailo Braichevsky

Braichevsky, Mykhailo [Brajčevs'kyj, Myxajlo], b 1924. Slavic archeologist and historian, senior scientific research associate of the Institute of History of the Academy of Sciences of the Ukrainian SSR. Braichevsky studied at the universities of Kiev and Moscow. His published works include *Ryms'ka moneta na terytorii Ukraïny* (Roman Coins on the Territory of Ukraine, 1959), *Koly i iak vynyk Kyïv* (When and How Kiev Arose, 1963), *Bilia dzherel slov'ians'koï derzhavnosti* (At the Sources of Slavic Statehood, 1964), and *Pokhodzhennia Rusi* (The Origins of Rus', 1968). He co-authored *Istoriia Kyieva* (The History of Kiev, 2 vols, 1959–60) and contributed articles to *Istoriia ukraïns'koho mystetstva* (The History of Ukrainian Art, vol 1, 1966), *Narysy starodavn'oï istorii URSR* (Essays on the Ancient History of the Ukrainian SSR, 1957), *Istorychni pohliady T.H. Shevchenka* (The Historical Views of T.H. Shevchenko, 1964), *Istoriia selianstva Ukraïns'koï RSR* (The History of the Peasantry of the Ukrainian SSR, 1967), and *Istoriia Ukraïns'koï RSR* (The History of the Ukrainian SSR, 1967). Braichevsky also contributed articles to such multi-volume collections as *Arkheolohiia* (Archeology, 1950–63) and *Arkheolohichni pam'iatky URSR* (Archeological Monuments of the Ukrainian SSR, 1949–63), and to *Materialy z antropolohii Ukraïny* (Materials on the Anthropology of Ukraine, no. 1, 1960). In 1966 he wrote a study entitled 'Pryiednannia chy vozz'iednannia?' (Annexation or Unification?), which the Institute of History refused to publish and for which he was reprimanded. The study appeared in samvydav and was published abroad (in Ukrainian in 1972 and in English in 1974). This work is a critical analysis of the Treaty of Pereiaslav, the policies of B. Khmelnytsky and other Cossack hetmans, and Russian imperialism. In 1968 Braichevsky signed a collective letter of 138 Ukrainian intellectuals to the Soviet leaders, protesting the political trials in Ukraine. For this action he was dismissed from his position in the Institute of History and his works were not published from the early to the late 1970s.

Brailiv [Brailiv]. iv-9. Town smt (1977 pop 8,200) on the Riv River in Zhmerynka raion, Vinnytsia oblast. Brailiv has a sugar refinery, a feed processing plant, a juice and fruit-drink plant, and a clothing factory. Among the architectural landmarks of the town is the Holy Trinity Monastery (18th century).

Brakhnov, Volodymyr [Braxnov]. A phonetician working at the Institute of Linguistics of the Academy of Sciences of the Ukrainian SSR. He has written important studies on the preservation/loss of voicing in Ukrainian consonants (*lavyshcha asymiliatsii v konsonantyzmi ukrains'koi movy* [Occurrences of Assimilation in the Consonantism of the Ukrainian Language], 1970) and on the articulatory and acoustic structure of north Ukrainian diphthongs.

Brandt, Józef, b 11 February 1841 in Szczepieszyn, Poland, d 12 June 1915 in Radom. Polish painter of battle scenes. A number of his paintings depict themes from Ukrainian history of the Cossack period.

Brashchaiko, Mykhailo [Braščajko, Myxajlo], b 1883 in the village of Blazhiiivo, Transcarpathia, d 1973 in Khust. Political and cultural leader in Transcarpathia, lawyer, brother of Yu. *Brashchaiko. In 1918–19 Brashchaiko promoted the movement for the unification of Transcarpathia with Ukraine. He was head of the national councils in Syhit and Khust (January 1919) and the delegate of the Khust council to the government of the Western Ukrainian National Republic in Stanyslaviv. Under Czech rule he was a founder of the Ruthenian Agrarian party, editor of its paper, *Rus'ka myva* (1920–4), and later vice-president of the Christian People's party (1923–38). In 1939 he was elected to the diet of Carpatho-Ukraine. He wrote a pamphlet on Czech-Ukrainian relations (1923) and co-authored a Hungarian-Ukrainian dictionary (1928).

Brashchaiko, Yulii [Braščajko, Julij], b 1879 in the village of Hlyboke, Transcarpathia, d 1946. Community and political leader in Transcarpathia, lawyer in Khust and Uzhhorod. In 1918–19, along with his brother M. *Brashchaiko, he organized a movement for the unification of Transcarpathia and Ukraine. He was a founding member of the Central Ruthenian National Council and in 1919 was named the member responsible for trade of the autonomous government, the Directory of Subcarpathian Ruthenia. He was a founder and leading member of the Ruthenian Agrarian party and later the Christian People's party, head of the Prosvita society, and editor of *Ukrains'ke slovo* (Uzhhorod) from 1932 to 1938. In February 1939 he became a member of the diet of Carpatho-Ukraine and on 14 March 1939 the minister of the interior. He led unsuccessful negotiations with the Hungarian government. In late 1944 he was arrested; he died in a Soviet prison.

Brasiuk, Hordii [Brasjuk, Hordij], b 1899 in Volhynia, d 1941. Writer. Brasiuk's stories appeared from 1924 in such journals as *Chervonyi shliakh*, *Zhyttia i revoliutsiia*, and *Pluh*. He belonged to the Kiev branch of the writer's group Hart and later to MARS. He published several collections of stories – *Bezputni* (The Dissolute, 1926), *V potokakh* (In the Streams, 1927), *Ustynka* (1929), *Sny i diisnist'* (Dreams and Reality, 1930) – and the novel *Donna*

Anna (1929). In 1931 he was arrested and imprisoned, and in 1935 he was exiled to Alma-Ata. The circumstances of his death are unknown.

Bratchenko, Leonid [Bratčenko], b 3 August 1923 in Odessa. Stage designer, graduate of the Kharkiv Art Institute. Bratchenko worked in the Kharkiv Ballet and Opera Theater. He designed the sets for the following ballets: L. Minkus's *Baiaderka* (1958), A. Asafiev's *Bakhchysaraiskyi fontan* (Fountain of Bakhchesarai, 1960), A. Khachaturian's *Spartak* (Spartacus, 1966), S. Prokofiev's *Romeo and Juliet* (1967), and K. Dankevych's *Lileia* (The Lily, 1968). He also designed sets for operas such as G. Verdi's *Don Carlos* (1964) and *Il Traviatore* (1971), Yu. Meitus's *Moloda hvardiia* (The Young Guard, 1975), and G. Bizet's *Carmen* (1976).

Bratislava. City (1979 pop 285,000, including about 2,000 Ukrainians) on the left bank of the Danube River; capital of Slovakia. After 1920 a small Ukrainian colony arose in Bratislava. The Prosvita society and later the Association of Ukrainian Engineers in Slovakia and the students' club Beskyd were organized there. The Commercial Academy, which was evacuated from Transcarpathia, functioned in Bratislava in 1939–40. In 1945 a Greek Catholic parish was established in the city. In the 1960s the Ukrainian section of the Slovak Pedagogical Publishing House began publishing books for the Ukrainian population of the Prešov region. In 1970 the T. Shevchenko Music and Drama Club was set up. The Ukrainian scholars in Bratislava M. Molnar and M. Nevrlý are associates of the Slovak Academy of Sciences.

Bratkivska [Bratkivs'ka]. A small mountain ridge in the Polonynian Beskyd of the Carpathian Mountains, covered in evergreen forests and pastureland. Bratkivska Velyka (1,789 m) is the highest peak in the range.

Bratkovsky, Danylo [Bratkovs'kyj], b ?, d 26 November 1702 in Lutske. Civic official of the Volhynian nobility, defender of the Orthodox faith and the rights of the Ukrainian population at the diets of the Kiev and Volhynian nobility. In 1700 Bratkovsky established relations with Hetman I. Mazepa and later took part in S. Palii's rebellion. He composed an appeal to the Orthodox population of Poland, calling on it to resist the Jesuits and Uniates. While the rebellion was being suppressed by the nobles, Bratkovsky was executed in Lutske. He published a collection of poems, *Świat po cześci przejrzaney* (The World Seen Part by Part, 1697).

Bratske [Brac'ke]. vi-12. Town smt (1977 pop 6,500), a raion center in Mykolaiv oblast, founded in the 1760s as a Cossack winter settlement. Bratske has a local food industry.

Bratslav [Braclav]. v-9. Town smt (1977 pop 5,500) in Nemyriv raion, Vinnytsia oblast. The town lies on the Boh River in southeastern Podilia and was well known in the 14th century. Under Polish rule it was an important defense post and voivodeship center. From 1648 to 1712 it was a Cossack regimental town. Under Russia it was a county center in Podilia gubernia. Eventually, because it had no access to the railroad, the town declined.

Bratslav region (Bratslavshchyna). Historical region in Right-Bank Ukraine that emerged in the second half of the 16th century and played an important role until the 18th century. The region got its name from its main town, *Bratslav. After being incorporated into Poland by the Treaty of Lublin in 1569, its territory became the *Bratslav voivodeship. In 1648 it became part of the Hetman state, but in 1667 it was returned to Poland by the Treaty of Andrusovo. From 1648 to 1712 the region also constituted a Cossack regiment. After the second partition of Poland in 1793, the region was annexed by Russia. Up to 1796 it was called the Bratslav vicegerency; then it became part of Podilia gubernia and Kiev gubernia.

Lying on the border of Turkish and Tatar territories, the region suffered frequent incursions and was sparsely settled. The Ukrainian population of the region resisted Polish domination: in 1541 and 1594–5 the burghers of Bratslav revolted, in 1594–6 S. *Nalyvaiko led a peasant-Cossack uprising, and in 1692–1703 A. *Abazyn led a rebellion there.

Bratslav voivodeship. Administrative unit in Right-Bank Ukraine within the borders of the Polish Commonwealth between 1569 and 1793. It included the southern portion of Podilia and was administered from Bratslav until 1598 and later from Vinnytsia. Between 1648 and 1712 the territory constituted a separate regiment in the Hetman state. After the second partition of Poland in 1793, the voivodeship became the Bratslav vicegerency in the Russian Empire. In 1796 it was divided between the Podilia and Kiev gubernias.

Bratun, Rostyslav [Bratun'], b 7 January 1927 in Liuboml, Volhynia. Poet and journalist. Bratun graduated from Lviv University in 1950 and worked as an editor. From 1956 to 1966 he was editor in chief of the journal *Zhovten' and, from 1966 to 1980, head of the Lviv branch of the Writers' Union of Ukraine. His collections of poetry include *Veresen'* (September, 1949), *Svitanky* (Daybreaks, 1950), *Pisnia pro voliu* (Song about Freedom, 1953), *Vohon'* (Fire, 1956), *Ia – syn Ukraïny* (I Am a Son of Ukraine, 1958), *Pora liubovi* (A Time of Love, 1960), *Tsvit zhorzhyny* (Dahlia Blossoms, 1960), *Hrudka zemli* (A Clod of Earth, 1962), *Kanads'ka knyha* (Canadian Book, 1963), *Buinotsvit* (The Wildflower, 1964), *Vatra* (Bonfire, 1966), *Perekhrestia* (Crossroads, 1969), *Vitryla moïei doli* (The Sails of My Fate, 1971), *Oderzhymist'* (Possessedness, 1974), and *Poezii* (Poems, 1977).

Braude, Semen, b 28 January 1911 in Poltava. Ukrainian radiophysicist, full member of the Academy of Sciences of the Ukrainian SSR since 1969. From 1933 to 1955 Braude worked at the Physical-Technical Institute of the Academy of Sciences in Kharkiv. In 1955 he began working at the Institute of Radiophysics and Electronics of the academy. Braude's research is concentrated in the fields of high-frequency vibrations, the propagation of radio waves, radio oceanography, and radio astronomy. He is the author of *Radioustronomiia* (Radioastronomy, 1965).

Braun, Volodymyr, b 13 January 1896 in Yelysavethrad, d 21 August 1957 in Kiev. Film director. He began his career in Leningrad in 1924 and in 1939 moved to Ukraine. His films usually dealt with the sea: *Skarby zahybloho korablia* (The Treasures of a Sunken Ship, 1935), *Koro-*

Semen Braude

livs'ki matrosy (The King's Sailors, 1935), *Moriaky* (Sailors, 1940), *V dalekomu plavanni* (On Distant Voyages, 1946); *Holubi dorohy* (Azure Routes, 1948), *Komandyr korablia* (Commander of the Ship, 1954), *More klyche* (The Sea Calls, 1956), and *Matros Chyzhyk* (Chyzhyk the Sailor, 1956).

Brauner, Oleksander, b 25 January 1857 in Symferopil, d 5 May 1941 in Odessa. Zoologist and archeologist. He finished Odessa University in 1881 and worked in a zemstvo. In 1918 he was appointed chairman of the department of animal husbandry at the Odessa Agricultural Institute. From 1923 to 1935 he worked in the All-Union Institute of Hybridization and Acclimatization of Animals in Askaniia-Nova. He produced about 150 zoological works.

Brazil. Brazil, the largest country in South America, is a federation of 23 autonomous states, 4 territories, and the federal capital district of Brasília. The country has an area of 8,512,000 sq km and an estimated population in 1983 of 131.3 million.

History of Ukrainian settlement. Ukrainians began to settle in Brazil at the beginning of the 1870s. They came from Galicia and Bukovyna and settled in the state of *Paraná. The first known immigrants were the family of M. Morozovych, from the Zolochiv region, who arrived in 1872. Mass immigration took place in three phases. The first wave of immigration from Ukraine, called 'the Brazilian fever,' occurred in 1895–7 and brought over 20,000 small farmers and landless peasants, who were promised cheap land by agents of Italian shipping companies. Instead of the promised black soil, the Ukrainian colonists received lots of uncleared forest in Paraná in the vicinity of Prudentópolis and Mallet. Some of them returned to Galicia. After this, fresh Ukrainian immigrants arrived in smaller groups of 700–1,000 people per year. A larger influx, of 15,000–25,000, took place in 1907–14, this time in response to the Brazilian government's call for construction workers to lay the railroad from São Paulo through Paraná to Rio Grande do Sul. The second wave of immigration consisted of newcomers from Galicia and Volhynia between the world wars. The third wave took place in 1947–51, when about 7,000 Ukrainians arrived from *displaced persons camps in Germany and Austria. These immigrants were socially more diverse and settled almost exclusively in the cities. Among them were many intellectuals, most of whom later emigrated to Canada or the United States.

Population. Although government statistics are inaccurate because Ukrainian immigrants were classified as Austrians or Poles and children born in Brazil were counted as Brazilians, the Ukrainian ethnic group in Brazil numbers 190,000–200,000, and 92.5 percent of its members are Brazilian-born. Of all of these Ukrainians, 78 percent live in the state of Paraná, 5 percent in the state of São Paulo (most of them in the city of São Caetano do Sul), 9 percent in the state of Santa Catarina, 6 percent in the state of Rio Grande do Sul, 0.8 percent in the state of Mato Grosso do Sul, 0.6 percent in the territory of Rondônia, 0.4 percent in the state of Goiás, and 0.2 percent in the state of Minas Gerais. The bulk of the Ukrainian ethnic population lives in Paraná in an area of 6,000 sq km that is known as 'Brazilian Ukraine.' Its largest concentration, 30,500, is found in southeastern Paraná in the county of Prudentópolis. There Ukrainians constitute 75 percent of the population. The city of Prudentópolis is a center of Ukrainian life, particularly religious life. The second-largest concentration is found in the city of Curitiba and its environs, where about 13,750 ethnic Ukrainians live and make up 1.3 percent of the population. Pockets of Ukrainians exist in other cities and towns of Paraná, such as Apucarana, Ivaí, Irati, Ponta Grossa, and União da Vitória, and in such counties of Santa Catarina as Itaiópolis, Papanduva, and Taió.

Religious life. Eighty-five percent of Ukrainians in Brazil are Catholic. The first Ukrainian Catholic chapel was built in Silva near Itaiópolis. In 1897 Ukrainian monks of the Basilian order began to arrive in Brazil, followed by the Sisters Servants of Mary Immaculate in 1911. At first Ukrainian Catholics were subject to the Brazilian Roman Catholic hierarchy. Since the Brazilian church did not accept married priests, most of the Ukrainian priests were and still are members of the Basilian order. Under the dictatorship of G. Vargas in 1930–45, priests were forbidden to preach in Ukrainian. Ukrainian Catholics received their own vicar general only in 1952 – Mgr C. Preima – and were brought under a new ordinary for Eastern-rite Catholics in Brazil – Archbishop J. Câmara.

A typical church built by Ukrainian settlers in Brazil

In 1958 they got their own bishop – Y. Martynets, who served as auxiliary bishop to Cardinal Câmara. Finally, in 1962, a separate exarchate was established under the direction of Bishop Martynets, whose residence was in Curitiba. At the same time Rev P. Busko was appointed vicar-general in place of Mgr Preima, who emigrated to the United States. In 1971 the Apostolic See created the Eparchy of St John the Baptist for all Brazil. Its seat is Curitiba. Bishop Martynets was appointed its first head,

The Ukrainian Catholic church in Prudentópolis, built in 1933

and Bishop E. B. Krevey (Kryvy), who was born in Brazil, was appointed auxiliary bishop with the right of succession. When Bishop Martynets resigned in 1978, Bishop Krevey succeeded him.

The Ukrainian Eparchy of St John the Baptist encompasses 17 parishes, which are in the care of 52 priests, 43 of whom are Basilians and 9 diocesan. There are 179 churches and chapels, the most impressive of which are St Josaphat's Church in Prudentópolis, the Cathedral of St John the Baptist in Curitiba, and the Church of the Nativity of the Virgin Mary in Curitiba. The following monastic orders are active in the eparchy: the Basilian fathers, the Sisters Servants of Mary Immaculate, the Sisters Catechists of St Anne, the Sisters of St Joseph, the Basilian sisters, and the Sisters Catechists of the Sacred Heart of Jesus. The Basilian fathers run St Joseph's Seminary in Prudentópolis and the Cardinal Tisserant Seminary in Marechal Mallet. Their monasteries in Ivaí and Curitiba support a novitiate and teach philosophy and theology. Most of the Ukrainian priests are now Brazilian-born, and many of them are graduates of Gregorianum University in Rome.

The Ukrainian Autocephalous Orthodox church consists of the descendants of colonists from Bukovyna and Volhynia, as well as Galician converts to Orthodoxy in the 1920s. The first parish was formed in 1926 in Jangada, Santa Catarina, by Galician settlers. Another parish was established in the following year in the colony of São Miguel, in Joaquim Távora, Paraná. These parishes were in the care of Rev M. Zombra, who came from Galicia. In 1929 the Orthodox community in Iracema, Santa Catarina, petitioned Archbishop I. Teodorovych in the United States to take the community under his care and to send a missionary to Iracema. This led to the formation of the first organized parish of the Ukrainian Autocephalous Orthodox church in Brazil in 1930. In 1931 Protopresbyter D. Sidletsy, who was appointed head of the Ukrainian Orthodox mission in Brazil by Archbishop Teodorovych, arrived in Gonçalves Júnior. By 1938, 20 parishes and missionary outposts were established in Paraná and Santa Catarina. The period of dictatorship and nationalization in Brazil (1938–45) had a detrimental effect on the Orthodox church, and it lost most of its clergy. In 1942 the archimandrite, V. Postolian, left for Uruguay, where he was ordained by Archbishop M. Solovii. In 1945–8 Rev Postolian was the only Orthodox priest left in Brazil.

After the Second World War four Orthodox priests came to Brazil. In 1951 Protopresbyter F. Kulchynsky

came from Canada to assume the duties of administrator of the church in Brazil. This led to important changes in the life of the church and to new organizational forms. In 1969 Bishop Y. Skakalsky became head of the Orthodox church for all of South America. When he died in 1974, the United States Council of Bishops appointed Bishop V. Hai as his successor. On Hai's death in 1977 Metropolitan M. Skrypnyk appointed Rev M. Mylus as his representative and administrator of the Ukrainian Autocephalous Orthodox church in South America. The church has about 8,000 members in Brazil, who constitute 4 percent of the Ukrainian population. They are organized in 14 parishes and missionary posts and are served by five priests. The largest churches are St Volodymyr's Church in São Caetano do Sul, built in the Ukrainian style; St Michael's Church in Curitiba; and SS Peter and Paul's Church in Gonçalves Júnior.

Ukrainian Evangelical Baptists first came to Brazil after the Second World War and settled mostly in the state of São Paulo. In 1951 the first Baptist congregation was formed in São Caetano do Sul under the leadership of Pastor S. Molezhnyk. In 1955 it adopted the official name First Ukrainian Baptist church. Since 1960 its pastor has been D. Butsky. There are about 300 Ukrainian Baptists in Brazil.

Social and political life. At first Ukrainian settlers congregated around their churches and parish organizations. The first secular organizations appeared in the early 1900s. In 1902 a Prosvita society was founded in Curitiba. On the eve of the First World War there were 32 Ukrainian organizations in Brazil. They spanned the entire political spectrum, from conservative to radical. The largest of them was Ukraine (Ukraina) in Prudentópolis, which was supported by the Basilian fathers. The second largest was the Ukrainian Union, which was founded in Porto União in 1922. In 1934 its central office moved to Curitiba. In 1938 its name was changed to the *União Agrícola Instrutiva, and it became the cultural center of Ukrainian life in Brazil. In 1940 the corporatist government of G. Vargas dissolved all immigrant organizations in Brazil. With the return to a democratic order the union resumed its activities in 1947 and was ideologically associated with the Melnyk faction of the OUN. In the same year the *Society of Friends of Ukrainian Culture was founded in Curitiba; it was ideologically close to the hetmanite movement and the Bandera faction of the OUN. In 1949 the Sociedade Ucraniana Unificação (SUU) was established in São Caetano do Sul; its activities were limited to the state of São Paulo. In 1971 the Brazilian Center for Ukrainian Studies was established in Curitiba. In the last few years the activities of the União Agrícola Instrutiva (UAI) have expanded greatly. Publishing has been resumed, and weekly radio broadcasts were begun, first in Ukrainian and later, in response to government demands, in Portuguese.

The UAI and SUU each have a women's section. In 1967 a conference of all women's organizations in South America that are members of the World Federation of Ukrainian Women's Organizations was held in Curitiba. There also exist youth organizations, which are affiliated with parishes and various societies. The largest youth group today is the Literary and Sports Youth Center of the UAI in Curitiba. In 1980 the Catholic eparchy founded the Religious and Cultural Center for Ukrainian Youth in Curitiba.

Attempts to set up a federation of Ukrainian organizations – including the Ukrainian People's Council in Prudentópolis, formed by the first congress of Ukrainians in Brazil in 1910; the Ukrainian People's Council, created at the congress in Dorizón in 1919; and the Ukrainian Union, founded at the congress in Dorizón in 1922 – were short-lived. Even the Ukrainian-Brazilian Committee, which was formed by three Ukrainian organizations in Curitiba in 1953, disintegrated in 1956 because of political conflicts. In spite of their disunity, the Ukrainians in Brazil always took a keen interest in events in Ukraine and responded to them actively. In 1920–2 P. Karman-sky, a representative of the Western Ukrainian National Republic, collected a large sum in Brazil in aid of the republic. Later the Ukrainians in Brazil supported various Ukrainian causes.

Ukrainians have been active in Brazilian politics in two ways: they have informed the government and the mass media about Ukraine, and they have participated in the party politics of Brazil. Since 1946 Brazilians of Ukrainian origin have been elected to state legislatures and the federal parliament. In Paraná many Ukrainians hold government posts, and even more of them are elected to local and municipal councils.

Education and cultural life. Ukrainian private schools were first organized by the better-educated immigrants in 1897–8. In 1913, as a result of the efforts of the Basilian fathers, the School Union was established. In 1938, when the Vargas government prohibited immigrant schools, there were 41 Ukrainian schools in Prudentópolis county alone. By 1938 the Sisters Servants ran 18 schools, some of which were boarding schools. Today their schools are government supervised and subsidized. In 1926–7 the Ukrainian Union founded a junior gymnasium in Porto União, but efforts to establish a full gymnasium did not succeed. Only in 1935 was a permanent Ukrainian secondary school, with two languages of instruction – Ukrainian and Portuguese – established: St Joseph's Minor Seminary, directed by the Basilian fathers in Prudentópolis. The Ukrainian language is taught as an extra-curricular subject in the 32 elementary and 3 secondary schools of the Sisters Servants, at the St Olha Institute in Prudentópolis (which was founded in 1941 and is run by the Sisters Catechists of the Sacred Heart of Jesus), and at evening, weekend, and summer schools run by various parishes and organizations.

The Ukrainian press in Brazil began to appear at the beginning of the 20th century. In 1907–9 S. Petrytsky published a radical biweekly, *Zoria*, in Curitiba. The Catholic bimonthly *Prapor* was published first in Curitiba and then in Prudentópolis in 1910–11. The Basilian fathers have published the monthly *Ukraïns'kyi missionar* in Prudentópolis since 1911. The Catholic weekly **Pratsia* has been published with a few interruptions since 1912. In 1924 P. Karmansky founded the weekly *Ukraïns'kyi khliborob* in Porto União. From 1934 it was published in Curitiba under the name **Khliborob* by the UAI. In 1972 it changed its name to *Informatyynyi biuleten'* and now appears irregularly. Many periodicals appeared only briefly: the semimonthly *Ukraïna*, published in Curitiba in 1919; the monthly *Samoosvitnyk*, published in Prudentópolis in 1935–40; *Nash napriam*, published in Curitiba in 1937–8; *Nasha dumka*, published in São Paulo in 1948; *Sorbornist'*, published in São Paulo in 1966–8; and *Pravoslavna nyva*, published by the Ukrainian Autocephalous

The title page of the first issue of *Pratsia*, 22 December 1912

Orthodox church in Brazil in 1954–70. The Basilian fathers' publishing house in Prudentópolis has published religious, educational, and popular literature since 1912.

