In the second half of the 17th and at the beginning of the 18th century the burghers declined rapidly on Ukrainian territories under the Polish Commonwealth because of the hostile policies of the nobility and the gentry. To monopolize the profits from commerce, the nobility prohibited burghers from engaging in foreign trade and lowered prices on the burghers' wares while raising the prices on its own goods. It did so through the Sejm, which it controlled. For these reasons the burghers became impoverished. Many skilled tradesmen left the towns and took up employment on the estates of nobles or the latifundia of magnates. As a result, the cultural importance of the Ukrainian burghers declined as well.

With the abolition of the Hetman state and the unification of the majority of Ukrainian territories under the Russian Empire, the position of burghers in Ukraine changed. Catherine II's charter (1785) and subsequent acts of the Russian government divided town residents, excluding nobles, 'honorary citizens,' clergy, and urban peasants, into three estate-corporative groups: merchants, guild tradesmen, and burghers. Thus, the burghers in the 19th–20th century formed a separate estate, membership in which was hereditary. Before the emancipation in 1861, serfs could not become burghers, and state serfs could become burghers only by permission of the senate. The burgher estate had its own self-government, whose role gradually decreased, particularly after the reform of municipal self-government in 1870. These changes led to the socioeconomic, legal, and cultural decline of Ukrainian burghers. Although in the 19th century the majority of burghers were Ukrainian, there were many Russians, some Jews (in Right-Bank Ukraine), Greeks, Armenians, and other non-Ukrainians (in the south) among the merchants. According to 1832 data, of 1,000 merchants who owned factories in Ukraine 526 were Russian, 222 Ukrainian, 209 Jewish, and 43 other. Of

1,000 burghers who owned industrial firms the respective figures were 355, 314, 124, and 207. In general the burghers constituted 5 percent of the population of Ukraine at the beginning of the 19th century and almost 8 percent by mid-century.

Old Ukrainian burgher families that went over to the merchant estate retained their socioeconomic status during the 19th and the beginning of the 20th century, particularly in Kiev and the Left Bank (notably the Balabukh, Barsky, Dykovsky, Dronyk, Dubynsky, Kyselevsky, Kobets, Kulzhenko, Kunderevych, Matiienko, Mytiuk, Sokolovsky, Strilbytsky, and Sukhota families). Only a few Ukrainian families of burgher or peasant-burgher lineage managed to penetrate the top echelon of wealth and economic power: the Yakhnenko and Symyrenko families of the Kiev region, the Tereshchenko family of the Chernihiv region, and the Kharytonenko and Alchevsky families of the Kharkiv region.

The majority of Ukrainian merchants remained, up to recent times, petty merchants and tradesmen. Many burghers, particularly in small towns and suburbs, were farmers. Most of the Ukrainian burghers preserved the Ukrainian language, customs, and traditions. Enjoying greater rights than the peasants, they had better access to schools. This advantage eventually produced many cultural and political leaders. The Ukrainian burgher intelligentsia took part in the hromadas of the 1860s and 1870s. S. Petliura was descended from Poltava burghers. Many Ukrainian burghers, however, became Russified or Polonized under the influence of the city environment, education, or career interests.

In Western Ukraine under Austrian rule, attempts were made in the 1870s to revive the Ukrainian burgher class and strengthen its economic position, despite Polish opposition. Brotherhoods and banks were organized by Ukrainian burghers to protect small producers against usury. This was the purpose of the Burgher Brotherhood in Lviv, founded by M. Zhelekhivsky and M. Dymet in 1872, and of other brotherhoods in various towns of Galicia and Bukovyna, particularly in Ternopil and Peremyshl. In 1884 the trades association Zoria was organized in Lviv through the efforts of V. Nahirny, and it continued the work of the former brotherhoods.

Among the prominent organizers of Ukrainian burghers in Western Ukraine before the First World War, the following deserve to be mentioned: R. Zalozetsky-Sas (founder of a Ukrainian business school in Lviv in 1911), I. Levynsky (founder of a craft-industrial building complex in Lviv), M. Halibei, M. Stefanivsky, Yu. Sydorak, A. Andreichyn, I. Yarema, Karpiak, Ferentsevych and Chornii. Among women pioneers of small-scale industries were K. Avdykovich, O. Levyska, O. Hirniak (all of Lviv), and many organizers in the provinces.

Between the two wars the *Union of Ukrainian Merchants and Entrepreneurs, headed by Ya. Skopliak and then Ye. Dumyn, was active in Western Ukraine. Young people with higher education who set up small business and industrial firms or worked in co-operatives continued the traditions of the burghers.

The legal and economic status of Ukrainian burghers within the Russian Empire remained almost unchanged until the revolution in 1917, although their numbers increased to 13 percent of the population. The revolution abolished the estate system. The Soviet victory in Ukraine destroyed the economic base of the burghers in central

and eastern Ukraine in the 1920s and in Western Ukraine after 1939. (See also *Magdeburg law and *Cities and towns.)

Ivan Buriachok

Buriachok, Ivan [Burjačok], b 6 October 1877 in the village of Lozuvata, near Vinnytsia, d 24 October 1936 in Kiev. Stage designer and graphic artist. Buriachok graduated from the Kiev Drawing School and the Cracow Academy of Fine Arts (in 1907). From 1908 to 1918, while working with the Sadovsky Theater in Kiev, he designed the sets for M. Lysenko's operas *Utoplennia* (The Drowned One, 1913) and *Rizdviana nich* (Christmas Night, 1915) and for stagings of plays by I. Karpenko-Karyi (*Sava Chalyi*, 1913), Lesia Ukrainka (*Kaminnyi hospodar* [The Stone Host, 1914]), S. Cherkasenko (*Pro shcho tyrsa shelestila* [What the Grass Whispered], *Kazka staroho mlyna* [Tale of the Old Mill], *Zemlia* [Earth]), and others. Buriachok also worked as a caricaturist (under the pseudonym P. Burula) and as a book and newspaper illustrator.

Buriak, Borys [Burjak], b 6 August 1913 in Rubizhne, Kharkiv gubernia. Literary and film critic and writer. Buriak has worked as the chief editor of Vilna Ukraina publishers and of the Kiev Artistic Film Studio, and as head of the Department of Film Studies of the Institute of Fine Arts, Folklore, and Ethnography of the Ukrainian Academy of Sciences. Today he heads the academy's Chair of Film Studies of the Institute of Theater Arts. His books are chiefly collections of literary essays: *U sim'i shchaslyvii* (In a Happy Family, 1949), *Sluzhinnia narodovi* (Service to

the People, 1954), *Obraz nashoho suchasnyka* (The Image of Our Contemporary, 1960), *Za zakonamy krasny* (According to the Laws of Beauty, 1963), *Khudozhnii ideal i kharakter* (The Artistic Ideal and Character, 1967), *Nauka. Literatura. Heroi* (Science. Literature. The Hero, 1969), *Khudozhnyk i zhyttia* (The Artist and Life, 1973), and *Prohres i sviit prekrasnoho* (Progress and the World of the Beautiful, 1974). He also wrote a study of Ya. Kachura. Although adhering to official literary policy, Buriak has attempted to go beyond the framework of socialist realism.

Burial mound. See Kurhan.

Burial rites. The ancient burial rites of the Ukrainian people were based on various customs and beliefs. The body of the deceased was washed, dressed, and placed on a bench under a window, with the head towards icons and the feet towards the door. As long as the deceased remained in the house, all work ceased, except that required for the funeral. The house was not swept during the funeral proceedings. The body was carried to the grave feet first, and the mourners followed, to prevent the deceased from 'seeing' them. The coffin was knocked against the threshold three times so that the deceased might bid farewell to his or her home and not return. In ancient times the coffin was lined with down, hence the proverbs *Khai yomu zemlia perom* (May the earth be like feathers for him) and *Pukhom tobi zemlia* (May the earth be like down for you). *Kolyvo* – cooked wheat or barley covered with honey – was carried in front of the coffin in the funeral procession and was always the first course of the funeral meal. The ritual was accompanied by wailing and lamentation. Following the requiem, the 'final embrace,' a formal leave-taking of the deceased, took place, after which the coffin was lowered into the grave, in a position so that the deceased faced the sunrise. Those people who were directly involved in the burial purified themselves by washing their hands and touching the stove before sitting down to dinner. The fear of the dead and the desire to protect themselves from the return of the deceased to this world characterized the burial rites of the Ukrainian people. In order to discourage the return of the deceased, attempts were made to placate him or her with an elaborate funeral and by giving generous alms to the elderly and preparing a good commemorative meal.

P. Odarchenko

Burkser, Yevhen, b 4 August 1887 in Odessa, d 25 June 1965 in Kiev. Geochemist, one of the founders of geochemistry, corresponding member of the Academy of Sciences of the Ukrainian SSR. He graduated from Odessa University and in 1910 became director of the radiology laboratory in Odessa. In 1926 he was appointed director of the Chemical-Radiology Institute in Odessa and in 1938 head of a department of the Institute of Geological Sciences of the Academy of Sciences of the Ukrainian SSR. Burkser studied the radioactivity of natural objects; the geochemistry and hydrochemistry of mineral waters, salt

waters, and curative muds, geological dating; meteorites; and other topics.

Burkut. A mineral spring in a hamlet near Zhabie (now Verkhovyna) on the Chorny Cheremosh River in the Hutsul Beskyd. A resort built in the 18th century was destroyed in the First World War and was not restored. The name is also used locally for other mineral springs in the Carpathian Mountains, for example, Burkut-Svaliava.

Burlesque (from the Italian *burlesco*, 'joke'). Genre of comic poetry, prose, or drama whose artistic effect is achieved by the mixing of elevated and 'low' jocular elements. Works in which serious themes were treated in humorous, vulgar language were very common in Ukrainian literature of the late 18th and early 19th century. I. Kotliarevsky's *Eneida* (Aeneid) and the works of many of his epigones were written in this style.

Burliai, Kindrat [Burljaj], 17th century; dates unknown. First colonel of the Hadiache Regiment (1648–9), a close associate of B. Khmelnytsky, and a leading Cossack diplomat. As Khmelnytsky's emissary at the beginning of 1648, he led negotiations with Khan Islam Girei III concerning an alliance against Poland. In 1653 he headed the Cossack legation to Moscow to prepare for the Treaty of Pereiaslav. In 1655 he again traveled to Moscow, in an unsuccessful mission to obtain the tsar's approval of an alliance between Khmelnytsky and Sweden against Poland. Burliai's further activities are unknown.

Burmister (from German *Bürgermeister*). Chairman of a city or town council, assistant to the **viit* (mayor) in cities with self-governing charters based on *Magdeburg law. First introduced to Ukraine in the 14th century, the term was used for various municipal officers until the 19th century. In accordance with Magdeburg law the general assembly of townsmen usually elected two *burmistry* to the **magistrat* (municipal administration). They alternated in performing their functions, which included presiding over the council and taking care of certain administrative and financial matters. Cities without full self-government usually had one *burmister*. By the 19th century on Ukrainian territories in Austria-Hungary the *burmister* or *burgomister* was the equivalent of mayor. In Ukraine under Russia the term was used for municipal officers who managed the city administration and collected state taxes; occasionally, for managers of estates; and, after 1861, for elected officers of the rural district (*volost*) administration.

Bursas and student residences. The first student residences in Ukraine were known as bursas (sg, bursa) and were established by religious brotherhoods at *brotherhood schools in the late 16th century; they usually housed students from poorer families and orphans. The best-known bursas were at the Lviv Brotherhood School and the *Kievan Mohyla Academy; they were also found at Jesuit schools (in Zamostia and elsewhere). In the early 18th century bursas were set up at *colleges in Chernihiv, Pereiaslav, and Kharkiv and remained when the collegiums became seminaries. The residences were supported by donations (which were forbidden in eastern Ukraine after 1786) and by special foundations. They had their own organization and customs. Two prefects and several assistants and secretaries were elected annually in

each bursa. Residents with full or partial board staged Christmas and Easter plays; poor students earned their keep by singing. In the 18th century there was a school and residence at the Church of the Holy Protectress at the Zaporozhian Sich.

In Ukraine under Russian rule at the end of the 18th century *boarding schools (*pansiony*) for children of the gentry, particularly the poorer gentry, began to appear. The name 'bursa' was retained for all student residences within the system of religious educational institutions; sometimes the term denoted the institutions themselves. By the turn of the 20th century such residences could be found at *theological seminaries that had been former collegiums or had recently been founded in provincial capitals; at schools for children of the clergy (*dukhovni uchylshcha*, popularly known as bursas); and at *eparchial schools for women. Other institutions with student residences were the finishing schools for daughters of the gentry and nobility (*instytuty blahorodnykh divyts*), military schools, certain *gymnasiums, especially private gymnasiums for women, and schools that were part of the system of secondary pedagogical education (teachers' seminaries, religious teachers' schools, etc). However, the majority of students in secondary and higher schools in the 19th century lived in private lodgings as opposed to student residences. Despite the prevailing Russification in the educational system, some residences, especially at seminaries, housed active Ukrainian student circles, out of which emerged many prominent civic leaders. The best known were *Galagan College and the *Kiev Theological Academy, which boarded about 200 students annually. A. Svydnytsky based his novel *Liuborats'ki* (1861–2) on his own experiences at the residence of the Kamianets-Podilskyi Theological Seminary in 1851–6.

In Galicia, under Austrian rule, the Institute of the Basilian Sisters in Yavoriv was established in 1848. In time many residences were established by various associations and religious corporations, among them the Ruthenian Bursa (later known as the Ukrainian Bursa) in Ternopil (1873) and Stryi (1876), the Institute of the Basilian Sisters in Lviv (1880), the Trade and Industrial Bursa in Lviv (1890), the Institute for Girls in Peremyshl (1895), and the residences of the Ruthenian Pedagogical Society and Prosvita (beginning of the 20th century). In 1914 there were 68 Ukrainian residences in 37 towns; 54 were for boys, and 14 for girls. They housed about 3,500 students, or close to 3 percent of the student population in Galicia. More than 30 residences owned their buildings. The Academic Home in Lviv (1909) for students at institutions of higher learning, which was funded by Ye. Chykalenko and V. Symyrenko, held a special place among residences. It played an important role in raising the level of national consciousness among Ukrainian students. There were also 30 Russophile residences. After the First World War the number of residences in Galicia, now under Polish rule, declined almost every year. In 1942–4 the number increased, mainly owing to the efforts of the Ukrainian Central Committee in the German Generalgouvernement. In 1943 there were 102 residences, housing over 6,000 students.

In Transcarpathia the first residences were established in Uzhhorod: in 1826 a boys' residence, which operated until 1946, and in 1840 a girls' residence; both were for orphans of the Greek Catholic clergy. Eparchial residences were established in other towns and accepted

students without regard to origin. In the interwar period the residences were supported by the Czechoslovakian government. There were 14 residences (one of them for Czech children), housing 700–1,000 secondary school students. Although Russophile influence dominated, some of these residences, for example, the Basilian residence in Uzhorod and others in Khust, Berehove and Mukachiv were able to maintain a Ukrainian character. The Shkolnaia Pomoshch Society was one of the private Russophile institutions that operated residences.

In Bukovyna the oldest Ukrainian bursa – the Fedkovych Bursa – was established for gymnasium students in Chernivtsi in 1896 and functioned until 1940. Four other residences, which were opened in the early 1900s, declined under Rumanian rule.

After the First World War the most important residence outside Ukraine belonged to the Ukrainian Gymnasium in Řevnice, and later Modřany, Czechoslovakia. In Canada today there are five Ukrainian student residences: at the Mohyla Institute in Saskatoon, St John's Institute in Edmonton, the St Vladimir Institute in Toronto, St Andrew's College in Winnipeg (all four are Orthodox), and the Catholic Sheptytsky Institute in Saskatoon. In Brazil there is one student residence, at Mohyla College in Prudentópolis.

In the Ukrainian SSR, instead of 'bursa,' the term *hurtozhytok* is used for residence. The Marxist view of the school system as an instrument of class power led to the rapid establishment of preparatory 'workers' faculties for students of desirable 'proletarian' backgrounds and forced the government to set up student dormitories in the early 1920s. Later, residences for secondary-school students were built. According to official statistics, 41.5 percent of students lived in residences in the 1926–7 school year. In the following years this percentage increased with the general rise in student enrollment but dropped after the Second World War. By 1968–9 only 21.8 percent of students lived in residences. Since the 1930s and especially after the Second World War, the residence system has expanded to the *tekhnikums*, the 'labor reserve schools,' and the military schools. Living conditions and food are modest in the residences; they are better in certain industrial institutes and *tekhnikums* that are supported by the ministries of various industries. By controlling access to the residences and regulating the size of scholarships the state can control student activities. In 1956 several privileged secondary *boarding schools were established, primarily for children of the Soviet elite. In 1960 exclusive 'semiboarding' secondary schools ('schools with a prolonged day') with a simpler program were created.

P. Polishchuk

Burshtyn [Burštyn]. iv-5. Town smt (1977 pop 13,000) in Halych raion, Ivano-Frankivske oblast, situated in the Opilia Upland on the Hnyla Lypa River. It has a prefabricated-building panels plant, a regional power plant, and energetics *tekhnikum*. Burshtyn is first mentioned in

historical documents of 1554 because of its fortress, which was built in the 16th century.

Burtniak, Peter [Burtnjak, Petro], b 26 March 1925 in Fork River, Manitoba. Politician. Burtniak was elected to the Manitoba legislature in 1969, representing the Dauphin constituency for the New Democratic party until 1977. He held the portfolios of tourism and recreation, culture, and highways, and was minister responsible for the Manitoba Public Insurance Corporation. He has been a member of the board of Canada's National Ukrainian Festival in Dauphin, Manitoba.

Burulcha River [Burul'ča]. Small river in the Crimea, a right-bank tributary of the Salhyr River. The Burulcha is 76 km long, and its basin covers 244 sq km. It rises in the Crimean Mountains. In years of drought the river runs dry in the summer.

Burundai [Burundaj], 13th century; dates unknown. Mongol-Tatar military leader who took part in the attacks on Kievan Rus' led by Batu Khan in the late 1230s and early 1240s. Burundai forced the Volhynian prince Vasylo Romanovych to join the Tatar campaigns against Lithuania (1258) and Poland (1259). On Burundai's orders all fortifications in Volhynia and Galicia (except for Kholm) were destroyed.

Buryn [Buryń']. II-14. City (1970 pop 10,300), a raion center in Sumy oblast, and a food-industry center.

Busha [Buša]. v-9. Village (1972 pop 1,300) in Yampil raion, Vinnytsia oblast, situated on the Murafa River in eastern Podilia. In the mid-17th century it was a fortress of the Bratslav Regiment. (The remains of the fortress have been preserved.) In February and March 1654 Polish forces attacked Busha, and finally a 60,000-strong army captured it in November. Captains Hrechka and Zavysny commanded the defense of several thousand Cossacks. After their deaths Zavysny's spouse, Maria, set fire to the magazine, perishing together with many of the attackers. The Poles slew almost all the inhabitants. These events were popularized in Ukrainian literature by M. Starytsky in the play *Oborona Bushi* (The Defense of Busha) and the short novel *Obloha Bushi* (The Siege of Busha).

Bushytyna [Buštyna]. v-4. Town smt (1977 pop 7,100) in Tiachiv raion, Transcarpathia oblast, located at the junction of the Tereblia and the Tysa rivers in the Maramures Basin. It has a timber-processing complex.

Bustard, Great (*Otis tarda*; Ukrainian: *drokhva*). The largest game and land bird in Ukraine and Europe. Its length is over 1 m, and its weight is 10–21 kg. It is found in the steppe and the forest-steppe belts, the Crimea, and northern Caucasia. In the past bustards were far more numerous and widespread; in 1910 they could still be found in western Podilia.

Butakov, Aleksei, b 19 February 1816 in Kronshtadt, Russia, d 10 July 1869 in Schwalbach, Germany. Russian geographer, explorer, and sailor. In 1848–9 he led an expedition to the Aral Sea, in which T. Shevchenko took part as the landscape artist. Butakov treated the exiled Shevchenko well and allowed him, in spite of the tsar's

prohibition, to paint a large number of landscapes and genre paintings.

Butenko, Hryhorii, b 12 February 1904 in the village of Diachkivtsi, Kharkiv gubernia, d 9 January 1977. Communist official. From 1938 to 1940 Butenko was head of the executive committee of Kharkiv oblast. From 1940 to 1949 he was minister of agriculture of the Ukrainian SSR, later becoming minister of meat and milk production. From 1956 to 1968 he was deputy chairman of the Council of Ministers of the Ukrainian SSR.

Butkovsky, Ivan [Butkovs'kyj] (pseud: Hutsul), b 2 May 1910, d 5 July 1967 in Munich. Lieutenant colonel in the Ukrainian Insurgent Army (UPA), commander of its fourth military district in 1944, and chief of the UPA's mission abroad.

Butkovsky, Petro [Butkovs'kyj], b 1801, d 1844. Psychiatrist, surgeon, and therapist. He was born in Ukraine and graduated from the Kharkiv Theological Collegium and the St Petersburg Medical Surgical Academy in 1825. He served as an army doctor in 1825–32. In 1834 he was appointed professor at Kharkiv University. He wrote a number of works and textbooks in psychiatry, surgery, pathology, and therapy.

Butnyk-Siversky, Borys [Butnyk-Sivers'kyj], b 16 March 1901 in Chernihiv. Art historian. Butnyk-Siversky has specialized in the history of decorative folk art, poster art, and the art of T. Shevchenko. His major works are *Riepin i Ukraïna* (Repin and Ukraine, 1962), *Ukraïns'keadians'ke narodne mystetstvo, 1917–1941* (Soviet Ukrainian Folk Art, 1917–1941, 1966), *Ukraïns'keadians'ke narodne mystetstvo, 1941–1967* (Soviet Ukrainian Folk Art, 1941–1967, 1970), *Narodnye ukrainskie risunki* (Ukrainian Folk Drawings, 1971), and *Ukraïns'kyiadians'kyi suvenir* (The Soviet Ukrainian Souvenir, 1972).

Butovych. Surname of several Ukrainian families of different lineage known since the 17th century. Stepan Butovych of the Chernihiv Regiment was general aide-de-camp of the Hetman state in 1709–17. Demian and Stepan Butovych were fellows of the standard and participants in the Hylian and Sulak campaigns in 1725–7. Oleksa Butovych was governor of Chernihiv gubernia in 1813–18. Hryhorii Butovych (from a different line) was archpriest of Pereiaslav and Hadiache in 1654–75 and a supporter of Hetman I. Briukhovetsky, with whom he traveled to Moscow. The family controlled the captaincy of the Zinkiv company of the Hadiache Regiment in the last half of the 18th century.

Butovych, Mykola [Butovyč], b 1 December 1895 in the village of Petrivka, Poltava gubernia, d 21 December 1961 in Hackensack, New Jersey. Modernist painter and graphic artist. Butovych studied in Prague, Berlin, and Leipzig (at the Academy of Graphic Art, 1922–6). He worked in Lviv, Western Europe, and, from 1947, in the United States. He had individual exhibits in Berlin and New York and took part in group shows in Lviv (numerous exhibits of the Association of Independent Ukrainian Artists), Paris (the Salon d'Automne), Los Angeles (exhibiting bookplates in 1933), Rome (graphics in 1938), Brussels (1946), and, from 1952, the United States (exhibits of

Mykola Butovych

the Ukrainian Artists' Association). Butovych's work is based on themes from Ukrainian folkways, mythology, and folklore, which are often treated in a humorous or grotesque way. His works include illustrations to books by N. Gogol, V. Stefanyk, and I. Kotliarevsky; numerous book-cover designs, bookplates, and company emblems; series of woodcuts on Ukrainian mythology and demonology and of Greek gods dressed in Ukrainian costumes; and graphic and oil compositions, such as *Aeneas, Dido and Music* (1942), *Zeus Resting* (1955), *On Lysa Mountain* (1955), and the series *The Witch*. Many of his works have expressionist or constructivist elements.

S. Hordynsky

Butsmaniuk, Yuliiian [Bucmanjuk, Julijan], b 3 July 1885 in Smorzliv, Brody county, Galicia, d 30 December 1967 in Edmonton, Alberta. Painter. Butsmaniuk studied art in Lviv and Cracow before the First World War and painted churches in Galicia as an assistant to M. Sosenko. Following studies in Prague, he returned to Lviv in 1927 and taught art in Ridna Shkola society schools and painted the Basilian church in Zhovkva. In 1950 he emigrated to Canada and settled in Edmonton, where he did portraits and painted the interior of St Josaphat's Ukrainian Catholic Cathedral. Butsmaniuk's religious art is traditional in form but has elements of new styles, particularly of the Viennese Secession. A book about him was published in Edmonton in 1979.

Buturlin, Vasilii, ? – 1656. Russian boyar. In January 1654 he headed the Muscovite delegation that negotiated the Treaty of Pereiaslav with Hetman B. Khmelnytsky and the Cossack *starshyna*. In 1655 he commanded the Russian forces that helped the Ukrainian army expel Polish troops from most of Ukraine.

Buturlynivka (Russian: Buturlinovka). III-21. City (1968 pop 23,000) on the Osered River, a raion center in Voronezh oblast, Russian SFSR. In 1926 it had a population of 28,000, of which 85 percent was Ukrainian. It lies in the northeasternmost part of Ukrainian ethnic territory. Buturlynivka arose in about 1740 and was inhabited mostly by Ukrainian settlers from the Left Bank. In 1766 the settlers rebelled when Count Buturlin turned them into serfs. Under the Russian Empire Buturlynivka was the largest village with a cottage industry in Voronezh gubernia.

Buzanov, Ivan, b 12 May 1903 in Nova Praha, Kherson gubernia. Plant physiologist, full member of the All-

Union Academy of the Agricultural Sciences. He graduated from the Odessa Agricultural Institute and in 1930 joined the All-Union Scientific-Research Institute of Sugar Beets in Kiev. From 1941 to 1970 he served as its director. He has published works on the physiology and agrotechnology of sugar beets.

Buzeskul, Vladyslav, b 8 March 1858 in the village of Popivka, Kharkiv gubernia, d 1 June 1931 in Kharkiv. Historian. Buzeskul graduated from Kharkiv University in 1880 and in 1890 became a professor there. He became a member of the Academy of Sciences of the USSR in 1922 and of the All-Ukrainian Academy of Sciences in 1925. He published works on the history of ancient Greece, including *Vvedenie v istoriiu Gretsii* (Introduction to the History of Greece, 1915), *Istoriia afinskoï demokratii* (History of Athenian Democracy, 1909), and studies on Pericles, Aristotle, and the antiquities of the northern Black Sea coast; he also wrote *Vseobshchaia istoriia i ee predstaviteli v Rossii v XIX i nachale XX veka* (World History and Its Representatives in Russia in the 19th and Early 20th Century, 1929–31).

Buzhanians (Buzhany). An East Slavic tribe or alliance of tribes that, according to the Primary Chronicle, inhabited the Buh River Basin. An anonymous 10th-century Bavarian writer noted that the Buzhanians had 230 strongholds. According to some scholars, the Buzhanians, like the Volhynians, were earlier known as the Dulibians. In the 9th–10th century the Buzhanians came under the rule of Kievan Rus' and were no longer mentioned in chronicles.

Buzhynsky, Havryil [Bužyns'kyj, Havryjil], b 1680s in Ukraine, d 1731 in Moscow. Prefect of the Moscow Academy (1717–18), bishop of Riazan, collaborator in Peter I's reforms. Buzhynsky studied at the Kievan Mohyla Academy and belonged to a group of Ukrainians who chose to serve Peter I. Buzhynsky praised Peter's reforms in his sermons (publ 1898). He translated works of such thinkers as S. Pufendorf and Erasmus.

Buzke [Buz'ke] (official Soviet name: Busk). IV-5. City (1970 pop 6,000) at the junction of the Poltva and Buh rivers, a raion center in Lviv oblast. First mentioned in the chronicles of 1097 as a stronghold, in the 12th century it was a Volhynian border town and an appanage capital for some years. Remnants of two forts and many graves have been preserved. Today Buzke has a brewery, two brick plants, and a food industry.

Buzko, Dmytro [Buz'ko], b 1891 in Kherson. Writer and political figure. Buzko studied at the University of Copenhagen. Until 1917 he was a member of the Ukrainian Party of Socialist Revolutionaries. Later he was secretary of the UNR mission in Copenhagen. He was published from 1920 as a futurist and belonged to the writers' group Nova Heneratsiia. Buzko is the author of the story collections *Lisovyi zvir* (Forest Animal, 1924) and *Na svitanku* (At Dawn, 1930) and the novels *Chaika* (The Seagull, 1929), *Pro shcho rozpovidala rotatsiika* (What the Press Operator Told, 1929), *Za gratamy* (Behind Bars, 1930), *Domny* (Blast Furnaces, 1932), *Nashchadky khorobrykh* (Descendants of the Brave, 1933), *Kryshtalevyi kraj* (The Crystal Country, 1935), and *ladviha i Malka* –

polis'ki partyzany (Yadviha and Malka, Polisian Partisans, 1936). He was arrested in 1937 during the Yezhov terror and was probably later shot. Various Soviet sources state he died in 1938 or 1943.

Petro Buzuk

Luka Bych

Buzuk, Petro, b 14 July 1891 in the village of Ternivka near Tyraspil, Bessarabia, d 7 October 1943. A prominent Ukrainian linguist, professor at the universities of Odessa and Minsk (from 1925), and director of the Institute of Linguistics of the Belorussian Academy of Sciences from 1931. Buzuk's first works on general linguistics were compilations and psycholinguistic in character (eg, *Ocherki po psikhologii iazyka* [Essays on the Psychology of Language, 1918]). Later he turned to researching Church Slavonic and comparative Slavic grammar. He studied Old-Ukrainian records such as the Lutske Gospel, the Arkhangelsk Gospel, and H. Skovoroda's works. He published several series of etymological studies. He wrote the comprehensive *Narys istorii ukrains'koi movy* (Outline of the History of the Ukrainian Language, 2nd edn, 1927) and was the first to attempt to apply the principles of linguistic geography to Ukraine and Belorussia in his 'Diialektolohichnyi narys Poltavshchyny' (A Dialectological Study of the Poltava Region, *Ukrains'kyi diialektolohichnyi zbirnyk*, 2, 1929) and *Sproba linhvistychnae heohrafii Belarusi* (An Attempt at a Linguistic Geography of Belorussia, 1928). He investigated Ukrainian and Belorussian dialects and described Ukrainian-Belorussian and Ukrainian-Moldavian linguistic relations. In his 'Sproba historyi dahistorychnai epokh slavianskai fanetyki' (An Attempt at the History of Slavic Phonetics in the Pre-historic Period, *Zapiski Addzelu humanitarnykh nauk*, 2, Minsk, 1928) Buzuk pioneered the historical-chronological approach to the Common Slavic language. Under the pseudonym of Rosich he published literary and critical works in Belorussian and popularized Ukrainian literature in Belorussia. After his arrest in 1933, he lived (according to Soviet sources) in Vologda and taught at the local pedagogical institute.

Buzuluk. See Bazavluk.

Byblo Apostol. A 36-folio fragment of the *apostol* (acts and epistles of Christ's apostles) found in the village of Byblo near Peremyshl and, most probably, transcribed there in the late 13th–early 14th century from the Church Slavonic text. It contains many peculiarities of the southwestern Ukrainian dialects at that time. The *apostol* was

researched and published by P. Kopko in *Denkschriften der Wiener Akademie, Phil.-hist. Klasse*, 55 (Vienna 1912).

Bych, Luka [Byč], b 1875 in Stanytsia Pavlovska in the Kuban, d 1944. Jurist and economist, Kuban political leader. Bych was a member of the Black Sea Committee of the Revolutionary Ukrainian party in Katerynoslav, leading member of the Kuban councils, first Kuban prime minister (1917–8), president of the Kuban Legislative Council, and chairman of the Kuban delegation to the Paris peace conference in 1918–20. After emigrating, he was a docent and then professor of economics at the Ukrainian Husbandry Academy, later the Ukrainian Technical and Husbandry Institute, in Poděbrady. In 1937–9 he was director of the institute. Bych is the author of many articles, particularly on banking, local self-government, and economics, several textbooks of the academy and the institute in Poděbrady, and the political work *Kuban' u kryvomu dzerkali* (The Kuban in a Distorted Mirror, Prague 1927).

Bychko, Valentyn [Byčko], b 17 June 1912 in Kharkiv. Writer, teacher, and journalist. For many years Bychko was editor of the children's paper *Zirka* and the periodical *Pioneriia*. He wrote over 30 collections of poetry, stories, and plays for children, articles, songs, and two opera librettos. In 1969 he published the autobiographical novel *Blahoslovialosia na svit* (Dawn Was Breaking). Among his collections of poetry for adults are *Sontse zustrichaiu* (I Greet the Sun, 1951), *Bilia sertsia blyz'ko* (Close to the Heart, 1955), *Siisia, rodysia, zerno* (Scatter and Grow, Grain, 1959), *Bilia vechirn'oho vohniu* (By the Evening Fire, 1966), *Sribnolittia* (The Silver Years, 1973), and *Kolir chasu* (The Color of Time, 1974). He also wrote a literary-critical study, *N.L. Zabala* (1963).

Bykhovets Chronicle. One of the most complete Ruthenian-Lithuanian chronicles of the late 16th century. In 1840 the chronicle was in the possession of O. Bykhovets from Volkovysk, Belorussia. The chronicle describes events in the history of the Grand Duchy of Lithuania from the 13th to the early 16th century. It deals with the wars between Lithuania and Poland, the struggle against the Tatars and the Teutonic Knights, and Ukrainian resistance to Lithuanian and Polish domination. The chronicle was published in *Polnoe sobranie russkikh letopisei* (The Complete Collection of Russian Chronicles, vol 17, 1907).

Bykhovsky, Hryhorii [Byxovs'kyj, Hryhorij], 1861–1936. Surgeon and oncologist. Bykhovsky graduated from Kiev University in 1899 and practiced surgery at the university clinic and hospitals in Kiev. He founded and directed the Kiev Institute for the Upgrading of Physicians in 1922. He also headed a network of oncological institutions in Kiev and throughout Ukraine. He wrote many scientific works, including several monographs.

Bykovsky, Lev [Bykovs'kyj], b 10 April 1895 in the village of Vilkhivets, Kiev gubernia. Bibliologist and bibliographer, full member of the Ukrainian Academy of Arts and Sciences in the United States. Bykovsky has worked in libraries in Kiev, Kamianets-Podilskyi, Warsaw, and Denver, Colorado. Since 1954 he has served as co-organizer and secretary of various research institutes,

including the Black Sea Institute, which was established in West Germany and transferred to the United States in 1950. Bykovsky has written bibliographic studies, including *Natsional'na Biblioteka Ukraïns'koi Derzhavy* (The National Library of the Ukrainian State, 1922) and *Knyzhna sprava v Chekhoslovachchyni* (Book Matters in Czechoslovakia, 1926). He has compiled numerous bibliographies of the writings of scholars and statesmen, as well as his own biography and bibliography, *U sluzhbakh Ukraïns'kii knyzhtsi* (In the Service of the Ukrainian Book, 1972).

Bylbasivka. v-18; DB II-3. Town smt (1976 pop 8,800) in Slovianske raion, Donetsk oblast, founded in 1670. Fish and poultry are bred there.

Bylyna (Russian: *bylina*). Name of epic songs of the Kievan Rus' era that have not survived in Ukraine but are still sung in northern Russia, where they are called *stariny*. The Ukrainian origins of the *bylyny* and their enduring presence on Ukrainian territories can be seen from the clear traces they have left in other forms of Ukrainian folk literature – in legends, carols, wedding songs, etc – as well as from references to certain *bylyny* heroes in old Rus' chronicles and literary works of the 16th–17th century. The *bylyny* are divided into several cycles. The pre-Christian cycle, which is richest in mythological themes, consists of *bylyny* about the heroes Mykula Selianynovych, Sviatohor, and Volha Vseslavych; the songs about Volha Vseslavych are reflected in tales about Prince Oleh the Seer and Princess Olha found in the chronicles. The Kiev *bylyny* cycle presents Prince Volodymyr as the central figure, combining in him the characteristics of Prince Volodymyr the Great and Volodymyr Monomakh. Other heroes of this cycle include Illia Muromets (Murovets in the older sources) from Chernihiv, whose grave at the Kievan Cave Monastery was still visited in the 17th century; Dobrynia; and Alosha (Oleksander) Popovych. The main themes of the Kiev cycle concern the demise of *bylyny* heroes and depict the struggle with 'the faithless power,' the nomadic hordes. Another series of *bylyny* are connected with the Volhynian and Halych principalities. They deal with Prince Roman Mstyslavych, Diuk (Duka) Stepanovych, Churylo Plenkovych, Mykhailo Kozaryn, and others. According to Ukrainian scholars, the *bylyny* ceased to be sung by the Ukrainian people in the 17th century, when turbulent events gave rise to a new epic song form – the Cossack *duma.

Byrchak, Volodymyr. See Birchak, Volodymyr.

Byriuchy Island [Byrjučyj]. An island in the northwestern part of the Sea of Azov. Together with the Fedotova Spit the island separates the Utliuk Liman from

the sea. Its maximum length is 24 km; width, 5 km. The island is part of the *Azov-Syvash Game Preserve.

Bystrytsia Nadvirnianska River [Bystrycja Nadvirnjans'ka]. A tributary of the *Bystrytsia River. Its length is 94 km; its basin area, 1,580 sq m. In its upper and middle course, in the Gorgany Mountains, it is a typical mountain river; in its lower course (in Subcarpathia) it is a river of the plains.

Bystrytsia River [Bystrycja], also called the Bystrytsia Tysmenska River. A right-bank tributary in Lviv oblast of the upper Dniester River. It is 72 km long and has a basin area of 1,160 sq km. The river flows through the High Beskyd mountains.

Bystrytsia River [Bystrycja]. A small right-bank tributary of the Dniester River in Ivano-Frankivske oblast. It is formed from the confluence of the *Bystrytsia Nadvirnianska and the *Bystrytsia Solotvynska rivers. The river is 17 km long; its basin covers an area of 2,520 sq km.

Bystrytsia Solotvynska River [Bystrycja Solotvyns'ka]. A tributary of the *Bystrytsia River. It is 82 km long and has a basin area of 795 sq km. The river flows through the Gorgany Mountains and Subcarpathia.

Bytkiv

Bytkiv. v-5. Town smt (1969 pop 4,700) in Nadvirna raion, Ivano-Frankivske oblast, in the northeastern part of the Gorgany Mountains. The town has oil and gas wells. Oil has been produced in Bytkiv since the end of the 19th century; the peak year was 1925. In the 1920s and 1930s Bytkiv was the largest producer of oil in Galicia after Boryslav.

Byzantine art. Visual art produced in the *Byzantine Empire and in countries under its political control or cultural influence, among them Ukraine. The spread of Byzantine art was the result, in large measure, of its style, which had all the traits of universalism to which other cultures could easily adapt. This style began to develop in the 6th century AD during the first Golden Age under the reign of Emperor Justinian. It was based on Greco-Roman art and the art of the East – Syria, Asia Minor, Persia, and Egypt. In architecture, churches with stone cupolas symbolizing the cosmos appeared, replacing the longitudinal basilicas with flat wooden ceilings. The Hagia Sophia Cathedral in Constantinople (dedicated in 537),

BYZANTINE ART I: mosaics and frescos in the St Sophia Cathedral in Kiev, 11th century: 1) archangel from the cupola; 2) central part of the Eucharist; 3) Mother of God, from the sanctuary arch; 4) daughters of Yaroslav the Wise; 5) unknown saint. II: mosaics from the church of St Michael's Golden-Domed Monastery in Kiev (1108): 6) Christ with a chalice; 7) St Demetrius; 8) angel from the Eucharist. (After the demolition of the church by the Soviets in 1935–6, the mosaics that survived were transferred to the St Sophia Museum with the exception of no. 7, which was taken to the Tretyakov Gallery in Moscow.)

This page intentionally left blank

with its huge cupola resting on four piers by means of pendentives, became the accepted standard for church architecture. In the 7th–9th century the cruciform church plan was developed. In this plan the main dome was surrounded by smaller domes, creating a large interior space without the use of buttresses to support the walls. Byzantine painting departed from Greco-Roman ideals, which prescribed three-dimensional illusionism in the reproduction of nature. Under the influence of Eastern art, it turned to a two-dimensional, flat representation. Some historians of the 19th century interpreted this as the barbarization of painting, with the return to Hellenic ideals only during the Renaissance. Yet, the replacement of realistic illusionism by symbolism under the influence of Christian ideas proved to be profoundly creative in that it rejected secondary detail and perspective and concentrated on the plastic depiction of an idea in its most immediate form. The content became more important than the form, and the background lost its perspective and became predominantly golden, emphasizing the play of lines and colored planes of strong tones and contrasts of light. All these features are elements of an essentially plastic nature, equally significant in all ages. Hence, Byzantine art developed creatively without losing its stylistic features when it was transferred to other lands, even after the decline of Byzantium as a cultural center.

In the 8th–9th century, after the defeat of the iconoclasts, the second Golden Age of Byzantine art began. It lasted through the reign of the Macedonian and Comnenian dynasties (869–1204). During this period Kievan Rus' actively entered the orbit of Byzantine culture and in 988 adopted Christianity through Byzantium. However, Byzantine influence on Ukrainian territory began much earlier and was concentrated on the northern shores of the Black Sea. In the 6th century Byzantine influence spread to Taurida, where the city of Kerch in the Crimea was restored. At this time basilican and cruciform churches similar to those in Ravenna were built in Chersonese. After the hiatus caused by the Khazar invasion in the 7th century Chersonese resumed its development and maintained close relations with Kiev. Prince Volodymyr the Great of Kiev was baptized here in 988. There were up to 30 churches and chapels in old Chersonese, of which only the foundations remain today. Having annexed the Crimea in 1783, the Russian government, under the pretext of urban development, demolished the partially preserved early Christian buildings of Chersonese. The oldest known church there dated back to the 5th century and displayed the influence of Syrian architecture. The largest church was the so-called Uvarov Basilica (named after the discoverer, A. Uvarov), whose three naves were similar to those in Ravenna and Balkan churches. Similar churches were discovered also in Kerch. The Church of St John the Baptist, built in Kerch in the 10th century, with a column dated 767 and Byzantine capitals from the 6th century, is the only fully preserved church of the first millennium in the Crimea.

Despite the destruction caused by the continual invasions of nomadic hordes, examples of art and architecture from the Princely era, particularly stone structures, have survived. Many icons and other artwork perished in fires, however. There were churches in Kiev, such as St Elijah's Church, even before Christianity was officially adopted by Ukraine. However, these early temples were built of wood and were also destroyed by fire. Stone and brick

architecture appeared in Ukraine under Byzantine influence, which brought to Kiev such traditional techniques of Roman architecture as *opus mixtum* (alternating layers of brick and stone in the construction of walls). Kievan architecture became the model for buildings in other cities of Kievan Rus'. Although the Church of the *Tithe from the end of the 10th century has not survived, the *St Sophia Cathedral, begun in 1037, has been preserved in relatively good condition. The cathedral has a cruciform plan, with 5 naves and, originally, 13 domes. Apart from the general features of the Byzantine style, St Sophia of Kiev does not resemble the Hagia Sophia of Constantinople, but rather bears a certain resemblance to the churches in Georgia.

The interiors of the early Kievan churches are connected directly with the art of Chersonese. According to the Rus' chronicles, Prince Volodymyr imported the first architects and artists from Chersonese, and these together with the artists of Constantinople were the first creators of mosaics and frescos. In style and chronology the mosaics of St Sophia Cathedral occupy a position between the mosaic complex of the monastery church of Hosios Lukas in Phocis, Greece (1020s) and the mosaics in the monastery church at Daphni near Athens (end of the 11th century). The style of the Kievan mosaics is more archaic and closer to the mosaics of Hosios Lukas, while the mosaics of St Michael's Golden-Domed Cathedral in Kiev (beginning of the 12th century) have already shed the archaic severity and are more lifelike. The interior of St Sophia basically adheres to the hierarchical ordering of paintings that was established in Byzantine art: Christ the Pantocrator was depicted on the dome ceiling; beneath him, four archangels; below them, the prophets and apostles; and at the bottom, the bishops or fathers of the Church. On the wall behind the altar the Mother of God (Orante) is depicted between the heavenly and the earthly Church, as if unifying the two. The arch of the sanctuary is framed with medallions portraying the martyrs. While the mosaics of St Sophia conform to all the traditions of Byzantium, the frescos contain numerous innovations and departures from the Byzantine models, in depicting, for example, the Last Supper, the transformation of water into wine at the wedding in Cana. Apocryphal themes are reflected in the cycle of paintings devoted to the life of the Virgin Mary. Even in this early period Kiev had its local iconographers who diverged in some ways from the mainstream of Byzantine art and followed their own inspiration in painting.

The Kievan state maintained close relations with the Western countries. Hence, a certain exchange and intermingling of styles was inevitable. Halych and Chernihiv buildings, for example, possess elements of *Romanesque architecture. The Western style is reflected also in some miniatures. Later, in the 15th–16th century, Galician iconography creatively absorbed certain features of the Gothic style, a rare occurrence in the history of Byzantine art.

At the turn of the 19th century some scholars, such as the Russian Byzantologist N. *Kondakov, held that the Kievan art of the Princely era was only a provincial imitation of the art of Constantinople. Since then much has been discovered and clarified. In 1957 A.M. Amman showed that the art of Kiev was of a metropolitan type, while the art of the northern territories of Rus', which arose under Kiev's influence, had a peripheral style. He

notes that the fresco complexes that have been preserved in Kiev had no parallels at the time in Constantinople and that the Kievan mosaics preserved the oldest normative type of the Pantocrator and the Eucharist in Byzantine art. Because of constant invasions few icons of the Princely era (10th–14th century) have survived in Ukraine, but some excellent examples of Kievan icons have been preserved in Russia; for example, the Mother of God from Vyshhorod (known as Vladimirskaia), St Demetrius, and the Mother of God with ss Anthony and Theodosius from the Monastery of the Caves, are now in the Tretiakov Gallery in Moscow.

After the fall of Byzantium in 1457 Byzantine iconography continued to flourish. This can be seen in Galicia, where from the 14th to the end of the 16th century high-quality Ukrainian examples of icons in the Byzantine style were painted. Over the centuries this style was transformed and became organically Ukrainian. In the 17th and 18th century some of the finest examples of architecture in Ukraine appeared. They were a synthesis of Ukrainian folk architecture with the Byzantine and the *baroque styles. Ukrainian wooden churches of that time are unparalleled masterpieces of world renown.

The Byzantine style was revived in Ukrainian art at the beginning of the 20th century. M. *Boichuk combined Byzantine traditions with modern tendencies such as cubism and constructivism, producing one of the most important movements in East European art.

Byzantine Catholic World. Official newspaper of the Byzantine Ruthenian Rite Archdiocese of Pittsburgh. It was established in 1956 on the initiative of Bishop N. T. Elko and since that time has appeared as a weekly published by the Byzantine Catholic Press Association in Pittsburgh. The first editors were Rev J. Kallok and Rev T. Dolinay (since 1982 bishop of Van Nuys diocese). English has always been the basic language of publication, although in the initial years there was also a Ruthenian section (printed in the dialect in Latin script) edited by Rev B. Shereghy.

Byzantine Choir. A male choir that sings a cappella, organized in 1951 in Utrecht, Holland by M. *Antonowycz, who is also its conductor. Although the choir members are Dutch, the choir's repertoire includes Ukrainian church music, folk songs, and the works of Ukrainian composers, which are all sung in Ukrainian. The Byzantine Choir has toured Europe, the United States, and Canada with its concerts.

Byzantine Empire. Byzantium was originally a Greek colony, founded ca 660 BC on the European side of the Bosphorus. Because of its strategic location between the Black and Mediterranean seas, the colony controlled the traffic between Asia and Europe. The city was completely razed by the Romans at the end of the 2nd century AD. In 326 Constantinople was built on the site of Byzantium, and in 330 the city became the capital of the Byzantine or Eastern Roman Empire, which endured until 1453 and played an important role in the history of Eastern Europe and the Near East. Preserving the classical heritage and fusing it with the accomplishments of the new Christian learning, the Byzantine Empire cultivated a profound spiritual culture and a highly developed material culture. Its weaving, silk, glass, and jewelry industries were very advanced, and its trade was extensive. For many centuries the empire's wealth attracted non-Christian invaders such as the Huns, Avars, Persians, Pechenegs, Arabs, Slavs, and finally the Turks, who brought about the empire's ultimate collapse.

In the 6th century AD the Byzantines both fought the *Antes and sought their alliance against other tribes. Byzantine chronicles mention Rus' attacks in about 842 and a Rus' seige of Constantinople in 860. At approximately the same time that Rus' and Byzantium began to trade, using the *Varangian routes, Christianity was introduced in Ukraine through the Byzantine colonies on the northern coast of the Black Sea. In the 10th century relations between Rus' and Byzantium intensified: Prince Oleh I marched on Constantinople and signed advantageous trade treaties in 907 and 911 that granted Rus' merchants certain privileges in Byzantium; Prince Ihor led two unsuccessful campaigns against Byzantium in 941 and 944, which resulted in less-favorable trading conditions for Rus'; and Princess Olha visited Constantinople in 957, paving the way for closer ties between the two states and a military alliance in 961. In 968 Prince Sviatoslav Ihorevych concluded a treaty with Byzantium that enabled him to defeat the Bulgarians. The Byzantines realized Sviatoslav's increasing power was a threat to them and turned against him, forcing him, after heavy losses, to accept a peace treaty with Byzantium and to abandon Bulgaria in 971. In return for providing military assistance to Emperor Basil II, Volodymyr the Great was promised

the hand of the emperor's sister in marriage. When the emperor refused to live up to his promise, Volodymyr occupied *Chersonese Taurica and forced him to surrender Princess Anna. Volodymyr's adoption of the Christian faith in 988–9 and further changes in the political situation generally put an end to Rus' campaigns against the Byzantine Empire, although one unsuccessful campaign against Byzantium was led in 1043 by Volodymyr, the son of Yaroslav the Wise. Cultural and commercial ties between Rus' and Byzantium grew stronger. Prince Vsevolod Yaroslavych (1077–93) married a Byzantine princess.

With the adoption of Christianity Ukraine came under Byzantine religious influence. Like other southeastern European nations it inherited from Byzantium not only the Christian faith but also its culture. For almost 700 years (until 1686) the Ukrainian Orthodox church remained under the canonic jurisdiction of the patriarch of Constantinople. For a long time the Kiev metropolitans were Greek, and attempts to install a Ukrainian metropolitan, apart from Ilarion in 1051 and Klym Smoliatych in 1147, were unsuccessful. However, from the outset the bishops in the major Rus' cities were locally appointed, and an indigenous Ukrainian tradition arose in church life. The Ukrainian church had a degree of internal independence from the patriarch. It was also not dependent on the secular authorities, unlike the church in Byzantium or in Muscovy. In the period of religious strife in the 16th–17th century the Orthodox Ukrainians continued to maintain uninterrupted contact with the Greek Orthodox patriarchate, even during the renaissance of the Ukrainian Orthodox church under P. Mohyla. Byzantine liturgical and religious literature as well as church singing based on eight *ēchoi* or modes were imported into Ukraine along with the clergy. Most of the church literature also came from Byzantium, although it was first translated by the southern Slavs. The internal life of the Ukrainian church was governed by the **Nomocanon*, which consisted not only of the regulations accepted by the Byzantine church, but also of the Byzantine state law regarding the church. The monasteries in Ukraine were organized according to Byzantine models: for example, St Theodosius of the Caves introduced the strict Studite rule in the 11th century in the Kievan Cave Monastery. From the Princely era to recent times Ukrainian monks maintained ties with the Greek monastery at Mt *Athos, which had an important influence on monastic life in Ukraine.

The influence of Byzantine culture in Ukraine was not limited to the religious sphere. For centuries Byzantine written works served as literary models for writers of nations that had accepted Christianity from Byzantium. The works of such Byzantine church writers as St Basil the Great, St John Chrysostom, St Gregory the Theologian, and St Gregory of Nyssa; collections of instructive aphorisms; the works of such religious poets as St Andrew of Crete and St John of Damascus; collections of *hagiographies, particularly the *patericons; epics; and a series of apocrypha all left a lasting impact on Old Ukrainian culture. Secular literature was strongly influenced by such Byzantine chroniclers as John Malalas, Georgios Hamartolos, Georgios Synkellos, and Constantine Manasses. The first translated tales or romances, such as **Varlaam i Ioasaf*, **Aleksandriia*, **Povist' o Akiri premudrom* (Tale of Akir the Wise), **Devenievo diianie* (Deeds of Digenis), and **Stefanit i Ikhnilat*, arrived in Ukraine directly

from Byzantium or indirectly via the Southern Slavs. These works were not only favorite reading materials until the middle period of Ukrainian literature but also served as literary models and thus stimulated the growth of an original Ukrainian literature.

At the same time *Byzantine art had a great impact in Ukraine. Greek masters of *fresco painting, *mosaics, *icon painting, *miniature painting, and book design taught these arts to Ukrainians and provided the foundations for original Ukrainian creativity (for example, the St Sophia Cathedral in Kiev). Similarly, Greek master builders constructed the first churches in Ukraine in the 10th–11th century; soon after, however, church construction was adapted to local conditions and assumed a Ukrainian-Byzantine-Romanesque character.

In the legal and social spheres the Byzantine influence in Ukraine was far weaker. Although certain norms of Byzantine law were enforced by the church courts, *Byzantine law did not have a dominant influence on legal relations or societal life in Ukraine. Rus' customary law and later Western influences were not compatible with Byzantine customs, and they did not take root in Ukraine. In general the influence of Byzantium in Ukraine was not as widespread or as profound as it was in the Vladimir-Suzdal principality and later in Muscovy, where Byzantine traditions lay at the foundation of the church and state. This was due to a well-developed Ukrainian indigenous tradition and Ukraine's close contact with the West.

Byzantine law. Positive law in Byzantium in the 6th–15th century AD, founded on Roman law. At times Byzantine law was influenced by the customary law of various peoples who themselves had adopted the Byzantine legal and political systems. Slavic influence on property law is evident, especially in the institution of community control with the allotment of land for individual ownership. As Byzantine law spread, it affected Rus' law as well; certain norms of Byzantine origin, especially those concerning public law, can already be seen in the treaties of the Kievan princes with Byzantium. Byzantine judicial norms were partially reflected in the **Ruskaia Pravda*. However, the influence of Byzantine law was strongest in the

church decrees of Kievan princes. Church legal proceedings in Ukraine were carried out on the basis of the norms of Byzantine law and specifically according to certain Greek legal compendiums: the **Nomocanon the Ecloga*, and the *Procheiron* (see **Canon law*). In addition to the official compendiums of Byzantine law, southern Slavic versions were known as well: **Zakon' sudnyi liudem'* (based on the *Ecloga*), and *Knigy zakonnyia* (The Books of Law). Not only members of the clergy, but also so-called church people, came under the jurisdiction of church courts. A number of the norms of Old Ukrainian customary law were incorporated into the Byzantine compendiums of law in Ukraine, and especially into their Ukrainian counterparts, **Kormchaia kniga* (based on the *Nomocanon*), and *Zakony hradskii* (Laws of the People). Byzantine law had an influence on Ukrainian positive law of that time, enriching it with new concepts and institutions, mainly in civil law (in the areas of inheritance and

testament). In Bessarabia Byzantine law as codified in the medieval *Shestiknizhie Armenopula* (*Hexabiblos Harmenopoulos*) was in force until the 1917 Revolution.

The reception of Byzantine law in Ukraine was only partial, because of the highly developed and deeply rooted norms of Old Ukrainian customary law. The influence of Byzantine public law on institutions in Kievan Ukraine was minimal.

Byzantine studies. See Classical studies.

Bzheska, Valentyna [Bžes'ka], b 5 March 1896 in Bila Tserkva, d 12 January 1977 in Kiev. Actress, wife of A. *Buchma. She worked in the Berezil theater (1925–34), the Kharkiv Ukrainian Drama Theater (1935–8), and the Kiev Ukrainian Drama Theater (1938–59).

C

Cabbage (*Brassica oleracea*; Ukrainian: *kapusta*). Annual or biennial of the Cruciferae family; one of the basic garden plants in Ukraine, taking up some 21 percent of horticultural land. It is grown in all areas of Ukraine, especially in the western forest-steppe zone, in Polisia, and near the larger cities. Of the different varieties, the most common is white head cabbage (*B. oleracea* var *capitata f alba*), which accounts for 90 percent of the cabbage grown in Ukraine. Its yield is 20–40 t per ha. Kale or borecole cabbage varieties (*B. oleracea* var *acephala*) are also cultivated for fodder.

Cabinet of Anthropology and Ethnology (Kabinet antropologii ta etnologii im. F. Vovka). A scientific institution of the All-Ukrainian Academy of Sciences which functioned in 1921–34 under the direction of F. Vovk's former student A. Nosiv. In 1926 the cabinet's department of anthropology was reorganized into a separate Cabinet of Anthropology, which conducted research mostly in Right-Bank Ukraine and the Crimea and analyzed the prehistoric materials that had been collected by Vovk in *Mizyn. The cabinet published *Biuletyn* (1 vol, 1925), four annual collections of *Antropologhiia* (1927–30), and other works. See also *Museum of Anthropology and Ethnology.

Cadet corps. In the Russian Empire an exclusive military educational institution at the secondary school level. The cadet corps prepared the sons mainly of officers and noblemen for military service and for higher military schools. The first cadet corps was opened in 1732. Cadet corps existed until 1918 in 29 cities in Russia. In Ukraine such schools were found in Kiev, Poltava, Kharkiv, and Odessa.

Calendar. A system of measuring time based on the periodicity of certain natural processes. Very little is known about the Ukrainian calendar in prehistoric times, but the popular names of the months indicate that some kind of calendar was used (see *Folk calendar).

Along with Christianity, Kievan Rus' adopted from Byzantium the Byzantine form of the calendar introduced by Julius Caesar in 46 BC (known as the Julian calendar). According to this calendar the average length of the year is 365 days and 6 hours. This exceeds the real solar year by 11 minutes and 14 seconds; hence, over time, the Julian calendar diverges more and more from the solar year (15.45 days by 1980). Pope Gregory XIII reformed the calendar in 1582, and since then the Gregorian calendar has been officially recognized by the Catholic church and Catholic countries. Protestants adopted it in the 18th century.

Poland adopted the Gregorian calendar in 1583, but King Stefan Batory, by the edicts of 1584, 1585, and 1586, permitted the Orthodox church to keep the Julian calen-

dar. Orthodox leaders (H. Smotrytsky, V. Surazky, S. Zyzanii, and others) rejected the new calendar on dogmatic and ritualistic grounds. The Ukrainians who accepted the union with Rome also kept the old calendar, in spite of attempts, mainly in the 17th century, to have them adopt the Gregorian calendar. After the partition of Poland the Russian government reintroduced the Julian calendar in those areas of civil life where the Polish authorities had instituted the Gregorian calendar. Meanwhile, Austria's efforts to introduce the new calendar among the Ukrainians of Galicia in 1773, 1798, and 1812 proved fruitless.

The new calendar was introduced into civil life by the Ukrainian Central Rada on 1 March 1918, while the Julian calendar continues to be used in the church to this day. Attempts to institute the Gregorian calendar in 1917–18 in the Ukrainian Catholic eparchy of Stanyslaviv under Bishop H. Khomyshyn and in the 1930s in the Orthodox church in Poland were strongly opposed by the Ukrainian community and did not succeed. However, the new calendar was adopted by some Ukrainian church communities outside Ukraine, notably by the Ukrainian Catholic church in Argentina, Brazil, and some eparchies in the USA and Canada.

The two calendars differ not only on the fixed feasts, but also on the movable feasts of the Easter cycle. The dates of the latter are calculated according to the paschal period, which is based on the monthly cycle. The Eastern church uses the period introduced by Dionysius Exiguus in 525. This has been modified by the Western church as well.

In Kievan Rus' the years were numbered from the creation of the world; hence, old Ukrainian documents are usually dated in this way. In the 14th century documents began to be dated from the birth of Christ as well, the difference between the two systems of dating being 5,508 years. The calendar year in civil life began on 1 March and in church life on 1 September, as in Byzantium since the time of Justinian. This difference led to confusion in the dating of the various entries in the chronicles. Only by the end of the 15th century was 1 September accepted as the beginning of both the civil and the church year. In 1700 Peter I introduced the Western practice of starting the year with 1 January. In the church, however, the older practice is still observed. At the same time Peter established in Ukraine the numeration of years from Christ's birth.

V. Pavlovsky

Calendar (*kalendar*). Scholarly and literary almanac that has been popular since the 17th century, particularly in Western Ukraine. It developed from a supplement to liturgical books called *misiatseslov* (menology), which, besides a daily calendar, contained various information.

In 1525 F. Skoryna published a well-known calendar

Calendar covers

entitled *Malaia podorozhnaia knizhitsia* (The Little Travel Book) in Vilnius. It contained a psalter, prayer book, acathistus, canon, hexaemeron, calendar, and Easter calendar. After the Act of Union had been signed in 1595, I. Potii and K. Terletsy published in Rome *Kalendar rym's'kyi novyi* (The New Roman Calendar) for the Uniates.

In the 17th and 18th centuries the calendars of Ormiński, S. and F. Nieweski, and particularly of S. Duńczewski (*Kalendarz polski i ruski* [Polish and Ruthenian Calendar], 1725–75), published in Polish in Lviv and Zamość, were popular. The most popular calendar in all of Ukraine was the so-called *Kolindar* entitled *Kalendarz gospodarSKI* (The Farmer's Calendar), which was published in Polish and Russian in the period 1760 or 1780 to 1864. At first it was printed in Berdychiv and, after the closing of the printery there, in Kiev and Zhytomyr. It was reprinted in various Ukrainian cities, including Kharkiv (1797, 1799, 1808, 1809).

In the 18th century the printers of the Kievan Cave Monastery published calendars. The first of them came out in 1700 under the title *Kalendar' ili mesiatseslov* (Calendar or Menology). At the end of the century two calendars were published periodically in Kiev: a church calendar and *Astronomo-politicheskii kalendar'* (The Astronomical-Political Calendar).

In the 19th century the Kievan Cave Monastery published a well-known calendar, beginning in 1845: *Polnyi khristiianskii mesiatseslov s prisovokupleniem raznykh statei k rossiiskoi istorii i Kievskoi eparkhii otnosiashchikhisia* (The Complete Christian Menology Supplemented with Various Articles on Russian History and the Kiev Eparchy). Besides church news it contained a list of Ukrainian princes, Russian rulers, and Kiev bishops; articles on the monasteries and churches of the Kiev metropolitanate; and other information. From 1864 to 1915 *Kievskii narodnyi kalendar'* (The Kiev Folk Calendar) was published in Kiev. The 1867 issue contains L. Kvas's engravings.

In Western Ukraine, Polish and German calendars – *Pielgrzym Lwowski* (The Lviv Pilgrim, 1822) and *Der Pilger vom Lemberg* (1823), which were composed by the professors of Lviv University with the participation of the historian D. Zubrytsky – provided the Ukrainian reader with interesting information.

The earliest Ukrainian calendars, such as *Misiatsoslov* (Menology) in Lviv, *Peremyshtianyn* (Peremysht Resident) in Peremysht, and *Pozdravlenie rusynov* (Ruthenian Greetings) in Transcarpathia, did not come out periodically. *Peremyshtianyn* (1850–61, 1863, 1864), under Rev A. Dobriansky's editorship, rivaled the best foreign calendars with its rich contents. *L'vovianyn, pryruchenyi i hospodars'kyi misiatsoslov* (The Lviv Resident, A Handy

Domestic Menology, 1861–2, 1882–4), composed by V. and Ya. Velychko, also deserves to be mentioned. In 1862 the first women's calendar appeared – *Peremyshtianka* (Woman of Peremysht). *Furkalo* (Spinning Top, 1869), published in Kolomyia, was the first satirical calendar.

The Stauropegion Institute in Lviv published the first periodic calendar – *Vremennyk Stavropihiiskoho instituta s misiatsoslovom* (The Periodical of the Stauropegion Institute with a Menology, 1864–1915 and 1923–39). This calendar appeared annually and contained a wealth of scholarly articles. From 1870 to 1939 the Prosvita society in Lviv published a calendar, whose initial title was *Kalendar narodnyi* (The Folk Calendar). The Transcarpathian calendar *Misiatsoslov* was published in Uzhhorod in 1867 by the Society of St Basil the Great. In Bukovyna the Ruska Besida society published *Misiatsoslov bukovynskoruskyyi* (The Bukovynian-Ruthenian Menology) in 1873 in Chernivtsi.

Calendar from Bukovyna, 19th century

Calendar issued by Ukrainian prisoners of war in Freistadt, Austria

In the 1920s–1930s various Ukrainian organizations in Western Ukraine published calendars. Some of them are important sources of historical materials on the various movements in Galicia: the Prosvita society's calendar on culture and education; the calendars *Zaporozhets'* (The Zaporozhian Cossack, 1904–14), *Chervona kalyna* (The Red Guelder Rose, 1921–39), and *Dnipro* (1923–39) on politics; *Sil's'kyi hospodar* (The Village Farmer), *Kalendartsi kooperatora* (The Co-operative Organizer's Calendars), and *Zoloty kolos* (The Golden Ear of Corn) on economy and co-operatives; *Misionar* (The Missionary, 1921–39) on education; and *Zhinocha dolia* (Woman's Fate, 1925–39) on the women's movement. The calendars reached regions of Ukraine that, because of political obstacles, were closed to Ukrainian books; for example, in the Kholm and Podlachia regions M. Vavrysevych's calendars were read, and in Polisia and Podlachia *Pravoslavnyi kalendar* (The Orthodox Calendar) was read.

In central and eastern Ukraine the most popular calendars were O. Gattsuk's *Russian Krestnyi kalendar'* (Calendar of the Cross, 1866), K. Andriiashev's calendar, and the address calendars published by gubernial governments or zemstvos. Among the Ukrainian calendars the calendar of the Kiev Prosvita society (1907, 1908) and

odryvni kalendari (wall calendars) of the Chas publishing house were widely known. In 1919 the first Soviet calendar appeared; it is still published today under the title *Kalendar-dovidnyk* (Reference Calendar) by Polityvdav publishers in Kiev. This calendar does not mark the days with the names of saints but with historical events of the USSR and the birth and death dates of Soviet political and cultural figures. Propagandistic material on economics and culture is included in *Kalendar znamennykh i pam'iatnykh dat* (Calendar of Significant and Memorable Dates, published since 1957). Provincial calendars do not differ from those of the capital.

During the First World War calendars were published for Ukrainian émigrés and soldiers in Vienna, prisoners of war at Wetzlar and Freistadt, and refugees at Gmünd. The Ukrainians in the Bačka region published *Ruski kalendar za iugoslavianskikh rusinokh* (A Ruthenian Calendar for Yugoslavian Ruthenians) from 1920. Ukrainian calendars were published by émigrés in Warsaw and Cracow (*Kalendar-al'manakh Ukraïns'koho vydavnytstva* [Calendar-Almanac of Ukrainske Vydavnytstvo Publishers]), Prague (*Nastup* [Advance]), and Berlin. Today calendars are published by various civic and church organizations in the countries to which Ukrainians have emigrated. These calendars contain historical material and information about cultural life and political developments in Ukraine and the émigré communities. For the history of Ukrainian life in the United States the calendars of such organizations as the Ukrainian National Association (published since 1897), the Ukrainian Fraternal Association (since 1911), and the Providence Association of Ukrainian Catholics in America (since 1918) are very valuable. In Canada the calendars of the newspapers *Ukraïns'kyi holos* (since 1915) and *Kanadiis'kyi farmer* (since 1920) are the most important. In Brazil the calendar *Pratsia* (Work), published since 1921, and in Argentina the calendars of the Prosvita and Vidrodzhennia societies are rich sources of historical data.

Calendric ritual folk poetry. The calendric festivals, rites, and songs of Ukraine reflect the ancient, pre-Christian world view of the people and disclose especially their belief in the magical power of words. The cyclical annual rituals and songs are closely related to nature and to the labor of an agricultural society. Such customs, rites, and songs reveal characteristic features of the material and spiritual life of Ukrainian society at the various stages of its historical development. With the people's acceptance of Christianity the ancient rituals did not disappear, but rather merged, retaining much of their original form, with Christian practices and beliefs.

The agrarian-calendric customs and rituals of the winter cycle were incorporated into the Christian feasts of St Andrew, St Barbara, and particularly into the three major winter celebrations of Christmas, New Year, and Epiphany. The feasts of spring, replete with ancient rites and customs, were blended into the church holidays of St George, and, more importantly, into the Easter celebrations. The summer cycle of pre-Christian feasts were

united with the Christian *Zeleni Sviata* (the 'Green Festival,' Pentecost), the holy days of ss Peter and Paul, St John the Baptist (the feast of Ivan Kupalo), and the prophet Elijah; the autumnal cycle, with the church feasts of the Holy Protectress and of St Demetrius.

The basic artistic components of calendric ritual poetry are songs, including *koliady* (Christmas carols) and *shchedrivky* (Epiphany carols), *vesnianky* (spring songs), *rusalni* (water-nymph songs, related to the festival cycle of earing of the grain), *kupalski* (songs of the feast of Ivan Kupalo), and harvest songs. The motifs of calendric ritual folk poetry are widely used in Ukrainian literature, painting, and music, in the works of such authors as T. Shevchenko, M. Starytsky, S. Vasylychenko, O. Dovzhenko, and I. Kalynets. (See also *Folk oral literature, *Folk songs, and *Folk calendar.)

California. A state on the western coast of the United States, 411,000 sq km in area and having a population of 28 million (1981). Before it became an American state, California was under the control of Spain and Mexico. At the beginning of the 19th century Russia tried to extend its influence to California and established Fort Ross in 1812. The first noted Ukrainian in California was the revolutionary and priest A. *Honcharenko (1832–1916), who in 1876 settled near San Francisco and named his homestead Ukraina. At the beginning of the 20th century individual Ukrainians resided in California, having moved there from the eastern United States and Canada. The members of the Ukrainian Brotherhood in California attempted to organize a commune at Honcharenko's homestead in 1902, but the experiment was not successful. Since 1950 the number of Ukrainians in California has increased steadily, reaching about 25,000 by 1980. Their main centers are Los Angeles (3,500 families), San Francisco (350), and San Diego (250). Ukrainian community life and cultural activities are well established in Los Angeles, where the Ukrainian Culture Center has been operating since 1955. There are three Ukrainian Catholic churches, six Carpatho-Ruthenian Catholic churches, three Orthodox churches, and one Ukrainian Baptist church in California. Several movie stars of Ukrainian origin have been residents of Hollywood, for example, J. Hodiak, J. Palance, N. Adams, and M. Mazurki. The film director E. Dmytryk, the journalist and community leader H. Skehar, the painter V. Balias, and the conductor V. Bozhyk have also been residents of California.

Camelis, Joseph de, 1641–1706. A Basilian monk of Greek origin from the island of Khios. Camelis was the procurator of the Basilian monastic order in Rome from 1674 to 1689 and in 1690 became bishop of the Mukachiv eparchy. He was involved in organizing schools in Transcarpathia and published two books: *Katekhyzys dlia nauky uhro-rus'kym liudem* (A Catechism for the Education of Hungarian-Ruthenian People, 1698) and *Bukvar iazyka slovenska* (A Primer of the Slavonic Language, 1699).

Camomile. Name of a number of related plants of the Compositae family, especially annuals and perennials of

the genus *Anthemis* (Ukr: *roman*, *romen*) and annuals of the genus *Matricaria* (Ukr: *romashka*). In Ukraine there are 15 species of *Anthemis*, widespread in all areas except for mountain regions and usually growing wild. These include the corn camomile (*A. arvensis*), the Ukrainian camomile (*A. ruthenica* or *A. arvensis ruthenica*), *A. tinctoria*, *A. cotula* L. or *A. foetida*, and *Chamaemelum nobile* or *A. nobilis*. All these species are very aromatic and bitter in taste. Some of them are decorative, and some are used in folk medicine as a cold remedy. There are four species of *Matricaria* in Ukraine: *M. recutita*, also known as *M. chamomilla*; the pineapple weed (*M. matricarioides*); *M. discoidea*; and *M. inodora*. The dried flowers and stems of the *Matricaria* are used as a remedy for colds.

Canada. Federal state, occupying about two-thirds of the North American continent, with an area of 9,976,139 sq km. Because of immigration, Canada is a multiethnic society, a fact acknowledged officially in 1971 by the federal government in Ottawa through its policy of multiculturalism within a bilingual (English-French) framework. In 1981 Canada's population was 24,083,500, and the 755,000 Canadians of Ukrainian origin (3.1 percent of the total) formed the fifth-largest group, preceded by the British, French, Germans, and Italians.

Immigration of Ukrainians. Isolated individuals of Ukrainian background may have come to Canada during the War of 1812 as mercenaries in the de Meuron and de Watteville regiments. It is possible that others participated in Russian exploration and colonization on the west coast, came with Mennonite and other German immigrants in the 1870s, or entered Canada from the United States. The mass movement of Ukrainians to Canada, however, occurred later, in three distinct waves. The first period, from 1891 to 1914, brought approximately 170,000; 68,000 came during the second or interwar period; and 34,000 came between 1947 and 1954.

Between 1891 and 1914 few Ukrainians emigrated to Canada from the western fringes of the Russian Empire or from Transcarpathia. Most came from the provinces of Galicia and Bukovyna in the Austro-Hungarian Empire, Galicia being the main source. Males predominated, illiteracy was high, and peasant farmers greatly outnumbered other classes. Almost two-thirds gave as their destination the Prairie Provinces of Manitoba, Saskatchewan, and Alberta, where the Canadian government offered homesteads of 160 acres (64.7 ha) for 10 dollars to induce settlement.

Interest in Ukrainian immigration to Canada was expressed first in Galicia. In 1891 I. Pylypiv and W. Eleniak, two peasants from Nebyliv, came to investigate, and Pylypiw's subsequent accounts of free land gave rise in 1892 to the first Ukrainian colony, at Edna-Star, east of Edmonton, Alberta. In 1895 O. *Oleskiv, an educator and agricultural expert in Lviv, concerned with the economic plight of the Ukrainian peasantry, visited Canada and was impressed with its suitability for the excess rural population of Galicia. His public lectures and two booklets, *Pro vil'ni zemli* (About Free Lands) and *O emigratsii* (About Emigration), did much to stimulate Ukrainian immigration to Canada. The following year C. Sifton became minister of the interior in Sir W. Laurier's new Liberal administration and amid much criticism for bringing large numbers of culturally alien people into Canada

began to solicit agricultural immigrants from southern, central, and eastern Europe.

Ukrainian immigration ceased during the First World War but resumed in the 1920s as stability returned to Eastern Europe and the Canadian Immigration Act was amended (1923) to permit former nationals from recent enemy countries to immigrate. Galicia and Bukovyna, part of Poland and Rumania respectively, continued to supply the majority of immigrants. Most were generally better educated, more secure financially, and more diverse occupationally than members of the first wave had been. They came to an established Ukrainian-Canadian community and benefited from its moral and financial assistance. Canada still favored agriculturalists, and the Prairies again attracted the bulk of the Ukrainian immigrants. After 1929, with widespread unemployment in Canada, few Ukrainians were admitted.

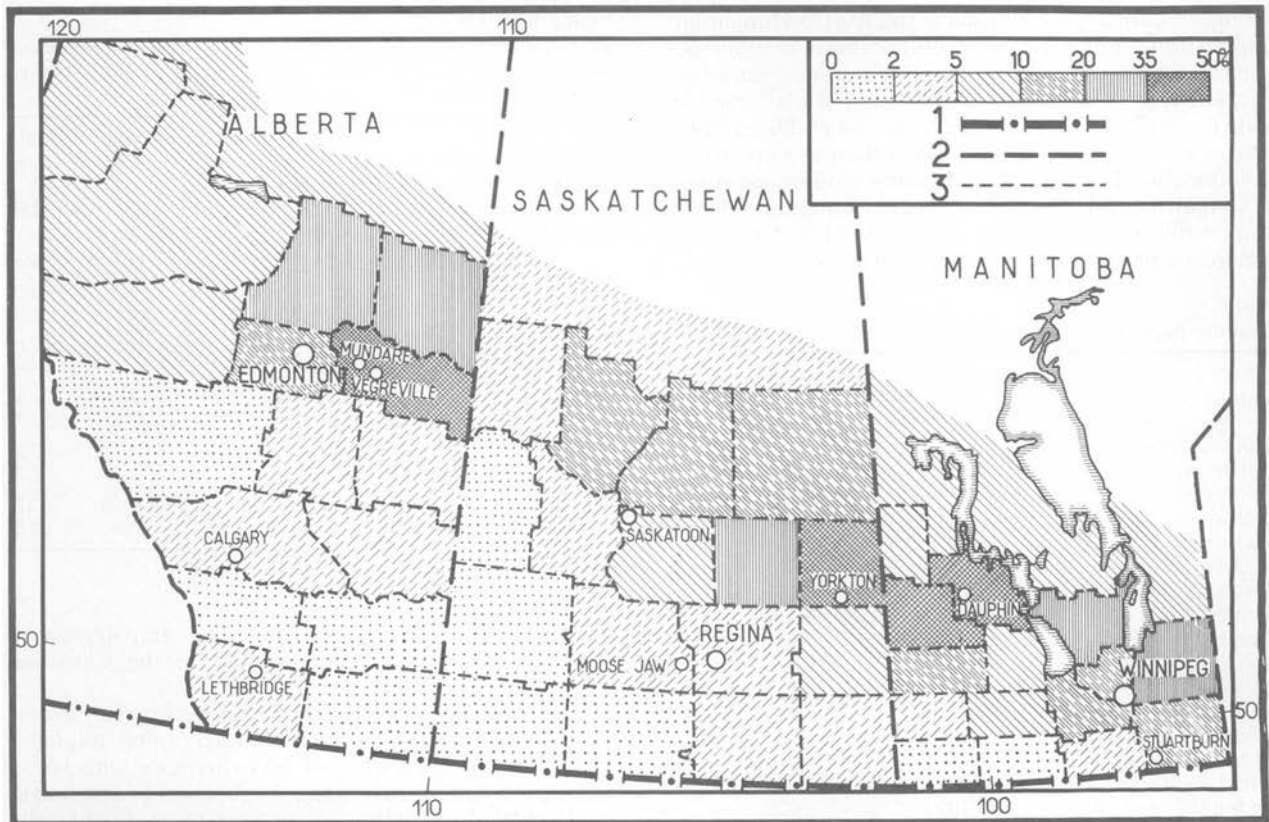

The third wave of Ukrainian immigrants to Canada consisted of persons displaced by the Second World War, living mainly in refugee camps in Austria and West Germany (see *Displaced persons). The newly formed *Ukrainian Canadian Committee urged the Canadian government to accept Ukrainian immigrants. Western Ukrainians again predominated, but all ethnic Ukrainian territories were represented. Socioeconomically, the new immigrants were more diverse than previous immigrants had been, and greater numbers were well educated. Almost all settled in urban areas in the industrialized East, particularly in Ontario.

Today over 80 percent of the Ukrainian-Canadian population is native-born. Various countries contribute a small number of immigrants annually, and in the 1970s limited emigration from the Soviet Union brought a few hundred Ukrainian immigrants to Canada, together with Soviet Ukrainian Jews.

Population. As subjects of a foreign power and possessing a blurred national identity, the first Ukrainians in Canada appeared under a variety of names, producing permanent confusion in early statistics. In 1931 the Canadian census showed 225,133 Ukrainians, or 2.2 percent of the population. In the 1971 census there were 580,660 Ukrainians, or 2.7 percent of the total Canadian population. The 1981 census allowed Canadians to declare their origins in either single or multiple terms. As a result, 529,615 persons indicated their origin as being Ukrainian and 225,360 indicated that it was at least one component in their background.

Settlement and distribution. After 1896 the Ukrainian colony at Edna-Star expanded rapidly, becoming the largest Ukrainian settlement in Canada. By 1914 the wooded-prairie parkland of western Canada was marked by a series of well-defined blocs of Ukrainian settlement that extended from Alberta through the Rosthern and Yorkton-Canora districts of Saskatchewan to the Dauphin, Interlake, and Stuartburn regions of Manitoba. In the interwar period secondary blocs, like that in the Peace River region in Alberta, emerged.

Within the blocs a distinctive way of life evolved around rural crossroads communities that had Ukrainian names and consisted of a post office, general store, church, and community center. Interwar migration to urban centers accelerated after the Second World War. Today the physical and cultural identity of the bloc settlements has been eroded by the automobile, the mass

PERCENTAGE OF UKRAINIANS IN THE POPULATION OF THE PRAIRIE PROVINCES (1951)

media, higher education, farm consolidation, rising standards of living, and upward social mobility.

Some of the early Ukrainian immigrants in cities were prospective farmers accumulating capital; others became permanent members of the urban labor force. Many of the living areas adjacent to the city core continue to house Ukrainian churches, organizations, and businesses, although the crowded tenements have generally been replaced by single-family dwellings in working-class districts and more recently in the suburbs. Immigrants from the second and third immigrations, as well as migrants from the rural blocks, have greatly increased the Ukrainian urban population. In 1981 the Ukrainian population (single-origin) in Edmonton was 63,120; in Winnipeg, 58,970; and in Toronto, 50,705. (See table 1.)

In 1931 over 85 percent of all Ukrainians lived in the three Prairie Provinces, where 77.9 percent were rural; in 1971 only 57.8 percent resided on the Prairies, and 75 percent of all Ukrainian Canadians were urban. Prairie Ukrainians, most urban in Alberta (70.2 percent) and least urban in Saskatchewan (53.1 percent), were less urban than those in Ontario (91.1 percent). In 1981 single-origin Ukrainians were most numerous in Alberta, where they formed 6.1 percent of the population; on the Prairies almost 8 percent of the residents were single-origin Ukrainian. (See tables 2 and 3.)

At the end of the 19th century Anglo-Canadians judged immigrants by their distance from British cultural

standards and placed great emphasis on assimilating Ukrainian peasants through the public schools and the Protestant churches. Departments of education found it difficult to establish schools in the poor, scattered, and ethnically diverse pioneer prairie communities, however. The education of Ukrainians was further complicated by Manitoba's 1897 law that permitted instruction in English and any other language when requested by 10 or more students in a school district. The *Ruthenian Training School opened in Winnipeg in 1905 (it moved to Brandon two years later) to provide bilingual teachers. Bilingual schools operated unofficially in Saskatchewan and to a lesser extent in Alberta. Led by a nationally conscious leadership, composed largely of bilingual teachers, Ukrainians strongly supported the bilingual schools that the Anglo-Canadians opposed. In 1916 Manitoba repealed its bilingual clause, and Ukrainians turned to private educational institutions to preserve their language and culture.

For approximately three decades the Methodist and Presbyterian churches sought to evangelize and Canadianize Ukrainians through direct proselytization and the establishment of rural schools and hospitals and urban home missions. But in spite of valuable educational, social, and medical services, the Methodists and Presbyterians converted few Ukrainians to Protestantism and did not remake them in their own image.

The First World War greatly intensified anti-Ukrainian

feelings in Canada. As subjects of the Austro-Hungarian Empire, unnaturalized immigrants became enemy aliens. Approximately 6,000 Ukrainians were interned, either as Austrian reservists or potential security threats, or for being unemployed. Many were harassed and fired from their jobs. Those naturalized for less than 15 years were disenfranchised in 1917; in September 1918 newspapers in Ukrainian and other enemy-alien languages were temporarily suspended. In spite of such treatment Ukrainians participated in the Canadian Patriotic Fund,

the Red Cross, and the Victory Loan campaigns, and approximately 10,000 men enlisted in the Canadian Expeditionary Force.

Socioeconomic development. Ukrainians initially homesteaded on unbroken land with limited capital, outdated agricultural technology, and no experience with large-scale North American farming. High wheat prices during the First World War brought prosperity, marked by the transition to ox- and horse-power and then to machines as farming became a business. Expansion based on wheat continued to the 1930s, when many farmers who had operated on credit or through mortgages were ruined by low grain prices. Many turned to more stable mixed farming, growing a variety of grains and keeping stock and dairy cattle. Since 1945 the Ukrainian blocs have undergone large-scale mechanization, farm consolidation, and rural depopulation. In 1971, 16,675 of the 23,459 farms with Ukrainian operators on the Prairies were between 240 and 1,119 acres (97.1-452.6 ha) in size.

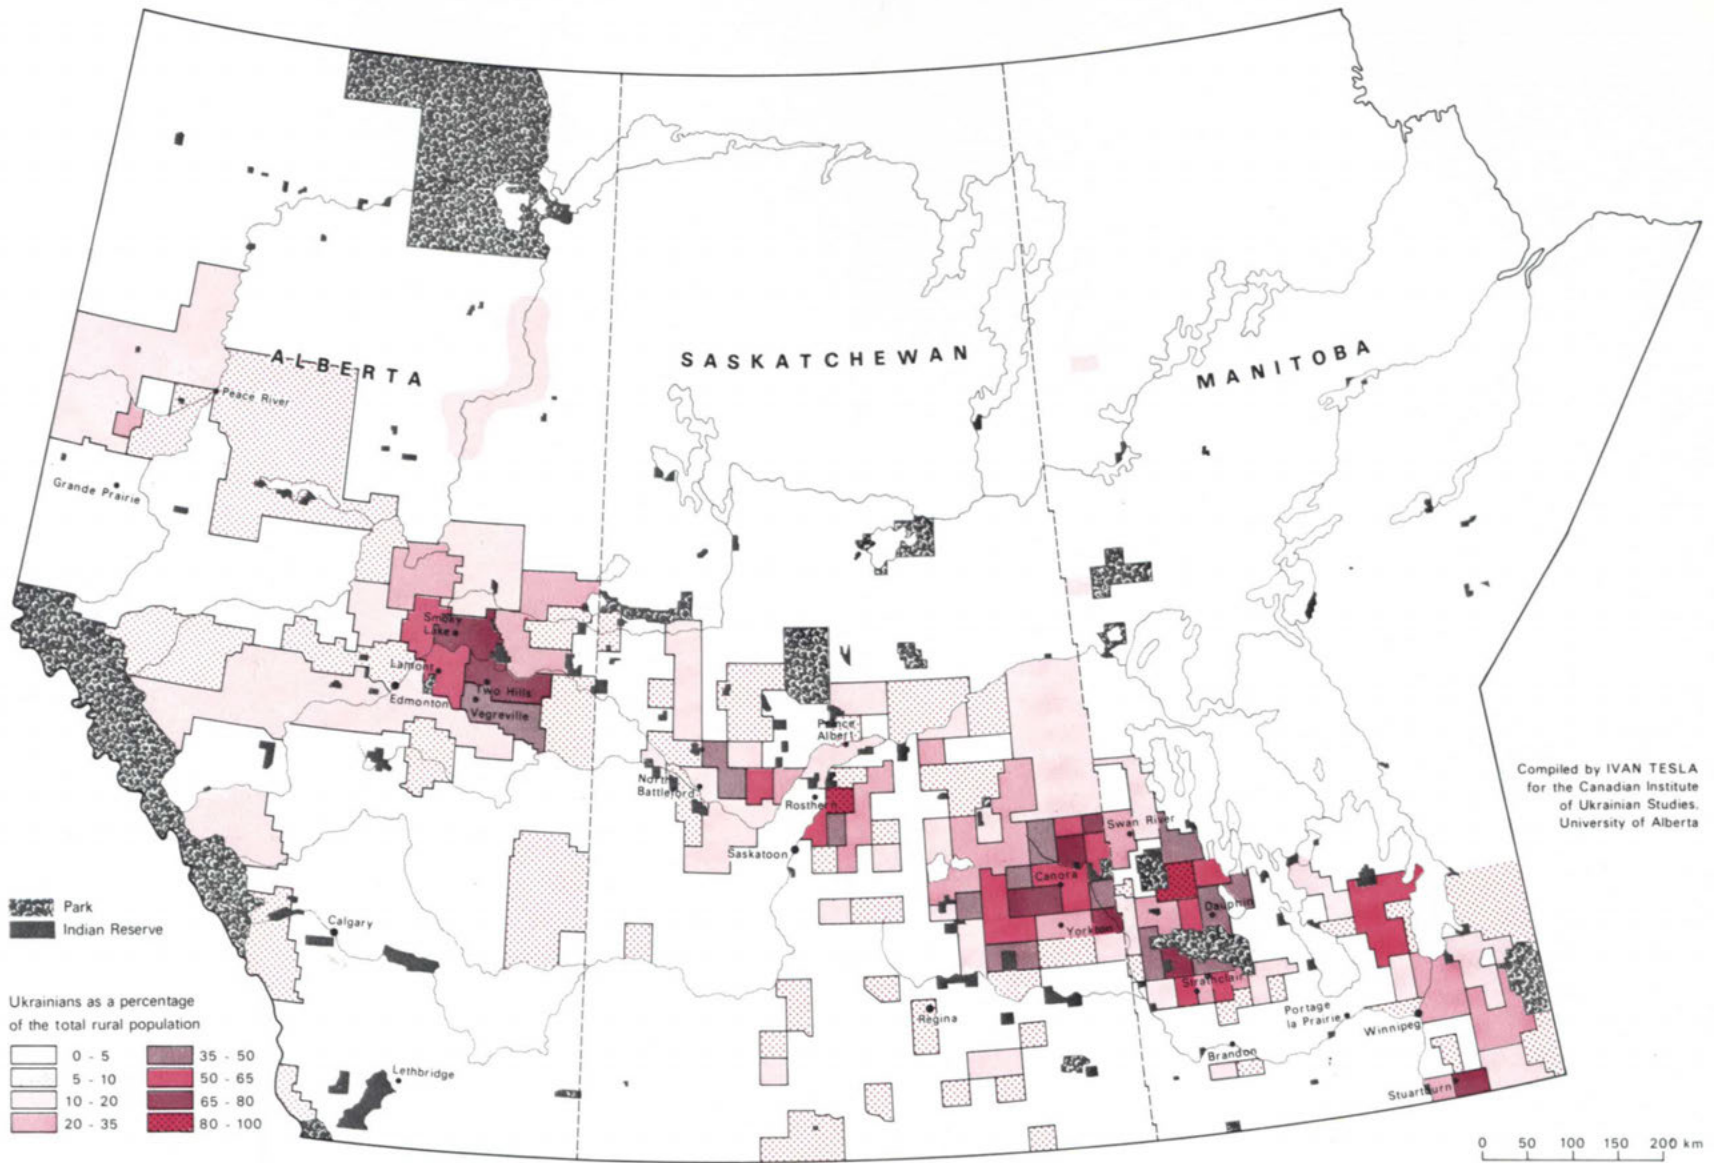

Early Ukrainian wage earners were either unskilled laborers in Canada's cities, members of railway gangs and lumbering crews, or miners in the Rocky Mountains, Northern Ontario, Quebec, or on Cape Breton Island. Women worked as domestics or in restaurants and hotels. Unsafe work conditions, low wages, exploitation, and discrimination made radicals of many Ukrainian workers, involving them in labor unrest and unionization, particularly during the 1930s when the unemployed faced public relief or (if unnaturalized) deportation.

Some urban Ukrainians before 1914 became small businessmen, general merchants, and shopkeepers, and catered to the immigrants' special needs through such establishments as Ukrainian bookstores and boarding-houses. While large-scale movement into the towns and villages of the rural bloc settlements was an interwar and postwar phenomenon, the earlier flour mills, general stores, and implement dealerships run by Ukrainians had laid the foundations. Hotels, bakeries, garages, and construction and transportation companies followed. Teaching was the first profession to attract Ukrainians in large numbers. Agricultural colleges also drew young men anxious to improve farming techniques.

Ukrainian co-operatives first appeared before the First World War. At its height the Ruthenian Farmers' Elevator Company (1917-30) operated eleven elevators in Manitoba and four in Saskatchewan. Ukrainian consumer co-operatives, which emerged in rural areas in the interwar years, profited from the experiences of interwar immigrants with similar enterprises in Western Ukraine. Alberta and Manitoba had nine consumer co-operatives each, and Saskatchewan had six. Unlike the co-operatives, Ukrainian credit unions expanded after 1945 because of their popularity among the third wave of immigrants. By the 1970s there were nearly 40, with a membership of approximately 49,000. The largest were the *Ukrainian (Toronto) Credit Union, the *Carpathia Co-operative Credit Union in Winnipeg, and *Buduchnist in Toronto. In the 1950s co-ordinating efforts created the Co-operative Community in Winnipeg and the Co-ordinating Committee of Ukrainian Credit Co-operatives in Toronto.

Between 1931 and 1971 the percentage of Ukrainians in agriculture dropped from 57.3 to 11.2; in the entire Canadian labor force the percentage decrease was from 28.7 to 5.6. In the same period the number of laborers or unskilled workers in the Ukrainian male labor force dropped from 23.9 to 3.5 percent. Participation in manufacturing, construction, and related occupations increased from 7.8 percent in 1931 to 27.7 percent in 1971, Ukrainians being overrepresented compared to Canadians as a whole. Participation in trade, sales, finance, administrative, and professional occupations increased. By 1971 the number of Ukrainians in medicine, law, and engineering had risen from 0.025 percent in 1931 to 0.23 percent (physicians and surgeons), 0.74 percent (professional engineers), and 0.13 percent (lawyers), but the proportion was still below that of the total Canadian work force in each category. Table 4 shows the distribution of Ukrainian Canadians in various occupations in 1971.

In 1970 the average income of Canadians over 15 years of age was \$5,033, compared to \$4,636 for Ukrainian Canadians; Ukrainian males earned less than Canadian males, but Ukrainian females earned more than the national average. The socioeconomic position of Ukrainians was lowest in the Prairie Provinces and progressively better in Ontario, British Columbia, and Quebec. In 1981, 15.3 percent of single-origin Ukrainian Canadians had attended university, which was slightly below the national level (15.9 percent).

Although the upward mobility of Ukrainian Canadians from peasant origins, rural status, and illiteracy has been impressive, as a group Ukrainians remain entrenched in the Canadian lower middle class.

Participation in Canadian political life. In 1908 I. Storo-

szuk was named reeve by the all-Ukrainian council in the municipality of Stuartburn, Manitoba, becoming the first Ukrainian to lead a local government. Where they were numerous, Ukrainians eventually dominated the elected and administrative sections of rural municipalities, school divisions, counties, town, and villages. T. Stefanyk, elected alderman in Winnipeg in 1912, was the first Ukrainian successful in urban politics. Since the Second World War such successes have been numerous. W. Hawrelak was elected mayor of Edmonton four times between 1951 and 1977, S. Juba was mayor of Winnipeg from 1956 to 1977, and L. Decore was elected mayor of Edmonton in 1983.

The first Ukrainian elected to a provincial legislature was A. Shandro, Liberal candidate for the predominantly Ukrainian riding of Whitford in the 1913 Alberta election. He was followed by T. Ferley, who became the Liberal member for Gimli, Manitoba, in 1915. By 1975, 77 Ukrainian candidates had been successful in Manitoba, 68 in Alberta, and 37 in Saskatchewan; Ontario and British Columbia, where Ukrainian candidates did not appear until the 1940s, had elected 15 and 1 respectively.

The first Ukrainian in the House of Commons in Ottawa was M. Luchkovich, who represented the Vegreville constituency for the United Farmers of Alberta (1926-35). By 1975, 62 Ukrainians had won federal seats - 25 in Alberta, 15 in Manitoba, 13 in Ontario, and 9 in Saskatchewan - the majority representing the Progressive Conservative party. Only after 1945 did Ukrainian candidates make noticeable progress in the Liberal and Conservative parties or outside the Ukrainian bloc settlements. Many early candidates represented Canadian protest parties. To date, candidates have been overwhelmingly from the first and second immigrations.

Cabinet posts have come to Ukrainian Canadians since the Second World War. Federally, M. Starr (Starchev-

sky) served as Conservative minister of labor (1958–63) under J. Diefenbaker; N. Cafik held the multiculturalism portfolio (1977–9) in P. Trudeau's Liberal administration; and R. Hnatyshyn (energy, mines, and resources; science and technology) and S. Paproski (fitness and amateur sports and multiculturalism) were ministers in the short-lived Conservative cabinet of J. Clark in 1979–80.

Ukrainians have been better represented provincially. In Alberta A. Holowach and A. Ludwig served as Social Credit ministers, and in the 1970s W. Diachuk, A. Hohol, J. Koziak, G. Topolnisky, P. Trynchy, and W. Yurko sat in P. Lougheed's Conservative cabinet. In Manitoba, Liberal premier D. Campbell appointed the first Ukrainian cabinet ministers, N. Bachynsky and M. Hryhorczuk, in the 1950s; S. Uskiw, B. Hanuschak, P. Burtiak, and W. Uruski served in E. Schreyer's New Democratic government (1969–77). Three Ukrainian cabinet ministers in Saskatchewan – A. Kuziak, J. Kowalchuk, and R. Romanow – represented the Co-operative Commonwealth Federation under T.C. Douglas (1952–64) or its successor, the New Democratic party, under A. Blakeney in the 1970s. Progressive Conservative J. Yaremko has been the sole Ukrainian cabinet minister in Ontario.

Five Canadians of Ukrainian origin have been summoned to the Senate of Canada: W. Wall (Wolokhatiuk) (Manitoba, 1955–62), J. Hnatyshyn (Saskatchewan, 1959–67), P. Yuzyk (Manitoba, 1963–), J. Ewasew (Quebec, 1976–8), and M. Bielish (Alberta, 1979–). S. Worobetz served as lieutenant governor of Saskatchewan from 1970 to 1976.

For many years Ukrainians supported the Liberal party, which was in power when they first arrived. Together with other Canadians from the lower socio-economic strata, Ukrainians have shown considerable support for Canadian protest parties, which emerged in the 1930s – the Social Credit party and the Co-operative Commonwealth Federation (subsequently the New Democratic party). During the Great Depression the Ukrainians, Jews, and Finns were the most prominent ethnic groups in the *Communist Party of Canada. In the late 1950s many Ukrainians turned to the Progressive Conservative party, approving J. Diefenbaker's anticommunism and his appointment of the first Ukrainian Canadian to the federal cabinet. Increasingly, the voting habits of Ukrainians reflect their economic class or region rather than any common ethnic pattern.

Religion. No Ukrainian Catholic or Orthodox priests accompanied the early Ukrainian immigrants to Canada. Among the denominations that moved to fill the spiritual vacuum were the Methodists and Presbyterians, the Independent Greek church, and the Russian Orthodox and Roman Catholic churches.

A unique religious experiment originated with a Russian Orthodox priest, S. Ustvol'sky. As the monk Seraphim, self-proclaimed bishop and metropolitan of the Orthodox Russian church for America, he arrived in Canada in 1903 and began to ordain priests. In 1904, alarmed by Seraphim's growing eccentricities, several priests, led by I. Bodrug, broke with him and formed the Ruthenian Independent Greek church. The new church retained the Eastern rite and liturgy but was supervised and financially supported by the Presbyterian church, with which Bodrug had contacts. At its height, the Independent Greek church claimed 60,000 adherents. It declined after 1907 when Presbyterian pressure forced

genuine Protestant reform; it became part of the Presbyterian church and then of the United church. Bodrug remained within the Ukrainian evangelical movement, working closely with the *Ukrainian Evangelical Alliance in North America (est 1922). In 1931, 1.6 percent of Ukrainian Canadians were United church adherents. By 1971 intermarriage and assimilation had increased the figure to 13.9 percent, the fourth-largest religious denomination among Ukrainian Canadians.

Bukovynian immigrants who appealed to the Orthodox church in Bukovyna for priests were directed to the Russian Orthodox mission in the United States. The Russian Orthodox missionaries who came were also popular among Galicians. They used a familiar form of worship, charged little, and gave the laity considerable local control. The Russian Orthodox Greek Catholic church declined sharply after 1917 when the Russian Holy Synod's financial support for missionary work ended and the traditional Ukrainian churches were re-established in Canada. Today the Russian Orthodox faith claims a few hundred Ukrainian-Canadian adherents. Parishes that recognize the patriarch of Moscow share a bishop with their American counterparts. A few Orthodox Ukrainians belong to the *Ukrainian Orthodox Church of America, with its seat in the United States.

A small number of Ukrainian Baptists (stundists) from the Russian Empire immigrated to Canada prior to 1917 to escape religious persecution. They were first associated with the Russian Stundists, but in 1921, under P. Kindrat, separate Ukrainian congregations were organized. In 1946 the Ukrainian Bible Institute opened in Saskatoon to train Ukrainian Baptist clergy and to publish religious literature. The Ukrainian Evangelical Baptist Alliance of Canada, strengthened by the third immigration, has approximately 25 congregations. Their members, together with those Ukrainians in other Baptist congregations, accounted for 1.4 percent of all Ukrainian Canadians in 1971. The Lutheran church, the Pentecostal Assembly, the Seventh-Day Adventists, and the Jehovah's Witnesses also have significant Ukrainian memberships but are marginal to the organized Ukrainian community. Publications and religious programming in Ukrainian acknowledge the Ukrainian components. Only a minority of Ukrainian Protestants form independent congregations.

The two major Ukrainian denominations in Canada have been the Ukrainian Catholic church and the Ukrainian Orthodox church, which were supported by 58.0 and 24.6 percent respectively of all Ukrainian Canadians in 1931. Despite strained relations between them, the two churches have been central in preserving the Ukrainian language, culture, and identity. Since the 1940s their strength has declined: in 1971 the Ukrainian Catholics constituted 32.1 percent and the Orthodox 20.1 percent of the Ukrainian-Canadian population.

The first Ukrainian Catholic immigrants were visited periodically by priests from Pennsylvania, including N. Dmytriv as early as 1897. Immigrants and itinerant priests came under the jurisdiction of the French-dominated Roman Catholic hierarchy in western Canada, which tried to absorb the Ukrainians. In view of Ukrainian opposition, the Roman Catholic church gradually accepted the idea of a separate Ukrainian Catholic hierarchy and worked to obtain clerical personnel.

Because the papal decree of 1894 imposed celibacy on

Ukrainian Catholic priests in North America, the secular clergy, who greatly outnumbered the regular clergy in Galicia, could not work in Canada. To fill the vacuum, French and Belgian missionaries, some of whom adopted the Eastern rite, served among the Ukrainians. They included the French Canadian Father J. Jean and the Belgian Redemptorist Father A. Delaere, who was based at Yorkton, Saskatchewan. Because of Delaere's work, an Eastern-rite branch of the Congregation of the Most Holy Redeemer was founded in Galicia in 1913 and later in Canada (see *Redemptorists). For approximately a generation the Roman Catholic church assisted its Ukrainian counterpart, particularly in the establishment of schools and newspapers. In 1902 the first Ukrainian monks, members of the *Basilian monastic order, and four nuns of the Sisters Servants of Mary Immaculate were sent to Canada by Metropolitan A. Sheptytsky. From Beaverlake (now Mundare) in Alberta they served a pastoral community scattered over hundreds of kilometers.

Sheptytsky toured the Ukrainian settlements in 1910, and in 1911 he successfully appealed to Rome for a Ukrainian Catholic bishop. In December 1912 N. Budka became the first bishop of the Ruthenian Greek Catholic church in Canada, incorporated by Canadian charter in 1913. He was not under the Roman Catholic hierarchy but directly responsible to the apostolic delegate in Canada. Concerned about restoring the church's customary dominance in Ukrainian life, Budka alienated many Ukrainians, particularly the rising influential intelligentsia, which led to the formation of the *Ukrainian Greek Orthodox church in 1918.

Despite the Orthodox inroads, the Ukrainian Catholic church expanded in the 1920s and by 1931 had 100 priests, 58 of them secular, serving 350 parishes (3 in British Columbia, 102 in Alberta, 108 in Saskatchewan, 110 in Manitoba, 21 in Ontario, 5 in Quebec, and 1 in Nova Scotia). Budka returned to Europe in 1927, to be succeeded in 1929 by V. Ladyka. In 1948 three exarchates were created: the eastern (Toronto) under Bishop I. Borecky, the western (Edmonton) under Bishop N. Savaryn, and the central (Winnipeg) under Ladyka, who was elevated to titular archbishop. In 1951 the Saskatchewan exarchate was carved out of the western exarchate, with A. Roborecky as bishop. In 1956 Pope Pius XII established the Ukrainian Catholic metropolitanate in Canada, elevating the four exarchates to eparchies with the central as the archeparchy. M. Hermaniuk became the first metropolitan. In 1974 the eparchy of New Westminster for British Columbia, under Bishop J. (I.) Chimy, was created from parts of the Edmonton eparchy. In 1984 B. Filevich succeeded A. Roborecky as bishop of the Saskatoon eparchy.

During the 1970s, in the 600 Ukrainian Catholic parishes and missions, the secular clergy greatly outnumbered their monastic counterparts. After the Second World War married priests in the third immigration were permitted by the Vatican to serve, although ordination of married men by Canadian Ukrainian Catholic bishops was generally forbidden. In 1970 the Basilians had 109 monks, including 51 regular priests. The order became a separate Canadian province in 1948 and has its seat in Winnipeg, its publishing house in Toronto, its seminary in Ottawa, and its rich library, archives, and museum in Mundare. The Ukrainian Redemptorist Mission in Canada, a separate province after 1961, had over 60 regular

TABLE 5
Religious affiliation of Ukrainian Canadians (percent), 1931-71

Denomination	1931	1941	1951	1961	1971

priests in the 1970s. The provincial seat is in Winnipeg and St Vladimir's College (the Minor Seminary) for boys is in Roblin, Manitoba; the publishing house is in Yorkton. Until the 1970s the Eastern-rite Brothers of the Christian Schools operated St Joseph's College (est 1919) in Yorkton. A small number of Ukrainian *Studite monks, who came to Canada in 1951, live at Woodstock, Ontario. There are approximately 300 Ukrainian Catholic nuns in Canada. The Sisters Servants of Mary Immaculate have operated schools, orphanages, hospitals, and, more recently, senior-citizens' homes. Their private schools, under provincial regulations, include Sacred Heart Academy (est 1917) in Yorkton, Immaculate Heart School (est 1905 as the Ukrainian Catholic School of St Nicholas) in Winnipeg, and Mount Mary Immaculate Academy (1952-1970) in Ancaster, Ontario, which housed the novitiate after being moved from Mundare in 1946. Two minor orders are the *Sisters of St Joseph in the Saskatchewan eparchy and the Missionary Sisters of Christian Charity in the Toronto eparchy.

Since the 1930s the Ukrainian Catholic church has sponsored national men's, women's, and youth lay organizations with local branches, and a host of other associations, co-ordinated by a Ukrainian Catholic council in each eparchy and a conciliar superstructure, the All-Canadian Ukrainian Catholic Council - the whole assisted by an active press.

The rising intelligentsia (among them many bilingual teachers) who opposed Budka had been influenced by the anticlericalism of the *Ukrainian Radical party in Galicia. They condemned the episcopal incorporation of church property, the imposed celibacy, and the use of non-Ukrainian Latin-rite priests. In 1916 Ukrainians on the Prairies established in Saskatoon a non-denominational, non-partisan Ukrainian students' residence or bursa, the *Mohyla Ukrainian Institute, which they refused to incorporate with the bishop. The ensuing controversy peaked in 1918 when a group associated with the Mohyla Institute broke with Budka and created a Ukrainian Greek Orthodox Brotherhood to establish the Ukrainian Greek Orthodox Church of Canada. Rising national consciousness because of events in Ukraine favored an independent Ukrainian national church in Canada.

The Ukrainian Greek Orthodox church has followed the dogma and rites of Orthodoxy. Priests are married, church property belongs to the congregations, bishops are elected by a council of clergy and laymen, and congregations engage and discharge priests. Theological classes, begun in Saskatoon in 1919, graduated the first priests in 1920; in 1932 the theological seminary moved to

Winnipeg, and since 1946 it has been at *St Andrew's College. The new church attracted many Greek Catholics, Orthodox Bukovynians, and adherents of the Independent Greek and Russian Orthodox churches and by 1935 had 180 parishes and missions (53 in Alberta, 76 in Saskatchewan, 43 in Manitoba, 7 in Ontario, and 1 in Quebec).

For several decades the new church warded off charges of canonical unorthodoxy in its search for autocephaly and a suitable bishop. In 1919 it was taken under the spiritual wing of Metropolitan Germanos (Shegedi) of the Syrian Orthodox church in the United States. In 1924 Archbishop I. Teodorovych of the *Ukrainian Autocephalous Orthodox church in Ukraine and new head of the *Ukrainian Orthodox Church in the USA became bishop, but his efforts to be reconsecrated forced him to resign in 1947. Archbishop M. Skrypnyk, also of the Ukrainian Autocephalous Orthodox hierarchy, replaced him, but his role in Teodorovych's reconsecration and his overtures towards union with the American Ukrainian church led to his resignation in 1950. In 1951 the second extraordinary sobor voted to make the Ukrainian Greek Orthodox church truly autocephalous through a metropolitanate with three bishops. I. Ohienko was elected metropolitan, a position he held until his death in 1972, when he was succeeded by Archbishop M. (F.) Khoroshy, who was followed by Archbishop A. Metiuk in 1975.

Three Orthodox eparchies were created in 1951. The eastern eparchy (Toronto) was under Khoroshy until 1977 and then under Bishop M. Debryn. The western eparchy (Edmonton) took in Alberta and British Columbia and received its first bishop, A. Metiuk, in 1959. The central eparchy (Winnipeg) covered Saskatchewan and Manitoba. In 1963 it received an auxiliary bishop, B. Yakovkevych, with his see in Saskatoon; in 1975 he became head of the western eparchy and archbishop of Edmonton. Bishop W. Fedak replaced him as auxiliary bishop of Saskatoon and the central eparchy in 1978 and in 1981 was given temporary responsibility for the eastern eparchy following Debryn's death.

The Ukrainian Greek Orthodox church also sponsors national men's, women's, and youth lay organizations and maintains four institutes with educational facilities, as well as an active press. In 1958 it had 300 parishes and missions with 80 priests; during the 1970s, 100 priests served the same number of parishes.

The two traditional Ukrainian churches are losing ground with Ukrainian Canadians (see table 5), many estranged by intermarriage, loss of the Ukrainian language, and the adoption of middle-class values and ambitions. The Ukrainian Catholic church has tried to meet the crisis by allowing some parishes to adopt the Gregorian calendar and to use English for parts of the liturgy and sermon, but the Orthodox church has been less flexible. Both churches, still often led by European-born and European-educated clergy, face uncertain futures.

Education and cultural life. The first secular organizations were local reading halls (*chytalni*), *Prosvita societies, and *people's homes (*narodni domy* – community centers or national halls) based on Galician and Bukovynian models. By 1925 there were approximately 250 of these organizations across Canada. Although most had a specific religious or political orientation and were later often absorbed by national organizations, they offered

similar programs: concerts, plays, readings for the illiterate, and popular and scholarly lectures, all combining a lively interest in the homeland with instruction about life in Canada. The people's homes and related institutions peaked in the 1930s and declined after the Second World War.

Ridni shkoly, or part-time Ukrainian schools, existed from the early days of settlement and grew rapidly after the abolition of bilingual public schools. Interwar and post-Second World War immigrants provided new teachers and pupils. In 1958 there were 600 *ridni shkoly* (almost two-thirds in Ukrainian Catholic parishes), with 650 teachers and 18,000 pupils. Today they reach about 9,000 of an estimated 95,000 school-age children. In 1981, 510 teachers taught in 110 *ridni shkoly*, mainly in urban areas where the post-1945 immigration settled. Some cater to children who speak only English. Most operate at the elementary level, teaching Ukrainian language, culture, and history; the major cities also offer more advanced courses (*kursy ukrainoznavstva*). Too few professional teachers and resistance to a common curriculum and central co-ordination have created duplication and inconsistent quality. There have been various efforts to co-ordinate *ridni shkoly*, both within the different organizations and across partisan lines. In 1971 the Ukrainian Canadian Committee formed the Ukrainian National Educational Council of Canada to establish standards, but results have been meager.

Pioneer student residences or bursas emerged in cities and larger towns on the Prairies to provide a Ukrainian environment for rural students completing elementary school. They included the Ukrainska Bursa, which the Independent Greek church opened in Edmonton in 1912; the Adam Kotsko Bursa (1915–17) in Winnipeg; the Metropolitan Sheptytsky Bursa (1917–24) in neighboring St Boniface; the Catholic-supported Shevchenko Institute (1918–22) of the Narodnyi Dim Association in Edmonton; and the Shevchenko Institute (1917–19) in Vegreville, which merged with the Hrushevsky Institute (est 1918) in Edmonton. The latter, now the St John's Institute, and the Mohyla Ukrainian Institute (est 1916) in Saskatoon still exist; along with St Andrew's College (est 1946) in Winnipeg and St Vladimir's Institute (inc 1961) in Toronto, they are affiliated with the Ukrainian Orthodox church.

Early bursa students, determined to raise the people's educational level and national consciousness, were the community's first political and cultural leaders. Today the four Orthodox institutes still work closely with the community, but they are primarily student residences, often with a few non-Ukrainian and non-Orthodox members. St Andrew's College is an affiliate of the University of Manitoba and offers theology and other courses leading to the bachelor of arts degree. In 1981 its Centre for Ukrainian Canadian Studies became an integral part of the university. The Sheptytsky Institute in Saskatoon (est 1934 as the Markiian Shashkevych Bursa) serves primarily as a Ukrainian Catholic student residence at the University of Saskatchewan.

Because of conditions in Ukraine, Ukrainian Canadians have sought public support for their language and culture through a policy of multiculturalism. In the 1950s and 1960s governments on the Prairies accredited Ukrainian as an option, first in high school, then in the elementary grades. In 1971 Edmonton's Ukrainian Professional and Business Club got the Alberta government to amend the

The Ukrainian Cultural Heritage Village near Edmonton, Alberta, August 1980

School Act to permit bilingual instruction. By the fall of 1980 the Ukrainian-English program had reached the junior high school level in Edmonton and the elementary level in several smaller communities. Pressed by Ukrainians, Saskatchewan legislated similar instruction in 1974 and Manitoba in 1978. Ukrainian language and literature became university subjects after 1945 as Slavic studies departments were established on several Canadian campuses; courses in Ukrainian history, political science, and Ukrainians in Canada followed.

Civic and political organizations. The socialists were the first Ukrainian group with a national profile. In 1907 Ukrainian branches of the Socialist Party of Canada were formed, and by 1909 approximately 10 existed in centers where workers had reading clubs. The *Federation of Ukrainian Social Democrats in Canada (FUSD) was launched in Winnipeg in 1909 and the following year affiliated with the Social Democratic Party of Canada. Ukrainian socialists in Edmonton unsuccessfully challenged the FUSD and Winnipeg leadership in 1910–12, organizing the *Federation of Ukrainian Socialists as an autonomous body within the Socialist Party of Canada. In 1914 the FUSD was renamed the *Ukrainian Social Democratic party. By 1917 it had become Marxist, and in September 1918, when it was banned by the Canadian government, it was pro-Bolshevik, with 2,000 members.

War and revolution in Ukraine spurred Ukrainians in Canada to organize on behalf of their countrymen. In 1919 the Ukrainian Canadian Citizens' Committee, led by supporters of the new Ukrainian Greek Orthodox church, and a Catholic counterbody, the Ukrainian National Council, sought to help the new Ukrainian republic at the Paris Peace Conference. The Ukrainian Red Cross in Canada was organized to aid war victims in Ukraine, and in 1920 a Ukrainian Central Committee was established to co-ordinate collections for overseas relief. St Raphael's

Ukrainian Immigrants Welfare Association, which functioned for approximately a decade after its establishment in 1925, assisted interwar immigrants to Canada.

National organizations emerged in the interwar years. The left resurfaced in 1920, incorporating in 1924 as the *Ukrainian Labour-Farmer Temple Association (ULFTA); sections for women (est 1922) and youth (est 1926) followed. The ULFTA was the largest ethnic organization sympathetic to the Communist Party of Canada, and its educational and cultural attractions and economic program enjoyed wide support during the depression. The *Ukrainian Self-Reliance League, organized in 1927 by the Ukrainian Orthodox laity, encompassed the following organizations: the Ukrainian Self-Reliance Association, the *Ukrainian Women's Association of Canada (est 1926), the *Canadian Ukrainian Youth Association (est 1931), and the *Union of Ukrainian Community Centres of Canada, which united local Orthodox people's homes and Prosvita societies. The *Ukrainian Catholic Brotherhood of Canada was established in 1932 for Ukrainian Catholic laymen, followed in 1944 by the *Ukrainian Catholic Women's League and in 1939 by the *Ukrainian Catholic Youth.

Interwar immigrants introduced a number of new organizations. The paramilitary sporting Sitch (renamed the *Canadian Sitch Organization in 1928) was founded in 1924 with official support from the Ukrainian Catholic church. It declined with the appearance of the Ukrainian Catholic Brotherhood and in 1934 was reorganized without church backing as the *United Hetman Organization, a conservative monarchist movement that favored P. Skoropadsky as hetman of Ukraine. After the death of his son, D. Skoropadsky, in 1957 the movement, never too popular, rapidly declined. In 1928 the republican-inclined veterans of the Ukrainian independence struggle formed the *Ukrainian War Veterans' Association

(uwva). In 1932 it provided the base for the *Ukrainian National Federation, which espoused the militant nationalism of the *Organization of Ukrainian Nationalists. The *Ukrainian Women's Organization of Canada, initially associated with the uwva, affiliated with the Ukrainian National Federation in 1934, the same year that the *Ukrainian National Youth Federation was formed. In the late 1920s and early 1930s Ukrainian socialist revolutionary émigrés made a brief alliance with the Ukrainian National Home Association in Winnipeg. The institutions of the second immigration generally fared better in urban centers, where the new arrivals were more closely congregated, than in previously settled rural areas.

During the 1930s there was considerable friction between the Canadian-oriented Ukrainian Catholic Brotherhood and Ukrainian Self-Reliance League and such Ukraine-oriented organizations as the Ukrainian National Federation. In spite of rivalries, Ukrainian-Canadian organizations gave moral and financial assistance to Ukrainian émigré centers in Western Europe and to Ukrainian veterans, war orphans, and numerous causes in Poland and neighboring countries. In the 1930s Polish pacification in Western Ukraine and Stalinist terror in the Soviet Union were widely publicized. The ULFTA, which extolled the Soviet Ukrainian state and especially its cultural flowering in the 1920s, failed to question the purges, forced collectivization, and artificial famine of the 1930s. In 1935 an anti-Soviet faction under D. Lobai broke away and formed the Federation of Ukrainian Worker-Farmer Organizations (later the League of Ukrainian Organizations [1936–40] and then the *Ukrainian Workers' League). The ULFTA, banned in 1940, re-emerged as the Association of Canadian Ukrainians after the Soviet Union became Canada's wartime ally. Its successor, the *Association of United Ukrainian Canadians, was incorporated in 1946; but with the cold war, the anticommunism of the third immigration, and the decreasing social isolation and poverty of Ukrainian Canadians, it has never had the strength of its predecessor.

In 1940, to unite Ukrainian Canadians behind the war effort, the major non-Communist organizations formed an ad hoc body, the *Ukrainian Canadian Committee (ucc), by merging two smaller committees: the Representative Committee of Ukrainian Canadians (comprising the Ukrainian Catholic Brotherhood and the Ukrainian National Federation) and the Ukrainian Central Committee of Canada (comprising the Ukrainian Self-Reliance League, the United Hetman Organization, and the League of Ukrainian Organizations). The ucc encouraged military enlistment and participation in victory-loan campaigns, established the *Ukrainian Canadian Relief Fund to co-operate with the Red Cross in providing aid to Ukrainian refugees, and from 1945 to 1951 financially supported the *Central Ukrainian Relief Bureau in London, England.

The ucc was retained after the war as a permanent co-ordinating superstructure for all non-Communist organizations, which in 1982 number between 25 and 30. Six – the Ukrainian Self-Reliance League, Ukrainian National Federation, *Ukrainian Canadian Professional and Business Federation, Ukrainian Catholic Brotherhood, *Ukrainian Canadian Veterans' Association, and *Canadian League for Ukraine's Liberation – dominate. In 1944 the Ukrainian Canadian Women's Committee was formed to co-ordinate the major national women's organizations

and local unaffiliated groups, traditionally concerned with education, arts and crafts, museums, child-rearing, and language preservation.

The *Ukrainian Canadian Servicemen's Association became the Ukrainian Canadian Veterans' Association in 1945 and was accepted as a founding member of the ucc; its members belong to Ukrainian branches of the Royal Canadian Legion. The Ukrainian Canadian Relief Fund formed the nucleus of the postwar Ukrainian Canadian Social Welfare Service. In 1953 the *Ukrainian Canadian Students' Union (susx) superseded several smaller predecessors, although not all Ukrainian student clubs on university campuses joined. In the 1970s the Ukrainian Canadian Professional and Business Federation, formed in 1965 by several independent clubs, had a high political profile as a successful lobby.

Organizations introduced by the third wave of immigration have attracted few Ukrainian Canadians from the first two immigrations. The Canadian League for Ukraine's Liberation (est 1949), associated with the Bander faction of the Organization of Ukrainian Nationalists, is the largest; tied to it is the *Ukrainian Youth Association of Canada, the largest youth group in Canada today. The Ukrainian Youth Association *Plast (est 1948) is the Ukrainian equivalent of the boy scout-girl guide movement; the *Ukrainian Democratic Youth Association (est 1950) enrolls children of postwar immigrants primarily from central and eastern Ukraine. Youth groups generally transmit the principles of the elders as well as entertain. The Ukrainian National Democratic League was formed in 1952 by participants in the 1917–22 liberation struggle and post-1945 immigrants from central Ukraine. A number of veterans' organizations have appeared among the third wave of immigrants, and since 1964 their members have been able to join the *Ukrainian Canadian Veterans' Association. Two scholarly associations, the *Ukrainian Academy of Arts and Sciences (Winnipeg) and the *Shevchenko Scientific Society (Toronto), were established in 1948 and 1949 respectively. There are also professional organizations for doctors, lawyers, engineers, writers, and journalists, supported mainly by the third immigration.

Three Ukrainian mutual-benefit associations, incorporated under the Canada Insurance Companies Act, provide life insurance, funeral benefits, and other services. The oldest, the *Ukrainian Mutual Benefit Association of St Nicholas (est 1905), is Ukrainian Catholic. The independent Ukrainian Fraternal Society of Canada was formed in 1921. The *Workers' Benevolent Association, organized by the Ukrainian Labour-Farmer Temple Association in 1922, continues to serve supporters of the Association of United Ukrainian Canadians. The *Ukrainian National Association and the *Ukrainian Fraternal Association in the United States also serve Ukrainians in Canada.

The strength of the various national organizations has varied over time and in different parts of the country. Today only 10–15 percent of Ukrainian Canadians belong to the organized community. To attract members, some groups are downplaying their political-nationalist emphasis to display a more cultural and social profile.

The press. The oldest Ukrainian newspaper in Canada is the independent weekly **Kanadiis'kyi farmer*, launched in 1903 with Liberal party support. **Ukrains'kyi holos*, begun in 1910 by the bilingual teachers, was influential in

the birth of the Ukrainian Greek Orthodox church and became the unofficial organ of the Ukrainian Self-Reliance League. In October 1981 the two pioneer newspapers amalgamated.

By the 1920s Ukrainians had published 54 newspapers and periodicals, some lasting a few issues and others for several years. Another 150 appeared between 1921 and 1940, and approximately 350 under the stimulus of the third wave of immigration. Most have been local, non-professional publications; only a few have been large-scale enterprises with a national readership. Winnipeg has traditionally dominated publishing, Toronto and to a lesser extent Edmonton being the main challengers. Saskatoon, Mundare, and Yorkton have been the most significant smaller publishing centers.

The left-wing press began with **Chervonyi prapor* (1907–8), which was succeeded by **Robochyi narod* (1909–18), as the organ of the Federation of Ukrainian Social Democrats and the Ukrainian Social Democratic party. The Federation of Ukrainian Socialists published **Nova hromada* (1911–12). *Ukrains'ki robitnychi visti* (1919–37) was the official organ of the ULFTA until replaced by **Narodna hazeta* (1937–40). The ULFTA also published the newspaper **Farmers'ke zhyttia* (1925–40) and the magazines *Holos robitnytsi* (1923–4), **Robitnytsia* (1924–37), **Svit molodi* (1927–30), and *Boiova molod'* (1930–2). D. Lobai's splinter group sponsored the newspaper **Pravda* (1936–8) and *Vpered* (1938–40), and Ukrainian Trotskyists published the newspaper **Robitnychi visty* (1933–8). Two newspapers founded during the Second World War – **Ukrains'ke zhyttia* (1941–65) and **Ukrains'ke slovo* (1943–65) – served pro-Soviet Ukrainian-Canadian Communists and merged in 1965 to form *Zhyttia i slovo*, published in Toronto. Since 1947 the English-language *Ukrainian Canadian* has been published for Communist youth.

The Roman Catholic hierarchy funded the first Ukrainian Catholic newspaper, *Kanadiis'kyi rusyn* (1911–19); as **Kanadiis'kyi ukrainets'* (1919–31), it served as the principal organ of the Ukrainian Catholic church until 1927. In Edmonton *Zakhidni visty* (1928–31) was purchased by the Ukrainian Catholic church in 1929; in 1932 it became **Ukrains'ki visti*. Other major Ukrainian Catholic weeklies are the Toronto-based **Nasha meta*, begun in 1949 for eastern Canada, and **Postup*, begun in 1959 to serve the archeparchy of Winnipeg. The monthly **Svitlo* (since 1938) and *Beacon* (begun in 1966 as *Life Beacon* to promote the Ukrainian rite) are Basilian publications. The Redemptorists have published the monthly **Holos Spasytelia* since 1933 (formerly *Holos Izbavytelia*, 1923–8) and the theological quarterly **Lohos* since 1950. The Ukrainian Catholic Brotherhood has had two major publications: *Biuletyn' Bratstva ukrainsiv-katolykiv Kanady* (1933–7) and **Buduchnist' natsii* (1938–50). In 1946 *Youth – Iunatstvo* became the national organ of Ukrainian Catholic Youth, and in 1970 the Ukrainian Catholic Women's League began to publish the quarterly *Nasha doroha*.

The second Ukrainian newspaper in Canada was the Presbyterian-Independent Greek **Ranok* (1905–20). It merged with the Methodist *Kanadyiets'* (1912–16) to become **Kandiis'kyi ranok* (1920–61), subsidized for most of its existence by the United Church of Canada; in 1961 it became *Levanhel's'kyi ranok*, the organ of the Ukrainian Evangelical Alliance, which had its headquarters in the United States. In 1940 Ukrainians still within the Presbyterian church began the newspaper **Levanhel's'ka*

pravda, now a magazine published in Toronto by the Ukrainian Evangelical Alliance. One of several Ukrainian Baptist publications, *Khrystians'kyi vistnyk*, has appeared since 1942 as the organ of the Ukrainian Evangelical Baptist Alliance of Canada. The Seventh-Day Adventists, Pentecostals, and Jehovah's Witnesses have also published various Ukrainian-language periodicals.

The principal organ of the Ukrainian Orthodox church is the semimonthly newspaper **Visnyk* (formerly *Pravoslavnyi vistnyk*, 1924–7), published by the consistory since 1928. Other Orthodox publications have included *Ridna tserkva* (1935–40), published by V. Svystun during the religious controversy of the 1930s; *Tserkva i narod* (1949–51); and two theological monthlies edited by Metropolitan Ilarion, **Nasha kul'tura* (1951–3) and **Vira i kul'tura* (1953–67 and 1974–5). In addition to *Ukrains'kyi holos*, the Orthodox laity has the magazine **Promin'*, published monthly since 1960 by the Ukrainian Women's Association of Canada. *Sumkivets'*, the national quarterly of the Canadian Ukrainian Youth Association since 1967, expired in the late 1970s.

The first publication of the nascent hetmanite movement was *Probiti* (1924) followed by *Kanadiis'ka Sich* (1928–30), the official organ of Ukrainian monarchists in Canada. For most of its existence **Ukrains'kyi robitnyk* (1934–56) supported the United Hetman Organization, but its successor, *Vil'ne slovo*, became a nonpartisan weekly. Since the Second World War the monarchist viewpoint has been presented by **Nasha derzhava* (1952–5) and **Bat'kivshchyna* (1955–).

The newspaper **Novyi shliakh* became the organ of the Ukrainian National Federation in 1932. **Holos molodi* (1947–54), *MUN Beams* (1955–66), and *New Perspectives* (since 1971) have been publications of the Ukrainian National Youth Federation; **Zhinochyi svit* has been the monthly magazine of the Ukrainian Women's Organization of Canada since 1950.

By the Second World War the Ukrainian community had also published miscellaneous Russophile, children's, agricultural, home, special-interest, and other newspapers and periodicals. Satire and humor were at their richest in the interwar period, in P. *Krat's socialist *Kadylo* (1913–18), Ya. Maidanyk's **Vuiko* (1917–27) and *Vuiko Shtif* (1927–9), and S. *Doroshchuk's **Tochylo* (1930–47).

The largest newspaper launched by the third wave of immigration is **Homin Ukraïny* (1948–), which soon became the unofficial organ of the Canadian League for Ukraine's Liberation. It also publishes the English-language *Ukrainian Echo. Na varti* (1949–52) and **Krylati* (after 1963) have been the major publications of the Ukrainian Youth Association. **Moloda Ukraïna* has represented Ukrainian Democratic Youth since 1951. There have been three major Plast organs: **Iunak* and **Plastovyi shliakh* in the 1960s, and **Hotuis'*, transferred to Toronto from New York in the early 1970s.

Other émigré organizations, as well as educational, professional, and special-interest groups emerging after the Second World War, have produced many periodicals of national or local interest. They include *Student*, since 1968 the often provocative newspaper of the Ukrainian Canadian Student's Union; *Ukrainian Canadian Review*, published occasionally since 1966 by the Ukrainian Canadian Professional and Business Federation; **My i svit*, an émigré magazine that moved to Toronto from Paris in 1955; and **Novi dni*, a literary magazine published since

1950. The number of English-language periodicals is increasing.

Accurate circulation statistics are rarely available, but figures in 1969 for the six large weeklies were as follows: *Kanadiis'kyi farmer*, 16,000; *Ukrains'kyi holos*, 14,000; *Novyi shliakh*, 12,000; *Vil'ne slovo*, 9,500; *Ukrains'ki visti*, 9,500; and *Homin Ukrainy*, 9,000. Only one-fifth of Ukrainian Canadians read the Ukrainian-language press regularly. A primary function of an immigrant press, to interpret the new homeland, has largely disappeared, leaving the Ukrainian-Canadian press to report developments in Ukraine and in the immigrant community.

Ukrainian publishing houses have brought out a great many Ukrainian-language books, pamphlets, and annual calendar-almanacs, as well as a growing number of titles in English. Major book publishers since 1945 have included *Homin Ukrainy*, *Dobra Knyzhka*, *Yevshan-Zillia*, *Novi Dni*, the *Basilian Press*, and *Novyi Shliakh* in Toronto; the *Redemptorist Press* in Yorkton; *Ukrainian News Publishers* in Edmonton; and *Trident Press*, the *Ukrainian Greek Orthodox church*, the *Ukrainian Academy of Arts and Sciences*, and *Ivan Tyktor Publishers* in Winnipeg. The *Ukrainian Academy of Arts and Sciences*, the *Shevchenko Scientific Society*, and the *Ukrainian Canadian Research Foundation* have published scholarly monographs; since 1978 the *Canadian Institute of Ukrainian Studies* has been the most active academic publisher.

Theater. Amateur drama clubs flourished among the early Ukrainian immigrants, often in conjunction with the local *Prosvita* society, reading room, or people's home. Most performed traditional favorites, but they also staged plays that portrayed the immigrant Canadian experience. Between 1928 and 1934 there were two semiprofessional companies in Winnipeg, the *Prosvita Rusalka Theater* and the *UNF Travelling Stock Theater*. Local Ukrainian communities across Canada supported drama groups as well, but by the Second World War the popularity of these groups was declining.

Professional actors and experienced theater personnel among the third wave of immigrants, including M. Tahaiv, H. Maliieva-Tahaieva, L. Kempe, I. Kurochka-Armashovsky, and S. Telizhyn, revitalized Ukrainian theater, and Toronto replaced Winnipeg as the major center. *Zahrava* is one of the best known Ukrainian theater companies. A new departure in the 1970s saw the small-scale introduction of Ukrainian-Canadian subject matter into English-language plays written for the general stage.

Dance. Folk dances, declining as a form of spontaneous expression among descendants of the early settlers, were raised to an art form by V. Avramenko, whose 1927 Canadian tour gave rise to folk-dance schools in larger centers and to staged, choreographed performances. Instructors of the dance groups formed during the 1930s and 1940s (the majority associated with youth organizations) were largely Avramenko's disciples. Ukrainian professional dancers arriving in the 1950s established dance schools and ensembles in addition to performing themselves. Numerous groups emerged in the 1960s and 1970s, often with organizational ties but increasingly as independent societies. Among them were some large companies with junior and intermediate sections: the *Rusalka Dance Ensemble* (Winnipeg), *Chaika* (Hamilton, Ontario), the *Ukrainian Festival Dance Company* (Toronto), *Kalyna* (Toronto), the *Shumka Dancers* (Edmon-

ton), the *Ukrainian Cheremosh Society* (Edmonton), the *Poltava Dance Ensemble* (Regina), and the *Yevshan Ukrainian Folk Ballet Ensemble* (Saskatoon). Individuals active in instruction and direction since the Second World War include P. Marunczuk, J. Klun, P. Hladun, C. Kuc, T. Luchenko, and N. and L. Pavlychenko.

The spontaneous improvisations of the early immigrants were succeeded by dance repertoires shaped by Avramenko around a few set pieces. In the 1960s dance groups copied the colorful, large-scale, and conformist style of touring Soviet Ukrainian troupes. Some have undertaken serious training in addition to more varied repertoires and innovative choreography. In 1975 Soviet influence on Ukrainian dance in Canada became more direct with the introduction of dance seminars taught by Soviet Ukrainian choreographers; some smaller groups, and those affiliated with the *Association of United Ukrainian Canadians*, have come to draw on them. To date there has been limited experimentation with Ukrainian-Canadian themes.

Ukrainian dance grew during the 1960s and 1970s with national media exposure and government grants to subsidize tours by the larger companies, dance workshops, and seminars. In the 1970s approximately a hundred amateur troupes represented various age groups and skill levels. In addition to major, almost professional productions by large metropolitan companies, there are a number of annual regional festivals where Ukrainian dancers perform regularly: *Canada's National Ukrainian Festival* in Dauphin, Manitoba; the *Pysanka Festival* in Vegreville, Alberta; the *Vesna Festival* in Saskatoon; and *Toronto's multicultural Caravan*.

Music. The folk tradition is a rich source for Ukrainian music in Canada. Choral singing, introduced by the first immigrants, became a national art form with the creation of large, trained choirs after the 1922 Canadian tour of the *Ukrainian National Choir* from Europe under O. Koshyts. Among the leading interwar choirs were the *Boian Chorus* of the *Ukrainian National Home Association*, the *Bandurist Chorus* of the *SS Volodymyr and Olga Cathedral*, and the *Prosvita Choir* in Winnipeg; the choir of the *Ukrainian National Home* in Toronto; and the *Ukrainian National Federation* and *St Sophia* choirs in Montreal. In the 1930s Koshyts taught music history and theory and choral directing in Winnipeg. Conductors of the period included B. Kovalsky, Ya. Kozaruk, Ye. Turula, V. Bohonos, and P. Matsenko. With the third immigration came such professionals as I. Kovaliv, conductor of the *St Nicholas Church choir* and founder of the *Lysenko Musical Institute* in Toronto, N. Horodovenko of the *Ukraine choir* in Montreal, and L. Turkevych of the *Prometei choir* in Toronto. Since the Second World War noted amateur conductors have included W. Klymkiw and V. Kardash. The third immigration stimulated instrumental, solo, and chamber music, particularly in the larger cities where Ukrainian symphony concerts were held. With the major exception of classical Ukrainian musicologist P. Matsenko, the musical community has lacked qualified critics.

The 1930s and 1940s witnessed the appearance of professional musicians of Ukrainian descent raised in Canada, including Winnipeg's D. Grescoe (violinist). Of these Ukrainian musicians who immigrated to Canada, the opera singer M. Holynsky is probably best known. The more accomplished professional instrumentalists,

singers, and composers include G. Fiala (composer), L. and I. Zuk (pianists), Z. Lawryshyn (composer), S. Staryk (violinist), and A. Chornodolska and R. Roslak (classical vocalists). In 1974 Ukrainians sponsored performances by the Edmonton and Winnipeg symphony orchestras that featured Ukrainian composers and artists. Ukrainians in Toronto (1979) and Edmonton (1981) also staged the opera *Kupalo* under V. Kolesnyk, former director of the Kiev State Opera.

Beginning in the 1940s and 1950s a distinct Ukrainian-Canadian popular music began to evolve. Drawing on folk tradition and Canadian elements, it has acquired mass appeal through the long-playing record, radio, and television. In western Canada Ukrainian country music has been represented by such artists as Mickey and Bunny (Sklepowich); other popular singers have included A. Stecheson (Tony the Troubador), W. Koster, J. Karasevich, E. Evanko, and T. Shipowick. In the 1960s and 1970s popular bands like Dumka of Edmonton, the D Drifters Five of Winnipeg, and Rushnychok of Montreal provided another dimension to the new Ukrainian-Canadian music scene. The **tsymbaly*, **bandura*, and mandolin have been played in Canada since the early 1900s, although the popularity of mandolin and bandura choruses has fluctuated and *tsymbaly* have been most common on the Prairies.

Architecture, painting, graphic arts, and sculpture. Church architecture has evolved greatly since the erection of modest prairie pioneer structures by anonymous folk builders. The first architect to have widespread impact was the Oblate priest P. Ruh. Examples of his monumental elaborate style are St Josaphat's Catholic Cathedral in Edmonton and the Ukrainian Catholic church in Cook's Creek, Manitoba. Since the 1960s architect R. Zuk has skillfully integrated traditional Ukrainian and contemporary elements to design modern churches, such as the Holy Eucharist Church in Toronto and the Holy Family Church in Winnipeg, both Ukrainian Catholic. Other architects of Ukrainian churches include Yu. Kodak and V. Deneka.

Such Ukrainian folk arts as Easter egg ornamentation and embroidery remain productive forms of individual artistic expression. In danger of being lost in the early 1940s, they have been revived by Ukrainian Canadians of all generations. Wood carving has been largely confined to iconostasis, ciborium, and altar construction.

Several Canadian artists of Ukrainian descent have drawn on their ethnicity in the Canadian context; others (particularly immigrants) have relied more heavily on the Ukrainian artistic tradition in subject matter, style, or form. In the 1920s cartoonist Ya. Maidanyk satirized the Ukrainian immigrant community and interpreted Canadian society to his readers. W. Kurelek, whose pioneer prairie experience inspired many of his paintings, has been widely recognized by the Canadian artistic community. L. Mol (Molodozhanyan), the international-award-winning sculptor, has done several Ukrainian and Canadian pieces, but his work is wide-ranging. Emigré artists of the 1950s who have continued to produce in Canada include M. Levytsky (painting, graphics), I. Keivan (graphics, art criticism), and R. Koval (portraits, landscapes); other members of the group include L. Palii (graphics) and M. Bidniak, H. Novakivska, I. Bielsky, M. Styranka, O. Telizhyn, and P. Mahdenko (painting). Notable church painters have been Yu. Butsmaniuk and

W. Dobrolige. In 1956 émigré artists established the *Ukrainian Association of Creative Artists in Toronto. Artists of Ukrainian background active in the Canadian artistic community have included M. Kuczer, L. Klimec, R. Kost, P. Shostak, P. Kolesnyk, K. Kulyk, I. Hrytzak, L. Luhovy, K. Mamchure, I. Kordiyuk, I. Osadsa, V. Yurchuk, C. Kudryk, K. Aronetz, P. Diakiw, F. Tymoshenko, and L. Sarafinchan (painting); N. Husar and D. Proch (mixed media); R. Logush (silkscreen prints); A. Lysak (engraving, woodcuts); and E. Drahan-chuk (ceramics).

The first Ukrainian art gallery, My i Svit, was established in Toronto in 1958 by M. Koliankivsky, who later moved his collection to Niagara Falls, Ontario. Also exhibiting the work of Ukrainian-Canadian artists have been the *Ukrainian Cultural and Educational Centre in Winnipeg and the Ukrainian Canadian Art Foundation in Toronto.

Electronic arts (film, radio, television). Ukrainian filmmaking was poorly developed until B. Soluk, L. Orlyhora, and W. Wasik in the Toronto area became involved after the Second World War. Their productions, which have largely romanticized the Ukrainian past or have been anti-Soviet statements, have included *Chornomorti* (Black Sea People, 1952), *Hutsulka Ksenia* (Ksenia, the Hutsul Girl, 1956), *Lvivs'ki katakomby* (Lviv Catacombs, 1954), *Pisnia Mazepy* (Song of Mazepa, 1960), and the more recent productions by Wasik Films, *Zhorstoki svitanky* (Cruel Dawn, 1965), *Nikoly ne zabudu* (I Shall Never Forget, 1969), *Marichka* (1974), and *Zashumila verkhovyna* (Whispering Highlands, 1975). The National Film Board of Canada (NFB) has produced a number of films and shorts about Ukrainian Canadians, ranging from the early documentarylike *Ukrainian Winter Holidays* (1943) and *Ukrainian Dance* (1944) to *Kurelek: The Ukrainian Pioneers* (1974), R. Kroiter's *Strangers at the Door* (1977), H. Spak's *Wood Mountain Poems* (1979, featuring poet A. Suknaski) and H. Kuchmij's *Strongest Man in the World* (1980) and *Laughter in My Soul* (1983). *Reflections of the Past* (1974), an impressionistic view of the pioneer experience in Manitoba by S. Nowytski, was commissioned by the Ukrainian Cultural and Educational Centre in Winnipeg. While films about Ukrainians in Canada have tended to be 'success' oriented or to focus on folkloric and ethnographic elements, some have taken a more critical approach: the Canadian Broadcasting Corporation's (CBC) *Another Smith for Paradise* (1973); the NFB's *Teach Me to Dance* (1978, with script by M. Kostash); and '1927' (1978), a CBC television drama written by G. Ryga.

Although programs with Ukrainian-Canadian content increased on CBC television during the 1970s, the national network refused to introduce regular non-official-language programming. During the 1960s the CBC's musical variety show 'Juliette,' hosted by singer J. Sysak, periodically featured Ukrainian performers. Local Ukrainian television programs emerged in the 1970s with the advent of community cable television and multilingual stations. Private Ukrainian radio broadcasting had preceded both in the 1930s and consisted largely of entertainment programs sponsored by community organizations. Regular programs, sponsored either by Ukrainian groups or by advertisers, multiplied and diversified after the Second World War – most being religious or musical. Multilingual radio stations in the 1970s expanded the scope and potential of Ukrainian-language and Ukrainian-content

programming; CBC radio has also aired Ukrainian music, interviews, and feature stories. Since 1952 CBC radio's Voice of Canada, which became Radio Canada International in 1972, has beamed daily Ukrainian-language broadcasts into Soviet Ukraine.

Literature. Immigrant folk ballads at the turn of the century were the first form of literary expression among Ukrainians in Canada. Composed in the lively *kolomyjka* meter, they expressed nostalgia for the homeland or the hopes and trials of the new world. Among the folkloristic poets were D. Rarahovsky, P. Bozhyk, I. Zbura, S. Palamariuk, and T. Fedyk. Fedyk's collection of poems, *Pisni pro Kanadu i Avstriiu* (Songs about Canada and Austria, Winnipeg 1908), became a best-seller, reaching its sixth edition by 1926 and selling an estimated 50,000 copies. Poetry reflecting the national and social consciousness of its authors also appeared during the first three decades of the 20th century and included works by M. Gowda, P. Krat, V. Kudryk, S. Kovbel, and later writers H. Ewach, I. Danylchuk, and T. Pavlychenko. Ewach, Danylchuk, and Myroslav *Ichniansky (I. Kmeta), all lyricists, also wrote philosophic and esthetic poetry. M. Kumka and S. Doroshchuk were early humorists. Other interwar poets, who frequently chose Ukrainian-Canadian themes, were M. Adamovska, A. Pruska, J. Yasinchuk, T. Kroitor, I. Novosad, S. Savchuk, K. Novosad, P. Chaikivsky, and S. Semchuk. Interwar immigrant and lyricist M. Mandryka produced the first Ukrainian-Canadian émigré poetry of note; his works embraced romantic, philosophic, nostalgic, and patriotic themes.

Approximately 40 Ukrainian poets, writers, and literary scholars came to Canada after the Second World War. Their initiative gave rise to the writers' association *Slovo, which has published nine anthologies of prose and poetry by its members since 1971. Major poets among the third wave of immigrants have included B. Oleksandriv, V. Skorupsky, Y. Slavutych, and O. Zuiievsky. Two major English-language translations of Ukrainian poetry have been completed by C. Andrusyshen and W. Kirkconnell: *The Ukrainian Poets 1189-1962* (1963) and *The Poetical Works of Taras Shevchenko* (1964).

The first three decades of the 20th century also produced a number of playwrights. By 1942 approximately a hundred Ukrainian plays had been written and published in Canada; the majority were drama or melodrama, followed by satire and farce, and were set in Ukraine. Canadian-content plays dealt with the struggle for socio-economic betterment, romance, and social ills. Six dramatists dominated: M. Irchan (A. Babiuk), S. Kovbel, D. Hunkevych, O. Luhov (Ovrutsky-Schwabe), P. Ostapchuk (Pylypenko), and M. Petrivsky.

Early prose about the Ukrainian immigrants in Canada by N. Dmytriv, S. Chernetsky, and others also appeared in the pages of the American daily, *Svoboda*. Among the pioneer prose writers were M. Stechishin and A. Novak, whose realistic stories often portrayed the immigrant experience negatively; V. Kudryk, who wrote romantic works; P. Krat, whose prose dealt with socialist or contemporary Ukrainian political themes; and O. Hykawy, who wrote children's literature.

H. Ewach's novel *Holos zemli* (Voice of the Land, 1937) and O. Luhov's *Bezkhatsnyi* (Homeless, 1946) both depicted the settling of the land. The classic novel of the Ukrainian immigrant pioneer experience in rural western Canada in the early 20th century is the trilogy *Synyi zemli*

(Sons of the Soil, 1939-45) by I. Kiriak; it subsequently appeared in an abridged English translation. The major prose figure to come with the third immigration was U. Samchuk, whose Canadian output has included one novel dealing with Ukrainian-Canadian immigrant adjustment, *Na tverdii zemli* (On Firm Ground, 1967). Others have been I. Bodnarchuk, M. Keivan, and the satirists M. Koliiankivsky and O. Smotrych.

Among the few Ukrainian Canadians to describe the experiences of their group in English have been V. Lysenko (*Yellow Boots*, 1954), M. Lazechko-Haas (*The Street Where I Live*, 1976), and M.A. Seitz (*Shelterbelt*, 1979). Non-Ukrainians have seldom chosen Ukrainian-Canadian themes or major characters; those who have include Ralph Connor (C. Gordon) (*The Foreigner*, 1909), H. Kreisel (*The Broken Globe*, 1966), G. Roy (*Garden in the Wind*, 1977), and M. Atwood (*Life before Man*, 1979). Canadian writers of Ukrainian origin recognized by the Canadian literary establishment include playwright G. Ryga (*The Ecstasy of Rita Joe*, 1967; *Beyond the Crimson Morning*, 1979) and poet A. Suknaski (*Wood Mountain Poems*, 1976; *The Ghosts Call You Poor*, 1978), whose works do not necessarily reflect their ethnicity.

Scholarship. Ukrainian scholarship in Canada was rudimentary and sporadic before the 1950s. The two major figures were M. Mandryka, who founded the short-lived Ukrainian Canadian Association for Scholarly Research and taught at the Ukrainian National Home in Winnipeg, and D. Doroshenko, the Ukrainian historian who lectured at the Hrushevsky Institute in Edmonton in the late 1930s. Anglo-Canadians who published articles on Ukrainian history and literature and translated literary works included poetess F. Livesay, Presbyterian missionaries A. Hunter and P. Cundy, historian G.W. Simpson, and linguist W. Kirkconnell.

The arrival of Ukrainian émigré scholars, the increased interest in Eastern Europe because of the cold war, and the growing number of Ukrainian-Canadian university students facilitated the consolidation of a Ukrainian scholarly community in Canada after 1950. Scholars who researched privately included theologians M. Hermaniuk, V. Laba, and I. Vlasovsky; geographer I. Tesla; archeologist Ya. Pasternak; literary historian L. Biletsky; linguist and church historian I. Ohiienko; and D. Doroshenko, who taught at St Andrew's College. Ukrainian scholars who helped establish Ukrainian studies and Slavic departments at Canadian universities include Canadian-born C. Andrusyshen at the University of Saskatchewan (1945), philologist J.B. Rudnycky at the University of Manitoba (1949), historian V. Kaye-Kysilewsky and C. Bida (language and literature) at the University of Ottawa (1950), G. Luckyj (modern Ukrainian and Russian literature) at the University of Toronto (1954), and linguist O. Starchuk at the University of Alberta (1960). In 1979, 30 percent of approximately 275 professors of Ukrainian origin at Canadian universities were in the social sciences and humanities, the great majority in Slavic languages and literatures, followed by East European history and politics. In 1982 eight universities had programs with Ukrainian language and literature majors leading to a bachelor of arts degree; four offered master's degrees in Ukrainian language and literature; and three (Alberta, Ottawa, and Toronto) offered doctorates. The University of Manitoba offers a BA program in Ukrainian-Canadian heritage studies. In 1982-3, 12 universities

offered 102 half-courses (or their equivalent) in Ukrainian studies to 1,389 students. In the 1970s courses in folklore, history, political science, and methodology for teaching Ukrainian as a second language were introduced.

Membership in the Canadian branches of the Ukrainian Academy of Arts and Sciences, the Shevchenko Scientific Society, and smaller organizations has largely been confined to Ukrainians of the third immigration. Ukrainian scholars have been active in the Eastern Canadian Association of Slavic and East European Specialists and in the Canadian Association of Slavists (est 1954), within which they created a Conference on Ukrainian Studies in 1974. Academics interested in Ukrainian-Canadian studies helped form the Inter-University Committee on Canadian Slavs (est 1964), which became the Canadian Ethnic Studies Association in 1971. Efforts to co-ordinate Ukrainian studies within the university framework resulted in the establishment of the *Canadian Institute of Ukrainian Studies at the University of Alberta in 1976; it conducts and publishes its own research and promotes Ukrainian studies in North America and elsewhere. The *Canadian Foundation for Ukrainian Studies, founded in 1975, is working closely with the institute to publish a multi-volume English-language encyclopedia of Ukraine. In March 1979 an endowed chair of Ukrainian studies (history and political economy) was established at the University of Toronto; it is held by P.R. Magocsi.

Research in Ukrainian studies has been dominated by work in 19th- and early 20th-century literature (G. Luckyj); linguistics (I. Ohijenko), onomastics (J.B. Rudnycky), and lexicography (C. Andrusyshen) have been secondary. Research in history also emphasizes the 19th and early 20th centuries (I.L. Rudnytsky). Ukrainian political scientists have concentrated on Soviet politics, particularly nationalities and religious policies (J. Borys, B. Bociurkiw, P. Potichnyj). Scholarly periodicals include *Ukrainica Canadiana* (1954-72), an annual bibliography published by the Ukrainian Academy of Arts and Sciences; *Zbirnyk materialiv Naukovoho tovarystva im. Shevchenka*, published occasionally by the Shevchenko Scientific Society since 1954; and the semiannual *Journal of Ukrainian Studies*, published by the Canadian Institute of Ukrainian Studies since 1976.

Notable scholars in Ukrainian-Canadian studies have been the professional historians P. Yuzyk, B. Kazymyra, V. Kaye-Kysilewsky, and M. Lupul, and the private scholars M. Marunchak, O. Woycenko, and P. Krawchuk. Early Canadian sociologists examined Ukrainians for the problems they posed for Canadian society, but serious sociological research is more recent and is represented by W. Isajiw. In spite of a wealth of raw material Ukrainian-Canadian folkloric and ethnographic studies are in their infancy, being almost solely dominated by R. Klymasz. The recent surge of interest in ethnic origins has produced several popular and local Ukrainian-Canadian histories. As ethnic studies are accepted as part of Canadian studies proper, the examination of the Ukrainian-Canadian experience becomes increasingly critical and analytical.

Libraries, museums, and archives. The nuclei of Ukrainian libraries, museums, and archives were established early in the 20th century by religious orders and local Prosvita societies, reading rooms, and people's homes. Later, secular and religious organizations set up

their own institutions. Many disappeared or fell into disuse, but since the 1960s interest has been rekindled, particularly in museums, aided by federal and provincial multicultural grants.

The oldest and richest of the libraries, museums, and archives are those of the Basilian fathers in Mundare, Alberta. Both the library and museum (est 1957), with artifacts from Ukraine, Western Europe, and Canada, were largely created by J. Jean. Other surviving pioneer libraries are those at the Redemptorist Mission in Yorkton, the Ukrainian National Home in Toronto, and the Mohyla Ukrainian Institute in Saskatoon. Major library collections established later are those of the Ukrainian Cultural and Educational Centre (est 1944) with almost 40,000 items, the Ukrainian Academy of Arts and Sciences, and St Andrew's College in Winnipeg; the Ukrainian National Federation, Ukrainian People's Home, and St Vladimir Institute in Toronto; the Ukrainian Fraternal Society in Vancouver; and the Ivan Franko Museum (Winnipeg) and Taras Shevchenko Museum (Palermo, Ontario), both pro-Soviet institutions. University-level Ukrainian courses have spurred the development of Ukrainian collections on Canadian campuses; the best library collections are at the universities of Alberta and Toronto, followed by Manitoba, Ottawa, and Saskatchewan.

In the late 1920s and 1930s Ukrainian Canadians seriously began to preserve materials from their past. In 1941 the Ukrainian Women's Association of Canada opened the Ukrainian Arts and Crafts Museum in Saskatoon, now the Ukrainian Museum of Canada with branches in Edmonton, Winnipeg, and Toronto. In Winnipeg the Ukrainian Cultural and Educational Centre houses a major historical and ethnographical museum, with 8,500 artifacts, and an art gallery. The Ukrainian Canadian Archives and Museum of Alberta (est 1972) in Edmonton stresses pioneer artifacts from Alberta. Other predominantly folk arts and crafts museums include those of the Ukrainian Catholic Women's League in Edmonton, Saskatoon, and Toronto. The General M. Sadowsky Museum (originally the Military History Museum in Toronto, now operated by the Ukrainian Academy of Arts and Sciences in Winnipeg) features artifacts and documents from the independence struggle of 1917-21, and the St Volodymyr Ukrainian Catholic Centre (est 1967) in Winnipeg displays religious artifacts. By the late 1970s there were approximately 20 Ukrainian museums, the majority housing arts and crafts, in Canada.

Ukrainian exhibits and artifacts have become permanent features of several provincial government museums as well as of the Canadian Centre for Folk Culture Studies and the National Museum of Man in Ottawa. The most elaborate attempt to preserve and re-create the Ukrainian-Canadian past has been the erection near Edmonton, Alberta, of the Ukrainian Cultural Heritage Village, since 1975 a provincial government project. The display of pioneer artifacts in restored buildings is designed to portray Ukrainian life in rural Alberta before 1930.

Archives have received the least attention from community groups. Religious and secular organizational records, as well as personal papers, often remain in the hands of their owners and are closed to researchers. The best-organized and most accessible archival collections are at the Ukrainian Cultural and Educational Centre, which houses the papers of I. Bobersky, Ye. Konovalets, O.

Koshyts, and others. The Ukrainian Canadian Archives and Museum of Alberta and the Ukrainian Museum of Canada also collect archival materials, as do many other organizations that operate museums and libraries, but archival work is often secondary. Canadian provincial archives and the Public Archives of Canada (through the National Ethnic Archives) in Ottawa have begun to collect private papers (A. Zhuk, D. Dontsov, V. Kaye), photographs, organizational records, and sound recordings pertaining to Ukrainian Canadians.

Assimilation. Increasing intermarriage, the decline in traditional religion, low organizational membership, and Ukrainian-language loss are affecting the size and strength of the Ukrainian-Canadian community. As late as 1941, 92.1 percent of Ukrainian Canadians reported Ukrainian as their mother tongue (94.3 percent in the Prairie Provinces, 85.2 percent in Ontario, 88.0 percent in Quebec, 71.4 percent in British Columbia). Language loss accelerated over the next 30 years, however, and in 1981 only 55.1 percent of single-origin Ukrainian Canadians reported Ukrainian as their mother tongue. Ukrainians in Manitoba, Saskatchewan, Ontario, and Quebec were the least assimilated linguistically, with 58.9, 58.1, 60.8, and 73.5 percent respectively being native Ukrainian speakers; those in Alberta (49.8 percent) and British Columbia (42.3 percent) were the most assimilated. Almost all Canadians of Ukrainian origin who first learned a language other than Ukrainian have been assimilated into the English linguistic community. Accelerating assimilation since the Second World War, however, has been partially countered from the 1960s by growing interest among third- and fourth-generation Ukrainian Canadians in their heritage, particularly in the visual folk arts.

Canadian Foundation for Ukrainian Studies. The Canadian Foundation for Ukrainian Studies was incorporated as the Canadian Institute of Ukrainian Studies Foundation in 1975 by the Ukrainian Canadian Professional and Business Federation; it was renamed in 1979. The foundation assists the development of Ukrainian studies in Canada by financing research, publications, scholarships, conferences, and other scholarly activities. Its main project is the publication of the four-volume English-language alphabetical *Encyclopedia of Ukraine*, prepared jointly by the University of Toronto project office of the Canadian Institute of Ukrainian Studies and the Shevchenko Scientific Society in Sarcelles, France. S. Frolick, W. Tarnopolsky, O. Rudzik, P. Savaryn, and J. Stashuk have served as presidents of the foundation, which is administered by a national board of directors.

Canadian Institute of Ukrainian Studies (CIUS). The Canadian Institute of Ukrainian Studies became a project of the Ukrainian Canadian Professional and Business Federation when the national executive was in Edmonton (1973–5). In July 1976 it was established at the University of Alberta in Edmonton as a publicly funded national institute with a project office at the University of Toronto. The CIUS promotes Ukrainian and Ukrainian-Canadian studies through research grants, publications, scholarships, seminars, and conferences; co-ordinates scholarly activity; and encourages Ukrainian-content programs at Canadian universities and English-Ukrainian bilingual classes in Canadian elementary schools. The CIUS houses the only Ukrainian language resource center in the Western world. Its main project is the four-volume English-language alphabetical *Encyclopedia of Ukraine*, prepared jointly with the Shevchenko Scientific Society in Sarcelles, France. The first director of CIUS has been M. Lupul; B. Bociurkiw, G. Luckyj, and I.L. Rudnytsky have served as associate directors.

Canadian League for Ukraine's Liberation (Liga vyzvolennia Ukrainy). A political organization formed in 1949 by the Bandera faction of the OUN. It has become the largest organization introduced into Canada by the third immigration. Among its founders were R. Malashchuk, V.

Production of canned goods in the Ukrainian SSR (in millions of standard cans)

Makar, M. Kravtsiv, M. Sosnovsky, V. Borodach, and P. Bashuk. The league supports the *Anti-Bolshevik Bloc of Nations. The Toronto weekly **Homin Ukraïny* is the organization's unofficial organ. In 1956 the league joined the Ukrainian Canadian Committee. In 1978 the league had 15 buildings and 48 branches, 34 of them in Ontario. Its presidents have been R. Malashchuk, V. Bezkhlibnyk, and T. Buiniak. A women's association and the Ukrainian Youth Association of Canada maintain close ties with the league.

Canadian Sitch Organization (CSO). A conservative political organization founded in 1924 in Toronto by V. Bosa as the Ukrainian Sporting Sitch Association of Canada, renamed the Canadian Sitch Organization in 1928. The CSO was close to the American Hetmanite organization based in Chicago. It was officially supported by the Ukrainian Catholic church and from 1928 to 1930 was served by the newspaper *Kanadiis'ka Sich*. Its most important members were V. Bosa, D. Elcheshen, M. Hetman, J. Esaiw, A. Zaharychuk, V. Dyky, and N. Danylchenko. In 1934 the CSO's 50 branches were reorganized, without official church support, as the *United Hetman Organization.

Canadian Ukrainian Youth Association (Soiuz ukrainskoi molodi Kanady). Since 1931 the Ukrainian Orthodox youth section of the *Ukrainian Self-Reliance League, with branches across Canada. H. Tyzyk and P. Yavorsky were pioneer organizers, and I. Danylchuk was an early leader. *Sumkiyets'* was its national quarterly from 1967 to the mid-1970s. Since the early 1970s it has conducted an annual cultural immersion camp, Selo, in various parts of Canada.

Candela (Icon Lamp). Church journal published monthly in Rumanian and Ukrainian in Chernivtsi from 1882 to 1916. The Ukrainian section was edited by S. Vorobkevych, T. Tyminsky, O. Manastyrsky, and Ye. Semaka. The journal published the minutes of meetings of the Bukovynian Orthodox Consistory.