In the early days of Ukrainian settlement in Brazil an important role in Ukrainian cultural life was played by V. Kuts-Smola, S. Petrytsky, P. Karmansky, O. Martynets, the priests P. Protskiv, S. Kizyma, M. Shkirpan, K. Bzhukhovskyy, and O. Ananevych. Several early immigrants wrote on Brazilian themes: V. Kuts-Smola, P. Karmansky, S. Kalynets, and O. Shpytko. The present generation of writers consists of O. Kolodii, V. Vovk-Selianska, O. Zaporizky, V. Buzhenko, and O. Mak, who emigrated to Canada in 1971.

The most prominent Ukrainian artists and musicians in Brazil are the landscape painter M. Bakun, the portrait painter D. Izmailovych, the sculptor O. Narozhniak, and the pianist L. Borushenko.

Ukrainian scholars are usually employed by Brazilian universities: in 1980, 52 Ukrainians held university appointments.

Ukrainian folk arts are cultivated by Ukrainians in Brazil. Amateur groups devoted to Easter-egg painting, embroidery, woodcarving, folk singing, and dancing display their skills at folk festivals. The largest amateur group, 120 people, is connected with UA1.

Economic life. Almost 75 percent of Ukrainians in Brazil (compared to 52 percent of Brazilians in general) are occupied in farming. They grow wheat, rye, buckwheat, potato, and local crops such as rice and sweet potato. Industrial crops such as mint, sunflower, castor bush, maté, and coffee are widely raised. The Ukrainian settlers have made beekeeping popular in Brazil and have developed new species of fruit trees by grafting and crossbreeding. Ukrainian farmers also raise cattle, poultry, and hogs for their own use and for sale at local markets. Generally the Ukrainian farmers in Brazil are poor. Today successful agriculture requires a large investment of capital or a co-operative system. Unfortunately, in spite of the efforts of V. Kuts and other leaders, there are no Ukrainian co-operatives in Brazil.

Some Ukrainians work in industry or in small manufacturing firms. Relatively few Ukrainians – only about 8 percent – work in professions such as medicine, dentistry, pharmacy, law, engineering, agronomy, or in government jobs at the federal, state, or municipal level.

Bream (*Abramis brama*; Ukrainian: *liashch*). A fish of the carp family. It reaches 50 cm in length and 6 kg in weight. Usually, breams of 0.8–1.5 kg are caught. The fish is very common in the rivers of Ukraine, the low-salinity waters of the limans, and the freshwater parts of the Sea of Azov. The bream is an important mainstay of the fish industry.

Breiter, Ernest, b 22 October 1865 in Davydiv near Lviv, d November 1935 in Vienna. Polish journalist and politician in Galicia, an independent socialist, member of the Austrian parliament for Lviv (1900–14). In 1918 he was a member of the Ukrainian National Rada and the government of the Western Ukrainian National Republic. He was the only Polish politician at that time who supported Ukraine's sovereignty; later he joined Ye. Petrushevych's government in exile in Vienna.

Brest (Ukrainian: Berestia). 1-4. City (1981 pop 194,000); an oblast capital in the Belorussian SSR on the right bank of the Buh River at the mouth of the Mukhavets River, an important railway and highway junction, and a port on the Mukhavets. The city has an airport. Brest was founded as a center for trade and defense on the border between Kievan Rus', the Polish Kingdom, and the Grand Duchy of Lithuania. It was first mentioned in 1017 as the city of Berestia of the *Derevlians and was for a time ruled by the Turiv princes. In 1044 it was conquered by Yaroslav the Wise. As the major center of *Berestia land, Berestia was a part of the Kievan state and the Volhynian principality. In 1319 it came under Lithuanian rule; in 1596 the Church Union of *Berestia took place there. From 1569 to 1795 it was the major city of Brest voivodeship in the Grand Duchy of Lithuania (during this time it was called Brest Lytovskyy). In the 15th and 16th century it was a busy market town; during the second half of the 17th century it fell into decline. In 1795 Brest came under Russian rule and in 1801 it became a county town of Grodno gubernia, with the name of Brest-Litovsk. In 1831 the population of the town was resettled a few kilometers to the east, and Brest was turned into a fortress to defend the highways leading to Kiev and Moscow from the west. In the second half of the 19th century, when Brest became a railway junction, trade increased, and by 1909 the population (mainly Jewish) had increased to 53,000. In 1918 the Peace Treaty of *Brest-Litovsk between Ukraine and the Central Powers was signed there. Under Polish rule (1920–39) Brest (Brześć nad Bugiem) was the center of Polisia voivodeship; in 1920 it contained an infamous internment camp for soldiers of the Ukrainian Galician Army; in 1930–1, opposition members of the Polish Sejm (including Ukrainians) were imprisoned there. In 1939 the Brest region became part of the Belorussian SSR, although its inhabitants were Ukrainian. Today Brest is an important appliance-manufacturing center. The city also has a food

industry and light industry, a carpet-manufacturing complex, and shoe and garment factories. A once-famous Basilian monastery and the Church of ss Peter and Paul, as well as a pedagogical and a construction institute, a theater, and a regional museum are located there.

V. Kubijovyč

Brest oblast. A southwestern province of the Belorussian SSR, bordering on the Ukrainian SSR in the south and Poland in the west. In the north and east it borders on other oblasts of the Belorussian SSR. Brest oblast was formed on 4 December 1939. Its area covers 32,300 sq km, and its population in 1979 was 1,360,000. It is divided into 16 raions and has 19 cities and 10 towns. Although Brest oblast lies within Belorussia, most of its territory is a part of Ukrainian ethnic territory. Of the 16 raions, 10 are essentially Ukrainian, 4 in the north are Belorussian, and 2 are mixed (ie, are divided by the Ukrainian-Belorussian ethnic border). The part of the oblast settled by Ukrainians covers about 20,000 sq km and has a population of 900,000.

The discrepancy between the Ukrainian-Belorussian political border and the ethnic border results from a deliberate decision made by the Soviet authorities. It is their policy to weaken the Ukrainian SSR and to reduce the size of the Ukrainian population, which is subjected to denationalization through both Belorussification and Russification in Belorussia.

Physical geography. Brest oblast lies on the border of Polisia, except for a small part in the northwest that belongs to Podlachia and a part in the northeast (settled exclusively by Belorussians) that belongs to the Belorussian Upland (Baranavichy Plain and Navahrudak elevation). The Ukrainian part of Brest oblast includes the following areas of Polisia: Buh Polisia, the western part of Prypiat Polisia, Zaiasoldia, Zarichia, and the somewhat more elevated *Zahorodia. Except for Zahorodia, all these areas are wetlands. The highest elevation is 175 m, and the lowest is 110 m. The climate is temperate continental: the average temperature in July is 18–19°C, and in January it is –4.5°C (in the west) and –5.5°C in the east. The length of the growing season is 195–205 days. The annual precipitation is 550–650 mm, of which 400–450 mm fall in the warm season. The total length of the rivers is 5,000 km. The largest rivers are the Prypiat and its tributaries the Yaselda, Pyna (connected to the Buh through the Dnieper-Buh Canal and the Mukhavets River), Styr, and Horyn. There are many lakes, of which the largest are Vyhonivske and Chorne. The oblast has weakly podzolic sandy soils, podzolic turf loam, podzolic turf gley, and humus carbonate soils. Peat-bog soils constitute about 360,000 ha. Marshes cover 20 percent of the territory; of these, 93 percent are lowland bogs. The forests of Brest oblast are 54 percent pine, 18 percent birch, 18 percent alder, and 5 percent oak. *Bilovezha Forest lies within the oblast.

History. Under the Polish Commonwealth most of the present Brest oblast constituted Brest voivodeship of the Grand Duchy of Lithuania. After the partitions of Poland it became part of Hrodna gubernia within the Russian Empire. In 1917–19 the area was part of the UNR. In 1920–39 under Poland it belonged to Polisia voivodeship. After 1939, retaining approximately the same boundaries, it became Brest oblast. (See also *Berestia land and *Polisia).

Population. In 1979 the population of Brest oblast was 1,360,000, resulting in a density of 42.3 people per square kilometer. The population density was highest in the raions with the largest cities – the Brest and Pynske raions. In the First World War the front for a long time ran through the region, and there was a high loss of life during that war as well as during the Second World War. Owing to a high birth rate, the population bounced back quickly after the wars. The oblast's population was 1,225,000 in 1940, 1,182,000 in 1959, and 1,294,000 in 1970. The percentage of the urban population is constantly increasing: it was 17 percent of the population in 1940, 24 percent in 1959, 34.8 percent in 1970, and 42.1 percent in 1980. The largest cities in the province are Brest, with a population of 194,000; Baranavichy, with 135,000; Pynske, with 96,000; Kobryn, with 25,000; Luninets, with 11,000; and Pruzhany, with 10,000.

According to the census of 1979, the ethnic composition of the oblast's population was: Belorussians, 1,151,000; Russians, 124,400; Ukrainians 40,600; Poles, 34,000.

Economy. Until 1940 the economy of Brest oblast was predominantly agricultural. Lumbering also played an important role. Certain specific old farming methods were still employed (see *Polisia). After the Second World War the oblast's economy underwent basic changes because of the nationalization of agriculture and the growth of industry.

Industry. In the present structure of industrial production the food industry (35 percent) and light industry (33 percent) predominate; they are followed by the metalworking industry (12 percent), the lumber and woodworking industry (8 percent), the peat industry, and the building industry. The energy produced is based on peat, natural gas (brought in by the Dashava-Minsk pipeline), and coal (from the Lviv-Volhynia Coal Basin). A huge 920,000 kW thermal power plant has been built in Bereza. The food industry consists of poultry- and meat-packing plants, fruit and vegetable canning plants, flour mills, sugar refineries, liquor distilleries, breweries, etc. The largest enterprise of light industry is the cotton textile mill in Baranavichy. There are also a rug factory, a hosiery factory, and a wool-textile factory in Brest and a knitted wear factory in Pynske. Leather footwear is produced on a large scale. The metalworking and machine-building industries developed only in the 1950s. They consist of an auto-repair plants and plants producing machine-tool instruments and equipment for commercial enterprises (in Baranavichy), gas equipment and electrical lamps (in Brest), and repair shops for boats and excavators (in Pynske). The largest plants of the woodworking industry are the plywood and matchstick production complex in Pynske, the ski factory in Telekhany, and the furniture factories in Brest, Baranavichy, and Pynske. The main industrial centers of the oblast are Brest, Baranavichy, Pynske, Luninets, and Kobryn.

Agriculture. In 1978 there were 307 collective farms and 91 state farms in Brest oblast. Farmland covers 1,482,700 ha, or 45.1 percent of the total land area: of the total land resources in the oblast, 25.2 percent is cultivated, 9.2 percent is hayfields, and 9.4 percent is pasture. Much of the farmland is swampy and requires draining; in 1978 drained farmland covered 497,400 ha. There were 855,500 ha under crops in 1978 (756,400 in 1965); of this, 402,500 ha (47.1 percent) were devoted to grain, 44,500 ha (5.2 percent) to industrial crops, 121,300 ha (14.2

percent) to potatoes, 6,600 ha (0.8 percent) to vegetable and melon crops, and 126,300 ha (14.8 percent) to fodder crops. Flax predominates among the industrial crops, covering an area of 24,555 ha. In 1975–8 the average yield (in centners per hectare) in Brest oblast was 25.0 for grains, 177.7 for potatoes, and 4.5 for flax.

In 1979 there were 1,050,000 head of cattle (including 423,600 cows), 649,900 hogs, and 99,600 sheep in the oblast. Fishing, poultry farming, and beekeeping are also well developed.

Transport. As of 1969 there were 1,050 km of usable railway in Brest oblast. The main lines are Moscow-Brest, Homel-Brest, and Vilnius-Rivne. The main railway junctions are Brest, Baranavichy, Lunynets, and Zhabyinka. The road transportation network is expanding rapidly, encompassing 10,500 km of highways, of which 3,300 km are hard-surface highways. Waterways, too, are extensively used, primarily the Prypiat, Pyna, Mukhavets, Styr, Horyn, and Shar rivers and the Dnieper-Buh Canal. The trans-European Druzhba oil pipeline and the Dashava-Minsk gas pipeline run through the oblast.

Brest-Litovsk, Peace Treaty of. A peace treaty between the Ukrainian National Republic and the Central Powers of Germany, Austria-Hungary, Turkey, and Bulgaria, signed on 9 February 1918 in Brest, Belorussia. When the Russian Bolshevik government began to negotiate an armistice on the eastern front, the government of the Ukrainian Central Rada also began negotiations, because the Austro-German and Rumanian fronts ran through Ukrainian territory.

The Central Rada expressed its desire for peace with the four Central Powers in the resolutions of 22, 24, and 26 December 1917, and on 28 December an armistice suspending hostilities at the front was signed. The Bolshevik delegation led by L. Trotsky began peace negotiations at Brest-Litovsk on 3 December 1917. On 1 January 1918 the Ukrainian delegation, headed by V. Holubovych and including M. Poloz, O. Sevriuk, M. Levytsky, and M. Liubynsky, arrived at Brest-Litovsk. On 12 January 1918 Count O. Czernin, representing the Central Powers, recognized the independent UNR delegation. Counts Czernin and Csáky, representing Austria-Hungary, refused to include the question of Galicia, Bukovyna, and Transcarpathia in the general peace treaty, claiming these territories were an internal issue of the Habsburg monarchy. But they conceded that the Kholm region and Podlachia should be part of the UNR. After 20 January 1918 the Ukrainian delegation returned to Kiev.

The full independence of the UNR was proclaimed in the Fourth Universal on 22 January. The Ukrainian delegation, now headed by O. Sevriuk and including M. Liubynsky and M. Levytsky, returned to Brest-Litovsk. On 1 February 1918 the plenary session was attended by Ye. Medvedev and V. Shakhrai, representing the 'Soviet Ukrainian government' in Kharkiv. On behalf of the Central Powers, Czernin recognized the independence

and sovereignty of the UNR. On 9 February 1918, over Bolshevik protests, the treaty between the UNR and the Central Powers was signed. Those signing the treaty included O. Sevriuk, M. Liubynsky, and M. Levytsky for the UNR; Gen M.F. Hoffmann, the representative of the German high command, and R. von Kuhlmann for Germany; Count O. Czernin for Austria-Hungary; V. Radoslavov, A. Toshev, I. Stoianovich, T. Anastasov, and Col P. Ganchev for Bulgaria; and Talaat Pasha, I. Hakki Pasha, A. Nessimi Bey, and A. Izzet Pasha for Turkey.

The Central Powers recognized the following as the UNR's boundaries: in the west the 1914 Austro-Hungarian-Russian boundary; in the north the line running from Tarnohrad through Bilhorai, Shchebreshyn, Krasnostav, Puhachiv, Radzyn, Mezhyrichia, Melnyk, Kamianets-Lyтовskyi, Pruzhany, and Vyhoniyske Lake. The exact boundaries were to be determined by a mixed commission on the basis of ethnic composition and the will of the inhabitants (art 2). Articles in the treaty provided for the regulated evacuation of the occupied regions (art 3), the establishment of diplomatic relations (art 4), the return of prisoners of war (art 6), and the exchange of interned civilians and the renewal of public and private legal relations (art 8). Both sides renounced mutual war reparations (art 5). Article 7 provided for the immediate resumption of economic relations and trade and set down the principles of accounting and tariffs.

Austria-Hungary and the UNR also signed a secret agreement regarding Galicia and Bukovyna. Austria agreed to unify by 31 July 1918 in one crown land those areas of eastern Galicia and Bukovyna where the Ukrainian population predominated. But on 4 July 1918 Austria annulled this secret agreement under the pretext that Ukraine had not delivered to it the amount of grain promised under the treaty. This action was really the result of Polish pressure.

The Central Powers signed a separate peace treaty with Bolshevik Russia at Brest-Litovsk on 3 March 1918. Russia agreed to recognize the concluded treaty with the UNR, to sign a peace treaty with Ukraine immediately, and to define the border between Russia and Ukraine (art 6).

The Treaty of Brest-Litovsk provided Ukraine with German military aid in clearing Bolshevik forces from Ukraine in February–April 1918. However, the Allied powers received news of the treaty with indignation and suspended relations with the UNR. The Treaty of Rapallo of 1922 between Germany and Soviet Russia canceled the German commitments made at Brest-Litovsk. The disintegration of Austria-Hungary automatically annulled Austria's commitments. Turkey renounced the Treaty of Brest-Litovsk by signing a treaty with the Ukrainian SSR in 1922. Only Bulgaria, so far as is known, never formally annulled the treaty.

Brewing industry. A branch of the food industry that produces beer. In Ukraine brewing has existed as a home industry since the period of Kievan Rus'. Beginning in the 15th century, the Polish kings and the grand dukes of Lithuania granted the right to establish breweries in the towns, where later brewery guilds began to form. In the mid-19th century the small home breweries were supplanted by brewing factories. At first these factories were small: in 1895 there were 186 such breweries, employing 1,417 workers, in the nine Ukrainian gubernias; in 1913 there were 218 breweries, with an annual production of 204 million liters of beer (17.8 percent of beer production in the Russian Empire). The brewing industry was distributed throughout Ukraine, but it was concentrated in the larger cities, particularly in Kiev, Kharkiv, and Lviv. During the First World War breweries across the Russian Empire were closed down, and the industry declined. Beer production returned to the prewar level towards the end of the 1920s. In 1940 the Ukrainian SSR (in its present boundaries) produced 272 million liters of beer, which amounted to 22.5 percent of the USSR production and to 1.6 percent of the gross output of the food industry in Ukraine. After the Second World War a number of breweries were rebuilt, and many new ones constructed. The growth in the production of beer in the Ukrainian SSR is represented by the following figures (in millions of liters; the percentage of the USSR production that these figures constitute is given in parentheses): 1950 – 267 (20.4); 1960 – 522 (20.8); 1970 – 900 (21.5); 1978 – 1,409 (21.8); and 1980 – 1,331 (21.7). In 1978 the per capita production of beer in Ukraine was 28.2 L as compared to 6.7 L in 1940 (the respective figures for the USSR are 24.6 L and 6.4 L). As of 1978 there were 110 breweries in Ukraine, at which time brewing and bottling were already fully mechanized, but the packaging, loading, and unloading were not. Breweries are distributed fairly evenly throughout Ukraine, but most of the beer is produced in the Dnipropetrovske, Donetske, Kharkiv, Lviv, and Kiev oblasts. The largest breweries are located in Lviv (the Kolos plant), Donetske, Dnipropetrovske, Kiev, and Kharkiv. Improvements in the development of the brewing industry are studied at the Ukrainian Scientific Research Institute of the Food Industry in Kharkiv and the All-Union Planning and Design Scientific Research Institute for the Automation of the Food Industry in Odessa. (For a bibliography see *Food industry.)

B. Wynar

Brezhnev, Leonid Ilich, b 19 December 1906 in the village of Kamianske (now Dniprodzerzhynske) in Katerynoslav gubernia, d 10 November 1982 in Moscow. Soviet political leader, first secretary of the Central Committee (CC) of the CPSU from 14 October 1964 (general secretary from 8 April 1966), and chairman of the Presidium of the USSR Supreme Soviet from 16 June 1977.

Brezhnev's grandfather, Yakov, and father, Ilia, were immigrant workers from Kursk gubernia. From 1923 to 1927 Brezhnev attended the Kursk Tekhnikum for Land Utilization and Reclamation and, in 1930–1, the Agricultural Institute in Moscow. In 1931 Brezhnev joined the Communist party and returned to Ukraine from the Urals

to work at the Kamianske steel mill and to finish his degree in engineering at the local metallurgical institute (1931–5).

Brezhnev's political career began in Ukraine. He held various posts in the Party oblast committee (*obkom*) in Dnipropetrovske (1938–40), including that of secretary for propaganda during the Great Purge. During the war Brezhnev rose to the rank of major-general, with such duties as chief of the Political Administration of the Fourth Ukrainian Front (1945) and of the Carpathian Military District (1945–6), where he participated in the Soviet campaign against the Ukrainian Insurgent Army. After the war Brezhnev was *obkom* first secretary in Zaporizhia (1946–7) and Dnipropetrovske (1947–50), first secretary of the Communist Party of Moldavia (1950–2), and secretary of the CC CPSU and candidate member of the CPSU Presidium (1952–3). As N. *Khrushchev's successful representative for the virgin-lands program, he was second secretary (1954–5) and then first secretary (1955–6) of the Communist Party of Kazakhstan. He became a full member of the CPSU Presidium in 1957, head of the Presidium of the Supreme Soviet (1960–4), and finally first secretary of the CC CPSU after the overthrow of Khrushchev in 1964.

Brezhnev changed Khrushchev's regional pattern of Soviet economic administration (*sovnarkhoz*) back to the rigidly centralist, functional, ministerial pattern. Opposition from Ukrainian economists and government officials was disregarded, and generally, as supreme ruler of the USSR, Brezhnev systematically asserted his power and centralist policies in Ukraine. Brezhnev defeated the Kharkiv–Kiev (Pidhorny–Shelest) faction in the Soviet leadership. M. *Pidhorny was removed from the CC CPSU Secretariat (December 1965) and ousted from the Politburo (May 1977). P. *Shelest lost his position as first secretary of the CPU in May 1972 and his seat on the CPSU Politburo in April 1973. He was replaced as first secretary of the CPU by Brezhnev's protégé, V. *Shcherbytsky, a prominent member of the Dnipropetrovske faction. Whereas Pidhorny's and Shelest's factions were more assertive of Ukrainian political, economic, and cultural autonomy, Shcherbytsky's group has been more subservient to Moscow.

Although continuing the assimilationist pressures of Khrushchev's last years, Brezhnev's legacy in Soviet *nationality policy appears to be threefold. On the theoretical level, at the 24th CPSU Congress (1977) Brezhnev altered Khrushchev's 'merging of nations' to 'the unshakable union' and endorsed the concept of the 'Soviet people,' as 'a new historical community' that has emerged during the 'building of socialism in the USSR.' On the practical level, despite some pressure to abolish the pseudosovereign Soviet republics, Brezhnev accepted their continued existence in the new 1977 Soviet constitution. Thirdly, on the policy level, in May 1979 the Tashkent Conference on 'The Russian Language – The Language of Friendship and Co-operation of the Peoples of the USSR' passed a secret draft calling for the mandatory teaching of Russian in every non-Russian kindergarten and nursery. It appears that, despite Brezhnev's close personal connections with Ukraine, his attitude towards Ukraine was that of a Russian centralist attempting a gradual conversion of Ukraine back into the Little Russia or New Russia of the 19th century.

Brianka [Brjanka]. v-19. City (1981 pop 63,000) in Voroshylovhrad oblast, on the Lozova River. The city developed from a mining settlement that sprang up near a coal mine opened in 1889 in Luhanske county in Katerynoslav gubernia. In 1944 Brianka became a raion of the city of Kadiivka and in 1962 it became a separate city. The population of Brianka is declining: It was 78,000 in 1959, 71,000 in 1970, and 67,000 in 1977. Brianka has eight coal mines, two enrichment plants, a mining-machine repair plant, a reinforced-concrete plant, and a tekhnikum of economics and technology.

Briansk oblast. Administrative unit in the western RSFSR, established on 5 July 1944. It has an area of 34,900 sq km and a population of 1,509,000 (1980). Until 1920 the southwestern portion of Briansk oblast included the northern part of *Chernihiv gubernia (Novozybkiv, Starodub, Mhlyn, and Surazh counties), which at one time was part of the Cossack Hetman state and the UNR. In 1980 Briansk oblast officially had a Ukrainian population of 22,200. (See also *Chernihiv region.)

Brick industry. A branch of the *building-materials industry that manufactures various forms of brick, blocks, panels, tiles, etc, out of minerals – mostly clay and a mixture of quartz sand and lime. See also *wall-materials industry.

Brickmaking involves two processes – the mechanical process of breaking up, mixing, and shaping the clay from which the bricks are made and the thermal process of firing the bricks.

Brickmaking existed in the Far East as early as the 5th millennium BC. It was probably introduced into Ukraine through the Greek Black Sea colonies and later the Byzantine cities. The adoption of Christianity in Ukraine stimulated the development of the brick industry. As early as the 10th and 11th century large buildings – such as St Sophia Cathedral and the Church of the Tithes in Kiev and the princely palaces in Kiev, Chernihiv, and elsewhere – were constructed of fired brick. The shape of bricks changed with time: the oldest were square (30 cm × 30 cm) and very thin; the bricks of the 11th–12th century were rectangular (36–38 cm × 26–29 cm) and 4.5 cm thick. Today the standard form is 25 cm × 12 cm × 6.5 cm. Urban growth stimulated the further development of the brick industry. Brickyards were usually located near deposits of clay. Nevertheless, only a small number of buildings were built of brick. Brickmaking in the preindustrial period was a cottage industry; all work was done by hand, and employment was seasonal. Brickyards often developed as subsidiaries of metallurgical, sugar, and other enterprises and were usually located in the larger towns. It was only at the end of the 19th century that the industry lost its cottage-industry character. In 1912

Russian-ruled Ukraine produced 519 million bricks, or 22 percent of the empire's production, and nearly 100 million fireproof bricks, or 53 percent of the empire's production, of which Katerynoslav gubernia produced 85 million.