Canning industry. A branch of the food industry that preserves fruit, vegetable, meat, seafood, and dairy

products primarily through hermetic sealing. Many of its enterprises service the *fruit-and-vegetable processing industry specifically, with facilities for drying, salting, pickling, and freezing vegetables and fruit. Ukraine provides a rich source of raw materials for the canning industry. Although it covers only 2.7 percent of the USSR's territory, Ukraine contains 31.2 percent of the land devoted to orchards and vineyards in the USSR (producing 20 percent of the USSR crop) and 30 percent of the land devoted to vegetable cultivation (producing 25.2 percent of the crop). Ukraine also produces 23.6 percent of the meat and 23.8 percent of the milk in the USSR. The canning industry developed in Ukraine in the second half of the 19th century, mostly in the south. In 1913 there were 25 semidomestic canning enterprises, which produced annually 16–18 million standard cans of vegetables and 15 million cans of meat, accounting for 40 percent of the canning production of the Russian Empire. The canning industry was concentrated in Kherson gubernia (which produced two-thirds of Ukraine's canned goods), Kiev gubernia, and Tavriia gubernia. The largest canning centers were Odessa and Symferopil, which together produced 90 percent of the empire's canned vegetables and fruit. After the revolution the small canning enterprises were abolished, the larger ones were modernized several times, and new plants were built in Kherson, Odessa, Cherkasy, Melitopil, and other places during the prewar five-year plans. By 1940 the number of canning plants had grown to 30, and they produced 339.2 million standard cans (30.3 percent of USSR production). After the war the canning industry reached its prewar level of production only in the 1950s. Besides reconstructing old plants and building new ones, the state set up new branches of the canning industry to produce canned milk, baby foods, and dietary foods, vitamins, etc. In 1980 3,488.3 million standard cans (24.7 percent of USSR production) were produced in the Ukrainian SSR. The canning industry accounts for 5 percent of the production of Ukraine's food industry (for more detail see the accompanying table). Most canning firms come under the control of the Ministry of the Food Industry, but some come under the Ministry of Local Industry or the Ministry of Trade or belong to the system of consumer co-operatives, state farms, or collective farms. The capacity of the canning

factories is inadequate, and, therefore, a large quantity of fruit and vegetables is lost because of spoilage in the fields and collection depots.

The canning factories are located near the sources of raw materials, and their distribution is, therefore, uneven. Almost 60 percent of the canneries are located in large cities. Fruit and vegetable canneries are usually found in Kherson, Odessa, and Crimea oblasts. Meat canneries are concentrated in Poltava, Vinnytsia, and Cherkasy oblasts. Fish canneries are located in the port cities of the Black and Azov seas (Kherson, Odessa, Kerch, Bilhorod-Dnistrovskiy), on the Dnieper River (in Kiev, Dnipropetrovske, and Zaporizhia), or on the Danube River (in Vylkove, Izmail, and Kiliia). The largest canning complex is in Kherson (built in 1966, superseding a complex built in 1932), followed by the complexes in Odessa (built in 1919), Nizhen (1927), Talne (1965), Izmail (1954), Zhdanov, Melitopol, Symferopil, and Mykolaiv.

The canning industry in the Kuban and Stavropol regions is well developed and accounts for 8.2 percent of USSR production. Vegetable and fruit canneries are located in Krasnodar, Sloviansk, Armavir, Georgievsk, Izobilnyi, and Cherkessk. Fish canneries are found in Novorosiiske on the Black Sea coast and in Yeiske and Oziv on the coast of the Sea of Azov. Research for the canning industry is done by the Ukrainian Scientific Research Institute of the Canning Industry in Odessa.

Canon (from the Greek *ὁ κανών* [rule]; also called *kryloshany* or capitular). A higher priestly office in an eparchy. Often canons are members of a bishop's council and have important functions and privileges in solemn worship in a cathedral or church. There are active canons (at the bishop's residence) and titular ones without the rights and duties of canons. In the Ukrainian Catholic church the title of canon was introduced under the influence of the Roman Catholic church at the beginning of the 19th century.

The title is unknown in the Ukrainian Orthodox church, but the corresponding title *krylos* was introduced very early. Holders of the title (eg, the famous *krylos* of Halych) are known as *kryloshany*.

In recent history there have been very learned and distinguished canons in the Ukrainian Catholic church who have had considerable influence on the public life of the church and the nation. Candidates for the episcopate have commonly been elected from among their number.

Canon law (Greek: *κανών* [norm]). The set of laws regulating the internal order of the church. The oldest source of canon law in the postapostolic era is *Διδχήτων δώδεκα ἀποστόλων* (The Doctrine of the Twelve Apostles), dating from the 1st century AD. The body of church laws accepted in the Byzantine church (and state) was called the *Nomocanon*. One canonical collection, compiled by John the Scholastic, consisted of 50 titles (the first edition, AD 550, contained 85 canons of the Apostles, the canons of 10 synods, and 68 canons of St Basil; the second edition, AD 565, contained more canons of St Basil as well as those of other church fathers). The most famous *Nomocanon*, ca AD 883, consisted of 14 titles and is attributed to the patriarch Photius.

The Slavic translation of the *Nomocanon* (of 50 titles)

is called *Ustiuzhska Kormcha* or the *Nomocanon* of St Methodius (13th century); the translation of the *Nomocanon* (of 14 titles) is entitled *Efremovska Kormcha* (11th century). Another Slavic source is the *Kormchaia kniga* (The Rudder Book), composed by the Serbian archbishop Sava (ca 1199–1207) at Mt Athos. In 1260 it was transferred from Serbia through Bulgaria to Ukraine, where, in 1274, it was accepted as the official source for church law at the synod of Vladimir-on-the-Kliazma under the metropolitan of Kiev, Cyril III. *Kormchaia kniga* consisted of different Byzantine sources of canon law, later supplemented with some sources of Ukrainian origin, such as **Ruskaia Pravda* (Rus' Justice). Some other Ukrainian sources of canon law are *Mirylo pravednoie* (The Righteous Standard, 14th century, dealing with judicial procedure), the synopsis of canons of 1420, the *Nomocanon* of 226 chapters (several editions: Kiev 1620, 1624, 1629; Lviv 1646), and *Zinar* (a penitential collection from the 12th–14th century). These collections form the basis of the canon law of the Orthodox church, including the Ukrainian Orthodox church.

At the beginning of the 16th century a collection of canon laws known as *Corpus Iuris Canonici* was prepared in the Roman Catholic church. This collection expanded constantly but was never approved. The official codification of Catholic canon law began in 1904, and the new code, entitled *Codex Iuris Canonici* (Code of Canon Law), came into effect in 1918. The code is binding on the Roman Catholic church but affects the Eastern church only in certain relevant sections. Outside this code there is room for special laws adopted by the individual church provinces.

To compile a similar code of canon law for the Eastern church, in 1929 Pope Pius XI appointed a commission of cardinals, which consisted of two subcommissions: one to collect the sources of Eastern canon law, and the other to prepare a code of laws of the Eastern church. The consultant from the Ukrainian Catholic church to the codification subcommission was Rev D. Holovetsky, and to the editorial subcommission, Rev Y. Zaiachkivsky. The editorial subcommission planned to unify the laws of the scattered Eastern churches, to orientalize these laws (eg, a number of Eastern legal terms were introduced), and to reconcile the Eastern code with the code of canon law of the Western church. The code of canon law of the Eastern church was prepared in full, but in 1957 Pope Pius XII published only a few of its parts, including those relating to Eastern rites.

After the Second Vatican Council a new period of codification of canon law was begun. A pontifical commission for the revision of canon law for Eastern churches was established and included as the Ukrainian representatives Metropolitan M. Hermaniuk and Bishop M. Marusyn (now the commission's vice-president), as well as several other Ukrainians in the role of consultants.

Cantata. A composite vocal-instrumental work for choir, soloists, and orchestra, usually of a solemn or lyric-epic character. In Ukrainian music the model for the cantata was set by M. Lysenko with pieces such as 'Rejoice, Unwatered Field,' 'The Rapids Pound,' and 'In Eternal Memory of Kotliarevsky.' Other composers who wrote cantatas were K. Stetsenko ('On Sunday, Holy Sunday'), S. Liudkevych ('Caucasus,' 1902–13, 'Testament,' 1934), L. Revutsky ('The Kerchief,' 1923), M. Verykivsky ('October Cantata,' 1936), B. Liatoshytsky ('Ceremonial Cantata,' 1939), I. Shamo ('Duma about Three Winds'), A. Shtoharenko ('My Ukraine,' 1943), A. Rudnytsky ('Moses'), L. Kolodub ('Glory to the Fatherland'), R. Simovych ('Flower of Happiness and Freedom'), M. Skoryk ('Spring,' 'A Person'), A. Kos-Anatolsky ('It Passed Long Ago,' 1961), Ya. Tsehliar ('To the Immortal Kobzar'), V. Kyreiko ('In Memory of M.L. Kropyvnytsky'), and L. Dychko ('Red Guelder Rose'). The cantata became particularly popular in Soviet music as a medium for the glorification of the socialist epoch.

Cantus. A song of religious content that appeared in Ukraine at the turn of the 17th century and from there spread to Russia. The original structure of the cantus was a simple one based on three voices, frequently with parallel passages in the two higher voices; in time it became more complex. The influence of choral polyphonic music, the so-called *partesnyi spiv* (part singing) is evident in the old cantus. By the 18th century the cantus form took on more of a folk character, reflecting popular customs and domestic themes, including love lyrics, humorous songs, songs of greeting, and panegyrics. Cantus songs were composed and sung in the vernacular by music teachers, students of the Kievan Mohyla Academy, wandering cantors, lirnyks, and others. The cantus was an indispensable part of the *vertyp* puppet theater and other performances in brotherhood schools and the Kievan Mohyla Academy. Among authors of the cantus were H. Skovoroda, D. Tuptalo, and V. Trediakovsky. In recent times M. Leontovych, O. Koshyts, M. Haivoronsky, and others have arranged cantus. The influence of the cantus is detectable in the works of D. Bortniansky and others. Examples of lira cantus are presented in the collection *Lira ta її motyvy* (The Lira and Its Motifs, Kiev 1903).

Capercaillie (*Tetrao urogallus*; Ukrainian: *hlushets*, *hotur*, or *hlukhar zvychainyi*). A species of game bird of the grouse family (Tetraonidae), Galliformes order. The male capercaillie grows up to 110 cm in length and 6 kg in weight. In Ukraine this bird now lives only in the northern forest belt and the Carpathian Mountains; in the second half of the 18th century it could still be found in the forest-steppe between the Dnieper and the Don rivers. It is valued for its feathers and tasty meat; hence it has been intensely hunted.

Capital investment. Monetary resources used for constructing, expanding, and reconstructing plants, residential housing, schools, hospitals, and other buildings, communication and transport facilities, mining research and development, and stocks of goods.

Before the revolution most of the capital investment in Ukraine was made by private individuals and companies, such as joint-stock companies, manufacturers, merchants, and financiers. Foreign capital played an important role in Ukraine's industry. The government's involvement was relatively small; it partly financed railroad construction, schools, the postal network, and certain government projects. Under the Soviet regime capital investment has been strictly controlled by the state. Depending on the source of financing, capital investments are either centralized or non-centralized. The magnitude of centralized capital investment is determined by the state (see *Economic planning) and confirmed by legislation, and the capital is financed mostly out of the state's *budget, revenue, and amortization funds. Non-centralized capital investments are also determined by the state's economic plan or the plans of individual enterprises and are financed out of the national budget, the budgets of enterprises, collective farms, and other co-operative organizations, and the savings of the population; the latter is particularly true of the capital for private and co-operative housing construction.

The main sources of capital received and redistributed by the state budget of the USSR are: the turnover tax (see *Taxation), which is included in the price of consumer goods, as well as other taxes whose importance has decreased considerably in recent times; the profits of enterprises; *state loans; and the obligatory deliveries of farm products to the state at prices often below cost. The capital is financed through a bank network for long-term credit operations (see *Banking system). In accordance with the basic thrust of Soviet economic policy a large part of the capital is invested in industrial development, particularly in heavy industry; as a result, the needs of the population are neglected. This is reflected in the low standard of living.

In 1918–80 the total capital investment in the Ukrainian SSR was 334,780 million rubles or about 16 percent of the USSR investment. As can be seen from the accompanying table, the relative magnitude of investment in Ukraine has been declining steadily, particularly since the Eighth Five-Year Plan, and is out of proportion to Ukraine's population (18.8 percent of the USSR population) and to the *national income of Ukraine's economy. The highest percentage of the capital is invested in construction and equipment – 206.8 billion rubles or 62 percent of all capital investment in 1918–80. This percentage fell significantly in the Tenth Five-Year Plan to 53 percent (49.6 billion rubles), and in this period only 158 large industrial enterprises were built in Ukraine. In general, the highest proportion of investment capital has been directed into industry (36.9 percent in the Ninth Five-Year Plan, 38.6 percent in the Tenth). The proportion of capital invested in agriculture has increased (21.1 percent and 21.5 percent). Investment in housing has declined (13.4 percent and 13.1 percent, compared to 17.1 percent in the Seventh Five-Year Plan and 15.2 percent in the Eighth). The decrease has resulted in a significant decline in the standard of living and a chronic shortage of living space in Ukraine, particularly in the larger cities. The most important indicator of a rational capital investment policy is expenditure on fixed productive assets. In 1978, 120.1 billion rubles were spent for this purpose in the USSR economy, and 18.5 billion or 15.4 percent were spent in Ukraine's economy (73.3 billion or 61 percent were spent

Capital investment in the national economy of the Ukrainian SSR (relative prices, in millions of rubles)

	Total capital investment	Percentage Ukraine in USSR	Industry	Farming	Transport and communications	Housing construction
1918-28 (excepting last quarter of 1928)	834	18.9	139	20	81	559
First Five-Year Plan, 1929-32 and last quarter of 1928	1,577	17.9	693	137	289	261
Second Five-Year Plan, 1933-7	3,260	16.5	1,370	355	575	419
Third Five-Year Plan, 1938-mid-1941	2,959	14.5	1,043	293	447	484
1 July 1941-1 January 1946	2,482	12.1	1,117	142	381	492
Fourth Five-Year Plan, 1946-50	9,170	19.3	4,031	935	889	1,890
Fifth Five-Year Plan, 1951-5	14,838	16.5	6,170	2,304	1,195	2,903
Sixth Five-Year Plan, 1956-60	28,530	16.9	10,908	4,495	2,403	6,475
Seventh Five-Year Plan, 1961-5	41,355	16.9	15,837	6,985	4,832	7,074
Eighth Five-Year Plan, 1966-70	57,374	16.4	21,497	10,454	6,152	8,713
Ninth Five-Year Plan, 1971-5	78,518	15.9	28,989	16,593	8,740	10,896
Tenth Five-Year Plan, 1976-80	93,747	15.1	35,737	20,140	10,524	12,262

in the Russian SFSR's economy, although its population in 1978 was 42.6 percent of that of USSR). In 1970 the respective figure for the Russian SFSR was 58.6 percent and for Ukraine 16.6 percent; in 1975 it was 60.4 percent and 15.9 percent. Thus, basic investment in Ukraine is steadily declining, while in the Russian economy it is rising. This favoritism towards Russia at a considerable loss to Ukraine is a concrete example of the Soviet government's colonial approach to the distribution of investment capital.

Capital punishment. There was no punishment by death in the prestate period of Ukraine or in the customary law codified in **Ruskaia Pravda* and practiced in Kievan Rus' prior to Prince Volodymyr the Great. Volodymyr's introduction of capital punishment (along with Christianity and under pressure of his bishops) was short-lived. During the subsequent Lithuanian-Ruthenian period (14th-15th century) the death penalty was introduced into the criminal law of the country, mostly under the influence of the strict West European penal systems. Under the *Lithuanian Statutes (1529, 1566, 1588) the death penalty (state beheadings) became one of the principal forms of public punishment. In the Hetman state (17th-18th century) capital punishment existed for crimes against the head of state, society, religion, and morals, as well as for several crimes against private interests. Beheading and hanging, the latter being considered most shameful, were the common forms of execution. At the Zaporozhian Sich, where military order and discipline were of primary importance, the death

penalty was the punishment for violation of the Cossack order, treason, homicide, and homosexuality. Capital punishment was also in force on Ukrainian territory under Polish (later Austrian) and Russian domination in the 18th-20th century, as provided by the criminal laws of the respective countries.

During the period of Ukrainian statehood (1917-20) no attempt was made by the Ukrainian government to pass new criminal laws. However, the Constitution of the Ukrainian National Republic of 29 April 1918 contained, in article 14, the provision that 'no citizen of the Ukrainian National Republic nor any person on its territory shall be punished by death.' This was the only constitution of all the successor states of the former Russian and Austrian empires to abolish the death penalty.

In Polish-occupied Ukraine (1919-39) the criminal code of 1932 limited the use of capital punishment to crimes of high treason and assassination of the president. However, court-martial law, which was in force at various periods during this time, permitted the use of the death penalty without the above limitations, and, in fact, capital punishment was invoked against members of the Ukrainian resistance.

In the Ukrainian SSR capital punishment is firmly established, although theoretically it contradicts the Marxist understanding of crime. The Ukrainian criminal code (of 28 December 1960), based on the 'Principles of Criminal Legislation' of 1958, calls the death penalty 'an exceptional punitive measure [in use temporarily] until its complete abolition.' Three times in the past (1917, 1920, 1947) the death penalty was formally suspended to show 'genuine socialist humanism,' but each time it was re-introduced after a short time, allegedly as a necessary temporary measure. The 'Principles' of 1958 provided for capital punishment (by shooting) for treason, espionage, diversion, acts of terrorism, banditry, and premeditated murder; but very soon special decrees of the Supreme Soviet extended that penalty to several other crimes, such as theft of state property, currency speculation, and counterfeiting. The recent version of the criminal code mentions the death penalty 15 times for offenses by civilians and, additionally, 14 times for offenses by the military.

Capitalism. In the current sense of the term capitalism is a socioeconomic order with the following properties: (1) the means of production are owned mostly by private individuals or companies, which use them primarily for the owner's profit; (2) industrial production is concentrated mostly in large enterprises (factories, plants, etc), and the production process is to a large extent mechanized; (3) the division of labor, the money economy, and exchange by trade on an open market are highly developed; and (4) a large class of workers exists, and the urban population expands at the expense of the rural population.

In Russian-ruled Ukraine the capitalist system existed until 1917; in other parts of Ukraine it persisted until 1945. According to Soviet theory the period of capitalism in Russian-ruled Ukraine began with the abolition of serfdom in 1861. However, the origins of capitalism can already be detected at the end of the 17th and the beginning of the 18th century when industrial production of market goods began to develop on the large landed estates ('trade capitalism,' according to M. Yavorsky and V. Sukhyno-Khomenko). The *sugar industry can be considered the first true form of capitalist production in Ukraine. It originated in the 1820s and reached significant proportions by the middle of the century, employing almost half of the wage-earning industrial laborers. The development of the industry was marked by the growth in size of sugar refineries: in the early 1870s refineries with over 500 workers employed about 30 percent of the workers in the industry; by the beginning of the 20th century such refineries employed up to 60 percent of the workers. At first the owners of the refineries were large landowners; later they were joined by members of other social classes, mostly the merchant class, including Jews or enterprising individuals of Ukrainian peasant origin.

The development of *metallurgy and the *coal industry in the 1870s-1880s had a decisive impact on Ukraine's economy and on the growth of capitalism. In 1867 the Welshman J. Hughes formed the New Russia Anthracite, Iron, and Rail Production Company in Yuzivka (now Donetsk), and in 1871 the first steel and rail mill began to operate, producing a half million centners of rail a year. In 1880 a French mining company was established in the Kryvyi Rih ore region, and it built a pig-iron foundry. Subsequently, other large coal and iron-ore mining and smelting firms were formed. In 1887 the Russian Briansk Metallurgical Company built the Alexandrian plant in Katerynoslav (now Dnipropetrovske). In 1889 the South Dnieper mill was built with Belgian capital. In 1891 French capital financed the Donets Iron and Steel Company, which built the Druzhkivka mill. In 1895 the Russian-Belgian Company constructed the Petrovsky mill. In 1896 the Nykopol-Mariupol Mining and Metallurgical Company was established with American capital to mine manganese ore. A French joint-stock company known as the General Pig Iron, Iron, and Steel Production Company built the Makiivka mill in 1898. Between 1872 and 1900 in the anthracite industry alone 20 large joint-stock companies were formed, among them the Rutchenkove, Katerynoslav, and Nikitin companies. The growth in the mining of anthracite and iron ore and in the production of pig iron and steel is presented in the accompanying table (in millions of centners).

The size of the metallurgical works can be inferred from their production of pig iron in 1913 (in millions of cent-

Anthracite and iron-ore mining and iron and steel production, 1880-1913 (in million centners)

Year	Anthracite	Iron ore	Pig iron	Steel
1880	14	0.4	0.2	0.3
1890	30	3.8	2.2	1.4
1900	110	33	15	12
1913	252	69	31	23

ners): Petrovsky, 3.5; Yuzivka, 2.8; Donetsk-Yurivsky, 2.5; Makiivka, 2.3; Kramatorske, 1.7. Heavy industry in Ukraine developed mostly on the basis of foreign capital: foreign companies owned 80 percent of the blast furnaces, 90 percent of the coke-chemical firms, 80 percent of the ore mines in the Kryvyi Rih region, and 70 percent of the manganese mining. In relation to the output of the whole Russian Empire, Ukraine in 1913 produced 70.2 percent of the anthracite, 72.3 percent of the iron ore, 67.1 percent of the pig iron, and 57.2 percent of the iron and steel.

Of the other branches of heavy industry in Ukraine, machine building developed the most. This industry had a large market in the agricultural regions of southern Ukraine, where agriculture was being mechanized. In 1912 Ukraine produced 55 percent of the Russian Empire's farm machinery. The Elworthy factory in Yelysavethrad (now Kirovohrad) had the highest production and the largest number of employees in the empire. Transportation machine-building was also being developed in Ukraine: steam locomotives in Kharkiv (from 1896) and in Luhanske (Hartmann's factory, 1876); railway coaches in Katerynoslav, Kiev, and Mykolaiv; ships in Odessa, Kiev, and Mykolaiv. Prior to 1914, 41.3 percent of the empire's steam locomotives were built in Ukraine. Machine-building and metalworking plants were also established in Kramatorske, Horlivka, Yuzivka, Kadiivka, Kostiantynivka, and Luhanske. In general, however, manufacturing lagged far behind mining. There was hardly any machine-tool industry (in 1913 Ukraine produced only 3.7 percent of the empire's output), electric-machine building (first plant in 1914), or machine-equipment production in Ukraine. Except for the Luhanske munitions factory, established in 1795, and the Mykolaiv shipyard there was no arms industry in Ukraine.

Besides the sugar industry, liquor distilling, which was almost the oldest industry in Ukraine and accounted for 21 percent of the distilleries in the Russian Empire, and flour milling, which accounted for 32.3 percent of the empire's milling firms and 24.9 percent of the flour, developed rapidly in Ukraine. However, there was virtually no textile industry, and Ukraine was the main market for the textile manufacturers in the Russian and Polish industrial regions.

As in other capitalist countries, *cartels were formed in Ukraine at the end of the 19th and the beginning of the 20th century. In 1887 the *Syndicate of Sugar Manufacturers was organized. In 1902 the *Prodamet metallurgical products cartel was formed, encompassing 30 large metallurgical plants, of which 16 were in the Donbas. In 1904 a coal cartel, *Produgol, was organized, and in 1908 the *Prodarud ore cartel began to operate. This process of monopolization was concurrent with the growing concentration in certain manufacturing industries and the merging of industrial capital with bank capital (see

*Banking system). The cartels were more detrimental than salutary to Ukraine's economy, for they could not prevent *economic crises and contributed to the decline in the pace of industrial development.

Onesidedness was the peculiar feature of capitalism in Ukraine. Most of the developing industries produced raw materials: the mining industry before 1914 produced 70 percent of the empire's output, while the manufacturing industries accounted for only about 15 percent of the output. Owing to the colonial nature of capitalism in Ukraine, Ukraine exported raw materials and semimanufactured goods to the central regions of the empire and was compelled to buy back manufactured products. This state of affairs was primarily the result of a deliberate policy of the tsarist government, which promoted industrial development in the St Petersburg and Moscow regions. The government located munitions factories in the central regions, placed a low duty on anthracite imported from England to St Petersburg, and discriminated among firms in placing its orders or in providing credits. As a consequence of this centralist policy, almost all the head offices of the industrial joint-stock companies, banks, and insurance companies were located in St Petersburg or Moscow. This too had an influence on the distribution of industry. It must be admitted, however, that the government's tariff and railway policies promoted industrial development throughout the empire, including Ukraine. At the end of the 1870s and during the 1880s and 1890s the duties on pig iron, iron, and the products made of these metals rose sharply. Manufacturers of iron rails received government premiums. Companies obtaining concessions to build railroads had to promise to buy a certain proportion of the rails from manufacturers in the empire. A high duty on sugar and premiums on sugar exports stimulated the growth of the sugar industry.

In agriculture the development of capitalism, which was directly related to the emancipation of the serfs, was marked by the differentiation of land holdings; that is, by an increase in the number of small land holdings at the same time as the ruling class of wealthy landholders grew, by the emergence of a landless rural proletariat, and by the transfer of over one-third of the landowners' estates to the peasantry (see *Land tenure system). Ukraine's agrarian countryside remained relatively overpopulated, and there was a rise in peasant *emigration.

In 1913 Ukraine's economy was 48.2 percent industrial and 51.8 percent agricultural. Of the total production of market goods, industry produced 63.5 percent and agriculture 36.5 percent; 53.5 percent of industrial production consisted of industrial machines, machine tools, and equipment; 46.5 percent consisted of consumer goods. Between 1900 and 1913 the number of industrial workers doubled. In 1913 the urban population constituted 19.3 percent of the total population, while in 1851 it had been only 10 percent.

In Western Ukraine capitalism developed somewhat differently than in Russian-ruled Ukraine, because the emancipation of the serfs took place earlier (in 1848) and because natural conditions did not facilitate the growth of heavy industry. However, the Drohobych region oil fields gave rise to a petroleum industry, of which 85 percent was controlled by foreign capital, and the huge Carpathian forests favored the growth of the lumber and woodworking industries. In the food industry flour

milling and sugar refining, and to a minor extent liquor distilling, developed. In general, Galicia lagged far behind the other parts of the Austro-Hungarian Empire in industrial development. Its industrial firms were small, and industrial workers were few. The skilled urban trades were more developed and were mostly in Jewish hands. Agrarian overpopulation was more acute there than in Russian-ruled Ukraine and led to the emigration of many peasants to North and South America. Apart from the successful growth of the *co-operative movement in Galicia, there were no dramatic changes in the situation in the 1920s and 1930s. The main branch of industry – petroleum production – steadily shrank: 2,080,000 t were produced in 1909 compared to 370,000 t in 1938.

As capitalism developed in Ukraine, the number and importance of the workers, and particularly of the urban proletariat, increased (see *Working class). By the end of the 19th century there were close to three million industrial workers. They were recruited from among the impoverished peasants and urban artisans who left private workshops that could not compete with factories. At the same time the *trade union movement took shape, and confrontation between the capitalists and the workers in the form of *strikes and pressure on political parties and the government for economic and progressive social reform emerged.

Ye. Glovinsky

Captain (*sotnyk*). Military officer in charge of a *company. In the UNR Army and the Ukrainian Galician Army this was the highest rank among the junior officers.

Cardinal. A high ecclesiastical office in the Catholic church, second only to that of pope; a member of the Sacred College of Cardinals. New cardinals are appointed by the pope in a secret consistory of cardinals. From the late 16th century the number of cardinals was limited to 70, but in the 1960s the limit was raised by Pope John XXIII to over 100. The College of Cardinals has, since the 11th century, elected the new pope in conclave; it also serves as the advisory body on matters of church administration and assists the pope. Cardinals are in charge of the various sections of the Curia, one of which is the *Congregation for Eastern Churches, which oversees the Ukrainian Catholic church and other Eastern Catholic churches. The following Ukrainian church leaders have been appointed cardinals: Metropolitan Isidore of Kiev, the metropolitans of Halych M. Levytsky and S. Sembratovych, and, in 1965, Archbishop Major Y. Slipy of Lviv.

Carmelites (Friars of Our Lady of Mount Carmel). A Roman Catholic ascetic order. The order was founded in Palestine in 1156 and transferred in about 1238 to Europe, where it became a mendicant order. In the 17th and 18th century there were Carmelite monasteries in many Ukrainian towns, including Bar, Berdychiv, Drohobych, Kamianets, and Peremyshl. In the first half of the 17th century the Carmelites exercised some influence on the Basilian order, which was manifested in the reforms of Metropolitan V. Rutsky.

Carnival (*miasnytsi*). The period between Epiphany and Lent traditionally devoted to revelry and dancing. Normally, weddings take place during this period. The carnival period ended in Ukraine with the *kolodka*, an ancient feast for older women, who treated each other with dumplings (*varenyky*). Later it became a feast for everyone (known in Western Ukraine as *zapusty*) to celebrate the end of the carnival season. The name *kolodka* derives from the word for a small log or stick; this was tied to a young man or girl who did not marry during the carnival.

Carols. The custom of caroling is highly developed and widely practiced in Ukraine. There are two kinds of carols: *koliadky* and *shchedrivky*. The *koliadky* are festive, ritual songs sung at Christmastime, while the *shchedrivky* are sung on New Year's Eve. Both types of carol have retained traces of their ancient origin, particularly to the cult of the sun and the ancestors, of nature worship, and of the faith in the magical power of words. The *koliadky* and *shchedrivky* depict scenes from farm life and express the desire for good harvests, prosperity, good fortune, and health. They are remarkable for their wealth of subject matter and motifs, which vary with the person who is addressed and praised in each carol. There are carols dedicated to the master of the house, the mistress of the house, the young bachelor, the girl, the daughter-in-

law, the son-in-law, and so on. The carols dedicated to the master deal with farm work: they glorify prosperity, the happiness of a well-off farmer, and his well-being. The songs for the young bachelor depict his strength, courage, and good looks. The carols for girls praise their unmatched beauty, wisdom, deep love, diligence, and respect for parents. The descriptions of prosperity, beauty, and wisdom are magical incantations intended to secure the described effects. The most important aspect of carols is their wish-fulfilling power.

By their age and content the carols can be divided into several groups: (1) the oldest carols, which deal with the creation of the universe in a pre-Christian, dualistic, mythological framework; (2) a later stratum describing life in the Princely era; (3) carols about daily life; and (4) recent *koliadky* and *shchedrivky*, which have a biblical theme—Christ's birth, the shepherds, the three wise men, Herod. The Kievan Mohyla Academy was famous for its new carols, which were composed in the 17th–18th century. Some carols were also composed by the monks of the *Pochaiv monastery in the 18th century. The process of Christianization embraced the whole content of the *koliadky* and *shchedrivky*. In some carols the ancient agricultural themes are fused with more recent religious themes, as in 'V poli, poli pluzhok ore ...' (In the Field the Plow Is Plowing).

As poetry *koliadky* and *shchedrivky* are remarkable for their artistic quality. They are distinguished by their joyful spirit, festive air, and melodious tunes. Their poetic and musical quality has attracted the attention of the best poets, writers, playwrights, and composers, such as M. Lysenko, M. Leontovych, D. Sichynsky, O. Nyzhankivsky, and particularly K. Stetsenko, who arranged over 50 carols for choirs. The most popular and best-known carols are 'Oi, vydyt' Boh' (O, God Does See), 'Boh predvichnyi' (The Eternal God), 'Nova radist' stala' (A New Joy Has Come), 'Dobryi vechir tobi, pane-hospodariu' (Good Evening to You, Master), 'V poli, poli pluzhok ore' (In the Field the Plow Is Plowing), 'Nebo i zemlia' (Heaven and Earth), and 'U Yerusalyimi rano zadzvonyly' (In Jerusalem the Bells Rang in the Morning). M. Leontovych adapted a simple melody of an ancient Ukrainian *shchedrivka* to create a miniature for choir entitled 'Shchedryk' (Carol of the Bells). This song has now become part of the American repertoire of carols.

Carp (*Cyprinus carpio*; Ukrainian: *korop*). A valuable commercial freshwater fish, up to 1 m in length and 20 kg in weight (usually 1–3 kg). The carp is common in the rivers

CARPATHIAN MOUNTAINS IN PROFILE

of Ukraine, particularly in the lower Dniester and the Danube. It is also raised in ponds.

Carpathia Co-operative Credit Union. Formed in Winnipeg in 1940, the second-largest Ukrainian credit union in Canada in 1978 with 6,656 members and assets of over \$29 million. In 1956 it began publishing the bulletin *Samodopomoha*.

Carpathian Alliance (*Karpatskyi soiuз*). A civic-political organization of immigrants from Transcarpathia founded in 1948 in New York. The alliance has branches in the major cities of the United States. Groups of members of the alliance exist also in Western Europe and Australia. In 1951–2 the organization published the newspaper *Karpats'ka zornia*, of which 18 issues appeared, and books about Transcarpathia, mostly memoirs. The alliance has a relief fund. The following individuals have served as presidents of the alliance: I. Cheresnia, V. Shandor, I. Kardashynets, V. Komarynsky, and Yu. Kostiuk. Yu. Revai and A. Shtefan have been its honorary presidents.

Carpathian Mountains (*Karpaty*). Folded, young mountains of medium elevation, stretching in an arc about 1,500 km long (with a chord of almost 500 km) from the city of Bratislava in the northwest to the Iron Gate on the Danube in the southeast and covering an area of about 200,000 sq km. The Carpathians are part of the Alpine mountain system and border on the old Czech, Polish, and Ukrainian massifs and Dobrudja, being separated from them by a band of young depressions – along the Morava and Vistula rivers, the Sian and Dniester lowlands, the Subcarpathian Depression, and the Wallachian Depression. The Pannonian Basin, which cuts north into the mountains along the Tysa and Bodrog rivers and their tributaries, occupies the central part of the arc.

Orography. The Carpathian Mountains consist of three geologically distinct bands: the outer flysch, the central crystalline, and the inner volcanic. Only the flysch band is continuous, connecting the Carpathians into one whole. The crystalline band is interrupted in the middle for a distance of over 200 km. Thus, the Carpathians are divided into three parts: the Western Carpathians and the Southern Carpathians, both of which consist of three bands, and the Eastern Carpathians, which are only 100–120 km in width and consist only of the flysch and volcanic bands. The Western Carpathians are settled mostly by Slovaks and Poles (with Czechs, Hungarians, and Ukrainians at the fringes), the Eastern Carpathians are settled by Ukrainians, and the Southern Carpathians, by Rumanians. Sometimes the Carpathians are divided into two parts only: the Western and Eastern Carpathians are called the Northern or Slavic Carpathians, as distinguished from the Southern or Rumanian Carpathians.

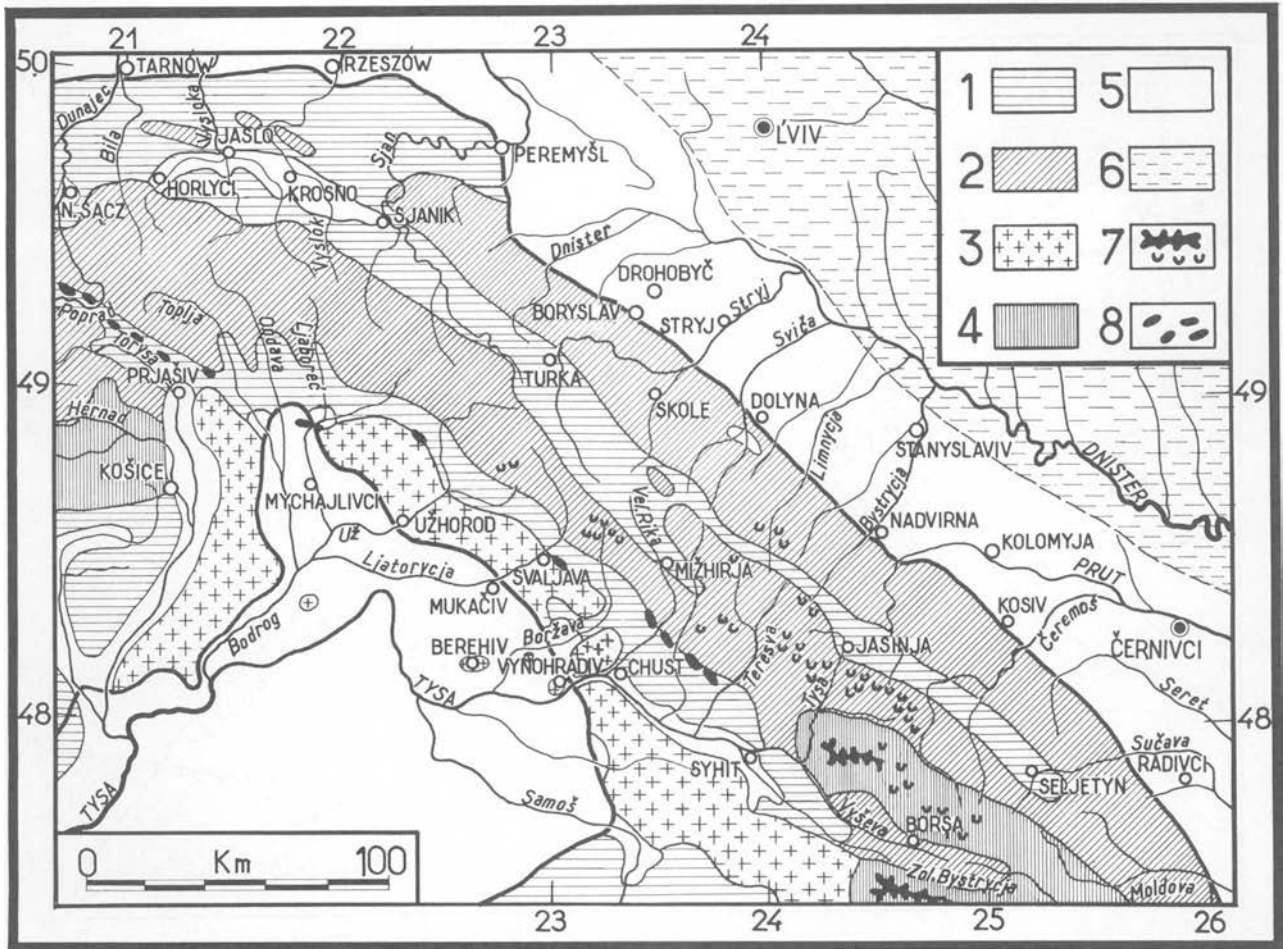

The Eastern Carpathians extend from the Biafa River, Tylych Pass, and Topl'a River in the west to the Tysa

River, Prislop Pass, and Suceava River in the southeast. Sometimes the western limit of the Eastern Carpathians is defined by the Oslava, Laborec, and Sian rivers. In Soviet texts the Moldavian Carpathians are included in the Eastern Carpathians, which extend as far south as the Predeal Pass. The Eastern Carpathians (excluding the *Low Beskyd) are known as the Forested or Ukrainian Carpathians. They consist of the flysch band (the *Beskyds) and the volcanic band (the *Volcanic Ukrainian Carpathians). In the southeast the Beskyds meet the crystalline *Maramureş–Bukovynian Upland. With the Low Beskyd the Eastern Carpathians cover an area of almost 40,000 sq km and, without it, an area of 32,000 sq km. Ukrainian ethnic territory in the Carpathians up to 1946 covered 24,000 sq km and had a population of 1.7 million. Today 22,500 sq km of the Carpathians, with a population of approximately 1.2 million, belong to the Ukrainian SSR.

The Carpathian Mountains, particularly Transcarpathia, are important to Ukraine from a geopolitical viewpoint. The Carpathian watershed defined for many centuries the political border of Ukraine, but not the ethnic border, since the mountain passes allowed Ukrainians to penetrate the southern slopes. Thus, the Carpathian region, along with the adjacent edge of the Transcarpathian Lowland, connects Ukraine with Hungary and Slovakia, which lie in the Pannonian Basin (for more detail see *Transcarpathia).

Geological structure. The Ukrainian Carpathian Mountains lie on the border of the East European Platform and the Mediterranean Geosynclinal Province. Their geological structure is the result of successive periods of sedimentation, orogenesis, and denudation. The basic pattern in the structure of the Ukrainian Carpathians is their distinct division into longitudinal structural-lithological zones. The mountains were principally formed in the Tertiary period and, therefore, Cretaceous and Lower Tertiary rock formations are most widespread in the Carpathians. The older Paleozoic and Precambrian rocks are quite rare and are found mostly in the Rakhiv Massif and the *Chyvychnyn Mountains, which are part of the Maramureş-Bukovynian Massif. Upper Cretaceous and Paleogene deposits appear in dislocated layers of flysch – interbedded sandstones, marls, and schists. Late Tertiary strata are common in Subcarpathia and Transcarpathia. Quarternary formations such as glacial deposits, alluvial deposits, and loess in the depressions are widespread.

The tectonic structure of the Ukrainian Carpathian Mountains is complex and is still being investigated by geologists. Generally, however, the structure is characterized by zonation and nappes. The Carpathian Mountains were formed during the Alpine orogeny in the Tertiary period. Prior to that, from the end of the Paleozoic to the Cretaceous period, mountains of the Hercynian orogeny (late Paleozoic era), known as the Protocarpathians, existed in their place. In the Creta-

ceous and Lower Tertiary periods the Protocarpathians were destroyed and were replaced by geosynclinal depressions filled with seawaters. The Rakhiv Massif and isolated cliffs (klippen) are remnants of the ancient mountains. In the geosynclines flysch was deposited to a depth of 5,000–7,000 m. In the Upper Tertiary period the present mountains rose at the site of the geosynclinal depressions. Their formation was accompanied by violent volcanic effusions. The contours of the Carpathians were formed in the first half of the Miocene epoch. In the middle of the period the Carpathians underwent partial peneplanation, which was interrupted by uplifting followed by peneplanation again. The present relief of the mountains is the result of the two peneplanations, which produced large, flat surfaces and terraces at several altitudes. During the Quarternary period there was some glaciation of the Carpathians in the Riss and Würm ages. Transverse dislocations, which cut across the structural zones and frequently provide a path for rivers, play an important role in the geological structure of the Ukrainian Carpathians.

Zonation is characteristic of the tectonic structure of the Ukrainian Carpathians. They consist of four longitudinal structural zones, which extend from the northwest to the southeast: (1) the outer or overthrust fold zone, 40 km wide, built of Cretaceous and Paleogene flysch (mostly sandstone) formed into anticlinal folds that were broken and thrust towards the southeast (at the edge of the Carpathians they often cover the Miocene strata of Subcarpathia); (2) the central synclinal zone, 30–40 km wide: at its surface intensely folded Upper Oligocene strata of soft, sand-clay sediment are most common; (3) the core of the inner anticlinal zone, consisting primarily of crystalline rock formations – crystalline schists, gneiss, quartzite, and crystalline limestones – and, to a lesser extent, of Triassic and Jurassic strata – limestones, sandstones, porphyrites, and conglomerates – which emerge to the surface only in the Maramureş-Bukovynian Upland; however, this basic core is often overthrust with flysch strata from the Cretaceous and Lower Paleogene periods, folded, frequently dissected, and in places

pushed towards the north; (4) a zone of volcanic deposits – trachytes, andesites, rhyolites, and tuffs – separated from the rest of the Carpathians by the *Inner Carpathian Valley and the *Maramureş Basin, which are covered by horizontal layers from the Miocene period.

Landscape. The Ukrainian Carpathians are typical mountains of medium height with rock of low resistance. Gentle, broad, and little-dissected ridges and parallel valleys contrast with the deeply incised (up to 1,000 m) transverse valleys with steep slopes that are the result of the relief's rejuvenation. Only the highest parts of the Carpathians – mainly the *Hutsul Alps and *Chornohora

– display a high-mountain landscape owing to past glaciation. Rock fields appear only here and, more markedly, in the *Gorgany Mountains, but even the highest peaks of the Carpathians are covered with clays and continuous vegetation.

Despite a certain generally perceived uniformity of landscape, the Ukrainian Carpathians can be divided into a number of regions, based on different geological structure and altitude. These tend to form longitudinal belts stretching from the northwest to the southeast as is typical of all the Carpathians. The belts comprise (1) the high, outer flysch belt, separated by (2) the Middle-

EASTERN CARPATHIANS

This page intentionally left blank

Carpathian Depression from (3) the inner, high flysch belt – the *Polonynian Beskyd, which is in turn separated by (4) the Inner Carpathian Valley from (5) the Volcanic Ukrainian Carpathians. In the southeast the Polonynian Beskyd borders on (6) the Maramureş-Bukovynian Upland. The landscape varies within each belt.

The outer high belt of the Beskyds, which corresponds to the outer anticline, rises steeply to 300–400 m above Subcarpathia. The lower parts of this belt have a well-developed lattice structure with a trellised drainage pattern: the longitudinal ridges, with steeper northeastern slopes and gentler southwestern slopes, are built of limestones and are separated by parallel wide valleys carved out of soft marls and clay. In the higher parts ridges forming a feathered pattern with transverse valleys predominate; clearly defined peaks, rock fields, and weak traces of glaciation are evident. Several groups can easily be distinguished in the outer Beskyds: (1) the lowest range – the *Middle Beskyd – which lies between the bend of the Sian River and the Turka-Boryslav line; (2) the *High Beskyd, which rises above the Middle Beskyd by 300–400 m and extends to the east of it as far as the Mizunka River (its peaks are Parashka, 1,271 m, and Magura, 1,368 m); (3) the Gorgany – the highest (Syvulia Peak, 1836 m) and most continuous part of the Outer Beskyds, which stretches to the Prut River; and (4) the lower *Hutsul Beskyd, sometimes known as the Pokutia-Bukovynian Carpathians (Hordyi Peak, 1,478 m), which stretches to the Suceava River in the east.

The Middle-Carpathian Depression is a basin of gently contoured, low-mountain topography with an elevation 200–600 m below that of the two high sandstone zones. The main Carpathian watershed runs along this belt on a line from the source of the Sian to the source of the Prut, as do the main mountain passes such as Uzhok (889 m), Veretskyi (839 m), and Yablonytskyi (931 m). The central part of the depression (25–30 km wide) borders on the Great Beskyd and is the most developed part.

The Polonynian Beskyd is the highest and most continuous part of the Eastern Carpathians. In the past it was the main watershed. Its broad and gentle tops are covered with meadows, the remnants of former peneplains, and provide a sharp contrast with the narrow valleys, which are almost 1,200 m deep. Postglacial cirques, some of them filled by lakes, appear on the mountain slopes. West of the Uzh River the ridges of the Polonynian Beskyd form a latticelike pattern and in a few places rise above 1,200 m. Farther east it consists of the high massifs Rivna (1,482 m), Borzhava (1,679 m), Krasna (1,568 m), Svydivets (1,883 m), and Hoverlia (2,061 m). Even farther to the east the Polonynian Beskyd narrows and splits into several longitudinal, broad ridges, which press closely to the Maramureş-Bukovynian Mountains. In eastern Bukovyna the flysch zone shrinks to 40 km in width, and the division between the flysch belts disappears, forming the East Bukovynian Beskyd.

The Maramureş-Bukovynian Upland is more picturesque than other parts of the Ukrainian Carpathians because of its varied geological structure, its deeply incised rivers, and landscapes resulting from former glaciation. This applies particularly to the Hutsul Alps (1,961 m). The lower Chyvchyn Mountains, which are built mostly of crystalline schists, and the Bukovynian part of the range have gentler outlines, which are not much different from those of flysch mountains.

Lake Synevyr in the Carpathian Mountains

The Inner Carpathian Valley (400–500 m deep and 1–6 km wide) runs between the Polonynian Beskyd and the Volcanic Carpathians. Its absolute elevation is 150–300 m; it can, however, reach 450 m in passes. Formed out of volcanic strata, the valley has gentle outlines and contains a series of terraces. Small longitudinal streams flow along it into the right-bank tributaries of the Tysa River. To the east the valley widens into the broad (30 km) Maramureş Basin, which lies flat along the Tysa River and becomes hilly farther from the river. The basin has an elevation of 200–600 m and is covered with thick layers from the Miocene period, with saline strata.

The last belt of the Ukrainian Carpathians consists of the Volcanic Ukrainian Carpathians, which rise steeply for 600–900 m above the Tysa Lowland and attain an elevation of 900–1,100 m. These mountains consist mainly of effusion centers joined by lava streams. The landscape is defined by massive, broad ridges, picturesque volcanic rings (the remains of craters), and cones. The transverse valleys, containing the tributaries of the Tysa, divide the Volcanic Carpathians into the following massifs: Vyhorlat, Makovytsia, Syniak, Velykyi Dil, Tupyi, and Hutyn mountains. A narrow band of gentle foothills stretches below this range.

West of the Liaborets, Oslava, and Sian rivers the Carpathians consist only of a low flysch belt, 30–40 km wide, on both sides of the main watershed. This is the Low Beskyd. It is preceded by low foothills 300–400 m in elevation, which broaden out in the north and encompass the large, flat Gorlice-Sianik Basin (a continuation of the Mid-Carpathian Depression). The highest peaks of the Low Beskyd hardly reach 1,000 m, and the passes lie at an elevation of 500–700 m (the Tylych [688 m], Duklia [502 m], and Lupkiv [651 m] passes).

Climate. The climate of the Carpathians is determined by the climate of the adjacent plateaus, the height of the mountains, and the relief. Seasonal variations (which also affect the Danube Lowland) in barometric pressure from the winter maximum to the summer minimum have an important influence. The mountains protect southern Transcarpathia from the flow of cold air from the north. However, warm air masses from the Mediterranean Sea and the Atlantic Ocean bring cyclones and heavy rainfall to the southern and western slopes. The July temperature varies with altitude from 20°C at the southern edge of the Carpathians and 18°C in the north to 6° on the highest peaks. The variation is smaller in winter – from –3° to

-10°C. The number of days with temperatures above 0°C fluctuates between 290 and 100 per year, and the number with temperatures above 10°C varies from 180 days in the south to 80–100 days at the upper limits of grain cultivation and to 50 days in the lower meadow belt. Annual precipitation varies from 600 to 1,600 mm and is usually 900–1,200 mm, depending on altitude and local conditions, such as the position of the slopes. The basins of the upper Teresva and Tereblia rivers receive the largest amount of precipitation, while the intermontane depressions are relatively dry. The southern slopes get 100–200 mm more precipitation than do the northern slopes at the same altitude. Most of the precipitation occurs in June and July; the least, in January and February. In general, almost two-thirds of the precipitation comes in the warm half of the year; hence summers are quite cloudy, and winters are sunny.

Generally, the summer temperature rises towards the southeast by 1–2°C as the climate becomes more continental and the mountains more massive. Like all mountain climates, the climate of the Carpathians is subject to many local variations: the weather of the northern slopes differs from that of the southern slopes, gentle Foehn winds visit some parts, and temperature inversions occur in wintertime when the air is warmer on the slopes than in the valleys, which are filled with heavier, cold air.

Rivers. The Carpathians are rich in rivers. The Dniester with its numerous tributaries (the Stryi, Svicha, Limnytsia, Bystrytsia, etc), the tributaries of the Danube-Tysa with its tributaries (the Teresva, Tereblia, Rika, Borzhava, Bodrog and its tributaries [the Liatorytsia, Uzh, Laborec], etc), the Prut (with the Cheremosh), and the Seret-Vistula's tributaries the Sian (with the Wistok), and the Wistoka, and others all originate in the mountains. The rivers are fed mostly by snow and rain. Flash floods are common in the spring and summer.

Soils. In the Carpathians the soils are determined by the type of parental mountain rock, elevation, and vegetation cover. The brown podzol forest soils are the most common, but they are not homogeneous. They vary from areas covered with beech woods to areas of fir-tree forests and are different still in deforested, farming areas (which have light-brown forest soils). The brown soils are acidic and of low fertility; hence, lime and mineral fertilizers are required for their improvement. The peat podzolic soils on the southern slopes of the Volcanic Carpathians are more fertile. Various meadow soils are found in the valleys. Above the timberline there are mountain podzol soils, mountain meadow soils, and peat soils, often containing madny rock fragments.

Flora. The vegetation of the Ukrainian Carpathians belongs to the Central European province. Except for that of the Low Beskyd, the flora here is much richer than in the Western Carpathians and includes many Balkan and Transylvanian species and a number of endemic forms. At one time all the Carpathians were covered with forest and topped with meadows and rock fields. Even today about one-half of the region is forested. All the mountain vegetation belts are represented in the Ukrainian Carpathians.

The lowest belt, up to an altitude of 500–600 m, consists of deciduous and mixed forests, which contain mostly oak and some hornbeam, maple, linden, elm, birch, and pine. In Transcarpathia, up to an altitude of 400 m, there are also some warm-climate species such as the chestnut and

walnut. This belt has been modified by humans more than any other, and today the forests form only small islands among the farmlands.

Above 500–600 m lies the belt of mountain forests. In Transcarpathia (apart from its northeastern and eastern parts) and in the upper Sian Basin beech forests occur exclusively; in other parts of the Ukrainian Carpathians mixed and coniferous forests predominate. Some oak is found at the lower levels of the beech forests, as well as maple, birch, and ash. The undergrowth includes elder, mezzereum, raspberry, currant, honeysuckle, and willow. Grass cover is rare. The upper limit of the beech forests is rather well defined, at 1,100–1,200 m. Above 1,000 m the beech trees are somewhat shorter.

Other mountain forests in the Carpathians form two belts: a lower, mixed belt, which reaches an altitude of 900–1,200 m and consists mostly of beech, spruce, and fir, with an undergrowth similar to that of the beech forests; and a higher, spruce belt, with an admixture of fir, pine, larch, cembra pine, and ash. The grasses are poorly developed. The upper limit of the forests is 1,450–1,600 m. This zone is a transitional belt, about 100 m wide, consisting of individual trees, brush, and meadow.

Above the forests runs a belt of highland pastures – meadows and brush with subalpine (up to 1,750–1,850 m) and alpine vegetation. The typical plants of the subalpine belt are mugho pine, green alder, rhododendron (*Rhododendron Kotschyi*), and dwarf juniper (*Juniperus nana*), which often form a large, hardly penetrable brush, particularly in the Gorgany and the Maramureş-Bukovynian Mountains.

Grasslands cover all the higher ridges except the Gorgany. In the beech-forest belt they completely cover the ridges above 1,100–1,200 m, while in the pine-forest belt their lower limit is 100–150 m higher and they are partly taken over by brush, mainly by dwarf pines. In the Gorgany meadows are rare. By lowering the upper boundary of the forests, humans have increased the area of grasslands, but excessive pasturing has reduced the variety of plant forms. The mountain meadows are overgrown with sedge (*Carex curvula*, *C. rupestris*), hard rush (*Juncus trifidus*), sheep fescue (*Festuca ovina*), and smallreed (*Calamagrostis*). Low-quality grasses such as matgrass (*Nardus stricta*) and tufted hairgrass (*Deschampsia caespitosa*) predominate to an altitude of 1,500–1,600 m, while such valuable grasses as common meadow grass (*Poa pratensis*) and white dutch clover (*Trifolium repens*) are rare. In general, the variety of plants growing in the meadows increases towards the east. The variety is greatest on chalky soils.

Fauna. The vertical zoning of the vegetation in the Carpathians is only feebly reflected in the distribution of animals. Some high-mountain species are restricted to the subalpine zone; for example, the alpine snow vole and the alpine shrew. Some taiga species – the capercaillie, hazel grouse, woodcock, black grouse, rare lynx, and others – live only in the mountain forest zone. Most of the fauna consists of species typical of the Central European forests, and they can be found in the higher and the lower regions of the Carpathians; these include the brown bear and wildcat (both rare now), red deer, roe deer, wolf, fox, forest marten, ermine, Carpathian squirrel, dormouse, mole, and bat. Among the common birds are the berkut eagle, hawk, owl, woodcock, black stork, rock pupit, and white-throated blackbird. Many of the birds visit the

The village of Kosiv in the Carpathian Mountains

Carpathians only in summer. There are quite a few species of amphibians and reptiles, particularly on the southern slopes, including the Carpathian newt, western bullfrog, spotted salamander, and smooth snake. Mink and otter reach the high regions by means of streams. The mountain streams contain trout, grayling, and Balkan barbel (*Barbus meridionalis*). The huchen (*Hucho hucho*) is endemic to the Cheremosh and Tysa rivers.

The *Carpathian Nature Reserve has been established to protect the original flora and fauna. Some parts of the Carpathians were protected earlier and formed reserves.

Population. All of the eastern Carpathians are Ukrainian ethnic territory except for the Low Beskyd, where, until 1946, Ukrainians occupied only a narrow strip on both sides of the watershed known as the Lemko region. Thereafter the Lemkos who lived in Poland were resettled, and only the Lemkos in Czechoslovakia were left in their homeland. The ethnic boundaries between the Ukrainians and other nationalities in the Carpathians are fairly distinct, except in the case of the Slovaks. The mountains did not attract foreigners; hence, non-Ukrainians are few. Until the beginning of the 1940s the Jews were the largest minority (10 percent), while the Slovaks, Hungarians, Rumanians, Czechs, Poles, and Germans together accounted for 12 percent of the population. Today less than 10 percent of the population is non-Ukrainian (see also *Bukovyna, *Galicia, *Transcarpathia, and the *Prešov region).

The Ukrainian highlanders are divided into several ethnographic groups: the Lemkos, in the Low Beskyd and the western part of the Middle Beskyd (almost all of them were resettled by the Polish authorities); the Boikos, up to the Solotvynska Bystrytsia River in the east; and the Hutsuls in the east. The central part of Transcarpathia is settled by the *Zahorians* (tramontanes) or *Dolynians* (lowlanders), who are related to the Boikos and speak a central Transcarpathian dialect. There are two forms of settlement and farming in the Carpathians, and they appear to be independent of the natural environment. The first is the Hutsul form; the second is practiced by all other highlanders. The Lemkos, Boikos, and *Zahorians* are basically agricultural people. They cleared the forests to obtain arable land and built their elongated villages in the valleys. Their settlements are at low altitudes. The basic occupation of the Hutsuls is animal husbandry. Their land is used for pastures and hayfields. Their homesteads are attached to their fields; hence, their settlements are scattered and extend to considerable altitudes.

The distribution of the population and farm lots depends mostly on natural conditions. The lower, gently sloped areas have been deforested and settled. The higher and steeper areas remain forested or covered with meadows. The longitudinal valleys and lower strips are settled; the higher strips are not. Transverse valleys are important communication links but are not heavily populated. The narrow edges on both sides of the Carpathians, the Inner Carpathian Valley, and the Maramureş Basin are densely populated. The Mid-Carpathian Depression, except for its central, elevated part; the Middle Beskyd, with its densely populated valleys and longitudinal forested ridges; and the Low Beskyd, with islands of forest (one-third of the area) and unpopulated land, are regions of moderate population density. About one-half of the area of the Ukrainian Carpathians is unpopulated. A large unsettled area extends from the Zolota Bystrytsia River in the southeast to the Opir and Velyka rivers in the northwest. The Volcanic Carpathians are also unsettled. (For more detail see the accompanying table and map, both based on 1920–30 data, which, except for those for the Lemko region, are still valid.)

Almost 30 percent of the population lives in towns that are located at the intersection of longitudinal and transverse highways. The largest towns are at the foot of mountain ranges or at some distance from them (Subcarpathia) and in the Maramureş Basin. There are only small towns in the mountains, the largest of them being Sianik and Turka. These towns are industrial, trade, and administration centers.

The upper boundary of permanent settlement coincides usually with the upper limit of grain growing. Both rise as the mountains become more massive, but they also depend on the form of settlement and farming. On the southern slopes of the Carpathians, where corn is grown, the boundary dips below 600 m. It rises above 1,000 m only in the Hutsul region.

Seasonal settlements exist at much higher altitudes. These are used only in the summer, when sheep and cattle are pastured in the remote mountain meadows. Herding is not practiced in the Low Beskyd, Middle Beskyd, or the Volcanic Carpathians. Only non-dairy cattle and horses are pastured in the meadows of the High Beskyd and Rivna. Herding is widely practiced in the Polonynian Beskyd, the Gorgany, and the Hutsul region:

Castle ruins in Urych, in the Carpathians

Land use and population in 1930

Region	Percentage of area used for				Population per sq km in 1930

³Together with the adjacent part of the Middle Carpathian Depression

⁴Including the east-Bukovynian Beskyd

⁵Including the Inner Carpathian Valley

in the 1930s it involved about 5,000 herders, 9,000 horses, 55,000 head of cattle (including 8,000 cows), and 190,000 sheep and goats, which amounted to almost one-quarter of all cattle and two-thirds of all sheep in the Carpathians. The pasturing season lasts two and one-half to four and one-half months. It is extended even beyond this duration, especially in the Hutsul region, by the feeding of sheep in winter enclosures (*zymarky*) until the hay runs out.

Herding in the meadows was generally backward, particularly in Galicia and Bukovyna. Under the Soviet regime the old forms of pastoral life are disappearing. Pastoral artels exist today.

Economy. Economic activity in the Carpathians was determined by the natural environment, folk customs, tribal relations, and the economic policies of the governments that had control of the region. As in the past the economy today is based on farming, which is closely associated with animal husbandry, and on the forest industry. Compared to that of neighboring plateau re-

Mountain huts in the Carpathians

gions, the economy of the Carpathians is backward and quite primitive.

Agriculture plays a greater role in the economy of the Lemko and Boiko regions. Yet, even here the production is insufficient to feed the population. Much of the arable land is left fallow. In the Boiko region the more elevated fields are fertilized by means of sheep grazing. Traces of the tree-clearing system of farming can still be found. The main crops are potatoes and oats, which until the beginning of the 20th century was the main bread-baking grain. In the lower parts rye and wheat are grown, and corn is the main crop on the southern slopes. Much animal feed is produced. The trend is to grow more potatoes and feed and less oats. The fertility of the soil is low. In the 19th century animal husbandry specialized in raising non-dairy cattle in the Lemko and Boiko regions and dairy cattle in the Hutsul region, where sheep raising and horse breeding (of the famous Hutsul horse) were well developed. Since the second half of the 19th century these differences between the various regions of the Carpathians have diminished somewhat. As a result of the impoverishment of the peasantry, horse raising replaced ox raising, since the horse was useful in lumbering. Sheep raising declined in the western areas. In the 1950s the structure of animal husbandry in the Carpathians was as follows (proportion of the Ukrainian SSR production in parentheses): cattle, 80 percent (75.5 percent); hogs, 9 percent (18.8); sheep and goats, 11 percent (6.7). The per capita supply of domestic animals is somewhat higher here than in other parts of Ukraine.

The forest, which for centuries supplied the highlander with food (berries, mushrooms, animals), pasture, fuel, and materials and energy for small-scale industries, became the main source of exports and a very important economic factor in the second half of the 19th century. The exploitation of the Carpathian forests intensified at the end of the 19th century when a network of narrow-gauge railroads was built to transport lumber from remote

A water trough for floating logs down the mountain at the village of Hrebeniv near Stryi in the Carpathians

mountain areas. Because of inadequate protective measures, the forests have sometimes been excessively exploited, particularly under the Soviet regime. Although the Carpathian Mountains possess only 22 percent of Ukraine's forests, in the 1950s they yielded over 60 percent of the lumber produced in Soviet Ukraine. Today young forests and deforested areas constitute over 50 percent of the forest land, while mature forests account for scarcely 11 percent instead of the expected 25 percent. Reforestation measures are inadequate. In the Gorgany alone, 1,470 ha of rocky slope have appeared. Floods have increased, and the importance of the mountains as a source of moisture has declined.

Industry in the Carpathians is insignificant. The hydroelectric resources of the mountains are unused. The Tereblia-Rika power station (1956) is the only large hydroelectric station in the region. Larger hydroelectric plants can be found in Transcarpathia. In Galicia the woodworking industry is located at some distance from the mountains, in Subcarpathia. The largest woodworking complexes are located in Svaliava, Velykyi Bychkiv, Perechyn, and Skole. Salt is mined in Galicia at the foot of the mountains – in Dobromyl, Deliatyn, and Kosiv. In Transcarpathia a huge salt field is being developed at Solotvyna. The Carpathians are a source of valuable building materials: andesites, basalts, rhyolites, tufas, and marble in the Volcanic Carpathians and hard sandstone in other regions. The oil industry, located at the foot of the mountains, has a national importance. The main oil fields are Boryslav-Skhidnytsia, Dolyna (which is today the most important field), and Bytkiv. Rivne, Sloboda-Rungurska, and Kosmach have now lost their

former significance. Gas fields are found in Subcarpathia. Since the 19th century the iron industry, based on small deposits of mud ores, and coal have had a slight importance.

Because of the abundance of mineral springs, a healthy climate, and natural beauty, the Carpathians are the main resort and recreation area in Ukraine after the Crimea. Various mineral springs – carbonic acid, salt, iodine salt, bitter, and petroleum – occur. The most famous springs are in the Lemko area, which today lies beyond Ukrainian territories: in Krynytsia, Bardejov, Iwonicz, Rymanów, Wysowa, Zhegestiv, etc. At the foot of the mountains are found the Truskavets, Morshyn, Deliatyn, and Kosiv springs. Transcarpathia is rich in mineral springs, mostly in the Volcanic Carpathians. These include the Poliana, Kvasova, and Syniak springs, near Uzhhorod. Summer resorts are even more important. Before 1914 the Prut Valley was the main summer-resort area. In the interwar period vacationers visited all parts of the Carpathians. Under Soviet rule the resort area was limited again. The most popular resorts are located in the Prut Valley (Vorokhta, Yaremcha [including the former villages of Yamna and Dora], etc) and the Opir Valley. Smaller resorts are found in Transcarpathia.

Cottage industry has lost its importance except in the Hutsul area, which specializes in folk art. For a long time traveling craftsmen such as wire drawers were important. Traveling salesmen sold tar to the Lemkos and fruit and salt to the Boikos. Common workers found seasonal work on the farms during harvesttime and in the forests. Emigration, which began at the end of the 19th century, was vigorous. Generally, the economic resources of the Carpathians under all regimes (except for the Czechoslovakian to some extent) were poorly developed. The population was poor and could not find enough employment. The situation was aggravated by the fact that the main natural resources, the forest and oil industries, resorts, and trade were foreign-owned (mainly by Jews, Poles, Hungarians, and Czechs). The economic conditions in the mountains are still bad and have become worse with the destruction of the forests.

Timber rafts on the Cheremosh River

The communication lines in the Carpathians have run in two directions since ancient times: longitudinally and transversely. The longitudinal lines are of greater importance locally; the transverse have connected Ukraine with Hungary for centuries. The Austrian government developed these old routes to connect Galicia with the other

Opening of the dam on Brustvy Lake in the Carpathians

parts of the empire and built a number of railroads. From 1918 to 1945 these highways lost their importance, because the state border ran along the ridges of the Carpathians. However, when Transcarpathia was annexed to the Ukrainian SSR, these routes regained their importance. Since the Carpathians are narrow, the longitudinal railroad lines usually run parallel to the ridges: in the north, in Subcarpathia, there is the Peremyshl-Khyriv-Sambir-Stryi-Ivano-Frankivske-Chernivtsi line; the Michalovce-Chop-Vynohradiv line is in the south, in the Tysa Lowland and the Maramureş Basin. Both of the longitudinal lines are intersected by four transverse lines that run through the mountain passes: the Peremyshl-Michalovce, Sambir-Uzhhorod-Chop, Stryi-Mukachiv-Vuzlove, and Ivano-Frankivske-Syhit lines. The whole railway network was built before the First World War. Paved highways run the same way as the railroads. The important highways used for regular motor transportation are the Snina-Perechyn-Svaliava-Khust highway, which runs along the Inner Carpathian Valley and through the Duklia Pass, and the Nyzhni Vorota-Mizhhiria-Khust highway.

(For more detail on the population and economy of the Ukrainian Carpathians today see *Bukovyna, *Transcarpathia, *Hutsul region, *Lemkos, *Boikos, *Ivano-Frankivske oblast, *Lviv oblast, *Chernivtsi oblast.)

Carpathian National Park (Karpatskyi pryrodnyi park). A park established in 1980 for the purpose of protecting the mountain environment, providing recreational facilities, and promoting tourism. It covers an area of 47,300 ha. The park is part of the *Chornohora massif, and a section belongs to the Carpathian Nature Reserve.

Carpathian Nature Reserve (Karpatskyi zapovidnyk). Created in 1968 to protect the environment, plants, and animals of the Ukrainian Carpathians (until then only game preserves existed). The reserve, with an area of 18,500 ha, is composed of three complexes. Two of them cover the *Chornohora range, which contains the highest peaks of the Carpathians – Hoverlia (2,061 m) and Pip Ivan (2,022 m) – and is covered with fir, spruce, and beech-spruce forests. The third, the Uhliia-Shyrekyi Luh complex, lies in Transcarpathia oblast on the southern slope of Mount Menchul (1,500 m) in a region of unique ancient beech forests. The deer, mountain goat, lynx, brown bear, and other species are protected at the reserve.

Carpathian Sich (Karpatska Sich) (also the Carpathian Sich National Defense Organization). A paramilitary organization in Transcarpathian Ukraine in 1938–9, formed in November 1938 from units of the Ukrainian National Defence (organized in Uzhhorod by Ukrainian nationalists and headed by S. Rosokha). The leadership of the Carpathian Sich consisted of the command (commander, D. Klympush; deputy-commander, I. Roman) and the staff of officers. The organization's headquarters were in Khust, and there were 10 individual district commands with subordinate local sections, which conducted military and political training involving several thousand men. Five permanent garrisons conducted regular military training, and a number of the Sich soldiers served in the local police force and with the border guards. The Carpathian Sich adopted uniforms and ranks modeled on those of military formations in Ukraine between 1917 and 1920. It was also involved in cultural and educational work among the local population: its members organized the artistic group Letiucha Estrada and published the weekly **Nastup*, edited by S. Rosokha. The Sich held general and district conventions, the largest of which, consisting of several thousand participants, took place in Khust in February 1939.

A significant number of Galician Ukrainians (who entered illegally from Poland), together with emigrants from Dnieper Ukraine, joined the local Ukrainians as officers and soldiers in the permanent garrisons of the Carpathian Sich. After Carpatho-Ukraine's proclamation of independence, the Sich became its national army (Col S. Yefremov, commander; Col M. Kolodzinsky, chief of staff) and, in March 1939, mounted an armed resistance to the Hungarian invasion. At that time the strength of the Sich was about 2,000 men. Several hundred of them died in battles against the Czechs (13 March) and the Hungarians (14–18 March). Overwhelmed by the Hungarian army, the soldiers either retreated to Rumania and Slovakia or hid in the mountains. The Rumanians turned over many of the soldiers to the Hungarians, who in turn gave up many Galicians to the Poles and kept the remainder as prisoners. Illegal executions of prisoners were perpetrated. The struggle of the Carpathian Sich

against the Hungarians was the first armed conflict in central Europe to precede the Second World War. See also *Transcarpathia.

Carpathian Ski Club (Karpatskyi leshchetarskyi kliub). Sports club founded in Lviv in 1924 for skiing enthusiasts. Besides a skiing section it also had a swimming section and a games section. The club had branches throughout Galicia. Its presidents were Z. Rusyn and V. Pankiv. The club was dissolved by the Soviets in 1939 but resumed its activities in 1941 under the Germans. It was revived abroad – in Munich in 1945, then in New York in 1955, and eventually in Toronto.

Carpatho-Ukraine (Karpatska Ukraina). The name of the autonomous Carpatho-Ukrainian state within Czechoslovakia in 1938–39. This name as well as the earlier name Subcarpathian Ruthenia (Pidkarpatska Rus') was in official use. It was the name adopted by constitutional law no. 1 of the Carpatho-Ukrainian Diet on 15 March 1939 for the Carpatho-Ukrainian republic. The name was used unofficially before 1938 to designate *Transcarpathia.

Carpini, Giovanni da Pian del, b 1182 in Umbria, Italy, d 1 August 1252. Italian Franciscan and traveler. In 1245–7 he headed the mission of Pope Innocent IV to the Mongols. On his way through Ukraine in 1245 and 1247 he received aid from princes Danylo and Vasylo Romanovych of Volhynia and served as an intermediary between them and the pope. He described his travels in *Liber Tartarorum*, which contains valuable information about Ukraine, particularly a description of Kiev.

Carrot (*Daucus*; Ukrainian: *morkva*). Plant of the family Umbelliferae. In Ukraine the wild carrot (*Daucus carota*), a biennial plant with white flowers and an inedible root, is widespread. The garden carrot (*D. carota sativus*), an edible biennial plant, is cultivated for human consumption and animal feed. The most popular varieties in Ukraine are the Kharkiv Nantes, Skvyra Chantenay, and Chantenay 2461, which are cultivated as animal feed.

Cartel. An association of independent firms in the same or related branches of industry formed for the purpose of regulating production or sales through the allocation of raw materials, the dividing up of markets, the assigning of sales quotas, or the fixing of prices. Cartels have a monopolistic tendency (see *Monopoly): they restrict, but do not abolish, free competition. Members of a cartel retain their identity and financial independence. Cartels are characteristic of periods of industrial concentration. Another form of association, consisting of enterprises belonging to different branches of industry and even of financial institutions, is prevalent today. These integrated enterprises share planning and management; hence, they sacrifice some of their former autonomy. Combinations of financial and industrial firms known as

consortiums are organized for specific purposes. *Trusts, which come under one management, are the most integrated form of association. They exist in the USSR, but are distinct from the capitalist trusts in the West. International cartels are composed of enterprises or financial firms from various countries.

In prerevolutionary Russia the *syndicate, which was interested primarily in regulating sales, was the standard form of cartel. The production of the syndicate members was sold through a common marketing center. The syndicates in Russia were usually joint-stock associations of firms with a common statute capital and a single representative agency, which received purchase orders and distributed them according to quotas among the syndicate members. In the Russian Empire cartels arose at the end of the 19th century, and by 1917 there were 100 to 140 of them. The principal cartels were *Prodamet, *Produgol, *Prodarud, the Russian Steamshipping and Trade Company, the Union of Rail Manufacturers, the Union of Rail Fittings Manufacturers, the Urozhai syndicate of farm-machine builders in Ukraine, and the Syndicate of South Russian Starch Factories. Most of these cartels were under the control of foreign capital or of the largest imperial banks, which were also usually foreign-controlled. Individual price-fixing agreements (known as *puly* or *ringi*) among manufacturers were common. The Russian cartels did not develop into trusts: attempts to turn Prodamet into a steel trust on the German-American model did not succeed. The Russian government tried to curb the growth of cartels only when they encroached upon state interests; for example, it reacted against Produgol when the cartel tried to increase the price of coal to the state railways, against the *Syndicate of Sugar Manufacturers, and against the secret salt syndicate in Ukraine, which lowered prices to undercut the salt refineries in the Urals and thus reduced the government's income from excise taxes. In most cases, however, the Russian government permitted cartels to exist. The legislation against monopoly was limited to articles 913 and 1180 of the Code of Laws of the Russian Empire, which prohibited artificial price hikes on goods deemed primary necessities, but these articles were rarely invoked, particularly because of widespread corruption in government and judiciary circles.

Cartels in Ukraine often competed with cartels in Russian or Polish territory, and in the process the territorial interests of the Ukrainian enterprises became clearly defined. The government tried to defend the Russian cartels by manipulating freight tariffs on the state railways and by usually purchasing Russian products, but the policy proved a failure. The cartels in Ukraine, such as Urozhai, which after a fierce struggle captured markets as far away as Siberia, and Prodamet, extended their influence to markets throughout the empire.

During the revolution the cartels were nationalized, and during the NEP period the Soviet government organized state cartels, which usually operated on a territorial basis. The latter were abolished in 1929–30.

Before the First World War Galicia's petroleum industry was controlled by Austrian, British, American, and French concerns, and after the war, under Polish rule, it was controlled by British, American, and French cartels. A large part of interwar Poland's industry was controlled by cartels, and the Polish government was in debt to certain international cartels. In 1929 the Polish govern-

ment adopted legislation similar to the German legislation of 1923 limiting the activities of cartels.

Cartography

Maps of Ukraine until the mid-17th century. One of the oldest maps of the ancient period is an outline of the Ukrainian coast of the Black Sea found in Mesopotamia on a Roman shield. Another map representing Ukraine is a traveler's map of the Roman Empire of the 4th century, which is known as *Tabula Peutingeriana*.

During the Middle Ages the territory of Ukraine was marked on the hand-drawn maps of the world prepared by the Arabic geographers Al-Istakhri of the 10th century and Al-Idrisi (1154, 1192). The former introduced the name Rus'.

In the 14th century Ukraine appeared in the portolano of 'Pisane' (1300), G. Laurenziano of Florence (1351), M. Sanuto's (1320) and P. Vesconte's (1311) maps of the world, and the Catalan atlas (*Mappemundi*) of 1375.

In the 15th century several maps of the world depicted Ukraine: the Catalan map of 1450, P. de Noha's map (ca 1414), and H. Germanus's map of 1489. The portolani of U. Freducci (1497), the 'Borgia map', (1457), and A. Benincaso (1476) gave some information about Ukraine. The 'Genoese' map of the Atlantic (1490) and M. Beheim's globe also included Ukraine.

In the 16th century new cartographical works appeared in which Ukrainian lands were represented: J. de la Cosa's portolano (ca 1500); G. Contarini's map of the world (1506); D. Ribero's map of the world (1527); B. Agnese's map of Muscovy (1525); S. Herberstein's map (1549); the 'Salviati planisphere' (1527); the maps of B. Sylvanus (1511), A. Dürer (1515, designed by S. Stabius), and S. Gutierrez; the portolano of V. Maggiolo (1512); a map of the Atlantic that included the Black Sea and the most detailed description of the Black and Azov seas along with southern Ukraine (Rusia) by the Greek cartographer G. Kalapoda (1552). Ukraine was depicted on the maps of P. Forlani (1565) and A. Pograbijs (1569).

Regional maps that included Ukrainian lands were published by the Polish historian B. Wapowski (ca 1475–1535). His maps of Poland and Lithuania encompassed Ukraine as far east as the Dnieper River and the Black Sea. Ukraine was also represented on M. Waldseemüller's map of the world, *Carta marina* (1516), and J. Ruysch's map of the world (1508). The eastern part of Ukraine was presented on the maps of A. Wied (1555, 1594) and the English traveler A. Jenkinson (1562). Western Ukraine was encompassed by W. Grodecki's map (1562), which was printed in A. Ortelius's atlas (1527, 1598), and central Ukraine by G. Mercator's (1512–94) map. Mercator also published maps of Europe and the world that covered all Ukraine. The Crimea and its adjacent lands were depicted on the map of the Ukrainian M. Bronovsky (1515). The Lviv region was mapped by A. Passarotti in 1607.

The first cartographers to produce maps based on topographic observation and measurement of Ukrainian territories were T. Makowski (ca 1575–1620) and G. le Vasseur de*Beauplan (ca 1600–73). Makowski prepared a comprehensive map of Lithuania, on a scale of 1:1,300,000,

which encompassed northern Ukraine. It was published in Amsterdam in 1613 by H. Gerritsz and appeared later in various atlases, most importantly those of K. Allard and N. Visscher. Makowski also prepared a map of the Dnieper, on a scale of 1:1,300,000, for some atlases.

The most important cartographical publication in the 17th century was Beauplan's map of Ukraine. His comprehensive map *Delineatio specialis et accurata Ucrainae* is a detailed representation of Ukraine on a scale of 1:452,000. It was engraved and published by W. Hondius (1597–1660) in Amsterdam in 1650–53 in 8 sheets and was reproduced in the atlases of J. Blaeu and N. Sanson. Beauplan's second map, *Delineatio generalis*, on a scale of 1:1,800,000, encompassed Ukraine from Red Rus' (Galicia) to the Black Sea. It was published in Danzig in 1651 and, under a French title, in Rouen in 1660. Later, it was frequently reproduced under the title *Typus generalis Ucrainae*. His third work was the map of the Dnieper River from Kiev to its mouth. It occupied three sheets in the multilingual *Grand Atlas* by J. Blaeu, two on a scale of 1:226,000 and one 1:452,000, and in a reduced form in the atlases of J. Jansson and M. Pitt. Beauplan established the name Ukraine, which appeared first on a map prepared for Charles IX of France in 1572 and then in Blaeu's atlas of 1613 and the atlas of the Hondius brothers of 1644 under the title *Typus generalis Ucrainae*.

Maps from the mid-17th century to 1917. More detailed maps of eastern Ukraine were made by J. Bruce and C. Cruys, two Dutchmen in the Russian service; they were published in Amsterdam. Bruce published a map of western and southern Russia in 1679, which, besides eastern Ukraine, included the Kiev and Bratslav regions on the Right Bank. Czuy's atlas of the Don contained 17 maps. K. Allard's map at the beginning of the 18th century encompassed all Ukraine. The eastern regions were depicted in the first Russian atlas, published by I. Kirilov in 1734, and in *Atlas rossiiskoi* (The Russian Atlas), edited by L. Eiler and published by the St Petersburg Academy of Sciences in 1745.

The first topographic surveys and mappings of Ukrainian lands were made during the reign of Hetman I. Mazepa (1687–1709) for administrative use of the Cossack regiments. (The surveys were later the responsibility of the Imperial College of Foreign Affairs.) On the basis of the data that were gathered several maps were prepared, including *Atlas Dnepra* (Atlas of the Dnieper), printed in 36 sheets in 1784; *General'naia karta Kievskoi gubernii* (A General Map of the Kiev Gubernia, 1774), which encompassed the lands of 10 regiments; and *Novorossia* (New Russia, 1779). The eastern parts of Ukraine were represented on the first Russian general map (1785), consisting of 8 sheets on the scale of 1:3,150,000, and in *Rossiiskii atlas* (The Russian Atlas, 1792, 1800), edited by A. Wilbrecht, which also included central Ukraine.

More accurate topographical surveys of Ukrainian territories based on triangulation were introduced at the end of the first half of the 18th century. Larger-scale maps were based on these surveys: G. Rizzi-Zannoni's *Carte de la Pologne* (on a scale of 1:692,000) in 24 sheets (1770–7), which encompassed all Ukrainian lands under Poland and the larger part of Russian-ruled Ukraine; an Austrian map of Galicia (on a scale of 1:178,000) in 21 sheets (1783); and a Russian general map of western Russia by K. Oppermann (on a scale of 1:840,000) in 114 sheets (1801–16), which encompassed the adjacent Austrian and Polish

lands. A. Maksymovych, a Ukrainian, prepared a general map of European Russia on a scale of 1:3,780,000 and published it in 5 sheets in 1816.

The southwestern territories that were annexed by Austria were mapped towards the end of the 18th century. In 1805 A. Heldensfeld's *Operationskarte beider Galizien ...* appeared in 34 sheets, on the scale of 1:172,800; it later became the basis of a map drawn to a scale of 1:200,000. In 1790 J. Liesganig published *Königsreich Galizien und Lodomerien* on the scale of 1:288,000. In 1779–83 Mieg prepared a manuscript map in 413 sheets, on the scale of 1:28,000, which later was used as the source for a map with a scale of 1:25,000.

During the 19th century and up to the First World War, Austria, Russia, and Germany published modern, detailed maps that were based on new surveying methods. The most important maps published by the Russian Military Topography Corps were Shubert's special maps of Russia in 60 sheets on the scale of 1:420,000 (1832–44), and a map of Eastern Europe on the same scale in the Gauss projection, edited by Gen I. Strilbytsky, which appeared in 158 sheets in 1864–71. The latter embraced all Ukrainian territories. The corps also published a topographic map of western Russia on the scale of 1:126,000 in the Bonne projection (1845–63). It was printed in 435 sheets, and relief was rendered by hachures. The corps' best topographic map was published in 1845–82 and 1907–17. It covered the western territories belonging to Russia starting from the Kiev-Odessa line on the scale of 1:84,000 using the Muefling projection. It was printed in two colors. Relief was marked by contours and measured in sazhen (1 sazhen = 2.13 meters). New methods of triangulation and new topographic data were used in its preparation. Like other maps this map was oriented on the Pulkovo meridian (30°19'42" east of Greenwich) and referred to the Paris or Ferro meridian (17°39'57" west of Greenwich). The most accurate maps published in Russia were the map encompassing the Crimea, Taman Peninsula, Donbas, and territories west of Kiev, published in 84 sheets in 1855 on the scale of 1:42,000, and the map of the western borderlands (western Volhynia, the Kholm region, and Podlachia) and the Crimea on the scale of 1:21,000.

In Austria-Hungary accurate maps of Galicia, Bukovyna, and Transcarpathia were prepared by the Military Geographic Institute: the map on the scale of 1:75,000, which was published in 1873–89 and supplemented and revised on the eve of the First World War, and the very accurate topographic map on the scale of 1:25,000, which was published in 1867–88, and to some extent served as the source of the former map. Both maps were monochromatic contour maps with hachures. Among other maps published in Austria-Hungary were the general maps of central Europe on the scales of 1:200,000 (1885) and 1:750,000. Both were four-color, hachure maps and covered the western part of Ukraine up to the Kiev-Odessa line. V. Kammersberg's map of Galicia, on the scale of 1:115,000, was published in 1855–63. In 1868 a statistical map of Galicia and Bukovyna appeared, with a scale of 1:576,000. All these maps were oriented on the Ferro meridian. A hypsometric map of the central Carpathians on the scale of 1:100,000 was also published under Austria. In 1885 K. Czoernig published an ethnographic map of Austria-Hungary on the scale of 1:2,500,000. The Polish Academy of Sciences published a geological atlas

of Galicia in Cracow in 1898–1906. Hungarian maps of Transcarpathia were published in 1884 on the scale of 1:360,000 and in 1869–81 (1:144,000). In 1919 Z. Bátky Kogutowicz published an ethnographic map of Hungary on the scale of 1:300,000, which included Transcarpathian Ukraine.

Ukrainian territories were represented on the following German maps: the northwestern territories on a map with a scale of 1:100,000; the western part on a map of central Europe with a scale of 1:300,000; and all Ukraine on a map of Europe with a scale of 1:800,000. The first of these was monochromatic; the last two were colored.

During the First World War the Germans reproduced the Russian maps with scales of 1:84,000 and 1:126,000 and reissued them on the scale of 1:100,000. They also published the first aviation map of Kiev in 1916, with a scale of 1:26,600.

Thematic cartography, which developed in the second half of the 19th century, extended cartography in many directions. The following important thematic maps dealing with Ukraine were published in Russia: V. Dokuchaev's map of soils for European Russia in 6 sheets on the scale of 1:2,500,000 (1900); a map of forests on the scale of 1:1,680,000 (1909); two geologic maps, one in 6 sheets with a scale of 1:2,520,000 (1900 and 1916) and one with a scale of 1:420,000 (1882–94); a military road map in 27 sheets on the scale of 1:1,050,000 (1864–1917); the ethnographic map by A. Rittich in 12 sheets on the scale of 1:1,680,000 (1875), which was republished in 1878 in a German edition on the scale of 1:1,370,000 by *Petermanns Geographische Mitteilungen*; and *Gornopromyshlennaiia karta evropeiskoi Rossii* (The Mining Industry Map of European Russia, 1903) on the scale of 1:2,250,000. In 1915 a hypsometric map of the Donets Ridge with a scale of 1:420,000 was published.

The first atlases of Ukrainian territories were the historical *Atlas Slobodsko-Ukrainskoi gubernii* (Atlas of Slobidska Ukraine Gubernia, Kharkiv, 1885), *Atlas Poltavskoi gubernii s uездami* (Atlas of Poltava Gubernia with Its Districts, Poltava 1895) by H. Kolominsky, and *Opisaniie Chernigovskoi gubernii* (A Description of Chernihiv Gubernia; 2 vols, 37 maps, Chernihiv 1898–9). The first ethnographic map of Ukraine was prepared by H. Velychko in 1896 on a scale of 1:3,700,000, and the first regional map of Transcarpathia was published by S. Tomashivsky in 1910 on the scale of 1:300,000. J. Buzek published a Polish denominational-linguistic map of Galicia on the scale of 1:432,000 in Lviv in 1909.

The Ukrainian state. In 1918 the department of cartography of the Chief Geodesic Administration in Kiev revised the Russian special map in 54 sheets on the scale of 1:420,000 and the map of Kiev and its suburbs in 6 sheets on the scale of 1:21,000, which showed contours and Ukrainian names; it also reprinted a Russian map on the scale of 1:1,050,000 (2nd edn, Vienna 1920) and a map by P. *Tutkovsky on the scale of 1:1,680,000. That year S. *Rudnytsky published the first physical wall map of Ukraine in Ukrainian with a scale of 1:1,000,000.

Between the world wars. During the civil war in Russia, the national revolutions, and the 1920s, the Russians revised the old maps of the Russian Empire. In 1924 work on new maps began. These maps were based on conic projections, referred to Greenwich as the principal meridian, and used metric units. They were prepared with the help of new photographic methods. The funda-

Portolan chart (1311) by P. Vesconte of the eastern Mediterranean region, including the Black and Azov seas. (Note remarkable outline.)

First German aviation map in the Second World War, 1:500,000 (1940)

mental topographic map with a scale of 1:100,000 covered, until 1941, the European part of the USSR up to the Volga River. It represented relief by contour lines, and objects made by humans, such as settlements and roads, were marked in detail. From it were compiled large-scale maps with scales of 1:25,000, 1:50,000; and 1:10,000. Maps with scales of 1:50,000 and 1:1,000,000 were used as aviation maps, and the latter was also used for economic and military planning, particularly during the Second World War.

Two hypsometric maps with a scale of 1:1,500,000 were published in the USSR in 1926 and 1929. They also covered the parts of Ukraine under Poland, Rumania, and Czechoslovakia. S. Rudnytsky published, in 1929, the first large hypsometric map of the Ukrainian SSR on a scale of 1:1,000,000.

In Soviet Ukraine the following thematic maps were published: a soil map on the scale of 1:1,000,000 by H. Makhiv in 1927; a geological map on the scale of 1:1,000,000 edited by P. Chervinsky in 1940; *Elektrifikatsiia Ukrainy* (The Electrification of Ukraine, 1920) on the scale of 1:2,100,000; a map of minerals on the scale of 1:1,050,000 in 1922; a map of the regions of sugar-beet cultivation on the scale of 1:1,700,000 in 1936; Yu. Kleopov and Ye. Lavrenko's map of vegetation on the scale of 1:1,000,000 in 1938; and detailed maps of the Donbas with scales of 1:200,000 and 1:8,400. At the same time the following atlases were published: *Atlas elektrifikatsii Ukrainy* (The Atlas of Ukraine's Electrification, Kharkiv 1922), *Energeticheskii atlas Ukrainy* (The Atlas of Ukraine's Energy Resources, Kharkiv 1921), *Statistiko-ekonomicheskii atlas Kryma* (The Statistical-Economic Atlas of the Crimea, Sym-

feropil 1922); *Klimatichnyi atlas Ukrainy* (The Climatic Atlas of Ukraine, Kiev 1927), and L. Klovany's *Atlas Ukrainy* (Atlas of Ukraine, Kiev 1928, 1929).

The Military Geographic Institute in Warsaw prepared maps encompassing Ukrainian territories on scales of 1:25,000; 1:100,000; and 1:300,000, as well as aviation maps on scales of 1:500,000 and 1:1,000,000. The eastern Carpathians were represented on the 1927 map on the scale of 1:200,000.

V. *Kubijovyč and M. *Kulytsky collaborated in preparing two physical maps of the ethnic territories of Ukraine, which were published in Lviv in 1935 (on the scale of 1:2,500,000) and in 1939 (on the scale of 1:1,500,000) and revised in 1942. An administrative map of Galicia, with a scale of 1:600,000, was published in 1939. Regional maps of the Galician voivodeships (on the scale of 1:500,000) appeared in 1940–3. Kulytsky published a map of the Ukrainian Catholic church in Galicia on the scale of 1:300,000 and a map of Lviv on the scale of 1:30,000 in 1935. The most important contribution to Ukrainian scholarship was *Atlas Ukrainy i sumezhnykh kraïv* (Atlas of Ukraine and the Neighboring Countries), which was edited by V. Kubijovyč and published in Ukrainian and English in Lviv in 1937. This was one of the few national atlases at the time. A part of this atlas was translated and published in Berlin under the title *Atlas der Ukraine und benachbarten Gebiete* (part 1, 1943).

Transcarpathian Ukraine was represented on Czechoslovakian maps with scales of 1:25,000, 1:75,000, 1:200,000, and 1:750,000, as well as on the maps of the national atlas of Czechoslovakia. S. Boháč's ethnographic map of 1937 on the scale of 1:500,000 showed the distribution of

Ukrainians in Czechoslovakia. Bukovyna, Bessarabia, and the Maramureş region were depicted on Rumanian maps with scales of 1:100,000 (1926–39); 1:200,000, 1:300,000, and 1:500,000.

During the Second World War the Germans revised the Polish maps on scales of 1:100,000 and 1:300,000 and the Russian maps with German nomenclature on scales of 1:100,000, 1:200,000, 1:300,000, 1:500,000, and 1:1,000,000. These maps were often supplemented with aerial data. In Kiev a German geobotanical map of Ukraine, on the scale of 1:1,000,000, was published in 1942 by Kleopov and Lavrenko. The German Auslandsinstitut in Stuttgart published two valuable ethnographic maps of Caucasia based on the censuses of 1926 and 1939.

After the Second World War. The Soviet Union published new maps based on aerial photography on scales of 1:25,000, 1:50,000, 1:100,000, 1:200,000, 1:300,000, 1:500,000, and 1:1,000,000, according to Krasovsky's ellipsoidal and the Gauss projection. *Gosudarstvennaia karta* (The State Map) on the scale of 1:1,000,000, published in 1940–5, served as the basis for other maps of the Soviet Union – geological, soil, and geobotanical. None of these maps are available to the public. The most precise hypsometric maps are those of the Carpathians and the Donbas, both on a scale of 1:600,000. The basic geological map of Ukraine today is the map on the scale of 1:200,000. Large parts of Ukraine are covered by the geological map on the scale of 1:50,000. Smaller areas are represented on maps on the scale of 1:25,000. There are even more precise maps of mining areas. Shelf maps on the scales of 1:100,000 and 1:250,000 are published. Special maps on the scale of 1:2,000 to 1:10,000 are based on local measurements. Sea maps are prepared with scales of 1:25,000 and 1:75,000 (port maps), 1:100,000 to 1:500,000 (navigational maps), and 1:1,000,000 and over (regional maps). Forest maps are prepared on a scale of 1:300,000. Soil maps have scales of 1:10,000 and 1:25,000, while regional maps have a scale of 1:200,000. Thematic maps (soil, geological, tectonic, climatic, ethnographic, etc) are published with a scale of 1:2,500,000 and 1:1,000,000. The Chief Administration of Geodesy and Cartography has published, among others, the following important atlases that pertain to Ukraine: an atlas of railroads (from 1962); an atlas of roads and highways (from 1961); A. Baronov's comprehensive atlas of the USSR (1962, 1969, 1982); Svinarenko's hypsometric *Atlas sssr* (Atlas of the USSR, 1954–5); *Atlas razvitiia khoziaistva i kul'tury sssr* (An Atlas of the Development of the Economy and Culture of the USSR, 1961); *Obrazovanie i razvitie sssr* (Formation and Development of the USSR, 1972); the large *Klimaticheskii atlas sssr* (Climatic Atlas of the USSR, 2 vols, 1960–2); *Atlas sel'skogo khoziaistva* (Atlas of Agriculture, 1960); *Atlas ugliakopleniia na territorii sssr* (Atlas of Coal Deposits on the Territories of the USSR, 1962). It has also published a monumental *Atlas mira* (World Atlas, 1954, 1967) in Russian and English.

The following maps have been published in the Ukrainian SSR: a map of soils on the scale of 1:750,000 (1972); tectonic maps on the scale of 1:750,000 (1959) and 1:1,000,000 (1962–78); V. Bondarchuk's map of the Carpathians on the scale of 1:1,000,000; a map of the Dnieper-Donets Lowland and Greater Kryvyi Rih on the scale of 1:500,000 (1971); a metallogenic map of the Carpathians on the scale of 1:1,000,000 (1973); a map of the Ukrainian Crystalline Shield; a hydrogeological map of Ukraine on the scale of 1:1,000,000 (1971); geographical-physical

maps with a scale of 1:750,000 (at first geographical survey maps with forests, then only administrative maps); a valuable ethnographic map by V. Naulko on the scale of 1:1,500,000, based on the census of 1959; and a map of the oblasts on the scale of 1:600,000. The following atlases have been published in Ukraine: *Atlas Ukrainskoi sssr i Moldavskoi sssr* (Atlas of the Ukrainian SSR and the Moldavian SSR, 1962); *Atlas sil's'koho hospodarstva URSS* (Atlas of Agriculture in the Ukrainian SSR, 1958); *Atlas paleoheohrafichnykh kart URSS* (Atlas of Paleogeographic Maps of the Ukrainian SSR, 1960); *Atlas Kyivs'koi oblasti* (Atlas of Kiev Oblast, 1962); the economic atlas *Nove na karti Ukrainy* (The New on Ukraine's Map, 1961); *Agroklimaticheskii atlas Ukrainskoi sssr* (Agroclimatic Atlas of the Ukrainian SSR, 1964); three climatic atlases, Leningrad 1964–8; and *Sil's'ko-hospodars'kyi atlas zakhidnykh oblastei URSS* (Agricultural Atlas of the Western Oblasts of the Ukrainian SSR, 1965). *Natsional'nyi atlas Ukrain'skoi rsr* (The National Atlas of the Ukrainian SSR) has been prepared in three volumes since 1963 but has not been published.

Ukrainians abroad have published the most detailed ethnographic map of interwar Galicia, on the scale of 1:250,000, prepared by V. Kubijovyč (Munich 1953). Kubijovyč and A. Zhukovsky also published a reference map of Ukraine in Ukrainian and English on the scale of 1:2,000,000 in 1978. A physical school map of Ukraine by R. Drazniowsky and L. Prokop (with a scale of 1:1,000,000) and a historical atlas of Ukraine (1981) edited by L. Wynar, I. Tesla, and Ye. Tiutko have been published in the United States.

In Ukraine there are two central map depositories: the Central Scientific Library of the Academy of Sciences in Kiev and its branch in Lviv and the Republican Historical Archive in Kiev, with maps from the 17th century to 1918.

Ukrainian geographic nomenclature is determined by the Chief Administration of Geodesy and Cartography and by the government in Moscow, which ignore the traditions of Ukrainian toponymy.

Casimir III the Great, b 30 April 1310, d 5 November 1370. Polish king from 1333, last of the Piast dynasty. Casimir began the expansion of Poland into Ukrainian territory (Red Rus'). Having made peace on his western border with Bohemia and the Teutonic Knights, Casimir obtained the support of Hungary and the neutrality of the Tatars. In 1340, following the death of Prince *Yurii II, Casimir invaded Galicia, taking Lviv and destroying its

fortifications. He was repelled by the boyars under the leadership of D. *Dedko, but, on Dedko's death in 1349, Casimir seized Galicia and western Volhynia, consolidating his rule in wars against Lithuania's Prince Lubart. Casimir distributed property and privileges in Galicia to Polish magnates, provided incentives to Polish merchants and German colonists, and granted cities and towns – especially Lviv – self-government on the German model. He supported Catholic missionary orders, particularly the Franciscans and Dominicans, though he did not persecute the Orthodox and agreed to reinstate the Halych metropolitanate.

Casimir IV Jagiellończyk, b 30 November 1427 in Cracow, d 7 June 1492. Son of *Władysław II Jagiełło and his fourth wife, the Ukrainian princess Sofiia Holshanska. Casimir became grand duke of Lithuania in 1440 and king of Poland in 1447. He adopted a centralist policy with regard to the Ukrainian lands and favored the Lithuanian Catholic nobles in the Grand Duchy of Lithuania. He abolished the principality of Volhynia in 1452 and the Kiev principality in 1470. In 1481 he uncovered a conspiracy of the Ukrainian princes led by *Mykhailo Olekvych and executed them. Other princes transferred their allegiance and their lands to Muscovy. During Casimir's reign the Tatars, now vassals of the Ottoman Empire, resumed their incursions, destroying Kiev in 1482. The major development in church affairs during Casimir's reign was the definitive separation of the Moscow metropolitanate from that of Kiev.

Castle courts (*zamkovi sudy*). Criminal courts in the Grand Duchy of Lithuania presided over by a single judge – by the vicegerent or the starosta in county cities and the voivode in provincial cities. Castle courts were introduced after the Bilske diet of 1564, when the lords, under the pressure of the gentry in general, renounced their judicial privileges. The castle courts had jurisdiction over the entire gentry, the burghers under the Magdeburg law, the lords' peasants in respect to serious criminal offenses, the burghers of small cities, and the peasants belonging to grand dukes in respect to all criminal matters. The castle courts corresponded to *city courts in Poland.

Castles. Fortified residences of rulers. Castles were first built in the Middle Ages as shelters from invaders. In Ukraine fortified towns were the precursors of castles. Usually the fortifications consisted of a wooden stockade, rarely of stone. Fortified towns were established by the princes in the 10th–12th century, particularly in the areas threatened by nomadic tribes and on the Polish frontier. (See also *Cities and towns.)

In the 13th century, after the decline of Kievan Rus' and the Tatar invasions, the focus of political and cultural life moved to the western Ukrainian territories. To defend and restore the Principality of Galicia-Volhynia, its rulers, particularly King Danylo, renovated and built numerous fortified towns and castles (Danyliv, Lviv, Kholm, Volodymyr, Lutske, Kremianets, etc), which under Tatar pressure they then had to demolish.

Castles became widespread at the end of the 14th century when Ukraine became part of the Lithuanian and Polish states. Lithuania intended to colonize the steppes as far as the Black Sea and undertook the struggle against

the Tatars, in which the castles played both a defensive and an offensive role. Either the state or individual magnates such as the Czartoryski or Ostrozky princes restored or built castles in strategically or economically important locations. To protect the Black Sea coast and the customs warehouses in the south, the grand duke Vytautas built an extensive system of castles (Karavul, Bilhorod, Chornohorod, Khadzhibei, etc) and installed in them nobles who were obligated to render military service. After Vytautas's death in 1430 the colonization movement diminished. The castles in the southern steppes were abandoned, and the defense line was moved north. Larger incursions by the Crimean Tatars, who found new support in the Turkish protectorate at the end of the 15th century, forced the Lithuanian state to restore the old castles and to build new ones. Wooden buildings were replaced by stone structures, and new types of weapons were introduced.

Castles were built not only on the exposed frontier along the Dnieper River (Kiev, Kaniv, and Cherkasy) and in Podilia (Bar, Mezhybizh, Chornokozyntsi, Sataniv, Zhvanets, Pyliava, Zinkiv, Liatyshiv, Yampil, Sutkivtsi, Bratslav, and Vinnytsia), but also in the interior – in Galicia and Volhynia. The Dniester line was guarded from the Turks by *Kamianets-Podilskyi, the strongest fortress in Poland and Ukraine. On the Turkish side stood *Khotyn.

Castles were built in inaccessible places – on steep hills (eg, Kremianets, Kiev, Lviv, Halych, and Chyhyryn), at river bends (eg, Dubno, Lutske, and Berezhany), on islands, or in marshes. Building materials consisted of wood (castles in Vinnytsia, Chornobyl, Putyvl, Ovruch, Zhytomyr, Zvenyhorod, Bratslav, and Cherkasy) and sometimes stone (Kremianets, Lviv, and Kholm).

Wooden castles were surrounded by a thick stockade covered with mud to protect it from fire. At the top of the stockade was a covered platform and firing holes. Towers built of beams stood at the corners of the stockade. Sometimes a water-filled moat surrounded the castle, and a drawbridge provided access to the gate. The stronghold or palace, which was often topped with a tall tower, was the center of the castle. It encompassed the prince's or magnate's residence, the guards' quarters, the prison, the cellars, and the well. Usually there was also a secret passage in the castle that led beyond the walls. On the castle grounds there was a church, and under the walls there were warehouses where the townsfolk who lived around the castle stored their goods during an enemy attack. Cossack castles were also usually built of wood with an emphasis on a more solid stronghold but weaker fortifications. The largest number of such castles appeared during the Khmelnytsky period.

Stone castles consisted of exterior walls, towers, and inner buildings. The old castles had a large number of towers – Kamianets had 11 and Yazlivets 8 – which were used as arsenals and warehouses. The towers were either square, as in Kholm, or circular, as in Kamianets. In the 16th–17th century pentagonal towers, as in Chortkiv, were introduced. The castle entrance was a double gate, usually within a tower. The other buildings were similar to those in wooden castles.

The ground plan of a castle was determined to some degree by the setting. But the older castles (eg, Kamianets-Podilskyi, Terebovlia, and Buchach) had an irregular plan, as did the fortified towns of the Princely era. Castles

in the form of a regular pentagon (Berezhany, Brody, Chortkiv, Sataniv, Zhvanets, and Kodak) appeared only in the 16th–17th century.

It was very costly to maintain castles in a battle-ready condition. The central government did not always provide the necessary funds, and the local magnates and population could not afford to support the troops and armaments. Hence, many castles in Right-Bank Ukraine in the 16th century were no more than temporary refuges for the population. The castles along the Dnieper were in a better condition and were continuously manned by 50–100 troops. Besides the garrison they also had irregular 'field' troops for reconnaissance duty. Each castle was provided with several cannons.

The architecture of the fortified towns of the Princely era has not been adequately researched. The wooden castles of the 14th–17th century were usually built by craftsmen who continued and developed the traditional forms of wooden fortification from the early Princely era. The large castle complex in Chornobyl was built by the master builder Zamorenko in 1548. The large castle on Kyselivka Hill in Kiev was built by I. Slushka in 1545. The castle in Oster was the work of master builder Shutkovsky.

Of the numerous stone castles usually only the ruins have been preserved (Lutske, Dubno, Ostrih, Mezhyrichia Ostrozke, Kremianets, Kamianets-Podilskyi, Uzhhorod, Mukachiv, and many others). It is possible to reconstruct from these remains a typical castle, which as early as the 16th century was predominantly of the Gothic style modified by an admixture of Renaissance forms. Such reconstructions were made of the castles in Lutske (reconstructed by Luka of Prešov in 1541), Ostrih, Dubno, Mezhyrichia, and Kamianets-Podilskyi (14th–16th century and rebuilt in the 17th–18th century).

During the Renaissance period (16th–17th century) grand residences were built by the magnates – the castles in Lisko (owned by the Kmita family), Krasychyn (Krasicki family), Berezhany (Sieniawski family), Ternopil (Tarnowski family), Olesko (Daniłowicz family), Zhovkva (Żółkiewski family), Stare Selo (Ostrozky family), etc. The remains of castles and fortified palaces built in the 17th century (rare samples of the West European baroque style) can be found in Pidhirtsi, Zbarazh, Brody, Zolochiv, Ivano-Frankivske, and other places.

Because of new military technology and the cessation of Tatar-Turkish incursions, castle building declined in the 18th century. Magnates began to build residential palaces instead.

Special mention must be made of the castles built by Genoese traders in the Crimea to protect their colonies in the mid-14th century. The best-preserved ruins of such castles are found in Sudak (1345–1414) and Teodosiia (1348). On the lower Dniester River Akkerman (now Bilhorod-Dnistrovskyi) and Bendery were built and later were taken by the Turks when they established control of the northern coast of the Black Sea. The Turks maintained the castles of Khotyn, Bendery, Akkerman, and Ochakiv and eventually built forts on the lower Dnieper River, of which Kazykermen was the most important.

Castor bean (*Ricinus communis*; Ukrainian: *rytsyna*). An oil plant cultivated in Ukraine since the 1920s. It is grown in the eastern steppe region, mostly in Zaporizhia oblast, and in the Kuban. Ukrainian territories produce almost 90 percent of the USSR's castor oil. The Ukrainian SSR devoted 52,200 ha to castor beans in 1940, 46,300 in 1950, 36,900 in 1960, and almost 80,000 in 1969. The main varieties grown in Ukraine are Kruhlyk 5 and synthetic Sanguineus.

Catacomb culture. Bronze Age culture that existed in the Ukrainian steppes from the late third millennium BC to the early second millennium BC and was a continuation of the *Pit-Grave culture. The Catacomb culture was analyzed by V. Gorodtsov after his excavations of kurhans in the Donets River Valley in the 1900s. Relicts of the culture are widespread in northern Left-Bank Ukraine and are also found in the Right Bank, the Azov coastal region, the Crimea, along the Don River, and in the Kalmyk steppes. The tribes of the Catacomb culture practiced herding and primitive subsistence farming and produced metal objects. During its existence the patriarchal system replaced the matriarchal order. The dead were usually buried in a crouched position in catacomb niches of burial pits and sprinkled with red ochre dye. Excavations of the graves revealed spherical clay pottery, flint knives, bronze implements, and silver ornaments. Major excavations took place in the 1950s at the Kuta burial mound, which is now inundated by the Kakhivka water reservoir on the Dnieper River. The tribes of the culture are known to have had cultural and trade relations with the peoples of northern Caucasia.

Catherine I, b 15 April 1684 in Marienburg, d 17 May 1727 in St Petersburg. Empress of Russia, 1725–7. Catherine, née Marta Skowrońska, was the daughter of a Lithuanian peasant. She succeeded her husband, Peter I, and continued his policies. She was largely dominated by A. *Menshikov, the effective head of government. Under Catherine I the *Little Russian Collegium was in charge of Ukrainian affairs.

Catherine II, b 5 May 1729 in Stettin, Prussia, d 17 November 1796 in St Petersburg. A member of the German Anhalt-Zerbst princely house; empress of Russia, 1762–96. The reign of Catherine II was marked by an extremely reactionary internal policy (the institution of a system of total serfdom, and the expansion of the rights and privileges of the Russian nobility) and by a highly successful imperialistic foreign policy (wars with Turkey, 1768–74 and 1787–91; the partitions of Poland). Cathe-

rine's policies towards the non-Russian nations and peoples of the empire were centralist, especially with respect to Ukraine. In 1764 the hetman office was abolished, and in the 1780s Ukraine's autonomy was wholly liquidated. In 1765 the regiments of Slobidska Ukraine were abolished, and in 1775 the Zaporozhian Sich was destroyed. In 1783 the Crimea and in the 1790s the territory between the Boh and Dniester rivers, as well as the entire Right Bank, were incorporated into the empire. In the cultural sphere, Catherine's reign was marked by further Russification in Ukraine. The rights and interests of the Ukrainian church were curtailed by the secularization of monastic estates in 1786. In Right-Bank Ukraine Catherine's government advanced a policy aimed at the annihilation of the Ukrainian Catholic church.

Catholic Action (Katolytska aktsiia). The laity's assistance in the apostolic work of the church hierarchy, channeled through Catholic organizations under the supervision of the church authorities. Catholic Action in Galicia grew to prominence in the 1930s. Its center was the General Institute of Catholic Action of the Greek Catholic province in Lviv, which consisted of the representatives of Catholic organizations such as the *Obnova Society of Ukrainian Catholic Students, the *Orly Catholic Association of Ukrainian Youth, and the *Skala educational association. The general church assistant from the Greek Catholic episcopate was first Bishop I. Buchko and then Bishop N. Budka. The president of the institute was M. Dzerovych, and its most active members were I. Babii, V. Hlibovytsky, and P. Isaiv. The institute published the quarterly *Katolyts'ka aktsiia* in 1934–9.

In Canada Catholic Action was founded in 1933 when the Catholic lay organizations the *Ukrainian Catholic Brotherhood, *Ukrainian Catholic Women's League, Ukrainian Catholic Youth, and Obnova were formed. Its publication was the monthly *Katolyts'ka aktsiia*. In the United States the Association of Ukrainian Catholic Students and Obnova have active branches, and women's organizations are active at the parish level. In Brazil the Institute of Women-Catechists has been active in educational and charity work since 1940.

In Germany Catholic Action was established in 1947, and in 1949 it encompassed all of Western Europe. Its publication is the weekly *Khrystyians'kyi holos*. The main organizations that belonged to Catholic Action were the Obnova Federation of Societies of Ukrainian Catholic Students and the Obnova Ukrainian Catholic Academic Alliance. The active leaders of Catholic Action in Western Europe were Ye. Pereima, M. Tomashivska, R. Danylyvych, and V. Yaniv.

Cattail (*Typha*; Ukrainian: *rohiz*). Perennial plant of the Typhaceae family that grows in marshes and along riverbanks. It has an extensive creeping rhizome and a rigid, round stem. In Ukraine there are five species of cattail, but the most prevalent are the common cattail (*T. latifolia*) and the narrow-leaved cattail (*T. angustifolia*). Their stems are up to 2.5 m high. Young stems can be eaten raw, and the roots can be roasted. The stems are used for thatch and fuel, the leaves for weaving baskets. The hairs can be used as filling and packing material and mixed with animal hair for making hats. Cattails are used in the paper and cellulose industries.

Cattle raising. Cattle have been the most important domestic animals in Ukrainian territories since the later Neolithic period. In the 15th century oxen were exported from Left-Bank Ukraine and Podilia to Western Europe and later Muscovy for their value as food and draft power. Later they were exported from southern Ukraine. In the second half of the 19th century, as the steppes came under cultivation, grazing land diminished. In the forest-steppe belt, with the exception of Western Ukraine, the three-field system prevailed. Hence, cattle numbers did not keep pace with population growth. From 1897 to 1912 the number of cattle even declined by 8 percent in central and eastern Ukraine. In 1912 there were over 10 million head of cattle in all Ukrainian territories. The Right Bank and the Left Bank had the lowest cattle density, while Polisia, with its extensive meadows and pastures, and Galicia, with its abundance of cultivated grasses, had the highest. Ukraine was deficient in cattle: 35.7 percent of the farms had no cows. At the same time the types of cattle changed: the number of cattle raised for meat and work declined as the ox was replaced by the horse, and the number of milking cattle increased. In spite of the contributions of the zemstvos, the breeding of cattle was generally neglected. The annual production of milk in agricultural regions was 600–1,000 kg per cow. Although the number of cattle declined, over 50 million rubles' worth of animal products was exported from Ukrainian gubernias per year, mainly to Poland.

In the first years of the First World War the cattle population increased from 6 million (1912) to 7.7 million (1916) in central and eastern Ukraine because the extent of fallow land increased. It declined during the revolution and rose again in the NEP period (9,928,000 in 1928), because the number of farms increased and each farmer wanted to own a cow. During the collectivization and the famine the cattle population fell drastically to 3.4 million in 1933. To correct this, the Soviet government devoted much effort to the development of animal husbandry on collective and state farms. Every collective farm set up an animal farm. State farms specializing in animal husbandry were organized. Much was done to improve the stock. But the most significant step was the government's compromise with the peasants that permitted them to keep a few privately owned head of cattle on private lots. This is clear from the fact that in 1938, when the cattle population in the Ukrainian SSR stood at 7.8 million, the vast majority of it was privately owned: 69 percent of the cattle belonged to collective farmers and other private persons (it went down to 63.6 percent in 1941, with 3.6 percent belonging to state farms and 30.9 percent to collective farms). In Western Ukraine there were no significant changes in cattle population.

In 1941 the number of head of cattle in the Ukrainian SSR was just under 11 million (13 million in all Ukrainian territories). During the war the number fell by a half, and it returned to what it had been in 1941 only in 1950. Generally, advances in animal husbandry were much more difficult than in other branches of agriculture; hence, this branch fell further and further behind the demand of the increasing urban population for animal products. As before, the amount of land devoted to animal husbandry was deficient, and the collective farms lacked any material incentive to improve animal husbandry. The resolutions of the plenums of the Central Committee of the CPSU (in September 1953 and January

TABLE 1
Cattle: beef and milk production

Year	Total cattle	Cows	Beef and veal (tonnes)	Milk (tonnes)
1916	9,132,000	4,116,000	600,000 (in 1913)	4,667,000 (in 1913)
1928	9,928,000	4,938,000		
1935	5,113,000	2,514,000		
1941	10,997,000	5,965,000	408,700 (in 1940)	7,114,000 (in 1940)
1946	8,275,000	4,312,000		4,813,000
1950	11,103,000	4,796,000	552,300	6,804,000
1955	11,674,000	5,727,000		9,670,000
1960	17,040,000	7,687,000	714,800	13,995,000
1965	19,777,000	8,559,000	793,300	16,629,000
1970	20,289,000	8,451,000	1,105,000	18,712,000
1978	24,924,000	9,143,000	1,603,000	22,480,000

1955, etc) and other Party and government resolutions attempted to overcome these defects. Through an increase in the amount of land devoted to fodder crops and corn, a firm basis was laid for cattle farming. The wholesale and retail prices of animal products were raised, and the old breeds of cattle were improved and new breeds introduced.

Table 1 shows how the cattle population increased. By 1966 it had reached 21.3 million and remained stable for some time. In the last few years it has increased, reaching 24,924,000 in 1978. There are 29 million head of cattle in all Ukrainian territories (22.1 percent of all of the cattle in the USSR). In 1978 cows numbered over 9 million (32.6 percent of the cattle total).

An index of the intensity of cattle farming is the number of cattle per 100 ha of agricultural land. In 1978 in the Ukrainian SSR the index was 51, compared to 23 in 1941 (in the USSR the 1978 index was 10.8). The index for cows was 18.7. Cattle farming is most intense in Galicia, Volhynia, and the forest-steppe of the Right Bank (55 to 67 per 100 ha); of medium intensity on the Left Bank and in the Kuban; and of lowest intensity on the southwestern steppe (38 per 100 ha). Table 2 shows the distribution of cattle by type of farm in Ukraine.

The growth in the cattle population occurred on the collective and state farms. The number of head raised on private plots has remained the same or declined in the last 10 years. The main reason is the lack of an adequate fodder supply for private owners. Thus, only half of the collective farmers now keep their own cows. The main

emphasis of collective and state farms is placed on both meat and milk production, while the private owners concentrate on milk production. In 1978 cows constituted 32.1 percent of the cattle owned by collective farms, 34.4 percent of the cattle owned by state farms, and 62.8 percent of privately owned cattle.

The production of meat and milk increased more rapidly than the cattle population because of more intensive farming methods. The Ukrainian SSR produced over 552,000 t of beef and veal in 1950 and 1,118,000 t in 1968, which constituted 21.4 percent of the total produced by the USSR. Ukraine produced 6,804,000 t of milk in 1950 and 22,480,000 t in 1978 (73.2 percent of the milk came from collective and state farms and 26.8 percent from private plots), which constituted 23.6 percent of the milk produced by the whole USSR. In 1977, 527 centners of milk were produced for every 100 ha of agricultural land in Ukraine (in 1940 it was 167 centners), while in 1977 the USSR average was 92 centners. The average production per cow was 2,496 kg in 1977 (1,688 in 1955), while the USSR average was 2,232 kg. The production of milk per 100 ha was highest in Western Ukraine and in the vicinity of large towns, where cattle farming consists mostly of dairying. In 1977 the production of milk per person in Ukraine was 453 kg, while the per person production of meat was 70 kg (in the USSR the figures were 365 kg and 57 kg respectively). In spite of the increase in meat production, it barely meets the demands of the urban population.

In recent years all cattle in Ukraine have been purebred. The proportion of purebred cattle has increased as follows: 62 percent in 1951, 96 percent in 1955, and 100 percent in 1966. The most popular milk-yielding and milk-meat-yielding breeds in Ukraine are the Red Steppe and Simmental (together constituting 80 percent of the cattle on collective and state farms), Red-Spotted, White-head, and Red-Polish.

Total	11.0	11.7	17.0	19.8	25.0	9.3

Soviet-Turkish and Soviet-Iranian borders. The region covers an area of over 440,000 sq km and in 1959 had a population of 27 million. Its northwestern part is settled by Ukrainians.

Caucasia consists of three geographical zones: (1) the steep Caucasus Mountains, known also as the Great Caucasus Range; (2) the steppe lowlands of *Subcaucasia, which lies north of the mountains and is divided by the Stavropol Upland into the Kuban Lowland and the Terek-Kuma Lowland; and (3) the mountains of Transcaucasia (the Little Caucasus and the Southern Caucasian or Armenian Highland), which are south of the lowlands and are separated from them by the Rion Depression and the Kura Valley. The Caucasus mountain watershed divides Caucasia into two historical-political regions: (1) Transcaucasia, with an area of 190,000 sq km (encompassing Georgia, Azerbaijan, and Armenia) and a population of 14 million; and (2) Subcaucasia or northern Caucasia, with an area of 250,000 sq km belonging to the Russian SFSR (encompassing Krasnodar krai, Stavropol krai, Kabardino-Balkar ASSR, North Ossetian ASSR, Chechen-Ingush ASSR, and Dagestan ASSR) and a population of 13 million.

The history and the ethnic composition of Caucasia were determined by its location on the European-Asian frontier. Except for eastern Subcaucasia, with its arid steppes and lowlands of the Caspian littoral, this region was repeatedly crossed by migrating peoples from the East. The mountains served as an obstacle to the migrations and a refuge for many small indigenous peoples. No large and lasting independent states, except Georgia and Armenia, ever arose in Caucasia. The region was usually subject to the political and cultural domination of the neighboring peoples – the Scythians, Huns, Khazars, Persians, Greeks, Romans, Byzantines, Arabs, and Turks. The Mongol invasions of the 13th century and Mongol control of Subcaucasia had a great impact on the region. In the 15th century Caucasia became an object of contention between Iran and Ottoman Turkey. Christianity reached Transcaucasia in the 4th century and Subcaucasia (Taman) in the 6th. The Arabs introduced Islam, which by the 18th century was adopted by all the peoples of the region except the Georgians, Armenians, and, partly, the Ossetians. Russia began to expand into the region in the 18th century and by the beginning of the 19th century controlled most of it. In spite of resistance from the Caucasian peoples, the process of conquest was completed by the 1860s and led to an almost full Slavization of Subcaucasia, where, apart from Dagestan, indigenous peoples account for scarcely one-eighth of the population (see *Kuban). In Transcaucasia, however, the population consists mainly of Georgians (3.5 million), Azerbaijanians (over 4 million), and Armenians (2.5 million), with Russians and Ukrainians accounting for over 1 million, or one-tenth of the population.

After the 1917 revolution the independent states of Georgia, Azerbaijan, Armenia (which formed a short-lived federation), and the Republic of Caucasian Mountain Peoples arose in 1918. In 1920–1 these countries were occupied by the Bolsheviks. In 1922 the Transcaucasian SFSR was established, which was divided into three Soviet republics – Azerbaijan, Armenia, and Georgia – in 1936. In 1921–2 Subcaucasia was incorporated into the Gorskaiia ASSR as part of the Russian SFSR. Eventually it was divided into a number of autonomous republics and oblasts (see *Caucasian mountain peoples).

Ukrainian contacts with the peoples of Caucasia go back to the Princely era and were renewed in the 19th and particularly the 20th century. They have consisted mostly of contacts with the *Georgians and to a lesser extent with the *Armenians. Ukrainian deputies worked with Caucasian deputies in the Russian State Duma in the *Autonomists' Union. In 1917 representatives of the Caucasian peoples took part in a conference of the captive peoples of Russia, which was held in Kiev. The UNR established diplomatic ties with the independent Caucasian states in 1918. Their diplomatic missions abroad (particularly at the Paris Peace Conference) worked closely together to defend their independence. The Ukrainian and the Caucasian governments in exile continued their co-operation: in 1926 the UNR government established an alliance with the Caucasian confederation. The Ukrainian and Caucasian delegations worked closely together at the League of Nations in Geneva. From 1926 they co-operated in the *Promethean movement in Warsaw and Paris and, after the Second World War, in the *Anti-Bolshevik Bloc of Nations and the *Paris Bloc.

Under the Soviet regime Ukrainian-Caucasian contacts have taken place only in the cultural sphere.

V. Kubijovyč

Central mountain range of the Caucasus

Caucasian mountain peoples (Caucasian highlanders, north Caucasian peoples). A group of small nations that inhabit the Caucasus Mountains and the southern part of Subcaucasia in the vicinity of territories settled by Ukrainians and people of other nations. These mountain peoples are mostly the remnants of larger nations that were destroyed by the Mongol invasion and who were later pushed into the mountains by Russian and Ukrainian colonists. Russian attempts to subjugate them in the 18th and 19th centuries succeeded by the 1860s. From west to east the Caucasian mountain peoples include the following nationalities (the 1979 population throughout the USSR is added in parentheses): the Adygians (109,000) and the Kabardians (322,000) of the Cherkess group, the Balkars (66,000) and the Karachays (131,000) of the Turkic group, the Ossetes (542,000) of Iranian origin, the Chechens (756,000) and the Ingushes (186,000) of the Chechen group, and the Kumyks, Avars, Dargins, Lezgians, and numerous other smaller peoples in Dagestan (total population 1,657,000). Except for some of the Ossetes these mountain peoples are Sunni Moslems.

After the 1917 revolution the Caucasian mountain peoples proclaimed their own state on 11 May 1918, but it was crushed by A. Denikin's White forces and the Bolsheviks. In 1921–2 the Gorskaia ASSR was formed within the Russian SFSR, but it was divided eventually into a number of autonomous republics and oblasts. After the Second World War the Soviet regime resettled the Balkars, Karachays, Chechens, and Ingushes, and in 1944–5 it abolished their autonomous territories. In 1957 the former arrangements were restored. Today the following autonomous regions exist in Subcaucasia: the Kabardino-Balkar ASSR, North-Ossetian ASSR, Chechen-Ingush ASSR, and Dagestan ASSR, and the Adygey and Karachai-Cherkess autonomous oblasts.

Political émigrés of the Caucasian mountain peoples were active in Warsaw until 1939. Today they are active in Paris, Munich, and Istanbul and occasionally co-operate with certain Ukrainian émigré groups.

Bison in the Caucasian Nature Reserve

Caucasian Nature Reserve (Kavkazkyi zapovidnyk). With an area of 262,500 ha this is the largest preserve on the Ukrainian ethnic territories of the Kuban. It lies in the Krasnodar krai, in the western part of Caucasia, on the upper Bila Laba and Mala Laba rivers, at an altitude of 500–3,150 m. The preserve was created in 1920–4 as the High Mountain Landscape (Vysokohirskyy kraievyyd). It contains all the vegetative zones that are characteristic of Caucasia and over 3,000 flora species. The preserve is inhabited by such species as the wisent, deer, chamois, boar, goat, wildcat, and bear. The most interesting birds that live here are the Caucasian woodcock, black vulture, and mountain eagle.

Caucasus Mountains. See Caucasia.

Cavalry. Until the Second World War one kind of military force used on land. The cavalry's importance was diminished by the development of firearms and mechanized armaments. Large cavalry battles took place at the beginning of the First World War, but by the end of the war the cavalry had no important operational use. The cavalry, however, played an important role in the fighting in Eastern Europe in 1918–20. With time the cavalry ceased to be a separate armed service.

In the Princely era the Ukrainian army consisted

originally mostly of foot soldiers. A cavalry began to form, mainly under Volodymyr the Great and Yaroslav the Wise, in response to the invading hordes from the steppes. There were two kinds of cavalry: heavy and light. The heavily armed cavalry consisted of the prince's troops, who were armed with helmets, armor, shields, spears, and swords. The light cavalry consisted at first of hired steppe nomads. With time a light Rus' cavalry was organized and was armed with sabers, bows, and spears. Eventually the cavalry expanded to such an extent that it constituted the nucleus of the princely army.

In the Lithuanian-Polish armies the cavalry was the main armed force. It consisted mainly of heavy cavalry armed with lances, swords, and heavy armor. In the Cossack forces, however, the cavalry was of secondary importance; it consisted of light cavalry armed with spears, sabers, pistols, small rifles, and sometimes bows. It was organized into small units that, before battle, challenged the enemy to skirmishes. Rarely did it appear in large numbers, and when it did, it rode into battle in long rows. The cavalry played a more important role in the army of B. Khmelnytsky. Large cavalry units with some light artillery were often used in large raids against the Poles (eg, the raids of Col S. Morozenko and A. Zhdanovych). Under the Hetman state in the 17th–18th century there were regiments of volunteer cavalry (known as *kompaniitsi*) and mercenary units of Wallachian, Tatar, Serbian, or German (latter half of the 17th century) cavalry. Ukrainian mounted musketeer regiments served in the Russian army at the end of the 18th century.

The cavalry has had no important role in modern Ukrainian military formations or armies. A small cavalry unit was organized in 1914 under Lt R. Kaminsky's initiative in the Legion of the Ukrainian Sich Riflemen. Its functions were reconnaissance and communications. After 1917 the larger cavalry formations were the Cavalry Division of the Sich Riflemen and the following cavalry regiments: the Haidamaka Cavalry Regiment, the Serdiuk Lubni Regiment, the Black Zaporozhian Regiment, the Pereiaslav Regiment, the Ivan Mazepa Regiment, and the Otaman Ivan Sirko Regiment. These regiments were rather small—300–700 men—and decreased as recruitment failed to keep pace with losses.

During the campaign of 1919–20 cavalry companies were formed at brigade headquarters. In June 1919 the Cavalry Brigade of the Ukrainian Galician Army was also organized. It consisted of two regiments numbering at most 600 men altogether. It saw action only after the Zbruch crossing and the Kiev offensive. In 1920 the Separate Cavalry Division of the Army of the UNR was organized under Gen I. Omelianovych-Pavlenko. Furthermore, every division in 1920 had its own cavalry regiment. During the anti-Bolshevik partisan struggle almost every partisan detachment had a cavalry unit. The cavalry of the Army of the UNR was armed and equipped on the Russian pattern, while the cavalry of the Ukrainian Galician Army followed the Austrian pattern. Yet in the 1917–20 period Ukrainian cavalry forces were inadequate. The Ukrainian army encountered strong enemy cavalry troops in battle: G. Kotovsky's Bolshevik regiments and S. Budenny's Mounted Army, A. Denikin's Volunteer Army, and the Polish armed forces.

During the Second World War the Division Galizien

had only one cavalry company. The Ukrainian Insurgent Army had a few small cavalry units, which were used only for reconnaissance.

Caves, Kievan Monastery of the. See Kievan Cave Monastery.

Cecora, Battle of. During the Polish-Turkish War of 1620–1, which was started by Turkey in an attempt to annex Ukraine, a battle took place near the Moldavian village of Cecora, not far from the town of Iași on the Prut River. On 20 November 1620 the Turkish-Tatar army, numbering close to 40,000, surrounded the advancing Polish-Cossack army, numbering about 8,400, under the leadership of Crown Hetman S. Żółkiewski. The Polish-Cossack army retreated in disorder and was completely crushed. Żółkiewski died in battle, as did M. Khmelnytsky, the father of B. Khmelnytsky. B. Khmelnytsky was captured and spent the next two years as a Turkish prisoner. After the battle the Tatars ravaged a large part of Podolia and eastern Galicia.

Cedar of Lebanon (*Cedrus libani*; Ukrainian: *kedr*). An evergreen of the pine family. The tree attains a height of 25–40 m. Its wood is valued highly as building material. The cedar is cultivated in the Crimean Mountains as a decorative tree.

Čelakovský, František, b 7 March 1799 in Strakonice, Bohemia, d 5 August 1852 in Prague. Czech poet, philologist, and activist in the national renaissance. Čelakovský published the collection *Slovanské národní písně* (Slavic Folk Songs, 1822–7), which included Ukrainian songs. He translated into Czech works by L. Borovykovsky, A. Metlynsky, M. Kostomarov, and M. Shashkevych. Metlynsky included translations from the work of Čelakovský in his collection *Dumky i písní i shche deshcho* (Ballads and Songs and Still Other Things, 1839).

Celibacy. The unmarried state of clergy, known in both Eastern and Western Christianity. The practice of the Eastern churches, which trace their origin to the Byzantine church, was permanently codified by the Council of Trullo (692): priests, deacons, and subdeacons may continue a marriage entered into before ordination; men who have remarried cannot be ordained; and a priest or deacon cannot remarry after the death of his wife. The Council of Trullo also sanctioned the norms for a candidate to the episcopacy: he must be celibate, widowed, or, if married, must separate permanently from his wife.

This legislation was in force when Christianity was adopted in Ukraine. The pastoral clergy were married, while the bishops were chosen from among the monastic clergy, although it was not rare for widowers to be raised to the episcopacy after taking monastic vows. This is the canonical norm now in force in the Ukrainian Orthodox church.

When the Ukrainian and Belorussian hierarchy joined the Catholic church in the Union of *Berestia (1595), the bishops were aware of the possibility that Rome might impose celibacy on their clergy. Therefore, they sought express approval of a married priesthood. This they received in the bull *Magnus Dominus* from Pope Clement

viii: 'Priestly marriages remain intact with the exception of bigamous ones.'

The freedom to elect marriage before ordination remained uncontested in the Ukrainian Uniate church until the First World War. An attempt to enact mandatory celibacy at the Lviv local synod (1891), favored by the papal representative, failed. A conference of the three bishops of the Halych metropolitanate finally adopted celibacy. However, Metropolitan A. Sheptytsky, not wishing to challenge the statute of the Union of Berestia, understood this step as favoring optional celibacy. He reserved half of the places in the seminary for married candidates. Two other bishops (H. Khomyshyn and Y. Kotsylovsky) did not follow him in this measure and from 1924 refused to ordain married men. Three other eparchies (Mukachiv and Prešov in Czechoslovakia and Križevci in Yugoslavia) did not follow this practice of making celibacy mandatory.

The situation developed differently in the diaspora. In the United States, Canada, Brazil, and Argentina the Ukrainian Catholic community had its beginnings in the 1880s–1890s, when large groups of immigrants from Galicia and Transcarpathia settled there permanently. A circular letter of the Congregation for the Propagation of Faith of 1 October 1890, addressed to the Ukrainian bishops of Austria-Hungary, forbade married priests to minister among their compatriots in America. This measure was repeated several times, although it was not fully observed. The majority of priests who went to the United States were married men who took with them their wives and children. Most of those who went to Canada and Brazil were monks.

The opposition of Rome, at the insistence of the local hierarchy of the Latin rite, to married clergy led to a movement by many of the priests and faithful to join the Russian Orthodox church. The prohibition of a married clergy was omitted in the decree *Cum Episcopo* of 17 August 1914, which established separate Ukrainian Catholic jurisdiction in the United States. However, it was reinstated in 1929 and enforced with vigor. This led to a secession in the Ruthenian exarchate of Pittsburgh, when about 100,000 church members left to form an Orthodox eparchy under the patriarch of Constantinople.

With the new influx of Ukrainian immigrants from Western Europe after the Second World War, the Roman Curia consented to their being ministered by married priests from Ukraine. But this appeared to be an exceptional measure; the prohibition against ordaining married candidates or bringing them from Europe to the Ukrainians in the Americas and Australia was repeated several times in the 1970s. Still, married ordained priests in Europe, once they emigrate to the United States or Canada, are tolerated and are permitted to serve as priests. The Roman Curia also applies the rule on celibacy to Ukrainian Catholic communities in Western Europe and, more recently, in Poland. The Ukrainians in Galicia, Transcarpathia, Czechoslovakia, and Yugoslavia are not affected by this prohibition. The Ukrainian Catholic lay movement and the priests of the Society of St Andrew are advocating married priesthood in the diaspora, although without much success in the Vatican.

Celtic coins. The coins produced by the Celts were mostly imitations of the silver tetradrachmas of Philip of Macedonia and the gold staters of Alexander the Great. They appeared in western Ukraine during the La Tène period. Hoards of Celtic coins were found in Skomorokhy in Sokal county, Mukachiv, and Rozavlia in the Marmarosh region. Celtic coins were unknown, however, in eastern and central Ukraine.

Celts. Tribes that inhabited, in the 6th–1st century BC, a large part of western and central Europe, mainly the territory of present-day France. Influenced strongly by the Greeks, the Celts had an advanced culture, which they spread throughout Europe during their migrations. The culture was brought to Ukraine by the Celtic tribes of the *Bastarnae and Skiri. The mass production of iron articles, mostly weapons and farm implements, the widespread use of pottery made on a potter's wheel, and fine ornamentation are characteristic of the Celtic culture. The main occupations of the Celts were mixed farming and trading, in which they used their own coins (see *Celtic coins).

Cement industry. Branch of the *building-materials industry that produces various types of cement. The raw materials from which cement is made – limestones, marls, chalk, and cement clays – are found mostly in the Donbas, where some of the largest deposits in the Soviet Union, and in fact in the whole world, are located near Amvrosiivka, in the Kharkiv region, and in Chernihiv, Lviv, Chernivtsi, and Rivne oblasts. It is in these regions that the cement industry has developed. The first cement plants in Ukraine were built in Amvrosiivka in the Donbas in 1896 (see *Amvrosiivka Cement Complex) and in Zdolbuniv in Volhynia in 1898. By 1913 there were 12 cement plants in Ukraine, most of which were small, and their total output was 269,000 t of cement (15 percent of the output of the Russian Empire). During the period of industrialization under the first five-year plans the cement industry grew by expansion of the existing plants and by construction of new plants in Dnipropetrovske, Yenakieve, and Kharkiv. By 1940 the Ukrainian SSR produced 1.2 million t of cement, or 20.7 percent of the USSR production. After their destruction in 1941–3 the cement plants were rebuilt, and by 1948 they had returned to their prewar level of production. Eventually, a string of new plants was built, including such plants as the cement-mining plant in Mykolaiv in Lviv oblast, the Balakliia plant in Kharkiv oblast, the Novoamvrosiivske plant, the Zdolbuniv plant, the Kryvyi Rih plant, and the Kamianets-Podilskyi plant. In 1978 the cement industry was represented by 15 enterprises, which produced 23.1 million t of cement, or 18.1 percent of the USSR total. Of this output 51.8 percent was portland cement, 44.8 percent was slag cement, and 3.3 percent consisted of other types of cement.

The present distribution of the cement industry necessitates extensive interoblast and interrepublican freight transportation. The average radius of transportation is 310 km in Soviet Ukraine and over 500 km in the southern regions of Ukraine. Cement is also brought into

some oblasts that have deposits of the raw materials for cement, for example, Voroshylovhrad, Sumy, and Kherison oblasts. Some of the high-quality portland cement, produced mostly at the Amvrosiivka complex, is exported from Ukraine, particularly to Rostov and Krasnodar, but also to the central RSFSR and Belorussia. High-quality quick-setting portland cement and slag cement is imported by Ukraine from other republics of the USSR. (For a bibliography, see *Building-materials industry.)

Censorship. Control by state and other institutions of public expression of ideas and opinions. As in other countries, church censorship preceded state censorship in Ukraine. On 5 November 1591 the council of Orthodox bishops meeting at Berestia decreed that 'bishops must inspect, sign, and stamp manuscripts before submitting them for printing.' The reason for this prior censorship was 'that nothing detrimental to God's church be published.' The Uniates behaved in the same way: article 27 of the Church Union of *Berestia of 1 June 1595 forbade printers to 'print anything without the knowledge and permission of their bishops' in order to prevent 'various heresies from spreading.' Sometimes the Polish authorities exercised postpublication censorship over Ukrainian publications. Thus, in 1647 the Lviv printer M. Slozka was summoned before the king's court for publishing the catechism of P. Mohyla in 1645. Muscovite church censorship disapproved of various Ukrainian books even before the Pereiaslav Treaty of 1654. In 1627 the *Katekhizis* (Catechesis) of S. Zyzyanii and the *levanheliie uchitel' note* (Didactic Gospel) of K. Stavrovetsky were burned in Moscow for 'heresies' contained in them, and books of Lithuanian imprint (ie, Ukrainian-Belorussian books) could not be brought into Muscovy. When the Ukrainian Orthodox church became subordinate to the Moscow patriarch in 1686, his censorship was extended to the Hetman state. In 1689 the Moscow patriarch Joachim ordered all new church books to be sent to him for approval before printing. In 1690 the Council of Moscow anathemized the works of P. Mohyla, I. Galiatovsky, L. Baranovych, A. Radyvylovsky, Ye. Slavynetsky, and others. In 1720 Peter I ordered the two presses in Hetman Ukraine – the press of the Kievan Cave Monastery and the press of the Holy Trinity–St Elijah Monastery in Chernihiv – not to print any books without prior censorship by the Spiritual Collegium, which replaced the Moscow patriarchate and in 1721 was given the name *Holy Synod. The purpose of this censorship was to suppress any religious heresy or deviation from the Great Russian books. In 1724 both presses were fined for disobeying this order.

At the end of the 18th century Russian authorities began to introduce secular censorship in Ukraine. The gubernial governments were given the responsibility of controlling publications. In 1804 Alexander I entrusted the task of censorship to the universities for a brief period. Nicholas I established a special censorship of Uniate publications in 1826. From 1828 local censorship committees, the Kiev and Odessa committees among others, were subordinated to the Main Censorship Administration in St Petersburg. The progress of secularization in the Russian Empire made possible the printing of Ukrainian literature, first in Russia and then, from the beginning of the 19th century, in Russian Ukraine. When the Ukrainian awakening became politicized in the 1840s,

the authorities began to use censorship to control Ukrainian literature: in 1847 T. Shevchenko's works were prohibited, particularly his *Kobzar*, the 1840 and 1844 editions of which came out with the censor's excisions.

The Russian government launched a new offensive against Ukrainian publications in 1863 with a circular from the minister of internal affairs, P. Valuev, which prohibited the printing of Ukrainian books with a religious content, Ukrainian school texts, and generally books for popular use. The church authorities prevented the publication of P. Morachevsky's Ukrainian translation of the Gospels. In 1865 publications entering Russia from abroad began to be censored. A special commission, chaired by the minister of internal affairs, was set up in 1875 to study the means of suppressing Ukrainophile activities. As a result of the commission's recommendations, Alexander II issued the *Ems Ukase* on 8 May 1876, forbidding the printing of books in Ukrainian, the publication of Ukrainian translations, theatrical performances, musical texts in Ukrainian, and the importation of Ukrainian books from abroad. Because Ukrainian was banned from the stage, Ukrainian songs had to be translated into Russian. The prohibition of Ukrainian texts in musical compositions was so absurd that M. Lysenko, with the support of the Kiev and Kharkiv governors general, succeeded in getting it lifted by 1881. At the same time Alexander III permitted Ukrainian dictionaries to be published and, under special conditions, Ukrainian plays to be staged. Grammar books, however, were not permitted to be published. In 1895 children's books in Ukrainian were banned. In 1901 subscribing to the Lviv journal *Literaturno-naukovyi vistnyk* was prohibited. The censors banished the name Ukraine and its derivatives and replaced them with Malorossia (Little Russia). They disapproved of such words as Sich and Cossack, eliminated neologisms that arose as the language developed, and even removed Ukrainianisms from Russian works. From 1895 to 1904, 70 percent of the manuscripts submitted to the censors were rejected. In some years (1866, 1877) not a single Ukrainian book was published in the Russian Empire. The ban on Ukrainian from 1863 forced writers in Russian Ukraine to publish in Galicia. It was easier to publish something in Ukrainian in Moscow than in Kiev, where the censorship was particularly severe: in 1894, 14 Ukrainian books were published in Moscow and only 8 in Kiev.

The Revolution of 1905 spontaneously abolished the restrictions on Ukrainian. The Imperial Academy of Sciences favored their abolition. Ukrainian publications began to be censored according to general standards, that is, on the basis of their content rather than their language. The legacy of Valuev and Alexander II did not die out, however; in 1906 a complete Ukrainian translation of the Scriptures and the importation of such translations were prohibited. Some newspapers were banned because of their contents: for example, *Khliborob* in Lubni in 1905, the Social Democratic *Borot'ba* in Kiev, *Vil'na Ukraïna* in St Petersburg, *Dobra porada* and *Zaporozhzhia* in Katerynoslav, *Narodna sprava* in Odessa, and *Slobozhanshchyna* in Kharkiv in 1906. The publication of T. Shevchenko's complete works was stopped in 1911, and Ukrainian newspapers could not be sent to village co-operatives. With the outbreak of the First World War strict restrictions were imposed on Ukrainian publications. Many publications were prohibited. The military censorship

that came into force was particularly severe in Russian-occupied Galicia.

Under Austrian rule Ukrainian publications were subjected to censorship not only from Austrian authorities but also from Ukrainian conservative circles, whose restrictions were more severe. This was the state of affairs up to the revolution of 1848. In 1834 Rev V. Levytsky, the censor of Ruthenian books, as they were called then, bowed to the demand of the Greek Catholic metropolitan M. Levytsky and prohibited the publication of *Zoria*, a collection of poems by the Ruthenian Triad, although Y. Kopitar, the Viennese censor, had approved it. This collection of poems appeared in Budapest under the title *Rusalka dnistrovaia* (The Dniester Water Nymph), but most of the copies printed were later confiscated in Galicia. The reason for its prohibition was the fact that its language was considered substandard, being too close to the vernacular. In 1838 Y. Lozynsky's Ruthenian grammar was banned for a similar reason (it was published in 1848). When a constitutional order was established in Austria in 1867, the old system of censorship was abolished, and the public prosecutor was given the power to impound suspected publications (particularly in Galicia). To avoid financial loss, the economically weaker publishers submitted manuscripts to the public prosecutor for prior inspection (known as prophylactic censorship). Polish censors sometimes used censorship blackmail against Ukrainian newspapers; for example, *Dilo* and *Hromads'kyi holos* were confiscated. At the beginning of the 20th century Austrian censorship took a much more liberal attitude towards Ukrainian publications.

The February Revolution in 1917 brought eastern Ukraine freedom of the press. Censorship was introduced only under Hetman P. Skoropadsky in 1918, because most of the press, both Ukrainian and Russian, was opposed to his government. Leftist papers were closed down, including *Borot'ba* and *Narodna volia* in Kiev; *Mysl'*, *Zemlia i volia*, and *Rabochaia bor'ba* in Odessa; *Mysl' naroda* and *Narodnie dilo* in Kharkiv; *Nash luch* in Katerynoslav; and *Dnipro* in Kherson. Under the Directory of the UNR the Sich Riflemen in Kiev first assumed censorship powers and closed down *Kievskaia mysl'* and some other Russian newspapers because of their anti-Ukrainian stand. These powers were then transferred to the Supreme Administration of the Press and Propaganda, which was directed by O. Nazaruk at the end of 1918 and the beginning of 1919. Nazaruk demanded that the Russian press print one-third of its material in Ukrainian. The Western Ukrainian National Republic had no separate agency responsible for censorship.

After the Polish occupation of Western Ukraine in 1919, Ukrainian publications came first under prepublication censorship, but in the 1930s this was changed to postpublication censorship. In 1924 the Ukrainian representative S. Khrutsky declared in the Warsaw Sejm that 'almost all issues of Ukrainian periodicals contain the eloquent heading "Second Printing after Confiscation."' In the 1930s it was forbidden to fill the confiscated spaces in newspapers with other material. Blank spaces stamped 'confiscated' served as a protest, contrary to the intention of Polish authorities. As under Austrian rule, censorship could be circumvented by reading the confiscated articles in the Sejm and reprinting them from the official stenographic record. In 1932–8, 11 editions of T. Shevchenko's works were prohibited by Polish censors. In general, the

ensorship of Ukrainian books was more liberal than that of Ukrainian periodicals.

In Bukovyna the Rumanian authorities suppressed from the very beginning (1918) the newspapers *Nova Bukovyna* and *Borba*. Ukrainian editors had to submit to the censors twice as much material as they intended to print, because half of it was usually rejected. Blank spaces were not permitted. In spite of prepublication censorship the police sometimes confiscated publications that had been approved.

In Transcarpathia under Czechoslovakian rule the press was censored after publication, while books were censored before publication. Several periodicals were closed down temporarily or permanently because of their oppositional or anti-Czech position. The Hungarians introduced prior censorship in 1939–44 for the press as well. Publications in literary Ukrainian and in phonetic orthography were prohibited.

In the Generalgouvernement (1939–45) German prepublication censorship of the Cracow press and books (restricting the number of titles to be published and copies to be printed) was very strict. Scholarly works were forbidden, and books on historical themes (particularly on the 1917–20 period) were limited. To facilitate control and censorship, the authorities granted the *Ukrainske Vydavnytstvo publishers in Cracow a publishing monopoly. In Galicia Ukrainian newspapers were published by a German semigovernmental publishing firm. Up to the German-Soviet war criticism of the Soviet Union was not allowed. The scanty Ukrainian press in the Reichskommissariat Ukraine and in Germany was usually under the direct control of the Germans. Almost no Ukrainian books appeared in Reichskommissariat Ukraine, but a few were published in Germany, where censorship was not as strict.

The Soviet government quickly restored censorship of the press, some of which was still privately owned or controlled by civic organizations. The Revolutionary Tribunal, established on 2 August 1918, decreed that to use the press against the Soviet regime was a crime. On 29 December 1918 military censorship was introduced, allegedly to protect military secrets. This agency constantly abused its authority. In 1922 the Main Administration for Literature and Publications (Glavlit) was established and served as a model for similar republican administrations, which were set up within the people's commissariats of education as censorship agencies. In the USSR there was also the Administration for the Protection of State Secrets in the Press. Besides the special Soviet institutions of censorship, the Party leadership exercises censorship in enforcing a single Party line. Even libraries are censored: their holdings are purged periodically, and certain books are destroyed or transferred to special sections (*spetsfondy*), to which admission is restricted. In contrast to tsarist censorship, Soviet censorship is directed not so much against the Ukrainian language as against specific subject matter: religious subjects, Cossack themes, and various persons, particularly national Communists. As a result of the sudden intensification of the anti-Ukrainian policy in 1933–4, a number of publication projects such as M. Hrushevsky's *Istoriia Ukraïny-Rusy* (The History of Ukraine-Rus') and *Istoriia literatury* (A History of Literature), the Soviet Ukrainian Encyclopedia, the Great Russian-Ukrainian Dictionary, and the Ukrainian Historical Dictionary were canceled.

In the Ukrainian SSR censorship was first exercised

by the Ukrainian Main Administration for Literature and Publications (Ukrholovlit), and since 1963 it has been exercised directly by the State Committee for Printing of the Council of Ministers of the USSR (not the Ukrainian SSR). As well, the Ideological Department of the Central Committee of the CPSU keeps an eye on the press. Other areas of Ukrainian culture are censored by the State Committee for Radio and Television, the State Committee for Cinematography, and the State Committee for the Arts. All these agencies are responsible to higher agencies in Moscow.

The function of censorship is not merely to prevent certain events and people from being mentioned, but also to distort the texts of Ukrainian classics. Excisions are often marked by three dots. Anti-Russian works by classic Ukrainian writers are banned (eg, Shevchenko's poem 'Iak by to ty, Bohdane piany!' [If Only You, Drunken Bohdan] and Lesia Ukrainka's play *Boiarynia* [The Boyar Woman]). Ukrainians who have fought against Moscow cannot be mentioned without being abused. Censorship criteria differ according to territory; for example, in 1944–5 when the Ukrainian Insurgent Army was active in Western Ukraine, *Radians'ka Ukraïna* and other Kiev papers had page-long inserts in issues distributed in Western Ukraine; these contained some material of local significance. Through *samvydav* and *samizdat* literature certain acts of censorship have become public knowledge. The Moscow *Chronicle of Current Events* has revealed, for example, that the Ukrainian films *Kievan Frescos* (1966) by S. Paradzhanov and *The Stone Cross* (1968) by L. Osyka have been banned.

The time a work spends at the censor's is indicated on the last page of a book or journal; it is the difference between the 'submitted for publication' date and the 'authorized for printing' date. The average term is two months for journals and from a few months to a year for books. Every work is subjected to 'self-censorship' before it is submitted to the censor: authors and editors use every precaution to avoid deviations from the Party line. One of the consequences of the suppression of free speech was the appearance of Ukrainian *samvydav* in the early 1960s.

In the Soviet bloc countries publications in Ukrainian on Ukrainian subjects come under prior censorship according to general standards and are liable to Soviet interference. Censorship in Yugoslavia is more lenient.

Census. A direct, massive, statistical survey of the whole population of a given territory for the purpose of determining its size, composition (by sex, age, family ties,

descent, language, nationality, religion, social status, occupation, etc) and distribution on a given date. Governments began to conduct general censuses at the end of the 18th century, in Eastern Europe at the end of the 19th century, and in the Russian Empire in 1897. Usually, a census was taken every five or ten years. But partial censuses, which usually encompassed only taxpayers, were carried out more often. They were unpublished and provided little information about the population.

Cossack Ukraine and the Russian Empire. Some information about the size of the population in Ukraine and its social composition can be obtained from the tax registers of the Polish state, the Hetman state, and the Russian Empire. In the Hetman state censuses had a predominantly fiscal character, which was true of, for example, the so-called *perepysni knyhy* (census books) of 1666. In the 18th century censuses, known as *revizii*, were conducted quite frequently, but they were usually limited to certain localities, or to certain groups or estates of the population. The first general census of Hetman Ukraine was taken in 1723, and the second accurate census of the male population in 1763. In 1765–9 the so-called *Rumiantsev census of the male and female population of Hetman Ukraine was conducted, but it was never completed and tallied. The censuses of the Russian Empire are important sources for information about Ukrainian territories. There were 10 such surveys, of which the following were conducted in Ukraine (apart from Slobidska Ukraine, where they were begun earlier): 1782, 1795, 1811, 1815, 1833, 1850, 1857. They counted the population that was to pay taxes and presented the figures according to estate, urban or rural residence, and nationality (in the 18th century). In 1857, 1863, and 1885 three administrative-police surveys were conducted.

Before the 1897 census, censuses of various towns of central and eastern Ukraine were taken: in Yevpatoriia (1887), Zhytomyr (1873), Katerynoslav (1865, 1873), Kiev (1874), Mykolaiv (1875), Odessa (1873, 1879, 1892), Tahan-rih (1863, 1864), Kherson (1887), Yalta (1894). Except for the results of the Kiev census, which was conducted and published by the Southwestern Branch of the Imperial Russian Geographic Society, and the 1892 census of Kharkiv, which was published by O. Rusov, the results of these censuses were not published.

The only general census of the Russian Empire was the census of 9 February 1897, which was conducted by the Central Statistical Committee in St Petersburg. The questionnaires consisted of 14 questions, including a question on religion and language but not on nationality. The census had many shortcomings, among them an unclear classification of occupations and erroneous data on language in some outlying regions of Ukraine such as the Belorussian-Ukrainian borderland and the northern Chernihiv region. Only some of the results were published, and these were calculated only for large administrative units such as gubernias and counties. In spite of its defects the 1897 census remains the only authoritative source of data for 85 percent of the population in Ukrainian territories at the end of the 19th century. Its results for the whole empire (two volumes) and for individual gubernias were published. Some of its materials were later used in the 1920s by the Central Statistical Administration of the Ukrainian SSR.

Soviet Union. The first Soviet census, held on 28 August 1920, was of limited value, because it did not

embrace all of Ukraine and was conducted during a civil war. Many people refused to register or gave false information. Census materials were published by the Central Statistical Administration of the USSR in Moscow and the Central Statistical Administration in Kharkiv.

On 15 March 1923 a fairly accurate city census was held in the Soviet Union. The data for Ukraine were published by the Central Statistical Administration of the Ukrainian SSR in Kharkiv.

The first general census of the USSR was conducted on 17 December 1926. It was well prepared and conducted in an objective way. The questionnaire contained 14 questions, dealing with such areas as nationality, language, place of birth, occupation, literacy, and education, but there was no question about religion. Of all the censuses in central and eastern Ukraine, this census provided the most valuable data. Its data have been published extensively and studied thoroughly by the statistical administrations of the USSR and the Ukrainian SSR. The data on the native tongue and, to a smaller degree, on the nationality of the population in Ukrainian territories outside the Ukrainian SSR were somewhat vitiated by the misleading instructions and the method of carrying out the census. The number of Ukrainians by nationality and, even more so, by language was actually somewhat higher than that recorded.

The next USSR census was organized by the Central Administration for the Population-Economic Census in Moscow on 6 January 1937. According to the government itself, this census was carried out with flagrant violations of the principles of statistics and of government instructions. For this reason the Council of People's Commissars of the USSR repealed it on 25 September 1937 before its results were published. The real reason behind its repeal was the terrible population loss, owing to the *famine of 1933 and the terror, that the census revealed, particularly in Ukraine.

The subsequent census of 17 January 1939 was also kept from the public, except for the most general data. The official reason for this secrecy was the outbreak of war in 1941, but the actual reason was falsification. The government announced that the population of the USSR had grown by six million and the population of the Ukrainian SSR by two million in order to conceal the population loss in the 1930s, which would have been obvious had the specific results been published.

The first postwar census of the USSR, on 15 January 1959, dealt with 15 traits of the population. In contrast to the 1926 census the question on place of birth was omitted, probably to conceal the changes resulting from migration. The information about age, socio-occupational status, and family relations was relatively detailed. The results, summarized by the USSR Central Statistical Administration rather briefly in *Itogi vsesoiuznoi perepisi naseleniia 1959 g.* (Results of the All-Union Census of 1959, 15 vols, 1 vol per republic, 1962–3), are given only for large administrative units such as republics, krais, and oblasts. This makes any comparison with the results of the 1926 census very difficult. The 1959 census and the succeeding censuses provide no data on the national breakdown by occupation. The information on the nationality and native language of the population in the Ukrainian SSR is reliable. It is not reliable for Ukrainian ethnic territories outside the Ukrainian SSR and for Ukrainians scattered throughout the rest of the USSR.

The second most recent census took place on 15 January 1970. The questionnaire had 11 questions. Four supplementary questions on activities at the place of work and on matters pertinent to migration were to be answered only by 25 percent of the population. Unlike the 1959 census, this census examined the educational level of the population in detail. For the first time since 1926 information on the use of second languages of the peoples of the USSR was collected, although it contains a host of inaccuracies. The results were summarized by the Central Statistical Administration of the USSR in *Itogi vsesoiuznoi perepisi naseleniia SSSR 1970 g.* (Results of the All-Union Census of 1970, 7 vols). There are no separate volumes for the republics.

The most recent census was held on 17 January 1979. The questionnaire consisted of 16 questions – 11 for everyone and 5 for 25 percent of the population. The question on family relations that appeared in the 1970 census was changed, and a question about the number of children born to each mother was added.

Austria-Hungary. Censuses had been conducted in Austria since 1818 and in Hungary since 1850. Particularly accurate censuses were taken in 1857, 1869, 1880, 1890, 1900, and 1910 (the last four were taken on 31 December of the given years). The results were summarized and studied in the numerous publications of the Central Statistical Commission in Vienna and the Hungarian Statistical Agency in Budapest, as well as the regional statistical agencies of Galicia and Bukovyna. The data were presented according to counties and partly (since 1880) according to communities. The questionnaires did not deal with nationality but with the language used (*Umgangssprache*) and religion. The linguistic composition of the population was presented inaccurately, because Yiddish was not recognized as a separate language and Jews were classified with other linguistic groups, and because the census was often administered in a way that was unfair to Ukrainians. However, the results could be corrected on the basis of the data on religious faith.

Western Ukraine after 1918. In Poland, which included part of Western Ukraine, a census was held on 30 September 1921 and on 9 December 1931. The first census registered nationality; the second, native language. The results of the 1921 census were published and were broken down in greater detail than those of the 1931 census: nationality and religious faith were given by community, while in the 1931 census they were given only by county. In both censuses the nationality and language data for the population on Ukrainian territory were biased against Ukrainians. The data on religious affiliation were more accurate.

In Czechoslovakia censuses were conducted on 15 February 1921 and on 1 October 1930. They registered all the important features of the population, including nationality and religious faith. National relations in western Transcarpathia (eastern Slovakia) were misrepresented: the figures for Ukrainians were minimized in favor of the Slovaks.

In Rumania a census was taken on 19 December 1930, and the main results were published according to county and community. The national composition of the population was surveyed in two ways – by language and by ethnic origin. The figures for Ukrainians were minimized, to the advantage of the Rumanians.

After the Second World War countries that contain

border regions of Western Ukraine have conducted censuses: Poland in 1946, 1950, 1960, and 1970; Czechoslovakia in 1947, 1961, 1970, and 1976; and Rumania in 1948, 1956, 1966, 1970, and 1976. Religious affiliation is no longer registered in these countries. Nationality has been registered in Rumania and Czechoslovakia, but the figures for Ukrainians have been minimized. In Poland the censuses have not included sections on nationality and language.

Central Rada (Tsentralna Rada). At first, an all-Ukrainian center that united political, community, cultural, and professional organizations; later, after the *All-Ukrainian National Congress (17–21 April 1917), the revolutionary parliament of Ukraine that directed the Ukrainian national movement and by its four *universals led Ukraine from autonomy to independence.

The Central Rada was founded in Kiev on 17 March 1917 on the initiative of the *Society of Ukrainian Progressives with the participation of other political parties. M. *Hrushevsky was chosen in absentia as the chairman of the Rada, with D. Antonovych and D. Doroshenko as his deputies. After the All-Ukrainian National Congress the Rada was composed of 150 members, elected from Ukrainian political parties, professional and cultural organizations, and delegates from the gubernias. At the congress a new presidium of the Rada was elected, with M. Hrushevsky as president and S. *Yefremov and V. *Vynnychenko as vice-presidents. To take care of current matters, the Rada chose an executive committee, later renamed the Little Rada, which consisted of members of the presidium, secretaries of the Rada, and two representatives from each political party. All important matters were first decided by meetings of the Little Rada; later the proposals drawn up were ratified by the plenum of the Central Rada. During its existence the Rada held nine plenary sessions.