In 1918–20 the brick industry declined. Although it recovered beginning in 1921, the technology remained backward, and production could not satisfy the demand, which had grown particularly because of the growth in housing construction. By the mid-1930s the prewar level of production was reached, and in 1940, 1.6 billion bricks were produced.

Following the period of postwar reconstruction in the early 1950s, a series of new, larger brick plants was built in 1960–75 – in Mykolaiv (Lviv oblast), Zdolbuniv (Rivne oblast), Novoamvrosiivske (Donetske oblast), Kryvyi Rih, and elsewhere. During this time about 60 percent of the plants were converted from seasonal to year-round production. New branches of the industry were created to produce artificial brick and slate and silica brick. The production of architectural brick (porous and perforated), brick blocks, and facing brick for metallurgy was expanded. Old plants were reopened and provided with ring kilns of a modified type (producing three million bricks a year) and tunnel kilns (with a capacity of eight million bricks a year). Since the second half of the 1970s, however, brick production has slowed down. Clay brick was found to be a poor wall material and is currently being replaced with more effective products, such as building blocks and precast reinforced concrete.

Today there are close to 500 state and co-operative brick plants in Ukraine and nearly 4,000 smaller brickyards, which are usually located on collective farms and in less populated areas. The smaller brickyards belong to sugar refineries and other industrial enterprises and are managed by industrial co-operatives and other agencies of local industry. In spite of the relatively wide geographic distribution of the brick industry in Ukraine, brick production does not always function economically. The transportation of brick, which is very heavy, is very expensive, and long hauls have a high damage rate, of 10–25 percent. Although the necessary raw materials can be found in almost all regions of Ukraine, brick continues to be transported over long distances, particularly from Crimea and Chernivtsi oblasts; silicate brick is transported from Voroshylovhrad, Donetske, Kharkiv, Dnipropetrovske, Kiev, and Lviv oblasts to Poltava, Zaporizhia, Chernihiv, Mykolaiv, and Kherson oblasts (supplying nearly 40 percent of their needs). In addition, the capacity of drying kilns in the brick plants is smaller than the capacity of the firing furnaces by about two billion bricks; hence, hundreds of brick plants continue to operate only six to eight months a year. Ukraine now produces 21–22 percent of the building brick in the Soviet Union. Production has varied over the years as follows (in billions of bricks): 0.6 in 1913, 1.6 in 1940, 2.1 in 1950, 7.3 in 1960, 9.7 in 1970, and 8.9 in 1981.

The development of the brick industry is studied at the Scientific Research Institute of Building Materials and Products in Kiev.

Brisling or Sprat (*Sprattus sprattus phalericus*; Ukrainian: *kilka chornomorska, shprot, sardelia, sardynka*). Sea fish of the herring family. It reaches a length of 12 cm and a weight of 9 g. In the spring large numbers of sprat swim up to the shore of the Black Sea. They seldom enter the Sea of Azov.

British Columbia. Canada's most western province. In 1971 British Columbia had 60,150 Ukrainian residents, who constituted 2.8 percent of the provincial population and were the fifth largest Ukrainian community in Canada. The first Ukrainians settled in Vancouver and in mountain mining centers such as Fernie, Michel, and Hosmer before the Second World War. Most Ukrainians (78.4 percent) in 1971 were urban residents in such major centers in Vancouver (31,130 or 2.9 percent), Prince George (1,905 or 3.8 percent), Kamloops (1,545 or 3.5 percent), Kelowna (1,470 or 4.0 percent), and Vernon (1,285 or 9.7 percent). Of the Ukrainian organizations, the religious organizations are most active: the Ukrainian Catholics through the exarchate of New Westminster for British Columbia, created within the western eparchy in 1974, and the Orthodox as part of the western eparchy, whose see was established in Edmonton in 1951.

Britsky, Nicholas [Bryc'kyj, Mykola], b 11 December 1913 in Veldizh, Dolyna county, Galicia. Pedagogue, painter, sculptor. Britsky emigrated with his family to New York City in 1922. He studied fine arts at Yale University, the Cranbrook Academy of Art in Bloomfield Hills, Michigan, and the University of Syracuse. He was a professor of art at the University of Illinois at Urbana-Champaign from 1945 to 1978. Britsky specializes in religious art: he has decorated St Patrick's Church in Urbana, producing for it a fiberglass and steel sculpture, *Rising Christ*, and other churches. He has also created symbolic canvases on philosophical themes, such as *The Downfall of Culture*, *The Road to Illusion*, and *The Wall of Shame*, in which he combined modern and traditional styles. He has taken part in over 70 art exhibits in the United States and other countries.

Briukhovetsky, Ivan [Brjuxovec'kyj], b ?, d 18 June 1668. Hetman of Left-Bank Ukraine. Briukhovetsky was a registered Cossack of the Chyhyryn Company (1650) and B. Khmelnytsky's courier and diplomatic emissary. After Khmelnytsky's death Briukhovetsky went to the Zaporozhian Sich (1659) and became its otaman (1661-3). In 1663 at the *Chorna Rada near Nizhen he was elected hetman with the support of the Zaporozhian Cossacks and the Cossack masses (*cherni*) (*Baturyn Articles). After doing away with his opponents, Col Ya. Somko and Col V. Zolotarenko, he went to Moscow in 1665 and signed the *Moscow Articles, thereby placing Ukraine under the direct authority of the tsar and his voivodes and thus relinquishing Ukraine's autonomy. For this he received the title of boyar. By this time Briukhovetsky had forfeited the support of the population, which had had high expectations of him. In response to popular opposition to the Treaty of *Andrusovo Briukhovetsky broke off rela-

Ivan Briukhovetsky

tions with Moscow in 1668 and organized a rebellion against the tsar. But an angry Cossack mob killed him in the village of Budyshchi near Opishnia.

Briukhovychi [Brjuxovyči]. iv-4. Town smt (1977 pop 6,200) 6 km northwest of Lviv on the slope of the Roztochia ridge. The town has a recreational resort and a wood industry. An astronomy station of the Lviv University observatory is located here.

Briullov, Karl [Brjullov], b 23 December 1799 in St Petersburg, d 23 June 1852 in Marciano near Rome, Italy. Painter, professor at the St Petersburg Academy of Arts (1836-48). A number of Ukrainian artists, including I. Soshenko, D. Bezperchy, A. Mokrytsky, and T. Shevchenko, studied with Briullov. He took an active part in emancipating Shevchenko from serfdom and later befriended him. His most famous work is *The Last Day of Pompei* (1830-3).

Broch, Olaf, b 4 August 1867 in Horten, Norway, d 28 January 1961. A prominent Norwegian linguist and Slavist, professor at the University of Oslo, and member of the Shevchenko Scientific Society. Broch wrote seminal studies in the descriptive phonetics of Slavic languages, including those of Western Ukrainian (*Slavische Phonetik*, 1911), and a number of descriptive works on Transcarpathian Ukrainian dialects transitional to the Slovak language. These are based on extremely minute observations on phonetics, but do not discuss the problems of phonemics.

Brockhaus and Efron. Publishing house founded in St Petersburg in 1890 by the German firm of F. A. Brockhaus (Leipzig) and the Russian entrepreneur I. Efron. The *Entsiklopedicheskii slovar'* (Encyclopedic Dictionary) published by Brockhaus and Efron was one of the largest Russian encyclopedias and was produced with the participation of eminent scholars. The first edition (1890-1907) comprised 82 volumes and 4 additional demi-volumes. The second edition, entitled *Novyi entsiklopedicheskii slovar'* (New Encyclopedic Dictionary, 1911-16), remained unfinished: of the 48 volumes planned, 29 were published. Among those contributing articles on Ukrainian history and culture were D. Bahalii, M. Vasylenko, I. Zhytetsky, O. Lazarevsky, V. Peretts, O. Rusov, M. Sumtsov, I. Franko, O. Yefymenko, P. Yefymenko, and A. Krymsky.

Brodii, Andrii [Brodiij, Andrij], b 1895 in the village of Kyviazhhd, Transcarpathia, d 1946 in Uzhhorod. A leader of the Russophile and pro-Hungarian orientation in Transcarpathia and a teacher. Brodii was a co-founder in 1920 of the Autonomous Agriculturalist Union (AZS) (its head in 1933–9); publisher of the AZS newspaper, **Russkii vjestnik* (1923–39); and AZS representative in the Czechoslovakian parliament (1932–8). In October 1938 he was appointed prime minister of the autonomous government of Subcarpathian Ruthenia by the Czechoslovakian government. Arrested in November for pro-Hungarian activities, he escaped to Budapest and fought against an autonomous Carpatho-Ukraine. From 1939 to 1944 he was a member of the Hungarian parliament and led efforts to obtain local autonomy for Transcarpathia. From 1940 to 1944 he published the weekly newspaper *Russkoe slovo*. He was arrested by the Soviet authorities in 1945 and executed for collaborating with the Hungarian regime.

Archangel Michael, an icon by Illia Brodlakovyč, 17th century

Brodlakovyč (Vyshensky), Illia [Brodlakovyč, Illja], b in the village of Sudova Vyshnia, Lviv region, Galicia. Seventeenth-century painter. Brodlakovyč worked in Mukachiv in Transcarpathia, painting traditional monumental icons in bright colors. These include *The Protectress* (1646), *Deesis*, and *Archangel Michael*. He also painted icons in a lyrical one-dimensional style: *St Nicholas*, *Christ the Pantocrator* (1666), and *Sobor of the Archangel Michael*. Discrepancies in the style of these works have led to the conjecture that they were painted by two artists with the same name (perhaps father and son).

Brodnyks (*brodnyky*). A warlike steppe people, mostly of East Slavic descent, who lived in the region north of the Black Sea in the 12th–13th century. Mentioned in old Rus' chronicles under the years 1147 and 1216, the Brodnyks are also referred to in Byzantine and Hungarian chronicles. They took part in the internecine strife among the Rus' princes. At the battle on the Kalka River in 1223, they fought on the side of the Tatars.

Brodsky, Oleksander [Brods'kyj], b 19 June 1895 in Katerynoslav, d 21 August 1969 in Kiev. Physical chemist, full member of the Academy of Sciences of the Ukrainian SSR from 1939 and corresponding member of the Academy of Sciences of the USSR from 1943. In 1939 Brodsky became director of the Institute of Physical Chemistry at the Academy of Sciences of the Ukrainian SSR. His works are devoted to the thermodynamics and electrochemistry of

Oleksander Brodsky

solutions. He was the first to produce heavy water in the Soviet Union (1934). He developed a general theory for isolating isotopes and some methods for analyzing them. Brodsky wrote a number of textbooks and monographs, among them *Khimiia izotopov* (The Chemistry of Isotopes, 1952), the first such work in the field, and *Fizicheskaia khimiia* (Physical Chemistry, 2 vols, 1948).

Brody. III-6. City (1970 pop 13,500) at the foot of the Podilia Upland in the valley of the upper Styr River; a raion center in Lviv oblast. Brody is first mentioned in historical sources in the 12th century. In 1584 the town was granted Magdeburg law, and in the 17th century a well-fortified castle was built there, designed by the French military engineer G. de Beauplan. From the mid-19th century to 1939 Brody was a county town. Because of its border location and trade privileges it was a center of Austrian-Russian trade in the first half of the 19th century. With the building of the railroads Brody lost its privileged position and began to decline: it had 20,000 inhabitants in 1880 and only 12,500 in 1931. Most of its inhabitants were Jews; in 1900 they constituted 64 percent of the population. The city has a clothes factory, a furniture factory, a concrete-making plant, a food industry, and teachers' school. The ruins of the castle have been preserved. On 17–22 July 1944 the Ukrainian *Division Galizien fought the Soviet army nearby (see *Brody, Battle of).

Brody, Battle of. A series of defensive engagements fought by the Ukrainian *Division Galizien, attached to the 13th German Army Corps, against the advancing Red Army during the Lviv-Sandomierz operation (13–22 July 1944). The Soviet forces, several times stronger in men and material, began their offensive against Lviv with advances in the direction of Ternopil-Zolochiv to the south and Radekhiv-Busk to the north of the town of Brody. During the battle individual regiments of the division – then stationed on the second line of the front – were dispatched to the areas of heaviest fighting to close gaps. On 18 July Soviet forces surrounded the corps and destroyed it. On 21–22 July the survivors broke out of the encirclement near the villages of Kniazhe and Pochany and moved south towards the Podilian Upland (Holohory-Peremysliany). Of the division's 11,000 soldiers, 3,000 returned from Brody and regrouped in Serednie, Transcarpathia. After the battle some members of the division joined up with the *Ukrainian Insurgent Army. Many were taken as prisoners of war.

Bronze Age. Historical-cultural period in which bronze utensils, implements, and weapons began to be manufactured. Bronze implements became increasingly widespread alongside stone implements. Owing to the greater hardness of bronze, an alloy of copper and tin, as compared to copper, bronze culture replaced the Copper Age or Eneolithic Age and lasted from the end of the 4th millennium to the 1st millennium BC. The bronze culture did not develop synchronously: the territories that were remote from the advanced centers of civilization retained their Neolithic form of life based on hunting and fishing. There the transition to metal progressed slowly. In Europe bronze products were known in the 3rd-2nd millennium BC. Deposits of copper and tin ores were located at the time in Spain, England, France, Austria, and Hungary. Caucasia played an important role in this age by supplying the steppe regions of eastern Europe with bronze implements at the end of the 2nd millennium BC.

Barter trade was gradually established and developed in the regions of metal mining. On Ukrainian territory

Plan of a Trypilian settlement of the Late Bronze Age at Kolomyishchyna, Kiev region; drawing according to T. Passek, 1949

trade stimulated the rapid development of livestock grazing and primitive agriculture and facilitated the transition to a patriarchal clan system and the economic stratification of the livestock-herding tribes. The tribes who lived west of the Dnieper River and north of the Dniester River usually obtained their bronze from Subcarpathia; the tribes east of the Dnieper obtained their bronze from Caucasia and partly from the Donets Basin.

The Bronze Age on Ukrainian territory and in all eastern Europe can be divided into three periods: (1) the early period from the 19th to the 17th century BC; (2) the middle period from the 16th to the 14th century BC; and (3) the late period, from the 13th to the 9th century BC. The oldest copper-bronze culture that existed on Ukrainian territories between the Dnieper and the Volga was the *Pit-Grave culture of the livestock-grazing and agricultural tribes who lived east and partly west of the Dnieper. Later, during the early Bronze Age, the southern steppe region of Ukraine east of the Dnieper was inhabited by livestock-raising tribes of the *Catacomb culture, who also occupied the Don region and the Caspian steppes. These tribes maintained close trade relations with the tribes of northern Caucasia. In the early 2nd millennium BC seminomadic livestock-raising tribes of the Corded-Pottery culture appeared from the west in Right-Bank Ukraine. Migrating eastwards, they mingled with the indigenous tribes and thus gave rise to the *Middle-Dnieper culture.

In the middle Bronze Age almost all the forest-steppe of the Dnieper and Dniester regions was settled by tribes of the Trzciniac-*Komariv culture, whose artifacts are found also in Poland. In the east the basins of the Desna and

Seim rivers were inhabited by the tribes of the *Marianivka and *Bondarykha cultures. In southern and southwestern Ukraine the so-called *Multicylindrical-Pottery culture flourished at that time.

In the late Bronze Age the tribes of the *Bilohrudivka culture inhabited the forest-steppe west of the Dnieper River. East of the Dnieper the late Marianivka and Bondarykha cultures continued to flourish. In the middle Dniester region the Noua culture was widespread. Its agricultural and livestock-raising tribes were advanced in their bronze casting and maintained ties with the Transylvanian centers of metallurgy. They were also in contact with the tribes of central Europe and western Ukraine. Their bronze artifacts also reached the tribes of the late *Timber-Grave culture.

In Transcarpathia the *Stanove culture of agricultural and cattle-raising tribes was advanced in bronze casting and was connected with the Transylvanian centers. Many valuable bronze artifacts – weapons, farm implements, decorative objects, and horse armor – have been found in the region. A large proportion of these articles come from the Tysa-Danube Basin.

The tribes of the Timber-Grave culture, who were related to the *Scythians, moved into the Black Sea steppes in the middle of the 2nd millennium and lived there until the 8th century BC. They lived by agriculture and animal breeding and partly by bronze manufacturing. Bronze smithies and foundries of this culture, with molds of daggers, spearheads, decorative objects, and farm implements, have been uncovered. A shortage of metals forced these tribes to establish close cultural ties with the Noua tribes, who provided them with metal ores from the Transylvanian centers.

During the Bronze Age important historical developments, migrations, and military encounters took place in southern Ukraine. Ukraine became the location of various tribal cultures and alliances. Some tribes were gradually assimilated by others and disappeared. Others continued to exist in the *Iron Age.

Bronzov-Yehorov, Ivan [Bronzov-Jehorov], b 7 March 1896 in Katerynoslav, d 20 February 1963 in Kharkiv. Opera singer, dramatic baritone. From 1925 until 1959, Bronzov-Yehorov performed in the opera theaters of Kiev, Odessa, Dnipropetrovske, and Kharkiv. His roles included Bohdan in K. Dankevych's *Bohdan Khmel'nyts'kyi*, Mazeppa in P. Tchaikovsky's *Mazeppa*, Scarpia in G. Puccini's *La Tosca*, and Kachura in O. Chyshko's *Bronenosets Potemkin* (Battleship *Potemkin*).

Broshniv-Osada [Broshniv-Osada]. v-5. Town smt (1977 pop 5,800) in the Carpathian foothills of Rozhnativ raion,

Ivano-Frankivske oblast. Broshniv-Osada is one of the largest timber-industry centers in Ukraine, processing wood from the central Gorgany Mountains (a narrow-gauge railway gives access to the mountain range). There are two timber mills near Broshniv-Osada: the Osmoloda and the Broshniv.

Brotherhood of Former Soldiers of the First Ukrainian Division of the Ukrainian National Army (Bratstvo kolyshnykh voiakiv Pershoi ukrainskoi dyvizii Ukrainskoi natsionalnoi armii). An association of former members of the *Division Galizien, founded in Neu Ulm, West Germany, in 1949. Its head office was located first in Munich, then transferred to New York at the end of the 1950s, and finally to Toronto in the mid-1960s. The brotherhood has national organizations and local branches in Germany, Canada, the United States, Argentina, and Australia. In Great Britain former members of the division co-operate with the brotherhood but have founded a separate organization known as the *Ukrainian Former Combatants in Great Britain. The brotherhood's membership numbered some 1,000 in 1950, 1,400 in 1980. Its presidents have been Rev M. Levenets (1950–2), L. Ortynsky (1953–62), I. Skirka (1963–4), R. Drazhniowsky (1974–9), and M. Maletsky (1964–73 and from 1979). The brotherhood published a magazine, *Visti*, in Munich in 1950–74 (140 issues). It co-publishes a bimonthly – *Visti kombatanta* (115 issues by 1981) – with the United Ukrainian War Veterans in America.

Brotherhood of St Nicholas. See Ukrainian Mutual Benefit Association of St Nicholas.

Brotherhood of Taras in Kharkiv, 1891–3

Brotherhood of Taras (Bratstvo tarasivtsiv). Secret organization of young nationally conscious Ukrainians established in 1891 (according to some, in 1892) when a group of students and civic leaders from Kharkiv and Kiev visited the grave of T. Shevchenko near Kaniv. Among the brotherhood's founders were V. Borovyk, B. Hrinchenko, I. Lypa, and M. Mikhnovsky. Besides promoting cultural goals, the brotherhood raised political demands – the liberation of the Ukrainian nation from Russian domination, full autonomy for all the peoples of the Russian Empire, and social justice. Kharkiv was the brotherhood's center of activity until its members were arrested in the summer of 1893. Then Kiev became the center, with chapters in Odessa, Poltava, Lubni, and

Pryluka. The brotherhood included such people as V. Borzhkovsky, M. Dmytriiev, M. Kononenko, M. Kotsiubynsky, V. Samilenko, V. Sovachiv, V. Stepanenko, Ye. Tymchenko, O. Cherniakhivsky, V. Shemet, V. Andriievsky, M. Bazkevych, and M. Baizdrenko. The ideological principles of the society were formulated by I. Lypta and were published anonymously in a revised form as 'Profession de foi' in the journal *Pravda* (April 1893). These ideas were propagated by Vartovy (B. Hrinchenko) in *Lysty z Ukraïny Naddnyprians'koi* (Letters from Dnieper Ukraine), by M. Kotsiubynsky in the fable 'Kho,' and by V. Samilenko in satires on the Little Russian mentality and Ukrainophilism.

The Brotherhood of Taras was active until 1898. Through its influence the Old Hromada transformed itself in 1897 into the more political *General Ukrainian Non-Party Democratic Organization, and the younger generation organized the *Revolutionary Ukrainian party in 1900.

Brotherhood of the Resurrection (Bratstvo Voskresinia). Founded in Kiev in 1917 following a convention of clergy and laymen that elected as its head the archpriest (later metropolitan) V. *Lypkivsky. The goal of the brotherhood was the winning of autocephalous status for the Ukrainian Orthodox church. The brotherhood reconstituted itself as the *All-Ukrainian Orthodox Church Council, which convened the *All-Ukrainian Church Sobor on 7 January 1918.

Brotherhood schools. Schools founded by religious *brotherhoods for the purposes of counteracting the denationalizing influence of Catholic (Jesuit) and Protestant schools and of preserving the Orthodox faith began to appear in the 1580s. The first school was established in 1586 by the *Lviv Dormition Brotherhood. The school served as a model for other brotherhood schools in various towns of the Polish-Lithuanian Commonwealth, most of them in Ukraine and Belorussia: Peremyshl (est 1592), Halych, Horodok, Rohatyn, Stryi, Mykolaiv, Komarno, Yaroslav, Kholm, Krasnostav, Zamostia (est 1606), Lublin, Bilske, Berestia, Volodava, Pynske, Kiev (est 1615), Striatyn, Vinnytsia, Nemyriv, Kamianets-Podilskyi, Medzhybizh, Lutske (est 1620), Volodymyr-Volynskyi, Dubno, Kremianets, Vilnius (est 1587), Minsk, and Mohyliv. In the first half of the 17th century even some villages had brotherhood schools. The most prominent schools were those of the Lviv and Kiev brotherhoods.

At first the brotherhood schools had a Greek-Church Slavonic curriculum: lectures were in Church Slavonic, and Greek was taught as a second language. (Hence these schools were also called Greek schools.) Then the schools began to adopt the structure and curriculum of the Jesuit schools, using Latin as the primary language, particularly those schools that modeled themselves on the *Kievan Mohyla Academy. Ukrainian was used only for examination purposes and, from 1645, for teaching the catechism. The curriculum of most of the brotherhood schools

provided what was accepted as a secondary education in those times: classical languages, dialectics, rhetoric, poetics, homiletics, arithmetic, geometry, astronomy, and music (church singing). Some schools taught Orthodox theology and Catholic theology (for the purpose of polemics). Brotherhood schools were open to various social strata. Students were judged not by lineage, but by achievement (in contrast to Jesuit schools). Discipline

A page from *O vospitanii ditei* (On the Education of Children), published in Lviv in 1609

in the schools was strict, and physical punishment was used. Orphans and poor students lived in *bursas. Lecturers were required to set an example by their behavior and to have pedagogical training. Brotherhood schools made a significant contribution to the growth of religious and national consciousness and the development of Ukrainian culture. They published textbooks, particularly language textbooks. The Czech educator J.A. Comenius (Komenský) derived many of the ideas in his *Didactica Magna* (1628–32) from the practices of the brotherhood schools. At the end of the 17th century and in the 18th century the schools found themselves in adverse political conditions and declined.

Brotherhoods (Ukrainian sing: *bratstvo*). Fraternities affiliated with individual churches in Ukraine and Belorussia that performed a number of religious and secular functions.

The origins of brotherhoods can be traced back to the medieval *bratchyny*, which were organized at churches in the Princely era (first mentioned in the Hypatian Chronicle, 1159). Brotherhoods as such appeared in Ukraine in the mid-15th century (the *Lviv Dormition Brotherhood was first mentioned in 1463), with the rise of the burgher class. They adopted their organizational structure from Western medieval brotherhoods (*confraternitates*) and trade guilds. Initially the brotherhoods engaged only in religious and charitable activities. They maintained churches and sometimes assumed financial responsibility for them, ensured that church services, in particular

Church of the Lutske Brotherhood (1622)

parish feasts, were celebrated in a ceremonious way, arranged ritual dinners for their members, collected money, helped the indigent and the sick, and organized hospitals. Since these religious and charitable activities of the brotherhoods left no visible traces, some historians, such as K. Huslysty and Ya. Isaievych, do not consider the early period of the brotherhoods as being part of their history.

The brotherhoods began to play a historical role in the second half of the 16th and at the beginning of the 17th century. In this period they assumed the task of defending the Orthodox faith and Ukrainian nationality by counteracting Catholic and particularly Jesuit expansionism, Polonization, and later conversion to the Uniate church. Because they consisted predominantly of burghers, the brotherhoods acquired a secular character and often found themselves in opposition to the authoritarian practices of the clergy. Hence, they endeavored to reform the Orthodox church from within by condemning the corrupt practices of the hierarchy and of individual clergymen. Their interference in clerical affairs was one of the reasons for the favorable attitude towards the Church Union of *Berestia among the Orthodox bishops. The brotherhoods brought about a revival in the life of the church by promoting cultural and educational activity. They founded *brotherhood schools, printing presses, and libraries. The resulting cultural-religious movement found its literary expression in *polemical literature. The brotherhoods also participated in civic and political life. They sent representatives to church councils and to the Sejm in Warsaw and maintained ties with the Cossacks.

In the late 16th and early 17th century new brotherhoods were founded and existing ones were reorganized in the towns of Galicia, the Kholm region, Podlachia, Volhynia, and the Dnieper region. Each brotherhood had its own statute (articles, regulations, procedures), modeled on the statute of the Lviv brotherhood of 1586. Membership was open to all estates, but usually only married men were admitted (unmarried men belonged to the 'junior' brotherhoods). At his initiation a member had to take an oath. Officers – usually four elders, including the head (a senior member) – were elected at the annual meeting.

Although brotherhood members were usually merchants and skilled tradesmen residing in the towns, some Orthodox clerics and nobles, such as L. Drevynsky and A. Puzyna, and some magnates, such as K. Ostrozky, A. Vyshnevetsky, R. Ruzhynsky, and A. Kysil, participated

in the affairs of certain brotherhoods. The clergy and the nobility were particularly active in the Lutske and Kiev brotherhoods. Hetman P. Sahaidachny, 'with the whole Zaporozhian Host,' joined the Kiev brotherhood.

The Lviv Dormition Brotherhood was one of the oldest and most successful brotherhoods. In 1586 it received the right of *stauropolegion (direct subordination to a patriarch instead of a local bishop) and founded a school and a printing press. It maintained close contacts with Moldavian rulers and boyars. In 1588–95 there were active brotherhoods in the towns of Kamianets-Podilskyi, Rohatyn, Horodok, Berestia, Peremyshl, Lublin, and Halych. After 1596 brotherhoods were established in Sianik, Zamostia, Drohobych, Sambir, Kholm, Ostrih, Lutske, Kremianets, Sharhorod, Nemyriv, Kiev, and elsewhere. The *Kiev Epiphany Brotherhood began to play an important cultural-educational and religious role in 1615. It founded a school (*Kiev Epiphany Brotherhood School) that in 1632 became a college and then in 1701 the *Kievan Mohyla Academy. In 1617 the *Lutske Brotherhood of the Elevation of the Cross gained prominence.

The logogram of the Lviv Dormition Brotherhood printing press, with the coats of arms of Lviv (left) and the brotherhood (right)

Under the Hetman state, the Orthodox church increased in influence. The reforms of P. Mohyla and the general improvement in clerical education enabled the Orthodox to compete with the previously superior educational system of the Jesuits, and the threat of denationalization in Ukraine diminished. Although the number of brotherhoods increased in this period, they confined their activities to the religious and charitable sphere and dropped their broader national and civic pursuits.

In Left-Bank Ukraine new brotherhoods, with a narrower focus, appeared at the end of the 17th and the beginning of the 18th century in Poltava, Novi Sanzhary, Starodub, Sribne (where the brotherhood supported a hospital), Lebedyn, and Kharkiv. After the Ukrainian church became subordinated to the Moscow patriarchate in 1686 and then to the Holy Synod, the Russian imperial government did not approve of the activities of the

The Teaching of Letters, a detail on an icon from Yablonytsia Ruska (15th century)

brotherhoods. Only much later, on 8 May 1864, did the Russian authorities issue a law permitting brotherhoods to be formed throughout the Russian Empire; these newly created brotherhoods, however, differed in their aims and work from the traditional Ukrainian brotherhoods.

In Right-Bank Ukraine in 1679 the Polish Sejm prohibited the brotherhoods from maintaining ties with the Eastern patriarchs; as a result, the right of stauropeion lost its significance. By the beginning of the 18th century the Uniate church had established itself firmly in Western Ukraine. The Lviv Dormition Brotherhood had accepted the union in 1709 and had received from the Pope a guarantee of its right of stauropeion. Under the Austrian regime, however, the Galician brotherhoods were dissolved by the government decree of 1788. The Lviv brotherhood was then transformed into the *Stauropeion Institute.

In the 19th–20th century brotherhoods were again organized in many villages and towns, but these usually merely helped to run the local parishes. They assumed their proper religious and national tasks only during Ukraine's independence in 1917–20. The Kiev *Brotherhood of the Resurrection (established in 1917 and headed by Rev V. Lypkivsky) helped to convene the *All-Ukrainian Orthodox Church Council, which later led to the formation of the *Ukrainian Autocephalous Orthodox church.

Religious life in certain internment camps for the soldiers of the Ukrainian National Republic in 1921–2 was under the care of brotherhoods. The best-known among them was the Brotherhood of the Holy Protectress (1921–4) in Aleksandrów Kujawski and then in Szczypiorno, Poland, with branches in other camps. This brotherhood published *Reliĭhino-naukovyĭ visnyk* and books.

Ukrainian immigrants in the United States and Canada organized brotherhoods as soon as they established their own parishes. The Brotherhood of St Nicholas was formed in Shenandoah, Pennsylvania, in 1885, and many other similar societies appeared. Eventually they united into brotherhood associations, which in time evolved into mutual-aid and insurance organizations. Parallel women's organizations, such as the St Olha Sisterhood in Jersey City (1897), were founded. In 1932 the Ukrainian Catholic Brotherhood was established in Canada and adopted the functions of the Catholic Action societies rather than those of the traditional Ukrainian brotherhoods.

After 1945 many Orthodox and Catholic brotherhoods were created in the displaced persons camps. The statute of the Orthodox brotherhoods was adopted by the council of bishops in 1947. The most important Orthodox brotherhoods established after the Second World War were the Metropolitan Lypkivsky Brotherhood, which publishes the bimonthly *Tserkva i zhyttia*; the Brotherhood of the Holy Protectress in Argentina, which published the monthly *Dzvin*; St Simon's Brotherhood in Paris; and St Valdimir's Brotherhood in Toronto. In the United States the parish sisterhoods together formed the United Ukrainian Orthodox Sisterhoods of the USA, which is engaged in educational and publishing activities and has published *Ukraina: Entsyklopediia dlia molodi* (Ukraine: Encyclopedia for Youth, 1971).

The oldest Catholic brotherhood outside Ukraine is St Barbara's Brotherhood, established in the 1870s in Vienna. The church life of the Ukrainian Catholic eparchy in Australia is based on lay brotherhoods. The recent struggle for an independent patriarchate and for the autonomy of the Ukrainian Catholic church has given rise to brotherhoods and sisterhoods in the United States that continue the traditions of the old brotherhoods. The

The seal of the Lviv Dormition Brotherhood, late 16th century

Ukrainian Catholic Lay Brotherhood of St Andrew in Chicago is among the better known; since 1970 it has published annually *Tserkovnyi kalendar al'manakh*. The Union of Ukrainian Catholic Brotherhoods and Sisterhoods of America was formed in 1976 and is based in Chicago.

A. Zhukovsky

Brounov, Petr, b 2 January 1853 in St Petersburg, d 24 April 1927 in Leningrad. Russian meteorologist, founder of agricultural meteorology in the Russian Empire. He was a professor at Kiev (1890-5) and St Petersburg universities and organizer of the Dnieper network of meteorological stations in Ukraine.

Brovary. III-11. City (1982 pop 62,000) and raion center in Kiev oblast, 20 km northeast of Kiev. The city has a metallurgical plant, built in 1961-4, a rail-repair plant, a plastics plant, a rolled-steel and foundry plant, a refrigerator factory, a mechanical-repairs plant, a children's clothes factory, the Kiev poultry plant, a woodworking complex, and a consumer-goods complex. In January 1918 the city was the site of battles between UNR and Bolshevik forces.

Brovchenko, Volodymyr [Brovčenko], b 1 June 1931 in Mala Vyska, now in Kirovohrad oblast. Poet and journalist. From 1973 to 1979 he was chief editor of the literary journal **Dnipro*, and he now heads the Ukraine Association for Cultural Relations with Ukrainians Abroad. His collections of poetry include: *Shumliat' zhyta* (The Grain Is Rustling, 1956), *Zustrichajte sontse* (Greet the Sun, 1959), *Skelia liubovi* (The Cliff of Love, 1964), *Nerostryliani zori* (Unexploded Stars, 1966), *Perelohy* (Fallow Fields, 1968), *Na krylakh vechoriv* (On the Wings of Evenings, 1971), *V orkestri sviitla* (In the Orchestra of Light, 1973), *Dumna hora* (The Lofty Mountain, 1975), *Surmy* (Trumpets, 1976), *Vichnyi zhavir* (The Eternal Lark, 1977), *Pohoda na zavtra* (Tomorrow's Weather, 1979), and *Zoshyt z-pid kamenia* (Notebook from under a Stone, 1980).

Bryk, Ivan, b 8 July 1879 in Ustryky Dolishni, Lisko county, Galicia, d August 1947 in Landeck, Austria. Literary scholar, teacher, and civic leader; full member of the Shevchenko Scientific Society from 1919. Bryk received his PhD from Vienna University in 1903. He taught at the Lviv Academic Gymnasium and the Ukrainian Underground University, wrote for Galician newspapers, and contributed articles on Ukrainian-Czech relations, the Galician press, the Galician revival (M. Shashkevych), and T. Shevchenko to Galician and Czech scholarly journals. In 1902 Bryk founded and headed the Ukrainian Hromada in Prague. He is best known for his activity in the central office of the Prosvita society in Lviv, where he served as secretary, office director (1906-10), acting head (1919-23), deputy head (1923-31), and head (1932-9). Bryk organized the First Ukrainian Educational and Economic Congress in Lviv in 1909 and the Second All-Ukrainian Educational Congress in 1929. In 1931-3 he

edited the illustrated educational monthly *Zhyttia i znannia*. Bryk is the author of *Slav'ians'kyi z'izd u Prazi 1848 r. i ukrains'ka sprava* (The Slavic Congress in Prague in 1848 and the Ukrainian Question, 1920) and *Materiialy do istorii ukrains'ko-ches'kykh vzaiemyn v pershii polovyni XIX st.* (Materials on the History of Ukrainian-Czech Relations in the First Half of the 19th Century), vol 15 of *Ukrains'ko-rys'kyi arkhiv* (1920).

Bryndzan, Teofil, b 1 November 1875 in Tovtry, Bukovyna, d 24 January 1962 in Bad Salzufen, West Germany. Community figure and pedagogue in Bukovyna. Bryndzan taught classical and modern languages at gymnasiums in Kitsman and Chernivtsi and organized courses in Ukrainian studies for students in Bukovyna. His articles appeared in the Bukovynian press.

Mykhailo Brynsky

Brynsky, Mykhailo [Bryns'kyj, Myxajlo], b 11 October 1883 in Dolyna, Tovmach county, Galicia, d 10 January 1957 in Prague. Sculptor, monumentalist. Brynsky graduated from the Academy of Arts in Prague (1926). He lived in Prague from 1920 and produced several monuments, including one to killed striking workers (1912) at Ottakring Cemetery near Vienna. He sculpted the monument to dead Ukrainian prisoners of war that stands in Jablonov (1922) and monuments in Liberec, Příbram (1926), Hradec Králové, and Jozefov, all in Moravia. He designed a columbarium in Poděbrady. His other works include *Aeneus Saves His Father* (1916), *Boy with a Goose*, *Head of a Peasant Woman*, relief sculptures, and portraits of T. Shevchenko.

Bryzh, Teodosiia [Bryž, Teodosija], b 18 February 1929 in Berezhnytsia, Rivne county, Volhynia. Sculptor, graduate of the Lviv Institute of Applied and Decorative Art (1954). She has sculpted portraits of King Danylo (1954), Yevpraksiia Mstyslavna, Princess Olha (1961), and I. Vilde (1964); compositions based on the works of V. Stefanyk (*The Road*) and Lesia Ukrainka (*The Forest Song*, 1970); and series on ancient Slavic mythology: *The God of War*, *The God of Fire*, *The God of Earth and Water* (1968-70). She has also done sculptures for parks. With Ye. Dzyndra she produced the monument to Nazi victims in Volodymyr-Volynskyi (1966).

Bubniuk, Stefaniia [Bubnjuk, Stefaniija] (birth name: Hladka), b 26 April 1901 in Troianivka, Galicia. Bubniuk came to Canada in 1926. She was a member of the first

executive of the Ukrainian Women's Organization of Canada (ouk, 1934–43) and from 1951 to 1973 editor of *Zhinochyi svit*, the official organ of ouk.

Bubnyshche

Bubnyshche [Bubnyšče]. iv-4. Village in Dolyna raion, Ivano-Frankivske oblast. A medieval cave monastery, protected by a wall on one side, was located here. One of the important monuments of monasticism in Ukraine, it was investigated by the archeologists W. Demetrykiewicz in 1903 and Ya. Pasternak in 1913. Popular legends about O. Dovbush's treasure are associated with Bubnyshche.

Bucha [Buča]. III-11. Town smt (1977 pop 24,500) in Kiev oblast, subordinated to the Irpin city soviet. A resort town located among pine forests 32 km northwest of Kiev, it has an experimental packing plant and a glass-packing plant. The Ukrainian branch of the All-Union Institute of Fiberglass and Polyacrylics is located here.

Buchach Town Hall

Buchach [Bučač]. iv-6. City (1973 pop 11,400) on the Strypa River, a raion center in Ternopil oblast. Buchach was first mentioned in historical documents from 1397 as part of the estates of the Buczacki family. In 1515 the fortified city was granted Magdeburg law. In the 16th–17th century Buchach protected Galicia from the Tatars and Turks. In 1672 the *Buchach Peace Treaty was signed. Count S. Potocki established a Basilian monastery in 1712; a well-known school functioned at the monastery until 1893. The Basilians ran a teacher's seminary here in 1855–65, and from 1911, the St Josaphat Institute. From the mid-19th century to 1939 Buchach was a county center. It produced carpets and ornamental rugs. The city devel-

oped slowly: in 1880 it had 9,000 inhabitants, of whom 63.5 percent were Jews; in 1939 it had 11,100 inhabitants, of whom 46.4 percent were Jews, 31.9 percent were Poles or Roman Catholics, and 21.6 percent were Ukrainians. In 1959 Ukrainians constituted 96 percent of the population. Today a food industry is located in Buchach. Among its architectural monuments are the ruins of the Potocki family's castle (14th–16th century); St Nicholas's Church (1610); the Basilian monastery (1712) with a baroque church (1751); and the town hall, built in the baroque style by the architect B. Meretyń and decorated by the sculptor J. Pinzel (1751).

Buchach Gospel. Also known as the Horodyszche Gospel. The Church Slavonic text of 180 folios was transcribed in Ukraine, probably in southern Volhynia in the first half of the 13th century. The language of the text has been studied by A. Sobolevsky, I. Svientsitsky, and O. Kolessa (who published samples from it). The manuscript is preserved in Lviv.

Buchach Peace Treaty of 1672. A treaty concluded on 16 October 1672 in the town of Buchach between Turkey and Poland, which had been defeated by Mohammed iv. According to the terms of the treaty, the Podilia voivodeship, with Kamianets, was to be ceded to Turkey; the Bratslav voivodeship and the southern portion of the Kiev voivodeship were to be recognized as Cossack territory administered by Hetman P. *Doroshenko under a Turkish protectorate; and Poland was to pay a large annual tribute to Turkey. The Polish Sejm did not ratify the treaty, however, and war resumed in April 1673. Turkish policy in Right-Bank Ukraine led to the mass resettlement of the Ukrainian population in Left-Bank Ukraine and to Doroshenko's resignation as hetman in 1676.

Bucharest (București). ix-7. Since 1862 the capital city (1980 pop 1,858,000) of *Rumania, located on the Dimbovița River. Bucharest has been known since the 14th century, and in 1659 it became the capital of Wallachia. In 1812 Russia signed the *Bucharest Peace Treaty here, annexing *Bessarabia.

Between the world wars many Ukrainians from Bukovyna and Bessarabia and émigrés from central Ukraine lived in Bucharest; in 1940 their number increased. A number of Ukrainian organizations were based here: the Public Relief Committee of Ukrainian Emigrants in Rumania (established in 1923), its branch the Community of Ukrainian Emigrants in Bucharest, the monarchist Ukrainian Union of Agrarians-Statists (established in Bucharest in 1921), the Society of Ukrainian Soldiers in Rumania, the Union of Ukrainian Emigrant Women in Rumania, and the student organizations Zoria (1921–6) and Bukovyna (1926–44). In 1941 a Ukrainian radio program was broadcast from Bucharest, and the newspaper *Zhyttia* and the journal *Batava* were published. During the Soviet occupation of 1944–5 Ukrainian activists, including I. Hryhorovych and O. Masikevych, were arrested. Since the 1950s the Ukrainian population in Bucharest has been about 3,000. The biweekly *Novyi vik* (1949–) and the bimonthly journal *Kul'turnyi poradnyk* (1950–8) have been published in the city. Since 1969 Kriterion publishers have published many works by Ukrainian writers living in Rumania. In 1952 a chair of Ukrainian language and literature was established in the Slavic Institute of

Bucharest University, and a monument to T. Shevchenko was erected in a public park of the city. Bucharest is the center of Ukrainian cultural life in Rumania.

A. Zhukovsky

Bucharest Peace Treaty of 1812. A treaty signed by Russia and Turkey on 28 May 1812 following the war of 1806–12. Turkey ceded *Bessarabia to the Russian Empire, the Prut River became the new Russian-Turkish border, and Russia was guaranteed the right to use the Danube River for trade purposes.

Buchko, Ivan [Bučko], b 1 October 1891 in the village of Hermaniv near Lviv, d 21 September 1974 in Rome. Ukrainian Catholic archbishop, church and civic leader. Having completed his theological studies in Rome in 1911–15, Buchko was ordained in 1915. He served as rector of the Minor Seminary and professor of the Greek Catholic Theological Seminary in Lviv. In 1929 he became auxiliary bishop of the Lviv eparchy and was active in the archeparchial administration, the improvement of the religious life of the laity, the organizations of Catholic youth (including the Ukrainian Youth for Christ manifestation) Catholic Action, Orly, and the defense of the church and the people under the Polish occupation, particularly during the Pacification. In 1939 he was the visitator of Ukrainian communities in South America and in 1940 the auxiliary bishop of the Philadelphia exarchate in the United States and the pastor of New York. From 1942 he lived permanently in Rome, representing Ukrainian church and national interests at the Vatican. In 1946 he was appointed apostolic visitator of Ukrainians in Western Europe and in 1953 the titular archbishop of Leucadia. In 1958 he became consultor to the Congregation of the Eastern Churches, a member of the Vatican Commission of the Eastern Churches of the Second Vatican Council, and the vice-chairman of the Ukrainian Episcopal Conference. He was instrumental in the growth of the Ukrainian Catholic church in the diaspora. He also acted as the protector of Ukrainian political refugees in Europe after 1944.

As a patron of Ukrainian culture and learning, Buchko was instrumental in setting up the Shevchenko Scientific Society center in Sarcelles, France, and was an honorary member of the society. He received honorary doctorates from the Ukrainian Free University and the Ukrainian Technical and Husbandry Institute.

A. Velyky

Buchma, Amvrosii [Bučma, Amvrosij], b 14 March 1891 in Lviv, d 6 January 1957 in Kiev. Prominent stage and screen actor, director, and teacher. Buchma began his stage career at the Ruska Besida theater in Lviv in 1910. In 1917 he studied at the Lysenko Music and Drama School in Kiev. In 1920 he worked in the Franko Drama Theater in Kiev and in 1923–6 in the *Berezil theater, where he played such memorable roles as Jimmy Higgins in an adaptation of U. Sinclair's novel, Leiba in an adaptation of T. Shevchenko's *Haidamaky* (The Haidamakas), Jean in P. Mérimée's *La Jacquerie*, and the Fool in W. Shakespeare's *Macbeth*. At the same time he became a film actor and later left the theater to devote himself solely to the cinema (1926–30). The main roles in which he appeared in these years were those of Jimmy Higgins, Mykola Dzheria, Taras Shevchenko, Taras Triasylo (in films of the

Archbishop Ivan Buchko

Amvrosii Buchma

same titles), the leading role of Hordii in *Nichnyi viznyk* (The Night Coachman) and the German soldier in O. Dovzhenko's *Arsenal*. In 1930–6 Buchma returned to the Berezil theater (called the T. Shevchenko Ukrainian Drama Theater from 1935), now in Kharkiv, and played such roles as Dudar in I. Mykytenko's *Dyktatura* (The Dictatorship), Puzyr in I. Karpenko-Kary's *Khaziain* (The Master), and Haidai and Krechet in O. Korniiuchuk's *Zahybel' eskadry* (The Destruction of the Squadron) and *Platon Krechet*. From 1936 to 1954 Buchma worked as an actor and director in the Franko Theater in Kiev and in film. His was one of the best portrayals of Mykola Zadorozhny in I. Franko's *Ukradene shchastia* (Stolen Happiness).

Buchma played in over 200 different roles. He depicted comic, dramatic, and tragic figures equally well. He directed the film *Za stinoiu* (Behind the Wall, 1928) and the play *Nazar Stodolia* at the Franko Theater in 1942 (he also co-directed this play with L. Dubovyk in 1951) and co-directed I. Kotliarevsky's *Natalka Poltavka* (Natalka from Poltava) at the Kiev Opera and Ballet Theater with V. Manzii in 1951. From 1940 Buchma lectured at the Kiev Institute of Theater Arts and in 1946–8 was the artistic director of the Kiev Studio of Artistic Films.

V. Revutsky

Buchynsky, Meliton [Bučyns'kyj], b 24 February 1847 in Skalat county, Galicia, d 25 April 1903. Lawyer, civic leader, folklorist. He collected ethnographic material. His correspondence with M. Drahomanov in 1871–7 was published in 1910 by the Shevchenko Scientific Society through the efforts of M. Pavlyk.

Buckwheat (*Fagopyrum sagittatum*; Ukrainian: *hrechka*). An annual spring grain that has been grown in Ukraine since the Princely era. The seed is ground into grits and flour. Buckwheat grows in many soils and matures quickly (65–80 days), but it does not tolerate drought. It is widespread only in the forest and forest-steppe belts of Ukraine, particularly in the Chernihiv region. In Ukraine 600,000–700,000 ha were usually devoted to buckwheat. In 1913, for example, 698,000 ha, or 2.8 percent of the land devoted to grain, were seeded with buckwheat and produced 400,000 tonnes or 1.7 percent of the total grain

crop. From the mid-1950s the area seeded with buckwheat was greatly reduced, mainly because of its low harvest yield. In 1980, 345,000 ha (0.7 percent of the land given to grain) produced 371,000 tonnes (0.4 percent of all grain).

Bucovina. See Bukovyna.

Bucyk, John [Butsyk, Ivan], b 12 May 1935 in Edmonton, Alberta. Professional hockey player. Bucyk played 22 years (1955–77) in the National Hockey League (NHL), including 20 seasons with the Boston Bruins. With V. Stasiuk and B. Horvath, the left-winger formed the 'Uke Line,' becoming the Bruins' first 250-goal scorer and the second highest point scorer in NHL history. Twice an NHL all-star and twice awarded the Lady Byng Trophy for gentlemanly conduct, Bucyk was elected to the Hockey Hall of Fame in 1981.

Budapest. Capital city (1982 est pop 2,000,000) of Hungary. In the 18th–19th century Budapest was an important cultural center for Transcarpathian Ukrainians. Many Ukrainians studied at its university. There were two Greek Catholic parishes in the city, in which Church Slavonic was replaced by Hungarian in the 1920s. The Transcarpathian Ukrainian community in the city was not separately organized and numbered about 500 in the 1960s. In 1837 the almanac *Rusalka Dnistrovaia* was published in Budapest, and several Ukrainian periodicals appeared there at the end of the 19th and the beginning of the 20th century. During the First World War the magazine *Ukrània* was published there in Hungarian. In 1919 the Communist paper *Chervona Ukraina* appeared in Budapest. In 1918–21 diplomatic missions of the UNR and the Western Ukrainian National Republic were stationed in the city. Budapest University has a chair in the Ukrainian language.

Budenny, Semen [Budennyj], b 25 April 1883 in Koziurin in the Kuban, d 26 October 1973 in Moscow. Soviet military and political leader, field marshal of the USSR. In 1918–21 Budenny commanded the Bolshevik 1st Cavalry Army in southern Ukraine and Russia and played a crucial role in defeating the White forces of A. Denikin, P. Wrangel, and the combined Polish and Ukrainian armies. During the Second World War he commanded the Soviet army on the southwest front. For a time Budenny served as first deputy commissar for defense and from 1938 was a member of the Presidium of the Supreme Soviet of the USSR.

Budget. A statement of the past period, and estimate for the coming period, of the revenues and expenditures of a given governmental entity, prescribed in fiscal terms by a legislative process for a specific period of time, usually one year, and allocated by the appropriate executive agencies. Depending on the jurisdiction, budgets are classified as state (national), regional, or local administrative budgets, municipal budgets, or public and economic institutional budgets.

Before the First World War Ukraine, not being an independent state, did not have its own national budget but was included as part of the financial systems of the Russian and Austro-Hungarian empires. During the period of independence (1918–19) the efforts of the Central Rada and the governments of the UNR and the

Western Ukrainian National Republic to institute a state budget did not succeed. The first state budget for Ukraine was introduced in 1918 under the Hetman government. The state income was 3.2 million *karbovantsi* (Ukrainian rubles), and the expenses 5.3 million; the deficit was to be covered by issuing credit bonds and printing money.

After the defeat of the Ukrainian government there was no organized budget in the period of War Communism (1919–20). There were provisional estimates of income and expenses, which had little significance in this period of economic ruin and inflation. The huge government deficits were covered by printing more paper money. Besides the printing of money the state's other main sources of income were the surplus appropriation system, various contributions, seizures and confiscations, and the depletion of financial reserves accumulated in previous years. In this period the Ukrainian SSR did not even have its own provisional budget but was subject to the financial legislation and policies of the Russian SFSR.