Even before the proclamation of the First Universal, membership in the Rada was increased by 130 members delegated by the Second *All-Ukrainian Military Congress (23 June 1917) and 133 members of the Council of Peasant Deputies, elected at the First *All-Ukrainian Peasant Congress (15 June 1917). After the proclamation of Ukrainian autonomy (in the First Universal, 23 June 1917), the Rada chose the *General Secretariat – the autonomous government of Ukraine. Having won recognition by the Russian Provisional Government (proclaimed in the Second Universal, 16 July 1917), the Central Rada increased its membership by 100 representatives elected at the First *All-Ukrainian Workers' Congress (24–27 July 1917) and by representatives of the national

First General Secretariat of the Central Rada, 1917

minorities. By the end of July 1917 the Rada consisted of 822 deputies, who represented the following groups: the *All-Ukrainian Council of Peasants' Deputies (212), the *All-Ukrainian Council of Military Deputies (158), the *All-Ukrainian Council of Workers' Deputies (100), non-Ukrainian workers' and soldiers' councils (50), Ukrainian socialist parties (20), Russian socialist parties (40), Jewish socialist parties (35), Polish socialist parties (15), cities, towns, and gubernias (84), and professional, educational, economic, and community organizations and the national minorities – Moldavians, Germans, Tatars, Belorussians (108). Out of the 822 members, the 58 members of the Little Rada were chosen, with 18 of these representing the national minorities.

On 21–28 September 1917 the Central Rada held the *Congress of the Peoples of Russia in Kiev.

After the Bolshevik seizure of power in Russia, the Rada proclaimed the *Ukrainian National Republic (UNR), designating its territory and its federal relationship with Russia (Third Universal, 20 November 1917). At the same time the Rada passed a law on elections to the *Constituent Assembly of Ukraine, as well as several other laws (on the courts, the printing of UNR credit notes, etc). The Rada had the support of the majority of the population of Ukraine, as was shown in the election to the *All-Russian Constituent Assembly on 25 November 1917 (Ukrainian parties received 75 percent of the vote; the Bolsheviks, only 10 percent).

As early as the end of November 1917 the Bolsheviks were preparing to seize power in Ukraine. The Bolshevik government of Russia sent an ultimatum to Ukraine (17 December 1917), which the Rada rejected. The Bolshevik army then began its military campaign against Ukraine. The *All-Ukrainian Congress of Workers', Soldiers', and Peasants' Deputies, convoked in Kiev on 17 December 1917, proclaimed its complete confidence in and support for the Central Rada. The Bolshevik deputies left for Kharkiv, where, on 25 December, they established a rival government opposed to the Central Rada and the General Secretariat. At the same time the Rada sent a delegation to the peace negotiations with the Central Powers in Brest-Litovsk. At the height of the war with the Bolsheviks and in the midst of the peace negotiations, the Central Rada proclaimed the Fourth Universal (22 January 1918), which declared the UNR an independent and sovereign state; the General Secretariat was renamed the *Council of National Ministers. Following the declaration, the Central Rada passed a series of laws, establishing the eight-hour work day, land reform, and, during its stay in Zhytomyr and Sarny in Volhynia, laws on the

monetary system, a national coat of arms, citizenship in the UNR, and the administrative-territorial division of the territory of Ukraine. The most important legislative act of the Central Rada was the adoption of the *Constitution of the UNR (29 April 1918). The presiding officer of the parliament was simultaneously president of the UNR. M. Hrushevsky was elected the first president.

After the signing of the Peace Treaty of *Brest-Litovsk (9 February 1918), the German army took over the Ukrainian territory that had been occupied by the Bolsheviks, but conflict ensued between the Germans and the UNR because of German interference in the internal affairs of Ukraine. On 28 April an armed German detachment even broke into a meeting of the Central Rada and arrested two ministers of the UNR. On 29 April a coup took place with the support of the German army, and Gen P. *Skoropadsky was proclaimed hetman of the Ukrainian state. Hetman Skoropadsky dissolved the Central Rada and the Little Rada by an edict and revoked the laws that had been passed by them.

During its existence the Central Rada was headed by M. Hrushevsky. Its deputy-heads were S. Veselovsky, M. Shrah, A. Nikovsky, and F. Kryzhanivsky, and its secretaries were M. Yermiiv, M. Chechel, A. Postolovsky, M. Levchenko, and Ye. Onatsky. Its governments went through multiple changes under the leadership of V. Vynnychenko (28 June 1917–30 January 1918) and V. Holubovych (30 January 1918–29 April 1918).

The official publication of the Central Rada was *Visti z Ukrain'skoi Tsentral'noi Rady* (April–November 1917), while the official publication of the government of the UNR was **Visnyk Heneral'noho Sekretariatu*, which began publication in November 1917.

Central Representation of the Ukrainian Emigration in Germany (Tsentralne Predstavnytstvo Ukrain'skoi Emigratsii v Nimechchyni; Zentralvertretung der ukrainischen Emigration in Deutschland, e.V.). Central Ukrainian civic institution in the Federal Republic of Germany, elected at the first convention of Ukrainian immigrants in Germany and Austria, which was held in Aschaffenburg in November 1945. The purpose of the institution was to represent and intercede on behalf of the Ukrainians with the occupying powers and later with the German government, as well as to co-operate with foreign charitable organizations and institutions, both Ukrainian and non-Ukrainian. The representation has a three-level structure (headquarters, regional centers, and local centers); its principal legislative body is the Supreme Council, and the executive body is the Supreme Admini-

stration. Initially the representation's activities extended to the American, French, and British zones of occupation, and subsequently to the whole of the Federal Republic of Germany.

At first the representation represented all Ukrainians – 177,000 persons in 1946; 29,000 in 1951. In 1953 it became a legally registered association with the German authorities. In 1956 it had 6,700 members; in 1980, 3,800. Until 1950 the representation was based in Augsburg; then its headquarters were moved to Munich, where they remain to this day. The occupation authorities did not recognize the representation, but tolerated its existence. In the British zone the Central Ukrainian Relief Committee, based in Blomberg and headed by S. Biliak and O. Yalovy, was given official recognition, as was the regional office of the Central Representation of the Ukrainian Emigration in Wangen in the French zone (headed by Ye. Mentsinsky, with Ya. Kalba in charge). The representation's presidents have been: V. Mudry (1945–9), I. Vovchuk (1949–50), Yu. Studynsky (1950–1 and 1957–61), V. Pliushch (1951–3), M. Dorozhynsky (1953–7), Ya. Bentsal (1961–4), and A. Melnyk (1964–present). The secretaries general have been: R. Ilnytsky, N. Hirniak, K. Hodovanets, Z. Pelensky, R. Hromnytsky, A. Melnyk, and V. Lenyk. By 1950 three conventions of delegates representing the Ukrainian immigrants had taken place, in Augsburg (1945 and 1949) and Regensburg-Dillingen (1947–8). Since the completion of resettlement there have been nine general sessions and delegates' conventions of the representation, as well as six general conventions of Ukrainians in West Germany: these have taken place in Stuttgart (1962), Munich (1965, 1970, 1975, 1980), and Königstein (1967).

Central Republican Botanical Garden of the Academy of Sciences of the Ukrainian SSR (Tsentralnyi respublikanskyi botanichnyi sad AN URSR). The garden was established in 1936 and incorporated the garden of the *Institute of Botany of the Academy of Sciences of the Ukrainian SSR. In 1944 it became an independent scientific research institution under the present name. It is located in Kiev on the slopes of the Dnieper's right bank. During the war it was heavily damaged but was later restored and expanded. The garden has an area of 169 ha, with varying soil and orographic conditions. The institution has 13 departments, a herbarium, an orangery, and a library. Its collections contain about 13,000 species and varieties of plants from all the continents. The institution conducts research in such areas as introduction and acclimatization, selection, ecology, physiology, and the protection of plants. Many new varieties of decorative and agricultural plants have been developed there.

Central Ruthenian People's Council (Tsentralna Ruska Narodna Rada). A political organization of Transcarpathian Ukrainians, which was formed in 1919 from an association of local people's councils in Khust, Uzhhorod, and Prešov. Its first president was Rev A. *Voloshyn. On 8 May 1919 the council adopted a resolution on the autonomy of Transcarpathia and its union with Czechoslo-

vakia and sent a delegation to Prague. Eventually, the Russophile faction in the council left and formed a parallel Central Ruthenian People's Council. The original council functioned for the duration of the interwar Czechoslovak Republic as a coalition of non-Communist Ukrainian groups and individuals. In 1938 it was reorganized into the Central Ukrainian People's Council and played a key role in bringing about the autonomous state of *Carpatho-Ukraine. In January 1939 the functions of the council were assumed by the *Ukrainian National Alliance.

Central Scientific Library of the Academy of Sciences of the Ukrainian SSR (Tsentralna naukova biblioteka Akademii nauk URSR). The largest research library in Ukraine, with 18 divisions and 2 branches, and a research center for library science and bibliography. The library was established in 1918 at the same time as the Ukrainian Academy of Sciences in Kiev and was known at first as the National Library of the Ukrainian State. In 1919 it was renamed the National Library of Ukraine (Vsenarodna biblioteka Ukrainy) and affiliated with the All-Ukrainian Academy of Sciences. Publishers were required to provide the library, as the official Ukrainian depository, with copies of their publications. By 1940 the library contained five million holdings. During the Second World War it sustained some damage. In 1948 it was renamed the State Public Library of the Ukrainian SSR. In 1965 its present name was adopted.

By 1979 the library possessed more than 10 million items, including about 298,000 manuscripts, about 8,000 books of the 15th–18th century in Slavonic script (eg, S. Fiol's *Chasoslovets* [1491], F. Skoryna's *Bibliia ruska* [1517–19], I. Fedorovych's *Apostol* [1584], and the Ostrih Bible [1581]), 152,000 art works, 38,000 dissertations, 516 incunabula, and more than 117,000 annual runs of newspapers. The manuscript division contains such rarities as 'Kyivs'ki lystky' (Kiev Missal, 10th century), a fragment of the Slipchynskyi *Apostol* (12th century), the Orsha Gospel (13th century), the Peresopnytsia Gospel (1556–61), the edicts of B. Khmelnytsky, and manuscripts of T. Shevchenko's, I. Franko's, M. Kotsiubynsky's and A. Krymsky's works.

Holdings of the library that are considered to be ideologically subversive are kept in special repositories with restricted access. On 24 May 1964 many valuable old printed books, manuscripts, rare books, archives (of the Central Rada, B. Hrinchenko, *Kievskaiia starina*) and other materials in the library were destroyed in a fire, which was exposed as officially sanctioned arson in the samvydav pamphlet *V spravi Pohruzhal's'koho* (On the Pohruzhal'sky Case).

A. Zhukovsky

Central State Archive-Museum of Literature and Art of the Ukrainian SSR (Tsentralnyi derzhavnyi arkhiv-muzei literatury i mystetstva URSR). A major archive established in Kiev in 1967 for the preservation of documentary material on deceased Ukrainian cultural figures. Theoretically, the archive-museum is supposed to collect documentary material on Ukrainian culture from the earliest times, but in practice it confines itself to the Soviet period. A similar institution was established in Moscow in 1941; it houses archival material pertaining to some Ukrainian figures, including the film directors O. Dovzhenko and I. Savchenko.

Central State Historical Archive of the Ukrainian SSR (Tsentralnyi derzhavnyi istorychnyi arkhiv URSR). Established in Kiev in December 1943 with later branches in Kharkiv (in 1944; abolished in 1971) and in Lviv (in 1946; since 1958 a separate state archive). The archive in Kiev preserves documentary materials from the 16th century to 1917. It has published such collections of documents as *Ukraina pered vyzvol'noiu viinoiu 1648–1654 rr.* (Ukraine before the Liberation War of 1648–1654, 1946) and *Ukrains'kyi narod u Vitchyzniani viini 1812 roku* (The Ukrainian People in the Patriotic War of 1812, 1948) and co-published *Revoliutsiia 1905–1907 rr. na Ukraini* (The Revolution of 1905–1907 in Ukraine, 2 vols, 1955), *Haidamats'kyi rukh na Ukraini v xviii st.* (The Haidamaka Movement in Ukraine in the 18th Century, 1970), collections of documents on peasants' and workers' movements in Ukraine at the beginning of the 20th century, and a number of reference works such as descriptions of legal books, indexes, and catalogues. In 1971 *Kataloh kolektsii dokumentiv Kyivs'koi arkhеоhrafichnoi komisii 1869–1899* (The Catalogue of the Collection of Documents of the Kiev Archeographic Commission 1869–1899) was published by the Kiev archive. The Lviv archive is the major repository of archival materials on the history of Western Ukraine.

Central Statistical Administration of the Council of Ministers of the Ukrainian SSR (Tsentralne statystychnе upravlinnia pry Radi Ministriv URSR or TsSU URSR). Union-republican agency (since 1960) located in Kiev that is responsible for gathering and analyzing statistical data in Ukraine. The agency is subordinate to the Council of Ministers of the Ukrainian SSR and to the Central Statistical Administration of the Council of Ministers of the USSR (TsSU SSSR). Because data gathering and statistics are strictly centralized in the USSR and thus reflect the centralization of planning, the Ukrainian TsSU in practice merely carries out the tasks assigned to it by the TsSU SSSR in Moscow.

There are a number of subagencies within the TsSU of Ukraine: the Ukrainian Mechanical Computation Administration (Ukrmekhoblik), which is in charge of mechanizing computation in the national economy; the Computation Personnel Development Administration (UPK), which is responsible for training in the field; the Ukrainian branch of the state statistical publishing house; and a branch of the Scientific Research Institute for Designing Computing Centers and Systems of Economic Information of the TsSU SSSR, whose basic task is to perfect the methodology of statistical work. The oblast statistical agencies and the city statistical bureau of Kiev are directly subordinate to the TsSU URSR.

The TsSU URSR dates back to the end of 1920, when the Central Statistical Administration of Ukraine (TsSUU) was founded. In the 1920s, when the USSR still lacked a unified economic plan, the TsSUU enjoyed a significant degree of autonomy in planning statistical research and in publishing statistics. During 1924–5 the TsSUU was Ukrainized. Its main publications were *Statystyka Ukrainy* (209 issues, 1921–31); *Statystychna khronika* (152 issues, 1925–9); *Visnyk statystyky* (1928–30); an annual reference book, *Narodne hospodarstvo Ukrainy* (Ukraine's National Economy); and a statistical yearbook, *Ukraina* (Ukraine). Local statistical offices published their own statistical collections and bulletins.

In 1930 all Soviet statistical agencies were abolished as the five-year plans and a general planning system were introduced. Their functions were transferred to the State Planning Committee of the USSR and in 1931 were assigned to the committee's planning agencies – the Central Economic Survey Administration of the USSR and its republican counterpart in Ukraine, the Central Economic Survey Administration of the Ukrainian SSR (Upravlinnia narodno-hospodarskoho obliku URSR). During the Stalinist purges of the civil service in the 1930s many associates of the TsSUU perished. In 1931 the publication of statistical materials was stopped almost completely. Only four statistical reference works appeared in the 1930s, and their information was poor and often falsified.

In 1941 the TsSU SSSR was restored and placed under the jurisdiction of the State Planning Committee. In 1948 its jurisdiction was transferred to the Council of Ministers of the USSR. The restored Central Statistical Administration of the Ukrainian SSR was subordinated to the TsSU SSSR instead of the government of the Ukrainian SSR. Under the economic reforms initiated by N. Khrushchev in 1956 the TsSU URSR became more responsible to the government of Ukraine. In 1960 the agency became a Union-republican institution. The publication of statistical materials was resumed in 1957. Since 1959 the TsSU URSR has published a statistical yearbook, *Narodne hospodarstvo Ukrainy* (Ukraine's National Economy), brief reports of earlier data, and an insignificant number of statistical materials on agriculture, science, and culture. Oblasts sporadically publish their own statistical reports. The TsSU URSR does not have its own periodical, although in the 1960s efforts were made to begin such a publication. See also *Statistics.

Central Ukrainian Relief Bureau (CURB). Relief agency established in London, England, in late 1945 on the initiative of the Ukrainian Canadian Servicemen's Association to assist Ukrainian refugees in Western Europe. It provided material relief, campaigned against forcible repatriation to the Soviet Union, and worked for the resettlement abroad of Ukrainian *displaced persons. CURB was sponsored and financially supported by the Ukrainian Canadian Committee (through the *Ukrainian Canadian Relief Fund) and the Ukrainian Congress Committee of America (through the *United Ukrainian American Relief Committee). It also represented Ukrainian relief committees in Great Britain, Belgium, France, Switzerland, Italy, Argentina, and Brazil. In 1946 the Ukrainian Information Service existed briefly as an adjunct to CURB, disseminating material on Ukraine and Ukrainian refugees in the non-Communist world. G. Panchuk was the first director of CURB, and S. Frolick was the first secretary general. Others closely associated with it were M. Lucyk, M. Kapusta, A. Crapleve, P. Smylski, J. Romanow, S. Davidovich, G. Luckyj, W. Byblow, A. Panchuk, and A. Yaremovich.

Central Union. See Tsentrosoiuz.

Central Union of Ukrainian Students (Tsentralnyi soiuз ukrainskoho studentstva or TseSUS). A central organization that has represented and co-ordinated the activities of Ukrainian students outside the Soviet Union since 1922. TseSUS was founded in Prague at the Third All-Ukrainian Student Congress (20 June–8 July 1922), which acted on the resolutions of previous student congresses. Over the years the TseSUS head office has been located in Prague, Vienna, Munich, Paris, and the United States.

1922–45. For the first 12 years the union headquarters were in Prague, which provided favorable conditions for its activities. From 1922 to 1939 TseSUS called 11 ordinary and 2 extraordinary congresses; most of these were held in Prague, but some were held in Poděbrady, Danzig, and Vienna. Membership in TseSUS was based largely on national student unions (early members included the Professional Organization of Ukrainian Students; the Committee of the Ukrainian Students of Bukovyna, later the Union of Ukrainian Student Organizations in Rumania; the Union of Ukrainian Student Organizations under Poland; the Union of Ukrainian Student Organizations in Germany and Danzig; and the Union of Subcarpathian Ukrainian Students), but almost all individual Ukrainian students' clubs abroad in Europe, America, and Asia (Harbin) were also represented.

The membership was highest at the beginning, with 4,650 students who belonged to 18 organizations in 1923. In 1924 new students' clubs in the United States and Canada joined TseSUS, but total membership fell to 3,364 students. Later the Union of Subcarpathian Ukrainian Students joined the central union. From the end of the 1920s until the outbreak of the Second World War the union's membership declined steadily. All ideological-political tendencies that found adherents among Ukrainians were represented in TseSUS, but at the beginning of the 1930s the nationalist tendency became dominant. Sovietophile students seceded from TseSUS in 1924 and founded the *Working Alliance of Progressive Students, which had, however, a brief existence.

In the fall of 1934 TseSUS moved its head office to Vienna because of the change in Czechoslovakia's foreign policy and its rapprochement with Poland and the Soviet Union. At the end of the 1920s and the beginning of the 1930s students' organizations underwent a structural change that resulted in a three-level structure (the central organization, national organizations, and local clubs). This simplified the work of the central executive, because the national unions assumed some of the organizational and cultural tasks, leaving TseSUS to set policy and provide general direction for the union's work.

TseSUS was active in the international forum, informing non-Ukrainians about the problems of Ukrainian students and about conditions in Ukraine in general under the different occupations. To maintain an effective relationship with non-Ukrainian organizations, TseSUS appointed representations in various countries. It participated in international student organizations, sent delegates to their conferences, collaborated with numerous national student unions, and published materials in foreign languages, and was accepted as a special member of the Confédération Internationale des Etudiants (CIE,

based in Brussels). (A Ukrainian representation had been admitted to the CIE back in 1921, before TseSUS was formed.) It was also a member of the aid organization the International Students' Service (ISS). Ukrainian students were represented by TseSUS at the All-Slavic Students' Congress in Prague in 1922 and at various international student sports meets and Olympics. V. Oreletsky, M. Mukhyn, S. Nyzhankivsky, L. Makarushka, Ya. Baranovsky, L. Huzar, and others were active in the area of international contacts. In 1933–9 TseSUS participated in the International Students' League (Internationale Studentenliga), an anti-Communist central organization of students in Central Europe.

Through its economic department TseSUS solicited funds from the Ukrainian public and international organizations to provide needy students with aid. In 1940 this function was transferred to the *Ukrainian Students' Aid Commission (KoDUS).

TseSUS published **Students'kyi visnyk* (1923–31) in Prague, followed by **Students'kyi shliakh* (1931–34) and **Students'kyi visnyk* (1935–9) in Lviv, as well as publications in foreign languages. I. Fediv, M. Masiukevych, O. Boikiv, V. Oreletsky, M. Mukhyn, V. Yaniv, and M. Prokop were closely associated with the student press.

When the German authorities began to restrict the union's freedom of action, it decided to transfer its head office to Rome in 1939, but the outbreak of war made the move impossible. In 1941 the Nationalist Organization of Ukrainian Students assumed the task of co-ordinating the work of Ukrainian student organizations in Germany.

The following individuals served as president of TseSUS: P. Gan (1922–3), I. Fediv (1923–4), M. Masiukevych (1924–5), V. Oreletsky (1925–6, 1927–33), S. Nyzhankivsky (1926–7), Ya. Baranovsky (1933–9), D. Ravych (1939–42), and K. Bilynsky (1942–7). At the 10th Congress of TseSUS in 1934 it was resolved that every president of the Union of Ukrainian Student Organizations under Poland would automatically be the first vice-president of TseSUS.

1945–67. After the end of the Second World War the Central Emigré Union of Ukrainian Students was established in Munich in December 1945, headed by P. Mirchuk. In March 1946 TseSUS resumed its work. The political rivalry between supporters of the Melnyk and Bandera factions of the OUN was thus manifested in the existence of two central unions and had a detrimental effect on student activities. After a fierce struggle between the two camps, the two central unions merged at the Fourth All-Student Congress in Munich on 30 June–2 July 1947. An important role in this reconciliation was played by the two union presidents, P. Melnyk and K. Bilynsky, and by V. Yaniv. With the conflict thus settled, TseSUS became active in various areas of student life.

The postwar period witnessed a great resurgence in organized student activity, reminiscent of that in the Prague period. The union represented 33 students' clubs in 10 countries with a total membership of 2,721 students (1947). As many students graduated and some emigrated to America, the number of members declined. TseSUS represented 1,950 students in 1948, 850 in 1950; and 574 in 1952. Outside of Europe the membership grew from 133 students in 1951 to 281 in 1953. Beginning in 1949, ideological and religious students' organizations such as Zarevo, the Ukrainian Students' Organization of Mi-

Executive of the Central Union of Ukrainian Students, 1947. Front row from left to right: B. Ciuciura, O. Horbach, B. Makarenko, V. Yaniv, R. Zalutsky, R. Borkovsky, M. Huta, M. Sosnovsky; back row: V. Matskiv, M. Antokhii, N. Smiak

khnovsky, Obnova, and the Alliance of Orthodox Students joined TseSUS.

Student periodicals of the postwar period included *Students'kyi shliakh*, the bulletin *Visnyk TseSUSu*, and the literary journal *Zveno* (ed V. Bilynsky-Krymsky). After the reconciliation of the two central unions, TseSUS published the journal *Students'kyi visnyk* (1948–9) and its official paper *Visti TseSUSu* (1947–56).

TseSUS again became active on the international stage. The CIE was replaced by the International Union of Students (IUS), which had its head office in Prague and was largely subject to Soviet influence. After 1948 Western national unions began to resign from the IUS, and alternative central student unions were established – the International Student Conference (ISC) in Edinburgh in 1952 (dissolved in 1969) and the World University Service in 1950, the successor of the prewar ISS. TseSUS established ties with these unions and sent its representatives to various international student conferences. In 1953 at the congress of the ISC in Copenhagen it was recognized as 'a representative student organization.' From 1947 B. Makarenko, I. Sukhovskyy, Z. Vynnytsky, and V. Mardak were active in the area of international contacts.

New forms of cultural-social work were introduced – the Student Ideological Congress in Munich in 1948, the Week of Higher Education in Munich in 1949, and, beginning in 1952, advanced summer courses in Ukrainian studies. The Ukrainian Students' Aid Commission continued to provide financial aid to needy students. The union's head office was located in Paris for a brief period (1952–4) and then was moved back to Munich.

As large numbers of Ukrainian students began to leave Europe in the 1950s, those remaining centered their activities in Louvain, Paris, Munich, London, Madrid, and Vienna. In 1952 the American division of the union's executive, with P. Stercho at the head, was established, and by the end of the 1950s the TseSUS head office had moved to the United States. At the same time national student organizations were founded: the Federation of Ukrainian Student Organizations of America (1953) in the United States, the Ukrainian Canadian Students' Union (1953) in Canada, the Central Office (Tsentralia) of

Ukrainian Students of Australia (1959) in Australia, the Union of Argentinian-Ukrainian Students (1963) in Argentina, and the Union of Ukrainian Student Associations in Europe (1963) in Europe. These unions assumed some of the tasks of the Central Union, and as the TseSUS executive became less active, its role was reduced to that of general spokesman for the Ukrainian student body. In the postwar period the union's presidents were R. Zalutsky (1947–9), B. Huk (1949–52), V. Markus (1952–3), K. Mytrovych (1953–4), P. Dorozhynsky (1954–8), and Ye. Hanovsky (1958–67).

1967–81. In 1967 TseSUS was reactivated, as a new generation of students, those born outside Ukraine, joined its ranks. World congresses of Ukrainian students were organized, to which national unions and international ideological associations sent their delegates. These congresses were held in New York in 1967, Montreal in 1970, Toronto in 1973 and 1977, and Philadelphia in 1976. TseSUS opened an office in Toronto in 1970 for a brief period. In 1971 TseSUS initiated a broad campaign in defense of Soviet Ukrainian dissidents. However, political and ideological rivalries, of the type that had plagued the union in the immediate postwar period, surfaced once more. Since 1977 TseSUS has been undergoing a leadership crisis and has become inactive. In this period it has been headed by B. Futei (1967–70), O. Romanyshyn (1970–3), A. Chornodolsky (1973–6), A. Chyrovsky (1976–7), and B. Harhai (1977–9). (See also *Students.)

Central Upland (Serednia vysochyna) (usually known as the Central Russian Upland and sometimes as the East European Central Upland). An extensive upland in the central part of Eastern Europe, stretching from the north and the northwest (from the Oka River and the line Kaluga-Riazan) towards the southeast to the Donets River, whose valley is sometimes designated as the Donets Lowland. In the east the upland borders on the Oka-Kama Lowland and in the west on the Dnieper Lowland. It is up to 1,000 km long and 500 km wide. The greater part of the upland lies within the borders of Russia. Only a small part of it lies on Ukrainian ethnic territory within the borders of the Ukrainian SSR (parts of Sumy, Kharkiv, and Voroshylovhrad oblasts) and within the Russian SFSR (the southern part of Belgorod and Voronezh oblasts and the edges of Kursk and Rostov oblasts). The Central Upland is an undulating plateau with an average elevation of 230–250 m (293 m at its highest point). The plateau is dissected to a depth of 100 and even 150 m by river valleys, ravines, and gullies. Basically, the upland is built of Precambrian deposits of the crystalline *Voronezh Massif, which in the southwest descends to the Dnieper-Donets Trough. Most of the

Voronezh Massif is covered with thin layers (up to 150 m) of sedimentary deposits of the Devonian, Jurassic, Cretaceous, and Paleogene periods. In the southeast along the Don between the cities of Bohuchar and Pavlovske the crystalline layers come to the surface. On all sides of the upland the Precambrian deposits descend far below the sedimentary layers. A small part of the upland in the northwest was covered with a glacier during the Dnieper glaciation. Today almost all of the upland is covered with loess and loessial loams. Rivers that arise in the Central Upland flow into the Black, Caspian, and Azov seas. The larger part of the upland belongs to the forest-steppe belt, but the southwestern part belongs to the belt of mixed forests and the southeastern part to the steppe belt.

The Ukrainian part of the Central Upland, consisting of the southwestern slope of the upland and its southwest branch and covering an area of about 80,000 sq km, corresponds to the southwestern slopes of the Voronezh Massif, which are covered with thick layers of chalk (particularly white chalk, which comes to the surface in exposed areas) and thin layers of Paleogene and Anthropogene deposits. All these layers are soft and subject to erosion. The upland is a gently sloping loess plain, denudated by erosion, that is densely dissected. Absolute elevations diminish in the southwestern direction, which defines the flow of the following rivers: the tributaries of the Dnieper – the Seim, Sula, Psol, Vorskla, etc – and of the Donets – the Uda, Nezhehol, Oskil, Aidar, Derkul, Kalytva, etc. The eastern part of the upland slopes towards the east to the Don River and is dissected by its tributaries – the Tykha Sosna, Chorna Kalytva, Osered, Tohuchivka, etc. The river valleys are usually wide (up to 6 km) and deep. As in the Poltava Plain the right-bank parts of the valleys are generally steep, complicated by slides and covered by forests or brush. They are dissected by short, deep, sharply incised ravines. The left-bank sides of the valleys are sloping and have three to four terraces, of which the lower are covered mostly with sand and the higher with loess. They are infrequently dissected by long ravines and shallow gullies with sloping sides. In general, the ravines and gullies in the upland are more prevalent than in other Ukrainian territories. Their density is 1–2 km per sq km, and the dissection that results from them reaches 10–30 percent of the area (it is highest in the southeastern part between the Oskil and Don rivers and the Khopor River). Deforestation of the upland and plowing of the steppes have contributed to the growth of the gullies and have brought about a catastrophic increase in the amount of non-arable land.

In the generally uniform landscape of the Central Upland the high right banks of rivers, built mostly of chalk layers, constitute the more picturesque regions. This is particularly true of the right bank of the Don, which is known as Donske Bilohiria (the Don White Highland, elevation 242 m), and the densely dissected Kalach Upland in the southeast. In the southwestern part of the Sumy region karst topographical features are common. Moraine and sandur plains are also found there. Generally, this part of the upland forms a transition to the northern part of the Dnieper Lowland and Left-Bank Polisia, which is sometimes known as Siverske Polisia. On the swampy terraces of rivers Aeolian forms are sometimes found.

The rivers of the upland, except for the Don and Donets, are small, and some of them dry out in the summer. Numerous lakes and marshes are found in the floodplains of the rivers.

The climate of the upland is the most continental in Ukraine, and the winters are the coldest. The average annual temperature is 6°C in the north and 8.5°C in the south; the average January temperature is –7°C in the southwest and –9.5°C in the northeast; and the average July temperature is 19°C in the northwest and 22°C in the southeast. The average difference in temperature between the coldest and warmest month increases from 26°C in the northwest to 29°C in the southeast. The average annual precipitation varies from 500 mm in the northwest to 400 mm in the southeast. Seventy-five percent of the precipitation comes in the summer months, when downpours are common. The winters are remarkably stable, and the summers are dry with frequent dry winds.

The soils and vegetation change from the north-northwest to the south-southeast. Podzolized soils, podzolized chernozems, and dark gray, gray, and light gray podzolized soils are prevalent north of the Seim River. In the forest belt soddy podzolic sandy soils are also found. In the rest of the forest-steppe the deep, low-humus chernozems are common. In the steppes the ordinary low-humus chernozems prevail. Meadow chernozems, sandy soils, and swampy soils are found in the river valleys.

Approximately half of the Central Upland lies in the forest-steppe and steppe belts. The rest lies in the forest belt. Today scarcely 6 percent of this belt is covered with forest. Most of the forests are mixed (pine, oak, birch); some are pine. A significant part of the upland consists of dry and flood meadows and swamps. In the forest-steppe belt forests occupy about 10 percent of the area, mostly in the northwest and the river valleys. Oak forests with an admixture of maple, ash, and linden are most common, while on the sandy river terraces pine forests with oak, alder, willow, etc prevail. Remnants of the grassy, colored, broadleaved steppe have survived only on the ravine slopes. The large Shypovyi Forest (32,000 ha) near Buturlynivka is partly under state protection. Yama Steppe in the southern Voronezh region (near Staryi Oskil) is a nature preserve. Forests cover 3 percent (mostly on the sandy terraces of the Donets) of the colored fescue-feather-grass steppe belt. Some of the steppe vegetation has survived on the steep slopes of gullies and ravines, on the small tracts of virgin steppe, and on reserves such as the *Striletskyi Steppe.

(For population and economy see *Slobidska Ukraine.)

technical ceramics, terra-cotta (small clay objects), traditional pottery, and artistic ceramics (one of the decorative arts).

The ceramics made on the territory of Ukraine from the earliest times to the present reveal a highly developed artistic and technical culture, originality, and creativity. The development of ceramics has been facilitated by the existence of large deposits of various clays, particularly kaolin (china clay).

The history of Ukrainian ceramics begins in the Neolithic period, with the ceramics of the *Trypilian culture. Their high technical and artistic level equals that seen in artifacts of the Aegean culture. Also interesting are the ceramics made by various cults. The development of Ukrainian ceramics was also influenced by the ceramics of the Hellenic colonies on the Black Sea coast, beginning in the 8th and 7th century BC.

Ceramics of the so-called Slavic era, which began in the 2nd century AD, were more modest, and only in the Princely period (9th–13th century) did the production of ceramics achieve a high technical level and a variety of artistic forms, while growing into a large industry. Many forms of dishes were produced, as well as decorative, glazed tiles that were used for the floors of churches and palaces. The tiles of Halych in the 12th–13th century depicted griffons, peacocks, eagles, and doves in relief; they were cast with the use of carved wooden forms. Their characteristic feature is the joining of the Byzantine and Romanesque styles. After the Mongol period the potter's wheel was widely introduced, and its use finally supplanted the manual shaping of pottery. In the 14th and 15th century ceramic manufacturing declined, and a revival began both on the technical and artistic levels only with the appearance of trade guilds (at the end of the 15th century). In the 17th and 18th centuries the making of ceramics flourished in Ukraine. Ukrainian artists boldly transformed the lavish styles of the baroque and created an original decorative style with ornamental motifs and a tasteful harmony of colors. In addition to kitchenware and tableware, an architectural element – the stove – was developed. In the 18th century enameled tiles were produced in almost all ceramic-producing centers in Ukraine, particularly in the Chernihiv region, where small manufacturing factories were located in Chernihiv itself and in Tulyholove, Novhorod-Siverskyi, Hlukhiv, and Baturyn.

The technology of ceramics for construction purposes became highly developed in the 18th century: bricks, ridge tiles, ornamental slabs and tiles, attractive ceramic shields decorated with colored glazes, and fantastic rosettes symbolizing the sun were produced. At this time the manufacture of faience and porcelain developed in a number of centers, including Mezhyhiria near Kiev, Korets and Baranivka in Volhynia, Tomashiv (Tomaszów Lubelski) in the Kholm region, and Volokytno in the Chernihiv region. Hand-shaped and dried dishes were painted by potters (after a first firing in the kiln) with white, yellow, and brown clays or a combination of colors, which melted in the second firing. Green color was obtained from burnt copper filings, and various types of ochre provided different shades of red. Effective colored glazes were already being used in the Renaissance and baroque periods, and by the end of the 18th century potters were using so-called granular glazes – which included in the

glaze colored coarse granules of metal oxides that, in firing, melted with the glaze and gave a lustrous (opallike) blue, green, or violet shade to the objects (this method is still in use in the Kharkiv region). Some household pottery was covered with a light green lead glaze, which has been replaced today by various artistic enamel glazes. Ornamentation was scratched out on the surface of dried, unfired dishes with a stylus, and painting was usually done with a quill.

The forms of these ceramic dishes and pots bring to mind the anthropomorphism of Grecian vases, yet they display a specific originality. Their stylistic peculiarities were based on the local characteristics and traditions of folk art. Ukrainian artists, using the so-called ribbon technique on the potter's wheel, created various types of kitchenware and tableware: soup bowls, plates, cups, pots, mixing bowls, pitchers, jugs, small vessels, flasks, jugs in the form of wheels, and also candlesticks, candelabras, and terra-cotta lamps. In the 18th century an important center of ceramic manufacturing was the pottery village of the Zaporozhian Sich. It produced a rich variety of surprisingly skillfully made folk terra-cotta playthings, such as small whistles, and particularly figures of the animal world: cats, rams, cocks, etc. These small ceramic sculptures were often presented in a humorous fashion and are true masterpieces.

The ornamentation of Ukrainian ceramics is well thought out. The decorative elements used are similar to those that appear in other forms of folk art. Some of the oldest elements used are geometric motifs such as dots, straight lines, wavy lines, broken lines, crosses, meanders, and combinations of flat geometric figures such as squares, triangles, and circles – all logically connected with the form of the individual piece. The floral ornamentation and natural patterns taken from the immediate surroundings, stylized into decorative motifs, contain a surprisingly wide range of artistic interpretations, ranging from naturalistic strokes to fantastical depictions. The same applies to the artistic, ornamental rendering of the human figure and various animals.

The territorial distribution of ceramic production depended on the deposits of suitable kaolin clay. The first centers of ceramic manufacture in Ukraine were the village of Dybyntsi in the Kiev region, an ancient pottery center with the marvelous dynamism of the authentic Ukrainian baroque of the 18th century; the village of Vasylkiv, a rich center of ceramic ornamentation with a potters' artel, which later became a majolica factory famous for its production of souvenirs; and the village of Obukhiv.

The village of Holovkivka in the Cherkasy region is a well-known center, famous particularly for its individual style of decoration known as *fliandrivka* (a peculiarly Ukrainian technique of painting on unbaked clay). In the old Cossack town of Opishnia in the Poltava region, glazes were rarely used, but the pottery produced there was of very fine quality and decorated with geometric motifs. From the second half of the 19th century this creative decoration gave way to a form of *fliandrivka*, carefully executed with restraint and great artistic taste. Today Opishnia is a center producing ceramic toys and small ceramic sculptures. Well-known modern ceramics artists from Opishnia include O. Seliuchenko, N. Poshyvailo, and M. Didenko. One of the late 19th-century

masters of ceramic figurative sculpture in Opishnia was O. Nochovnyk. Great traditions continue to develop in the work of modern artists such as I. Bilyk, H. Koriachok, V. and P. Omelchenko, and T. and V. Demchenko.

Other important ceramics centers in the Poltava region are the cities of Zinkiv and Myrhorod. In the Chernihiv region Ichnia was renowned throughout the 19th century for its production of original decorative tiles with an almost total exclusion of the color red, but with a technically brilliant facility of design. In the Kharkiv region, ceramics produced in the villages of Nova Vodolaha and Tonivka were known for their brilliant colors, dominated by bright yellow, orange, and green, their balanced slender compositions, and the widespread application of ancient geometric elements. In the Vinnytsia region the ceramic guild in the city of Bar was famous as early as the 15th century. Besides ceramic ware for everyday use, a variety of terra-cotta human figurines and anthropomorphic vases were produced there.

Considerable originality and expert workmanship are revealed in the ware of a more folk character. In Transcarpathia the centers of ceramic production include Uzhhorod, the village of Vilkhivka (known for its decoration of ceramics by the Sgraffito technique, with convex objects appearing on a dark background), and Dubovenka. In the Ternopil region the centers include the village of Zalistsi; Tovste (renowned in the past for beautiful *fliandrivka* ware); and the city of Berezhany (known for pitchers, flasks, plates, and bowls that were mostly covered with a white glaze ornamented with fine *fliandrivka* bands). In the Lviv region the cities of Sokal, Yavoriv, Komarne, and Sambir and the village of Potelych are among the main ceramics centers; their ornamentation is unique in content as well as composition.

Ceramics production developed intensively in the Hutsul region and in Pokutia in such well-known centers as Kosiv, Pistyn, Kut, Halych, and Kolomyia. Kosiv and adjacent Pistyn, as early as the 18th century, were known for their painted bowls, sculptured tiles, and elegant candlesticks with ornamental and figurative scenes. Kosiv was also famous for its painted tile stoves with distinctly original forms. During the 19th century Kosiv craftsmen created over 400 tile stoves, some of which can still be seen today in the surrounding villages. (Most of them are now in museums.) Hutsul potters knew intuitively the rules of decorative art in relation to the character of the object for which the decoration was intended. Distinct contrasts of a few colors are characteristic of the pictures on dishes and hand-shaped objects: brown clay, dark-brown drawing, and free brushstrokes of green and golden glaze, which do not always coincide with the contours of the picture; this apparent carelessness or imperfection gives the decoration pictorial spontaneity and lightness. In figurative compositions the ceramists of Kosiv and Pistyn use great detail and uniform lines and colors. Today these centers produce mostly souvenirs, decorative plates, flower vases, pitchers, flowerpots, statuettes, flasks, casks, etc.

Among the most prominent Hutsul ceramists at the end of the 19th century were P. Baraniuk, O. Bakhmatiuk, and M. Koshchuk. The most prominent modern craftsmen include P. Lazarovych, I. Tabarkhaniuk, and the Voloshchuk, Koshak, Tsvilyk, and Tymiak families.

The development of ceramics was aided by trade schools. In Western Ukraine the first school was founded in 1874 in Kolomyia, while in Lviv, Uzhhorod, and Khust there were pottery departments in art schools. A native of Myrhorod, V. Trebushny, directed the ceramics workshop of the Cracow Academy of Arts from 1928 to 1939. In the Myrhorod school artists such as V. Krychevsky, O. Slastion, O. Biloskursky, H. Levynsky, and S. Lytvynenko were teachers. Today much work is being done to develop and introduce new ceramics materials – varied glazes, enamels, and pigments – at the experimental workshop of ceramic art of the Kiev Scientific Research Institute of Experimental Planning. Many artists have taken advantage of this research, including D. Holovko, whose works are of a decorative-monumental nature and form an effective integral part of both public and residential interiors.

Chabanenko, Ivan [Čabanenko], b 17 December 1900 in Chyhyryn, d 1972 in Kiev. Play director and pedagogue. In 1930 he graduated from the Lysenko Music and Drama Institute in Kiev and in 1931 began to lecture at the institute. From 1935 to 1965 he worked as a lecturer and then professor (1961) at the Kiev Institute of Theatre Arts, where he served also as director (1937–45) and as rector (1961–5). In 1931–3 he worked as a play director at the Zankovetska Theater in Zaporizhia and the Young Workers' Theater in Kiev. He staged W. Shakespeare's *Othello* and L. Pervomaisky's *Nevidomi soldaty* (The Unknown Soldiers). He also wrote the play *Hore namuchyt', hore nauchyt'* (Misfortune Will Torment, Misfortune Will Teach, 1943).

Chabanivsky, Mykhailo [Čabaniv's'kyj] (pen name of M. Tsyba), b 18 September 1910 in the village of Lyhivka, Kharkiv gubernia, d 4 March 1973. Writer and journalist. Chabanivsky began to work as a journalist in 1930; during the Second World War he worked as a correspondent at the front. In 1931 he began to publish poetry and then

turned to prose. At the end of the 1950s he was an official critic of the *Shestydesiatnyky. Among his short novels and collections of stories are the following: *Svizha skyba* (The Fresh Furrow, 1949), *Pid zoriamy balkans'kymy* (Under Balkan Stars, 1951), *Stoiť iavir nad vodoiu* (The Maple Stands over the Water, 1959), *Doroha dodomu* (The Road Home, 1966), *Lebedyna saha* (Swan Saga, 1969), *Balkans'ka vesna* (Balkan Spring, I–III, 1954–60), and *Teche voda v synie more* (The Water Flows into the Blue Sea, 1961). His two collections of sketches, *Sadok vyshnevyyi kolo khaty* (The Cherry Orchard near the House, 1961) and *Oberihaimo ridnu pryrodu* (Let Us Protect Our Natural Environment, 1968), deal with the protection of the environment.

Chaco. Northeastern province of Argentina, covering 100,000 sq km and containing a population of 690,000 in 1980, including about 25,000 Ukrainians. The climate is subtropical. Most of the population is occupied in farming – raising cotton, sugarcane, corn, and sunflowers – and animal husbandry. Ukrainians, mostly from Volhynia and Polisia, began to settle in Chaco after the First World War. The Ukrainians live for the most part in the cities and suburbs: in Presidencia Roque Sáenz Peña, where there is a Ukrainian Catholic church and a monastery of the Sister Servants of Mary Immaculate; in Las Breñas, where the Ukrainian Orthodox church has a parish; in San Bernardo, where the Ukrainian community has organized the credit union Vidrozhennia; and in other cities.

Chaha River. A river in the Bessarabian Upland and the Black Sea Lowland, a left-bank tributary of the Kohyl'nyk River in Odessa oblast. Its length is 120 km, and its basin area is 1,270 sq km. The average width of the upper river is 6–8 m; of the lower, 20–30 m. The waters are used for irrigation.

Chahovets, Rostyslav [Čahovec'], b 21 September 1904 in Kiev. Biochemist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1957 and full member since 1967, son of Vsevolod *Chahovets. From 1932 to 1950 Chahovets lectured at the Kiev Medical Institute. Since 1933 he has been an associate of the Institute of Biochemistry of the Ukrainian academy of sciences. His works deal with the biochemistry of muscles, water exchange, the experimental basis of vitamin therapy, and the use of vitamins in animal husbandry. Some of his writings explore the philosophical problems of biology and the history of vitaminology.

Chahovets, Vasyl [Čahovec', Vasyl'], b 30 April 1873 at Patychys homestead near Zarudia in Poltava gubernia, d 19 May 1941. Physiologist, one of the founders of electrophysiology, full member of the Academy of Sciences of the Ukrainian SSR from 1939. A graduate of the St Petersburg Military Medical Academy (1897), Chahovets worked as an army physician until 1903, when he joined the teaching staff of the academy. He was appointed professor at Kharkiv University in 1909, at Kiev University in 1910, and at the Kiev Medical Institute in 1921. His works deal with the application of the theory of electrolytic dissociation to explain electrical processes in living organisms, the use of mathematical methods in biology, electro-anaesthesia, etc. He devoted much attention to the construction of electrophysiological instruments in Ukraine. The collected works of Chahovets and a mono-

Vasyl Chahovets

graph about him by D. Vorontsov were published in Kiev in 1957.

Chahovets, Vsevolod [Čahovec'], b 18 February 1877 in Starokostiantyniv in Volhynia, d 20 December 1950. Drama critic and scholar. After graduating from the historical-philological faculty of Kiev University in 1900, Chahovets worked in Kiev as a theater critic and publicist from 1901 to 1918. He wrote the play *Doïna*, the librettos to K. Dankevych's ballet *Lileia* (The Lily) and A. Svechnikov's ballet *Marusia Bohuslavka*, and a dramatization of N. Gogol's *Taras Bul'ba*. His memoirs are entitled *Z temriavyy mynuloho* (From the Darkness of the Past). He wrote studies of M. Lysenko, M. Zankovetska, I. Marianenko, P. Saksahansky, I. Patorzhynsky, O. Petrusenko, M. Solovtsov, and the Sadovsky Theater, and the book *Zhyttia i stsena* (Life and the Stage, 1956).

Chaika. Type of boat, 18–20 m in length, 3–3.5 m in width, and 3.5–4 m in depth, used by the Zaporozhian Cossacks. Its bottom was carved out of a single tree trunk, and the sides were built of planks. Reed bales were tied to the gunwales of the boat to protect it from enemy guns and from sinking. There were two helms, at the fore and aft, to avoid the need to turn the boat about. The *chaika* was also equipped with a mast and sail. The crew consisted of 50–60 men. The boat carried several small cannons. G. de Beauplan left a precise description of the *chaika*.

Chaika, Andronyk [Čajka], b 29 May 1881 in the village of Ruchky in Poltava gubernia, d 1968. Physician, urologist, major general of the medical service. He graduated from the Military Medical Academy in 1911. From 1928 to 1944 he was a professor at the Kiev Institute for the Upgrading of Physicians and from 1944 to 1962 a professor at the Kiev Medical Institute. Chaika's publications deal with general surgery, surgical treatment of adenoma and cancer of the prostate, tuberculosis of the urinary-sexual organs, and the etiopathogenesis of infections of the urinary system.

Chaika, Yakiv [Čajka, Jakiv], b 10 October 1918 in Brodsky, Lviv county, Galicia. Ceramicist, sculptor. Chaika studied at S. Lytvynenko's ceramics studio and graduated from the School of Industrial Arts in Lviv (1939). At first he did mostly ceramics (decorative vases, jugs, and figurines) and small sculptures (statuettes of terra-cotta). Since then he has specialized in portrait and decorative

sculpture. Chaika co-sculpted the I. Franko monuments in Lviv and Drohobych. Exhibits of his work were held in 1956 and 1969 in Lviv.

Chaika, Yevhen [Čajka, Jevhen], b 25 February 1902 in Rozbyshivka, Poltava gubernia. Pathologist and anatomist. Chaika graduated from the Kiev Medical Institute in 1927 and became a professor there in 1940. He is the author of works devoted to the study of reactive changes in connective tissue, brucellosis, Bright's disease, pancreatitis, blood diseases, and changes in the peripheral section of the nervous system caused by various illnesses.

Mykola Chaikivsky

Chaikivsky, Mykola [Čajkivs'kyj], b 2 January 1887 in Berezhany, Galicia, d 7 October 1970. Mathematician and pedagogue, full member of the Shevchenko Scientific Society. From 1914 to 1918 Chaikivsky worked with the Union for the Liberation of Ukraine in Freistadt, Germany. Subsequently he was a teacher in Galicia; in 1923 he became a professor at the Institute of People's Education in Odessa. He was persecuted in the 1930s but was later appointed a professor at pedagogical institutes in Kazakhstan and Lviv. Chaikivsky wrote the manual *Kvadratni rivniannia* (Quadratic Equations) and the school textbooks *Al'gebra* (Algebra) and *Tryhonometriia* (Trigonometry); he also compiled *Slovnyk ukrains'koi matematychnoi terminolohii* (Dictionary of Ukrainian Mathematical Terminology, 1924) and *Ukrains'ka matematychna naukova bibliohrafiia* (Ukrainian Scientific Mathematical Bibliography, 1931).

Chaikovsky, Andrii [Čaikovs'kyj, Andrii], b 15 May 1857 in Sambir, Galicia, d 2 June 1935 in Kolomyia. Writer, Galician civic and political leader, lawyer. Chaikovsky was a classmate of I. Franko. In 1883 he graduated from Lviv University, where he had been head of the student group *Druzhnyi Lykhvar*. He was active in organizing *Prosvita* societies (and later became an honorary member) and *Sich* and *Vidrodzhennia* societies in Berezhany, Sambir, Rohatyn, and Kolomyia. In 1924 he was elected president of the Society of Ukrainian Writers and Journalists. He belonged to the National Democratic party and then to the Ukrainian National Democratic Alliance. Chaikovsky was one of the organizers of the Ukrainian *Sich* Rifleman and in 1918–19 a county commissar of the Western Ukrainian National Republic in Sambir.

As a writer Chaikovsky published two sets of memoirs—

Spomyny z-pered desiaty lit (Memoirs from before Ten Years, 1894) and *Chorni riadky* (Black Lines, 1930); a number of collections of short stories – *Obraz honoru* (The Insult, 1895), *Khto vynen?* (Who Is to Blame?, 1920), *Krashche smert', nizh nevolia* (Better Death than Enslavement, 1920), *Ne dlia vsikh vesna zeleniie* (Spring Is Not Green for Everyone, 1920); and a number of novels depicting Galician life – *Oliun'ka* (1895), *V chuzhim hnizdi* (In Another's Nest, 1896), *Brazylits'kyi harazd* (Brazilian Prosperity, 1896), *Malolitnyi* (The Minor, 1919), and others. Chaikovsky's historical novels about the Cossacks were written in a romantic style and had an important influence on the national consciousness and outlook of young people; they include *Za sestroi* (In Search of My Sister, 1907), *Viddiachyvsia* (Avenged, 1913), *Kozats'ka pomsta* (Cossack Vengeance, 1919), *Na ukhodakh* (Escapees, 1925), *Oleksii Korniienko* (1924–9), *Do Slavy* (After Glory, 1929), *Polkovnyk Mykhailo Krychevs'kyi* (Colonel Mykhailo Krychevsky, 1935), and *Pered zryvom* (Before the Upheaval, 1937). In these novels and stories Chaikovsky idealized the Zaporozhian Cossacks and their belief in equality and condemned Russia for oppressing Ukraine. I. Franko and O. Makovei gave a favorable critique of Chaikovsky's work.

Chaikovsky, Danylo [Čaikovs'kyj], b 19 March 1909 in Myshkiv, Zalishchyky county, Galicia, d 3 July 1972 in Philadelphia. Journalist and political activist of the *Bandera* faction of the OUN, political prisoner incarcerated in Polish prisons and German concentration camps. As an émigré in Germany Chaikovsky served as propaganda officer of the External Units of the OUN and edited *Ukrains'ka trybuna*. In 1948 he moved to France, where he edited *Ukrainets'-Chas* (1948–55). In 1955 he became editor of *Shliakh peremohy* in Munich. In 1967 he emigrated to the United States and worked on the editorial board of the daily *Ameryka*. Chaikovsky described his experiences in prison in *Khochu zhyty* (I Want to Live). He also published a collection of short stories, *Nashi dni* (Our Times).

Chalk. White, friable, and finely granular sedimentary rock, a form of limestone composed of calcium carbonate (calcite) (90–99 percent), remains of minute marine organisms such as Foraminifera, and clay minerals. Chalk is used in agriculture and in the paper, building, chemical, and cosmetics industries. The main areas with chalk deposits in Ukraine are the outlying areas of the Donets Basin (the Lysychanske and Slovianske regions, which provide chalk for the Donbas chemical industry), the northeastern region of the Dnieper-Donets Trough, and the parts of the Belgorod and Voronezh oblasts that are settled by Ukrainians. Smaller deposits are found in the western part of the Volhynian and Podilian uplands.

Chaly, Bohdan [Čalyj], b 24 June 1924 in Kiev. Writer for children and young people. Chaly has been a member of the editorial boards of the youth magazines *Molod'*

Ukrainy and Pioneriia and has served as editor in chief of *Barvinok*. He has been secretary of the Writers' Union of Ukraine. His works, which conform to official literary norms, include poetry, prose, plays, and a film scenario, *Zakon Antarktydy* (The Law of the Antarctic, 1963).

Chaly, Dmytro [Čalyj], b 2 July 1904 in the village of Arkhanhelske in the Donbas. Literary scholar, associate of the Institute of Literature at the Academy of Sciences of the Ukrainian SSR in Kiev. Chaly is the author of *Stanovlennia realizmu v ukrains'kii literaturi* (The Formation of Realism in Ukrainian Literature, 1956), a monograph on H. Kvitka-Osnovianenko (1962), and many other literary studies.

Chaly, Mykhailo [Čalyj, Myxajlo], b 1816 in Novhorod-Siverskyi, d 19 February 1907. Educator, scholar, friend of T. Shevchenko, and author of the first full biography of the poet, *Zhizn' i proizvedeniia Tarasa Shevchenko* (The Life and Works of Taras Shevchenko, 1882). Chaly was active in the Ukrainian Sunday-school movement. From 1882 he was one of the editors of *Kievskaia starina*.

Chaly, Sava [Čalyj], b in Komarhorod, Vinnytsia region, d 1741. Cossack colonel. After spending some time at the Zaporozhian Sich, Chaly served as captain of a private Cossack guard detachment on the estate of a Polish noble family, the Czetwertyńskis. In 1734 he joined a Haidamaka uprising led by Captain Verlan. After the uprising had been quelled, Chaly again went over to the Poles, serving the Potocki family of magnates as colonel of their private army. He was executed for treason by haidamakas from the detachment of H. Holy.

Chamber music. Vocal and instrumental music for small ensembles, intended for performance in small settings. In the 16th and 17th centuries the term 'chamber music' was used in reference to court music. Chamber music plays an important role in the creative efforts of Ukrainian composers. Among the earliest pieces of Ukrainian chamber music are M. Berezovsky's Sonata for Violin and Harpsichord and D. Bortniansky's piano quintet. Chamber music, primarily for string quartet and piano trio, is prominent among the works of 20th-century Ukrainian composers; for example, V. Kosenko's *Classical Trio*, V. Barvinsky's piano sextet, and B. Liatoshynsky's piano quintet. The most distinguished chamber music ensembles are the Leontovych Quintet, the Vuillaume String Quartet, the Ukrainian State Trio, and the Lysenko String Quartet.

Chancellor (*kantsler*). Head of the chancellery of the Grand Duchy of Lithuania, responsible for drafting most state documents on domestic and foreign policy. The chancellor was also in charge of foreign policy. There was an analogous office in the Polish Commonwealth.

Chapaieva [Čapajeva]. IV-16. Town smt (1976 pop 3,175) in Kehychivka raion, Kharkiv oblast. It has a sugar refinery and an asphalt-concrete plant.

Chapelsky, Ivan [Čapel's'kyj], b 1858 in Rybnyk, Drohobych county, Galicia, d 31 March 1918 in Lviv. Priest, catechist, civic figure. Chapelsky studied at Lviv University. He served as a village priest and later became

prefect at the Lviv Theological Seminary and catechist in Lviv schools. In 1895 he was appointed canon in the Lviv metropolitan consistory and priest of St George's Cathedral. For many years Chapelsky headed the Ridna Shkola Ukrainian pedagogical society. Under his direction the society grew from a few hundred to 10,000 members, the number of branches grew to 60, and many new schools and residences were established. In 1918 the Apostolic See appointed him its domestic prelate.

Chaplenko, Vasyi [Čaplenko], b 18 March 1900 in Ukraine. A graduate of the Dnipropetrovske Institute of People's Education, linguist, writer, and literary critic. After teaching at several institutions of higher learning in the USSR, Chaplenko emigrated in 1945 to Western Europe and later to the United States. He is the author of the novels *Pyvoriz* (The Itinerant Tutor, 1943), *Chornomortsi* (Black Sea Cossacks, 1948), *Liudy v tenetakh* (Ensnared People, 1951), *Zahybil' Peremitka* (The Fall of Peremitko, 1961), *Ioho taiemnytsia* (His Secret, 1975), and several collections of short stories. As a linguist Chaplenko's main contribution is in the area of the history of the Ukrainian standard language, summarized in his books *Ukrains'ka literaturna mova (xvii st.–1917 r.)* (The Ukrainian Literary Language [17th Century to 1917], 1955) and *Istoriia novoi ukrains'koi literaturnoi movy (xvii st.–1933 r.)* (History of the Modern Ukrainian Literary Language [17th Century to 1933], 1970). Chaplenko has also written on the Ukrainian elements in N. Gogol, the Ukrainian literary language, and the ethnogenesis of the Slavs.

Chapli burial ground. A site located near the village of Chapli on the left bank of the Dnieper in Dnipropetrovske oblast. Archeological study of it began in 1950. It was used a burial ground from the eighth millennium BC to the third millennium BC (from the Mesolithic period to the Bronze Age).

Chaplyne [Čaplyne]. V-17. Town smt (1977 pop 6,110) in Vasylykivka raion, Dnipropetrovske oblast. The town is a railroad junction and services the railway transport system.

Chaplynka [Čaplynka]. VII-14. Town smt (1970 pop 6,600), raion center in Kherson oblast located in the Black Sea Lowland. The town has a food industry, brick factory, and a tractor repair plant.

Chaplynka irrigation system. A system built in 1963–7 to supply water to about 19,000 ha of the dry Chaplynka raion in Kherson oblast.

Chardynin, Petr [Čardynin] (pen name of P. Krasavchikov), b 1873 in Cherdyn in Perm gubernia, Russia, d 14 August 1934. Film director. Chardynin graduated from the Music and Drama School of the Moscow Philharmonic Society. At first he acted in provincial Russian theaters; then from 1907, in films. In 1921–3 he was an émigré. On his return he worked in Ukraine. His best films were *Ukraziia* (1925), *Taras Shevchenko* (1926), *Taras Triasylo* (1927), and *Cherevychky* (Little Shoes, 1928), a dramatization of N. Gogol's work.

Charles X Gustav, b 8 November 1622 in Nyköping Castle, Sweden, d 13 February 1660 in Göteborg. King of

Sweden (1654–60); an ally of Hetman B. Khmelnytsky in the war against Poland. In 1655–6 Charles occupied most of the Polish Commonwealth and was recognized as king by the majority of the Polish nobles. A general Polish revolt against Charles developed, however, and he was forced to relinquish the throne. Charles agreed to the division of Poland among Sweden, Cossack Ukraine, and Transylvania. On 6 October 1657 a Swedish-Ukrainian alliance against Poland was formally concluded in Korsun with the Cossack senior officers in his name.

Charles XII, b 17 June 1682 in Stockholm, d 30 November 1718 in Fredrikshald, Norway. King of Sweden from 1697. In the Great Northern War (1700–21) against the coalition of Russia, Denmark, and Saxony (headed by the Polish king Augustus II), Charles conquered Denmark, occupied Poland, and forced Augustus to abdicate. In the course of the war with Russia Charles entered into negotiations with Hetman I. *Mazepa (initially through the mediation of the new Polish king Stanisław I Leszczyński, then directly), which were soon formalized in a Ukrainian-Swedish alliance. In the fall of 1708 Charles advanced into Ukraine, where in 1709 he suffered defeat by Russia in the decisive Battle of *Poltava. With the remainder of his army and his Ukrainian allies Charles found refuge in Turkish territory at Bender, Moldavia. After Mazepa's death Charles negotiated an alliance with Hetman P. *Orlyk and the Crimean Tatars and induced the Tatars, for a time, to engage in war with Russia (the Prut campaign).

Charnetsky, Mykola [Čarnec'kyj], b 14 December 1884 in Semakivtsi, Horodenka county, Galicia, d 2 April 1959 in Lviv. Religious leader of the Ukrainian Catholic church, from 1919 a member of the Redemptorist order, bishop. Charnetsky was ordained in 1909 and from 1910 to 1919 was a professor at the Stanyslaviv seminary. In 1926 he was appointed abbot of the Kostopil and Kovel monasteries in Volhynia. In 1931 he was appointed apostolic visitor for Byzantine-rite Catholics in Poland and was consecrated bishop of Kovel. Because of opposition from the Polish government Charnetsky lacked jurisdiction, yet he ministered to the Greek Catholics from Galicia who settled in Volhynia. In 1939 the Soviet authorities prohibited Charnetsky from living in Volhynia, and until 1945 he lived in Lviv. In 1945 he was arrested and exiled to Siberia for 10 years. From Siberia he returned to Lviv, where he died.

Charnetsky, Stepan [Čarnets'kyj], b 21 January 1881 in Shmankivtsi, Chortkiv county, Galicia, d 2 October 1944 in Lviv. Poet, feuilleton writer, theatrical producer and director, drama critic, and a member of the Moloda Muza writers' group. In 1913–14 he was in charge of the Ruska Besida theater in Lviv. He co-edited the daily (1916–18) and then the weekly (1922–5) **Ukraïns'ke slovo* and wrote feuilletons under the pseudonym Tyberii Horobets. He published several collections of poetry: *V hodyni sumerku* (In the Twilight Hour, 1908), *V hodyni zadumy* (In the Hour of Contemplation, 1917), *Sumni idem* (Unhappy We Go, 1920). His short stories and feuilletons appeared in several collections: *Dykvi vynohrad* (Wild Grapes, 1921), *Kvity i budiache* (Flowers and Thistles, 1922), *Z moioho zapysnyka* (From My Notebook, 1922), and the posthumous, abbreviated collection *Vybrane* (Selections, 1959).

Stepan Charnetsky

Charnetsky also translated Polish and German works and wrote *Narys istorii ukrains'koho teatru v Halychyni* (An Outline History of the Ukrainian Theater in Galicia, 1934).

Charnysh [Čarnyš]. Surname of a Cossack officer family of the Poltava region, well known from the 17th century. Fedir Charnysh, as well as his father, took part in the Chyhyryn campaigns of 1677–8. His son Ivan *Charnysh was colonel of Hadiache and general judge. The descendants of Ivan and his brother Tykhon constituted two branches of the family – the Hadiache branch and the Myrhorod branch. Ivan's great grandson Vasyl (1759–1822) was a member of the Poltava patriotic circle (at the end of the 18th century and in the first quarter of the 19th) and a freemason and served intermittently as marshal of the nobility of Poltava gubernia from 1801 to 1820. Petro, of the Myrhorod branch, was mayor of Poltava in 1777 and then, in 1793, a county marshal. He belonged to Prince O. Bezbordko's Ukrainian milieu. His and his brothers' descendants were zemstvo activists in the Poltava region in the 19th and 20th century.

Charnysh, Ivan [Čarnyš], b?, d 10 December 1728 in Moscow. A public figure of the Mazepa period from the Poltava region. From 1668 to 1708 he served (with interruptions) as military chancellor; he carried out Hetman I. Mazepa's diplomatic assignments in Moscow in 1699 and Constantinople in 1700 and acted as the hetman's resident at the court of Peter I in Hrodna in 1705. He took part in the Great Northern War as commander of the Hadiache Regiment. His participation in V. Kochubei's and I. Iskra's conspiracy led to his imprisonment, but turned out to be useful for his advancement under Hetman I. Skoropadsky. From 1709 to 1715 he was the colonel of Hadiache and from 1715 to 1725 the general judge of Left-Bank Ukraine. Charnysh accumulated a huge property by violent means. In 1723 he was summoned to St Petersburg with acting hetman P. Polubotok and was locked up in the Peter and Paul Fortress. After Peter I's death he was released.

Chas. One of the largest and most productive publishing houses in Kiev in 1908–20. Established and directed by V. Koroliv-Stary, M. Synytsky, and P. Petrushevsky, it had 250 members and over a million rubles in capital. Chas published school textbooks, selections from the classics of Ukrainian literature, popular low-priced books, which consisted of translations of foreign novels (most of them

illustrated by I. Buriachok), series of small publications (one of them devoted to T. Shevchenko), colored post-cards by A. Zhdakha, and the monthly **Knyhar* devoted to literary criticism and bibliography (1917–20). Chas had its own press and bookstore. The **Slovo* publishing house in Kiev continued (1922–6) the work of Chas.

Chas (Time). The only Ukrainian daily in Chernivtsi from 1 October 1928 to 26 June 1940. The first owner and editor was T. Hlynsky. From 1929 it was owned by a publishing association that had its own press, directed by I. Ivanytsky. From 1938 it was owned by a joint-stock company directed by E. Turushanko. The main editors were V. Mehydyniuk (1928), Yu. Serbyniuk (1929–32), and L. Kohut (1932–40). Other staff members included O. Mehydyniuk, S. Pihuliak, O. Nasykevych, V. Yakubovych, V. Kmitskevych, T. Bryndzan, A. Kyrlyiv, I. Karbulysky, O. Shevchukevych, and V. Huzar.

Chas published articles on Bukovynian current affairs and history, belles lettres, a women's section (edited by O. Huzar), and a weekly issue for farmers. It had a liberal democratic profile and supported the **Ukrainian National party* in elections to the Rumanian parliament. *Chas* engaged in heated polemics with the OUN in Bukovyna. It is an important source for the history of Bukovyna in the 1920s–1930s.

Chas (Time). A liberal nationalist weekly published in Fürth, Bavaria, from December 1945 to mid-1949; its chief editor was R. Ilnytsky, who was assisted by M. Koliankivsky and Z. Kuzelia. *Chas* had well-developed cultural, economic, and women's sections; leading émigré writers contributed to it. In 1949 *Chas* merged with the Paris newspaper *Ukrainets'* to form *Ukrainets'-Chas*, which was published until 1961.

Chashnyk. In Kievan Rus' a higher official of the princely administration. The *chashnyk* was in charge of beekeeping and the preparation of mead for the prince's court.

Chasiv Yar [Časiv Jar]. v-18, DB 1-3. City (1974 pop 23,000) in Donetsk oblast, subordinated to the Artemivske city soviet. It is the site of the largest plant of refractory products in Ukraine and one of the largest in the USSR. The plant exploits a large local field (2,000 ha) of high-quality fireclays and produces a great variety of refractory products. There is also a reinforced-concrete plant, a research institute, and a regional museum in the city.

Chasopys' pravnycha (Juridical Periodical). A professional legal journal published irregularly in Lviv beginning in 1889. The journal was founded by K. Levytsky (editor), Ye. Olesnytsky, and A. Horbachevsky. From 1893 it was published by the Legal Commission of the Historical-Philosophical Section of the Shevchenko Scientific Society. Ten issues were published. In 1900 the scope of the journal was broadened, and its title was changed to *Chasopys' pravnycha i ekonomichna*. The editor was S. Dnistriansky. By 1906 nine issues had been published; one issue was published in 1912. Contributors to the journal included I. Franko, M. Zobkiv, Yu. Zaiats, V. Starosolsky, V. Paneiko, P. Stebelsky, and M. Shukhevych. Articles in the journal dealt with the history

of Ukrainian law, legal terminology, and sociological questions.

Chasoslov. A liturgical book, used by cantors and singers, that contains the prayers of the daily church services. The name is derived from the word *chasy* (hours), which refers to the parts of the church liturgy. Besides the unchanging prayers, the *chasoslov* contains changing liturgical hymns or chants (troparia, kontakia), paschal services, necessary instructions on ritual, and other information. The *chasoslov* was the most popular liturgical book in old Ukraine and went through many editions. It was widely used in teaching pupils how to read, and many of its texts were memorized.

Chastii, Mykola [Častij], b 9 May 1905 in Valky, Kharkiv gubernia, d 18 November 1962 in Kiev. Singer, bass. Chastii was a soloist with the Kharkiv Opera and Ballet Theater in 1930–5, the Tbilisi Opera in 1935–41 and the Kiev Opera in 1944–58. His main roles were Karas in S. Hulak-Artemovskyy's *Zaporozhets' za Dunaïem* (Zaporozhian Cossack beyond the Danube), Vyborny and Taras in M. Lysenko's *Natalka Poltavka* (Natalka from Poltava) and *Taras Bul'ba*, Ivan Susanin in M. Glinka's opera of that name, and Tsynhal in Z. Paliashvili's *Dais*.

Chatyr-Dag. A plateaulike, calciferous massif (1,525 m high) in the major ridge of the Crimean Mountains. It is characterized by karstlike relief formations. The slopes of the massif are covered with beech, elm, and pine forests.

Yelysaveta Chavdar

Chavdar, Yelysaveta [Čavdar, Jelysaveta], b 23 February 1925 in Odessa. Singer, lyric and coloratura soprano. In 1948 Chavdar graduated from the Odessa Conservatory (class of O. Aslanova) and since then she has been a soloist with the Kiev Opera and Ballet Theater. Her main roles have included Maryltsia and Venus in M. Lysenko's *Taras Bulba* and *Aeneid* respectively, Yolan in H. Maiboroda's *Mylana*, Gilda and Violetta in G. Verdi's *Rigoletto* and *La Traviata*, Rosina in G. Rossini's *Barber of Seville*, and Lucia in G. Donizetti's *Lucia di Lammermoor*. Since 1949 she has appeared on stage in many European countries, Canada, China, and India. In 1951 she won first prize at the International Competition of Vocal Soloists in Berlin.

Chavdarov, Sava [Čavdarov], b 9 August 1892 in the village of Belshama, Bessarabia, d 20 September 1962. Ukrainian scholar, pedagogue, corresponding member of the Academy of Pedagogical Sciences of the Russian SFSR

from 1947. From 1929 to 1939 Chavdarov lectured in teachers' institutes in Kiev. From 1939 he was a professor at Kiev University, and from 1944 he also served there as chairman of the department of pedagogy. He was director of the Scientific Research Institute of Pedagogy of the Ukrainian SSR from 1944 to 1956. His works deal with such topics as approaches to educational work in the Soviet school system, influence on the students' world view, the history of pedagogical theory, the methodology of teaching Ukrainian, and T. Shevchenko's views on pedagogy.

Chebotariv, Mykola [Čebotariv], b 24 October 1884 in Poltava, d 4 February 1972 in Ulm, Germany. Military and political figure, a member of the Revolutionary Ukrainian party and the Ukrainian Social Democratic Workers' party in 1903–5. In 1917 Chebotariv was a member of the Ukrainian Military General Committee and of the Central Rada. Under the Directory he was a colonel in the Army of the UNR, the organizer and chief of counterespionage, then director of the political department of internal affairs, and, in 1920, chief of S. Petliura's bodyguard. He lived as an émigré in Warsaw and then in Germany.

Chebotarov, Dmytro [Čebotar'ov], b 17 September 1908 in Kiev. Specialist in internal medicine, geriatrics, and gerontology, corresponding member of the Academy of Medical Sciences of the USSR from 1961. After graduating from the Kiev Medical Institute in 1933, he worked at higher educational schools and research institutes in Kiev. In 1961 he was appointed director of the Institute of Gerontology of the Academy of Medical Sciences of the USSR. His works deal with illnesses of the stomach and intestinal tract, the state of internal organs during pregnancy, gerontology, and geriatrics. In 1963 he became president of the Association of Gerontologists and Geriatricians of the USSR.

Chechel, Dmytro [Čečel'], ?–1708. Cossack officer, member of an old family of Ukrainian gentry in the Bratslav region, official of Hetman I. Mazepa's administration (1689–96), colonel of a *serdiuk* (mercenary) regiment (1696–1708). In 1700–4 Chechel fought in the Great Northern War. When Mazepa went to join Charles XII against Peter I, he entrusted the defense of his capital, Baturyn, to Chechel. During A. Menshikov's siege of the city Chechel was wounded and captured by the Russians. He was executed by quartering in Hlukhiv.

Chechel, Mykola [Čečel'], 1891–? Political leader, an engineer by profession. Chechel was a member of the Central Committee of the Ukrainian Party of Socialist Revolutionaries (UPSR). He was also a member and secretary of the Central Rada and a member of its Little Rada. He worked with M. Hrushevsky. After emigrating to Vienna (1920–4), Chechel belonged to the external delegation of the UPSR and co-edited the journal *Boritiesia-poborete*. In 1924 he returned to Ukraine and worked in Kharkiv at the Ukrainian Scientific-Technological Society in 1927–31 and at the Ukrainian State Planning Committee (Derzhplan), doing research on the productive potential of Ukraine. He was arrested in the 1930s, and his subsequent fate is unknown.

Chechelnyk [Čečel'nyk]. v-10. Town smt (1963 pop 5,200), raion center in Vinnytsia oblast, situated on the

Savranka River in eastern Podilia. The town has a food industry, in particular a sugar refinery, established in 1875.

Chechet-Volyniak, Petro. See Volyniak, Petro.

Chechviansky, Vasyl [Čečvjans'kyj, Vasyl'] (pen name of V. Hubenko), b 23 February 1898 at the Chechva home-stead in Poltava gubernia, d 26 October 1938. Writer-humorist, brother of O. *Vyshnia. For many years Chechviansky was secretary of the editorial board of *Chervonyi perets'* and contributed his works to the journal. He was a member of the writers' organization Pluh and of the All-Ukrainian Association of Proletarian Writers. His works began to appear in the early 1920s. During his brief but prolific life he published the following collections of humorous sketches: in 1928, *Tsari pryrody* (The Tsars of Nature) and *Ekh, tovaryshi ...* (Bah, Comrades ...); in 1929, *Kadylo* (The Censer), *Mizh inshym* (By the Way), *Ozdorovlennia aparatu* (Reviving the Apparatus), *Oskudnienie* (Impoverishment), *Perelyvannia krovy* (Blood Transfusion), and *Faktor* (Factor); in 1930, *Ne vam kazhuchy* (Without Telling You), *Parodii* (Parodies), and *Respublikantsi* (Republicans); in 1933, *Neshchasni* (The Unfortunates); and in 1934, *Utyliu –put'ovku!* (A Pass to the Scrap!). Chechviansky was shot during the Yezhov terror and was rehabilitated in the 1950s. Two of his collections were published in 1959: *Vybrani humoresky* (Selected Humorous Sketches) and *M'iakyi kharakter* (A Softy).

Checkers (*shashky*). One of the oldest games, played with two sets of markers on a checkered board. The game originated in ancient Egypt. Archeological excavations of the *Cherniakhiv culture indicate that checkers was known on Ukrainian territory as early as the 3rd century AD. Soviet checkers players participate in international competitions. In 1958–9 and 1961 I. Kuperman, a player from Ukraine, won the world championship. In 1977 R. Leshchynsky won the European championship.

Cheka (VChK or Vserossiiskaia chrezvychainaia komissia po borbe s kontrevoliutsiei i sabotazhem [All-Russian Extraordinary Commission for Fighting Counterrevolution and Sabotage], popularly called ChK, Cheka, or *chrezvychaika*). Soviet security agency organized by F. Dzerzhinsky at the beginning of the revolution and confirmed by the decree of the RSFSR of 20 December 1917. Although formally it was responsible to the government, in reality the Cheka constituted a state within a state and acted independently. Whenever it could, it extended its operations into Ukraine, where it was formally established in December 1918 by decree of the Provisional Workers' and Peasants' Government of Ukraine as the All-Ukrainian Extraordinary Commission for Fighting Counterrevolution, Speculation, Sabotage, and Administrative Crimes in the Department of Internal Affairs. In 1919 it was headed by one of the chiefs of the Russian Cheka – M. Latsis. On 30 May 1919 the decree on the All-Ukrainian Extraordinary Commission for Fighting Counterrevolution, Espionage, and Banditry and on Local Extraordinary Commissions was adopted. In 1920 the Central Administration for the Extraordinary Commissions was created and was subordinated to the government of Ukraine. On 5 May 1920 F. Dzerzhinsky came to Ukraine

with 1,400 Russian Cheka agents and carried out a thorough purge of the Cheka apparat.

The Cheka justified its repressions and terror as the struggle 'against counterrevolution, espionage, and banditry,' but 'banditry' encompassed every activity of the government's political opponents. The Cheka carried out the policy of the so-called Red Terror with its mass killings, executions of hostages, coercion, and sadistic torture. It was notorious for its repressions in Ukraine in 1918–20, particularly in the cities during the retreat of the Red Army and during every new occupation. In 1920–2 the Cheka fought Ukrainian insurgents and terrorized the peasants. It destroyed the nationally conscious Ukrainian intelligentsia, particularly members of Ukrainian political parties. The atrocities that it carried out in Ukraine, under M. Latsis in Kiev, V. Yakovlev and M. Deich in Odessa, S. Saienko in Kharkiv, and Yu. Piatakov in the Donbas, were investigated by special commissions, which included civic leaders and foreigners, during A. Denikin's occupation of Ukraine in the second half of 1919. With the introduction of the New Economic Policy and positive contacts with the West, the Soviet government tried to dissociate itself from the politics of terror and reorganized the Cheka into the *GPU, which was succeeded by the OGPU, *NKVD, and *KGB. This, however, has changed little in the nature of the Soviet security machine.

Chekaniuk, Andrii [Čekanjuk, Andrij], b 29 October 1906 in Kamianka, Podilia gubernia. Soviet Party activist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1964. Chekaniuk graduated from one of the Communist institutions of higher education in 1937; from 1938 to 1943 he edited the newspaper *Komunist*, which later was published under the title **Radians'ka Ukraïna*. In 1946 Chekaniuk became director of the Higher Party School of the CC CPU and later served as the school's rector. His works on the history of the Party include *Torzhestvo lenins'koï natsional'noi polityky KPRS* (The Triumph of Leninist Nationality Policy of the CPSU, 1972).

Chekaniuk, Vilen [Čekanjuk], b 12 October 1932 in Zhmerynka, Vinnytsia oblast. Painter, son of A. *Chekaniuk. He graduated from the Kiev Art Institute in 1958. Among his paintings are the following: *Returning from Work* (1960), *Siberian Morning* (1963), *Whale Hunters* (1966), *For the Land* (1967), *Karmeliuk* (1969), and *Anti-aircraft Gunners, Vietnam* (1970–1).

Chekhivsky, Mykola [Čexivs'kyj], 1878–1938. Prominent member of the Ukrainian Autocephalous Orthodox church, brother of V. *Chekhivsky. In 1917–19 Chekhivsky was a colonel in the Army of the UNR. In 1921 he was ordained. He won distinction as a preacher and debater against antireligious propagandists. In 1927 he was arrested and exiled to Saratov, Russia. In 1930 he was sentenced at the show trial of the Union for the Liberation of Ukraine to three years in Yaroslavl Prison and was then exiled to Siberia, where he perished.

Volodymyr Chekhivsky

Chekhivsky, Volodymyr [Čexivs'kyj], b 19 July 1876 in the village of Horokhuvatka, Kiev gubernia, d ? Prominent civic, political, and church leader. A priest's son, Chekhivsky graduated from the Kiev Theological Academy in 1900. In 1901–5 he worked as the assistant inspector of the Kamianets-Podilskiy Theological Seminary. In 1906 he was elected to the first Russian State Duma. After a year's exile to Vologda gubernia he lived in Odessa (1907–17) and was active in the Ukrainian Hromade and the Prosvita society. In 1917 he became the editor of *Ukraïns'ke slovo*. He was a member of the Central Committee of the Ukrainian Social Democratic Workers' party, a member of the Central Rada, and in 1918 the chairman of the Ukrainian Military Revolutionary Committee, which planned the overthrow of Hetman P. Skoropadsky. From 26 December 1918 to 11 February 1919 he headed the Council of Ministers of the UNR and served as the minister of foreign affairs. In March 1919 he was one of the founders of the Committee for the Defense of the Republic in Kamianets-Podilskiy. At the same time he was a prominent figure in the *Ukrainian Autocephalous Orthodox church. It was under his leadership that the government of the UNR adopted the law on the autocephalous status of the Ukrainian Orthodox church on 1 January 1919. After the first church sobor (14–30 October 1921), he became a member of the *All-Ukrainian Orthodox Church Council and chairman of the Ideological Commission of the church. On 29 July 1929 Chekhivsky was arrested in connection with the show trial of the *Union for the Liberation of Ukraine and on 19 April 1930 he was sentenced to be shot. The sentence was commuted to 10 years of solitary confinement. He served his term in the political prisons of Kharkiv and Yaroslavl. In 1933 he was transferred to the prison on the Solovets Islands. After extending his sentence for another 20 years, in 1936 the authorities transferred him to the strict-regime camps of the Far East (correspondence forbidden). Nothing more is known of his fate. Chekhivsky wrote a book-length study of the Kievan metropolitan G. Banulesko-Bodoni (TKDA, 1904, nos 2, 3; 1905, no. 2). He is also the author of historical articles in the journal *Ukraïna*, theological articles in *Tserkva i zhyttia*, and the pamphlet *Za Tserkvu, Khrystovu hromadu, proty tsarstva t'my* (For the Church, the Community of Christ, against the Kingdom of Darkness, 1922).

A. Zhukovsky

Chekhove [Čexove] (to 1944: Autka). ix-15. Town smt (1963 pop 4,900) in Crimea oblast west of Yalta and

under the administration of the Yalta city soviet. It is the home of the Chekhov Memorial Museum.

Chekhovych, Konstantyn [Čexovyč], b 21 May 1896 in Khyryna, Peremyshl county, Galicia. A philologist and Slavist, lecturer at the Ukrainian Free University in Prague, and professor of Slavic philology at the Theological Academy in Lviv. Chekhovych wrote a study of O. Potebnia's philosophy (1931) and published **Slovo*, a journal of Slavic philology (Lviv, 1936–8). In 1945 he was arrested and spent eleven years in Soviet labor camps. Since 1956 Chekhovych has lived in Poland.

Chekmarov, Oleksander [Čekmar'ov], b 12 September 1902 in Velyka Znamianka, Katerynoslav gubernia, d 11 March 1975 in Dnipropetrovske. Specialist in the use of pressure in metal forging. Chekmarov was a full member of the Academy of Sciences of the Ukrainian SSR from 1948 and a member of the Academy of Sciences of the USSR from 1968. A graduate of the Dnipropetrovske Mining Institute (1927), he taught at the Dnipropetrovske Metallurgical Institute beginning in 1930 (from 1934 as full professor) and worked at the Scientific Research Institute of Ferrous Metallurgy in Dnipropetrovske from 1948 (as head of a department until 1970, and subsequently as a consultant). His scientific work concerns the theory of metal rolling, the improvement of metal-rolling equipment, and the development of new technology.

Chekunov, Anatolii [Čekunov, Anatolij], b 24 March 1932 in Kharkiv. Geologist-geophysicist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1973. Since 1961 Chekunov has worked in the Institute of Geophysics of the Academy of Sciences of the Ukrainian SSR and since 1976 has been its director. His publications deal with the structure and evolution of the earth's crust and the tectonic-geophysical structure of Ukraine.

Cheliad (collective noun; singular – *cheliadnyk*). In Rus' a designation for members of the dependent population, consisting of *khology* (male slaves), **zakupy* (slaves through loan defaults), dependent **smerds* (free peasants), and others. In the Cossack period and later *cheliad* was applied to the servants and other permanent members of a noble's household. In some regions of Ukraine the term was used to refer to young people attending a wedding.

Chełm. See Kholm.

Chelomei, Volodymyr [Čelomej], b 30 June 1914 in Siedlce, Poland. Mechanical engineer, specialist in the dynamics of stability in oscillating systems, since 1962 full member of the Academy of Sciences of the USSR. After graduating from the Kiev Polytechnical Institute in 1937, Chelomei worked in the institute. At the beginning of the Second World War he was transferred to Moscow and in 1952 was appointed professor at the Bauman Advanced Technical School. He specializes in the theory of nonlinear pneumatic and hydraulic servomechanisms and in the theory of oscillation of vibrating systems and has made a number of brilliant discoveries in these fields. Most of his publications are classified. In the prewar period he published a number of papers in Ukrainian. Since the 1950s he has participated in numerous rocket-

building projects in the USSR and has become one of the leading consultants on propulsion systems for various spacecraft, mostly for the military. After the death of M. Yanhel in 1971 Chelomei was put in charge of the entire Soviet space program.

Chemervivtsi [Čemerivci]. iv-7. Town smt (1970 pop 4,000), raion center in Khmelnytskyi oblast, situated on the Zhvanchyk River in eastern Podilia. The town has a food industry.

Chemerynsky, Orest [Čemeryns'kyj], b 1910 in Zolochiv, Galicia, d 1942 in Kiev. Political leader, publicist, editor. Chemerynsky was a member of the OUN in Galicia and eventually became a member of the organization's leadership (PUN) responsible for propaganda and the director of the Ukrainian Press Service in Berlin (1935–40). In 1941 he went to eastern Ukraine with the OUN Expeditionary Forces (Melnyk faction) and was appointed co-editor of *Ukrains'ke slovo* in Kiev. Chemerynsky wrote several works under the pseudonym Ya. Orshan: *De stoimo?* (Where Do We Stand? 1937), *Zakarpattia* (Transcarpathia, 1938), *Doba natsionalizmu* (The Age of Nationalism, 1938), and 'Der ukrainische politische Gedanke in den letzten hundert Jahren,' in *Ukrainischer Nationalismus* (1939). Chemerynsky was executed by the Germans together with his wife, D. Huzar, in Kiev.

Chemical industry. A heavy industry that produces minerals, fertilizers, plastics, synthetic fibers and textiles, organic and inorganic chemicals, herbicides, preservatives for the food industry, photographic and cinematographic film, synthetic rubber, cleaning fluids, disinfectants, and chemicals for military use. The basic branches of the chemical industry are the petrochemical industry, the carbochemical or coke industry, and industries specializing in the processing of other chemical resources (iodine, sulfur, bromine, etc). According to the Soviet system of classification, however, some branches of the chemical industry constitute separate industries. Among these are the petrochemical industry, the cellulose and paper industry, the coke-chemical industry, the pharmaceutical industry, and the newest branch – the micro-biological industry.

The products of the chemical industry are used in all areas of the national economy and daily life. There has been a particularly rapid increase in the use of chemical products from the middle of the present century because of the shortage of traditional forms of raw materials such as wool, leather, wood, furs, and even metals, and because of a large increase in population. Because of the advancement of the chemical sciences and the automation of chemical production, the chemical industry needs little labor but requires costly equipment.

Before 1917. Although the copper sulfate factory in Putyvl (est in 1743) was one of the first chemical plants in Ukraine, the development of the chemical industry in Ukraine starts with the rapid growth of gunpowder production in the 18th century. In 1764 the Russian senate feared a Cossack uprising and ordered all gunpowder factories in Ukraine to be disassembled. But in 1777 the factories were reopened, and by 1790–5 one factory in Shostka alone produced half of the Russian Empire's gunpowder. Small quantities of gunpowder were manufactured in other localities of Ukraine, includ-

ing Lviv. Saltpeter was also produced in Ukraine, but by the 19th century its production had ceased.

The production of lacquers and paints also forms one of the older branches of the chemical industry in Ukraine. Paints and enamels were made in Ukraine as early as the Kievan period (11th–12th century). At first raw minerals and plants were used in this production, and then (14th century) natural tars and bitumen. The first producers of paint in Ukraine were potters and monks (for example, paint was produced at St Michael's Monastery in Kiev). In the 14th–18th century home craftsmen made paints themselves. The first large lacquer-paint firms, however, were a factory in Odessa (built in 1856), one in Kharkiv (1857), one in Kiev (1860), and one in Poltava (1870). At the end of the 19th century a lacquer-paint factory was built in Lviv and another in Kharkiv. In 1910–14 the lacquer-paint industry was an exceptionally well-developed branch of the chemical industry in Ukraine.

As in other areas of the national economy of imperial Russia, foreign capital played an important role in the early stages of the development of the chemical industry in Ukraine. One of the first industrial chemical plants was the Schultz factory in the village of Ivanivka in Kharkiv gubernia. It was built in 1843 and was the first factory to produce sulfuric acid. Smaller plants were built in Kiev and Chernihiv.

Another older branch of the chemical industry was the *salt industry. Potash, however, began to be processed only in 1913–16, in Stebnyk and Kalush in Galicia. From 1922 to 1932 Stebnyk supplied the farms of Western Ukraine with potash fertilizers. The production of soda began in Ukraine towards the end of the 19th century (see *Soda industry). The *coke-chemical industry originated in the 1870s.

In the 1850s Lviv was the center for the production of matches. Its two factories produced three million boxes of matches annually in the 1910s. With time the Chernihiv area also became a producer of matches.

Rubber products began to be manufactured in Ukraine at the beginning of the 20th century. The first rubber plant was built in Kiev to supply military needs. In 1915 the Koksobenzol plant in the Donbas began to produce some chemical substances, and in 1916–17 a nitric acid plant was built in Yuzivka (now Donetsk) and at the soda plant in Slovianske. Chemical plants were also built in Odessa (superphosphate and lacquer-paint plants), Kostiantynivka, and Mariupil. A plant producing aniline dyes was established in Rubizhne at this time. All of these plants were later expanded and are still productive today. Some of them – the ones in Rubizhne and Donetsk – are among the largest plants in Ukraine.

The production of the chemical industry in Ukraine in 1913 was valued at over 20 million gold rubles and accounted for 10 percent of the production in imperial Russia. The breakdown of the 1913 production was as follows (in millions of tonnes): (1) primary chemicals: anthracite tar, 38.6; 25 percent ammoniac water, 16.1; (2) secondary products: ammonium sulfate, 13.5; heavy lubricants, 10.9; pitch, 12.6.

1917–41. The First World War and the civil war did much damage to the chemical plants in Ukraine. In 1921–7 the industry was revived. In November 1921 the Khemvuhillia trust was formed; in 1922 it was renamed Pivdenkhemtrest. Some of the chemical factories in Ukraine became part of the all-Union trust Fosfatot. In 1927–8

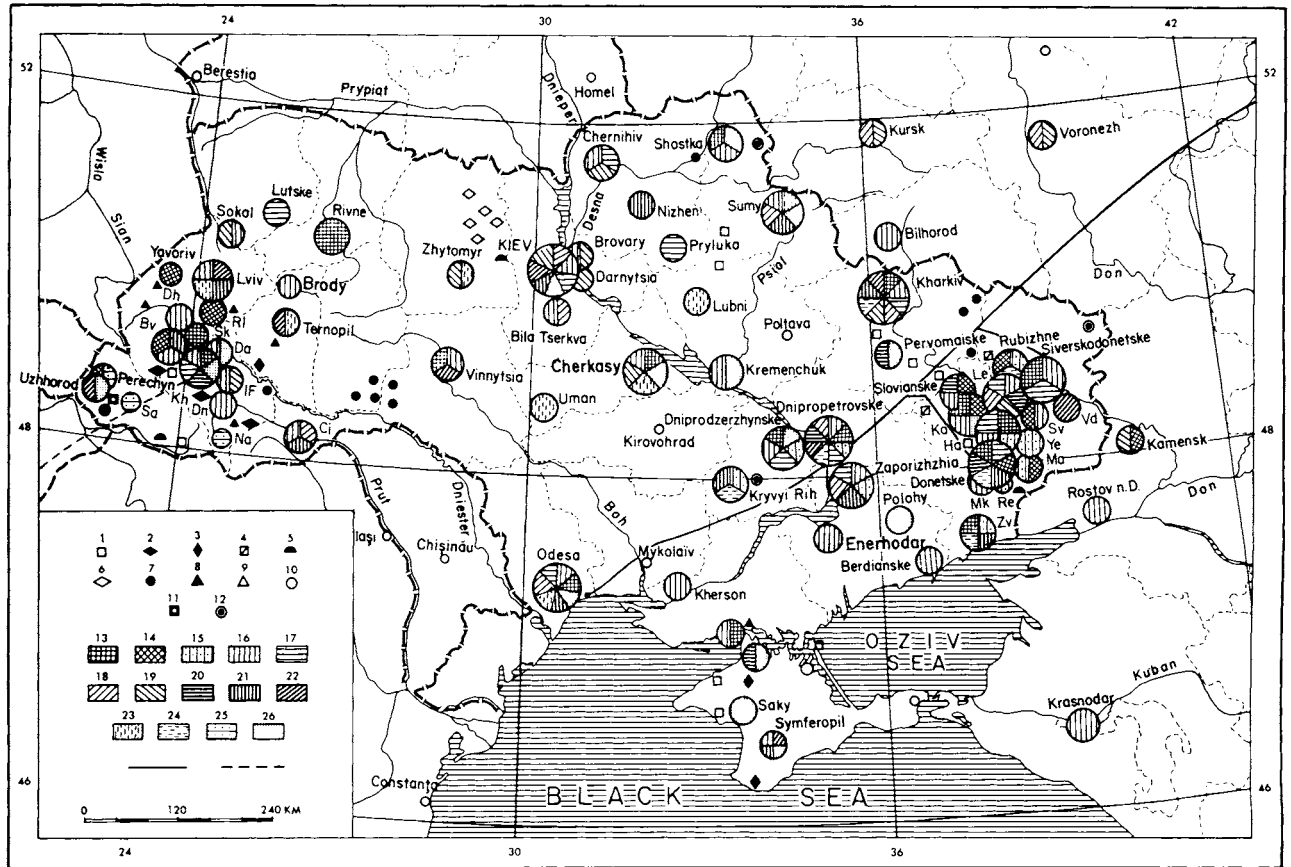

Ukraine produced 15.4 percent of the chemicals in the USSR. Its contribution was valued at 56.5 million gold rubles. In 1928 a chemical production committee (Komitet khemizatsii) was created at the Council of People's Commissars of the Ukrainian SSR. In that year chemical production in Ukraine reached the 1914 level. The First Five-Year Plan provided for an investment of 320–340 million rubles in the chemical industry of Soviet Ukraine. Emphasis was put on increasing the production of mineral fertilizer for agriculture and on beginning the production of chemicals for military purposes. A series of new plants was built: a superphosphate plant in Kostiantynivka, a celluloid film plant in Shostka, the Kharplastmas plastics plant in Kharkiv, and a plastics plant in Pryluka. Of the older plants, the ones in Donetsk, Odessa, and Vinnytsia were greatly expanded.

With greater centralization and the abolition of the system of the Supreme Economic Council in 1932, the chemical industry of Ukraine was brought under the control of the new all-Union Commissariat of Heavy Industry in Moscow. At the same time Ukrainian firms were subjected to the administration of all-Union organizations such as Soiuzkalii, Lakokraska, Rezynobiednannia, and Soiuzkhimplastmas. Among the new plants that were built at the time were the synthetic ammoniac and coke-gas production complex in Horlivka, the casein plastic plant in Dnipropetrovske, lacquer-paint factories in Dnipropetrovske and Huliai Pole, the ether factory in Kiev, the minium plant in Kryvyi Rih, and the first Ukrainian factory producing synthetic silk – Kievovolokno.

Of the projects proposed in the Third Five-Year Plan (1938–42), only the following plants were built: the nitrogen plant in Dnipropetrovske, a new soda plant in Slovianske, and the first departments of the Lysychanske chemicals complex. In 1940 the chemical industry in Ukraine produced (in thousands of tonnes): mineral fertilizers, 1,012; caustic soda, 78; sulfuric acid, 407; soda ash, 413; potassium fertilizers, 82; lacquers, 45; paints and dyes, 8; synthetic fiber, 1.6. In 1941 Soviet Ukraine had a near monopoly on the production of superphosphates in the USSR. In 1939 a special commissariat of the chemical industry was separated from the commissariat of heavy industry and was put in charge of the main Ukrainian plants producing primary chemicals. The rapid growth of the chemical industry in Ukraine is reflected in the growth of its capital funds, which were (in millions of rubles) 154 in 1928, 464 in 1932, and 1,270 in 1937.

Since 1944. The Second World War brought destruction again to the chemical industry in Ukraine. Its reconstruction took longer than the reconstruction of other branches of industry, because the technology of production, particularly of sulfuric acid, caustic soda, and potassium fertilizers, was modernized at the same time. The prewar level of production in these branches was attained again only in 1952–6. The production of the chemical industry is shown in table 1.

The chemical industry of Soviet Ukraine made only small advances until 1955, when the republic's planning agencies had a somewhat better opportunity to supervise its development. In 1955–70 many new, large chemical plants were built: plants of chemical reagents in Shostka and Cherkasy; a bromine plant in Perekop; a chemicals complex in Sumy; a chemical plant in Lviv; a sulfur chemical-mining complex in Rozdil; a paint factory in Donetsk;

synthetic-fiber plants in Cherkasy, Chernihiv, and Sokal; a tire plant in Dnipropetrovske; a chemical-metallurgical plant in Kalush; a potash production complex in Stebnyk; and a sulfur plant in Yavoriv. At the same time new departments were added to existing chemicals complexes in the Donbas, primarily departments of plastics and composites. Chemical production in Ukraine increased from 10 percent of imperial production in 1913 to 21 percent of Soviet production in 1940 and to 23 percent in 1970. Ukraine's production of nitrate fertilizers reached 21 percent of USSR production; of sulfur, 64 percent; of

sulfuric acid, 18 percent; of synthetic dyes, 32 percent; of soda ash, 15 percent; of caustic soda, 12 percent; of plastics, 25 percent; of chemical pesticides, 12 percent; of consumer chemicals, 33 percent.

The importance of the chemical industry grew even more in the 1970-80 period, when new plants were built in Zhytomyr (synthetic fiber), Ivano-Frankivske (fine organic synthetics), Bila Tserkva (a tire complex), Rivne (nitrogenous fertilizers), and the Crimea (titanium dioxide).

Certain branches of the chemical industry in Ukraine are noticeably behind their counterparts in the West. The

TABLE 1
Production of the chemical industry in Ukraine (thousands of tonnes)

Product	1913	1928	1940	1945	1950	1960	1970	1979
Mineral fertilizers	36	57	1,012	136	1,536	3,853	11,541	19,547

Chemical poisons for agriculture	—	—	—	—	—	7	34.6	84.4

automobile-tire plants were built late: the Dnipropetrovsk plant was built by British firms in 1956 and reached its production capacity only in 1965. The Bila Tserkva plant was built in 1969–75. By 1980 both plants were supposed to produce eight million tires per year. Vulcanizing plants for retreading tires and manufacturing rubber belts, pipes, and consumer goods were built in Ukraine only in the 1960s. Now there are eight factories producing synthetic leather and rubber footwear, of which the largest are in Chernivtsi, Lviv, Kiev, and Odessa. In 1971 they produced 12 million pairs of footwear. In Ukraine there are only three carbon dust plants – in Dashava, Kadiivka, and Kremenchuk – and in 1967 they produced 120,000 tonnes of carbon dust. The production of chemical fibers in Ukraine is given in table 2.

The production of synthetic fibers in Soviet Ukraine accounted for 19 percent of USSR production in 1979, and the production of synthetic thread, for 37 percent. The production of plastics, synthetic resins, and fiberglass is, on the whole, satisfactory in Ukraine. It is carried out by about 30 large factories, most of them built after 1950. In 1970, 14,400 tonnes of alkyd resins and 3,600 tonnes of organic silicon were produced.

Because of the wide use of sulfur in the western regions of Ukraine, the proportion of the basic raw materials for the production of sulfuric acid has changed (the 1975 percentages relative to all raw materials are given here with the figures for 1960 in parentheses): pyrites, 48.9 (66.9); elementary sulfur 37.1 (16.8); associated gases, 14.0 (16.3). There have also been great changes in the proportion of the basic materials in the production of nitrogen compounds: the proportion of natural gas increased from 49.3 percent in 1965 to 76.1 percent in 1975, while the proportion of coke gas declined from 50.7 to 23.9 percent in the same period.

One of the main branches of the chemical industry in Ukraine is the mineral-fertilizer industry. Figures for the production of mineral fertilizers are given in table 3.

The production of methyl alcohol, acetaldehyde, acetic acid, vinyl-acetates, nitrene, and various emulsions that

Boracic	—	11	27	25

are necessary for the manufacture of cloth substitutes (artificial leather, furs, materials for boat and automobile covers, etc) was also begun at this time. In the lacquer-and-paint branch of the industry departments were created to manufacture transparent lacquers for furniture. Almost half of the lacquer and paint output of Ukraine is exported.

Soviet Ukraine turned in the 1970s to the production of ecologically and hygienically safer and more effective herbicides (ethersulfonate, sodium trichloroacetate, celitum, and others), but a sizable proportion of the herbicides still consists of DDT and DNOK.

The contribution of Ukraine's chemical industry to the total chemical production of the USSR in 1965–70 was as follows (in percentages): mineral fertilizers, 21; sulfuric acid, 18; soda ash, 25; caustic soda, 12; synthetic dyes, 32; refined sulfur, 64; poisons, 12; consumer chemistry (plastics, fibers, etc), 33. In the 1960s primary chemicals dominated in Ukraine's chemical industry, but in the 1970s the proportion of secondary chemical products in the output of the industry rose sharply. The development of the chemical industry in Soviet Ukraine is held back by the need to restrict the production of those compounds and synthetic materials that are the byproducts of oil and coal processing. The threat of a future shortage of these raw materials is forcing the chemical industry to look for alternatives.

The chemical industry requires costly equipment and large sources of energy and raw materials. Its small workforce has a large proportion of highly qualified specialists. At the end of 1973 the chemical industry in Ukraine employed 19,170 specialists with a higher education and 36,000 workers with a secondary education (6.4 percent and 4.5 percent of the industrial workforce in Ukraine). In 1975–80 the value of the industry's production (at 1975 prices) in comparison to the value of Ukraine's total industrial production remained unchanged at 6.3 percent. Chemical products accounted for 2.4 percent of all industrial products for general consumption.

S. Protsiuk

Chemical-products industry. A branch of the *chemical industry that produces synthetic products for washing and cleaning clothes, dishes, and furniture and that packages, in small quantities for retail sale, lacquers, paints, photographic materials, pesticides, etc. Chemical products for consumers were produced in a limited assortment before the 1930s by cottage industry and then by industrial co-operatives, which were abolished in 1956, and by local industry. The chemical-products industry developed into an independent branch of the chemical industry at the end of the 1960s, when it was organizationally unified under the Union of Consumer Chemicals (Soiuzpobutkhim) (1965). In this period existing plants in Odessa, Symferopil, and Uzhhorod were reconstructed, and new plants were built in Kiev, Donetske, and Dnipropetrovske. In 1978 chemical products accounted for 2.4 percent of the consumer goods produced in the Ukrainian SSR. In 1969 Ukraine's production of chemical products amounted to 26 percent of USSR production. Chemical products are manufactured not only by 16 specialized plants, but also by other branches of the chemical industry; the total of 60 plants producing chemical products includes the Azot complex in Siverskodonetske and the chemicals complexes in Cherkasy and Pervomaiske (pesticides), Vinnytsia (synthetic washing products), and Rubizhne (lacquers and paints). Plants under the Ministry of Local Industry are also producers of chemical products, the largest of them being the factory of chemical products in Chernivtsi. Some chemical products are imported into Ukraine from other regions of the USSR and from the East European countries.

Yu. Savchuk

Chemistry. Scientific discipline concerned with the physical and chemical properties of substances, their transformations, and the development and control of such transformations to attain specific goals.

Practical utilization of chemical knowledge was made in Ukraine long ago in connection with the production and use of metals, their alloys, enamel, gunpowder, etc.

A significant role in the development of chemical sciences in Ukraine was played by societies of natural scientists that existed in Kharkiv, Kiev, and Odessa. Since 1897 the mathematics – natural sciences – medicine division of the Shevchenko Scientific Society in Lviv and New York has published transactions that have included articles on chemistry and on Ukrainian chemical terminology.

The first scientific studies in chemistry were done at the beginning of the 19th century at Kharkiv University by V.

Karazin and F. Giese. From 1864 to 1887 N. Beketov investigated thermochemistry and the theory of solutions there; later on his students and co-workers studied reaction kinetics, adsorption, and topochemical and molecular polymorphism. Significant also were the studies of N. Izmailov in the area of acids/bases and electrolytes. Other renowned scientists at Kharkiv University were O. Danylevsky (physiological chemistry, 1886–92), V. Palladin (biochemistry, 1889–97), and A. Eltekov and K. Krasusky (organic chemistry). The first textbook of physiological chemistry, by A. Khodnev of Kharkiv University, was published in 1847.

At Kiev University in 1867–89 V. Kistiakovsky worked in the area of biochemistry, on the metabolism of carbohydrates, especially of glycogen. Important studies of molecular dissociation were conducted by M. Kaiander in 1879–84, and Ya. Mykhailenko investigated solution thermodynamics and A. Speransky the theory of solutions (1905–19). I. Borshchov worked from 1869 in colloidal chemistry. This area was extensively developed by A. Dumansky, who in 1912 began to teach the subject at Kiev University and subsequently published a monumental monograph, *Colloidal Solutions*. Noted organic chemists at Kiev University were P. Alekseev and N. Bunge, as well as the world-renowned S. Reformatsky, who discovered the synthesis of β -oxyacids by means of zinc-organic compounds.

At Odessa University during the later part of the 19th century and in the early part of the 20th century research in organic chemistry was carried out by P. Melikishvili and N. Zelinsky; in colloidal chemistry, by F. Shvedov; and in physical chemistry, by O. Sakhanov (electrochemistry of non-aqueous solutions), A. Rabinovich (conductivity anomalies), O. Frumkin (electrocapillary phenomena), and L. Pysarzhevsky (peroxides and peracids). During his 1913–34 stay in Dnipropetrovske, Pysarzhevsky established the Institute of Physical Chemistry, where, together with his co-workers, he created the scientific basis for electronic chemistry and catalysis.

At Lviv University in the 1850s and 1860s L. Pebal conducted studies in organic and analytical chemistry. From 1872 to 1910 B. Radziszewski researched various problems of general and pharmaceutical chemistry; of significance also was the work of S. Tolochko in physical chemistry and of V. Kemula and E. Linneman in organic chemistry.

A noted Ukrainian biochemist at Prague University was I. Horbachevsky, who in 1882 synthesized uric acid from carbamide and glycine.

After the revolution the level and development of chemical sciences in Ukraine were uneven. Most research was still conducted at the universities and polytechnical institutes, although the function of doing fundamental research was later taken over by the newly founded institutes of the Ukrainian Academy of Sciences. These were formed according to then-existing needs and possibilities; today they encompass the highest level of chemical research in Ukraine. They possess the best means for doing research, and they usually collaborate with the universities, polytechnical institutes, and other research centers, frequently co-ordinating their efforts on specific tasks.

The institutes of chemistry of the Academy of Sciences of the Ukrainian SSR represent branches into which modern chemistry is divided; in their research they

respond to the needs of the chemical industry, taking into account the characteristics of indigenous minerals and other types of natural resources found in Ukraine. Not all branches of chemistry have their own institutes. For instance, work in analytical chemistry is done at the institutes of physical and inorganic chemistry (theory and application of complexes, photometric analytical methods, polarography), although chairs of analytical chemistry exist at all nine universities, at four polytechnical institutes, and at some technical institutes.

The branch of chemistry and chemical technology at the Academy of Sciences consists of eight centers, six of them in Kiev: the Institute of General and Inorganic Chemistry; the Institute of Macromolecular Chemistry; the Institute of Physical Chemistry; the Institute of Physical-Organic Chemistry and Coal Chemistry in Donetsk; the Institute of Colloidal Chemistry and Hydrochemistry; the Institute of Organic Chemistry; the Institute of Gas; and the Physical-Chemical Institute (est 1977) in Odessa.

The Institute of Physical Chemistry was established in 1927 in Dnipropetrovske; since 1944 it has been located in Kiev. Its first director (after whom it is now named) was L. Pysarzhevsky. It consisted in 1967 of the following departments: heterogeneous catalysis – the mechanism and macrokinetics of industrial processes (V. Roiter, H. Kornichuk); hydrogenation – the relationship between structure and the surface condition of the hydrogenation catalysts, catalysts for various industrial processes, the electronic theory of catalysis (M. Rusov, V. Vlasenko); oxidative catalysis – the catalysts and mechanism of olefin oxidation, the theory of gas-phase chromatographic analysis (M. Rubanyk); liquid-phase catalysis – heterogeneous catalytic processes in the liquid phase, correlation of their specific features in the gaseous and liquid phases (Ya. Horokhovatsky); sorbent synthesis – the preparation and modification of sorbents based on silica, alumina, etc (I. Neimark); adsorption and ion exchange – electrochemical adsorption on carbon and on ion exchangers as a function of the surface layer; studies of colloids (D. Strazhesko); chemical structure and reactivity – isotope exchange, the structure-reactivity relationship, reaction mechanisms, as well as studies of quantum chemistry (O. Brodsky, I. Hraherov, B. Heller); photochemistry – studies of chlorophyll, photosynthesis, and photolytic reactions (B. Dain); radiation chemistry – modification of polymers by radiation (A. Kabakchi).

Outstanding scientists who have worked at the Institute of Physical Chemistry include I. Obreimov, A. Prykhotko, M. Vuks (spectroscopy), S. Urazovsky, O. Holyk (solid- and liquid-state physical chemistry), A. Mashovets, O. Afanasev (electrochemistry), V. Finkelstein (theory of electrolytes), and P. Budnykov (physical chemistry of silicates). From 1966 the institute had a branch of physical-organic and coal chemistry in Donetsk, where the mechanism and kinetics of organic reactions were studied (L. Lytvynenko, R. Kucher, S. Baranov). Since 1977 this branch has been a separate institute – the Institute of Physical-Organic Chemistry and Coal Chemistry – with a sector of petrochemistry in Kiev. The institute's director is L. Lytvynenko; the sector's director is V. Hutyria.

The Institute of General and Inorganic Chemistry was established in 1931 in Kiev. Until 1945 it was called the Institute of Chemistry. Its directors have been V. Plotnikov, V. Yavorsky, A. Kiprianov, A. Dumansky, Yu.

Delimarsky, and, since 1973, O. Horodysky. In 1965 the institute consisted of 6 departments, which encompassed 25 sections. The department of the chemistry of complex compounds (two sections) is concerned with the theory and practice of complex formation and research on sensitive analytical methods utilizing spectrometric, spectrophotometric, and polarographic methods (Ya. Fialkov, A. Babko, K. Yatsymyrsky). The department of electrochemistry (two sections) deals with the kinetics and thermodynamics of electrode processes in molten electrolytes, including new methods of studying electrochemical kinetics; polarography; electrometallurgy; studies on the corrosion of metallic alloys; the structure of electrolytes (Yu. Delimarsky, M. Hratsiansky, B. Markov). The department of colloidal chemistry (three sections) studies the electrical and rheological properties of dispersed metals; minerals and polyelectrolytes; and the stabilization of disperse systems and their practical application (A. Dumansky, F. Ovcharenko, O. Kurylenko, E. Natanson). The department of the physical chemistry of metallurgical processes (four sections) studies a number of problems connected with the manufacturing processes of non-ferrous and rare metals, particularly of those indigenous to Ukraine (I. Sheka, M. Fortunatov, V. Sazhyn, Ya. Horoshchenko). The department of the chemistry and technology of rare metals (seven sections) conducts research on ways to improve the processes of producing rare metals and their compounds (M. Poluektov, V. Nazarenko). The department of the chemistry and technology of water, with four sections in Vyshhorod, conducts research on the purification of drinking and industrial waters (L. Kulsky).

The Institute of Organic Chemistry was established in 1939, replacing the Institute of Chemical Technology of the Academy of Sciences of the Ukrainian SSR, and is now located in Kiev. The directors of the institute have been V. Yavorsky, A. Kiprianov, and, since 1960, O. Kirsanov. The main departments in the institute are those of the chemistry of organophosphorus compounds (O. Kirsanov), element-organic isocyanates (H. Derkach), organophosphorus complexing agents (N. Feshchenko), organophosphorus precipitants and non-flammable liquids (Ya. Vashchenko), the chemistry of herbicides (V. Cherka-sov), chemical intermediates (S. Solodushenkov), fluorine-containing intermediates and dyes (L. Yahupolsky), color and structure of organic compounds (A. Kiprianov), mechanisms of organic reactions (Ya. Shylov), synthetic physiologically active compounds (O. Svyshchuk), photosynthesis (O. Yasnykov), and the modeling of technologically important organic synthetic processes (R. Melnykov).

The Institute of Macromolecular Chemistry has existed in Kiev since 1958. Its first director was K. Kornev; since 1965 the director has been Yu. Lipatov. The main departments of this institute are polymer synthesis (K. Kornev), the physical chemistry of polymers (Yu. Lipatov), polymer physics (Yu. Yagorov), the kinetics and mechanism of polymerization (T. Lipatova), elastomers (T. Hryshchenko), three-dimensional polymers (S. Omelchenko), oligomeric compounds (Yu. Spirin), polymer modification (O. Kachan), and the technology of monomers and polymers (A. Shevliakov).

In the early 1960s the main thrust of research was in the areas of the synthesis of thermally stable polymers; the chemical, photochemical, and radiation-chemical modi-

fication of polymers; the synthesis of selective ion-exchange resins; and technological developments in the synthesis of monomers and polymers. Since 1965 the institute has been studying the causes for the specific physical and chemical properties of polyurethanes and investigating the relationship between the chemical structure of polyurethanes and their specific properties; working on the syntheses of new di- and tri-isocyanates and of oligomeric compounds; studying the mechanism and kinetics of the migrational polymerization and reactivity of the reactants; and establishing the basic relationships in the conversion of polyurethanes to valuable polymeric products: elastomers, synthetic fibers, etc. The subdivision of petrochemistry (V. Hutyria) is concerned with the chemistry of hydrocarbons and their chemical transformations.

The Institute of Gas was established in 1949 under the directorship of M. Dobrokhotov; since 1952 it has been directed by V. Kopytov. The main research areas of the institute are studies of chemical transformations of hydrocarbon gases, the utilization of combustible gases in industry, the automation of chemical conversion, and the combustion of gases.

The Institute of Colloidal Chemistry and Hydrochemistry replaced the section of the physical chemistry of dispersion systems and the section of hydrochemistry and hydrotechnology of the Institute of General and Inorganic Chemistry in 1968. Under the directorship first of F. Ovcharenko and later of O. Kurylenko and A. Pylypenko, the institute has been concerned with theoretical experimental studies in the area of colloidal chemistry, the physical chemistry of natural sorbents, colloidal metals, and water purification.

Some areas of chemistry are studied in non-chemistry institutes of the Academy of Sciences of the Ukrainian SSR. Thus, for instance, research concerned with the synthesis of borides, carbides, silicides, nitrides, and sulfides of certain rare and rare-earth elements is conducted at the Institute of Materials Science of the Academy of Sciences. Physical properties of polymers are studied at the Institute of Mechanics of the Academy of Sciences.

The founder of geochemistry was V. Vernadsky, who from 1919 studied the composition of various minerals and cataloged their abundance in the earth's crust. Today problems of geochemistry are investigated in the Institute of Geological Sciences, particularly the geochemistry of inert gases, scandium, and germanium.

Scientific papers in the area of chemistry are published in the following journals: *Ukrainskii khimicheskii zhurnal* (1948-), formerly *Ukrains'kyi khimichnyi zhurnal* (Kharkiv 1925-38), the bimonthly *Ukrainskii biokhimicheskii zhurnal* (1946-), the bimonthly *Teoreticheskaiia i eksperimental'naia khimiiia* (1965-), the bimonthly *Farmatsevtichnyi zhurnal* (1930-41 and 1959-), formerly *Farmatsevticheskii zhurnal* (1928-9), and *Visnyk Akademii nauk URSR* (1947-). The following publications have been discontinued: *Zapysky Instytutu khimii Akademii nauk URSR* (1934-48), *Naukovotekhnichniy visnyk* (Kharkiv 1926-36), and *Visti Instytutu fizychnoi khimii* (1936-47).

Publications in the area of chemistry also appear, albeit irregularly, in the scientific periodicals of the universities of Kiev, Kharkiv, and Dnipropetrovske and, from 1948, of Lviv, Chernivtsi, and Uzhhorod, as well as of the Kiev, Odessa, Kharkiv, and Lviv polytechnical institutes. (See also *Biochemistry.)

Chendei, Ivan [Čendej], b 20 May 1922 in Dubove, Transcarpathia. Writer. Chendei's first published work appeared in 1940. From 1945 to 1955 he was a member of the editorial board of the newspaper *Zakarpats'ka pravda*. He is a member of the Writers' Union of Ukraine; in the 1960s he was secretary of the Transcarpathia oblast section of the writers' union. He has written novels, sketches, stories, and film scripts, including the story collections *Chaiky letiat' na skhid* (The Seagulls Are Flying East, 1955), *Viter z polonyny* (Wind from the Mountain Pasture, 1958), *Chornoknyzhnyk* (The Sorcerer, 1961), *Teren tsvite* (The Blackthorn Is in Bloom, 1967), and *Teplyi doshch* (Warm Rain, 1979), and the novel *Ptakhly polyshaiut' hnidza* (The Birds Leave Their Nests, 1965). In the early 1970s he was criticized for idealizing the Transcarpathian past in his novel *Ivan*, and he was dismissed from positions of responsibility. He has also published translations from Hungarian.

Chepa, Adriian [Čepa, Adrijan], b ca 1760 in the Poltava region, d ca 1822. Amateur historian. From 1779 to 1789 Chepa served in the chancellery of the governor general of Left-Bank Ukraine, Count P. Rumiantsev-Zadunaisky, whose estates he later managed. A Ukrainian patriot and connoisseur of Ukrainian antiquity, Chepa amassed a great collection of historical documents and materials (used by D. Bantysh-Kamensky and Ya. Markovych in their works). His intention of publishing these materials was never carried out, and the entire collection (with some possible exceptions) was destroyed in a fire on his estate.

Chepiha-Zelenkevych, Yakiv [Čepiha-Zelenkevych, Jakiv], b 12 May 1875 in Marianivka, Kherson gubernia, d 22 August 1938. Pedagogue. From 1918 to 1928 Chepiha taught at institutions of higher education in Kiev; from 1928 he worked at the Scientific Research Institute of Pedagogy in Kharkiv. He wrote studies on pedagogy, especially on child rearing and job training, as well as primary school handbooks and manuals on the Ukrainian language and arithmetic.

Cherche [Čerče]. iv-5. Village (1970 pop 1,400) in Rohatyn raion, Ivano-Frankivske oblast, situated in the Opilia Upland. Cherche is a health resort, known for its therapeutic baths and muds. Its medicinal mineral waters - hydrogen sulfide, sulfate-hydrocarbonate-calcium, and calcium sulfate - and peat mud are helpful in treating disorders of the motor system and peripheral nervous system and gynecological diseases. The resort was developed in the 1930s by the association Zhyvets Cherche, headed by M. Panchyshyn.

Cherediiv, Volodymyr [Čeredijiv], 1885-1961. Agronomist. In 1918-19 Cherediiv served as agronomist of the

Ivan Chendei

Marko Cheremshyna

Podilia zemstvo, and he became the director of the Ministry of Economics of the UNR in 1919–20. As an émigré he was a founder of and professor at the Ukrainian Husbandry Academy in Poděbrady and a professor at the Ukrainian Pedagogical Institute in Prague.

Cherednychenko, Varvara [Čerednyženko], b 16 December 1896 in Kiev, d 22 April 1949. Writer and pedagogue. Cherednychenko graduated from the history and philosophy faculty of the Higher Women's Courses school in Kiev and, after the revolution, worked as a teacher in Poltava (1917–23). From 1928 to 1938 she lived in Ossetia and then returned to Kiev. Her work was first published in 1912, and she was a member of the Pluh writers' group. She published collections of short stories: *Z zhyttia ukrains'koho vchytel'stva* (From the Life of Ukrainian Teachers, 1919), *Vesela kompaniia* (Gay Company, 1928), *Vesnianyi drib'iazok* (Spring Children, 1929), *Zhuzhil'* (Carabus, 1930), and *Osetyns'ki opovidannia* (Ossetian Tales, 1931). She wrote a pedagogical book *Dytiacha khata* (The Child's Home, 1921).

Cheremosh River [Čeremoš]. Right-bank tributary of the Prut River that flows through the eastern Carpathians (Hutsul region) and Subcarpathia. It is 80 km long and has a basin area of 2,560 sq km. The river is formed by the confluence of the Chorny Cheremosh (87 km long with a basin of 856 sq km) and the Bilyi Cheremosh (61 km long with a basin of 606 sq km). The Chorny and Bilyi Cheremosh and the upper part of the Cheremosh proper are mountain streams flowing through a picturesque gorge in the *Hutsul Beskyd. Further downstream, in Subcarpathia, the Cheremosh flows through a broad valley. Its waters come from various sources, mostly from rain. The average water flow below the confluence of the Chorny and Bilyi Cheremosh is 26.6 cu m per second. The major towns on the rivers are Vyzhnytsia, Vashkivtsi, and Kuty on the Cheremosh, and Verkhovyna (formerly Zhabie) on the Chorny Cheremosh. The rivers are navigable by raft. The Bilyi Cheremosh and the Cheremosh form the boundary between Galicia and Bukovyna and for centuries defined the border between Poland and Moldavia (Turkey).

Cheremshyna, Marko [Čeremšyna] (pseudonym of Ivan Semaniuk), b 13 June 1874 in Kobaky, Kosiv county, Galicia, d 25 April 1927 in Sniatyn, Galicia. Writer. Cheremshyna completed a law degree at the University of

Vienna in 1906 and maintained a law practice in Sniatyn, where he was active in civic life. He began writing short stories as early as 1896 and published them in newspapers (*Bukovyna*) and journals (*Literaturno-naukovyi vistnyk*). On the basis of regional origin, Cheremshyna is often placed together with V. *Stefanyk and L. *Martovych in the 'Pokutia triad.' Yet Cheremshyna's stories are more like chronicles of local peasant life and lack the tension and force of Stefanyk's works, as well as the humor and satire of Martovych's. They reflect the dialectal traits of Pokutia and are marked by a rhythm and style reminiscent of folk laments (*holosinnia*) or of folk epics (*dumas). Two collections of his stories appeared during his lifetime: *Karby* (Notches, 1901) and *Selo vyhybaie* (The Village Is Dying Out, 1925). These have been followed posthumously by many selected and collected works, published in Galicia and in Soviet Ukraine, including his last collection *Verkhovyna* (Highlands, 1929). Cheremshyna was also known for his translations of short stories from German, Czech, and Hungarian. In 1949 the Cheremshyna memorial museum was founded in Sniatyn.

D.H. Struk

Cherepyna settlement. An early Slavic settlement of the 1st–4th century AD near the village of Cherepyna in Lviv oblast. The settlement belongs to the *Lypytsia and *Cherniakhiv cultures of the early Iron Age. The remains of semipit and pit dwellings, a large quantity of pottery, vessels, iron knives, bronze ornaments, and implements have been discovered at the site. In the 1950s–1960s the settlement was investigated by V. Baran.

Mykhailo Cheresnovsky

Cheresnovsky, Mykhailo [Čerešn'ovs'kyj, Myxajlo], b 5 March 1911 in the village of Stezhnytsia in the Lemko region. A sculptor of the neoclassical monumentalist school and a woodcarver. Cheresnovsky graduated from the School of Plastic Arts in Cracow in 1939. After the war he emigrated to Germany and then to the United States. He does decorative woodcarving (for example, the iconostasis of St John the Baptist Church in Hunter, New York), has sculpted busts of a number of prominent Ukrainians, including R. Shukhevych, S. Bandera, D. Dontsov, O. Olzhych, Y. Hirniak, V. Pereiaslavets, and R. Pryima-Bohachevska, and produced several monuments in bronze, such as the *Monument to the Heroes* at the resort of the Ukrainian Youth Association in Ellenville, New York, and the Lesia Ukrainka monuments in Cleveland, Toronto (1976), and at the Ukrainian resort in Kerhonkson, New York. Cheresnovsky's work is characterized by a classi-

cal simplicity and a monumental style. Since 1973 he has served as president of the Ukrainian Artists' Association in the USA.

Cherin, Hanna [Čerin'] (pen name of Hrybinska), b 29 April 1924 in Ukraine. Poet and prose writer. Cherin has lived in the United States since 1949. She is the author of collections of poetry – *Crescendo* (1949), *Chornozem* (Black Earth, 1962), *Travnevi mrii* (May Dreams, 1970) – of the novel in verse *Slova* (Words, 1980), and of stories for children. Several of her poems have been set to music.

Spyrydon Cherkasenko

Cherkasenko, Spyrydon [Čerkasenko], b 24 December 1876 in Novyi Buh, Kherson gubernia, d 8 February 1940 in Prague. Writer, dramatist, journalist, pedagogue. Beginning in 1895, he worked as a teacher, primarily in the Donbas (1899–1908). He wrote for the Kiev daily *Rada*, the journal *Svitlo*, and other magazines. In 1917–18 he worked for the UNR Ministry of Education, preparing readers and primers for Ukrainian schools. An émigré from 1919, he edited school textbooks in Vienna. From 1929 he lived near Prague. Cherkasenko, whose pseudonyms were Petro Stakh and Provintsial, made his literary debut as a poet in *Literaturno-naukovyi vistnyk* in 1904. He published story collections, including *Na shakhti* (In the Mine, 1909) and *Vony peremohly* (They Conquered, 1917). His lyric poetry appeared in three volumes of his *Tvory* (Works, 1920–2), published in Vienna. His most successful dramas were *Kazka staroho mlyna* (Tale of the Old Mill, 1914) and *Pro shcho tyrsa shelestilā* (What the Steppe Grass Murmured About, 1916). His work is imbued with the national aspirations of Ukraine's struggle for independence and is modernist – predominantly symbolist – in style.

Cherkas'ka pravda (Cherkasy Truth). A daily newspaper of the Communist Party of Ukraine and the oblast and city soviets in Cherkasy. The paper began publication under its current name in 1954, after Cherkasy oblast had been established.

Cherkaske [Čerkas'ke]. v-18, DB II-2. Town smt (1975 pop 4,900) in Slovianske raion, Donetske oblast. Its major industries are chalk and lime production and canning.

Cherkasky, Iryrnarkh [Čerkas'kyj, Iryrnarkh], 1869–? Historian of law, member of the *Commission for the Study of the History of Western-Ruthenian and Ukrainian Law, chairman of the Commission for Legal Terminology at the

All-Ukrainian Academy of Sciences, and co-editor of *Rosii's'ko-ukraïns'kyi slovnyk pravnychoi movy* (Russian-Ukrainian Dictionary of Legal Language, 1926). He directed the work on *Slovnyk ukraïns'koi iurydychnoi starovyny* (Dictionary of Ukrainian Juridical History), which was prohibited in the early 1930s. He is the author of a number of articles and books on the history of Ukrainian law, among them *Hromads'kyi (kopnyi) sud na Ukraïni-Rusi XVI–XVIII vv.* (The Community [Kopnyi] Court in Ukraine-Rus' in the 16th–18th Century, 1928), and articles on domanial courts and Hetman K. Rozumovsky's legal reforms. Cherkasky was arrested in 1934 and again in 1941. His ultimate fate is unknown.

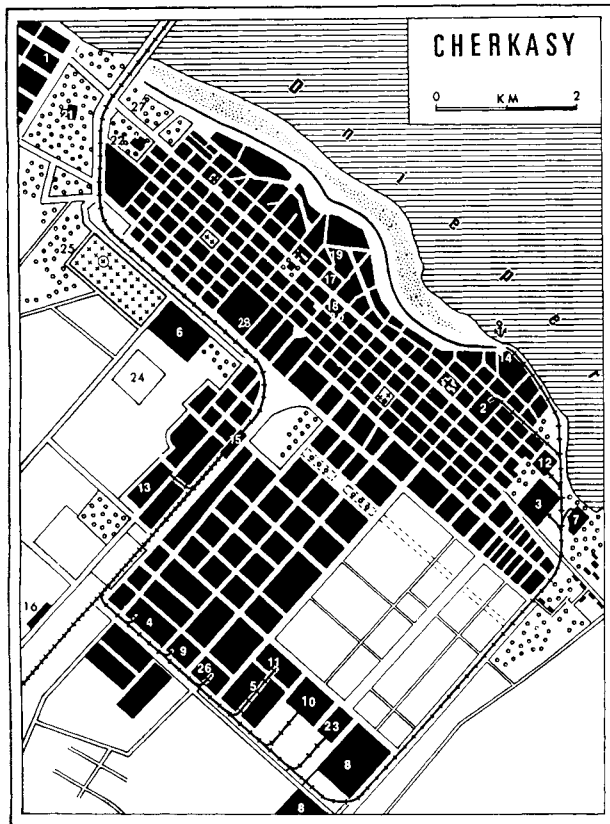

Cherkasky, Teofan [Čerkas'kyj], b 12 March 1892 in Rososha, Kiev gubernia. Political leader, economist, graduate of the Kiev Commercial Institute. Cherkasky was a member of the Ukrainian Party of Socialist Revolutionaries. In 1919 he served as minister of the national economy in the UNR government of B. Martos, and then as minister for the press and propaganda in the government of Isak Mazepa. He remained in Ukraine when the Soviets came to power and was eventually sentenced to 25 years in exile. His subsequent fate is unknown.

Cherkasy. The official name used in the laws and state documents of Muscovy in the second half of the 16th and the 17th century for Ukrainian Cossacks and for the Ukrainian population in general. Eventually the Russians substituted the term *malorossiiskie kazaki* (Little Russian Cossacks) for this name. There are two theories about the origin of the name *cherkasy*: (1) that it derived from the town of Cherkasy, in whose vicinity there were many Cossack settlements in the given period; (2) according to some Russian historians, that it derived from the Caucasian Cherkess peoples. The latter school of thought associates the Ukrainian Cossacks with the *Chorni Klobuky to support the theory that the Ukrainian Cossacks were not of Ukrainian origin.

Cherkasy [Čerkasy]. IV-13. A city (1983 pop 259,000) on the right bank of the Kremenchuk Reservoir, the capital of Cherkasy oblast, and a river port, with an airfield. Cherkasy was first mentioned in documents in 1394 as a fortified city in the Kievan appanage principality of the Grand Duchy of Lithuania. From the end of the 15th century Cherkasy was an important defense outpost against surprise attacks by the Tatars (in 1532 Cherkasy withstood a 30-day siege by the armies of the Crimean khan Seadet-Girei). In the early 16th century Cherkasy was the center of the Cherkasy *starostvo* (district). Among its administrators were E. Dashkevych and D. Vyshnevetsky. After the Union of Lublin in 1569 Cherkasy became part of

Poland. Most of its population was Cossack, and the city played an important role in the Cossack insurrections against Poland. From 1648 Cherkasy was one of the principal cities in the state of Hetman B. Khmelnytsky; it was a regimental city until 1686. After the Treaty of Andrusovo in 1667, Cherkasy again fell under Polish rule. In 1793 the city became part of the Russian Empire, and in 1797 it became a county center of Kiev gubernia. Industry developed in Cherkasy during the second half of the 19th century, especially after the construction of a railroad, a sugar factory (1854), and a tobacco factory (1878). The population grew from 29,600 in 1897 to 39,600 in 1910. Under Soviet rule, from 1923 to 1930, Cherkasy was the center of Cherkasy (from 1927, Shevchenko) okruha. In 1926 the city's population was 39,500, of which Ukrainians constituted 61.9 percent, Jews 27.6 percent, and Russians 8.6 percent. Industry, especially the food industry and light industry, was expanded during the First Five-Year Plan. The chemical industry was introduced in the late 1950s. In 1954 Cherkasy became the capital of Cherkasy oblast. This stimulated a rapid growth in population (51,600 in 1939; 85,000 in 1959 [Ukrainians – 70 percent, Russians – 22 percent, Jews – 6 percent]; 158,000 in 1970; and 229,000 in 1977).

Today Cherkasy is an important economic and cultural-educational center. The main branches of industry are: the chemical industry (a chemical complex [1964], a synthetic fibers and thread factory [1958], a chemical reagents plant); light industry (a silk complex [1965], factories producing knitted fabrics, clothing, hygroscopic cotton wool, and fine leather products); the machine-building industry (outfitting and equipment for the food

industry; an auto repair plant); the food industry (sugar refinery, dairy, brewery, canning factory [1936, today one of the largest in Ukraine], meat-packing plants); and the construction industry (reinforced-concrete products, silicate bricks, housing construction). There are other factories and plants (tobacco [1878], handicrafts, etc).

An important cultural and educational center, Cherkasy is the home of a pedagogical institute; of the General Technical Faculty of the Kiev Civil Engineering Institute; of various tekhnikumus specializing in electrification and agricultural construction, finances, Soviet trade, and co-operative management; of music, drama, and puppet theaters; of a philharmonic society, a planetarium, and a regional museum (est 1918). The oblast newspaper *Cherkas'ka pravda* is published here. The poet V. Symonenko lived and wrote in Cherkasy.

Cherkasy is a modern and well-planned city, developed according to several comprehensive plans, primarily those of V. Hest in 1826 and of the Kiev Dnipromisto construction firm in 1932, 1950, and 1962–5. The city has no major historical architectural monuments. Among the finer public buildings, erected between 1959 and 1971, are the House of Soviets, the railway station, the Music and Drama Theater, the Turyst Hotel, and the covered collective-farm market (1971).

The Sosnivka health resort for treating tuberculosis of the lungs and bones is situated south of Cherkasy in a pine forest on the Dnieper River.

Istoriia mist i sil Ukrain's'koï RSR. Cherkas'ka oblast' (Kiev 1972)

Cherkasy bentonite clay field. Located in Zvenyhorod raion, Cherkasy oblast; one of the largest such deposits in the USSR. The field contains some 10 billion t of bentonite clay at a depth of 10–40 m; its surface area is approximately 120 sq km. It was discovered in 1954 and has been mined since 1960.

Cherkasy oblast. Cherkasy oblast lies on both banks of the Dnieper in the forest-steppe belt of central Ukraine. It was formed on 7 January 1954. Its area is 20,900 sq km, and its population was 1,538,000 in 1982, of which 47 percent was urban. The oblast has 20 raions, 416 rural soviets, 15 cities, and 19 towns (smt).

Physical geography. The larger, right-bank part of Cherkasy oblast lies in the Dnieper Upland (maximum elevation, 270 m). This part is an undulating plateau dissected by river valleys, ravines, and gullies. The steep bank of the Dnieper, which rises to 150 m above the riverbed (forming the Kaniv Hills and the Moshnohirskyi Ridge), is picturesque. The left-bank part of the oblast (with an elevation of up to 150 m) is part of the Dnieper Lowland. The climate of the oblast is temperate-continental: the July temperature is 19.5°C, the January temperature –3.9°C, and the average annual temperature is 7.2°C. The temperature is above 10°C for 160–170 days of the year. The annual precipitation is 450–520 mm. The main river is the Dnieper, with the Kremenchuk and Kaniv reservoirs and the tributaries Desna, Vilshanka, and Tiasmyn on the right and the Supii on the left. On the right bank of the Dnieper the soils are mostly podzolized chernozems and moderate-humus chernozems. On the left bank the soils are light and moderate clayey, chernozem-meadow, and peat-bog soils. Forests cover 4.5 percent of the oblast's area.

In the past the right-bank part of Cherkasy oblast belonged to Right-Bank Ukraine and until 1793 was under Polish sovereignty, while the left-bank part belonged to the Hetman state. Under the Russian Empire three-quarters of the oblast belonged to Kiev gubernia, and one-quarter to Poltava gubernia.

Population. The average population density in 1978 was 73.9 people per sq km. It is highest in the areas bordering the Dnieper and lowest in Left-Bank Ukraine. The proportion of urban population is rising rapidly: it was 14.1 percent in 1940, 23.6 percent in 1960, 36.4 percent in 1970, and 44.8 percent in 1979. There is hardly any population growth: the population was 1,571,000 in 1940, 1,488,000 in 1960, 1,535,000 in 1970, and 1,544,000 in 1978. The natural population growth in 1975 was 2.1 percent (cf 5.1 percent for all of Ukraine). More population flows out of than into the oblast. The largest towns (according to 1978 figures) are Cherkasy (234,000), Uman (82,000), Smila (61,000), Zvenyhorodka, Zolotonosha, Kaniv, and Shpola. The ethnic composition of the population in 1979 (1959 figures in parentheses) was Ukrainians, 91.7 (94) percent; Russians, 6.8 (4.5) percent; and Jews, 0.7 (0.9) percent.

Economy. Cherkasy oblast is an agrarian-industrial region. It is a region of intensive farming with specialization in grain, sugar beets, and meat and dairy cattle. Industry is an important part of the oblast's economy and is based on the processing of local agricultural products.

After the war most enterprises were reconstructed, and some new branches of industry were established (equipment making, precision-instruments building, etc).

Industry. Cherkasy oblast is an important region for the food industry, which in 1970 accounted for 55.2 percent of the oblast's industrial production. The machine-building and metalworking industries are less important, producing only 13.5 percent of the oblast's industrial goods. The chemical industry and light industry are gaining in importance. Power to run industry comes from the Cherkasy Thermoelectric Station and to some extent from the thermoelectric stations of Uman, Talne, and Yurkivka and from the Kaniv Hydroelectric Station. The Chyhyryn Regional Power Plant, which will produce 4.8 million kW, is under construction. The lignite industry is concentrated in Zvenyhorodka, and the peat industry is centered in the Cherkasy area. Natural gas is brought in from Shebelynka, and the pipeline from Orenburg to the western border of the USSR runs through the oblast.

Sugar is the main product of the food industry. There are 24 sugar refineries, which are located mostly in the right-bank part of the oblast, in such places as Verkhnia, Shpola, and Zhashkiv. The milk industry is well developed. It has six plants, the largest being in Smila and Talne. Of the six meat-packing plants in the oblast the largest are in Cherkasy and Vatutine. There are also six distilleries, several breweries, and flour mills. The canning factory and tobacco plant in Cherkasy are the largest in Ukraine.

The machine-building and metalworking industries serve mostly the needs of the local food industry, light industry, and agriculture. Food-processing equipment is made in Cherkasy and Smila. Textile and chemical machinery is built in Kamianske. Commercial and food-service equipment is made in Monastyrshche; agricultural machines are built in Uman. Machine-repair and auto-repair plants are found in Cherkasy and Korsun-Shevchenkivskyi. Photographic equipment and telephone equipment are made in Cherkasy, while electronic measuring instruments are manufactured in Uman. At Zolotonosha railway cranes and transportation machinery are built. Light industry includes textile and clothing manufacturing (silk, cotton, knitwear, hemp-working) and shoemaking. The largest plants of this industry are in Cherkasy, where silk, knitwear, felt, and handicraft products are produced. There is a cotton plant in Stebelske. Shoes are made in Cherkasy and Uman. Synthetic-fiber plants and chemical plants are concentrated in Cherkasy. Uman has a vitamin plant, and Zolotonosha has an ether plant. The furniture plant in Cherkasy, metalworking plant in Zolotonosha, and willow-products factory in Korsun-Shevchenkivskyi are of less importance. The largest bentonite deposits (estimated at 10 billion t) in Ukraine, indeed in Europe, as well as gneiss, granite, and limestone, are the foundation of the building-materials industry. There are 11 reinforced-concrete plants, 6 rock-crushing plants, and 18 building-materials plants. Granite is quarried in the Uman, Horodyshche, and Zvenyhorodka raions. There is a refractory-clay plant in Vatutine, and a bentonite clay plant operates in Lysianka raion.

Agriculture. In 1976 there were 389 collective farms (457 in 1970) and 58 state farms (38 in 1970) in Cherkasy oblast. Arable land covers 70 percent of the area. Of this, 91 percent is cultivated land; 7 percent is hayfield and

pasture; and 2 percent is orchard, berry patch, etc. The total area seeded in 1976 was 1,320,700 ha, of which 609,000 ha (46.1 percent) was devoted to grain, 201,000 (15.2 percent) to industrial crops, 410,000 (31 percent) to fodder, and 96,000 (7.3 percent) to potatoes and vegetables. The principal grains are winter wheat (273,400 ha) and seed corn (54,400 ha). Millet, barley, legumes, and buckwheat are also grown. For industrial crops the largest area is given to the sugar beet (152,000 ha) and sunflower (36,600 ha). Orchards, berry patches, and vineyards take up 48,000 ha. The Korsun-Shevchenkivskyi and Horodyshche regions produce apples, pears, apricots, plums, and sweet and sour cherries. In 1970-5 the average grain yield was 30,400 centners per ha, and the winter wheat yield was 35,400 centners per ha (one of the highest in Ukraine). The productivity of sugar beets was 267 centners per ha, and of potatoes, 120 centners per ha.

Animal husbandry consists mainly of dairy- and beef-cattle farming and hog raising. Sheep, poultry, and rabbits are also raised. Cattle feed, consisting of cultivated grasses and the wastes of the food industry (particularly the sugar refining and distilling industries), is abundant. In 1975 there were 887,000 head of cattle (320,000 cows), 936,400 hogs, and 280,900 sheep and goats in the oblast. The main breed of cattle was the Simmenthal; of hog, the Large White and Myrhorod; of sheep, Precocious. In the Moshny region mink farming is developing.

Transportation. Apart from the subsidiary track there are 605 km of railroad track in the oblast. The main railway lines are those from Kiev to Dnipropetrovske, from Donetsk to Lviv, and from Moscow to Odessa. The main railway junctions are Shevchenkove, Cherkasy, Khrystyivka, and Tsvitkove. There are 6,500 km of motor highways, of which 4,700 km are hard surface. The main highways run from Kiev to Odessa, from Kiev to Dnipropetrovske, and from Uman to Lviv. River transportation plays an important role in the economy. Cherkasy has one of the largest river ports in Ukraine, as well as airline connections with the main cities of Ukraine.

Tourism is an important industry. The main tourist areas are the picturesque right bank of the Dnieper (particularly Kaniv with its Shevchenko monument) and the Kremenchuk Reservoir area.

Cherkavsky, Mykhailo [Čerkavs'kyj, Myxajlo], b 7 November 1879, d 6 November 1929. Community figure in Volhynia, pedagogue, publicist. In 1918 he became director of the teachers' seminary in Derman, and he served as commissar of education during the UNR period in Volhynia. From 1922 to 1926 he was a member of the Polish senate and head of the Ukrainian parliamentary representation. He was one of the founders of the Ukrainian National Democratic Alliance and served as its vice-president. He was active in Volhynia's Ukrainian organizations, particularly those in Kremianets.

Cherkes, Oleksander [Čerkes], b 2 May 1894 in Kharkiv. Pharmacologist and toxicologist; full member of

Mykhailo Cherkavsky

Oleksander Cherkes

the Academy of Medical Sciences of the USSR from 1960. Cherkes graduated from Kharkiv University in 1917 and taught at the Kharkiv Medical Institute (1921-44; from 1930 as full professor) and from 1944 at the Kiev Medical Institute. His scientific studies were devoted to experimental pharmacology and toxicology. Together with his associates Cherkes developed and introduced the use of new hypotensive drugs, as well as an antidote for arsenic poisoning. Cherkes was the author of a number of textbooks and monographs.

Chern [Čern'] or **Chorne Misto** (Black City). An Old Ukrainian city, situated between the Prut and Dniester rivers. According to some experts, the ruins of Chern are located near the village of Alchedar (Rezina raion, Moldavian SSR) on the right bank of the Dniester; they are the ruins of a Tivertsian settlement of the 9th-11th century. According to others, the Chern ruins are in the village of Lenkivtsi, near Chernivtsi, on the left bank of the Prut River, and date from the 12th to the mid-13th century.

Chernai, Aleksandr [Černaj], b 19 April 1821 in St Petersburg, d 18 February 1898. Zoologist, professor at Kharkiv University (1848-73). In his works on the fauna of Kharkiv gubernia and the surrounding regions he in fact gave the first analysis of the mammals and birds of Ukraine as a whole. He also studied insect pests. Chernai headed the Society of Naturalists at Kharkiv University.

Chernenko, Oleksander [Černenko], 1864-1921. One of the founders of the co-operative movement in Ukraine, a teacher by profession. Chernenko organized credit and consumer co-operatives in the Kiev region and trained Ukrainian co-operative cadres, including the prominent co-operative leader Kh. Baranovskyy.

Chernetsky, Antin [Černećkyj], b 8 April 1887 in Berezhany, Galicia, d 15 February 1963 in Switzerland. Civic and political leader, trade unionist, noted member of the Ukrainian Social Democratic party (USDp), journalist. Chernetsky fought for the autonomy of Ukrainian workers in the Austrian central trade-union organizations. He set up separate Ukrainian sections with their own secretariat, which he headed, and organized Ukrainian railway workers. He was a member of the Ukrainian National Rada of the Western Ukrainian National Republic and its secretary of labor and social security. In 1924 he

Antin Chernetsky

became the president of the Union of Ukrainian Private Employees, and in 1925–8 he served as director of the Pension Institute of Private Employees in Lviv. He edited and co-edited the periodicals of USSR: *Zemlia i volia* (1908), the weekly (1911) and daily (1919) *Vpered*, and *Profesiinyi visnyk* (1920–1). After emigrating to Germany and Switzerland, he wrote brochures on the history of the workers' and professionals' movement. In 1964 his *Spomyny z moho zhyttia* (Memoirs from My Life) was published.

Cherniaev, Vasilii [Černjaev, Vasilij], b 1796 in Kalytva (now Nova Kalytva) in the Voronezh region, d 21 February 1871. Botanist. A graduate of Kharkiv University, Cherniaev worked as full professor at the institution from 1829 to 1859. In 1859 he published *Konspekt rastenii, dikorastushchikh i razvodimykh v okresnostiakh Khar'kova i v Ukraine* (Conspectus of Wild and Cultivated Plants in the Kharkiv Region and Ukraine). He collected a large herbarium of Ukrainian flora (now preserved at the Institute of Botany of the Academy of Sciences of the Ukrainian SSR), which contained over 1,700 plant species, including 17 that he first discovered. Cherniaev also studied mushrooms of the Kharkiv and neighboring gubernias.

Cherniakhiv [Černjxiv]. III-9. Town smt (1965 pop 9,000) in Polisia, a raion center in Zhytomyr oblast. The town has a food industry, brickyards, an asphalt factory, and a granite plant.

Cherniakhiv culture. An ancient culture of the 2nd–5th century AD, discovered in 1899 by V. Khvoika near the village of Cherniakhiv in the Kiev region. The culture was widespread in the forest-steppe on both banks of the Dnieper between the Don and the Dniester rivers and along the Boh River, as well as in southeastern Poland, Czechoslovakia, Hungary, Rumania, and Bulgaria. Monuments of the Cherniakhiv culture consist of moundless burial grounds and settlements. The settled tribes of the culture lived in large, unfortified settlements and engaged in farming and animal husbandry. They also practiced various trades – bronze working, iron working, jewelry making, and pottery making, which was usually executed by means of a potter's wheel. There was a well-developed trade with nearby Roman centers, from which the tribes imported amphoras, glass cups, and clay pottery. Roman coins were used in internal and external trade. Most scholars believe that the Cherniakhiv culture

1

2

THE CHERNIAKHIV CULTURE 1) Early Slavic pagan idols found at various sites in the middle Dniester Valley, 2nd–5th century (according to I. Vynokur, 1972). 2) Calendar on the rim of a vessel found in Lepesivka, Volhynia; the 12 panels correspond to the 12 months; the cycles of the sun, rain, and snow, as well as related agricultural activities, are symbolized (according to B. Rykov, 1962).

was the product of various ethnic tribes – the Dacians, Sarmatians, Germans, Scythians, and Antes – mentioned by ancient writers. The culture perished, probably during the invasion of the Huns at the end of the 4th century. Among the better-known monuments of the Cherniakhiv culture in Ukraine are the burial grounds at Cherniakhiv and the settlements at Zhukivtsi and Yahniatyn.

Cherniakhivsky, Oleksander [Černiakhivs'kyj], b 1 October 1869 in Mazepyntsi, Vasylkiv county, Kiev gubernia, d ? Husband of L. *Starytska-Cherniakhivska. Physician-histologist, civic leader, professor at Kiev University and then the Kiev Medical Institute, where for many years he was chairman of the department of histology. He did research in histology in Madrid and Berlin. In 1926 he founded a school of Ukrainian histologists. In his department he established a large collection of his own, unique, histological preparations. He wrote many scientific works on various problems of histology and a dictionary of medical terminology. He was chairman of the medical section of the All-Ukrainian Academy of Sciences in 1927 and a full member of the Shevchenko Scientific Society. During the trials of the *Union for the Liberation of Ukraine in 1930, he was sentenced to five years of strict solitary confinement. His consequent fate is unknown.

Cherniata (Chorniata), Ivan [Černjata (Čornjata)], birth and death dates unknown. Close associate of Hetman B. Khmelnytsky, participant in the campaigns against Poland, and general quartermaster of the Cossack Host in 1648–9. Cherniata was given diplomatic missions by Khmelnytsky. After the Treaty of Zboriv in 1649 he presided over the commission that drew up the 40,000-Cossack register (see *Registered Cossacks). After 1649 Cherniata is no longer mentioned in historical documents.

Cherniavshchenko, Demian [Černjavščenko, Dem'jan]. Zaporozhian Cossack and rebel leader. Cherniavshchenko took part in the *Koliivshchyna rebellion, serving in the detachments of M. Zalizniak, A. Zhurba, and M. Shvachka. In 1768 he conducted negotiations on behalf of the *Haidamakas with the Kiev governor general, F. Voeikov, concerning a joint campaign against the Poles. Treacherously arrested by Voeikov and sentenced to hard labor, Cherniavshchenko escaped to the Volga region, where he took part in the Pugachev rebellion of 1773–5. His fate is unknown.

Cherniavsky, Mykhailo [Černiavs'kyj, Myxajlo]. Engraver in wood in the Chernihiv region during the mid-18th century (1740–60). Cherniavsky produced engravings for ecclesiastical books published in Chernihiv, including *Ispovidaniie pravoslavnoi viry* (Confession of the Orthodox Faith, 1745), *Novyi Zavit* (New Testament, 1759), and *Psaltyr* (Psalter, 1763).

Cherniavsky, Mykola [Černjavs'kyj], b 3 January 1868 in the village of Torska Oleksiivka in Katerynoslav gubernia, d 28 November 1948 in Kherson. Writer, pedagogue, and zemstvo activist. A priest's son, Cherniavsky graduated from the Katerynoslav Theological Seminary. From 1889 he taught at the church school in Bakhmut. In 1901–3 he worked as a zemstvo statistician in Chernihiv and then moved to Kherson, where he worked in the gubernial zemstvo until 1919 and then returned to teaching. Cherniavsky's earliest poems are dated 1889. He published several collections of poetry, including *Pisni kokhannia* (Songs of Love, 1895), *Donets'ki sonety* (Donets Sonnets, 1898), and *Zori* (Stars, 1903). He frequently collaborated in publishing almanacs: *Dubove lystia* (Oak Leaves), *Z potoku zhyttia* (From the Stream of Life), and *Persha lastivka*

Mykola Cherniavsky

(The First Swallow). His work appeared in such journals as *Literaturno-naukovyi vistnyk*, *Pravda*, *Kievskaia starina*, and, in the Soviet period, in *Zhyttia i revoliutsiia*, *Chervoyni shliakh*, and *Zoria*. His lyrical poetry is thematically rich, but much of it consists of love poetry that was composed under the influence of T. Shevchenko and Ukrainian folklore. His historical poems are devoted to the Cossack era, particularly to B. Khmelnytsky's period. Cherniavsky was one of the masters of the sonnet in the pre-Soviet period: in *Donets'ki sonety* he described the daily life of the Donbas peasants and workers for the first time in Ukrainian poetry. He also wrote 80 short stories, 5 novellas, and memoirs. Although he welcomed Ukrainian independence, he did not work for its preservation. Under the Soviet regime Cherniavsky was not very active as a writer and in 1933 ceased to publish. Later he suffered political persecution, and his works were prohibited. He was rehabilitated after Stalin's death, but Soviet critics still accuse him of Ukrainian nationalism. The fullest edition of his works is *Tvory* (Works, 10 vols, 1927–31). After his rehabilitation, a few short collections were published: *Poezii* (Poetry, 1 vol, 1959) and *Tvory* (Works, 2 vols, 1966).

I. Koshelivets

Cherniavsky, Volodymyr [Černjavs'kyj], b 1893 in Odessa, d 13 November 1939. Communist party activist. Cherniavsky joined the Bolshevik party in 1911 and took part in the struggle against Ukrainian governments in Kiev from 1917 to 1920. He served as first secretary of oblast committees of the CP(B)U in Dnipropetrovske and Vinnytsia. From 1930 to 1937 he was a candidate member of the Politburo and secretary of the CC of the CP(B)U.

Chernigovskii listok (Chernihiv Newsletter). Russian-Ukrainian weekly newspaper published in Chernihiv from July 1861 to August 1863 (61 issues). The editor and publisher was L. *Hlibov. Besides literary works by P. Kulish, P. Kuzmenko, Mykola Verbytsky, L. Hlibov, O. Konysky, and S. Ovechko, the newspaper published articles on the Chernihiv region and other areas (concerning Sunday schools, school textbooks, cultural and literary life), valuable material on ethnography and folklore by S. Nis, P. Yefymenko, and M. Nomys, criticism and reviews (including Hlibov's theater criticism), and bibliographic articles. With the onset of an official policy of reaction (especially after the arrest of I. Andrushchenko, who wrote for *Chernigovskii listok*), the newspaper was forbidden to publish. From October 1862 until its closing, *Chernigovskii listok* was the only periodical in the Russian Empire that published Ukrainian-language material.

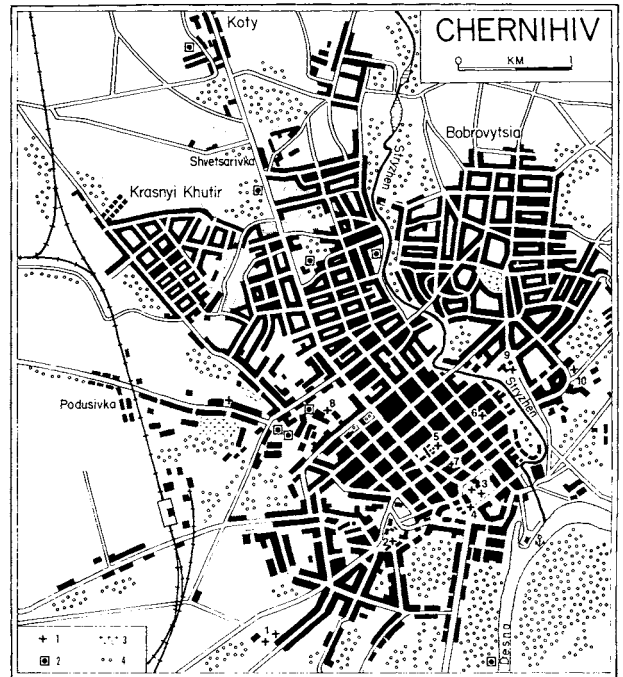

Chernihiv, general view of the city

Chernihiv [Černihiv]. 11-12. City (1983 pop 263,000) in the Dnieper Lowland situated on the high right bank of the Desna River, principal city of the *Chernihiv region and capital of *Chernihiv oblast, railway and highway junction, with a port on the river and an airport.

History. Traces of settlements from the Neolithic period and the Bronze Age have been found on the site of present-day Chernihiv. In historical times Chernihiv was a center of the *Siverianians. The city was incorporated into Kievan Rus' in the 9th century and became one of the most important and wealthiest cities of the realm. The first mention of Chernihiv in the chronicles occurred in 907. In the 11th-13th century Chernihiv was the capital of *Chernihiv principality, whose first ruler was Prince Mstyslav Volodymyrovych, the son of Volodymyr the Great. The old city was situated on an elevated terrace between the Desna and its tributary the Stryzhen. The city center consisted of the **ditynets*, which was encircled by the town proper, the suburbs, and a third section known as *Tretiak*, which was inhabited by merchants and artisans. Each part of the city had its own protective walls. The commercial section known as the *Podil* stretched along the river's edge. In the 12th century the area of the city was about 120 ha, excluding the *Podil*.

In 1239 the Tatars devastated Chernihiv. It fell under the control of Briansk principality in the second half of the 13th century and was incorporated into the Grand Duchy of Lithuania in the second half of the 14th century. In 1503 Chernihiv, along with the whole Chernihiv-Siverskyi land, came under Muscovy's rule. During this period the *ditynets* was fortified, and the suburbs were enlarged. The city was laid waste by the Tatars several times, particularly in 1482 and 1497. In accordance with the Truce of Deulino (1618), Chernihiv was transferred to the Polish Commonwealth and in 1635 became the principal city of *Chernihiv voivodeship. In 1623 Chernihiv was granted the Magdeburg law, and in 1648 it became part of the Cossack Hetman state and the capital of Chernihiv regiment.

After the abolition of the Cossack Hetman state Chernihiv became the capital of Chernihiv vicegerency (in 1781), of *Little Russia gubernia (in 1797), and of *Chernihiv gubernia (in 1802). At the time the city had 4,000 inhabitants. Its population increased to 12,000 by 1844, to 27,000 by 1897, and to 35,000 by 1913. During this time Chernihiv was an administrative, commercial, and manufacturing center with a small food industry; brick, candle, and soap factories; and other enterprises. The city

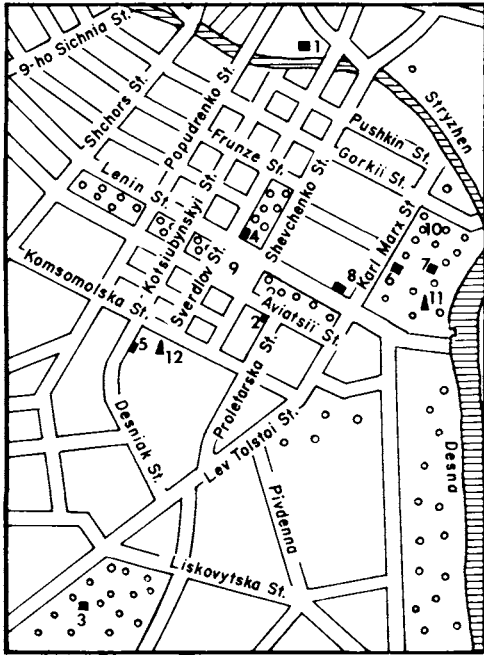

1. Churches: 1, Church of the Holy Trinity; 2, Cathedral of the Assumption of Yelets'kyi Monastery; 3, Cathedral of the Transfiguration and ss Borys and Hlib Cathedral; 4, Church of the Holy Protectress; 5, Church of Good Friday; 6, St Nicholas's Church; 7, Church of the Elevation of the Cross; 8, Church of the Resurrection; 9, ss Michael and Theodore's Church; 10, Church of the Ascension
2. Industrial enterprises

expanded towards the west and the northwest. After the revolution of February 1917 a Ukrainian administration was established in the city. In 1919 Chernihiv found itself in the territory contested by the UNR, the Red Army, and Gen A. Denikin, and by the end of that year Soviet authority was established in the city. It was the center of Chernihiv okruha from 1925 to 1932, when it became the capital of Chernihiv oblast. According to the 1926 census the population of the city of that time was 35,200, of whom 57 percent were Ukrainian, 20 percent Russian, and 10 percent Jewish. In the 1930s, as industry developed rapidly, the population increased to 69,000. During the German-Soviet war in 1941-4 Chernihiv suffered extensive damage.

After the war the city's industrial capacity reached its prewar level by the beginning of the 1950s, and the population grew rapidly; it was 90,000 in 1959, of which 69 percent was Ukrainian, 20 percent Russian, 8 percent Jewish, and 1 percent Polish; 159,000 in 1970; and 250,000 in 1980.

Economy. The main branches of industry located in Chernihiv are chemicals, food-processing, light industry, building materials, and woodworking. The major industrial enterprises include the Chernihiv Synthetic Fibers Plant (est 1959), the *Chernihiv Woolen Fabrics Manufacturing Complex (est 1963), the *Chernihiv Musical

CHERNIHIV, CITY CENTER

1. School attended by M. Kybalchych and P. Tychyna
2. The home where V. Samiilenko and M. Kotsiubynsky worked

Instruments Factory (est 1934), a primary wool-processing factory, a clothing factory, a footwear factory, a meat-packing plant, a dairy, a brewery, a confectionery factory, a macaroni factory, a dry-fruits processing plant, a reinforced-concrete plant, a mechanical-repair plant, and a woodworking plant.

Education and culture. Chernihiv is the home of many educational, academic-research, and cultural institutions, among them the Shevchenko Pedagogical Institute; a branch of the Kiev Polytechnical Institute; an evening mechanical-technological *tekhnikum*; a co-operatives *tekhnikum*; a commercial *tekhnikum*; a pedagogical and a musical school; branches of the All-Union Scientific Research Institute of Oil and Gas Exploration, the All-Union Scientific Research Institute of Machinery for the Manufacture of Synthetic Fibers, and the Ukrainian Scientific Research Institute of Agricultural Microbiology; two museums – a historical museum and the Kotsiubynsky Literary-Memorial Museum; a branch of the St Sophia Cathedral Museum; the Chernihiv Oblast Ukrainian Music and Drama Theater; and the oblast philharmonic orchestra.