With the creation of the USSR and the introduction of the New Economic Policy, taxes in kind, which were undermining economic activity, were replaced by monetary taxes, and a number of prerevolutionary financial institutions were revived. In September 1924 the Central Executive Committee of the USSR recommended the adoption of the first law on the budgetary rights of the Union republic, according to which the Ukrainian SSR and other republics are wholly subordinate to all-Union legislation, and the central government of the USSR has the right, even without the republic's approval, to change these budgetary rights and to set the rate and means of taxation and of other financial exactions. The republican agencies have the power merely to set additional norms for fulfilling the financial plans according to local circumstances and the right to issue executive orders, but only within the limits specified by all-Union legislation. Thus, the principle of a unitary state budget was established in the USSR; it includes the all-Union budget and the budgets of the various republics. This centralized budgetary system makes it possible for the central authorities in Moscow to redistribute the national incomes of individual republics and regions and to influence decisively capital investment in the different branches of the economy.

The first budget of the Ukrainian SSR, for 1923–4, had a total of 44.7 million rubles, or 2.2 percent of the USSR state budget. This by no means reflected the economic role of Ukraine in the Soviet economy. The revenues of the Ukrainian SSR came almost entirely (99 percent) as deductions from direct taxes (taxes on agricultural products and industrial profits). Non-taxable revenues originated in the activities of the republic's people's commissariats. Up to 30 percent of the expenditures were spent on the economy; 20 percent were spent on culture, education, and social programs; and 10 percent on administration. The remainder, about 40 percent, was transferred to local budgets.

The taxation reform of 1930, which aimed at simplifying the taxation system, was directly connected with the introduction of the *five-year plan and the increasing nationalization of sectors of the Soviet economy. Of the 70 existing taxes, 56 were revoked. A turnover tax was introduced, and the importance of indirect taxation thus increased. This indirect form of taxation provided the USSR state budget with large financial resources for the development of industry and the bureaucracy. In this

connection an important contribution was made by the obligatory deliveries of agricultural products to the state at artificially low, fixed prices (see *Agricultural procurement). Similarly, artificially high prices were set for manufactured goods. The revenue from the turnover tax flowed directly into the all-Union budget, and only a certain portion of it was returned to the republics.

Another source of state revenue was the tax on the profits of enterprises, which in the interwar period had a varying rate of 10–80 percent, with a considerably higher rate applying to manufacturers of consumer goods than to heavy industry. The taxes from republican enterprises went into the budget of the Ukrainian SSR, while those from the all-Union enterprises went into the USSR budget. In 1927 the practice of massive *state loans from the population was introduced; by 1931 about 17 percent of Ukraine's budget consisted of such loans. In 1938 local budgets and social-insurance funds were included in the budget of Ukraine. In the interwar period only about 20 percent of the revenues and expenditures of the Ukrainian SSR figured in the budget of the republic. The rest was transferred to Ukraine from the all-Union budget. The small importance of Ukraine's budget can be seen from the comparison in table 1.

TABLE 1
Budgets of Ukraine and USSR (in millions of rubles)

	1928–9	1932	1937	1940
USSR's income	8,831 (100%)	38,042	109,329	180,241
Ukraine's income	413 (4.7%)	781 (2%)	4,069 (3.7%)	7,880 (4.4%)
USSR's expenses	8,784 (100%)	37,995	106,238	174,350
Ukraine's expenses	412 (4.7%)	781 (2%)	4,070 (3.8%)	7,880 (4.5%)

This state of affairs aroused opposition in Ukrainian circles. In the published materials of the State Planning Commission of the Ukrainian SSR there were attempts to analyze the distribution of all budgetary income and expenses on Ukrainian territory and to delineate the financial relations between the budgets of Ukraine and the USSR. V. Dobrohaiev, M. Volobuiev, and other economists of the period asserted that about 25 percent of the income from Ukraine's economy was spent outside of Ukraine through the all-Union budget and based their methodological arguments on earlier studies by M. Porsh, P. Maltsev, and others on Russia's economic exploitation of Ukraine. According to Dobrohaiev's calculations, the 1925–6 income from the Ukrainian SSR was 689.4 million rubles, while the money spent on the republic was 554.2 million, resulting in a loss to Ukraine of 135.2 million rubles or 19.6 percent of its income. The respective figures for 1926–7 were 852.3 and 686.2, with a loss to Ukraine of 166.1 million rubles, or 19.5 percent of its income. If one takes into account only those amounts that were processed by the People's Commissariat of Finances of the Ukrainian SSR, the absence of data about the income and expenditures in the field of transportation (which amounted to a profit for Ukraine), as well as certain inaccuracies in the calculations, several insignificant

TABLE 2
Territorial budget of the Ukrainian SSR for 1926–7
(in thousands of rubles)

Revenues collected in Ukraine from:	For USSR budget	For Ukraine's budget	Category total
1. Direct taxes	3,811.4	186,722.8	190,534.2
2. Indirect taxes	292,266.5	–	292,266.5
3. Payments	532.8	30,078.9	30,611.7
4. Communications and transportation	2.9	–	2.9
5. State property	11.4	43,542.9	43,554.3
6. State farming, industry, trade, banks, and insurance	45.9	8,703.5	8,749.4
7. Covered state expenditures	445.8	2,644.2	3,090.0
8. Miscellaneous	298.8	1,708.5	2,007.3
9. Issuing money and loans	11,095.4	–	11,095.4
Total revenues	308,510.9	273,400.8	581,911.7
Expenditures in Ukraine for:	From USSR budget	From Ukraine's budget	Total
1. Government and administration	71,100.9	94,424.0	165,524.9
a) unconsolidated	–	76,425.8	76,425.8
b) consolidated	4,946.6	17,998.1	22,944.7
c) all-Union	66,154.2	–	66,154.2
2. State credit system	366.7	–	366.7
3. Funds	297.6	4,684.4	4,982.0
4. Financing of economy	71,964.4	58,112.1	130,076.5
5. Aid to local budgets	–	115,445.3	115,445.3
Total expenditures	214,830.4	367,089.7	581,920.1
Balance (loss to Ukraine)			165,507.4

corrections can be made to Dobrohaiev's figures (see table 2).

During the Stalin terror economists such as Volobuiev, Dobrohaiev, and others who defended Ukraine's budgetary rights perished, and research on the territorial budget of Ukraine was curtailed. After the Second World War the USSR's budgetary system became even more centralized, particularly after the passage of the law of 30 October 1959. Since then, as in previous years, the central institutions in Moscow have had a decisive say in the drafting of the republican budgets. They have determined the size of revenues and expenditures for most branches of the national economy and even the cultural-educational requirements of the republics: the elementary and secondary schools have been financed through the republican budget, while technical schools, universities, and the institutions of the Academy of Sciences of the Ukrainian SSR have been financed through the all-Union budget. Transportation and communications, external trade, military expenses (including pensions), the courts, etc. have been financed through the all-Union budget. However, the new law has permitted the supreme soviets of the republics to increase their budgeted incomes and expenditures somewhat beyond the limit set by the USSR Supreme Soviet, with the proviso that the percentage of disbursements from Union taxes to the republics remains constant and that new taxes are not introduced.

This innovation in the budgetary legislation of the USSR probably resulted from N. Khrushchev's reforms, aimed at decentralizing to some extent the management of the national economy (see *Regional economic councils). At the time the Institute of Economics of the Academy of Sciences of the Ukrainian SSR was permitted at least partially to resume research into the *national income of Ukraine. For the first time since the 1920s some fairly limited data were published on the redistribution of revenues collected in Ukraine through the all-Union budget. In 1960, for example, of the total turnover tax collected in Ukraine (5,442 million rubles), 72.3 percent was retained in the all-Union budget, and only 27.7 percent was returned to Ukraine's budget. That year enterprises under all-Union jurisdiction contributed 102.4 million rubles to the all-Union budget, while the enterprises under the jurisdiction of the economic councils contributed 548.9 million rubles. In 1956-62, 46.5 percent of the total revenues from taxes paid by the population (6,488.8 million) was transferred to the all-Union budget. Again a number of Ukrainian economists (including O. Nesterenko, V. Kuts, I. Tereshchenko, and others) spoke out in defense of Ukraine's budgetary rights, and in 1963 the Institute of Economics published a book on the national income of the Ukrainian SSR that showed that in 1959-61 Ukraine lost almost 14.4 percent of its national income annually to the other Soviet republics. With the abolition of Khrushchev's economic reforms and the return to full centralization of the Soviet economy, such research was curtailed; only general data about the size and structure of the republican budget are now published. The basic tendencies in the structure of the budget of the Ukrainian SSR since the second half of the 1960s are evident in table 3.

The relative proportion of the budget of Ukraine in the budgetary system of the USSR has continued to be small: 4.2 percent in 1950, 10.3 in 1960, 9.8 in 1965, 8.5 in 1970, 8.5 in 1975, and 8.6 in 1979. Ukraine's budget has increased only insignificantly in the postwar period and does not correlate with the relative size of Ukraine's population or its economic resources. The budget of Ukraine, being deprived of any financial resources of its

TABLE 3
Budget of the Ukrainian SSR (in millions of rubles)

	1965	1975	1979
Revenues from:			
1. Turnover tax	2,273	5,150	8,245
2. Contributions from the income of state enterprises and organizations	3,999	7,600	9,131
3. Income tax from co-operatives and collective farms	443	303	335
4. State loans	18	46	63
5. Individual taxes	761	1,580	1,929
Expenditures for:			
1. National economy	5,105	9,057	11,217
2. Social-cultural programs	4,603	8,651	10,343
Administrative expenses	164	234	260
Repayment of loans, etc	145	197	291

own, is wholly dependent on the transfer of revenues from the central agencies in Moscow and in fact encompasses only a small part of the financial operations that take place on Ukrainian territory. Most of the branches of Ukraine's national economy are financed through the all-Union budget. All-Union investments not only have a decisive influence on the structure of Ukraine's economy but also subordinate Ukraine's economic interests to the general interests of the USSR as a whole. The policy of transferring *capital investment from Ukraine's economy to the other republics of the USSR is often discriminatory and reflects the exploitation of Ukraine's resources.

Budiak, Yurii [Budjak, Jurij] (pseud of Yurii Pokos), b 1879 in the village of Krasnohirka, Poltava gubernia, d 23 September 1943. Poet, writer, journalist, and teacher. Budiak was first published in Russian in 1895. Before the revolution he had published the poems *Nevoľnytsia-ukrainka* (The Ukrainian Slave-Girl, 1907) and *Pan Bazalei* (Master Bazalei, 1911), the poetry collections *Na poliakh zhyttia* (On the Fields of Life, 1909) and *Buryny* (Breakers, 1910), and a book of memoirs, *Zapysky vchytelia* (Notes of a Teacher, 1912). In 1924 he joined the literary organization Pluh and from 1924 to 1930 published two plays, sixteen collections of verse, and four collections of stories, all for children; the story collection *Zablukalyi* (The Lost One, 1928); and the short novels *Do velykoi bramy* (Maryna Kopachivna) (To the Great Gate [Maryna Kopachivna], 1929) and *Chervonyi mak* (The Red Poppy, 1930). Repressed in the 1930s, he died in exile.

Budilovich, Anton [Budilovič], b 24 May 1846 in Hrodna gubernia, d 19 December 1908 in St Petersburg. Russian linguist, professor at Warsaw University from 1881. Budilovich researched a Church Slavonic text written in Ukraine, which was published under the title *Izsledovanie iazyka drevne-slavianskogo perevoda trinadtsiat' slov Grigoriia Bogoslova po rukopisi Imper. publichnoi biblioteki, XI veka* (An Investigation of the Language of the Old

Slavonic Translation of the 'Thirteen Sermons of St Gregory of Nazianzus,' based on an Eleventh-Century Manuscript in the Imperial Public Library, 1871, 1875).

Budivelyk (The Builder). Publishing house for technical literature in the field of construction and communal economy, located in Kiev and established in 1947. Until January 1964 the publishing house was part of the Academy of Construction and Architecture of the Ukrainian SSR. It publishes the journals *Stroitel'stvo i arkhitektura* and *Sil's'ke budivnytstvo*, scientific collections, and popular books in Russian and Ukrainian.

Budka, Nykyta, b 7 September 1877 in Dobromirka, Zbarazh county, Galicia, d 1 October 1949 in Karaganda, Kazakh SSR. Ukrainian Catholic bishop. After attending university in Vienna and Innsbruck, Budka received a doctorate in theology and was ordained in 1905. He became prefect of the Lviv Theological Seminary and involved himself with Ukrainian emigration through the church-sponsored St Raphael Galician and Bukovynian Emigrant Aid Society, which he helped to found. In October 1912 he was consecrated bishop and in December became first head of the Ruthenian Greek Catholic church in Canada, remaining to 1927. His pastoral letter of 27 July 1914, on the eve of the First World War, created considerable controversy at the time and remains a subject of debate in Ukrainian Canadian historiography. On his return to Europe Budka was named vicar general of the Lviv archeparchy. In 1945 the Soviet authorities arrested and deported him.

Budnevych, Viktor [Budnevych], b 1895, d 1957 in Chernivtsi. Opera singer, dramatic baritone. He sang as a soloist in the Odessa and, from 1927, Kharkiv opera theaters. He was active in the Ukrainization of opera in the 1920s. He appeared in many operas, including A. Vakhnianyn's *Kupalo*, B. Liatoshynsky's *Zoloty obruch* (Golden Hoop), G. Rossini's *William Tell*, and G. Verdi's *Aida* and *Rigoletto*. In the 1940s he worked mostly as a director and teacher.

Budnikov, Petr (Budnykov, Petro), b 21 October 1885 in Smolensk, d 6 December 1968 in Moscow. Chemist, full member of the Academy of Sciences of the Ukrainian SSR and corresponding member of the Academy of Sciences of the USSR from 1939. Budnikov taught at the Kharkiv Chemistry and Technology Institute in 1926–41. He researched the properties and chemical changes of silicate systems in order to synthesize refractory, ceramic, and fusible materials. His selected works were published in Kiev in 1960.

Budny, Symeon [Budnyj] (Polish: Budny, Szymon), b ca 1530, d 13 January 1593, in Lithuania. Belorussian theologian from Lithuania, graduate of the University of Cracow, advocate of Calvinism and later of Socinianism, which was widespread in Ukraine. Budny translated the Bible into Polish for the Socinians (1570–2) and published the books *O opravdanih hrishnogo chelovika pered Bohom* (On the Justification of Sinful Man before God, 1562) and *Katykhysys ... dlia prostykh liudei iazyka rusko* (Catechism ... For Common Folk of the Ruthenian Tongue, 1562).

Buduchnist Credit Union. One of the largest Ukrainian credit unions in Canada. Buduchnist was established in 1952 and by 1982 had attained a membership of 5,939 and held assets of \$40,311,434. It has a head office and one branch office in Toronto.

Buduchnist' natsii (Future of the Nation). Newspaper that replaced *Biuleten' Bratstva ukraintsiv-katolykiv Kanady* (1933–7). From 1938 to 1950 it was the organ of the Ukrainian Catholic Brotherhood of Canada. Published semimonthly in Yorkton, Saskatchewan, it was primarily a religious newspaper with some general news, historical articles, literary works, and sections for women and youth. Rev S. Semchuk was editor.

Budy. iv-17. Town smt (1977 pop 9,700) in Kharkiv oblast, southwest of Kharkiv. The *Budy Faience Factory and a building-materials plant are located there.

Budy Faience Factory (Budianskyi faiansovyi zavod Serp i molot). Enterprise of the porcelain industry. The factory is located in the town of Budy in Kharkiv oblast. Its basic output consists of faience dishware. The plant was built in 1887. It produced about 11 million pieces in 1913, 44 million in 1940, and 78.6 million in 1976. Samples of its ware have been exhibited at Soviet and international exhibits and fairs.

Budyns. According to Herodotus, this was a large tribe that lived 'above the Sarmatians in a completely forested region.' Although scholars disagree on the Budyns' precise homeland, they generally agree that it was in the forest-steppe belt, somewhere between the Dnieper and Volga rivers. Some scholars think that the Budyns were the ancestors of the Moravians, others that they were the ancestors of the Eastern Slavs, and still others that they were of Iranian origin. It is known that they helped the Scythians to fight Darius I of Persia in 514 or 513 BC and that they had strong, wooden fortifications.

Budzhak. A historical land of the 16th–19th century between the lower Danube and the lower Dniester rivers in southern Bessarabia, consisting of steppe that is flat in the south and undulating in the north. In the 17th–18th century the Budzhak was inhabited by the Bilhorod Tatar Horde. In 1812, along with the rest of Bessarabia, it was ceded to Russia by Turkey under the *Bucharest Peace Treaty.

Budzynovsky, Viacheslav [Budzynovs'kyj, V'jačeslav], b 30 January 1868 in the village of Bavoriv, Ternopil county, Galicia, d 14 February 1935 in Lviv. Galician politician, writer, and journalist. One of the founders of the *Ukrainian Radical party, he edited its organ, *Hromads'kyi holos*, as well as other periodicals, such as *Pratsia* (Chernivtsi), *Svoboda* (Lviv), and the literary biweekly *S'vit*. After leaving the Radical party in 1889, he helped found the Ukrainian National Democratic party and represented it in the Austrian parliament (1907–18). In 1927–30 he founded and headed the pro-Soviet *Ukrainian Party of Labor and edited its weekly, *Rada*. He wrote works on socioeconomic topics, including *Kul'turna nuzhda avstriis'koi Rusy* (The Cultural Impoverishment of Austrian Ruthenia, 1880), *Agrarni vidnosyny v Halychyni* (Agrarian Relations in Galicia, 1894), *Ril'nycha produktsiia*

Viacheslav Budzynovsky

u Skhidnii Halychyni i na Bukovyni (Agricultural Production in Eastern Galicia and Bukovyna, 1896), *Panshchyna, iei pochatok i skasovanie* (Serfdom, Its Origin, and Abolition, 1898), *Khlops'ka posilist' v Halychyni* (Peasant Property in Galicia, 1901), *Nashi het'many* (Our Hetmans, 1907), and *Istoriia Ukraïny* (The History of Ukraine, 2 vols, 1924). After 1921 he devoted himself mostly to writing literature. He contributed over 100 stories to the American daily *Svoboda*. He is the author of short historical adventure novels, including *Osaul Pidkova*, *Plastun* (The Scout), *Krov za krov* (Blood for Blood), *Pid odnu bulavu* (Under One Command), and *Shliakhets'ke pravo* (The Noble Right). His story collections include *Strimholov* (Headlong, 1897), *Iak cholovik ziishov na pana* (How Man Degenerated into a Master, 1897), *Opovidannia* (Stories, 1897), *Do viry bat'kiv* (To the Faith of Our Fathers, 1924), and *Opryshok ta inshi opovidannia* (The Opryshok and Other Stories, 1927).

Buenos Aires. Federal capital city (1970 metropolitan pop 8,352,900; city pop 2,972,453) of *Argentina. Buenos Aires is the center of Ukrainian community life in Argentina; more than 20,000 Ukrainians live there. Ukrainians began to settle there at the beginning of the 20th century and arrived in great numbers between 1922 and 1940; a second major influx occurred after 1947, and a number of Ukrainians from Paraguay and Uruguay migrated to the city between 1965 and 1970. Some Ukrainians, notably members of the intelligentsia, emigrated to North America in the 1950s and 1960s. Ukrainian organizations and institutions in Buenos Aires include the Ukrainian Central Representation; the *Prosvita* and *Vidrozhennia* societies, which maintain several community centers; and the *Vidrozhennia* and *Fortuna* credit unions. The semi-monthly *Ukrains'ke slovo* and *Nash klych* and the monthly *Zhyttia* are published in Buenos Aires, and the publishers M. Denysiuk (1949–55) and Yu. Serediak have established publishing houses in the city. Buenos Aires is the seat of the Ukrainian Catholic Eparchy of the Holy Protection and its cathedral. The city also has a branch of the Ukrainian Catholic University, a minor seminary, several monasteries, an Orthodox church established by the Brotherhood of the Holy Protectress, three Ukrainian Catholic churches, and a Baptist house of worship. A statue of T. Shevchenko sculpted by L. Molodozhanyin has been erected in a civic park. Ukrainians manage a number of small commercial and manufacturing enterprises in the city.

M. Vasylyk

Buffalo. City (1980 metropolitan pop 1,242,573) in northwestern New York State. About 10,000–12,000

Ukrainians live in Buffalo. The first Ukrainians, mostly Lemkos, settled there in the 1880s. Between 1895 and 1907 they built three churches. Today there are five Ukrainian Catholic churches, one Orthodox church, two community centers, an elementary Ukrainian Catholic school, a Saturday school, a choir (Burlaky), and over 30 Ukrainian institutions and organizations in the city. There are two resorts near Buffalo – *Novyi Sokil*, owned by the Plast association, and *Kholodnyi Yar*, owned by the Ukrainian Youth Association of America. From the 1950s to the early 1980s V. Sharavan managed a daily Ukrainian radio program in Buffalo.

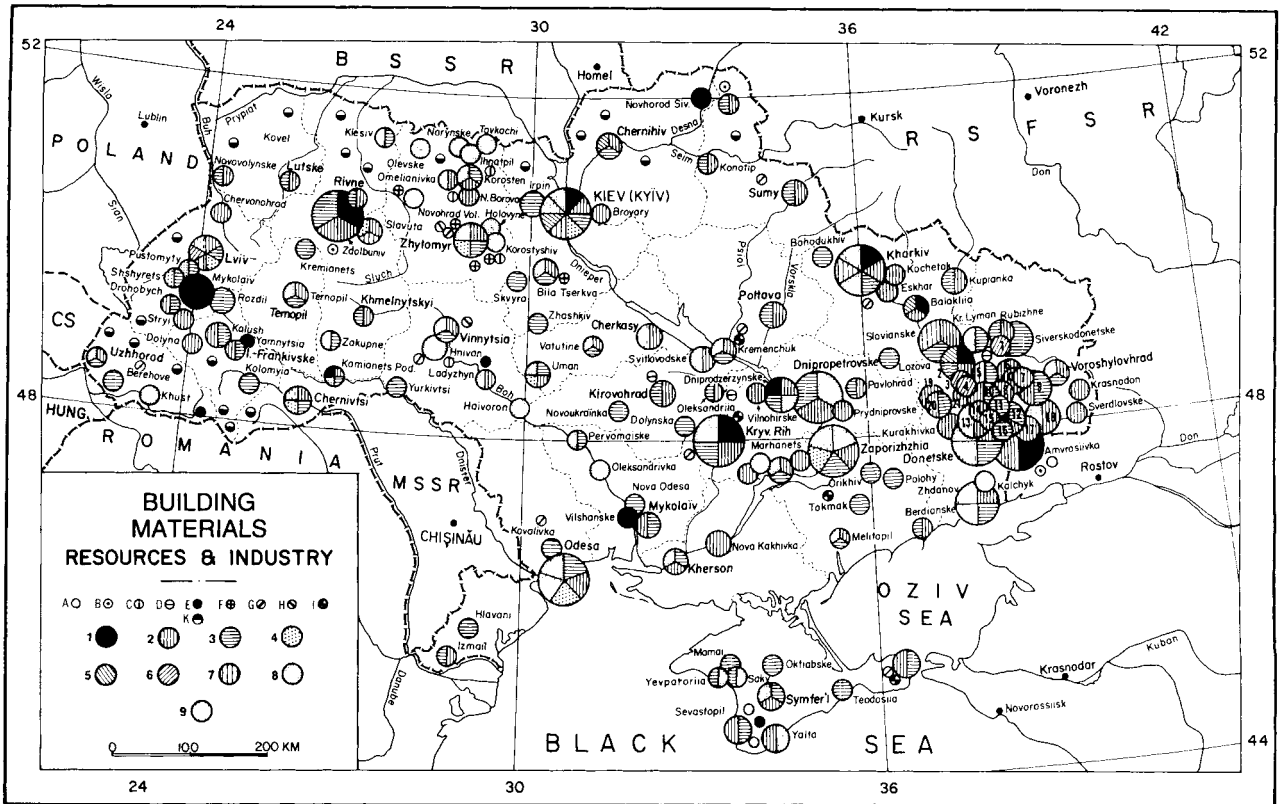

Buggan, Constantine, b 29 July 1936 in Pittsburgh, Pennsylvania. Orthodox clergyman. Buggan graduated from Duquesne University and took monastic vows in 1967. In 1972 he was consecrated bishop of the Ukrainian Orthodox church in the United States and established residence in Chicago. In 1976 he was promoted to archbishop. He also serves as the spiritual adviser to the Ukrainian Orthodox League.

Buh, Southern. See Boh.

Buh Depression. The western part of Little Polisia, the Buh Depression forms a triangle bounded by the Roztochia hills in the southwest, the edge of Podilia in the southeast, and the recess of the Volhynian-Kholm Upland in the north. The depression is of tectonic-erosive origin. The northern part is a moraine-sand or sand outwash plain, in many places covered with pine forest. The southwestern part consists of low, flat, latitudinal chalk hills, covered mostly with loess, which are dissected by broad, swampy hollows.

Buh River (Soviet Ukrainian name: Buh zakhidnyi [Western Buh]; Polish: Bug). A right-bank tributary of the Vistula River. The Buh is 813 km long, and its basin is 73,470 sq km in area. It originates in the Podilian Upland in Lviv oblast. It flows through the Buh Depression to the mouth of the Solokiia River and then crosses the Volhynian-Kholm Upland. From the town of Dubenky it flows through the Podlachian-Polisian Lowland (average depth 1 m). Its slope is 3 m/km in the upper section, 0.6 m/km in the middle section, and 0.25 m/km in the lower section. The Buh freezes over in late December and thaws in late March. It is navigable (periodically) below Brest. Its tributaries on Ukrainian ethnic territory are the Poltva, Rata, Solokiia, Huchva, Uherka, Volodava, and Krna on the left bank and the Luha, Mukhavets, Lisna, Nurets, and Narva on the right bank. The Buh is connected by canals between the Mukhavets River and the Pyna River (a tributary of the Prypiat River) to the *Dnieper-Buh Canal system and by the Narva River and the Augustów Canal to the Neman River.