Cultural history. Chernihiv has always played a prominent role in Ukraine's cultural life. Its cultural traditions date back to Kievan Rus', when the broad national scope of the Chernihiv dynasty's political activity secured favorable conditions for cultural development and promoted the culture of Chernihiv to an all-Ukrainian level, particularly in the areas of architecture and painting. The city's monumental structures of the 11th–12th century, especially its churches, were remarkable achievements of the age. In the first half of the 11th century the Cathedral of the *Transfiguration was erected at the center of the *ditynets*. The *SS Borys and Hlib Cathedral, the Dormition Cathedral of *Yeletsnyi Monastery, *St Elijah's Church, the Church of the Annunciation, and St Michael's Church, which has not survived, were built in the 12th century. The Church of *Good Friday, erected at the turn of the 13th century, was devastated in The Second World War and was later reconstructed. Chernihiv also made contributions to the development of Old Rus' literature. Hegumen *Danylo from Chernihiv wrote an account of his travels to the Holy Land at the turn of the 12th century. Although the Chernihiv Chronicle has been lost, fragments of this work have been preserved in later chronicle compilations.

The Tatar invasions and the destruction of Chernihiv in 1239 interrupted its cultural growth for many years. Chernihiv's location on the border between the warring Lithuanian-Polish and Muscovite states did not favor its cultural renaissance. The first signs of a cultural rebirth in Chernihiv appeared only in the 17th century. The Uniate archimandrite of the Yeletsnyi Monastery, K. Stavrovetzky (Trankvilion), the author of poems and theological works, set up the first printing press in Chernihiv in about 1646. The flourishing cultural life of the second half of the 17th century was connected with the work of the archbishop of Chernihiv, L. Baranovych, who in 1679 moved to Chernihiv the printing press he had founded in Novhorod-Siverskyi in 1675. The circle of writers and artists associated with Baranovych included I. Galiatovsky, the archimandrite of the Yeletsnyi Monastery; A. Radyvylovsky, the archdeacon of the Chernihiv eparchy; L. Tobolynsky, elder of the Trinity–St Elijah Monastery; the poet I. Velychkovsky; Ioan Maksymovych, the future archbishop of Chernihiv; the engravers I. Shchyrsky, L. Tarasevych, and N. Zubrytsky; and the architects A. Zörnrikau and J. Baptist. Owing to Baranovych's initiative and funds provided by the Hetman administration and Chernihiv's Cossack *starshyna*, the city's architectural monuments, and particularly the Trinity Cathedral (built in the 16th century), were renovated and reconstructed in the baroque style. Of particular significance was the founding in 1700 of *Chernihiv College, which became one of the main centers of learning in the Hetman state. In the first half of the 18th century the Chernihiv Chronicle and the Lyzohub Chronicle were written. Grand new churches such as the baroque St Catherine's Church (1715) and secular buildings such as the regimental chancellery known as Mazepa's building and the building of Ya. Lyzohub were erected.

In the second half of the 18th century Chernihiv preserved its importance as a great cultural center. During this period the principal cultural figures were O. Shadunsky, D. Pashchenko (the author of a monograph describing Chernihiv vicegerency, 1731), the general judge H. Myloradovych, the writer O. Lobysevych, and

the historian M. Markov. At the turn of the 19th century a circle of Ukrainian 'patriotic nobles' grew out of the cultural milieu of Chernihiv. Among its members were the Chernihiv gubernia marshal, A. Poletyka; the amateur historian A. Chepa; R. Markovych; and T. Kalynsky. They devoted themselves to history, collected historical documents and chronicles, and composed memoranda based on them about the history and rights of the Ukrainian gentry. These memoranda were known all over Left-Bank Ukraine. The purposes of the circle were to defend Ukraine's right of autonomy and to obtain for the Cossack estate rights enjoyed by the nobility.

From the middle of the 19th century cultural life in Chernihiv developed rapidly. In contrast to the earlier period, in which regional and nobility interests and aspirations were dominant, general national objectives came increasingly to the fore. The following scholars and writers worked in Chernihiv during this period: the historians O. Lazarevsky, Count H. Myloradovych, O. Khanenko, the brothers Mykola and Myrofan Konstanyovych, A. Verzylov, and P. Doroshenko; the ethnographers Opanas Markovych, O. Shyshatsky-Illich, and S. Nis; the writer L. Hlibov; and the statisticians O. Rusov, V. Vyrzar, P. Chervinsky, and O. Shlykevych. Some of these individuals belonged to the Chernihiv Hromada, one of the more radical *hromadas in Ukraine.

Towards the end of the 19th century intellectual life in Chernihiv expanded in scope and intensity. Its main centers were the Statistical Committee; the Gubernia Archival Commission, established in 1896 through the efforts of O. Lazarevsky and H. Myloradovych; and the Tarnovsky Museum, founded by V. Tarnovsky, Jr. Scholars, pedagogues, writers, and artists of the Chernihiv zemstvo, whose work and interests often extended beyond the boundaries of the Chernihiv region, were active in these institutions.

At the turn of the century the writers M. Kotsiubynsky, B. Hrinchenko, V. Samiilenko, M. Vorony, and M. Cherniavsky, the painter I. Rashevsky, and the historian V. Modzalevsky lived in Chernihiv. Young Ukrainians, most of them graduates of the Chernihiv gymnasium or seminary, gathered at the homes of these prominent artists or scholars. Some of these young people made important contributions to Ukraine's cultural and scholarly life after the revolution of 1917. The writers P. Tychyna, I. Kocherha, and V. Blakytny, the historians P. Savytsky, Ye. Onatsky, M. Petrovsky, Vasyl Dubrovsky, and V. Shuhaievsky, and the art scholar O. Hutsalo spent at least some years of their youth in Chernihiv. In 1911 the 14th Archeological Conference took place in Chernihiv. The city maintained its importance as a cultural center in the 1920s and the early 1930s. It was the home of such institutions as the *Chernihiv State Historical Museum (the greatly expanded former Tarnovsky Museum), a historical archives, a learned society, and an institute of people's education. The work of these institutions was closely connected with the work of the All-Ukrainian Academy of Sciences and particularly with the work of its historical section of the academy; the Archeological Committee; the central historical archives of Ukraine in Kiev and Kharkiv; and the Scientific Research Institute of Ukrainian Culture in Kharkiv. Their further development was curtailed by Soviet political repression in the 1930s and by the Second World War.

Chernihiv College

Chernihiv College. One of the oldest secondary schools in Ukraine, the Chernihiv College was established in 1700 on the model of the *Kievan Mohyla Academy by the archbishop of Chernihiv, Ioan Maksymovych. It was generously supported by Hetman I. Mazepa. The college replaced the Slavonic-Latin school that had been moved to Chernihiv from Nizhen. It had a six-year program and provided a general education (no theology or philology classes). The students were mostly the sons of priests (in 1743-4, 78 out of 253 students) and Cossacks. In 1776 the college was reorganized into a theological seminary, which functioned until 1917.

Chernihiv gubernia. Administrative territorial unit in Left-Bank Ukraine created in 1802. Its center was the city of *Chernihiv. The gubernia was composed of 15 counties, 11 of which (Borzna, Hlukhiv, Horodnia, Kozelets, Konotip, Krolevets, Nizhen, Novhorod-Siverskyi, Oster, Sosnytsia, Chernihiv) lay within the boundaries of Ukrainian ethnic territory. The remaining four northern counties (Mglin, Novozybkov, Starodub, Surazh) were part of a mixed Ukrainian-Belorussian-Russian ethnic territory. Chernihiv gubernia covered 52,396 sq km and, according to the 1897 census, had a population of 2,298,000 (cf Ukrainian ethnic territory, which covered 38,324 sq km and had a population of 1,663,000). The 1914 population figure was 2,340,000, of which Ukrainians numbered 1,525,000. In 1919 the four northern counties were transferred to Homel gubernia and, in 1926, to Briansk gubernia, RSFSR. In 1925 the territory of Chernihiv gubernia became part of Hlukhiv, Konotip, Nizhen, and Chernihiv okruhas.

Chernihiv State Historical Museum

Chernihiv State Historical Museum. Established in 1925 by the merger of the Tarnovsky Museum of Antiquities, founded in 1897, the collection of the Archival Commission, and a number of other collections. The museum has two departments: the department of prerevolutionary history and the department of the history of Soviet society. It contains valuable archeological materials excavated at the sites of various cities of Kievan Rus', such as Kniazha Hora, Roden, Peplava, and Chernihiv. On display are clay pottery, tools of the skilled trades, farm implements, bone carvings, porcelain, carved crystal, church articles, arms (particularly the arms of B. Khmelnytsky, Ya. Ostrianyn, and S. Nalyvaiko), woven articles, old printed documents from the Kiev, Ostrih, and Pochaiv presses, universals issued by hetmans, icons, portraits, etc.

In the department of the history of Soviet society there are documents of the 1917–45 period, the October Revolution, the Second World War, and the partisan movement. There are also displays illustrating the development of industry and farming in the Chernihiv region and urban-development plans.

Chernihiv Musical Instruments Factory. Established in 1934, the factory produced stringed folk instruments until 1950. It then specialized in pianos and in 1955 began to produce the first small upright pianos in the Soviet Union. In 1970 the factory produced 26,300 pianos, 75,900 guitars, 16,500 balalaikas, and 1,500 banduras. The production figures for 1960 were 14,270 pianos, 33,200 guitars, 48,200 balalaikas, and 586 banduras.

Chernihiv oblast. Chernihiv oblast lies in the northern part of Left-Bank Ukraine. In the north the oblast borders on the Belorussian SSR and the Russian SFSR. For centuries the oblast's territory was part of the geographical-historical *Chernihiv region. Chernihiv oblast was established on 15 October 1932. Its area is 31,900 sq km. Its 1982 population was 1,472,000, of which 47 percent was urban. The oblast has 22 raions, 462 rural soviets, 15 cities, and 30 towns (smt).

Physical geography. Most of Chernihiv oblast lies within the *Dnieper Lowland. It is a somewhat swampy

plain, sloping from the northeast (200–220 m in elevation) to the southwest (120–150 m in elevation). The climate here is moderate-continental: the July temperature is 18.4° to 19.7°C, and the January temperature –6° to –8°C. Annual precipitation is 500–600 mm. The length of the growing season is 190–200 days. The Dnieper flows along the western boundary of Chernihiv oblast. The main river of the oblast is the *Desna, which flows from the northeast to the southwest. The left-bank tributaries of the Desna are the Seim, Doch, and Oster; its right-bank tributaries are the Ubid, Mena, Snov, and Bilous. There are mainly podzol sandy soils in the northern, Polisian part and chernozems in the southern part. Mixed forests of pine, oak, birch, hornbeam, aspen, alder, and poplar predominate in the northern part, while small oak forests predominate in the southern, forest-steppe part. Forests cover 20.1 percent of the oblast's territory.

In the past Chernihiv oblast was part of the Hetman state. Under the Russian Empire it constituted Chernihiv gubernia.

Population. The average population density is 47.3 persons per square kilometer. In the forest-steppe the density exceeds 50 persons per square kilometer. The proportion of urban population has risen rapidly in recent years: it was 15.3 percent in 1940, 23.6 percent in 1960, 34.6 percent in 1970, and 44.1 percent in 1978. During the Second World War the population declined considerably. Then, until the beginning of the 1960s, the population increased slowly and later declined again: it was 1,787,000 in 1940, 1,478,000 in 1950, 1,558,000 in 1960, 1,560,000 in 1970, and 1,501,000 in 1978. The natural population growth here is one of the lowest in Ukraine (in 1975 the rate was the lowest, at 0.9 percent). The balance of migration is constantly negative. The largest cities in 1980 were Chernihiv (pop, 242,000), Nizhen (pop 71,000), and Pryluka (pop 67,000). The ethnic composition of the population in 1979 (1959 figures in parentheses) was Ukrainians, 92.5 (94.5) percent; Russians, 5.8 (3.9) percent; and Jews, 0.7 (0.8) percent.

Economy. Chernihiv oblast is one of the industrial-agrarian regions of Ukraine. Industrial production accounted for 66.4 percent of the oblast's gross output in 1970. Most enterprises were built in the postwar years, and new branches of industry were established – petrochemicals, equipment building, textiles, machine building, fuel (55 percent of Ukraine's petroleum). Agriculture also plays an important role in the oblast's economy. It is varied and intensive, with an emphasis on grain, potatoes, meat, and dairy products.

Industry. In 1970 light industry accounted for 44.5 percent of industrial production, the food industry for 24.5 percent, the machine-building and metalworking industry for 9.4 percent, the chemical industry for 8.4 percent, the fuel industry for 5.3 percent, and the wood-working and paper industry for 3.2 percent. The energy to run the industry is derived from local peat deposits (the Zamhlai peat-brick plant), oil fields (at Hnidyntsi, Pryluka, Leliaky, and Monasteryshche), natural-gas fields (Bohdanivka and Milky), the Chernihiv Thermo-electric Station, the Kyvenerho power system, and coal from the Donets Basin.

The most developed branches of light industry are the textile, knitted-materials, garment, flax-and-hemp-manufacturing, and leather-goods branches. One of the largest

textile plants in Ukraine – the *Chernihiv Woolen Fabrics Manufacturing Complex – and a woolworking plant are located in Chernihiv. There are textile mills in Novhorod-Siverskyi and Oster; garment factories in Chernihiv, Pryluka, and Nizhen; a leather-goods factory, hosiery factory, and knitting and spinning mills in Pryluka; and a felt factory in Chernihiv. Eight flax-working plants, two hemp-working plants, and several shoe factories are found in Chernihiv, Pryluka, and Semenivka. The oblast is famous for its handicraft industries: kilim weaving and artistic embroidery.

In the food industry sugar refining, distilling, meat packing, butter and cheese making, flour milling, and canning are highly developed. Sugar refineries are located in Bobrovysia, Nosivka, Parafiivka, Lynivka, and Novyi Bykiv. Distilleries are found in the Borzna, Koriukivka, Horodnia, and Kozelets raions. Chernihiv and Nizhen have breweries. There are meat-packing plants in Chernihiv, Nizhen, Pryluka, Bakhmach, and Novhorod-Siverskyi. Butter and cheese factories are located in Ichnia and Bakhmach. In Nizhen there is a large canning factory and an oil-and-fat rendering plant.

The chemical industry has become very important in the oblast's economy. In Chernihiv there is a large synthetic-fibers plant, the Khimvolokno plant (built in 1957); in Pryluka there is a synthetic-resins plant; and in Nizhen there is a lacquer and paint factory. The machine-building and metalworking industries serve for the most part the needs of agriculture and the chemical industry. Agricultural machinery is built in Nizhen, Pryluka, and Makoshyne; firefighting equipment and construction machinery are manufactured in Pryluka; fishing equipment and chemical machinery are produced in Bakhmach. In Chernihiv auto parts are made at a branch of the Gorky auto works, and instruments are manufactured. In the woodworking and paper industry there are six furniture factories, the *Chernihiv Musical Instruments Factory, and an industrial paper and carton plant in Koriukivka. The building-materials industry produces reinforced-concrete structures, roofing materials, brick, etc.

Agriculture. In 1976 there were 503 collective farms (614 in 1970) and 57 state farms (40 in 1970). Sixty-eight percent of the oblast's area was devoted to agriculture. Of this, 72 percent was cultivated land, and 26 percent was pasture and meadow. The total land under cultivation in 1976 covered 1,587,100 ha; 44.8 percent (711,800 ha) of this land was devoted to grain, 6.3 percent (100,500 ha) to industrial crops, 12.2 percent (193,300 ha) to potatoes, 1.2 percent (19,400 ha) to fruit, particularly melons, and 35.4 percent (562,100 ha) to fodder crops. The main grains grown are winter wheat (243,300 ha), barley (194,600 ha), rye, and corn. In terms of industrial crops most of the land is devoted to flax (45,900 ha), barley (45,900 ha), sugar beets (41,800 ha), and tobacco. The oblast is Ukraine's largest producer of potatoes (2,943,000 t in 1975) and flax (28,900 t). In the period 1970–5 the average grain yield was 19.5 centners per ha. Winter-wheat yield was 23 centners per ha, sugar-beet yield was 244.2 centners per ha, and potato yield was 141.8 centners per ha.

In 1976 there were 1,305,500 head of cattle in Chernihiv oblast (of which 505,100 were cows), 847,600 hogs, and 245,500 sheep and goats. The predominant breed of cattle was Simmental; of hogs, Large White; of sheep, Perekos. Poultry farming, rabbit raising, apiculture, and fishing are expanding.

Transportation. The length of effective railroads is 892 km (1976). The oblast is crossed by such railway lines as the Kiev-Nizhen-Konotip-Moscow line, the Homel-Bakhmach line, the Kiev-Nizhen-Chernihiv-Homel-Leningrad line, the Chernihiv-Nizhen-Pryluka line, the Chernihiv-Korysten line, and the Novhorod-Siverskyi–Novozybkov–Homel line. The main railway junctions are Bakhmach, Nizhen, and Pryluka. There are 7,500 km of highway, of which 3,600 km are hard surfaced. The motor highways Kiev-Chernihiv-Leningrad, Kiev-Nizhen-Moscow, and Chernihiv-Pryluka-Cherkasy cut across the oblast. There is boat transportation on the Dnieper, Desna, and Sazh rivers, and on parts of the Snov and Seim. Chernihiv's port on the Desna is important. Chernihiv has airline communications with the larger cities of the USSR and with the distant raion centers of the oblast. The Dashava-Kiev-Moscow gas pipeline runs through the oblast.

Many tourists are attracted to the region of the Kiev Reservoir, the banks of the Desna, the *Trostanets Dendrological Park, and the cities of Chernihiv, Nizhen, and Novhorod-Siverskyi.

Chernihiv principality. One of the largest and mightiest political entities of Kievan Rus' in the 11th–13th century. The principality was formed in the 10th century and retained some of its distinctiveness until the 16th century. Its basic territory consisted of the basins of the Desna and Seim rivers in Left-Bank Ukraine, which were settled by the *Siverianians and partly by the *Polianians in the south. Eventually the principality expanded to encompass the territory of the *Radimichians and some of the lands settled by the *Viatichians and *Drehovichians. Chernihiv was the capital of the principality, which included a number of towns and cities, such as Novhorod-Siverskyi, Starodub, Briansk, Putyvl, Kursk, Liubech, Hlukhiv, Chechersk, Kozelsk, Homel, and Vyr. Until the 12th century the domain and influence of the principality expanded far into the northeast (the Murom-Riazan land) and into the southeast (*Tmutorokan principality).

Until the 11th century Chernihiv principality was governed by local (tribal) elders and by vicegerents who were sent from Kiev to collect tribute, administer justice, and organize a defense against foreign enemies, particularly the nomadic hordes. In 1024–36 the principality was ruled by Prince Mstyslav Volodymyrovych, who came from Tmutorokan. After the reign of the Kievan grand prince Yaroslav the Wise, who unified the right-bank and left-bank territories of the Kievan state, the principality was inherited by his son Sviatoslav II, who founded the Chernihiv house of the Riuryk dynasty. The *Riurykids governed the principality until the 14th century by transferring power either from father to son (dynastic inheritance) or from older to younger members of the family. Kievan grand prince Volodymyr Monomakh ruled the principality for a time, but in accordance with the

decision of the *Liubech congress of princes (1097) the principality and its appanages went to Sviatoslav's sons, Oleh and Davyd Sviatoslavych, and their descendants, the Olhovychi. Although some of the appanages, particularly Novhorod-Siverskyi, developed into independent principalities, the authority of the Chernihiv prince as the head of the princely house and the supreme ruler was great enough to preserve for him the title 'grand prince.'

The power possessed by the Chernihiv princes, the unity of the house, and the wealth and ability of its leading members played an important role in the economic and cultural development of the principality in the 12th–mid-13th century. The policies of the Chernihiv princes were determined by the historical development of the principality and its economic and military importance and were characteristic of a great state. The Riurykids of Chernihiv always aspired to gain the great throne of Kiev and to hand it on to their descendants. The Chernihiv house ruled Kiev in the 11th–13th century during the reign of the grand princes Sviatoslav II (1073–6); his grandsons Vsevolod (1139–46) and Ihor (1146–7) Olhovych, the sons of Oleh Sviatoslavych; Iziaslav Davydovych (1157–61); Sviatoslav III Vsevolodovych (1176–94, with interruptions); Vsevolod Chernny (Sviatoslavych) (1206–12, with interruptions); and Mykhailo Vsevolodovych (1238–46). At the same time these princes or their relatives retained direct control of Chernihiv principality.

With the title, authority, and influence of the grand prince of Kiev and the resources of Chernihiv principality at their disposal, the Chernihiv princes conducted an ongoing expansionist policy. In the 11th–mid-12th century their foreign policy was focused mostly on the southeast – the Don and Lower Volga region (the former Khazar state), Caucasia, and Tmutorokan principality. This policy determined the relations between the Chernihiv princes and the *Cumans, who acted at various times either as allies of the princes in foreign undertakings and internal struggles or as opponents to their eastward expansion. One of the last attempts of the Chernihiv Riurykids at eastward expansion was Ihor Sviatoslavych's disastrous campaign of 1185, which is described in the epic *Slovo o polku Ihorevi* (The Tale of Ihor's Campaign). The Cuman barrier enabled Byzantium to consolidate its influence over the territory of Tmutorokan principality.

As the eastern ties of Chernihiv principality grew weaker, the attention of the princes turned westward towards the Belorussian territories of the Kievan realm. With the consent of the Polotsk princes Chernihiv assumed the role of guardian and even sovereign over *Polotsk principality. Towards the end of the 12th century the Chernihiv princes both held the Grand Principality of Kiev and enjoyed sovereignty over Polotsk principality. Thus, they were in a favorable position, after their attempts to consolidate their influence in Novgorod failed, to bid for control over all Ukrainian territories, including the Principality of *Galicia-Volhynia, and thus for the primacy of Chernihiv principality among the principalities of Rus'. The attempt of the Ihorevychi of Novhorod-Siverskyi to gain control of Galicia ended in failure and the violent death of the brothers in 1211. In 1229 Mykhailo Vsevolodovych of Chernihiv began a prolonged struggle with his brother-in-law Danylo Romanovych of Galicia for the Kievan and Galician thrones.

These ambitions were undermined by the Mongol-Tatar invasions. In 1223 the grand prince of Chernihiv, Mstyslav Sviatoslavych, died at the battle on the Kalka River. On 18 October 1239 Chernihiv was captured and plundered by the Tatars, and Prince Mstyslav Hlibovych died in battle. In 1245 Prince Rostyslav Mykhailovych, the Chernihiv pretender to the Galician throne, was decisively defeated at Peremyshl. In 1245 and 1246 Danylo Romanovych of Galicia suffered the humiliation of submitting to the Mongol khan's authority, while Mykhailo Vsevolodovych, who refused, suffered a martyr's death. Chernihiv principality was divided into a number of appanage principalities, which for a long time remained directly controlled by the Golden Horde.

The Grand Principality of Chernihiv ceased to exist, but Chernihiv principality, devastated and plundered by the Tatars, restricted in its rights, borders, and aspirations, survived with Briansk as the new capital. In the second half of the 13th century and at the beginning of the 14th century it was governed by princes of the Chernihiv house, beginning with Roman Mykhailovych of Briansk and Chernihiv (1263–85). Then it passed into the hands of the Riurykid princes of the House of Smolensk. In the second half of the 14th century Chernihiv principality became a vassal of the Grand Duchy of Lithuania and was ruled, as were all the northern Rus' principalities, by the Lithuanian princes of the Gediminas dynasty. During his reign as grand duke of Lithuania, Casimir IV of Poland granted Chernihiv principality to émigré princes of the Moscow Riurykids, in particular to Prince Ivan Andreevich of Mozhaisk. His son, Semen, submitted to Muscovy in 1500, and in 1515, during the rule of Semen's son, Vasily Semenovych, Chernihiv principality was annexed by Muscovy, which in 1523 also annexed Novhorod-Siverskyi principality, the last independent Ukrainian principality.

The state traditions of Chernihiv principality outlasted its historical existence by many centuries. They were reflected in the political projects of the Cossack Hetman state of the 17th–18th century (the so-called Kunakov Articles, 1649); in P. Ivanenko's Zaporozhian Cossack treaty with the Crimean Tatars in 1692, which mentions Chernihiv principality; in Hetman I. Mazepa's use of the title 'Prince of Chernihiv' in negotiations with Poland and Sweden in 1708; in the Russian tsars' use of the title 'Grand Prince of Chernihiv,' adopted after the Treaty of Pereiaslav (1654); and finally in the history of the Ukrainian national renaissance of the 19th–20th century and the founding of a new Ukrainian state in 1917.

Chernihiv printing press. Founded ca 1675 by L. *Baranovych in Novhorod-Siverskyi and moved to Chernihiv in 1679. At the beginning of the 18th century it was the third-largest printing house, in terms of size and production, in Ukraine, after the Kiev and Lviv presses, and had its own paper factory. The press printed liturgical books, the polemical works of I. Galiatovsky, the poems of Ihnatii Maksymovych, the historical and theological works of D. Tuptalo, translations of works in Latin, etc. Among the famous engravers who worked at the Chernihiv printing press were Leontii Tarasevych, I. Shchyrsky, I. Strelbytsky, and N. Zubrytsky. In spite of prohibitions and threats from the Holy Synod, which demanded that all books be 'in agreement with Muscovite books,' the Chernihiv printing press maintained its independence until 1724 and printed books on various topics in Ukrainian, Polish, Latin, and Church Slavonic. The press began to decline in 1724 and was closed down in 1820.

Chernihiv region (Chernihivshchyna). A historical and geographical territory in northeastern Ukraine on the border with Russia and Belorussia. In the west the Chernihiv region borders on the Kiev region; in the east, on Slobidska Ukraine; in the northwest, on Belorussia; and in the north, on Russia (Briansk region). The precise boundaries of the Chernihiv region have changed over the centuries. The territory has an area of about 55,700 sq km. During the Princely era the Chernihiv region formed the nucleus of *Chernihiv principality, which also encompassed large territories in the north (Briansk region), the northeast (Kursk, Murom-Riazan lands), and the southeast (Tmutorokan principality). In 1239 the Chernihiv region was captured by the Tatars, in 1356 most of the region was annexed by the Grand Duchy of Lithuania, and in 1503 it came under the control of Muscovy. The Truce of Deulino (11 December 1618) transferred the region to Poland, and it became *Chernihiv voivodeship. In 1648 the Chernihiv region became part of the Hetman state and encompassed the Chernihiv, Starodub, and Nizhen regiments as well as parts of the Pereiaslav and Pryluka regiments. After the abolition of Ukraine's autonomy the Chernihiv region was divided into two vicegerencies in 1782 – the Chernihiv and Novhorod-Siverskyi vicegerencies – which survived until 1797 and then became part of the Little Russia gubernia (covering the territory of the Hetman state). In 1802 the gubernia was reorganized into two gubernias – *Chernihiv gubernia and Poltava gubernia (see *Poltava region) – which endured until 1917. In 1917–19 the Chernihiv region, including its northern part (the counties of Starodub, Mglin, Surazh, and Novozybkov), belonged to the UNR.

In 1919 the Chernihiv region was captured by the Soviets, and the four northern countries were transferred to Homel gubernia and then in 1926 to Briansk gubernia of the Russian SFSR. In 1925 Chernihiv gubernia was divided into okruhas, and in 1932 it was reorganized into *Chernihiv oblast. In 1939 the eastern part of the oblast was transferred to the new Sumy oblast, and a small southwestern part was transferred to left-bank Kiev oblast, while Chernihiv oblast acquired the Pryluka area.

In general the Chernihiv region is not rich in natural resources and has a moderate population density. Farming in this region has been less profitable than in other

regions of Ukraine. Hence there have been frequent migrations from the Chernihiv region to other territories, such as southern Ukraine and the Far East. From the historical, cultural, and ethno-linguistic viewpoint the Chernihiv region has always been an integral part of Ukraine and has often rivaled the Kiev region as the center of Ukrainian territory and the Ukrainian people.

Geography. The Chernihiv region encompasses the northern part of the *Dnieper Lowland, which is a somewhat swampy plain sloping from the northeast (elevation, 200–220 m) towards the southwest (elevation, 120–150 m). The climate is moderate-continental: the temperature in July is usually 18.4° to 19.7°C and in January –6.7° to –7.6°C. The annual precipitation is 500–600 mm. The growing season is 190–200 days. The Chernihiv region lies in the Desna Basin, which includes the left-bank tributaries of the Desna – the Oster, Doch, and Seim – and the right-bank tributaries – the Bilous, Snov, Mena, Ubid, and Sudost. The Dnieper and Sozh mark the western boundary of the Chernihiv region. The forests in the northern part of the region consist mostly of pine, oak, birch, hornbeam, and alder; in the southern, forest-steppe part small oak forests are predominant. Forests occupy one-fifth of the region's land area. The soils in the northern, Polisian part are sandy podzolic, and in the southern part, chernozems.

Population. The Chernihiv region has been inhabited from the earliest times. In the 8th century AD the *Siverians appeared in the region. Besides the native Ukrainian population, there were some Russians, mainly Russian Old Believers fleeing religious persecution, who established homesteads and settlements in the Chernihiv region in the 17th–18th century, mostly in Starodub, Novozybkov, Surazh, and Horodnia counties. Klyntsi became their cultural center. From the end of the 18th century there was also an exodus. It consisted of peasants, who fled from the Chernihiv region to the south (to the Katerynoslav region, Tavriia, the Kuban, and Caucasia) and to the east. In the brief period 1782–91, about 700,000 peasants emigrated from the Chernihiv and Novhorod-Siverskyi vicegerencies. Emigration continued at the end of the 19th and the beginning of the 20th century. Between 1893 and 1903, 11,300 peasants per year on the average left Chernihiv gubernia to resettle in remote regions of the Russian Empire, such as the Central Asian steppe, the Urals, Siberia, or the Far East. In 1906–12, 157,600 peasants emigrated to Siberia. Large numbers of peasants from the region – about 133,000 per year in 1893–7 – took up seasonal work in other parts of Ukraine such as Katerynoslav, Kherson, and Tavriia gubernias, the Donbas, and the Kryvyi Rih region. Thirty-five percent of the miners in Kryvyi Rih came from the Chernihiv region. In spite of emigration and migration, the population of the Chernihiv region (and later Chernihiv gubernia, which included most of the region) increased steadily from 964,500 in 1764 to 1,176,570 in 1782, to 1,374,746 in 1851, to 1,471,866 in 1858, to 2,321,900 in 1897, to 3,132,000 in 1914 (according to S. Rudnytsky). Natural population growth in 1897 was 17.8 percent. Yet the population density in Chernihiv gubernia (area, 52,400 sq km) was one of the lowest for the Ukrainian gubernias: 26.2 inhabitants per sq km in 1851, 44.3 in 1897, and 59.8 in 1914. Most of the population (91.1 percent) was peasant; only 207,390 people lived in cities (in 1897). There were 19 cities in the gubernia, the

largest being Chernihiv (27,000), Nizhen (32,000), Starodub (26,000), Konotip (23,800), Hlukhiv (17,600), Novsivka (15,500), Borzna (15,000), Novozybkov (15,000), Berezna (13,100), Krolovets (12,800), Klyntsi (12,000), and Ichnia (10,000). At the end of the 19th century Chernihiv gubernia was divided into 15 counties. In 1860 the gubernia's population consisted of the following social strata: enserfed peasants (38.8 percent), state peasants (44.5 percent including Cossacks, who accounted for 30.8 percent), burghers (9.4 percent), nobles (1.6 percent), clergy (0.9 percent), merchants (0.6 percent), and military and others (4.5 percent). Eighty-four percent of the population in 1897 were peasants, and 16 percent were of other social classes. In 1913, 308,720 of the 2,956,000 inhabitants were urban residents; of these, 79,700 were tradesmen and 18,100 were factory workers.

By national composition the population of the gubernia in 1897 was as follows: Ukrainians, 85 percent; Belorussians (who settled in Surazh county in the 17th century), 6 percent; Russians, 5 percent; and other nationalities, such as the Jews, Poles, and Germans (who had four colonies in Borzna county and two in Konotip county), 4 percent. S. Rudnytsky gave similar statistics for 1914: Ukrainians, 85.6 percent; Russians, 9.0 percent; Jews, 4.9 percent; Germans, 0.4 percent; and Poles, 0.1 percent. In terms of religious affiliation, 91.8 percent of the gubernia's population in 1897 was Orthodox; 0.9 percent, Edinovertsy; 0.9 percent, Old Believers; 0.2 percent, Protestants; 0.3 percent, Catholics; 5.0 percent, Jews; and 1 percent, other.

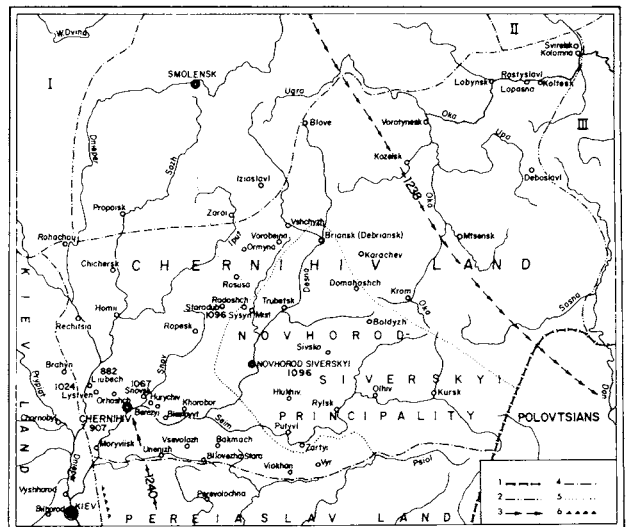

During the Soviet period changes occurred in the region's administrative division and in the national composition of its population. According to the 1926 census, the territory of former Chernihiv gubernia was inhabited by 2,906,000 people, of whom 73 percent were Ukrainians; 23.1 percent, Russians; 2.6 percent, Jews; and 1.2 percent, Belorussians. The population of the part of the Chernihiv region that belonged to the Ukrainian SSR (excluding the four counties of Klyntsi, Novozybkov, Starodub, and Pochep, where the population was 14.7 percent Ukrainian and 79.3 percent Russian) was 92.7 percent Ukrainian, 4.9 percent Russian, and 2.2 percent Jewish. The later official censuses recorded population statistics by oblast, and the boundaries of Chernihiv oblast did not coincide with the boundaries of Chernihiv gubernia or with those of the Chernihiv region. The total population of Chernihiv oblast has been steadily decreasing over the last 40 years: in 1940 it was 1,787,000; in 1959, 1,573,000; in 1970, 1,560,000; and in 1981, 1,483,000. This decline has coincided with urban growth and a population transfer from country to city: the rural population fell from 1,504,000 in 1940 to 796,000 in 1981, while the urban population rose from 282,000 to 686,000. Population density in the oblast is one of the lowest in Ukraine: 46.5 inhabitants per sq km. Since the 1960s Chernihiv oblast has had the lowest natural population growth of all Ukrainian oblasts: 0.9 per cent in 1976. According to the 1959 census the national composition of the population was: Ukrainians, 94.5 percent; Russians, 3.9 percent; and Jews, 0.8 percent. In 1970 the respective figures were 93.8, 4.7, and 0.7 percent. These data indicate that the national profile of the Chernihiv region, where Ukrainians account for a higher proportion of the population than in any other region of Ukraine, remains stable.

History. The Chernihiv region has been inhabited

since the middle Paleolithic period (Chulativ village near Novhorod-Siverskyi). The number of settlements increased in the Upper Paleolithic period (40,000–8,000 years ago), when temporary settlements were built on the Desna River (the sites *Pushkari and *Mizyn north and south of Novhorod-Siverskyi), at Novhorod-Siverskyi, and at Zhuravka on the Udai River. Neolithic relicts have been found in the vicinity of Kudlaivka and Sosnytsia on the Desna. The settlements at Yevmynka village and Morivske in Kozelets raion belong to the Trypilian culture. The remains of Scythian fortified settlements of the 5th century BC, which are known as the Yukhnove settlements, are found along the Desna near Novhorod-Siverskyi.

At the beginning of our era Slavic settlements appeared in the Chernihiv region at Tabaivka, Sosnytsia, and Petrivka. In the 7th–8th century the Siverianians settled on the Desna, Seim, and Sula rivers and made Chernihiv their center. In the 9th century the region became a part of Kievan Rus', and Chernihiv became an important political, cultural, and economic center in the new state (see *Chernihiv principality).

In the mid-14th century Algirdas, the grand duke of Lithuania, defeated the Tatars and gained control of the Chernihiv region. At first Lithuania respected the autonomy of the appanage principalities, leaving them in the hands of local princes. At the beginning of the 15th century, however, the small principalities were abolished, and administrators were appointed. In this period the Chernihiv region was plundered frequently by the Tatars. In the war of 1500–3 Lithuania lost the region to Muscovy. Poland obtained the territory by the Truce of

CHERNIHIV LAND,

4. Borders of the Chernihiv land
5. Borders of Novhorod-Siverskyi principality
6. Defensive wall

Numerals associated with cities indicate the founding dates of the cities.

Deulino in 1618 and in 1635 formed Chernihiv voivodeship out of its northern part (Chernihiv, Novhorod-Siverskyi, Konotip, Putyvl, and Hlynsk), while attaching the southern part (Nizhen, Oster, and Baturyn) to Kiev voivodeship. The Polish administration exploited the local population, and the Polish nobility seized lands belonging to Ukrainian peasants or burghers. Hence the population of the region took part in the Cossack uprisings of P. Pavliuk (1637) and Ya. Ostrianyn (1638) against the Poles.

During B. Khmelnytsky's rebellion M. Nebaba was the chief of the insurgent detachments in the Chernihiv region. At the end of 1648 the Chernihiv, Starodub, Nizhen, and Pryluka regiments were formed and incorporated into the Hetman state. After the Treaty of Bila Tserkva (1651) the Polish nobles began to return to their estates under the protection of Polish troops. To escape Polish oppression, many peasants emigrated to Muscovy and settled mostly on the Tykha Sosna River, establishing the town of Ostrohozke. The Polish-Ukrainian reconciliation under Hetman I. Vyhovsky (Treaty of Hadiache) led to the Ukrainian-Russian war, in which the tsar's army was crushed at Konotip on 8 July 1659. The Treaty of Andrusovo, signed on 30 January 1667, divided Ukraine between Poland and Russia. The Chernihiv region, along with the rest of Left-Bank Ukraine, was annexed by Russia. The capitals of the Russian-ruled Hetman state were Baturyn (1669–1708 and 1750–64) and Hlukhiv (1708–50).

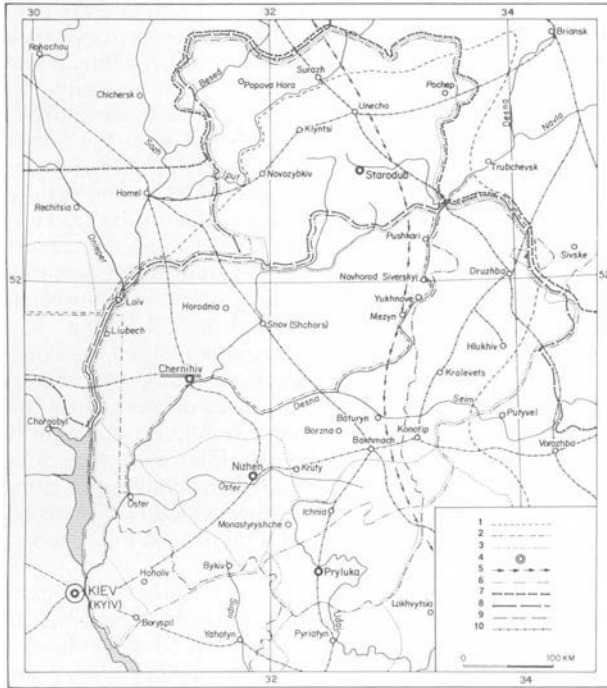

The region's proximity to Russia was convenient for trade; hence trade centers developed in the Chernihiv region. According to the census of 1666, among the important cities in the region were Nizhen, with 642 taxpaying households; Konotip, with 474; and Baturyn, with 365. Chernihiv and Nizhen obtained the privileges of Magdeburg law. In the 18th century the number of manufacturing enterprises in the Chernihiv region increased: in 1728 sailcloth began to be manufactured in Pochep, and in 1737 woolen cloth began to be produced in Riashky village near Pryluka (700 workers) and in Sheptaky village near Novhorod-Siverskyi. Flour milling developed rapidly: in the 18th century there were 2,759 windmills and 1,511 watermills in the Chernihiv region. Nizhen became the largest economic center of the region. Beginning in 1657, large fairs that attracted merchants from various cities in Ukraine and abroad were held in Nizhen. By the end of the 18th century the urban population had increased significantly: in 1786 Nizhen had a population of 11,000; Pryluka, 6,200; and Chernihiv, 3,900.

In the 17th–18th century the region played a leading cultural role in Left-Bank Ukraine, and indeed the whole of Ukraine. Such cultural and religious leaders as L. Baranovych, I. Galiatovsky, and Ioan Maksymovych lived and worked there. In 1700 Maksymovych founded *Chernihiv College on the model of the Kievan Mohyla Academy. The famous physician D. Samoilovych studied at this college in 1755–61. The general flag-bearer M. Khanenko pursued his political career in the Chernihiv region. In the mid-18th century parochial elementary schools were opened in the cities and villages: there were 215 of them in Nizhen regiment and 144 in Chernihiv regiment. Printing was an important factor in the growth of culture and education: in 1675 a printing press was established in Novhorod-Siverskyi and was later transferred to Chernihiv. The 16 monasteries and 4 convents in

the Chernihiv region played an important cultural as well as religious role in the 18th century. The most prominent ones were the Trinity–St Elijah Monastery and the Yeletskyi Monastery in Chernihiv, the Monastery of the Transfiguration in Novhorod-Siverskyi, the Monastery of the Annunciation in Nizhen, the Hustynia Monastery near Pryluka, and the monasteries in Liubech, Rykhyly, Domnytsia, and Makoshyne.

During the Hetman period and at the end of the 18th century architecture in the Chernihiv region attained a high degree of development. Monuments of the Princely era were restored, and new architectural ensembles were erected. In Chernihiv the Yeletskyi Monastery was restored and the Church of SS Peter and Paul was added to it, and the Trinity–St Elijah Monastery acquired the Cathedral of the Trinity (1679–95), the Church of the Presentation at the Temple, and the belfry. The most prominent secular buildings that appeared in Chernihiv were the regimental chancellery and the college (1700–2). In Nizhen the following churches were built: St Nicholas's Cathedral (1668), St Michael's Church (1714–31), the Cathedral of the Annunciation (1716), the Church of the Holy Protectress (1757), and the Cathedral of the Presentation at the Temple (1772). New churches and secular buildings, such as the Dormition Cathedral (1796), the Church of SS Peter and Paul, the student residence, and the triumphal arch, were built, and the Cathedral of the Transfiguration (1796) was rebuilt in Novhorod-Siverskyi. The complex of the Hustynia Monastery, particularly its Cathedral of the Trinity (1674), was an important architectural achievement. The two-story building of the regimental chancellery (1760) and the Cathedral of the Nativity of the Mother of God (1752–63), which were built by A. Kvasov and I. Hryhorovych-Barsky, as well as the many-storied belfry, have been preserved in Kozelets. The palace of K. Rozumovsky was built in Baturyn by A. Rinaldi and C. Cameron.

After the abolition of the Hetman state and the destruction of the Zaporozhian Sich, until the beginning of the 19th century the traditions of Cossack statehood and aspirations to autonomy were strongest in the Chernihiv region. The Ukrainian Cossack officers and the region's prominent families did not collaborate with the Russian authorities and did not assimilate into the Russian culture. On the contrary, they propagated I. Mazepa's and P. Polubotok's ideal of independence, informed foreigners about Ukraine's past, and published materials on history, literature, ethnography, and the Ukrainian church. The Ukrainian patriots who served as gubernial marshals of Chernihiv vicegerency – I. Horlenko (1782–5), A. Poletyka (1785–8), and V. Tarnovsky (1790–4) – encouraged this kind of work. A separate Cossack estate with its own rights and privileges survived in the Chernihiv region until 1917. The most active groups in the national movement were the *Novhorod-Siverskyi patriotic circle and the Chernihiv circle, which consisted of prominent cultural and political figures tied to the Chernihiv region by birth or career. Many Ukrainian autonomists were active at the end of the 18th century in the Chernihiv region: H. Dolynsky, P. Koropchevsky, A. Hudovych, I. Khalansky, F. Tumansky, A. Rachynsky, M. Myklashevsky, P. Koropchevsky, O. Lobysevych, A. Khudorba, P. Symonovsky, Bishop V. Shymatsky, Archimandrite M. Zhnachko-Yavorsky, Rev A. Pryhara, O. Shafonsky, and others.

CHERNIHIV REGION

Administrative Division from the Hetman State to the Present

6. Borders of Chernihiv gubernia
7. Borders of the Ukrainian National Republic
8. Borders of the Ukrainian SSR
9. Borders of present oblasts
10. Railway lines

During Napoleon's invasion of Russia in 1812 the Ukrainian upper class did not side with him because of his pro-Polish orientation. Six Cossack cavalry regiments and eight infantry regiments of 25,000 soldiers were mobilized in Chernihiv gubernia and were supported by the local population.

In the 1820s some professors of the Nizhen Lyceum maintained ties with the *Little Russian Secret Society. Some Ukrainians from the Chernihiv region were also involved in the *Decembrist movement. In the first half of the 19th century there was an upsurge in education and cultural life in the region. At the beginning of the 19th century there were gymnasiums in Chernihiv and Novhorod-Siverskyi (est 1808). The latter was attended by such outstanding cultural figures as M. Maksymovych, K. Ushynsky, P. Kulish, and M. Kybalchych. In 1820 a gymnasium was also opened in Nizhen, which in 1832 became a lyceum and in 1875 the Historical-Philological Institute. Among its prominent graduates were such figures as N. Gogol, Ye. Hrebinka, V. Tarnovsky, and O. Lazarevsky. Important contributions to Ukrainian culture and scholarship were made by individuals born in

the Chernihiv region: for example, the composer M. Berezovsky, the sculptor I. Martos, and the Slavist O. Bodiansky.

In the first half of the 19th century the economy of the Chernihiv region underwent some changes. The land area devoted to industrial crops, particularly tobacco, hemp, and sugar beets, was increased. Up to 800,000 poods of tobacco and 10 million poods of sugar beets were harvested annually during the 1840s. In 1847 there were 25 sugar refineries in Chernihiv gubernia, and in 1866 there were as many as 66 refineries, producing 316,000 poods of sugar annually. The sugar industry employed 11,000 workers. A liquor industry also developed: in 1860 there were 336 distilling factories in the gubernia, including 91 whiskey distilleries and 52 breweries. Another important branch of industry in the Chernihiv region was woolen-cloth manufacturing. The first woolens factory was built in 1810 in Masheve near Novhorod-Siverskyi. By 1851 there were 13 such factories. In 1860 these factories employed 4,233 workers and produced over one million arshins of woolen cloth. Klyntsi was the industry's center, and it is still noted for its woolen cloth. In 1860 there were 62 leather-manufacturing enterprises in the region, of which the main ones were located in Sedniv, Semenivka, Dobrianka, and Starodub. There were also four glassworks, in Oleshnia, Stara Huta, and Bleshnia.

After the abolition of serfdom and the agrarian reforms in 1861, of the Chernihiv region's 3,805,000 desiatins of agricultural land, 1,889,000 desiatins belonged to the peasants, 1,625,000 desiatins were in private hands (of nobles and members of other estates), and 290,000 desiatins were held by the state and other owners (as of 1877). The reforms stimulated the expansion of industrial labor: 2,000 enterprises in the region employed about 30,000 workers. The principal branches of industry were sugar refining, with 12 plants (the largest being in Koriukivka), employing 30 percent of the gubernia's workers; liquor distilling (68 distilleries with 940 workers); textile manufacturing (for which Chernihiv was the most important region in Ukraine); match manufacturing, concentrated in Novozybkov; lumbering (12 sawmills); and hemp spinning (some small mills).

Beginning at the end of the 1860s, zemstvos were introduced to manage the economic, social, and educational affairs of the gubernia. In 1869 a zemstvo collection, *Chernigovskaia zemskaia nedelia*, began to be published in Chernihiv, and in 1913 it was turned into a newspaper. Among the region's zemstvo activists there were many individuals with liberal, Ukrainophile attitudes: O. Rusov, I. Shrah, F. Umanets, P. Doroshenko, M. Savytsky, O. Tyshchynsky, I. Petrunkevych, and others. The zemstvos of the Chernihiv region played an important cultural and political role in supporting the work of such prominent figures as M. Kotsiubynsky and B. Hrinchenko.

Education improved in the second half of the 19th century, and 50,700 children (of a total of 210,000) were enrolled in the gubernia's 604 schools by 1897. At the end of the 1850s Sunday schools were founded at existing public schools and gymnasiums: in Hlukhiv, Chernihiv, Nizhen, and Novhorod-Siverskyi. Day schools for girls were opened at county schools in Starodub, Horodnia, and Surazh. The Chernihiv Hromada (1861-3), founded by O. Tyshynsky, L. Hlibov, S. Nis, O. Markovych, D.

Lavrinenko, P. Borsuk, and others, published **Chernigovskii listok*, the only Ukrainian periodical in the entire Dnieper region. The journal was edited by Hlibov and had such contributors as O. Markovych, O. Lazarevsky, and O. Konysky. In the second half of the 19th century some natives of the Chernihiv region – the brothers I. and V. Debahorii-Mokriievych, D. Lyzohub, and M. Kybalchych – belonged to the Russian populists. The following Ukrainian writers lived and worked in the Chernihiv region: L. Hlibov, Marko Vovchok, P. Myrny, B. Hrinchenko (who in 1894–1902, while living in the region, published 50 Ukrainian books with a printing of 50,000), M. Kotsiubynsky, and V. Samiilenko. The Ukrainian historians O. Markovych, O. Khanenko, A. Verzylov, and O. Lazarevsky lived in the Chernihiv region and wrote many studies of the region, using its archival collections.

Such well-known painters as I. Repin, M. Samokysha, V. and K. Makovsky, I. Rashevsky, M. Vrubel, and L. Zhemchuzhnikov worked in the Chernihiv region. The famous actress and civic leader M. Zankovetska performed there. The noted bandura players O. Veresai, T. Parkhomenko, and A. Shut were born in the region.

In 1893–1917 the Ukrainian Hromada, consisting of I. Shrah, A. Verzylov, O. Tyshchynsky, V. Andriievsky, V. Samiilenko, B. Hrinchenko, M. Kotsiubynsky, O. and S. Rusov, and others, was active in Chernihiv. In 1905 the Prosvita society was established there. The Chernihiv Committee of the Revolutionary Ukrainian party (RUP), in which M. Porsh and M. Rusov were active and which had peasants' and workers' organizations in Chernihiv, Oster, Kozelets, Shostka, Chemer, and other towns, was established in 1902. During the revolutionary period of 1905–6 peasant strikes and unrest broke out in the Chernihiv region. The Chernihiv Committee of RUP issued proclamations to the workers and peasants, and the Chernihiv Ukrainian Hromada sent greetings to the Finnish diet, supporting the struggle for liberty. The Spilka in 1906 had local organizations in Nizhen, Ichnia, Konotip, and Bakhmach. I. Shrah was elected deputy of Chernihiv gubernia to the First State Duma.

At the beginning of the 20th century economic and social conditions in the Chernihiv region were difficult. The peasants, who accounted for 90 percent of the population, owned only 42 percent of the land. The other 58 percent of the land was in the hands of landowners with large or medium-sized holdings. In 1905 there were 267,300 small farms (about 73 percent of the farms) in the gubernia, and many peasants hired themselves out as farm laborers or migrated to distant regions in search of land. After the 1905–6 revolution the number of small factories increased, reaching 334 in 1913, with a work force of 28,000. About 80,000 tradesmen plied their trade in the cities and villages. Small landholders or landless peasants emigrated to Siberia. By the eve of the First World War the state of education had improved somewhat: 142,300 children, including 38,400 girls, attended the 1,746 schools in the gubernia in 1912. Yet 40 percent of the children received no schooling.

With the outbreak of the 1917 revolution the Chernihiv region became involved in Ukraine's political and national life. At the Ukrainian National Congress I. Shrah, H. Odynets, and M. Rubisov were elected deputies of Chernihiv gubernia to the Central Rada. During the Bolshevik invasion of Ukraine the Chernihiv region

became one of the first battlegrounds: on 29 January 1918 a decisive battle between Ukrainian and Soviet troops took place at Kruty on the Bakhmach-Kiev railway line. Some Bolshevik activists, such as Yu. Kotsiubynsky, B. Antonov-Ovsiienko, M. Podvoisky, and V. Prymakov, were natives of the Chernihiv region. Under the Soviet occupation the distinctive features of the different regions of Ukraine began to disappear. Yet, in the 1920s a commission for Left-Bank Ukraine, chaired by O. Hermaize, was formed within the historical section of the Ukrainian Academy of Sciences to study the Chernihiv and other regions. The commission published a number of works dealing with northern Left-Bank Ukraine. The All-Ukrainian Academy of Sciences maintained the Chernihiv Historical Archive under the direction of P. Fedorenko. Among the prominent figures of this period the following were from the Chernihiv region: the writers P. Tychyna, S. Vasylychenko, V. Ellan-Blakytyn, and I. Kocherha; the film director O. Dovzhenko; the composer and conductor H. Verovka; the musician L. Revutsky; the economist and statistician M. Ptukha; and the historian O. Ohloblyn.

During the Second World War the Chernihiv region suffered severe losses. Soviet partisan detachments under the leadership of O. Fedorov and M. Popudrenko were organized in the region. In October 1943 the Germans retreated from the region, which reverted to Soviet control. (For the history of the region after 1944 see *Chernihiv oblast.)

Church. The Chernihiv eparchy with Chernihiv as its see was established at the end of the 10th century after the Christianization of Rus'. During the Lithuanian-Polish period the eparchy declined and for a time was part of other eparchies, such as the Smolensk eparchy. The eparchy was renewed in 1622 under the leadership of Bishop I. Kopynsky and then of Bishop Z. Prokopovych, and flourished under the care of Bishop L. Baranovych, who in 1667 was appointed archbishop of Chernihiv and Novhorod-Siverskyi. In 1688 the Chernihiv eparchy was removed from the control of the Kiev metropolitanate and subordinated directly to the Moscow patriarch. St Fedosii Uhlytsky (1692–6) and I. Maksymovych (1697–1712) were noted Chernihiv hierarchs. Chernihiv College was eventually turned into a theological seminary. In 1861 Archbishop F. Gumilevsky began to publish the semimonthly *Chernigovskie eparkhial'nye vedomosti*. During the existence of the Ukrainian Autocephalous Orthodox church Yu. Mikhnovsky (1921–2), I. Pavlovsky (1922–6), and O. Chervinsky (1927–30) served as bishops of Chernihiv. After 1945 the Chernihiv eparchy of the Russian Orthodox church was revived.

A. Zhukovskiy

Chernihiv voivodeship. Administrative-territorial unit in the Polish-Lithuanian Commonwealth, created in 1635. Its center was the city of *Chernihiv. The voivodeship was composed of Chernihiv, Novhorod, and Siverskyi counties. As a result of the Cossack-Polish War of 1648–54, Chernihiv voivodeship was abolished, and its territories became part of Chernihiv and Nizhen regiments.

Chernihiv Woolen Fabrics Manufacturing Complex (Chernihivskiy kamvolno-sukonnyi kombinat). One of the largest enterprises of the *textile industry in Ukraine. The complex began production in 1963. Its basic operations are wool carding and combing, wool spinning, weaving, and finishing. Its basic products are worsted yarn and thread, and woven woolen fabrics.

Chernihivka [Černihivka]. vi-17. Town smt (1980 pop 8,250), raion center in Zaporizhia oblast, situated on the banks of the Tokmak River. The major industry is food processing.

Chernivtsi [Černivci] (German: Czernowitz; Rumanian: Cernăuți). v-6. The historical capital and the political,

Chernivtsi, an engraving from 1845

cultural, and religious center of *Bukovyna and eventually of *Chernivtsi oblast. The city (1983 pop 232,000) lies on the border of Subcarpathia and on the boundary separating the Ukrainian and Rumanian ethnic territories. Situated on both banks of the Prut River, it covers the valley and surrounding hills and has an elevation ranging from 250 m at its highest point to 160 m in the Prut Valley. Chernivtsi is a highway and railway junction and has an airport.

History until 1774. Human settlements at the site of Chernivtsi date back to the Paleolithic period. Traces of the Trypillian culture and Bronze Age and Iron Age settlements have been discovered in the suburbs of the city. Archeological finds in the environs of Chernivtsi give evidence of a Slavic population in the 2nd–5th century AD. In the period of Kievan Rus' the area was inhabited by White Croats and Tivertsians (9th–11th century). The defensive fortifications of Chernivtsi were erected on the left bank of the Prut in the second half of the 12th century by the Halych prince Yaroslav Osmomysl. The fortress endured until the middle of the 13th century, when it was destroyed by the Tatars. The new town was built on the high right bank of the Prut. The ruins of the old fortress are still preserved.

In the middle of the 14th century Chernivtsi belonged to Moldavia and stood on its border with Poland. The trade route from Lviv to Suceava, which linked Western Europe with the countries of the south and the east, ran through Chernivtsi. The city collected an excise tax (*Chernovskoe myto*), and the earliest reference to Chernivtsi appears in a document of Prince Alexander of Moldavia of 1408 in connection with an excise treaty that he concluded with the merchants of Lviv. In 1488 Chernivtsi became the center of Chernivtsi county. During the Moldavian period the town enjoyed self-government based on Magdeburg law and as a 'free city' was directly subordinate to the prince. In the 15th–16th century Chernivtsi was a trade center with widely known international fairs on the left bank of the Prut. From the mid-16th century, however, the town began to decline economically because of continuous wars and sieges. The town was sacked during the Moldavian-Polish wars in 1497, 1509, and 1688; the Turkish wars in 1476 and 1714; and the Tatar wars in 1626, 1646, 1650, and 1672. In 1538 Chernivtsi came under Turkish control. The Cossacks, under T. Khmelnytsky, came to Chernivtsi in 1650 and 1653. I. Mazepa's troops spent the winter of 1709–10 there after the defeat at the Battle of Poltava. That winter

Chernivtsi Town Hall, built in 1845

Russian forces, in pursuit of Mazepa and the Swedes, entered the town for the first time, and Chernivtsi was pillaged by both Swedes and Russians. Russian troops entered Chernivtsi again in 1739 during the Russo-Turkish War, taking with them on their retreat a large number of the town's citizens. As the result of frequent wars and invasions, by the 18th century Chernivtsi had shrunk to a small settlement: in 1762 there were scarcely 200 wooden buildings. Its population of 1,200 consisted of boyars, merchants, moneylenders, and the poor, who revolted against social injustice and joined the ranks of the *opryshoks in the 17th–18th century.

1774–1918. During the Russo-Turkish War of 1768–74 Chernivtsi was occupied by Russian troops and then became part of Austria (1774–1918). From the beginning of Austrian rule Chernivtsi became the capital of Bukovyna – as the seat of the military administration at first (1774–86) and of the civil government afterwards. In 1786–1849 the town was the center of the Bukovynian district, a part of the crown land of Galicia, and from 1849 to 1918 it was the capital of the crown land of Bukovyna, receiving full municipal self-government on 8 March 1864. The town's transfer from the Turkish-Balkan to the Western European sphere of influence and its renewed administrative importance led to an increase in its population. By 1779 Chernivtsi had 3,200 inhabitants, and it continued to grow as a result of the influx of Germans (civil servants, teachers, and merchants), Rumanians, Ukrainians, Poles, and others. In 1783 craft guilds were established in the town, and by the end of the 18th century industry began to develop. At the beginning of the 19th century various public buildings were constructed: the gymnasium (1813–17), a number of churches, private four-to-five story buildings, as well as a public park in 1830. In 1832 a municipal council, headed by a burgomaster, was set up.

The revolutionary events of 1848 led to the abolition of serfdom, the establishment of Bukovyna as a crown land, and increasing political competition between the Ukrainian and Rumanian nationalities in Bukovyna. In the middle of the 19th century Chernivtsi experienced an upsurge in economic development: a brewery, steam mill, distillery, and tile factory were built. In 1850 a chamber of commerce was established, followed by a stock exchange in 1877. Development was stimulated by the introduction of telegraph communications in 1855, the construction of the Lviv-Chernivtsi railroad in 1866, the building of an electric power station in 1895, the establishment of an

electric streetcar system in 1897, and the introduction of a water-supply and a sewage disposal system in 1895–1912. Some important buildings that appeared in this period were the Orthodox cathedral, the residence of the Bukovynian metropolitan, the Armenian church, the Jesuit church, and the Jewish synagogue. At the beginning of the 20th century the city theater and the railway station were built. The center of the city acquired the appearance of a European city and was often referred to as 'Little Vienna.' In 1895 over 2,500 workers were employed in the factories of Chernivtsi. In 1910 there were 2,140 tradesmen and 1,400 merchants in the town. Chernivtsi was the seat of the Orthodox bishop and, from 1873, the metropolitan.

Until 1781 there was only one elementary school (a Rumanian one) in Chernivtsi. The Austrian authorities subsequently opened German schools, and by 1869 there were six schools with 26 teachers. The first classical gymnasium was set up in 1808, and the first non-classical secondary school (*realgymnasium*) in 1862. A teachers' seminary was established in 1870 and expanded in 1872 by the addition of a women's division. In the second half of the 19th century trade schools for agronomy, weaving, and handicrafts were organized. A higher theological school to educate candidates for the priesthood had been in existence since 1827. In 1875 *Chernivtsi University was founded. It had three faculties: philosophy, law, and Orthodox theology. The language of instruction was German, but chairs of Ukrainian language and literature and of practical theology and homiletics in Ukrainian were established from the very outset. The university attracted students from both Bukovyna and Galicia. In the secondary schools the language of instruction was German, but in 1851 Ukrainian was introduced as a subject; subsequently it was taught in the teachers' seminary. In 1896 the *Chernivtsi Ukrainian Gymnasium was established. By the end of the Austrian period there were four elementary schools in Chernivtsi using Ukrainian as the language of instruction.

The work of such writers as Yu. Fedkovych, S. Vorobkevych, and O. Kobylanska was closely connected with Chernivtsi. Ukrainian organizations began to appear in Chernivtsi in the second half of the 19th century: the association *Ruska Besida was founded in 1869, the *Ruska Rada society in 1870, and the student society *Soiuz in 1875. At first a Russophile tendency held sway in these organizations, but in 1884 the populists (*narodovtsi*; see *Populism, Galician) – Ye. Pihuliak, Omelian Popovych, S. Smal-Stotsky, and others – gained the upper hand. From then on the Ukrainian national movement developed rapidly. In 1884 the society *Ukrainskyi Narodnyi Dim* was founded, and its building became the center of Ukrainian community and cultural life. In 1887 the educational society *Ukrainska Shkola was founded, followed by two economic organizations – the savings and loan association *Ruska Kasa in 1896 and the central union of agricultural credit associations *Selianska Kasa in 1903 – the cultural and educational society *Mishchanska Chyhtalnia* in 1880, the Women's *Hromada* in 1906, the sports central *Sich Union* in 1904, the Fedkovych Bursa (students' residence) in 1896 (with its own building in 1906), the musical societies *Bukovynskyi Boian* in 1895 and *Mishchanskyi Khor* in 1901, and the Bukovynian People's Theater in 1897.

Until 1914 Chernivtsi was one of the more important

The People's Theater in Chernivtsi, built in 1905

Ukrainian publishing centers. Here were published the monthly *Bukovynskaia zoria* (1870–1); the daily **Bukovyna* (1885–1918); the monthly *Biblioteka dlia molodezhi, selian i mishchan* (1885–93); the children's book series **Kreitsarova biblioteka* (1902–8); *Pravoslavnyi kalendar* (1874–1918); *Haslo* (1902–3); the political journals *Narodnyi holos* (1909–15, 1921, 1923), *Narodna sprava* (1907–10), *Hromadianyn* (1909–11), and *Borba* (1908–14); and literary, student, and teachers' publications.

Chernivtsi was also an important political, cultural, educational, and publishing center for the Rumanians, Jews, Germans, and Poles. The German writer K.-E. Franzos popularized T. Shevchenko's poetry, and the historian-ethnographer R. Kaindl studied the history of Bukovyna, particularly that of the Hutsuls.

During the First World War Chernivtsi was thrice occupied by the Russians, in the periods 30 August–21 October 1914, 26 November 1914–18 February 1915, and 18 June 1916–2 August 1917. It was the policy of the occupational regime to persecute nationally conscious Ukrainians, and the situation improved somewhat only after the Russian Revolution of March 1917 when O. *Lototsky became governor of Bukovyna. After the Ukrainian Regional Committee of Bukovyna was formed on 25 October 1918, a large public assembly was convened in Chernivtsi on 3 November 1918, which approved Bukovyna's union with the Ukrainian state. On 6 November 1918 the Ukrainians took control of Chernivtsi and appointed Y. Bezpalko mayor. Five days later, however, Rumanian troops occupied the city, and on 28 November the Rumanian General Congress of Bukovyna proclaimed Bukovyna's union with Rumania.

1918–44. During the Rumanian period, Chernivtsi remained the administrative center of Bukovyna, and in spite of the persecution of Ukrainians by Rumanian authorities, continued to be the center of Ukrainian life. New organizations were founded alongside earlier ones: the Bukovynskyi Kobzar musical society, the Ukrainian Male Choir, the Ukrainian Theater, and the sport clubs Dovbush and Mazepa. The headquarters of the *Ukrainian National party were located in Chernivtsi. Ukrainian publications were severely reduced: the weeklies *Borot'ba*, *Ridnyi krai*, *Rada*, and *Samostiinist'*; the daily *Chas*; and the journals *Promin'* and *Samostiina dumka* did appear, but very few books were published. A new building of Chernivtsi University and the House of Culture were erected in this period.

In the 1930s Chernivtsi became an important economic center. In 1936, 155 large and 61 small firms were located in the city, among them 5 mills, 8 large bakeries, 6 distilleries, 7 meat-packing plants, 16 food-processing plants, 21 chemical plants, 18 metalworking plants, 51 textile factories, 6 furniture factories, and 7 printing shops.

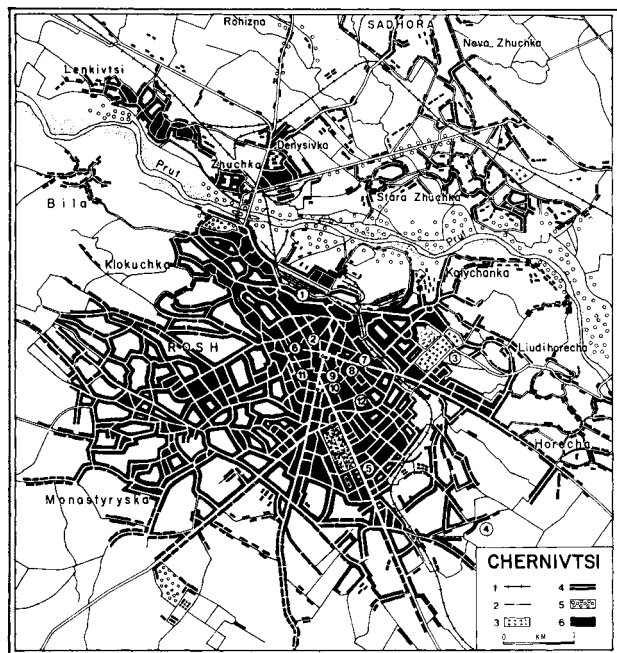

From June 1940 to July 1941 Chernivtsi was occupied by the USSR and then by Rumania. During the Second World War drastic changes occurred in the national composition of the city's population: in 1940 the Germans were repatriated to Germany, and some of the Rumanians returned to Rumania. The city was considerably damaged. Ukrainian civic and cultural life was completely disrupted, and many Ukrainian leaders were arrested.

After 1944. After Soviet troops occupied Chernivtsi for the second time, on 29 March 1944, the political order of 1940–1 was restored. Chernivtsi became the oblast capital. From 1956 the city began to be developed along the main arteries, and industrial sections were established in the north, central, and southern districts. In 1956 a natural-gas system was installed. The outlying town of Sadhora was incorporated into the city in 1965, which extended it to the left bank of the Prut. In 1971–3 a new railway bridge was constructed over the Prut River.

Chernivtsi possesses a labor force of about 70,000 workers and encompasses 60 percent of the oblast's industry. The major branches of industry are light industry, consisting of the textile complex Voskhod, the clothing complex Trembita, a hosiery complex, three knitting factories, two haberdashery factories, a shoe factory, and a glove factory; the food-processing industry, consisting of a sugar and alcohol plant, an oil and fats processing complex, a meat-packing plant, and a brewery; and the machine-building and metalworking industry, consisting of the light-machine plants Lehmarsh, Industriia, and Emalposud, an instruments plant, a metalworking plant, and a petroleum-machinery plant. The chemical industry encompasses a rubber-footwear plant and a consumer-chemicals plant. The electronic industry boasts the complex Elektromash. There is also a woodworking industry and a construction-materials industry. Street-cars have been replaced by trolley buses in the city's transportation system.

In 1970 there were 50 general-education schools, with 30,000 students, in Chernivtsi, including 12 secondary schools, 8 tekhnikums, 8 vocational schools, a music school, a teachers' college, and a medical school. The three institutions of higher learning – Chernivtsi University, with 10,000 students; the Medical Institute, established in 1944; and a branch of the Kiev Institute of Trade and Economy – had an enrollment of 15,000. Branches of institutes of the Academy of Sciences of the Ukrainian SSR are active in Chernivtsi; these include a branch of the Institute of Semiconductors, a branch of the Institute for Social and Economic Problems of Foreign Countries, and a branch of the Institute of History (specializing in the history of northern Bukovyna). The city is the home of the *Fedkovych Memorial Museum, the Kobylanska Memorial Museum, and a regional-history museum.

Population. Since 1775 the population of Chernivtsi has grown continuously (except between 1939 and 1941), as follows (in thousands): 1775–2.3; 1779–3.2; 1794–5.0; 1816–5.4; 1832–11.0; 1843–16.6; 1851–20.4; 1869–34.0; 1880–45.6; 1890–54.2; 1900–65.8; 1910–87.1; 1919–91.9;

1930–112.4; 1941–78.8; 1959–152.3; 1970–187.0; and 1981–224.0. The increase in population was a result of an influx from the countryside and an even greater influx from Galicia, Moldavia, Austria, and Germany.

After 1775 the city acquired a cosmopolitan character with an ethnically heterogeneous population. Besides Ukrainians and Rumanians, Jews, Germans, Poles, and, in smaller numbers, Russians, Hungarians, and Arme-

nians inhabited the city. Until 1918, however, the German language, which was used by the Germans and Jews (together constituting 50 percent of the city's population) and partly also by other ethnic groups, was dominant. The city was the most easterly German cultural center and had the largest proportion of Germans among the major cities of Ukraine. The accompanying table presents the changes in the national composition of the city's population.

The 1941 census testified to the great changes that had taken place at the beginning of the war: the resettlement of Germans and of some Ukrainians, Poles, and Rumanians in Germany and Rumania, and the influx of Jews from the surrounding areas. During the Soviet period the Germans and Poles disappeared from the city, and the number of Rumanians and Jews declined, while the number of Ukrainians and Russians increased. Today Chernivtsi has the largest percentage of Jews among the cities of Ukraine.

The religious composition of the city's population in 1910 was as follows: Orthodox, 24 percent; Greek Catholic, 11 percent; Roman Catholic, 27 percent; Protestant, 5 percent; and Jewish, 33 percent.

Architectural monuments. The oldest church in Chernivtsi is St Nicholas's Church, built of wood in 1607 and restored in 1954. Prominent churches constructed in the 18th century include the stone baroque-style St George's Church in Horecha (1767); the wooden Church of the Trinity, built near the village of Mahala in 1774 and moved to Klokuchka in 1874; and the wooden Church of the Dormition in Kalichanka (1783). The city hall, with a 45-m tower, was constructed by A. Mykulych in 1843–7 and houses the city soviet today. Nineteenth-century church architecture is represented by the baroque-style Greek Catholic church (1825–30); the Orthodox cathedral, built in the Byzantine style by Röhl (1844–64); and the Church of St Paraskeviia, built by A. Pavlovsky in the Romanesque style (completed by 1862). The residence of the Bukovynian metropolitan is the most impressive building in Chernivtsi. It was designed and constructed by J. Hlavka in 1864–82 and combines Romanesque and Byzantine architectural forms with motifs of Ukrainian folk art. In 1956 the residential ensemble, with its 12-ha park, became part of Chernivtsi University. The complex of Chernivtsi University was built in 1874–5. The city theater was designed by F. Fellner and H. Helmer in the Viennese baroque style with elements of the modern in 1904–5; today it houses the *Chernivtsi Oblast Ukrainian Music and Drama Theater. The railway station was built in the modern style in 1898–1903. More recent prominent constructions dating from the 1930s include the new

Population of Chernivtsi by nationality

A. Zhukovsky

Chernivtsi oblast. Chernivtsi oblast lies in southwestern Ukraine, bordering on Rumania and Moldavia. It was formed on 7 August 1940 out of the northern parts of Bukovyna and Bessarabia. Its area is 8,100 sq km, and its population is 904,000 (1982), of which 38 percent is urban. The oblast has 10 raions, 207 rural soviets, 10 cities, and 9 towns (smt). Only 70 percent of the oblast's population is Ukrainian.

The oblast can be divided into the following regions according to economic and geographic conditions: the plateau region between the Prut and the Dniester, with its intensive agriculture and concentration of food-processing and building-materials plants; the city of Chernivtsi and the surrounding region, with well-developed machine-building, light, and chemical industries; the foothill regions (on the right bank of the Prut) with light industry and an agriculture based on grain, potatoes, flax, and cattle raising; and the mountain region, where lumber and woodworking industries and sheep raising are concentrated.

Physical geography. Chernivtsi oblast lies within three geographical regions: the southwestern, mountainous part is in the Carpathian Mountains (more precisely, the *Maramureş-Bukovynian Upland and the *Hutsul Beskyd, with a maximum elevation of 1,565 m); the middle part, consisting of the foothills, is in *Subcarpathia (maximum elevation 537 m); and the northern part, an undulating plateau, is in the *Pokutian-Bessarabian Upland (reaching an elevation of 515 m). The climate is moderate continental except in the Carpathians, where it is of the mountain type. The July temperature is 10°–18°C in the mountains, 17°–19°C in the foothills, and 19°–20°C on the plateau. The January temperatures are –6° to –10°, –5° to –6°, and –4° to –5° c respectively. The annual precipitation is 800–1,200 mm in the mountains, 650–800 mm in the foothills, and 500–650 mm on the plateau. In the mountains the growing season is 136–162 days; in the other parts it is 205–215 days. The main rivers in the oblast are the Dniester, Prut, and Seret. The soils in the foothills are mostly peat-podzolized soils, and in the mountains they are brown forest soils and peat-brown soils. The mountains and foothills lie in the forest belt (beech is dominant on the lower slopes, fir on the higher), and the plateau lies in the forest-steppe belt. Forests cover 31.4 percent of the oblast's area.

History. Until the 13th century the present Chernivtsi oblast formed part of Kievan Rus'. Then it belonged to the Principality of Galicia-Volhynia, and from the second half of the 14th century to Moldavia. In 1774 the western (Bukovynian) part of the territory was incorporated into Austria. The northeastern part belonged to Russia after 1812 and was called Bessarabia oblast (later gubernia). From 1919 the whole territory was controlled by Rumania. Since August 1940 it has belonged to the Ukrainian SSR.

Population. The average population density is 109.7 people per sq km (1978 figures). The density is highest (140–160) in the northwestern part, which is one of the most densely populated regions of Ukraine. The lowest density occurs in the mountains. The percentage of urban population has increased from 19.5 percent in 1940 to 27.3 percent in 1960, 34.6 percent in 1970, and 37.5 percent in 1978. The population has grown steadily: it was 820,000 in 1940, 782,000 in 1960, 845,000 in 1970, and 896,500 in 1979. The birthrate is quite high (7.3 percent per year). Out-migration slightly exceeds in-migration. The oblast has only one large city, Chernivtsi (pop 232,000 in 1983). The other cities, such as Khotyn and Storozhynets, have fewer than 15,000 inhabitants.

Because the Ukrainian-Rumanian border does not

coincide exactly with the ethnic boundary, a large proportion of the oblast's inhabitants are Rumanians. The ethnic composition of Chernivtsi oblast in 1979 (1959 figures in parentheses) was Ukrainians, 70.1 (66.9) percent; Rumanians, 19.6 (19.6) percent; Russians, 6.6 (6.6) percent; and Jews 3.0 (5.4) percent.

Economy. Chernivtsi oblast is an industrial-agrarian region. Industry, which is the leading branch of the economy, developed mainly after the war, when existing enterprises were reconstructed and new industries were established; these included machine building, metalworking, and equipment making. The main branches of agriculture are grain growing, industrial crops, and cattle feeding.

Industries of the oblast usually process imported metals and local agricultural products. The food industry is the main industry, accounting for 41 percent of industrial production in 1970. Light industry comes second (28.5 percent), followed by machine building and metalworking (11.7 percent), and lumber and woodworking (9 percent). Energy to run industry comes from oil brought in from Lviv and Ivano-Frankivske oblasts, coal from the Donbas and the Lviv-Volhynia Coal Basin, and natural gas piped in from Kosiv. The largest power station is the thermoelectric station in Chernivtsi.

The main branches of the food industry are sugar refining (concentrated in Chernivtsi, Kostryzhivka, Nelypivtsi, and Zarozhany), meat packing and dairy processing (Chernivtsi and Novosilka), oil and fat production (in Chernivtsi), distilling, and fruit processing. The largest enterprises in light industry are the textile plant Svitlanok and the hose, knitwear, and clothes factory Trembita, both in Chernivtsi. The oldest branch of industry is the lumber, woodworking, furniture, and veneer industry, with plants in Chernivtsi, Vyzhnytsia, Berehomet, Storozhynets, Khotyn, and Putyliv. Bukovynian furniture is renowned beyond Ukraine. The main enterprises of the machine-building and metalworking industries are located in Chernivtsi: a machine-building plant for the oil, chemical, and electric industries; Leh-mash (a light-industry plant); and a factory producing farm implements. The chemical industry is new (a chemical and a rubber footwear plant in Chernivtsi). Building materials such as brick, tiles, ceramic products, reinforced concrete, and wall materials are produced by plants in Chernivtsi, Kostryzhivka, Kelmentsi, Storozhynets, and Sokyriany. The Hutsul region is famous for its handicraft industries – wood carving, kilim weaving, and embroidery.

Agriculture. In Chernivtsi oblast the main branches of agriculture are grain and sugar-beet growing, dairying, and meat-livestock raising. In 1976 there were 151 collective farms (208 in 1970) and 33 state farms (2 in 1970) in the oblast. Farmland constituted 59 percent of the oblast's area in 1976. Seventy-three percent of this land was cultivated, 7 percent was hayfields, 14 percent was pasture; 351,900 ha were seeded in 1976. Of this, 147,300 ha (41.9 percent) were devoted to grains, 40,800 ha (11.6 percent) to industrial crops, 32,000 ha (9.1 percent) to potatoes and vegetables, and 126,300 ha (35.9 percent) to fodder. Among the grains, corn (47,700 ha) and winter wheat (45,800 ha) are predominant. The main industrial crops are sugar beet (35,800 ha), sunflower, and flax (particularly in the foothills). Fruit orchards in the Khotyn and Sokyriany regions produce apples, plums, pears, and

cherries. The area devoted to fruits, berries, and grapes is 33,100 ha. In 1970–5 the average grain yield was 28.3 centners per ha (the winter-wheat yield was 26.8), the sugar-beet yield was 333.8 (the highest in Ukraine), and the potato yield was 136.8. The leading branch of animal husbandry, which accounts for half of the agricultural income, is beef- and dairy-cattle raising. Hog farming and sheep farming (particularly in the mountain regions) are expanding. Poultry farming and apiculture are of less importance. In 1976 there were 448,700 head of cattle (of which 154,000 were cows), 266,200 hogs, and 169,800 sheep and goats.

Transportation. The oblast has 466 km of railway track. The following railway lines run through Chernivtsi: the Chernivtsi-Zhmerynka-Kiev line, the Chernivtsi-Chişinău-Odessa line, and the Lviv-Chernivtsi-Bucharest line. Chernivtsi is the main railway junction. There are 3,000 km of road, of which 2,800 km are hard surface (1976 figures). The Chernivtsi-Lviv, Chernivtsi-Kiev (through Ternopil), and Chernivtsi-Chişinău-Odessa highways run through the oblast. Air routes connect Chernivtsi with Kiev and the oblast capitals of Ukraine.

Tourism is an important industry in the Carpathians, along the Cheremosh River, and in Chernivtsi.

Chernivtsi Oblast Ukrainian Music and Drama Theater (Chernivetskyi oblasnyi ukrainskyi muzychno-dramatychnyi teatr im. O. Kobylanskoï). Formerly the Kharkiv State Theater of the Revolution, which had been founded in 1931 and transferred to Chernivtsi in 1940. From 1941 to 1944 the theater operated in northern Caucasia and in the Tatar and Mari ASSR. A part of the company's repertoire consists of plays based on Bukovynian life, such as dramatizations of O. Kobylanska's novels (*Zemlia* [Earth], *U nedilii rano zillia kopala* [On Sunday Morning She Gathered Herbs], *Vovchytisia* [She-Wolf]); L. Balkovenko and H. Mizium's historical drama *Lukiian Kobylitsia*; and Z. Prokopenko's *Vesnianyi potik* (Spring Stream). The director B. Borin, the stage designer O. Plaksii, and the actors V. Sokyрко, P. Stoliarenko-Muratov, P. Mykhnevych, H. Yanushevych, and K. Tsypa have been associated with the theater.

Chernivtsi Ukrainian Gymnasium (Ukrainska himnaziia v Chernivtsiakh). A secondary school in Chernivtsi, which was opened in 1896 and which offered courses in both Ukrainian and German. Under the Rumanian occupation it was steadily Rumanianized, beginning in 1920. By 1925 the Ukrainian language was taught only as a subject, and in 1927 it was abolished from the curriculum altogether. In 1918 the school became the Ukrainian State Gymnasium, but in 1922 the Rumanians changed the name to the Fourth Gymnasium, and in 1930 to Liceul Marele Voievod Mihai. Among the gymnasium's principals were K. Kozak, A. Artymovych, and P. Klym. Teachers at the gymnasium included M. Korduba, V.

Kmitsykevych, Yu. Kobylansky, A. Klym, and M. Ravliuk. In 1913 the gymnasium had an enrollment of 560 and a faculty of 34. After 1940 the gymnasium was transformed into a ten-year school.

Chernivtsi University (Chernivetskyi derzhavnyi universytet). The university was founded in 1875, succeeding the Higher Theological School, which had existed since 1827. Until 1918 it was known as Franz-Josefs Universität, with German as the language of instruction and separate departments of Ukrainian and Rumanian language and literature. From 1919 to 1940 it was the Universitatea Regele Carol I din Cernăuți, with instruction in Rumanian, and since 1940 it has borne its present name.

During the Austrian period Chernivtsi University had three faculties: Orthodox theology, law, and philosophy. The department of Ukrainian language and literature was in the faculty of philosophy and was chaired by K. Hankevych and O. Kaluzhniatsky (1875–6), H. Onyshkevych (1877–82), and S. Smal-Stotsky (1885–1918). The department of Slavic languages was headed by O. Kaluzhniatsky (1875–99) and Ye. Kozak (1899–1923). The department of practical theology was under the direction of D. Yeremiichuk-Yeremiiv (1899–1919).

In this period the university was attended not only by Bukovynians, but also by many Galician students, among whom were I. Franko, L. Martovych, and D. Lukiianovych. V. Milkovych defended a doctoral thesis on the history of Eastern Europe and eventually was appointed professor at the university (1895–1919). O. Kolessa received a doctorate in the Ukrainian language. The following rectors of the university were Ukrainians: K. Tomashchuk (1875–6), O. Kaluzhniatsky (1889–90), and Ye. Kozak (1907–8). Ukrainian students constituted, on the average, about 20–25 percent of students enrolled: 41 out of a total of 208 in 1875, and 303 out of a total of 1,198 in 1914. There were about as many Rumanians, with the majority of students being Jewish or German.

In 1918–40 Chernivtsi University was Rumanianized: the Ukrainian departments were dissolved, and the Ukrainian professors dismissed. The faculty of philosophy was split into the faculty of philosophy and literature and the faculty of natural science. For many years the university's rector was I. Nistor, who was hostile towards Ukrainians. In 1920 there were 239 Ukrainians in a student body of 1,671. In 1933 the body of 3,247 students consisted of 2,117 Rumanians, 679 Jews, 199 Germans, 155 Ukrainians, 57 Poles, and 40 of other nationalities.

In 1940 northern Bukovyna was annexed to the Ukrainian SSR, and Ukrainian became the language of instruction at Chernivtsi University. The university was reorganized at first into 7 faculties and by 1982 had grown to 10 faculties: history, philology, foreign languages, geography, biology, chemistry, physics, mathematics, oriental studies, and general engineering. The theological faculty was abolished. Evening-school, correspondence-school, and graduate-school programs were introduced. In 1982–3 there were close to 10,000 students enrolled at the university, 54 percent of whom were correspondence and evening students. The teaching faculty numbered about 500, including 26 full professors.

The university's main building is the previous residence of the metropolitan. There are a number of research institutions associated with the university: a botanical

garden (est 1877), a biological research base in Zhuchka, a physics laboratory for semiconductor and thermodynamic research, an experimental fish farm, seismological and meteorological stations, and four museums (of zoology, botany, geology, and the university's history). The library possesses about 1.7 million books. The university has published *Naukovi zapysky* (58 vols, as of 1967), monographs, textbooks, and many other works. In 1982 its rector was K. Chervinsky. Public efforts to rename the university in honor of Yu. Fedkovych, led by the literary scholar Ye. Kyryliuk, did not gain the consent of the authorities. In the 1970s a faculty- and student-exchange program was established between Chernivtsi University and the University of Saskatchewan in Canada.

Chernobaiev, Mykola [Černobaiev], b 1797 in the Chernihiv region, d 7 March 1868. Physician. From 1820 Chernobaiev served in the military, becoming chief physician of Kiev Military Hospital in 1847. During the Crimean War (1853–6) he was in charge of the medical service of the Southern Army. Chernobaiev's works deal with the care and treatment of victims of plague epidemics, hemorrhoids, and other diseases common in the army. He was the first to describe cases of tularemia (in 1836).

Chernov, Leonid [Černov] (pen name of Maloshychenko), b 15 January 1899 in Oleksandriia, Kherson gubernia, d 13 January 1933 in Kharkiv. Writer. He traveled in the Far East and Siberia and in 1924 visited India, returning and settling down in Kharkiv in 1926. Chernov belonged to the writers' organization Avanhard. He published in the journals *Literaturnyi iarmarok* and *Prolitfront*. He wrote a book of travel sketches, *125 dniv pid tropikamy* (125 Days in the Tropics, 1928), and collections of short stories: *Sontse pid veslamy* (Sun under the Oars, 1929), *Stantsiia Znam'ianka* (Znamianka Station, 1930), and *Liudyna z inshoi planety* (A Person from Another Planet, 1931). He also published humorous stories, such as *Chudaky prykrashuiut' svit* (The Oddballs Make the World More Beautiful, 1929) and *Podarunok molodym kinematohrafistam* (A Gift to Young Cinematographers, 1930). A collection of his poetry, entitled *Na rozi bur* (On the Corner of Storms), was published posthumously in 1933.

Chernov, Leonid [Černov], b 18 June 1915 in Starobil'ske, Kharkiv gubernia. Painter and graphic artist. Chernov graduated in 1941 from the Kharkiv Institute of Arts, where he studied with M. Samokysha. His works include the landscapes *Blue Evening*, *Spring Morning*, and *Wind*; the portraits *Mother* and *Natalochka*; a series of color

autolithographs; watermarks; watercolors, such as *In the Carpathians* (1954) *Through Bulgaria* (1956) and *Through India* (1957); and book illustrations.

Chernov, Vasiliĭ [Černov, Vasilij], b 18 September 1852 near Tbilisi in Georgia, d 29 April 1912. Pediatrician. In 1889 Chernov became a professor at Kiev University, where he organized the first clinic for children's diseases. He was the author of works on the theory and practice of pediatrics, particularly studies of the absorption of fats, diseases of the digestive tract, and children's infections.

Chernozem (Ukrainian: *chornozem*). Soil that forms on a lime-rich loess substratum under the conditions of a moderate continental or continental, humid or dry climate and steppe vegetation. Soil bacteria decompose the organic remains of the steppe plants and produce new organic colloidal compounds, which are known as humus. Chernozem soil usually occurs as a thick layer (20–30 cm) of dark gray soil with a definite granular-lumpy structure and a high content (4–14 percent) of decomposed matter. It is soft and absorbs water and air well. These properties promote plant nourishment and bacterial development. The soil's fertility is high and can be increased by proper treatment, particularly by deep plowing.

Chernozem covers about 44 percent of the territory of Ukraine, but only 8.4 percent of the USSR as a whole and 6 percent of the world. Chernozem soils cover almost all of the forest-steppe belt, except in the western part of Ukraine, and the steppe belt. Various types of chernozem can be found in Ukraine, depending on climatic conditions, varieties of forest, and types of vegetation. Typical or deep chernozems, with 6–9 percent humus, a depth of 1.5–2 m, and the highest fertility, are prevalent in the forest-steppe belt. Ordinary chernozems, having a humus content of 6–8 percent and a depth of about 1 m, are widely found in the northern steppe. Southern chernozems are widespread in the southern steppe of Ukraine. They have the lowest humus content (4–6 percent) and a depth of 60–75 cm. The depth of carbonate occurrence is 0–30 cm. Their fertility is high if there is enough moisture.

Under proper tillage chernozems produce the highest possible yields of every type of agricultural crop. Their fertility is greatly increased by deep plowing and the addition of mineral fertilizers.

Chernukha, Valentyn [Černuxa], b 27 December 1929 in Kharkiv. Graphic artist. Chernukha graduated from Kharkiv Art School in 1951. He has produced series of lithographs on humorous subjects and illustrated such collections as *Suchasni ukraïns'ki baiky* (Contemporary Ukrainian Fables, 1962), M. Hodovanets's *Baiky* (Fables, 1963), and J. Korczak's *Matsiusevi pryhody* (The Adventures of Matsius, 1969). In collaboration with V. Vasyliiev and Yu. Severyn, he executed a monumental panel in the café Avanhard in Kharkiv (1964).

Chernysh, Oleksander [Černyš], b 25 July 1918 in Kholmy, Chernihiv gubernia. Archeologist; research associate of the archeology section of the Institute of Social Sciences of the Academy of Sciences of the Ukrainian SSR. Chernysh has studied a number of Paleolithic sites. His works devoted to the history of the inhabitants on Ukrainian and Moldavian territory during the Stone Age include *Volodymyrivs'ka paleolitychna stoianka* (The Volody-

myrivka Paleolithic Site, 1953), *Paleolitychna stoianka Molodove v* (The Paleolithic Site Molodove v, 1961), and 'Karta paleolitu URSR' (Map of the Paleolithic Era in the Ukrainian SSR) in *Naukovi zapysky Instytutu suspil'nykh nauk AN URSR* (vol 2, 1954), and many others.

Chernyshevsky, Nikolai [Černyševskij, Nikolaj], b 24 July 1828 in Saratov, Russia, d there 29 October 1889. Eminent Russian publicist and writer, ideologue of the revolutionary Russian intelligentsia. Chernyshevsky wrote for the journal *Otechestvennye zapiski* and later became the chief writer of the journal *Sovremennik*, the major organ of the revolutionary movement opposed to tsarist rule. Sentenced to penal servitude and exile for his participation in the underground organization Zemlia i Volia, Chernyshevsky spent the years 1864–83 in Siberia. He wrote studies in political economy, philosophy, and literary criticism. Chernyshevsky was a critic of capitalism and economic liberalism; his socioeconomic views were those of a utopian socialist. In philosophical outlook Chernyshevsky was a materialist, but he did not subscribe to Marxist dialectics. He strongly identified himself with the populists (see *Populism, Russian and Ukrainian) and with the Russian Westernizers, opposing the Slavophiles. In his literary criticism Chernyshevsky was a consistent realist. His novel *Chto delat'* (What Is to Be Done, 1863) became a programmatic work for the Russian revolutionary intelligentsia.

Chernyshevsky considered the political movements of the oppressed peoples to be a positive phenomenon. In his works he defended the right of Ukrainians to develop their own culture based on their native language. He gave favorable evaluations of the work of T. Shevchenko and other Ukrainian writers. In an article entitled 'Natsional'naia beztaktnost'' (National Tactlessness), Chernyshevsky sharply attacked the Lviv journal *Slovo* for its anti-Russian stance.

Chernyshevsky's work was popularized by I. Franko and M. Pavlyk, who translated *Chto delat'*. Soviet historiography, maintaining its thesis concerning the invariably 'beneficial influence of the Russian revolutionary democrats' on 19th-century Ukrainian figures, exaggerates Chernyshevsky's influence on a number of Ukrainian writers, including T. Shevchenko, P. Myrny, I. Franko, P. Hrabovsky, and Lesia Ukrainka. P. Tychna wrote his poem 'Chernyshevs'kyi i Shevchenko' (Chernyshevsky and Shevchenko) in this spirit.

Chernyshov, Borys [Černyšov], b 27 January 1888 at Yasenka stanytsia in the Kuban, d 31 August 1950. Geologist and paleontologist, professor at Dnipropetrovske, Leningrad, and (from 1939) Kiev universities, full member of the Academy of Sciences of the Ukrainian SSR from 1939. From 1939 to 1946 Chernyshov served as vice-president of the academy and as director of the academy's Institute of Geological Sciences. He conducted research in the Urals and the Donets Basin and wrote valuable studies on pelecypod, brachiopod, and crustacean fossils, especially in the Mesozoic and Paleozoic deposits of the Donets Basin.

Cherry, sour (*Cerasus vulgaris* or *Prunus cerasus*; Ukrainian: *vyshnia*). A tree or bush of the rose family that grows up to 7 m in height. The cherry is believed to have originated in Caucasia and the Balkans. Because of its

valuable, juicy fruit, which is consumed in large quantities whether fresh, dried, cooked, or preserved, the cherry tree is widespread throughout Ukraine. Cherries are also used to make wine and liquor, and dried cherries are exported. The best-known varieties of cherry in Ukraine are the Ukrainian Griotte, Ostheim Griotte, Lihel's Griotte, Early Shpanka, Ukrainka, Kaniv, and the Melitopol dessert cherry. Wild species grow in the steppe gullies: the mahaleb cherry (*Prunus mahaleb*), which is a bush or tree up to 8 m in height, and the ground cherry (*Cerasus fruticosa*), which is a bush up to 2 m in height.

Chersonese Taurica or **Chersonesus** (known as Kher-son in the Middle Ages and as Korsun in Slavic sources). Ancient Greek city and city state in the southwestern part of the Crimea, near present-day *Sevastopol. The city was established in 422–21 BC by Megarian Greek colonists from Heraclea Pontica, a city on the southern coast of the Black Sea. In ancient times the city of Chersonese was an important manufacturing and trade center as well as the political center of a city state that encompassed the southwestern coast of the Crimea. The city flourished in the 4th–2nd century BC. It had a democratic system of government and coined its own money. Its economy was based on viticulture, fishing, manufacturing, and trade (grain, cattle, fish) with other Greek cities, the Scythians, and the Taurians. In the 1st century BC Chersonese recognized the sovereignty of the Bosphoran prince Mithradates VI and, later, of Rome. At the end of the 4th century AD the city became part of the Byzantine Empire. In the 5th–11th century it was the largest city on the northern coast of the Black Sea and an important center of Byzantine culture. At the end of the 10th century Chersonese was captured and held briefly by the Kievan prince Volodymyr the Great. From that point on Byzantine cultural influences often entered Kievan Rus' through Chersonese. At the beginning of the 13th century, when Constantinople was captured by the Crusaders, Chersonese came under the protection of the Trabzon (Trebizond) Empire. In the second half of the century the city suffered a rapid decline as Genoa established a trade monopoly on the Black Sea. The Tatars sacked the city in 1299 and at the end of the 14th century, bringing about its depopulation.

The remaining ruins and the site of the former city were studied and excavated many times, beginning in 1827 (by K. Kostsiushko-Valiuzhnych) and systematically from 1876 (by R. Lener, K. Hrynevych, G. Belov, A. Yakobson, and others).

Chersonese covered an area of up to 40 ha. Excavations uncovered the remains of Greek, Roman, and Byzantine city walls, residential blocks with rectilinear streets, homes with rainwater reservoirs, workshops, over 50 Christian churches, palaces, a theater seating over 3,000 people, etc. The graves outside the city walls contained a rich inventory of ancient artifacts. (See also *Kherson Historical-Archeological Museum.)

Cherven towns. Group of towns and fortresses on Volhynian territory – Cherven, Volyn, Lutske, Suteiske, Yurody, etc – which were situated on the left bank of the Buh River on the border between Poland and Rus'. The area controlled by these towns was also known as the Cherven Land (Chervenska zemlia). Historians have offered many hypotheses and have argued for a long time about the extent of the territory and the political affiliation of the Cherven towns, which were united around the town of Cherven on the Huiva River. In 981 Prince Volodymyr the Great captured the Cherven towns from the Polish princes, but in 1018 the Polish prince Bolesław I the Brave won them back. In 1031 Yaroslav and Mstyslav Volodymyrovych finally annexed the towns. The towns played an important role in Kievan Rus' as trade links between Kiev and Byzantium (through Hungary) when the Black Sea route was severed by the Cumans. In the 11th–12th century the Cherven towns belonged partly to the Volhynian principality; in the 13th–14th century they belonged to the Principality of Galicia-Volhynia.

Chervinsky, Petro [Červins'kyj], b 1849 in Chernihiv, d 1931. Civic leader and zemstvo statistician. After graduating from the St Petersburg Institute of Agriculture, Chervinsky returned to the Chernihiv region. For his participation in Ukrainian civic life he was exiled to Kholmogory and lived there in 1870–5. After returning from exile, he worked as a statistician in the Chernihiv gubernia zemstvo (1876–90). Along with I. Shrah, F. Umanets, and other liberal civic activists he made an important contribution to the improvement of farming in the Chernihiv region. Chervinsky published many works on this subject. His best-known work dealt with the problems of communal life. He also helped to prepare a collection of materials on the evaluation of agricultural land, which was assembled by the Chernihiv statistical department of the gubernia zemstvo executive (1877–87, 15 vols). Under the Soviet regime Chervinsky lived mostly in Russia and worked for a long time at an agricultural research station near Viatka.

Chervona hazeta (Red Newspaper). Ukrainian newspaper published from 1926 to 1932 in Rostov-na-Donu by the North Caucasian Regional Committee of the CPSU, under the editorship of Chapal. For those readers with a low level of literacy, a special Ukrainian-language edition, entitled *Chervona hazeta dlia malopys'mennykh*, was published from 1931 to 1936.

Chervona Kalyna (Red Guelder Rose). A publishing co-operative founded in 1921 in Lviv by former members of the Ukrainian Sich Riflemen and the Ukrainian Galician Army for the purpose of collecting and publishing materials, documents, and memoirs about the Ukrainian struggle for independence (1917–21). The board of directors was chaired by S. Shukhevych, the president of the publishing house was O. Navrotsky, and the members of the executive were M. Matchak, P. Postoliuk, I. Tyktor, and L. Lepky. Its membership grew from 103 in 1921 to over 1,000 by 1939.

Chervona Kalyna published the annual *Istorychnyi*

kalendar-al'manakh Chervonoï Kalyny (1921–39, 18 issues, eds O. Navrotsky, L. Lepky, and, from 1937, I. Ivanets) and the monthly journal *Litopys Chervonoï Kalyny* (October 1929 to July–August 1939, eds V. Sofroniv-Levytsky and L. Lepky). Both periodicals were devoted to Ukrainian military history, in particular to the period 1914–21, and contained valuable bibliographies (contributed by K. Kupchanko, I. Shendryk, and others) and a wealth of photographs. Articles on the Princely era and the Cossack period also appeared, contributed by such authors as M. Andrusiak, Mykhailo Antonovych, M. Holubets, T. Kostruba, I. Krypiakevych, I. Losky, and V. Sichynsky. In a period of 18 years Chervona Kalyna published about 80 titles. Belles lettres on military themes included O. Babii's *Hutsul's'kyi kurin'* (The Hutsul Battalion), Ya. Vilshenko's *Zhyttia i pryhody Tsiapky Skoropada* (The Life and Adventures of Tsiapka Skoropad), F. Dudko's trilogy *V zahravi* (In the Red Glow), R. Kupchynsky's trilogy *Zametil'* (The Snowstorm), works by M. Brylinsky, B. Lepky, V. Sofroniv-Levytsky, V. Lopushansky, M. Matiiv-Melnyk, and Yu. Shkrumeliak, and the historical works of E. Borschak (*Mazepa, Hryhor Orlyk, and Napoleon i Ukraïna* [Napoleon and Ukraine]).

A large number of memoirs were also published, including those by M. Halahan, V. Petrov, S. Shukhevych, D. Doroshenko, I. Maksymchuk, and Ye. Chykalenko; K. Levytsky's *Velykyi zryv* (The Great Upheaval): H. Koch's *Dohovir z Denikinom* (The Treaty with Denikin); V. Yurchenko's *Shliakhamy na Solovky* (Along the Roads to the Solovets Islands) and *Peklo na zemli* (Hell on Earth); A. Krezub's *Partyzany* (The Partisans); and O. Stepaniv's *Na peredodni velykykh podii* (On the Eve of Momentous Events). Several historical monographs were published by Chervona Kalyna: *Beresteis'kyi myr* (The Peace Treaty of Brest-Litovsk) and *Zoloti vorota* (The Golden Gate), both edited by I. Kedryn-Rudnytsky; O. Dumin's *Istoriia Legionu uss, 1914–1918* (The History of the Legion of the Ukrainian Sich Riflemen, 1914–1918) and, under the pseudonym A. Krezub, *Narys istorii ukraïns'ko-pol's'koi viiny* (An Outline of the History of the Ukrainian-Polish War); and O. Kuzma's *Lystopadovi dni 1918 r.* (The November Days of 1918).

Two albums rich in photographic materials came out – *Ukraïns'ki Sichovi Stril'tsi, 1914–1920* (The Ukrainian Sich Riflemen, 1914–1920, ed B. Hnatevych) and *Pami'iaty vozhdia* (In Memory of the Leader, dedicated to Gen M. Tarnavsky, ed V. Lasovsky). The musical heritage of the Ukrainian soldiers was preserved in two published song collections – *Surma* (The Bugle) and *Velykyi spivanyk Chervonoï Kalyny* (The Great Songbook of Chervona Kalyna, ed Z. Lysko). The publications of Chervona Kalyna played an important role in fostering the traditions of the Ukrainian liberation struggle and the ideals of political independence among the public in Western Ukraine. After being closed by the Soviets in 1939 in Lviv, the publishing house was restored in New York in 1949 as a result of the efforts of P. Postoliuk, who served as its president until September 1978. The following individuals have served as chairmen of the board of directors in the United States: V. Galan, I. Porytko, and Ya. Rak. Kh. Navrotska, R. Danyiuk, V. Onyshkevych, S. Shuhan, O. Slupchynsky, R. Haietsky, and L. Pryshliak were members of the executive and active members of the enterprise. R. Kupchynsky, S. Ripetsky, L. Lutsiv, M. Ostroverkha, and I. Kedryn-Rudnytsky belonged to the edi-

torial committee. Chervona Kalyna had published 22 works in the United States by 1981, including O. Udovychenko's *Tretia Zalizna Dyviziia* (The Third Iron Division), V. Galan's *Bateriia smerty* (The Death Battery), M. Lozynsky's *Halychyna v rokakh 1918–1920* (Galicia in the Years 1918–1920), and second editions of O. Kuzma's *Lystopadovi dni*, E. Borschak's *Hryhor Orlyk*, and the album *Ukraïns'ki Sichovi Stril'tsi* (Ukrainian Sich Riflemen).

Chervona Rus' (Red Rus' or Red Ruthenia). The historical name of Galicia, which was used mostly by non-Ukrainian writers in the 16th–19th century, and never by the populace. Some historians and geographers of the 17th–18th century, such as S. Starowolski and J.B. Homann, applied this name to all Ukraine or to the part of it west of the Dnieper River. Most frequently, however, the term Red Rus' was used in documents to designate the former Galician principality, which in the 15th–18th century constituted the Rus' and Belz voivodeships. After 1772 Red Rus' was officially designated as Galicia and Lodomeria. The artificial term *Chervenska Rus'*, used in certain Polish and Russophile circles, was an attempt to associate Red Rus' with the *Cherven towns and stems from the tendentious hypothesis about the 'non-Ukrainian' character of these towns.

Chervone [Červone]. iv-9. Town smt (1964 pop 4,700) in Andrushivka raion, Zhytomyr oblast. The town has a food industry that produces sugar, alcohol, and cheese.

Chervone [Červone]. ii-15. Town smt (1970 pop 2,900) in Hlukhiv raion, Sumy oblast. Chervone has a sugar refinery and a distillery. Called Yesman until 1957, it was a raion center from 1923 to 1963.

Chervone pravo (Red Law). Biweekly legal journal published in Kharkiv by the People's Commissariat of Justice of the Ukrainian SSR in 1926–31. The first two issues bore the title *Chervonyi iuryst* (The Red Jurist). In 1931 it was merged with the journal *Visnyk radians'koï iustytzii* and began to appear under the title **Revoliutsiine pravo*. One hundred and fourteen issues were published.

Chervone selo (Red Village). Popular monthly published for Communist village activists. It appeared in Kharkiv from 1925 to 1933 as a publication of the All-Ukrainian Central Executive Committee. Special sections were printed in the languages of the national minorities: in German (*Das rote Dorf*), in Bulgarian (*Cherveno selo*), and in Yiddish. In 1933 *Chervone selo* merged with the newspaper *Komunist* (later **Radians'ka Ukraïna*).

Chervonenko, Stepan [Červonenko], b 16 September 1915 in Okip in Poltava gubernia. Soviet public figure and diplomat. He is a graduate of Kiev University and of Party schools in Kiev and Moscow and has lectured on Marxism-Leninism. In 1949 he worked in the cc of the CPU. He is a member of the cc of the CPSU and was a candidate to its Presidium (1957–9). He is also a deputy to the Supreme Soviet of the Ukrainian SSR and the Supreme

Soviet of the USSR. Since 1959 he has been in the diplomatic service as the USSR representative to China (until 1965), then to Czechoslovakia (1965–75), and until 1982 to France.

Chervonets. Common name for Polish, Lithuanian, Hungarian, and other gold coins (ducats, sequins), also known as *chervoni zoloti* (red gold coins), that were in circulation in Eastern Europe and Ukraine in the 17th–18th century. At the beginning of the 18th century the Russian government tried to replace these coins by introducing its own *chervonets*; later the two-ruble *chervonets* containing about four grams of gold was widely circulated. In 1922–47 the notes issued by the State Bank of the USSR in various denominations were called *chervintsi*. The *chervonets* of this period was valued at 7.74234 grams of gold and was equivalent to 10 new rubles. After the monetary reform of 1947 the *chervonets* was no longer used (see also *Currency and coins).

Chervoni kvity (Red Flowers). An illustrated children's biweekly published by the Central Committee of the Communist Youth League of Ukraine and the Office of Socialist Education of the People's Commissariat of Education of the Ukrainian SSR in Kharkiv (1923–31) and in Kiev (1930–1). In 1931 it merged with the magazine *Bil'shovy-cheniata* (1924–31) to form the new magazine **Pioneriia*.

Chervoniuk, Yevhen [Červonjuk, Jevhen], b 21 April 1924 in Brusyliv, now in Korostyshiv raion, Zhytomyr oblast. Operatic bass, graduate of Kiev Conservatory, student of I. Patorzhynsky (1950). In 1950 he was laureate of the International Vocal Competition in Prague. In 1950 he was appointed soloist of the Kiev Opera and Ballet Theater, and in 1952 he joined the Kharkiv Opera and Ballet Theater. Since 1960 he has been teaching at the Kharkiv Institute of Arts. Chervoniuk has given concerts in the countries of Eastern Europe, Canada, Israel, and elsewhere.

Chervonoarmiiske [Červonoarmijs'ke]. III-9. Town smt (1967 pop 3,700), raion center in Zhytomyr oblast. The town was established in the late 16th century and was called Pulyny until 1935. The town's industries are food processing and brick making; it also has a museum of history and ethnography.

Chervonoarmiiske [Červonoarmijs'ke]. III-6. City (1966 pop 5,500) in western Volhynia; raion center in Rivne oblast. It has a food industry. Established in the late 16th century, it was called Radziviliv until 1939. From the second half of the 19th century to 1914 Radziviliv was an important trade center; its proximity to the Russian-Austrian border allowed it to participate in the active trade between the two empires. The city's 1910 population was 14,600.

Chervonohrad [Červonohrad]. III-5. City (1983 pop 62,000) in Lviv oblast, located in the Buh Depression on the Buh River. The town was built in 1692 by the Polish magnate F.K. Potocki and was called Krystynopil until 1953. In 1736 Potocki built a palace and funded a Basilian monastery (including the baroque Church of St George). Until 1946 the town was a known religious center, attracting pilgrims by its miracle-working icon of the Mother of

New housing in Chervonohrad

God. In the 19th century the *Krystynopil Apostol* (see **Horodyshe Apostol*) and the famous chronicle of 1763–79, which was reprinted several times, were part of the town's valuable collection of historical monuments. After 1951 Chervonohrad became one of the centers of the recently established Lviv-Volhynia Coal Basin, and it grew rapidly. Its population increased from 3,000 in 1939 to 12,000 in 1959, 44,000 in 1970, and 53,000 in 1977. The city has a reinforced-concrete products plant, a wood-working plant, a dairy, a clothing and stocking factory, a branch of the Lviv Polytechnical Institute, and a mining tekhnikum.

Chervonohryhorivka [Červonohryhorivka]. VI-15. Town smt (1977 pop 8,125) on the Kakhivka Reservoir in Nykopol raion, Dnipropetrovske oblast. Its major industry is food processing. The town was established in the late 18th century and was formerly called Chernyshivka.

Chervonopartyzanske [Červonopartyzans'ke]. V-20, DB III-7. City (1976 pop 25,000) in Sverdlovsk raion, Voroshylovhrad oblast, founded in 1947. The city has coal mines and coal-processing plants, as well as a regional museum.

Chervonozavodske [Červonozavods'ke]. III-14. City (1970 pop 8,300) in Lohvytsia raion, Poltava oblast, situated on the Sula River. It was established in 1928 when a sugar-refining complex was built on the site; today food processing is still the main industry. The city also has a distillery and a food-processing tekhnikum.

Chervonyi Donets [Červonyj Donec']. IV-17. Town smt (1976 pop 7,000) in Balakliia raion, Kharkiv oblast. The town is located on the banks of the Donets River near the Shebelynka gas field.

Chervonyi Ekskavator (Red Excavator). A construction- and road-machine-building plant in Kiev, established in 1898 as a small sowing-machine plant. In 1975 it became the main plant of a large manufacturing association that includes excavator plants in other oblasts and republics. Since 1955 the plant has specialized in hydraulic excavators. It produces many-scooped excavators, concrete mixers, lifting machines, trailers, etc.

Chervonyi Khutir burial site. The burial ground, located near the Chervonyi Khutir suburb of Kiev, on the left bank of the Dnieper River, belongs to the late period of the *Trypillian culture, dating back to the end of the

3rd millennium BC. The site was excavated in 1950–1 by V. Danylenko and M. Makarevych, who discovered the remains of 260 cremations in urns and pits. Decorated pottery, weapons, ornaments, and implements were also found. The large quantity of arms (daggers, arrowheads, and spears) unearthed indicates that the region was inhabited by warlike herdsman.

Chervonyi perets' (Red Pepper). Semimonthly magazine of humor and satire published in Kharkiv in 1922 and then from 1927 to 1934 by **Visti VUTsVK*. It was edited by V. *Chechviansky. Contributors included O. Vyshnia, Yu. Vukhnal (I. Kovtun), Yu. Gedz (O. Yasny), Antosha Ko (A. Hak), B. Simantsiv, and K. Kotko (M. Liubchenko). Among the artists whose work appeared in the magazine were O. Khvostenko-Khvostov, O. Dovzhenko, A. Petrytsky, K. Ahnit-Sledzevsky, O. Koziurenko, and L. Kaplan. Besides political satire (invariably presented from the official Soviet viewpoint), *Chervonyi perets'* devoted considerable attention to the campaign against speculation, administrative incompetence, bureaucratization, deficiencies in food supply and transportation, and everyday difficulties. After most of its contributors fell victim to Stalinist repression, *Chervonyi perets'* ceased publication. It was revived in 1941 under the title *Perets'* and is now published in Kiev.

Chervonyi prapor (Red Flag). Semimonthly organ of the *Ukrainian Social Democratic party, published in Ternopil in 1906–7 under the editorship of Ya. Ostapchuk. From 1907 to 1914 the Chervonyi Prapor publishing house issued popular brochures under the editorship of M. Hankevych.

Chervony prapor (Red Flag). The first Ukrainian socialist newspaper in North America. It was published by the Ukrainian local of the Socialist Party of Canada (SPC) in Winnipeg, Manitoba, and appeared in 18 issues from 15 November 1907 to August 1908. P. Krat, V. Holovatsky, and M. Stechishin were its editors. As the vanguard of socialism among Ukrainian workers and farmers it stimulated the creation of Ukrainian branches of the SPC. It was succeeded by **Robochyi narod* (1909–18). *Chervony prapor* was the first periodical to use the term Ukrainian (spelled 'Ookrainian') in Canada.

Chervonyi shliakh (Red Pathway). Leading Ukrainian monthly journal in the 1920s. It was published from 1923 to 1936 in Kharkiv. The first editorial board consisted of O. Shumsky (editor), P. Tychyna, H. Hrynko, V. Blakytyn, S. Pylypenko, and M. Khvylovy and reflected an independent, although official, attitude. Later Hrynko became the editor in chief, and, still later, many personnel changes occurred during the purges of Ukrainian intellectuals. Among the contributors were the leading writers, critics, and scholars of the day, including many from abroad. The journal printed poetry, prose, criticism, and articles in the field of theater, drama, economics, and history. It also had a good book-review section.

Chess (*shakhy*). The game of chess was brought to Ukraine from the Near East by traders in the 9th century. Chess pieces discovered by archeologists in the Chorna Mohyla kurhan in Chernihiv are estimated to belong to the 10th century, while those found in Kiev and Vysh-

horod belong to the 11th–12th century. Numerous references to the game in medieval oral literature, and particularly in the *bylyny*, testify to the popularity of chess among the boyars and princes. Later the Orthodox church's prohibition of the game (similar to that of the Catholic church in the West) undermined its popularity. Yet chess was played at gentry manors in the 16th–17th century, and in the 18th century it spread among the intelligentsia. In Russia the so-called Russian school of chess playing emerged by the end of the 19th century, and imperial and international competitions were held.

Chess became very popular in Ukraine at the turn of the 20th century, when chess clubs were founded and individual tourneys for local championships were organized in many cities, such as Kiev, Kharkiv, Odessa, Yuzivka, and Mykolaiv. In 1924 the first competition for the chess championship of Ukraine was held in Kiev. It was won by Ya. Vilner of Odessa. Subsequent republican competitions were held almost every year, usually in Kiev but sometimes also in Kharkiv, Odessa, and Dnipropetrovske. The following players have been chess champions of the Ukrainian SSR: V. Rauzer, Y. Pohrebysky, M. Shumylin, A. Bannyk, I. Lypnytsky, O. Sokolsky, Yu. Geller, A. Khavin, L. Shtein, and Yu. Nikolaievsky. F. Bohatyrchuk attained the level of international master. In 1927 he shared first place at the USSR championship tournament and in 1938 captured second place. Yu. Boholiubov (1889–1952), who won several international competitions, in particular the tournament in Moscow in 1925 where he placed ahead of two world champions (E. Lasker and J. Capablanca), was a player of world rank. Boholiubov played A. Alekhine for the world championship in 1929 and 1934.

In the 1970s–1980s the following Ukrainian grand masters, who belong to the Soviet extra class of players, advanced to the level of world players: O. Biliavsky, Y. Dorfman, H. Kuzmyn, A. Mykhalchyshyn, S. Palatnyk, I. Platonov, O. Romanyshyn, V. Savon, and V. Tukmakov. Ukraine does not appear as an independent participant in the biannual international olympiads; Ukrainian chess masters participate in the competitions as members of the USSR team. At the beginning of the 1980s about one million chess players were registered in Ukraine.

Among Ukrainian chess players the following women deserve to be noted: L. Rudenko, who was the first women's world champion in 1950–3; grand master M. Litynska, who is considered to be one of the five best women players in the world; and the masters L. Semenova and L. Mulenko.

Several grand masters of world rank who are of Jewish origin were born in Ukraine: I. Boleslavsky, a noted theoretician and author of several important chess books; Yu. Geller; L. Shtein; and L. Albur, who now lives in the United States and is one of the top American chess players.

In Galicia Ukrainians began to play chess in an organized fashion only in the 1920s. In 1926 a chess club called Shakhovyi Konyk was founded in Lviv and was soon renamed the Society of Ukrainian Chess Players. Under the German occupation this club formed a section of the sports association Ukraina. Its membership consisted of the best Western Ukrainian chess players, and in the 1930s the society was one of the two best chess clubs in Lviv. The first competition for the Ukrainian championship of Lviv was held in 1928. Ten players took part, and S. Popel captured first place, O. Slobodian second, and

Ya. Onyshchuk third. The second competition was held in 1943 with 14 players participating. The first three places were captured by Popel, M. Turiansky, and M. Romanyshyn. Popel and E. Yaniv won the championship of Western Ukraine (Sianik, 1944), and that year Popel drew a match with F. Bohatyrychuk in Cracow.

In the diaspora Ukrainians began to organize chess clubs and competitions after 1945. M. Turiansky was one of the best players in Vienna in 1945–7. In France S. Popel won the championship of Paris three times – in 1951, 1953, and 1954. In Switzerland V. Bachynsky captured the championship of Geneva several times.

In Australia Ya. Shevchuk took first place several times in the competitions of New South Wales. F. Bohatyrychuk, I. Teodorovych, L. Turkevych, Ya. Onyshchuk, D. Kulyk, A. Yusyp, and R. Turkevych were well-known players in Canada. B. Nazarko, B. Stepanenko, and V. Dzera competed in the 1960s–1970s for the championships of Canada, Ontario, and Toronto.

Some Ukrainian players in the United States achieved high marks from the American Chess Federation and the rank of master or senior master. M. Turiansky took second place in the tournament of the Marshall Chess Club in New York in 1950, won the championship of Chicago in 1952 and 1953, and received the title of master. S. Popel moved from Paris to the United States in 1956 and won the championship of the midwestern states and the title of master. O. Popovych, a key player in the eastern states, attained the rank of senior master during the 1960s–1970s. B. Bachynsky, a senior master, has the highest ranking among Ukrainian chess players in the United States. A tournament for Ukrainian chess players from Canada and the United States held in Toronto in 1969 was won by the United States team.

The first Ukrainian chess club in the United States was organized in New York in 1949 under the name Shakhovyi Konyk. It had about 30 members. Eventually, almost every sports club that belonged to the Association of Ukrainian Sports Clubs in North America (USTsAK) had its own chess team; starting in 1966, these teams participated in annual tournaments for the individual championship of USTsAK. The following players won first place in these competitions: O. Popovych (1966–8, 1972), S. Popel (1969), S. Stoiko (1970), L. Blonarovych (1971, 1973), V. Dzera (1974, 1981, 1983), B. Bachynsky (1975–9), and M. Turiansky (1982).

Among Ukrainian contributors to chess literature, O. Selezniv (1888–1965) won recognition in the West for his studies, which were published in the chess journals of various countries and appeared in Berlin in a separate collection under the editorship of E. Lasker. Selezniv's collection *Sto shakhmatnykh etiudov* (100 Chess Moves) came out in Moscow in 1940. A. Hryn (problemist), T. Horhiev, and P. Bondarenko, the author of *Shakhovyi etiud na Ukraïni* (Chess Moves in Ukraine, Kiev 1966), have written on chess. Among Western Ukrainian writers on chess, O. Slobodian, Ye. Onyshchuk, and T. Kukych deserve to be mentioned.

Chestakhivsky, Hryhorii [Āstaxivs'kyj, Hryhorij], b. 1820 in Kherson gubernia, d. 1893. Painter, close friend of T. Shevchenko. In 1861 he painted *T. Shevchenko's Grave at the Smolensk Cemetery*, *T. Shevchenko's Coffin in Transit*, and *A Peasant beside the Coffin of T. Shevchenko*. He left a memoir of Shevchenko as a student at the St Petersburg Academy of Art. At Chestakhivsky's initiative, a hill near Kaniv was chosen as Shevchenko's burial site.

Chevalier, Pierre, dates of birth and death unknown. French officer of the 17th century. In 1646 he commanded a detachment of Ukrainian Cossacks. He served in the French army from 1648 to 1654 and was secretary of the French embassy in Poland. Between 1653 and 1663 he wrote *Histoire de la guerre des Cosaques contre la Pologne. Avec un discours de leur origine, pays, mœurs, gouvernement et religion*, which was translated into English (1672) and Ukrainian (1960). Chevalier's work is a valuable source on the history and ethnography of Ukraine, particularly on the history of the Cossack-Polish War of 1648–54.

Chicago. City on the shore of Lake Michigan in the state of Illinois, second-largest city in the United States, and important industrial, commercial, and cultural center of the midwest. In 1980 the population of Chicago proper was 3,005,072 and of the metropolitan area, 7,102,328. Of metropolitan Chicago's inhabitants, 50,000–60,000 are of Ukrainian origin. Ukrainians began to settle in the city in the 1880s. The earliest settlers came from Transcarpathia, the later ones from Galicia. In 1892 V. *Simenovych, a physician, arrived in Chicago and began to organize the Ukrainian community. The first Greek Catholic parish – the parish of the Blessed Mother of God – was established in 1902; its congregation was predominantly Carpatho-Ruthenian.

The Ukrainian immigrants resided close to the meat-packing plants, the railway stations, and later the steel plants, in which most of them worked. Then they gradually moved north from the southern part of the city. For a long time West Town had the highest concentration of Ukrainians in Chicago, and in the 1980s it became officially known as 'Ukrainian Village.' Smaller numbers of Ukrainians lived in Burnside, West Pullman, Cicero, and Harvey. In the 1950s–1960s Ukrainians began to move into the western and northwestern suburbs, such as Oak Park, River Forest, Park Ridge, and Palatine. According to V. Simenovych's estimates there were 25,000–30,000 Ukrainians in Chicago in 1930. The wave of postwar immigrants from Western Europe added another 7,000–8,000 Ukrainians to Chicago's population. Natural population growth and the influx from other American cities brought the Ukrainian population of Chicago up to 60,000 by 1980. Yet only 25,000–30,000 Chicagoans are members of Ukrainian parishes and active in Ukrainian organizations. The socioeconomic profile of the Ukrainians has gradually become more diversified. By the 1930s there were over 100 small Ukrainian enterprises and businesses in Chicago, and after 1950 the number of Ukrainians in the professions and civil service increased rapidly. There are five to six large companies or factories owned by Ukrainians.

The parishes were the earliest centers of organized community life for the Ukrainians in Chicago. For a long time the main center of Ukrainian life was the Greek Catholic Church of St Nicholas, which was founded in

1905. Its present imposing edifice was erected in 1913–15 in the style of the Cossack baroque. In 1961 the church was elevated to a cathedral when Chicago became the seat of the Ukrainian Catholic Eparchy of St Nicholas, headed by bishops J. Gabro and (since 1981) I. Lotocky. There are six other Ukrainian Catholic parishes in Chicago. The Carpatho-Ruthenians have two Greek Catholic churches. There are five Ukrainian Orthodox churches and one Carpatho-Ruthenian Orthodox church in Chicago. The first Ukrainian Orthodox church – the Church of the Holy Trinity – was established in 1915 by former Greek Catholics as an ‘independent national church,’ and eventually it became the source of the Ukrainian Orthodox movement in the United States. In 1925–30 I. Teodorovch, the archbishop of the Ukrainian Orthodox church, resided at the Church of the Holy Trinity, and in 1922–6 the parish published the periodical *Dnipro*. In 1945 the church was moved to the present ‘Ukrainian Village’, its name was changed to St Volodymyr’s Church, and it was elevated to a cathedral. The bishops have been H. Shyprykevych, O. Novytsky, and C. Buggan. The Church of the Holy Protectress is the seat of the Ukrainian Autocephalous Orthodox church (Conciliar) and is under the care of Metropolitan H. Ohiichuk. A Ukrainian Baptist church has been in existence in Chicago since 1915. There is also a congregation of Ukrainian Pentecostals in the city.

The first known secular organization was the St Nicholas Brotherhood, which was founded by V. Simenovych and S. Yanovych. Rev. M. Strutynsky was an active community organizer who was responsible for founding the *Sich societies and the savings-and-loan association *Dnipro*. After the First World War the Sich societies, which adopted the program of the United Hetman Organization, were quite active. For a time Chicago was the American center for the Ukrainian monarchist movement. Its magazine *Sich was published there in 1924–34, and its prominent leaders, such as O. Shapoval, O. Nazaruk, O. Tarnavsky, S. Hrynevetsky, and M. Siemens-Simenovych, resided there. In 1930, under the influence of the OUN, S. Kuropas founded the *Organization for the Rebirth of Ukraine. Some Ukrainians came under the influence of leftist-socialist groups and founded the Union of Ukrainian Workers’ Organizations. On the occasion of the World’s Fair in Chicago in 1933 the founding congresses of the Ukrainian Youth League of North America and of the Ukrainian Professional Association were held in the city. In 1940 a broadly based organization – the League of American Ukrainians (led by I. Duzhansky for many years) – was established and became the local branch of the Ukrainian Congress Committee of America.

New immigrants arriving after the war developed a network of political, social, cultural, and professional organizations, which numbered about 120 by 1980. In 1981 the central office of Ukrainian National Aid was moved to Chicago. There are eight branches of the Ukrainian National Women’s League of America, several branches of the Organization for the Defense of Four Freedoms for Ukraine, and a number of veterans’ associations in the city. The central office of the Association of Ukrainian Cooperatives of America, the chief executive of the Ukrainian Veterinary Medical Association, and the executive of the Ukrainian Medical Association of North America are located in the city. The national executives of

The Ukrainian pavilion at the Century of Progress World Fair in Chicago, 1933

the Ukrainian Librarians’ Association, the Association of Ukrainian Businessmen and Professionals, and the Ukrainian Cossack Brotherhood also have their offices there. Several youth organizations are active in Chicago and own their own camping grounds in Wisconsin – Plast Ukrainian Youth Association has a campsite in Westfield, and the Ukrainian Youth Association of America has a campsite in Baraboo. Ukrainian sports associations flourished in Chicago as early as the 1930s. Since the 1950s the most active among them has been the Levy sports club.

Among the more important Ukrainian institutions in Chicago are the credit unions *Samopomich* (Selfreliance) and *Pevnist*; the Ukrainian bank *Tryzub*, which existed until 1970; the consumer co-operative *Samodopomoha*, which runs a summer resort on Round Lake and a Ukrainian senior citizens’ home in Chicago; the *Ukrainian Institute of Modern Art, which supports a permanent art gallery; and the Ukrainian National Museum, which houses a research library.

The first Ukrainian school was established in 1906 at St Nicholas’s Church, and by 1922 it had 300 students. In 1936 this school was expanded into a Ukrainian Catholic day school, which included the Ukrainian language in its school program. In the 1950s–1960s the Church of the Nativity of the Blessed Virgin Mary ran a day school. In 1980 there were five Saturday schools for Ukrainian studies, the largest of which was the school run by the association *Ridna Shkola*. In 1966 two-year pedagogical courses were established for teachers of Ukrainian studies; since 1978 they have been run by the Chicago branch of the Ukrainian Catholic University. The Slavic department at the University of Illinois (Chicago Circle) offers a program in Ukrainian language and literature.

A number of Ukrainian newspapers have been published in Chicago: *Ukraina* (1917–20, 1930–2, ed. V. Simenovych), the biweekly *Sich* (1924–34), the weekly *Nash stiah* (1934–41), the weekly, and then biweekly, *Ukrains’ke zhyttia* (1955–), the Catholic weekly *Nova zoria* (1965–), and the Catholic biweekly *Tserkovnyi visnyk* (1968–). Several important magazines and journals have also been published there: the monthly, and then bi-monthly, *Samostiina Ukraina* (1948–), the illustrated quarterly, *Ovyd* (1957–76), the quarterly *Ukrains’ke kozatstvo* (1964–80), the illustrated bimonthly *Ekraïn*, the Orthodox

bimonthly *Tserkva i zhyttia* (1957–), and the quarterly *Likars'kyi visnyk* (1961–).

In the 1950s–1960s the Nova Stsena theater and the choirs *Surma* (conducted by O. Pleshkevych and I. Trukhly) and later *Prometei* (conducted by R. Andrushkiv) were active in Chicago. There are a number of dance and music ensembles, mostly connected with youth organizations. The following Ukrainian writers and poets have lived or still live in Chicago: O. Babii, T. Kurpita, R. Zavadovych, H. Cherin, B. Rubchak, and Yu. Kolomyiets. The painters M. Harasovska-Dachyshyn and A. Kolomyiets and the sculptors K. Milonadis and M. Urban work in Chicago. Ukrainian musicians such as M. Malko (the conductor of the Chicago Symphony Orchestra), I. Bilohrud (a composer and pianist who conducts his own music school), and the singer I. Matsiuk-Hrytsai contribute to the musical life of the city.

Some Ukrainians are active in American politics: I. Himka and J. Kulas are leading members of the Democratic party, while I. Zadrozhny and M. Kuropas (President G. Ford's adviser on ethnic affairs) are active in the Republican party. B. Antonovych (Republican) and M. Kulas (Democrat) were elected in the 1970s and 1980s to the Illinois House of Representatives. R. Smook, a lawyer from Chicago, was the director of the European office of the United Ukrainian American Relief Committee.

The following events can be viewed as the highlights of Ukrainian life in Chicago: the delegating of K. Bilyk in 1919 to represent the American Ukrainians on the Ukrainian delegation to the Paris Peace Conference; Metropolitan A. Sheptytsky's visit to Chicago in 1921; Ukrainian participation in the 1933 Century of Progress Exposition, at which the Ukrainians had a separate pavilion, 'Ukraine,' and an exhibit of A. Archipenko's sculptures; the large demonstrations for Ukrainian independence staged in 1918 and 1933. In the 1960s Chicago was the center of bitter strife among Ukrainian Catholics over whether to adhere to the Julian or the Gregorian calendar of holy days, which led to the organization of the new parish of ss Volodymyr and Olha.

Child-care institutions. State institutions for raising children who are orphans or wards of the state. They developed out of orphanages, which were first established by monasteries and from the 19th century to the 1917 revolution were mostly under the jurisdiction of the Department of Empress Maria's Institutions.

The first Ukrainian foster home was established in 1917 in Kiev for children from Galicia who had lost their parents in the war. In that year other child-care institutions were opened in the vicinity of Kiev and in other cities of Ukraine.

As soon as the Soviet regime was established in Ukraine, a large network of child-care institutions was set up to care for children who had been left homeless by the war and revolution. (See *Children, homeless.) Such

institutions appeared first in 1919, and by the end of 1921 there were 1,644 of them, supporting 98,890 children. Owing to the terror and collectivization, child homelessness remained a permanent feature of the Soviet system; hence, the number of child-care institutions, in spite of fluctuations, stayed high. In 1940 there were 553 institutions with 68,770 children. After the Second World War the number of homeless children increased again and so did the number of institutions. In 1950 there were 821 institutions with 99,940 children. The return to normal, peaceful life brought a decline in the number of institutions: in 1955, 621 institutions cared for 64,230 children; in 1960, 518 institutions cared for 56,600 children (the figures include institutions for blind, deaf-mute, and retarded children).

There are four types of child-care institutions: (1) preschool institutions for children aged three to seven; (2) institutions for school-age children between the ages of seven and sixteen; (3) mixed institutions for entire families of preschool and school-age children; and (4) special institutions for cripples, etc. Most of the institutions come under the Ministry of Education of the Ukrainian SSR. Some institutions are connected with certain enterprises and come under the appropriate government ministries, but agencies of public education are in charge of their wards' education. The program in preschool institutions coincides with the nursery and kindergarten program, and in school institutions, with the general curriculum. When a ward reaches the age of eighteen, the agencies of public education determine whether he/she should continue his/her studies or begin working.

In 1959 the Soviet authorities decided to change the institutions for school children gradually into boarding schools. Since 1963 there have been no statistics on child-care institutions in the Ukrainian SSR, but statistics for the USSR show almost a four-fold reduction in child-care institutions between 1958 and 1971.

Child labor laws. On 21 September 1921 the Council of People's Commissars of the Ukrainian SSR approved the Code of Laws Concerning the Work of Minors and Children. The code became ineffective in 1926, at which time some of its provisions were incorporated into the Labor Code of the Ukrainian SSR, which now regulates the work of minors. Many of the provisions have been superseded by later legislation of the USSR and the Ukrainian SSR.

Children, homeless. The number of homeless children in Ukraine reached alarming proportions in the 1920s as a result of the economic devastation, famine, and epidemics brought on by the First World War and the revolution. In 1922, according to official statistics, there were seven million homeless children in the USSR. A large proportion of them lived in Ukraine, which had been a theater of war and terror for four years and suffered from severe famine in 1921, when grain was confiscated and exported to Russia. According to official statistics, out of a total of 3,861,000 children, 1,734,000 suffered famine in the five southern gubernias of the Ukrainian SSR in 1922. Only 228,000 of these hungry children received organized aid.

With the revival of economic life in 1922 the problem of homelessness was not solved. *Child-care institutions, refectories, and hostels were established haphazardly at first. Later, a network of hostels and foster homes for

preschool and school-age children and handicapped children was set up. Child settlements were also organized. This network came under the jurisdiction of the People's Commissariat of Education and the public control of children's commissions that were members of the Central Committee for the Aid of the Children of the Ukrainian SSR. In 1925, according to official statistics, there were 788 institutions aiding 72,400 children in Ukraine. Fifty percent of the children were of peasant origin, and 71 percent were between the ages of eight and fourteen. Some orphans were entrusted to the care of peasant, artisan, and worker families. Many homeless children were also placed in colonies for delinquents run by the People's Commissariat of Education and the security police, such as the GRU labor colony near Kharkiv. Yet gangs of homeless, destitute children who survived by begging and stealing and turned into professional criminals or died of disease could still be found in the cities and towns of Ukraine. The forced collectivization and the anti-kulak drive of 1929–31, followed by the famine of 1932–3, swelled the ranks of homeless children. Thousands of peasant children perished, while the survivors became homeless. The Soviet authorities adopted severe measures against them: on 1 June 1935 the Central Committee of the All-Union Communist Party (Bolshevik) and the Council of People's Commissars of the USSR issued the decree On Liquidating Homelessness and Neglect among Children, and in 1941 the Supreme Soviet of the USSR passed a decree making 14-year-olds subject to criminal prosecution generally and 12-year-olds subject to prosecution on charges of theft, rape, assault, etc. At the end of the 1930s the number of homeless children appeared to decline, since many of them were imprisoned in labor colonies or concentration camps.

During the Second World War the number of orphans increased dramatically. The destruction of cities and villages, economic devastation, and famine caused a swift rise in the numbers of homeless children. After the war the network of foster homes was expanded to accommodate the orphans. In 1947 there were 702 institutions, caring for 109,340 children. Teenage orphans were put into labor-reserve schools and were ruthlessly exploited in industry. Deportation from Ukraine was widely practiced, and thus many of these youths lost touch with their country.

M. Hlobenko

Children's folklore. Oral literature created by adults for children, some of the folklore created for adults that has turned into oral poetry for children, and the oral poetry created by children. The characteristic feature of children's folklore is its clear educational purpose. The material in this field differs according to the ages of the children at which it is aimed. The basic genres of children's folklore are cradle songs, lullabies, humorous songs, nonsense stories, teasing jests, counting songs, song games, children's ritual songs of the annual cycle (carols, New Year's songs, spring songs), proverbs and sayings, riddles, and folk stories for children (particularly stories about animals).

Cradle songs are the first examples of children's folklore that children hear from their mothers. They are remarkable for their poetic beauty, tenderness, sincerity, vivid imagery, and playful language. In them one often comes across the image of the purring cat, the personifica-

tion of sleep and drowsiness, and the figures of various animals and birds. Lullabies and soothing songs have a pronounced rhythm and a wide range of sounds. They are often sung while the child is being fondled. Counting songs help the child memorize the number sequence.

A special place in children's folklore is occupied by folk stories. Each age group has its own stories. For the smallest children there are 'Kolobok' (The Ball), 'Ripka' (The Turnip), 'Ivasyk-Telesyk,' and 'Rukavychka' (The Mitten). For children of school age there are 'Kotyhoroshok' (Pea-roller) and many magic stories that end in the victory of good over evil. Children's folklore contains many ancient inventions, such as games ('We Sowed Millet,' 'Poppies Are Growing on the Hill,' and 'The Quail') and dance games ('The Sad Rabbit' and 'The Noise').

Children's folklore began to be published in the 1830s–1840s. Ukrainian poets such as Lesia Ukrainka, S. Rudansky, M. Shchokoliv, and O. Oles have written many poems on the model of popular cradle songs. Folk stories have inspired many prose works and literary adaptations of folk stories. They have had an important influence on such writers as Marko Vovchok, I. Franko, and M. Kotsiubynsky. (See also *Children's literature.)

P. Odarchenko

Children's literature. Ukrainian literature for children follows the development of Ukrainian literature in general, sharing with it some authors and works as well as the general impediments in development (see *Ems Ukase). The earliest work common to both children's and adult literature is the *Azbuka* (ABC, 1574) published by the printer I. Fedorovych in Lviv. The first book wholly devoted to children was *Chytanka dlia malykh ditei do shkil'noho i domashn'oho upotrebleniia* (A Reader for Small Children for School and Home Use, Lviv 1850), compiled by M. Shashkevych. Other primers soon followed, notably in eastern Ukraine (P. Kulish's *Hramatka* [Grammar, St Petersburg 1857]; T. Shevchenko's *Bukvar* [Primer, St Petersburg 1860]; M. Hattsuk's *Ukrains'ka abetka* [Ukrainian Alphabet, 1861]).

The interest of the Ukrainian romantics in folklore led inadvertently to the growth in children's literature. Thus, L. Borovykovsky's *Baiky i prybauitky* (Fables and Sayings, Kiev 1852) and the first fables of L. Hlibov (which began to appear in 1853) laid the beginnings for entertaining as well as didactic children's literature (see *Fable.) Artistic prose written specifically for children, however, appeared only with the writings of Marko Vovchok, who may be called the founder of modern Ukrainian children's literature. Her *Opovidannia Marka Vovchka* (The Stories of Marko Vovchok, St Petersburg 1865) contained the first

real stories for children: 'Dev'iat' brativ i desiaty sestrytsia Halia' (Nine Brothers and a Tenth Sister Halia), 'Vedmid' (The Bear), 'Nevil'nychka' (The Slavegirl), and 'Karmeliuk.' However, her most famous work for children, *Marusia*, owing to the prohibition of publications in Ukrainian, appeared first in a Russian translation from Ukrainian (1871). It also appeared in a French translation edited by P.J. Stahl (*Maroussia, d'après la légende de Marko Wozzoh*, 1878) before it finally came out in the original Ukrainian (1905). The French redaction has enjoyed great popularity and countless editions. It is still recommended literature for children in France.

Some authors circumvented the restrictions on original Ukrainian literature by translating works from other literatures; these translations included M. Starytsky's *Kazky Andersena z korotkoiu ioho zhyttiepyssiu* (Fables of H.C. Andersen with a Short Biography, 1873), O. Pchilka's *Ukrains'kym ditiam* (For Ukrainian Children, 1882); and B. Hrinchenko's *Robinzon, opovidannia pro te, iak odyn cholovik po chuzhykh kraiakh mandruvav i iak vin sam na ostrovi sereď moria zhyv* (Robinson, the Story of How One Man Traveled in Foreign Lands and How He Lived Alone on an Island in the Middle of the Sea, 1891). Most eastern Ukrainian writers contributed their stories and works for children to publications in Western Ukraine, where a series of *children's magazines had been established. In Lviv children's literature came under the special care of the Ruthenian Pedagogical Society (see *Ridna Shkola society), which undertook the publication of Ukrainian children's books as a means of combating Polonization. Between 1884 and 1910 the society published about 150 books for children, some with illustrations. The society's most noted contribution to the development of children's literature, however, was the outstanding magazine **Dzvinok* (1890–1914). During its existence it had among its contributors the most noted Ukrainian writers and illustrators of the time (M. Kotsiubynsky, Lesia Ukrainka, B. Hrinchenko, V. Shchurat, I. Nechui-Lyvytsky, K. Hrynevychyeva, and others). The most important contributor was I. Franko; *Dzvinok* serialized several of his stories for children – 'Lys Mykyta' (Mykyta the Fox; nos 3–21, 1890), 'Abu Kasymovi kaptsi' (Abu Casim's Slippers, nos 1–23, 1895) – and published many of his individual animal stories, fables, and translations (in 1896–8). A notable first was also the appearance in *Dzvinok* of the first opera for children, *Koza Dereza* (Billy Goat's Bluff) by M. Lysenko.

Publication activity spread into eastern Ukraine with the relaxation of Russian censorship after the 1905 revolution. O. Lototsky's collection of stories *Vinok* (Wreath, 1905, 2d edn 1911) was issued by the newly established Nashym Ditiám publishing house in St Petersburg. Translations of children's books were published by Ya. Orenshtein in Kiev (1903–14). Some translations, as well as original works, were published by L. Kyselytsia in the series *Dytiacha Biblioteka* (Children's Library) in Chernivtsi (1909–14). The translations of H.C. Andersen's tales and Mark Twain's *Tom Sawyer* and *Huckleberry Finn* were issued by B. Hrinchenko's publishing house, Vik. The most notable children's authors at this time were A. Chaikovsky and A. Kashchenko, who both wrote Cossack adventure stories.

Children's literature continued to be written and published in the period between the two world wars. In Western Ukraine some 500 titles appeared during this

time. In Transcarpathia P. Kukuza published a magazine for children, *Pchilka* (The Bee, 1923–33), as well as a series, *Dytiacha Biblioteka*, of 88 titles (1923–38). The Svit Dytyny publishing house in Lviv (1919–40) produced about 200 titles as well as the magazine *Svit dytymy*. Among its most prominent authors were A. Lototsky and I. Lypa. Also of interest were the poetic stories and plays by O. Oles (*Solom'iany bychok* [The Straw Ox, 1927] and others) published by Chaika publishers in Prague.

In Soviet Ukraine children's literature took on a special significance as a means of educating future Communist cadres. The most prominent Soviet Ukrainian children's authors in the interwar years were A. Holovko, author of such stories as 'Chervona khustyna' (Red Kerchief, 1926); S. Vasylychenko, author of 'Aviatsiyni hurtok' (The Aviation Group, 1924); O. Kopylenko, author of novels of school life (*Desiatyklasnyky* [Tenth Graders, 1938]); and M. Trublaini. Also very popular were the translations from Russian of K. Chukovsky's works (*Likar Aibolyt* [Doctor Owlwithurts, 1926], *Vid dvoch do p'iaty* [From Two to Five, 1928], and others). Some excellent poetry for children was written by P. Tychyna. Of other writers who wrote for young children the most noted was N. Zabala (*Derev'iany bychok* [The Wooden Ox, 1935], *Kazka pro pivnyka ta kurochku i pro khytru lysychnu* [A Tale about the Rooster and the Hen and the Crafty Fox, 1936], and other books). Other authors of note were O. Ivananenko, M. Pryhara, V. Bychko, and I. Nekhoda. Currently the most prolific Soviet Ukrainian writer of children's literature is V. Nestaiko, who combines boys' adventures with some science fiction and humor (*Suputnyk 'Lira-3'* [Sputnik 'Lira-3,' 1960], *Pryhody Robinzona Kukuruza* [Adventures of Robinson Kukuruzo, 1964], *Taiemnytsia tr'okh nevidomykh* [The Secret of Three Strangers, 1970], etc).

The war years brought an interruption to the publishing of children's literature. The only exception was the *Ukrainske Vydavnytstvo* publishing house in Cracow, which published not only the journal *Mali druzi* but also some notable titles: a jubilee edition of I. Franko's *Lys Mykyta* (1941), illustrated by E. Kozak; R. Zavadovych's *Pryhody Gnomyka Romtomtomyka* (The Adventures of Gnome Romtomtomyk), and his poetic tale *Khloptsi z zelenoho boru* (The Boys from the Green Wood, 1943).

After the war activity in children's literature was resumed by the establishment of the *Association of Ukrainian Writers for Young People (OPDLM) in 1946 in Germany. The OPDLM has since spread to many Western countries and has established, under the direction of B. Hoshovsky, its publishing firm *Nashym Ditiám* in Toronto; it has more than 100 titles to its credit, among them: *Pryvit, Ukraïno, tobi* (Greetings to You, Ukraine, 1950), consisting of poems and stories illustrated by V. Tsymbal, O. Sudomora, and M. Mykhailevych; Marko Vovchok's *Sestra Melassia* (Sister Melassia), illustrated by J. Hnizdovsky; and N. Mudryk-Mryts's *Pryhody horishka* (Adventures of a Little Nut, 1970).

Prior to the arrival of the postwar emigration some Ukrainian books for children had appeared in Canada. The first was a Ukrainian-English dictionary compiled by I. Bodrug and M. Shcherbinin in 1905. In 1913 the first bilingual Ukrainian-English reader, *Manitoba-Ruthenian Reader*, appeared. Although few original books were written, children's needs were served by the establishment of several magazines (*Tsvitka*, Jersey City, NJ 1914–17; *Dzvinochok*, Winnipeg 1918). Nevertheless, prior

Children's magazines

to 1945 most books for children were imported from Ukraine.

Although OPDLM is the primary publisher of books for children, other Ukrainian associations (Plast, the Ukrainian National Women's League of America), publishing houses (Howerla, Knyhospilka), newspapers, and even individual authors (R. Zavadovych) publish children's books. In recent years some Ukrainian books for children have appeared also in English: K. Ushinsky's *How a Shirt Grew in the Field*, 1967; *Tusya and the Pot of Gold*, 1971; several books illustrated by Y. Surmach-Mills; the collections *Ukrainian Folk Tales*, 1964, illustrated by J. Hnizdovsky, and *The Flying Ship and Other Ukrainian Folk Tales*, 1975; M. Halun Bloch's *Bern, Son of Mikula*, 1972, illustrated by E. Kozak; and a prose adaptation of I. Franko's classic, *Fox Mykyta*, 1978, by B. Melnyk, illustrated by W. Kurelek).

Children's magazines. The first children's magazine published in Ukraine was *Lastivka* in 1869, a weekly supplement to the journal *Uchytel'*, edited by M. Klemertovych. In 1875, starting with the 15th issue, *Lastivka* became an independent biweekly and was published until 1881. In 1881–3 I. Trembitsky published the semi-monthly **Priiatel' ditei* in Kolomyia. At the same time *Novost'* was published in Lviv by O. Shcherban (edited by H. Kupchanko); one time it issued a supplement also called *Priiatel' ditei*. All these journals of Russophile sympathies served the readership in Galicia for a period of over 10 years but failed to become firmly rooted.

The children's magazine **Dzvinok* (1890–1914) in Lviv marked a turning point and had a lasting influence on the development of children's periodicals. It was professionally edited in Galicia and included among its contributors writers from central and eastern Ukraine. It fulfilled its purpose well. A monthly supplement to *Misionar*, **Malyi misionarchyk*, was published and edited by the Basilian fathers in Zhovkva in 1903–14. It gave special attention to religious matters.

The only children's magazine in central and eastern Ukraine before the First World War was a monthly supplement to the paper *Ridnyi kraj*, entitled **Moloda Ukraïna*, published and edited by Olena Pchilka in Kiev in 1908–14. During Ukraine's independence a literary, illustrated, semimonthly, *Voloshky*, came out in Kiev from October 1917 to January 1918 under the editorship of N. Romanovych-Tkachenko and with the support of V. and K. Antonovych. In Kamianets-Podilskyi S. Rusova

Children's magazines

edited the short-lived *Ranok* (1919). It was illustrated by P. Kholodny, Sr, and others.

After the war the monthly **Svit dytyny* began to appear in Lviv. It was published and edited by M. Taranko and played an important educative role in Western Ukraine and in the diaspora. The religious and national traditions of *Malyi misionarchyk* were assumed in 1921–39 by **Nash pryiatel'*, which was published by the Marian Youth Society in Lviv and edited by the Basilian fathers. In 1931–9 the *Ukrainska Presa* publishers, owned by I. Tyktor, published **Dzvinochok*, a mass monthly aimed especially at peasant children. For a brief period children's magazines of a nationalist orientation appeared: the illustrated monthlies *Veselka*, published in 1933 by H. Hanuliak; *Iuni druzi*, published by *Ukrainska Rekliaama* publishers and edited by P. Polishchuk in 1933–4; *Orlenia*, published by *Desheva Knyzhka* publishers; and **Mali druzi* (1937–8), edited by B. Hoshovsky, which after a two-year interruption was published by *Ukrainske Vydavnytstvo* publishers in Cracow (1940–2) and Lviv (1942–4).

The Polish authorities prohibited the distribution of Galician children's magazines in Volhynia, Podlachia, and Polisia. This prompted the Orthodox metropolitanate in Warsaw to publish the magazine *Dytyna* in 1937–9 for these regions. Its editor was I. Korovytsky. In Rivne the *Ukrainska Shkola* educational society published **Sonechko* (1935–7). The magazines published in Volhynia during the Second World War included *Shkoliaryk*, edited by A. Kolomyiets, which appeared in Dubno (1941–2),

and *Orlenia*, issued in Rivne (1942–3). The children's press in Ukrainian territories under Polish rule was very important in instilling a national consciousness in Ukrainian children (something that the Polonized schools could not do).

In Chernivtsi, Bukovyna, the *Ruska Besida* society published a monthly book series, *Biblioteka dlia Molodozhy* (Library for Youth, 1885–95), and *Lastivka* (1894–6). The *Ukrainska Shkola* society published *Ukrains'ka lastivka* (1933–9).

In Uzhhorod, Transcarpathia, the Basilian monastic order published a monthly bulletin, *Svitlo* (1913–14 and 1916). Later **Vinochok dlia podkarpats'kykh ditochok* (1920–4) and *Dzvinochok* came out in Uzhhorod; both were edited by I. Pankevych. **Nash ridnyi kraj*, published in Tiachiv by O. Markush in 1922–39, was aimed at older children. **Pchilka*, a children's journal, was published and edited by P. Kukuza in Uzhhorod in 1923–32.

In Soviet Ukraine children's magazines have served and continue to serve Communist upbringing. The Central Bureau of the Communist Children's Movement published the following magazines: for younger children, the monthlies **Zhovtenia* (Kiev, 1928–41) and **Tuk-tuk* (Kharkiv 1929–35); for older children, **Chervoni kvity* (Kharkiv, 1923–31), which in 1931 was amalgamated with *Bil'shovycheniata* (1924–31), a magazine for peasant children, and in 1937 with the magazine *Vesela bryhada* (1931–7), forming a new magazine, **Pioneriia* (1931–41). This last magazine was revived in 1950 and is currently published in Kiev in Ukrainian and in Russian. In 1922 the Central

Committee of the Communist Youth League and the People's Commissariat of Education of the Ukrainian SSR began publishing *Lunyi spartak* for members of the Pioneer organization and schoolchildren. Since 1923 it has appeared in Russian under the title *Lunyi leninets* and briefly (1938–41) in Ukrainian under the title *Lunyi pioner*. In 1923 *Na zminu* began to appear in Kharkiv; in 1943 it was renamed *Zirka*.

**Barvinok*, an illustrated monthly for younger schoolchildren, has been published in Kiev in Ukrainian since 1945 and in Russian since 1950. A magazine for preschool children, **Maliatko*, has appeared since 1960. Both magazines are published by the Central Committee of the Communist Youth League. Magazines in specialized areas – art, technology, science, etc – are published only in Russian for all of the USSR.

The Ukrainians of Bačka, Yugoslavia, published the magazine **Nasha zahradka* (Ruski Krstur, 1937–40), edited by M. Kovach. Since 1945 *Pionerska zahradka* has appeared. Since 1956 *Svitanok* (entitled *Dytiache slovo* up to 1958) – a biweekly supplement for schoolchildren in the paper **Nashe slovo* – has appeared in Warsaw. In Prešov the biweekly **Veselka* has appeared since the 1950s.

Ukrainian émigrés published briefly in Regensburg, Germany, in 1945 *Shkoliar* and *Shkoliaryk*, two children's journals edited by L. Poltava. In Munich V. Orenchuk published *Vovcheniata* (1946), and in Neckarsulm L. Haievskva published *Sonechko* (1947). B. Hoshovsky issued *Mali druzi* in Augsburg (1948) and *Iuni druzi* in Munich (1947–8). In 1947 the almanac *Nashym ditiam* appeared in Munich. The Association of Ukrainians in Great Britain published the magazine *Iuni druzi* (1956–74).

Before the Second World War children's magazines in Canada and the United States were not successful. Several magazines appeared briefly in Winnipeg: in 1918 *Dzvinochok*; in 1924 *Ditochyi svit*, published by the Canadian-Ukrainian Publishing Association; in 1925–8 *Promin'*, published by S. Doroshchuk; and in 1931 *Iahidka*, published by M. Borysyk. After the Second World War the following children's magazines appeared in Canada: **Mii pryiate!* (1949–66), published by the Central Office of Ukrainian Catholics in Canada in Winnipeg and edited by Rev S. Izhyk; the monthly *Soniashnyk* (1956–61), published by P. Volyniak in Toronto; a children's page in the magazine *Zhinochyi svit* entitled 'Dytiachyi svit' and in *Ukrains'kyi holos* entitled 'Viddil dlia molodi,' both published in Winnipeg.

In the United States the first children's magazine was the illustrated quarterly *Zirka*, which began to appear in 1913 in New Britain, Connecticut, as a supplement to *Dushpastyr* and was edited by Rev M. Zalitch. The Ukrainian National Association published *Tsvitka* in Jersey City in 1914–17. After this, Ukrainians in the United States subscribed to children's magazines published in Galicia. Only in 1954 did the Ukrainian National Association resume publication of children's literature, first as a supplement to the daily **Svoboda* (1954–5), and from 1956 as a separate magazine, **Veselka*, which has been edited by B. Hoshovsky, R. Zavadovych, and V. Barahura. Since 1953 *Plast*, the Ukrainian scouting organization has published **Hotuis'*, a magazine for its youngest members, in New York. Since 1951 the woman's magazine **Nashe zhyttia* in Philadelphia has had a permanent children's page entitled 'Nashym maliatam' (For Our Little Ones).

B. Hoshovsky

Children's music. Music written for child performers or listeners. Children's operas were written by M. *Lysenko (especially the popular *Koza dereza* [Billy-Goat's Bluff]), K. Stetsenko, and others. There is a large body of Ukrainian piano music for children, including works by V. Kosenko, V. Barvinsky, N. Nyzhankivsky, and M. Fomenko. Children's music occupies a prominent place in the work of modern Ukrainian composers, including M. Dremliuha, H. Maiboroda, Yu. Rozhavska, G. Fiala, V. Ovcharenko, A. Filipenko, B. Filts, and I. Sonevytsky.

Chimy, Isidore (Jerome) [Xymij, Jeronim], b 12 March 1919 in Radway, Alberta. Religious leader. Chimy entered the Basilian monastic order in 1934 and was ordained into the Ukrainian Catholic priesthood in 1944. He was Basilian provincial superior of Canada (1958–61), secretary to the superior general in Rome, Italy (1961–3), a member of the General Curia (1963–74), and acting superior (1964–6). From 1966 to 1974 Chimy was rector of *St Josaphat's Ukrainian Pontifical College in Rome; he also belonged to the Sacred Congregation for Eastern Churches and Sacred Congregation for the Doctrine of the Faith. In 1974 Chimy was appointed and consecrated bishop of the Ukrainian Catholic church in Canada, Westminster eparchy, British Columbia.

China. Country in eastern and central Asia with a territory of 9,561,000 sq km and a population in 1982 of 1,008,175,288. In 1949 the Chinese Communists established the People's Republic of China, while the Chinese Nationalists, led by Chiang Kai-shek, retained control only over the island of Taiwan (Formosa).

It is difficult to trace the origin and development of Ukrainian-Chinese relations, which until recent times were only sporadic. At the end of the 17th century they were a part of Russian-Chinese relations (Ukrainian monks took part in Russian Orthodox missions to China, etc). Later, several Ukrainian travelers were acquainted with China: Yu. Tymkivsky, M. Bantysh-Kamensky, and Y. Voitsekhivsky, a physician who during his lifetime was honored by the Chinese with a monument (1829) for his contribution to the struggle against epidemics. After the revolution about 1,000 Chinese lived in Ukraine. In 1926 *Huangun-bao* (Chinese Workers' Newspaper) was published in Kiev. Systematic research on China was developed in the 1920s, mostly by the All-Ukrainian Scholarly Association of Oriental Studies (1926–30). When the association was abolished, Chinese studies died out in Ukraine; they were revived only after the Communists came to power in China. Beginning in 1949 cultural ties between Ukraine and China were cultivated as part of the Soviet policy on closer economic and cultural relations with China. In 1957 a secondary boarding school offering the Chinese language from the first year was established in Kiev, with an enrollment of 700 students. In 1958 specialization in the Chinese language was introduced at Lviv University.

In the 1950s over 100 Chinese delegations visited Ukraine. About 400 Chinese students studied at institutions of higher learning in Ukraine, and several thousand Chinese received training at Ukrainian enterprises. During this period the works of T. Shevchenko (beginning in 1934), I. Franko, V. Stefanyk, and other classics, as well as about 50 titles of contemporary Soviet writers such as O. Kornichuk, O. Honchar, A. Holovko, O. Dovzhenko,

and Yu. Zbanatsky were translated into Chinese. A comparable number of works were translated from Chinese into Ukrainian. Beginning in 1949, many Ukrainian engineers, writers, scholars, and actors visited China. A continuous exchange in theater and musical ensembles, dance groups, and art exhibits was instituted between Soviet Ukraine and China, while institutions of learning and libraries exchanged publications. The Ukrainian-Chinese Friendship Society was established in 1958 in Kiev as a branch of the all-Union society. In the 1960s cultural relations between Ukraine and China were discontinued.

There were no important economic ties between Ukraine and China in the pre-Soviet period. In 1925 the short-lived Ukrainian-Oriental Trade Chamber was set up, and it conducted trade, which never attained sizable proportions, with China. In 1926–7, for example, Ukraine's exports to China totaled only 2.8 million rubles. Ukraine's economic relations with China expanded rapidly after 1949. In the 1950s at least 35 percent of the Soviet Union's economic aid to China came from Ukraine. From 1950 to 1958 Ukraine contributed on the average 500 million rubles per year in aid to China (7 percent of China's annual capital investment). China imported automated machine shops, metallurgical equipment, coal-mining machines, electric motors, cars, tractors, farm machinery, pipes, ferrous metals, chemical fertilizer, etc, from Ukraine. In 1958 Ukraine provided the equipment for building about 100 industrial enterprises in China. Ukrainian plants and scientific institutes designed and constructed industrial plants in China. China paid the USSR for this aid in products, of which Ukraine received raw silk, ferroalloys, tea, canned goods, and textiles.

However, even after the break in relations between China and the USSR in the 1960s, interest in Ukraine did not completely disappear.

In 1972 the Beijing Shangwu publishing house published I. Dziuba's *Internationalism or Russification?* (Guo-ji-zhu-yi-hai-shi-e-luo-si hua?), translated by Xin Hua and Lin Han-da. In 1974 the highly respected San-Lian publishing house in Beijing released P. Shelest's *O Ukraine, Our Soviet Land* (Wuo-men-de-su-wei-ai-wu-ke-lan), translated by a collective of the Xian-Wing Cadre School of the Ministry of Culture.

Since the Great Proletarian Cultural Revolution and the reorganization of the universities and research institutes, the study of the Soviet Union and of the Soviet nationalities, including Ukrainians, has undergone considerable revival.

The Institute of Nationality Studies and the Institute of Soviet and East European Studies of the Chinese Academy of Social Sciences (CASS) are the two leading centers among several in China where Ukrainian problems are studied. On the university level the important centers, to mention just a few, are Heilongjiang University in Harbin, Beijing University and the Central School for Nationalities in Beijing, the University of Nanjing, and various centers in Shanghai.