From Kryliv in the south to Melnyk in the north the Buh serves as a border of the Ukrainian SSR, the Belorussian SSR, and Poland. Since the resettlement of Ukrainians from Podlachia and the Kholm region in 1946, the Buh has also marked the Polish-Ukrainian ethnic border. In 1795–1831 it was a border river between the Russian Empire and the Austrian Empire (in 1807–15 the Grand Duchy of Warsaw, in 1815–31 the Congress Kingdom of Poland). Later the borders of Russian gubernias and Polish voivodeships, as well as the *Curzon Line, ran along the Buh.

Buhaievsky-Blahodarny, Ivan [Buhajevs'kyj-Blahodarnyj], b 9 September 1773 in Kiev, d 1859. Painter, student of V. Borovykovsky and D. Levytsky, graduate of the St Petersburg Academy of Arts. Buhaievsky-Blahodarny was an outstanding portraitist. Among his works are a portrait of V. Borovykovsky and the icons of the Smolensk Monastery, the Synodal Church in St Petersburg, and the Kronstadt Cathedral.

Buhaiivka [Buhajivka]. v-19, DB III-5. Town smt (1977 pop 7,300) in Pereval'ske raion, Voroshylovhrad oblast. A stone quarry and the Pereval'ske Coal Mine are located there.

Buial'sky, Illia [Bujal's'kyj, Illja], b 6 August 1789 in the village of Vorobivka in the Novhorod-Siverskyi region, d 20 December 1866 in St Petersburg. Surgeon and anatomist. He graduated from the St Petersburg Medical-Surgical Academy in 1814 and was a professor of surgery and anatomy there in 1821-44. He also taught anatomy at the Academy of Arts and was chief surgeon at St Mary's

Hospital. One of the outstanding surgeons in Europe, Buial'sky developed several new surgical operations and medical methods, such as a treatment for aneurisms. He introduced refinements in various surgical instruments and was one of the first physicians in Russia to use antiseptics and ether and chloroform anesthesia, and to perform blood transfusions. He wrote many works on anatomy and surgery, among them *Anatomiko-khirurgicheskie tablitsy* (Anatomic-Surgical Tables, 1827).

Buiev'sky, Borys [Bujevs'kyj], b 7 June 1935 in Kryvyi Rih. Composer, graduate of the Kharkiv Conservatory. He composed the ballet *Song of the Blue Sea* (1966); the oratorio *Voyage of the Heart* (1946), to the poems of L. Kostenko and T. Kolomiets; and various symphonic works.

Building-ceramics industry. A branch of the *building-materials industry. Its basic products include ceramic floor tiles, wall tiles, sanitary and acid-resistant porcelain, ceramic facing, and drain and sewer pipes. The first

Building-materials production

ceramics plant in Ukraine and in the Russian Empire was built in 1880 in Kharkiv. In 1913 there were four large ceramics firms in Ukraine. In the Soviet period before the Second World War, existing plants were modernized, and after the war new plants were built. In 1978 the Ukrainian SSR produced 11.3 million sq m of floor tiles (45.1 percent of USSR's production), 7,040,000 sq m of decorative wall tiles (24.3 percent), 225,000 tonnes of acid-resistant ceramic products (35.5 percent), and 2.3 million sanitary articles (24.5 percent). Today Ukraine boasts large, mechanized enterprises: ceramics complexes in Slovianske and Donetsk; glazed-tile, ceramic-pipe, and tile plants in Kharkiv; the Keramik Plant in Kiev; the Budfaians Plant in Slavuta; a ceramics plant in Lviv; and a building-ceramics plant in Artemivske.

Building-materials industry. An industry, consisting of various branches, that produces materials for the construction of buildings. The *building-ceramics industry manufactures decorative and sanitary-technical materials. The *cement industry produces binding materials. The *asbestos-cement industry makes covering and insulating materials. The *brick, block, and *reinforced-concrete industries produce wall-building materials. Building stone and sand are produced by the inert-materials industry. Some types of building materials, such as construction metal and wood products, are manufactured by other industries, for example, the *metalworking and *woodworking industries.

Certain types of building materials – brick, tile, lime, glass, ceramic tile – were already used in Kievan Rus'. In the 18th century the first brick and glass workshops in

Ukraine were established. But the origin of the building-materials industry in Ukraine can be dated at 1854, when a large glazed-tile factory was built in Kharkiv. By 1913 there were over 500 building-materials firms in Ukraine. The largest were the cement factories in Amvrosvivka (the *Amvrosvivka Cement Complex, 1896) and Zdobuniv (1898). Most of the firms were technologically backward and limited in the amount and variety of their production.

The First World War devastated the industry, which recovered only in 1927. During the 1930s it developed rapidly, particularly in the production of cement, building ceramics, and wall materials. Cement plants were built in Dniprodzerzhynske, Yenakiieve, and Kharkiv, a ceramic pipe plant was built in Artemivske, and other plants were modernized. After another setback in 1941–5, the industry resumed its prewar production level in 1947. Thereafter its rate of development greatly outstripped the general rate of industrial growth in the Ukrainian SSR. New branches of the industry were established to manufacture precast reinforced concrete, insulated pipes, etc. In addition to the Donbas, the Lviv and Kharkiv oblasts and Kiev became the centers of cement, building-ceramics, and glass production. New plants were built: insulation-materials plants in Zhdanov, Bila Tserkva, Donetsk, Zaporizhia, and Kiev; an asbestos-cement complex in Kiev; a technical-glass plant in Lviv; and cement plants in Kryvyi Rih, Kamianets-Podilskyi, Mykolaiv (Lviv oblast), Balakliia, and elsewhere.

The problems of the industry and production planning are studied by the Southern State Planning Institute for the Cement Industry (Pivdendiprotsement) in Kharkiv, the Scientific Research Institute of Building Materials and

Products in Kiev, and the State Planning Institute for Building Materials in Kiev.

In general, only 14 percent of usable building materials produced are of a high quality. The accompanying table indicates the main types produced.

Bujak, Franciszek, b 16 August 1875 in the village of Maszkienice, Brzesko county, Poland, d 21 March 1953 in Cracow. Polish historian, economist, and sociologist. Bujak was a professor at Cracow (1909-18), Warsaw (1919-21), and Lviv (1921-41) universities. His works, especially *Galicya* (2 vols, 1908-10), contain a wealth of material on the history and economy of Galicia.

Archbishop Havryil Bukatko

Bukatko, Havryil, b 2 January 1913 in the village of Adrijevcy, Croatia, d 18 October 1981 in Ruski Krstur, Serbia. Greek Catholic archbishop and church figure. Bukatko studied philosophy and theology in Rome and was ordained in 1939. In 1950 he became administrator of the eparchy of Križevci; in 1952, Severian bishop; and, in 1960, bishop of the eparchy. In 1964, as archbishop, he accepted the responsibilities of Roman Catholic archbishop of Belgrade (a position he held until 1980). He took part in the synods of the Ukrainian Catholic church.

Bukovetsky, Yevhen [Bukovec'kyj, Jevhen], b 17 December 1866 in Odessa, d 27 July 1948 in Odessa. Realist painter. Bukovetsky obtained his artistic education at the Odessa Drawing School (graduating in 1890), the St Petersburg Academy of Arts, and the Académie Rodolphe Julian in Paris. He was a member of the Society of South Russian Artists and took part in the exhibitions of the *Peredvizhniki. He was an initiator of the Kyriak Kostandi Artistic Society (1922-9) and taught at the Odessa

State Art School (from 1937). Among his paintings are *Amateur Photographer* (1894), *In Court* (1895), and portraits of V. Filatov, P. Nilus, P. Stoliarsky, and many others.

Bukovyna (Bukovina, Bukowina, Bucovina). The territory between the middle Dniester River and the main range of the Carpathian Mountains, around the source of the Prut River and the upper Seret (Siret) River, the border area between Ukraine and Rumania. Today Bukovyna is divided between the Ukrainian SSR (incorporating Chernivtsi oblast or most of northern Bukovyna) and Rumania (containing most of the Suceava region or southern Bukovyna). The name of this territory is derived from its great beech (*buk*) forests and dates back to the 14th century when it designated the lands on the Moldavian-Polish border.

Bukovyna is a transitional land between Ukraine and Rumania. From a historical perspective it is a strategically important border area between Galicia and Moldavia, as it lies at the northwest entrance to Moldavia. Bukovyna's transitional location influenced its history; it belonged to the Principality of Galicia-Volhynia, then to Moldavia. Polish and Hungarian influences intersected here in the 14th and 15th century. In 1919-40 and 1941-4 all of Bukovyna belonged to Rumania. It was only in 1940 that Bukovyna was divided, according to the ethnic principle, between Ukraine and Rumania. Bukovyna's territory consists of 10,440 sq km, of which about 5,500 belong to the Ukrainian SSR. The population in 1930 was 853,000, about 520,000 of which became citizens of the Ukrainian SSR in 1940.

Geography and economy. The southwestern half of Bukovyna consists of the Carpathians, which are divided into two ranges: the crystalline *Maramureş-Bukovynian Upland and the flysch Hutsul Beskyd Mountains. Adjacent to the Carpathians lie the Bukovynian Carpathian foothills. Then comes a part of the *Pokutian-Bessarabian Upland located between the Prut and the Dniester rivers. The climate of Bukovyna is temperate continental, modified by the elevation. For example, the temperature at Vatra Dornei (at 789 m) is -6.4°C in January and 14.2°C in July, and the annual precipitation is 745 mm; at Chernivtsi (at 252 m) the temperature is -5.1°C in January and 20.1°C in July and the annual precipitation is 619 mm. About 40 percent of the area is forest, up to 20 percent is pasture, and over 30 percent is cultivated land. The 270,000 ha under cultivation produce corn, rye, wheat, oats, potatoes, seed grasses, and sugar beets. In 1930 about 75 percent of the population was employed in agriculture. The crystalline band contains such useful minerals as iron ore, manganese ore, lead, silver, and copper. The Carpathian foothills contain salt and cement marls. The main industry is woodcrafts, which produces significant exports, followed by the food industry (sugar refining, milling, brewing), tanning and shoemaking, rubbermaking, and knitting. In general industrial development is low, although industrial growth was somewhat greater under Rumanian rule than it was before 1918, when Bukovyna had to compete with Austrian and Czech industries. The railway network (5.1 km per 100 sq km or 6.3 km per 1,000 inhabitants) and highway network are well developed.

Population. At the time Bukovyna came under Austrian rule it was sparsely settled. In 1775 it had 75,000 inhabitants or 7 people per sq km. Eventually, through

Bukovyna; river valley near the village of Kurlybaby

natural growth and immigration, its population increased to 208,000 in 1807; 371,000 in 1827; 447,000 in 1857; and 642,000 in 1890. At the end of the 19th century the population outflow (emigration to the Americas) exceeded the influx, and so the rate of population growth declined: in 1900 the population was 730,000; in 1930 it was 853,000; and in 1941 it was 792,000. In 1930 there were 82 inhabitants per square kilometer, and 27 percent of the population lived in towns. The largest towns were Chernivtsi (the center of the region) with 112,000 inhabitants, Suceava with 17,000, Rădăuți with 17,000, Seret with 10,000, Cîmpulung Moldovenesc with 10,000, Sadhora with 9,000, and Storozhynets with 9,000. Ukrainians and Rumanians constitute the majority of the population. According to the Austrian census of 1910, Ukrainians numbered 340,000 or 40 percent of the population (29.2 percent according to the inaccurate Rumanian census of 1930), while Rumanians numbered 290,000 or 34 percent of the population (379,000 or 44.5 percent of the population according to the Rumanian census).

Other ethnic groups appeared only during the Austrian period: in 1910 Jews numbered 95,000, constituting 11 percent of the population (92,000 or 10.8 percent according to the 1930 census); Germans numbered 75,000 or 9 percent (75,500 or 8.9 percent); Poles numbered 25,000 or 3 percent (30,600 or 3.6 percent); and smaller groups, such as the Hungarians, Russian Old Believers, Slovaks, and Armenians, totaled 25,000 or 3 percent of the population. The Jews, Germans, and Poles lived primarily in towns (most of them in Chernivtsi). Although the Germans constituted only one-tenth of the population, the German language, which was used by Jews as well as Germans, was widely spoken in Bukovyna, especially during the Austrian period. Nowhere else in Ukraine were German cultural influences and, in the Austrian period, German political influences as strong as in Bukovyna. The ethnographic border that divides Bukovyna into Ukrainian and Rumanian sections runs from Kyrylbaba in the south, through Ruska Moldavytsia, Banyliv-Pidhirnyi, Storozhynets, and Chernivtsi, to Ridkivtsi on the Bessarabian border in the north. From the Ukrainian ethnic area a long Ukrainian ethnic peninsula, containing the town of Seret, extends along the Moldavian border from Chernivtsi to Suceava in the south. On the other side Rumanian settlements extend up to Chernivtsi. In 1930 Ukrainians constituted 65 percent, Jews 12 percent,

Rumanians 11.5 percent, Germans 5 percent, and others 6 percent of the population in the Ukrainian ethnic area (5,300 sq km and 460,000 inhabitants). At the same time, in the Rumanian ethnic area (5,140 sq km, 390,000 inhabitants), Rumanians constituted 64 percent, Germans 11 percent, Jews 10 percent, Ukrainians 9.5 percent, and others 5.5 percent of the population.

The present political border between the Ukrainian SSR and Rumania does not coincide with the ethnic border: Rumania contains the southern part of the Ukrainian ethnic peninsula with Seret and a string of mountain villages, while Ukraine contains the Rumanian ethnic wedge that extends to Chernivtsi. Rumanian Bukovyna has about 30,000 Ukrainians or 9 percent of the region's total population, while Ukrainian Bukovyna has almost 95,000 Rumanians or 18 percent of the region's population. The present ethnic composition of the population has changed somewhat as a result of the German exodus and the extermination of most of the Jews during the Second World War.

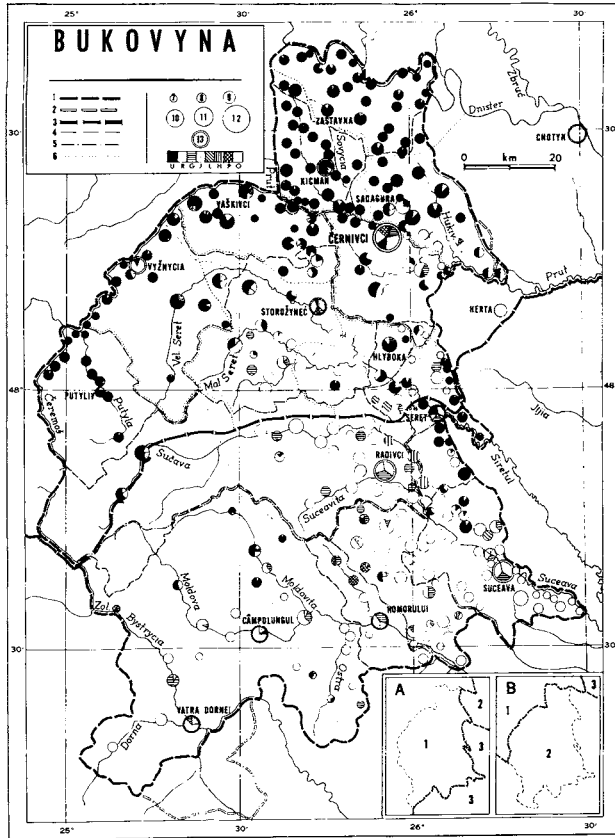

Bukovyna; mountain meadows

History

To 1774. In early times Bukovyna was inhabited by the Thracian tribes of the Getae and Dacians. From the 3rd to the 9th century AD various nomads traversed Bukovyna: in the 4th century East Slavic tribes began to appear and the region was part of the Antean state; in the 9th century the Tivertsians and White Croats were the local inhabitants.

In the 10th century Bukovyna became part of the Kievan state. When this state was divided at the end of the 11th century, Bukovyna was eventually incorporated into the Principality of Galicia-Volhynia. The church in Bukovyna was administered by the Kiev metropolitanate until 1302, when it was transferred to the Halych metropolitanate. With the Tatar invasion in 1241 Bukovyna fell under Tatar domination. At the beginning of the 14th century in northern Bukovyna an autonomous territory called the Shypyntsi land arose. When the Hungarian king Louis I defeated the Tatars in 1342, southern Bukovyna came under Hungarian rule. During this period Rumanians from Transylvania and the Marmarosh (Maramureș) region began to settle in Bukovyna. Voevode Bogdan I, the founder of the Moldavian state, freed Bukovyna from Hungary (1359–65). From then to 1774 Bukovyna belonged to *Moldavia and shared its fate. From 1387 to 1497 Moldavia recognized the nominal supremacy of Poland. In this period the people of Bukovyna took part in *Mukha's rebellion against the Polish and Moldavian nobles (1490–2). From 1514 Moldavia recognized the supremacy of Turkey, and towards the end of the century it became increasingly dominated by that country. The

Rumanianization of Moldavia, where the Ukrainians played an important role and literary Ukrainian was the official language, and of Bukovyna became more intense after 1564, when the capital of Moldavia was moved from Suceava in Bukovyna to Iași. Yet Bukovyna maintained its ties with the rest of Ukraine. Cossack regiments (under I. Pidkova, S. Nalyvaiko, and P. Sahaidachny) fought on Moldavian territory against the Turks. Some of Bukovyna's population participated in B. Khmelnytsky's national rebellion. T. Khmelnytsky died near Suceava in 1653 fighting a coalition of Poland, Transylvania, and Wallachia.

In the cultural sphere, Bukovyna benefited from the achievements of the Lviv Dormition Brotherhood and the Kievian Mohyla Academy. From 1401 to 1630 an independent metropolitanate (to which the eparchy of Rădăuți was subordinated) existed in Suceava. From 1630 to 1782 the Suceava metropolitanate came under the metropolitan of Iași. From the 16th to the mid-19th century the *opryshoks were active in the mountainous part of Bukovyna bordering on Galicia; among them was the famous O. *Dovbush. At the end of the Moldavian period Bukovyna was sparsely populated and was economically and culturally backward.

1774–1918. Taking advantage of the Russo-Turkish war of 1768–74, Austria annexed the part of northern Moldavia that included Chernivtsi, Seret, Rădăuți, and Suceava. Turkey and Moldavia had no choice but to accept this action. The new administrative entity was given the name of Bukovyna (first used in a document in 1412). The Austrian government brought in a series of reforms: in 1781 serfdom was abolished; in 1782 a Bukovynian eparchy (subordinated to the Serbian metropolitan in Sremski Karlovci) was established; in 1873 the eparchy was elevated to an independent metropolitanate with E. Hakman as the first metropolitan; schools were then founded. Austria opened new sources of immigration into Bukovyna from the neighboring lands – Transylvania, Moldavia, Galicia – as well as from the heartland of Austria and Germany. As a result, there was an influx of Germans, Poles, Jews, Hungarians, Rumanians, and Ukrainians, and by the beginning of the 19th century the population of Bukovyna was three times that of 1775. German was the official language in Bukovyna, although Rumanian and Ukrainian could be used in transactions with the government.

At first Austria held Bukovyna under military rule. From 1774 to 1786 it was governed by the generals G. Splényi and K. von Enzenberg. In 1787 it was attached as a separate region to Galicia, a status it retained until 1849. During this period, in 1842–5 and particularly in 1848–9, peasant revolts broke out in the Hutsul area of Bukovyna. The peasants demanded social and political rights. Corvée was abolished in 1848. Then elections to the parliament in Vienna were held, and five Ukrainians (among them L. *Kobylytsia), two Rumanians, and one German were elected to represent Bukovyna. On 4 March 1849 Bukovyna became a crown land with an autonomous administration and its own president. It attained full autonomy in 1861, when it was granted a special statute, a regional diet (its first marshal was Bishop E. Hakman), and its own executive.

Writers such as Yu. *Fedkovych, S. *Vorobkevych, and later O. *Kobylianska were the heralds of the 19th-century Ukrainian renaissance in Bukovyna. The first

Bukovyna; the village of Putylyiv, early 20th century

Ukrainian association, known as *Ruska Besida, was established in 1869. In 1870 a political society, the *Ruthenian Council, was founded, and in 1875 a student organization called Soiuz, in which Russophiles at first predominated. From 1884 the populists (see Galician *Populism) assumed the leadership in Ukrainian public life. They founded a number of new organizations and published the periodical **Bukovyna* (1885–1918). Led by S. *Smal-Stotsky, Ye. *Pihuliak, O. *Popovych, and M. *Vasylo, the Ukrainians of Bukovyna made important gains in the political, civic, economic, cultural, and religious fields.

Not until 1890 did Ukrainians win representation at the regional diet and in the Vienna parliament, where their representatives from Bukovyna and Galicia formed the 'Ukrainian Club.' After 1911 Ukrainians exerted greater influence in the administration of Bukovyna. By that year they had 16 representatives in the diet. The vice-marshals of the diet were S. Smal-Stotsky (from 1904) and Rev T. Drachynsky (from 1911). At the turn of the century the populists split into various parties: the National Democrats (led by S. Smal-Stotsky until 1911, then by M. Vasylo and Rev T. Drachynsky), the Radicals (founded in 1906 and led by T. Halip and I. Popovych), and the Social Democrats (led by O. Bezpalko and M. Havryshchuk).

Cultural-educational work was carried on by the Ruska Besida society, which had nine branches in various towns, 150 reading rooms in villages, and a membership of 13,000; by the Ukrainska Shkola society, and by the Sich (a sports and firefighting organization). In Chernivtsi the People's Home network was responsible for cultural work. The Seliaska Kasa union of agricultural associations headed a system of savings and loan co-operatives of the Raiffeisen type. Ukrainian schools were well organized in Bukovyna; there were 216 elementary schools and 6 secondary schools (4 gymnasiums and 2 teachers' seminaries). At *Chernivtsi University, which was founded in 1875 with German as the language of instruction, there were three chairs besides the chair in Ukrainian language and literature whose holder lectured in Ukrainian. Generally speaking, up to 1914 Bukovyna had the best Ukrainian schools and cultural-educational institutions of all the regions of Ukraine.

In the religious field the Orthodox Ukrainians of Bukovyna strove for equality with the Rumanians. They achieved it in part on the eve of the First World War. The consistory was divided into two branches – Ukrainian and Rumanian. A bishop was appointed for the Ukrainians (Bishop T. Tyminsky); two Ukrainian chairs were

established in the faculty of theology; and church publications appeared in Ukrainian. The Greek Catholic deanery of Chernivtsi was subordinated to the Lviv archeparchy from 1811 and from 1885 to the Stanyslaviv eparchy. The efforts of Ukrainians to divide Bukovyna into a Ukrainian- and a Rumanian-governed section did not succeed. Ukrainian achievements were accompanied by friction with the Rumanians, especially at the turn of the century. Rural overpopulation and difficult economic conditions forced many peasants to emigrate overseas (almost 50,000 left in 1891–1910) and led to peasant strikes in 1901–5.

During the First World War Bukovyna was a war zone and therefore suffered great losses. In 1915 Ukrainian representatives from Bukovyna and from Galicia organized the General Ukrainian Council in Vienna (with M. Vasylo as vice-president).

1918–40. On 25 October 1918 the Ukrainian Regional Committee, with O. Popovych as chairman, was established in Chernivtsi to represent the Ukrainian National Council in Bukovyna. This committee organized a massive public rally in Chernivtsi on 3 November to demand that Bukovyna be attached to Ukraine, and on 6 November it took power in the Ukrainian part of Bukovyna, including Chernivtsi. Rumanian moderates, led by A. Onciul, accepted the division of Bukovyna into Ukrainian and Rumanian sections, but Rumanian conservatives under I. Flondor's leadership rejected this idea. On 11 November the Rumanian army occupied Chernivtsi and all Bukovyna in spite of resistance from the Ukrainians. The General Congress of Bukovyna, which was hastily summoned by the Rumanians, declared the unification of Bukovyna with Rumania on 28 November. On 10 September 1919, the peace conference of Saint-Germain recognized Rumania's right to the part of Bukovyna settled by Rumanians. On 10 August 1920 the conference at Sèvres ceded all Bukovyna to Rumania. Official representatives of the Western Ukrainian National Republic, the Ukrainian National Republic, and the Ukrainian SSR protested this action.

The Rumanian government canceled all the autonomous powers of Bukovyna and turned it into an ordinary Rumanian province. The Ukrainian school system was dismantled; Ukrainian cultural and civic life was restricted; and the Ukrainian church was persecuted (Rumanian was introduced into the liturgy). In 1918–28 and 1937–40 Bukovyna found itself in a state of siege.

Village of Falkiv in the Suceava Valley of the Bukovynian Beskyd

Ukrainians were particularly oppressed when the Liberal party was in power, and they made few gains when the National Peasant party took office. In the 1920s the Ukrainian section of the Social Democratic Party of Bukovyna (led by V. Rusnak) became active. The left wing of the party (under S. Kaniuk) became the Communist Party of Bukovyna. In time the *Ukrainian National party (1928–38), under the leadership of V. Zalozetsky-Sas, V. Dutchak, and Yu. Serbyniuk, became the legal political representative of the Ukrainian population. Having reached an understanding with Rumanian political parties, the Ukrainian National party won several seats in the Rumanian parliament. When Rumania became an authoritarian state in 1938, the position of Ukrainians in Bukovyna grew even worse. In the 1930s an underground nationalist movement led by O. Zybachynsky and D. Kvitkovsky gained strength. To counteract it, the Rumanian government staged two political trials in 1937.