Chinese information about Ukraine is still quite inadequate, however. For example, in a highly authoritative reference work, *Ci-Hai* (3 vols, Shanghai 1979), edited by Xia Zheng-nong, there are a total of 30 references pertaining to Ukraine. Of these, 16 are geographical in nature; 3 pertain to historical figures (the princes Ihor, Oleh, and Yaroslav the Wise); and the remainder include

T. Shevchenko, I. Franko, Lesia Ukrainka, M. Kotsiubynsky, O. Korniiuchuk, N. Gogol, V. Korolenko, H. Skovoroda, M. Tuhan-Baranovsky ('bourgeois economist'), T. Lysenko, and H. Kulishenko, a colonel of a Soviet volunteer unit who died fighting the Japanese in China in 1939. Nearly all the information comes from Soviet Russian sources.

In 1979 three Ukrainian scholars in the West – B. Bociurkiw, P. Potichnyj, and B. Lewytskyj – visited China as guests of the CASS. Since then a number of scholarly contacts have been established between various Ukrainian-studies centers in the West and Chinese institutions, with the aim of furthering the exchange of knowledge and publications about Ukraine.

Chinese scholars interested in Ukrainian problems include Ruan Xihu, author of 'The Ukrainian Nationality Problem' in *Shi-jie-min-zhu-wen-ti-chu-tan* (Brief Survey of World Nationality Problems, Beijing 1981); Guo Simian; Shen Yun at Heilongjiang University; and Chen Yi-yun, an editor of *Sociology Today*, a CASS journal. The journal *Shijie Wenxue* of the CASS Institute of Foreign Literature occasionally publishes translations of Ukrainian literature.

Ukrainians in China. Until the end of the 19th century only those Ukrainians who worked for various imperial Russian institutions on Chinese territory (diplomatic missions, postal service, steamship lines, trade missions, and the Peking church mission) lived in China. Many more Ukrainians settled in China when the Chinese Eastern (Manchurian) Railway was built by Russia in 1898 on Manchurian territory that belonged to China. Ukrainian colonies sprang up at stations and towns along the railway, particularly in Harbin, which became the Ukrainian center for all of northern Manchuria. Smaller Ukrainian communities appeared in central and southern Manchuria – in Mukden, Dairen, and Kirin – and in Shanghai, China.

On the eve of the revolution there were over 20,000 Ukrainian families in Manchuria, mostly families of employees of the Chinese Eastern Railway. These Ukrainians maintained close ties with Ukraine and with Ukrainians living in the Far East. Amateur and professional theater groups were organized, usually at railway workers' clubs (the first professional troupe was Myroslavsky's). A Ukrainian hromada was organized in Shanghai in 1906, and a Ukrainian club in Harbin and elsewhere. There was no Ukrainian press, but the official publication of the Chinese Eastern Railway – *Khabinskii vestnik* – contained much information about Ukrainians.

The Revolution of 1917 provided a stimulus to Ukrainian cultural life and led to the founding of various institutions and organizations, which were represented by the Manchurian District Council (Mandzhurska Okruzhna Rada). The council's chairman was I. Mozolevsky, and its members were P. Tverdovsky, S. Kukuruza, and M. Yurchenko. The Ukrainians in Manchuria participated in Ukrainian political life in the Far East, particularly in the Far Eastern Ukrainian congresses, and maintained close contact with Kiev. At the end of 1917 a Ukrainian military unit commanded by P. Tverdovsky was dispatched from Harbin to Ukraine, and in the fall of 1918 Tverdovsky returned to Harbin as the Ukrainian consul. A Ukrainian school, a gymnasium, a Ukrainian Orthodox parish, and a number of Ukrainian institutions that were housed in the building of the Ukrainian club

(the Ukrainian People's Home) were established in Harbin. A weekly newspaper, *Zasiv*, was published there (34 issues). Refugees from the Far East after the Bolshevik occupation enlarged the Ukrainian population in China.

In 1922–31 the flourishing Ukrainian community in Manchuria suffered a setback as a result of its loss of ties with the Far East and, more important, because of the hostile attitude adopted by the Chinese administration, which was influenced by Russian circles. The Ukrainian People's Home in Harbin was confiscated by the authorities, and the Ukrainian gymnasium and other institutions were abolished. At this time the Prosvita society in Harbin, which to survive operated under the auspices of the local branch of the YMCA, played an important cultural role. The weekly *Ukrains'ke zhyttia* was published in Harbin over a Japanese signature to avoid control by the Chinese administration.

Ukrainians met with fairer treatment in Manchoukuo, the buffer state set up by Japan in 1931, although the Japanese military mission meddled in the internal affairs of the Ukrainian community. Ukrainian organized life again became centered on the Ukrainian People's Home in Harbin, which housed a number of organizations, such as the Ukrainian National Hromada, the Union of Ukrainian Emigrants, Prosvita, the Union of Ukrainian Teachers, the Ukrainian Youth Association, and the Zelenyi Klyn Youth Association. In 1935 the Ukrainian National Colony was founded as an umbrella organization for all Ukrainians in Manchuria. When the Japanese dissolved all other Ukrainian organizations in 1937, the Ukrainian National Colony became the center of all Ukrainian life. In 1932–7 the weekly **Mandzhurs'kyi visnyk* was published under the editorship of I. Svit. In 1934 Ukrainian radio programs were established in Harbin and in 1942 in Shanghai as well. In the Prometheus club in Harbin Ukrainian representatives collaborated with the émigrés of other nations oppressed by Russia. When the Soviet army occupied Manchuria in 1945, most of the Ukrainians there were arrested and deported, and all Ukrainian organizations were outlawed.

On the territory of China proper in the 1920s–1940s Ukrainian organizations functioned in Shanghai, where a Ukrainian bureau for all of China was located for a time and the newspapers *Shankhais'ka hromada* and *Ukrains'kyi holos na Dalekomu Skhodi* were published; in Tientsin; in Tsingtao, where the newspaper *Na Dalekomu Skhodi* was published; in Hankow; and in other cities. Virtually all Ukrainians in China emigrated to the West by 1949, before the Communists came to power.

Accurate figures for the number of Ukrainians who lived in China are unavailable. It is estimated that in the 1930s there were about 30,000 Ukrainians living in China including Manchuria, half of them in Harbin.

L. Holubnycha, P. Potichnyj, I. Svit, Tsui Tsien-hua

Chirovsky, Nicholas [Čyrovsk'kyj, Mykola], b 5 August 1919 in Voynyliv, Kalush county, Galicia. Economist, pedagogue, and community leader in the United States. Chirovsky studied at the universities of Louvain (Belgium) and Graz (Austria) and the Ukrainian Free University in Munich. He is now a professor at Seton Hall University in Newark, New Jersey. Chirovsky has served as vice-president (1967–74) and secretary (1974–80) of the Shevchenko Scientific Society in the United States. He has published studies on the history of Ukraine and Russia,

as well as on the development of economic ideas. His major publications are *Old Ukraine* (Madison, NJ 1963), *An Introduction to Russian History* (New York 1967), *Ukraine and the European Turmoil, 1917–1919* (co-authored with M. Stakhiv and P. Stercho, 2 vols, New York–Scranton 1973), *Philosophy in Economic Thought* (co-authored with V. Mott, Madison, NJ 1972), and the first volume of a planned three-volume *Introduction to Ukrainian History* (New York 1981).

Chistovich, Ilarion [Čistovič], b 1828 in Kaluga gubernia, d 1893. Russian church historian, professor at St Petersburg Theological Academy. In many of his works Chistovich touched on the history of the Ukrainian church; for example, in *Arsenii Matsievich (1861–2), Neizdannyye propovedi S. Iavorskogo* (The Unpublished Sermons of S. Iavorsky, 1867), *Teofan Prokopovich i ego vremia* (T. Prokopovych and His Time, 1868), and *Ocherk istorii zapadno-russkoi Tserkvi* (An Outline History of the West Russian Church, 2 vols, 1882–4).

Chmelov, Serhii [Čmel'ov, Serhij], b October 1896 in Nova Vodolaha, Kharkiv gubernia, d 16 November 1941 in Kharkiv. Writer-humorist. He graduated from the faculty of law at Kharkiv University and worked as a public judge in the town of Valky in the Kharkiv region. His works began to appear in print in 1925. He was a member of Pluh. He published a number of collections of satire and humorous stories: *Horokhom ob stinu* (Like Throwing Peas against a Wall, 1929), *Pal'tsem u nebo* (A Finger Skyward, 1929), *A vy kazhete* (So You Say), *Kino-ideolohiia* (Cinema Ideology, 1930), *Vashi znaiomi* (Your Acquaintances, 1930), *Svyniacha sprava* (Dirty Business, 1931), *Mertvi dushi* (Dead Souls, 1931), *Sobi dorozhche* (More for Oneself, 1931), *Perekvalifikatsiia* (Requalification, 1933), *Navit' dyvno!* (Strange, Even!, 1934). His *Klapytk istorii* (A Piece of History) was published posthumously in 1961.

Ivan Chmola

Chmola, Ivan [Čmola], b 6 March 1892 in Solotvyna, Nadvirna county, Galicia, d? Military and pedagogical activist in Galicia. Before 1914 he was one of the founders of the **Plast* Ukrainian Youth Association and of the Sich Riflemen movement in Galicia. In 1914 he became an officer of the Ukrainian Sich Riflemen, and in 1917 a colonel and organizer of Sich Riflemen units in Kiev. In 1919 he commanded a battalion and then a regiment of Sich Riflemen. After the war he taught in gymnasiums in Yavoriv and

Drohobych and continued to organize and instruct Plast groups. For his activities in Plast he was arrested by the Polish authorities in 1930 and jailed for one and a half years. Upon his release he continued to work in the then-clandestine Plast movement up to the Second World War. In 1941 he was deported by the Soviets and disappeared without trace.

Choirs. The earliest choirs in Ukraine were found in monasteries and princely courts. In the 11th century choral singing was taught at the women's monastery school in Kiev. From the 16th century church brotherhoods organized choirs; the better-known of these were in Kiev, Lviv, and Lutske. The choir of the Kievan Mohyla Academy was particularly famous and had over 300 singers. At the end of the 19th and the beginning of the 20th century amateur choirs sprang up spontaneously all over Ukraine and became one of the forms of expression of the national awakening. The best choirs demonstrated the excellence of Ukrainian choral art abroad: the *Ukrainian Republican Kapelle, conducted by O. Koshyts, toured Western Europe and America in 1919–20, and the Kiev choir *Dumka, conducted by N. Horodovenko, performed in France, particularly in Paris in 1929. Amateur choirs are very popular in Ukraine and can be found in almost every village. Abroad, almost every larger center of Ukrainian émigrés supports a choir. The best professional Ukrainian choirs today are Dumka and the *Verovka State Choir in Kiev, *Trembita in Lviv, the *Transcarpathian Folk Choir in Uzhhorod, and the *Byzantine Choir in Utrecht in the Netherlands.

Chokratske Lake [Čokrats'ke]. A saltwater lake in the Kerch Peninsula of the Crimea, separated from the Sea of Azov by a broad sand strip. The lake is 3.5 km in length and 2.5 km in width; its area is 8.5 sq km. The sediment on the lake bottom has curative properties. Salt is produced from the lake.

Cholera. Common name for Asiatic cholera, an acute, bacterial, contagious infection of the small intestine, characterized by severe diarrhea and a rapid depletion of body fluids. Under favorable conditions it quickly assumes epidemic or even pandemic proportions. The bacillus causing the disease was identified by the German bacteriologist R. Koch in 1884 as *Vibrio cholerae*. Cholera spreads through contact with an infected person or by means of contaminated water and foods. Flies and roaches also contribute greatly to its spread. The incubation period lasts usually from 12 to 28 hours. During chronic epidemics almost two-thirds of the infected die within the first two days. Several methods are practiced now in combating the disease: hospitalization, isolation of suspected carriers and their contacts, vaccination, and even quarantine. Drugs such as an alkaline solution of sodium chloride to replenish body fluids and salt, antibiotics, sulfa drugs, vitamins, and glucose are administered. The disease is checked by sanitary control and disinfection of food and water supplies, fly control, and the like.

Cholera was little known in Europe before 1817. Only after the British colonization of India (1757–1817) and the growth of international ties did cholera begin to spread far beyond its original Asiatic habitat. In Europe, including the Russian Empire and Ukraine, it appeared in the

1820s. There were six major cholera epidemics in the Russian Empire. During the first epidemic (1817–23) the incidence of cholera in Ukraine was only sporadic and occurred only in 1823. During the second epidemic (1826–37) cholera spread into Ukraine in 1830, facilitated by the Russian-Turkish War, especially when the troops returned home. Cholera also appeared among the Russian soldiers sent to quell the Polish uprising (November 1830), and it reached its height in Ukraine in 1831. Exact figures are not available, but it is known that in the village of Podosakh in Berdychiv county, for example, eight persons died daily from cholera at this time.

The third epidemic (1846–61) reached the coasts of the Black Sea and the Sea of Azov in 1847, spreading first through Odessa and then the whole of Ukraine and Poland. The Russian army deployed in Galicia lost 7,400 men to cholera in 1849. In 1853–5, during the Crimean War, cholera was especially severe: the French army lost 11,200 of the 20,000 men who were contaminated with the disease; the English lost 4,500 out of 7,600 contaminated. The fourth epidemic (1863–75) spread in August 1865 from Constantinople into Odessa and in 1866 to almost all of Europe. The epidemic died down in Europe in 1869–70 but continued in Ukraine and Russia. The fifth epidemic (1881–95) reached Austria in 1885 and Hungary and Germany in 1886, from where it again returned to Galicia, central and eastern Ukraine, and Russia. In Galicia and Bukovyna 2,300 persons died from cholera in 1892–4. During these epidemics the mortality rate from the disease in Ukraine and other territories of the Russian Empire fluctuated between 36.8 percent and 44.9 percent of those infected.

The sixth epidemic (1902–26) spread through the Russian Empire and reached Ukraine in 1907. It peaked in 1910, infecting 230,000 and killing 11,000. In 1912 the epidemic diminished (there were only 9 incidents of contamination in Odessa and Astrakhan), but in 1913 a new upsurge occurred, especially in Podilia gubernia (1,600 contaminations). The epidemic waxed and waned during the First World War. It affected mainly the soldiers but also spread to the civilian population (in 1914 there were 7,700 contaminations among the military and 1,800 among the civilian population; in 1915, 11,400 soldiers and tens of thousands of civilians were infected). At the end of the war there was a great upsurge in the epidemic (owing to the movement of refugees, prisoners of war, and demobilized troops), which spread through all of Ukraine and central Russia. The mortality rate from cholera was exceptionally high – in Odessa it reached 55.8 percent of the infected in 1918, 47.2 percent in 1919, 65.0 percent in 1920, and 48.8 percent in 1921 – and was particularly high among the youngest and the oldest groups of the population. After the civil war and the introduction of NEP, an intensive campaign to combat cholera was begun, and by 1926 the disease was virtually eliminated from the whole territory of the USSR. Since that time cholera has officially been considered wiped out, although individual incidents (of the El-Tor strain) were recorded in Odessa in 1970.

H. Schultz

Chomiński, Józef, b 24 August 1906 in Ostriv, near Peremyshl. Musicologist of Ukrainian origin. Chomiński graduated from Lviv University in 1936 and in 1950 was appointed professor at Warsaw University. He has writ-

ten books and articles on the work of F. Chopin and K. Szymanowski, on the analysis of musical forms, on the history of harmony and counterpoint, and on the imitative technique of the polyphonists of the 13th–14th century. Chomiński was editor of the annual publication *Studia muzykologiczne* (1953–6) and in 1956 became the editor of the quarterly *Muzyka*.

Chop [Čop] (Hungarian: Czap). v-3. City (1969 pop 6,300, mostly Hungarian and Ukrainian) in Uzhhorod raion, Transcarpathia oblast, situated in the Tysa Lowland on the border between Hungary, Czechoslovakia, and Soviet Ukraine. Founded in the late 19th century, it is an important border railway junction and contains railway-servicing shops and a brick-and-tile factory. In 1944 Chop was the site of a month-long battle between German and Soviet troops.

Choral music. Music written for performance by choirs. In Ukraine the development of choral music is linked closely with the church. In the Eastern church choral singing is unaccompanied by musical instruments; hence, Ukrainian church choral music was and remains a cappella. Early choral music was monodic. Polyphony developed only in the 16th century. At the time a unique form of choral concerts known as *partesnyi* arose. The number of voices increased from the simple three and four to the more complicated eight, which were typical at the end of the 17th century. Some composers tried an even greater number and, in one case, even eighteen voices. The richness of the Ukrainian choral repertoire is evident from a preserved list of notes of the Lviv brotherhood, made in 1697, which contains 396 choral compositions, 151 of which are vocal concertos and 56, liturgies. In the second half of the 18th century there were several famous composers of church choral music: M. *Berezovsky, D. *Bortniansky, and A. *Vedel. Their works, which were choral music a cappella, called concerts, are remarkable for their cyclical structure of several movements and contrasting solo and choral parts. In their works the four-voice choir became the basic form.

The development of secular choral music in Ukraine began in the first half of the 19th century. M. *Lysenko made an enormous contribution, particularly in the area of original creativity. He is famous for his cantatas for choir and orchestra and his choral arrangements of folk songs. After Lysenko the most noted composers of choral music were M. *Leontovych, K. *Stetsenko, O. *Koshyts, S. *Liudkevych, and P. *Kozytsky. In the period 1920–60 choral music received relatively little attention from Ukrainian composers. Only among younger composers such as L. Dychko and I. Karabyts does choral music retain some of its former importance.

W. Wytwycky

Chorna Mohyla (Black Barrow). An Old Rus' 10th-century kurhan in Chernihiv. According to local beliefs it is the grave of Prince Chorny, the legendary founder of Chernihiv. The kurhan is 11 m high, 125 m in circumference, and surrounded by a trench 7 m wide. It was excavated by D. Samokvasov in 1872–3. A funeral pyre and the bones of at least two warriors and a slave girl, weapons and armor, tools, pots, ornaments, items of daily life, coins, etc. were discovered. In the upper part of the kurhan, at a height of 7 m, the remains of a funeral

banquet (helmets, shirts of mail, Byzantine coins, and an iron kettle with sheep bones) were found.

Chorna rada (black council). A Cossack council consisting not only of the *starshyna*, but also of a large number of common Cossacks. The term *chorna* is derived from *chern*, which was the officers' designation for the common Cossacks and the lower estates. The most famous *chorna rada* took place on 17–18 June 1663 near Nizhen, when thousands of common Cossacks, Zaporozhians, and 'non-Cossack volunteers' (peasants and poor townsmen) assembled to elect a new hetman for Left-Bank Ukraine. A large rift appeared between the interests of the officers and those of the commons (*chern*). The officers proposed the acting hetman, Ya. Somko, and the Nizhen colonel V. Zolotarenko as candidates. The commons proposed I. Briukhovetsky, the otaman of the Zaporozhian Sich, who promised to lower taxes. The tsar supported Briukhovetsky, counting on his help in increasing Russian influence in Ukraine. Swayed by Briukhovetsky's demagoguery, the commons elected him and eventually put Somko, Zolotarenko, and other officers to death.

Chorna Rus' (Black Rus'). Medieval name of northwestern Belorussia. From the 10th century AD it belonged to Kievan Rus'. In the 13th century the Principality of Galicia-Volhynia and the Grand Duchy of Lithuania fought over the territory, and in the 1240s Lithuania conquered it. From 1255 to 1258 it was ruled by the son of Danylo of Halych, Roman Danylovych, who was a vassal of the Lithuanian prince Mindaugas. In the 1270s Chorna Rus' was finally taken over by Lithuania.

Chorni Klobuky (Black Hats). The name that appears in Old Ukrainian chronicles for the Turkic tribes that at the end of the 11th century settled south of the Kiev and Pereiaslav principalities. The name is derived from the headdress of these tribes. In the 12th century some of the Chorni Klobuky changed to a settled form of life. The Rus' princes used them for the defense of their southern borders.

Chornobai [Čornobaj]. iv-13. Town smt (1970 pop 7,000) in the Dnieper Lowland; a raion center in Cherkasy oblast. Chornobai has a food industry and a regional museum. The town was first mentioned in the 1720s.

Chornobyl [Čornobyl']. ii-11. City (1971 pop 10,000), raion center in Kiev oblast, port on the Prypiat River in Kievan Polisia. Before 1917 Chornobyl was an autonomous (*zashtatne*) town in Radomyshl county with a population employed in agriculture and small trades. The city has experienced periods of decline: in 1897 it had 9,300 inhabitants, while in 1926 it had 9,000. The main industry is food processing, but the city also has a pig-iron foundry and a ship-repair base. Since 1972 a nuclear power plant has been located there. Chornobyl was first mentioned in 1193.

Chornock, Orestes [Čornok], b 1883 in Transcarpathia, d 17 February 1977 in Stratford, Connecticut. Churchman and metropolitan. A Greek Catholic priest who was opposed to the Latinization of the Eastern rite in the United States, Chornock, together with some of the Transcarpathian clergy, set up in the 1930s an inde-

pendent *American Carpatho-Russian Orthodox Greek Catholic Church, which came under the jurisdiction of the patriarch of Constantinople. Formerly the church's see was in Bridgetown, Connecticut; now it is in Johnstown, Pennsylvania. In 1939 Chornock was consecrated bishop and in 1965 he was promoted to metropolitan. At first Chornock was a Russophile, but eventually he drew closer to the Ukrainian community.

Chornodolska, Anna [Čornodol's'ka], b 21 April 1946 in Vienna, Austria. Soprano. A graduate of the Quebec Conservatory (1970) and McGill University, Chornodolska has sung in lieder, oratoria, opera, recital, and as a guest soloist with symphony and chamber orchestras. In addition to performing across Canada, she has appeared with the Orchestra Simfonica Nacional in Mexico City, in recital at Carnegie Hall in New York, and at the Centre Culturel Canadien in Paris and the Smithsonian Institution in Washington.

Chornohora, view of the Cheremosh Valley

Chornohora. The highest mountain group in the Ukrainian Carpathians, the eastern part of the *Polonynian Beskyd. Its main range extends for about 40 km from the Chorna Tysa River in the west to the Chorny Cheremosh River in the east. Chornohora is built of hard sandstone with strata of low-resistance schist. The major part of Chornohora forms the watershed between the Prut and the Tysa rivers. For many centuries this was also the boundary of the states to which Galicia and Transcarpathia belonged. The western part of Chornohora, containing the Petros Peak (2,020 m), lies in Transcarpathia in the basin of the Tysa. The two parts of Chornohora are separated by a deep pass (alt 1,550 m). The western part of Chornohora is heavily gouged (the relative height of Petros is 300 m). The eastern part is a massive, monotonous range with peaks over 1,900 m high – Hoverlia, 2,061 m; Shpytsi, 1,997 m; Tomnatyk, 2,018 m; Pip Ivan 2,026 m – and a minimum elevation of 1,750 m. Short ranges branch off from the main range. The slopes of Chornohora, which are dissected by narrow valleys 1,000 m or more in width, contrast with the almost level ranges, which are the remains of former peneplains. The landscape of Chornohora has been affected by glaciers more than has that of other parts of the Ukrainian Carpathians. In the Ice Age the boundary of permanent snow lay at an elevation of 1,300–1,400 m, and short glaciers formed at the sources of

streams. In the Prut Valley the glacier reached an elevation of 1,000 m and was 6.5 km long. Postglacial depressions, with steep, often rocky slopes and broad bottoms sometimes covered with lakes (mostly under Tomnatyk) or peat bogs, the uneven slope of the valleys with occasional waterfalls (on the Prut River, for example), and lateral and terminal moraines are some of the effects of former glaciation.

The slopes of Chornohora are covered with forests, which occupy 70 percent of the surface. Beech trees are found on the northern slopes in the lower forest belt up to 1,300 m, and spruce trees appear higher up (even up to 1,600 m). Beech are also common on the southern slopes and they constitute the upper boundary of the forests. Above the forest belt, up to 1,800 m, lies a belt of alder and juniper brush, and above it a belt of clear mountain meadow that reaches the peaks or ends sometimes at stone fields. There are many endemic species of flora.

The local population consists of the Hutsul ethnographic group, which inhabits the lowest parts of Chornohora: in Transcarpathia Yasinia lies in the Chorna Tysa Valley and Bohdan in the Bila Tysa Valley; in the north there are only the villages of Bystrytsia and Dzembronia. Arable land covers scarcely 0.5 percent of the surface area; forests, 70 percent; hayfields, 5 percent; meadows and pastures, 22 percent. To protect the soil and the villages from floods, small reservoirs were built after the First World War. In 1964 a preserve of 7,702 ha was created in the region; it now forms part of the *Carpathian Nature Reserve.

Herding is an important occupation in Chornohora, where the pasturing season lasts for five months. The main industry of the Ukrainian Carpathians is tourism. Its centers include Rakhiv, Yasinia, Vorokhta, Bystrets, and Zhabie (now Verkhovyna).

V. Kubijovyč

Chornomore (Black Sea). A student association in Chernivtsi (1913–40, with breaks between 1918 and 1923) that continued the traditions of the student association *Soiuz. Chornomore conducted cultural and educational activities and maintained a chorus; its members participated in other Ukrainian organizations in Bukovyna and provided the initiative in promoting Ukrainian publishing in Bukovyna. Chornomore co-operated with societies of the same name in Lviv, Cracow, Poznań, and Danzig. It had a women's section. The organization had 110 members in 1923 and 307 members in 1934. In 1923–36 Kuban, an association of secondary school students, was affiliated with Chornomore.

Chornomors'ka komuna (Black Sea Commune). Oblast newspaper, organ of the Odessa oblast and city committees of the CPU and of the oblast and city soviets of workers' deputies. The newspaper had its origins in several Communist periodicals that appeared in Odessa from 1917 to 1920 and in the newspaper of the Odessa Military-Revolutionary Committee and Executive Committee, *Izvestiia*, which began publication in 1920. In 1929 *Chornomors'ka komuna* acquired its current name and began to be published in Ukrainian. It was not published from 1941 to 1944. The newspaper is now published five times a week.

Chornomorska Sich (Black Sea Sich). Ukrainian sports association founded in 1924 in Newark, New Jersey. It

became particularly active after 1950 when new immigrants arrived. In 1970 its membership was 400. The association has soccer, basketball, tennis, ping-pong, swimming, and chess sections. Chornomorska Sich has won the championship of the Association of Ukrainian Sports Clubs in North America (USTsAK) several times, particularly in soccer. In 1959 its team won the Louis Cup of the National Professional Soccer League. Since 1969 the association has run a summer sports school for children and teenagers. It publishes a periodical, *Nash sport*, edited by O. Tvardovsky.

Chornomorske [Čornomors'ke] (formerly Ak-Mechet). VIII-13. Town smt (1974 pop 5,800), raion center in north-western Crimea oblast. It has a port, a resort for children, and a small-scale food industry. Scythian graves of the 4th–5th century BC have been found nearby (see *Ak-Mechet burial site).

Viacheslav Chornovil

Chornovil, Viacheslav [Čornovil, V'jačeslav], b 1 January 1938 in the Kiev region. Literary critic, journalist, dissident, member of the *Ukrainian Helsinki Group since 1979. In 1960 he graduated from Kiev University and began to work as an editor in the radio-television broadcasting system of the Ukrainian SSR and in the Komsomol press. In 1967 he prepared a collection of materials about 20 Ukrainian dissidents who were imprisoned for protesting against national oppression. The collection was entitled *Lykho z rozumu* (Woe from Wit) and circulated in samvydav. He has been imprisoned several times on the charge of 'anti-Soviet agitation and propaganda': in 1967–9, 1972–9, 1980–present. He served a long term in the strict-regime camps of Mordovia and a part of his term of exile (1979–80) in the Yakut ASSR before he was imprisoned for the third time on a false criminal charge. Besides *Lykho z rozumu*, which was published in Paris in 1967 and translated into English as *The Chornovil Papers* (Toronto 1968), he wrote *la nichoho u vas ne proshu* (I Ask Nothing of You, Toronto 1968). Chornovil is the author of a number of samvydav articles, including 'Retsydyv teroru chy pravosuddia' (Relapse into Terror or Justice, 1967) and 'Shcho i iak obstoiuie B. Stenchuk' (What B. Stenchuk Defends and How, 1969), and, in collaboration with B. Penson, the brochure *Budni mordovs'kykh taboriv* (Daily Life in the Mordovian Prison Camps, 1974; published in *Suchasnist'* in 1976). Chornovil's writings are

distinguished by their brilliant journalistic style. He has been awarded the British Tomalin Prize for journalism.

I. Koshelivets

Chornozem. See Chernozem.

Chornukhy [Čornuxy]. III-13. Town smt (1970 pop 2,700), raion center in Poltava oblast, situated on the Udai River. The renowned Ukrainian philosopher H. Skovoroda was born in Chornukhy, and a monument to him has been erected in the town. Chornukhy has existed since the 16th century.

Chornukhyne [Čornuxyne]. V-19, DB III-5. Town smt (1976 pop 11,485) in Pereval'ske raion, Voroshylovhrad oblast. Coal mining is the major industry. The town was founded in the second half of the 18th century.

Chorny, Hryhorii [Čornyj, Hryhorij], ?–1630. Hetman of the *registered Cossacks (1628–30). In 1628 Chorny joined M. *Doroshenko in a campaign against the Crimean Tatars. As a hetman he conducted a pro-Polish policy, putting down a revolt of the non-registered Cossacks. In 1630 during the rebellion led by T. Fedorovych Chorny was executed by the Cossacks.

Chorny, Mykhailo [Čornyj, Myxajlo], b 8 November 1911 in Bohodukhiv in Kharkiv gubernia. Filmmaker. Since 1932 Chorny has worked at the Kiev Artistic Film Studio, with an interruption in 1941–4 when he worked at the Ashkhabad film studio, Turkmen SSR. Among the films he has made are *V stepakh Ukraïny* (In the Steppes of Ukraine, 1952), *Komanda z nashoi vulytsi* (Squad from Our Street, 1953), *Lymerivna* (Saddler's Daughter, 1955), *Partyzans'ke polumia* (Partisan Flames, 1957), *Povist' nashykh dniv* (A Tale of Our Days, 1959), *Mertva petlia* (The Dead Noose, 1960), *Son* (The Dream, 1964), *Hadiuka* (The Snake, 1965), and *Tsyhan* (The Gypsy, 1966).

Chorny Lis culture. An archeological culture of the pre-Scythian period (10th–8th century BC) that flourished along the middle Dnieper River. The first monuments of this culture were discovered in the Chorny Lis forest of Kirovohrad oblast. The Chorny Lis fortified settlement near the village of Khyrivka and other similar settlements have been excavated by A. Terenozhkin. The remains of dugouts, burial sites with interred or cremated dead (in urns), bronze and some iron weapons and farm implements, pottery, and ornaments have been discovered. Crop growing was the main occupation of the population, but cattle, horse, and hog raising was also practiced. The people of the Chorny Lis culture were related to the people of the *Bilohrudivka, *Bondarykha and *Timber-Grave cultures.

Chorny Mochar (Black Marsh). Land-reclamation system in the Tysa Lowland on the territory of Berehove and Mukachiv raions of Transcarpathia oblast. It covers an area of 10,500 ha. Before the melioration projects at the end of the 19th century Chorny Mochar was marshland, which was inundated by floods each year. After 1946 the melioration work was accelerated, and the drained fields are cultivated today.

Chornyi Ostriv [Čornyj Ostriv]. iv-7. Town smt (1966 pop 5,500) in Khmelnytskyi raion, Khmelnytskyi oblast. The town lies on the Boh River in eastern Podilia. In the 14th century it was called Chornyi Horodok and belonged to Prince Liubart of Lutske. In 1556 it was granted Magdeburg law. The town had a fortified castle and played an important role in the Cossack wars. In 1919 it was the site of Ukrainian-Bolshevik battles. Chornyi Ostriv has a knitwear factory and a food-processing industry.

Chornyi Tashlyk River [Čornyj Tašlyk]. Stream in the Dnieper Upland, left-bank tributary of the Syniukha, 135 km in length with a basin area of 2,387 sq km. Its width is 7–10 m in the upper part and up to 23 m in the lower part. Water from the Chornyi Tashlyk is used for irrigation.

Chortkiv; the Ridna Shkola building

Chortkiv [Čortkiv]. iv-6. City (1974 pop 22,000) on the Seret River, raion center in Ternopil oblast, situated in the northern part of Galician Podilia. Chortkiv was founded in 1522 by Yu. Chortkivsky with the right of Magdeburg law. The town declined in the second half of the 17th century, during the Polish-Turkish wars. Under Austrian rule it was the center of the Chortkiv district; later it became a county center. On 8 June 1919 the Ukrainian Galician Army broke through the Polish front at Chortkiv and began the *Chortkiv offensive. In 1931 the town had 19,000 inhabitants, 22.8 percent of whom were Ukrainians (Greek Catholics), 46.4 percent Poles (Roman Catholics), and 30 percent Jews. Chortkiv is an administrative, commercial, and small-scale manufacturing center. Today it has some industry: food-processing, garment making, and railway maintenance. Among its architectural monuments are a fortress built in the 16th–17th century and wooden churches of the 17th and 18th centuries. There is also a historical museum.

Chortkiv offensive (also known as the June offensive). Military operation by the *Ukrainian Galician Army (UHA) against the Polish army from 7 to 28 June 1919, which resulted in the UHA's retreat to a triangle of land in southeastern Galicia bounded by the Zbruch and Dniester rivers and the Husiatyn-Ulashkivtsi-Tovste-Ustechko line. The goal of the operation was to throw back the Polish forces to the Zolota Lypa River in order to give the UHA, which numbered 19,000 combat-ready officers and men and 50 batteries, greater space to maneuver. The

offensive, which began on 7 June, initially yielded a tactical advantage: on 8 June the UHA took Chortkiv, defeated the Polish army, and forced it to retreat a distance of 150 km to the Holohory-Peremyshliany-Bukachivtsi line. The UHA successfully fought engagements at Yazlivets (10 June), Buchach (11 June), Pidhaitsi (14 June), Nyzhnyv (14 June), and heavy battles at Ternopil (14 June) and Berezhany (21 June), but a shortage of weapons and ammunition prevented it from consolidating these victories. On 28 June the Polish forces, armed with 38,600 bayonets, 2,100 sabers, 797 machine guns, and 207 cannons, broke through the Ukrainian front lines at Yanchyn and forced the UHA, armed with 24,000 bayonets, 400 sabers, 376 machine guns, and 144 cannons, to retreat to the Zbruch River and enter the territory of eastern Ukraine on 16 July. The Chortkiv offensive, waged with inadequate forces, could not yield strategic gains for the UHA. In addition, the Allied Council of Foreign Ministers' decision on the political status of Galicia (18 June 1919) allowed the Polish army to conduct operations as far as the Zbruch River (both sides were informed of this decision). Nonetheless, the UHA's victories displayed its value as a military force and gave proof of its high morale, later exhibited in battles against the Red Army in eastern Ukraine.

Chortomlyk. A large Scythian kurhan (20 m high and 350 m in diameter) from the end of the 4th century BC, situated 22 km from Nykopol in Dnipropetrovske oblast. The burial mound was excavated in 1862–3 by I. Zabelin, who discovered in it the burial remains of a Scythian king and queen, their guard or slaves, horse skeletons, and a wealth of gold and silver ornaments and arms. The most valuable find was a silver amphora with a depiction of Scythians taming wild horses. The art objects found in the kurhan are some of the finest examples of ancient Greek jewelry and are preserved at the Hermitage museum in Leningrad.

Chortomlyk Sich, also known as the Bazavluk Sich or Old Sich. The seat of the *Zaporozhian Sich from the end of the 16th century, located on Chortomlyk, or Bazavluk, Island at the junction of the Dnieper River and its tributaries the Chortomlyk, Pidpilna, and Skarban rivers (today near the village of Kapulivka, Nykopol raion, Dnipropetrovske oblast). The Sich was built in 1593 after the Tatars destroyed the *Tomakivka Sich. It stood until 25 May 1709, when it was destroyed by the Muscovite army as punishment for K. *Hordiienko's support of I. Mazepa's struggle for independence. After 1709 the Cossacks tried to re-establish the Sich at the Kamianka River, but because of Peter I's hostility they retreated to territory controlled by the Crimean Khanate, where they built the *Oleshky Sich in 1711.

Christian People's party (Khrystyiansko-narodna partiia). Populist political party in Transcarpathia, active from 1924 to 1938. It was the successor of the *Ruthenian

Agrarian party and collaborated with the Czech Catholic party of Monsignor J. Šramek. From 1925 to 1929 the party had one deputy (A. Voloshyn) in the Czechoslovak parliament. Other party leaders included M. and Yu. Bra-shchaiko, M. Dolynai, and Rev K. Fedelezh. The party weekly was *Svoboda* (1925–38).

Christian Social Movement. Political movement that bases its program of social and economic reform on Christian ethics and the main papal encyclicals dealing with social questions. In Galicia at the end of the 19th and the beginning of the 20th century the movement was represented by the moderate wing of the populists (see *Populism, Galician), the supporters of the *New Era, which was headed by O. Barvinsky and published the newspaper **Ruslan*. At first the movement was known as the Catholic Ruthenian People's Union (est in 1896); in 1911 it changed its name to the Christian Social party. This party had its representatives in the Austrian parliament and the Galician diet. It continued to operate under the interwar Polish regime. Its leading members were A. Vakhnianyn, K. Studynsky, and L. Lopatynsky. At the beginning of the 1930s a part of its active members joined the *Ukrainian National Democratic Alliance (UNDO), while others founded the *Ukrainian Catholic People's party, which published the newspaper *Nova zoria* in Stanyslaviv. Bishop H. Khomyshyn supported this party. The *Ukrainian Catholic Union, which did not participate in politics but concentrated on social and religious matters, was founded in 1931 in the Lviv archeparchy. Politically the union supported the UNDO.

In Transcarpathia the supporters of the Christian Social Movement formed the *Ruthenian Agrarian party in 1920 under the Czechoslovak Republic. In 1924 this party adopted the name *Christian People's party. After 1945 no Christian social party was revived abroad. The *Ukrainian Christian Movement, which was organized in 1955, continued instead the traditions of the Ukrainian Catholic Union. The program and principles of the Christian Social Movement were elaborated in the Catholic publications that came out in Galicia and abroad. *Catholic Action, under the leadership of the church hierarchy, operated independently of the Christian Social Movement. Some of the organizations within the Christian Social Movement that have been mentioned worked closely with the church hierarchy, and some were even dependent on it. For this reason they were accused of clericalism (ie, of church interference in politics) by leftist-socialist and rightist-nationalist circles.

V. Markus

Christianization of Ukraine. Because of the geographical location of Rus' close to the Black Sea and the Near East, Christianity was known on the present territory of Ukraine as early as the first century AD.

Origins. At first Christianity won converts among the Greek colonists who settled the northern coasts of the Black and Azov seas. The Primary Chronicle mentions *St Andrew's mission on the Black Sea coast at Synope and his blessing of present-day Kiev. There is no documentary evidence that the apostle Andrew visited the Kiev region, but it is almost certain that he was assigned Scythia (ie, the territory of present-day Ukraine) for his mission, as Eusebius of Caesarea wrote, basing himself on

Origen. From Synope Andrew was said to have traveled to Transcaucasia, the Black Sea, and Scythia (A. Kartashev). S. Golubinsky and S. Tomashivsky believe that the story of Andrew's mission to Ukraine was of later origin, but M. Chubaty argues that it is largely historically true.

According to traditional belief the popes *St Clement 1 (90–100) and St Martin (649–55) were exiled to the Crimea, which belongs to Ukraine today. The proximity of the Slav-settled lands to the Greek colonies on the Black Sea must have been an important factor in the spread of Christianity among the Slavic tribes.

More concrete data on the presence of Christianity on Ukrainian territories extend back to the 3rd century, when the Goths invaded these territories from the north. At first the Goths destroyed the Christian colonies and then conducted forays into Asia Minor, bringing back slaves from as far away as Cappadocia. These slaves acquainted the Goths with Christianity. The bishop of the Visigoths, Ulphilas, translated the Bible into Gothic, and this text, known as *Codex Argenteus*, is preserved today in Uppsala, Sweden. Theophilus, the bishop of the Goths, participated in the Council of Nicea in 325. Theophilus's successor was Bishop Unilo, who was consecrated by John Chrysostom and made his residence in Dora in the Crimea.

The invasion of the Huns in 375 interrupted the spread of Christianity on Ukrainian territories for a long time, although not all the Goths migrated west under pressure from the Huns, some staying behind in the southern Crimea. Archeological excavations show that there were churches on the Black Sea coast in the 4th–5th century. The oldest church articles discovered in Chersonese and Kerch date back to the 4th and 5th centuries.

After capturing Kiev in 860, the princes *Askold and Dyr are said to have embraced Christianity, and Patriarch Photius wrote in one of his letters that in about 864 he had sent a bishop to Rus'. It is uncertain, however, where the eparchy was established – whether in Kiev or in Tmutorokan. It is traditionally believed that St Nicholas's Church was built on Askold's grave, and this would indicate that the prince was a Christian. During the reign of Oleh the Seer the pagan reaction suppressed Christianity, but it did not disappear completely. There is evidence that during Ihor's rule St Elijah's Church existed in Kiev, and during the signing of the treaty of 944 with the Greeks some of Ihor's deputies took an oath on the Bible while others swore by the pagan deity Perun.

Christianity entered Ukraine from the West as well, specifically from Moravia, where *St Cyril and *St Methodius and their disciples worked as missionaries. Both 'Slavic apostles' visited the Crimea on their way to the Khazars and found the relics of Pope Clement 1. According to tradition Christianity spread from Moravia to Galicia and then to Volhynia, where (according to N. Polonska-Vasylenko) a bishop resided in Volodymyr before Prince Volodymyr the Great adopted Christianity. M. Chubaty contends that an eparchy was established in Peremyshl at that time.

After Ihor's death in 945 his wife, Princess *Olha, was baptized (most likely in Kiev in 955) before her voyage to Constantinople in 957. Presbyter Hryhorii, who is mentioned by Emperor Constantine VII Porphyrogenitus, was a member of her retinue. In 959 she sent a delegation to Emperor Otto 1 and in reply was sent a delegation from him headed by Bishop Adalbert. Olha's son Sviatoslav re-

mained a pagan, but his sons Yaropolk and Oleh were probably Christians. In 979 Pope Benedict VII sent emissaries to Yaropolk.

Christening under Volodymyr. At first Prince Volodymyr was the leader of the pagan movement in Kiev, but, having concluded that the new faith would strengthen the state and increase its prestige among his Christian neighbors, he adopted Christianity and christened all his people. Volodymyr himself was baptized in about 987, probably through the influence of his friend O. Tragvison (according to F. Dvornik) or his Christian wives and Princess Olha, his grandmother (according to N. Polonska). Furthermore, Volodymyr sought to establish family ties with the Byzantine court. Having helped the emperor crush the rebellion of Varda Foka, Volodymyr demanded the hand of the emperor's sister Anna, which he had been promised. When the emperor refused to carry out his promise, Volodymyr captured the Byzantine colony of Chersonese and forced the emperor to sign a peace treaty. In fulfillment of its terms Volodymyr ordered that all his people be baptized in 988–9. The christening was probably carried out either by priests (including Nastas) from Chersonese who knew the Slavic language or by priests from Tmutorokan (according to G. Vernadsky and M. Chubaty). It is also possible that priests were brought in from Bulgaria. The baptism of the Kiev residents is described dramatically in the Primary Chronicle. First Volodymyr ordered all the pagan images (statues), including the statue of Perun, to be destroyed. Some residents grieved over the old gods, but everyone obeyed the prince's order to accept baptism in the Dnieper River. Members of every estate and every age waded into the river while the priests conducted the liturgy and baptized them. According to the chronicle this event took place on 1 August (OS) or 14 August (NS), which is now a holy day in the Ukrainian church.

The population of Rus' along the main water routes was baptized gradually. The larger centers were converted first, followed by the outlying regions. The process did not always take place as smoothly as it had in Kiev. Most of the opposition came from the pagan priests (*volkhovy*), who had little influence in southern Rus' but in the north – in Novgorod, Suzdal, and Belozersk – incited the people to hostile acts against the Christian priests. For a long time the pagan religion, mostly its rites, was practiced alongside the Christian religion.

To normalize religious life in his country, Volodymyr issued a law assigning a tenth of the state's property to the church and recognizing various rights of the clergy. The first mention of a metropolitan for Rus' dates back to 1039, but there must have been an archbishop in charge of the Rus' church before then (according to F. Dvornik). The first-mentioned metropolitan of Rus' was the Greek Theopemptos (see *Kiev metropolitanate and *Church, history of).

With the adoption of Christianity, Christian writings and culture spread throughout Ukraine. Volodymyr established schools and built churches, first in Kiev and then in other cities. Priests from Chersonese (Korsun), who spoke the Slavic tongue, served as teachers. The liturgy was in Slavonic, and this made the religion less alien. The introduction of Christianity did not lead to Byzantium's political domination of Rus', but rather to new contacts between Rus' and its closer and more distant neighbors. Volodymyr attempted to secure for the

new church the same position in the structure of his state as it enjoyed within the Byzantine state. Christianity gave religious unity to Volodymyr's domain.

Christmas (*Rizdvo*). The feast of Christ's birth was at first celebrated in the East on 6 January, together with the feast of *Epiphany. Later, in the mid-4th century, it was established by the Roman Catholic church as a separate feast and was celebrated on 25 December according to the Julian calendar. With the introduction of Christianity into Ukraine in the 10th century Christmas was fused with the local pagan celebrations of the sun's return or the commencement of the agricultural year. In some areas the pre-Christian name of the feast – *Koliada* – has been preserved. The most interesting part of Ukrainian Christmas is Christmas Eve (*Sviat-Vechir*) with its wealth of ritual and magical acts aimed at ensuring a good harvest and a life of plenty. Dead ancestors and family members are believed to participate in the eve's celebration and are personified by a sheaf of wheat called *did* or *didukh* (grandsire). A characteristic feature of Christmas is caroling (*koliaduvannia*), which expresses respect for the master of the house and his children and is sometimes accompanied by a puppet theater (*vertep*), an individual dressed up as a goat, and a handmade star. The religious festival lasts three days and involves Christmas liturgies (particularly on the first day), caroling, visiting, and entertaining relatives and acquaintances. The Christmas tree, which was adopted from Western Europe, is today an element of the New Year celebrations in Soviet Ukraine. The Christmas theme has an important place, more important than Easter, in Ukrainian painting, particularly church painting, and in poetry.

The 'holy supper' on Christmas Eve is a meal of 12 ritual meatless and milkless dishes. The order of the dishes and even the dishes themselves are not uniform everywhere, for every region adheres to its own tradition. In the Hutsul region, for example, the dishes were served in the following order: beans, fish, boiled potato dumplings (*pyrohy* or *varenyky*), cabbage rolls (*holubtsi*), *dzobavka* or *kutia* (cooked whole-wheat grains, honey, and ground poppy seeds), potatoes mashed with garlic, stewed fruit, *lohaza* (peas with oil or honey), plums with beans, *pyrohy* stuffed with poppy seeds, soup containing sauerkraut juice and groats (*rosivnytsia*), millet porridge, and boiled corn (*kokot*).

Although there were regional variations, the rituals of

Christmas followed a set pattern in former days. Except for the preparation of the 'holy supper,' all work was halted during the day, and the head of the household saw to it that everything was in order and that the entire family was at home. Towards the evening the head of the house went to the threshing floor to get a bundle of hay and a sheaf of rye, barley, or buckwheat; with a prayer he brought them into the house, spread the hay, and placed the sheaf of grain (the *didukh*) in the place of honor (under the icons). Hay or straw was strewn under and on top of the table, which the housewife then covered with a tablecloth. Garlic was placed at the four corners of the table while iron objects – an ax and a plowshare (or the plow itself) – and a yoke, a horse collar, or pieces of harness, were placed under the table. A pot of *kutia* was placed high up on the shelf in the corner of honor; the pot was topped with a loaf of bread (*knysh*) and a lighted candle.

The evening meal was accompanied by a special ceremony. When the *kutia* was served, the head of the house took the first spoonful, opened the window or went out into the yard, sometimes with an ax in his hand, and invited the 'frost to eat *kutia*.' On re-entering the house, he threw the first spoonful to the ceiling: an adhesion of many grains signified a rich harvest and augured a good swarming of bees. The head of the house then took some food from every dish and, placing it with some flour in a trough, carried it out to the cattle and gave it to them to eat. At the evening meal fortunes were told. After the meal three spoonfuls of each dish were placed on a separate plate for the souls of the dead relatives and spoons were left for them.

This 'holy supper' ritual and caroling are still observed, in a modified fashion, by Ukrainians in the diaspora. In Soviet Ukraine most Christmas rituals have disappeared.

Chronicle of Current Events (*Khronika tekushchikh sobytii*). Russian-language samizdat publication, which was established in 1968. The *Chronicle* reports on political repressions throughout the USSR. It provides facts on national discrimination, lists labor camp conditions, and gives details on political trials. The *Chronicle* provided considerable information on Ukrainian political trials in the 1960s and 1970s; however, the fifth issue of **Ukrains'kyi visnyk* contained an editorial in which some criticism was leveled at the *Chronicle* for its 'all-Union' stance. The *Chronicle* was until recently published in English by **Amnesty International*. The managing editor of the Russian-language edition is P. Litvinov of Khronika Press in the United States. By 1982, 62 issues had been published.

Chronicles. The Ukrainian chronicles are the most remarkable monuments of historical literature produced in ancient Rus'. They were written as annual records or annals. Besides accounts of events they contain a variety of literary materials – stories, legends, biographies, and borrowings from Byzantine chronicles. According to

some scholars such as I. Sreznevsky and M. Tikhomirov, chronicle writing began in Kiev in the 10th century. The first compilation was made in 1037, followed by the Kievan Cave Compilation of 1073 and the Novgorod Compilation of 1079. The so-called Primary Chronicle or Kievan Cave Compilation of 1097 was based on these collections and became in its turn the source for *Povist' vremennykh lit* (Tale of Bygone Years, ca 1110), whose authorship is traditionally attributed to the monk *Nestor.

The Primary Chronicle begins with the biblical description of the Flood and the division of the earth among Noah's sons. Then it deals with the migrations of the Slavs, St Andrew the apostle, and the question of who first ruled Rus' (the story of Kyi, Shchek, and Khoryv, the calling of the Varangians, etc). The subsequent chronological account of events is interspersed with such legendary stories as that of Kozhemiaka (993) and the siege of Bilhorod by the Pechenegs (997). Nestor not only supplemented this chronicle, which ends with 1093, but extended it to 1110. He added information about the strife among the sons of Yaroslav the Wise, Cuman attacks on Kiev, assemblies of the princes, and the blinding of Vasylko. The second edition of the *Povist'* (1116) was completed by the abbot of the Vydubychi monastery, Sylvester, who among other materials added Volodymyr Monomakh's speech to the Dolobsk council of princes in 1103. It is probable that Monomakh's *Pouchenie ditiam* (Instruction for My Children) was added to the *Povist'* at the Vydubychi monastery. The third edition of the *Povist'* was completed at the Kievan Cave Monastery in about 1118.

Povist' vremennykh lit served as the basis for later chronicles composed in monasteries and princely courts in Kiev and other cities of Rus'. It was continued by the so-called *Kiev Chronicle of the 12th century. The Chernihiv, Pereiaslav, and Galician chronicles did not survive, but excerpts from them have been preserved in other chronicle collections.

The story of the blinding of Prince Vasylko of Terebovia, which was inserted into *Povist' vremennykh lit* as a model of the contemporary historical tale, testifies to the high standards of the Galician tradition of chronicling in the 11th–12th century. With the fall of Kiev and the shift of political power to the Principality of Galicia-Volhynia in the mid-13th century, chronicle writing became concentrated in these territories and produced the *Galician-Volhynian Chronicle, which was written at the end of the 1280s and is the main source for the history of this period. The chronicle consists of two main parts: the Galician part, written in Halych from 1201 to about 1262, and the Volhynian part, written probably in Volodymyr up to 1292. These parts went through at least five editions. The Galician-Volhynian Chronicle continues where the earlier chronicles – the *Povist'* and the Kiev Chronicle – leave off (1200) and presents in a chronological order (this order was introduced only in the later editions and is often a mere convention) the history of the principality from 1201 to 1292. The authors evaluate events from the standpoint of Rus' unity under the Galician prince and advocate a strong centralized government under the prince in opposition to the boyars. The chronicle extols Danylo Romanovych of Halych, who 'is without fault.' From 1264 to the end the chronicle dwells on the history of the Volhynian land and its relations with Lithuania and Poland. It contains highly polished literary stories (eg,

Yevshan Zillia) and military accounts imbued with patriotism that are reminiscent of the epic **Slovo o polku Ihorevi*.

In the 14th century a new period in chronicle writing began in which Rus'-wide collections were compiled. The **Laurentian Chronicle* (ca 1377), the **Hypatian Chronicle* (beginning of the 15th century), and many others from this period have come down to us in later redactions and were published in *Polnoe sobranie russkikh letopisei* (The Complete Collection of Russian Chronicles, 37 vols, 1841–1982).

The Rus' tradition was carried on by the chroniclers of the Lithuanian-Ruthenian state in the 14th–16th century. Most of the writing was done in Belorussia, which suffered least from Tatar invasions. For this reason the chronicles of this period are known as the Lithuanian or West Ruthenian chronicles. Of the 13 redactions that were published in volumes 16–17 of *Polnoe sobranie russkikh letopisei*, the more important ones for Ukrainian historiography are the **Suprasl Chronicle*, which was compiled in 1520 from various historical sources, the **Bykhovets Chronicle* (end of the 16th century), and the *Barkulabovo Chronicle*, which was composed in the village of Barkulabovo near Mahiliou at the end of the 16th and the beginning of the 17th century and provides information on the activity of church brotherhoods.

A large number of 17th–18th century chronicles have survived. One of the important monuments of this period is the *Hustynia Chronicle* (*Kronika*), which according to some scholars, such as A. Yershov, was written by Z. Kopystensky between 1623 and 1627. It has been preserved in the redaction of M. Losytsky, an elder of the Hustynia monastery. Besides excerpts from the old chronicles it contains a wealth of historical material on Ukraine's relations with Lithuania, Poland, the Tatar Khanate, and Turkey, on the Union of Lublin, and on the origin of the Cossacks. The account is brought up to 1597. A collection of chronicle stories by an anonymous writer, known as the *Chronicles of Volhynia and Ukraine*, belongs to this period and contains besides materials from old chronicles, the notes of B. **Balyka* on events at the end of the 16th and the beginning of the 17th century. Local chronicles from this period have a certain importance also: the *Khmelnik Chronicle* (found in Khmelnyk, Podilia), containing information on the events of 1636–50, is particularly important for the history of the origins of the Khmelnytsky period; the *Lviv Chronicle* (named after the place where it was found) describes events from 1498 (in more detail from 1630) to 1649 in the Kiev region, Podilia, and Galicia; and the *Mezhyhiria Chronicle* (found in Mezhyhiria monastery) deals with the events of 1393–1620 in the Kiev region and Volhynia.

The monastery chronicles belong to a separate group, which includes the *Hustynia Monastery Chronicle* (1600–41), the *Mezhyhiria Monastery Chronicle* (1608–1700), the *Dobromyl Chronicle* (1648–1700), the *Pidhirtsi Chronicle* (1659–1715), the *Mhar Chronicle* (1682–1775), and the *Sataniv Chronicle* (1770–93). These chronicles provide important materials on local history.

Although they are not chronicles in the strict sense of the word, the historical accounts of the Cossack wars in the 17th–18th century (hence the name *Cossack chronicles*) are particularly important. These include the **Samovydyets Chronicle*, the chronicles of H. **Hrabiianka* and S. **Velychko*, several short works of the 18th century (**Lyzohub Chronicle*, *Chernihiv Chronicle*, etc), and several at-

tempts at a pragmatic approach to history (see **Historiography*). The authors of these works followed the developments in neighboring countries and used a wide range of sources: legal documents, proclamations, documentary material, Polish chronicles, diaries of eye witnesses, and the writings of European scholars.

O. Ohloblyn

Chrysostom, John. See Saint John Chrysostom.

Chteniia v Imperatorskom obshchestve istorii i drevnostei rossiiskikh (Lectures at the Imperial Society of Russian History and Antiquities). A periodical that published the papers of the Historical Society at Moscow University from 1846 to 1918 (with interruptions). In all 264 volumes of the journal, which contained materials on Russian history, were published. Its founder and first editor was O. **Bodiansky*, who edited 101 volumes in 1846–8 and 1858–77 and included in them many valuable source materials on Ukrainian history. D. Bantysh-Kamensky, M. Liubavsky, D. Bahalii, and others published in the journal. The following contributions on Ukrainian history are among those that appeared in the *Chteniia*: 'Istoriia Rusov' (History of the Rus' People, 1846), 'Letopis' Samo-vidtsa' (Chronicle of an Eyewitness, 1846), A. Rigelman's 'Letopisnoe povestvovanie o Maloi Rossii' (A Chronicle Account of Little Russia, 1847), P. Symonovsky's 'Kratkoe opisanie o kozatskom malorossiiskom narode ...' (A Brief Description of the Cossack Little Russian People ..., 1847), 'Kratkoe istoricheskoe opisanie o Maloi Rossii do 1765 goda' (A Brief Historical Description of Little Russia until 1765, 1848), 'Povest' o tom chto sluchilos' na Ukraine ... azh do smerti B. Khmel'nitskogo' (An Account of What Occurred in Ukraine ... up to the Death of B. Khmelnytsky, 1848), 'Pis'ma get'mana Mazepy' (The Letters of Hetman Mazepa, 1848), D. Zubrytsky's 'Nachalo Unii' (The Beginning of the Union, 1848), M. Khanenko's 'Diariush' (Diary, 1858–9), D. Bantysh-Kamensky's 'Istochniki malorossiiskoi istorii' (Sources of Little Russian History, 1858), Yu. Krachkovsky's 'Ocherki Uniatskoi Tserkvi' (Outline of the Uniate Church, 1871), 'Reiestra

vsego Voiska Zaporozhskogo v 1649 g.' (The Register of the Entire Zaporozhian Host in 1649, 1874), and Ya. Holovatsky's 'Narodnye pesni Galitskoi i Ugorskoi Rusi' (Folk Songs of Galician and Hungarian Ruthenia, 1878).

Chteniia v Istoricheskoi obshchestve Nestora-letopistsa (Lectures at the Historical Society of Nestor the Chronicler). Publication of the *Historical Society of Nestor the Chronicler in Kiev. Between 1879 and 1914, 24 volumes were published, containing material on Ukrainian history as well as on legal history, philology, archeology, historical geography, paleography, and numismatics. One of the society's most valuable publications was *Akty iz istorii zemlevladiiia v Malorossii* (Documents from the History of Land Tenure in Little Russia, 4 vols, 1890). The *Chteniia* published articles by such eminent professional historians of Ukraine as M. Vladimirsky-Budanov, I. Kamanin, O. Kistiakivsky, and O. Lazarevsky.

Chubar, Vlas [Čubar], b 22 February 1891 in Fedorivka, Katerynoslav gubernia, d 26 February 1939. An economic administrator and Communist party leader, Chubar was the first Ukrainian to be elected to the all-Union party Politburo. He attended the Oleksandrivske mechanical-technical school (1904–11) and joined the Bolshevik party in 1907. After 1911 Chubar worked in factories in Kramatorske, Mariupol, Moscow, and Petrograd. During the October Revolution he was appointed commissar of the chief artillery administration in Petrograd, then held a number of administrative positions in Russia.

Chubar's Ukrainian career spans the years 1919–34. He served as the chairman of the Organizational Bureau for the Reconstruction of the Industry of Ukraine, chairman of the Supreme Council of the National Economy of the Ukrainian SSR (1920–1), a member of the All-Ukrainian Revolutionary Committee, and, from December 1921, head of the Central Administration of the Coal Industry in the Donets Basin. In July 1923 Chubar was elected chairman of the Council of People's Commissars of the Ukrainian SSR, serving also as deputy chairman of the USSR Council of People's Commissars. In March 1920 Chubar was elected a full member of the Central Executive Committee (CEC) of the CP(B)U and was continuously re-elected to this position until January 1934. Chubar was also a member of the CP(B)U Politburo (1920–34). In August 1921 he was elected full member of the All-Union Party CEC, a status he maintained through to the 17th Party Congress (February 1934). Chubar also served as a candidate member of the All-Union CP Politburo from 1926 to 1935 and as a full member from February 1935. Around 1925 Chubar headed the committee for *Ukrainization and was unsuccessfully recommended by O. Shumsky for the position of first secretary of the CEC CP(B)U in place of L. Kaganovich. In 1934 Chubar was transferred to Moscow as deputy chairman of the USSR Council for Labor and Defense. Chubar was arrested in 1937 and subsequently either was shot or died a prisoner. He was rehabilitated in the 1960s.

As a Ukrainian administrator and Party leader, Chubar spoke out in defense of the economic interests of the republic. He emphasized the necessity of expanding activities on the local level. Reporting on industrialization to the 11th Congress of the CP(B)U in Kharkiv (5–15 June 1930), Chubar called for control by the Ukrainian government of Union enterprises on the territory of the republic. At the Third All-Ukrainian CP(B)U Conference in Khar-

kiv (6–9 July 1932) he and A. Shlikhter argued that the method and the pace of collectivization were unrealistic and the grain collection plan too ambitious. Yet, in 1926, Chubar, along with M. Skrypnyk, A. Khvyliia, and Ye. Hirchak, opposed the position of cultural independence taken by M. Khvylovy and O. Shumsky. Chubar feared that it would lead to the separation of the Ukrainian SSR from the USSR.

Y. Bilinsky

Vlas Chubar

Mykola Chubaty

Chubaty, Mykola [Čubatyj], b 11 December 1889 in Ternopil, d 10 July 1975 in Paramus, New Jersey. Historian of the Ukrainian church and Ukrainian law, Ukrainian civic and Catholic leader, pedagogue, and publicist. Chubaty was a full member of the Shevchenko Scientific Society from 1928 and the founder and first president of the American branch of the society. In 1939 he went to the United States to attend the Pax Romana congress and settled there. In 1909–18 Chubaty studied theology, history, and law at the universities of Lviv and Vienna and studied under M. Hrushevsky and O. Balzer. He served as professor of the Lviv (Underground) Ukrainian University (1920–3), the Greek Catholic Theological Seminary (later, Academy) (1927–39), the Ukrainian Free University, and the Ukrainian Catholic University in Rome (from 1963).

His principal works on the history of the Ukrainian church are 'Zakhidna Ukraïna i Rym u XIII v. u svoikh zmahanniakh do tserkovnoi unii' (Western Ukraine and Rome in the 13th Century in Their Striving for Church Union, *Zapysky NTS*, vols 123–4, 1917), 'Pro pravne stanovyshe tserkvy v Kozats'kii derzhavi' (The Legal Status of the Church in the Cossack State, *Bohosloviia*, vol 3, nos 1–2, 1925), *Istoriia uniinykh zmahan' v ukrains'kii tserkvi* (The History of the Aspirations for Union in the Ukrainian Church, 2 vols, 1937), and *Istoriia khrystyianstva na Rusy-Ukraïni* (The History of Christianity in Rus'-Ukraine; vol 1 to 1353; vol 2 to 1458; 1965, 1976). In these works Chubaty emphasized the importance of Christianity in Ukrainian territories prior to the reign of Prince Volodymyr the Great and defended the theory of the Tmutorokan origin of the Kiev hierarchy and the autonomous status of the Kiev metropolitanate. His works on the history of Ukrainian law include *Ohliad istorii ukrains'koho prava: Istoriia dzherel ta derzhavnogo prava* (A Survey of the History of Ukrainian Law: A History of Sources and State Law, 2 vols, 1921, 1922, 1947, 1976); 'Derzhavno-pravne

stanovyshche ukrains'kykh zemel' lytovs'koi derzhavy pid kinets' xiv st.' (The Political-Legal Status of the Ukrainian Lands in the Lithuanian State at the End of the 14th Century, *Zapysky NTSh*, vols 134-5 and 144-5, 1924), and 'Literatur der Ukrainischen Rechtsgeschichte in den Jahren 1919-1929,' *Przewodnik historyczno-prawny*, vols 2-4, 1930). In these works Chubaty formulated a scheme for the history of Ukrainian law. His general historical works include 'Kniazha Rus'-Ukraina ta vynyknennia tr'okh skhidn'o-slovians'kykh natsii' (Princely Rus'-Ukraine and the Emergence of Three East Slavic Nations, *Zapysky NTSh*, vol 178, 1964).

Chubaty's journalistic articles appeared in Galician papers and journals such as *Nova rada*, *Pravda*, *Dilo*, *Dzvony*, *Meta*, and American papers such as *Svoboda* and *Ameryka*. He was a co-founder of the *Ukrainian Congress Committee of America and the editor of its periodical the **Ukrainian Quarterly* (1944-57). As a Catholic activist he was president of a section of Pro Oriente of Pax Romana, participated in Pax Romana congresses, and co-founded the Obnova Society of Ukrainian Catholic Students. In the 1960s and 1970s he was active in the movement to establish a Ukrainian Catholic patriarchate.

His publications and activity at international congresses helped to inform the English-speaking world about Ukraine.

Ya. Padokh

Chubynsky, Mykhailo [Čubyns'kyj, Myxajlo], 1871-? Criminal jurist, son of P. *Chubynsky, professor at Kharkiv University, representative of the sociological school of criminology. Chubynsky contributed to the journal *Ukrainskaia zhizn'*. Under the Hetman government in 1918 Chubynsky was minister of justice and later the president of the State Criminal Court. In 1920 he transferred his support to A. Denikin. After emigrating to Yugoslavia he worked as a professor in Belgrade and Subotica.

Pavlo Chubynsky

Chubynsky, Pavlo [Čubyns'kyj], b 27 January 1839 in Boryspil, d 26 January 1884 in Kiev. Ukrainian ethnographer and civic leader. Chubynsky graduated from the faculty of law at St Petersburg University. In 1869-70 he headed an ethnographic-statistical expedition to Ukraine,

Belorussia, and Moldavia and studied the daily life, customs, dialects, folklore, and folk beliefs of the people. In 1873-6 he directed the *Southwestern Branch of the Imperial Russian Geographic Society. His main works are 'Ocherk narodnykh iuridicheskikh obychaev i poniatii v Malorossii' (Sketch of Folk Juridical Customs and Concepts in Little Russia, in *Zapiski Imperatorskogo ruskogo geograficheskogo obshchestva*, 1869) and *Trudy etnograficheskostatisticheskoi ekspeditsii v Zapadno-russkii kraii* (Works of the Ethnographic-Statistical Expedition to the West-Russian Region, 7 vols, 1872-9). Volume 1 of *Trudy* deals with folk beliefs, superstitions, proverbs, riddles, and spells; volume 2 with folk tales and anecdotes; volume 3 with the folk calendar, spring songs, harvest songs, and carols; volume 4 with birth, baptism, wedding and funeral rites; volume 5 with folk songs; volume 6 with legal customs; and volume 7 with the various peoples that lived in Ukraine. For his valuable research Chubynsky was awarded a gold medal by the Russian Geographic Society in 1873, a gold medal at the International Exhibition in Paris in 1875, and the Uvarov Prize by the Russian Academy of Sciences in 1879. Chubynsky is also known for his poetry; he published a collection entitled *Sopilka* (The Reed Pipe, Kiev 1871) and wrote the words to 'Shche ne vmerla Ukraina' (Ukraine Has Not Yet Died), later the anthem of the UNR. A list of Chubynsky's works can be found in P. Yefymenko's 'Bibliograficheskii ukazatel' trudov P.P. Chubinskogo' (Bibliographic Guide to the Works of P.P. Chubynsky), *Kievskaiia starina* (May 1884).

P. Odarchenko

Chudniv [Čudniv]. III-9. Town smt (1970 pop 6,600), raion center in Zhytomyr oblast, situated on the Teteriv River in the northwestern section of the Dnieper Upland. Chudniv was first mentioned as a fortified town in 1471. In 1660 the Muscovite armies under Gen V. Sheremetiev capitulated to the Poles at Chudniv, a defeat that led to the signing of the Treaty of *Slobodyshche. In the 19th century Chudniv was an important center of agricultural trade (towards the end of the century it had a population of 10,500, of whom one-half were Jews). Today the town has a small food industry, a furniture factory, and a peat-processing enterprise.

Chudnovsky, Volf [Čudnovs'kyj, Vol'f], b 1908. Specialist on the vibration of pivot and frame systems, research associate of the Institute of Mechanics of the Academy of Sciences of the Ukrainian SSR. Chudnovsky collaborated with S. Serensen and A. Kovalenko in investigating the dynamic strength of parts for new aviation machines and turbines. In 1935-40 and during the thaw of 1957-62, Chudnovsky published his work in Ukrainian, developing the appropriate Ukrainian technical terminology. His principal work is *Metody rascheta kolebani i ustoičivosti sterzhnevnykh sistem* (Methods of Estimating the Vibration and Stability of Pivot Systems, 1952).

Chufut-Kaleh (Hebrew for *city*). One of the largest cave settlements in the Crimea, built by the descendants of the *Alans in the 5th-6th century AD. In 1299 the town was captured by the Tatars and was given the name Kyrk-Er. In the 14th century the *Karaites settled there and turned the town into a manufacturing and trade center. Under

the Crimean Khanate captured military leaders were imprisoned there. The name Chufut-Kaleh dates back to the 16th century. In the mid-19th century the Karaites moved to Bakhchesarai, and the town was abandoned and fell into ruin. In the older, western part, the town's wall and arched gate, numerous cave dwellings, the ruins of a mosque, a Tatar mausoleum (1437) and two Karaite temples have been preserved. A mint that produced silver Tatar coins was located in the eastern part. The town's ruins are now part of the *Bakhchesarai Historical and Archeological Museum.

Chuhmak River [Čuhmak]. Stream in the Dnieper Lowland, right-bank tributary of the Orzhytsia River (of the Dnieper Basin). It is 72 km long and has a basin area of 845 sq km.

Chuhuiv [Čuhujiv]. IV-17. City (1976 pop 29,000), raion center in Kharkiv oblast, located on the banks of the Donets River. Chuhuiv was known from 1627 as a frontier settlement. From the middle of the 17th century to 1765 it was a company town in the Kharkiv (Slobidskyi) regiment. In 1780 it was given the status of a city. From 1817 to 1857 Chuhuiv was the center of a district of military settlements. A revolt of military settlers of the Chuhuiv Regiment, known as the *Chuhuiv uprising, was ruthlessly crushed in 1819. From 1857 Chuhuiv was an autonomous (*zashitatne*) town in Zmiiv county in Kharkiv gubernia. In 1897 it had a population of 12,600, and in 1926, 14,400. The population was occupied in agriculture, crafts, and trade. Today it is an industrial city, producing heating equipment, precision equipment, research apparatus, building materials, reinforced concrete, furniture, food, and artistic embroidery. The painter I. Repin was born in Chuhuiv. Today his home is the Repin Memorial Museum. The city also has an art gallery.

Chuhuiv uprising. Armed revolt in 1819 by military settlers of the Chuhuiv Regiment in the Kharkiv region against the harsh working conditions and severe regulations in *military settlements, in which military service was combined with farm work, that were introduced in the Russian Empire in 1816. The uprising began on 9 July 1819 with a demand that military settlements be abolished. It was joined by peasants from neighboring villages and military settlers from Balakliia. In order to suppress the revolt the Russian government dispatched four infantry regiments and two artillery batteries under the command of the minister of war, Gen A. Arakcheev. After a month of fighting the uprising was crushed. Close to 2,000 rebels were arrested and cruelly punished: 20 died under the rod, and 400 were exiled to hard labor. In 1820 similar revolts occurred in southern Ukraine and involved about 200 villages.

Chuikevych [Čujkevych]. Name of a cossack officer family in the Hetman state, descended from the brothers Oleksander Chuikevych, town chancellor of Poltava (1666-89), and Vasyl *Chuikevych, general judge (1706-9). Oleksander's son Fedir *Chuikevych was a fellow of the standard (1735) and an eminent jurist. One of his descendants, Petro Chuikevych (1818-ca 1875), was a pedagogue and ethnographer who belonged to the *Cyril and Methodius Brotherhood. A son of Vasyl Chuikevych, Semen, was a leading member of the General Military

Chancellery (1728-30), judge of the Nizhen regiment (1730-4), and a member of the Codification Commission (1728-43) and the General Court (1744).

Chuikevych, Fedir [Čujkevych], b ? , d ca 1759, Jurist and Cossack political leader. In 1717 Chuikevych was the assistant secretary of the General Military Court. In 1750 he received the rank of fellow of the standard. In 1750-8 he privately completed a codification of the laws that were in force in the Hetman state and compiled the collection *Sud i rozprava* (Court and Trial), both of which he based on the *Lithuanian Statute. He made various proposals for the reform of the court system and its procedures. In 1760 Chuikevych's ideas were partially realized when the Hetman state was divided into 20 court districts.

Chuikevych, Vasyl [Čujkevych, Vasyl'], b in the Poltava region, d ? A courtier (*dvorianyn*) of hetmans I. Samoilovych and I. Mazepa, Chuikevych served as military chancellor (1689, 1697), keeper of the Hadiache castle, supervisor of the General Military Chancellery (1702), and second general judge (1706-9). He joined the Swedes along with Mazepa, but surrendered to the Russians at Poltava. He was exiled to Siberia, where he became a monk.

Chukarin, Viktor [Čukarin], b 9 November 1921 in Mariupol, Katerynoslav gubernia. Gymnast. Chukarin graduated from the Lviv Institute of Physical Culture in 1950 and in 1971 began to teach gymnastics at the institute. He won the championship of the USSR (1949-51, 1955), the world championship (1954), and the Olympic championship (1952 and 1956). He also received 13 gold medals in USSR competitions for his performance in various forms of gymnastics.

Chukhno, Anatolii [Čuxno, Anatolij], b 20 December 1926 in Baturyn, Chernihiv oblast. Economic theorist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1967. After graduating from the University of Kiev in 1951, Chukhno worked at the university, becoming head of the department of political economy in 1963. He has written some 80 studies on the laws governing the distribution of wealth, the stimulation of economic development, the efficiency of social production, and other theoretical questions of political economy.

Chukhrai, Hryhorii [Čuxraj, Hryhorij], b 23 May 1921 in Melitopol, Tavriia gubernia. Film director. Chukhrai graduated from the All-Union State Institute of Cinematography and worked as a film director at the Kiev Artistic Film Studio in 1953-5. There he produced the color film *Nazar Stodolia* and other films. In 1956 he transferred to the Moscow Film Studio (Mosfilm). Chukhrai's name became well known for the film *Ballada o soldate* (Ballad of a Soldier, 1959).

Chukovsky, Kornei [Čukovskij, Kornej], b 31 March 1882 in St Petersburg, d 28 October 1969 in Peredelkino near Moscow. Russian writer, translator, literary scholar, author of children's books. Chukovsky spent his early years with his mother, K. Kornichuk, in Odessa, where his first published work appeared. He published translations of Ukrainian poetry in the collection *Molodaia Ukraina* (Young Ukraine), compiled several Russian trans-

lations of T. Shevchenko's work, and wrote a study of Shevchenko (1911).

Chulaivsky, Yakiv [Čulajiv's'kyj, Jakiv], b 1889 in the Kiev region, d ? Appointed bishop of the Ukrainian Autocephalous Orthodox church for the Berdychiv okruha in 1923. As a member of the Presidium of the All-Ukrainian Orthodox Church Council from 1926, he was in charge of religious education. In 1931 he was arrested and exiled to Siberia, where he perished.

Chuma, Andrii [Čuma, Andrij], b 30 December 1927 in the village of Tsbany, Prešov region, Slovakia. Pedagogue. Chuma studied at the University of Bratislava and the Moscow Pedagogical Institute. He is a professor at Šafařík University in Prešov. His studies in the history of pedagogy include *Ukrains'ke shkil'nytstvo na Zakarpatti i shkidnii Slovachchyni* (Ukrainian Education in Transcarpathia and Eastern Slovakia, 1967) and *Komenský a ruska škola* (Comenius and the Ruthenian School, 1970). Chuma contributes to Ukrainian publications in the Prešov region, especially to the pedagogical supplement *Shkola i zhyttia* of the journal *Druzhno vpered*.

Chumachenko, Mykola [Čumačenko], b 1 May 1925 in Hladivka, Kherson oblast. Economist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1973. In 1961 Chumachenko became a professor at the Kiev Institute of National Economy, serving as its prorector from 1967 to 1970. Between 1971 and 1973 he was deputy director of the Institute of Economics of the Academy of Sciences of the Ukrainian SSR; since 1973 he has been director of the Institute of Industrial Economics of the Academy of Sciences in Donetsk. He has produced studies on industrial economics and management, such as *Statistiko-matematicheskie metody analiza v upravlenii proizvodstvom SShA* (Statistical-Mathematical Methods of Analysis in the Management of Production in the USA, 1973).

Chumak, Roman [Čumak], b 10 September 1918 in Ksaverivka, Kiev gubernia. Poet. Chumak graduated from Kiev University in 1950 and completed his graduate studies there in 1953. Since then he has occupied important posts in the publishing houses Molod and Dnipro, where he served as chief editor from 1954 and director from 1963 to 1966. His poetry began to appear in print in 1937. He wrote several collections of poetry: *Liryka* (Lyrics, 1955), *Liubliu iak spivaiut'* (I Love It When They Sing, 1958), *Holuby nad kalynoiu* (Doves above the Viburnum, 1960), *Troiandy v snihu* (Roses in the Snow, 1961), *Pisnia nezradlyoho lisu* (Song of the Unbetraying Forest, 1963), *Zakokhanymy ochyma* (With Loving Eyes, 1964). *Kraplyna chystoi liubovi* (A Drop of Pure Love, 1965). He has published a number of poetry collections for children; translations from Russian, Belorussian, Polish, English, etc; and the historical novel *Branne pole* (The Battlefield, 1969).

Chumak, Vasyl [Čumak, Vasyl'], b 7 July 1901 in Ichnia, Chernihiv gubernia, d 21 November 1919 in Kiev. Revolutionary and writer. Chumak became an active member of the *Borotbists. He was secretary of the editorial board of the journal *Mystetstvo* and an associate of the All-Ukrainian Literature Collegium of the People's Commissariat of Education. A talented writer of romantic-

revolutionary poetry, Chumak began to write in 1917. He was executed by A. Denikin's counterintelligence, and collections of his poetry were all published posthumously: *Zaspiv* (Prelude, 1920), *Revoliutsiia* (Revolution, 1920), and *Chervonyi zaspiv* (The Red Prelude, 1922, 1930, 1956). Despite the general acceptance in the 1920s of V. Koriak's thesis that Borotbist poets such as Chumak, V. Blakytyn, A. Zalyvchy, and H. Mykhailychenko were the 'first brave' founders of Ukrainian Soviet literature, Chumak's works were prohibited at the beginning of the 1930s. He was rehabilitated only in the mid-1950s.

Chumak songs. Folk songs about the life and adventures of the *chumaks. The themes of the songs are very diverse and deal with every aspect of the wagoners' daily life: their departure, the misery of their families, their nostalgia, the hardships of life on the road, the loss of oxen, Tatar attacks and robbers, illness and death, longing for a beloved, the hard life of a hired hand, momentary distractions, their return home, love and marriage, the longing of waiting wives. The conflict between familial feelings and the obligations of the trade is one of the frequent sources of drama in chumak lyrical poetry, which is permeated with a longing for good fortune. Some of the chumak songs, by their epic quality, are similar to the Ukrainian *dumas. The melodies of these songs are suited to the text: they depict the beauty of the steppe and the tragedy of illness and death on the road.

Some chumak songs originated at least five centuries ago. They belonged to the repertoire of the *kobzars and *lirnyks. Some of them were written down in the manuscript song books that appeared in the first half of the 18th century. They began to appear in print at the beginning of the 19th century. The first musical publication of chumak songs was done by M. Maksymovych in 1834, and the first systematic collection of chumak songs was published by I. Rudchenko in 1874. Arrangements of chumak songs were written by such composers as M. Lysenko, K. Stetsenko, Ya. Stepovy, O. Koshyts, M. Leontovych, F. Kolessa, and L. Revutsky.

Chumak songs had an important influence on Ukrainian culture. They were used by T. Shevchenko as models for such poems as 'Oi, ne piut'sia pyva' (O, Beer Is Not Being Drunk), 'U nedilen'ku ta ranesen'ko' (Early on Sunday Morning), and 'Nenache stepom chumaky' (As If Chumaks on the Steppe). Chumak themes are reflected in the prose of Marko Vovchok, I. Nechui-Levytsky, and P. Myrny; in the dramas of I. Karpenko-Kary (the play *Chumaky*); and in the poetry of Ya. Shchokoliv (eg, 'Chumat'ski mohyly' [Chumak Graves]). M. Kotsiubynsky's short story 'Na krylakh pisni' (On the Wings of a Song) expresses the thematic richness and beauty of chumak songs.

P. Odarchenko

Chumaks. Wagoners and traders who were common in Ukraine from the 17th to the mid-19th century. They brought by wagon salt from the Crimea and salted and dried fish from the Black and Azov seas and the Don

River. The name *chumak* is derived from the term *chum*, which refers to a wooden container used by the chumaks for transporting salt and fish. According to another theory a *chum* was a measuring scoop used by the salt traders when they sold salt. The chumak vocation was common among all classes of the Ukrainian population, particularly among the Cossacks and well-to-do peasants. The difficulties and perils of travel compelled the chumaks to organize themselves into trains of 10–100 wagons for the duration of a trip. In this way they could defend themselves from attack by the Crimean Tatars and robbers. The life and customs of the wagoners are vividly depicted in the *chumak songs. From the 17th to the mid-19th century the chumaks controlled 50 percent of the salt trade in Ukraine. In the 1830s–1850s these wagoners imported about 41,000 tonnes of fish each year. They carried wheat, farm products, and manufactured articles south into the steppes, the Crimea, and Moldavia. With time the chumaks became the main carriers of bulk cargo. They played an important role in Ukraine's economy by promoting the development of internal and external trade. In the second half of the 19th century the wagoners' trade began to decline as railways were built and steppe pasturage for oxen shrank.

The chumaks' life is extensively reflected not only in Ukrainian folklore but also in literature by such authors as T. Shevchenko, Marko Vovchok, I. Karpenko-Kary, and M. Kotsiubynsky. Painters were also attracted by the subject: V. Shternberg painted *Chumak* in 1836; I. Aivazovsky, *Chumak Wagon Train* in 1885; K. Trutovsky, *Chumak* in 1855; A. Kuindzhi, *Chumak Highway* in 1875; V. Orlovsky, *A Chumak's Rest*; and S. Vasylykivsky, *The Chumak Romodan Road*.

P. Odarchenko

Chumer, Vasyl [Čumer, Vasył], b 5 February 1882 in Drohoiv, Peremyshl county, Galicia, d 2 August 1963 in Edmonton, Alberta. Chumer was a pioneer schoolteacher who arrived in Winnipeg in 1903 and became a member of the first class to enroll in the *Ruthenian Training School in 1905. He taught in Manitoba and Alberta (1907–13) and was an organizer and first secretary-treasurer of the Ukrainian Pioneers' Association of Alberta. He is the author of one of the first historical accounts of the Ukrainian settlers in Canada, *Spomyny pro perezhyvannia pershykh ukrains'kykh pereselentsiv v Kanadi* (Recollections about the Experiences of the First Ukrainian Settlers in Canada, 1942), which was published in English as *Recollections about the Life of the First Ukrainian Settlers in Canada* (1981).

Chupakhivka [Čupaxivka]. III-15. Town smt (1970 pop 4,100) in Okhtyrka raion, Sumy oblast. Chupakhivka has a sugar-refining complex. The town was founded in the early 18th century.

Chuprynka, Hrytsko [Čuprynka, Hryc'ko], b 15 November 1879 in Hoholiv, Chernihiv gubernia, d 28 August 1921. A modernist poet, Chuprynka took an active part in the Revolution of 1905. He contributed to **Ukrains'ka khata* and, during the 1917 Revolution, served in the *Khmelnysky Regiment. In 1919 he led a rebellion against the Bolsheviks in the district of Chernihiv. He was executed by the Cheka. Though a fine craftsman who espoused P. Verlaine's dictum that poetry is firstly music,

Hrytsko Chuprynka

Chuprynka was not averse to speaking out on social and patriotic themes in his poems. Most of his poetry has been published in a collected edition, *Tvory H. Chuprynky* (Prague 1926), edited by P. Bohatsky.

Chuprynka, Taras. See Shukhevych, Roman.

Churai, Marusia [Čuraj, Marusja]. Legendary Ukrainian singer who, according to legend, lived in Poltava in 1625–50 and composed a number of songs that are still sung, including 'Oï, ne khody, Hrytsiu' (Don't Go to Parties, Hryts), 'Kotylysia vozy z hory' (The Wagons Rolled Downhill), and 'Za svit vstaly kozachen'ky' (The Cossacks Awoke at Dawn). The theme of 'Don't Go to Parties, Hryts' has been used in about 10 Ukrainian novels, several plays, and poems. The best-known novel based on this theme is O. Kobylanska's *V nediliu rano zillia kopala* (On Sunday Morning She Dug Up Herbs). The song itself was translated into German and French at the beginning of the 19th century. A collection of Churai's songs, with a biographical sketch by L. Kaufman, was published under the title *Divchyna z lehendy – Marusia Churai* (The Girl out of a Legend – Marusia Churai, 1967, 1974). In 1979 L. Kostenko's 'historical novel in verse' entitled *Marusia Churai* was published in Kiev.

Church brotherhoods. See Brotherhoods.

Church endowment property. In the Lithuanian-Polish Commonwealth this property consisted of land donated to the Catholic church by the state or the gentry. In the Hetman state in the second half of the 17th century and in the 18th century this property consisted of land donated to Orthodox monasteries by the hetmans or the Russian tsars. In Left-Bank Ukraine the church's endowment property was secularized in 1786, while in Right-Bank Ukraine the Russian government confiscated it in 1741–4 by converting it into state-controlled 'clerical' property, the income of which was used to support the clergy.

Church, historiography of the Ukrainian. The historiography of the Ukrainian church originated in the Princely era. The important events in the history of the church were recorded in the oldest monuments of Ukrainian literature: *chronicles, biographies of prominent church leaders, and descriptions of churches and monasteries. These sources are rich in materials on church history because their authors were usually members of the clergy. Some of these monuments have been pre-

served in such chronicles as *Povist' vremennykh lit* (Tale of Bygone Years), the *Kiev Chronicle, the *Lviv Chronicle, and in other documents of the period.

This tradition of church history was continued in the Lithuanian-Polish period, particularly in the second half of the 16th century and the beginning of the 17th century, in the general and the church-monastery chronicles and in the collections and records of church activities, such as the synodicons (registries of the dead). A larger number of historical works appeared in the period of religious struggle and polemics after the Church Union of Berestia (1596), although most of them were of a political nature. The religious struggle, as well as the broad cultural activity of Metropolitan P. Mohyla and particularly of his Kiev Collegium (see *Kievan Mohyla Academy), gave rise to truly historical treatises, although most of them were marginal parts of theological or biographical works such as the Hustynia Chronicle, the notes of Mohyla, S. Kosov's Patericon, and the later writings of Bishop Ya. Susha.

For the most part the first scholarly works on the history of the church still had a polemical purpose and were produced on the Orthodox side by the circles associated with the Kievan academy and on the Catholic side by the scholars of the *Basilian monastic order. Among them are the works of Archbishop H. Konysky, M. Bantysh-Kamensky (*Istoricheskoe izvestie o vznikshoi v Pol'she Unii* [Historical Information about the Union Originating in Poland], 1805), and the Catholic metropolitan L. Kyshka. The first general history of the Ukrainian church was written by the Basilian I. Kulchynsky: *Specimen Ecclesiae Ruthenicae, ab Origine Susceptae Fidei ad Nostra Tempora* (Rome 1733–4).

In this period works on various topics and local problems of the Ukrainian church appeared: H. Stebel'sky, I. Oleshevsky, and K. Srochynsky wrote on the history of the Basilian order and the monasteries: M. Ryllo, K. Khodyevych, and Y. Bazylovych wrote about Prince T. Koriatovych's foundation for the Mukachiv monastery (4 vols, 1799–1804).

19th and early 20th century. Systematic scholarly works on the history of the church, particularly on the church monuments of Kiev and other historical centers and prominent figures in Ukraine, began to appear at the beginning of the 19th century. After 1819 the center for these studies was the *Kiev Theological Academy. The first works were written by the Kievan metropolitan E. Bolkhovitinov: *Opisanie Kievo-Sofiiskogo sobora i kievskoi ierarkhii* (A Description of the Kiev St Sophia Cathedral and the Kiev Hierarchy, 1825) and *Opisanie Kievo-Pecherskoi Lavry* (A Description of the Kievan Cave Monastery, 1826). A number of noted church historians were graduates of the Kiev Theological Academy, among them M. Bulgakov, the author of the monumental work *Istoriia Russkoi Tserkvi* (A History of the Russian Church, 12 vols, 1857–83), Bishop F. Humilevsky, Bishop G. Rozanov, and Archbishop Teodosii of Katerynoslav.

Besides the theological academy several new institutions of learning in Kiev published research on the history of the church, in particular the *Kiev Archeographic Commission, the *Historical Society of Nestor the Chronicler, the journal **Kievskaia starina*, and later the *Ukrainian Scientific Society in Kiev. They influenced other centers of learning – in Kharkiv (A. Lebedev, M. Stelletsky), Poltava, Chernihiv, Odessa – and provincial ar-

cheological church societies, archives, and museums, mainly in Volhynia (M. Teodorovych, A. Khoinsky, and O. Fotynsky) and Podilia (Yu. Sitsinsky).

In the 19th century a particularly large number of archival materials and documents in the history of the Ukrainian church were published. The more important collections of documents were **Akty, otnosiashchiesia k istorii Iuzhnoi i Zapadnoi Rossii* (15 vols, 1863–92); **Arkhiv Iugo-Zapadnoi Rossii* (Archive of Southwest Russia), series 1, 12 vols, 1859–1914); *Materialy dlia istorii zapadno-russkoi Tserkvi* (Materials for the History of the West Ruthenian Church, 3 vols, 1895), edited by S. Golubev; **Pamiatniki, izdannye Vremennoi Komissiei dlia razbora drevnikh aktov* (Monuments Published by the Temporary Commission for the Study of Ancient Acts, 4 vols, 1845–59); *Opisanie dokumentov arkhiva zapadno-russkikh uniatskikh metropolitov* (Description of the Documents in the Archive of the West Ruthenian Uniate Metropolitans, 2 vols, 1897). M. Petrov's five volumes, F. Titov's five volumes, and A. Tainer's and Ye. Shmurlo's collections of materials on the history of the Kievan Mohyla Academy in the 18th–19th century also deserve mention.

In this period the following important contributions to the history of the Ukrainian church were published: F. Ternovsky's *Ocherki iz istorii Kievskoi eparkhii v xviii st. ...* (Outline of the History of the Kiev Eparchy in the 18th Century, 1879); S. Ternovsky's *Issledovanie o podchinnii Kievskoi mitropolii Moskovskomu patriarkhatu* (Study of the Subordination of the Kiev Metropolitanate to the Moscow Patriarchate, 1872); I. Malyshevsky's *Kievskie tserkovnye sobory* (The Kievan Church Sobors, 1884) and *Zapadnaia Rus' v bor'be za svoiu veru i narodnost'* (Western Rus' in the Struggle for Its Faith and National Identity, 1894); S. Golubev's *Kievskii mitropolit Petr Mogila i ego spodvizhniki* (Kievan Metropolitan Petro Mohyla and His Associates, 2 vols, 1883 and 1898); V. Bidnov's *Pravoslavnaia Tserkov' v Pol'she i Litve* (The Orthodox Church in Poland and Lithuania, 1908); T. Titov's *Ruskaia Pravoslavnaia Tserkov' v pol'sko-litovskom gosudarstve v xvii–xviii vv. (1654–1795)* (The Ruthenian Orthodox Church in the Polish-Lithuanian State in the 17th–18th Century [1654–1795], 3 vols, 1905–16) and *Istoriia Kievo-Pecherskoi Lavry* (The History of the Kievan Cave Monastery, 2 vols, 1880); P. Lebedintsev's works on Kiev church monuments and monasteries; and T. Lebedintsev's work on M. Znachko-Yavorsky. The studies of the following scholars were published mostly in **Trudy Kievskoi Dukhovnoi Akademii*: M. Ohloblyn, S. Kryzhanovskiy, P. Orlovskiy, S. Kurhanovych, I. Rybolovskiy, I. Hraievskiy, M. Shpachynskiy, A. Bilhorodskiy, V. Chekhivskiy, A. Osynskiy, V. Ivanytsky, M. Mukhyn, and A. Krylovskiy.

Several scholars who worked outside Ukraine made important contributions to the history of the Ukrainian church: I. Chistovich wrote *Ocherk istorii zapadno-russkoi tserkvi* (An Outline of the History of the West Ruthenian Church, 2 vols, 1882–4) and *Ieofan Prokopovich i ego vremena* (Teofan Prokopovych and His Time, 1868); P. Zhukovich wrote *Seimovaia bor'ba pravoslavnogo zapadno-russkogo dvorianstva s tserkovnoi uniei (do 1609 g.)* (The Parliamentary Struggle of the Orthodox West Ruthenian Nobility against the Church Union [to 1609], 6 fascicles, 1901–10); and K. Kharlampovich authored *Malorossiiskoe vliianie na velikoruskuuiu tserkovnuuiu zhizn'* (The Little Russian Influence on Great Russian Church Life, 1914).

Many Ukrainian historians studied various aspects of

church history: M. Maksymovych wrote on the church in the Kiev and Pereiaslav regions; M. Kostomarov wrote on the causes and the nature of the union in Western Russia (1842); V. Antonovych produced *Ob Unii i sostoianii Pravoslavnoi Tserkvi s poloviny xvii do kontsa xviii v.* (On the Union and the State of the Orthodox Church from the Middle of the 17th to the End of the 18th Century, 1871); M. Ivanyshchyn discussed the origins of the union (1859); O. Levytsky wrote a monographic preface to vol 6, series 1, of *Arkhiv Iugo-Zapadnoi Rossii*, entitled 'Vnutrennee sostoianie zapadno-russkoi Tserkvi v pol'sko-litovskom gosudarstve v kontse xvi veka i Unii' (The Internal State of the West Ruthenian Church in the Polish-Lithuanian State at the End of the 16th Century and the [Church] Union, 1884), 'Iuzhnorusskie arkhieri v xvi-xvii v.' (South Russian Bishops in the 16th-17th Century, *Kievskaiia starina*, vol 1 [1882]), and 'Tserkovni spravy na Zaporozhu' (Church Affairs in Zaporizhia, *ZUNTK*, vol 9 [1912]); O. Lazarevsky traced the history of the clergy of the Hetman state; M. Vasylenko and M. Hrushevsky discussed church affairs, the latter in his *Istoriia relihiinoi dumky na Ukraïni* (The History of Religious Thought in Ukraine, 1925) and *Istoriia Ukraïny-Rusy* (The History of Ukraine-Rus', 10 vols, 1898-1937).

In this period a number of Russian historians dealt with the history of the Ukrainian church, usually in the context of the history of the Orthodox church in the Russian Empire; these included N. Karamzin, S. Sokolov, and V. Kliuchevsky, and the following church historians: A. Ornatsky, who produced *Istoriia rossiiskoi ierarkhii* (A History of the Russian Hierarchy, 6 vols, 1807-15); G. Karpov; V. Eingorn; I. Shliapkin, who wrote on Dmitrii of Rostov (1891); M. Priselkov, author of *Ocherki po tserkovno-politicheskoi istorii Kievskoi Rusi x-xii vv.* (Outlines of the Church-Political History of Kievan Rus' in the 10th-12th Century, 1913); and, most importantly, E. Golubinsky, the author of *Istoriia Russkoi Tserkvi* (A History of the Russian Church, 2 vols, 1880, 1911).

Western Ukraine up to 1917. The Ukrainian Catholic church in Galicia developed a distinct national identity. Historical studies of the church usually reflected this identity and consisted mostly of monographs and investigations of sources. The following scholars wrote on church history (mostly local): M. Harasevych, the author of *Annales Ecclesiae Ruthenae* (1862); D. Zubrytsky; T. Zakhariasevych; Ya. Holovatsky; M. Malynovsky, the author of *Die Kirchen- und Staats-Satzungen bezüglich des griechisch-katholischen Ritus der Ruthenen in Galizien* (1861); A. Dobriansky, who wrote on the bishops of Peremyshl; and, most important, A. Petrushevych, the author of *Svodnaia galitsko-russkaia letopis' 1500-1840* (The Composite Galician-Ruthenian Chronicle 1500-1840, 1872-4, and 1889) in six volumes, which focuses on various events in the history of the church in Galicia, and I. Sharanovych, who wrote about the Stauropogion Institute in Lviv. In 1878-80 Yu. Pelesh's large, two-volume work *Geschichte der Union der ruthenischen Kirche mit Rom von den ältesten Zeiten bis auf die Gegenwart* was published in Vienna. It presented the entire history of the Ukrainian church up to the Union of Berestia in 1596, as well as the history of the Ukrainian Catholic church until 1879. During this period one of the largest research and publishing centers for church history was the *Stauropogion Institute. Among other works this center published the monumental *Monumenta Confraternitatis Stauropigianae*

Leopoliensis (1518-1600) (2 vols, 1895-6), prepared by V. Milkovych. Many studies in church history appeared in *Zapysky Naukovoho tovarystva im. Shevchenka*, written by such scholars as O. Sushko, B. Buchynsky, I. Franko, K. Studynsky (on the history of polemical literature), and F. Sribny (on the history of the Lviv brotherhood).

In Transcarpathia the problems of the local church were studied by such scholars as M. Luchkai; O. Dukhnovych, the author of *Istoriia Priashevskoi eparkhii* (The History of the Prešov Eparchy, 1877; English translation, 1971); I. Dulyshkovych; Yu. Zhatkovych; and A. Hodynka, who in 1911 published 527 documents in the history of the Mukachiv eparchy from 1459 to 1715.

Several works on the history of the church in Bukovyna appeared in this period: S. Dashkevych's *Die Lage griechisch-orthodoxen Ruthenen in der Bukowiner Erzdiözese* (1891) and the studies of O. Manastyrsky, Ye. Kozak, and Ye. Pihuliak.

The more important Polish historians who devoted attention to the problems of the Ukrainian church or the problems of the Roman Catholic church in Ukrainian territories were A. Prochazka, W. Abraham, K. Stadnicki, M. Giżycki (Wofyniak), and E. Likowski, the author of *Unia brzeška* (The Union of Berestia, 1896), *Historia Unii Kościota Ruskiego z Kościołem Rzymskim* (A History of the Union of the Ruthenian Church with the Roman Catholic Church, 1875), and *Dzieje Kościota Unickiego na Litwie i Rusi w xviii i xix w.* (The History of the Uniate Church in Lithuania and Rus' in the 18th and 19th Centuries, 2 vols 1880).

Among West European specialists the following deserve to be mentioned: L.K. Goetz, the author of *Das Kiewer Höhlenkloster als Kulturzentrum des vormongolischen Russlands* (1904); J. Fiedler, who wrote on the Union of Berestia; P. Pierling, the author of *La Russie et le Saint-Siège* (5 vols, 1896-1912); and A. Guépin, who wrote on Y. Kuntsevych.

1917-45. Except for studies of church archeology, art, and estates, research and publication in church history ceased during this period in the Ukrainian SSR. The main centers for church history were the *Ukrainian Scientific Institute in Warsaw, the Faculty of Orthodox Theology at Warsaw University, and the Orthodox Theological Seminary in Kremianets. The more important works that were prepared mainly at these centers were O. Lototsky's *Ukraïns'ki dzherela tserkovnoho prava* (Ukrainian Sources of Church Law, 1931) and *Avtokefaliia* (Autocephaly, 2 vols, 1935-8); D. Doroshenko's *Pravoslavna Tserkva v mynulomu i suchasnomu zhytti Ukraïns'koho narodu* (The Orthodox Church in the Past and Present Life of the Ukrainian People, Berlin 1940); V. Zaikyn's articles and studies on the origins of Christianity in Ukraine and laity participation in church government and his *Z suchasnoi Ukraïns'koi tserkovnoi istoriohrafii* (From Contemporary Ukrainian Church Historiography, 1927); I. Ohienko's works on the church in the 17th-18th century; E. Sakovych's studies on the Orthodox church in Poland at the end of the 18th century and his *Kościół Prawosławny w Polsce w epoce Sejmu Wielkiego 1788-1792* (The Orthodox Church in Poland during the Period of the Great Sejm, 1788-1792, 1935), and the studies of A. Richynsky.

Ukrainian Catholic historiography developed freely during this time in Galicia and Transcarpathia at such research centers as the *Greek Catholic Theological Academy and the *Ukrainian Theological Scholarly Society

with its quarterly **Bohosloviia*, both in Lviv, around the journal *Zapysky Chyna sv. Vasyliia Velykoho* (**Analecta Ordinis S. Basilii Magni*) in Zhovkva and Lviv, and (to a lesser extent) at the Shevchenko Scientific Society.

Among the lay church historians who wrote at this time the following should be mentioned: S. Tomashivsky, the author of *Petro, pershyi uniiats'kyi mytropolyt Ukraïny-Rusy* (Petro, the First Uniate Metropolitan of Ukraine-Rus', 1928) and *'Vstup do istorii Tserkvy na Ukraïni'* (An Introduction to the History of the Church in Ukraine, *Zapysky Chyna sv. Vasyliia Velykoho*, 1932, nos 1–2); M. Chubaty, who wrote many studies and articles and the large work *Istoriia khrystyianstva na Rusi-Ukraïni* (The History of Christianity in Rus'-Ukraine, 2 vols, 1965 and 1976), which was completed only up to 1458; M. Andrusiak, who studied the 17th-century Galician church; I. Krypiakevych; M. Bordun; and A. Androkhovych. V. Sichynsky, V. Zalozetsky, M. Holubets, I. Svientsitsky, and L. Dragan published studies of Ukrainian church architecture and art.

Among clerical church historians the most noted ones were: I. Skruten, who specialized in the historiography and history of the Basilian order; T. Kostruba, the author of *Narys z tserkovnoi istorii Ukraïny x–xiii st.* (Essays on the Church History of Ukraine in the 10th–13th Century, 1939); R. Lukan, a specialist in the history of monasteries; A. Ishchak, who studied the struggle for union and autocephaly in the 13th–15th century; M. Karovets, the author of *Velyka reforma Chyna sv. Vasyliia Velykoho* (The Great Reform of the Order of St Basil the Great, 4 vols, 1933–8); T. Halushchynsky; P. Tabinsky; Bishop H. Lakota; and I. Rudovych. Special mention should be made of V. Lypynsky's historiographic work *Relihiia i Tserkva v istorii Ukraïny* (Religion and the Church in the History of Ukraine, 1925).

Local church history was studied in Transcarpathia by A. Hodynka, O. Petrov, Ye. Perfetsky, V. Hadzhega, and H. Kinakh. In Bukovyna Ye. Kozak and I. Pihuliak did research in church history.

1945–79. After the Second World War the main centers of Ukrainian Orthodox historiography were at first the **Theological Academy of the Ukrainian Autocephalous Orthodox Church in Munich* (where N. Polonska-Vasylenko lectured and did research in church history, O. Ohloblyn studied church historiography, and V. Hryshko and L. Okinshevych specialized in church law) and then the Scholarly Theological Institute, which eventually moved to the United States; the Ukrainian Scholarly Orthodox Society in Canada; and the publishing center of the Ukrainian Orthodox church in South Bound Brook, New Jersey. Besides the numerous articles and studies of Metropolitan Ilarion (I. Ohienko), several large works on the history of the Orthodox church were published: I. Vlasovsky's *Narys istorii Ukraïns'koi Pravoslavnoi Tserkvy* (An Outline History of the Ukrainian Orthodox Church, 4 vols, 1955–66); N. Polonska-Vasylenko's *Istorychni pidvalylyny UAPT's* (The Historical Foundations of the Ukrainian Autocephalous Orthodox Church, 1964); and A. Zhukovsky's *Petro Mohyla i pytannia iednosti tserkov* (Petro Mohyla and the Question of Church Unity, 1969).

Zapysky Chyna sv. Vasyliia Velykoho resumed publication under Rev A. Velyky's editorship in 1949, and its editorial office in Rome became the center for Ukrainian Catholic historiography. In the journal's first section, *Pratsi* (Transactions), 40 monographs were published; almost all of

them dealt with the history of the Ukrainian church. The second section, *Zapysky* (Notes), constitutes 10 large volumes. The third section, *Dokumenty* (Documents), constitutes 52 volumes of materials and documents from the Vatican archives. With the arrival of Archbishop Major Y. Slipy in Rome in 1963, the Ukrainian Theological Scholarly Society resumed its activities, and the **Ukrainian Catholic University* founded by Cardinal Slipy began to publish the society's works. Numerous monographs and historical articles appeared in the revived journal *Bohosloviia*. This center also produced 14 volumes of documents entitled **Monumenta Ucrainae Historica* (1964–77).

Among the Ukrainian Catholic clergy the more important historians are A. Velyky, the author of numerous articles and the nine-volume *Z litopysu khrystyians'koi Ukraïny* (From the Chronicle of Christian Ukraine, 1968–77); I. Nazarko, who wrote monographs on Volodymyr the Great and on the Catholic metropolitans of Kiev and Galicia; M. Vavryk, the author of articles on the history of the Basilian order and the monograph *Narys rozvytku i stanu Vasyliians'koho Chyna vprodovzh 17–20 storich* (An Outline of the Development and the State of the Basilian Order during the 17th–20th Century, 1978); I. Nahaievsky; M. Shegda; S. Semchuk; V. Boisak; I. Patrylo; M. Marusyn; I. Khoma; P. Pidruchny; Yu. Kubinii, A. Pekar, and A. Baran (the latter three specialists on the history of Transcarpathia); M. Voinar, an expert on the history of the Basilian order; M. Solovii, the author of a monograph on M. Smotrytsky; O. Kupranets; R. Holovatsky; A. Hlynya, the author of monographs on Metropolitan H. Yakhymovych and the suppression of the union in the Kholm region; I. Prashko, the author of a work on the Kiev metropolitanate in 1655–65; B. Balyk; D. Blazheiovsky; and B. Kurylas. Among lay historians the following deserve to be mentioned: W. Lencyk; B. Kazymyra; P. Isaiv; L. Sonevytsky; H. Luzhnytsky, the author of *Ukraïns'ka tserkva mizh Skhodom i Zakhodom* (The Ukrainian Church between the East and the West, 1954); and V. Yaniv, the editor of the collection *Relihiia v zhytti Ukraïns'koho narodu* (Religion in the Life of the Ukrainian people, 1966). The problems of the church in Soviet Ukraine after the Second World War have been studied by the Institute for the Study of the USSR in Munich (N. Teodorovych and others) and by such scholars as L. Sonevytsky, P. Hrytsak, I. Korovytsky, A. Zhukovsky, and particularly B. Bociurkiw and V. Markus.

Historical accounts of the evangelical movements and sects in Ukraine were written by M. Hrushevsky, V. Lypynsky, D. Olianchyn, and particularly H. Domashovets – the author of *Narys istorii Ukraïns'koi Ievanhelyts'koi Baptysts'koi Tserkvy* (An Outline History of the Ukrainian Evangelical Baptist Church, 1967) – and O. Dombrovsky – the author of *Narys istorii Ukraïns'koho ievanhel's'ko-reformovanoho rukhu* (An Outline History of the Ukrainian Evangelical Reformed Movement, 1979). Among Polish historians W. Zakrzewski, J. Szujski, J. Bukowski, S. Morawski, N. Lubowicz, K. Chodyncki, and S. Kot studied this subject. The history of church art is presented in the works of P. Kurinny, O. Povstenko, V. Karmazyn-Kakovsky, and S. Hordynsky.

Articles and materials on the Ukrainian church appeared in the following foreign publications: the Russian journals **Chteniia v Imperatorskom obshchestve istorii i drevnosti rossiiskikh* (Moscow), *Khristiianskoe chtenie* (St Petersburg),

and *Vestnik Iugo-Zapadnoi Rossii* (Kiev-Vilnius); and in the Polish journals *kwartalnik historyczny* (Lviv) and *Przewodnik naukowy i literacki* (Lviv). The Papal Institute of Oriental Studies in Rome gave much attention to the history of the Ukrainian church. Among its professors the following published on this subject: N. Baumgarten, who specialized in the origins of Christianity in Ukraine; G. Hofman and J. Krajcar, who wrote on the union; M. Lacko, who concentrated on Transcarpathia; and A. Ammann, the author of *Abriss der ostslawischen Kirchengeschichte* (1950).

Other foreign historians who made contributions to the history of the Ukrainian church were the Poles K. Lewicki, K. Chodynicki, A. Łapiński, J. Umiński, A. Deruga, W. Meysztowicz, T. Długosz, A. Petrani, L. Bienkowski, O. Halecki (the author of *From Florence to Brest, 1439–1596*, 1958), and A. Poppe; the Germans E. Winter, A. Ziegler, A. Korczok, J. Madey, and H. Koch; the Frenchmen B. Leib, A. Jobert, M. Jugie, F. Rupp, and N. Struve; the émigré Russians E. Shmurlo, M. Taube, V. Moshin, G. Ostrogorsky, A. Kartashev, and G. Fedotov; the Rumanians P. Panaitescu, N. Popescu, T. Ionesco, and E. Turdeanu; and the Czech F. Dvornik.

Relatively recently Soviet historians have begun to write on church history, including the history of the Ukrainian church: B. Ramm published *Papstvo i Rus' v x–xv vv.* (The Papacy and Rus' in the 10th–15th Century, 1959) and Ya. Shchapov published *Kniazheskie ustavy i tserkov' v drevnei Rusi xi–xiv vv.* (Princely Statutes and the Church in Ancient Rus' of the 11th–14th Centuries, 1972).

A general survey of Ukrainian church historiography can be found in O. Ohloblyn's article 'Ukrains'ka tserkovna istoriografiiia,' *Ukrains'kyi istoryk*, 1969, no. 4. A detailed survey of the bibliography on the history of the Ukrainian church is presented in Rev I. Patrylo's 'Dzherela i bibliografiiia istorii Ukrain's'koï Tserkvy,' *Zapysky ChSVV*, 8–9 (repr separately, Rome 1975). A supplement and continuation of the survey appeared in *Zapysky ChSVV* (Rome 1979).

Church, history of the Ukrainian

Beginnings. Christianity had already penetrated some regions adjacent to the Black Sea known in antiquity as Scythia by the late first century. St Andrew, brother of St Peter, is said to have preached the message of Jesus Christ there. The western part of Scythia belonged to the Roman Empire, while the eastern part was an independent

Hellenistic kingdom. During the vehement persecutions within the Roman Empire from the time of Nero, the Black Sea region became the place of exile of many Christians sentenced by Roman courts. Pope *St Clement I (88–97) was exiled to Chersonese in the Crimea where he is said to have died a martyr. His remains were brought later to Rome by the Apostle of the Slavs, St Cyril, and in 989 Pope John xv sent his skull to the prince of Kiev, *Volodymyr the Great, after the latter embraced the Christian faith. It is likely that Christianity spread at a very early date from the Hellenistic colonies to the neighboring Slavic tribes in the southern parts of today's Ukraine. The Hellenistic settlements on the Black Sea vanished during the migration of nations, but the new invaders themselves adopted the Christian faith in the form of either Arianism (the Visigoths) or Eastern (Byzantine) Christianity (the Ostrogoths). The latter had a metropolitan see at Dorus in the northern Crimea that played an important role in converting the people living in the Azov Sea region. The first Rus' eparchy was created by the patriarch of Constantinople, probably at *Tmutorokan on the Taman Peninsula, some time during the 9th century. This eparchy does not appear in the hierarchical lists before the 10th century. After the decline of the Khazars, the prince of Kiev, Sviatoslav the Conqueror, annexed the Tmutorokan principality (khaganate) to his realm in 965, and from 970 until the 12th century the eparchs of Tmutorokan were styling themselves archbishops. After the conversion of Rus' proper and the capture of Korsun (Chersonese), they may have, in fact, become the proto-hierarchs of the Rus' church. In Nestor's chronicle, *Povist' vremennykh lit* (Tale of Bygone Years), the see of Tmutorokan is called 'kafolikani ikkllisia' (catholicate church). This suggests that the archbishops of Tmutorokan may have considered themselves autonomous, largely independent of Constantinople.

The liturgical language of the Tmutorokan eparchy was Greek, but Greek was later replaced by Slavonic, the liturgical language that came from Bulgaria and was adopted in all the Slavic churches. The latter represented a current that originated from the missionary work of ss Cyril and Methodius, the apostles of the Slavs, and their disciples. The Slavic rite used by these missionaries held an intermediate position between the Roman (Latin) rite and the Byzantine rite. This current also reached parts of Poland and western Rus' and gave rise to the dioceses of Cracow and Peremyshl. It is known that during the reign of Mieszko in Poland, who had received baptism in the Latin rite from Bohemia, there were priests who were married and used the Slavic-rite liturgy. Thus, 100 years before the official baptism of Rus' in 989 (according to tradition in 988), parts of Rus'-Ukraine, including Tmutorokan Rus' and Peremyshl, were already Christian. Christianity was not entirely absent in Kievan Rus' even before that decisive event. Princess *Olha (945–64), who governed the Kievan state until her son Sviatoslav came of age, was baptized by Patriarch Theophylactos at Constantinople in 954 or 955. Her wish to Christianize the people of Rus', after unsuccessful negotiations with Constantinople, led her to approach the German Emperor, Otto I, to ask for missionaries. However, the mission of Bishop Adalbert was frustrated by a strong pagan reaction that broke out under Sviatoslav. Olha's grandson, Yaropolk, whom she had educated, wanted to realize her intentions, and again envoys were sent to the west. But

the missionaries sent by Pope Benedict VII could do very little, as Kiev was in the hands of Prince Volodymyr, another of Olha's grandsons, who had been brought up by his pagan uncle, Dobrynia. Volodymyr did not embrace the Christian religion until somewhat later, in 986 or 987. Having supported the Byzantine emperor in his wars, he was duly rewarded; he married the emperor's sister, Anna, in Korsun in 989. On his return to Kiev, he declared Rus' a Christian country. From then on he used all means to Christianize his realm. Yet the process of Christianization met strong opposition, and sporadic pagan reaction was felt even 100 years later. (See *Christianization of Ukraine).

Little is known about the beginnings of the church hierarchy in the Kievan realm. The first hierarch residing in the capital was a Greek, Metropolitan Theopemptos, who was sent by the ecumenical patriarch Alexandros Studites in 1037 as a result of an agreement between the Byzantine emperor and Prince Yaroslav the Wise. There are three different theories on the rise of the hierarchy in Rus'. Many historians assume that it originated in Byzantium-Constantinople or in the west; the Russian historian M. Priselkov suggests that the Rus' hierarchy, like the liturgical language, originated in Bulgaria (in the Patriarchate of Ohrid). Other scholars suggest that Volodymyr relied on the already existing eparchies of Tmutorokan in the south and Peremyshl in the west. The following eparchies existed during his lifetime in Rus', which comprised Ukrainian, Belorussian, and Russian lands: Kiev, Novgorod, Chernihiv, Volodymyr-Volynskiy, Peremyshl, and, probably, Turiv.

Shortly after Volodymyr's death (1015) he and his grandmother, Olha, came to be venerated as saints or 'equals of the apostles' in Rus'. However, the Byzantine church recognized this veneration only two centuries later. The struggle for the Kievan throne among Volodymyr's sons interrupted the ecclesiastical and missionary development in Rus', and the Greek metropolitan's jurisdiction ended abruptly six years after his arrival in the capital because of the war between Rus' and Byzantium. This war (1043-6) interrupted the political as well as the ecclesiastical relations between the two states. In 1051 Yaroslav the Wise (1019-54) convoked a synod of bishops and installed *Ilarion as metropolitan without having asked for the consent of the ecumenical patriarch. Ilarion governed the Rus' church until about 1065. The number of eparchies was also augmented at that time: Pereiaslav, Yuriiv, and Bilhorod (near Kiev) were added; the latter two were parts of the Kiev eparchy, and their hierarchs were assistant bishops to the metropolitan.

With the introduction of Christianity, Rus' culture, architecture, and education flourished, fostered by the Greek clergy, artists, and artisans accompanying Volodymyr's Greek wife, Anna. *St Anthony of the Caves, founder of the Kievan Cave Monastery, had experienced monastic life at Mt Athos. As well, some native hierarchs such as Ilarion, who eventually became metropolitan (1031-65?), and Luka Zhydiata of Novgorod, excelled in erudition.

Under Constantinople. Around 1069, Byzantium sent another Greek metropolitan, Georgios, to head the Rus' church. But because he would not recognize the sanctity of the local martyrs, Georgios was forced to return to Byzantium some four years later. It was only in 1080 that the metropolitan see was again filled by a Greek, Ioannes

II, whose successor, Ioannes III, occupied the Kiev see for only one year. During the seven-year vacancy that followed, Yefrem, the bishop of Pereiaslav, governed the metropolity. Yefrem was a native boyar who had become a monk of the Kievan Cave Monastery, which had been reformed by its third abbot, *St Theodosius, according to the rules of St Theodore Studite which changed it from the eremitic to the cenobitic way of life. Under Yefrem the feast of the transference of the relics of St Nicholas of Myra was introduced in Rus'. Yefrem was succeeded by Nicholas (1097-1103), during whose rule the Rostov eparchy came into being. Here the missionaries Leontii and Isaiah, monks of the Kievan Cave Monastery, were martyred.

The three Greek metropolitans of Kiev - Nicephorus (1103-21), Nicetas (1122-6), and Michael II (1130-45) - spread polemical writings and incited feelings of hostility against the Western church. They also tried to impose Greek hierarchs on the other established eparchies and were partly successful, especially in the northern part of the Kievan metropolity. A serious conflict between Michael and Prince Vsevolod Olhovych forced the metropolitan to leave Rus'. Vsevolod's successor on the Kievan throne, Iziaslav II Mstyslavych, summoned a synod of the hierarchy in 1147. Presided over by Bishop Onufrii of Chernihiv, the synod elected Klym Smoliatych, an erudite monk of the Zarub monastery, as metropolitan. During his enthronement Smoliatych was blessed with the relics of Pope St Clement. Under him monastic life underwent a considerable revival. He governed the Rus' church until about 1154 and subsequently headed the Volodymyr-Volynskiy eparchy. He probably died before the devastation of Kiev in 1169 by the prince of Suzdal and Vladimir, Andrei Bogoliubskii.

Though Rome and Constantinople had had no ecclesiastical communion with each other from 1054, relations between state and church in Rus' on the one hand and Rome on the other were maintained. Pope Gregory VII granted Prince Iziaslav royal status. The latter sent a pallium for the tomb of St Adalbert-Wojciech in Gniezno, Poland. In the 12th century Rus' princes and boyars contributed financially to the construction of the churches of St Jacob and St Gertrude at Regensburg, Bavaria. Only after 1204, when the Crusaders devastated Constantinople and its sanctuaries, did relations with the West worsen; Greek hierarchs coming from Nicea disseminated anti-Latin sentiments. Greek metropolitans remained in continuous succession until the Mongol capture of Kiev in 1240.

After the Mongol invasion Prince Mykhail Vsevolodovych of Chernihiv became prince of Kiev and installed P. *Akerovych as metropolitan (1242-6). Akerovych attended the Ecumenical Council of Lyons in 1245. In the mid-13th century Prince *Danylo Romanovych of Halych became the ruler of Rus'. In 1245 he asked Pope Innocent IV for help against the Tatars and for royal status. In his reply in the same year the pope addressed him as 'king.' Danylo, his nobles, and the clergy were prepared to acknowledge the pope as the head of the church. However, the union with Rome by Danylo and his brother, Vasylo, who resided at Volodymyr-Volynskiy, was politically motivated. After his coronation in 1253, when the expected assistance against the Tatars did not materialize, Danylo broke off relations with Rome. Having appointed *Cyril II as metropolitan of Kiev, Danylo

sent him to the ecumenical patriarch for consecration. The patriarch obliged on two conditions: the metropolitan was not to reside in the Principality of Galicia-Volhynia and was to foster good relations with the Tatars, who were the enemies of the Latin empire at Constantinople. Keeping this promise, the metropolitan resided either at Kiev, Pereiaslav, or Vladimir on the Kliazma. A zealous pastor, Cyril summoned a synod at Vladimir in 1274, which adopted a number of ecclesiastical reforms. He also succeeded in getting important privileges for the church from the Golden Horde, which permitted him to create an eparchy in their capital, Sarai.

When his successor, the Greek metropolitan Maximos (1283–1305), transferred the metropolitan's residence from Kiev to Vladimir, the Principality of Galicia-Volhynia reacted strongly and demanded a separate metropolity from Constantinople. Patriarch Athanasios consented to this demand, and Niphont became the first metropolitan of Halych in 1302. After Niphont's death in 1305, the prince of Galicia-Volhynia, Yuri Lvovych, sent the hegumen of Ratna Monastery, Petro, to Constantinople for episcopal consecration. Since Maximos died at that time, the patriarch and his synod appointed Petro as the sole metropolitan of Kiev and Halych (1308–26), under the condition that he would reside in the north. Petro transferred his residence to Moscow, retaining, however, the title of metropolitan of Kiev, Halych, and all Rus'. Thus, he laid the foundations for a new independent ecclesiastical development in the Moscow principality. In the end the Kievan metropolity was divided by the patriarch. A separate metropolitan had to be appointed not only for Halych but also for Lithuania (from 1317). Despite the efforts of the Greek metropolitan of Kiev, Theognost (1328–53), who succeeded Petro, to suppress the rival metropolitan sees and to unite them with the see of Kiev at Moscow, the disintegration could not be stopped. Metropolitan Theodore of Halych (1337–47) acquired power even in the eparchies of the Kiev and Chernihiv regions.

In the mid-14th century the Principality of Galicia-Volhynia collapsed and the metropolity of Halych ceased to exist. Theognost, the Kiev metropolitan residing in Moscow, himself appointed Aleksei (1354–78), with the consent of the ruler, as his successor. However, the Lithuanian grand prince Algirdas, supported by the princes of Tver, sent his candidate, Roman, to Constantinople, denying Aleksei any jurisdiction in his realm. To satisfy the rules of canon law, the patriarch ordained Aleksei metropolitan of 'Kiev and all Rus'' and Roman metropolitan of 'Lithuania and Volhynia.' In 1356 the Lithuanian metropolitan, by decision of the Holy Synod in Constantinople, was to exercise jurisdiction over the eparchies of Polatsk and Turiv, Volodymyr, Lutske, Kholm, Halych, and Peremyshl. The metropolitan also considered Tver as his suffragan see, though officially it belonged to the Moscow metropolity 'of Kiev.' After Roman's death in 1361 Aleksei tried to prevent the appointment of his successor, but in 1371 Algirdas demanded from the patriarch the ordination of a metropolitan with jurisdiction over Kiev, Smolensk, Tver, Little Rus' (Halych, Kholm, Volodymyr, Lutske, Turiv, and Peremyshl), Novosel, and Nizhnii Novgorod. In the same year the Polish king, Casimir III, demanded from Patriarch Philotheos the re-establishment of Halych as a metropolity with Bishop Antonii as its titular head. The patriarch had to give in.

In the letter of appointment, however, Antonii was given jurisdiction only over the eparchies of Volodymyr, Peremyshl, and Kholm as suffragan sees, all of which were under Polish rule.

In 1373 the patriarch sent the monk *Cyprian, a native of Serbia, to investigate the situation in Rus'. He succeeded in being ordained as metropolitan of 'Kiev and all Rus'' and took up his residence in Moscow in 1389. He managed to unite the Lithuanian and Halych metropolities to his see. After Metropolitan Antonii's death in 1391 the efforts of the Polish-Lithuanian king Jagiello to establish Bishop Ivan of Lutske as metropolitan of Halych failed. Metropolitan Cyprian succeeded in obtaining from Constantinople the abolition of this metropolity in 1401. Only a vicar remained in Halych to administer the ecclesiastical property. In 1406 the eparchy of Halych itself was dissolved for the next 130 years. Later laymen, appointed by the Latin-rite archbishop of Lviv, functioned as administrators, which brought the major part of the Orthodox church's property into the possession of the Latin archdiocese.

After having failed in his efforts to establish Bishop Teodosii of Polatsk as metropolitan of Kiev, Grand Duke Vytautas of Lithuania was prepared to accept Photios, Cyprian's successor in Moscow (1408–31), if the latter visited the Western eparchies more frequently. But the bishops complained that the metropolitan would then take away the church treasures to Moscow. Because of this, the ruler convoked the bishops to Navahrudak in 1414 for the election of a new metropolitan. The metropolitan-elect, Hryhorii Tsamblak (a Bulgarian), was, however, refused consecration by Constantinople. Eventually, he was ordained in 1415 by the bishops of Polatsk, Smolensk, Lutske, Chernihiv, Volodymyr, Turiv, Peremyshl, and Kholm, who invoked as precedent the 1147 election of Klym Smoliatysh. Tsamblak's excommunication, Constantinople's reply to this act, was simply ignored in Rus'. In 1418 Metropolitan Hryhorii attended the ecumenical council at Constance, where he expressed his desire for the ecclesiastical communion between the Eastern and Western churches. But on his return he died (1419). Now Vytautas and Photios became reconciled. After the latter's death – Vytautas had died one year before – in 1431, Grand Prince Svidrigailo's candidate, Bishop Herasym of Smolensk, ascended the metropolitan's throne, but in 1435 he was accused of high treason and burned at the stake. His successor was again a Greek, *Isidore (1437–58), one of the most erudite and enlightened men of his time. He took part in the council of Ferrara-Florence as a member of the Orthodox delegation. Like his patriarch, Joseph II, Isidore was in favor of restoring ecclesiastical communion between the East and West and signed the act establishing the Church Union of *Florence. After the council in 1439, he left Florence, as legate of Pope Eugenius IV, for Rus', Lithuania, Livonia, and Poland. He met with opposition both from the Polish Catholic hierarchy and from those in power in Moscow. Imprisoned in Moscow in 1441, Isidore was able, however, to escape and eventually return to Kiev. He returned to Rome and, in 1458, resigned as metropolitan of Kiev and all Rus'.

By order of Grand Prince Vasili of Moscow, Bishop Iona of Riazan was appointed metropolitan in 1448 without the consent of the patriarch of Constantinople. Because of the Union of Florence this was now considered schismatic. The Moscow church thus declared its

autocephaly, which was recognized by Constantinople only in 1589. Iona's successor, Feodosii, assumed the title of metropolitan of Moscow and all Rus'.

In the Polish-Lithuanian Kingdom Hryhorii *Bolharyn became metropolitan of Kiev and all Rus' in 1458. He was consecrated by the fugitive patriarch, Gregory IV Mammias of Constantinople, in Rome, receiving jurisdiction over the eparchies of Briansk, Kholm, Halych, Lutske, Peremyshl, Polatsk, Turiv, Smolensk, and Volodymyr. His efforts to bring Moscow under his see failed. After his death in 1472 the see was headed by metropolitans Mysail (1475–80), Symeon (1480–8), Iona I Hlezna (1492–4), Makarii I (1495–7), Y. *Bolharynovych (1498–1501), and Iona II (1502–7). The latter was succeeded by Metropolitan Yosyf II Soltan (1507–21), a zealous pastor who convoked the Synod of Vilnius in 1509, one of the most important events in Ukrainian-Belorussian church history. From the time of Yosyf III (1522–34) the Kievan metropolitans opposed union with Rome; Yosyf III was succeeded by Makarii II (1534–56), Sylvester Belkevych (1556–67), Iona III Protasovych (1568–77), and Illia Kucha (1577–9). Beginning in 1522 the metropolitans were simply appointed by the Polish kings; some of them, like some bishops, were raised to the episcopal rank without any ecclesiastical vocation. During their time Protestantism also influenced parts of Rus'. As a reaction against the double threat from Roman Catholicism and Protestantism, religious *brotherhoods came into existence, the first of which was established at the Dormition Church in Lviv. The brotherhoods of Lviv, Kiev, and Lutske, as well as the rich monasteries of Vilnius, Slutsk, and Krekhiv, were granted by Patriarch Jeremiah II of Constantinople during his visit to Rus' the right of stauropegion, which made them independent of the local hierarchy. Relations between the brotherhoods and Metropolitan O. *Divochka (1579–89) worsened. Through the influence of the brotherhoods M. *Rahoza, archimandrite of the Minsk Monastery, became metropolitan of Kiev and all Rus' in 1588. Under him the Church Union of *Berestia, which split the Orthodox church and created the Uniate church in Ukraine, took place in 1596.

The divided church in Ukraine. Many factors contributed to the Union of Berestia: spiritual decay; the little interest Patriarch Jeremiah took in the welfare of the Kievan metropolity; the simoniac practices of his alleged representative, Archbishop Dionysios; the pressure of both the Latin church and Protestantism; and last, but not least, the appointment of Bishop K. *Terletsy of Lutske as patriarchal exarch to control the metropolitan. A union with Rome, it was hoped, would offer the Kievan metropolity more protection from the interference of both the Latin and the Muscovite churches as well as from the Polish authorities. Bishop H. *Balaban of Lviv, who later joined the antiunion camp, was the first to enter into negotiations with the Latin archbishop of Lviv. Bishop Balaban was also hoping to get rid of the local brotherhood. He won the support of several other bishops, including those of Lutske and Volodymyr, who eventually became the leaders of the church union movement. Opposition to the union was led by Prince V.K. *Ostrozky, whose influence led Bishop Balaban to withdraw from the Uniate camp. Initially the prince was not an adversary of a union, but he wished to have certain conditions fulfilled. Metropolitan Rahoza joined the other bishops only in 1595 when the act was signed. At a

synod held at Berestia on 12 June 1595, bishops I. *Potii and Terletsy were elected as delegates of the hierarchy to realize the union in Rome. Pope Clement VIII proclaimed the ecclesiastical communion on 23 December 1595, guaranteeing the Rus' church retention of the Byzantine rite and the rights of the metropolitans, including the royal privileges they had obtained in the Orthodox church. In October 1596 the union was proclaimed at a synod in Berestia. All the bishops, except those of Lviv and Peremyshl, and representatives of monastic and eparchial clergy took part in this synod.

The antiunionists assembled at another synod under the leadership of Prince Ostrozky and bishops Balaban and Z. *Kopystensky; present were members of the nobility, a good number of hegumens and other clergy, and the representatives of the patriarchates of Constantinople and Alexandria, Nicephoros and Kyrillos. They appealed to King Sigismund III, declaring the synod headed by the metropolitan to be illegal. The king supported the union, but he was eventually unable to fulfill his promises regarding the equal status of the Uniate church and the Latin-rite church, owing to opposition from within the Polish hierarchy to his 'Message to the Ruthenian Nation' on 15 December 1596. These events split the Kiev metropolity into two. Searching for allies, the Orthodox formed an alliance with the Protestants at Vilnius in 1599. The latter were headed by Prince A. Radziwill. In their struggle with the Catholics the Lithuanian court, where the Protestants had a majority, played an important role. After Metropolitan Rahoza's death in 1599, Bishop I. Potii succeeded him as Uniate metropolitan of Kiev, while retaining his old eparchy. Under him the struggle with the Protestant-Orthodox alliance continued. Prince Ostrozky remained the leader of the Orthodox until his death in 1608. Despite all the opposition and the negative attitude or indifference of the Latin Catholics, the efforts of Metropolitan Potii did not remain without success. When he died in 1614, however, the union was not yet fully realized in the eparchies of Peremyshl and Lviv and in some parts of Belorussia.

Potii's successor was Y.V. Rutsky, the titular bishop of Halych and a convert from Calvinism. Rutsky devoted himself to giving monastic life a new organization and the clergy a good spiritual and theological foundation. He obtained a decree from Pope Urban VIII in 1634, prohibiting the reception of Uniate faithful into the Latin church, which, however, was ignored by both the Polish king and the Roman Catholic clergy. Indeed, only one year earlier the Polish primate Bembecki had demanded the abolition of the union from the pope.

The Ukrainian Cossacks opposed union with Rome. Under Hetman P. Sahaidachny they succeeded in having a new Orthodox hierarchy consecrated at Kiev in 1620 by Patriarch Theophanes of Jerusalem on his return from Moscow. At that time there was but one Orthodox bishop in Ukraine: Ye. Tysarovsky of Lviv. Now the Orthodox received a new metropolitan of Kiev, Y. *Boretsky (1620–31), and several eparchs: M. *Smotrytsky of Polatsk, who later converted to Catholicism, I. *Kopynsky of Peremyshl, Y. Kurtsevych-Koriatovych of Volodymyr, I. Boryskovych of Lutske, and P. Ipolytovych of Kholm. Though the king did not recognize the new hierarchy, Metropolitan Boretsky and Archbishop Smotrytsky were eager to revive Orthodox life in Kiev and other centers of Ukraine. In the intensifying Uniate-Orthodox conflict,

both sides suffered losses; in 1623 the Uniate archbishop Y. Kuntsevych of Polatsk was murdered. In this complex atmosphere the Orthodox turned to Moscow for support, while the Uniates sought the support of the Polish authorities. But since Metropolitan I. Kopynsky (1631–2) had not obtained royal installation, he was deposed and confined to the Kievan Cave Monastery in 1633. Archimandrite P. *Mohyla of the same monastery was raised to the dignity of Orthodox metropolitan of Kiev (1633–47). Under Mohyla the Ukrainian Orthodox church experienced an institutional and spiritual renaissance. Mohyla paid special attention to the development of education and theological scholarship, the revival of monasticism, and the restoration of churches. He died in 1647 leaving behind a flourishing Orthodox church, including the famous Kievan academy bearing his name, schools, printing presses, and hospitals.

In an atmosphere of mutual distrust and struggle between the Orthodox and the Uniates, the more enlightened in the divided nation began to think of reconciliation under a proposed Ukrainian-Belorussian Uniate Kiev patriarchate. The first attempts at this took place in 1623, when negotiations with the Orthodox were begun by Metropolitan Rutsky. The idea of a patriarchate was revived after Archbishop M. Smotrytsky secretly joined the Catholic church in 1627. Together with newly elected Archimandrite P. Mohyla, he prepared a synod of the Orthodox hierarchy to be held at Kiev in the same year. Another synod of bishops met in 1628, but the proposed joint Uniate-Orthodox synod at Lviv in the following year proved a failure. Negotiations for the unification of Ukrainian churches continued under Rutsky's successors, R. *Korsak (1637–40) and A. *Seliava (1640–55).

The Hetman state under B. Khmelnytsky partially dissolved the Uniate church. Through the Treaty of *Zboriv (1649), the Orthodox church obtained a series of privileges in Poland and a good part of the properties held by the Uniate church. Metropolitan Seliava died deprived of all his properties in 1655. The Treaty of *Bila Tserkva annulled certain parts of the Treaty of Zboriv, but the situation did not change essentially. Under Cossack rule the Orthodox church, headed by Metropolitan S. *Kosiv (1647–57), continued to flourish. However, after the Treaty of Pereiaslav in 1654, the tsar and the patriarchate of Moscow intensified their efforts to subordinate the Kievan metropolity to Moscow, despite strong opposition from the Ukrainian hierarchy and clergy. The Russian-Polish war brought large parts of Belorussia and Lithuania under Moscow's control and caused the death of many Eastern and Latin Catholics. For about 10 years the Uniate metropolitan see remained vacant. The Treaty of Hadiache (1658) provided that Orthodoxy should be the predominant religion in the voivodships of Kiev, Bratslav, and Chernihiv. But in 1659, during new tensions between Russia and Poland, Hetman I. Vyhovsky was overthrown while the Cossacks sided with Moscow. The Treaty of Andrusovo (1667) between Muscovy and Poland, followed by the so-called Eternal Peace (1686), spelled an end to the independence and unity of the Hetman state. The Starodub, Chernihiv, and other territories in Left-Bank Ukraine went to Muscovy; the rest remained in the Polish Kingdom. Metropolitan Y. Neliubovych-Tukalsky (1663–75) and his successor A. Vynnytsky (until 1679) remained in the Polish part. Soon, however, the Kievan metropolity came under the control of the Moscow patriarchate.

The Ukrainian Orthodox church under Russian rule. Contrary to canon law the Moscow patriarchate installed 'guardians' of the Kiev metropolity, bishops L. *Baranovych of Chernihiv and M. *Fylymonovych of Mstislau. In 1685 the tsar ordered the election of a new metropolitan, and Hetman I. Samoilovych convened an electoral synod in Kiev. The bishop of Lutske, Prince H. Sviatopolk-Chetvertynsky, was elected metropolitan (1685–90) and was subsequently confirmed at Moscow. Part of the the Ukrainian clergy protested at Constantinople, but Patriarch Dionysios, under pressure from the Turkish government and from Moscow, from where he used to get subsidies, simply transferred the jurisdiction of the Kiev metropolity to the Moscow patriarchate.

Though the Cossack state continued to exist formally and the Ukrainian church, according to the tsar's charter, was supposed to enjoy wide autonomy, both were far from being autonomous. Before long all the suffragan eparchies of the Kiev metropolity, including the restored Pereiaslav eparchy (1700), came under the direct jurisdiction of Moscow; even the leading Kievan monasteries were exempted from the metropolitan's jurisdiction when they were granted stauropegion rights from Moscow.

Under Hetman I. Mazepa (1678–1709) there was some hope for the restoration of religious rights. Because they were well educated, Ukrainian bishops even received higher ecclesiastical offices in Russia, but the failure of Mazepa's campaign to liberate Ukraine had dire consequences on any real political or religious autonomy in Ukraine. On the tsar's orders Mazepa was anathematized by the Russian church (the Ukrainian hierarchs were forced to take part in this act). In 1721 Peter I abolished the Moscow patriarchate and replaced it with the *Holy Synod, presided over by the tsar's representative, the *ober-prokuror*. Three archbishops of Ukrainian descent, T. Yanovsky of Novgorod, S. Yavorsky of Riazan, and T. Prokopovych of Pskov, were appointed to the synod several years after the death of Metropolitan Y. Krovovsky (1708–18). V. Vonatovych (1722–30) was appointed archbishop of Kiev by the tsar, thus abolishing the Kievan tradition of electing metropolitans. Vonatovych was succeeded by R. *Zaborovsky (1731–47), who in 1743 was given back the title of metropolitan of Kiev and Halych. His successors were T. Shcherbatsky (1748–57), the first Kievan metropolitan to be transferred to the Moscow see; A. Mohyliansky (1757–70); and H. Kremianetsky (1770–83), during whose time the Holy Synod even usurped the appointment of the superiors of the monasteries. Monastic property was secularized when S. Myslavsky occupied the Kievan see (1783–96). Russian replaced Latin as the language of instruction at the Kievan academy. Ye. Malytsky (1796–9) was the last Ukrainian to be appointed metropolitan of Kiev. His successor was H. Banulesco-Bodoni (1799–1803), a Moldavian. All subsequent Kievan metropolitans appointed by the tsars were Russian. Among them, Metropolitan E. *Bolkhovitinov (1822–37) distinguished himself as a learned man who made important contributions to culture, education, and research, especially at the *Kiev Theological Academy, which replaced in 1819 the *Kievan Mohyla Academy closed two years earlier.

The Kiev Theological Academy as well as the ten eparchial theological seminaries became essentially Russian schools. The Ukrainian redaction of the church Slavonic language was replaced by the Russian. Russian

came to predominate in sermons, which traditionally had been more frequent in Ukraine than in Russia. The Russian liturgical prescriptions were also to be observed in the ecclesiastical rites, and even the external appearance of the Russian clergy was adopted. The Ukrainian architectural styles (Cossack baroque or rococo) were prohibited in 1800, and churches and chapels had to be built according to the Russian style. The Russification of the church, directed against Ukrainian spiritual and cultural identity, met with some success among the clergy in Ukraine. By the early 20th century many of them had become members of Russian extreme-right political organizations, and the Pochaiv Monastery in Volhynia, under Archimandrite V. Maksymenko, was transformed into a major center of Russian nationalist propaganda.

Nevertheless, many Ukrainian traits survived in the church. The local traditions proved strong: for example, the blessing of special foods at Christmas and Easter, the blessing of houses with holy water, carolling during the Christmas season, praying over graves, religious processions, etc. The hereditary rural-parish system (from father to son or son-in-law) was also an important obstacle to complete Russification. The Ukrainian influence penetrated from priests' families into the theological seminaries, where a good number of prominent political and cultural figures of the Ukrainian national revival in the 19th century were educated. Tsarist prohibitions of publications in Ukrainian (1863 and 1876) delayed for many years the appearance of the Ukrainian translation of the Bible (by P. Kulish and I. Puliui); it was published in Vienna only in 1903. Within the Russian Empire it was only in 1906, after the Revolution of 1905, that the Gospels were published in Ukrainian, translated by P. Morachevsky and edited by Bishop P. Levytsky (who, while occupying the Podilia see, permitted his clergy to preach and teach in Ukrainian). Bishop A. Hudko of Kremianets himself preached in Ukrainian villages. Archbishop O. Dorodnytsyn translated prayer books. In the Russian State Duma the Ukrainian faction included several clergymen. Such leading Ukrainian political figures as S. Petliura, V. Prokopovych, V. Chekhivsky, and O. Lototsky were priests' sons.

The Uniate church in the 17th–19th century under Poland and Russia. During the second half of the 17th century the Polish government subjected the Uniate church to growing discrimination. After Metropolitan A. Seliava's death in 1655, no successor was appointed for 10 years. It was only in 1666 that Bishop Ya. Susha of Kholm secured Rome's confirmation of the new Uniate metropolitan, the exiled archbishop of Polatsk and administrator of the metropoly, H. Kolenda. The metropolitan also became the protoarchimandrite of the Basilian monasteries. After the Treaty of Andrusovo, the Polish king, Jan II Casimir Vasa, approved again the previous privileges of the Eastern Catholics. His successors, Michał Wiśniowiecki and Jan III Sobieski, also supported the Uniate church.

In 1680 Sobieski convoked representatives of the Uniate and Orthodox churches to Lublin ('colloquium lublinense') to achieve an understanding between the two churches, but the meeting failed to overcome their differences. In spite of the rights and privileges granted to the Orthodox in Right-Bank Ukraine by the Eternal Peace concluded between Poland and Muscovy, the Uniate church grew in strength. In 1681 the archimandrites of the Univ, Ovruch, and Melets monasteries accepted the

union, followed by the Peremyshl eparchy (under Bishop I. Vynnytsky) in 1692, the Lviv eparchy (under Bishop Y. Shumliansky) in 1700, and the Lutske eparchy (under Bishop D. Zhabokrytsky) in 1702. In 1708 the *Lviv Dormition Brotherhood and in 1712 the Pochaiv Monastery joined the Union. Metropolitan Kolenda was succeeded by Archbishop K. Zhokhovsky of Polatsk (1674–93) and Bishop L. Sliubych-Zalensky (1694–1708), while the metropolitans of Kiev retained their former eparchies. In 1708 Bishop Yu. Vynnytsky of Peremyshl became the new Uniate metropolitan. He was succeeded by Bishop L. *Kyshka of Berestia (1714–28), who convened the important Synod of *Zamostia in 1720, which for many years to come shaped the organization, rituals, and orientation of the Uniate church, bringing it closer to Roman Catholicism. The Uniate metropoly now had nine eparchies, seven of them in Ukraine. The synod had the aim of raising the religious and moral life in the metropoly. Certain elements of Latinization were introduced into the Eastern rite, which further alienated the two Ukrainian-Belorusian churches. Latinization was accompanied by Polonization, especially among the upper strata of the clergy. Consequently, the Uniate church lost most of its adherents among the nobility; in addition, the more Polonized the upper clergy became, the more the higher and lower clergy became alienated from one another. Metropolitan Atanasii *Sheptytsky (1729–46), the bishop of Lviv, continued the reforms of the synod. The *Basilian monastic order experienced a revival and helped give the eparchial clergy a thorough clerical formation. From 1748 to 1762 Archbishop F. Hrebnytsky of Polatsk was the metropolitan. His successors in the metropolitan's office were Bishop P. Volodkovych (1762–78) of Volodymyr and Bishop L. Sheptytsky of Lviv (1778–9).

The Orthodox eparchy of Mahiliou, Mstislau, and Orsha, the only one in the Polish Commonwealth, was under the protection of Russia, and Empress Catherine II demanded, through her envoy in Warsaw, the restitution of all former Orthodox churches. The pressure from Russia became even stronger after Metropolitan Sheptytsky's death. From 1764 Poland was ruled by Catherine's minion, S.A. Poniatowski (1764–98), under whom the partitions of Poland took place. The first partition (1772) split the territory of the Uniate metropoly among Poland, Russia, and Austria. Before long, after the third partition (1795), only the southern parts of the metropoly remained outside the Russian Empire. After Metropolitan Sheptytsky's death, the Polish king appointed Archbishop Ya. Smogozhevsky of Polatsk metropolitan (1780–8). During the subsequent three-year vacancy of the see of Polatsk, Empress Catherine attempted to make the eparchy Orthodox by imposing Orthodox priests on 800 Catholic parishes. Pope Pius VI protested against this measure. In her efforts Catherine found an ally in the Roman Catholic bishop S. B. Siestrzencewicz, whom she raised to the rank of archbishop of Mahiliou in 1782. Rome finally succeeded in getting H. Lisovsky installed as archbishop of Polatsk in 1783.

In 1785 the Orthodox archbishop of Minsk and Chernihiv, V. Sadkovsky, was made the superior of the mission for 'converting the Uniates.' The military commanders were ordered to give the archbishop all assistance in achieving his task. With their help, Sadkovsky was successful in suppressing many parishes. At Polatsk, Minsk, Lutske, and Mahiliou, the Russian government

appointed Orthodox bishops. Only in the southern parts adjoining Galicia did the 'mission' meet with resistance. After the third partition of Poland Catherine suppressed all the Uniate eparchies with the exception of Polatsk. Metropolitan T. Rostotsky (1788–1805) was ordered to abstain from any act of jurisdiction and to transfer his residence to St Petersburg. The remaining bishops received a pension and were sent to central Russia; only Bishop P. Vazhynsky of Kholm escaped to Lviv, where he resided until Catherine's death in 1796. Catherine's successors, Paul I (1796–1801) and Alexander I (1801–25), embarked on a more tolerant and lenient policy towards the Uniates. Already in 1798 a part of the Uniate hierarchy was restored (in the eparchies of Berestia and Lutske), and many of those exiled to Siberia were allowed to return home. Alexander I appointed H. Lisovsky (1806–9) and, later, H. Kokhanovych (1809–14) metropolitan, but refused to acknowledge for them the title 'of Kiev' (they each bore the title 'metropolitan of the Uniate church in Russia'). Rome viewed these developments with suspicion and refused to grant either of these metropolitans formal recognition; nevertheless, it tolerated the newly improved situation. The metropolitans, especially Lisovsky, desired to bring changes to their church by purging it of Latin influences and recovering those who had been converted to Roman Catholicism. However, their short terms as metropolitans did not allow for much progress along these lines. After the death of Metropolitan Kokhanovych in 1814 his position was not filled for three years. Only in 1817 did Alexander I appoint Y. Bulhak (1817–38) as his successor. Two years later, in 1819, Rome confirmed Bulhak as the delegate of the Apostolic See, but refused to grant him the title of metropolitan.

The Uniate church in the Russian Empire was placed under the jurisdiction of the Roman Catholic Ecclesiastical Collegium, created in 1801 as a special governmental department. In 1804 a separate department under Lisovsky was created within this collegium for the affairs of the Uniates. The Uniates were also allowed to organize one theological seminary, in Vilnius. By 1825 the Ukrainian-Belorussian Uniate church was composed of one metropoly and four eparchies.

The reign of Nicholas I (1825–55) once again witnessed the harsh attitude of the Russian state against the Uniates. Nicholas had already restricted the activities and rights of the Basilians in 1827. In the next year he separated the Uniate department from the Roman Catholic collegium and, at the same time, abolished two eparchies – Lutske and Berestia. In 1829 Y. Symashko, assessor of the Uniate department, became a bishop and was given the task of purging the rite of Latin influences. Nicholas's plans were to abolish the Uniate church altogether, and he found a good pretext to do so when a number of Uniate priests and monks were accused of participating in the Polish insurrection of 1830–1. In 1832 the authorities dissolved the Basilian monastic order. A few years later, in 1835, a special committee was established for the conversion of the Uniates to Orthodoxy. In 1837 the Uniates were placed directly under the *Oberprokurator* of the Russian Holy Synod. The death of Metropolitan Bulhak, in 1838, signalled the beginning of the end for the Uniate church. Bishop Y. Symashko and two of his vicars, V. Luzhynsky and A. Zubko, joined the Orthodox church. On 12 February 1839, a large celebration of reunification was held in Polatsk: the Union of

Berestia (1596) was declared null and void, and the accession of the Uniates to the Russian Orthodox church was proclaimed. Nearly a third of the clergy refused to adopt Orthodoxy and were exiled to Siberia or the interior of Russia. The subsequent protests of Pope Gregory XVI and the metropolitan of Halych, M. Levysky (1816–58), against this 'reunification' went totally unheeded. Thus, close to two million Uniates, both Ukrainians and Belorussians, were brought into the fold of the Orthodox church.

The Uniate church in the Russian Empire now remained only in the regions of Kholm and Podlachia (up to 1831 they were part of the Congress Kingdom of Poland). After 1839 the sole Uniate eparchy in the Russian Empire remained at Kholm. Here the Latinization and Polonization of the church and clergy had gone further than in other regions. Thus, the Russian government had to move slowly. The last Uniate bishop of Kholm was M. Kuzemsky (1868–71). He was finally removed from his see, and the administration of the eparchy was placed in the hands of a priest, M. Popel. Under Popel the eparchy was subordinated to the Orthodox metropolitan of Warsaw in 1875. Popel himself became a vicar bishop of the Warsaw see, with the title of bishop of Lublin. A significant portion of those who became Orthodox did so in name only. Thus, when the Act of Religious Toleration was issued in 1905, a sizable number of these left Orthodoxy and joined the fold of the Roman Catholic church, since they were not allowed to return to the Eastern rite.

The Ukrainian Greek Catholic church under Austria. After the first partition of Poland (1772), the Ukrainian Uniates, or Greek Catholics, in Galicia, with their two eparchies, Lviv-Halych and Peremyshl-Sambir-Sianik, found themselves under Austrian rule. Under Austria the state of the church improved considerably, for it was granted equal status with the Roman Catholic church. One of the first major consequences of this new situation was the establishment of a Greek Catholic theological seminary, known as the *Barbareum, in Vienna by Empress Maria Theresa in 1775 to raise the educational standards of the clergy. This seminary existed for nearly a decade before being closed in 1784. It was replaced by the *Greek Catholic Theological Seminary in Lviv, established in 1783. This school served the educational needs of the two eparchies in Galicia and even accepted some students from outside of Austrian territory. In 1784 Lviv University was opened (with instruction in Latin), and the *Studium Ruthenum, where instruction took place in the vernacular, was attached to it in 1784. These institutions produced an enlightened cadre of clergy for both the religious and the national-cultural life of the Ukrainians in Galicia.

After the three partitions of Poland, the Ukrainian Uniate metropoly was divided between Russia and Austria. The administration of the eparchies in Austria became difficult because the metropolitans resided on Russian territory. Subsequently, with the death of Metropolitan T. Rostotsky in 1805, the office was not restored at all. Efforts at establishing an ecclesiastical province with the metropolitan's see in Lviv, on Austrian territory, had been made since the first partition of Poland, but did not meet with success. After the third partition an attempt was made again, but it was fulfilled only after the death of T. Rostotsky, who himself was opposed to the idea. Thus, in 1806 Emperor Francis I approved, and in 1807 Pope Pius

vii sanctioned, the establishment of the Ukrainian Uniate metropoly of Halych with rights and privileges similar to those of the Kiev metropoly (the papal bull *In Universalis Ecclesiae Regimine*, dated 17 April 1807). The first metropolitan of Halych-Lviv was A. Anhelovych (1807–14), formerly the bishop of Peremyshl and a leading proponent of the establishment of this see.

The equality of the Ukrainian (Ruthenian) Uniate or Greek Catholic church with the Roman Catholic church in Austria was officially established by imperial decrees in 1813 and 1816. However, the powers granted to the Halych metropolitans in 1807 were later (in the second half of the 19th century) significantly curtailed and restricted. In 1855 Austria signed a concordat with the Holy See and afterwards, by the resolution of 1874, the Austrian monarch received the prerogative to nominate metropolitans, bishops, and canons (members of the eparchial chapters), as well as to divide or establish eparchies. Under Austrian rule the Ruthenian Greek Catholic church, as it became known at that time, became the national church of Galicia's Ukrainians, and the clergy played a seminal role in Galician life. The Ukrainians experienced a religious and national renaissance, in which education played a prominent part. The foremost religious leaders in this rebirth were M. *Levytsky, I. *Snihursky, and I. *Mohylnytsky. In fact, Levytsky succeeded Anhelovych as metropolitan and held this post for over four decades (1816–58). In 1856, just before his death, Levytsky was made a cardinal by Pope Pius IX, the first such distinction in the 260-year history of the Uniate church.

The Ukrainian Uniate hierarchy and clergy were known for their conservatism and devotion to the rite and traditions. Yet, they remained for the most part aristocratic in their manners and often spoke Polish at home. In the 1820s and 1830s however, a new generation of clergy started to emerge, and these played an important role in the national and political awakening of the Ukrainians in Galicia. They began publishing in the vernacular (see *Ruthenian Triad), organizing politically (see *Supreme Ruthenian Council, est 1848), initiating learned organizations (see *Congress of Ruthenian Scholars), and establishing the so-called enlightenment societies (see *Halysko-Ruska Matytsia). Austria's decision to hand over the administration of Eastern Galicia to the Poles in the 1850s greatly disappointed and frustrated the Ukrainians. Hence, many, including the hierarchy, began to lean towards the Russophile movement (see *Russo-philés).

The Ukrainian Greek Catholic hierarchy wanted to purify their rite of Latin influences and was vehemently opposed to the conversion of Ukrainian Catholics to the Latin rite. This brought to the forefront the conflict between the Ukrainians and the Poles and their respective churches. Under the capable leadership of Metropolitan S. *Lytvynovych (1863–69) an understanding was reached in 1863 in the 'Concordia', whereby the change in rite was prohibited (except by papal approval) under the threat of severe penalties. This document was ratified by both the pope and the Austrian emperor and was promulgated in all the eparchies by the bishops of both the Eastern and Latin rites. The 'Concordia' was observed for the most part until the 1920s, when the Polish authorities came to encourage and support open conversions to the Latin rite.

The Russophile movement continued to grow in the second half of the 19th century, coming more and more under Russia's influence. The transfer of the Kholm eparchy to the Orthodox faith in 1875, and the acceptance of Orthodoxy by the well-known Galician priest I. *Nau-movych and his entire village, contributed to the growth of the movement. Indirectly, it also led to the resignation of Metropolitan Y. *Sembratovych (1870–82), who was under great pressure from Emperor Francis Joseph. The new metropolitan, S. *Sembratovych (1885–98), adopted a strong pro-Ukrainian platform and had the support of the majority of the clergy, who adhered to the Galician populist movement. The clergy continued to play an important role in the national rebirth of Galicia, even though political leadership was now in the hands of the secular intelligentsia. However, Sembratovych's support of the *New Era, an attempted agreement with the Poles, resulted in the church's loss of both popular support and political influence.

At the end of the 19th century several new developments in the internal life of the church took place. In 1882 the Jesuits, on the orders of Pope Leo XIII, began the reform of the declining Basilian monastic order. Their action proved to be beneficial to the Basilians and rejuvenated their internal life; however, it also introduced various Latin influences. The newly reformed order later aided the Basilian order of nuns (responsible for secondary education) to carry through their own reform. The Basilians were also entrusted with directing the newly founded Congregation of *Sister Servants of Mary Immaculate (founded in 1892 by Rev K. Siletsky). In 1891 Metropolitan Sembratovych convoked in Lviv a synod of the Ukrainian Greek Catholic church to clarify various questions pertaining to the Eastern rite. Two important trends emerged at the synod: the conservative 'Easterners,' on the one hand, wanted to purge the church of all Latin influences; the 'reformists,' on the other hand, wished to draw the church nearer to the Latin rite. Although neither position triumphed, the church was nevertheless brought closer to the Latin rite. The synod's decisions applied initially only to the church in Galicia, but later were also adopted in Transcarpathia and by the Ukrainian immigrants in North America. In 1885 the creation of the new see of Stanyslaviv raised to three the total number of eparchies in the Halych metropoly. The first bishop of Stanyslaviv was the well-known theologian and church historian Yu. *Pelesh. Towards the end of his career (1895), S. Sembratovych was made a cardinal – the second such honor to be bestowed on the Galician church. After two years under Metropolitan Yu. Sas-Kuilovsky (1899–1900), the Ukrainian Greek Catholic church was entrusted to Count Andrei *Sheptytsky (1900–44). His activities during four and a half decades extended into many areas, which were neither exclusively ecclesiastical nor limited only to Galicia.

The Ukrainian Catholic church in the 20th century. Metropolitan Sheptytsky was the most ardent defender of the Eastern tradition and rite of his church. He was also greatly preoccupied with the development of theology and the education of the clergy. Under his guidance the Lviv theological seminary was reorganized, and with his aid seminaries were opened in Stanyslaviv (1906) and Peremyshl (1907). The most talented students were sent abroad for graduate studies. In 1904 Sheptytsky established the contemplative Eastern monastic order of St

Theodore Studite (see *Studite monks) and in 1913 he introduced the *Redemptorist order, a section of which had adopted the Eastern rite for its missionary activities in the same year. Sheptytsky also worked on behalf of women's monasticism; he promoted the reorganization of the Basilian order of nuns and the Sisters Servants of Mary Immaculate, as well as the establishment of several new orders: Sisters of St Joseph (1896), Sisters Myronosytsi (1910), Sisters of St Josaphat (1911), and the Studite order of nuns (1921).

Sheptytsky was concerned with the problem of the union of churches. As such, he organized and initiated the so-called *Velehrad congresses, the first held in 1907, which brought together the leading ecclesiastical figures of the various Slavic peoples. As the senior hierarch of the Ukrainian Catholic church, Sheptytsky established good contacts with the bishops of Transcarpathia (the eparchies of *Mukachiv and *Prešov) and *Križevci (ministering to Ukrainian-Ruthenian settlers in what is today northern and western Yugoslavia). Likewise, he was greatly concerned with the fate of the Ukrainian immigrants in Canada and the United States. In 1919, he himself visited the Ukrainian communities in both of these countries and was instrumental in having Rome appoint Ukrainian bishops for them.

Sheptytsky was also a generous benefactor of various cultural, educational, humanitarian, and economic institutions. He especially patronized the arts and, in 1905, founded the National Museum of Ukrainian Art in Lviv. As a member of the Austrian House of Lords (Herrenhaus) and the Galician Diet, he often defended vigorously the political rights of the Ukrainian people. In September 1914, with the Russian invasion of Galicia, Sheptytsky was arrested and exiled to the Russian interior. While returning from exile in 1917, he presided over the birth of the Russian Uniate church at a synod in Petrograd and appointed a convert Studite, L. Fedorov (1879–1935), as its exarch.

Sheptytsky and his clergy participated actively in political affairs during the existence of the independent Ukrainian state (1918–20), especially the Western Ukrainian National Republic. After the First World War, the fall of the Austro-Hungarian Empire, and the failure of the Ukrainian struggle for independence, Western Ukraine was annexed by Poland. The centuries-long hostilities between the Poles and Ukrainians continued to erupt throughout the interwar period. Sheptytsky's travels to Western Europe and, subsequently, to the scattered Ukrainian immigrant communities in the early 1920s gave him many opportunities to speak out on behalf of the Ukrainian cause and in defence of his church's rights. Although the concordat of 10 February 1925 between the Holy See and Poland guaranteed the Ukrainian Greek Catholics equal rights with the Roman Catholics, the Warsaw government intensified its political, educational, and economic discrimination against the Uniates, seeking to divide and weaken the Greek Catholic church.

Between the two world wars two main currents of thought persisted within the church. The first, the traditionalist 'Easterners,' who desired to strengthen the Byzantine rite, were centered around the Lviv archeparchy. They enjoyed the support of Metropolitan Sheptytsky himself, of his auxiliary, I. Buchko, and of the Studite monks. The leading organs of this current were the

quarterly **Bohosloviia* (est 1923), the monthlies **Nyva* (1904), and **Dzvony* (1931), and the weekly **Meta* (1931). The other current, the modernizing 'Westerners,' wanted to bring the Ukrainian Catholic church somewhat closer to Roman Catholicism. Its chief spokesmen were the bishops H. *Khomyshyn and Y. *Kotsylovsky and the Basilian monks. This current published the weeklies **Nova zoria* (1926) and **Ukrains'kyi Beskyd* (1928), the quarterly **Dobryi pastyr* (1931), and the Basilian scholarly journal **Analecta OSBM* (1924). This current especially favored compulsory celibacy for the clergy.

Metropolitan Sheptytsky was committed to higher education for the Ukrainian clergy and was instrumental in having a graduate department established at the Lviv Greek Catholic Theological Seminary in 1920. At this time Lviv University was completely Polonized. Subsequently, in 1928, the Lviv seminary was elevated in status and became the Greek Catholic Theological Academy, with Y. *Slipy as the first rector. There were also seminaries in Peremyshl and Stanyslaviv, as well as a number of monastic schools. Branches of the *Catholic Action were organized in the 1930s for the lay apostolate. Other organizations, especially youth associations such as *Obnova*, *Orly*, and *Skala*, also spread throughout Galicia. In 1923 the Theological Scholarly Society was founded in Lviv; it published *Bohosloviia*. The theological academy published its own transactions, entitled *Pratsi*, and the Studite order organized the Studite Scholarly Society. In 1931 Sheptytsky founded the *Ukrainian Catholic Union with the object of assuring a proper place for the Catholic faith in Ukrainian public life.

The concordat of 1925 confined the Ukrainian Catholic church to Galicia. As a result, various problems arose for those territories outside it. In Bukovyna, annexed by Rumania, the local Ukrainian Catholic parishes were reorganized as a separate vicariate of the Rumanian Catholic diocese of Maramureş. The missionary activities in Volhynia were entrusted by the Vatican to the Byzantine-Slavic 'neo-Uniate' clergy. Only in 1931 was an apostolic visitator for Volhynia named in the person of M. Charnetsky, a Ukrainian Redemptorist. However, the cause of reunification in predominantly Orthodox Volhynia never attracted much support.

The Soviet occupation of Western Ukraine in September 1939 was followed by the abolition or state takeover of the longstanding church institutions, including schools, seminaries, monasteries, and publishing houses, as well as the confiscation of all of the church's properties and lands. During this period the church suffered greatly but remained steadfast under the leadership of Metropolitan Sheptytsky. In May 1940 the metropolitan even convoked an archeparchial synod to deepen and strengthen the faith of church members and leaders in the new and trying circumstances. In the meantime, the Moscow patriarchate imposed its jurisdiction over the Orthodox church in Volhynia, and by April 1941 it had already consecrated an Orthodox bishop, P. Rudyk, for the Lviv see to prepare the Ukrainian Catholics for an eventual 'reunification' with the Russian Orthodox church.

The German occupation of Galicia in 1941 and the incorporation of it into the German Generalgouvernement brought a temporary respite for the Ukrainian Catholic church. At the same time the church's activities were restricted by the circumstances of war. The second Soviet occupation of Galicia in mid-1944 was not immediately

followed by the persecution of the church, because Soviet efforts were concentrated on defeating the Germans and combating the popular Ukrainian resistance (the Ukrainian Insurgent Army and the Organization of Ukrainian Nationalists). During this difficult period the church lost its spiritual father when on 1 November 1944 Metropolitan Sheptytsky died. The leadership of the church now fell on the shoulders of Y. Slipy, who had been secretly consecrated on 22 December 1939 as an archbishop coadjutor with the right of succession.

Almost from the very beginning of the Soviet occupation measures aimed at liquidating the Ukrainian Catholic church were imposed. An anti-Uniate campaign began in the Soviet media on 5 April 1945, and on 11 April 1945 the entire Ukrainian Catholic hierarchy was imprisoned and exiled. Along with Metropolitan Slipy, the KGB arrested his auxiliary, N. Budka, as well as Bishop M. Charnetsky; in Stanyslaviv, Bishop H. Khomyshyn and his auxiliary bishop, I. Liatshevsky, were imprisoned. In June Msgr P. Verhun, apostolic visitor for Ukrainian Catholics in Germany, was arrested. In June 1946, the Polish Communist authorities arrested and extradited to the Soviet Union Bishop Y. Kotsylovsky of Peremyshl and his auxiliary, H. Lakota. They were sentenced to long prison terms by closed military tribunals in the same year. All those arrested died in prison except for Archbishop Slipy. In early 1963, as a result of the efforts of Pope John XXIII, Slipy was released; he currently resides in the Vatican. He was recognized by the pope as archbishop-major of the Ukrainian Catholic church, and in 1965 the Roman Catholic church bestowed on him the rank of cardinal.

As mass arrests of leading Ukrainian clergy were carried out throughout Galicia, the Soviet authorities sponsored, in late May 1945, the so-called Initiating Committee for the Reunification of the Greek Catholic Church with the Russian Orthodox Church. This group was headed by three former Ukrainian Catholic priests – H. Kostelnyk, a leading advocate of the ‘Eastern’ tendency within the church; A. Pelvetsky; and M. Melnyk – and was promptly recognized by the government as the sole administrative organ of the Ukrainian Catholic church. In February 1946 members of the committee were secretly accepted into the Russian Orthodox church in Kiev and Pelvetsky and Melnyk were ordained as Orthodox bishops for Stanyslaviv and Drohobych respectively. Earlier, in 1945, the Moscow patriarchate appointed its own Orthodox bishop for Lviv, M. Oksiiuk. Soon after the committee convened a sobor in Lviv on 8–10 March 1946 and proclaimed an end to the Union of Berestia (1596) and the ‘reunification’ of the Greek Catholics with the Russian Orthodox church. The entire campaign was planned and guided by the Soviet authorities, the security police being entrusted with the task of coercing the Uniate clergy to join the Russian Orthodox church. Both the Vatican and the Ukrainian Catholic church in the West refused to recognize this forcible reunification and consider it to be uncanonical and illegal. The Soviet authorities consider this sobor and its decisions binding on all Ukrainian Catholics in the USSR to this day. The protests of Ukrainian clerics and the two encyclicals of Pope Pius XII (1946 and 1952) in the defense of the Ukrainian Catholic church have gone unheeded. The Ukrainian Catholic church was thus forced underground, where it continues to exist, despite ongoing persecution by the Soviet authorities.

(For the history of the Ukrainian Catholic church in Hungary [prior to 1919] and in Czechoslovakia [1919–39 and after 1945], see *Mukachiv and *Prešov eparchies. For church history in the diaspora, see *Ukrainian Catholic church.)

The Ukrainian Orthodox church in the 20th century. The rebirth of the Ukrainian state in 1917–18 witnessed a national movement within the Orthodox church in Ukraine. In December 1917 the *All-Ukrainian Orthodox Church Council, headed by Archbishop O. *Dorodnytsyn and Rev O. Marychiv, took place. This council soon challenged the newly restored Moscow patriarchate by demanding Ukrainianization, an independent (autocephalous) status, and the restoration of the traditional conciliar administration (*sobornopravnist*). Faced with the threat of a split in the church, Patriarch Tikhon granted the council permission to convoke the first *All-Ukrainian Church Sobor with the participation and veto power of the eparchial bishops of Ukraine. The sobor was convened in Kiev in January 1918 and was reconvened under the Hetman government in June 1918. The earlier session of the sobor had to adjourn before arriving at any decisions because of the Soviet Russian invasion. The later summer and fall sessions were dominated by pro-Russian elements in the church (led by the recently appointed Kievan metropolitan A. Khrapovytsky), which denied voting rights to nearly all pro-Ukrainian delegates. On 9 July 1918, the sobor adopted a statute for the Provisional Supreme Administration of the Orthodox church in Ukraine. Patriarch Tikhon quickly approved this statute, which provided for the permanent canonical subordination of the church in Ukraine to the Russian patriarchate, but with a considerable degree of internal autonomy. Thus, the electoral privileges of the Ukrainian church were to be restored, yet the patriarch was ‘to confirm and bless’ those elected hierarchs. The church in Ukraine was to be governed by a triennial Ukrainian church sobor and was to be administered between sobors by the Holy Synod of Ukrainian Bishops and the Supreme Church Council, all under the authority of the metropolitan of Kiev and Halych. However, the decisions of the All-Russian sobors and the directives of the Moscow patriarch were to be considered binding and obligatory for the church in Ukraine as well. The Ukrainian church leaders rejected this statute and continued to press for the church’s independence. They were aided by the change in the political situation in Ukraine after the Directory of the UNR overthrew the Hetman government and, in December 1918, had Metropolitan Khrapovytsky removed. On 1 January 1919, the Directory issued the Law on the Supreme Authority of the Ukrainian Church, which provided for the church’s complete *autocephaly. The implementation of this decree was, however, impeded by the second Bolshevik invasion (February–August 1919) and the continued opposition of the majority of the bishops. During the Bolshevik occupation the All-Ukrainian Orthodox Church Council was reconstituted. It began organizing Ukrainianized parishes and registering them under the new Soviet regulations on religious associations, which brought the council into an escalating confrontation with the episcopate. Finally, on 5 May 1920, in response to the suspension of the clergy of the Ukrainian parishes by the Kiev auxiliary bishop Nazarii, the council proclaimed the Ukrainian Orthodox church to be autocephalous.

The struggle for the control of the church in Ukraine divided the latter into two distinct camps: the pro-Russian, headed by the bishops and higher clergy and supported by the Moscow patriarchate, and the pro-Ukrainian, led by the lower clergy and laymen and deeply entrenched in the Ukrainian national movement. While the first derived its strength from the episcopal hierarchy, canonical continuity, and traditionally conservative beliefs, the second appealed to the nationally conscious population by the use of the vernacular Ukrainian and an emphasis on the distinctive features, traditions, and rites of the Ukrainian church. In 1922 another orientation entered this struggle, the so-called *Living church, later replaced by the more moderate *Renovationist church. Supported by the regime, these offshoots of the reform movement in the Russian church cut into the patriarchal following in Ukraine rather than into the Autocephalous church.

The Second All-Ukrainian Orthodox Church Council, having severed relations with the Moscow patriarchate, sought to secure a canonical bishop for the *Ukrainian Autocephalous Orthodox church (UAOC). It found such a hierarch in the person of P. Levytsky, bishop of Poltava, but by spring 1921, as a result of pressures from Moscow, Levytsky refused to collaborate any further. The council failed to find another bishop who would be willing to serve the Ukrainian church or one who would consecrate a hierarchy for the church. Thus, the council decided to take the fateful decision and to create its own episcopate. The First All-Ukrainian Sobor of the UAOC was convened in Kiev on 14–30 October 1921. The sobor took the bold step of creating its own hierarchy by consecrating a bishop 'according to the ancient practice of the Alexandrian church.' On 23 October 1921 the archpriest V. *Lypkivsky, the leading spiritual head of the movement, was consecrated metropolitan of Kiev and all Ukraine. Then, with sobor members, Lypkivsky consecrated Archpriest N. Sharaievsky as the second hierarch of the church. Later, in October 1921, the two consecrated four more bishops for the church.

The action of the sobor and the departure from established canonical practice caused a great deal of confusion and alienated a number of followers. In addition, the refusal of other Orthodox churches to acknowledge the new Ukrainian hierarchy virtually isolated it. However, the UAOC found a ready following among the Ukrainian peasantry and intelligentsia and soon spread rapidly. By early 1924 the church had some 30 bishops and 1,500 priests and deacons serving 1,100 parishes. It also started to establish its roots in the Ukrainian communities in Western Europe, Canada, and the United States. Meanwhile, the Soviet authorities began to impose increasingly more severe restrictions on the church and even attempted to split it by supporting certain dissenting factions, such as the so-called Active Church of Christ (Diialno-Khrystova Tserkva). When such groups failed to gain control of the church, the Soviet authorities resorted to direct repressive measures. Thus, in the summer of 1926 Lypkivsky and a number of church leaders were arrested. At the Second All-Ukrainian Sobor of the UAOC in October 1927, the authorities requested and received the official dismissal of Lypkivsky. Elected in his place was M. *Boretsky, who administered the church during a brief period of toleration. In 1929 all this came to an end when the Soviet regime undertook

massive repressive measures to stamp out all traces of this church. The church was accused of collaborating with an underground organization, the *Union for the Liberation of Ukraine. Consequently, in January 1930 an extraordinary sobor was held; it formally dissolved the Ukrainian Autocephalous Orthodox church as such. The leaders of the church, Metropolitan Boretsky and its ideologue V. *Chekhivsky, were imprisoned and exiled. The remnants of the church, some 300 parishes, were allowed to reconstitute themselves as the Ukrainian Orthodox church under the bishop of Kharkiv, Metropolitan I. Pavlovsky. However, this body was closely watched by the Soviet regime, and by 1936 it was totally suppressed.

The Russian Orthodox Patriarchal church remained the largest church in Ukraine, although the Ukrainian church had seriously challenged its hold on the villages and deprived it of support among the Ukrainian intelligentsia. Most of the support for the Russian church came from the clergy (especially those in the monasteries), the Russian minority in Ukraine, and the conservative elements of the Ukrainian population. Since it had lost its metropolitan, A. Khrapovitsky, and many of its bishops, the Moscow patriarchate in 1921 named Metropolitan M. Yermakov as its first exarch for Ukraine. When the Soviet government openly supported the so-called Renovationist church in the 1920s, a large number of bishops and clergy defected from the Patriarchal church; those who would not join them were arrested and deported. In 1925 a group of Ukrainian bishops from the Patriarchal and Renovationist churches formed, under the leadership of T. Buldovsky, still another ecclesiastical jurisdiction in Ukraine, known as the Conciliar-Episcopal church (Soborno-iepyskopska Tserkva). Although it attacked both the Autocephalous and the Patriarchal churches, it called for a truly canonic, independent Ukrainian Orthodox church. However, it did not attract a large following and disappeared in the antireligious terror of the mid-1930s. The Patriarchal church in Ukraine was administered until 1920 by the exarch Yermakov, who was succeeded by K. Diakov. The 1930s witnessed a new wave of repression against the church and led to its almost total destruction. Thus, when the Germans invaded Ukraine in 1941, only a handful of the patriarchate's parishes existed in eastern Ukraine, with not a single bishop.

Another ecclesiastical jurisdiction in Ukraine during the 1920s and 1930s was that of the Renovationist church, known officially as the All-Ukrainian Union of Religious Congregations of the Orthodox Autocephalous Synodal church. Supported by the Soviet authorities, this body was headed by Metropolitan P. Pegov. It was assigned numerous churches by the authorities and initially had numerous clergymen join it, mostly under duress. But the Renovationists were repudiated by the Orthodox church, and when the patriarchate and the Soviet regime reached a *modus vivendi* in 1927, this religious formation declined rapidly, most of its clerics returning to the Patriarchal church. By the end of the 1930s, this group had become extinct.

After the First World War and the Polish occupation of the western regions of Ukraine and Belorussia, the eastern part of the new Polish state included a sizable number of Orthodox believers, including some two and a half million Ukrainians. The Russian influence was also very strong here, as a result of the extensive Russification of these territories prior to the war. In its initial few years

of postwar existence, the Polish state was quite hostile to the Orthodox. However, the anti-Russian orientation of the Ukrainians and Belorussians coincided with the policies of the Polish state. Thus, a Ukrainian by birth, Metropolitan Yu. Yaroshevsky, became the head of the Orthodox church in Poland. In 1922, Yaroshevsky convened a sobor of bishops which adopted the Provisional Rules of Church-State Relations. Being opposed to dependence on Moscow, Yaroshevsky strove to attain a status of autocephaly for his church. In 1923, however, as a result of internal tensions, he was assassinated.

Yaroshevsky was succeeded by D. *Valedinsky. On becoming metropolitan, Valedinsky was faced with the arduous task of defending the rights of the Orthodox ethnic minorities that the Polish state wanted assimilated. Valedinsky met the Polish authorities halfway, but continuously demanded his church's independence in ecclesiastical matters. He continued the efforts of his predecessor to secure autocephaly, and in 1924 the patriarch of Constantinople finally issued him the *Tomos* granting the Orthodox church in Poland canonical independence of the Moscow patriarchate. This was the first major step in the reordering of church life; however, the next step – the calling of a church sobor – was never realized because of the procrastination of the secular authorities. In 1938 the Polish government promulgated two decrees (Internal Statutes of the Polish Autocephalous Orthodox Church, and the Presidential Decree on the Relations of the State to the Polish Orthodox Church) that made the church dependent on the state. The state appropriated for itself the power of sanctioning all ecclesiastical appointments. It demanded the introduction of Polish as the official language in the church and imposed other restrictions on the church.

The Orthodox church in Poland was composed of five eparchies (Warsaw-Kholm, Volhynia, Vilnius, Hrodna, and Polisia) with two theological seminaries, in Vilnius and Kremianets, a theological lyceum in Warsaw, and an Orthodox theological faculty at Warsaw University. The exact number of parishes is not known, especially owing to the confiscation and destruction of churches that was initiated at the end of the 1920s and continued throughout the 1930s. The Polish government tried to Polish the church in various ways, but was only partially successful. However, efforts at converting the Orthodox to Roman Catholicism made no headway whatsoever.

The Orthodox church on the Ukrainian ethnic territories of Poland was able to maintain the specific characteristics of Ukrainian Christianity. The vernacular came into use in some churches as early as 1921, and many liturgical books were translated into Ukrainian. The hierarchs were mostly Ukrainians and were well disposed to Ukrainian influences. In Volhynia and the Kholm region there were many prominent Ukrainians, who eventually evolved into an important and influential group of lay church leaders. Several publications appeared, such as *Tserkva i narid* (1935–8), *Dukhovnyi siiiach* (1927–31), *Za sobornist'* (1932–5), and *Shliakh* (1937–9). Although the Russophile traditions of the Orthodox church were still felt at the central administrative level and its Polishization was officially fostered, the Ukrainian element grew steadily and gained more and more popular support.

The Second World War created new havoc in the life of the church in Ukraine. With the Soviet occupation of

Western Ukraine, the Patriarchal church undertook to extend its jurisdiction over Volhynia and, at the same time, prepared for the conversion of the Ukrainian Catholics in adjacent Galicia. The subsequent German occupation of Ukraine led to a spontaneous revival in church life. However, it soon became marred by jurisdictional disputes, two ecclesiastical entities battling for supremacy. The first, the Autonomous Orthodox church in Ukraine, was headed by Archbishop O. Hromadsky, who assumed the titles of metropolitan and exarch. Hromadsky formally affirmed the church's canonical dependence on the Moscow patriarchate but in practice considered it to be suspended, as long as the patriarchate was subject to the Soviet authorities. The basis of Hromadsky's position was rooted in the 1918 statute that granted the Ukrainian church a certain degree of autonomy. His church appealed to conservative and Russophile elements and soon spread from Volhynia to central and eastern Ukraine, where it attracted conservative Russian and Russified clergy and believers. The second body, the Ukrainian Autocephalous Orthodox church, developed in early 1942 under the spiritual authority of Metropolitan D. Valedinsky of Warsaw. This group was headed by Bishop P. *Sikorsky, who also assumed the title of metropolitan. It disclaimed the 1921 ecclesiastical reforms of the Autocephalous church of Metropolitan Lypkivsky, but made accommodations for the surviving clergy and faithful from this church. The wartime Autocephalous church attracted the more nationally conscious faithful and readily welcomed the revival of the Ukrainian language and national traditions in the life of the church.

In October 1942, an unsuccessful attempt was made to unite both of these groups under one jurisdiction. German policy in occupied Ukraine clearly favored the continued division and internal strife within the Orthodox church and aimed at the total subordination of individual bishops to the local German authorities. With the German retreat in 1943–4, several Autonomous church bishops and all but one autocephalous church bishop sought exile in the West. They were followed by a fair number of their clergy and faithful. The territories taken over by the Soviet Union were incorporated into the Moscow patriarchate, and the various churches in Ukraine were either absorbed or annihilated. Consequently, an autocephalous or independent Ukrainian Orthodox church exists now only outside the Soviet bloc.

The Orthodox church in German-occupied Poland (ie, on the territory of the German Generalgouvernement) remained autocephalous and continued to be headed by Metropolitan Valedinsky. The Kholm-Podlachia eparchy was placed under the authority of the newly elevated archbishop I. *Ohiienko, a well-known Ukrainian scholar; the Cracow-Lemko region eparchy was administered by Bishop P. Vydibida-Rudenko. In 1942 the synod of bishops adopted certain internal statutes that were later acknowledged by the German authorities as well. The statutes spoke very clearly about the prevailing Ukrainian spirit in the church. The further growth of the church was, however, impeded with the withdrawal of the Germans and subsequent chaotic developments. Both Archbishop Ohiienko and Bishop Vydibida-Rudenko sought refuge in the West.

After the Second World War the leadership of the Orthodox church in Poland remained in the hands of Metropolitan Valedinsky. However, he was soon forced

out of office by Communist authorities and spent his last years in a monastery. The two remaining bishops of the church began to cultivate favorable relations with the Moscow patriarchate and in 1948 received acknowledgment of autocephaly for their church. But it was only in 1951 that the Orthodox church in Poland received from the Moscow patriarchate a ruling hierarch in the person of M. Oksiuk, hitherto archbishop of Lviv. He was succeeded by T. Shreter, S. Rudyk, and, from 1970, Metropolitan V. Doroshkevych. The number of Ukrainian Orthodox in the Polish People's Republic is now greatly reduced as a result of the transfer of population to the USSR after the Second World War and the incorporation of former Polish territories into the Ukrainian SSR. The Orthodox church in Poland counted in 1970 some 460,000 faithful, the greater part of whom were Ukrainians. In 1970 this church was composed of four eparchies, 216 parishes, and 216 priests, including 25 inactive ones. It has a monastery in Jabłoczn (St Onufrii) and a convent (ss Martha and Maria) in Grabarka. The official church language is Polish, Church Slavonic (in the Russian redaction) being used for liturgical purposes only. The official publications of the church are *Tserkovnyi vestnik* (in Russian) and *Wiadomości Polskiego Autokefalicznego Kościoła Prawosławnego* (in Polish). An annual almanac, *Kalendar*, is published in Ukrainian. The church has a theological seminary in Warsaw with a section (classes) at St Onufrii's Monastery. For higher studies, there exists an Orthodox section at the Christian Theological Academy in Warsaw.

After the German retreat in 1943–4, the Moscow patriarchate re-established its jurisdiction over the Orthodox church in Ukraine. In 1944 the Kievan see was filled by a Russian, I. Sokolov, who was succeeded in 1964 by another Russian, Y. Leliukhin. Since 1966 the metropolitan of Kiev and Halych and exarch of Ukraine has been F. *Denysenko, a Ukrainian. Since the Second World War the Moscow patriarchate has enjoyed a period of toleration from the Soviet regime which allows it to maintain parishes and monasteries that were reopened during the German occupation. It has established jurisdiction over the Ukrainian Orthodox population in Bukovyna and Transcarpathia as well as over the parishes of the suppressed Ukrainian Catholic church in Galicia and Transcarpathia. By the early 1950s the Ukrainian exarchate embraced some 8,000 churches with close to 6,800 priests, organized in 18 eparchies (corresponding to the oblasts of the Ukrainian SSR), three seminaries (Kiev, Odessa, and Lutske), and 38 monasteries and convents. The Ukrainian exarchate accounted for more than half of the churches and monasteries in the Soviet Union, which were most heavily concentrated in Western Ukraine. With its pre-eminent status, the Ukrainian exarchate has been allowed a certain degree of autonomy within the confines of the Moscow patriarchate.

The position of the church has progressively deteriorated since Stalin's death. The imposition of increasingly severe legal and administrative restrictions and the commitment of massive resources to antireligious campaigns (see *Antireligious propaganda) have greatly undermined the status of the church in Ukraine. In the Ukrainian SSR an antireligious journal, *Voiovnnychi ateist*, began publication in 1960 (it was renamed *Liudyna i sviit* in 1965). Soviet mass media have also contributed to the new offensive against the church, as has the compulsory

teaching of atheism in the schools. The establishment of 'museums,' 'houses,' and 'corners' of atheism has greatly aided Soviet antireligious policy. In the course of Khrushchev's antireligious campaign (1958–64), some 3,500 Orthodox churches, 29 of 38 monasteries and convents, and two of the three seminaries, those of Kiev and Lutske, were closed by the authorities. The Odessa seminary remains the only and grossly inadequate theological school in Ukraine. Political surveillance and administrative control over the Orthodox church were entrusted to the governmental Council for the Affairs of the Russian Orthodox Church in 1943. It was merged in 1965–6 with the Council for the Affairs of Religious Cults (established in 1944 for non-Orthodox groups) and renamed the *Council on Religious Affairs. An all-Union agency, the council has its equivalent at the republican level (Ukrainian SSR) and commissioners at the oblast levels.

The episcopate of the Ukrainian exarchate of the Russian Orthodox church has become, since the 1950s, predominantly Ukrainian, but the Ukrainian language remains banned from liturgical use. Outside of the forcibly 'converted' former Uniate eparchies in Western Ukraine, the church has been used as a vehicle for Russification, especially in the larger cities. The Ukrainian exarchate publishes a monthly journal in Ukrainian called **Pravoslavnyi visnyk*, which has appeared from 1946 to 1962 and again from 1968 to the present. According to official sources, the Ukrainian exarchate comprised 4,500 churches in 1976 (some 65 percent of the 'registered' Orthodox churches in the USSR), of which 60 percent are located in the western oblasts. In 1974 the two surviving monasteries and seven convents had 45 monks and 755 nuns; there were 118 students at the Odessa seminary in 1974–5, and many Ukrainian candidates for priesthood were enrolled at the Leningrad and Moscow (Zagorsk) theological schools. Brezhnev's era (1964–82) was characterized by steady (though less violent than under Khrushchev) pressure on the Orthodox church (and all other denominations), aimed at reducing the number of churches and priests through attrition and withdrawal of permits (registrations) for both. Their numbers have slowly declined while the ranks of believers have increased. The severely restricted and state-controlled position of the church in Ukraine has been reflected in the new Statute on Religious Associations in the Ukrainian SSR adopted on 1 November 1976.

Church holidays. Days set aside by the church for celebrating various events from the life of Christ, the Virgin Mary, and the saints. The main holidays are known as *praznyky*, from the Church Slavonic *praznyk* (day free from labor), and the faithful are obliged to desist from work on such days. For each holiday the church has a special service (*chynoposlidovannia*), which is described in the book of rules for church services – the *tyikon*. The most important holiday in the Ukrainian churches is *Easter (Resurrection of Christ). Next is *Christmas (25 December), followed by *Epiphany (6 January), Christ's presentation at the Temple (2 February), Annunciation (25 March), Christ's entrance into Jerusalem (Palm Sunday), Ascension (40 days after Easter), Pentecost or Sunday of the Trinity, Transfiguration (6 August), Dormition of the Virgin Mary (15 August), Nativity of the Virgin Mary (8 September), Elevation of the Cross (14 September), and Presentation of the Virgin Mary at the Temple (21 November). Easter Sunday does not have a set date, but changes every year to fall on the first Sunday after the full moon that occurs on or right after the spring equinox. In the Byzantine-rite church a slightly different calculation is followed, resulting in Easter coinciding or falling one, four, or five weeks later. The dates of the other movable feasts depend on the date of Easter. The Ukrainian Catholic church has a special movable feast, the Feast of the Holy Eucharist (second Sunday after Pentecost). Individual parishes celebrate feasts in honor of the saint or event to which the local church is dedicated. In the Ukrainian Catholic church the Feast of the Immaculate Conception (9 December) is a major holiday. There are also holidays connected with local saints or with historical events, such as the feasts of Prince Volodymyr (15 July) and of St Mary the Protectress (1 October). In Ukraine the feasts are celebrated according to the Julian (old style) calendar. Some Ukrainian communities abroad, however, now celebrate according to the Gregorian (new style) calendar.

Church holidays sometimes coincide with folk feasts;

thus, the winter cycle of feasts coincides with Christmas-Epiphany and the spring cycle with Easter (see *Folk calendar and *Folk customs and rites).

I. Korovytsky, M. Vavryk

Church music. Religious music existed in Ukraine before the official adoption of Christianity, in the form of plain-song (*obychnyi spiv*) or *musica practica*. With the conversion to Christianity in 988, the Byzantine chant was imported together with Byzantine ritual (partially through the mediation of Bulgaria). The distinguishing feature of Ukrainian church music was its exclusively vocal nature. The original liturgical chants were sung in unison and based on one line of melody. In time the tonal classification became based on the octet system *vosmyholossia*, which was a division of the church chants into eight melodic types or formulas.

Through the ages this system assimilated Ukrainian folk-song themes, and the melodies were restructured and adapted to Ukrainian forms and styles. An original Ukrainian church music first emerged in the 11th century at the Kievan Cave Monastery, where the so-called Kievan Cave chant was evolved from a merging of the old Kievan and the old *znamennyi* chants. Conforming to church practice, a method of musical notation called the *znamennyi* notation was developed, consisting of symbols (neumes) written without the staff. In the 12th and 13th centuries the *znamennyi* notation was also used to record three-part chants. From the mid-16th to the end of the 17th century a contrapuntal or polyphonic singing (vocal music with simultaneous but melodically independent parts or voices) was developed in Ukraine. This development was accommodated by a new and more precise system of notation employing the staff, called the Kievan notation. Polyphonic music was cultivated primarily by church brotherhood choirs. The choral concerto in one movement, composed for non-liturgical texts, became a very popular form. The composers of polyphonic music were, among others, M. *Dyletsky (the author of a handbook on the theory of music written in 1677) and A. *Rachynsky. Several outstanding Ukrainian composers of liturgical music, including M. *Berezovsky, A. *Vedel, and D. *Bortniansky, emerged during the latter half of the 18th century. The predominant form of their compositions was the cyclical choral concerto. Important editions of the liturgical chants 'Irmoloi' (Lviv 1707) and 'Bohohlasnyk' (Pochaiv 1790) have been preserved from the 18th century. A separate branch of sacred music includes *kanty* (chants) and psalms, religious songs that have become saturated with elements of Ukrainian folk music. These pieces are generally composed for three parts. Church music was further developed primarily by Galician composers, including M. *Verbytsky, I. *Lavrivsky, and S. *Vorobkevych. Twentieth-century composers of sacred music are K. *Stetsenko, M. *Leontovych, O. *Koshyts, M. *Haivoronsky, and others.

Church peasants (*tserkovni seliany*). A dependent group of peasants who belonged to and worked in monasteries or the homes of the higher clergy (bishops and patriarchs). Church estates and church-dependent peasants were known as early as the Princely era and during the Lithuanian-Polish period. The number of church peasants in Ukraine increased significantly under the Russian Empire. A large number of church peasants belonged to the Kievan Cave Monastery, the Hustynia Monastery, the Transfiguration Monastery in Novhorod-Siverskyi, and other monasteries. By 1768, 61 monasteries in Left-Bank Ukraine owned about 160,000 church peasants. In 1786–8 the imperial government secularized the possessions of these monasteries and transferred control over their lands and serfs to the Collegium of the Economy (see *Economic peasants). After 1793 the same thing happened to the church peasants in Right-Bank Ukraine. In most cases the position of the church peasants and their labor obligations were similar to those of the serfs belonging to gentry landowners.

Church people (*tserkovni liudy*). Individuals who until the end of the 18th century were under the church's or, more precisely, the bishop's jurisdiction. Besides the clergy, the church people included the servants and families of the clergy and all those who worked for the church or lived under the church's protection in its charitable institutions (declassés [*izhoi*], bankrupt merchants, freed slaves, *church peasants, etc).

Church register (*metrychna*, or *metrykalna, knyha*). Record of civil acts such as births, marriages, and deaths. For centuries the register was kept by church officials, but later civic or state agencies took over the function. An excerpt from the register was popularly known as the *metryka*, and officially as the 'certificate of birth and baptism' (or of marriage and death). In Ukraine registers were kept from the 17th century. Church sobors such as the Orthodox sobor of Kiev in 1646 and the Uniate Sobor of Zamostia in 1720 ordered priests to keep an accurate register. Bishop I. Shumliansky furnished models of registry records in *Metryka, albo reiestr na poradu tserkovy sviatoi i snadneishoi informatsie dukhovnym, svietskym ...* (Registry [or Register] for the Welfare of the Holy Church and for Better Information for Clergy, Laity ... , 1686–7). Only the church kept a register in Ukraine under the Russian Empire (beginning in the 18th century), under the Austrian Empire, and, later, under Poland. In Transcarpathia under Czechoslovakia and in Bukovyna under Rumania the church register was merely a supplement to the state register. In the Ukrainian SSR the church is separated from the state, and the church register is not recognized by the state.

At first the church register was written in the Ukrainian redaction of Church Slavonic, then, under Russia, in Russian. In Galicia, by the end of the 18th century Church Slavonic and Latin were used, and in this century, Ukrainian. In Bukovyna the register was kept in Church Slavonic and then in German.

In the diaspora the Ukrainian churches keep registers, but these are for unofficial, internal, church statistics. Only if other documents are lacking are these registers accepted as evidence by state authorities.

Church rite. The external manifestation of faith and worship. The term is used to refer to (1) the canonical rite of the church (see *Canon law) and (2) a distinctive liturgical form (eg, the Eastern and the Western rite). The term acquired the latter meaning in the Western church after the Second Vatican Council.

Although Rus' received the Christian faith from Byzantium, where the liturgical ritual was precisely defined, some departures from Byzantine norms appeared, particularly in the **Trebnyk* (Euchologion) and *Chynovnyk* (Service Book) as a result of the influence of local Ukrainian customs. These departures are discernible as early as the second half of the 11th century. Among them were the prince's presence during the chirotony (consecration of a bishop) and the declaration of the clergy's deputies that the priests approved the consecration of the elected bishop. There was also a difference on fasting: if an important feast fell on a Wednesday or Friday, the Kievan church, contrary to Byzantine practice, suspended the fast. The local population assimilated only those elements of the church rite that were in harmony with its traditions and adapted the Christian themes to its world view. Besides the liturgical models adopted from Byzantium, Rus' produced its own original texts of services to individual saints, hymns (acathisti), etc. Church singing, which is a part of the church rite, developed independently in the Ukrainian church.

Attempts were made in the Kievan Orthodox church – for example, under Metropolitan H. Tsamblak – to sort out the wealth of customs and rituals, but it was not until the mid-17th century that Metropolitan P. *Mohyla succeeded in standardizing the liturgical books with their distinctive ritual. In his polemical work *Lithos* (The Stone, 1644) Mohyla emphasized that it was not rite but dogma that divided the churches. The church rites (liturgy, calendar, etc) were discussed at length in the religious polemics of the 17th century. The church sobors of 1596, 1629, and 1636 expressed concern for the preservation of local peculiarities in the church rite. The Orthodox sobor that met in Kiev in 1640 devoted its attention to the church rite and approved certain practices that did not exist in other Orthodox churches but were consistent with the practices of the Uniate church. Hence, the *Trebnyk* of 1646 and **Sluzhebnyk* (Missal) of 1639 retained a number of church customs that were practiced at the time and were found in earlier church books such as the *Trebnyk* of 1606, the *Sluzhebnyk* of 1604, and the hand-copied euchologia of the 16th–17th century (now lost). The *Trebnyk* of 1646 contains 20 rituals that are not mentioned in other books and that were derived from local rites. Altogether it contains 37 local Ukrainian ceremonies, whose inclusion caused consternation in Moscow. Yet, some local church practices, such as prayers over those who had pronounced a curse on themselves, processions around the church from east to west, the priest's following rather than preceding the coffin at a burial procession, and communion with holy water for unconscious individuals (found in the *Trebnyk* of 1606), were omitted from this book.

The peculiarities of the Ukrainian church rite began to disappear at the end of the 17th century, following the submission of the Ukrainian Orthodox church to the patriarchate of Moscow. Ukrainian customs were suppressed not only because of the centralizing tendencies of the Russian church, but also because of its confusion

of rite with dogma. Because ritual was given the same weight as dogma, Moscow condemned baptism by the pouring of water, the ordination of several priests during the same liturgy, the celebration of the Proskomide (the Rite of Preparation) with five consecrated wafers, the use of the vernacular in some ceremonies and sermons, and many other practices peculiar to the Kievan church. The authorities in Moscow watched for any peculiarities 'in words and services' (as with the Kiev *Sluzhebnyk* of 1692) and issued prohibitions (1721) against distinctive church practices and the use of a 'different dialect' in the liturgical language. For this reason the old rites of the Ukrainian Orthodox church, which were suppressed in the Russian Empire and then in the Soviet Union, survived until the Second World War only in Western Ukraine, which was located outside the jurisdiction of the Russian synod or patriarch. The old rites were partly preserved also in the Ukrainian-Belorussian Catholic church, which absorbed many practices of the Roman Catholic church and yet retained its distinctiveness. The *Ukrainian Autocephalous Orthodox church (UAOC), which was revived in 1919–21, introduced the vernacular into the liturgy and tried to restore and develop the traditional peculiarities of the Ukrainian church rite in singing, preaching, lay participation in the church, and so on. This process was halted with the suppression of the UAOC in the Soviet Union. Since 1943 the Soviet government has shown some favoritism towards the Russian Orthodox church in Ukraine; hence, Ukrainian church rites are cultivated only outside the USSR. The work of the *Mohyla Society in the interwar period in Lutske and Warsaw was interrupted by the war; it has continued in the Ukrainian Orthodox church in the diaspora, but no uniformity of the church rite has been achieved.

The traditional Ukrainian church rites continue to be practiced in the churches of the UAOC abroad: the priest reads the Gospel facing the congregation, the sermon follows the reading of the Gospel, the royal doors are kept mostly open, the eucharistic prayers are read aloud, before the Credo the congregation is addressed with the words 'Christ is among us,' the feast of St Mary the Protectress (1 October) is solemnly kept (it is not recognized by some non-Ukrainian Orthodox churches), flowers are blessed on the feast of the Maccabean Martyrs on 1 August, and so on.

When the Ukrainian church entered into union with the Roman Catholic church in 1596, it reserved the right to keep the Eastern church rite, and this right was guaranteed by Pope Clement VIII in the Church Union of *Berestia. At first the Uniate priests used the old liturgical books, but with time innovations and borrowings from the Latin rite began to appear in the liturgical books of the Uniate church. The bishops began to send candidates for ordination to Roman Catholic seminaries, where these future priests became accustomed to Latin-rite practices. Priests who came from Polonized Ukrainian nobility became champions of the Latinization of Ukrainian rites. Gradually, the so-called silent or read liturgy was introduced, hands were folded in the Western manner, communion was accepted in the kneeling position, altar bells and sometimes organs were introduced, the iconostasis was removed, and the altars were placed against the walls. Such innovations were more prevalent in the northern Uniate eparchies (Lithuania and Belorussia) and

the Kiev metropolitanate than in Galicia, Volhynia, and Transcarpathia.

The Uniate Synod of Zamostia in 1720 devoted some attention to innovations in the church rite and approved only four of them – prayers for the pope in the liturgy, the addition of 'filioque' to the Credo, and the elimination of the sponge and the so-called *zeon* (pouring of warm water into the consecrated wine) during the liturgy – although it did not prohibit others. Opponents of the Latinization of the church rite planned to summon a provincial council in the second half of the 18th century to explore this issue. At the end of the 18th century H. Lisovsky, the archbishop of Polatsk and a proponent of the ancient practices, took an interest in liturgical reform, but political events and the persecution of the Uniate church made such reform impossible. In the first half of the 19th century the Russian government encouraged liturgical reform in the Uniate church of I. Semashko (1839) in the spirit of Russian Orthodoxy. The suppression of the Uniate church in the Kholm region and Podlachia in 1875 began with the changing of the church rite.

In Galicia the church rite was Latinized to a lesser extent than in the Kholm region. In the works of the *Lviv Synod of 1891 there is an evident striving to return to the old church rites based on Greek examples. This intention is apparent in the *Sluzhebnyk* of 1906. After the First World War the Ukrainian church hierarchy tried at several councils to agree on a uniform church rite. The Intereparchial Liturgical Commission in Lviv worked towards this goal in 1930–5. There were two camps in the Ukrainian Greek Catholic church: the 'Easterners,' who favored a conservative position on rites, and the proponents of changes under the influence of the Latin rite. The Liturgical Commission was established in Rome and headed by Cardinal E. Tisserant, the secretary of the Congregation for Eastern Churches. Its task was to produce a normative edition of the liturgical books. So far 10 books have been published, among them the liturgies of John Chrysostom, Basil the Great, and the Presanctified Host, as well as the code of liturgical rules. This code – *Ordo celebrationis*, published in 1944 – encompasses the principal rules of the church rite of the Eastern Catholics of the Byzantine-Slavonic rite. The commission based its work on Ukrainian texts of the pre-Union period and generally standardized church practices according to the spirit of the Eastern rite.

In the mid-1960s the episcopal conferences and councils of the Ukrainian Catholic church turned their attention to restoring the traditional Ukrainian rites and making them uniform. The Intereparchial Liturgical Commission resumed its work. The archbishop major of the Ukrainian Catholic church in Rome, Y. Slipy, is supervising the publication of liturgical books. In 1966 the hierarchy permitted the Ukrainian vernacular and partly the language of the country of residence to be used in church services. By 1980 Ukrainian translations of the liturgy, the Gospels, the Acts and the Epistles, the *Eucho-logion*, and the *Archieratikon* (episcopal service book) have appeared.

Since the 18th century the rites of the Orthodox church in Ukraine have been unified with those of the Russian Orthodox church. Only the movement for an autocephalous Ukrainian church brought about a Ukrainianization of the church rite, a tendency to abandon Russian synod-alism, and a search for pre-1685 Kievan forms. Because of

inexperience, insufficient research, and a lack of unified leadership the churches of the UAOC do not have a uniform rite. The new direction in which the church rite of the Ukrainian Catholic church is developing brings it closer to the rite of the Orthodox church and particularly to the Kievan tradition.

Church Slavonic. The oldest literary language of the Slavs, which originated in 863 when the Moravian prince Rastislav requested that the Byzantine emperor Michael III send missionaries to Moravia to educate the local clergy. The choice fell on the brothers Constantine (see *St Cyril) and Methodius (see *St Methodius), who were born in Thessaloniki and knew the Slavic language in its local Macedonian variant. As part of his missionary work Cyril created an alphabet (later named the Glagolitic alphabet) and, probably after his arrival in Moravia, began to translate liturgical texts. The basis of the literary language developed by Cyril in the course of his work as a translator was the Macedonian dialect, with which he was most familiar. However, in his attempts to make the language intelligible to the local populace, Cyril incorporated Moravian elements into it. After Cyril's death in 869, his work was continued by Methodius. After the latter's death in 885, the students and followers of the holy brothers were expelled from Moravia, and many of them settled in Macedonia and Bulgaria. In Macedonia St Clement (d 916) and St Naum (d 910) cultivated the Church Slavonic language. Since the Moravian elements were unnecessary in this new environment, the majority of them were removed, and a Macedonian recension of Church Slavonic came to replace the Moravian version. In Bulgaria, where a powerful Byzantine influence prevailed, the Glagolitic writing system and the Moravian elements in the language were especially unwelcome.

During the reign of Simeon, about 893, a new alphabet – *Cyrillic – was developed; it was based on the Greek alphabet but incorporated elements of the Glagolitic. The language was supplemented by Bulgarian elements. Thus arose the third, Bulgarian recension of Church Slavonic. There existed also the Serbian, Croatian, and, for a short time, Czech recensions.

Few original Church Slavonic texts have been preserved. Apart from some small fragments, the Moravian recension is represented by the so-called Kiev Fragments; the Macedonian recension by the Zographensis, Assemanius, and Marianus Gospels (the latter containing elements of the Serbian redaction), the Euchologium of Sinai, and the Clozianus collection of sermons; the Bulgarian recension by Sava's Book (Gospel), the Suprasliensis collection of the lives of saints and others, and the Enina Acts and Epistles. All of these texts date from the 11th century, except the Kiev Fragments, which were possibly written near the end of the 10th century (unless they are later forgeries, as suggested by J. Hamm). After the 11th century, Church Slavonic evolved differently in the various Slavic countries; these variants are not considered to belong to Old Church Slavonic.

Church Slavonic was never a spoken language. It transcended tribal and national barriers and was intended for liturgical and related genres. With the Christianization of Ukraine, Church Slavonic was adopted as the church and literary language. Texts representative of each of the original recensions were known and copied in Ukraine (eg, the Moravian [or Czech] is represented in the *Besidy* [Discourses] on the Gospel of Gregory the Great, the Serbian by the Gospel of Rheims), but it was ultimately the Bulgarian recension that gained acceptance (as it did in Belorussia and Russia as well). Initially these texts were simply copied verbatim, but gradually they were altered by a series of local features. The earliest and most significant of these were: (1) the third-person endings of verbs in *тъ* (in Church Slavonic, *-тъ*); (2) the ending of the instrumental singular of masculine and neuter nouns, *-ѣмь* and *ѣмь* (Church Slavonic, *-омь* and *-емь*); (3) the avoidance of nasal vowels; (4) the replacement of *žd* (from the Common Slavic **dj*) by *ž*. Other local features were less strictly adhered to; hence, some of the parallel variants came to acquire stylistic overtones. Such local features included spellings of the type *вѣрхъ* (*verx* [top]; Church Slavonic – *врѣхъ*); pleophony; the use of *č* instead of *št* (from the Common Slavic **tj*); the use of *ě* rather than the Church Slavonic nasal *ę* in the genitive singular endings of soft-declension feminine nouns (also in the nominative/accusative plural of feminine nouns of the soft declension and the accusative plural of masculine nouns of the soft declension: *zeml'ě* [earth], *kon'ě* [horse]; Church Slavonic, *zeml'ę*, *kon'ę*); disyllabic endings in the adjectival declension instead of the Church Slavonic trisyllabic endings (*novogo* [new]; Church Slavonic, *novaego*); and peculiarities of syntax and vocabulary. Thus, Church Slavonic, based on the Bulgarian recension in the process of its partial adaptation, became the oldest literary language of Ukraine (as well as, with certain modifications, the literary language of all Rus') and was also used in original works written in Ukraine, such as 'Slovo o zakoni i blahodati' (Sermon on the Law and Grace) by Metropolitan Ilarion.

(On the further development of Church Slavonic in Ukraine, see *Standard Ukrainian.)

Church-Archeological Society (Tserkovno-arkheologicheskoe obshchestvo). Society founded in 1872 at the Kiev Theological Academy to preserve, and publish reproductions of historical monuments such as sculptures, paintings, books, documents, charters, and valuable manuscripts found in the academy's museum and library. In 1898 the society had a collection of about 30,000 items. It published annual reports as well as scholarly papers in *Trudy Kievskoi dukhovnoi akademii* and *Kievskie eparkhial'nye vedomosti*. The society dissolved in 1919 after transferring its old printed books and manuscripts to the National Library of Ukraine and its museum holdings to the Museum of Literature and Books.

Churches of Ukraine, structures of the. The church of Ukraine (Orthodox and Catholic) belongs to the family of the Byzantine-rite churches. It is identical with the original church of Rus', or Ruthenian church. While the Orthodox church keeps only to the doctrines of the first seven ecumenical councils, the Ukrainian Catholic church (for a long time called 'Uniate,' and later 'Greek Catholic,' as formulated in the Austrian decree of 28 July 1774) professes the doctrine taught by the Catholic church, with Rome as its primatial see.

The first liturgical language of the Ukrainian church as a whole has been *Church Slavonic, based on one of the southern Slavic languages, ancient Macedonian-Bulgarian, originally easily understood by the laypeople of Rus'. In the 16th century the Scripture was partly translated into the vernacular (eg, the Peresopnytsia Gospel of 1556–61, the Apostle of Krekhiv); in the 17th century certain liturgical texts and prayers were also published in the vernacular. However, when Ukraine was forcibly incorporated into the Russian Empire, the Ukrainian pronunciation of Church Slavonic was given up in favor of the Russian (in the 18th–20th century); thus understanding became difficult. The Ukrainian churches outside the Russian Empire kept the traditional pronunciation. After the 1917 revolution the Ukrainian Autocephalous Orthodox church and Ukrainian Orthodox churches outside the USSR introduced modern Ukrainian into their liturgies without, however, completely abandoning Church Slavonic with the Ukrainian pronunciation. After the Second Vatican Council (1962–5) the Ukrainian Catholic church also started publishing liturgical books in modern Ukrainian and now uses them along with some still in Church Slavonic.

Sermons in Ukraine have always been more frequent than in Russia and other Orthodox lands. A rich homiletic literature as well as theoretical books such as I. *Galiatovsky's *Nauka, albo sposob zlozhenia kazania* (Instruction in or Method of Composing Sermons, 1659) serve as proof of this phenomenon. The following are examples of other particularities of the Ukrainian church: the pro-comedy is done with five (not seven) prosphoras; the royal gates of the iconostasis remain open for most of the liturgy; the Gospel is read facing the people; sermons are delivered immediately after the Gospel; baptism can be administered by immersion and by infusion, as it was done in the 17th century; during the matrimonial rites bridegroom and bride recite a special oath. There are also particularities in the ordination of deacons and priests. In the Mineas (monthly Sanctorals) the Ukrainian saints are especially honored. The Ukrainian Autocephalous Orthodox church reintroduced such particularities as reading the Gospel facing the people and audible reciting of the Anaphora, which were not permitted in the Russian church. Ukraine also has particularities in the liturgical chant, including popular singing during the liturgy, as well as in church architecture (eg, three-domed churches); these have survived outside the Soviet bloc.

Despite the efforts of the ecumenical patriarchate to keep the church strictly dependent on Constantinople, the church of Rus' succeeded in developing an increasing autonomy. From the beginning of the 16th century the Polish kings confirmed the hierarchs in Rus' who had been duly elected by the local hierarchy, and the ties with Constantinople became merely nominal. Following the political union of the Cossack state with Muscovy in the mid-17th century, the Moscow patriarchate succeeded in annexing the Orthodox church of Rus'-Ukraine in 1686. In 1919 the Ukrainian National Republic ended the Orthodox church's dependence on Moscow and proclaimed a Ukrainian autocephalous church. The Orthodox in Western Ukraine renewed their allegiance to Constantinople in 1791, and in 1924 the Orthodox church in Poland received autocephaly from the ecumenical patriarch despite the protests of the Moscow patriarchate.

The Catholic branch of the Ukrainian church was established by the Church Union of *Berestia in 1596. The Roman pontiffs granted the metropolitan of Kiev, Halych, and all Rus' extensive autonomy, which later was accorded through the re-established metropolity of Halych (1807), with the archeparchy of Lviv as its center. For political reasons neither the eparchy of Mukachiv in Transcarpathia nor the eparchy of Krizevci (in present-day Yugoslavia – both under Hungarian rule at the time) was included in the metropolity.

With the Byzantine rite, Byzantine ecclesiastical law found its way into Rus'-Ukraine's churches, where it was soon translated. The most famous collection of church legislation is the **Kormchaia kniga* (Nomocanon), composed by the Serbian archbishop Sava in about 1207. This collection greatly influenced the legal decisions of the synods held in Rus', of which those of Vladimir (1274), Vilnius (1509), and Berestia (1596) are the most famous.

The legal sources for the law of the Ukrainian Catholic church also include papal bulls and decrees, decisions of the synods of Zamostia (1720) and Lviv (1891), legal prescriptions contained in the rules of the Basilian

monastic order, and finally, the Oriental Code, partly published under Pope Pius XII. A new Oriental Code is now being prepared, which will be obligatory for all of the churches of the Eastern tradition in communion with Rome (see *Canon law).

Institutions of authority. The highest ecclesiastical authority of the church of Rus' has always been the metropolitan major, whose authority by far surpassed that of an 'ordinary' metropolitan ruling over an ecclesiastical province within a local church. This authority was acknowledged by Rome in 1963 when it recognized the primate of the Ukrainian Catholic church, Y. *Slipy, as archbishop major. The metropolitans of Kiev presided over the election of bishops, convoked synods, visited the suffragan eparchies, represented the church vis-à-vis the state, and performed other functions. Under Polish rule the candidates were elected by an electoral body composed of bishops, representatives of the clergy, the hetman, and Cossack officers. The appointment was confirmed by the king, who also presented the candidate to the patriarch of Constantinople for confirmation of consecration. When the church was subordinated to the Moscow patriarchate, the metropolitan of Kiev, after 1721, retained only the title 'Metropolitan of Kiev and Halych,' while all his authority devolved on the patriarchate. This is also true in the present-day Ukrainian exarchate of the Moscow patriarchate.

In the Ukrainian Uniate church the metropolitan of Kiev was elected by the bishops and, after the reform of the *Basilian monastic order, the protoarchimandrite of the order. The appointment was executed by the king, who also asked for confirmation by the pope. In 1838 the Kiev Uniate metropolity was abolished. In the 19th century the Austrian emperors curtailed the right of the hierarchy to elect bishops, in agreement with the Roman Curia. According to the Polish concordat of 1925, Rome was to appoint directly the metropolitan and other hierarchs with the consent of the president of the Polish republic. In 1946 the Soviet authorities forcibly suppressed the Ukrainian Greek Catholic church in Galicia, and in 1949 in Transcarpathia. Released from the USSR in 1963 after lengthy imprisonment and exile, the present archbishop major resides in Rome and is denied immediate jurisdiction over the Ukrainian Catholics residing abroad. In 1980, however, Pope John Paul II authorized the archbishop major to convene both electoral and legislative synods of bishops in the diaspora, but reserved the right to approve the agenda. In terms of synodal rule the rights of the Ukrainian church are now similar to those of other patriarchal churches, especially with regard to matters concerning the selection of its hierarchy (eg, the election of candidates for bishops, from among which the pope appoints bishops). In the last decades the bishops for the Ukrainian diaspora have been directly selected by the Roman Sacred Congregation for the Oriental Churches, which has major jurisdiction over all the non-patriarchal churches of the Eastern rite in communion with Rome.

The eparchial bishops were originally elected by the hierarchs and ordained by the metropolitan with the ruler's consent. Later, representatives of the laity also took part in the elections. In the 14th century the bishops elected three candidates, one of whom received the episcopal consecration by the metropolitan. The secular authorities played a large role in this regard. In the Ukrainian Catholic church the metropolitan and his

fellow bishops chose the new hierarchs, but in recent times, as mentioned above, this procedure has not been observed.

The title 'archbishop' is, in both Ukrainian churches, an honorary distinction, though sometimes the term is also used to designate a metropolitan.

The metropoly of Kiev has known the institution of vicar or auxiliary bishop since the 11th century, but originally the vicars were the neighboring eparchial bishops. Later vicar or curial bishops were given the title 'the second see of the metropolitan' or 'the respective eparchial bishop,' because they were supposed to succeed the metropolitan in office. Simple auxiliary bishops are a more recent institution, an influence of the Latin church. The same is true with regard to episcopal titles outside the metropoly. In some countries where the Ukrainian Catholic faithful are not so numerous, there is no eparchy proper. There is sometimes a quasi-eparchial organization in the form of an apostolic exarchate under the leadership of a bishop who has jurisdiction over the faithful in the name of the Roman pontiff (ie, as his vicar).

Eparchies. The traditional eparchies of the metropoly of Kiev and all Rus', including Belorussian territory, were: (1) Volodymyr and Berestia; (2) Lutske and Ostrih; (3) Kholm and Belz; (4) Lviv and Kamianets; (5) Pere-myshl, Sianik, and Sambir; (6) Polatsk, Vitsebsk, and Mahiliou (archeparchy); (7) Smolensk, Mstislau, and Orsha; (8) Turiv and Pynske. Later, other sees were added.

The eparchies were governed by bishops, who were assisted by distinguished priests residing in the episcopal city and belonging to the cathedral clergy. This body was known as the *krylos* and its members as *kryloshany*. All major decisions were handled by bishops in agreement with the *krylos*. In the Ukrainian Orthodox church the *krylos* system functioned until it was replaced by the consistory system when the church in the Hetman state came under the rule of the Russian *Holy Synod established by Peter I. In accordance with his Ecclesiastical Regulations of 1721, church life in the Russian Empire was strictly controlled by the state. In 1841 the consistory was given a lay secretary, who was immediately responsible to the *ober-prokuror*, the tsar's representative in the Holy Synod.

In the Ukrainian Catholic church in the Austro-Hungarian monarchy the *krylos* developed into the capitular chapter, whose members continued to be called *kryloshany* or *kanoniky* (*canons). They were to be celibate or widowed; married canons could be appointed only with special dispensation from Rome. The title of *kryloshany* is now conferred upon distinguished priests as a purely honorific designation.

Clergy. The supervision of the parish clergy in the different districts of an eparchy was the responsibility of elected protopresbyters known in the Orthodox church as *protopopy*. Their duties passed later to the *blahochynni* or *dekany* (deacons), elected by the clergy at their regular conferences and approved by the bishop (in the Ukrainian Catholic church, nominated by bishops only). In previous times deacons and church elders (*starosty*) also attended these conferences. The functions of the church elders have now passed largely to parish councils, which, after the Second Vatican Council, have also been established in the Catholic church as a whole, although they

have not yet been fully implemented among Ukrainian Catholics.

Members of the eparchial clergy, also called 'the white clergy,' were normally married. Married candidates were admitted, however, only if married prior to their ordination as deacons. A second marriage of a deacon or a priest was never permitted. Although they received small allowances from the church or the state, the priests lived mostly from farming on church land. Thus they were not particularly mobile, and often a parish passed from father to son or to son-in-law. Many Ukrainian national and educational leaders have come from priestly families. In the Ukrainian Catholic church the synod of Lviv (1891) left the choice of celibacy or married life to the individual candidates for priesthood. From the 1920s the bishops of Peremyshl and Stanyslaviv no longer accepted married men as candidates for the priesthood. The metropolitan of Halych, however, remained faithful to the original tradition of his church. Rome prescribed *celibacy for all the Eastern Catholic priests ministering to the faithful in the Americas and Australia.

Monasticism. In Ukraine monasticism is as old as Christianity itself. After an ascetic period it became cenobitic, based on the rule of St Basil the Great. In 1702 St Theodosius of the Caves introduced a rule based on the Studite Typicon in the Kievan Cave Monastery. Monasteries were led by hegumens (abbots), large ones by archimandrites (archabbots). The religious superiors were originally under the authority of an eparchial bishop, but later some were given the right of stauropegion, placing them directly under the authority of the patriarch or the Holy Synod (eg, the Kievan Cave and Pochaiv monasteries). Filial monasteries, dependent on larger monasteries, were called *skyty*. The role of the monasteries as centers of culture, education, and piety began to decline after the Russian Holy Synod began to interfere in their internal affairs.

In the Ukrainian Catholic church Metropolitan Y.V. *Rutsky centralized the monasteries as a congregation under the exclusive jurisdiction of the metropolitan. After the synod of Zamostia (1720) the monasteries of the eparchies of Peremyshl, Lviv, and Lutske, which had accepted the church union later, formed a similar congregation. In 1743 both the congregations united as the *Basilian monastic order. The two congregations became provinces of the order, whose major superior was called a protoarchimandrite. The superiors of the subdivisions or provinces were called protohegumens. Only a few larger monasteries remained independent with an archimandrite (elected for life) or a hegumen (elected for four years) of their own. After the partition of Poland the order was dissolved in Russia. It survived only in Galicia, where a reform was carried out in 1882 with the help of the Jesuits. The order was transformed into a Jesuit-type congregation. The protoarchimandrite and his administration now reside in Rome. The order is exempted from the jurisdiction of the Ukrainian hierarchy. At present the Basilians have a monastery and three religious houses in Poland; they are also active in Yugoslavia, England, and the Americas. The *Studite monks, restored by Metropolitan A. Sheptytsky and centered at Univ, now have two monasteries – in Castelgandolfo, Italy, and in Woodstock, Canada. The Western Franciscan order and the congregations of the *Redemptorists and of the *Salesians

of Don Bosco now have Eastern branches with Ukrainian members.

Nuns, whose first convent was that of St Irene in Kiev (1037), developed an intensive religious life in Ukraine. As a result of the massive Soviet closing of monastic institutions in Ukraine, there are now only eight Orthodox nunneries in Ukraine. Since the Second World War all of the once-numerous Ukrainian Catholic communities of nuns have been suppressed by the Soviets. Their tradition is continued abroad by the Ukraine Catholic *Basilian order of nuns, which has its general curia in Rome. The Ukrainian Catholic church has several other female religious congregations of the Western type, some of which existed earlier in Galicia: the *Sisters Servants of Mary Immaculate, working in different countries of the emigration and in Poland and having their general curia in Rome; the Sisters of St Joseph; the Sisters of St Josaphat and the Holy Family; the Sisters of Charity of St Vincent de Paul; and the Missionary sisters and the Catechetist sisters, established in the principal countries to which Ukrainians have immigrated.

Laity. The lay element in the church was active in Rus' very early. The princes and the nobility also took a keen interest in ecclesiastical matters. Lay associations arose in the form of *brotherhoods as early as the late 15th and early 16th century (in Lviv, Kiev, Lutske, etc). These brotherhoods took care of the youth, founded homes for the aged and sick (hospitals), maintained schools and printing presses, and so on. They soon became very influential, often to the displeasure of the hierarchs. This situation caused discord in the church. The metropolitan of the Orthodox church, P. Mohyla (1633–47), succeeded in providing canonical solutions for most of the controversial issues. Under Russian rule the activities of the brotherhoods were restricted by the Holy Synod to the local parish level; they have now largely ceased. There were also sisterhoods, which, however, did not become involved in church politics. Their preoccupations resembled to a large extent those of the present-day parochial lay organizations devoted to the embellishment of the church, the production of liturgical vestments, charity work, and so on.

The influence of laypeople increased considerably after 1917, in particular within the Ukrainian Autocephalous Orthodox church, which in 1921 adopted a conciliar structure at all levels of the church. Suppressed by the Soviets, the councils were revived during the Second World War; the most important of these were the *All-Ukrainian Orthodox Church Council in Kiev, the Rivne Church Council in Volhynia, and the Kholm Church Council. The church councils still play an important role in the Ukrainian Orthodox church in the countries of Ukrainian emigration today. The Ukrainian Catholic church also has societies for laypeople, but their participation in strictly ecclesiastical matters is more restricted.

Church-state separation. A pattern of church-state relations characterized – as in the United States, where it was first constitutionally entrenched – by the disestablishment of a former state church, equalization of the legal status of all religious organizations, and abolition of a religious test for holding public office; also – as in France, since 1905 – involving the secularization of the state, public functions, and the educational system, and requiring for its operation an ideologically 'neutral,' liberal, democratic, political system.

Formally adopted by Lenin and the Bolsheviks before 1917, this principle has since been given a one-sided application in Soviet law and administrative practice to facilitate the Communist party's antireligious measures. When the Russian Orthodox church was disestablished by the Soviet Russian 5 February 1918 decree 'On the Separation of Church from the State and School from the Church,' all religious organizations were expropriated and deprived of the rights of juridical persons. Under the decree and subsequent Soviet enactments, the state assumed ownership of the nationalized houses of worship and their contents and the legally unrestricted authority to grant, withdraw, or deny legalization to individual religious groups, 'registration' of local congregations (of at least 20 faithful) and clergy, approval of congregations' executive and audit committees, leases for houses of worship to recognized congregations, permission for theological schools and religious publications, and so on. Private religious instruction of minors (except by parents) was made a criminal offense and, by constitutional amendment in 1929, churches lost the 'right to [conduct] religious propaganda.' Thenceforth, Soviet constitutions recognized only 'freedom of worship and antireligious propaganda,' with the Soviet state dropping the pretense of neutrality in matters of religion and mobilizing its resources, including the educational system, for antireligious propaganda.

In Ukraine church-state separation was first introduced on 22 January 1919 by a decree of the Bolshevik Provisional Workers'-Peasants' Government in Kharkiv entitled 'On the Separation of Church from the State and School from the Church,' which, with one omission (subsequently corrected), followed the Soviet Russian model, as did the constitutions of the Ukrainian SSR of 1919 (art 23), 1937 (art 104), and 1978 (art 50). Various legislative acts and administrative instructions regulating

religious activities were codified in the 1927 Administrative Code of the Ukrainian SSR (chap x: 'Regulations on Cults') and were subsequently given a more restrictive interpretation by the instruction of the Secretariat of the Presidium of the All-Ukrainian Central Executive Committee of 23 June 1932 ('On the Procedure for Organization, Activity, Reporting, and Liquidation of Religious Congregations and the System of the Registration by Administrative Organs of the Membership of Religious Congregations and Servants of the Cult').

J. Stalin's wartime concessions to 'loyal' religious groups were exemplified by the Statute on the Russian Orthodox church adopted at the church's 1945 local sobor and by an unpublished resolution of the USSR Council of People's Commissars of 22 August 1945 restoring (with important exceptions) to the Russian Orthodox church the rights of juridical persons. However, since 1958, some of these concessions have been withdrawn or severely restricted by published and unpublished government instructions and decrees, including 1966 amendments to the 1960 Criminal Code of the Ukrainian SSR. Most, if not all, of these measures were incorporated into the new Statute on Religious Associations in the Ukrainian SSR adopted on 1 November 1977 by the Presidium of the Supreme Soviet of the Ukrainian SSR, which replaced chapter x of the administrative code. (See also *Antireligious propaganda and *Council on Religious Affairs.)

B.R. Bociurkiw

Churgovych, Ivan [Čurgovyč], b 26 January 1791 in Novoselytsia, Transcarpathia, d 2 October 1862 in Uzhhorod. Greek Catholic priest, pedagogue. Churgovych studied at the University of Budapest. He served as vicar general of the Mukachiv eparchy (1828–37) and as director of the gymnasium and teachers' seminary in Uzhhorod. Churgovych had a considerable input into the reorganization of the school system and the training of teachers in Transcarpathia. He published pedagogical articles in the Hungarian press and articles on popular themes in the Ukrainian press.

Chutove [Čutove]. 1v-16. Town smt (1970 pop 7,700), a raion center in Poltava oblast. The town was founded in the 18th century.

Chychkan, Leonyd [Čyčkan], b 21 August 1911 in Krasnodar. Painter. In 1941 he became a lecturer and in 1971 a professor at the Kiev State Art Institute. His works include Carpathian landscapes, still lifes, portraits, and genre paintings, primarily of the life of the Hutsuls.

Chychorsky, Rostyslav [Čyčors'kyj], b 1871 in Khereson gubernia, d 19 September 1927. Actor. He began to act professionally in 1898 as a member of P. Saksahansky's troupe. In 1918 he worked in the State National Theater in Kiev and in 1922 in the M. Zankovetska Theater in Kiev. He was known for his portrayals of

comic or cunning characters, such as Roman in *Stotysiach* (A Hundred Thousand) and Demyd in *Suieta* (Vanity) by I. Karpenko-Kary and Hordii in *Doky sontse ziide ...* (By the Time the Sun Rises ...) or Skubko in *Po revizii* (After the Inspection) by M. Kropyvnytsky.

Chychykliia River [Čyčyklia]. Small river in the Black Sea Lowland, right-bank tributary of the Boh, 156 km in length and with a basin area of 2,120 sq km. Snow is the river's main source of water, the spring run-off constituting 75 percent of the annual discharge. The river is dry for seven or eight months of the year.

Chyhyryn, Vitalii [Čyhyryn, Vitalij], b 4 May 1908 in Borovytsia, Kiev gubernia, d 12 January 1941. Writer, journalist, member of *Vaplite. He spent his last years in internal exile. His works include the short story collections *Fragmenty doby* (Fragments of an Era, 1932) and *Povisti pro khoroshu divchynu* (Stories about a Beautiful Girl, 1934) and the novel *Kviten'* (April, 1937).

Chyhyryn, from a 17th-century engraving (according to H. Lohvyn)

Chyhyryn [Čyhyryn]. 1v-13. City (1971 pop 10,600) in the Dnieper Highland, a raion center in Cherkasy oblast. Chyhyryn was a fortified winter station of the Cossacks in the first half of the 16th century. In the second half it was the center of Chyhyryn county. In 1592 the town came under Magdeburg law and began to grow. In 1638–47 the head of Chyhyryn county was B. Khmelnytsky. In 1648 Chyhyryn became the residence of Hetman B. Khmelnytsky, a regimental center, and the capital of the Hetman state. After the capital was moved to Baturyn and Chyhyryn was sacked by the Turks in 1678, the town declined. Khmelnytsky's palace, the town hall, and the Church of the Savior, which were built in the second quarter of the 17th century, have not survived. The ruins of the fortifications can still be found on Bohdan Hill. Beginning in 1797, Chyhyryn was a county town in Kiev gubernia. The Monastery of the Trinity was built near Chyhyryn in 1627, at first housing only monks and then, beginning in 1735, nuns. The monastery was closed down by Soviet authorities. Chyhyryn has some small industry, including a food industry, a leather-haberdashery factory, a furniture factory, and an arts and crafts factory. It has a regional historical museum. In 1843 and 1845 T. Shevchenko visited the town and dedicated some poems and paintings to it.

Chyhyryn campaigns, 1677–8. The last attempts of the Ottoman Porte to conquer Ukraine. The campaigns

followed on the conquest of Podilia in 1672. The Porte's plan in 1677 was to capture the strategic town of Chyhyryn on the Right Bank and to install Yu. *Khmelnysky as its vassal, with the titles of Hetman of the Zaporozhian Host and Prince of Sarmatia (Ukraine). The first offensive began in the summer of 1677; a large Turkish army of 100,000–120,000 men under the leadership of Ibrahim Pasha besieged Chyhyryn, which was defended by Hetman I. Samoilovych with 20,000–25,000 Cossacks and by the Russian voivode G. Romodanovsky with 32,000 Russian troops. Because of the town's strong fortifications and the determination of the Cossack and Russian forces, the Turks had to withdraw. In the summer of 1678 they tried once again to capture Chyhyryn, converging on the town with almost 200,000 troops, led by Kara-Mustafa. Although the Cossack-Russian forces had been increased to 120,000, they were not able to hold the town, and after a month of hard fighting the Turks took Chyhyryn, which was by then reduced to rubble. Weakened by the fighting and frequent attacks by I. Sirko, the Turks soon also abandoned Chyhyryn. After signing the Peace Treaty of *Bakhchesarai with Russia in 1681 the Ottoman Porte stopped its campaigns into Ukraine.

Chykalenko, Levko [Čykalenko], b 3 March 1888 in Pereshory in Kherson gubernia, d 7 March 1965 in New York. Political and civic leader, archeologist, full member of the Shevchenko Scientific Society from 1932 and the Ukrainian Free Academy of Arts and Sciences from 1945; son of Ye. Chykalenko. He studied with F. Vovk and collected archeological and ethnographical materials with him. He was an active member of the Ukrainian Social Democratic Workers' party and a member and secretary of the Ukrainian Central Rada and the Little Rada. In 1920 he emigrated to Poland, then Prague, France, Germany, and, in 1948, the United States. He wrote works on Paleolithic ornaments and Trypilian ceramics.

Yevhen Chykalenko

Chykalenko, Yevhen [Čykalenko, Jevhen], b 9 December 1861 in Pereshory in Kherson gubernia, d 20 June 1929 in Prague. Prominent civic leader and publicist, patron of Ukrainian culture, publisher, agronomist, landowner descended from a wealthy family of the Kherson region. Chykalenko studied at the University of Kharkiv in the department of natural sciences and was active in the Ukrainian students' hromada and in the radical Draho-manov circle (headed by V. Malovany). He was arrested in 1884 for belonging to the circle and spent five years

under police surveillance in Pereshory. While managing the family estates, Chykalenko wrote and published a practical guide to farming entitled *Rozmovy pro sel'ske khoziaistvo* (Conversations on Farming). The work was published in Odessa in 1897 and then in St Petersburg, with a printing of half a million. It consisted of five volumes, amounting to a popular agricultural encyclopedia. In 1894 Chykalenko moved to Odessa, and then in 1900 to Kiev, where he became active in Ukrainian public life. He supported many cultural projects: he financed the publication of M. Kamarov's *Russko-ukrainskii slovar'* (The Russian-Ukrainian Dictionary, Lviv 1893–8); he helped the journal *Kievskaiia starina* by offering a prize of 100 rubles for the best history of Ukraine and by providing honorariums for Ukrainian literary works that were printed in the journal; he organized the D. Mordovets Fund of the Shevchenko Scientific Society in Lviv to aid Ukrainian writers; he financed the weekly paper of the Revolutionary Ukrainian party, **Selianyn*, in Lviv; he encouraged young people from central Ukraine to study in Lviv and was the principal supporter of the Academic Home in Lviv (his endowment was 25,000 rubles). Chykalenko was an active member of the Old Hromada (from 1900), the General Ukrainian Non-Partisan Democratic Organization, the Ukrainian Democratic party (from 1904), and the Ukrainian Democratic Radical party (from 1905). He was one of the founders of the *Society of Ukrainian Progressives and its actual, but unofficial, chairman.

Chykalenko's greatest contribution to the national awakening was his funding (with the help of V. Symyrenko and L. Zhebunov) of the only Ukrainian dailies in central Ukraine – **Hromads'ka dumka* (1906) and **Rada* (1906–14). During the First World War he sought refuge from the Russian police in Finland, Petrograd, and Moscow. With the outbreak of the revolution he returned to Kiev, but did not participate in political events because of his conservative views. In January 1919 he went to Galicia, where he was interned by the Poles. From 1920 he lived in Rabenstein, Austria. In 1925 he became chairman of the Terminological Commission of the Ukrainian Husbandry Academy in Poděbrady, Czechoslovakia.

Chykalenko was the author of *Spohady* (Memoirs, 3 vols, Lviv 1925–6) and *Shchodennyk, 1907–1917* (Diary, 1907–1917, Lviv 1931), both rich in material on the history of the Ukrainian movement in the 19th and at the beginning of the 20th century.

Doroshenko, D. *Yevhen Chykalenko. Ioho zhyttia i hromads'ka diial'nist'* (Prague 1934)

A. Zhukovsky

Chykalenko-Keller, Hanna [Čykalenko-Keller], b 22 October 1884 in Pereshory in Kherson gubernia, d 19 October 1964 in Tübingen, West Germany. Journalist, librarian, women's leader; daughter of Ye. *Chykalenko. Chykalenko-Keller studied in Odessa, Lausanne, Edinburgh, and Geneva, specializing in science, history, and librarianship. Before the First World War she contributed articles to *Rada* and *Literaturno-naukovyi vistnyk*. In 1918–20 she was a member of the Ukrainian diplomatic mission in Switzerland. She participated in many international women's conferences. She translated works of foreign literatures into Ukrainian and Ukrainian works into French. In 1931 she settled in Tübingen and worked at

the university library in the incunabula department. She discovered one of the two known copies of the first edition of *Prenosticon* by Yu. Drohobych.

Chylihider River [Čylihider]. Left-bank tributary of the Kohylnyk that flows through the Black Sea Lowland. The Chylihider is 57 km in length and has a basin area of 334 sq km. The average width in the middle stretch is 5 m. In the summer the stream becomes very shallow and even dries up.

Chynadiieve [Čynadijeve]. v-3. Town smt (1981 pop 6,700) in Mukachiv raion, Transcarpathia oblast. The town lies on the slopes of the Volcanic Carpathian Mountains in the valley of the Liatorytsia River. Artifacts from the Neolithic period and the Bronze Age have been discovered there. In the medieval period it was the seat of a principality. Its main industry is woodworking, and until 1950 it had a match factory. A castle and church from the 14th–15th century have been preserved. The Syniak and Karpaty sanatoriums are located near the town.

Chyrko, Pylyp [Čyrko], b 3 July 1859 in Kiev, d 21 March 1928 in Chernihiv. Painter. Chyrko graduated from the St Petersburg Academy of Arts in 1892. His first works (eg, *Shooting Lessons*) were influenced by academicism. Beginning in 1898, his works were displayed at exhibitions of the *Peredvizhniki. He produced genre paintings (eg, *Mother and Daughter*, *The Porter*), historical paintings (eg, *Mazepa's Death at Bendery*), and landscapes (eg, *Series of Ukrainian Landscapes*). Chyrko's works, which were preserved at the Chernihiv Museum, were destroyed during the Second World War.

Chyrsky, Mykola [Čyrs'kyj], b 1903 in Kamianets-Podilskyi, d there in 1942. Poet and dramatist. While serving in the Army of the UNR, Chyrsky crossed the Zbruch River and was interned in Kalisz, Poland. From 1922 he lived as an émigré, at first in Poděbrady and later in Prague and Uzhhorod. Chyrsky was a member of the Organization of Ukrainian Nationalists, and his work reflected the weltanschauung of the journal *Visnyk. His only collection of poetry, *Emal'* (Enamel), appeared in Prague in 1941. He also wrote several dramas: *Otaman Pisnia*, *P'ianyid reid* (Drunken Raid), and *Andrii Korybut*.

Mykola Chyrsky

Mykola Chyrvynsky

Chyrvynsky, Mykola [Čyrvyns'kyj], b 10 May 1848 in Chernihiv, d 5 January 1920. Zootechnician, one of the founders of zootechny in the Russian Empire. From 1879 to 1894 Chyrvynsky worked at the Petrine Academy of Agriculture and Forestry in Moscow. From 1898 to 1919 he was a professor at the Kiev Polytechnical Institute (serving as its first elective rector from 1905 to 1916), where he organized a department of animal husbandry. His major research studies concern the feeding, growth, and development of livestock; sheep breeding; and wool and lambskin. His selected works were published in two volumes in Moscow in 1949–51.

Chyrvynsky, Volodymyr [Čyrvyns'kyj], b 27 September 1883 in Moscow, d 28 February 1942. Geologist, graduate of Kiev University (1907), then lecturer (1911) and professor at Kiev University and other postsecondary schools in Kiev; associate of the Ukrainian Geological Committee and the Institute of Geological Sciences of the Academy of Sciences of the Ukrainian SSR. Chyrvynsky did research in crystallography, mineralogy, and Ukraine's mineral resources. In the last area he published *Fosforyty Ukrainy* (Ukraine's Phosphorites, 1918) and *Holovni korysni kopalyny Ukrainy v zv'iazku z ii heolohichnoiu mynuvshynoju* (Ukraine's Principal Mineral Resources in Relation to Its Geological Past, 1919). He was particularly interested in lignite resources and published *Materialy k poznaniuu burougol'nykh mestorozhdenii USSR* (Materials on the Identification of Lignite Fields in the Ukrainian SSR, nos 2–3, 1939). He also compiled *Geologicheskii putevoditel' po Kiievu* (Geological Guide to Kiev, 1926).

Chyshko, Oles [Čyško, Oles'], b 20 June 1895 in the village of Dvorichnyi Kut near Kharkiv, d 4 December 1976 in Leningrad. Composer and lyrical tenor. Chyshko is a graduate of the Kharkiv Conservatory (1918), the Kharkiv Music and Drama Institute (1924), and the Leningrad Conservatory (1938), where he later lectured. In 1925 he began his professional career as a soloist with the Kharkiv, Kiev, and Odessa operas, moving to Leningrad in 1931 to perform at the Philharmonia, the Academic Ensemble, and the Little Opera Theater. He wrote the operas *Iablunevyi polon* (Apple Blossom Captivity, 1931), *Bronenosets' Pot'omkin* (Battleship *Potemkin*, 1937; 2d edn 1955), *Don'ka Kaspiia* (Daughter of Kaspia, 1942), and others. For symphony orchestras he composed *Ukrains'ka siuita na temy narodnykh pisen'* (The Ukrainian Suite on Folk-Song Themes, 1944), two overtures, a rhapsody, and music to *Nazar Stodolia* by T. Shevchenko. He composed solo music for about 50 works by Shevchenko, I. Franko, Lesia Ukrainka, P. Tychna, and other writers, and arranged about 75 folk songs.

Chystiakov, Borys [Čystjakov], b 23 June 1904 in St Petersburg. Opera conductor. After graduating from the Kiev Conservatory in 1937 Chystiakov became conductor at the Kiev Opera and Ballet Theater. The following Ukrainian operas and ballets form part of his repertoire: *Utoplenu* (The Drowned Girl) and *Natalka Poltavka* (Natalka from Poltava) by M. Lysenko, *Lisova pisnia* (The Forest Song) by M. Skorulsky, *Lileia* (The Lily) by K. Dankevych, *Marusia Bohuslavka* (Marusia from Bohuslav) by A. Svechnikov, and *Tini zabutykh predkiv* (Shadows of Forgotten Ancestors) by V. Kyreiko.

Valentyna Chystiakova

Chystiakova, Valentyna [Čystjakova], b 18 April 1900 in St Petersburg. Dramatic actress, accomplished in various styles and trained in the school of her husband, L. *Kurbas, and his company. Chystiakova began her stage career with the theater *Molodyi Teatr in Kiev in 1918 and later joined the short-lived Shevchenko Theater and the Kiev Drama Theater companies, performing in Bila Tserkva and Uman (1920–2). In 1922–3 Chystiakova was a member of the *Berezil Theater and, from 1934 to 1959, of the Kharkiv Ukrainian Drama Theater. She became a lecturer at the Kharkiv Institute of Arts in 1959. Chystiakova's acting range was quite broad, from the melodramatic to the deeply psychological. Among her finer depictions were the roles of Oksana in *Haidamaky* (based on T. Shevchenko's poem), the multimillionaire's daughter in G. Kaiser's *Gas*, Isabella in P. Mérimée's *Jacquérie*, Liubunia in M. Kulish's *Narodnyi Malakhii* (The People's Malakhii), Odarka in M. Kropyvnytsky's *Dai sertsiu voliu* (Give the Heart Freedom), Kateryna in A. Ostrovsky's *Groza* (Storm), Lady Milford in F. Schiller's *Kabale und Liebe*, and especially the leading role in a dramatization of H. de Balzac's *Eugénie Grandet*. Chystiakova also appeared in films. Her dramatic career was documented by I. Kyselov in *Razom z zhyttiam* (Together with Life, Kiev 1972).

Chyvchyn Mountains. Range in the southeastern part of the Ukrainian Carpathians, the central part of the *Maramureş-Bukovynian Upland. The range stretches for about 50 km from the northwest (Stih Peak, 1,653 m) to the southeast (Hnitiassa Peak, 1,769 m), between the valley of the Chorny Cheremosh in the northeast and the valley of the Vişeu in the southwest, and forms the boundary between Ukraine and Rumania. The mountains consist of crystalline schists and sandstones. The range is gently contoured and massive. Its highest peak is the basalt Kopula Chyvchyna (1,769 m). Small limestone cliffs are sometimes evident on the slopes. The mountains are uninhabited and covered with coniferous trees and meadows.

Chyzh, Yaroslav [Čyž, Jaroslav], b 17 February 1894 in Dubliany near Lviv, d 13 December 1958 in Elmhurst, Illinois. Military and civic leader. Chyzh was one of the organizers of the Sich Riflemen and in 1919 served as a political officer on the staff of its Siege Corps. For a time he edited the journal *Strilets'ka dumka*. In 1921 he became a member of the leadership of the Ukrainian Military Organization. He emigrated to Prague and graduated in 1922 from the philosophy faculty of Prague University.

In the United States he edited for a time the paper **Narodna volia*. In 1942 he became a member of the Common Council for American Unity and in 1952 a co-editor of its press and information bureau. He acted as adviser to the American government on ethnic affairs. In 1956 he was one of the organizers and then the executive director of the Committee of the President's People-to-People Program.

Chyzenko, Ivan [Čyženko], b 27 March 1916 in the village of Kozyn, Kiev gubernia. Scientist specializing in electrotechnology, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1972, professor at the Kiev Polytechnical Institute. Chyzenko proposed, studied, and introduced into industrial production compensating transformers of electrical current.

Chyzhevsky, Dmytro [Čyževs'kyj] (Čiževskij, Čiževsky, Tschyževskij), b 23 March 1894 in Oleksandriia, Kherson gubernia, d 18 April 1977 in Heidelberg, Germany. Prominent Slavist, leading authority on Ukrainian literature and intellectual history. Chyzhevsky studied at the universities of St Petersburg (1911–13) and Kiev, from which he graduated in 1919. His first interest was philosophy, and his teachers were N. Lossky, V. Zinkivsky (Zenkovsky), and H. Chelpanov. Gradually he became an avid student of philology and literature. During the 1917 revolution he was involved in politics. In 1921 he left for Germany, where he became a student of K. Jaspers, E. Husserl, and M. Heidegger. Chyzhevsky's doctoral thesis on G. Hegel in Russia was published in 1934. He began his teaching career in 1924 at the Ukrainian Higher Pedagogical Institute in Prague, where he was also a lecturer of the Ukrainian Free University. From 1932 to 1945 he taught Slavic linguistics and literatures at the University of Halle and from 1945 to 1951, at Marburg University. In 1951–6 he taught as a visiting lecturer at Harvard University, and then returned to Germany to become a professor at Heidelberg and, from 1968 on, at Cologne as well. He was a member of numerous scholarly societies and academies and held several honorary degrees.

In his multifaceted scholarly activity Chyzhevsky showed great erudition and originality. His contribution to scholarship embraces literary history and criticism, philology, esthetics, and philosophy. He was equally at ease in Russian, Ukrainian, Slovak, Czech, Polish, and German fields and produced seminal studies of the literary baroque, Slavic comparative literature, and the general Slavic *Geistesgeschichte*. Among his publications are *Logika* (Logic, 1924), *Dostoevskij Studien* (1931), *Gegel' v Rossii* (Hegel in Russia, 1939), *Štúrova filozofia žiotoa* (Štúr's Philosophy of Life, 1941), *Geschichte der altrussischen Literatur: Kiever Epoche* (1948; English trans, 1960), *Outline of Comparative Slavic Literatures* (1952), *On Romanticism in Slavic Literatures* (1957), *Das heilige Russland* (1959), *History of Russian Literature from the Eleventh Century to the End of the Baroque* (1960), *Russland zwischen Ost und West* (1961), *Russische Literaturgeschichte des 19 Jahrhunderts* (1964), and *Comparative History of Slavic Literatures* (1971). He made signal contributions to the study of J. Comenius and N. Gogol.

His scholarly endeavors in Ukrainian studies were prodigious. He was the author of *Filosofia na Ukraïni* (Philosophy in Ukraine, 1926), *Narysy z istorii filosofii na*

Ukraini (Essays on the History of Philosophy in Ukraine, 1931), *Ukrains'kyi literaturnyi barok* (The Ukrainian Literary Baroque, 3 vols, 1941, 1944), *Istoriia ukrains'koi literatury vid pochatkiv do doby realizmu* (History of Ukrainian Literature from the Beginnings until the Era of Realism, 1956), *Skovoroda: Dichter, Denker, Mystiker* (1974), *A History of Ukrainian Literature* (1975), and hundreds of scholarly articles. Two festschrifts in his honor appeared, in 1954 and 1966.

G.S.N. Luckyj

Dmytro Chyzhevsky

Pavlo Chyzhevsky

Chyzhevsky, Pavlo [Čyževs'kyj], b 1860 in Poltava, d 1925 in Geneva. Civic and political leader. Chyzhevsky studied physics at Kiev University and in Switzerland. While still a student he was exiled to Siberia for his political activities. He was active in the zemstvos and was a member of the Ukrainian Democratic Radical party and the *Society of Ukrainian Progressives. He was elected to the first and second state dumas and was a key member of the Ukrainian caucus. Chyzhevsky represented Poltava gubernia at the Ukrainian Central Rada and served as a member of the Central Committee of the *Ukrainian Party of Socialists-Federalists. In 1918 he was appointed chairman of the Ukrainian trade delegation to Switzerland. He also served as chief of the External Office of the Ukrainian Party of Socialists-Federalists in Vienna and as a member of the UNR government in exile in Tarnów, Poland (1920).

Chyzhovych, Eugene [Čyžovyč, Jevhen], b 27 January 1935 in Liutovyska near Stryi Sambir in Galicia. Sportsman, instructor in physical education. Chyzhovych played on several Ukrainian soccer teams in the United States and Canada. In 1973 he was appointed trainer of the United States Olympic soccer team. In 1967 he and his brother Volodymyr received the trainer-of-the-year award of the American Professional Soccer League as the best trainers in New Jersey. Chyzhovych has done much to popularize soccer in the United States.

Cimmerians. Oldest settlers of southern Ukraine, mentioned by Homer (ca 8th century BC) and by Herodotus in his *History* (5th century BC). Their origin is unknown. In linguistic terms, on the evidence of the recorded names of their leaders – Tygdamme (in Herodotus, Lygdamis) and his son Sandakhsatra – they are considered Iranians. According to Herodotus, the Cimmerians were driven

from the steppes by the Scythians in the 7th century BC: some of them settled on the southern shore of the Black Sea (in the Crimea they were known as Taurians), while others waged a campaign in Asia Minor, taking Sardis, the capital of Lydia, in 652 BC. This marked the Cimmerians' apex of power: subsequently they declined and became extinct. Although their culture has been little studied as yet, some scholars believe that the numerous settlements and burial mounds in southern Ukraine dating from the late second and early first millenniums BC are archeological remains of the Cimmerian age.

Circle of Ukrainian Women (Kruzhok ukrainok). Known as the Circle of Ukrainian Girls until 1905, the circle was founded in Lviv to serve the needs of young women for self-education. The circle worked towards the establishment of high schools for females. It published K. Malyska's book *Pro zhinochyi rukh* (About the Women's Movement, Lviv 1904) and a women's newspaper, **Meta*, in 1908. Its first head was N. Budzynovska, followed by D. Shukhevych-Starosolska, S. Danylevych, I. Sichynska, M. Nehrebetska, and O. Ozarkevych. In 1909 the circle merged with the *Club of Ruthenian Women to form the *Women's Hromada.

Circle of Ukrainians in Paris (Cercle des Oukrainiens à Paris or Ukrainska hromada v Paryzhi). First Ukrainian organization in Paris, established in 1908 by political émigrés who had left the Russian Empire after the revolution of 1905 and by students from Galicia. By 1910 the organization had 120 members, maintained a choir, had organized Ukrainian language courses, and had published informational brochures on Ukraine. Among its leading members were Ya. Fedorchuk, M. Parashchuk, V. Vynnychenko, Oleksander Kovalenko, E. Batchinsky, M. Rudnytsky, and M. Boichuk. With the outbreak of war in 1914 the circle ceased its activity.

Cities and towns. In Ukraine cities were closed settlements with special rights and a sizable population occupied mainly in the skilled crafts, industry, trade, transportation, administration, the professions, and various cultural and civic activities. In some small towns the population consisted of farmers. The emergence of cities was conditioned on the one hand by advanced agriculture, the separation of the crafts and industry from agriculture, and the development of trade, and on the other by defensive, administrative, and cultural needs. The city is an economic, cultural, and administrative center for the surrounding region.

The criteria by which a settlement is classified as a city change; hence, any comparison of the number of cities or of their populations in various periods and in various countries is only tentative. Furthermore, statistical data, particularly for the distant past, are incidental and frequently unreliable.

Ancient period. The largest Trypilian settlement, at *Volodymyrivka, can be considered the prototype of the city in Ukraine. The oldest true cities on what are now Ukrainian territories were the *ancient states on the northern Black Sea coast established by the Greeks in the 7th–5th century BC. Surrounded by local tribes, these colonies traded with them and gradually became large manufacturing and commercial centers. The most important Greek cities were: Olbia, at the mouth of the Boh River; Tyras, at the mouth of the Dniester River; Phanagoria, on the Taman Peninsula; Tanais, at the mouth of the Don River; Chersonese Taurica, Theodosia (Teodosiia), and Panticapaeum in the Crimea. The largest of them became democratic city states.

The cities on the Kerch Strait belonged to the Bosporan Kingdom from the 5th century BC. In the 1st century BC and AD the Greek cities on the Black Sea came under Roman rule. The population of the cities consisted not only of Greek colonists but also of enterprising local natives – Scythians, Taurians, Sarmatians, and Thracians. The urban cultures and tribal cultures influenced each other. Another city, Neapolis, the capital of the Scythian Kingdom in the Crimea, was established in the 3rd century BC and was inhabited mostly by Scythians and Greeks. The large Scythian fortified settlements (eg Bilske) can be considered precursors of the city.

Various trades flourished in the ancient cities: metallurgy, jewelry making, stone cutting, pottery, weaving, tanning, fishing, and winemaking. Wheat, fish, furs, honey, wax, hides, and also slaves were exported by them to Greece, Asia Minor, and Egypt. In return the cities imported luxury items, weapons, cloth, fine ceramics, wine, oil, etc.

The cities were built on a parallel plan, with the agora, or market, at the center, and were bounded by a wall, sometimes as high as 12 m, defense towers, and well-fortified gates (for details see *Olbia and *Chersonese Taurica). The buildings were constructed of stone and brick, and the streets were paved. The Greek colonies were important centers of culture and art.

From the 3rd century AD these ancient cities began to decline, and they were finally destroyed by the invading Huns in the 4th century. New cities eventually arose on some of the ruins. Chersonese (Korsun), for example, was rebuilt in the 5th century. It preserved the ancient traditions and was an important influence on the formation of Old Ukrainian culture.

Princely era. During the Princely era cities developed from strongholds (*horod, hrad*), which were situated for easy defense and surrounded by walls, stockades, and moats. Such strongholds are known to have existed already in the 6th century AD. They were built by the Antes and with time became the focuses of tribal organization. Although most of them were small, a few of them that were particularly well situated (at river crossings, mountain passes, etc) became trade centers and attracted a larger population, which settled near (*pryhoroddia*) and under (*pidhoroddia*) the fortresses and engaged in trade and manufacturing.

According to the Rus' chronicles, Kievan Rus' had 24 cities in the 9th–10th century. The main cities on Ukrainian territory were Kiev, Chernihiv, Pereiaslav, Pere-myshl, Cherven, Vyshhorod, Bilhorod, Iskorosten, Vru-chyi, Liubech, Turiv, and Peresichen. In the 11th century 64 more cities arose in Rus', of which the following were

located in Ukraine: Berestia, Belz, Volodymyr-Volynskiy, Buzke, Pynske, Pryluka, Dorohobuzh, Iziaslav, Lutske, Terebovlia, Starodub, Novhorod-Siverskyi, and Kursk. One hundred and thirty-four new cities were mentioned in the 12th century. Among them the following were in Ukraine: Halych, Dorohychyn, Peresopnytsia, Putyvl, Rylysk, Hlukhiv, Oster, Kaniv, and Korsun. In the 13th century 47 new cities appeared. Of these Kholm, Lviv, Kremianets, Kamianets, Kolomyia, Bakota, Sosnytsia, and others were in Ukraine. The total number of known cities in Kievan Rus' between the 9th and 13th century was about 300.

The distribution of cities on what are now Ukrainian territories was uneven. Most of the cities were located along the middle Dnieper River, especially around Kiev, in Volhynia, and in Galicia. In Transcarpathia the first cities developed around citadels (Uzhhorod, Mukachiv, Khust) or grew out of German colonies (Bardejov, Berehove). Most of the cities were small in area and population. The citadel of Kiev covered no more than 100 ha under Volodymyr the Great and Yaroslav the Wise. With the town outside the walls Kiev covered some 500 ha. In Chernihiv the citadel had an area of 15–16 ha, and the city had up to 100 ha. The corresponding figures for Pereiaslav are 8.5 and 50; for Halych, about 50 and 200. The exact city populations are unknown. At its height Kiev (and Novgorod Velikii) had 50,000–100,000 inhabitants (London, the largest city in Western Europe in the 14th century, had a population of 40,000). Chernihiv and Pereiaslav were smaller in population. Many cities had less than 1,000 inhabitants. Up to the Mongol-Tatar invasion in the 13th century the number and size of cities were constantly increasing.

Old Ukrainian cities consisted of two parts. The center (**ditynets* or higher city) was a citadel built on elevated ground. It was protected by natural formations (rivers, ravines, etc) and fortified with walls and moats. The princely court, the episcopal residence, one or more churches, and military quarters were located there. The second, larger part consisted of the town outside the walls (*pidhoroddia, pryhoroddia, okolnyi hrad, posad*), which in Kiev, Chernihiv, and other cities was called *podil* (lower town). This part was inhabited mostly by craftsmen, traders, and merchants. With time it too became fortified. The outer city was divided into various *kintsi* (ends) or trades districts: the tanners lived near the river, the potters near clay pits. The districts acquired their names from the tradesmen who lived there – for example, Kozhumiaky (Tanners' District) and Honchari (Potters' District) in Kiev – and sometimes from the ethnic origin of their inhabitants. The streets of the city usually converged at the center or at the market place. Their layout was sometimes determined by natural conditions or by the defensive works. Because the walls limited the available space within a city, the buildings were close together and the streets were narrow. Residential buildings were built of wood, while princely and episcopal palaces, churches, and monasteries were usually built of stone. Monasteries often had their own fortifications.

The manufacturing *crafts and trade formed the economic base of the city in the Princely era. The crafts in the 11th–12th century were highly developed and numbered more than 60. Trade was well regulated: every city had a special area set aside for trading – the market (*torh, torzhok, torzhyshe, bazar*). At the beginning of the 11th

century Kiev, which was a center of east-west trade, had eight marketplaces, where traders from various Rus' cities met foreign merchants. Some foreign merchants (*hosti*) had their own districts and churches in Ukrainian cities.

The population of the smaller cities was socially little differentiated and did not differ basically from the population of the countryside. A burgher estate began to take shape only in the larger cities. Its leading members were merchants who engaged in foreign trade with the *hosti* and often also belonged to the boyar estate. Below these 'better people' (*luchchi liudy*) were the common people (*chern, chorni liudy*), consisting of ordinary merchants and artisans, farmers, and servants (*cheliad*) to the princes, boyars, and church hierarchs. The social divisions of the time were quite fluid. The city government was run by the princes or by their officers: the chiliarch (**tysiatskyi*), the voivode in the Galician-Volhynian state, and the magistrate (*sotskyi*). Some administrative and judicial functions were carried out by a princely servant called the **tyvun*. In the larger cities the **viche* – a general assembly of all freemen to decide particularly important matters – was a democratic institution. Certain foreign communities in the cities enjoyed self-government. From the 13th century Armenians, Jews, and Germans had self-government in the Galician-Volhynian state in accordance with *Magdeburg law. Merchants and tradesmen could sometimes form trade associations that enjoyed a certain autonomy. The beginnings of such trade *guilds and brotherhoods date back to the Princely era.

In this period the cities played an important cultural role. As centers of political and religious life, they promoted education, literacy, scholarship, literature, and art. The first schools and libraries were founded at princely courts and urban monasteries. The building of palaces, churches, and fortifications stimulated the development of architecture, painting, sculpture, and various applied arts. In economic and cultural development the cities of Kievan Rus' rivaled the most advanced world cities of the time.

The Tatar-Mongol invasion of 1239–41 put an end to city growth. Most of the cities in central and eastern Ukraine, including Kiev, were heavily damaged, and some were completely destroyed. Volhynian and Galician cities also lay in ruins, yet, with a few exceptions, all of them were quickly rebuilt and refortified. New cities – Kholm and Lviv – were even built. The larger cities in Western Ukraine patterned their external form and internal life on Western European models, beginning in the 13th century.

Mid-14th to mid-17th century. After the Tatar invasion only the cities of the Principality of Galicia-Volhynia continued to develop. The larger ones formed juridically and economically autonomous entities and retained this status under Polish (Galicia, western Podilia) and Lithuanian (Volhynia and eastern Podilia) rule.

In contrast, the cities of central and eastern Ukraine remained in a state of decline during the 120 years of Tatar domination and began to develop again only in the second half of the 14th century, when they came under Lithuanian rule. The defense and colonization of borderlands, which were open to Tatar incursions, stimulated the growth of existing cities and the founding of new ones. Most of these were administrative-defensive outposts with a basically agrarian population and a low

concentration of manufacture and commerce. They consisted of a castle-fortress surrounded by a town of artisans and traders or by peasant settlements a little farther off. Under the grand duke Vytautas these fortified cities reached the coast of the Black Sea. After his death in 1430, the defense line retreated north into the northern forest-steppe belt. Many *castles were built in already existing cities in Galicia, Volhynia, and Transcarpathia.

The population of the cities quickly and steadily increased under the protection of the castles. The colonization of Podilia and Right-Bank Ukraine was interrupted at the end of the 15th century by Crimean Tatar incursions, particularly by Mengli Girei's sacking of Kiev in 1482. Ukrainian cities began to recover from this blow only in the second half of the 16th century. By that time they were part of the Polish Commonwealth. Owing to a new colonization process spurred by the Polish authorities and magnates, many ruined and deserted castles and cities were rebuilt, and new ones were founded. This process was intensified in the first half of the 17th century: in the Kiev and Bratslav voivodeships alone about 300 new cities and towns appeared. The restoration and growth of cities was also influenced by the expanding political power of the Cossacks. It was under their protection and care that Kiev revived and resumed its role as a national religious, cultural, and economic center. Similarly, many other cities developed from insignificant settlements or even villages into Cossack administrative and military centers (Chyhyryn, Bila Tserkva, Khvastiv, Terekhtemyriv, etc).

In the mid-17th century there were in Ukraine about 1,000 cities or towns. In Western Ukraine there were about 440; in eastern Ukraine about 530, of which 385 (mostly towns) were in the Kiev voivodeship. The larger cities, which were located on Polish crown lands, enjoyed Magdeburg law and various privileges. The smaller towns, located on lands belonging to the gentry, differed from villages only in that their inhabitants paid taxes or payments in kind instead of performing *corvée* for the lord. True cities – by their physical and economic structure – were found mostly in Volhynia and Galicia, regions that were threatened less by Tatar attacks and were intersected by the main trade routes from the West to the Black Sea and the Near East. Internal trade – mainly the exchange of farm products from the village for manufactured goods from the town – took place at local markets, while foreign trade took place at annual and semiannual *fairs, which drew merchants from various Western and Eastern countries. The larger cities had the right of staple (*sklad*), according to which merchants visiting a given city were obliged to stay for a certain period and to offer their merchandise for sale to the local merchants.

At this time Lviv was the largest city and the main commercial and manufacturing center in Ukraine (30,000 inhabitants in the mid-17th century), followed by Kiev (15,000) and Kamianets-Podilskyi (over 10,000). The other important cities were Peremyshl, Stryi, Sianik, and Yaroslav in Galicia; Lutske, Volodymyr, Kremianets, and Ostrih in Volhynia; Zamostia, Kholm, and Krasnostav in the Kholm region; Berestia in Podlachia; Pynske in Polisia; Bar, Bratslav, and Vinnysia in Podilia and the Bratslav region; Zhytomyr, Ovruch, and Bila Tserkva in the Kiev region; and Chernihiv, Starodub, Novhorod-Siverskyi, and Pereiaslav in Left-Bank Ukraine.

The national and religious composition of the urban

population was somewhat different from that of the Princely era. Even in the Galician-Volhynian state there was an influx of foreigners – mainly Germans, Armenians, Poles, and Jews – into the cities of Western Ukraine. Under Polish rule Italians also arrived. In the 16th century most of the Germans and Armenians became Polonized; thus, the cities of Western Ukraine acquired a mixed Ukrainian-Polish-Jewish character, with the Polish element usually predominating. The urban population in central and eastern Ukraine remained mostly Ukrainian.

In appearance the larger Western Ukrainian cities were similar to Polish, German, and Czech cities. Lviv, Pere-myshl, Kamianets, Zamostia, and other cities had a rectangular plan and were surrounded with high, thick walls, towers, and gates. At the center of the city stood the *ratusha* (city hall) in a rectangular marketplace, on which the regularly spaced streets converged. The streets were narrow. The buildings were very close together; they were built of stone or brick, were two to three stories high, and had three windows per story. Many buildings were built in the Renaissance style (see *Lviv). Outside the city walls there was a suburb (lower town).

In central and eastern Ukraine the cities were not as compact, the streets did not form a regular network, and the buildings were usually made of wood. The cities were usually located near castles and often had their own fortifications (see *Kiev), which in Left-Bank Ukraine consisted usually of earthworks and stockades. In appearance most of the smaller cities and towns differed little from villages.

Important changes in the legal status of cities occurred in this period. In the Princely era the city was closely associated with the village. In the 14th–15th century it separated itself from the village both economically and legally, as a result of the introduction of Magdeburg law. The cities thus became self-governing and had their own administration and courts. The burgher estate became distinct, and trade guilds were founded. Only the larger cities had full Magdeburg law. The rest of the cities and towns were subject to their lords (*didychi*) or to the **derzhavets* (viceroy), although a few did have self-government. In contrast to Western Europe, the rights of cities within the Polish Commonwealth, particularly in Ukraine and Belorussia, were limited, and the Magdeburg law was somewhat modified. The king, voivode, or **starosta* (county head) appointed the top officials in certain cities and intervened in municipal affairs. Burghers of various faiths and nationalities came under different jurisdictions. Finally, the cities were not represented at the Sejm or dietines, while the gentry (*szlachta*) constantly reduced the cities' rights, particularly their economic rights, thus bringing about their decline.

In Transcarpathia the larger crown cities, such as Uzhhorod and Mukachiv, lost their privileges as 'free,' ie, self-governing, cities in the 14th century. Later some of their privileges continued to be respected, although the cities themselves were controlled for a time by magnates. Their organization approximated that of cities governed by Magdeburg law.

The urban population was divided into three basic social groups: the patricians – the wealthy *burghers with political power; the middle burghers; and the poor townspeople or plebeians. Ukrainians usually constituted the last two groups. The inhabitants of the suburbs did not have the same rights as the burghers, and their manufac-

turing and trade activity was restricted. The peasants of villages near the cities, who were subject to both the gentry and the patricians, and the servants and indentured artisans of the gentry and clergy formed a separate group. This social differentiation was characteristic of the larger cities; the smaller towns had a more homogeneous population, consisting mainly of traders and artisans, who were subject to the 'town hall law' (*ratushne pravo*), and peasants, most of whom were indentured. A significant proportion of the urban population consisted of the secular and monastic clergy, which was independent of both the city government and the royal officials. Cathedrals and monasteries had their own lands and subjects, who were occupied in farming, manufacturing, and trading. Jews had their own self-government outside the jurisdiction of Magdeburg law and formed a distinct urban group. Armenians had a certain measure of self-rule within the framework of the city administration.

Besides social distinctions there were also religious and national distinctions among the townsfolk. In some cities only Roman Catholics could enjoy Magdeburg rights; hence, Ukrainians had limited access to municipal government and were often confined to a small section of the town. They suffered discrimination in the guilds and were restricted in their manufacturing and commercial activities. They were not allowed to build churches, etc. The discrimination was worst in Lviv, but even in the smaller towns, where Ukrainians were the majority, the Poles controlled the municipal government. Ukrainian burghers had to wage a struggle against both social and religious and national oppression. Consequently, they organized themselves in *brotherhoods. Owing to their activity at a time when the Ukrainian upper estates became Polonized, the burghers assumed leadership in Ukrainian national life and, particularly in the 16th century, became the champions of Ukrainian religious, political, and cultural rights. They also gave a new direction to the Ukrainian Cossacks on the steppe frontier, strengthening them with active, intellectually more sophisticated elements and drawing them into a common national-political struggle.

The cities in Ukraine played an important cultural role in this period. They were the centers of literary life, education (brotherhood schools), book scribing, and later printing and publishing (Lviv, Ostrih, Lutske, Kiev). City architecture attained a high level of development and stimulated the advancement of painting and the applied arts. The cities, particularly in Western Ukraine, also became important centers of Polish and Jewish culture.

Mid-17th to the end of the 18th century. In this period the development of cities in Ukraine was influenced by the political, social, and economic changes that the *Cossack-Polish War of 1648–54 brought about. The division of Ukraine into a Russian and Polish sphere of influence in 1667 and, finally, in 1686 accounts for the different historical fates of the cities in Right-Bank and Western Ukraine and those in Left-Bank Ukraine.

In the middle of the 17th century the cities of Western and Right-Bank Ukraine went into a decline. This was a result of the drop in trade with the Near East and of changing trade routes, as well as of continual wars and the restrictive administrative and economic policies of the Polish gentry and magnates. Consequently, the cities and their inhabitants became impoverished; trade disappeared, and the guilds disintegrated under competition

from unorganized tradesmen (court tradesmen and the so-called *partachi* – literally ‘bunglers’). At the same time the Jewish population in the cities increased and became active in money lending and estate management. The Jews gained control of most of the manufacturing, trade, and money-lending enterprises. As the cities declined, their population diminished: the population of Lviv, for example, fell from 30,000 in the mid-17th century to 20,000 in the mid-18th century.

The cities of Western Ukraine and to some extent of Right-Bank Ukraine underwent further Polonization, particularly in the 18th century. The Ukrainian burghers became less active, and the brotherhoods limited their activities to church affairs. The center of Ukrainian cultural life shifted to the Hetman state, which attracted many creative people from Western Ukraine. Architecture remained generally in a state of stagnation, although several outstanding buildings, such as St George’s Cathedral in Lviv and the city hall in Buchach, were constructed.

The cities of the Hetman state developed in a very different way. After the Polish administration and part of the gentry had been suppressed, the Cossacks joined the burghers as the most influential estate in city life. The larger cities with their patricians, who were quite advanced economically and culturally, were particularly important in the Hetman state. These cities had Magdeburg law while the smaller cities and towns had only partial self-government (*ratushne pravo*). Manufacturing and trade were not well developed in the smaller cities and towns, and most of their inhabitants were peasants. In the second half of the 17th century there were about 90 cities and towns in the Hetman state. According to the 1764 census (excluding Poltava regiment and four companies of Myrhorod regiment), there were 117 cities and towns. Most of them had been established in the first half of the 17th century as the Left Bank was colonized, and some – mainly on the southern frontier – were established later. The main cities of the Hetman state in the 17th–18th century were: Kiev, Baturyn, and Hlukhiv (the hetmans’ capitals); Starodub, Nizhen, Chernihiv, Pereiaslav, Pryluka, Lubni, Poltava, Myrhorod, Kozelets, and Hadiach (regimental centers); Novhorod-Siverskyi, Oster, Pohar, Mglin, Pochep, and Krolevets (company centers). Accurate figures on the populations of these cities do not exist. Generally, they were small. Even Kiev had only 2,450 residences (or about 15,000 inhabitants) in the middle of the 18th century. In 1781 Nizhen had 1,623 residences; Hlukhiv, 1,085, and Starodub, 863.

By nationality the population of the Hetman state was almost exclusively Ukrainian. The Poles had completely disappeared, and very few Jews remained. However, in their place Russians appeared, particularly in Kiev and other commercial and administrative centers and in the northern areas of the Hetman state (the so-called *razkolnik* settlements in Starodub and Chernihiv regiments). A small number of Belorussians lived in the northern cities. In Nizhen, Pereiaslav, and Kiev there were sizable Greek colonies, as well as small numbers of Wallachians, Balkan Slavs, and, from the middle of the 18th century, Georgians.

Compared to the period before 1648, the social structure of the city population changed substantially. Besides the burghers, who were divided as before into the patricians, middle burghers, and plebeians, the urban population now included the Cossacks and the Cossack *starshyna*. Most of the *starshyna* were engaged in trade

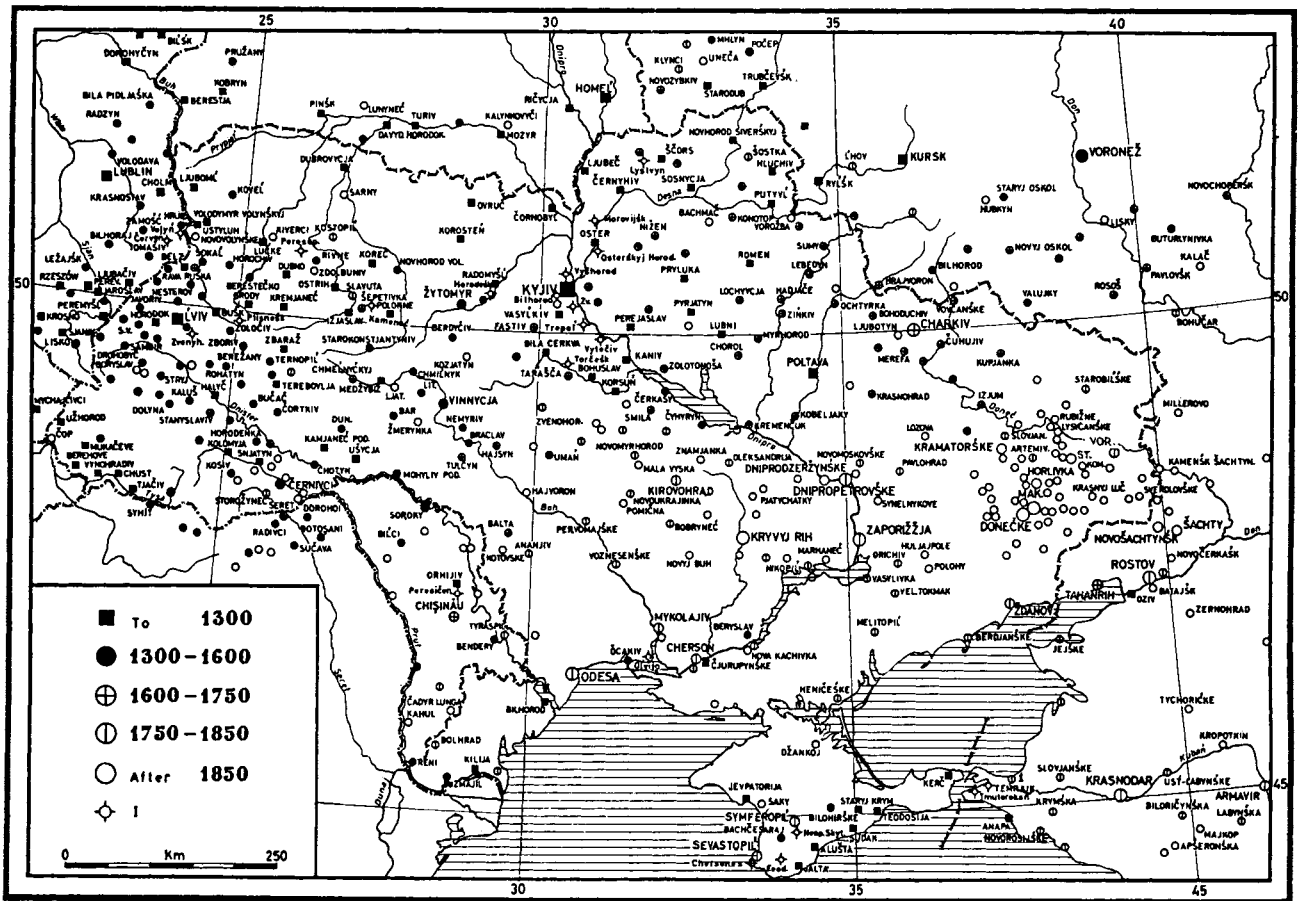

and manufacturing in addition to agriculture and enjoyed greater freedom in these fields than did the burghers. As before, the secular and monastic clergy and various groups indentured to the *starshyna* and monasteries lived in the cities. Many military personnel were stationed in Kiev and the larger cities of Left-Bank Ukraine.

Generally the burghers retained their former rights, although the Cossack *starshyna* tried to limit them. Only a few hetmans, such as B. Khmelnytsky, I. Mazepa, and D. Apostol, guaranteed the cities their former privileges or granted them new privileges. In addition, Muscovy’s centralist policies restricted city self-government. From 1654 Russian voivodes and military garrisons were stationed in Kiev and several larger cities. In the large cities offices that were once elective gradually became the prerogative of the Cossack *starshyna* or of individuals appointed by the Russian government (eg, in Kiev in the middle of the 18th century). Often non-Ukrainians – Russian officers or administrators – held these offices. The smaller towns were often granted to members of the Cossack *starshyna* by the hetman or the tsar.

After the abolition of the Hetmanate in 1764, the gradual elimination of self-government in the Left-Bank cities began. The large Ukrainian cities came under the Russian urban statute (*gorodskoe polozhenie*) of 1785, by which two councils (*dumy*) – a general council and a six-member council – were established. These councils, which were fully subordinated to the governor and the gubernia’s financial board (*kazennaia palata*), decided all the important questions of city government. The **magistrat* (city administration) retained only judicial authority over the city inhabitants and supervision of the guilds.

Most of the cities and towns in the Hetman state had a heterogeneous economy consisting of industry, trade, and agriculture. In the first half of the 18th century the first manufacturing industries appeared in certain cities such as Kiev and Nizhen. The centralist policies of the Russian government were aimed at subordinating the trade of the Ukrainian cities to the interests of the Russian government and market. This was evident in the advantages that Russian merchants received in Ukraine. Nevertheless, a prosperous Ukrainian merchant class emerged in the larger cities. Organized into merchant groups (*kramarski sotni*) and guilds (from the second half of the 18th century), it faced growing competition from Russian merchants (particularly in Kiev) and sometimes from Greek and other foreign merchants.

From the mid-17th century to the end of the 18th century the cities of the Hetman state attained a high level of cultural development. With its numerous monasteries and churches, the metropolitan’s residence, the printing press of the Kievan Cave Monastery, and the Kievan Mohyla Academy, Kiev became the cultural center of all Ukraine, particularly during the rule of Hetman I. Mazepa. The other important cultural centers were Chernihiv and Novhorod-Siverskyi, where L. Baranovych wrote and published his works; Pereiaslav, which, like Chernihiv, had a collegium; and the hetman capitals of Baturyn and Hlukhiv. Ukrainian architecture particularly flourished, as churches, city halls, etc, were constructed in the Cossack baroque style. Learning and education were highly advanced; literature and the arts developed. Their main centers were Kiev, Chernihiv, Pereiaslav, and, at the end of the 18th century, Novhorod-Siverskyi and Poltava.

1. Phanagoria

From the middle of the 17th century cities began to arise in Slobidska Ukraine as Ukrainian migrants from the Dnieper region began settling there. These cities were fortified military settlements in which – mainly in the regimental centers – craftsmen and traders began to settle. They grew rapidly only in the 18th century. In the 1770s there were as many as 8 cities and 44 towns in Slobidska Ukraine, not counting the territory of Ostrohozke regiment. In 1773 the main regimental cities had the following populations: Okhtyrka, 11,000 (in 1732–4,700); Kharkiv, 10,100 (3,700); Sumy 9,800 (3,800); Ostrohozke, 9,100; Izium, 4,600 (1,600). As in the Hetman state, most of the urban population in Slobidska Ukraine consisted of Cossacks, and the main occupation was farming. The economy of these cities was similar to that of cities in the Hetman state.

Late 18th century to 1860. After Russia's annexation and colonization of southern Ukraine, many new cities were founded there in the second half of the 18th century and at the beginning of the 19th. The earliest cities started out as forts defending the southern frontier of the Russian Empire – Yelysavethrad, Novomyrhorod, Oleksandriia, Oleksandriivske, Pavlohrad, and Katerynodar in the Kuban – or the Black Sea coast – Kherson, Mykolaiv, and Tahanrih. Soon after, the commercial port of Odessa, the military port of Sevastopol, and the administrative center of Symferopil were built. In the second half of the 18th century and at the beginning of the 19th, 22 new cities were founded in the steppe region of Ukraine (excluding the Crimea). Only 4 cities built earlier by the Turks or Tatars remained.

Russian colonial policies slowly changed the nature of

the cities of central and eastern Ukraine. Their legal status and administrative structure became more and more like those of other cities in the empire. In 1835 the Magdeburg law of Kiev, which had been renewed in 1802, was abolished. Self-government in other cities was limited to the community's economy and the basic professional concerns of the burghers. In Right-Bank Ukraine relics of the Polish urban order survived here and there; eg, the privately owned cities in Volhynia and Podilia, which lasted to the 20th century. In the south, particularly on the coast, the cities preserved for a long time a cosmopolitan character, owing to the transit trade, exemption from tariffs, and primarily the multinational composition of the population (Odessa). The local Russian administration acquired increasingly more power over the cities.

Social relations also changed, particularly in the larger cities. The Ukrainian and non-Ukrainian nobility (Polish on the Right Bank and partly Russian in the south) became bound to the cities by its various interests – occupational, economic, commercial, cultural, and educational – and by its increasing residency there, including permanent residency. Government officials on the Right Bank, who were mostly Russian and partly Polish, the military, the clergy, who were increasingly Russian or Russified, and, finally, the intelligentsia gradually altered the social and national character of the cities. The influx of Russian burghers, particularly merchants of the first and second guilds, forced out the Ukrainian patricians and then the rest of the Ukrainian burghers from their traditional economic position and confined them to the suburbs. As a result, the larger cities of central and eastern Ukraine became Russified. The Ukrainian burghers retained their predominance and national character only in the small county cities and towns, where they were active not only in local commerce and the crafts, but also in farming. In Right-Bank Ukraine trade and the crafts remained mostly in the hands of Jews, as before. In southern Ukraine, particularly in port cities, the important commercial and manufacturing companies were controlled not only by Jews, but also by Armenians, Greeks, and West Europeans, the latter being involved particularly in international trade.

At the time of the Austrian annexation (1772–4), the cities of Western Ukraine were in a state of decay. With the exception of the free city of Lviv, the cities and towns of Galicia belonged mostly to magnates or were administered by starostas (county heads). The tradespeople and merchants had to pay the lord rent, while the inhabitants of the suburbs had to perform *corvée*. Annexation by Austria brought far-reaching changes, particularly in the social and legal spheres. The earliest Austrian laws freed the urban population from personal indenture and established the urban centers as separate administrative units. The Austrian administration assumed responsibility for urban affairs, which led to a stricter observance of legal norms, particularly with regard to the Ukrainian population. In the economic sphere the construction of paved highways connecting Lviv with Vienna and with other large cities of Galicia and Bukovyna stimulated trade. In addition to the main city of Galicia, Lviv, Brody was also granted, in 1779, the rights of a free trade city. Its Jewish community controlled the entire transit trade between Austria and Russia and between Ukraine and Western Europe. Trade in Peremyshl and Yaroslav increased. The Podilian cities and towns of Ternopil, Ushakovtsi, and

Buchach became trade centers known for their annual fairs; their industry, however, did not advance beyond the manufacturing trades.

From the political point of view, the Austrian annexation of Galicia and the tension between the Austrian government and the Poles in the first half of the 19th century resulted in decreased influence of the Polish administration and hence a weakening of the Polonization drive in the cities. The influx of German officials, merchants, and military and the introduction of German as the official language gave the large Galician and Bukovynian cities, particularly Lviv, Chernivtsi, and Brody, a German appearance. The Austrian annexation also had a cultural significance. The changes that followed from it strengthened the Ukrainian elements in Lviv, Peremyshl, and Chernivtsi. The sees of Ukrainian bishops became the centers of Ukrainian cultural life.

On Ukrainian territories ruled by Russia, settlements considered urban were those in which most of the inhabitants belonged to the burgher estate and had the right to engage in trade and manufacturing. They were divided into cities (*goroda*) – gubernial and county (*uezd*) cities, non-county (*bezuezdnye*) towns, towns with full municipal rights, but without the state bureaucracy (*zashitatnye*), and into small towns (*mestechka*). In the 1860s there were 113 cities and towns and 547 small towns in central and eastern Ukraine (excluding the Crimea and western Volhynia). There were no small towns in Slobidska Ukraine and in the southeastern steppe. Of a population of 12,802,000, only 1,394,000 (10.9 percent) lived in the cities, and 1,340,000 (10.5 percent) lived in small towns. At this time there were 109 cities and towns in Galicia, with 505,000 inhabitants, or 17.6 percent of the total population.

Of the 850 cities and towns on all Ukrainian territories in 1858, only 62 had over 10,000 inhabitants. Only 18 had over 20,000 inhabitants, and only 5 had over 50,000: Odessa (114,000), Kiev (71,000), Lviv (70,000), Berdychiv (54,000), and Kharkiv (50,000). The more important cities were located at the junctures of water and land routes and depended mostly on trade. The largest cities had factories. Most cities were also important administrative, cultural, and educational centers. The towns differed little from villages in this respect, and many of their inhabitants were occupied in farming.

1860–1914. The abolition of serfdom and the subsequent influx of peasants into the cities, the construction of railroads beginning in the 1860s, the expansion of industry in the last decade of the 19th century, and the accumulation of capital account for the rapid growth of cities towards the end of the 19th century. The cities that had good transportation facilities expanded particularly rapidly. New cities sprang up in mining and industrial regions such as the Donets Basin, the Dnieper Industrial Region, and the Drohobych-Boryslav Industrial Region. Cities that were not served by the railways declined. The changes in urban size and population of central and eastern Ukraine are shown in table 1.

In 1858 the urban population constituted 10.9 percent of the total population; in 1897, 11.6 percent; and in 1910, 19.3 percent, of which 6.6 percent lived in 4 cities with populations over 100,000. The most rapid development occurred in the large, newly founded cities of the Donets Basin and the Dnieper Industrial Region. In 1858–97 the population of central and eastern Ukraine increased by 85

percent, the population of cities by 120 percent, and the population of large cities by 140 percent. But the competition between industrial manufacture and the crafts and cottage industry, and between large trading companies and small merchants, led to the decline of the towns. Their population increased by only 72 percent in 1858–97. Many of them were merely villages from an economic standpoint, while many cities were not legally recognized as cities; eg, Yuzivka (now Donetsk) with a population of 48,000 (in 1910) and Kamianske (now Dniprodzerzhynske) with a population of 35,000 (in 1910).

The population influx into the cities, particularly into the new industrial centers, came not so much from the overpopulated Ukrainian villages as from ethnically Russian territories. New urban residents had to have a passport issued at their place of origin and a residence permit from the police. The authorities gave preference to immigrants from Russia, because they were artisans, and hindered the influx of Ukrainian peasants, particularly into the cities of southern Ukraine. The Russian population in the cities of Ukraine was augmented by imported administrative personnel. In the new cities of southern and southeastern Ukraine Russian workers predominated from the beginning, and Ukrainian workers were gradually Russified. The rate of Russification of the proletariat in Ukraine was also greatly influenced by the activities of Russian political parties and labor unions, which appeared in Ukraine much earlier than did Ukrainian organizations. Only a small Ukrainian intelligentsia put up resistance to the Russification policies of the tsarist government and the Russian church and civic organizations in the larger cities. In the smaller cities and towns the local Ukrainian element predominated. In spite of censorship and police persecution the Ukrainian intelligentsia formed semilegal and clandestine educational, scholarly, co-operative, and, later, political groups and published newspapers. But Ukrainian influence in the cities really increased only at the beginning of the 20th century with the general growth of Ukrainian national consciousness and the involvement of Ukrainian political parties in the labor movement. Still, the industrial cities of Ukraine remained thoroughly Russified until the end of the 1920s.

The urbanization of Western Ukraine was less intensive. While the population of Galicia increased in 1869–1910 by 55 percent, the urban population increased by 81 percent (the population of Lviv by 137 percent and of other cities and towns by 71 percent). This rate of urban growth was the result of a conflict of interest between the cities and the landowners, who had control of the

region's administration, and of the economic policies of the Austrian government, which hindered the industrialization of Galicia and Bukovyna. The only cities that grew were the two provincial capitals, Lviv and Chernivtsi, such railway junctions as Stanyslaviv and Stryi, and the cities of the petroleum basin, Drohobych and Boryslav. These cities attracted Ukrainian peasants and even greater numbers of Poles from western Galicia.

In the second half of the 19th century Polish domination over the Ukrainians was reinforced by the bureaucracy, which the Austrian government turned over to the Poles. Nevertheless, Ukrainian national consciousness had reawakened, and the Ukrainian element in the cities of Galicia and Bukovyna gained strength under the more liberal conditions of Austrian rule. The West Ukrainian cities and towns became the centers of Ukrainian political and cultural life. By the end of the 19th century Lviv had become the center of Ukrainian national life for all Ukraine. Other important centers were Chernivtsi, Pere-myshl, Stanyslaviv, Kolomyia, Ternopil, Stryi, Berezhany, and, in Transcarpathia, Uzhhorod and Prešov to some extent.

The cities were not planned and developed in step with their expansion. Even in the large cities only the central district was densely built over and regulated. At the beginning of this century barely 23 percent of the buildings in the cities of central and eastern Ukraine were constructed of stone (42 percent in cities with populations over 100,000); 33 percent of the buildings did not have fire-resistant roofs; 90 percent of the buildings were one- or two-story (73 percent in cities with populations over 100,000). Conditions were slightly better in Galicia.

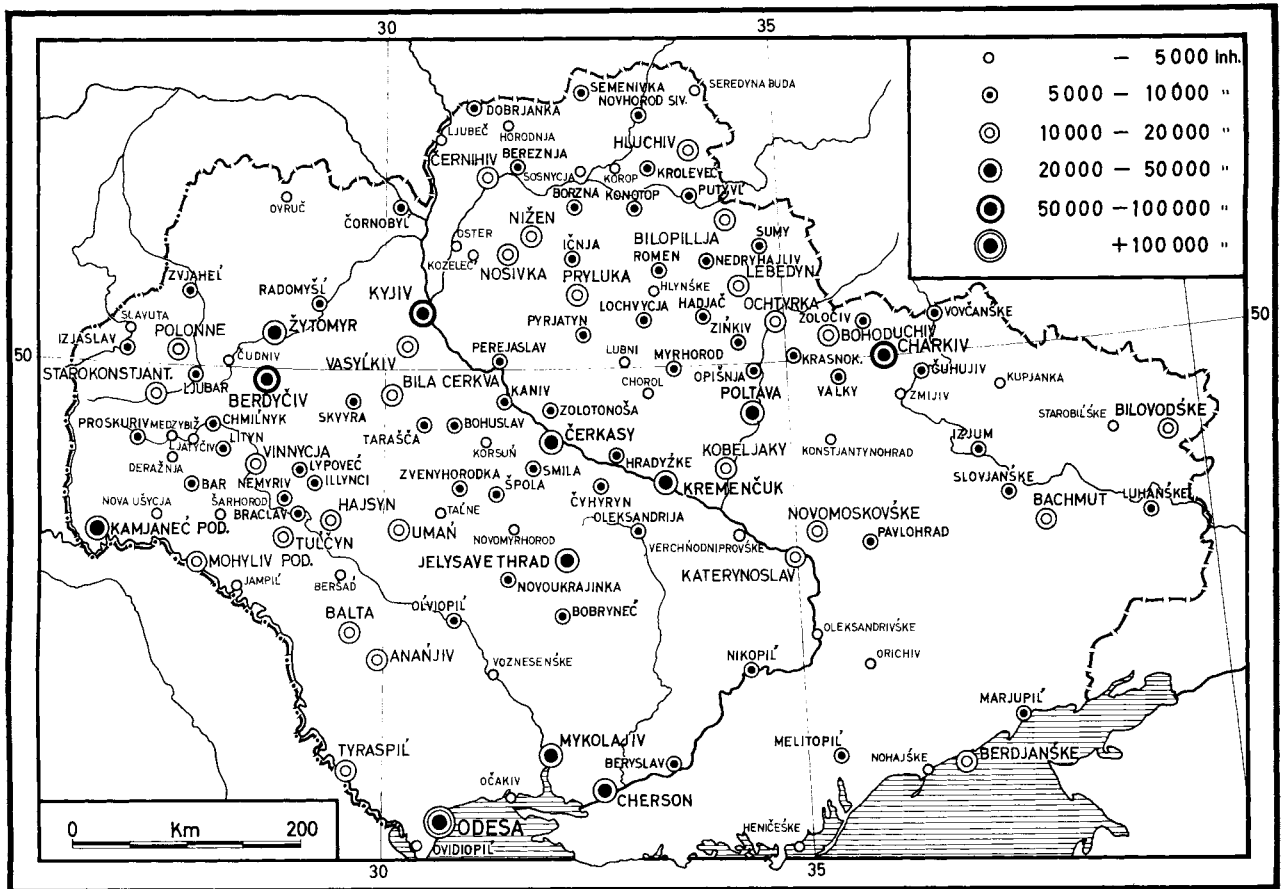

Most cities had a mixed economy. The major industrial cities were Katerynoslav, Kharkiv, the cities in the Donets Basin, and Boryslav in Galicia.

1914–40. During the First World War the cities of central and eastern Ukraine, particularly the large ones, expanded, owing to the influx of refugees and the evacuation of factories from Poland and the Baltic region to eastern Ukraine. During the revolution and Ukrainian statehood (1917–18) many Ukrainian peasants and townfolk migrated to the cities and some formerly alienated urban strata became nationally conscious. This facilitated the Ukrainianization of various institutions, the organization of new economic enterprises, and the expansion of co-operatives and cultural societies. But this process was interrupted by the Bolshevik invasion of Ukraine and the urban famine of 1920–1. In these years the population in the cities fell by a quarter.

Beginning in 1923, the urban population increased

TABLE 1
Urban size and population, central and eastern Ukraine, 1858 and 1910

Cities and towns (by population)	1858		1910	
	Number of cities and towns	Total population	Number of cities and towns	Total population
up to 20,000	101	701,000	76	1,067,000
20,000–50,000	8	227,000	28	870,000

again, to reach the prewar level by 1926. In the early 1920s a reclassification of the cities and towns of the Ukrainian SSR was made for economic purposes. Besides the city the category of town (*selyshche miskoho typu* or *smt*) was introduced. Towns were divided into two kinds: official towns, which had the same rights as cities, and unofficial towns, which were governed by rural soviets. From April 1924 a city was defined as a settlement with a minimum of 10,000 inhabitants, and a town as one with a minimum of 3,000 inhabitants, most of whom were not occupied in agriculture. As a result almost 40 percent of the cities lost their city status, while many towns and villages acquired it. In 1926 the Ukrainian SSR in its pre-1939 boundaries had 80 cities, 96 official towns, and 226 unofficial towns/smt. With the growth of industrialization their numbers increased steadily: in 1940 there were 179 cities and 397 towns/smt, containing 36.2 percent of the country's population within the pre-1939 boundaries, and 33.4 percent within the present boundaries.

At the end of the 1920s and during the 1930s there was a massive influx of Ukrainians into the larger cities as a result of the collectivization drive and the famine of 1932-3, as well as the recruitment of peasants into industry and the enrollment of young men and women in institutions of higher learning. Between 1924 and the

early 1930s the government enforced a policy of *Ukrainization in the cities: ie, Ukrainian was introduced not only in education, culture, the press, etc, but also in government, the service industry, and the economy. By the end of this period even the cities of the Donets Basin and southern Ukraine had acquired to some extent a Ukrainian character: signs, billboards, posters, and street names were in Ukrainian. Ukrainian was widely used in the street and in the office. However, the non-Ukrainian urban population resisted Ukrainization, which was eventually discontinued, *Russification being reinstated by Moscow.

After the completion of collectivization and the consequent decline of the village, the city became the only center of Ukrainian national, cultural, and political life. In the 1930s the Ukrainians attained a numerical majority even in most of the southern industrial cities. They comprised over two-thirds of the labor force (over one-half of the technical and administrative personnel). Although the Soviet authorities tried to regulate the flow of people into the cities by means of police and housing permits, the demand for labor in the rapidly growing industries made government control difficult. Even kulaks (former rich peasants) who had fled from the villages sometimes managed to establish themselves in the cities.

The cities of Western Ukraine did not undergo significant changes in this period. In 1921 they contained 18.5 percent of the population, and in 1931, 18.4 percent. But the Ukrainian element, which flowed into the cities from the villages of Galicia and Transcarpathia, gradually increased in strength. The social structure of the Ukrainian urban population also changed. Under Austrian rule Ukrainians had relatively easy access to government institutions and tended to take advantage of this. Under Polish or Rumanian rule this became virtually impossible, but the ranks of Ukrainian industrial workers, artisans, small entrepreneurs, co-operative workers, and professionals expanded. In spite of the obstacles created by a hostile administration and urban society, a Ukrainian 'third estate' thus took shape and acquired strength.

After 1940. In 1941–5 many cities of the Ukrainian SSR were devastated, and their population declined to 30–40 percent of the 1940 level. During the war the Germans destroyed 711 cities and towns. The large cities – Kiev, Kharkiv, Dnipropetrovske, Kremenchuk, Poltava, Donetsk, Ternopil – were particularly affected. The urban population regained its prewar level in the early 1950s and since then has constantly increased, reaching 30.5 million in 1979 (an estimated 35 million on all Ukrainian ethnic territories). In the postwar period the national composition of the urban population changed radically as a result of the mass destruction of the Jews by the Germans during the war, the forced emigration of Poles after the war, the continuing influx of Ukrainian peasants into the cities, and the even greater influx of Russians, particularly in 1945–50, when the economy was being rebuilt. Owing to the Stalinist terror, the large emigration of Ukrainians during the war, and the huge losses of human life, there was a shortage of Ukrainian technical and administrative personnel and skilled labor. A particularly large number of Russians moved to the cities of Western Ukraine to replace the Jewish, Polish, and German artisans and workers in the industries requiring highly developed technical skills (eg, the petroleum industry).

This migration of Russians to Ukraine's cities was in part politically motivated. This is evident from the fact that many demobilized Russian officers and other war veterans were given jobs mostly at the middle administrative level. They proceeded to bring their families to Ukraine, particularly to the larger cities of Western Ukraine, which had not suffered as much destruction during the war.

Even after 1950 there was a certain shortage of indigenous skilled personnel, particularly since the government recruited many Ukrainians to work outside Ukraine. Migrants from Russia and other Soviet republics continued to settle permanently in the cities. In 1959–70 about one million Russians – engineers, scholars, scientists, functionaries, and pensioners – came to work or retire in Ukraine.

At the same time Ukrainians from the villages and small towns have continued to move to the cities in increasing numbers. The demand for labor in the cities is so great that government attempts at controlling the migration have been only partially successful. Competition for housing, services, and better jobs continues to be keen in the cities; but in contrast to the situation before the war, Ukrainians are now competing mainly against Russians and other Ukrainians rather than against Jews and Poles. Although

Ukrainians constitute a larger proportion of the urban population than before the war, the cities have become more Russified, owing to the strong Russian minority and to government policy. Most secondary schools and almost all postsecondary schools use Russian as the language of instruction. Russian prevails in all urban cultural and public institutions, government agencies, and on the streets of the city centers (except in the Western Ukrainian cities).

Distribution of urban population. The population growth of the cities and towns of the Ukrainian SSR is presented in table 2. In 1979 there were approximately 35 million urban dwellers (57 percent of the population) in all the Ukrainian ethnic territories. For the sake of comparison, one might note that the urban population constitutes 69 percent of the total population of the RSFSR, 55 percent in the Belorussian SSR, 39 percent in the Moldavian SSR, 70 percent in the Estonian SSR, 75 percent in France, and 90 percent in West Germany.

In 1982 there were 417 cities and 908 towns (smt) in the Ukrainian SSR; in 1959 there were 332 and 744 respectively. Two cities (Kiev and Sevastopol) are independent of oblast administration and 137 are independent of raion administration. There are 479 raion centers. Twenty-one cities were subdivided into 121 city raions.

The number of municipalities is tentative, however, because the criteria defining a city or town (smt) have changed. Since 1956 a municipality has been considered a city if it has a population over 10,000. A town (smt) must have a population of not less than 2,000, of which over 60 percent is not employed in agriculture. Exceptions, how-

TABLE 2
Urban population growth in the Ukrainian SSR

Year	Population (in millions)	Percentage of total population
1897	4.4	16.0
1913	6.8	19.4
1926	7.5	19.8
1940	13.6	33.6
1945	8.0	27.0

ever, do exist. The criteria in other parts of the USSR differ from those in Ukraine.

The size of municipalities in Ukraine and their total population in 1939, 1959, and 1979 are shown in table 3.

In 1926 only 5.5 percent of the entire population of the Ukrainian SSR and only 28 percent of the urban population lived in cities of over 100,000 inhabitants; in 1940 the figures were 14.5 percent and 44 percent; in 1959, 20 percent and 44 percent; and in 1979, 34 percent and 56 percent. An increasing proportion of the total population lives in cities with populations over 100,000. This is reflected in table 4.

The population growth of Ukraine's largest cities is represented in table 5. In fact, the larger cities have considerably more inhabitants than the figures indicate, for many neighboring municipalities (satellite cities) have merged with the larger cities to constitute one cultural and economic whole.

Commuting blue-collar and white-collar workers are an important part of the urban structure of Ukraine's large cities. Owing to the shortage of housing in the cities, the number of commuters from neighboring areas is constantly increasing, as in evident in table 6.

Counting the satellites, there are several large, supra-regional urban clusters in the Ukrainian SSR: three with populations of over 2 million each, three with populations of 1-2 million, five with populations of 0.5-1 million, and a number of smaller ones. Most of them are located in the industrial regions such as the Donets Basin and the Dnieper Industrial Region, while others have grown up around large cities like Kiev and Kharkiv. The larger urban clusters in 1979 were Kiev with 3.9 million inhabitants; Kharkiv with 2.1 million; Donetsk-Makiivka with 2.1 million; Dnipropetrovske-Dniprodzerzhynske with 1.9 million; Odessa with 1.3 million; Zaporizhia with 1

TABLE 4
Growth of cities with populations over 100,000, 1860-1979

Year	Number of cities	Total population (in millions)
1860	1	0.1
1897	5	1.1

TABLE 6
Increase in commuters to Ukrainian cities, 1960-75

City	Numbers of commuters		
	1960	1970	1975
Kiev	-	198,500	205,800
Kharkiv	82,000	148,600	157,000
Lviv	45,000	51,000	95,500
Odessa	20,000	35,000	62,700
Chernivtsi	17,400	33,500	46,800

million; Kryvyi Rih, Stakhanov-Komunarske, and Horlivka-Yenakiieve with 900,000 each; Kramatorske-Kostiantynivka with 800,000; and Lviv with 750,000.

Until the end of the 19th century the cities were generally distributed throughout Ukraine according to regional population density. The more important ones were conveniently located near the borders of various geographic regions. For this reason, until 1914 the Black Sea littoral region had the largest urban population and Odessa was the largest city. Today the distribution of the urban population is uneven: in the Donets Basin 93 percent of the population is urban; in the Dnieper Industrial Region, 84 percent; and in Kryvyi Rih, almost 90 percent. The lowest percentage of urban population is found in the western part of the forest-steppe: Ternopil oblast with 31.3 percent.

The 1970 census gives us some idea of the economic structure of Ukraine's cities. In 1970 most of the urban inhabitants - 60 percent - were employed in industry, construction, transportation, and communications; 4.2 percent in agriculture; 8.3 percent in trade and the food industry; 21.5 percent in non-manufacturing branches; and 6 percent in other fields. Although the figures are not strictly comparable, in 1926 32.5 percent of the urban population was engaged in industry, construction, transportation, and communications; 17 percent, in agriculture; and 7.4 percent, in trade and the food industry.

Ethnic composition. Ukrainian cities have long had an ethnically mixed population, although Ukrainians were in a majority until the 19th century. From the 13th century increasing numbers of Armenians and Germans settled in the cities of Ukraine; from the 14th century, Jews and Poles; and from the end of the 18th, Russians. The strength of the dominant nationalities - the Poles and the Russians - in the Ukrainian cities increased further through the assimilation of Ukrainians. For this reason,

TABLE 7
Ethnic composition of the urban population of the Ukrainian SSR, 1926–70

Nationality	1970 population	Percentage		
		1970	1959	1926
Ukrainians	16,164,000	63.0	61.5	41.3
Russians	7,712,000	30.0	29.9	22.2
Jews	764,000	2.9	4.2	24.4
Poles	163,000	0.6	0.9	6.5
Others	886,000	3.5	3.5	5.6
Total	25,689,000	100	100	100

TABLE 8
Ethnic composition of urban population according to language used

	1970 population	Percentage	
		1970	1959
Ukrainian	13,607,000	53.0	53.1
Russian	11,537,000	44.9	44.3
Yiddish	98,000	0.4	0.6
Polish	29,000	0.1	0.1
Other	424,000	1.6	1.9

until 1940 the cities in Western Ukraine had a mixed Polish-Jewish-Ukrainian character; in Right-Bank Ukraine and in the western steppe, a Russian-Jewish-Ukrainian-Polish character; in Left-Bank Ukraine, the eastern steppe, and in the Kuban, a Ukrainian-Russian character; in Bukovyna, a Jewish-German-Ukrainian-Rumanian character; and in Transcarpathia, a Jewish-Hungarian-Ukrainian (in the 1920s–30s, also Czech) character. The large cities in particular had a non-Ukrainian character. It should be noted that most Jews and many Ukrainians used Polish or Russian, the language of the dominant nationalities. The Ukrainians had much less economic power than cultural influence in the cities.

The ethnic composition of the urban population in the Ukrainian SSR according to the censuses of 1970, 1959, and 1926 is shown in table 7.

In 1970, 45.8 percent of all Ukrainians lived in the cities of Ukraine; in 1959 the figure was 36.8 percent; and in 1926, only 10 percent. Of all Russians in Ukraine in 1970, 84.5 percent lived in the cities; in 1959, 81 percent, and in 1926, 46 percent.

The ethnic composition of Ukraine's urban population according to the language most often used is somewhat different (see table 8). According to the 1970 census 13,308,000 (82.8 percent) of the 16,164,000 urban Ukrainians in Ukraine gave Ukrainian as their mother tongue; 1,454,000 (9.0 percent) said they could speak Ukrainian; and 1,332,000 (8.2 percent) said they did not know Ukrainian. Of Ukraine's urban population 77.2 percent spoke Russian and 62.2 percent spoke Ukrainian.

Although the proportion of Ukrainians in the cities has risen since the Second World War, their Ukrainian character has not been clearly manifested, and recently, in 1972–80, it has been sharply altered. The Party and the government take advantage of urban processes to Russify Ukraine. This is apparent from the fact that of 3,017,000

Ukrainians in Ukraine who gave Russian as their mother tongue in 1970, 2,771,000 were urban residents.

Mixed ethnic marriages are one of the main factors in the increase of Russification in the cities. In 1927, 18.6 percent of the marriages in Ukraine were mixed; in 1969 the figure rose to 35.3 percent. In 1960, 323 of every 1,000 children in Ukrainian cities came from mixed marriages. The Russification of Ukraine's cities is most strongly manifested in the sharp decrease in the number of Ukrainian schools in the cities and in the external features of the cities. Until 1972 names of streets and institutions, as well as store signs, were usually in Ukrainian. In 1975–8 all these names were transcribed into Russian; in exceptional cases bilingual signs appeared.

In Western Ukraine, Ukrainians constitute the largest percentage of the urban population and Russians the smallest, whereas before 1939 Ukrainians constituted barely one-third of the urban population. In 1970, for example, in Ternopil oblast Ukrainians accounted for 88.5 percent, and Russians for 9.8 percent, of the urban population.

The most Russified cities are in the Crimea, where Russians constitute 72.9 percent of the population; in the Donets Basin, where in Donetsk oblast Ukrainians constitute 50 percent and Russians 44.1 percent of the urban population; and in the Dnieper Industrial Region.

In table 9 Kiev and Lviv serve as an illustration of the changes in ethnic composition that the Ukrainian cities have undergone. The composition of Kiev by language differs somewhat: in 1970, 50.7 percent of its residents gave Ukrainian as their mother tongue, and 47.5 percent gave Russian; 65 percent spoke Ukrainian, and 63.4 percent spoke Russian. In Kharkiv, according to the 1959 census, there were 452,500 Ukrainians by nationality (48.4 percent of the population); 291,600 were Ukrainians by language (31.2 percent). There were 377,100 Russians by nationality (40.3 percent) and 628,000 Russians by language (67.2 percent).

City planning and appearance. The appearance of a city is influenced mainly by its relief, history, and economy. The natural relief determines the city's plan, particularly its street network. Among the best-situated cities are those on the steep, perpendicular banks of rivers (Kiev), in depressions (Kamianets-Podil'skiy), on hills (Lviv), on the southern Crimean and Black Sea–Caucasian coast, or in the foothills of the Carpathians and the Caucasus.

The historical past has left little trace on the appearance of Ukrainian cities, for most of them arose in modern times, while the old cities were destroyed in wars. Of the larger cities only the old city of Lviv (14th–16th century)

TABLE 9
Ethnic composition of Lviv and Kiev (percent)

	Kiev			Lviv*	
	1926	1959	1970	1931	1959

Jews	27.2	13.9	9.3	31.9	6.0
Poles	2.7	0.8	0.6	50.0	4.0
Other	3.9	2.2	2.4	1.8	3.0

*Figures are approximate.

has been preserved almost intact. Old sections have survived in such smaller cities as Kamianets-Podilskyi, Zamostia, and Zhovkva (now Nesterov). In other cities, including Kiev, only individual architectural monuments, mostly churches, remain from the past.

The cities of the former Hetman state (17th century), Slobidska Ukraine, the steppe region, and the Kuban (18th–19th century) were built mostly on a rectilinear plan. Their buildings are in one style, which was prescribed by the tsar's decree of 1768. The same is true of the newer sections of old cities, which were built in the latter half of the 19th century and at the beginning of the 20th. In all the large cities there was a marked contrast between the densely built-up central sections (covering 60–80 percent of the area), which have a modern appearance, and the neglected outskirts. Small towns usually differed little from villages in appearance, although they almost invariably had a central marketplace. The most neglected settlements were the workers' towns in the Donets and Kryvyi Rih basins. The Tatar towns of the Crimea were quite different in appearance from other cities in Ukraine.

During the First World War and the revolution the construction of new cities came to a halt. Then, until 1940, the housing industry could not keep up with the growth of the urban population, particularly in the Donets Basin and the Dnieper Industrial Region. In 1917 there was 7.1 sq m of living space per person in the city; by 1941 this had dropped to 4.5 sq m, even though the legal minimum established in 1939 was 8.6 sq m. City planning was inadequate. Many cities, particularly in the Donets Basin and the Dnieper Industrial Region, were developed in an unplanned way (see *Housing).

After the wartime destruction of the cities in 1941–4, housing regained its prewar level only in 1951. By 1978 the total amount of living space in Ukraine's cities and towns had increased to 13.2 sq m per person. Nevertheless, this figure was still below the legal minimum of 13.6 sq m. In Kiev 17 sq m per person were available (7.8 sq m in 1956), and in the oblast centers, 12.6 sq m (the corresponding figures for Moscow and the United States were 15.1 sq m and 16 sq m). Soviet figures include not only the area of private dwellings but all 'usable' space; therefore the figures do not reflect the true housing situation.

City development has improved since the war. Many cities – Sevastopol, Odessa, Kiev, Kharkiv, Poltava, Chernihiv, Ternopil – have been rebuilt according to new plans. New residential districts called microraiions (*mikroraiony*) have been built according to standard plans, with convenient layouts and abundant greenery. The quality of building materials has improved, and the buildings have a better appearance. In 1976, 62 percent of all urban housing was public.

In the older cities or the old sections of cities the main buildings are churches, former noble and burgher residences, markets, banks, theaters, and schools, built usually in the prevailing style of the period. In the newer cities or sections the main buildings are Party and government offices, public recreation facilities, cinemas, stores, hotels, schools, and institutions.

Political and cultural role. Although the cities of Ukraine had non-Ukrainian majorities and the Poles and Russians restricted Ukrainian life, the cities played an important role in Ukrainian political and cultural life from the mid-19th century. They were the centers of political movements, parties, and activities that also influenced

the surrounding towns and villages. The main cities of the historical regions – Kiev, Kharkiv, Lviv, Chernivtsi, Uzhhorod, Poltava, Chernihiv, Katerynoslav, Odessa, Katerynodar, Nizhen, Yelysavethrad, Lutske, Kholm, and Peremyshl – and the capitals of the states that ruled Ukraine served as primary catalysts in political and cultural life. In 1917–20 several large cities (Kiev, Lviv, Stanyslaviv, Kamianets-Podilskyi) were centers of Ukrainian statehood, while the smaller cities served as centers of local government.

Kharkiv, Kiev, Odessa, and Lviv and their universities have been important centers of learning since the 19th century. More recently, Chernivtsi, Dnipropetrovske, Uzhhorod, and Donetsk have also become university cities. Dozens of other cities have various higher educational institutions and research institutes. In the late 19th century Lviv became the home of the *Shevchenko Scientific Society. In 1907 the Ukrainian Scientific Society, and in 1918 the Ukrainian Academy of Sciences, were established in Kiev.

Today almost every large city has an institution of higher education. In 1977 there were 143 such institutions in 44 cities, with a total enrollment of 856,700 students. The most important academic centers are Kiev, Kharkiv, Odessa, Lviv, Dnipropetrovske, and Donetsk; in 1977 they had 60 percent of Ukraine's educational institutions and 50 percent of the students.

The cities have played an important role in the development of Ukrainian literature, theater, publishing, and art. Today there are 78 professional theaters (6 of them opera and ballet theaters), 44 theater and musical-comedy companies, and 28 children's and youth theaters in the major cities. There are also 157 museums (56 of them regional museums), 34 historical museums, and 6 literature and scholarship museums. The cities of Right-Bank Ukraine (Kiev, Kremianets, Zhytomyr) were once important centers of Polish and Jewish culture. Lviv was an important center of Polish culture, science, and education until 1939.

Urban economy. Water supply is an important factor in city growth. Most cities depend on artesian wells, but they also use rivers, reservoirs, ponds, and underground springs. In 1978, 60 percent of urban dwellings used gas for heating. In 1978, 2 cities – Kiev and Kharkiv – had subways, 25 cities had trolley-car lines, 38 had trolley-bus lines, and 390 had bus lines. Taxi services were available in 457 cities and towns. Telephone facilities remain inadequate: in 1977 there was an average of one telephone for every 12 people in Ukraine. (See *Urban economy, *Urban transit.)

Environmental pollution is a major problem in urban areas. In Kryvyi Rih and Voroshylovhrad, for example, the pollution index is often 10 times greater than the permissible level. Since 1975 steps have been taken to alleviate this problem. Much has been done to make the cities greener by increasing the amount of parkland, particularly in the industrial regions. In 1970–3 there were 540,000 ha of urban parkland.

Citizenship. In its modern sense, which became established after the French Revolution, the term means membership in a given state. Formerly members of various social categories were subjects of monarchs, as well as dependents of feudal lords (see *Feudalism and *Serfdom). Citizenship implies special obligations and rights for individuals in relation to the state that aliens or stateless persons lack. Under Russia and Austria-Hungary, Ukrainians were subjects of the tsar and kaiser respectively.

In the Ukrainian National Republic citizenship was first regulated by the law of 2–4 March 1918 passed by the Central Rada. Anyone who was born in Ukraine and resided there permanently was eligible for citizenship. The government could also grant citizenship to anyone who was not born in Ukraine but who had resided in Ukraine for at least three years. The UNR did not recognize dual citizenship. Under the Hetman government citizenship was regulated by the law of 2 July 1918: all citizens of the Russian Empire who lived in Ukraine and desired to be citizens of Ukraine could obtain citizenship. The Directory of the UNR reinstated the law of the Central Rada. Citizenship in the Western Province of the UNR was defined by the law of 8 April 1919: any

person who belonged to one of the communities (*hromady*) of the Western Province at the time of the law's proclamation was a citizen. Anyone who did not wish to be a citizen had to submit a petition to this effect and was then considered an alien.

Ukrainians in territories annexed by Poland, Czechoslovakia, and Rumania became citizens of these states on the basis of international agreements (the treaties of *Riga, *Saint-Germain, and Sèvres). The Ukrainians of eastern Galicia were not recognized according to international law as Polish citizens until 15 March 1923. In spite of this situation the Polish government made the same demands on them as on all its citizens (performance of military service, obligation to vote in elections). Some Ukrainians who were active in public life but who lived outside Poland after 1923 and failed to meet other requirements of the law (eg, by severing communications with the government for five years or by anti-Polish activity) were denied citizenship.

From 1919 to 1923 there was a specific Soviet Ukrainian citizenship, defined by the legislation of the Ukrainian SSR. All former citizens of the Ukrainian state or subjects of the Russian Empire who lived on Ukrainian territory were recognized as citizens of the Ukrainian SSR, unless they refused Soviet Ukrainian citizenship (decree of the Council of People's Commissars of 11 March 1919). Only those who were not of Ukrainian descent and who could become citizens of other states could refuse. Soviet Ukrainian citizenship was governed by the principle *jus soli* ('right of the soil'), while Soviet Russian citizenship was governed by the principle of *jus sanguinis* ('right of blood'). Children who were born in the Ukrainian SSR of alien parents were recognized as Ukrainian citizens, unless within a year after attaining maturity they declared that they were assuming their parents' citizenship (decree of 28 March 1922). Ukrainian citizenship could be obtained through *naturalization (decree on aliens of 28 March 1922) or through *option, according to agreements between Ukraine and the Baltic countries and Poland. Anyone who spent over five years abroad without a Soviet passport, served voluntarily in a 'counter-revolutionary army,' left the country without permission of the Soviet government (*émigrés*), or failed to make use of his right of option lost his/her citizenship.

When the USSR was formed, dual citizenship was introduced: an all-Union and a republican citizenship. Every citizen of the Ukrainian SSR is a citizen of the USSR. The adoption and loss of Soviet Ukrainian citizenship was governed later by the Administrative Code of the Ukrainian SSR of 1927 (sec 7, arts 231–46). In Ukraine only those who are not Soviet citizens are aliens. Since 1931 only Union citizenship has been recognized abroad (formerly Ukrainian citizenship was also marked on passports), and republic citizenship has only an internal use. Eventually the USSR law of 19 August 1938 established a single Union citizenship: the citizens of one republic automatically enjoyed equal rights in other republics. The renunciation or loss of Soviet citizenship comes under the exclusive jurisdiction of the Supreme Soviet of the USSR. Until 1938 all residents of the Soviet Union who could not prove that they were citizens of another country were considered to be Soviet citizens. The new law introduced the category of stateless person and made the adoption of Soviet citizenship no longer automatic, but a regulated process. On naturalization one

acquires not only an all-Union citizenship, but also a republican citizenship, which is conferred by the Supreme Soviet of the republic. The residents of annexed territories have received Soviet citizenship collectively, eg, those of Bessarabia and Bukovyna were made Soviet citizens by the decree of the Presidium of the Supreme Soviet of the USSR of 8 March 1941.

On 1 December 1978 the Supreme Soviet of the USSR adopted new citizenship legislation, which came into force on 1 July 1979. This legislation does not greatly alter the law of 1938; it merely restates its principles and adds some details. The principle of a single Soviet citizenship is asserted, and republican citizenship is interpreted as a designation of residency. Today the Ukrainian SSR does not have its own legislation on citizenship. Anyone who was a Soviet citizen on 1 December 1978 or has since become a citizen in accordance with the new law is recognized as a citizen of the USSR. Permanent residency abroad does not negate Soviet citizenship. One cannot unilaterally renounce Soviet citizenship. The USSR does not recognize dual citizenship, hence the naturalization of Soviet citizens in other countries is invalid from the Soviet viewpoint. The children of Soviet citizens, regardless of their birthplace, are held to be Soviet citizens. Only children born outside the Soviet Union who have one non-Soviet parent do not automatically become Soviet citizens, but need the consent of both parents. In general the law restricts the child's possibilities of becoming a citizen of a different country; for example, to those circumstances in which the parents renounce their Soviet citizenship or the child is adopted. Basically the Soviet law on citizenship emphasizes two principles – 'the right of the land' and the 'right of blood' – and places state interests above individual interests. It restricts and even completely negates the freedom to choose one's citizenship.

Applications for Soviet citizenship and revocations of citizenship are decided by the Presidium of the Supreme Soviet of the USSR, although theoretically the law gives the republican presidiums the authority to rule on such matters. Requests to annul one's Soviet citizenship are also ruled on by the Presidium of the Supreme Soviet, and the law erects various obstacles.

In the 1970s many Ukrainian dissidents and political prisoners renounced their Soviet citizenship, but their declarations had no effect. Yet the Soviet government arbitrarily revoked the citizenship of some dissidents – P. Hryhorenko, L. Pliushch, V. Moroz, G. Vins, etc – after it provided them with exit visas. In accordance with the latest law the Soviet government claims that thousands of Ukrainians in the West who are stateless or naturalized citizens or who were born abroad are Soviet citizens. This law has upset Ukrainians outside Ukraine and has led to protests.

The governments of some Western countries in which many former Soviet citizens have become naturalized have declared that they do not recognize certain provisions of the 1978 Soviet citizenship law.

City court (*grodskyi sud, starostynskyi sud*). Name of the lowest state courts dealing with serious crimes in medieval Poland. In 1434 city courts were introduced in Ukrainian territories under Polish rule. For peasants, Jews, Armenians, and certain categories of burghers the city courts served as courts of appeal. Gradually they replaced the *land (nobility) courts. The county *starosta* (administrator) presided over the court and was assisted by the county secretary, who kept a register not only of the court's decisions but also of contracts and declarations of private individuals, thus giving them legal force. City courts were called *castle courts in the Grand Duchy of Lithuania.

City school (*horodske uchylshche*). A six-year elementary school established in the Russian Empire in 1872. Replacing the *county and *parochial schools, city schools taught the children of small merchants, tradesmen, and government employees. Their program did not prepare pupils to continue their education at gymnasiums or technical schools. The teachers were trained at special institutes (the first institute of this kind in Ukraine was opened in Hlukhiv in 1874). In 1912 the city schools were replaced by *upper elementary schools.

Ciuciura, Theodore [Cjucjura, Teodor], b 10 January 1919 in Kubaky, Kosiv county, Galicia. Political scientist, full member of the Shevchenko Scientific Society. Ciuciura studied law and public administration at the universities of Lviv and Munich and at Columbia University (PHD, 1953) in New York. Since 1962 he has been a professor of political science at St Mary's University in Halifax, Canada. He is the author of *Lenin's Idea of a Multinational Commonwealth* (1963) and of articles on Ukraine's role in the formation of the USSR, on Ukrainian deputies in the Austrian parliament and the Bukovynian and Galician diets, and on Soviet dissent and law.

Civic organizations. Public associations organized for certain more or less permanent goals (political, economic, cultural, religious, athletic, etc) which are defined in their statutes. Civic organizations spread rapidly through Europe and the Western Hemisphere in the 19th century as a result of decreasing state control over society and the evolution of pluralistic democracy.

The characteristic feature of Ukrainian civic organizations before the revolution of 1917 was their national aspect. Their purpose was to nurture a Ukrainian cultural, economic, and political life that would be independent of the state and of other nationalities and to resist the denationalizing policies of the state. In Ukrainian territories under Austria, Poland, Rumania, and Czechoslovakia the ex post facto system of establishing associations was in force. In Russia prior permission from the government was usually required.

After the revolution a distinction was made between civic organizations whose purpose was to make a profit and those with other purposes. In the Ukrainian SSR, organizations of the first type were governed by the Civil Code of 1922. With time they became a part of the state economic complex. *Trade unions and co-operative organizations, including the *Committees of Poor Peasants, had a special status. Their activities conformed to the policies of the Party. The trade unions in the Ukrainian SSR were formally registered in all-Union organizations,

while co-operative organizations came under gubernial co-operative committees of the gubernial executive committees. If a co-operative association's activities extended to two or more gubernias, then the association came under the Main Co-operative Committee of the Council of People's Commissars. All other civic organizations came under what was called the concession system, which meant that before a civic organization could be formed registration was necessary.