In spite of government persecution, Ukrainian organizations – such as the People's Home in Chernivtsi (headed by O. Kupchanko); the Ukrainska Shkola educational society (led by A. Kyryliv and T. Bryndzan); the musical societies Bukovynskyi Kobzar (Chernivtsi 1920–40) and the Ukrainian Male Choir; the Women's Hromada (headed by O. Huzar); the student societies Zaporozhe, Chornomore, and Zalizniak; and the Ukrainian Theater (headed by S. Terletsky and I. Dudka) – continued their cultural activities. The publication of the daily *Chas* by L. Kohut, several weeklies – *Khliborobs'ka pravda*, *Ridnyi kraj*, *Rada*, and *Samostiinist'* – and the journal *Samostiina dumka* was an important achievement.

Under Rumanian domination there were 155 Ukrainian Orthodox parishes (out of a total of 310), 135 Ukrainian priests, and 330,000 church members in Bukovyna. The Greek Catholic church had 17 parishes and 17 priests. In 1923–30 it constituted the Bukovynian apostolic administration with its center in Seret. Then it became a general vicariate subordinated to the Rumanian diocese of Baia Mare.

1940–5. On 28 June 1940 the Rumanians withdrew from the Ukrainian part of Bukovyna in response to an ultimatum from the USSR, and Soviet troops moved in. By decision of the Supreme Soviet of the USSR on 2 August, northern Bukovyna, together with northern Bessarabia and a small part of old Rumania containing the town of Hertsa, became *Chernivtsi oblast. During the year-long Soviet occupation some radical changes took place in Bukovyna: private property was nationalized; farms were partly collectivized; and education was Ukrainianized. At the same time all Ukrainian organizations were disbanded, and many publicly active Ukrainians were either killed or exiled. A significant part of the Ukrainian intelligentsia had emigrated to Rumania or Germany when the Soviet occupation began. When the German-Soviet war broke out and the Soviet troops retreated from Bukovyna, Ukrainians tried to establish their own local government, but they could not withstand the advance of the Rumanian army. In July 1941 almost 1,000 Bukovynians fled to Galicia, where they formed the *Bukovynian Battalion under the leadership of P. Voinovsky. This company joined the OUN expeditionary groups of the Melnyk faction and reached Kiev. In 1941–4 the Rumanians set up a military dictatorship in Bukovyna (which was turned into a *Generalgouvernement*), established concentration camps, put prominent Ukrainians (O. Huzar, M. Zybachynsky,

and others) on trial, prohibited any kind of civic and cultural work, and introduced total Rumanianization. At this time partisan groups sprang up in the mountains of Bukovyna forming the Bukovynian-Ukrainian Self-defense Army. Under V. Luhovy's leadership these units fought the Rumanians and, in 1944, the Soviets.

In March 1944 Soviet troops occupied northern Bukovyna for the second time. The Paris Peace Treaty of 1947 between the Allies and the Rumanians recognized the Soviet-Rumanian border that had been established in 28 June 1940. The Soviet government created in Bukovyna the same conditions of life as in the Ukrainian SSR.

Front page of *Bukovyna*

Bukovyna. The largest Ukrainian newspaper in Bukovyna, published in 1885–1918; the unofficial organ of the Bukovynian populists. It appeared in the vernacular Ukrainian, adopting the phonetic orthography in 1888. *Bukovyna* was published in Chernivtsi and in Vienna (1915–17), originally twice a month until 1892; then weekly until 1895, four times a week in 1895–6, then daily

until 1898, and three times a week from 1898 to 1910. It ceased publication in 1911–12 to resume in 1913–14 three times weekly under the title *Nova Bukovyna*. From 1915 to 1917 it was a weekly and in 1918 a daily. *Bukovyna* was edited by Yu. Fedkovych (1885–8), P. Kyrchiv (1888), S. Dashkevych (1888–94), V. Dutchak (1894–5), O. Makovei (1895–7), L. Turbatsky (1897–8), L. Kohut, D. Lukiianovych, I. Shpytko, V. Simovyč, A. Krushelnytsky, Ya. Veselovsky (1904–5), O. Lutsky, V. Shchurat, V. Fedorovych, V. Kushnir, Yu. Serbyniuk, and others. The politics of the paper were determined by O. Popovych and S. Smal-Stotsky (a series of articles entitled 'Polityka real'na' [A Realistic Policy], 1896). Such writers as O. Konysky, B. Hrinchenko ('Lysty z Ukrainy Naddniproians'koï' [Letters from Dnieper Ukraine], 1892–3, which provoked a reply by M. Drahomanov), I. Franko, A. Krymsky, M. Kotsiubynsky, O. Makovei, O. Kobylianska (*Tsarivna* [The Princess]), and M. Cheremshyna published their works and articles in *Bukovyna*. The newspaper played an important role in the development of national consciousness in Bukovyna and contained valuable materials on the history of the territory.

Bukovyna-Pokutia dialects. Spoken in the area bordered by the Dniester, the Bystritsia (near the town of Nadvirna), and the Seret rivers, they are closely related to the *Hutsul and *Dniester dialects. The Bukovyna-Pokutia dialects are characterized by the following peculiarities: (1) the use of 'e (if unstressed, 'y, 'i) instead of 'a (*por'édok* [order]) after palatalized consonants; (2) *u* in place of the unstressed *o* (*subi* [himself], dat); (3) *k'*, *g'* in place of *t'*, *d'* (*g'ivka* [girl], *žyk'e* [life]); (4) the so-called Middle European *l*; (5) the coronal (weak) palatalization of the softened *s'*, *z'*, *c'*, and *dz'* and their dispalatalization in certain suffixes (*des* [somewhere], *blýsk'yyj* [near], *pánckyj* [master's], *pálec* [finger]); (6) the preservation of the palatalization in *š'*, *ž'*, *č'*, and *r'*; (7) the preservation of certain archaic endings in the soft declension (*na kony*, *konevy* [horse], dat and loc sing) and the use of verb forms of the following type: *pečý* [bake]; *močý* [be able]; *xóg'u* [I walk]; *l'úbju* [I love]; *uný xog'y* [they walk]; *xodýwjem/-smyl/-jes*, *xodýlysmo,-ste* [walk], past tense; *-mul/budu xodýty* [walk], future tense; (8) certain lexical peculiarities, including Rumanianisms, especially in the eastern part of the Bukovyna-Pokutia dialects area. The expansion of ancient Pokutian phonetic features ('e from 'a) in the 14th to 16th centuries in western Podilia contributed, together with the expansion of the Sian dialect features, to the formation of the Dniester dialects. The Bukovyna-Pokutia dialects have been studied by I. Verkhatsky, Yu. Karpenko, and K. Kysilevsky, among others. Bukovyna-Pokutia dialecticisms form a stylistic element in the stories of V. Stefanyk and M. Cheremshyna.

Bukovynian Battalion of 1919. Volunteer military formation organized in Kolomyia by M. Topushchak. The battalion, which consisted of refugees from Bukovyna, was attached to the Third Armored Rifle Division of the Army of the UNR and saw action against the Soviet forces. The commanding officer was O. Kantemir.

Bukovynian Battalion of 1941. Volunteer formation of Bukovynians created in July 1941 by the OUN (Melynk faction). With a force of some 1,000 men under the command of Capt P. Voinovsky, the battalion reached Kiev, where it was demobilized. Members of the battalion later fought in the ranks of German auxiliary forces against Soviet partisans in Belorussia. Some went into the Ukrainian underground, while others joined the French Resistance after having been transferred to the French front in 1944.

Bukovynian Song and Dance Ensemble (Bukovyns'kyi ansambl pisni i tantsiu). A vocal-choreographic organization of the Chernivtsi Philharmonic. The ensemble arose out of a Bukovynian choral and dance group in 1944. It consists of a mixed chorus, a dance group, and an orchestra of folk instruments. Its repertoire includes Bukovynian folk songs and dances and dramatized musical-choreographic sketches.

Boris Bukreev

Bukreev, Boris, b 6 September 1859 in Lgov, Kursk gubernia, Russia, d 2 October 1962 in Kiev. Mathematician, professor at Kiev University from 1889. Bukreev's main works deal with the theory of complex functions, differential equations, and geometry, particularly non-Euclidean geometry. His most important books are *Kurs prilozhenii differentsial'nogo i integral'nogo ischisleniia k geometrii* (A Course on Applications of Differential and Integral Calculus to Geometry, 1900), *Vstup do variatsiionoho chyslennia* (An Introduction to Variational Calculus, 1934), and *Neevklidova planimetriia v analitychnomu vykladi* (Non-Euclidean Planimetry in Analytical Terms, 1947).

Bukvar' iuzhnorusskii (South Russian Primer). A primer compiled by T. Shevchenko in 1860 and published by him in 1861 in St Petersburg for use in Sunday schools for

adults and adolescents. Beginning in 1859, the *Sunday schools were used by Ukrainian intellectuals to promote Ukrainian as the language of education. Shevchenko's primer followed *Hramatka* by P. Kulish (1857) but placed more emphasis on folkloric texts.

Buky. iv-11. Town smt (1977 pop 4,100) in Mankivka raion, Cherkasy oblast, on the Hirskyi Tikych River. The town was first mentioned as a village in 16th-century documents. It has two brick factories, a stone quarry, and a hydroelectric station.

Bulakhovsky, Leonid [Bulaxovs'kyj], b 14 April 1888 in Kharkiv, d 4 April 1961 in Kiev. Outstanding Slavic linguist, from 1921 professor at Kharkiv University and, from 1946, at Kiev University; member of the Academy of Sciences of the Ukrainian SSR from 1939 and director of its Institute of Linguistics from 1944. A student of S. Kulbakin and Ya. Endzelin, Bulakhovsky was a typical representative of the neogrammarian school, which emphasizes comparative studies. The merit of Bulakhovsky in this regard was his broad study of Slavic accentology (he conducted studies in Polish, Czech, Bulgarian, Serbian, Russian, and other accents). In the history of the Ukrainian language his main works are *Pytannia pokhodzhennia ukrains'koi movy* (The Question of the Origin of the Ukrainian Language, 1956) and a series of smaller studies published posthumously in the collection *Istorychnyi komentarii do ukrains'koi literaturnoi movy* (A Historical Commentary to the Ukrainian Literary Language, 1977). Bulakhovsky's historical studies are free from distortion of facts for the sake of political conformity and in this respect are unique for the time of their appearance. However, they are built on limited data – dictionaries and modern fiction, as well as comparison with other Slavic languages – and give little attention to Old and Middle Ukrainian texts; furthermore, Bulakhovsky's knowledge of dialects was only secondhand. As a result his studies include certain unjustified hypotheses (eg, his attempt to tie the development of *o* and *e* into *i* with the new rising pitch in Slovene and Serbo-Croatian and other 'fictions of comparative linguistics'). In studies of modern standard Ukrainian, Bulaxovs'kyj's main achievements were two collective works that he edited – *Pidvyshchenyi kurs ukrains'koi movy* (An Advanced Course in the Ukrainian Language, 1930) and *Kurs suchasnoi ukrains'koi literaturnoi movy* (A Course in the Contemporary Ukrainian Literary Language, 2 vols, 1951–2). He was also the originator and editor of the Ukrainian orthography mandatory in the Ukrainian SSR since 1946, which has since been only slightly modified. Five volumes of Bulakhovsky's selected works were published in Kiev in 1975–7.

G. Y. Shevelov

Bulankin, Ivan, b 3 February 1901 in the village of Tenky, Tatar ASSR, d 31 October 1960 in Kharkiv. Biochemist, full member of the Academy of Sciences of the Ukrainian SSR from 1951. In 1934 Bulankin was appointed professor at Kharkiv University and from 1945 served as its rector. His works deal with the chemistry of proteins, particularly the problem of the reversibility of protein denaturation processes, and with problems of comparative and age-conditioned biochemistry. He is the author of *Fizicheskaia i kolloidnaia khimiia* (Physical and Colloidal Chemistry, 1959).

Leonid Bulakhovsky

Kost Buldyn

Bulat, Ivan, b 1896 in the village of Zhdany, Poltava gubernia, d 30 July 1939. Communist party administrator. In 1917 Bulat was engaged in Party work in Katerynoslav. From 1922 to 1925 he was a Party and trade-union figure in Kharkiv, serving as secretary of the Southern Bureau of the All-Union Central Council of Trade Unions in 1924. In 1925–6 he was deputy chairman of the Council of People's Commissars of the Ukrainian SSR and of the Economic Council of the Ukrainian SSR; in 1924–5 he was a candidate member of the Politburo of the CP(B)U. From 1926 he held high Party and government offices in Russia.

Bulat, Tamara, b 3 February 1933 in Zaporizhia. Musicologist and research associate of the Institute of Fine Arts, Folklore, and Ethnography of the Academy of Sciences of the Ukrainian SSR. She has written several works about M. Lysenko.

Bulava. A type of mace 50–80 cm in length consisting of a handle and head in the shape of a sphere or octahedron. The *bulava* was known among Eastern peoples and came into widespread use in Ukraine in the 13th century, first as a weapon and then as a symbol of authority. In the 16th–18th century Cossack officers bestowed the *bulava* on the elected hetman. The Russian tsar also endowed hetmans with the *bulava*. A smaller type of *bulava*, known as *pernach* or *shestoper*, was carried by Cossack colonels.

Bulavin, Kondratii, b ca 1660, d 18 July 1708 in Cherkaske, Don region. Bakhmut otaman of the Don Cossacks, leader of an antitsarist rebellion that spread through the Don region, Slobidska Ukraine, and 43 counties of southern Russia. The revolt was the result of the government's attempts to take away the traditional autonomy of the Don Cossacks, to apprehend peasants who had fled from their owners, to expel poor Cossacks from the Don Host, and to turn the rich Cossacks into a closed military estate. Because of his initial setbacks, Bulavin came to the Zaporozhian Sich in search of aid in the winter of 1707. A number of Zaporozhian rank-and-file Cossacks joined his ranks. However, Hetman I. Mazepa sent the Poltava Regiment against the rebels. In July 1708 the rebels were crushed by the tsar's army near Oziv, and shortly afterwards the Don Cossack officers did away with Bulavin. The Russian troops ravaged many rebel settlements and villages and tortured to death thousands

of the captured rebels. Many rebels fled to the Kuban. After the Battle of *Poltava the former followers of Bulavin established contact with Mazepa's supporters, who had emigrated to Bendery, Moldavia, and offered to recognize the authority of the Ukrainian hetman.

Bulavytsky, Oleksa [Bulavyc'kyj], b 8 October 1916 in Uman, Kiev gubernia. Painter. Bulavytsky studied at the Odessa Art School, the Leningrad Academy of Arts, and the Kiev State Art Institute. He worked in Kiev film studios and as a stage designer for various theaters. After the war he lived in Germany and in 1950 immigrated to the United States, where he worked as a draftsman and designer for various architectural firms. In 1959 he opened his own art studio in Minneapolis. As a painter Bulavytsky specializes in landscapes, portraits, still lifes, and figural compositions. He has held individual exhibits of his work and has participated in group exhibits in Europe, the United States, and Canada.

Buldyn, Kost [Bul'dyn, Kost'], b 1897 in Kiev, d 1966 in Buenos Aires. Sculptor and painter. Buldyn graduated from the Kiev Art Institute in 1929. He shared first prize, with A. Darahan and B. Kratky, in 1933 for his design of a gravesite monument to T. Shevchenko, which was never built. Using this design in 1935 M. Manizer built a monument to Shevchenko in Kharkiv. Buldyn worked on buildings as a decorative sculptor in Kiev, Dnipropetrovsk, Odessa, Voroshylovhrad (a huge bas-relief frieze for the Workers' Club), Kharkiv, Zaporizhia, and elsewhere. He helped found and worked as an editor at *Mystetstvo* publishers in Kiev. In 1943–4 he lived in Lviv and then emigrated to Austria. From 1949 he resided in Argentina, where he designed an industrial-economic exhibition in Avellaneda in 1950 and a building complex, the Children's Republic, in Buenos Aires. In the 1920s he belonged to the writers' association *Pluh* and published articles on art and short stories (the latter under the pseudonym Kost Haidar). In Argentina he wrote under the pseudonym V. Kob.

Bulgakov, Makarii, b 2 October 1816 in Surkov, near Kursk, Russia, d 22 June 1882 in Cherkizov, near Moscow. A noted Russian theologian and church historian. He studied at the Kiev Theological Academy and in 1841 became a professor at the academy. In 1842 he was appointed professor at the St Petersburg Theological Academy. He was a full member of the Russian Academy of Sciences. In 1850 he became bishop of Vinnytsia, then of Kharkiv (1862–7), and in 1879 metropolitan of Moscow. He wrote *Istoriia Kievskoi Akademii* (A History of the Kiev Academy, 1843). Bulgakov's 13-volume *Istoriia russkoi Tserkvi* (History of the Russian Church, 1857–83) contains much material on the history of the Ukrainian church.

Bulgaria. A predominantly Slavic country in southeastern Europe occupying the eastern portion of the Balkan peninsula. Settled originally by the Thracians, Bulgaria was conquered by Rome in the 1st century AD and by Byzantium in the 4th century. A Bulgarian state existed from the 7th to the 14th century; in the 11th and 12th century it was a Byzantine vassal state. Under Ottoman rule from the late 14th century, Bulgaria became an independent monarchy in 1879 and a Communist people's

republic in 1946. Its present territory is 111,000 sq km in area. In 1982 Bulgaria had an estimated population of 9,108,000, 87 percent of it Bulgarian, 8.5 percent Turkish, 2.5 percent Macedonian, and 2 percent Gypsy. The country's capital is Sofia.

Political relations between Bulgaria and Ukraine originated in the early period of Kievan Rus'. Conflicts between Bulgaria and Prince Ihor of Kiev arose as early as the 940s. Prince Sviatoslav Ihorevych took part in the wars between Byzantium and Bulgaria. In 968 he captured the town of Preslavets, an important trade center at the mouth of the Danube, but was forced to relinquish it when the Pechenegs attacked Kiev. In 971 Sviatoslav's forces marched through Bulgaria and with Bulgarian support fought the Byzantine emperor John Tzimisces. A Bulgarian monk and scribe, Gregory, was adviser to Princess Olha. One of the wives of Prince Volodymyr the Great, the mother of Borys and Hlib (Bulgarian names), was Bulgarian. From the end of the 10th century and the adoption of Christianity, cultural relations between Bulgaria and Ukraine were particularly important. Along with the first liturgical books, the Church Slavonic language (the language of the Southern Slavs, including the Bulgarians) was brought to Rus' and became the literary language of old Ukraine. The absorption of a foreign literature by Rus' was strongly encouraged by the close ties between Rus' and the Bulgarian patriarch of Ohrid in the first 50 years after the Christianization of Rus'. Along with translations done in Ukraine, earlier translations done in Bulgaria of liturgical books, sermons, the **Menaion*, **Zlatostrui*, the *Theology* of St John of Damascus, the version of the *Shestodnev* by John, exarch of Bulgaria, the *Chronicle* of John Malalas, the *Chronicle* of Constantine Manasses, **Izbornik* of Sviatoslav of 1073 and 1076 and *On Poetics* by the monk Khrabr spread throughout Ukraine. As well, a few original works by Bulgarian churchmen, such as Bishop Constantine of Preslav's *Uchitel' noeievangelie* (10th century) and some apocrypha of unquestionable Bulgarian origin (they contain traces of Bogomilism, which was widespread in Bulgaria in the 10th and 11th centuries), were known in Ukraine. In addition to translations, scribes (*knyzhnyky*) also came from Bulgaria to Ukraine. Old Ukrainian literature developed under Bulgarian and Byzantine influence and soon began to spread to Bulgaria (eg, the Lives of ss Borys and Hlib and Theodosius of the Caves) and to influence Bulgarian literature. Byzantium's conquest of Bulgaria in 1018 and its subsequent dominance until the end of the 12th century put an end to Bulgarian literary creativity.

During the second Bulgarian kingdom (1187–1396) the Bulgarian rulers appealed to the Rus' princes for help several times. The Bulgarian prince Ivan Asen II lived in exile for 10 years in the Principality of Galicia-Volhynia and with its help recaptured the throne in 1218. I. Rusyn of Ukraine was a Bulgarian military leader and fought against Byzantium. When Kiev was sacked by the Mongols in 1240, Prince Yakiv Sviatoslav found refuge in Bulgaria, where he ruled its northwestern part. The political renaissance of Bulgaria was accompanied by increased literary activity and the growth of Christian mysticism. The main representative of this movement was Patriarch Euthymius of Trnovo (1370s–93). He directly influenced the Kiev metropolitans Cyprian (d 1407) and G. Tsamblak (1415–19), both of whom were Bulgarians. The influence of this Trnovo school is apparent in

the strong ascetic and mystical sentiments, the rhetorical quality, and the ornamental style of the literature of the 14th–15th century.

During the period of Turkish domination Bulgaria found cultural support in Ukraine, especially in connection with the Orthodox renaissance in Ukraine at the end of the 16th century. The publications of the Kievan Cave Monastery press, established in 1615, reached Bulgaria and other Orthodox countries. In 1671 the monastery published for the first time Patriarch Euthymius's *Sluzhba s zhytiem Ivana Rylskogo* (which is about the popular Bulgarian saint and founder of the Rila monastery). In the first half of the 17th century the Zaporozhian Cossacks staged a series of attacks on Varna, Balchik, and other coastal towns of Bulgaria. A Bulgarian archbishop, P. Parchevich, representing Austria, negotiated a military alliance with B. Khmeinytsky against Turkey (1657).

Ukrainian-Bulgarian ties became closer at the end of the 18th and the beginning of the 19th century, particularly because Bulgarian merchants appeared in Odessa. During the 18th–19th century many Bulgarians studied at the Kievan Mohyla Academy. In the first half of the 19th century Odessa became an important center of the Bulgarian cultural movement known as the Bulgarian national renaissance. A Transcarpathian Ukrainian historian and writer, Y. Hutsa-Venelin (1802–39), played an important role in this renaissance. He traveled through Bulgaria, collected a large amount of historical and philological materials, and founded Bulgarian ethnographical studies. In 1829 he published *Drevnie i nyneshnie bolgare* (Ancient and Contemporary Bulgarians) in Moscow. The book had a great impact on Bulgarian national consciousness. In 1845 one of the first books of Bulgarian poetry in the 19th century, N. Gerov's *Stoian i Rada*, was published in Odessa. Bulgarian writers of the 19th century were keenly interested in T. Shevchenko, and many of them were clearly influenced by him, as Bulgarian critics point out. R. Zhinzifov (1839–77) was influenced by Shevchenko, particularly in his *Krvava koshulia* (Blood-stained Shirt, 1876), and from 1863 on published a number of translations of Shevchenko's works. The founder of modern Bulgarian poetry, P. Slaveikov (1827–95), translated Shevchenko and was influenced by him. The most prominent Bulgarian writer, I. Vazov (1850–1921), turned to motifs found in Ukrainian folk poetry and in Shevchenko. The writer and ethnographer L. Karavelov (1835–79) studied Ukrainian folklore and Ukrainian ethnographers and was influenced by H. Kvitka-Osnovianenko, Marko Vovchok, and Shevchenko, whom he also translated (1870–3).

Many Ukrainian volunteers fought for Bulgaria's liberation in the insurrection against Turkey and in the Russo-Turkish war (1877–8), when the idea of liberating the Slavs from Turkish rule was very popular. Later cultural relations between Ukrainians and Bulgarians were particularly influenced by M. *Drahomanov. As a professor at the University of Sofia (1889–95), he made important contributions to the study of Bulgarian folklore. Drahomanov's grandson D. Shishmanov collaborated in 1915 with the Union for the Liberation of Ukraine. The leading Bulgarian historian, M. Drinov (1837–1906), was a professor at the University of Kharkiv and took part in the work of the Kharkiv Historical-Philological Society. In 1890–7 he was its president. Many Bulgarian scholars were full members of the Shevchenko Scientific Society, among them M. Arnaudov, G. Bonchev, A.T. Ishirkov, L. Miletich, S. Petkov, and I. Shishmanov.

In 1918 the Peace Treaty of Brest-Litovsk led to diplomatic relations between Ukraine and Bulgaria. The first Bulgarian envoy in Kiev was I. Shishmanov, a long-time supporter of Ukrainian statehood. The Ukrainian envoy in Sofia was O. Shulhyn and then F. Shulha.

In the 20th century Ukrainian-Bulgarian relations have been restricted for the most part to the cultural sphere. Bulgarian writers have translated Ukrainian literature. I. Belev, Diiamantin, A. Ikhchiev, S. Drinov, S. Chilingirov, and Kh. Tsankov-Derizhan have translated Shevchenko. P. Todorov has translated V. Stefanyk and O. Kobylanska. Kh. Tsankov-Derizhan and others have translated I. Franko and O. Oles. I. Shishmanov, S. Mladenov, S. Chilingirov, M. Arnaudov, S. Stanimirov, N. Balabanov, D. Strashimirov, and others have written on Ukrainian subjects, particularly on Ukrainian literature. The works of Soviet Ukrainian poets and writers such as P. Tychyna, M. Bazhan, Yu. Smolych, A. Malyshko, M. Stelmakh, and O. Korniiichuk have been published in Bulgarian. From 1917 to 1974, 1,105 works of Ukrainian literature were translated into Bulgarian.