Interdepartmental commissions for the registration of societies and associations and the Central Commission of the NKVD registered organizations. The Central Commission consisted of representatives of the NKVD, the People's Commissariat of Justice, and the Southern Bureau of the Central Council of Trade Unions. The 1 February 1922 resolution of the All-Ukrainian Central Executive Committee and a corresponding instruction of the NKVD and the People's Commissariat of Justice of the Ukrainian SSR prescribed in detail the procedures for the registration and monitoring of associations. No civic organization whose activity contradicted the constitution and Soviet law was registered. Organizations whose purpose 'contradicted the principles of the Constitution and the Declaration of the Rights of the Working People' and which 'incited inter-national discord and hostility' were particularly prohibited. These articles were included in 1926 in the Administrative Code of the Ukrainian SSR (chapter 9 - 'On the Regulations for the Organization and Functioning of Associations, Unions, Clubs, Conferences, and Assemblies'; chap 10 - 'On the Regulations Governing Cults'). They effectively placed a ban on any organizations defending the national interests of the Ukrainian people.

During the First Five-Year Plan, the Central Committee (CC) of the CPSU unified the civic organizations. The CC resolution and similar resolutions of the federated republics 'On the Confirmation of the Decision about Voluntary Organizations and Associations' emphasized the participation of civic organizations in the building of socialism in the USSR.

These aims could be realized only if these organizations were led by the Party. This principle was firmly established by art 126 of the Constitution of the USSR of 1936. Organizations that do not come under the direction of the Party (eg, religious communities) are not considered to be civic organizations in the USSR. Thus, the Party has a monopoly on creating civic organizations and on supervising them. These associations are not voluntary in the sense of being freely organized and autonomous in their activities. The position of the Party as a civic organization of a higher type was confirmed by the 1978 Constitution of the USSR: 'The Communist Party of the Soviet Union is the leading and directing force of Soviet society, the nucleus of its political system, its state and civic organizations' (art 6). A special position in the system of civic organizations is held by the so-called mass organizations: professional trade unions, co-operative organizations (collective farms), and the Communist Youth League. Furthermore, there are all kinds of cultural, technical, and sports clubs, and other associations. The principles of democratic centralism and Party leadership are normative for all of them. The Party exercises its leadership over civic organizations through what are called Party groups, that is, through an active nucleus of Party members who belong to a given organization. They are responsible for

the political correctness of the organization's activities and for selecting the governing bodies of a given organization.

Civil Code of the Ukrainian SSR (Tsyvilnyi kodeks URSR). Systematic source of civil law in Soviet Ukraine, which regulates property and non-property relations between individuals. The first civil code was enacted by the All-Ukrainian Central Executive Committee on 16 December 1922 (effective 1 February 1923) and followed the principles of the Civil Code of the RSFSR of 1922. The civil code now in force was enacted by the Supreme Soviet of the Ukrainian SSR on 18 July 1963 (effective 1 January 1964, with later amendments). Pursuant to the provisions of the USSR constitution, the Civil Code of the Ukrainian SSR was based fundamentally on the 'Foundations of Civil Legislation of the USSR and the Constituent Republics,' enacted by the Supreme Soviet of the USSR on 8 December 1961. The civil code has 8 sections, divided into 42 chapters that contain 572 articles altogether. Section I states the objectives of the code and the legal status of citizens and juridical persons; it also deals with contracts, limitation of actions, and so on. Section II covers property rights (state property, co-operative and collective-farm property, public and private property) and their protection. Section III deals with the right, guarantee, and types of obligations. Section IV takes up authors' rights. Section V deals with rights to discoveries, section VI with rights to inventions, section VII with inheritance, and section VIII with the status and legal rights of foreign citizens and stateless persons, and with the application of foreign laws and international covenants. (See also *Civil law.)

Yu. Starosolsky

Civil law. In Kievan Rus' custom was the basic source of civil law. The provisions of civil law were compiled in the 11th and 12th century in **Ruskaia Pravda* (Rus' Law), but some were contained in other sources as well (administrative, ecclesiastical, etc).

Property laws regarding movables, including horses, slaves, etc, were based on actual possession; land ownership was not clearly defined, but some property rights were mentioned (eg, possession of bees' nests gave the owner certain rights to lands that were called 'honey lands'). Civil obligations could arise only between persons unrestricted in their legal capacity; sales and purchases, loans, leases, and mortgages were mentioned as contracts. The basic institution of *family law was marriage, which in the pre-Christian period was performed by stealing of the bride, purchase, or 'home-bringing.' Polygamy was practiced for some time, even after monogamy was introduced by the church. Divorce took the form of a decree by an ecclesiastical or secular court, or a special bill served on the wife by the husband. *Inheritance law was already operative, only family members being entitled to the estate, both by testament and by operation of the law.

During the Lithuanian-Ruthenian period old custom-

any laws, especially those specified in *Ruskaia Pravda*, remained in force, but new laws, primarily those of the *Lithuanian Statute, were also introduced. The scope of property rights, especially with regard to real property, was broadened. The laws were clearer in regard to the legal capacity of the different social categories of people, there being a set of civil rights peculiar to each estate. There was only a gradual acceptance of the nobles' property-inheritance rights. The dominant form was landholding under a contract or grant. Peasants initially enjoyed full property rights to the land they tilled but were later deprived of those rights by the third Lithuanian Statute (1588). Mortgage, fiduciary, and 'pignus' forms of pledge were in effect. The development of mortgage law provided more protection for the debtor.

In the area of obligations, contracts of sale and purchase could be concluded by people of all social estates. After the restrictions of 1588 the peasants could alienate the land they tilled only with the consent of their masters. Loans, leases, and barter became legal practices. Marriage became both a contract and a sacrament. Monogamy replaced polygamy almost completely, the latter being punishable by death. Divorces and annulments were within the jurisdiction of the church courts. All children born out of wedlock (eg, children of concubine slaves) were considered illegitimate. Custody was regulated by law. Inheritance law became more complex; the testator was free to select a beneficiary for chattels and real property that had been personally acquired, but property inherited from parents could not be freely bequeathed with disregard for other family members.

During the period of the Hetman state civil law was regulated by custom, the Lithuanian Statute, the *Code of Laws of 1743, and, in certain areas, by *Magdeburg law. In the field of property rights, in addition to the rights of the nobility, the newly formed Cossack estate retained permanent property rights over their landholdings, with unlimited right of alienation. Peasants on the Cossack land-holdings enjoyed their rights to the land throughout the second half of the 17th century. Peasants of the so-called free military estates, who had to perform certain duties for the state, enjoyed the right to dispose of their real property for a much longer time. Most provisions of the Lithuanian Statute concerning family and inheritance law remained unchanged.

On the territory of the Hetman state under Russian domination, the Lithuanian Statute and other sources of law were later abolished, and Russian laws were introduced in the process of Russification. They remained in force until they were replaced by Soviet laws after the First World War.

In Western Ukraine, Polish laws (along with some German and canon laws, etc) were introduced in the 14th century and remained in force until the partition of Poland in 1772. Civil laws in the Ukrainian territories under Austria (the first Austrian Civil Code of 1811) were modern and relatively progressive, and they remained in effect until they were partially replaced by the successor states after the First World War.

The Supreme Soviet of the USSR adopted the 'Fundamental Principles of Civil Legislation for All Constituent Republics' on 8 December 1961. The Supreme Soviet of the Ukrainian SSR adopted the present *Civil Code of the Ukrainian SSR on 18 July 1963. Since the civil code incorporates the Union 'fundamentals,' it can hardly be

regarded a free creation of the Soviet Ukrainian government.

The code regulates relations between persons and legal entities. It grants legal rights and privileges to all citizens of the USSR and full legal responsibility to persons over 18 years of age. Because of the Soviet social and economic system, the civil code deals extensively with legal entities. Most of them are state organizations through which the state enters into civil relations. The legal capacity of such entities (enterprises, collective farms, co-operatives, and mass organizations) is determined by law and by the organizations' charters. The code specifies four types of property: state property, co-operative property, property of mass (public) organizations, and personal property. The first three constitute 'socialist property.' State property includes the land, natural resources, water, forests, industrial plants, mines, electric-power stations, means of transportation and communication, banks, and state-administered housing projects. It can be assigned for perpetual use to co-operatives, mass organizations, and, sometimes, to private persons. Only certain types of property can be sold to citizens, by special legislation. Private property of citizens is recognized by the code. It is considered as 'derivative' from socialist property, and the right to exercise ownership is limited. Only property that 'serves to satisfy their material and cultural needs' (including earnings and savings) can be owned by citizens; it cannot be used for purposes of 'exploitation' of other people. The code limits personal ownership to one house or apartment and to a specified living area (60 sq m per family).

Legal relations that arise between private persons do not differ in substance from those in non-Communist countries. Legal relations between socialist organizations (eg, state enterprises or collective farms) arise from acts of economic planning, which usually obligate these organizations to conclude pertinent contracts. The contractual autonomy of such organizations is restricted to secondary details (see *Contract).

The civil code provides for the protection of the rights of authors, discoverers, and inventors but grants the state the right to utilize an invention for a determined fee. Inheritance is permitted in regard to private property. Citizens may bequeath their property to any person or legal entity. The law entitles two groups of heirs in case of intestate succession: (1) children, spouses, and parents and (2) brothers and sisters. However, regardless of any provision in a will, minor and incapacitated descendants retain the right to a certain portion of the estate.

Provisions concerning the family are contained in the separate Code Concerning Marriage and Family of the Ukrainian SSR of 20 June 1969. The objective of the code is the strengthening of the Soviet family on the basis of the 'principles of Soviet morality'; it postulates 'Communist upbringing' of children as the obligation of the family. Parents may be deprived of their parental rights if they fail to fulfill their child-rearing obligations.

The equality of both spouses is assured in all respects. Marriage (registration by the civil registrar's office) is the basis of family rights and obligations. A marriage can be terminated by annulment or by divorce through a people's court. The code establishes the rights and duties of parents and children. Children born out of wedlock, with paternity established by joint parental application or court decision, have the rights and duties of legitimate

children. Adoption is permitted and regulated by the code.

Civil procedure. In Kievan Rus' the rules of court procedure were included in the material law. The process had, by that time, achieved a public character; the trial was open and oral. As a rule, court action was initiated by the injured party, but sometimes it was effected on the basis of mutual agreement of both parties. The decision was rendered on the evidence presented at the trial.

During the Lithuanian-Ruthenian period court procedure became increasingly public. It aimed at 'establishing justice.' The trial, during which evidence was evaluated, was open, but the verdict was reached at a closed session of the court. An appeal was admissible to a higher court.

In the Hetman state, under Russian influence, the procedure became more formal, mainly because the judicial and administrative functions were united in the hands of the Cossack *starshyna*. The Zaporozhian Sich, however, retained a procedure that was more liberal and democratic, less formalistic, and more public; often the Cossacks themselves participated in the execution of sentences.

On the Ukrainian territory that came under Russian domination, the traditions of the civil procedure according to the *Lithuanian Statute were soon replaced by strict Russian laws. The new Code of Civil Procedure of 1864 was based on French models and included the 'dispositive power' of the plaintiff to file or withdraw a suit and an open trial and free evaluation of evidence. Procedural (formal) law was separated from material law.

Austrian laws were introduced after Austria annexed the Western Ukrainian provinces in 1772. Court procedure developed under the influence of West European ideas, as expressed in the Code of 1895. It was based on the principles of an open and oral trial and the 'dispositive power' of the plaintiff and provided for three court instances with the right of appeal to the court of a higher instance and revision by the supreme court.

During the period of Ukrainian independence (1917-20) the procedural rules of former occupying countries - Russia and Austria - continued in force, with necessary amendments. In Western Ukraine, again under Polish domination (1919-39), the rules of civil procedure of Russia and Austria remained in force until 1930, when a new code, based on modern European principles, was enacted.

In the Ukrainian sssr the laws of the Russian sfsr were imposed as models, beginning with the Russian Decree on Courts of 24 November 1917, which declared void former tsarist laws. Accordingly, the decree of the People's Secretariat of the Ukrainian sssr of 17 January 1918 on 'people's courts' and the decree of the Council of People's Commissars of the Ukrainian sssr of 14 February 1919 on 'People's courts and revolutionary tribunals' laid the foundation for the new court procedures. They were

followed by the civil procedure codes of 1924 and 1929. The present code was enacted by the Supreme Soviet of the Ukrainian sssr on 18 July 1963, in compliance with the Principles of Civil Procedure of the ussr and the Constituent Republics that had been approved by the Supreme Soviet of the ussr in 1961.

The code regulates court procedure in cases arising from civil, family, labor, or collective-farm relations. It contains such items as general provisions, parties to the litigation, procedure in the court of the first instance, procedure in the courts of appeal, execution of court decisions, and international procedural questions. The code provides that the *people's court has general, initial jurisdiction but allows higher courts to take over the proceedings in every case. It also stresses the public interest in civil cases, assuming that a violation of private rights also violates state interest. Therefore, although the plaintiff has the 'dispositive power' to file a court suit or to withdraw it at will, the public prosecutor, acting for the state, has the power, if he/she feels that the interest of the state warrants it, to submit a civil case between private parties to the court, to enter as a third party into a civil suit at any stage, and even to 'protest' a technically final judgment. The court also has the right to adjudicate the claims of the parties independently. The decision of the court may be protested or appealed. A higher court, by an action called 'cassation,' may annul, reverse, or modify the decision of a lower court. (See also *Court system.)

Yu. Starosolsky

Civil Procedure Code of the Ukrainian SSR (Tsyvilnyi protsesualnyi kodeks uksr). A systematic source of the laws of civil procedure in Soviet Ukraine. The first civil procedure code was enacted by the All-Ukrainian Central Executive Committee on 30 July 1924 (effective 31 October 1924). A revised code took force on 1 December 1929. The present code was enacted by the Supreme Soviet of the Ukrainian sssr on 18 July 1963 (effective 1 January 1964). Pursuant to the provisions of the ussr constitution, the Ukrainian code is based on the Principles of Civil Procedure of the ussr and the Constituent Republics enacted by the Supreme Soviet of the ussr on 8 December 1961. The code contains six parts, with 428 articles. Part I deals with the objectives of the code, basic principles of the process, jurisdiction, composition, and mechanisms of the civil court, evidence and its evaluation, summonses, etc. Part II deals with the rights and duties of participants in a trial. Part III regulates the trial procedure in the first instance. Part IV covers the court of appeal, cassation, and supervision. Part V deals with the execution of court decisions, and part VI, the litigation rights of foreign citizens and organizations, members of diplomatic corps, and stateless persons. (See *Civil procedure.)

 Yu. Starosolsky

Civil rights. Liberties granted by a state to its inhabitants that usually are guaranteed by the constitution. Before the revolution civil rights on Ukrainian territories were defined by the legislation of those foreign states that ruled Ukraine. In the Russian Empire civil rights were

very limited. In Austria-Hungary after 1848, and particularly from 1861, the principal individual and political freedoms were recognized, but the principles of universality and equality were not fully implemented.

The *Constitution of the UNR, adopted on 29 April 1918, guaranteed the following individual freedoms: inviolability of the person and his/her home (excluding sentenced criminals), privacy of correspondence, and freedom of residency. It also guaranteed the following political rights: the right to direct and indirect participation in elections, freedom of speech, freedom of the press, freedom of conscience, freedom of assembly, and the right to strike. All UNR citizens over 20 years of age, regardless of sex, enjoyed these rights fully, while all residents of the UNR possessed most of these rights. The temporary constitution of the Hetman government preserved in essence the individual and political freedoms, adding to them a guarantee of private property. The government permitted political opposition. Under the Directory of the UNR the basic civil liberties were secure in spite of the state of war. The same was true in the Western Province of the UNR.

Civil rights are formally established in the *Constitution of the Ukrainian SSR. At first only the 'toiling elements' possessed these rights, but since 1936 all citizens have done so. The fundamental rights of a citizen include the right to work, leisure, education, and old-age security; inviolability of the person and his/her home; and the political rights of free speech, press, association, and demonstration. However, all these rights, which were set forth in the 1937 Constitution of the Ukrainian SSR (arts 98–109), have usually had only a theoretical and propagandistic value.

The new constitutions of the USSR (1977) and of the Ukrainian SSR (1978) deal with civil rights at greater length and in more detail (part II, 'The State and the Individual,' chaps 5–6, arts 31–67, of the Ukrainian constitution). The two constitutions are identical on this subject. Prompted by international declarations and treaties to which the USSR and the Ukrainian SSR are signatories and by the CPSU program of 1961, the framers of the new constitutions have added certain rights that did not appear in the previous constitutions: the right to living quarters, participation in government and community affairs, enjoyment of culture, privacy of correspondence, legal defense, grievances against officials, proposals to and criticism of the government, the raising of a family, freedom of scientific and scholarly research, and artistic creativity. The article on the right to health protection has been supplemented. Freedom of conscience is interpreted as freedom of religious worship and is treated on a par with the right to disseminate atheistic propaganda, while excluding the right to engage in religious propaganda (art 50).

Political rights such as freedom of speech, the press, association, and assembly (art 48) are poorly articulated and dismissed with generalities. The enjoyment of civil rights and liberties is subordinated to 'the higher interests of society and the state, the rights of other citizens ...,' that is, these rights exist on paper but are not enjoyed in practice.

The new constitution sets forth the duties of the citizen as well as his/her rights: the duty to work, to protect socialist property, to defend the interests of the Soviet state, to serve in the armed forces, to promote 'friendship

among nations,' to inculcate Soviet patriotism in children, and to protect the environment and historical monuments.

The discrepancy between Soviet theory and practice has prompted many Soviet citizens, including Ukrainians, to struggle for the full implementation of the civil rights declared in the constitution and in international accords. Although this movement has attracted much attention outside the Soviet Union, it has not protected its members from being severely persecuted by the Soviet government. (See *Dissident movement.)

V. Markus

Clan (*rid*). A prehistoric and early historic social grouping that claimed descent from a common ancestor. A clan received new blood through exogamous marriages, occasional adoptions, and the liberation of slaves. According to some scholars clans were originally headed by women – the founders of the line (matriarchy) – although the real leaders were elected chiefs, usually the closest relatives of the founders. When the functions of the clan became more complex, men became heads of clans (patriarchy). A clan settled in one locality and held property and land in common. Together the clan supported its members by cultivating the land, raising livestock, hunting animals, and fishing. Most of the tools and implements were manufactured in the closed circle of the clan. Besides economic functions the clan also performed certain social functions, such as providing protection to its members against strangers and maintaining harmony among the members. Growth in clan size and economic changes brought about the gradual separation of families from the clan without, however, the severance of all links with it. The sites that have been uncovered by archeologists could accommodate only single families, but the number of sites on the territory of a clan increased greatly. Exogamous marriage demanded close co-operation among several clans that were linked with each other by family ties. Neighboring clans that were connected not only by blood ties but also by a common language or dialect, religious cult, and work formed tribes.

There is no doubt about the existence of clans in Ukraine in prehistoric times, but there is very little information about clans in the early historic period of Ukraine. The Primary Chronicle, describing the distribution of Ukrainian tribes, states: 'The Polonians lived apart and governed their clans, for thus far they were brethren, and each one lived with his clan on his own lands, ruling over his clan.'

Archeologists believe that the fortified settlement of Monastyryshche (8th–10th century) near Romen, which contained 20–25 clay huts for 70–80 individuals, is an example of a patriarchal settlement. Historians are divided into two groups on the question of clans in Kievan Rus': one claims that the clans continued to play a role as a social and economic entity in the early history of Ukraine, while the other (the larger group) asserts that by then clans were extinct. The term *rid* was applied to the extended family, which included the father, mother, children, and their closest relatives.

Certain characteristics of the clan as an association of several related families with common property and one ruling elder survived in the homesteads (*dvoryshcha*) of the 14th–16th century (and of the early 20th century in the Boiko region), which consisted of 40–50 individuals who were related either by blood or by adoption.

The traditions of clan solidarity are evident in Ukrainian folk customs, particularly in marriage customs; for example, the negotiations between the marriage brokers representing the two families, the participation of close and distant relatives and even of the neighbors or the whole village (the clan) in the wedding, the obligatory division of the wedding bread (*korovai*) among the wedding guests, and the delivery of the bread to absent members of the family. The importance, honor, and reputation of the *clan* (family in the broadest sense) are often emphasized in folk songs and proverbs ('Anyone who renounces his clan shall be renounced by it,' etc).

The concept of clan was used in the past in a wide sense. The phrase 'from the Rus' clan,' which was used in the treaties of Oleh and Ihor and appears in the chronicles, designated the Kievan state. The saying 'the Cossack clan shall never die out' referred not only to the Cossack estate but to the Ukrainian nation of the Cossack period. In recent times the term *rid* has been used usually to refer to the immediate family – parents, children, brothers, and sisters. But the term has been used to refer to distant relatives as well, and even to a tribal or national grouping.

B. Kravtsiv, M. Zhdan

Clarke, Edward Daniel, b 5 June 1769, in Willingdon, Sussex, England, d 9 March 1822 in London. English mineralogist, collector, and traveler; professor at Cambridge University. In his book *Travels in Russia, Tartary and Turkey* (1839), Clarke described his travels in Eastern Europe and the Near East, especially his stay in eastern and southern Ukraine. He presented interesting data on the life of the peasantry, as well as on the Black Sea and Kuban Cossacks.

Class. A stratum of people in a given society with approximately the same economic, legal, political, and cultural status. The concept of class is a modern sociological concept that is applied to various groups of the population in today's highly complex social structure. There are different sociological theories and definitions of class. Non-Marxist sociologists and political scientists point to historical, cultural, ethno-religious, legal, vocational, and other aspects of social differentiation besides the important economic (property, income, economic function) and political (role and aspirations) aspects. *Estates have been replaced by classes as the basic social groupings.

In Europe modern classes arose towards the end of the 18th century, and their development was greatly accelerated by the French and industrial revolutions. The capitalist system, as distinct from *feudalism, absolutism, and mercantilism, was built on the class system (see *Capitalism). According to Marxist theory, the concepts of class and class struggle are indispensable for an understanding of history and for the conducting of an effective political struggle: the class struggle is the moving force of history, and the working class (proletariat) is the only revolutionary agent capable of creating a new political system – the dictatorship of the proletariat – and a new egalitarian, classless, society free of individual exploitation. Class membership, according to Marxism, is defined by one's relation to the means of production. Classes emerged with the social division of labor, private ownership, and exchange of commodities, when one

group began to appropriate the labor of others. The primitive communal society was classless. In Marx's words, 'the history of all societies until now has been the history of class struggle' (*Communist Manifesto*). (See also *Marxism.)

In Ukraine the development of classes came late because of the endurance of the estate system. Vestiges of the estate order remained in the Russian Empire, including Russian-ruled Ukraine, until the 1917 Revolution. Yet, a class structure with an upper class (*nobility, landowners, capitalists), middle class (*burghers, *merchants, tradesmen, and civil servants), *peasants (rich, middle, and landless) and *working class (skilled and unskilled) emerged in the Russian Empire in the mid-19th century. As the ranks of industrial workers increased and after the serfs were emancipated, the political role of the masses grew. Gradually the majority of the population increased its demands to encompass the political rights and economic advantages enjoyed by the minority. Both the 1905 and the 1917 revolutions in Russia aimed at changing class relations and the social structure.

The Ukrainian revolution of 1917–20 had not only a national-political, but also a class-social, nature. While the peasantry played an important role in it, the Ukrainian working class played a lesser role. The *intelligentsia, a new social group that was the most active force in the national revolution, tried to subdue class conflicts and to eliminate economic differences between the classes (the UNR's progressive labor legislation, agrarian reforms, etc.). Certain leaders of the Ukrainian national movement (eg, M. Hrushevsky) and the majority of politically active Ukrainians of every class held the view that the Ukrainian nation was 'bourgeois-free.' During the period of the revolution and Ukrainian independence the national struggle against Russia and other foreign powers, as well as the existence of privileged non-Ukrainian classes, added to the complexity of class relations in Ukraine. Hence, even the objective contradictions in class interests were often subordinated to national interests and the goal of an independent state in the course of the struggle. Class conflict was greatest in the cities and industrial regions, where the workers were the most revolutionary force. The majority of workers and of the non-Ukrainian urban middle class supported the champions of a foreign power – the Russian Bolsheviks or the Russian Whites. Consequently class conflict and social unrest in Ukraine during 1917–20 also had a national dimension, which manifested itself in the struggle of the Ukrainian peasantry against the mostly non-Ukrainian landowners and of the Ukrainian national movement, which had its base in the peasantry, against the cities, which were dominated by a middle class and workers who were non-Ukrainian.

Several Ukrainian parties of this period had a class character: the *Ukrainian Party of Socialist Revolutionaries was a peasants' party, the *Ukrainian Social Democratic Workers' party defended the interests of the workers, and the *Ukrainian Democratic Agrarian party represented the landowners and rich farmers. However, the leading role in these parties was played by a nationally conscious intelligentsia of varied class origin. The parties of the national minorities were also usually class-based, but they also did not relinquish their national character. The Ukrainian parties in Western Ukraine in 1918–20 and then under Polish rule were only partly class-based: the *Ukrainian Social Democratic party

claimed to represent the small Ukrainian working class, while the *Ukrainian Radical party represented mostly the peasantry. The most powerful legal party – the *Ukrainian National Democratic Alliance (UNDO) – and later the influential underground *Organization of Ukrainian Nationalists (OUN) recruited their members and supporters from various classes. In the 1930s the OUN advocated M. Stsiborsky's doctrine of 'natiocracy' (*natsiokratia*) to counteract conflicting class interests and antagonisms.

V. *Lypynsky attempted to integrate the traditional concept of social estates with the modern concept of class. In his view classes were natural population strata tied to the economic-productive and political-defensive interests of the nation, while the traditional groups – the nobility, landowners, manufacturers, and merchants (who did not have to be ethnic Ukrainians but only residents of Ukraine) along with the farmers, the largest Ukrainian class – had the best-developed political instinct and the highest moral authority for state building. He considered that power in the Ukrainian state must be rooted in this 'national aristocracy.' The political system based on this elite would be a 'classocracy' (*kliasokratia*, a term coined by M. Kochubei) in the form of a hereditary monarchy. For Lypynsky the intelligentsia could either be a part of the productive classes or be a *déclassé* group and hence unable to create a state. Under the cover of liberalism and democracy the intelligentsia only sowed disorder in state affairs. The working class, according to Lypynsky, could play a constructive role in political life, but having been demoralized under the influence of the socialist intelligentsia and being ethnically the least Ukrainian class, it could not at that point make a positive contribution to the building of the Ukrainian state.

Ukrainian Marxists have contributed little that is original to the study of classes in Ukraine: the social democrats (M. Porsh, V. Levynsky) and the Ukrainian national Communists (V. Shakhrai, S. Mazlakh) emphasized the foreign character of the ruling classes and, while admitting that the peasantry was the source and principal agent of the national movement, evaluated positively the role played by the Ukrainian intelligentsia and petite bourgeoisie in the struggle for national independence. This position was contradicted by the Bolshevik interpretation of class and national relations in Ukraine. In practice and theory the Bolsheviks stressed the role of the working class. The peasants, for example, did not receive fair representation in the soviets.

In the 1920s certain Russian Bolsheviks in Ukraine (D. Lebed for example) proposed the class-based theory of the 'struggle between two cultures' – the Ukrainian (peasant) culture and the Russian (proletarian and urban) culture – and predicted the inevitable victory of the latter, which would also solve the Ukrainian national question. When Ukrainian national Communists opposed this theory, the Communist party seemingly backed away from it. Yet, the Soviet policy of the 'rapprochement of nations' and the creation of a 'Soviet people' that has been promulgated since the 1960s is in fact an extension of this theory.

The goal of government policy in the USSR and in other Communist countries is the creation of a classless society through the dictatorship of the proletariat (the liquidation of 'exploiting classes') and 'Communist construction' (the voluntaristic creation of all the preconditions – economic,

institutional, legal, and ideological – for the disappearance of class differences). Although the existence of a classless society in the USSR and a number of other socialist countries has already been proclaimed, a stratified social system continues to exist there. The main social groups are the workers, the collective farmers, and a transitional group, the 'working intelligentsia.' According to Communist doctrine these groups are no longer classes in the traditional sense, because the means of production are socialized and exploitation and class antagonisms no longer exist. Social differences are determined by the way of life (urban or rural), which is becoming more uniform, and by the means of production (industry, agriculture, intellectual work). The 1961 CPSU program asserted that the USSR has entered the last phase of so-called advanced Communist construction, during which class differences will completely disappear and a fully classless society will emerge. But in reality Soviet society is not classless or free of exploitation, even by Marx's criteria. New political and economic elites (the Party and economic apparatus, military leadership, police, and technocracy) have arisen and constitute unique classes with distinct group interests and even a tendency to the hereditary transfer of privilege and advantage. Since the 1950s the critics of the Communist system as it exists, including Western Marxist revisionists, have debated and expanded M. Djilas's concept of a 'new class' under communism. The struggle between the ruling class and various disenfranchised and economically exploited groups continues in the USSR, and its more open forms are suppressed by the Party leadership and the police machine.

Until the end of the 1950s a large measure of social mobility helped to diminish class differences in the USSR. The working class grew constantly at the expense of the peasantry, and large numbers of young people from both of these classes entered the nominal third class of the 'working intelligentsia.' Consequently the cultural differences and lifestyles that sharply distinguished the traditional classes in the past are gradually disappearing. However, the new working class and intelligentsia often perpetuate elements of the peasant culture. In spite of this, an urban and white-collar culture has formed, and its features have become increasingly discernible. In the last decade there has been a general reduction in social mobility. Soviet society has actually acquired a stabilized, mature class structure, often based along national lines, in which the collective farmers occupy the lowest cultural and economic rung and the 'new class' of the Party and bureaucratic elite occupy the highest rung. At the same time alienation, which according to Marx is the principal shortcoming of class society, has arisen in the USSR.

In Soviet society the classes do not have their own organized representation. The CPSU and the mass organizations under its control (trade unions, collective-farm congresses, and professional-intellectual associations) are supposed to function as 'transmission belts,' but in reality they represent their constituency in name only. The situation is quite different in the Western democracies, where the trade unions and farm, business, and professional associations are powerful defenders of the class interests of their respective groups, as was the agricultural *co-operative movement in Ukraine in the past.

Ukrainians abroad, especially in countries with large

Ukrainian communities, are differentiated by class. In Canada and the United States the social differences among Ukrainians correspond more or less to those that prevail in the dominant society. Class status is generally defined by income, occupation, education, and life style (area of residence, values, attitudes, social life), and, for Ukrainians, by the degree of integration with the society at large. In general, 2 to 3 percent of the Ukrainians in North America belong to the upper middle class, about 33 percent to the middle class, and the majority to the lower class. In societies with a high degree of social mobility and flexibility Ukrainian immigrants and their descendants, particularly the second and third generation, usually progress on the social ladder by means of education, occupational change, and accumulation of property.

(For information on relations among and within social groups and classes and on occupational and property distribution, and for statistical data and sociological analysis, see *Social stratification.)

Classical studies. With the introduction of Christianity from Byzantium, Ukraine became exposed to some extent to the cultural influence of ancient Greece. Translations of the Greek fathers of the church, chronicles, and excerpts from ancient philosophers that are scattered in collections such as the *Pchela*, show that the Greek language and culture were known in Ukraine. *Povist' vremennykh lit* (Tale of Bygone Years) asserts that in 1037 Yaroslav the Wise translated Greek writing into Slavic. It may be assumed that at the time certain elements of classical philology were studied in some monasteries. Latin was probably studied too. This is indicated by the well-known epistle in Latin from Prince Iziaslav Yaroslavych (1024–78) to Pope Gregory VII and by numerous Latin epistles from the popes to Ukrainian princes and bishops. Latin was used more widely in the Principality of Galicia-

Volhynia (on coins, in diplomacy, etc) than in Kievan Rus'.

When Ukraine became a part of the Polish-Lithuanian state, a strong Latin current entered Ukrainian culture. Latin became the language of government, scholarship, education, and poetry, first in Galicia and from the 17th century in other regions as well. Consequently, interest in Roman literature and classical culture in general increased.

Western humanism, the religious polemics of the 16th century, and the studies of Ukrainian scholars at Western universities encouraged the study of ancient culture and the classical languages. Classical philology and philosophy, rhetoric, and poetics were important subjects of study at the Ostrih Academy (est 1577), brotherhood schools, and the Kievan Mohyla College (est 1632). In some of these schools Latin was the language of instruction. Arsenii of Ellason, who published a Greek-Church Slavonic grammar, **Adelphotes*, in 1591, taught at the school of the Lviv Dormition Brotherhood. These schools trained not only future theologians, but also secular leaders. The works of Plato, Aristotle, Cicero, St Augustine, and, from the end of the 17th century, of Erasmus were familiar to collegium students.

Classical philology attained a high level at the *Kievan Mohyla Academy in the 17th–18th century: problems of classical philosophy and Greek and Roman literature were researched by Diakovsky, and classical poetics and metrics were researched by T. Prokopovych, H. Slomynsky, and M. Dovhalevsky. In 1632 *Eucharisterion*, a collection of poetry imitative of classical models, was dedicated to Metropolitan P. Mohyla. Classical themes were used in the sermons of A. Radyvylovsky and I. Galiatovsky, among others. S. Charnkovsky (Charnetsky), the author of a text in rhetoric, was an expert on classical culture and Latin. D. Tuptalo, founder of the Latin college in Rostov and author of *Basni ellinskii* (a collection of Greek myths) and of the first Slavic-Ruthenian translation of Ovid's *Metamorphoses* with a commentary, was an authority on classical philology. T. Prokopovych made an important contribution to classical education in Ukraine. After studying Latin theology and classical philology in Rome, he returned to Kiev in 1704 and thoroughly revised the Latin curriculum at the academy by introducing Western methods (among them, the direct imitation of such classical poets as Catullus, Ovid, and Horace). He provided models of the new methods in his *Lucubrations*, particularly in the poem 'Elegia Alexii,' which is an imitation of Ovid's 'Tristia.' In the 18th century H. Kozytsky taught Latin at the Kievan Academy (in 1758 he became professor of classical and West European literatures in St Petersburg).

The centralist policies of Catherine II and her heirs were detrimental to the development of classical philology in Ukraine. Nevertheless, the discipline retained its position in the Kievan Academy, Kharkiv University (est 1805), the Kremianets Lyceum (est 1819), and Kiev University (est 1834). Some Ukrainian scholars (H. Kozytsky, R. Tymkovsky, M. Novosadsky, F. *Zelenohorsky) taught classical studies in Russian schools, and most Ukrainian classical philologists published their works only in Russian (or Latin). The *Odessa Society of History and Antiquities (1839–1922) investigated the ancient states on the northern Black Sea coast (Z. Arkas, V. Modestov, S. Dlozhevsky, and others). Studies in classical philol-

ogy were basically directed towards narrow specialization in Greek epigraphy and partly towards the history of the Greek language. Some research was done on the history of Greek literature (A. Derevytsky, F. Myshchenko), Roman literature (V. Modestov, M. Sumtsov, S. Roslavsky-Petrovsky), classical philosophy (P. Linytsky, O. Novytsky), classical archeology and art (A. Dobiash, D. Yavornytsky), and ancient history (Yu. Kulakovsky, O. Pereiaslavsky). The popularity of classical philology in Russian Ukraine can be attributed to the fact that Latin and Greek were taught in gymnasiums and seminary schools.

In Western Ukraine – Galicia and Bukovyna – the centers of classical philology were the universities of Lviv and Chernivtsi. Although the related disciplines were highly developed in the Austro-Hungarian Empire and both classical languages were taught and used in gymnasiums, social conditions and Polish influence did not allow Ukrainian classical philology to develop. Publications on ancient culture began to appear only with the foundation of the Shevchenko Scientific Society. In 1906–14 a commission of classical philology directed by F. Kolessa and O. Makarushka existed at the Shevchenko Scientific Society; its members included A. Artymovych, Ya. Hordynsky, I. Demianchuk, V. Dyky, R. İlevych, S. Karkhut, A. Kmitykevych, Yu. Kobylansky, I. Kokorudz, I. Kopach, P. Mostovych, M. Posatsky, S. Rozdolsky, M. Sabat, H. and R. Tsehlynsky, and V. Shchurat. I. Franko's articles and translations of Greek lyric poetry and drama were an important contribution to classical philology.

After the First World War the development of Ukrainian classical philology declined. In the Ukrainian SSR it ceased to exist as a humanistic discipline. The teaching of classical languages was abolished and was resumed only in 1936 at a few universities for purely utilitarian purposes (in medicine and pharmacology) and partly for the needs of those studying ancient history and law. A few Ukrainian classical philologists (eg, A. Kotsevalov) at the Academy of Sciences of the Ukrainian SSR did research on the Greek and Roman relics on the Black Sea coast. Classical literature was assigned to institutes dealing with world literature. O. Biletsky published some works on ancient literature. In Western Ukraine classical philology served the needs of education (tests, popular articles, translations). Besides several older philologists, M. Bilyk, V. Stetsiuk, S. Dombrovsky, and M. Sonevytsky worked in the field of classical philology.

After the Second World War, the department of classical philology of the University of Lviv continued to function and in 1962 began to publish *Zbirnyk robıt aspirantiv romano-hermans'koї i klasychnoї filolohii* (Collection of Graduate Student Papers on Romance, Germanic, and Classical Philology) and *Visnyk: Serii romano-hermans'koї i klasychnoї filolohii* (Herald: Romance, Germanic, and Classical Philology Series). Since 1959 it has been publishing *Pytannia klasychnoї filolohii* (Questions of Classical Philology). The authorities put a stop to any attempts to re-establish departments or even chairs of classical philology at other universities (Kiev, Kharkiv, Odessa, Uzhhorod).

Some classical philologists who emigrated worked at the Ukrainian Free University in Prague (A. Artymovych, F. Sliusarenko), and then in Munich (A. Kotsevalov, V. Stetsiuk).

V. Stetsiuk

Classicism

Literature. In its broad sense the term refers to any kind of imitation of classical poetry; in its narrow sense, to a literary movement that arose in opposition to the *baroque and worked out its own poetic norms, which included clarity of expression, the striving for ideal beauty, and strict adherence to certain rules or the imitation of certain models.

Classicism appeared in Ukraine in the mid-18th century. Its main examples are the travesties or parodies of N. Boileau and classical models. Although they are recognized by classicist poetics, travesties are considered to belong to a 'low' genre. During this period of national decline some Ukrainian classicists – I. Bohdanovych, V. Kapnist, V. Narizhny, and V. Ruban – wrote exclusively in Russian. Some elements of classicism can be found in the school plays and school poetry of the 17th century and in T. Prokopovych's tragicomedy *Vladimir* (1705). After the versed travesties of the 18th century came the travesties by I. Kotliarevsky, P. Hulak-Artemovskyy, P. Biletsky-Nosenko ('Horpynyda'), K. Dumytrashko ('Zhabomyshodrakivka'), V. Dovhovych, Ya. Kukharenko ('Kharko'), and others. Poetry in a serious vein was written by P. Hulak-Artemovskyy and K. Puzyrna ('Oda' [Ode], 'Malorossiiskii krest'ianin' [Little Russian Peasant]), as well as by early Ukrainian writers of fables. I. Kotliarevsky, V. Hohol, and H. Kvitka-Osnovianenko wrote plays. The highest achievement of Ukrainian classicism is the prose of Kvitka. The influence of Ukrainian classicism beyond Ukraine was insignificant and limited to the use of Ukrainian themes. Only Kotliarevsky's *Eneida* (The Aeneid) served as a model for the uncompleted Belorussian *Eneida* of V. Dunin-Martynovych.

Art. In art classicism refers to a certain style, connected with classical culture and works of art, whose simplicity and severity of form contrast with the decorativeness of the baroque. Classicism came to Ukraine from central and southern Europe in the mid-18th century. Its influence was felt first in Western Ukraine, where it manifested itself mainly in the architecture of palaces and villas; eg, the palace of the Ossolińskis in Lviv (now the Library of the Academy of Sciences of the Ukrainian SSR), built in 1827 by the Swiss architect P. Nobile; the palace in Vyshnivets in the Ternopil region, built in 1730–40; and the metropolitan's residence in Horodok near Lviv, built in 1740. Later these kinds of buildings were built in central and eastern Ukraine by Italian, French, English, and German architects. One of the older monuments of palatial-villa architecture is the ensemble of buildings on the estates of A. Shydlovsky in the village of Merchyk in the Kharkiv region. It was built in 1776–8 by P. Yaroslavsky. The largest number of the finest examples of architectural classicism have been preserved in the Chernihiv region: the palace of Count P. Zavadovsky in Lialychi designed by G. Quarenghi in 1794–5; the villa in Khotyn, from the end of the 18th century; the villas in Stilne (built in 1797–9) and Ponurivka (built in 1804); the building of M. Myklashevsky in Nyzhnie (second half of the 18th century), V. Darahan's residence in Kozelets; the palaces of a patron of classicism, Hetman K. Rozumovsky, in Pochep (built in 1796 by O. Yanovsky using designs by De La Motte) and in Baturyn (built in 1799–1803 according to the design of C. Cameron); and the palatial complex of Count P. Rumiantsev-Zadunaisky in the village of Kachanivka, built at the end of the 18th and beginning of the

Church in Velykyi Bobryk, near Sumy, a fine example of classicism in architecture, 1808

19th century. The classicist style was also embodied in numerous manor houses, churches, and town buildings throughout Ukraine. The most typical buildings of the 19th century in this style are the palaces in the village of Murovani Kurylivtsi (1805); the buildings of the Sofiivka Park near Uman (1796–1805); the palaces in Samchyky in Podilia; P. Galagan's palace in Sokyryntsi, designed by P. Dubrovsky in 1829; the buildings on the estates of the Kochubei family in the village of Dykanka in the Poltava region; the church rotunda on Askoldova Mohyla in Kiev, designed by A. Melensky in 1809–10 and destroyed by the Soviets; the Transfiguration Cathedral in Bolhrad in Odessa oblast, built in 1833–8; the Bezborodko Nizhen Lyceum, designed by L. Rusca in 1824; the university building in Kiev, designed by V. Beretti in 1837–42; the new building of the Kievan Academy, designed by A. Melensky in 1822–5; and the cathedral in Sevastopil, built in 1843. In these buildings classicism was often combined with the *Empire style, which was closely related to it.

In sculpture classicism was represented by I. Martos and M. Kozlovsky, who worked in St Petersburg and Moscow and were the leading artists and teachers at the end of the 18th century, and by K. Klymchenko, who worked in Rome. Ukrainian classicist painters had an important influence on the development of Russian painting; among these painters were A. Losenko, who founded the historical school at the Russian Academy of Arts; D. Levytsky, who was the leading portraitist of his time; and Levytsky's student V. Borovykovsky, who painted icons and portraits. All of them worked in St Petersburg. The masters of decorative painting, which was very typical of the period and was widely used in the palaces in Ukraine, were H. Stetsenko, Yu. Kozakevych, I. Kosarevsky, and the painter-serf M. Dykov. V. Tropinin (a Russian who spent many years in Podilia), M. Terensky of Peremyshl, and L. Dolynsky and I. Luchynsky of Lviv were realist painters of the classicist school. Classicism is reflected in the engravings of H. Srebrenytsky, M. Kozlovsky, and V. Borovykovsky and in the autolithographs of I. Shchedrovsky, P. Boklevsky, K. Trutovsky, M. Mykeshyn, and others. In general, the works of the classicists are devoid of national traits. Classicism survived in Ukraine until the middle of the 19th century, when it turned into academism.

Clays. A group of sedimentary minerals consisting of kaolin and other hydrous silicates of alumina. Clay particles are up to 0.01 mm in size and are produced by the decomposition of various mineral rocks under the action of the atmosphere and other weathering agents.

Clays are plastic and usually impure, containing admixtures of sand and limestone. The color of the clay depends on the constituents. Clays are very common and have been used by humans since ancient times. They are important materials in building, metallurgy, ceramics, and farming (as constituents of the soil).

Various kinds of clay are common in Ukraine. Besides the ordinary clays, some special clays are widely found in Ukraine. *Kaolin is the result of the decomposition of mineral rocks that are rich in alumina. This pure, white clay is used to manufacture porcelain and faience. Kaolin is quite common in the crystalline belt. Pottery clay, which is plastic and yellowish red or grayish green in color, is found throughout Ukraine and is used in making earthenware. Brick clay is less plastic because of a high admixture of sand. This clay is common throughout Ukraine and is used in building cottages (*lipianky*) and in brick making. Clinker clay is used in road building and is found even in those regions (Dnieper Lowland) that lack building stone. Refractory clays are particularly valuable and are found mostly in the Donets Basin, where the demand for them is greatest. The largest deposits of refractory clays in the Donets Basin are at Chasiv Yar and Abramivka. In the Dnieper Industrial Region refractory clays are found at Piatykhatky and Polohy. Other important deposits are located at Katerynivka in Kirovohrad oblast and Ovruch in Kievan Polisia.

Clement I, Pope. See Saint Clement I.

Clergy. In pre-Christian Ukraine pagan priests (*zhretsi*) probably did not constitute a separate social class. As in Greece, the head of the extended family performed the religious functions. From earliest times in the Christian church the clergy has constituted a group sharply differentiated from the laity by being initiated into the service of God through the sacrament of ordination (laying on of hands). This remains so today in the Ukrainian Orthodox and Catholic churches. In other denominations, which do not believe in the sacred nature of ordination, the clergy is not as sharply differentiated from the laity, and passage from one state to the other is easy.

In the Ukrainian Orthodox and Catholic churches, the clergy is divided into the lower (deacons, priests) and higher (the hierarchy or episcopate) clergy and into the secular (white) and regular (black) clergy. The secular clergy lives 'in the world,' among the people, and fulfills its spiritual functions among them in their religious communities. The regular clergy, having renounced the

world, lives in monasteries and devotes itself to prayer (the contemplative orders) or to prayer and works of Christian charity (schools, shelters, hospitals, and the like); it rarely has charge of parishes. The Ukrainian Orthodox and Catholic secular clergy (but not the hierarchy), in accordance with the canons of the Eastern church, have the right to marry, which the Latin clergy has not had since the 4th century. The difference accounts for the special societal and community position of the Ukrainian clergy and its closer ties with the people. Celibacy was introduced in Galicia after 1920 in the Stanyslaviv and Peremyshl eparchies. Candidates for the Ukrainian Catholic priesthood in the diaspora are now also obliged by the Vatican Curia to take the vow of celibacy. The Ukrainian clergy traditionally wear special black clothing (the cassock). At one time members of the Orthodox clergy also had long hair and beards; this old custom was sometimes followed by Catholic priests.

After the Christianization of Ukraine, the first members of the lower clergy came from the Greek Black Sea colonies and from Bulgaria, while the higher clergy came mostly from Greece. The social and legal position of the clergy in Ukraine was based formally on that of the clergy in the Byzantine church. As in Byzantium, the Ukrainian clergy could marry; therefore, there was a close bond with the people. But in Ukraine there was no subordination of clergy to the state (caesaropapism) as there was in the Byzantine church. Nor did the opposite extreme prevail, ie, dependence of the secular power on the religious (papocaesarism), as it sometimes did in the West.

The legal position of the clergy in Kievan Rus' derived from the self-government of the church. The clergy constituted a social class with its own courts, whose jurisdiction extended not only to the priests, but also to groups associated with the church, known as *church people (deacons, precentors, sextons, women who made the communion bread, and their families). Church property was exempt from state taxes. The church and the clergy in Kievan Rus' received a *tithe from the prince's revenue. Sometimes persons of higher clerical rank, because of their education, had an influence on matters of state. The bishops and the metropolitan took part in the prince's councils sometimes directing the proceedings.

A special characteristic of the clergy in Kievan Rus' was its patriotism, as evidenced by the literary works of the clergy. Metropolitan Ilarion in his 'Sermon on the Law and Grace and a Eulogy to Our Khagan Volodymyr' of the mid-11th century speaks proudly of his homeland as one of the most famous in the world. The hegumen Danylo lighted an image lamp for the princes and his homeland at the Holy Sepulcher in Jerusalem. In the chronicles, which were written mostly by clerics, there is constant concern for 'the land of Rus'' and warnings against seditionaries, 'the destroyers of the land of Rus'.' In Kievan Rus' the clergy was almost the sole disseminator of education, as in Western Europe at that time. Clerics established schools and libraries. The regular clergy, especially the monks of the Kievan Cave Monastery, were active in education.

Under Tatar rule the status of the clergy did not change fundamentally, for the Tatars were quite tolerant of different faiths. The only limitation they imposed was that the Ukrainians sever all ties with the West. But the leading role of the clergy changed for other reasons. Kiev, with the Cave monastery and other centers of Ukrainian

spiritual and cultural life, was almost totally destroyed; and therefore the standard of clerical education suffered. As a result the clergy's influence on the Ukrainian masses diminished. The transfer of the metropolitanate from Kiev to Muscovy further weakened the role of the Ukrainian clergy in society. This decline became evident in the Principality of Galicia-Volhynia, where literature and education ceased to be the exclusive preserve of the clergy.

The status of the Ukrainian clergy declined significantly during the Polish-Lithuanian period, first in the lands under Polish rule and then in the Lithuanian-Ruthenian state. Under Poland, and especially in Galicia, the Ukrainian clergy was merely tolerated, for all the estate privileges were reserved for the Roman Catholic clergy as representatives of the interests of the foreign power on Ukrainian soil. The Ukrainian clergy was forced to seek the aid and support of its own community and those nobles, burghers, and peasants who were still adherents of the Ukrainian church. Thus, it lost the independence it had enjoyed previously; it became dependent on the nobility, which had the right of *patronage, and on the burghers, who were organized in *brotherhoods. This dependence led to difficulties while dependence on Catholic foreigners became intolerable, especially when the estates of Ukrainian nobles were transferred increasingly into Polish hands. Beginning in the 16th century, the power of the landowners (usually Poles or Polonized Ukrainians) over the peasants and the clergy began to increase. Theoretically, even under foreign domination, the Ukrainian clergy preserved its right to self-government and retained certain other privileges, but in reality these were limited, and eventually they were greatly reduced. The Western rule of patronage, that is, the power of the king to designate bishops and archimandrites, began to be applied to the higher clergy. The selection was usually influenced by the local nobles. Unfavorable political circumstances, as well as the decline of Byzantium, which had been an important cultural influence, led to a sharp decline in the level of education among the clergy.

The Church Union of *Berestia in 1596, which gave rise to the Ukrainian Catholic church, formally improved the position of the Uniate clergy, although in fact neither the Uniate hierarchy nor the rank-and-file Uniate clergy had rights equal to those of Polish Roman Catholic clergy until the fall of the Polish Commonwealth.

The educational level of the Uniate clergy was markedly improved through studies abroad in the Catholic higher schools of Western Europe and the founding of Uniate colleges, modeled on Jesuit schools, by the Basilian monks. The Uniate metropolitans and bishops, from the time of I. Potii to the partitions of Poland, fought for the rights that had been promised them by the Polish kings and never implemented; for example, they had been promised senate seats on par with the Roman Catholic bishops, but the metropolitan obtained this right only in the Constitution of 1791.

An improvement in the education of Orthodox clergy, owing to the establishment of such Orthodox schools as the Ostrih Academy, the Lviv Dormition Brotherhood School, and the Kiev Epiphany Brotherhood School (later the Kievan Mohyla College, and then the Kievan Mohyla Academy), was also noticeable. The importance of the Orthodox clergy increased in the Hetman state,

where, the clergy benefited from state protection and completely regained its former estate privileges (eg, the right to an autonomous church court). Lands belonging to monasteries and churches and clerical estates were exempted from military and other obligations that were imposed on Cossack and peasant-owned land. An important feature of clerical life under Cossack rule was the election of secular clergy to the lower church offices, which had previously been hereditary. A number of agreements between priests and parishioners testify to a certain dependence of the clergy on the congregation. The Ukrainian clergy in the Cossack period was not a closed estate: Cossack officers, rank-and-file Cossacks, burghers, and peasants entered the clergy, although priesthood remained a tradition in certain families. Former members of the general officer staff (R. Rakushka, M. Vuiakhevych) and children of the Cossack *starshyna* became clerics. The clergy of noble or Cossack-officer origin kept their estates and disposed of them freely. The clergy in the Hetman state of the 17th and 18th century played an important role in the political and cultural life of the nation. During the 17th century the Ukrainian Orthodox clergy produced many scholars, writers, and cultural figures. The subordination of the Ukrainian Orthodox church to the Moscow patriarchate in 1686 somewhat weakened the role and significance of the Ukrainian clergy.

Beginning in the second half of the 18th century, the legal position of the Ukrainian clergy was significantly reduced from what it had been under the Hetman state, to that of the Russian clergy. Various taxes were imposed on the secular clergy; limits were placed on the prerogatives of clerical courts; the custom of selection of the priest by the church community was abolished; the priest became more dependent on the hereditary gentry; and so forth. At the same time the Russian government and the *Holy Synod of the Russian church tried to Russify the Ukrainian clergy, but they were more successful among the higher clergy than among the lower. The latter remained, on the whole, Ukrainian well into the 19th century.

Under Polish rule the Ukrainian Catholic clergy had to wage a constant battle with the Roman Catholic clergy, which sought a preferential status for itself. Metropolitan and bishops usually came from the ranks of the Basilian monastic order, which had been reorganized in 1617 by Metropolitan V. Rutsky. The Basilians and the higher Ukrainian Catholic clergy, trained in Rome or in other Catholic universities and colleges, received the best theological education, but at the same time became increasingly Polonized. Many non-Ukrainians (Belorussians, Lithuanians, Poles) entered their ranks. The numerous Basilian colleges had a primarily Polish character; many of their students (often a majority) were descendants of the local Polish or Polonized nobility. The growth of Polish influence in the monastic orders and hierarchy of the Ukrainian Catholic church deepened the rift between the lower (secular) clergy on the one hand and the higher and monastic clergy on the other. The former was Ukrainian and democratic in spirit; the latter, Polonized and aristocratic. This was a significant shortcoming of the Ukrainian Catholic clergy and one of the reasons for the weakness of the Ukrainian Catholic church during its persecution by Russia after the fall of Poland (in 1772, 1839, 1875).

In the Austro-Hungarian Empire, to which Galicia,

Bukovyna, and Transcarpathia were annexed, the Ukrainian Catholic (and in Bukovyna, Orthodox) clergy had equal rights with the Roman Catholic clergy, and the government looked after the education of the clergy (see *Barbareum, *Studium Ruthenum). By the mid-19th century the Ukrainian clergy was as well educated as the Roman Catholic and began to play a leading role in the life of Western Ukrainians. The restored *Halych metropolitanate (1808) assumed a prominent position in Ukrainian national life. The Lviv *Greek Catholic Theological Seminary and Lviv University educated the higher echelons of the intelligentsia, which at first was clerical and later secular. Progressive Western influences reached Galicia through Vienna and were quickly assimilated by the Ukrainian clergy, which assumed a leading role not only in religious life, but also in cultural, educational, and community life (M. Shashkevych, M. Ustyianovych, O. Ohonovsky, M. Verbytsky, V. Matiuk, O. Nyzhankivsky). During the second half of the 19th century in Galicia, the position of the clergy as the sole intelligentsia was weakened because of the growth of the secular intelligentsia, which consisted mostly of young people of clerical or peasant origin who had been encouraged by local priests to attain higher education. Hence, a particularly close bond developed between the Western Ukrainian clergy and the masses. Many political figures, including members of the Galician diet and the Austro-Hungarian parliament (S. Kachala, I. Ozarkevych, T. Voinarovskyy-Stolobut, S. Onyshkevych, O. Stefanovych), of the Polish Sejm (L. Kunytsky) and senate (R. Lobodych), and of the Czechoslovak parliament (A. Voloshyn, later the president of the Carpatho-Ukrainian government) were priests or came from Catholic clerical families. In Galicia priests established their own vocational organizations (the *Society of St Andrew in Lviv and the Society of Celibate Priests in Stanyslaviv).

In Transcarpathia a general Magyarization of the Ukrainian clergy, with its consequent alienation from the people, began after 1867. Nevertheless, the major cultural leaders in 19th- and early 20th-century Transcarpathia were, almost without exception, priests, who were called *narodni budyteli* (national awakers) (O. Dukhnovych, O. Pavlovych, A. Kralytsky).

With the establishment of a theology faculty at Chernivtsi University in 1875, the educational level of the Ukrainian Orthodox clergy improved significantly, and its most gifted representatives participated in the religious, cultural, and political renaissance of Bukovyna (S. Vorobkevych, M. Halip, T. Tyminsky, Ye. Kozak, D. Yermiiv, T. Drachynsky, K. Bryndzan, S. Smereka).

Under Russian rule the status of the Ukrainian clergy changed considerably in the 19th century. The higher clergy and the upper monastic stratum became almost exclusively Russian and hence foreign to the Ukrainian masses. Under their authority, the lower clergy also gradually became Russified. The typical Ukrainian village priest, however, did not disappear and still existed at the time of the revolution. Many leading figures in the Ukrainian cultural and national renaissance came from families of the lower Orthodox clergy. Several members of the Russian State Duma were elected from the ranks of the Ukrainian Orthodox priesthood (A. Hrynevych, V. Solukha, K. Volkov, O. Trehubov). Clergymen also took part in the struggle for Ukrainian independence (V. Lypkivsky, M. Chekhivsky, P. Sikorsky).

The Soviet regime in Ukraine, as in the whole of the USSR, put the clergy into a difficult and in many ways extralegal position. The clergy was not only dispossessed of property, denied government stipends, and burdened with heavy taxes, but it was also deprived of fundamental civil rights such as the right to vote (hence the designation *lyshentsi*, the deprived). Children of clergymen were denied the right to higher education and to employment in the civil service. Religious education was forbidden. The authorities also began persecuting individual priests, starting with members of the hierarchy. In the early 1930s the majority of the clergy and particularly the nationally active individuals, such as the members of the Ukrainian Autocephalous Orthodox church, were physically destroyed. The terror forced many priests to abandon their vocation or to conceal their identity. A partial change in the USSR's policy on religion during the Second World War did not alter the extralegal status of the clergy of the Ukrainian Autocephalous Orthodox church and the Ukrainian Catholic church. Only the Russian Orthodox church and some other denominations exist within the law.

In the period between the two world wars the Polish government in Western Ukraine was hostile to both the Ukrainian Orthodox and the Ukrainian Catholic clergy. Many priests suffered government persecution. The clergy of the Ukrainian Catholic church was protected by the terms of a concordat with the Vatican and enjoyed somewhat better treatment.

Outside Ukraine the Ukrainian clergy is a leading organizing force in Ukrainian community and cultural life, particularly in education. However, second- and third-generation Ukrainian priests, especially Catholic priests, are attempting to introduce the dominant language of the given country (the United States, Canada, and Brazil) into the church and are coming into conflict with clergymen who have arrived more recently. In the early 1970s a part of the Ukrainian Catholic clergy re-established the Society of St Andrew and the journal *Nyva*. The Ukrainian clergy enjoy the same legal status as other clergy in their respective countries of residence; in Germany, for example, clergymen receive a government salary. (See also *Theological education.)

Cleveland. City (1981 pop 575,000; Metropolitan Cleveland pop 1.6 million) located on the shore of Lake Erie in the state of Ohio in the United States. After the 1860s, 40 percent of its immigrant residents were Slavs. There are about 60,000 Ukrainians in Greater Cleveland, half of them from Transcarpathia. There are a number of Ukrainian parishes in the city: five Catholic, three Orthodox, one Baptist, and ten Carpatho-Ruthenian Byzantine-rite parishes. Some Ukrainians belong to Russian Orthodox parishes. In the 1960s most Ukrainians moved from the city to its suburbs, mainly to Parma, which in 1969 became the seat of the Byzantine-Ruthenian Catholic eparchy under Bishop E. Myhalyk. In 1984 the Ukrainian Catholic eparchy of St Josaphat was established there. The new bishop is R. Moskal.

Cleveland; St Josaphat's Cathedral in Parma (1983)

Ukrainian immigrants, mostly from Transcarpathia and the Lemko region, began to settle in Cleveland in the 1880s. In 1892 the first Greek Catholic parish – St John's – was established. In 1902 the first national organization – the Brotherhood of ss Peter and Paul – was founded. For a long time Ukrainian civic and cultural life in Cleveland was organized around the Church of ss Peter and Paul, which was built in 1910, and the National Home, which was established in 1920. The first Ukrainian Orthodox parish was St Volodymyr's Church, established in 1924. Ukrainian socialists were active before and after the First World War, and in 1915 the Ukrainian Federation of Socialist Parties of America was set up in Cleveland. Some of the socialists eventually adopted a Sovietophile position and joined the Workers' Home. In the 1930s in Cleveland there were about 40 Ukrainian organizations, which had been members of Ukrainian United Organizations since 1928. A leading Ukrainian figure was the lawyer O. Malytsky (Miles). In 1940 the Ukrainian Culture Garden was established in Rockefeller Park; it contained the busts of Volodymyr the Great, T. Shevchenko, and I. Franko, sculpted by A. Archipenko, and of Lesia

Ukrainka, sculpted by M. Cheresnovsky. The Carpatho-Ruthenian community also erected a monument to O. Dukhnovych.

There were about 70 Ukrainian organizations in Cleveland after the Second World War and about 44 in 1980. Today the most active organizations are the Plast Ukrainian Youth Association and the Ukrainian Youth Association (both of which have summer resorts near Cleveland), the *Ukrainian Museum and Archive, the Dnipro Choir (conducted by E. Sadovsky), the Kashtan folk-dance school, the Self-Reliance Credit Union (founded by M. Khronoviat), the Organization for the Defense of Four Freedoms for Ukraine, the Ukrainian National Women's League of America, the Zoloty Khrest organization, the Lviv Sports Club, veterans' organizations, and professional associations of physicians, engineers, and businessmen. The Lemkos were organized in the Lemko Union and had their own Lemko Home. The Carpatho-Ruthenians were grouped mainly around their churches, and Rev J. Hanulia was a prominent leader among them.

Since 1947 a regular Ukrainian Catholic school with an enrollment of 250–760 pupils has been operating in Cleveland and, later, Parma. There is also a Ukrainian Saturday school with 220–370 pupils, and an Orthodox Ukrainian Saturday school with 60 pupils. Several Ukrainian periodicals have been published in Cleveland, including *Robitnyk* (1911–17, with interruptions) and *Lemko* (1930–5). The Byzantine-Ruthenian eparchy publishes the biweekly *Horizons* in English. The most prominent members of the Ukrainian community in Cleveland have been P. and V. Voliansky, I. Popovych, Rev D. Gresko, V. Radzykevych, M. Zhdan, I. Stavnychy, I. Kashubynska, O. Novytsky, M. Pap, B. Futey, H. Kytasty, L. Bachynsky, D. Szmagala, and A. and J. Bilinski.

Climate. Ukraine lies in the central part of the northern temperate zone at a great distance from the Atlantic Ocean and close to the large continent of Asia. Hence, Ukraine has a moderate continental climate. The characteristic features of the climate are four distinct seasons, annual snowfall, predominance of summer precipitation over winter precipitation, and a long and mild autumn. Such conditions are favorable to farming, particularly to the cultivation of field crops. The mountains of Ukraine – the Carpathian and Crimean mountains – have a different (mountain) climate, and the southern coast of the Crimea belongs to the Mediterranean climatic zone.

Continentalism. This is the second important feature of Ukraine's climate. It is manifested mainly in the distribution of the air temperature and humidity. In summer the

air temperature increases towards the east because of the influence of hot and dry air masses from the desert steppes of central and southwestern Asia. In winter the Asian continent is in the grip of a cold and dry anticyclone, which extends to all of central and a part of western Ukraine and brings cold, dry weather. The continental nature of Ukraine's climate can be represented in terms of average figures over a number of years for mean yearly temperature, January and July temperatures, temperature amplitude, absolute humidity, and total annual precipitation for Lviv, Kiev, and Kharkiv, which have almost the same latitude but differ in longitude (see the accompanying table).

Climatic factors. Among the basic climatic factors that must be considered are solar radiation, atmospheric circulation, and the relief of the underlying terrain. The amount of solar heat that reaches the earth's surface in Ukraine is highest on the southern coast of the Crimea. The multiannual mean there is 125–127 kcal per sq cm, but it decreases to 95–97 kcal per sq cm towards the north and the northeast. The average annual occurrence of sunlight reaches over 2,500 hours in the south and gradually diminishes towards the north and the northeast to 1,600 hours and less. Most of the solar radiation arrives in the warm half of the year, the maximum coming in June and July (17 kcal per 8 sq cm or more each month). The lowest amount of radiation comes in winter, when the sunlight hours are fewest and the highest percentage of solar heat is reflected from the earth's surface by the snow cover.

Various air masses, which differ in their origin and physical properties, sweep over Ukraine; these include polar and tropical masses of sea air, originating over the Atlantic Ocean (low pressure center near Iceland and high pressure center near the Azores); polar and tropical continental masses, which are always dry, hot in summer and cold in winter; and dry and freezing arctic masses from the polar region. The interaction of the various air masses produces cyclones and anticyclones. The cyclones, which are centers of low pressure and humid, relatively warm air, bring with them cloudy, rainy weather in summer and mild spells and snowy weather in winter. The anticyclones bring hot, dry weather in summer and cold, dry weather in winter. The arctic air masses, which are common in winter, appear as extensive anticyclones, carrying cold, dry weather. A special type of winter cyclone comes from the Atlantic Ocean along the Mediterranean Sea to the Black Sea and brings to the southern Crimea most of its annual precipitation. In Ukraine there are 120–130 days of cyclones and 235–245 days of anticyclones during the year.

Terrain. The underlying terrain has an important influence on the weather and hence on the climate. In winter almost all of Ukrainian territory is covered with snow, which cools the air over it. In summer the ground heats up the air lying above it. Rivers and marshland raise the temperature of the air in winter and lower it in summer. Forests slow down the melting of the snow in springtime and the runoff of rainwater, thus preserving air humidity, diminishing the threat of flooding, protecting the soil from leaching, and averting conditions that lead to dust storms and dry winds.

The relief of the land surface is particularly important in determining the climate. As is generally known, temperature falls and precipitation rises as altitude increases. Relief affects the direction and velocity of winds. The

	Lviv	Kiev	Kharkiv
Latitude	49°56'	50°27'	50°00'
Longitude	24°21'	30°30'	36°14'
Average temperature (°C):			
Annual	7.5°	7.0°	6.6°
January	-4.1°	-5.9°	-7.4°
July	18.3°	19.3°	20.3°
Amplitude	22.4°	25.2°	27.7°
Absolute humidity (g/cu m)	9.0	8.7	8.4
Annual precipitation (mm)	645	622	522

mountains constitute climatic boundaries and are themselves regions of special mountain climates.

The basic meteorological elements are air temperature, precipitation, humidity, wind, and cloud cover.

Temperature. The highest average temperature for the year occurs on the southern coast of the Crimea and in the south: it is 13.0°C in Yalta and 10.0°C in Kherson. The lowest annual average temperature is found in the northeast and the north: it is close to 5°C. The isotherms run generally parallel to the equator and slope gently towards the southeast. The mountains form low-temperature islands.

In January all Ukrainian territories with the exception of the southern coast of the Crimea experience below-freezing temperatures. The lowest values occur in the mountain regions and the northeast. The western parts of Ukraine are influenced by the warm air masses of the Atlantic Ocean. In the east, however, the isotherms run in a southeasterly direction.

In summer above-freezing temperatures prevail in all Ukrainian territory, the highest values occurring in the southeast and the lowest in the northeast and the mountains. In the flat parts of Ukraine the isotherms run from the southwest to the northeast.

The mean air temperatures for the year or any month can differ markedly from the average temperatures. The absolute maximum temperatures in July can reach 36°–39°C in Ukraine, lower in the mountains and higher in the southeast. The absolute minimum temperatures reach –14°C on the southern coast of the Crimea and –42°C and lower in the northeast. During the year, on the average there are 230–360 days with an average daily temperature above 0°C, 190–200 days with a temperature above 5°C, and 150–200 days with a temperature above 10°C. The length of the frost-free period varies from 150 to 240 days. On the southern coast of the Crimea it reaches 270 days.

Precipitation. For most of Ukraine precipitation exceeds 500 mm per year; this amount is conducive to agriculture. The highest precipitation occurs in the high mountain regions (over 1,500 mm in the Carpathians and 1,000 mm in the Crimean Mountains) and in the western and northwestern regions. The total annual precipitation diminishes towards the southeast to 300 mm on the Black Sea coast and in the northern Crimea. The summer months get most of the precipitation, the maximum coming in June or July. Precipitation is lowest in winter, with a minimum in January or February. The southern coast of the Crimea, which belongs to the subtropical climatic belt, has winter rainfall and is an exception to the rule. Evaporation consumes the reserves of moisture. In most of the forest-steppe belt the quantity of evaporated water equals the amount of precipitation. In the steppe belt the quantity of evaporated moisture exceeds the amount of precipitation, and this results in a dry climate. Only in the mountains and in the west is the loss of water to evaporation less than the precipitation. Variations in the total annual precipitation and in the monthly distribution of precipitation can be quite large. Sudden jumps in precipitation may cause floods and the expansion of marshland. In contrast, a sharp diminution of precipitation leads to drought and creates conditions that are favorable to dry winds and dust storms.

A winter snow cover is typical of Ukraine's climate. The cover appears in mid-November in the north and the northeast and somewhat earlier in the higher parts of the

mountain ranges. In the south a snow cover is established at the end of December or the beginning of January. There is no stable snow cover on the southern coast of the Crimea. The snow cover begins to disappear at the beginning of March in the south and a month later in the northeast. Mountain valleys retain their snow until May and even longer. During the winter warm air masses from the sea produce thaws and melt the snow cover. The cover is deepest in February: 70–80 cm in the Carpathians, about 40 cm in the Crimean Mountains, 20–30 cm in Polisia, and 5–10 cm in the steppe belt. The snow cover protects winter cultures from freezing. The melting snow is the main source of water for the rivers of the steppe belt and plays an important role in agriculture.

Throughout Ukraine the absolute humidity is highest in summer – 15–17 g/cu m in July – and lowest in winter – 4–5 g/cu m in January. The relative humidity is highest in winter and lowest on sunny summer days.

Winds. The direction and velocity of the wind are dependent on the distribution of barometric pressure. In winter the Asiatic anticyclone sends a high-pressure flank westward, which meets the subtropical high-pressure belt of the Atlantic over the Carpathian Mountains, the Alps, and the Pyrenees. The high-pressure axis (A. Voeikov's Axis) runs through Ukraine towards the southwest and divides Ukraine into a northwest section, in which west and northwest winds prevail, and a south and southeast section, in which east and northeast winds prevail. The highest wind velocities are recorded in winter: the mean velocity is 6–7 m/s, and in the mountains velocities of 50 m/s are reached. In summer the differences between centers of barometric pressure are small, hence the velocity of the winds is lower: the mean velocity is about 3.5 m/s. The direction of the wind is changeable. On the sea coast a breeze can be observed in summer. Other wind phenomena that occur are dry winds, dust storms, storms, mountain-valley winds, etc.

Climatic regions. According to W. Köppen's classification of climates, which is based on the average temperature and precipitation, Ukraine can be divided into four climatic provinces: (1) cold, snow-forest climate (Dfb), (2) steppe climate (Bs), (3) Mediterranean climate (Cs), and (4) mountain meadow climate (ETH).

The cold, snow-forest climate can be assigned to the western and northern part of Ukraine up to the line Chişnău-Kremenchuk-Poltava-Kharkiv-Voronezh. Its characteristic features are a temperature of –3°C or lower for at least one month, a temperature of 10–22°C for the four warmest months, and precipitation distributed over all the months but highest in summer. These climatic conditions favor the growth of forest plants.

The steppe climate covers an area from the southern boundary of the forest climate to the coasts of the Black and Caspian seas. The average annual rainfall is moderate – 500–250 mm – but inadequate for forest vegetation. There are sharp variations in precipitation. Evaporation loss is great and increases towards the south. Droughts and dry winds are frequent occurrences. The vegetation consists mostly of grasses and steppe herbs. Small woods and forests occur in the floodplains of the Dnieper River and other large rivers, in river valleys, and in gullies. Because of its fertile chernozem soils, the steppe belt is intensively farmed.

The wide transitional belt between the forest climate and the steppe climate is known as the forest-steppe belt.

The Mediterranean climate is limited in Ukraine to the southern coast of the Crimea. The characteristic features of this climate are hot and dry summers, mild and rainy winters, and a large quantity of solar radiation. The vegetation here is Mediterranean.

The climate of the Carpathian and Crimean mountains encompasses great differences, which arise from altitude and exposure. Generally, as the altitude increases, the air temperature falls, at the rate of 0.6°C per 100 m, and the amount of precipitation increases, as does the absolute humidity. The wind direction and velocity are to a large extent influenced by the relief. Two climatic zones can be distinguished in the mountains: the forest zone, which has a mean temperature of over 10°C for at least one month of the year and provides conditions for the growth of forest vegetation, and the higher zone, with lower temperatures, in which trees no longer grow and meadows replace forests. The border between these two zones lies at 1,600 m in the Carpathians.

Climatology and meteorology. Two closely related sciences of the earth's atmosphere. Meteorology is a part of geophysics and deals with the physical state of the atmosphere as well as atmospheric events and processes. The physical state of the atmosphere (the weather) at any moment can be described by means of a number of meteorological elements: solar radiation, atmospheric pressure, temperature, humidity, cloudiness, precipitation, wind, etc. Changeability is the most characteristic trait of the weather. To monitor meteorological changes, a network of meteorological stations has been set up. As a result of precise instruments, radiotheodolites, artificial earth satellites, and computers, the whole atmosphere up to an altitude of 1,000 km is accessible to meteorological observation today.

Climatology is the study of the average long-range weather patterns or the climates of various regions of the earth and their influence on the development of living things and the activities of humans. This science builds on the results of meteorology. General and regional climatology is a part of geography. Applied climatology forms a part of various practical sciences; there is, for example, agricultural climatology, medical climatology, aeronautical climatology, railway climatology, and construction climatology. The climate of small areas of the earth's surface is studied as microclimatology; the climate of past

ages, as paleoclimatology; and the climate of the elevated layers of the atmosphere, as aeroclimatology.

The first meteorological stations in Ukraine were established at the beginning of the 19th century. They were organized by meteorology amateurs and by the mid-century numbered twenty. These stations were poorly equipped, conducted observations in an unsystematic manner, and did not maintain communications among themselves. Meteorological stations with continuous and systematic observations were first organized in the middle of the century as a result of the influence of the Main Physical Observatory (now the Geophysical Observatory) in St Petersburg, which was founded in 1849. The meteorological observatories of the universities of Kiev (1855), Odessa (1866), and Kharkiv (1892) made important contributions to meteorological and climatological research in Ukraine. By the 1880s meteorological networks were established. The first network in Ukraine was organized by G. Bliznin in the Yelysavethrad region, and in 1886 it was integrated with the network known as the Southwestern Russian Network, which was organized by O. Klosovsky and had its central office in Odessa. In 1892 P. Brounov organized the Dnieper Meteorological Network, which covered the forest and forest-steppe belts of Ukraine. Meteorological services on Ukrainian territories that were part of Austria-Hungary were supervised by the meteorological office in Vienna. There were also meteorological observatories at Lviv Polytechnic and Chernivtsi University.

The first works on the climatology and meteorology of Ukraine were written by V. *Karazyn in the first half of the 19th century. Among other questions, he dealt with the influence of forests on climate. Others wrote climatological sketches of various regions: V. Petrovsky, of the Odessa region (1844); I. Leonov, of the Katerynoslav region (1848); K. Bunytsky, of the Berdianske region (1848); M. Markevych, of the Poltava region; F. Bazynier, of the Kiev region (1853); etc. The first survey of the climate of all Ukrainian territories was provided by K. Vesolovsky in his *O klimate Rossii* (On the Climate of Russia, 1857). A similar survey appeared in A. Voeikov's *Klimaty zemnogo shara, v osobennosti Rossii* (The Climates of the Earth and Particularly of Russia, 1884).

The steady growth of meteorological and climatological research began only after the Southwestern and the Dnieper networks had been organized and specialized publications such as *Trudy meteorologicheskoi seti iugo-zapada Rossii*, edited by V. Klosovsky, and *Trudy Pridneprovskoi meteorologicheskoi i sel'sko-khoziaistvennoi seti*, edited by P. Brounov, had begun to appear. At the beginning of the 20th century gubernia zemstvo meteorological networks were set up and were integrated with existing networks.

Besides the scientists already mentioned, the better-known specialists on Ukraine's climate in the second half of the 19th century and at the beginning of the 20th century included O. Baranovsky, V. Bauman, L. Berg, V. Vlasov, K. Horsky, I. Hranovsky, M. Danylevsky, P. Ivanov, S. Lavrentev, V. Morozov, M. Panchenko, M. Sydorenko, and B. Sreznevsky. Their work was published in the publications mentioned above and in gubernial journals, the *Zapiski* of Odessa, Kiev, and Kharkiv universities, *Zapiski obshchestva sel'skogo khoziaistva luzhnoi Rossii*, naturalist and geographic journals, and the *Zapiski* of the St Petersburg Academy of Sciences. Of the specialists on the climate of Ukrainian lands within

the Austro-Hungarian Empire the best known were J. Hann, S. Romer, V. Gorchynsky, and S. Rudnytsky.

After the First World War the local meteorological networks were integrated into one republican network under the control of the Ukrainian Meteorological Service of the Ukrainian SSR (UKRMET), which was established in 1921. The number of meteorological stations increased. UKRMET conducted a vigorous research and publication program. Yet it was disbanded in 1929 on orders from Moscow and was replaced by the Hydrometeorological Committee and then in 1931 by the Hydrometeorological Institute of the Ukrainian SSR. In 1936 the Administration of the Hydrometeorological Service of the Ukrainian SSR was set up and subordinated to the Administration of the Hydrometeorological Service at the Council of Ministers of the USSR.

Western Ukraine in the 1920s–1930s was served by the Polish State Hydrological-Meteorological Institute in Warsaw and by similar institutes in Czechoslovakia and Rumania. The Institute of Geophysics and Meteorology at Lviv University, which was directed by H. Arctowski, was an important research center.

Between the two world wars meteorological and climatological research grew rapidly in Soviet Ukraine. A number of surveys of Ukraine's climate appeared: S. Rudnytsky, H. Tanfiliev, and A. Kaminsky's *Klimaticheskie oblasti Vostochnoi Evropy* (Climatic Regions of Eastern Europe, 1924), I. Vysotsky's *Makroklimatychni skhemy Ukraïny* (Macroclimatic Schemes of Ukraine, 1922), I. Teslia's chapter in V. Kubiiovych's *Heohrafiia Ukraïny i sumezhnykh kraïv* (A Geography of Ukraine and Neighboring Countries, 1938), M. Huk's *Klimatychnyi atlas URSR* (The Climatic Atlas of the Ukrainian SSR, UKRMET 1927), a series of climatic charts by I. Teslia in V. Kubiiovych's *Atlas Ukraïny* (Atlas of Ukraine), and the works of A. Hryhoriev, V. Lebedev, A. Ohiiievsky, I. Polovko, I. Seletsky, O. Yasinska, and others. The latter works were published separately and in such periodicals as *Visnyk meteorolohii i hidrolohii*, *Visti Instytutu vodnoho hospodarstva Ukraïny*, *Pohoda i zhyttia*, the collections of the Academy of Sciences of the Ukrainian SSR, university periodicals, *Zapysky NTSh*, and *Zhurnal po sel'skoho-zhoziaistvennoi meteorologii*. Most of the publications were in Ukrainian.

After the Second World War most of Western Ukraine and the Crimea were annexed by the Ukrainian SSR, and the territory covered by the Administration of the Hydrometeorological Service of the Ukrainian SSR expanded correspondingly. In 1961 the meteorological network consisted of 231 first-class stations, about 800 rainfall-measuring posts, and over 2,000 collective-farm and state-farm agrometeorological posts. In the last decades various branches of meteorology have developed. Research in the field is published in *Trudy Ukraïnskogo nauchno-issledovatel'skogo gidrometeorologicheskogo instituta*, which is published in Russian by the Chief Administration of the Hydrometeorological Service at the Council of Ministers of the USSR (over 160 volumes by 1977). The main areas of research are agricultural meteorology, synoptic meteorology, weather forecasting, the distribution of precipitation and the river flow-off, and the prevention of drought, dry winds, and other threats to agriculture. Meteorological and climatological research was one of the most important undertakings at

the Ukrainian Academy of Agricultural Sciences, which functioned in 1956–62.

The meteorology and climatology of Ukraine are investigated at separate institutes and university departments, polytechnical schools, the Academy of Sciences of the Ukrainian SSR, the Ukrainian Scientific Research Institute of Medical Climatology and Climatotherapy in Yalta (established in 1965), agricultural schools, research farms, etc. One of the important achievements of Ukrainian climatology is *Agroklimaticheskii atlas Ukraïnskoi SSR* (Agroclimatological Atlas of the Ukrainian SSR, 1964). Some other important contributions to the field are the climatic maps in *Atlas Ukraïns'koi i Moldavs'koi SSR* (Atlas of the Ukrainian and Moldavian SSR, 1962), I. Buchinsky's *Klimat Ukraïny* (The Climate of Ukraine, 1960), *Agroklimaticheskie usloviia Ukraïnskoi SSR* (Agroclimatic Conditions in the Ukrainian SSR, 1952) by V. Popov, and chapters on Ukraine's climate in general surveys of the climate of the Soviet Union by B. Alisov (1956) and A. Lebedev (1958), and in geography, hydrography, and agronomy textbooks. In the second half of this century the following scientists have made important contributions to the research on the climate of Ukraine: M. Andriianov, V. Babychenko, L. Bohatyr, A. Borisov, I. Buchynsky, M. Volevakha, M. Havrylenko, M. Huk, M. Hoisa, P. Dmytrenko, O. Konstantinov, I. Koshelenko, O. Krychak, V. Ohiiievsky, R. Oliinyk, I. Polovyna, I. Polovko, I. Ponomarenko, L. Prokh, V. Romanenko, M. Sosidko, O. Tkachenko, M. Chuhai, and O. Shakhnovych. In regional climatology the climate of the steppe belt has been investigated by A. Babych, P. Bogdanov, H. Votselka, I. Hrytsenko, H. Dubynsky, V. Zaichenko, I. Ivanov, V. Muchnyk, V. Navrotska, and L. Sakaly. Specialists on the climate of the forest steppe are B. Davidov, V. Lapshin, Yu. Morozov, R. Pankiv, H. Prykhodko, I. Popov, and M. Shcherban. The climate of Polisia has been studied by M. Danylevsky, A. Mahomedov, and V. Popov. O. Antonov, A. Lazarenko, V. Melnychuk, D. Myshutin, and O. Tokmakov published important works on the climate of the Carpathians. A. Baranov, B. Dokarevych, V. Zemliakov, P. Lokhvytsky, and Yu. Sudakevych published research on the climate of the Crimea. With a few exceptions these works appeared not in Ukrainian but in Russian. A host of Ukrainian meteorologists and climatologists publish their work in Russian journals.

Clinic. (Ukrainian: *ambulatoriia*). Medical institution providing medical care to the infirm, either on the premises of the clinic or at home. The clinic dispenses only the simpler forms of medical service, and in this way it

differs from the more specialized *polyclinic. Clinics appeared in Ukraine in the 18th century. Their numbers increased sharply after 1864, when zemstvos began to provide medical care (see *Zemstvo medicine), but remained low (1,907 in 1926). In 1939 there were 2,070 urban out-patient institutions, 2,856 village clinics, and 5,289 surgical-obstetrical posts in the Ukrainian SSR (not including Western Ukraine). There were 7,700 out-patient (clinical and polyclinical) institutions in 1946, 6,300 in 1965, 6,417 in 1970, 5,870 in 1975, and 5,856 in 1978.

Today the clinics have a wide range of tasks to perform. Besides curing the sick, they provide sanitary-prophylactic, health-education, and epidemiological services (immunization, etc). Besides urban and rural clinics there are also closed clinics serving the workers of various enterprises. In 1947 most of the clinics in Soviet Ukraine belonged to hospitals. Today there are three types of independent clinics: clinics associated with hospitals, clinics with three to four physicians, and rural clinics. The rural clinics are usually poorly equipped, and many of them are staffed only with paramedical staff – *feldshers and midwives.

H. Schultz

Clothing industry. Until the 19th century, the clothing industry in Ukraine was a cottage or a small-shop industry. Then tailoring shops became quite specialized and widespread in the Kiev, Chernihiv, Poltava, and other regions, particularly in the large cities. Clothing factories were established only in the second half of the 1920s. In 1913 the registered clothing industry constituted 2 percent of light industry and in 1928, 25 percent. With the introduction of industrialization and collectivization the clothing cottage industry disappeared from the villages, and the small shops in the cities were gradually replaced with larger clothing factories. By 1940, 11 large clothing firms had been established, the largest being the Gorky plant in Kiev and the Teniakov plant in Kharkiv. That year larger firms accounted for 85 percent of the clothing industry's production and 37.8 percent of the total production of Ukraine's light industry.

Before the Second World War the clothing industry, like the other branches of light industry, was underdeveloped. Almost all the machinery had to be imported from Russia, for there were only two large sewing-machine plants in Ukraine: the Poltava Mechanical Plant for Knitting Machinery and the Special Sewing-Machine Plant (Spetsshveimash) in Kiev. After the war, particularly in the 1960s, the clothing industry was modernized: about 20 large factories were built, and about 50 were reconstructed. Now there are about 120 clothing factories in Ukraine, which are organized under 17 manufacturing complexes. The largest factory, Ukraina, is in Kiev, and smaller factories are located in Kharkiv, Dnipropetrovske, Odessa, Donetske, Lviv, and other cities. Most of the clothing firms come under the jurisdiction of the Ministry of Light Industry, while the smaller factories come under the Ministry of Local Industry and the Ministry of Consumer Services.

The geographical distribution of the clothing industry leaves much to be desired: it is concentrated in Kiev and Kiev oblast (1977 production – 371.7 million rubles), Donetske oblast (355.8 million rubles), Lviv oblast (321 million rubles), Dnipropetrovske oblast (319 million rubles),

and Kharkiv oblast (302.7 million rubles). In 1981 the total value of the clothing production in Ukraine was 47,803 million rubles, or 20.1 percent of the USSR production. This production included 13.9 million coats, 13.1 million suits, and 27 million pairs of trousers. However, it failed to meet the needs of Ukraine's population. Most of the clothing production consists of low-quality goods. Better-quality clothes are imported into Ukraine from Russia, Czechoslovakia, East Germany, and Poland. The development of the clothing industry is hindered by the bureaucratic structure of the wholesale trade, which accounts for frequent delays in the introduction of new designs and the usual indifference to the needs of the local population. Although Ukraine has six modeling houses – in Kiev (where the magazine *Krasa i moda* is published), Lviv, Donetske, Dnipropetrovske, Kharkiv, and Odessa – as well as the Ukrainian Scientific Research Institute of the Clothing Industry in Kiev, the production profile and the production planning are largely determined by the Central Scientific Research Institute of the Clothing Industry in Moscow. The needs of the population are met to some extent by private tailoring shops, which produce custom-made clothes of a better quality and at a higher price than the factory-produced clothes. Such shops, however, are strictly illegal in the USSR.

Club of Ruthenian Women (Klub rusynok). A cultural-educational and charitable organization of women in Lviv founded in 1893. As a result of the club's initiative the *Trud women's co-operative, the Domestic Servants' Aid Society, and the *Ukrainska Zakhoronka nursery school society were organized. The club's first president was H. Shukhevych, and its leading members were M. Biletska, O. Barvinska, M. Hrushevska, O. Luchakovska, V. Kotsovska, O. Hnatiuk, Z. Maikovska, and O. Rozdolska. In 1909 the club merged with the *Circle of Ukrainian Women to form the association *Women's Hromada.

Coal industry. Branch of the *fuel industry engaged in the exploration for and extraction of coal, coal enrichment, and the briquetting of anthracite and lignite coal. In Ukraine the coal industry is one of the leading branches of industry. Although the importance of other fuels has increased, coal remains the principal fuel, accounting for 94.1 percent of the fuel production in 1940, 94 percent in 1950, 71.4 percent in 1965, 61.1 percent in 1970, and 61.2 percent in 1975.

Most of the coal mined in Ukraine comes from the *Donets Basin. The *Lviv-Volhynia Coal Basin and the *Dnieper Lignite Coal Basin began to be developed only in the mid-1950s and produce only 13 percent of Ukraine's coal. The Donets Anthracite Coal Basin was discovered in the first half of the 18th century, but its large-scale commercial exploitation began only in 1876. The coal

industry grew slowly until 1900; thereafter it grew at an accelerating rate as the metallurgical and coke industries developed in southern Ukraine: by 1913 the basin's output was 22.8 million t (78.2 percent of the output of the Russian Empire), and by 1916 its output was about 29 million t. Thus the Donets Basin became the main source of coal for the Russian Empire. The growth in coal production for Ukraine is presented in table 1.

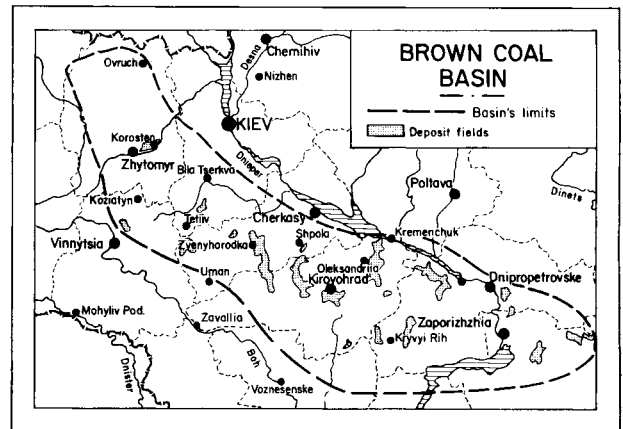

In 1870–1917 the coal industry in Ukraine was managed and financed by Russian, Belgian, French, German, and British industrial firms and concerns. In 1904 the coal-mining companies in Ukraine formed the *Produgol syndicate, which controlled the industry until 1917. It set coal prices for all of the empire: 59 kopecks per centner in 1907–8, 69 kopecks in 1912–3, and 88 kopecks in 1914. The railways were the principal buyers of coal at the time: in 1911 they consumed 3 million t, or about 30 percent of the coal output. The level of mining technology, working conditions, and work safety was low: machines were crude, there was no electrical wiring or lighting, mine ventilation was poor, haulage inside the mines was done manually, and accidents and coal-gas explosions occurred frequently. However, similar conditions prevailed at the time in the mines of Western Europe.

The revolution and civil war devastated the coal industry in Ukraine. The coal output in 1920 was only 14 percent of the 1916 output. The coal industry of the Donbas was rebuilt slowly, because there was a shortage of capital, specialists, and even labor. The 1916 level of production was attained only in 1929–30. In 1920 the average miner's wage was low; in 1925 it ranked 11th on the wage scale, but by 1932 it ranked 4th. During the Second and Third Five-Year plans the Donbas coal fields were exploited recklessly at an accelerated rate: in 1940 annual production was over 80 million t, owing to improvements in technology (extraction machinery, mechanization of auxiliary work, although 33 percent of the loading in 1937–40 was still manual), and to the excessive quotas imposed on the workers (Stakanovism).

The Donbas coal industry suffered another severe blow during the Second World War: in 1941–2 coal production fell to a few million t; in March–August 1943 production was only 1 million t; and in 1944 it rose to only 16.3 million t. After the war the work of rebuilding the industry was

TABLE 1
Coal output of Ukraine
(in millions of tonnes)

Year	Amount of coal produced
1880	1.3
1890	2.8
1900	10.8
1916	28.7
1920	4.1
1930	30.5
1940	83.8
1945	30.3
1950	78.0
1955	126.0

1970	207.1
1975	215.7
1980	197.1

COAL DEPOSITS

difficult, for a large number of mines (822) were flooded, and their surface installations were completely destroyed. A huge number of unqualified rural workers (including many women) and large detachments of German prisoners of war were used on construction projects in 1944–50. The work of reconstruction took place under difficult living and working conditions, and labor turnover was high. Consequently, productivity, even in 1950, barely reached 84 percent of the level in 1940.

The prewar production level of coal was attained in 1951, and then only after the labor force expanded considerably and mechanization was introduced. The industry's condition improved only in the 1960–80 period, when outdated methods were replaced by modern extraction machinery and technology, the machine-building industry began to manufacture improved cutting machines and machines for automated underground transport, and miners were provided with better living conditions (new dwellings, settlement parks), improved water supply (the Dnieper-Donbas Canal), air-pollution control, and noise control. There was a general trend towards a reduction in the number of mines: from 306 mines in 1940, 401 in 1950, and 503 in 1960 to 483 in 1965, 389 in 1970, and 348 in 1978. In 1975–80 only 13 new mines were opened in the Donbas. In the same period the limits of rational economic exploitation of the Donbas coal resources were reached, and in 1976 coal production peaked at 218.2 million t. Although Ukraine's output of coal rose steadily, its share of the USSR output declined gradually from the 1920s as new coal basins outside Ukraine were brought into production. In 1913 Ukraine produced 86.8 percent of the Russian Empire's coal; in 1932, 70.4 percent of the USSR's coal; in 1940, 55.8 percent; in 1950, 29.9 percent; in 1970, 40 percent; in 1973, 32 percent; and in 1978, 21.9 percent. Ukraine's coal production amounts to 6.6 percent of world production.

Because coal production fell at the same time as technology improved, the number of workers decreased, from 800,000 in 1932 to 531,000 in 1970 (including 427,000 miners). Miners' productivity increased fivefold during this period, with the largest gain coming in 1960–70: from 13 t of coal extracted per worker per month in 1914 to 21.8 t in 1950, 29.7 t in 1960, 40.2 t in 1970, and 45.8 t in 1973. Coal extraction has become increasingly expensive, because new seams must be sought at greater depths (70 percent of industrial-quality coal lies at a depth of 800–1,000 m).

The administration and management of the coal industry have changed over the years. After the revolution and nationalization, the coal industry was overseen until 1932 by the Union agency known as the Supreme Council of National Economy, and then until 1939 by the People's Commissariat (later Ministry) of the Coal Industry of the USSR. In 1954 the ministry became a Union-republican ministry, and a separate Ukrainian ministry of the coal industry was established in Staline (now Donetsk). After N. Khrushchev's reorganization of industry and construction in 1957, the central ministry in Moscow was abolished, and the coal-mining enterprises in Ukraine were subordinated directly to the regional economic councils (of Luhanske, Donetsk, and Lviv) and indirectly to the Ministry of the Coal Industry of the Ukrainian SSR as the central administrative body. Yet, the state planning committees of the Ukrainian SSR and the USSR remained, as before, in charge of planning for the coal industry. In 1965 the system of regional economic councils was abolished, and the coal industry was again placed under the jurisdiction of Ukraine's Ministry of the Coal Industry, which acts in accord with the Union Ministry of the Coal Industry in Moscow. The system of management is a complex one and depends on regular agreements between the ministry in Ukraine (Donetsk) and Moscow on production goals.

The local organization and administration of coal mines were also subject to frequent changes. For a long time they were organized into trusts (32), and then into industrial complexes (15 in the 1970s). Today an important role in the administration of the coal industry is played by the computation center of the Ministry of the Coal Industry of the Ukrainian SSR. The newest trend is the reorganization of the industrial complexes into large production associations (*obiednannia*) with a centralized system of financial management and credit.

The total geological reserves of coal in the Donbas are estimated at 231 billion t, and of lignite, at 7 billion t. At the beginning of 1975 the industrial (categories A, B, and C) reserves of high-quality coal in the Donbas were 48,223 million t; in the Lviv-Volhynia Basin, 752.3 million t; and in the Dnieper Basin, 2,462.6 million t of lignite. The quantity of coal produced in these basins is given in table 2.

TABLE 2
Coal output of Ukraine's coal basins (in millions of tonnes)

	1960	1970	1976
Donbas	156.2	183.8	191.4
Lviv-Volhynia Coal Basin	3.9	12.3	15.0
Dnieper Lignite Coal Basin	11.6	10.9	11.7

TABLE 3
Ukraine's coal export (in millions of tonnes)

	1913	1928	1932	1937	1956	1958
Total export	7.3	8.1	17.5	26.4	47.0	61.0
Export to other USSR republics	7.2	8.1	15.7	25.0	41.6	55.4
Export abroad	0.1	0.5	1.8	1.4	5.4	5.6
Percentage of export to output	31.0	31.0	45.0	28.5	37.0	39.7

Sixty-five percent of Donbas coal is gas coke and long-burning coal, 16 percent is anthracite, and 15 percent is low-grade coal. Coking coal is one of the most important exports of Ukraine (see table 3).

Before the First World War Ukraine exported coal only to other parts of the Russian Empire (mostly to the Moscow Industrial Region), competing with Polish and British coal exports to the Baltic region and the St Petersburg Industrial Region, and earned, in 1913, 50 million rubles for the coal (7 percent of Ukraine's export earnings). In the 1920s Donbas coal was used by the whole European part of the USSR, particularly by the two Russian industrial regions of Moscow and Leningrad. This was also true in the 1930s, although the Moscow Coal Basin had been developed in the meantime. In 1934 Soviet Ukraine's export of coal and coke was worth 140 million prewar rubles and accounted for 19.4 percent of Ukraine's export earnings. After the Second World War Ukraine ceased to export coal to northern Russia and reduced its exports to northwestern Russia as the Moscow Coal Basin became more fully developed and the Pechora Coal Basin was brought into production. In the mid-1970s Ukrainian coal was exported to the Russian SFSR, particularly to the Central Industrial Region, the Volga region (by the new Volga-Don Canal), and the Central Chernozem Region, which together received 33.7 percent of Ukraine's coal exports. At the same time Moldavia bought 13.8 percent, and Belorussia 6.7 percent, of Ukraine's exported coal.

Ukraine exports hard coal (particularly anthracite) beyond the USSR, mostly to the Soviet bloc countries – Hungary, East Germany, and Rumania – which receive 10 percent of the exported coal, but also to Austria, Italy, Yugoslavia, France, and Finland. Donbas coke accounts for a substantial part of Ukraine's coal export abroad: the quantity of exported coke increased from 0.35 million t in 1950 to 1.6 million t in 1955 and 1.9 million t in 1956. About 50 percent of the coke export went to East Germany, and 25 percent to Hungary and Rumania.

As for the consumption of hard coal in Ukraine itself, about 50 percent of the production is used in the Donbas; the rest goes to the Dnieper Industrial Region and other regions of Ukraine. The Lviv-Volhynia Basin meets the demands of Western Ukraine and exports coal to Belorussia.

Because of its large coal exports, the consumption of coal in Ukraine's economy is low in comparison to other fuels and is disproportional to its production of coal. In 1965–75 the proportion of coal consumption to total fuel consumption fell from 34 to 24 percent, while natural-gas consumption rose from 24 to 34 percent, and consumption of mazut refined in Ukraine rose from about 4 percent in 1965 to about 6 percent in 1978.

To maintain coal production at the level of 200 million t per annum, Ukraine's coal industry has introduced a number of technological and economic measures, the most important being the concentration and enrichment of the extracted coal at modern enrichment plants and the removal of sulfur pollutants from the products of carbonization. About 50 million t of rock wastes are brought to the surface annually in the Donbas; these occupy large sections of valuable land, as do slag and ash heaps. Ukraine lags far behind West European countries in utilizing rock wastes and slag, but this is to be rectified in the 1980s–1990s, when further improvements in extraction technology and new scientific research on the tectonics of coal seams and ventilating methods are planned.

Scientific research for the coal industry is conducted by several institutions in Ukraine: the Institute of Geotechnical Mechanics of the Academy of Sciences of the Ukrainian SSR in Dnipropetrovsk; the Institute of Geology and the Geochemistry of Combustible Minerals of the Academy of Sciences in Lviv; the Institute of Mining Mechanics of the USSR Ministry of the Coal Industry (established in 1951) in Donetsk; and the Scientific Research, Design-and-Construction, and Planning Institute of the Coal Industry of the USSR Ministry of the Coal Industry in Kiev, established in 1959 as a successor to the Ukrainian State Institute for Planning Mines. The Coal Institute of the Donbas (VUHI) in Kharkiv conducted research in 1927–41; it was then renamed the All-Union Institute of the Coal Industry and moved to Moscow. In its place the Donetsk Coal Scientific Research Institute (DonVUHI) was created in 1946 with a limited research program. There are also a number of smaller, highly specialized institutes in Ukraine: the Institute for the Experimental Mechanization of Coal Mines in Donetsk, the Institute of Miners' Work Safety in Makiivka, and, in Voroshylovhrad, the Institute for the Problems of Coal Enrichment and the Institute for the Problems of Hydraulic Coal Extraction. The Russian-language journal *Ugol' Ukrainy* is devoted to the problems of coal mining.

Coat of arms. A visual symbol designed according to the rules of heraldry that belongs to a state, city, or family and is passed on from generation to generation. Coats of arms are depicted on flags, seals, weapons, buildings, etc. The coats of arms belonging to noble houses evolved from

earlier family signs at the beginning of the 11th century; their development coincided with the growth of feudalism. It is known that Volodymyr the Great and his descendants had coats of arms showing tridents and bidents, the coat of arms of Mstyslav the Great had a representation of Archangel Michael, and the Halych princes in the 14th century used the lion. In the Lithuanian-Polish period many noble families had coats of arms. The state confirmed or bestowed coats of arms, usually along with new titles. The attributes of a complete coat of arms include the following: shield, helmet, tent, crown, crest, shieldbearers, mantle, and motto. The main parts of a coat of arms are the shield and the image on it, which constitute the emblem. During the baroque period coats of arms became very elaborate. A great number of Cossack *starshyna* families of the Hetman state had their own coats of arms and used them on seals. At the end of the 18th century Catherine II recognized the privileges and the coats of arms of the Ukrainian nobility. Maria Theresa did the same for the noble families of Western Ukraine. (See also *Heraldry.)

Coats of arms of cities and territories. The oldest coat of arms in Rus' was the trident. Lviv's and Halych's coat of arms, dating back to the 14th century, consisted of a yellow heraldic lion rampant on an azure background. The coat of arms of the Zaporozhian Host, which was known from the 16th century, depicted an armed Cossack. This later became the coat of arms of Slobidska Ukraine, and a variant of it was adopted by the Don Cossacks in the 18th century as their coat of arms. Other coats of arms with a long history are those of Volhynia (a silver cross on a red background), Podilia (a golden sun with 16 rays and a golden cross on an azure background), and the Kiev region (Archangel Michael with a fiery sword and a silver shield on an azure background). In the Lithuanian-Polish, Polish-Cossack, and Hetman periods the larger cities in Ukraine had their own coats of arms, which were used on official seals. The city coats of arms that were granted in the 18th–19th century by the Russian government are interesting mostly for their political symbolism: their emblems depict the tsars' solicitude for Ukraine or the bond between Ukraine and Russia. Poltava's coat of arms, for example, consisted of a golden shield with a black triangular monument entwined by a golden snake (symbolizing Hetman I. Mazepa), a pair of crossed red swords above (symbolizing the battle of Poltava), and two green pennants with the monograms of Peter I (symbolizing Peter's victory). Chernihiv's coat of arms depicted, on a silver background, a black crowned eagle holding a long golden cross in the claws of its left foot. Katerynoslav's coat of arms consisted of an azure shield containing the golden monogram of Catherine II and the date '1787,' with nine six-point stars surrounding the letters. Kharkiv's coat of arms consisted of a silver shield with a black horse's head and a golden six-point star. Kherson's coat of arms had a silver cross and three Russian crowns on the sides and below, against an azure background. The Kuban's coat of arms consisted of a green shield containing a golden wall with two turrets and above them a mace between two Cossack standards surmounted by an eagle. Behind the shield were four azure flags with the monograms of the Russian tsars from Catherine II to Alexander II.

The coat of arms of Transcarpathia – a bear and yellow and blue strips on the left side of the shield – was officially

adopted in 1920 and became part of the great coat of arms of Czechoslovakia. In 1939 the Diet of Carpatho-Ukraine sanctioned this coat of arms after adding the trident to it.

State coat of arms. The oldest coat of arms of Ukraine, that of the land of Prince Volodymyr the Great and his dynasty, is the trident, which was undoubtedly used as early as the 10th century. The coat of arms of the Halych princes – the lion – is known to have been used as early as 1316. The Hetman state had a coat of arms depicting an armed Cossack with a musket.

After the proclamation of the UNR, the Central Rada passed a law on 22 March 1918 adopting the Great State Emblem and the Minor State Emblem as the symbols of the sovereign and united Ukrainian state. Both consisted of the trident, which remained the national emblem under the Hetman government in 1918. On 13 November 1918 the Ukrainian National Rada of the Western Ukrainian National Republic adopted the yellow lion on an azure background as its coat of arms. When the union with the Ukrainian National Republic was proclaimed on 22 January 1919, the trident became the state emblem in Western Ukraine as well.

The constitution of the Ukrainian SSR defines a somewhat modified version of the coat of arms of the Russian SFSR as the coat of arms of the Ukrainian SSR. It consists of a golden sickle and hammer against a red background with sun rays, which is encircled by a garland of wheat sheaves and topped with a five-point star. At the foot of this composition is the inscription 'Ukrainian SSR' flanked by the motto 'Proletarians of All Countries Unite' in Ukrainian and Russian. This coat of arms was last confirmed on 21 November 1949. In it there are no traditional Ukrainian elements.

Code of Laws of 1743. Collection of prevailing Ukrainian laws in the Hetman state, codified under the title *Prava, po kotorym suditsia malorossiiskii narod* (Laws by Which the Little Russian People Are Judged). The Russian government never ratified the code of laws, and hence it remained only a proposal, although it became the basic source of operative laws in Ukraine in the 17th–18th century. The initiative to compile a code of laws came from the Russian government, which, in art 20 of *Reshitel'nye punkty* (Final Clauses, 1728), the Russian-imposed constitution for Ukraine, suggested that a collection of working laws in Ukraine be translated into the Russian language. This was affirmed by the edict of 1734, which widened the task of codification, suggesting certain corrections to existing norms and the compilation of new legal rules 'for the benefit of the Little Russian people.'

The compilation of a code of laws was assigned to a committee, created by Hetman D. *Apostol in 1728 and composed of representatives of the higher clergy (three persons), the Cossack *starshyna* (eight), and municipal administrators (two). Over a period of 15 years the composition of the committee was changed and augmented. The committee members were highly educated and came from various strata of society. Many were lawyers,

some of them with foreign legal degrees. The committee was headed by V. *Stefanovych (1728–34), General Judge I. Borozna (1734–5), General Quartermaster Ya. Lyzohub (1735–41), and General Flag-bearer M. Khanenko (1741–3).

The work of codification was completed in 1743, and in 1744 the project was sent to the Russian senate. The proposed code was not ratified and was returned for amendments and changes. For this purpose a new committee was formed in Hlukhiv. Its task was never completed, partly because of the attitude of the Russian government, but also partly because of the opposition of the conservative part of the Cossack *starshyna* and notable military fellows, who were afraid that the changes proposed in the code would limit the privileges that had been granted to them by the *Lithuanian Statute.

The code of laws prepared by the committee in the period 1728–43 was an original, systematized collection of prevailing legal norms in the Hetman state. The main sources of the code were the Lithuanian Statute (in the Polish edition of 1648) and the compilation of the *Magdeburg and Chełmno laws, prepared in the 16th century by M. Jaskier, P. Szczerbic, and B. Groicki. In addition, hetman manifestos, Cossack court practice, and Ukrainian *customary law were drawn on. In cases where no relevant law existed in the code, the code prescribed the use of other 'Christian' laws (law of analogy), court precedents, and customary law. The creative work of the committee consisted of the selection of quotes from written sources, their partial modification, and the incorporation of amendments to them.

The code was divided into 30 sections, 531 articles, and 1,716 points, which encompassed a wide range of legal norms of state, administrative, civil, commercial, criminal, and procedural law. Civil law was the most recent addition; the principles of Roman law, borrowed from German and Polish compilations, were reflected there. The prescriptions of criminal law did not differ significantly from those in the already antiquated Lithuanian Statute and collections of German laws. Hence, the code reflected the severity of ancient law, moderated only by the right of the court to reduce prescribed punishment 'according to circumstances of the case' and 'the severity of the crime.'

The code of laws was first published by O. *Kistiakovsky together with his monograph in *Kievskie universitetskie izvestiia* (1875–8) and then separately in 1879. In the 1930s M. Misiats found one of three original copies and was able to make certain revisions to the published text. The only remaining copy of the code of laws is now kept in Leningrad.

Coke-chemical industry. An important branch of industry that distills bituminous coal into coke and a number of byproducts, such as coal gas, ammonium sulfate, benzol, naphthalene, and cresols.

The first coke ovens in Ukraine were built in Yuzivka in the Donets Basin, where the first blast furnace using mineral fuel (coke) in Ukraine went into operation in 1872. At the beginning of the 20th century coke became the commonly accepted fuel for blast-furnace smelting; by 1913, 75 percent of the cast iron produced in Ukraine was smelted by means of coke. The early coke ovens were usually built near mines. Before the revolution only about one-third of the coke ovens were associated with metallurgical plants. Technically, the coke industry before the revolution was quite backward. In 1913 Ukraine accounted for over 90 percent of the total production of coke in the Russian Empire.

In 1921-8 the coke industry, which had been devastated in 1917-20, was completely restored, and some new plants were added. During the prewar five-year plans, new, fast-working byproduct ovens, which were heated with blast-furnace gas and captured all chemical products, began to be built. The proportion of the total coke production that came from the byproduct ovens grew from 17 percent in 1929 to 73 percent in 1940. In 1913 only 29.4 percent of the coke was produced in ovens that retained the chemical byproducts of coking, while in 1940, 96 percent of the coke was produced in such ovens. The technology of production improved considerably, the coking period diminished considerably, production became more concentrated, and the average annual productivity of a single oven doubled between 1913 and 1940. Today much attention is devoted to utilizing the chemical byproducts of coking (150 substances, accounting for about 6 percent of the output of the coke industry). Coke plants today co-operate primarily with metallurgical plants (in 1940, 73 percent of the coke was produced in such plants), and hence tend to be located in metals-producing regions such as the Donets Basin, the Dnieper region, and the Azov region. Large new industrial complexes that combine coke and metals production with the production of chemicals and synthetic products are being built.

The degree of concentration in the coke industry has increased significantly (19 large plants in 1979), and the average production per plant has grown rapidly from 2 million t per year in 1960 to 2.8 million t in 1979. The growth of the coke industry in Soviet Ukraine is shown in the following production figures (in millions of tonnes): 4.3 in 1913, 4.0 in 1928, 7.3 in 1932, 15.7 in 1940, 15.0 in 1950, 28.7 in 1955, 30.1 in 1960, 36.3 in 1968, and 42.1 in 1979.

The largest coke and coke-chemical plants in the Donets Basin are located in Avdiivka, Horlivka, Makiivka, Rutchenkove, Yenakieve, Kramatorske, Donetske, and Voroshylovske. The other important centers of the coke industry are Dniprodzerzhynske, Zaporizhia, Kryvyi Rih, and Kharkiv. As the coke industry expanded into the eastern regions of the USSR in the postwar period, the relative importance of Ukraine's coke production fell from 74.5 percent of the USSR production in 1940 to 54.7

percent in 1959 and 48 percent in 1979. Ukraine is the largest producer of coke in the Soviet Union and the second largest (after Germany) in Europe. Some of Ukraine's coke is exported beyond its borders, particularly to the foundries of the Russian SFSR. The problems of the coke industry are studied by the Ukrainian Scientific Research Institute of Coal Chemistry and the Dnieper Coke Institute (Dniprokoks) in Kharkiv.

Collective contract. A form of agreement between a union committee and the management of an enterprise that defines their mutual obligations in fulfilling planned tasks. The management undertakes to fulfill certain specified conditions for the workers and staff, while the latter agree to fulfill their obligations by a given deadline, for which they are to receive certain premiums and other rewards. Collective contracts in the USSR are actually arranged by the Party organization within each enterprise; thus almost no real decision-making power is left to the workers. The proposed agreement is discussed pro forma by the general assembly of the workers and staff, approved, and signed. The Party then monitors the fulfillment of the contracts.

Collective farm (Ukrainian: *kolektyvne hospodarstvo* or *kolhosp*; Russian: *kolektivnoe khoziaistvo* or *kolkhoz*). Since 1930 the type of farm that has dominated farming in the Ukrainian SSR. Collective farms were introduced by force during *collectivization and have existed side by side with *state farms (*radhospny*). Collective farms were called agricultural *artels for some time. Apart from the land, which belongs to the state, members of the collective farms own their principal means of production in common, and these cannot be divided among the members of the collective. Labor on the farms is collective, but the income is divided, either in kind or in money, among the members. This practice distinguishes the collective farms from other forms of shared farming such as the *commune, *association for the joint cultivation of land, and state farm. Legally the collective farms are autonomous economic enterprises that function on the basis of their own statutes within a framework of administrative-legal and contractual relations with the state, other enterprises, and their own members.

In the Ukrainian SSR collective farms were introduced in 1928-33. Collectivization was achieved by the abolition of privately owned farms and the intervention of political and police agencies. By 1939 there were 27,377 collective farms, the average farm having 1,285 ha at its disposal. Despite intensive collectivization in Western Ukraine at the end of the 1940s, the total number of collective farms fell to 23,653 owing to the merger of smaller farms. In the late 1940s many collective farms had very small areas of arable land: for example, 800 farms had less than 100 ha per farm, and almost 3,000 had less than 300 ha per farm. The policy of amalgamating collective farms, introduced

in 1950, further reduced the number of farms to 13,192 by 1958. At that time an average collective farm had 2,660 ha of land and 289 households. In 1938, after a decade of collective farming, 79.1 percent of the land in Ukraine was used by the collective farms. By 1958, 86.1 percent of the arable land was under their control. The land at the disposal of the farms was gradually reduced as the number of state farms and their farmland were increased: the number of state farms increased from 929 in 1940 to 2,104 in 1979. Starting in the 1960s, some of the lands belonging to collective farms were transferred to inter-farm enterprises and associations, which increased in number from 488 in 1965 to 1,537 in 1979. In 1980 the area of the tilled land and farming facilities at the disposal of collective farms in Ukraine amounted to only 70 percent of the total tilled land and facilities in the Ukrainian SSR. About 26 percent of the farming facilities were in the hands of state farms and the state.

During the 1960s–1970s the number of collective farms continued to decrease gradually, but at a slower rate than before. There were 9,553 collective farms in Ukraine in 1965, 9,141 in 1970, 7,603 in 1975, 7,016 in 1980, and 7,157 in 1982. For the average collective farm, however, the land under seed increased rapidly. By 1979 it reached 3,400 ha, while the number of households on the average collective farm had reached 655. In 1979 the average collective farm owned 2,278 head of livestock, of which 719 were cows; 1,516 hogs; and 922 sheep and goats.

The main purpose of the collective farms in the Soviet economic system is to provide the state with the maximum cost-free capital for developing heavy industry, arming the military, and maintaining the bureaucracy. Taking into account the demand for agricultural products inside the country and abroad, the government assigns maximal delivery quotas and minimal delivery prices, which it regards as expenses that must be minimized. The government then sells the products delivered by the collective farms at the highest prices, thus reaping a huge profit (see *Agricultural procurement). High selling prices are determined by the necessity to absorb the purchasing power of consumers and to adjust the demand to the available quantity of farm products. The profits of this operation are appropriated by the state treasury through the turnover tax. These profits are to a large extent absolute rents that the state exacts from the collective farms.

Until 1956 the collective farms did not keep records of their costs and labor losses. Government data in 1957 showed for the first time that many collective farms operated at a deficit. According to the data, the average production cost of one centner of pork was 1,185 rubles, while the state paid the farms only 425 rubles for obligatory deliveries and 880 rubles per centner for non-obligatory deliveries. The production cost of one centner of milk was 142 rubles; the state paid 55 and 135 rubles per centner. One thousand eggs cost 780 rubles in capital and labor; the state paid only 200 rubles for them. This kind of exploitation obstructed the development of collective farms and undermined any incentive to work. In September 1953 the Plenum of the Central Committee (CC) of the CPSU for the first time gave some recognition to these facts, and certain reforms were introduced. On 30 June 1958 delivery prices were raised, all forms of deliveries were consolidated into one, and the collective farms were ordered to change gradually to a sounder economic basis.

Typical indices of an average collective farm in Ukraine

	1940	1958	1979
Households	141	421	655
Able workers	242	571	628
Seeded land (hectares)	784	1,970	3,400
Head of livestock	122	674	2,278

From 1960 to 1980 the delivery prices of farm products were raised several times, but the prices on most products were always lower in Ukraine than they were in the Russian SFSR or in the Soviet Union generally. From 1970 to 1980 these prices rose 2 percent per year, while the state prices for industrial products rose 5 percent per year.

Until 1955 all the particulars of collective-farm economic life were planned centrally in Moscow. The USSR government set the same norms of production, forms of labor organization and compensation, and norms and deadlines for sowing and harvesting for all collective farms. It even issued instructions on the spacing of plants. Without permission of the raion land department members of a collective farm could neither plow, sow, nor reap. The collective farms had to conform to standards and instructions that were often pointless or unsuited to local conditions. They were given some economic autonomy only on 9 March 1955.

With time this 'autonomy' expanded somewhat, and all farming enterprises were supposed to have changed to a profit basis and to have received greater independence. In 1981, however, all the main parameters of the collective farms, including the area to be seeded, were still determined by the republican agencies, which in turn still had to conform to the agricultural policies of the central government in Moscow.

Collective farms were first permitted to own tractors in 1956. This reform, however, was made fully effective only by the law of 1 August 1958, which almost abolished the system of *machine tractor stations (MTS). During 1958, 94 percent of the collective farms purchased their tractors and other machinery from the MTS. The farms purchased equipment and fertilizer through the state enterprise known from 1961 as *Silhosptekhnika*. Eventually, it was changed to a Union-republican agency known as the State Committee for Farm Supplies. The collective farms now have the right to purchase farm machinery and fuel from the state directly.

The 6 March 1956 resolution of the CC of the CPSU granted the collective farms the right to introduce amendments to the artel statute. Until then a uniform 'model statute' was binding on all collective farms. Since then the general meeting of each collective farm can set the production norms, organizational forms, wages, and minimum number of obligatory workdays. But this new form of collective-farm democracy is quite limited, for the Party cell of the farm (consisting of 18 members on the average, including the farm chairman and other supervisors) plays a decisive role in the farm's life and follows the instructions of the raion Party committee.

The collective farm's work force is divided into brigades. Each brigade has a certain amount of land, buildings, equipment, and animals at its disposal for at least a year. The purpose of organizing labor in this way is to develop specialization and expertise among the farmers.

The brigades devoted to gardening and to tilled crops are divided further into squads (*lanky*).

Until 1966 every form of farm work had its production norm, which was based on a certain assigned number of conventional units called *workdays (*trudodni*). There were close to 2,000 forms of work and norms, all of which were assigned a value in terms of workdays. The lightest forms of work were valued at 0.5 of a workday, while the hardest or most skilled work was valued at 2.5 workdays. By fulfilling the norm, farm members got a certain number of workdays to their credit. At the end of the year, after the collective farm had fulfilled its obligations to the state, its remaining income was divided by the total number of fulfilled workdays to obtain the remuneration per workday. Each farmer then received a share of the farm's income according to the number of workdays he had earned during the year.

The income of collective-farm members consisted of two main parts: (1) wages paid in money and products, and (2) income derived from their *private plots. The first was supposed to constitute 75 percent and the second 25 percent of their incomes. In reality the first never accounted for more than 50 percent of their incomes. In 1934–7 the wages for a workday were 33–75 kopecks and 1–3.5 kg of grain. With time monetary wages increased, while wages in kind decreased. The farmers were hard hit by the drop in their share of the products, for they used grain for food and animal feed.

At the end of the 1950s farm labor gradually began to be recompensed solely in monetary wages, and in 1966 the system of workdays was finally abolished. The wages of collective farmers rose significantly, yet they remained lower than the wages on state farms. The incomes of collective farms increased from 1,818 million rubles in 1966 to 4,335 million rubles in 1975 and to 5,500 million rubles in 1979. Divided among all the working members of collective farms, these funds provided an average monthly wage of 96 rubles in 1975 and 81 rubles in 1979. Thus, in the last few years there has been a drop in individual earnings rather than an increase.

As late as 1952 the workday of a collective farmer was worth only 0.85 rubles on the average. In 1960 the value rose to 1.19 rubles. In 1970, according to official data, the value of the workday in products and money rose to 3.58 rubles. At the same time the proportion of payment in kind decreased to 25 percent of the farm income in 1965 and to 8 percent in 1975.

Lacking a sufficient incentive to work on the collective farms, farm members have tried to devote as much labor as possible to cultivating their private plots, which the government had allowed the peasants to keep in order to increase the availability of food products and satisfy the peasants' traditional need for private ownership and because it realized that its delivery quotas were too high and that the farmers were left too little. To force the members to give more of their labor to their collective farms, in 1939 the government introduced an obligatory minimal standard of workdays – 60–100 per person. In 1942 this standard was increased to 100–150 workdays, and today in some collective farms it amounts to 200–250 workdays per year. Many collective farms, however, do not fulfill the minimal standard.

In 1956 the collective farms were allowed to set up their own co-operative industries in the countryside. By 1958 69 percent of the collective farms were members of raion

interfarm building co-operatives, which were based on shares and which owned 300 brickyards, 500 carpentry shops, and 116 co-operative electric stations. This change has increased the productive capacity of the collective farms and created opportunities for higher incomes for the collective farmers. The state requires that the collective farms build their own schools, hospitals, etc at their own expense. In 1953–8, for example, the collective farms in the Ukrainian SSR built, on their own, 720 village schools, 125 hospitals, 800 bathhouses, and 1,800 clubhouses. The collective farms also reforest land, build irrigation systems, and construct new roads at their own expense.

In general, there is much less investment in rural development than in urban development. Hence, the *living standard on the collective farms is much lower than that of urban workers or the urban population in general. The average Ukrainian village in the 1970s–1980s has poor housing, inadequate medical services, poor roads, and insufficient public facilities.

Since the end of the 1960s collective farms have been allowed to enter jointly with state farms and industrial enterprises into what are known as 'agrarian-industrial complexes,' or associations for processing raw agricultural and animal products (fruit canneries, dairy and cheese operations, meat plants, etc). They may also form 'state-and-collective-farm enterprises' for building rural electric stations, creating irrigation systems, repairing farm equipment and machinery, etc. The collective farms maintain their separate identities and enter these associations to utilize their human and material resources more economically. The ideological purpose of these innovations is to integrate the collective farms and their property more closely with the state.

Legal status and collective-farm legislation. According to the Model Collective-Farm Statute of 1969, 'the collective farm is a co-operative organization of peasants who join together voluntarily to conduct large-scale socialist agricultural production on the basis of social means of production and collective labor.' The statutes of 1930 and 1935 defined the collective farm in the same way. They emphasized the 'voluntary' nature of the association and thus contradicted the historical facts of forced collectivization. The model statutes stress that the land held by the collective farms, like all land in the USSR, is owned by the state and is granted to the farms for their use indefinitely. For this reason the land cannot be bought, sold, or rented. The state decides such questions as the amalgamation of collective farms, their transformation into state farms, and the allocation of land for the private use of peasants.

During the collectivization drive the property of the collective farms was usually acquired by the socialization of private peasant farms. A part of this property was assigned to the common reserves of the collective farm, and a part was defined as the collective-farm member's share, which would be returned to him if he left the collective farm. Thus, only a portion of the peasant property – the common reserves – was expropriated during collectivization. The peasants retained ownership of the part that went into the shares until 1969, when the third Model Statute dropped any reference to shares and thus retroactively expropriated all the peasants' land.

The property of the collective farm – machines, equipment, livestock, etc – does not belong to all the members

of the farm but to the collective 'juridical person.' Like state property, collective farm property is socialist (not private). It differs from state property in that the latter figures in the state budget, which is the basis for economic planning, while the budget of each collective farm is not included in the state budget. The state plans define only the total agricultural production that the collective farms must deliver to the state. A small part of the collective-farm lands is distributed among the peasants for 'the private use' of each *collective-farm household.

Legally the collective-farm agencies have the right to manage the property and the financial resources of the farms. The property of collective farms is divided into various funds, of which the main ones are the basic fund and the turnover fund. There is also a seed fund and a feed fund. These funds are managed according to the state and production-financial plan of the collective farm. In this respect the collective farms barely differ from state enterprises, particularly state farms. Although collective farms are not formally state enterprises, they are subject to the principle of 'state control of agriculture.' There is a whole system of state bodies for managing agriculture. The executive committees of raion and rural soviets are involved directly in agricultural management. The executive committees of the raion soviets in particular approve the planned purchases of farm production and oversee their fulfillment, provide the collective farms with modern technology, and attempt to improve the material-technical base of farming. They also exercise a number of control functions over the collective farms. There is no sphere reserved by law for the collective farms in which the state cannot interfere.

Formally, the general meeting of the membership is responsible for affairs on the collective farm; between meetings the executive of the collective farm manages the farm. The general meeting approves the farm's statute; elects a chairman, the executive, and the auditing committee; approves the wage scale; etc. In reality all these decisions are made by the appropriate Party and state agencies. The elections, particularly, are controlled by the Party apparat.

The various branches of farming at a collective farm are supervised by specialists – agronomists, economists, zootechnicians, engineers, veterinarians, bookkeepers, etc. Formally, they are appointed by the farm's executive, but in reality they are sent by the executive committee of the raion soviet. The collective farm receives from the raion executive committee the projected quotas of farm products that are to be delivered to the state, and on this basis the farm's management draws up the so-called production-financial plan. The plan is formally approved by the general meeting and sent to the raion executive committee 'for examination.' Any changes made by the executive committee are binding on the collective farm.

In 1958 a unitary system of deliveries to the state at fixed prices, varying by zones, was introduced. The prices became stable in the sense that with normal harvests they do not change. At the same time the prices fluctuate; that is, they are adjusted depending on conditions during the year and during harvests. The delivery plans are approved by the USSR Council of Ministers and distributed among the republics. In exceptional circumstances they can be set by the Council of Ministers of the Ukrainian SSR, and the central agencies in Moscow must be advised of this. The government of the Ukrainian SSR

determines the deadlines by which the delivery plans must be fulfilled. The prices are approved by the USSR Council of Ministers for the entire Soviet Union; on this basis the Council of Ministers of the Ukrainian SSR sets the purchase prices by zone, variety, and delivery season. Thus the delivery organizations sign what are known as contractual agreements with the collective farms. These agreements are a more flexible form of obligatory delivery. Higher prices are provided for products sold to the state over and above the contracted deliveries. Any surplus may be sold at *collective-farm markets.

Labor discipline is obligatory at collective farms. Penalties such as redoing a poorly done job without pay, warning, censure, censure at a general meeting (formerly a fine of up to five workdays), transfer to a lower job, and finally expulsion from the collective farm are meted out by the executive for careless handling of common property, absenteeism, poor work, and other infringements of the farm regime.

Until 1964 collective-farm members had no social security. The law of 15 July 1964 introduced old-age and disability pensions and welfare for families that had lost their breadwinner. This was one step towards raising the economic status of the collective farmer to the level of the industrial worker.

Collective-farm household. Under Soviet law a family work group that belongs to a collective farm and takes part in its agricultural activities. At the same time the family cultivates its own *private plot, which it owns together with its cottage, private possessions, cattle, poultry, and farm implements. At the end of the 1960s, a household could own 1 cow, 1 heifer, 1 sow with a litter, up to 5 sheep and goats, up to 20 beehives, and an unrestricted number of rabbits and poultry. The income earned by the members of the household at the collective farm also belongs to the household. On the death of a member the question of inheritance does not arise, because the household is the joint owner of any property it possesses. There can be a division of property when a member leaves a household or when a household splits into two or more households. Such a division is governed by collective-farm law. Disputes are settled by the courts.

A household receives for its use a cottage plot of 0.25–0.5 ha. The size is dependent on the number of members in the household and on their fulfillment of their

labor obligations to the collective farm, as well as on the amount of land available for private plots. The nature and extent of the household's property is defined by the Civil Code of the Ukrainian SSR (1970, arts 120-7) and the Model Collective-Farm Statute of 1969, while practical decisions are made by the executive of the collective farm or the farm's general meeting. The republic's Council of Ministers has the right to introduce certain modifications within the general framework of the law.

The collective-farm household pays a farm tax proportional to its income. In the past higher taxes were imposed on a household that failed to fulfill the minimal norm of *workdays (*trudodni*). Until 1958 the household had to deliver a certain quota of farm goods at a low official price to the state. These obligatory deliveries were eventually abolished. The peasants now have the right to sell the products of their private plots on the free market, known as the *collective-farm market.

After 1965 certain burdens were removed from the collective-farm households. The obligation of every member of the household to work on the collective farm was abolished, for example. There are what are known as mixed collective-farm households, in which some members are employed by state enterprises instead of by collective farms.

A. Bilynsky

Collective-farm market. A form of free, small-scale trade conducted by the peasants and collective farms outside Soviet state and co-operative commercial networks. The prices of the products produced and sold there by the peasants and farms are determined not by the state, but by supply and demand, including the availability or lack of these products on the state-controlled market. Prices on the collective-farm market are understandably higher, but the quality of the goods is also higher. The peasants sell mostly agricultural products produced on their *private plots. The collective farms offer for sale the surplus left after they have fulfilled their compulsory deliveries to the state in order to increase their profits: over 22 percent of the income of Ukraine's collective farms in 1968 was obtained in this way. The main participants in the collective-farm market, however, are the peasants, who derive a substantial amount of their income from the sale of their privately produced products.

The Soviet authorities permitted the collective-farm market to operate as early as the beginning of collectivization (1931-2), after the private market of the NEP period had been abolished and the state-run system proved incapable of providing the population with basic agricultural products. This was a concession to private enterprise and, at the same time, an admission of the state system's inability to supply the population with food and to satisfy its needs. The main function of the collective-farm market thus became one of supplying the cities with such basic necessities as dairy products, meat, poultry, eggs, vegetables, and fruit.

Trading on the collective-farm market was legalized by a resolution of the Central Committee of the CPSU and the Council of Ministers of the USSR on 23 October 1953. The Model Collective-Farm Statute of 1969 permitted collective farms to take part. Since that time the market has been a major part (56 percent in 1968) of the Ukrainian peasants' and collective farms' trade, the rest of which consists of commission trading by co-operatives on behalf of the

peasants and farms and direct purchases by co-operatives (21 percent) and of trade among the collective farms (23 percent).

Collective-farm market trade plays an insignificant role in the USSR's general purchase and sale of goods, however: in 1968 it accounted for only 3 percent of the trade in the USSR and 4.2 percent of the trade in Ukraine. In general, sales of food products at collective-farm markets accounted for 6.8 percent of such sales in the USSR and 15.3 percent in Ukraine.

Collective-farm markets are conducted at designated sites on collective farms and elsewhere. In 1968 there were 2,220 such marketplaces in Ukraine. The larger ones, such as the Kiev central market, the Volodymyrskyi market in Kiev, and the Donetske central market, are large and modern and are known as covered markets. The markets in other cities and towns are usually open-air markets situated in squares and have very simple facilities. The larger markets are open every day; the smaller ones are open once or twice weekly.

The economic activity of the collective-farm market is supervised by Ukraine's Ministry of Trade through its oblast and city agencies. Sellers must purchase a vendor's license and pay a fee for the use of the market facilities. The collective-farm market is viewed by specialists on the Soviet economy as a part of the so-called second economy that operates outside the state plan and direct state control and as a unique remnant of capitalism. See also *Trade.

V. Markus

Collectivization. In Soviet terminology the transformation of agriculture from private-capitalist to collective-socialist production. The idea of collectivization has long been familiar in socialist co-operative movements, and Marxists have inserted it into their program. According to F. Engels, the process of collectivization must be completely voluntary and gradual. The Communists in Russia adopted a program of collectivization only after the October Revolution. In the USSR the long-term aim of collectivization was to set up large, state-owned, mechanized farms managed by experts and utilizing the newest inventions of science and technology. The short-term aim was to establish a form of collective farming that would provide the state with the maximum production of agricultural goods at a minimum level of peasant consumption.

Before the collectivization drive at the end of the 1920s the prevailing view was that this transformation was to take place voluntarily. Basically, three types of collective farms were set up: (1) *associations for the joint cultivation of land (*tsosiz*), without socialized means of production; (2) agricultural *artels, which were co-operatives with socialized means of production but with privately owned farms; and (3) *communes, in which all the means of production were socialized, the land was worked collectively, and consumption and way of life were communal. These types of associations were voluntary, that is, the admission of members was based on a civil-law contract that provided for voluntary withdrawal. The peasants preferred the first form of collective farming because it guaranteed that the means of production would remain privately owned.

The first collective farms, which were communes consisting mostly of workers, appeared in the Ukrainian SSR

as early as 1919. In February 1921 the first congress of farm collectives took place in Odessa. The decree of the All-Ukrainian Central Executive Committee of 9 August 1922 encouraged voluntary collectivization by various incentives. V. Lenin's 'co-operative plan' provided for a gradual collectivization through the development of all the forms of co-operative association, particularly of co-operative machine associations, which would give the peasants an economic incentive to work their land jointly. Ukrainian agrarian co-operative organizers such as I. Klymenko, M. Odynets, and O. Trylisky contributed to the theory of voluntary collectivization, mainly in the form of the *tsoz* rather than of the *artel*.

There were 193 voluntary collective farms in 1921 and 9,734 in 1928, embracing 2.5 percent of all farms and 2.9 percent of the land. According to the first version of the First Five-Year Plan for the Ukrainian SSR, 12 percent of all arable land was to be collectivized by 1932. The final version of the plan, which was approved in April 1929, projected 25 percent of the land to be collectivized. In November 1929, however, all these plans were set aside, and forced collectivization was begun.

The All-Union Communist Party (Bolshevik) (CP(B)) introduced forced collectivization because there was not enough capital to fulfill the First Five-Year Plan of rapid industrialization. Additional capital could be secured only by increasing exports of farm products, and so large quantities of them had to be purchased at low prices. However, the peasants did not want to surrender their grain to the state at ridiculously low prices. Furthermore, the Great Depression caused the price of grain on the world market to fall. The Soviet government also wanted to deprive the peasants of their own means of production and to draw excess labor from the countryside into the cities.

Forced collectivization was approved by a resolution of the Plenum of the Central Committee (CC) of the All-Union CP(B) on 17 February 1929, which stated: 'Ukraine should in the shortest period provide models of the organization of a large nationalized economy.' The plenum decided to start the building of the Kharkiv Tractor Plant and a combine plant in Zaporizhia. Accordingly, the November Plenum of the CC of the CP(B)U and the government of the Ukrainian SSR decided on 25 December 1929 to collectivize up to 21.6 percent of the land by October 1930. But the resolution of the CC of the All-Union CP(B) adopted on 5 January 1930 ordered the collectivization drive to be speeded up and to be completed in the main grain-growing regions in one to two years and 'the kulaks as a class to be liquidated,' on the assumption that they would be the leaders of the resistance to collectivization. To fulfill the plan, the CP(B)U sent its cadres into the countryside, increasing their number from 38,500 in 1930 to 112,000 in 1932. It also sent urban industrial workers (10,500 in 1930), who were appointed chairmen of collective farms and rural soviets, and 19,400 urban workers and functionaries on temporary assignment to the villages. As the head of the Soviet Ukrainian government, V. Chubar, stated, the collectivization of the middle stratum of peasants was conducted according to the principle 'join the collective farm or else off to the Solovki' (ie, exile). Peasants were forced to join collective farms under duress. Economic pressure was also used: individual farmers had to deliver 300–400 poods (5–6.5 t) of grain to the state in 1930, while collective-farm members

Rate of agricultural collectivization in the Ukrainian SSR, 1928–35 (percentages)

Date	Farms	Land
1 October 1928	3.4	3.8
1 October 1929	8.6	8.9
10 March 1930	65.0	70.0
1 July 1930	30.4	39.7
1 April 1931	55.4	61.9
20 January 1932	70.0	73.5
1 June 1933	69.5	86.1
1 June 1934	78.0	90.6
1 October 1935	91.3	98.0

were exempted from this. The collective-farm members paid a monetary tax of 5–7 percent of their income, while all other peasants were taxed at 7–70 percent.

The rate of collectivization was greatly accelerated. By 10 March 1930, 65 percent of farms and 70 percent of draft animals were collectivized. In many cases everything, including chickens and houseware, was socialized. The use of force provoked uprisings among the peasants, particularly the so-called women's revolts (*babski bunty*). Stalin retreated a step and on 2 March 1930 published an article in *Pravda* entitled 'Dizziness from Success,' in which he ordered an end to forced collectivization. As a result, on 15 March 1930 the CC of the All-Union CP(B) permitted the peasants to resign from the collective farms and to reclaim their property. In Ukraine almost half of the peasants immediately left the collective farms (see the accompanying table), and by 1 February 1930 only 30 percent of peasant farms remained collectivized. When it became clear that without coercion the collective farms would disintegrate and the peasants would return to individual farming, forced collectivization was reintroduced.

At first the government of the Ukrainian SSR resisted the decisions coming from Moscow about an accelerated, forced collectivization, but in November 1930 it agreed to collectivize 70 percent of the land by the spring of 1931. The December Plenum of the CC of the All-Union CP(B) raised the goal to 80 percent and resolved that during 1932 collectivization would have to be completed. Thus, a second collectivization drive was begun in the winter of 1930–1. By 2 August 1931 the CC of the All-Union CP(B) noted that in Ukraine collectivization was reaching completion. The extent of resistance among the Ukrainian peasants can be seen in the official statistics: during 1931 alone arson was reported on 24.7 percent of the new collective farms, poisoning of cattle on 3.8 percent, destruction of machinery on 9.6 percent, and assault on Party activists on 44 percent. Revolts and uprisings broke out in many villages. This resistance did not come from the *kulaks, most of whom had been crushed in 1930. The level of resistance is apparent also in the mass slaughter of cattle, intended to keep them from the collective farms. Between 1928 and 1932 the number of cattle in Soviet Ukraine fell from 8.6 million to 4.8 million head.

In 1930 Moscow raised the quota for grain deliveries in Ukraine by 115 percent above the 1926–7 quota. Of the 23.1 million t harvest, 7.7 million t were taken by the state. The same quota was applied to the 1931 harvest, although the collectivization reduced the yield because the collective farms were poorly run and the peasants were unable

and unwilling to work collectively. According to official data, the 1931 harvest was 18.3 million t, yet 30–40 percent of it was lost in the harvesting process. Of the actual harvest in 1931 of 11–13 million t, the government succeeded in exacting 7 million t. As a result, an average of only 112 kg of grain per person was left to the Ukrainian peasants to consume, and in the spring of 1932 *famine broke out in Ukraine. In spite of the famine and the poor harvest in 1932 of 13.4–14.7 million t, with losses this time of 40–50 percent during harvesting, Moscow imposed a quota of 6.6 million t. It managed to exact only about 5 million t. As M. Skrypnyk stated, 'there was nothing to take; everything had been swept away already as with a broom.' As a consequence, the average peasant in Ukraine was left only 83 kg of grain to live on, and the famine was even more severe in 1933. At the same time there was almost no famine in Russia, for the delivery quotas there were considerably lower than in Ukraine. The figures prove that Ukraine was intentionally exploited: its harvest amounted to 27 percent of the USSR harvest, while its delivery quotas amounted to 38 percent.

To prevent the starving peasants from taking grain belonging to collective farms, on 7 August 1932 the government of the USSR issued the law 'On the Protection of Socialist Property,' which permitted capital punishment for this kind of crime. Since in 1932 the collectivization drive did not progress and the collective farms were in a pitiful condition, on 3 January 1933 the USSR government published the decree 'On Strengthening the Collective Farms,' which permitted authorities to confiscate all the property of the peasants who refused to join collective farms and to exile the peasants to Siberia. At the same time political departments were set up at *machine tractor stations (MTS) and were given full administrative authority in the villages. These departments were staffed mostly by Chekists and used terror to complete the collectivization drive. The collective farms improved somewhat only when farming began to be rapidly mechanized, beginning in 1933. As late as 1932, 76.2 percent of the energy used for farming in Soviet Ukraine consisted of animal power.

The greatest pressure to collectivize within the USSR took place in Ukraine, the Don region, and the Kuban. In the Russian SFSR collectivization progressed at a slower rate than in Ukraine: 7.4 percent of the peasant farms were collectivized in Russia by 1 October 1929, 59.3 percent by 1 March 1930, 23.4 percent by 1 May 1930, 59.3 percent by 1 July 1932, and 92.6 percent by 1 October 1937.

Because of collectivization, after 1935 the state could buy at bargain prices or seize over 50 percent of the collective-farm production of Ukraine, which it then resold at higher prices in the cities, to the peasants themselves, and abroad. The free capital obtained in this way was used to develop heavy industry (see *Agricultural procurement and *Collective farm). Because of the collectivization, capital investment in the Soviet Union in 1932 was 5.2 times as high as it had been in 1928. The collectivization also provided industry with a huge labor pool: workers were recruited in a planned way on the collective farms, like military conscripts.

In Western Ukraine collectivization began after the first Soviet occupation in the summer of 1940. By the beginning of 1941 only 3.1 percent of peasant farms were collectivized. By 1 June 1941 as many as 13 percent were. A new, postwar collectivization drive began in the fall of

1948, and the last drive took place in the spring of 1950 as is evident from the statistics: 9.6 percent of farms were collectivized by 1 January 1948, 49 percent by 1 January 1949, and 92.7 percent by 1 July 1950. The Soviets applied the same methods here as they had used in central and eastern Ukraine to force the peasants into the collective farms. Political departments, for example, were set up at machine tractor stations and were staffed with armed MVD agents. During the collectivization in Western Ukraine, and particularly in Subcarpathia, the *Ukrainian Insurgent Army put up a stiff resistance to collectivization. Soviet agents were assassinated, farm buildings were burned down, cattle were slaughtered, and operations were sabotaged. In retaliation large numbers of peasants were deported to Siberia and Central Asia. Most of the collective farms in Western Ukraine remained poor and run-down for a long time.

College (*kolegiiia*). A secondary and sometimes post-secondary school of the 17th–18th century in Ukraine, organized after the pattern of the college in Western Europe. The first colleges in Ukraine were established by the *Jesuits (the first in Yaroslav in 1574) and at the time enjoyed the reputation of having the highest standards in the country. In 1632 P. Mohyla founded in Kiev the first Orthodox college, patterned after the Jesuit schools, which became the *Kievan Mohyla Academy in 1700–1. Other Orthodox colleges soon followed: on the Right Bank a branch of the Kievan college in Vinnytsia, moved in 1639 to Hoshcha in Volhynia, and on the Left Bank *Chernihiv College (1700), *Kharkiv College (1734), and

*Pereiaslav College (1738), sometimes also called seminaries. All of these schools were organized on the same pattern as the Kiev college and had a similar curriculum with eight subjects: *fara*, *infima*, grammar, syntax, poetics, rhetoric, philosophy, and theology, although some schools, such as the ones in Chernihiv and Pereiaslav, did not have the last two subjects. Besides these scholastic disciplines, languages such as French, German, and Greek, mathematics (including the fundamentals of physics and astronomy), painting, and singing were also taught to a varying extent in different periods. The language of instruction was Latin. The colleges were accessible to all classes of the population and played an important role in the spreading of education and knowledge in Ukraine. In the second half of the 18th century, when Catherine II confiscated the lands of the monasteries, on which the schools of the Left Bank depended for support, the colleges gradually lost their importance.

In Right-Bank Ukraine, besides Jesuit and Piarist colleges, there were also quite a few Uniate colleges run by the Basilian monastic order, particularly in the 18th century.

*Galagan College, a private Ukrainian gymnasium in Kiev, used the traditional term in its name. Church-run educational institutions have also been called colleges; for example, *St Andrew's College in Winnipeg and *St Josaphat's Ukrainian Pontifical College in Rome.

Collegio di San Giosafat. See Saint Josaphat's Ukrainian Pontifical College in Rome.

Colonel (*polkovnyk*). In the Cossack period a colonel was the commanding officer of a regiment (see *Regimental system). In recent times a colonel has been an officer of the sixth or seventh rank commanding a regiment or brigade or serving as a higher staff officer. (See *Military ranks.)

Comecon. See Council for Mutual Economic Assistance.

Comedy. Usually a humorous, and often satiric, dramatic work. Poets of the Ukrainian baroque defined comedy as a play with a happy ending, involving characters who lack 'greatness' and who speak in the vernacular. Comedy originated in Ukraine with the baroque **intermediia*, but its development in the form of a complete dramatic work began only with the national revival of the 19th century, in the works of I. Kotliarevsky. Kotliarevsky initiated the development of the musical comedy (*Moskal'-charivnyk* [The Soldier-Sorcerer]), as a result of which comedies were sometimes referred to as 'operettas.' This genre was continued by H. Kvitka-Osnovianenko (*Svatannia na Honcharivtsi* [The Marriage Engagement in Honcharivka] and *Shel'menko-denshchyyk* [Shel'menko the Orderly]). In Galicia S. Vorobkevych wrote comic operettas dealing with peasant life. The elements of satire and social comment became more pronounced in comedy during the latter half of the 19th century with the appearance of such plays as M. Sarytsky's *Iak kovbasa ta charka* (Sausage and Drink) and M. Kropyvnytsky's witty satire on rural administrations *Po revizii* (After the Inspection) and humorous operetta satirizing the bourgeoisie *Poshlyly's' u durni* (They Made Fools of Themselves). Ukrainian 19th- and early-20th-century comedy achieved its highest expression in the

works of I. Tobilevych (Karpenko-Kary). In plays such as *Rozumnyi i duren'* (The Wise Man and the Fool), *Sto tysiach* (A Hundred Thousand), *Khaziain* (The Master), and *Martyn Borulia* he exposed the shortcomings of his society with a scathing, yet humorous, satire. The most outstanding comedy writer of the early Soviet period was M. Kulish, who attacked Russian great-power chauvinism with merciless satire in *Myna Mazailo* and other works. Also popular in the early Soviet period were O. Vyshnia's dramatization of N. Gogol's story *Vii*, his parody of the opera *Zaporozhets' za Dunaiem* (Zaporozhian Cossack beyond the Danube), and Yu. Mokriiev's satire on the degeneration of party members into philistinism *Viddai partkvytok* (Return Your Party Card). Playwrights officially supported by the regime, such as I. Mykytenko and O. Korniiichuk adhered to the line of praise for Party politics, restricting their criticism to isolated imperfections. After the mid-1930s, however, this officially sanctioned type of comedy came to prevail; it was continued after the Second World War in the works of V. Mynko (*Ne nazyvaiuchy pryzvysch* [Without Naming Names], *Na khutori bilia Dykan'ky* [On the Farmstead near Dykanka], *Solovei u militsii* [A Nightingale in the Militia], etc), Yu. Mokriiev (*Sava i ioho slava* [Sava and His Glory], *Veseli zaruchynny* [Happy Engagement], etc), P. Zahrebelny (*Khto za? Khto proty?* [Who's for? Who's against?]), and other writers. Recently one of the most popular comic playwrights has been O. Kolomyiets (*Faraomy* [Pharaohs]). The artistic quality of the comedic genre has, on the whole, visibly deteriorated since the mid-1960s as a consequence of increased repressions. (For a bibliography, see *Drama.)

I. Koshelivets

Comintern. See Communist International.

Comité Central des Organisations Ukrainiennes en France. See Ukrainian Central Civic Committee in France.

Comité Ukrainien de Secours en Belgique. See Ukrainian Relief Committee in Belgium.

Commissar or Commissioner (*komisar*). Official delegated with special authority to execute a duty or office as an agent or representative of a superior body, usually the state. In the Polish Commonwealth the name denoted a special deputy charged with specific missions. When in 1638 Poland abolished the Cossacks' right to self-government, a Polish commissioner was appointed to command the reduced number of Cossacks. In some countries the term is used for an official assigned by the government to act temporarily in place of an elected body. Under the Ukrainian Central Rada such agents governed counties and gubernias of the Ukrainian National Republic (see *Gubernial commissioners).

In Soviet usage the title of commissar has been associated with a number of administrative and military functions. Military commissars were appointed by the Communist party and the Soviet government to direct political propaganda and ensure Party loyalty in military units. Often the commissar's role was more important than that of a regular military commander. The office of military commissar was abolished in 1942, but political officials without the title of commissar remained in the army. From

1919 to 1946 government ministers in the Ukrainian SSR, as in the rest of the Soviet Union, were known as people's commissars, and the ministries they headed were called people's commissariats (see *Council of People's Commissars).

V. Markus

Commission for the Study of the History of Western-Ruthenian and Ukrainian Law at the All-Ukrainian Academy of Sciences (Komisiia dlia vyuchuvannia istorii zakhidno-ruskoho ta ukrainskoho prava VUAN). Commission established in 1919 in the socio-economic division of the Academy of Sciences. It became active in 1920 after M. Vasylenko was elected its chairman and editor of the commission's publications. Its secretaries were V. Novytsky, S. Ivanytsky-Vasylenko, L. Okinshevych, and V. Hryshko. Among its members were Y. Malynovsky, M. Slabchenko, V. Barvinsky, I. Kamanin, O. Dobrov, and M. Maksymenko. The commission published seven volumes of *Pratsi* (1925–30), which included longer studies – L. Okinshevych's 'Tsentral'ni ustanovy Ukraïny-Het'manshchyny XVII–XVIII st.' (The Central Institutions of Hetman Ukraine in the 17th–18th Century) and I. Cherkasky's 'Hromads'kyi (kopnyi) sud na Ukraini-Rusi XVI–XVIII vv.' (Community Courts in Ukraine-Rus' in the 16th–18th Century) – and *Materialy do istorii ukrains'koho prava* (Materials on the History of Ukrainian Law, 1929) by M. Vasylenko. The preparation of *Slovyk ukrains'koi iurydychnoi starovyny* (Dictionary of Ukrainian Juridical Antiquity), which was begun in 1919 under the direction of I. Cherkasky, was suspended in the 1930s, and the large collection of materials perished. The commission was abolished in 1933 during the reorganization of the Academy of Sciences, which succeeded the Stalinist purge of its members.

Ya. Padokh

Commission for the Study of Ukraine's Customary Law (Komisiia dlia vyuchuvannia zvychaievoho prava Ukrainy). Center in the 1920s in the socioeconomic division of the All-Ukrainian Academy of Sciences that conducted research on Ukrainian customary law. The commission was chaired by academician O. Levytsky, and from 1926 by academician Y. Malynovsky. Under Malynovsky the commission was divided into two sections: one on private law (headed by A. Kryster) and one on public law (headed by Y. Malynovsky). The works of the commission's associates were published in three volumes of *Pratsi Komisii* ... in 1925, 1928 (ed A. Kryster), and 1928 (ed Y. Malynovsky). The Stalinist purge of the Academy of Sciences in the early 1930s put an end to the commission's work.

Commission for Youth Camps and Excursions (Komisiia vykhovnykh osel i mandrivok molodi, popularly known as KVOMM). One of the conspiratorial forms under which the Ukrainian youth association *Plast continued to operate after it was prohibited by the Polish authorities in 1933. It was renewed in the diaspora in countries where the law made it impossible to set up a Plast organization that would be independent of the country's scouting organization. The commission was established in the United Kingdom, for example, in 1949.

Committee for State Security. See КГБ.

Committee for the Defense of the Revolution (Kraiovyi komitet dlia okhorony revoliutsii). A committee formed on 7 November 1917 by the Ukrainian *Central Rada to defend the gains of the revolution against a possible reaction arising out of the outbreak of civil war in Russia. The committee consisted of representatives of Ukrainian and non-Ukrainian parties, including the Bolsheviks, who soon withdrew after the Central Rada condemned the Bolshevik uprising. The committee directed the struggle against the Russian command of the Kiev Military District, which defended the interests of the Kerensky regime. With the help of the committee and the First Ukrainian Regiment for the Defense of the Revolution, which was organized by the Third *All-Ukrainian Military Congress, the Central Rada took complete control of Kiev in mid-November 1917. The Committee for the Defense of the Revolution was dissolved at its own request by the Central Rada on 10 November 1917.

Committee for the Relief of the Population of Southern Russia Suffering from Military Actions (Komitet dlia okazaniia pomoshchi naseleniiu Yuga Rossii, postradavshemu ot voennykh deistvii, also known as the Relief Association for the Population of Southern Russia [Obshchestvo pomoshchi naseleniiu Yuga Rossii]). A Ukrainian relief society organized in Kiev and active throughout Ukraine, and to some extent throughout the Russian Empire, in 1914–18. It was recognized by the government in May 1915. The society provided aid to war refugees, as well as to those Ukrainians forcibly deported from Galicia and Bukovyna by the Russian authorities and to Ukrainian soldiers who had served in the Austrian army and had been captured by the Russians. The committee was headed by V. Ihnatovych, the vice-president was D. Doroshenko, and the secretary was M. Ishumina. Among its more active members were L. Starytska-Cherniakhivska, L. Shulhyna, N. Doroshenko, and N. Ishchuk-Shulhyna.

Committee of Poor Peasants (Komitet nezamozhnykh selian or Komnezam). Name of peasant organizations established by the Soviet government in Ukraine to consolidate its power in the countryside. The Komnezams were organized on the model of the Committees of the Poor (Komitety bednoty) that functioned in Russia from June 1918 to January 1919 and were then abolished, because the Party thereafter pursued a relatively peaceful policy in the countryside. Because grain deliveries in Ukraine were of decisive importance for Soviet Russia, the Komnezams were created by the law of the All-Ukrainian Central Executive Committee of 9 May 1920. The law empowered the Komnezams to collect compulsory deliveries of food to the state (*prodrozkladka*), to divest the kulaks (rich peasants), and to keep 25 percent of the collected grain and food for the use of the 'poor peasants.' The Komnezams were also used to fight anti-communist insurgents; sometimes they usurped the powers of the rural soviets, but this practice was stopped in 1925.

At first the Komnezams had 791,000 members, of whom 60 percent were landless peasants or farm laborers and the rest were poor and middle peasants. By the end of 1920 the Komnezams had confiscated 379,320 ha from the rich peasants and distributed them among their members. The advantages enjoyed by members led to a

rapid increase in membership, so that in 1921 there were 1,357,000 members in about 10,800 Komnezams. Yet, only 31 percent of the truly impoverished peasants belonged to the Komnezams. In contrast, in 1923 only 9.1 percent of Komnezam members were still landless, while 10.1 percent of the members owned 10 ha or more. Hence, purges of the membership were introduced, and in 1924 only 582,900 members were left.

Under a more liberal Soviet agrarian policy in 1923–7 the Komnezams were used to organize peasant mutual-aid associations, direct co-operatives, and so on. With the introduction of forced *collectivization, the Komnezams were revitalized. It again became advantageous to belong to them, and their membership increased from 600,000 at the beginning of 1929 to 1.6 million in April 1930. By 1 February 1930, 60 percent of the 'poor' peasants were already collectivized. Then the Bolshevik party began to demand that Komnezam members set an example and be the first to join the new collective farms. When it became apparent that the members were very reluctant to give up their recently acquired land and possessions to the collective farms, the Komnezams were abolished at the beginning of 1931.

While they existed, the Committees of Poor Peasants held seven all-Ukrainian congresses. At the first congress in 1920, H. Petrovsky was elected head of the Central Commission of Poor Peasants.

Common peasants (*pospolyti seliany*). General name for the majority of the peasants in the Hetman state and in Slobidska Ukraine in the 17th and 18th century. The name 'common' (*pospolyti*) also referred initially to the inhabitants of cities and towns. The common peasants were classified, according to the owners whose lands they tilled and the relations and obligations imposed on them by the owners or the local administration, into (1) peasants in the free military settlements (under the jurisdiction of the Hetman state); (2) town peasants (*ratushni seliany*, under the local company or municipal administration); (3) *rank peasants (living on lands awarded to Cossack officers for military service); (4) monastery peasants; and (5) common peasants on the private estates of the Cossack *starshyna*. In 1730 over half of the common peasants belonged to the last two categories. The obligations of the common peasants were various (monetary taxes and taxes in kind, land cultivation, conveyance, and the like) and increased in time. One group of the common peasants, the landless peasants (*pidsusidky*), worked as hired labor. The enserfment of the common peasants occurred towards the end of the 18th century (see *Serfdom).

Common Russian (also called Common Eastern Slavic). The name of the hypothetical uniform language of the Eastern Slavs, which presumably arose after the disinte-

gration of Common Slavic and which itself later disintegrated to form three new languages: Ukrainian, Russian, and Belorussian. The concept of Common Russian is typical of the neogrammarian school of linguistics, with its view of linguistic development as a 'genealogical tree,' symbolizing the gradual disintegration of larger languages into smaller ones, and with its concomitant underestimation of the opposite linguistic processes, the integration and hybridization of languages. Chronologically, Common Russian is considered by some to have existed from the 7th or 8th century to the 13th or 14th century (O. Sobolevsky, V. Jagić, F. Filin, et al) and by others only to the 10th or 11th century (O. Potebnia, A. Krymsky, and, in part, L. Bulakhovsky). The theory of Common Russian is based on the fact that several morphological and important phonetic changes took place identically in all the East Slavic languages prior to the appearance of the first written texts (ie, to the mid-11th century). These changes included the following: (1) the ending -ě developed in the accusative plural of *jo* stems and in the genitive singular and nominative/accusative plural of *ja* stems (also in the West Slavic as opposed to the South Slavic -e); (2) the ending -ьмь, -ьмь developed in the instrumental singular of masculine and neuter nouns (also in the West Slavic as opposed to the South Slavic -омь, -емь); (3) pleophony, with the splitting of *CaC* into *CoC* and *CeC*, depending on pitch (*molóty* [to grind], but *véleten'* [giant]). *C* here represents any consonant; (4) *CiC* became *CьC* (*volk/vovk* [wolf]); (5) **tj* became *č* (*krutyty*; *kručū* [to turn; I turn]); (6) **jea* became *o* (*ozero* [lake]); (7) the change of nasal vowels into *u*, *a* (*dub* [oak], *v'jaz* [elm tree]).

Attempts to refute the theory of Common Russian by the derivation of contemporary East Slavic languages directly from Common Slavic (O. Ohonovsky, S. Smal-Stotsky et al) were not generally accepted. Nevertheless, further study of the history of Ukrainian and other East Slavic languages revealed the artificiality of the Common Russian theory, which stressed similar phenomena, but ignored differences peculiar to the dialects of the Eastern Slavs of that period. The first attempt to explain these discrepancies fully was made by A. Shakhmatov, who accepted Common Russian as existing only for a short period – the 7th–8th century – and who posited its subsequent disintegration into three dialectal groups (the northern, from which he derived the northern Russian dialects; the southern, which gave rise to Ukrainian; and the southeastern, from which he derived the south Russian and Belorussian dialects); its new integration in the 11th and 12th century under the unifying influence of the Kievan state; and its definitive disintegration starting in the 13th century. T. Lehr-Spławiński and N. Trubetskoi described the prehistoric peculiarities of the northern East Slavic dialects. Now it is possible to speak of four original East Slavic dialectal groups, which can conditionally be called the Galicia-Podilia, Kiev-Polisia, Polatsk-Riazan, and Novgorod-Suzdal groups. The most characteristic features of the Galicia-Podilia group were as follows: the raising of the vowels *e* and *o* before a syllable with a weak jer, the shift from **dj* to *dž*, and probably the dispalatalization of consonants before *e*. The main characteristics of the Kiev-Polisia group were the diphthongal pronunciation of *ě*, the beginnings of the diphthongization of *e* and *o* under accent before a syllable with a weak jer, the dispalatalization of *r'*, the preservation of *k*-in

words of the type *kvit* (flower), and, dialectally, the shift from *e* to *i* in the unaccented position. The Polatsk-Riazan group was characterized mainly by *akan'e*, the change of *ě* into *e*, and the splitting of *ea* into *o* and *e* under accent, depending on the palatalization/non-palatalization of the following consonant. The characteristics of the Novgorod-Suzdal group include, dialectally, *cokan'e* and the shift from *ě* to *i*, the second pleophony, the transition of jers into *o* and *e* before *j*. The Ukrainian language arose from the crossing of the first two groups, Belorussian from that of parts of the second and third groups, and Russian from the crossing of parts of the third and fourth groups.

Set against the dialectal fragmentation of the vernacular of Kievan Rus' was the determination of all the educated members of the Byzantine rite to share a standardized literary language. *Church Slavonic was that literary language; imported mainly from Bulgaria, it was subject to adaptations to local speech habits in varying degrees, depending on the extent of a particular writer's mastery of the imported, bookish language. This language cannot be referred to as Common Russian.