After the Second World War and the peace treaty of 10 February 1947 between the Allies, including the Ukrainian SSR and Bulgaria, relations between the two countries became fairly close. In 1958 the Ukrainian Department of the Society for Soviet-Bulgarian Friendship was established. The Bulgarian consulate general was located in Odessa from 1966 to 1971 and since then has been located in Kiev. A Bulgarian consulate has existed in Odessa since 1971. Each country's theater and choir groups tour the other country. The prose works of I. Vazov have been published in Ukrainian, and the poetry of Kh. Botev has been translated by P. Tychyna, who was elected corresponding member of the Bulgarian Academy of Sciences. The poetry of L. Karavelov and L. Stoianov and a collection of selected poems by Bulgarian poets have been translated. From 1894 to 1962, 173 works of Bulgarian literature were published in Ukrainian. However, political interference has considerably impaired Ukrainian-Bulgarian co-operation.

The economic relations between Bulgaria and the Ukrainian SSR are mutually beneficial. Almost 100 percent of Bulgaria's imported coal and cast iron, 40 percent of its coke, 60 percent of its iron ore, and almost 50 percent of its ferrous metals come from Ukraine. Bulgaria accounts for 10 percent of Ukraine's foreign trade. The Ukrainian SSR took part in constructing 100 of the 180 industrial projects built with the aid of the USSR in Bulgaria up to 1970.

In 1920–44 a small number of Ukrainians lived in Bulgaria. Almost all of them were veterans of the Army of the UNR. They lived mainly in Sofia, Plovdiv, Sliven, Vidin, Ruse, Burgas, and Varna. Ukrainian organizations such as the Ukrainian Hromada in Bulgaria and the Ukrainian Alliance in Bulgaria and their branches were active in those years. In 1934 the Union of Ukrainian Organizations in Bulgaria was formed. The most prominent figures in the Ukrainian community were Col Fylypovych and the sculptor M. Parashchuk. In 1920 the Bulgarian-Ukrainian Society was established in Sofia. It was organized and headed by I. Shishmanov and remained active until 1944.

Bulgarians in Ukraine. The borderlands separating the Ukrainians and the Bulgarians in the prehistoric period, the Princely era, and then during the period of Moldavian statehood have not yet been adequately investigated, particularly because segments of the Ukrainian and Bulgarian nations have been Rumanianized, and the territories of both groups have undergone profound changes owing to colonization.

The present Bulgarian communities in southern Ukraine were established by people fleeing religious, national, and social oppression south of the Danube by the Ottoman Turks. Bulgarian migrations were connected with the Russo-Turkish wars, in which the Bulgarians helped the Russian army, and with Russia's desire to settle the southern steppes of *New Russia as quickly as possible. The first colonies appeared in Ukraine in the second half of the 18th century. In 1752 the Russian government recognized the Bulgarian settlements in Novomyrhorod and Vilshanka on the Syniukha River (on the territories of the Serbian Hussar Regiment). In 1764-9, in response to an appeal by the Russian government encouraging foreigners to settle in Russia, a small group of Bulgarians settled near Kiev on lands of the Kievan Brotherhood monastery, and other groups settled in the Chernihiv region. In 1769-91 there was an increasingly large influx of Bulgarians into Bessarabia (Izmail, Kiliia, Bendery, Akkerman, Reni, Chisinău). Russian landowners brought in Bulgarians to cultivate their steppe estates. In 1790 a sizable Bulgarian contingent joined the Boh Cossack Host (abolished in 1817), and its members were later settled in Kherson gubernia near Bobrynets and Voznesenske.

After the Treaty of Iași (1791) some of the Bessarabian Bulgarians moved to Tyraspil, Nyzhni Dubosari, Hryhoriopil, and Odessa. The period of most vigorous colonization was 1801-12, when the Russian government took a particular interest in the fate of the Balkan nations. Bulgarian refugees in this period settled south of Odessa, near Mykolaiv, and near Teodosiia in the Crimea. Others settled in southern Bessarabia and came under the protectorate of the Moldavian hospodars. The total number of Bulgarian settlers was about 24,000 in 1819. The Bulgarians' desire to organize a separate Bulgarian Cossack host in southern Bessarabia was left unrealized

by the Russian authorities. The last mass migration of Bulgarians into southern Ukraine occurred in 1830-4. By the mid-19th century there were 92 Bulgarian settlements in Ukraine, with a total population of 75,000 in 1844 (constituting 3.3 percent of the population of Bessarabia, Kherson, and Tavriia gubernias).

When, according to the Paris Peace Treaty of 1856, almost half of the territory of Bessarabia, which was settled by Bulgarians, was ceded to Moldavia, the Russian government resettled about 30,000 Bulgarians in 1861-2 along the Azov sea coast in the Berdianske and Melitopil regions. These settlers were joined by Bulgarians from beyond the Danube. Part of the Bulgarian population of the Melitopil region moved to the Kuban and Transcaucasia in the 1860s. The Russian government gave the Bulgarians various concessions and aid, and they proved to be good farmers, gardeners, and vintagers.

According to the 1897 census, there were 63,000 Bulgarians in the territories constituting the Ukrainian SSR in 1938. According to the 1926 census, there were 92,000, and 111,000 in all of the USSR. Ninety-six percent lived in the countryside. Most of them (50,000) were concentrated in the Melitopil region, where in the 1920s there were two Bulgarian national raions - Kolarov and Tsaredariv. The main center was the village of Preslav, where a Bulgarian teachers' seminary had been in operation since 1875. Smaller Bulgarian concentrations were found in southwestern Ukraine: in the okruhas of Odessa (19,000) and Pervomaiske (7,000), in the Crimea (11,000), and in the Kuban (1,000). The Bulgarians lived in more or less compact colonies: 76 percent lived in 40 exclusively or almost exclusively Bulgarian rural soviets. In the 1920s the language of instruction in elementary schools was Bulgarian. According to the 1927 census, 72.5 percent of Bulgarian children in Ukraine studied at Bulgarian seven-year schools, and 12.4 percent studied in Bulgarian and in another language. The Ukrainian branch of the Tsentridat publishing house published textbooks and popular literature in Bulgarian. An official newspaper, *S'vetsko selo*, was published in Bulgarian. After 1933 the nationality policy changed, and the Bulgarian raions and schools were abolished.

There is a large Bulgarian colony centered in *Bolhrad in southern Bessarabia, on the border dividing the Ukrainian and Rumanian (Moldavian) ethnic territories. According to the 1897 census, 102,000 Bulgarians lived there; according to the 1941 census, there were 179,000; and in 1970 there were an estimated 200,000. This area now belongs to Odessa oblast, except for the northern part, which belongs to the Moldavian SSR.

The number of Bulgarians in the Ukrainian SSR according to the 1959 and 1970 censuses is shown in the table below.

	1959	1970
Total	219,000 (0.5)	234,000 (0.5)
Urban	58,000 (0.1)	77,000 (0.3)
Rural	161,000 (0.7)	157,000 (0.7)

The Bulgarian population continues to be predominantly rural. In 1970, 67 percent of Bulgarians lived in the countryside (73 percent in 1959 and 94 percent in 1928). In 1979, 66 percent of the Bulgarians in the USSR and 3 percent of the Bulgarians in the world lived in Ukraine.

Twenty-two percent of the Bulgarians in the USSR live in the Moldavian SSR.

Today most of the Bulgarians in the Ukrainian SSR live in Odessa oblast. In 1979, 170,000 or 71.4 percent of the Bulgarians lived there, constituting 6.7 percent of the oblast's population. Thirty-seven thousand Bulgarians lived in Zaporizhia oblast, 6,000 in Mykolaiv oblast, and 25,100 in all the other oblasts.

Of the 238,217 Bulgarians in the Ukrainian SSR in 1980, only 162,693 (68.3 percent) indicated Bulgarian as their mother tongue, 67,980 (28.5 percent) indicated Russian, and only 6,787 (2.9 percent) indicated Ukrainian. Fifty-nine percent indicated that Russian was their second language, while only 7.3 percent indicated the same for Ukrainian. The Russification of Bulgarians is being hastened by the lack of Bulgarian schools, publications, cultural-educational institutions, and so on.

Bulhak, Yosafat Ihnatiĭ [Bulhak, Josafat Ihnatiĭ], b 10 April 1758, d 23 February 1838 in St Petersburg. Uniate bishop of Pynske (1790–5), removed from this office by Catherine II. In 1798 he became bishop of Berestia (Brest) and in 1817 metropolitan of the Uniate church in Russia (without the title 'of Kiev'); the Vatican confirmed this appointment in 1818 by making him 'apostolic delegate.' Bulhak was the last Catholic metropolitan of Kiev before the abolition of the Church Union of Berestia in 1839 in all territories of the Russian Empire except the Kholm region and Podlachia.

Bulich, Sergei [Bulič, Sergej], b 27 August 1859 in Kazan, Russia, d 1921 in Petrograd. Russian linguist. In *Ocherk istorii iazykoznaniiia v Rossii* (An Outline of the History of Linguistics in Russia, 1, 1904) he presented a wealth of materials from the history of linguistics in Russia and Ukraine up to 1825.

Bunchukovyi tovarysh. See Fellow of the standard.

Bunchuzhnyi. See General standard bearer.

Bund (Yiddish for 'union' or 'league'). Jewish social democratic party, the full name of which was the General Jewish Workers' Union in Lithuania, Poland, and Russia. Founded in Vilnius in 1897, it adopted a revolutionary Marxist program and represented Jewish workers and

leftist intellectuals in the Russian Pale of Settlement, which included Ukraine. The Bund's representatives were present at the founding congress of the *Russian Social Democratic Workers' party (RSDRP) in Minsk in 1898, and the Bund became an autonomous member of the RSDRP. V. Lenin opposed the 'separatist' and 'nationalist' tendencies of the Bund. Consequently the Bund left the RSDRP in 1903; it returned in 1906 and aligned itself with the Mensheviks.

The Bund defended the principles of federalism and cultural-national autonomy in the Russian Empire. In 1912 it was expelled together with the Mensheviks from the RSDRP by the Bolsheviks. After the Russian Revolution the Bund co-operated with the Russian Provisional Government, the Mensheviks, and the Socialist Revolutionaries. In Ukraine there were Bund representatives in the UNR governments of the Central Rada and the Directory. Yet, the Bund, which had 15,000 members in Ukraine at the time, did not support an independent Ukraine, and its representative, M. Rafes, voted against the Fourth *Universal of the UNR. By 1919 the majority of the Bund's members had gone over to the side of 'Soviet power.' The Bund continued to function despite internal splits until 1921, when it was forced to dissolve. Its members then either joined the Bolshevik party or emigrated abroad. The Bund was active in interwar Poland, including Galicia.

Nikolai Bunge

Bunge, Nikolai, b 23 January 1823 in Kiev, d 15 June 1895 in Tsarskoe Selo, Russia. Economist, financier, Russian political figure, full member of the St Petersburg Academy of Sciences from 1890. Bunge was a noble of German descent and a Protestant. He graduated from Kiev University and in 1850 began teaching there. In 1852 he held the chair of economics and statistics; he served several times as rector of the university during the period 1859–80. In 1881–6 he was the minister of finance in the tsarist government and in 1887–95 the chairman of the Committee of Ministers. Bunge founded a school of classical liberalism at Kiev University: he advocated free trade and free workers' associations, capitalism, and the industrialization of Ukraine and criticized the Russian government for expanding monopolies in Ukraine. With M. Yasnopolsky he founded the Kiev historical school of

economics. Bunge's main works were *Teoriia kredita* (The Theory of Credit, 1852), *Kurs statistiki* (Statistics Course, 1855), *Osnovaniia politicheskoi ekonomii* (The Foundations of Political Economy, 1870), *Ocherki politiko-ekonomicheskoi literatury* (Outlines of Politico-Economic Literature, 1895), *Esquisses de littérature politico-économique*, 1898), and a work on the iron-ore industry in the Kiev school district (1855).

Buniak [Bunjak]. Cuman khan who led attacks on Ukraine in 1096 (on Kiev), 1097, 1105, and 1107. In the last campaign Buniak's forces were routed by retinues of the Rus' princes near Lubni.

Buniak, Porfyr [Bunjak], 1888–1941. Printer, member of the Central Committee of the Ukrainian Social Democratic party (USDP), organizer of the trade-union movement in Galicia, co-editor of *Dobra novyna*, *Vpered*, *S'vit* (1925–9), and *Profesiini visti*. In the USDP he supported the position of independence from the Polish Socialist party and, later, from the Communist Party of Western Ukraine during the crisis in the party in 1924. He died in Soviet exile.

Buniakovsky, Viktor [Bunjakovs'kyj], b 16 December 1804 in Bar, Podilia, d 12 December 1889 in St Petersburg. Noted Ukrainian mathematician. After completing his studies in Paris in 1826, Buniakovsky taught in various institutions of higher learning in St Petersburg. In 1830 he was elected to the St Petersburg Academy of Sciences and from 1864 to 1889 was its vice-president. Buniakovsky wrote over 100 scientific works, some of them in French. His works deal with mathematical analysis, numbers theory, geometry, and the theory of probability and its application in demography, statistics, and inequality theory. His principal books are *Osnovaniia matematicheskoi teorii veroiatnosti* (Foundations of the Mathematical Theory of Probability, 1846), *O veroiatnoi chislitel'nosti kontingentov russkoi armii 1883–85 gg.* (On the Probable Size of the Contingents of the Russian Army in 1883–5, 1885), *Sur quelques inégalités concernant les intégrales ordinaires et les intégrales aux différences finies* (1859), and *Recherches sur quelques fonctions numériques* (1861). Buniakovsky invented the planimeter, the pantograph, and a device for adding squares.

Burachek, Mykola [Buraček], b 16 March 1871 in Letychiv, Podilia, d 12 August 1942 in Kharkiv. Impressionist painter and pedagogue. Burachek studied in Kiev and graduated from the Cracow Academy of Fine Arts in 1910 (class of J. Stanisławski). His first exhibit was held in 1907. In 1910–12 he worked in the studio of H. Matisse in Paris. In 1917–22 he served as professor at the Ukrainian State Academy of Arts in Kiev and then at the Kiev Art Institute and the Lysenko School of Music and Drama in Kiev. From 1925 to 1934 he was rector of the Kharkiv Art Institute and then returned to the Kiev Art Institute. Burachek also designed stage sets: in 1934 for the plays *Marusia Churai* by I. Mykytenko and *Dai sertsiu voliu ...* (Set Your Heart Free ...) by M. Kropyvnytsky, which were staged in Kharkiv theaters, and in 1937 for plays staged in Donetsk theaters. A master landscape painter, he rendered the Ukrainian landscape in a colorful, impressionist style in such works as *Morning on the Dnieper* (1934), *Apple Trees in Bloom* (1936), and *The Broad Dnieper Roars and Moans* (1941). Burachek wrote the books

Viktor Buniakovsky

Mykola Burachek, portrait by Zhevago, 1939

Moie zhyttia (My Life, 1937) and *Velykyi narodnyi khudozhnyk* (A Great National Artist, 1939, a monograph on T. Shevchenko), and numerous articles about O. Murashko, S. Vasylyvsky, M. Zhuk, M. Samokysha, and other artists. A book on Burachek by Yu. Diuzhenko was published in Kiev in 1967.

Burachynska, Lidiia [Buračyns'ka, Lidija], b 28 December 1902 in Hryniava, Stanyslaviv county, Galicia. Journalist, ethnographer, activist in the Ukrainian women's movement. Burachynska studied economics in Prague and edited the magazine *Nova khata* in Lviv from 1930 to 1939. During the Second World War she worked with the Ukrainian Central Committee in Cracow. She

Lidiia Burachynska

emigrated to Austria and moved to the United States in 1949, where she edited the magazine *Nashe zhyttia* from 1951 to 1972. Burachynska served as president of the Ukrainian National Women's League of America (1968–71) and as vice-president (1972–7) and president of the World Federation of Ukrainian Women's Organizations (1977–82). She is co-founder of the Ukrainian Museum in New York. Her articles and studies on ethnography have appeared in journals, as well as in the collection *Bukovyna – ii mynule i suchasne* (Bukovyna, Its Past and Present, 1956).

Burchynsky, Heorhii [Burčyns'kyj, Heorhij], b 2 May 1908 in Kiev. Therapist-clinician, graduate of the Kiev Medical Institute (1931), military doctor, and since 1954

chairman of the therapy department of the Kiev Medical Institute. He has written works on pulmonology, ulcers, cardiology, and other areas of internal medicine. He developed a theory of the neurotropic origin of ulcers and curative methods.

Burdenko, Nikolai, b 3 June 1876 in Kamenka, Penza gubernia, Russia, d 11 November 1946 in Moscow. Eminent surgeon of Ukrainian descent, one of the founders of neurosurgery. In 1912 Burdenko became a professor at Tartu University and in 1924 at Moscow University. In 1934 he organized and then directed the Central Neurosurgical Institute, and he was the first president of the USSR Academy of Medical Sciences (1944–6). He produced studies on military field surgery, surgical treatment of brain tumors, and damage of the nervous system.

Kost Burevii

Burevii, Kost [Burevij, Kost'] (pseud of Kost Sokolsky), b 2 June 1888 in the village of Velikaia Mezhenka in Voronezh gubernia, d 15 December 1934 in Kiev. Political activist, publicist, writer, and critic. Burevii became involved in revolutionary activity early in his life and was, for the most part, self-educated. From 1903 to 1922 he was active in the Russian Socialist Revolutionary party, becoming a member of its central committee in December 1917. Prior to 1917 Burevii had been arrested many times and exiled several times. In 1923 he became active in the Ukrainian national rebirth and was one of the organizers in Moscow, where he lived, of a Ukrainian club, a society of friends of Ukrainian theater, and the Ukrainian publishing enterprise *Selo i Misto*. In 1926 he wrote as a contribution to the literary discussion then occurring in Ukraine the brochure *Evropa chy Rosiia?* (Europe or Russia?). In 1929 he moved to Kharkiv, where he was active in literary and community life.

Burevii began his career as a publicist in Russian, with works such as *Kolchakovshchina* (1919) and *Raspad* (The Collapse, 1923). In Ukrainian he wrote the novel *Khamy* (The Boors), excerpts of which were published in the journal *Chervonyi shliakh* in 1925. His Ukrainian poetic parodies of 'proletarian' literature, the panfuturism of M. Semenko, and the constructivism of V. Polishchuk in *Nova heneratsiia* (1927–8) and the poem 'Zozendropiia' in *Avanhard* (1929), which were all published under the pseudonym Edvard Strikha, were some of the finer examples of the parodic poetry of the time. Burevii also contributed to the journals *Literaturnyi iarmarok*, providing editorial comment in the form of Aesopian fables (*intermedii*), and *Prolitfront*. He wrote the plays *Oportuniia* (1930) and *Chotyry chemberleny* (Four Chamberlains,

1931), which were staged by the Berezil theater, and the historical drama *Pavlo Polubotok* (published abroad posthumously in 1955). Among Burevii's works on literature and art are *Try poemy* (Three Poems, 1931) on the poetry of P. Tychyna, M. Semenko, and V. Polishchuk, and *Amvrosii Buchma* (1933). Official criticism of Burevii began in 1929, and in 1934 repressions were such that he was forced to flee to Moscow. In early December 1934 Burevii was one of 28 leading Ukrainian cultural figures arrested and executed by firing squad in Kiev.

I. Koshelivets

Burevisnyk (Shearwater). A student sports association in the USSR and the Ukrainian SSR, founded in 1957. In 1936–57 a sports association of trade unions and government institutions bore the same name. In 1978 Burevisnyk had over 386,000 members in Ukraine, who trained in 49 different kinds of sports. Its members have won Olympic and world championships in gymnastics (L. Latynina, B. Shakhlin, and Yu. Tytov), track and field (V. Borzov, V. Brumel), and various games.

Burghardt, Oswald. See Klen, Yuri.

Burghers. In the broad sense of the term, burghers were city and town dwellers employed in various skilled trades, industries, and commerce, as well as town and suburban residents employed in farming, gardening, fruit growing, etc. In the narrow sense, which is particularly applicable to Ukraine, burghers were a social stratum that used to be self-governing and then became an estate – the 'poll-tax-paying estate' (*podatnoe sosloviie*) of the Russian Empire in the 19th–20th century. In Kievan Rus' the burghers (known as *liudy hradskii* [townspeople] or *hrazhdany* [citizens]) were not legally defined, even though they constituted a socially and economically distinct stratum. The leaders were prominent men (*narochyiti muzhi*), city elders (*startsi hradskii*), and aliens (*hosti*); in the middle were the merchants; beneath them were the common burghers or simple folk (*prostaia chad, liude*). At the bottom were dependents of various kinds – servants, slaves, exiles, etc (*khology, izhoi*). The burghers were engaged in up to 60 different professions in this period.

The burghers (*mistychi* or *mishchany*) became a separate stratum in the Principality of Galicia-Volhynia at the end of the 13th century, and particularly under Polish-Lithuanian rule, when *Magdeburg law was granted to many cities and towns throughout Ukraine. During this period a distinct hierarchy, consisting of patricians, middle burghers, and plebeians, emerged among the burghers. In Western Ukraine this division was complicated by national-religious differences. As a result, different groups of burghers had different rights; for example, non-Catholic burghers (Orthodox Ukrainians, Armenians, Jews) lost the right to elect their own representatives to the city council and to certain guilds. In general, the residents of small towns, particularly towns owned by nobles, enjoyed significantly fewer rights than the residents of large towns that had full self-government. The burghers of larger towns or cities (eg, Kiev) came under various jurisdictions – the city council, the state *voivode

or *starosta, the church (monastery, metropolitan, or bishop) – and their legal-social position was not uniform. In spite of social and national-religious discrimination by the Polish authorities and the economic competition of the nobility and the foreigners, the Ukrainian burghers formed the leading stratum in the towns of the 16th–17th century. They sought allies in the struggle for their rights and interests; they attracted some noblemen and gentry of the 'Ruthenian faith' to their brotherhoods and in time won the significant support of the Ukrainian Cossacks, who came to a large extent from the towns of the Dnieper region.

By the end of the 16th century, the population of Galicia was about 100,000, of which 38 percent were burghers. Ten percent of the population was employed in commerce, and 28 percent, in the skilled trades. At the time there were about 100 trades and more than 33 guilds in Lviv, while Kiev had only 10 guilds, Kamianets-Podilskiy had 18, Cracow had 44, and Vienna had 77.

The following were the most influential burgher families of the 'Ruthenian faith' in Western Ukraine: the Babych, Berynda, Dubovych, Zyzanii, Krasovsky, Nalyvaiko, Smotrytsky, Striletsky, Tuchapsky, and Shakhovych families, and some immigrant families that joined the 'Ruthenian faith' (the Albiz, Korniaht, Lianhysh, Mazapet, and Mazarakii families). Well known in Kiev in the 15th–16th century were the Kobzyevych, Koshkoldovych, Krykunovych, Krynytsky, Meleshkovych, Mytkovych, Cherevchii, and Shavula families. In the 16th–17th century the leading families in Kiev were the Balyka, Bykovsky, Bulych, Voynych, Kotovych, Lobachevych, Machokha, Mefedovych, Samuilovych, Sobol, Somkovych, Sushchyn, Khmil, Khodyka, and Khursovych families. Some of them (eg, Khodyka) were elevated to the nobility because of their wealth and pro-Polish attitude.

The burghers played an important role in the Hetman state. They participated in large numbers in the Cossack wars of the 16th–17th century, particularly in Khmelnytsky's Cossack-Polish War. With their help the Cossack-Hetman government organized the economy and finances of the state and used their commercial connections with foreign lands to establish diplomatic relations. The burghers played a particularly important role in restoring the economy in Ukraine under the hetmans I. Samoilovych, I. Mazepa, and D. Apostol. The patricians participated actively in foreign trade and tax farming under the hetmans. Besides the patricians, the middle burghers took an interest in agriculture, particularly in various farm and forest industries, and acquired landed estates worked by the common people. In spite of strong competition from the Cossack officers and the monasteries, the burghers were an important factor in the economic development of the Hetman state, and this strengthened their influence in the sociopolitical and cultural life of the country. In 1666, 60–65 percent of the population of Left-Bank Ukraine lived in cities and towns. One-third to two-fifths of this population were burghers.

Many of the more influential burgher families joined the Cossack officer class in the 17th–18th century, including the Bezborodko, Vasylykivsky-Maksymovych, Kozelsky, Korniiievych-Ohranovych, Kuliabka, Lobysevych, Moliavko, Polubotok, Skorupa, Tomylovsky, and Shyrai families. But the patricians remained part of the burgher estate and retained all their public influence under the hetmans, as is especially noticeable in Kiev, where the

following burgher families were prominent in the 17th–18th century: the Aleksandrovych, Balabukha, Barsky, Kyselivsky, Nechai, Polotsky, Rybalsky, and Tadrnya families. The burghers of Kiev produced such outstanding cultural figures as T. Prokopovych, the brothers V. and I. Hryhorovych-Barsky, and A. Vedel.

As before, the burghers, particularly in large cities, constituted three basic groups: the rich (*mozhni*) or patricians, the middle stratum (*seredni*) or merchants, and the poor (*mizerni*) or plebeians. According to data from 1723, in Kiev and Starodub the first two groups comprised almost one-third, and the last group two-thirds, of the burghers.

In 1743 the legal code of the Hetman state recognized the burghers as a separate estate. According to the code, a burgher was a resident of a town and an accepted member of the community whose name was entered in the town register and who was occupied in commerce, the skilled trades, or in some other work related to town life. The burghers had the right to elect, and to be elected to, all offices of the municipal government, court, and administration, the exclusive right to commerce and industry in the town and its lands, and the right to be free of tolls. The burghers fulfilled their military service at home by maintaining law and order in their towns. They were obliged to defend their towns or to go to war only on rare occasions of national emergency. In some large cities such as Kiev the burghers maintained their own troops, which bore various types of arms.