Common Slavic. Language that developed from Common Indo-European and that, in its disintegration, gave rise to the historically attested Slavic languages. Common Slavic has not been preserved in notation; its structure and history have been reconstructed by means of the comparative method. The differentiation of Common Slavic from Indo-European began about 2000 BC with the following changes: (1) the loss of aspiration in voiced consonants; (2) the loss of labialization in velar consonants; (3) the loss of syllabicity in resonants (χ , λ became *ir* ~ *ur*, *il* ~ *ul*); (4) the appearance of *x* from *s* after *i*, *u*, *r*, *k*; (5) the loss of palato-velars (k^h , g^h became *s*, *z*); (6) the coalescence of *o* and *a*; (7) the development of phonemic pitch in long vowels. The Baltic and Indo-Iranian languages shared some of these changes with Common Slavic. During the early Christian era Common Slavic, which had a highly developed system of phonemic oppositions in vowels, underwent a number of simplifications of its consonant clusters, lost word-final consonants, and developed prothetic consonants before word-initial vowels. As a result of these changes as well as the monophthongization of diphthongs, by about the 6th century AD Common Slavic was a language characterized by a predominance of open syllables. With the further process of reciprocal assimilation of vowels and consonants within the syllable, there took place (1) three palatalizations of velar consonants before (and, partly, after) front vowels (5th–9th century), which caused the inventory of Common Slavic consonants to increase, and (2) two delabializations of labialized vowels (7th–9th century).

Nothing is known of the dialectal differentiations of

Common Slavic prior to the 6th century AD. If such dialectal peculiarities did exist, they were probably lost during the great migrations of the Slavs, who, starting in the 5th and 6th century, gradually came to occupy the expanses of the Balkan peninsula, central Europe, and central and northern Russia. Many linguistic changes, which did not affect the Common Slavic language as a whole and were therefore of a dialectal nature, can be reconstructed for the period beginning in the 6th or 7th century. The isoglosses of this period run in various directions, sometimes crossing each other, and coincide neither with the boundaries of the three traditionally accepted groups of the Slavic languages (West, East, South), nor even with the boundaries of later Slavic languages. This is the period of the disintegration of Common Slavic, but prior to the formation of the historically attested individual Slavic languages. Certain parallels exist among the linguistic changes of this period and those of later periods in various parts of the territory of the Slavic peoples (eg, jers were lost in all parts, although that loss took place in various areas at different times during the 9th–13th century and had more or less divergent consequences). But the general trend in the 8th–12th century led rather to the accumulation of linguistic differences and thus to the gradual formation, in the long run, of structurally highly differentiated languages. Several of these languages reinstated, on a new foundation, the system of pitch oppositions in vowels and the predominance of open syllables that characterized Common Slavic (eg Serbo-Croatian); others lost the pitch oppositions in vowels, limited the role of open syllables, and developed the opposition in the palatalization of consonants (eg Russian, Polish). (See *Common Russian for more on the differentiation and, specifically, on the formation of the Ukrainian language.)

In morphology, Common Slavic inherited from Common Indo-European a rich and diversified inflection of nouns and verbs. The Common Slavic nominal and pronominal declensions yielded to many partial changes (stemming primarily from phonetic changes of the late period of Common Slavic) but survived as a system up to the historic period and into our time in all of the Slavic languages except Macedonian and Bulgarian. Yet even in late Common Slavic the transition had progressed from a nominal declension based on stems to one based on gender and on nominative case endings. The compound declension (which combined nominal and pronominal endings) became characteristic of adjectives; it was also formed in the late period of Common Slavic. However, verb conjugation underwent a fundamental restructuring, possibly still in the early period of Common Slavic. The Indo-European imperfect, perfect, and future were lost, as were the imperative and the optative (which was transformed into the new imperative), and forms of the middle voice. A new infinitive was developed. During the late Common Slavic period, the new imperfect and perfect arose, the formation of a new future tense had begun, and verbal aspects were developing rapidly.

Commune. One of the forms of collective farming in which, in contrast to agricultural artels (see *Artel, *Collective farm), all means of production, including domestic work, are socialized, all labor is collective, and all income is distributed according to need. The Communist and early Bolshevik ideology and program stressed such forms of communal life as common meals in refectories, residence in dormitories, collective services (laundries, etc), collective upbringing of children in kindergartens, and so on.

The program of the CPSU from the very beginning provided for the formation of communes. In the Ukrainian SSR the first communes were established in 1919 on the estates of former landowners and monasteries. Their membership consisted of Red partisans, urban workers who had fled the cities to escape famine, and some hired laborers. There were 404 communes in Ukraine in 1919, 316 in 1925, and 412 in 1929 (2.9 percent of all collective farms). The size of these communal farms was small – 49 ha on the average. The state provided them with machines and did not tax them. In the 1930s the communes were given the status of agricultural artels.

Communications. The principal means of communication in Ukraine – mail, telegraph, telephone, radio, and television – are under the control of the All-Union Ministry of Communications in Moscow and, since 1955, of the Union-Republican Ministry of Communications in Kiev.

Postal services in Ukraine date back to the Princely period (when there were postal stations, with mail delivery by horses). In the Hetman state there were special Cossacks on the general and regimental staffs assigned to mail delivery. About 1750 the postal services came under government control. Since the end of the 19th century railroads have been extensively used for carrying mail. In the last few decades air transportation has also played a part. The growth of postal services can be seen from table 1 (percentage of USSR figures in parentheses). Thus, there was 1 post office per 415 sq km area and 25,000 persons in 1913, 1 per 72 sq km and 4,900 persons (in the USSR as a whole – 440 sq km and 3,800 persons) in 1940, 1 per 52 sq km and 3,880 persons (USSR – 300 sq km and 1,600 persons) in 1965, and 1 per 3.9 sq km and 2,800 persons (USSR – 179 sq km and 2,900 persons) in 1979. The annual average number of letters and parcels mailed was 8 per person (4 in the USSR) in 1913, 13 (14) in 1940, and 23 (23)

TABLE 1
Growth of postal services

	1913*	1928	1940	1960	1979

in 1965. The average is quite low compared with that of Western Europe and the United States.

Telegraph service dates back to the 1840s (in Galicia) and the 1850s (central and eastern Ukraine). A telegraph connection between Lviv and Vienna was established in 1846 and between Kiev and St Petersburg in 1855 (later between Kiev and Moscow). Telephone communication started in the 1880s. The first local telephone lines were installed in Odessa (1882), Lviv (1884), Kiev (1886), and Kharkiv (1888). Long-distance lines were not established until 1912 (Kharkiv-Moscow). Table 2 shows the development of telephone and telegraph communications in the Ukrainian SSR.

The number of telephones in the Ukrainian SSR increased from 187,400 in 1940 to 3,477,400 in 1979. Now all of the telephones are automatic, but in 1940 only one-third of them were automatic. In 1979 there was 1 telephone per 14.1 individuals in the Ukrainian SSR, compared to 1 telephone per 11.9 individuals in the USSR.

Communications specialists are trained at the Odessa Electrotechnical Institute of Communications and by tekhnikum specialists specializing in the field. (See also *Radio, *Television.)

Communism. According to the generally accepted definition, communism is a classless and stateless socio-political system involving collective ownership of the means of production and consumer goods. An early form of this order can be found in the primitive clan system. Communism is also the name of the ideology and the movement that aims to bring about such an order in the future. Certain communist ideas can be found in ancient

Greek philosophers, early Christianity, medieval sects and peasant rebellions, and utopian literature. The term communism was first used by the French utopian thinker E. Cabet in 1840. The Communist League, which existed from 1847 to 1852, was the first communist political organization. K. Marx and F. Engels composed the Communist Manifesto for the league in 1848. Then, until 1917 there were no organizations bearing the name communist, and the term almost fell out of use. In 1918 the term acquired a particular meaning when the *Russian Social Democratic Workers' Party (Bolshevik) adopted the name Russian Communist Party (Bolshevik). Then, in 1919 the *Communist International (Comintern) was set up. From that time communism became a separate political movement, distinct from socialism. Its aim is to overthrow capitalism by violent, revolutionary means and to establish the dictatorship of the proletariat, which would bring about a Communist order. Since 1918 Communist parties have been founded in other countries. By 1980 there were 99 Communist parties around the world, with a membership of 75 million. Outside of the USSR, Eastern Europe, and the People's Republic of China there are eight million Party members.

Communist ideas were found among Russian political organizations in Ukraine: in the populist Kiev Commune (1873), cells of *Zemlia i Volia, *Narodnaia Volia (1876–85), the *South Russian Workers' Union (Odessa, 1875; Kiev, 1880), and the Marxist *Union of Struggle for the Liberation of the Working Class (Kiev and Katerynoslav, 1897). The Communist Manifesto appeared in Ukraine in the 1880s in Russian translation. In the 1890s students' and workers' circles in Kiev, Katerynoslav, Odessa, and Kharkiv studied Marxist literature. In the 1900s much Communist literature was published in Ukraine, particularly in Odessa. The communist utopias of Atlantikus (K. Balodis), A. Bogdanov, and others were very popular. Only the utopian-moralizing and science-fictional aspects of the communist ideology entered Ukrainian literature: in P. Myrny's *Son* (The Dream, 1905) and later V. Vynnychenko's *Soniashna mashyna* (The Solar Machine, 1928). Academic Marxism in Ukraine (M. Ziber) was not communist.

A spontaneous, Ukrainian-organized communist movement hardly ever existed. The *Communist Party of Ukraine (CPU) originated as a Russian organization, and it remains anti-Ukrainian in tendency to this day. The *Borotbists, the *Ukrainian Communist party (Ukapist), Vynnychenko's émigré Ukrainian Communist party, and other groups were not consistently Ukrainian Marxist-Communist organizations, but rather attempts to adapt to the Russian Bolshevik regime in Ukraine and to continue the struggle for independence under new circumstances. The Ukrainian national oppositions in the CPU, headed by V. Shakhrai, O. Shumsky, M. Khylovy, and M. Skrypnyk, were more spontaneous, yet they too were mainly reactions to Moscow's policy. The basic conviction of the Ukrainian national Communists was that communism could be realized only in a national form, that in order to win the Ukrainian masses for communism their national aspirations had to be satisfied. This meant that communism in Ukraine should take the form of a Ukrainian communist state supporting the Ukrainian language and culture, books, schools, etc, and not an alien, strange, and hostile Russian form imposed on the masses. To make

communism more palatable for the Ukrainian people, the Ukrainian Communists demanded greater autonomy for the Ukrainian SSR, *Ukrainization, and other measures. Moscow regarded these demands as symptoms of 'nationalism' and destroyed all Ukrainian national Communists during the 1930s. Although Ukrainian national Communism had no influence abroad, its ideas were identical with those defended by the national Communist movements in such countries as Yugoslavia, Poland, and Hungary in recent times.

In the early 1920s Communist organizations were established in Galicia – the *Communist Party of Western Ukraine – and in Transcarpathia – the *Communist Party of Transcarpathian Ukraine. *Sel-Rob and other organizations in Western Ukraine were Sovietophile, but not consistently Marxist. The same can be said of the 'progressives' among Ukrainian immigrants to the United States and Canada, of whom only a small fraction belong to a Communist party.

Communism as a blueprint of the future socioeconomic order is one of the key ideas of the *Communist Party of the Soviet Union (CPSU) and the CPU. At first the CPSU tried to put into effect so-called War Communism, in 1918–21, but had to renounce it and adopt the *New Economic Policy (NEP). With the introduction of the *five-year plans, the abolition of private capital and the market, the centralization of planning, *collectivization, and the institutionalization of what is in fact forced labor, the CPSU declared that all these measures established socialism and paved the way for communism. But all these pseudo-theories are merely adaptations to the internal political situation. Not only the deadlines for the building of communism, but even the main features of communism are changed to suit the current conditions: as J. Stalin introduced the terror, he asserted, contrary to Marx, that the role of the state would increase, not diminish, in the process of realizing communism. After Stalin's death this thesis was rejected in theory, but it continues to hold in practice. According to the latest promises, the era of communism is to begin in the 1980s (new program of the CPSU). Concrete results are more noticeable today in the growth of Soviet military might than they are in the building of communism.

In foreign relations the most important development is the schism between Soviet and Chinese communism, which occurred at the beginning of the 1960s.

On the national question both Marx and the CPSU predict that all nations, cultures, and languages will merge and disappear, although Marx thought that this would be a long, worldwide process, while Stalin, as the spokesman of Russian chauvinism, held that under communism all the nations of the Soviet Union should be submerged in the Russian nation and their languages replaced by Russian. After some hesitation in 1956–8 owing to the political situation, most Communist theoreticians and particularly the Russians continue to assert that with the coming of communism Russian culture and language should prevail throughout the USSR. At the beginning of the 1970s these theoreticians won the acceptance of the concept of the 'Soviet people' as a normative one. The Soviet people is defined as a new, supranational, historical society of individuals. The *nationality policy of the CPSU is directed towards achieving this end. (See also *Marxism, *Leninism, *Socialism.)

Communist International (Comintern), known also as the Third International. International association of Communist parties around the world, which was formed in Moscow in 1919. At first the Comintern regarded itself as the world Communist party, responsible for bringing about a world revolution. From 1921 the member parties were regarded as sections of the Comintern, and the Russian party became the dominant section. Moscow was always the seat of the Comintern. Under J. Stalin the Comintern with all its sections became an instrument of Soviet foreign policy and espionage. This led to prolonged crises and various oppositions within the Comintern, which Stalin crushed by using terror, even outside the Soviet Union. The Comintern was headed consecutively by G. Zinoviev, N. Bukharin, G. Dimitrov, and D. Manuilsky. It held seven world congresses. To allay the fears of the Western Allies, Stalin disbanded the Comintern in 1943. The Cominform, or the Information Bureau of Communist Parties, functioned in 1947–55, but it consisted only of the European Communist parties and was never as important as the Comintern.

In spite of the fact that it belonged to the Russian Communist Party (Bolshevik) (РСР(В)), the Communist Party (Bolshevik) of Ukraine (СР(В)У) always formed a separate section of the Comintern, having at first three votes and then only one. The first manifesto of the Comintern was signed on behalf of the СР(В)У by M. *Skrypnyk in 1919. In 1921 O. Shumsky sat on the executive committee of the Comintern. The СР(В)У was represented at congresses of the Comintern by S. Hopper, F. Kon, M. Popov, and others. In 1920 the Galician Communists formed a separate section in the Comintern. In 1919–20 the *Borotbists demanded that they be admitted to the Comintern as an independent Ukrainian party, but the РСР(В) saw to it that the demand was rejected.

In 1919–21 Ukrainian political problems were often debated in the Comintern. The Fifth Congress in 1924 declared that the Ukrainian problem was of international significance and that its solution in the Ukrainian SSR would determine the attitude of the peoples of Eastern and Southern Europe to the Soviet Union. In 1925 the Comintern approved the dissolution of the *Ukrainian Communist party (УКР) and justified this by saying that the Ukrainian SSR was an independent Soviet state and consequently there was no need to demand its independence as the UKP did. In 1927–9 the Comintern heatedly debated the 'nationalist deviations' of Shumskyism-Khvylovyism (see O. *Shumsky and M. *Khvylovy) and Moscow's *nationality policy in Ukraine. The *Communist Party of Western Ukraine (КРЗУ) accused the СР(В)У before the Comintern of persecuting Ukrainian Communists, but under Russian pressure the Comintern condemned the КРЗУ. M. Skrypnyk's case and the famine in Ukraine were raised at the Thirteenth Plenum in 1933 and at the Seventh Congress in 1935.

The СР(В)У did not belong independently to the Cominform. Only in 1956–8 were representatives of the СР(В)У again included in official delegations of the CPSU to some international Communist conferences.

Communist party education. Component of the ideological-educational work of the CPSU. It has a dual purpose: (1) to train leaders professionally for all levels of the Party and government apparatus, and (2) to raise the level of ideological-political consciousness among Party members and non-Party activists. The latter aim is pursued by means of a system of political self-education, mass-education discussion circles on current political questions, seminars on the history of the CPSU or on Marxism-Leninism, raion night schools, 'universities of Marxism-Leninism,' and so on. Non-Party members are encouraged to participate in these groups, particularly if they are involved in the fields of education and culture. An emphasis is placed on organized forms of Communist education, such as discussion groups and seminars. Self-education groups are supervised by lecturers from primary organizations' 'cabinets of political education.'

The system for training political cadres has undergone many changes since its inception after the Bolshevik revolution. In 1920 the Ukrainian Central Party School was established in Kharkiv. In the following year it was renamed the Higher Party School of the Central Committee (CC) of the СР(В)У and in 1922, the Artem Communist University. This school trained Party apparatchiks, propagandists, and lecturers on politics. After collectivization the university was turned into the Higher Communist Agricultural School in 1932 to train leading cadres for the raions, collective farms, state farms and other Party-government institutions. In 1939 this school became a republican two-year Party school. To train Party and government cadres at lower levels, mostly at the raion level, government-Party schools of a lower and an intermediate type were introduced in Ukraine in the 1920s. By 1927 there were 47 such institutions, with an enrollment of 5,160. In 1936 they were turned into oblast agricultural schools for training leading cadres for collective and state farms and machine tractor stations. In 1921 a chair of Marxism was established in Kharkiv as a research institu-

tion in the field of ideological-political education. In the following year it became the Ukrainian Institute of Marxism, and in 1924 the Ukrainian Institute of Marxism-Leninism. Its departments eventually became independent institutes and in 1931 were organized into the *All-Ukrainian Association of Marxist-Leninist Scientific Research Institutes (VUAMLIN). Because almost all of its staff members (Ye. Hirchak, S. Semkovsky, P. Demchuk, V. Yurynets, and many others) were arrested during P. Postyshev's rule in Kharkiv and because it had emphasized the nationality question (a special chair under M. Skrypnyk was devoted to it), the association was dissolved soon after it had been transferred to Kiev in 1934. It was replaced by the institutes of history, philosophy, and economics of the Academy of Sciences of the Ukrainian SSR.

Since the Second World War the Higher Party School of the Central Committee of the Communist Party of Ukraine, which was formed in 1949 out of the republican two-year Party school, has been the highest institution of Party education in Soviet Ukraine. It has a four-year curriculum designed to prepare cadres for Party, government, newspaper, and similar posts at the republic and oblast levels. In 1956 oblast government-Party schools at a secondary school level were reopened to prepare leading cadres for the raions, state farms, and collective farms, as well as propagandists at the lower level.

Since 1964-5 the main forms of Party education at the lowest level have been (1) elementary political schools and schools teaching the foundations of Marxism-Leninism, with a program of 64 hours of classes per year; and (2) universities of Marxism-Leninism, which follow the program of the Higher Party School and include departments for Party executive personnel that help Party committees organize ongoing political courses for economic cadres and middle-level functionaries. Since February 1967 permanent monthly courses for retraining leading Party and state cadres have existed in a number of cities. In 1967-8, 2,440,000 persons, of whom 1,730,000 (70.9 percent) were Party members or candidate members, were involved in the system of Party education. Between 1946 and 1967, 6,456 individuals graduated from the Higher Party School, and 17,229 from two-year and three-year oblast schools, while 282 candidates from Ukraine graduated from the Academy of Social Sciences of the CC of the CPSU and 277 from the Higher Party School of the CC of the CPSU. Another 6,430 graduated through correspondence courses.

Ideological education is not restricted to Party schools; it is also part of the system of scientific-research and educational institutions that includes the Academy of Sciences of the Ukrainian SSR, whose institutes of history, philosophy, and economics are more propagandistic than scholarly in nature; the universities, where Party history and Marxism-Leninism are taught in all departments; and secondary schools, in which courses on the constitutions of the USSR and the Ukrainian SSR and social studies are compulsory.

Communist Party of Canada. The Communist Party of Canada (CPC) was founded in 1921, with Ukrainians M. *Popovich, J. Boychuk, and J. Navis (I. Navizivsky) participating. By the early 1930s Ukrainians were the largest group in the CPC after the Finns, forming approximately one-third of the membership. Most also belonged to the pro-Communist *Ukrainian Labour-Farmer Temple Association (ULFTA). CPC control was exercised through sections within the party until 1925 and through direct party representation in organizations like the ULFTA until 1935. Between 1928 and 1931 Ukrainian and other CPC leaders clashed over Ukrainian reluctance to accept the intensification of the class struggle. During the 1920s the CPC's failure to question the 1933 famine and Stalinist purges in Soviet Ukraine led to the defection of Ukrainians under D. Lobay. Since 1945 Ukrainian membership in the CPC has decreased, although liaison between the CPC and the *Association of United Ukrainian Canadians (AUUC), which succeeded the ULFTA, has been maintained by such key AUUC functionaries in the CPC as Boychuk, Navis, J. Weir, P. Krawchuk, and P. Prokop. In 1967 the CPC, at AUUC insistence, sent a delegation to investigate Russification in Ukraine; its critical report was withdrawn under Soviet pressure, over the objections of Ukrainian-Canadian Communist leaders. The 1968 invasion of Czechoslovakia, officially supported by the CPC, and restricted travel in Soviet Ukraine have further alienated Ukrainians from the CPC, which continues to maintain a pro-Soviet position.

Communist Party of Eastern Galicia. See Communist Party of Western Ukraine.

Communist Party of the Soviet Union or CPSU. Russian totalitarian political organization that has held power in Russia since 1917 and in the USSR, including Ukraine (see *Communist Party of Ukraine), since 1922. Formally, the Party embraces Marxism and Leninism as its ideology.

The CPSU is an offspring of the revolutionary circles of the 19th-century Russian intelligentsia and bourgeoisie, which were supported by the urban proletariat. It arose out of the split in the *Russian Social Democratic Workers' party (RSDRP) into Bolsheviks and Mensheviks in 1903. In 1912 it began to shape itself into a separate party under the name Russian Social Democratic Workers' Party (Bolshevik), but it assumed its final form only during the revolutionary events of 1917. At its sixth congress in July 1917 the Party set itself the goal of taking over the government, and it achieved this with the

*October Revolution. At the time the Party had only 115,000 members. Its leaders included V. *Lenin, L. *Trotsky, G. *Zinoviev, L. Kamenev, N. Bukharin, A. Rykov, and J. *Stalin. In March 1918 its name was changed to the Russian Communist Party (Bolshevik) or RCP(B).

During 1918–22 the RCP(B) carried out a radical social revolution in Russia and nationalized the property of Russian and foreign capitalists. By fanning and manipulating the revolutionary mood of the peasantry and workers, the Party preserved its dictatorship during the civil war against White Russian forces. Having achieved victory in Russia, the RCP(B) then intervened militarily in the affairs of non-Russian national states that had established themselves during the revolution, including Ukraine, and tried to annex them by force to the Russian Soviet Federated Socialist Republic (RSFSR). In 1918–20 the RCP(B) tried to introduce a form of Communist society and economy known as *War Communism, but this effort ended in an economic crisis and revolts against the Soviet government. In March 1921 Lenin conceded that this policy was wrong and introduced the *New Economic Policy (NEP). On the nationality question the Party proclaimed Lenin's slogan 'self-determination up to and including separation' but in practice defended a unitary Russian state. Only in the course of subjugating the national republics that had broken away from Russia in 1917–18 did the RCP(B) recognize the federal form of the Soviet state, in order to get these republics to merge with the RSFSR while preserving a certain autonomy. The idea of merging was opposed by the national republics and their Communist leaders, and in 1922 Lenin agreed to a compromise – the republics were to be preserved, and their national cadres and cultures were to develop within the framework of the USSR.

During 1922–7, that is, during Lenin's illness and after his death, a bitter struggle developed in the Party between Stalin's and Trotsky's factions. Stalin, who became secretary general of the Party in 1922, took a conservative line, while the Trotskyists demanded a revolutionary line in foreign affairs and rapid industrialization and collectivization at home ('permanent revolution'). They also demanded democracy and freedom of speech within the Party and criticized Stalin for bureaucratizing the Party and leading the revolution astray. Stalin was supported by the Party apparatus, which he had created. Having expelled the Trotskyists from the Party, Stalin adopted part of their program and took a course towards the left. A revolution in Europe seemed out of the question; hence, Stalin decided to build 'socialism in one country' by carrying out a rapid industrialization and militarization and then spreading revolution to other countries by force of arms.

Rapid industrialization was accompanied by the elimination of the NEP and the forced *collectivization of agriculture. This was opposed by a faction on the right led by N. Bukharin. The struggle in the Party went on from 1928 to 1930 and ended with Stalin's victory. In April 1929 the All-Union Communist Party (Bolshevik) (VKP[B]) adopted the First *Five-Year Plan and, in November of that year, a resolution on collectivization. In 1930 Stalin announced that the USSR had entered the period of socialism; in 1934, that socialism had already been established; and in 1937, that a classless society had been achieved in the USSR. Although there was no longer

any organized opposition within the Party, in 1934 Stalin began to arrest his former opponents and in 1936–8 unleashed the Yezhov terror against the Party and the people at large. In these years 900,000 members were expelled from the Communist party and arrested. This was 47 percent of the Party's total membership in 1935, including 71 percent of the Central Committee membership. All the surviving leaders of the October Revolution – Zinoviev, Bukharin, Rykov, and others – were sentenced to death at three show trials in Moscow.

During these purges the composition of the VKP(B) changed drastically. Instead of committed Communists and revolutionaries, as in Lenin's time, the Party members were mostly careerists without political convictions, obedient servants of Stalin's dictatorship. The Party magnified the cult of Stalin to the dimensions of idolatry and carried out his slightest whim. The Russians, whose national interests coincided with Stalin's centralism, constituted the absolute majority in the new bureaucracy. Soon these changes were reflected in the official Party ideology: Communist slogans became muted, and their place was taken by explicit Russian nationalist propaganda. This fact was clearly evident during the German-Soviet war of 1941–5. After the war Russian chauvinism was fostered, particularly by A. *Zhdanov, and became one of the main instruments of Party policy. The degeneration of Stalin's regime before his death in 1953 was manifested in such events as secret conspiracies and anti-Semitic campaigns (1949–53). The Party's foreign policy led to a break with the Yugoslavian Communists in 1948, the cold war, and the arms race.

After Stalin's death the leadership of the CPSU – the name adopted in 1952 – consisted of men who had been selected and trained by Stalin. They formed a 'collective leadership,' which lasted only four months. In the summer of 1953 L. Beria was arrested and later that year was executed. G. Malenkov fell in 1955, followed by G. Zhukov, V. Molotov, L. Kaganovich, and others in 1957. In 1956 the 20th Party Congress condemned in moderate terms the cult of Stalin's personality and the Yezhov terror, but did not touch the major part of Stalin's legacy. In 1953 N. *Khrushchev assumed the Party leadership and brought into power new people with no established reputations or political convictions. Stalin's terror and the totalitarian system did not permit new ideologues or independent leaders to develop within the Party.

Khrushchev's failures in foreign policy and internal affairs, mainly in the economic sector, and the disorganization brought about by his separation of local and oblast Party agencies into industrial and agricultural committees, led to his downfall in October 1964. He was replaced by L. *Brezhnev, who unified the divided CPSU and to some extent applied the principles of so-called collective leadership. The state apparatus was headed by A. Kosygin until 25 October 1980, while M. Suslov, a Russian nationalist and Stalinist, was in charge of ideology, including the nationality question. In 1977, with the change of the USSR constitution, Brezhnev became chairman of the Presidium of the Supreme Soviet of the USSR, that is, the president of the state. Brezhnev succeeded in combining a flexible foreign policy of détente with the growth of Soviet military might, a conservative internal policy, and strict control over the police agencies. Brezhnev died in late 1982 and was succeeded by Yu. *Andropov, who assumed all of Brezhnev's functions,

including chairmanship of the Presidium of the Supreme Soviet. No special changes in ideology and political strategy of the CPSU were introduced by Andropov.

Since the 1960s several Ukrainians have had some influence in the apparatus of the Central Committee of the CPSU: V. Titov, secretary of the CC CPSU and president of the Organization Committee of the CC (1962–5); M. *Pidhorny, secretary of the CC CPSU (1963–5); P. *Shelest, member of the Politburo of the CC CPSU (1964–73); and V. *Shcherbytsky, member of the Politburo of the CC CPSU since 1971.

According to its program the CPSU is committed to the building of communism and to its expansion around the world. But the present leadership interprets the building of communism not as social transformation, but as technological and economic development (eg, the industrialization of Siberia). Democratic freedoms are unnecessary and even detrimental to forced and rapid economic growth. Hence, in spite of the reforms that were introduced after Stalin's death, the general Stalinist system and program are still in force in the USSR. The national and social interests of the ruling Russian bureaucracy continue to coincide with the program of 'building communism.'

Communist Party of Transcarpathian Ukraine (Komunistychna partiia Zakarpatskoi Ukrainy). Party formed in March 1920 in Uzhhorod out of extreme-left socialist groups and known at first as the International Socialist Party of Subcarpathian Ruthenia. In 1921 it became a provincial organization of the Communist Party of Czechoslovakia. In its composition the party was multinational; Hungarians and Jews were the majority in the leadership, but with time more and more Ukrainians assumed a leading role. Until 1925 the party had no clear policy on the nationality question: some of its publications aimed at the Ukrainian population were printed in Russian or in an artificial local dialect. In the 1925 and 1935 elections to the Czechoslovakian parliament and senate, the party received the largest number of votes (20–30 percent) of any of the many competing parties. Among its main Ukrainian leaders were the parliamentary deputies and senators I. Mondok, I. Lakota, M. Sydoriak, I. Bodnar, P. Fushchych, K. Reshchuk, and O. Borkaniuk. The party belonged to the Comintern through the Communist Party of Czechoslovakia, and the party's delegates often spoke at the Comintern plenums and congresses in Moscow. The party co-operated closely with the leadership of the CP(B)U in Kharkiv.

The party's official press consisted of the newspapers *Karpats'ka pravda* (1923–38) and the Hungarian-language *Munkás újság* (The Workers' Paper). In the fall of 1938 the party was dissolved along with other parties by the Czechoslovakian central government, but it continued to work underground during the Hungarian occupation until 1944. When Soviet troops arrived, the party was formally restored on 19 November 1944 and conducted a campaign for the unification of Transcarpathia with the Ukrainian SSR. On 15 December 1945 the party was

admitted to the CP(B)U as an oblast organization. In 1944–5 the party's first secretary was I. Turianytsia.

Communist Party of Ukraine or CPU (Komunistychna partiia Ukrainy). Known until 1952 as the Communist Party (Bolshevik) of Ukraine, or CP(B)U, the CPU is a part of the *Communist Party of the Soviet Union (CPSU), which embraces the Communists of the Ukrainian SSR and controls all aspects of society. The CPU accepts *Marxism as its ideology and, according to its political program, claims to be building communism in Ukraine.

The CP(B)U arose through the association of local groups of the Russian Social Democratic Workers' Party (Bolshevik) (RSDRP(B)) in Ukraine. When it came to power, the Party was joined by small groups of the *Borotbists and *Ukrainian Communist party members as well as Jewish left-wing socialists. The founders and first leaders of the CP(B)U were predominantly Russian or Jewish members of the intelligentsia. The rank and file consisted of Russian and nationally indifferent Ukrainian workers in large industrial cities. At the time of its founding in 1918 no more than 7 percent of the Party's membership considered itself Ukrainian. The Ukrainian policy of the CP(B)U was defined at its founding conference as follows: 'The Conference of the CP(B)U considers the task of our party in Ukraine to be: to struggle for the revolutionary union of Ukraine with Russia on the principles of proletarian centralism within the boundaries of the RSFSR.'

The Bolsheviks in Ukraine separated themselves from the Mensheviks and formed their own organizations only in 1917. In the summer of 1917 the Central Committee (CC) of the RSDRP(B) brought the Bolsheviks in Ukraine under two territorial organizations: the regional organization of southwest Ukraine, with a central office in Kiev, and a provincial organization of the Donets-Kryvyi Rih Basin, with offices in Kharkiv and Katerynoslav. The Kiev Bolsheviks, influenced by Ukrainian national Communists, had a greater respect for the Ukrainian national revolution and voted against preparations for the October Revolution, considering it unrealistic under the prevailing conditions in Ukraine. The Bolshevik groups from Kharkiv, however, favored the seizure of power by the soviets. At the Party conferences held in July and December of 1917 V. Zatonsky, V. Shakhrai, and Yu. Lapchynsky demanded that the Bolshevik organizations throughout Ukraine be merged into one Ukrainian Communist party, which would participate in the Ukrainian national revolution in order to gain control of it. The CC of the RSDRP(B) and the Kharkiv-Katerynoslav organizations, however, underestimated the importance and strength of the national renaissance in Ukraine and tried to separate themselves from Ukraine by creating the 'independent' *Donets-Kryvyi Rih Soviet Republic in Ukraine's industrial region. Only in 1918, when events forced the Bolsheviks to recognize the existence of the

Ukrainian National Republic and then to begin military operations against it and to set up their own government in Kharkiv to challenge the authority of the Central Rada, did the Bolsheviks agree to form a single Communist Party of Ukraine. At the Party conference in Tahanrih on 20 April 1918 M. Skrypnyk, with the support of the Kiev Bolsheviks, overcame the opposition of the Russian delegates and forced through a resolution setting up the CP(B)U as an independent party with no organizational subordination to the Russian Communist Party (Bolshevik) (RCP(B)).

However, the first congress of the CP(B)U, which took place in Moscow on 5–12 July 1918, revoked the resolution of Tahanrih and declared that the CP(B)U was an integral part of the RCP(B) and was subject to its central committee. There was a fierce struggle over revolutionary tactics in Ukraine between the Kiev and Kharkiv-Katerynoslav groups at this and the two subsequent congresses. After each unsuccessful attempt of the CP(B)U to gain the support of the Ukrainian people, particularly in 1919 and 1920, a Ukrainian national opposition (led by V. Shakhrai, Yu. Lapchynsky, and later the former Borotbists) sprang up in the Party, demanding its separation from the RCP(B). But Moscow and the Russian majority in the CP(B)U consistently suppressed each opposition group, treating it as a manifestation of Ukrainian nationalism.

The CP(B)U came to power in Ukraine only through the support of the RSFSR occupation army and had to move its

headquarters to Moscow several times. It became firmly established only after the final occupation of Ukraine by the Bolsheviks. The Party was not very large or popular (see table 1). Only 19 percent of its membership in 1926 was Ukrainian, even after the left wing of the Ukrainian Social Democratic Workers' Party (Independent) and the Borotbists (Ukrainians constituted 52 percent of the industrial proletariat at the time) had joined the Party. Politically the CP(B)U was sectarian, and its socioeconomic policies encountered popular resistance from the very beginning. In introducing *War Communism in Ukraine, the Party did not want to distribute the landowners' estates among the peasantry; instead it tried to turn them forcibly into state farms and communes. Along with the government requisitioning of farm products, this policy sparked peasant revolts. In 1920 a workers' opposition emerged in the CP(B)U which, with the help of workers' strikes, took over the leadership of the Party at the fourth congress and revoked the economic policy of War Communism. This faction was suppressed by administrative means by the Central Committee of the RCP(B).

The power of the CP(B)U became firmly established in Ukraine only during the NEP period, and particularly after the Borotbists and Ukrainian Communist party had joined the Party. A struggle over *nationality policy continued in the Party throughout the 1920s. When, in 1922–3, J. Stalin and the CC of the RCP(B) renewed their proposal to abolish the Ukrainian SSR and the other Union republics and to incorporate them as autonomous repub-

lics into the RSFSR, the Politbureau of the CC of the CP(B)U rejected the proposal, and the Ukrainian delegates in Moscow, led by M. Skrypnyk, H. Hrynko, and O. Shumsky and supported by the national Communists of other republics and by V. Lenin, overcame the Russian chauvinists in the Party. They saved the Ukrainian SSR, although they had to accept a compromise in the form of the USSR as a federated state.

A more serious conflict in the CP(B)U arose over *Ukrainization. The non-Ukrainian majority in the Party, led by E. Kvirning and D. Lebed, stubbornly opposed both the promotion of Ukrainian personnel to the Party's and republic's leadership and the propagation of the Ukrainian language and culture. This pro-Russian wing was sharply attacked by the national opposition in the Party, led by O. Shumsky and M. Khvylovy and widely supported by the Ukrainian intelligentsia and young people as well as by M. Skrypnyk. Faced with this united front, the CC of the All-Union Communist Party (Bolshevik) (VCP(B)) recalled Kvirning from Ukraine. But in 1925 it replaced him at the head of the CP(B)U with L. Kaganovich and instructed Kaganovich not to stop Ukrainization, but to divide the Ukrainian national Communists and suppress them. Kaganovich fulfilled his assignment. Skrypnyk and some of the Ukrainian Communists were forced to take a stand against Shumsky and Khvylovy, who, distrusting the Russian chauvinist bureaucracy, issued the call 'away from Moscow.' During 1926-8, 36,300 members, or 12.5 percent of the membership, were expelled from the CP(B)U. The *Communist Party of Western Ukraine supported the Shumskyists. At the same time the CP(B)U conducted a struggle against the Trotskyist opposition within its ranks.

After his victory over Trotsky and Bukharin, Stalin established his dictatorship over the Party and government. Political power was strictly centralized in the USSR, and both the Party and society became bureaucratized. Stalin's centralization found a natural ally in Russian chauvinism and its champion - the Russian bureaucracy. Local national autonomy was seen as a hindrance; hence, in 1933-4 Stalin abruptly changed the nationality policy of the VCP(B). He condemned 'local nationalism' as the principal enemy of centralism and ordered that Ukrainization be stopped. During this period the forced collectivization of the peasantry and the elimination of the kulaks were carried out, accompanied by *famine. The CP(B)U went through a severe crisis during these changes of policy: in the first phase of collectivization and the anti-kulak campaign in 1929-30, 26,700 members were expelled, and some of them were arrested. During the famine of 1932-3, 51,000 more members were expelled. The demands of Skrypnyk and some of the other leaders of the CP(B)U that obligatory grain delivery quotas be lowered and the famine stopped were regarded by Stalin as placing the interests of the Ukrainian peasantry above the interests of socialism, and Skrypnyk's followers were accused of nationalism. Immediately after this, Ukrainization was halted, and its promoters, as well as numerous Ukrainian writers and cultural figures, were killed. An additional 27,500 members were expelled from the CP(B)U. During the whole crisis 46 percent of the CP(B)U's membership was expelled and persecuted, including 49 percent of the members of its central committee.

The campaign of terror was directed by the second secretary of the CC of CP(B)U, P. Postyshev, who was sent

from Moscow in January 1933 with a large number of Russians to replace the purged officials and to take over the Party and government machine in Ukraine. Postyshev eliminated every Ukrainian Communist who at any time had been a Borotbist, Ukapist, Shumskyist, Skrypnykist, Trotskyist, or any other oppositionist. Almost the whole generation of revolutionaries that had created the CP(B)U and established Soviet power in Ukraine was destroyed. Although new members were admitted to the Party in 1934 and the proportion of Ukrainians increased to 60 percent, the new members were careerists who blindly accepted every change of policy. Twenty percent of the CP(B)U's members were apparatchiks, that is, employees of the Party, while the proportion of workers decreased from 58.5 percent in 1921 to 41.1 percent in 1933. The Party's new statutes of 1934 transformed it into an economic-administrative institution that began to control all sectors of society. The CP(B)U enforced a monolithic discipline among its members by means of privileges and fear.

In 1936-8 the completely loyal CP(B)U underwent another great purge. Considering war with Germany and Japan to be inevitable, Stalin decided to uproot well in advance all 'potential double-dealers' who could become 'traitors.' In 1936, 45,000 members of the CP(B)U were expelled and arrested. In 1937-8, when N. Yezhov headed the NKVD, another 162,000 members, or over 50 percent of the Party's total membership, were purged. In the course of this campaign even P. Postyshev and S. Kosior (first secretary of the CC of the CP(B)U in 1930-37) turned against Stalin and were executed. In the second half of 1937 almost all the members of the CC CP(B)U and the government of the Ukrainian SSR were shot. In 1938 N. *Khrushchev, with a large group of Russian Communists, came from Moscow to take over the leadership of the CP(B)U. He also promoted hitherto-unknown Ukrainian Party functionaries of the raion level to important positions in the Party and the government.

In the 1930s the CP(B)U finally lost all contact with the Ukrainian people. The lack of popular support became apparent during the German-Soviet war, when the Party could neither organize a strong underground in the German-occupied territories nor bring the popular-resistance movement under its leadership. Almost all Party members either fled east or were mobilized into the army. Not more than 1 percent of the CP(B)U membership remained in Ukraine, and most of these members fought with the Soviet partisans in Polisia, not in the underground.

After the war, as a result of its powerful administrative machine, based primarily on the secret police, the CP(B)U quickly consolidated its authority in Ukraine and organized the reconstruction of the economy. But politically and ideologically it remained a lifeless body: no programmatic, theoretical, or international-political problems were discussed at its congresses any longer. There was no opposition in the Party. The mild purges of 1946 and 1949-52, in which 3 percent of the members were expelled from the party for inactivity, disloyalty during the war, or manifestations of Ukrainian 'nationalism' or Jewish 'cosmopolitanism,' did not disrupt the general routine. The only ideological problem that has perturbed the CP(B)U since the war is 'Ukrainian bourgeois nationalism.' In accordance with the directives of A. Zhdanov and L. Kaganovich, the CP(B)U became a manifest champion of

Russian chauvinism: praising everything Russian, it cultivated an inferiority complex among Ukrainians, systematically hampered and destroyed Ukrainian culture, and permitted extensive Russification of Ukrainian education. The *Russification policy and chauvinist propaganda reached their greatest intensity during the secretariat of L. Melnikov in 1950–3. Stalin's death and, particularly, Khrushchev's criticism of Stalin at the 20th Congress of the CPSU, followed by the defeat of the opposition led by V. Molotov, L. Kaganovich, G. Malenkov, and G. Zhukov in 1956–8, ended in the condemnation of Stalinism, but not of Russian chauvinism. The Communist Party of Ukraine continued to be a force hostile to the Ukrainian people. The fact that only a little more than 2 percent of Ukraine's population belonged to the Party testifies to its unpopularity. In 1956, for every 1,000 inhabitants of Ukraine, only 22 were Communists (38 in the RSFSR).

By the end of 1958 the CPU had 1,095,520 members and candidates. Of these, 60.3 percent were Ukrainian, 28.2 percent Russian, and 11.5 percent of other nationality. Twenty-five percent of the members had joined the Party before the war, 33 percent during the war and 42 percent after the war. According to age, 17.6 percent of the members were 30 or under, 36.9 percent were 31–40, 28.2 percent were 41–50, and 17.3 percent were over 50. Women constituted 17.5 percent of the membership. Forty percent of the members had completed secondary and higher education (in 1940 only 19 percent had done so). Twenty-nine percent of the members were employed in industry, construction, and transportation, 19 percent in agriculture, and 52 percent in administrative or academic work. (The respective figures for 1949 were 35 percent, 19 percent, and 46 percent.) The Party consisted of 52,983 local cells, attached to various plants, institutions, organizations, villages, and towns.

In the 1960s and early 1970s, when M. *Pidhorny (Podgorny) and P. *Shelest were first secretaries of the CPU, some elements of the Party adopted a position on the nationality question that diverged somewhat from extreme Russian chauvinism. At the same time cautious attempts were made to increase the Party's membership. In January 1959 only 5.05 percent of the population in Ukraine over 20 years of age belonged to the CPU, compared to the 6.6 percent of the Soviet population that belonged to the CPSU and 7.81 percent of the RSFSR

population. Pidhorny and Shelest tried to expand the Party rapidly. Between the 20th congress in 1959 and the 24th congress in 1971 the CPU grew from 1,282,500 to 2,534,600 members and candidates, an increase of 97.6 percent. At the same time the CPSU grew by only 43 percent.

With the general increase in membership the proportion of Ukrainians in the CPU increased also (see table 2). In spite of these results, the number of members and candidates, even in 1971, remained disproportionately small. To some extent the continued weakness of the CPU is attributable to its weakness in the western oblasts of Ukraine. The reduced, but by no means eliminated, underrepresentation of Ukrainians in the CPU also reflects the privileged position of the Russians in Ukraine. Furthermore, the position of Ukrainians in the CPSU is relatively weak: in 1967 only 4.9 percent of all Ukrainians (residing in or outside Ukraine) were members of the CPSU, compared to 6.4 percent of Georgians, 6.1 percent of Russians, 5.6 percent of Armenians, and 4.7 percent of Belorussians.

P. Shelest tried to defend the economic interests of the Ukrainian SSR, particularly its coal and other heavy industries. Some steps were also taken to improve national-cultural conditions in Ukraine. In August 1965, with the approval of the Party leadership, plans were drawn up to partly de-Russify the institutions of higher learning, which are under the Ministry of Higher Education of the Ukrainian SSR. But the plans were never implemented, owing to 'parental protest.' Instead, in August and September 1965, on orders from the Kremlin, the first wave of arrests swept Ukraine. To protest this persecution of nationally conscious Ukrainian intellectuals, I. Dziuba addressed a memorandum to Shelest – a book-length manuscript entitled *Internatsionalizm chy rusyfikatsiia?* (Internationalism or Russification?). In November 1966 Shelest spoke at the Fifth Congress of the Writers' Union of Ukraine and promised Party support for those who cultivated 'our beloved wonderful Ukrainian language.' In March 1968 F. Ovcharenko, who was relatively sympathetic to the needs of the Ukrainian intellectuals, was appointed secretary for ideology at the CC of the CPU. Shelest's book *Ukraino nasha radians'ka* (Our Soviet Ukraine) appeared in 1970. In it the development of the Ukrainian SSR into a mighty European state is presented in the spirit of Leninist nationality policy.

¹Unpublished

The book extols the Cossack period of Ukrainian history, approves of the Ukrainization policy of the 1920s, and avoids excessive praise of the Russians.

This development of the CPU was cut short by the CPSU Politburo, which in May 1972 removed Shelest from office and appointed L. Brezhnev's protégé, V. *Shcherbytsky, first secretary of the CPU. Earlier, in January 1972, another wave of arrests aimed at Ukrainian intellectuals had begun. In October 1972 F. Ovcharenko was replaced by V. Malanchuk, who in 1979 was replaced by O. Kapto.

Shcherbytsky's appointment signaled an intensification of the Party's anti-Ukrainian policy. The Party purge of 1973-5, connected with the renewal of membership documents, affected the CPU (4.6 percent of the members were expelled) more than the CPSU (2.9 to 3.2 percent of its members were expelled).

At the 25th Congress of the CPU in 1976, Shcherbytsky gave his main speech in Russian, an unprecedented step since Stalin's death. At this congress I. Sokolov, a Russian, was elected second secretary in charge of cadres of the CC of the CPU. Again, this was the first time since 1953 that a non-Ukrainian had been given such an important post in the Party machine.

On 1 January 1978 the CPU had 2,749,268 members and candidates. By nationality 65.8 percent of the members were Ukrainians, 27.3 percent were Russians, and 6.9 percent were of other nationalities. The number of Ukrainians in the Party remains disproportionately small: according to the census of 17 January 1979, Ukrainians constitute 73.6 percent, Russians 21.1 percent, and others 5.3 percent of the republic's population. The number of Ukrainians in the CPSU is also relatively small: in 1976 only 9 percent of Ukrainians over 20 years of age were members of the CPSU, compared to 12.8 percent of Georgians, 12.3 percent of Azerbaidzhanians, 12.2 percent of Kazakhs, 11.4 percent of Russians, and 9.6 percent of Belorussians.

Five percent of CPU members in 1978 had joined the Party before the war, 10 percent during the war, and 85 percent after the war (16 percent in 1946-57, 38 percent in 1958-67, and 31 percent in 1968-77). By age the statistics were as follows: members 30 years and younger, 15.5 percent; 31-40, 26.3 percent; 41-50, 26.1 percent; and over 50, 32.1 percent. Women accounted for 22.9 percent of the members. Of the members, 74.5 percent had completed secondary or higher education (26.7 percent had a higher education). In terms of occupation, 43.2 percent of the members and candidates were workers, 16.2 percent were peasants belonging to collective farms, and 40.6 percent were functionaries, etc. The members were employed in the following branches of the economy: 41.9 percent in industry, construction, and transportation; 16.2 percent in agriculture; and 41.9 percent in other areas.

The members of the CPU belong to 64,500 primary organizations, which exist at various plants, institutions, organizations, and localities. The primary Party organizations elect delegates to raion Party conferences, which in turn elect delegates to oblast conferences; these then elect delegates directly to the all-Union congresses of the CPSU and to the republican congresses of the CPU. The local organizations at each level are directed by Party committees headed by secretaries. The republican congress of the CPU elects the CC of the CPU every five years. The permanent agencies of the CC and

the top governing agencies of the CPU are: on political policy, the Politburo of the CC of the CPU (called the Presidium in 1953-66), which consists of 7-11 members; and, on organizational matters, the Secretariat of the CC of the CPU, consisting of 3-6 members. The entire Party machine is headed by the first secretary of the CC of the CPU.

On 1 January 1982 the Politburo of the CC CPU consisted of the following members: V. Fedorchuk, I. Herasymov, B. Kachura, O. Liashko, I. Mozhovy, V. Shcherbytsky, I. Sokolov, V. Solohub, O. Tytarenko, H. Vashchenko, and O. Vatchenko. Its candidate members were V. Dobryk, Ye. Kachalovsky, O. Kapto, Yu. Kolomyiets, Ya. Pohrebniak, and Yu. Yelchenko. The secretaries of the CC CPU were V. Shcherbytsky (first secretary), I. Sokolov (second secretary), O. Kapto (for ideology), I. Mozhovy, Ya. Pohrebniak, and O. Tytarenko. Following his temporary appointment as head of the All-Union KGB in May 1982 (in December 1982 he was transferred from the KGB to become USSR minister of internal affairs) V. Fedorchuk resigned from the CPU Politburo. Following Sokolov's death (1 October 1982), on 22 October 1982 D. Tytarenko was promoted to the important post of second (or personnel) secretary of the CC CPU. Once again an ethnic Ukrainian took over that key position. Tytarenko's old post of industrial secretary of the CC CPU was taken over by B. Kachura, until then first secretary of the Donetsk Oblast Committee. (Kachura's successor, V. Mironov, has become a prime candidate for eventual election to full membership in the CC CPU Politburo.) Yu. Yelchenko was promoted to member of the Politburo, and S. Mukha was elected a candidate member.

Finally, it would appear that with the possible exception of Fedorchuk and Shcherbytsky, leaders of the CPU have not contributed substantially to Yu. *Andropov's or K. Chernenko's accession to power as general secretary of the CPSU on 12 November 1982 and 13 February 1984 respectively - quite a difference from the important role that CPU leaders played in the accession of N. Khrushchev (1953) and L. Brezhnev (1964).

Communist Party of Western Ukraine (Komunistychna partiia Zakhidnoi Ukrainy or KPZU). Party formed at a conference of a group of *Borotbists (K. Savrych, M. Krystovy, and M. Yalovy) in Stanyslaviv (now Ivano-Frankivske) in February 1919 as the Communist Party of Eastern Galicia. In August 1920 the Soviet Galician Republic was proclaimed in the Ternopil region, which was under Soviet occupation. The head of the *Galician Revolutionary Committee, V. Zatonsky, restored the Party, but it ceased to exist when the Red Army withdrew from Galicia.

A different group of leaders succeeded, in the second half of 1920, in permanently consolidating Ukrainian pro-Communist groups in Galicia into a new Communist Party of Eastern Galicia (KPSH). This party operated illegally. Its organizers and leaders included O. Krilyk (pseud, Vasylykiv), R. Kuzma (pseud, Turiansky), K. Savrych (pseud, Maksymovych), R. Rozdolsky (pseud, Prokopovych), M. Tesliuk, P. Kraikivsky, V. Korbutiak, L. Rozenberg (pseud, Lvivsky), Chorny, V. Kopach, S. Rudyk, F. Bei, and P. Lyshega. Before the war most of these men belonged to the left wing of socialist youth groups known as *drahomaniivky*. In the spring of 1918 this wing formed the International Revolutionary Social Democratic Youth. In 1923-4 the active cadres of the KPSH (by then known as the KPZU) expanded, absorbing some former members of the *Ukrainian Social Democratic party. S. Volynets, a close associate of D. Paliiv from 1933, held a high post in the KPZU after the dissolution of the USDP.

The leadership of the new party received the support of

some of the leaders of the CP(B)U, such as M. Skrypnyk and O. Shumsky, but was opposed by others (V. Zatonsky). While the KPSH was being formed, Polish Communists such as S. Królikowski and C. Grosserowa were organizing their own party of the same name in eastern Galicia. The two parties were nationally distinct. The first attempts to join these organizations did not succeed because of ideological differences, primarily on the question of Ukraine's independence and on the extent of the Galician party's autonomy and subordination to the Communist Workers' Party of Poland (KPRP, from 1925 the Communist Party of Poland [CPR]). They also disagreed on boycotting parliamentary elections (a policy advocated by the *Vasylykiivtsi*, who were named after their leader's pseudonym) and on supporting the guerrilla activity and sabotage that were endorsed by most Ukrainian parties. The *Vasylykiivtsi* questioned the necessity of adopting common goals for the revolutionary struggle in all the territories of Poland. The pro-KPRP tendency obtained majority support in Volhynia, even among Ukrainians. The two branches of the party were joined together at the Second Congress of the KPRP in the fall of 1923. Control of the party was handed over to the *Vasylykiivtsi*, and the organizations in Volhynia and Podlachia were brought under their leadership. The party was then named the KPZU. It was given extensive autonomous status within the KPRP because of its connections with the CP(B)U. This autonomy was strengthened by the party's agreement in 1924-5 with the policy of the All-Union Communist Party (Bolshevik) and the Comintern at a time when the CPR twice openly criticized that policy.

The KPZU published various periodicals in Ukrainian: **Nasha pravda* (1923-35), the party's principal theoretical organ; *Svitlo* (1925-28), a weekly for the peasantry; **Kul'tura* (1923-31); **Profesiini visti* (1926-8); **Zemlia i volia* (1925-9); and others.

In 1926 the KPZU formed a legal party – the Ukrainian Peasants' and Workers' Socialist Alliance, or *Sel-Rob – which in 1927 won most of the Ukrainian vote in the local elections in Volhynia.

In regard to the nationality question, the KPZU advocated the incorporation of Western Ukraine into the Ukrainian SSR. The party rejected the demand of the CPR and the Comintern that it limit itself to the requirement of self-determination by the local population, claiming that such a requirement was not comprehensible to the Ukrainian masses. Apart from this, the main goal of the party until 1933, as of all sections of the Communist movement in Poland, was to carry out the revolution and to establish the dictatorship of the proletariat. Later, most of its effort was directed to overthrowing the Polish government, which was considered to be fascist.

At the end of 1927 the CC of the KPZU came to the defense of the opposition in the CP(B)U led by O. Shumsky, the people's commissar of education in Soviet Ukraine. This led to a heated factional struggle and a split within the party into a majority faction known as the *Vasylykiivtsi* or Shumskyists and a minority faction that defended the Stalinist line of the CP(B)U. In the 1928 elections to the Sejm the majority faction defeated its competitor, but after an alternative candidates' list was drawn up, the executive of the Comintern expelled the majority from the Comintern on 18 February 1928 and henceforth opposed it strenuously. In October 1928, after

clarifying its oppositionist platform, the majority faction abolished itself, but its leaders continued their political activities and, until the end of 1929, published *Informatsiynyi biuletyn*, in which they defended the position of the majority faction. In 1930 the oppositionists were forced to engage in self-criticism, and in 1931–2 most of them went to the USSR, where, after a few months or years, they were arrested and perished.

After the suppression of the Shumskyst crisis, power in the KPZU passed into the hands of those who in 1920–3 were opponents of the *Vasylkivtsi*. The most important among them were H. Ivanenko (pseud, Baraba) and M. Zaiachkivsky (pseud, Kosar). M. Postolovsky (pseud, Valter), V. Furer (pseud, Roman), and several others who were implanted by the CP(B)U also belonged to the CC of the KPZU. The party's autonomy was greatly reduced.

From 1929 the influence of the party among the Ukrainian population in Western Ukraine diminished increasingly, but its influence in Jewish and Polish circles grew. On the nationality question the party returned to the slogan of self-determination for the population of Western Ukraine. In the mid-1930s the party supported as a transitional solution the position of the Polish Socialist party that the territory be given national autonomy.

In 1933 Ivanenko and Zaiachkivsky, together with many other leaders and members of the KPZU, experienced political repression in the USSR. They were accused of collaborating with the Polish police or of belonging to the anti-communist *Ukrainian Military Organization. After that, Soviet repression of the KPZU did not cease, although it did not have a mass character. It was repeated on a similar scale in 1936–7. After 1933 the leadership of the party changed frequently. The last notable leader of the party was P. Zalesky (pseud, A. Tsuvinsky), who until 1928 was the editor of *Komsomol's'ka pravda*, a newspaper in Kharkiv.

In 1938 the executive of the Comintern dissolved the KPZU and the CPP. In 1956 both parties were rehabilitated, but the *Vasylkivtsi* were rehabilitated only in 1963.

Communist Youth Association (Komunistychna yunatska spilka or KYuS). Left Socialist Revolutionary and Borotbist youth organization. It functioned from January 1919 to July 1920 and had a membership of about 8,000 people, mostly in Left-Bank Ukraine. Proposing a Soviet but independent Ukraine, it competed successfully with Bolshevik youth organizations. In 1920 it underwent a split: some of its members joined the Bolsheviks, and the rest joined the Ukrainian Communist party organization – the Ukrainian Communist Youth Association. (See also *Communist Youth League of Ukraine and *Borotbists.)

Communist Youth League of Ukraine (Leninska komunistychna spilka molodi Ukrainy or Komsomol [LKSMU]). According to its statute and program, the league is 'a mass, non-Party organization' of young people that serves as a 'reserve' and auxiliary to the *Communist Party of Ukraine (CPU) and the *Communist Party of the Soviet Union (CPSU). All its work is conducted under the leadership of the Communist party. The Komsomol is an integral part of the All-Union Communist Youth League (VLKSM), with the status of a provincial organization, but with its own conferences and central committee.

Following the example of Petrograd and Moscow, the Kiev Socialist Union of Young Workers established the Third International under the leadership of S. Malchikov and M. Ratmansky on 22 October 1917. Not only Bolsheviks, but also Mensheviks, Socialist Revolutionaries, and other groups, belonged to this organization. In Kharkiv the Association of Proletarian Youth of the Bolshevik party set up the Third International in November 1917. Similar Communist youth organizations were founded in other cities. Socialist student unions, which had Communist leanings but embraced members of many parties, were organized separately. Altogether these organizations had a membership of about 1,500 at the beginning of 1918, although they were not united among themselves.

In Russia the Communist Youth League was founded at the First Congress of Young Workers' and Farmers' Unions in Moscow on 29 October 1918. This date is accepted as the beginning of the VLKSM, which until 1926 was known as the Russian Communist Youth League (RKSM). The Ukrainian league was not directly linked with the Russian league until 1919, although it imitated it. The problem of unifying the Communist youth organizations in Ukraine arose only in 1919, when the Bolsheviks were faced with strong competition from the *Borotbists. When the Ukrainian Communist Party (of Borotbists) was founded at the beginning of 1919, a fairly large *Communist Youth Association was organized by young, left Socialist Revolutionaries, mainly in Left-Bank Ukraine. This association immediately became a strong competitor of the Komsomol. For this reason the Bolsheviks decided to unify their youth organizations in Ukraine quickly.

On 26 June 1919 the Communist League of Young Workers of Ukraine (KSRMU) was founded at its first congress in Kiev. The congress represented about 8,000

members and decided that the Ukrainian league was to be a provincial branch of the РКСМ. Being extremely dogmatic, the congress also announced that the КСРМУ would admit only young workers to its membership. The Second Congress of the КСРМУ took place in Kharkiv on 11 May 1920. It represented 19,080 members, 75 percent of whom lived in the Kharkiv region and the Donbas. Two problems were raised at the congress: what policy to adopt towards students and what attitude to take towards the Ukrainian national movement. It was decided to open the league to students. A nationalistic Ukrainian opposition, the so-called Federalists, headed by M. Okulyk, formed at the congress. It proposed that the Communist Youth League of Ukraine leave the РКСМ and enter the Communist Youth International directly as an independent organization. The congress had a Russian majority and rejected this proposal.

In the meantime the Communist Party (Bolshevik) (СР(Б)У) forced the Borotbists to dissolve their party and join the СР(Б)У. In July 1920 the Communist Youth Association dissolved itself, and most of its members joined the Komsomol, where they formed an alliance with the Federalists. The other members of the association and some Borotbists did not join the Bolsheviks but, with the co-operation of the *Independent Social Democratic Youth Association, which was active mostly in Right-Bank Ukraine, founded the new *Ukrainian Communist Youth Association which was also known as Communist Youth. The association competed with the Komsomol until 1925, when it was forced to merge with the league. In 1920 the Communist organizations of Jewish youth – Yevkomol, Jugendbund, and the Jewish Young Workers' Organization – also merged with the league.

After the league's second congress, a serious split developed within it. Two opposition groups formed: first, a workers' opposition, based on syndicalist principles and headed by V. Dunaievsky, which demanded that students, peasants, and other non-proletarians be barred from membership in the league; and second, the Ukrainian national Federalists, who were greatly strengthened by the influx of former members of the Communist Youth Association and demanded that the league be independent of the Russian league. In contrast to what happened in the СР(Б)У, the two groups quickly came to an understanding and stood united under the name Ukrainian Opposition at the Third Congress of the Russian Communist Youth League in Moscow in 1920. In their platform they demanded that national Communist youth organizations be independent of the Russian Communist Youth League, that the league as a whole be independent of the Party, that the league remain a working-class organization, and that non-Party collectives of young workers at their plants and young peasants in their villages be permitted to organize themselves freely and have the right to participate in managing enterprises. V. Lenin himself spoke against the Ukrainian Opposition at the congress; nevertheless, it continued its struggle for two more years. It issued bulletins and leaflets and stirred up discussion throughout the league. At the Third Congress of the Komsomol in May 1921 the Ukrainian Opposition put up a strong struggle but was defeated by the Party apparatus, which controlled the congress.

After the third congress the conflict became so bitter that the Komsomol decided to suppress the Ukrainian Opposition. During this time young peasants' unions

were springing up spontaneously in the villages; the Ukrainian Communist Youth Association, with which the Ukrainian Opposition in the league began to establish contacts, played a leading role in these peasant unions. For this reason the Komsomol was purged at the beginning of 1922, and 17 percent of its members were expelled. Steps were then taken to gain control of the young peasants. During the НЕР period the league, which in 1924 adopted the name Leninist Communist Youth League of Ukraine (ЛКСМУ), became a privileged caste similar to the СР(Б)У. Membership in it conferred various advantages: without its recommendation access to higher education or good jobs was out of the question. Starting with the fourth congress in 1923, there was no longer any organized militant opposition in the Komsomol.

After the discussions of 1920–1, the activities of the league were directed into other channels by the Party. In 1920–3 its members (*komsomoltsi*) were active in the struggle with various Ukrainian partisans. Then the league furnished volunteers to the *Red Cossacks and undertook to help the Black Sea Fleet. During 1924–7 the members of the league were encouraged to stage antireligious demonstrations and to vandalize and close down churches. Then, when the Party's policy took a turn towards the left in 1927–9, the *komsomoltsi* were used to confiscate grain from the kulaks. At the beginning of the *collectivization drive and the campaign against the kulaks in 1930, there were close to 120,000 Komsomol members in the countryside.

The Ukrainization of the ЛКСМУ, that is, the rise in the proportion of Ukrainian membership, occurred much faster than that of the СР(Б)У or of the government bureaucracy. In 1925 Ukrainians accounted for 58.7 percent of the league's membership, but by the beginning of 1932 they accounted for 72 percent. The young people absorbed the Ukrainian language and culture with ease and eagerness. In 1931, at the Ninth Congress of the All-Union Lenin Communist Youth League in Moscow, O. Boichenko, the secretary of the Central Committee of the ЛКСМУ, even made the demand that members of his organization be under no compulsion to learn the Russian language. The ideas of M. Khvylovy were widely known and popular among the *komsomoltsi*.

During the famine of 1933 and the struggle against the Skrypnyk faction in the СР(Б)У, membership in the ЛКСМУ dropped suddenly, from 1,148,000 in 1932 to 449,000 in 1934. Those who remained members were purged, and many were repressed. The leading cadres were exiled or executed for their resistance to the famine and their national-Communist deviations. Thereafter the league became an instrument of the Party machine and was used mainly to attain production goals, that is, to recruit young people for building industrial projects inside and outside of Ukraine, as well as to Russify young Ukrainians.

On the eve of the Second World War, the ЛКСМУ numbered 1.3 million members. At least half of them stayed willingly behind when the Soviets retreated. The Soviet partisan groups in Polisia attracted only 25,000 *komsomoltsi* and after three years of fighting received only 5,000 young recruits. Having witnessed German atrocities, many league members spontaneously organized underground groups in the principal cities of Ukraine and fought actively against the Germans. Many *komsomoltsi* also collaborated with or even joined one

of the two factions of the Organization of Ukrainian Nationalists during the German occupation.

After the war the LKSMU became nothing but an economic organization, in which the ideological commitment and political awareness of its members were measured by their economic productivity. Thus, in 1954–5, the LKSMU sent 80,000 members to cultivate the virgin lands of Kazakhstan and western Siberia. In 1956–7, 120,000 members were sent to develop new mines in the Donbas. In 1957, 44,000 members were assigned to raise animals on collective farms. In 1958, 10,000 young Ukrainians were employed in the building of the Donets–Donbas Canal. Starting in 1974, thousands of league members worked on the Baikal-Amur Railroad (BAM).

By 1 January 1956 the LKSMU had 2,891,077 members, that is, 15.9 percent of the membership of the All-Union Communist Youth League. These members were organized into 66,758 primary organizations at factories and schools. Of the league's members, 500,000 worked in the countryside, 700,000 worked in industry, 1.1 million studied in schools, and the rest served either in the armed forces or in the bureaucracy.

In the 1920s admission to the league was open to those between the ages of 14 and 23. In the 1930s the age requirement was raised to those between 15 and 26 years. In the 1940s it was limited to those between 14 and 26, and today members must be between 15 and 28 years. Party members can also be members of the league, but they must hold positions of leadership. Congresses of the LKSMU are held every four years. Between congresses the work of the league is directed by the central committee and the secretariat. The *Pioneer Organization of Ukraine for schoolchildren 9–14 years of age, which has a membership of 3 million or close to 60 percent of schoolchildren, comes under the supervision of the league. In 1959 the LKSMU published 16 newspapers and magazines for youth and schoolchildren, 12 of which were in Ukrainian. The principal daily newspaper of the LKSMU is *Molod' Ukrainy*.

In June 1979 the league's membership was close to 6.5 million, organized in 70,000 primary organizations. The first secretary of its central committee was A. Kornienko.

Community court (*kopnyi sud*). Name of public, rural-community courts in the Ukrainian and Belorussian territories of the Grand Duchy of Lithuania, which continued to operate until the 18th century. The community courts developed out of the ancient district (**verv*) courts. They were recognized by the state, and their

powers were defined by the *Lithuanian Statute; particularly in regard to questions involving land boundaries and damages to crops or forests. In grave criminal cases the community courts functioned in a procedural-investigative capacity. The entire community gathered in an assembly (*kopa*) at the place of the trial (*kopyshche*), but the judging was done by elected 'righteous men' (*dobri liudy*). One community court served several villages. The *kopa* could be called by the plaintiff or the accused (who wished to be cleared), and also by the elders of the community – to discover, for example, the identity of a wrongdoer for whom the entire community had to bear responsibility. The decisions of the community courts (fines, punishment, execution) could be appealed to the *city courts or to other suitable state courts. After the Union of Lublin (1569) the Polish government was hostile to the community courts because they were an expression of peasant self-government. In the Hetman state the community courts lost their importance, because community representatives were incorporated into the appropriate institutions of the official legal system. A modified form of community courts existed in Volhynia and Podilia until the 20th century.

The community courts were the most interesting institution of Ukrainian *customary law. They have been studied by M. Ivanyshev, O. Yefymenko, R. Liashchenko, I. Cherkasky, A. Yakovliv, and others.

V. Markus

Company (*sotnia*). A military and administrative-territorial unit. In the Princely era a company was a military unit of the people's militia (**opolchennia*) that at first numbered 100 men. In the 16th century companies of *registered Cossacks appeared as subunits of Cossack regiments. In the Cossack register of 1649 the companies were named after their locality or their captain.

In the Hetman state of the 17th–18th century and in Slobidska Ukraine a company was an administrative-territorial, judicial, and military entity within a regiment (see *Regimental system). Companies were named after the city or town in which their headquarters were located. Each company was divided into *kurini*. The number of companies in a regiment was not uniform (ranging from 7 to 20) or fixed. In the 18th century some companies, particularly regimental companies, were divided into two, three, and even four (in the Nizhen Regiment) companies, which were numbered accordingly. The military strength of a company consisted of several dozen to a few hundred men (usually 200–250, and fewer in Slobidska Ukraine). A company was commanded by a *captain (see *Company system), who was subordinate to the regimental authorities. Companies connected with the hetman's capital (Baturyn, Hlukhiv) or with the hetman's estates were directly subordinate to the hetman. There were also companies in volunteer and *serdiuk (mercenary) regiments, but they had a strictly military function.

In recent times companies have been strictly military units. As such they existed in the Cossack armies (Kuban, Don, etc) of the Russian Empire and in the Cossack formations in 1918–20, where they corresponded to squadrons and squads of the regular army. In the UNR army they were divided into 2–3 *choty* (platoons), called *cheti* in the Ukrainian Galician Army. They were also units in the Ukrainian Insurgent Army and the Division Galizien.

Company system. In the Cossack Hetman state and in Slobidska Ukraine the company (*sotnia*) administration consisted of the captain (*sotnyk*) and the company officers, including the town (*horodovyi*) or company otaman, secretary (*pysar*), aide-de-camp (*osavul*), and flag-bearer (*khорunzhyi*). The captain was the company's commander in chief and carried out in its territory military, administrative, fiscal, and judicial functions similar to those performed by the colonel in the *regiment's territory, including keeping peace and public order in the company. He was the head of the company court, which looked into civil and minor criminal matters involving Cossacks and sometimes even the civilian population in the company's territory (then representatives of the appropriate estate would be included in the court). In matters of great importance the captain was responsible to the colonel and the regimental administration and sometimes directly to the hetman. Originally the captain was elected by a company council and confirmed by a higher, regimental or hetman, government. But from I. Mazepa's hetmancy the captain was usually appointed by the colonel or the hetman himself (from 1715 he was selected from a list of three candidates proposed by the company officers) or, during an interregnum, by the General Military Chancery. After Mazepa's defeat at the Battle of Poltava in 1709, captains were often appointed by the tsar's government or by the higher Russian administration in Hetman Ukraine; sometimes the appointees were from outside the company or were foreigners (Wallachians, Serbs, etc) in order to weaken the Cossack *starshyna* (officer class). After the Hetmanate was abolished in 1764, captains were appointed by the *Little Russian Collegium (actually by its president, Count P. Rumiantsev).

Captains sometimes stayed in office for decades or for life and were succeeded usually by their sons or more remote offspring. Thus, the captain's office became a hereditary one, and captain 'dynasties' sprang up (analogous to colonel dynasties): for example, the Zabilas of Borzna Company (1652–1783), the Rubetses of Topal Company (1669–1782), the Mandrykas of Kobysycha Company (1672–1781), the Shramchenkos of Olyshivka Company (1680–1773), the Storozhenkos of Ichnia Company (1687–1752), the Seletskys of Divytsia Company (1694–1767), and the Rodziankas of Khorol Company (1701–67).

The town or company otaman was the captain's lieutenant and assisted the captain in running the company chancery, supervised the police, and acted as the captain's assistant during campaigns. The company secretary supervised the company chancery. The company aide-de-camp and flag-bearer had their specific military and administrative functions. The company officers were usually appointed by the colonel.

The company system in Hetman Ukraine was abolished by the Russian government in the early 1780s, and in Slobidska Ukraine, in 1765.

Compulsory universal education. Education of all children within a given age bracket in general-education schools. In the Ukrainian lands of the Russian Empire, as in the empire's other territories, there was no compulsory

universal education. At the urging of the zemstvos and community organizations and in connection with the Duma's adoption of a bill on compulsory universal education (1907), the school system was enlarged, but as late as 1915 almost half the school-aged Ukrainian children in the Russian Empire were not enrolled in schools. With the Revolution of 1917 the Ukrainian government prepared a law on compulsory universal education, but wartime conditions prevented its application.

In the Ukrainian SSR compulsory universal education was introduced by resolution on 30 July 1924 for children aged 8 to 11; nevertheless, in 1927, 17 percent of school-aged children were not enrolled. In 1930–1 a requirement of seven years' compulsory education was introduced. The law of 17 April 1959 'On the Strengthening of the Bond between School and Life and on the Further Development of the System of Public Education' introduced compulsory universal education for children aged 7 to 15–16 within an eight-year program known as incomplete secondary education.

In Galicia and Bukovyna the Austrian government introduced compulsory universal education at the end of the 18th century, but in 1812 the program was deferred. It was reintroduced by law in 1868, 1869, and 1883; the program was to be six to seven years in length. But these requirements were not strictly observed, and in 1912–13 a large percentage of school-aged children were still not enrolled: in Galicia, some 20 percent; in Bukovyna, 3 percent (65 percent in 1882). Conditions were worse in Transcarpathia, where, in spite of a law on compulsory universal education (1868), some 40 percent of Ukrainian children were not enrolled as late as 1910.

In Western Ukraine, during the period of Polish occupation (1920–39), a seven-year program of compulsory general education was introduced (for the first time in the northwestern Ukrainian territories), but it came into effect gradually: in 1937–8, 10 percent of Ukrainian children in Galicia were not enrolled; in the northwestern Ukrainian territories the figure stood at 25 percent. In Transcarpathia, beginning in 1930, compulsory general education was extended to eight years, and, owing to the expansion of the school system, all school-aged children were enrolled. In Ukrainian lands under Rumanian rule there was a seven-year program of compulsory universal education.

Comrades' court (*tovaryskyyi sud*). Judicial organ of an association or organization, whose purpose is the settling of internal disputes among the members. Comrades' courts were introduced by the Soviet government as a form of 'citizen participation in self-government.' On 14 November 1919 the government of the Russian SFSR published the first decree 'On Workers' Disciplinary Courts,' but soon these courts ceased to function, as justice became the exclusive province of the state courts. When in the 1950s–1960s 'socialist democracy' and the 'people's state' became popular concepts, the comrades' courts were revived as elected civil bodies. On 2 March 1959 the Soviet government decided together with the Communist party to set up the comrades' courts and empowered the republican legislatures to regulate them. The Presidium of the Supreme Soviet of the Ukrainian SSR enacted the first Regulation on Comrades' Courts on 15 August 1961 and a new regulation on 23 March 1977.

Comrades' courts exist at various collectives – plants,

institutions, collective farms, schools, building-management committees, rural centers, etc. At a general meeting of the collective five to twelve people are elected to serve for two years in the comrades' court. The court can function with a minimum of three members present, and the members of the collective are free to participate in its sessions by posing questions. The courts have the power to rule in disputes over property valued at up to 50 rubles, work discipline, small losses affecting the collective inventory, disturbances of the public order, hooliganism, petty theft, speculation, etc. Proceedings may be initiated voluntarily by any side, the management of an enterprise or institution, the militia, the prosecutor's office, or the courts. The comrades' courts pronounce public condemnations (censure), compel the guilty party to compensate the victim and to pay a penalty up to a certain limit, and recommend administrative measures or criminal prosecution. These courts report to the general meeting of their collectives, and the general meeting may recall the court members before their term is up. The court members do not get paid for their service, which they provide from a sense of public duty (*hromadske navantazhennia*). The comrades' courts do not belong to the state's system of justice, hence there is no appeal of their decision. The law enforcement agencies, however, can be compelled to carry out the decisions of the comrades' courts.

In 1977 the Supreme Soviet of the Ukrainian SSR adopted the 'Regulation on Citizens' Councils on the Work of Comrades' Courts.' In accordance with this decision, citizens' councils were set up by city and raion Party executive committees to assist and to oversee the work of the comrades' courts, particularly to instruct the court members in legal matters. The citizens' councils can oppose the decisions of the comrades' courts before the appropriate executive committees.

Concentration camps. Confinement centers for civilians, in peacetime or wartime, who are regarded by government authorities to be politically unreliable or undesirable. Along with deprivation of freedom, the concentration camp regime usually includes some form of forced labor.

The first concentration camp in which Ukrainians were incarcerated was the Austrian internment camp in *Talerhof during the First World War, where almost 7,000 Ukrainians accused of Russophilism were confined. As a result of unhygienic conditions and contagious diseases, a large percentage of them died. A much greater number of Ukrainians, 70,000 – 100,000, were interned in Polish concentration camps at *Strzalkowo, Brest, *Wadowice, and Dabie in 1919–20 after the occupation of Galicia. They included former soldiers of the *Ukrainian Galician Army and thousands of civilians accused or suspected of disloyalty. Unsanitary conditions in the camps, poor nourishment, and diseases such as typhus and dysentery caused the death of a large number of internees.

The spread of totalitarian ideas in Poland in the 1930s led to the establishment of a concentration camp in *Bereza Kartuzka (1934–9). According to the decree of 18 June 1934 issued by the president of Poland, the admini-

stration could incarcerate in this camp individuals who 'by their activity or behavior gave grounds for suspicion that they endangered public safety, peace, and order.' Ukrainians who were suspected of belonging to the *Organization of Ukrainian Nationalists (OUN) constituted almost 65 percent of the prisoners. A large number of Ukrainians were sent to Bereza Kartuzka when the Polish-German war broke out in 1939 (4,500 of 7,000 prisoners).

After the Hungarian occupation of Transcarpathia in 1939, several hundred Ukrainian activists and members of the *Carpathian Sich were interned in Hungarian concentration camps in Kryva, near Khust, and Varjú-Lapos, near Nyíregyháza.

Under the Nazi regime in Germany, concentration camps were set up according to the 1933 decree On the Security of the Reich. The camps were under the jurisdiction of the Chief Security Administration of the Reich, headed by H. *Himmler, and contained individuals accused of criminal acts as well as political opponents of Nazism. During the Second World War the concentration camps in Germany were greatly expanded and used not only as isolation centers, but also as centers of slave labor and mass extermination, particularly of Jews. Among the larger concentration camps that confined Ukrainians were Dachau, Buchenwald, Oranienburg, Sachsenhausen, Gross-Rosen, Flossenbürg, Oświęcim (Auschwitz) and Majdanek (both in Poland), Mauthausen (Austria), and Terezín (Czechoslovakia). Smaller concentration camps were found in Ukraine, including Kiev.

Ukrainians were generally sent to German concentration camps for political reasons. Almost all of these were known or suspected OUN members (almost 2,000 people). They were arrested in two waves: in the early fall of 1941 and in mid-January 1944. Workers from central and eastern Ukraine who had been deported to Germany as slave laborers (**Ostarbeiter*) and had attempted to escape were also incarcerated (close to 14,500 in Auschwitz alone). Hundreds of thousands of Ukrainian soldiers of the Soviet army died in German prisoner-of-war camps.

Concentration camps in the USSR are officially known as 'corrective-labor camps' (*ispravitelno-trudovye lageria* or IRL). At the beginning of the revolution Soviet jurisprudence considered retributive punishment for political and criminal misdeeds to be distinct from corrective punishment. The program of the Bolshevik party permitted the substitution of forced labor in corrective-training establishments for the usual deprivation of freedom by imprisonment. This theory was expressed in the corrective-labor code of the Russian SFSR and other Soviet republics. A system of forced-labor camps was introduced by the decrees of the All-Russian Central Executive Committee issued on 15 April 1919 and 17 May 1919. Such camps were to be set up in every gubernia. For more dangerous political prisoners, however, a separate system of labor camps was created on the *Solovets Islands in 1920. In accordance with the decree of 26 September 1919, higher state, police, and church officials of tsarist Russia, landowners, nobles, and others were to be sent to the Solovets camps. In 1920–3 the Ukrainians who were incarcerated in these camps consisted mostly of insurgents, particularly the followers of N. *Makhno. During this time concentration camps were also set up on the Pechora River, where lumbering was the main form of labor, and in Siberia, where gold mining was important. From 1924–5

priests of the Ukrainian Autocephalous Orthodox church, *Nepmen, and later *kulaks were sent to these camps.

From 1928 to 1934 a huge network of concentration camps was established. The idea of reforming prisoners was replaced by the economic aim of exploiting their labor. The White Sea–Baltic Canal, the hydroelectric stations on the Svir and Niva rivers in Karelia, the railroad lines Kotlas-Ukhta, Baikal-Amur, etc, were all built by prison labor. The Soviet government did not try to conceal the existence of the forced-labor camps and emphasized that they were a means of re-educating 'non-working' and 'hostile class' elements through work. Yet, from the mid-1920s prison statistics ceased to be published. In Ukraine the period 1928–34 coincided with the first great wave of *terror, the anti-kulak campaign, the *collectivization drive, and the man-made *famine. Of the over one million victims sent to concentration camps from Ukraine about 70 percent were kulaks, but there were also many intellectuals, writers, and former members of Ukrainian national parties and opposition groups in the Communist Party of Ukraine. The kulaks were usually confined in special concentration camps known as *spetsposeleniia* (special settlements). In these new or long-established villages located in the north, in Siberia, or in Central Asia, the deported peasants were settled together with released inmates of corrective-labor camps who were prohibited from returning home. Although inhabitants of the special settlements lived under the constant surveillance of the *NKVD and were forbidden to leave their settlements, they were not actually imprisoned behind barbed wire and could decide how to make their living.

As early as 1930 the Statute for Corrective-Labor Camps was introduced, and three years later a new Corrective-Labor Code of the RSFSR was adopted, which recognized the camps and the so-called labor colonies as the basic form of imprisonment for petty criminals. Because most concentration camps at the time were located within the Russian republic, they were directly affected by the new code. On 10 June 1934 the infamous GULAG, ie, the Chief Administration of the Corrective-Labor Camps and Labor Settlements, was established within the NKVD. This office was responsible for all the concentration camps except a few local camps that came under the jurisdiction of the People's Commissariat of Justice. Within the GULAG system there were several large territorial administrations, each with 10–20 departments. Each department was responsible for several camps. Before the German-Soviet War the more notorious departments and clusters of concentration camps were Belbaltlag (White Sea–Baltic), Karlag (Karaganda), Dalstroi (Kolyma), Temnikov camps (Saransk-Potma in the Mordovian ASSR), and Svirstroi (near Leningrad).

The GULAG completed the transformation of concentration camps into economic enterprises using slave labor. According to data published by the International Labor Organization and the Economic and Social Council of the UN, 14 percent of the industrial output of the USSR, or 6.8 billion rubles' worth of production, was produced by forced labor in 1941. These figures include 12 percent of the lumber production, 5 percent of the coal, 2 percent of the oil, 40 percent of the chromium ore, and 77 percent of the gold production of the USSR. Before the war the GULAG's concentration camps held about 10–12 million

prisoners, that is, almost 30 percent of the USSR labor force employed in non-agricultural work.

Most of the prisoners in Soviet concentration camps were political prisoners. During the second wave of terror, in 1936–8, about one million Ukrainian political prisoners, mostly intellectuals or technical or administrative staff, found themselves in the concentration camps. Other prisoners included workers and collective farmers sentenced for petty theft and accidents involving machinery, almost all members of religious sects, foreigners, people with relatives outside the Soviet Union, and finally, speculators, bandits, and hooligans. When Soviet troops occupied Western Ukraine, Western Belorussia, and the Baltic countries, the concentration camps received an influx of nationally conscious elements from these territories. During and after the Second World War individuals sent to concentration camps were generally accused of such crimes as anti-Soviet agitation, praise of bourgeois society, collaboration with the Germans, and participation in or ties with anti-Soviet underground organizations and movements. Many foreigners, mostly war prisoners and former Communists captured by the Soviets, found themselves in concentration camps. A large number of Ukrainian Catholic clergy were imprisoned.

The severity of the camp regime varied in different periods. In the 1930s camp conditions were made particularly difficult by the lawlessness and arbitrariness of the administrative personnel, which consisted of a large number of convicted criminals. Occurrences of brutality, cruelty, and sadism were frequent. Additional hardship was deliberately imposed by the incarceration of political prisoners with common criminals, who terrorized and exploited the intellectuals. In various years, particularly in 1937, 1938, and 1941, the NKVD is known to have ordered politically dangerous prisoners to be executed. During the waves of executions a large number of prominent Ukrainian cultural and political figures who had been sent to concentration camps in the early 1930s were shot.

Production norms, which determined a prisoner's food rations and other supplies, were always high in the concentration camps and beyond the strength of many prisoners. Prisoners were given a diet intended to do no more than sustain their power to work. Most had the right to correspond with their families and to receive parcels. However, the regime was much more severe in the special isolation camps that contained the most dangerous 'criminals.' The extreme climate, lack of the most elementary medical care, and hard labor resulted in a high rate of illness and mortality.

In 1948 all prisoners were reclassified. Special camps with a particularly strict regime were created for those prisoners who had been convicted of participation in or ties with anti-Soviet organizations or undergrounds, espionage, and the most violent criminal acts. On completion of their prison terms these convicts were settled in remote areas and forbidden to return to their families. The special labor camps were under the supervision of the Ministry of State Security (MGB), which had an officer in every camp. The strict regime of the special camps often degenerated into arbitrary rule. Deprived of any legal means of protest and self-defense against the lawlessness of the administration and guards, the prisoners resorted to labor strikes. These strikes were ruthlessly suppressed

by all the means at the administration's disposal, including tanks and machine guns. In 1953 the large uprisings that took place in Vorkuta and Norilsk resulted in many dead and wounded. In 1954 several hundred prisoners, including many women, were killed during the uprising in Kingir, Kazakhstan. These protest actions were led mainly by Ukrainians, who were joined by members of other persecuted nationalities. The special camps contained about 1.5 million prisoners, and all the concentration camps contained over 10 million. Ukrainians constituted the largest group in the prison population, the second-largest was composed of all other non-Russian nationalities, and the third of Russians. Beginning in 1954, the regime of the special camps was tempered, and prisoners were required only to report for work. At the same time the official designation for the prisoners was changed from 'enemies of the people' to the 'temporarily isolated.'

The concentration-camp districts that had large numbers of Ukrainians in 1945-54 (with the special camps in parentheses) included Vorkuta (Rechlag), Inta-Abez (Minlag), Ukhta, Saransk-Potma (Dublag), Omsk (Kamyshlag), Karaganda (Peschlag), Kingir-Dzhezkazgan (Step-lag, later annexed to Peschlag), Taishet (Ozerlag), Norilsk (Gorlag), and Kolyma (Bereg-lag). Furthermore, the great expanses of Asia and northern Russia were settled by deportees from Ukraine. Most of the concentration camps mentioned were located in the northern part of the Soviet Union, within the polar or subpolar zone. Until 1954 concentration camps were also found in the Ukrainian SSR, mainly in the Donbas and the industrial regions of Dnipropetrovske and Kirovohrad. Their inmates were mostly war prisoners.

After J. Stalin's death there was a radical change in the camp system. At the 20th Congress of the CPSU in 1956 Stalin's thesis that the class struggle would intensify as the USSR approached socialism was rejected, and the thesis that socialism had been achieved in the USSR and that bourgeois relics and hostility to socialism had faded from the popular mind was adopted. As a result, the GULAG system and many concentration camps were 'officially' abolished. Prisoners who had less than five years to serve were freed, although many of the released had to remain in the north. The prison terms of some others were shortened.

The forced-labor camps, however, continue to exist and are now administered by the Ministry of Internal Affairs (MVD). Since the early 1960s the number of political prisoners confined in them has been constantly increasing with the rise of the *dissident movement, which advocates the upholding of basic human rights, the defense of non-Russian cultures, and freedom of religion.

There are four types of camp regime regulating the conditions of imprisonment: the ordinary, intensified, strict, and special (in order of increasing severity). Each entails a progressive reduction in prisoners' rights to visits, correspondence, food rations, etc, and determines the type and amount of labor required. 'Special regime' prisoners are kept in cells.

According to Amnesty International, there are over 330 prisons and labor colonies known to have confined political prisoners in recent years. More than 180 of these are in the RSFSR, 60 are in Ukraine, and the remaining are distributed in other republics. The highest concentration of political prisoners can be found in the Mordovian

complex (particularly the Dubrovlag subcomplex) in the Mordovian ASSR and in the Perm complex in Perm oblast. Of the approximately 1 million persons imprisoned in the USSR (other sources suggest as many as 2.5 million), about 1 percent are political prisoners. The majority of this minimum figure of 10,000 are confined in concentration camps, and a significant number of them are Ukrainian.

Concordat. An agreement with the force of international law, between the Catholic church, represented by the Holy See, and the state on matters of mutual concern, for example, the status of the church as a legal entity, hierarchical organization, appointment of bishops and other clerics, church property, material support of clergy, and religious marriage and education. Internal matters of the church are excluded from regulation by concordat. A limited form of concordat (not covering essential matters) is known as a *modus vivendi*.

The practice of concluding concordats dates from the 12th century. Beginning in the 16th century, Polish kings concluded a number of agreements with the papacy: these only partially involved the Ukrainian Catholic (Uniate) church; later, however, the concordats were gradually extended to the Ukrainian church as well. Between 1866 and 1878 a concordat was in force in the Russian Empire, but it concerned only Latin-rite Catholics. According to its terms, a new diocese was established in Kherson. Under Austria the Ukrainian church, subject to the concordat of 1855, enjoyed equal rights with the Latin-rite

church. In the Second Polish Republic (1919–39) the concordat of 1925 was in force; it was invoked by the Ukrainian hierarchy in asserting its rights vis-à-vis the government. Nevertheless, according to the terms of the concordat, Ukrainian Catholics in Volhynia were exempted from the jurisdiction of the Ukrainian hierarchy. The *modus vivendi* of 1927 with Czechoslovakia treated the position of Ukrainian Catholics in that country. A similar agreement concluded between the Holy See and Rumania (1927) and a concordat with Yugoslavia (1935) pertained to the legal situation of small Ukrainian communities in those states.

After 1945 the Communist states of Eastern Europe denounced existing concordats, although they unilaterally tolerated some internal church autonomy (with frequent and flagrant violations). Only in the 1960s did Yugoslavia, Hungary, and Poland proceed to normalize local church relations with the Holy See. The Soviet government has never established relations with the Catholic church on the basis of concordat. In principle, the contracting parties to a concordat are the state and the Holy See, not local churches. According to the Oriental code *Cleri Sanctitati*, the Holy See may authorize local Eastern churches to enter into agreements with civil authorities, subject to its approval.

V. Laba

Confectionery industry. Branch of the food-processing industry that manufactures a wide assortment of mostly sugar products, such as chocolate, candy, halva, caramel, and marmalade. In Ukraine confectionery manufacturing developed in the second half of the 19th century as the sugar industry expanded. Before the 1917 revolution the confectionery industry was scattered among all the larger cities of Ukraine and consisted mostly of small, semi-cottage enterprises. Forty-eight larger confectionery firms, accounting for 85 percent of production, were located in the Kharkiv and Kherson gubernias. Some large firms were located in Odessa, Kiev, and Lviv. In 1913 the industry in Ukraine produced 13,200 tonnes of various confectioneries, which amounted to 10.6 percent of the production in the Russian Empire. According to the wholesale value of its production (27 million rubles or 2.9 percent of total food-production value), the confectionery industry held fifth place among the branches of the food-processing industry.

The confectionery industry grew rapidly during the interwar period, usually through the reconstruction of existing firms. In 1940, 191,800 tonnes of confectioneries (24.3 percent of Union production) were produced in the Ukrainian SSR. The production of confectioneries in proportion to the output of the food industry increased by 7.5 percent during this period. After declining in 1941–5, the confectionery industry resumed its prewar level of production only in 1950. Since then the industry has grown steadily by means of modernization and concentration: there were 30 confectionery factories and 500 shops in 1940 and 26 and 200 respectively in 1978. The confectionery industry manufactures over 70 percent of confectioneries in the Ukrainian SSR; the rest is produced by other branches of industry, particularly by the canning industry, baking industry, and local industry. In 1978 the output of the confectionery industry amounted to 779,400 tonnes (27 percent of Union production). In 1978 it produced 15.7 kg per capita, while in 1940 it had

produced only 4.6 kg. Over 1,500 brands of confectionery are produced. Of the production, 50.6 percent consists of sugar products (47.9 percent in 1960, 51.3 percent in 1970), of which hard and soft candy constitute 49.9 percent (45.8 percent in 1960 and 49 percent in 1970). Chocolate products account for 0.7 percent (1.1 percent and 2.3 percent) of the industry's production. Grain products amount to 28 percent (31 percent and 28.2 percent), of which 7.4 percent (6.8 percent and 7.6 percent) consists of gingerbread and ship biscuits. Biscuits and baked products account for 16.1 percent (21.7 percent and 15.8 percent), cakes and cookies for 4.5 percent (2.5 percent and 3.8 percent), and other products for 21.4 percent. The decline in the production of chocolate products was the result of a rise in the world prices of cacao beans, cocoa, and coffee. Some of Ukraine's confectionery is exported to the other republics of the Soviet Union and abroad.

Small firms of the confectionery industry can be found in most regions of Ukraine. Forty-five percent of the production comes from Kharkiv, Kiev, Lviv, Donetsk, and Odessa oblasts. The largest confectionery factories are the Karl Marx Factory in Kiev, the Zhovten Factory in Kharkiv, the Svitoch Factory in Lviv, and other factories in Odessa, Voroshylovhrad, Donetsk, and Vinnytsia. Research in this branch of manufacturing is carried on by the Ukrainian Scientific Research Institute of the Food Industry in Kiev and the All-Union Scientific Research Institute of the Confectionery Industry in Moscow.

Conference of Ambassadors. An executive body of the Allied Powers in 1920–31 that oversaw the fulfillment of the peace treaties after the First World War. The conference consisted of the ambassadors of Great Britain, the United States, Italy, Japan, and, later, Belgium, and was chaired by J. Cambon. On 15 March 1923 the conference approved Poland's annexation of Galicia with a provision of certain territorial autonomy for the latter. At the same time the conference recognized the Polish-Soviet border set forth in the Peace Treaty of *Riga. Although Galicia's Ukrainians protested the decision, it remained irreversible. As a result, the government of the *Western Ukrainian National Republic was forced to dissolve itself in Vienna.

Confiscation. Forced and uncompensated seizure of property by the state resulting from a court decision. Confiscation has long been practiced and appears in almost all criminal codes as a primary or, more frequently, as a supplementary punishment.

In the Princely era confiscation was called *banishment and seizure (*potok i rozhrableniie*) and was usually associated with capital punishment or exile. The confiscated property was used to cover damages and to enrich the princes' treasuries. In the Grand Duchy of Lithuania confiscation had a similar function, except that it was sometimes associated with the punishment of deprivation

of honor. In the Hetman state confiscation usually accompanied capital punishment or deprivation of honor.

In the Ukrainian SSR, according to the criminal code, full or partial confiscation of property can be a punishment in itself or a supplementary punishment (the usual practice) and is associated with military, economic, administrative, or state crimes. Creditors' claims are settled by the state from the confiscated property of the convicted party. The state's appropriation of objects that have a physical connection with a crime – weapons, printing facilities, manuscripts, etc – differs from confiscation in nature and purpose. This power of appropriation is often exercised by the Soviet courts and administration.

There is a distinction between judicial confiscation and 'revolutionary' confiscation based on decrees or administrative decisions. The latter was widely applied by the Bolsheviks after they came to power. State appropriation of property, including land, with compensation differs from confiscation (see *Expropriation).

Confiscation is also used by the state to prevent the publication of certain books or materials in the press (see *Censorship).

V. Markus

Congregation for Eastern Churches (full name: Sacred Congregation for Eastern-Rite Catholic Churches). The branch of the Roman Curia responsible for the Eastern churches. Until 1862 these churches were under the jurisdiction of the Congregation for the Propagation of the Faith, established in 1622; they later came under the jurisdiction of a separate section of this congregation created by Pope Pius IX. In 1917 Pope Benedict XV made the Congregation for Eastern Churches an independent body, still under papal control. Its secretary was one of the curial cardinals: from 1936 to 1959 the post was held by Cardinal E. Tisserand. In 1967 Pope Paul VI made the congregation completely independent under the authority of a cardinal-prefect. The congregation's powers are defined in canon 195 of the apostolic letter of 11 June 1957, which proclaimed the existence of the Eastern church as a legal entity. The congregation is empowered to permit individuals to transfer from one rite to another; it is also authorized to publish books for the Eastern churches. The Ukrainian Catholic church is under the congregation's jurisdiction. Since the 1970s there have been strivings within the Ukrainian Catholic church to obtain independence of the congregation and to create a patriarchate with a synod of bishops empowered to make episcopal nominations and to create new ecclesiastical entities. Since 1980 the head of the congregation has been the Polish cardinal W. Rubin; its secretary is Archbishop M. Marusyn.

Congress Kingdom of Poland (Polish: Kongresówka; Russian: Tsarstvo Polskoe). Semiautonomous state established by the Congress of Vienna in 1815 out of the Grand Duchy of Warsaw and tied to the Russian Empire by a political and dynastic union (the Russian tsar was also the king of Poland). After the Polish rebellions of 1830–1 and 1863–4 Russia abolished any vestiges of the kingdom's autonomy, introduced Russification, and in 1888 renamed it the Vistula Land. Its area covered 123,000 sq km. It had a population in 1910 of 12 million. The kingdom was divided into 10 gubernias and encompassed the Kholm region and Podlachia, which constituted the eastern parts

of the gubernias of Lublin and Siedlce and were settled mostly by Ukrainians. In 1912 these regions became part of a separate *Kholm gubernia.

Congress of National Minorities. Annual conferences of the political representatives of national minorities in various European countries (except the Soviet Union), numbering about 40 million people, that were convened from 1925 to 1938 in Geneva, Berne, Berlin, or Vienna by an institution known as the Congress of Organized National Groups in the European States, popularly known as the Congress of Minorities or the Congress of Nationalities. The purpose of the congresses was to obtain better international protection for national minorities and to defend such minorities against the injustices of ruling nationalities. The Ukrainian national group in Rumania took part in the congresses from 1927 and was represented by V. Zalozetsky and other delegates. Ukrainians in Poland sent delegates to the congresses from 1928. One of the delegates – either V. Levytsky or Z. Pelensky – usually belonged to the presidium of the congress. The Ukrainian delegates presented the difficulties encountered by the Ukrainian populations under the ruling regimes: in 1931 at the congress in Geneva the Polish pacification policy in Galicia was discussed, in 1932 in Vienna the processing of minorities' claims by the League of Nations was criticized, and in 1933 in Berlin the famine in Soviet Ukraine was raised by M. Rudnytska.

Congress of Ruthenian Scholars (Sobor uchenykh ruskykh i liubytelei narodnoho prosvishcheniia). The first educational conference in Galicia, convened by the *Supreme Ruthenian Council through the initiative of M. Ustyianovych and I. Borysykevych. The congress took place in Lviv on 19–26 October 1848 with 99 participants conducting discussions in nine sections. They worked out a broad program for organizing Ukrainian scholarly research and public education (including the publication of general-education school handbooks), agreed to set up the Society for Public Education, and discussed the question of the Ukrainian literary language. The congress had no immediate practical effects.

Congress of the Peoples of Russia. A congress of subjugated peoples of the Russian Empire that was convened in Kiev on 21–28 September 1917 by the Ukrainian *Central Rada. Representatives of the Belorussian, Buriat, Georgian, Estonian, Jewish, Lithuanian, Latvian, Crimean Tatar, Moldavian, Don Cossack, and Cossack peoples participated in the congress. The Russian Provisional Government sent M. Slavinsky as its representative. The congress demanded that the future Russian republic be organized on the principle of a federation of nations. The Council of Peoples was elected, and M. Hrushevsky, the honorary president of the congress, was selected as its president. The council was to be located in Kiev. A new journal, *Svobodnyi soiuz*, was established, but revolutionary events prevented the Council of Peoples from implementing its program.

Conservatism. Conservatism as an ideology and political trend did not appear in Ukraine until the 19th century, but conservative attitudes – firm adherence to traditional forms of community life and respect for established authority – were evident from earliest times. They contributed to the preservation of a Ukrainian identity after the Union of Lublin (1569) had placed the country under Polish rule and exposed it to strong Polonizing pressure. An elemental conservatism was the driving force behind the defense of the ‘old faith,’ Orthodoxy, against Protestant, Roman Catholic, and Uniate challenges. This led to a revival of the Orthodox church and a strengthening of the traditions of Kievan Rus’ among Ukrainian ecclesiastical and secular elites in the first half of the 17th century.

The Khmelnytsky revolution (1648) derived its strength from popular grievances, but Hetman B. Khmelnytsky enlisted the services of numerous noblemen and followed a basically conservative social policy. Departing from the frontier democracy of the Zaporozhian Sich, he gave his rule an authoritarian, monarchical character and tried to make the hetman’s office hereditary. Such attempts were repeated by several later hetmans (I. Samoilovych, I. Mazepa, K. Rozumovsky).

The Cossack Hetman state of the second half of the 17th and the 18th century evolved into a hierarchical system of estates, and the Cossack *starshyna* (officer) stratum crystallized into a new landed aristocracy. The political thinking of that class combined a liberal tendency towards representative institutions with a conservative historical legitimism. Declaring the Pereiaslav Treaty (1654) a constitutional charter, the Cossack elite defended on that platform the autonomous status of the country against Muscovite encroachments and their own corporate ‘rights and liberties.’ The Russian government, however, was able to capitalize on the spontaneous conservatism of the Cossack and peasant masses and their reverence for the tsar’s monarchical charisma. This facilitated Ukraine’s absorption into a centralized Russian Empire.

19th century. Aspirations for the restoration of the autonomous Cossack state survived in the circles of the Left-Bank nobility until the middle of the 19th century. Some steps in that direction were undertaken in connection with Napoleon’s invasion in 1812 and the Polish uprising of 1830–1. The ideology of Ukrainian historical legitimism and state rights was eloquently formulated in the influential **Istoriia Rusov* (History of the Rus’ People) an anonymous treatise written in about 1800 and widely circulated from the 1820s. Similar ideas existed also among segments of the Right-Bank Polish-Ukrainian nobility.

The modern Ukrainian national movement, which originated in the 1840s with the **Cyril and Methodius Brotherhood*, was from the outset motivated by a radical democratic-populist philosophy. **Populism* became the dominant outlook of the Ukrainian intelligentsia in the second half of the 19th century; it increasingly assumed a socialist character. Having adopted an ethnic concept of nationality, the Ukrainian intelligentsia had no use for historical legitimism. A vocal, though isolated, contemporary critic of populist ideology was P. **Kulish*, a former Cyrillo-Methodian turned conservative. He pointed to the destructiveness of elemental popular revolts and stressed the importance of elitist cultural values.

The weakness of Ukrainian conservatism resulted from

conditions under tsarist **autocracy*, which polarized society between the extremes of reaction and revolution, while depriving moderate elements of channels of independent political action. Consequently, Ukrainian conservatives could express themselves only in non-political ways. Civic-minded landowners and industrialists sponsored cultural and educational institutions (museums, libraries, private schools, scholarly journals, etc) or worked in the *zemstvo* self-government. Ukrainian culture owes much to these efforts, although, because of tsarist proscriptions, they had to take place mostly in a Russian linguistic garb. Representative conservative personalities of the second half of the century are H. Galagan, V. Tarnovsky, and H. Myloradovych. In the next generation came F. Umanets, V. Horlenko, the brothers A. and M. Storozhenko, and P. Doroshenko. The future hetman P. Skoropadsky also originated from this milieu.

Members of the Ukrainian upper classes easily assimilated into the tsarist establishment, taking up careers in the imperial army and civil service without necessarily losing awareness of their ethnic origin and a sense of Ukrainian territorial patriotism (eg, General M. Dragomirov). This Russified Ukrainian conservatism at times degenerated into a reactionary pan-Russian chauvinism. Examples include M. Yuzefovich (the instigator of the anti-Ukrainian **Ems Ukase*, 1876), the circle around the Kievan daily **Kievlianin* (editors: D. Pikhno and V. Shulgin), and, after the 1905 revolution, the Club of Russian Nationalists in Kiev, the **Union of the Russian People*, and other reactionary organizations of the **Black Hundreds* operating in Ukraine.

A spokesman for a distinctly national Ukrainian conservatism during the last pre-First World War years was V. **Lypynsky*. In contrast to populists and socialists, whose tendency was to restrict Ukrainian nationality to the common people, he advocated the formation of a socially diversified, all-class, national community as a precondition of political independence. Lypynsky’s objective was the reintegration of the elites into Ukrainian national life; under his inspiration a group of ‘Roman Catholic Ukrainians’ came into existence among the Polonized Right-Bank nobility.

In Galicia the Greek Catholic (Uniate) church was the central institution of Ukrainian life, and until well into the second half of the century the clergy was the only educated class. Ukrainian priests were family men, different from the celibate Latin-rite Catholic clergy; in their lifestyle they resembled a lesser gentry. During the 1848 revolution clergymen made up the leadership of the emerging Ukrainian (Ruthenian) nationality and its political representative, the **Supreme Ruthenian Council*. The council followed a conservative, pro-Habsburg policy, opposed Hungarian and Polish insurgents, and called for the formation of a separate Ruthenian crown land within the Austrian Empire.

The conservative, mostly clerical, circle that dominated the Galician scene from 1848 through the 1870s was known as the **Old Ruthenians* or *sviatouirtsi* (the ‘St George’s Coterie,’ after the Greek Catholic cathedral in Lviv). The circle included M. Kuzemsky, M. Malynovsky, B. Didytsky, and A. Petrushevych. Identifying nationality with religious denomination, they emphasized the Eastern form of Christianity, which visibly demarcated Ukrainians from the Roman Catholic Poles. Out of regard for traditional Church Slavonic, they scorned efforts to

introduce the vernacular as the literary language. Their attitude towards the peasantry can be described as benevolent paternalism, and they showed little understanding of social problems and the need for popular political participation. In their struggle against the Poles, the Old Ruthenians leaned on the Austro-German centralists. This policy collapsed when Vienna turned over the control of Galicia's administration to the Polish aristocracy in 1867. Feeling betrayed by Austria, some prominent Old Ruthenians (I. Naumovych, Ya. Holovatsky, and others) reoriented themselves towards Russia. The transformation of conservative Old Ruthenians into reactionary Russophiles brought about the stagnation and disintegration of their party. By the 1880s the leadership of Galician Ukrainian society had passed to the rival populist, or Ukrainophile, trend. The Galician populists (see *Populism, Galician), however, remained moderate, adhering to strictly non-revolutionary, legal methods. A strong moderating factor was the continued influence of the Uniate church. As the ranks of the populists were swelled by the influx of former Old Ruthenians, they assumed a more conservative and clerical hue. The leading personalities among them were S. Kachala, Yu. Lavrivsky, D. Taniachkevych, the brothers V. and O. Barvinsky, O. Ohonovsky, A. Vakhnianyn, and Yu. Romanchuk. By their grass-roots educational and organizational work the populists laid the foundations of modern Ukrainian nationalism in Galicia. But their conformism and 'respectability' made them unacceptable to the younger generation, who in 1890 founded the *Ukrainian Radical party, with a socialist and anticlerical program.

In 1890 the conservative populists entered into an agreement with Galicia's ruling Polish aristocracy. This so-called *New Era lapsed after a few years, but it led to the establishment of O. Barvinsky's conservative *Christian Social movement, which never enjoyed a wide appeal because of its collaboration with the Austro-Polish regime. The *National Democratic party, a new political force (from 1899), was a coalition whose spectrum extended from near-socialists to conservatives. United on a platform of nationalism and progressive political and social reforms, they insisted on 'organic work' and parliamentary methods, professed loyalty to the Habsburg monarchy, and maintained cordial relations with the Uniate church hierarchy.

Ukrainian conservatism since 1917. The mainstream of the 1917–21 revolution in central and eastern Ukraine was leftist and socialist, but right-wing forces also asserted themselves during that period. In May 1917, in Lubni, Poltava gubernia, M. Boiarsky, S. Shemet, and L. Klymov founded the *Ukrainian Democratic Agrarian party, whose program, drafted by V. Lypynsky, was based on the principles of national independence and private land ownership. A similar tendency found expression in the movement of *Free Cossacks, a paramilitary organization for the defense of public order. At the congress in Chyhyryn, 16–20 October 1917, the Free Cossacks elected General P. Skoropadsky as commander (otaman).

After the Brest-Litovsk peace treaty the presence of German and Austro-Hungarian military units in Ukraine offered an opportunity to elements dissatisfied with the Central Rada's radical social, especially agrarian, policies. With German backing the Congress of Landowners, on 29 April 1918, proclaimed Skoropadsky hetman; the name

of the country was changed from Ukrainian National Republic to Ukrainian State. The 1918 *Hetman government, which appealed to the tradition of the 17th–18th century Cossack state, represented the conservative strand in Ukraine's struggle for independence. It had the support of the proprietary classes and of conservative and moderate political groups. Its position, however, remained precarious, owing to Bolshevik subversion, the boycott by Ukrainian socialist parties, and the pressure of Russian and Russophile circles that wished to use Ukraine as a cornerstone for the rebuilding of an imperial Russia. In November–December 1918, after the defeat of the Central Powers, the government was overthrown by a popular uprising, and the Ukrainian National Republic was restored.

The *Western Ukrainian National Republic, established on 1 November 1918 in formerly Austrian eastern Galicia, possessed a coalition government in which the National Democrats played the leading role. It avoided extreme social experiments and maintained a high level of law and order, which under the circumstances gave it a comparatively conservative color.

During the interwar era Ukrainian conservatism could exist overtly only among Ukrainians outside the USSR. Skoropadsky's émigré supporters (V. Lypynsky, D. Doroshenko, O. Skoropys-Yoltukhovsky, M. Kochubei) founded in Vienna, in 1920, the *Ukrainian Union of Agrarians-Statists, later renamed the Ukrainian Union of Hetmanites-Statists. The leader and ideologist of the movement was V. Lypynsky. In his theoretical writings he advocated a hereditary hetmanate with a corporate constitution ('labor monarchy'); his conservative conception was opposed equally to liberal democratic republicanism and to fascist-type dictatorship. Through his brilliant historical works Lypynsky initiated the 'statist school' in Ukrainian historiography, whose adherents included S. Tomashivsky, D. Doroshenko, V. Kuchabsky, I. Krypiakkevych, and T. Kostruba; its impact could be felt also among Soviet Ukrainian historians. A group of conservative émigré scholars was associated with the Ukrainian Scientific Institute in Berlin.

In the 1920s the hetmanite movement spread to Ukrainian communities in North America (the *Sich associations in the United States and Canada), and it had supporters and sympathizers among conservative and clerical circles in Western Ukraine (eg, O. Nazaruk's newspaper, *Nova zoria*). However, the rift between Lypynsky and Skoropadsky in 1930 caused a serious setback. By the 1930s the hetmanite movement had been overtaken by the more dynamic integral-nationalist movement, and the 'turn to the right' among non-Soviet Ukrainians was diverted from conservative into nationalist-authoritarian channels (see *Organization of Ukrainian Nationalists).

Since the Second World War monarchist (hetmanite) organizations have played only a marginal role in the political life of the Ukrainian diaspora. Their decline has been hastened by the extinction of the Skoropadsky line. The *Lypynsky East European Research Institute in Philadelphia continues to serve as a conservative studies and publication center. Some conservative traits, partly derived from Lypynsky's theoretical legacy, are to be found in the thinking of democratic émigré groups. In recent years a return to traditionalist, conservative values has been noticeable in the writings of certain Soviet Ukrainian dissidents (eg, V. Moroz).

Consistory. Collegiate institution of the church hierarchy. In the Catholic church there is the papal consistory, which consists of cardinals and pronounces on important matters of faith, rite, and church organization. There are also eparchial consistories, which help bishops govern their eparchies and consist of canons, advisers, archivists, supervisors, and chancellors. Every Ukrainian Catholic eparchy has a consistory. In the Orthodox church the bishops' consistory is an advisory and auxiliary body of the church administration under an archbishop. Consistories were introduced in the Russian Orthodox church in 1744 and were known as spiritual consistories. The principal officer in them was the consistory secretary, who was responsible to the head procurator of the synod. In the Ukrainian Orthodox church there were consistories at the eparchial level, and after the Second World War such consistories were established in the Ukrainian Autocephalous Orthodox church. In some eparchies abroad (in Canada, for example) they have a decisive voice in the administration of the eparchy. Each consistory has its own court, which looks into affairs involving priests and sometimes into lay affairs such as marriages.

Constantine VII Porphyrogenitus, 905–59. Byzantine emperor and writer. During Constantine's reign there was strong interaction between the Kievan and Byzantine states; for example, Prince Ihor led campaigns against Byzantium in 941 and 944 and signed a treaty with it in 944, while Princess Olha accepted baptism from Byzantium. The works written by Constantine (*De administrando imperio*) or edited by him (*De thematibus*, *De ceremoniis*) contain much material on the history and geography of Kievan Rus'.

Constituent Assembly of Ukraine (Ukrainski Ustanovchi Zbory). Elected legislative body of the Ukrainian people that had the task of establishing a new political system and confirming the constitution of the Ukrainian state after the February revolution. The difficulties that the Ukrainian *Central Rada encountered in reaching an understanding with the Russian Provisional Government, whose centralist and chauvinist policies opposed Ukraine's full autonomy, gave rise to the idea of a Ukrainian constituent assembly in Ukrainian political circles. In its First Universal the Central Rada had already proclaimed that only the People's Ukrainian Assembly (diet) had the right to approve all laws that would determine the political and social order in Ukraine. During its sixth session the Central Rada recognized on 18–22 August 1917 that 'only the people of Ukraine can resolve the question of the political order in Ukraine and Ukraine's relation to Russia' and, hence, that it was imperative to convene a Ukrainian constituent assembly. At this session the groundwork was laid for an electoral system to the constituent assembly and for the convening of that assembly.

The Central Rada's decision to convene a constituent assembly provoked a sharp reaction against the Rada among Russian centralists, particularly among the Kadets (see *Constitutional Democratic party), who in protest resigned from the Central Rada. Then, at the end of September, the Russian Social Democratic Workers' party (Mensheviks), the Russian Socialist Revolutionaries, and the Jewish Bund protested against the convening of the constituent assembly, because they viewed this step as an attempt to separate Ukraine from Russia. In the light of this reaction from the national minorities the Little Rada adopted a compromise position that attempted to reconcile the principle of Ukrainian self-determination through the Ukrainian constituent assembly with the principle of the unity of the Russian federated republic, which was to be confirmed by the *All-Russian Constituent Assembly. This compromise made possible the election of a commission to design the laws governing the Constituent Assembly of Ukraine. In spite of this the Provisional Government on 30 October 1917 declared that it was ready to take the Central Rada and the General Secretariat to court for 'separatism' in connection with their intention to convene a constituent assembly. In the meantime the Bolsheviks seized power, and on 12 October 1917 the Central Rada passed the fundamental laws on elections to the Constituent Assembly of Ukraine and instructed the Little Rada to confirm the law and to conduct elections.

The Third Universal designated 9 January 1918 as election day and 22 January as the opening day of the constituent assembly. It also pointed out that until the assembly was convened, the power to legislate belonged to the Central Rada. The law on the Constituent Assembly of Ukraine was ratified on 29 November 1917. Its deputies were to be elected by a universal, equal, direct, and secret vote, according to the principle of proportional representation. Individuals of both sexes over 20 years of age had the right to vote and to be elected. Three hundred and one members were to be elected (1 per 100,000 constituents). The electoral commission was headed by M. Moroz.

The regions not occupied by the Bolsheviks in Ukraine elected 171 out of the 301 deputies, and according to the Ukrainian lists over 70 percent of the votes were cast for

Ukrainian parties. For this reason the Central Rada decided not to delay matters of great importance, such as the proclamation of Ukraine's independence, until the Constituent Assembly of Ukraine met, and in the Fourth Universal on 22 January 1918 it proclaimed that it would govern until the assembly convened and that the elections were to continue. Subsequent events, however, made it impossible to carry out these plans, and the Constituent Assembly of Ukraine never did meet.

Constitution. Basic laws prescribing the structure of the state and the mutual relations between citizens and the state. The first constitutional document in Ukrainian history was the Constitution of *Bendery, adopted in 1710 by the émigré followers of Hetman I. Mazepa.

The Ukrainian state that arose in 1917–20 had several constitutions. The structure of the Ukrainian National Republic (UNR) was defined by several legislative acts – the universals and laws of the Ukrainian Central Rada – before the Central Rada adopted the comprehensive document the *Constitution of the Ukrainian National Republic on 29 April 1918. The constitution, however, could not be implemented because of Hetman P. Skoropadsky's coup.

The constitution of Skoropadsky's Hetman government can be found in the hetman's edict (*hramota*) and in the Law on the Provisional State Structure of Ukraine. Under the Directory the constitutional acts of the UNR consisted of separate declarations and laws – eg, the Law on the Form of State Rule, which was adopted by the Labor Congress on 28 January 1918. The proposed text of the Fundamental State Law on the Structure of the Ukrainian State, drawn up in May 1920 by the All-Ukrainian National Council in Kamianets-Podilskyi, and the project of the federated structure of the UNR worked out by O. *Eikhelman in 1921 are of great significance for Ukrainian political-juridical thought. In the Western Ukrainian National Republic a series of legislative acts constitutes the contents of the constitution.

In the Ukrainian SSR four constitutions (see *Constitution of the Ukrainian SSR) have been adopted (1919, 1929, 1937, 1978). They were inspired by or were closely modeled on the Constitution of the Russian SFSR and then of the USSR.

The Constitution of the Czechoslovak Republic of 1920 contained articles on the autonomy of Transcarpathia (Subcarpathian Ruthenia). Constitutional law no. 328 granted wide autonomy to Carpatho-Ukraine in 1938–9. The Constitution of the Carpatho-Ukrainian Republic, which declared its independence on 15 March 1939, is law no 1. of the Carpatho-Ukrainian Diet.

V. Markus

Constitution of the Ukrainian National Republic. Fundamental law of the UNR, adopted on 29 April 1918. It

was influenced to a large extent by previous legislative acts of the Ukrainian *Central Rada and had an important impact on future legislation and the government structure of the UNR. Before its adoption the universals of the Central Rada and certain laws – the law of 8 December 1917 on legislative procedure, the law on elections to the Constituent Assembly of Ukraine, the law of 22 December 1917 on the Ukrainian State Bank and the Main Treasury of the UNR, the laws of 15 and 30 December 1917 on the judicial system, the law of 21 January 1918 on national and personal autonomy, the law of 1 March 1918 on the emblem of the republic, the law of 2–4 March 1918 on citizenship, etc – had the force of a constitution.

Most of these acts were collected in the constitution, which was prepared by a special commission and adopted by the Central Rada at its last session on 29 April 1918, the day of Hetman P. Skoropadsky's coup. The constitution had 83 articles and eight sections.

The constitution asserted that the UNR was a 'sovereign, independent, and free state,' in which the people of Ukraine held sovereign power and exercised it through the National Assembly (*Vsenarodni Zbory*). The constitution did not specify the borders of Ukraine, but pointed out that its territory was indivisible. The citizens of the republic, regardless of sex or nationality, were guaranteed basic civil and political rights. The supreme legislative authority in the republic was to be the National Assembly, which would issue laws and form the higher agencies of the government and judiciary. The constitution set down the procedures of election to the National Assembly, the structure of the assembly, legislative process, and the powers of the highest government authorities. The chairman (president) of the National Assembly was to represent the republic externally. The *Council of National Ministers of the UNR was to be the highest administrative authority in the republic. It was to be named by the chairman of the National Assembly in consultation with the council of the Assembly Elders (*Rada Starshyn Zboriv*) and confirmed by the National Assembly. The Council of National Ministers was to be responsible to the assembly, which had the right to express non-confidence in the council or in particular ministers. The supreme agency of the judiciary was to be the General Court of the UNR, which would consist of a college of judges elected for five years by the National Assembly. The constitution affirmed the independence of the judiciary from the executive and legislative powers. The law of the Central Rada on the national autonomy of national minorities in Ukraine formed a separate section in the constitution. At the end of the constitution were provisions for the temporary suspension of civil rights in times of emergency.

The constitution left a number of important constitutional questions to be solved by future legislation. Proposals for constitutional changes were to be decided by the usual legislative process, with the provision that they had to be adopted by three-fifths of the deputies present and by the new National Assembly after the next election.

In general, the constitution asserted the principle of parliamentary democracy, with the legislative power outweighing the executive power. It favored decentralization and self-government and dealt with the problem of national minorities in a liberal manner.

The Constitution of the UNR turned out to have merely a moral-political significance, for Skoropadsky's coup on

the day of its adoption prevented it from being implemented. Skoropadsky's declaration of his assumption of power and the proclamation on 29 April 1918 of a temporary structure of Ukraine abolished the constitution of the UNR. However, some of its provisions inspired the legislation of the UNR under the Directory.

M. Stakhiv

Constitution of the Ukrainian Soviet Socialist Republic. Basic law of the Ukrainian Soviet state. The first constitution of the Ukrainian SSR was adopted on 14 March 1919 by the Third All-Ukrainian Congress of Workers', Peasants', and Soldiers' Deputies. The congress met in Kiev during the second Bolshevik campaign against the UNR. The Constitution of the Ukrainian SSR was modeled on the Constitution of the Russian SFSR, adopted on 10 July 1918, which was to define 'the dictatorship of the proletariat' in legal terms. According to this constitution, the soviets of workers', peasants', and soldiers' deputies in towns and villages were to be the principal government bodies. The All-Ukrainian Congress of Soviets was the highest governing authority, and the *All-Ukrainian Central Executive Committee was its inter-sessional legislative-administrative agency. The *Council of People's Commissars of the Ukrainian SSR was selected by the All-Ukrainian Central Executive Committee and constituted the administrative branch of the government. In the larger territorial units (gubernias, counties, rural districts) the administrative agencies were executive councils elected at conferences of the soviets within the given units.

There were different categories of voters, with unequal representation, in the soviets and their congresses. Proportionally, the workers had the most representatives (town soviets sent one representative per 100 voters, while other classes of 'working people' sent one per 300). Under this system of unequal and indirect (to the higher levels of the Soviet system) elections, the representatives of the overwhelming majority of the Ukrainian population – the peasantry – constituted a minority in the ruling bodies of the Soviet government. Furthermore, the so-called non-working classes were deprived of the right to vote. (See *Elections.)

The constitution formally guaranteed the 'working people' civil rights and freedoms, but the authorities were in control of the practical implementation of these rights and freedoms. The constitution did not formally establish a one-party regime, but all political parties except the CP(B)U were liquidated by 1924. The state system was based on the principle of democratic centralism, that is, the complete subordination of lower bodies to higher ones. In spite of having broad formal powers, local soviets were not self-governing bodies, for they were subordinated directly to higher executive committees and congresses of soviets.

The Constitution of the Ukrainian SSR of 1919 did not define Ukraine's relationship to the Russian SFSR. This was formulated in separate laws enacted by both states. On 1 June 1919 a resolution of the All-Ukrainian Central Executive Committee established a military and economic alliance between the two Soviet republics. On 30 December 1920 these ties were formulated in the so-called workers'-peasants' treaty between the Russian SFSR and the Ukrainian SSR. On 30 December 1922 the USSR was created, which finally united the 'sovereign' Soviet re-

publics into one 'federal state.' The Constitution of the USSR, which was confirmed on 31 January 1924, consisted formally of a declaration on the formation of the USSR and a treaty of union which defined the new relations between the Soviet republics as ones based on the principle of 'federalism. This agreement and later Ukrainian-USSR constitutions confirm the right of the Ukrainian SSR to secede from the Union, but under the present political system this right has only a theoretical significance. The 1924 constitution merged the following political and economic spheres: foreign relations, trade, the armed forces, roads, postal and telegraph services. To administer these areas, all-Union agencies were formed. In various other spheres the Union agencies were empowered to set general policies, but the republican agencies (called Directive People's Commissariats) were responsible for their execution. Only some spheres (internal matters, agriculture, education, justice, social security, health care) were under the autonomous prerogatives of the republics. But even in these areas the Union agencies retained the right to set 'general principles' of legislation and administration.

In 1925 a new version of the constitution of the Ukrainian SSR was adopted. It made some changes in connection with Ukraine's membership in the USSR. On 15 May 1929 the Ninth All-Ukrainian Congress of Soviets adopted the second constitution of the Ukrainian SSR, which in form and content was more like the constitutions of other Soviet republics.

On 10 January 1937 a new constitution, based on the constitution of the USSR of December 1936, was adopted by the Extraordinary Congress of Soviets of the Ukrainian SSR. The main features of the 1937 constitution are as follows: (1) it defines the foundations of a 'socialist' social order; (2) it introduces direct general elections of all soviets through an equal and secret vote; (3) the soviets are the organs of authority at every level. The highest legislative body is the *Supreme Soviet. The oblast, raion, town, and village governing bodies are the soviets of working people's deputies, which elect their respective executive committees to run the administration. The constitution theoretically guarantees broad civil rights, but at the same time legitimizes a one-party system (art 106).

Since 1937 the text of the constitution has undergone many changes, mainly to reflect changes in the text of the USSR constitution. These changes have to do primarily with such matters as the structure of state agencies, the number and names of the ministries (no longer called people's commissariats after 1946), local government agencies, and the administrative-territorial division. Amendments introduced on 1 February 1944 and after 1953 are more important. In 1944 the Ukrainian SSR was granted the right to establish direct relations with foreign countries and to maintain its own armed forces. The first right has been implemented to a limited extent (eg, through membership in the UN). The second remains unrealized. After Stalin's death, the powers of the government of the Ukraine SSR were increased in the process of full decentralization. In May 1957 most of the industrial ministries were abolished, and from 1960 the Ukrainian Council of the National Economy and the State Planning Committee of the Ukrainian SSR ran industry, but under the control of the State Planning Committee of the USSR and the USSR Council of Ministers. The practical management of industry was in the hands of regional economic councils.

After 1962 and Khrushchev's fall, the former, centralized system was reinstated.

The basic principles of the state and social order remained unchanged. They are elaborated in the constitution of the USSR and are incorporated almost verbatim into the constitution of the Ukrainian SSR. According to art 20 of the USSR constitution, a law of the Ukrainian SSR that conflicts with the laws of the USSR cannot be valid.

The Supreme Soviet can change or supplement the constitution with a two-thirds-majority vote (art 127). In practice, changes are introduced by the Presidium of the Supreme Soviet, and the Supreme Soviet merely confirms them.

The constitution since 1978. The present constitution of the Ukrainian SSR was adopted by the Seventh Extraordinary Session of the Supreme Soviet of the Ukrainian SSR, which convened on 20 April 1978. It is drafted in accordance with the USSR constitution of 7 October 1977. This constitution was prepared by a special commission headed by the first secretary of the CPU, V. Shcherbytsky. The new constitution basically retains the former political, economic, social, and ideological principles and the former state structure of the USSR and Ukrainian SSR. It differs merely in its more precise formulation of certain resolutions and in its broader ideological-programmatic additions, based on the 1961 program of the CPSU. The structural and institutional changes are insignificant.

Whereas the preamble of the constitution of the USSR declares that 'for the first time in history a socialist society has been created,' the preamble to the constitution of the Ukrainian SSR emphasizes that in the USSR 'for the first time in history the nationalities question has been solved.' Both documents speak of a 'new historical community – the Soviet people,' of which the people of the Ukrainian SSR consider themselves an inseparable part. The constitution describes the Ukrainian SSR as 'a socialist people's state, which expresses the will and interests of workers, peasants, and the intelligentsia, and of the republic's working people of every nationality' (art 1), in contrast to the 1937 statement 'the Ukrainian SSR is a socialist state of workers and peasants.'

As a Union republic the Ukrainian SSR is called 'a sovereign Soviet national state' (art 68), while the USSR is 'one, federal, multinational state.' Unitary Union citizenship is consistently stressed. Ukrainian citizenship no longer exists; it has been reduced to the designation of residency.

The Ukrainian SSR retains 'the right of free secession from the USSR' (art 69), and yet the state structure and government powers resemble those of a unitary state ruled consistently according to the principle of democratic centralism. At the same time, the principle of socialist democracy (increased citizen participation, initiative from below, etc) is emphasized more than before.

The chapter on basic civil rights, freedoms, and obligations of Soviet Ukrainian citizens is greatly enlarged. Political and other rights are guaranteed in accordance with the interests of the people ... [and] the goals of building communism.' Most of the human rights mentioned in the Universal Declaration and in international agreements are listed here. A citizen's obligations are enumerated as well (see *Civil rights).

According to the 1978 constitution of the Ukrainian SSR, the republic's Supreme Soviet is elected for five years and consists of 650 delegates. Local soviets are elected every

two-and-a-half years. The distinction between Union-republican ministries and republican ministries is retained, but the ministries are no longer listed: changes in government structure are left to ordinary legislation. The Presidium of the Council of Ministers, a smaller body of the Council of Ministers of the Ukrainian SSR that existed before without being mentioned in the constitution, is now defined. The government agencies of the Ukrainian SSR are fully subordinated to the government of the USSR. Articles on the participation of the Ukrainian SSR in the formation of the state agencies of the USSR are lacking, although such articles can be found in the USSR constitution. The 1978 constitution does not mention Ukraine's right to its own military formations.

As an official language of the Ukrainian SSR, Ukrainian is relegated to a subordinate status by a number of articles: the right to education (art 43) provides merely for 'the opportunity for instruction in one's native language' (the 1937 constitution required 'school instruction in one's native language'); legal proceedings in the Ukrainian SSR are conducted in Ukrainian or in the language of the majority in a given locality (art 157) (the previous constitution stated that legal proceedings in the Ukrainian SSR were to be conducted in Ukrainian, although non-Ukrainians had the right to use their own language [art 90]).

The chapters on state planning (chap 16), the people's deputy (chap 11), and the four introductory chapters are new. A number of constitutional provisions leave the detailed regulation of various matters to special legislation. The 1978 constitution has 171 articles, divided into 10 chapters. The 1937 constitution had 127 articles. In general the new constitution is more clearly formulated. It has codified some changes that were previously put into practice and introduced many ideological and programmatic statements. Yet, this constitution is merely a declarative document that cannot be interpreted in isolation from the whole system or from the unwritten but practiced constitution, according to which the Party is in control (art 6 describes the CPSU as 'the leading and directing force in Soviet society, the nucleus of its political system,' without saying a word about the CPU).

The final articles of the constitution deal with the emblem, flag, anthem, and capital of the Ukrainian SSR, as well as the procedures for constitutional amendments. The Supreme Soviet of the Ukrainian SSR has the power to change or amend the constitution by a two-thirds-majority vote.

V. Markus, O. Yurchenko

Constitution of the Western Ukrainian National Republic. Principal legislative acts of the Western Ukrainian National Republic (later known as the Western Oblast of the Ukrainian National Republic), which defined its political and legal structure. The most important act among them was the Provisional Fundamental Law on the State Independence of the Ukrainian Lands Formerly in the Austro-Hungarian Monarchy, which was issued on 13 November 1918. This law consisted of five articles: the new state was to be called the Western

Ukrainian National Republic; its borders were to coincide with 'the total Ukrainian ethnic region within the former Austro-Hungarian Monarchy; the entire people was sovereign; it was to manifest its will through representatives elected by universal, equal, direct, secret, and proportional vote; and prior to the election of the constituent assembly, political authority in the republic was to reside in the *Ukrainian National Rada and the *State Secretariat, which was responsible to it.

Other acts that supplemented the constitution of the republic included the law of 16 November 1918 on the temporary administration and organization of the courts, the act of 3 January 1919 on the union of the Western Ukrainian National Republic and the UNR, the act of 4 January 1919 on the board (*vydil*) of the Ukrainian National Rada, the act of 15 February on the official language, the act of 8 April on civil rights and duties, the act of 16 April on the diet of the republic, and the act of 9 June on the transfer of all military and civil authority to 'a fully empowered dictator.'

According to these constitutional laws, the supreme authority in the republic belonged to the Ukrainian National Rada, which had primarily a legislative function. Its board, which was chaired by the president of the Rada, acted as the republic's external representative and carried out some of the more important functions of the head of state (confirming and promulgating laws, appointing members of the State Secretariat, etc). Executive power lay in the hands of the State Secretariat, which consisted of various departments and was responsible to the Rada. The judiciary was independent, and the supreme court was the Highest State Court.

The constitution reflected a typical law-governed state (*Rechtstaat*). The structure of the government agencies was in some respects similar to that of the UNR in its first period (the Ukrainian Central Rada and Little Rada, the General Secretariat).

Certain proposals on the political and legal status of the republic's territory that were drawn up later by international and Ukrainian authorities had a constitutional nature. The proposal for an agreement between the Supreme Council of the Allied powers and Poland on the autonomy of Galicia was drawn up in Paris on 20 November 1919, but was rejected by Poland. The 'Foundations of the Structure of the Galician State' was prepared by the government of the republic's dictator and presented to the League of Nations. Professor S. Dnistriansky, a noted jurist, prepared a private draft of a constitution of the Western Ukrainian National Republic in 1921.

V. Markus, M. Stakhiv

Constitutional Democratic party (Konstitutsiino-demokraticheskaia partiia or Partiia narodnoi svobody). Russian liberal party founded in October 1905 whose members were popularly known as the Kadets. The Kadets took part in all the Russian state dumas and held 35 percent of the seats in the First Duma. On the nationality question, the party recognized the right of the non-Russian peoples to develop their national cultures, but was opposed to the reconstruction of Russia on the principle of autonomy or federalism. The party's leader, P. Miliukov, in 1914 spoke in the Duma against the government's prohibition of the celebration of T. Shevchenko's anniversary. Ukrainians active in the Kadet

party included M. Vasylenko, D. Hryhorovych-Barsky, B. Butenko, F. Shtaingel, Yu. Sokolovsky, I. Shrah, N. Mohyliansky, I. Luchyttsky, and A. Rzhpetsky. The party played an important role in the Russian Provisional Government of 1917. At that time it proposed that Russia become a democratic republic. Yet most Kadets opposed the Central Rada's demands for autonomy. Several former Kadets were in the cabinet of the Hetman government in 1918 (M. Vasylenko, A. Rzhpetsky, Yu. Sokolovsky, S. Hutnyk, B. Butenko, O. Kistiakovsky).

Construction and road-building machinery industry.

Industry that produces equipment and machines for industrial, residential, and road construction and the production of building materials; a branch of the heavy-machine-building industry. This branch manufactures a wide range of products - 150 in the USSR and 60 in the Ukrainian SSR. Its most important products are excavators, attachable graders, asphalt mixers, bulldozers, cranes, tractor scrapers, and pipe-laying machines. The manufacturing of construction and road-building machinery (building cranes, concrete mixers) developed in Ukraine in the second half of the 1920s, and there were many small-machine-building plants, particularly in the Kharkiv, Kiev, and Donets Basin regions. Before the war Ukraine accounted for 20 percent of the USSR output in this branch of machine building. As the construction industry became more mechanized after the war the manufacturing of construction and road-building machinery grew rapidly and became concentrated in larger plants. Today about 25 plants specialize in this type of machinery, including such plants as Chervonyi Ekskavator in Kiev, the road-machinery plants in Kiev, Kremenchuk, Berdianske, and Kharkiv, the heavy-crane plant in Odessa, and the Dormashyna plant in Mykolaiv. In spite of important gains much of the construction work, particularly on roads, is still based on manual labor (in the West 90 percent of construction work is mechanized).

Production of the principal types of construction and road-building machinery (in number of machines)

	1940	1960	1970	1980
Excavators	17	3,053	7,741	9,874
Bulldozers	100	-	16,202	23,975
Graders (attachable)	365	2,075	4,463	-
Tractor scrapers	209	1,819	5,760	8,016

In 1980 Ukraine produced about 30 percent of the construction and road-building machinery that was built in the Soviet Union. This included 23.5 percent of the excavators, 52.7 percent of the bulldozers, and 70.3 percent of the tractor scrapers. (For a bibliography see *Heavy-machine-building industry.)

B. Wynar

Construction industry. Important branch of the economy that involves the construction of new and the maintenance of existing buildings and permanent structures such as highways, bridges, canals, and water-supply systems. Civil engineering deals with the techni-

cal aspects of designing and constructing various kinds of buildings and structures. *Architecture is closely related to construction and occupies a position halfway between civil engineering and art. Structures can be classified according to the materials used into wooden, stone, concrete, reinforced-concrete, steel, block structures, and so on. According to use, permanent structures can be divided into residential and public buildings (including houses, apartment buildings, government buildings, school buildings, community buildings), rural buildings (houses, barns, community buildings in villages), industrial buildings (factories, plants, electric stations), hydro-technical structures (hydroelectric stations, dams, locks, canals, reservoirs, irrigation systems, drainage systems, fish ponds), and transport structures (railroads, highways, airports, pipelines, bridges, tunnels). This article deals mostly with residential and industrial construction as well as with urban development.

Today industrial methods are used extensively in construction operations: the work is organized according to the assembly-line principle and is highly mechanized. The production cycle in the construction industry lasts from a few months to a few years. Work is carried out by construction and assembly organizations that have at their command cadres of qualified workers and the support of design and research institutions.

History

Early period. Construction is closely tied to the development of civilization and has a long history. The oldest remains of dwellings found in Ukraine date back to the late Paleolithic period. These remains of huts built about 15,000 years ago and consisting of large mammoth bones covered with hides were discovered in the village of Mizyn on the Desna in the Chernihiv region. In Neolithic times huts were dug deeply into the ground and were covered with a peaked roof of hides or bark. At the time of the *Trypilian culture at the beginning of the 3rd millennium BC settlements were built on hills or on riverbanks, mostly in Right-Bank Ukraine. The houses were rectangular and quite large (about 120 sq m) and were constructed of wood covered with a thick layer of clay.

In southern Ukraine defensive walls were built of stone or clay. Wooden structures were known too, remnants of which were found near the village of Mykhailivka in Kherson oblast.

In the Bronze and Iron ages and the Scythian period high earthworks and barrows, fortified settlements, and open farm settlements with dwellings made of branches and clay (middle Dnieper region, 5th century BC) were constructed.

Beginning in the 7th century BC high stone walls, residential buildings, and temples were built in the ancient states on the northern coast of the Black Sea such as Chersonese Taurica, Tyras, Olbia, and Panticapeum. The building techniques of the ancient Greeks and then of the Romans and Byzantines later influenced construction in Ukrainian territories.

From the first half of the medieval period until the 10th century fortresses and fortified settlements were built of wood on elevated ground and were encircled with earthen walls and moats. Two-story dwellings in which the lower story was used for storage were built in a circle and formed part of the fortifications. The settlements beyond

the walls were inhabited by peasants, who lived in clay huts, and later by crafts people and merchants.

Princely period. Beginning in the second half of the 10th century stone construction developed in Kievan Rus' under the influence of Byzantine building techniques. Churches, princely palaces, and boyars' villas were built of brick interlaid with cut stone. The arch was extensively applied. In Kievan Rus', construction reached its peak of development in the 11th–12th century, when the following were built: the *Transfiguration Cathedral in Chernihiv (1036); in Kiev, the *St Sophia Cathedral (1037), Dormition Cathedral of the Kievan Cave Monastery (1073–8), *St Michael's Golden-Domed Monastery (1108), and the Transfiguration church in the Berestiv district (1113–25); and the *Good Friday Church in Chernihiv (end of the 12th century). In contrast to these architectural monuments, the houses of artisans, burghers, and peasants remained primitive; they were built of wood in the forest regions and of clay in the steppe regions.

The typical city in the Princely era (Kiev, Chernihiv, Lviv, Kamianets-Podilskyi, etc) developed on a radial plan around a nucleus consisting of a fortified citadel.

13th–16th century. In the 13th century the Mongols devastated cities and villages in Ukraine, which, given the political and economic decline of the 14th–15th century, could not be rebuilt immediately. In the 13th–16th century castle building developed rapidly: in Western Ukraine stone castles appeared in Lutske, Kremianets, Khotyn, Kamianets-Podilskyi, and other cities (see *Castles). In the 15th century a fortress was built in Bilhorod-Dnistrovskyi, and a number of fortified monasteries (Monastery of the Holy Trinity in Mezhyrichia) and churches were constructed. In Lviv, where a builders' guild was formed, the *Korniakt building (1571–80), the *Dormition Church (1547–59), and other buildings were constructed.

17th–20th century. In the first half of the 17th century castles and fortresses (Kodak, Bar, Brody, Kremenchuk) continued to be built in Right-Bank Ukraine. The French engineer G. de *Beauplan distinguished himself in this field. In the mid-17th century the construction trades flourished in Left-Bank Ukraine: in Chernihiv, Lyzohub's villa and the refectory of the Holy Trinity Monastery were built; in Novhorod-Siverskyi, a collegium; in Kharkiv, the Cathedral of the Holy Protectress; and in Kiev, the refectory of Vydubychi Monastery, the All Saints' Church above the Economic Gate of the Kievan Cave Monastery, and St Nicholas's Cathedral.

The vigorous urban construction in the 17th and at the beginning of the 18th century in Ukraine utilized Western architectural styles, such as the *Renaissance style (the building of the Kievan Academy, 1703–40) and the *baroque style (the metropolitan's residence in Kiev). The Ukrainian baroque became the dominant style in this period and was used in many prominent buildings such as churches, monasteries, belfries, military chanceries, and officers' villas. The residences of Cossack officers and the clergy were spacious, built of wood or brick, and decorated with galleries and carved doors, window frames, and ceilings.

At the end of the 18th and the beginning of the 19th century the cities began to grow rapidly. The production of building materials such as brick, plaster, and roofing

tiles expanded, and the techniques of construction improved. The influence of *classicism and its variant, the *Empire style, was apparent in the urban buildings of the period – churches, city halls, and large, private residences such as Prince V. Kochubei's palace in Dykanka in Poltava gubernia. At the end of the 18th century regulations of the Russian government began to play an important role in city planning. Their impact was particularly apparent in the new towns of Slobidska Ukraine, such as Sumy and Kharkiv, and those of southern Ukraine, such as Odessa, Katerynoslav, Mykolaiv, Kherson, and Mariupil, with their rectilinear street networks, distinctive main streets, and central squares. Military centers such as Chuhuiv, Yelysavethrad, and Tulchyn were built on a uniform plan and had similar barracks. In appearance these new towns were quite different from the towns in Hetman Ukraine or in Western Ukraine.

In the second half of the 19th century industrial and transport construction developed rapidly in the Donets Basin and the Kryvyi Rih region. Mining and metallurgical plants were built in Yuzivka, Makiivka, Mariupil, and Katerynoslav, and primitive, ugly, workers' settlements sprang up around the plants. In the provincial centers, where manufacturing developed at the turn of the 20th century, commercial buildings such as offices of stock companies, banks, and large stores, as well as tall residential buildings, government buildings, and railway stations, sprang up. New building materials were used in constructing these large buildings: cement, reinforced concrete (eg, in the lighthouse in Mykolaiv, built in 1904, the funicular in Kiev), and steel. New building methods were introduced. As the large cities expanded, their unity of design was violated: the modern appearance of some of their districts contrasted sharply with the disorderly state of the suburbs, which either were similar to small towns, with low buildings covered with tin or tile roofs and no sewage systems, or were industrial districts with large new plants and pitiful workers' houses. This contrast became particularly obvious in the largest cities of Ukraine before the First World War. The seaports, such as Odessa (the largest Ukrainian city in the mid-19th century), Kherson, Mykolaiv, Mariupil, and Sevastopol, grew rapidly.

The centuries-old, traditional form of construction was preserved in Ukrainian villages until recent times (see *Folk architecture). While the main features of residential housing remained the same, each region of Ukraine had its distinctive characteristics, depending on the building materials locally available and the physical nature of the locality. In the steppe regions houses were built of dried, unfired brick made of clay mixed with straw and chaff; in the forest-steppe regions they were built of wood or wattle covered with mud; and in the forest regions they were built mostly of lumber. In 1924, 50 percent of the houses surveyed in Ukraine were built of wood, 33 percent of clay, and 6 percent of stone. The construction of the roof, porch, and oven and the floor plan of houses and villas differed somewhat from region to region while retaining some common basic features. Before the First World War housing was built without planning and co-ordination; hence, there were sharp contrasts between one section of a city and another. Construction labor was manual.

1914–1928. During the war and the revolution construction came to a halt, and many buildings, particularly residential ones, were destroyed. Under the Soviet regime the larger buildings were placed under the control of housing co-operatives and then in 1937 they were transferred to the jurisdiction of the departments of communal housing at the city soviets. In the NEP period residential housing began to be constructed through residential-building co-operatives in Soviet Ukraine. Wherever technically feasible, two or three stories were added to old buildings. Most of the Soviet government's attention was devoted, however, to two showcase projects – the electrification plan of the State Commission for the Electrification of Russia (GOELRO) and industrial construction. To realize these projects state construction firms – Ukrderzhbud and Indubud – were created, and they used industrial methods of construction. In spite of these efforts, in the first decade of the Soviet period (1918–28) scarcely 800 million rubles' worth of construction was done in the Ukrainian SSR. Subsequently, the five-year plans marked the stages of construction planning.

First three five-year plans. Under the First Five-Year Plan (1929–32), which provided for 1.4 billion rubles' worth of construction, the emphasis was placed on industrial projects. About 400 large plants were built or reconstructed, including the *Dnieper Hydroelectric Station in Zaporizhia (the largest in Europe at the time), which was built by the Dniprobud firm; the Kharkiv Tractor Plant, which was built of reinforced concrete; and the Horlivka Mining-Machinery Plant. Government buildings such as the Building of State Industry in Kharkiv (1925–9) and the railway station in Kiev (1928–33), both built of monolithic reinforced concrete, and various buildings of culture, clubs, and schools in industrial regions were constructed. Yet, residential construction constantly lagged behind, even in the cities of the Donets Basin and the Kryvyi Rih region, which underwent rapid development in the 1920s–1930s, and in Kharkiv (where large blocks were used in construction for the first time in 1930), Dnipropetrovske, Mariupil, Staline, Zaporizhia, and Kramatorske, not to mention Odessa and Kiev, which fell behind in their development and retained their pre-1917 appearance.

During the Second Five-Year Plan (1933–7) construction doubled and reached a value of 2.8 billion rubles. Large industrial complexes were built – the Novokramatorskyi Machine-Building Plant in Kramatorske (1929–34), the Azovstal Metallurgical Plant in Zhdanov (1930–3), Zaporizhstal Metallurgical Plant in Zaporizhia (1930–5), and the Kryvyi Rih Metallurgical Plant (1931–9). Building trusts were organized to construct industrial projects: machine constructing (Mashynobud), mine constructing (Shakhtobud), coke-chemical plant construction (Koksokhimmontazh), construction of local industry (Ukrbudmistsevprom), civil engineering (Ukrtsyvilbud), and residential building (Pivdenzhytlobud).

During the Third Five-Year Plan (1938–41) the Soviet government, in preparing for war, continued the former policy that gave priority to the construction of heavy industry. The plan assigned 2.5 billion rubles for construction, and from 1929 to 1941 about 2,000 large industrial plants were built in Soviet Ukraine. In spite of various government and Party resolutions to improve and

lower the costs of construction, the quantity and quality of construction, particularly in residential housing, remained inadequate. In the 1920s–1930s industrial cities such as Staline, Zaporizhia, Makiivka, Kostiantynivka, Kramatorske, Dniprodzerzhynske, and Horlivka expanded. During this time a number of large buildings were erected in Kiev: the building of the Council of Ministers of the Ukrainian SSR (architects: I. Fomin and A. Abrosimov) and the building of the Supreme Soviet in 1939 (architect: V. Zabolotny). Sports stadiums were built in Kiev, Kharkiv, Odessa, Dnipropetrovske, Staline, Sevastopil, Kramatorske, and other cities.

Second World War. The German-Soviet War (1941–4) caused widespread destruction in Ukraine. According to the estimates of the United Nations Relief and Rehabilitation Administration, the Germans either completely devastated or damaged severely 714 cities, 28,000 villages, and over two million buildings, leaving about 10 million people homeless. According to official Soviet data, over 38 million sq m of living area, or about 50 percent of the residential fund, were destroyed. The heaviest losses were sustained by Kiev, Kharkiv, Dnipropetrovske, Odessa, Chernihiv, Zaporizhia, Staline, Poltava, Kremenchuk, Ternopil, Lozova, Kramatorske, and Romodan. The total loss was estimated to amount to 100 billion dollars.

Reconstruction began in 1943–4. It was tightly controlled by the government, and priority was given to industrial and agricultural projects. All able civilians were mobilized for construction work on the so-called days of rest.

Fourth and fifth five-year plans. During the fourth (1946–50) and fifth five-year plans (1951–5) many war-damaged plants were rebuilt: the large metallurgical plants in Zaporizhia, Mariupil, Dnipropetrovske, Donetsk, Nykopol, and Luhanske; the machine-building plants in Kharkiv, Kiev (Darnytsia silk industry), Horlivka, and Kramatorske; and the Dnieper Hydroelectric Station in Zaporizhia (1947). The Dashava-Kiev natural-gas pipeline was put into operation (1948), and the *Kakhivka Hydroelectric Station and Reservoir were built (1950–5). Attention turned to the war-devastated cities. In Kiev, Khreshchatyk Boulevard was rebuilt in 1948–53: a 1,500 m length of the street was widened to 75 m, new buildings were decorated with ceramic tiles displaying Ukrainian designs, and the restored complex of Kiev University enclosed over one million cubic meters of space. In 1951–7 the Exhibition of the Achievements of the National Economy of the Ukrainian SSR, which consists of a complex of pavilions spread over 337 ha in Kiev, was built. The Paton Bridge, built in 1953, a wholly welded structure 1,543 m in length, connects Darnytsia with the capital of Ukraine. Theaters were built in Donetsk, Vinnytsia, Luhanske, Kryvyi Rih, and other cities. In Kharkiv a complex of buildings on Dzerzhinsky Square was reconstructed, and the complex of the university, with an 18-story central building, was put up on the site of the Projects Building, which had burned down in 1941. Many department stores, hospitals, schools, houses, and the building of the city soviet were built in Kharkiv. Because of a shortage of skilled labor and good-quality materials, residential buildings in the cities were usually limited to a few stories. In Dnipropetrovske not only was the main street and the Karl Marx Boulevard reconstructed, but a new housing

A construction site in Donetsk

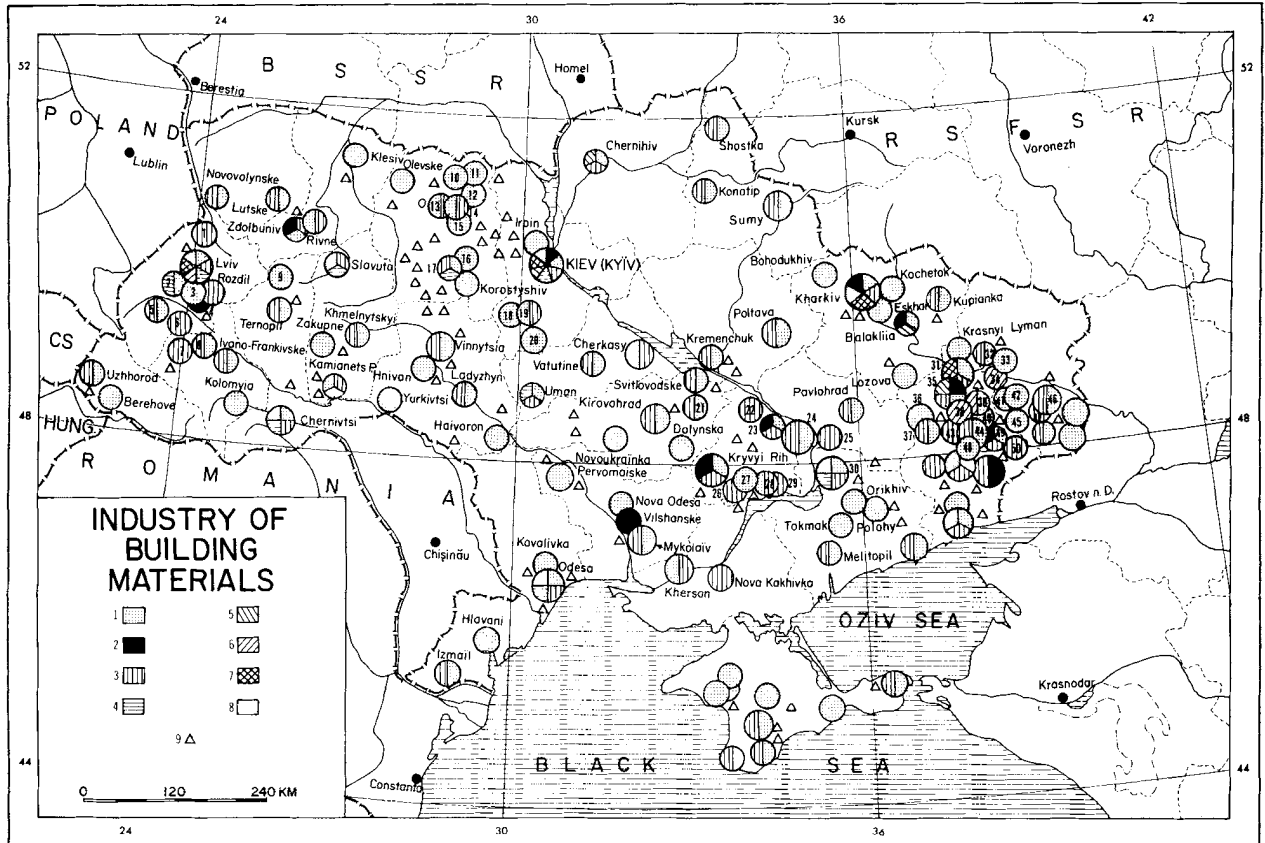

development known as Budivelnik, with one-story houses decorated with designs based on folk motifs, was built. Residential and public buildings were erected in Zaporizhia, particularly along Lenin Boulevard; in Donetsk, particularly at the city center with its 10-story Ukraina hotel; in Luhanske, Odessa, Mykolaiv, Kherson, Ternopil (almost completely reconstructed in 1953–5, mostly with three- and four-story buildings); and in Lviv, where a central square and a park of recreation and culture with a 5,000-seat theater were also developed. The railway stations in Kharkiv (1952, the largest in Ukraine and containing 105,000 cu m), Dnipropetrovske (1951, 165 m in length), Odessa (1952), Donetsk, Poltava, Vinnytsia, Chernihiv, Sumy, and a number of other cities were either restored or built.

According to official sources, in the first decade after the war (1946–55) about 4,600 large industrial enterprises were put into operation and 3,000 schools, 4,000 clubs and theaters, 2,000 hospitals, and 5,000 children's institutions were built. New cities sprang up – Nova Kakhivka, Prydniprovsk, Siverskodonetske, Chervonohrad, Novovolynske, Kremhes, etc. The value of the construction done in this period amounted to 17.5 billion rubles.

When the war-ruined cities had been rebuilt and the construction institutions reorganized, the period of normal planning began for the construction industry.

Sixth to tenth five-year plans. During the last five-year plans, from the sixth to the tenth (1956–80), important changes took place in certain branches of construction. The total value of construction in the Ukrainian SSR during this time came to about 188 billion rubles.

In industrial construction top priority was placed on heavy industry, which obtained over half of all capital investment. New metallurgical plants were built in Dnipropetrovske (the Petrovsky Plant), Kryvyi Rih, Yenakieve, and other cities. Blast furnaces, including the largest furnace in the world (the Kryvyi Rih No. 9), and rolling mills, at the Zhdanov (Azovstal) and the Kryvyi Rih steel plants, were introduced. Many large coal shafts were opened up in the Donets Basin and the Lviv-Volhynian Basin. Iron-ore enrichment complexes such as the Dnieper, Inhulets, and Northern plants and the Southern-Syvash Magnesium Plant were constructed. Machine building continued to expand, new centers opening up in Kramatorske, Dnipropetrovske, Zhdanov, Zaporizhia, Sumy, Horlivka, Kremenchuk, Poltava, Vinnytsia, Bila Tserkva, Zhytomyr, Lubni, Lviv, Chernivtsi,

CONSTRUCTION AND BUILDING-MATERIALS INDUSTRIES

1. Manufacture of binding, insulating, facing, and wall materials
2. Cement industry
3. Manufacture of concrete and reinforced-concrete structures and parts
4. Manufacture of covering materials
5. Manufacture of asbestos-cement products and slate
6. Silicate-glass industry
7. Manufacture of building ceramics and faience
8. Other branches
9. Deposits of raw materials for the construction industry
(glass sand, lime, clay, slate, gypsum, marl, bitumen, resins, rock, sandstones, marble)

| 17. Zhytomyr | 34. Lysychanske | 51. Krasnodon | |

Lutske, and many other cities. Beginning in 1956 long-distance pipelines were laid to carry natural gas from the Shebelynka gas fields. The chemical industry grew, with new plants appearing in Cherkasy and Sumy. The petroleum-refining and petrochemical industry gained new plants in Kremenchuk, Lysychanske, and Zaporizhia. The nitrogen-fertilizer plant in Rivne, the synthetic-fibers production complex in Chernihiv, the tire plant in Dnipropetrovske, and the rubber- and asbestos-products plant in Bila Tserkva went into operation. A number of light-industry plants were opened, including a textile plant in Donetsk, a woolen-cloth mill in Sumy, and a knitting factory in Dnipropetrovske. In all these buildings the construction of roofing and insulation was improved. Besides reinforced concrete, welded metal structures began to be used in industrial construction.

In the electric-power industry large thermal-power stations (including some of the largest in the world) were built, including the Dnieper (1955), Dobrotvir (1955), Sloviansk (1957), Voroshylovhrad (1957), Starobesheve (1958), Zmiiv (1960), Kryvyi Rih (1965), Burshtyn (1969), Zaporizhia (1972), Vuhlehrske (1975), and Trypillia stations. During the most recent five-year plan (1976–80) nuclear-power stations such as the Chornobyl, Rivne, and Southern Ukrainian stations were opened; these produce about five million kilowatts or half Ukraine's electric power.

Contemporary construction

Hydrotechnological construction. This branch of construction has increased greatly in Ukraine. Some of the largest dams, reservoirs, and hydroelectric stations have been built on the Dnieper River – in Kakhivka (1950–6), Kremenchuk (1954–60), Dniprodzerzhynske (1956–64), Kiev (1960–6), and Kaniv (1963–75). In 1961–9 the Northern Crimean Canal (402.6 km) was completed, and several water-supplying canals, such as the Donets-Donbas (132 km), the Dnieper-Donbas (125 km), and the Dnieper-Kryvyi Rih (41.6 km) canals, were built. The area of irrigated land expanded by 650,000 ha with the construction of the Inhulets, Krasnoznamianka, Tatarbunary, and Bortnychi irrigation systems. At the same time 920,000 ha of land were drained. In the postwar period (1946–80) a total of 2,130,000 ha were brought under irrigation, and 2,680,000 ha in Ukraine were drained.

Residential construction. Beginning in 1957, when the government adopted the decree 'On the Development of Residential Construction in the USSR,' the housing situation improved somewhat. The development of large residential complexes and microregions, which contain cultural and recreational buildings, cinemas, schools, government buildings, stores, commercial buildings, and sports facilities, was introduced at the time. The following residential districts appeared: in Kiev – Pershotravnevyi, Minskyi, Obolonskyi, Rusanivskyi, Voskresenskyi, Vidradnyi, and Livoberezhnyi, with high-rise (five- to sixteen-story) apartment buildings; in Kharkiv – Pavlove Pole; in Dnipropetrovske – Vuzivskyi and Novomoskovskyi; in Donetsk – Korovskiy and Donetsk Chermushky. In the microraiions of Zaporizhia, Odessa, Khereson, Mykolaiv, Zhdanov, Voroshylovhrad, and Lviv the streets, squares, and city districts have been completely built up as a result of the new system of construction.

On-site assembly of precast reinforced-concrete parts has made it possible to construct larger buildings at faster rates. Large building units, such as panels and blocks, are

A prefabricated-concrete plant in Kiev

prepared in factories and are then merely assembled at the site. In 1968 there were 36 industrial complexes and plants producing large-panel housing in Ukraine. Together they accounted for about 2.5 million sq m of new living space per year. Large prefabricated panels are used in about 50 percent of the new apartment buildings and 30 percent of the industrial projects.

To increase the output of reinforced concrete, the production of cement had to be increased: by 1978, 23.1 million tonnes of cement, compared to 1.2 million tonnes in 1940, were produced in Ukraine. Besides reinforced concrete and brick, slag concrete and silicate blocks and plastics are used as building materials.

The repetitive application of typical designs simplifies the planning of apartments and makes it possible to increase the housing fund rapidly. In 1956–80, 467 million sq m of living space, 15,175 schools with space for 5.5 million pupils, 13,800 clubs and cultural facilities, and hospitals with a total of 268,000 beds were constructed in Ukraine.

The more important urban buildings and structures in Ukraine are the Sports Center (1958–60), the Dnipro Hotel, the subway stations, the Center for Pioneers and Schoolchildren (1965), the Square of Glory, and the building of the Economics Institute of the State Planning Commission of the Ukrainian SSR (1967) in Kiev; the Ukraina concert and film theater (1963) in Kharkiv; the Tarasova Hora Hotel (1961) in Kaniv; the new campus of the Polytechnical Institute in Lviv; the building of the city soviet (1964) in Donetsk; the theaters in Cherkasy and Zhytomyr; and the air terminals in Boryspil, Odessa, Zaporizhia, Voroshylovhrad, and many other cities.

In the last 60 years about 250 new cities have been built in Ukraine, while many other cities have become industrial centers. When the cities were restored, new streets and squares were designed, and new residential sections with parks and greenery were built. Many old enterprises were moved beyond the limits of the residential sections.

The construction of new towns (smt) and workers' settlements is an important part of the new construction in Ukraine. They encircle industrial plants and railway junctions in many localities of the Donets Basin, Dnipropetrovske oblast, Zaporizhia oblast, and in many other industrial regions. In 1982 there were 908 towns and about 100 workers' settlements in Ukraine. They resemble the microraiions of the cities. Even in the industrial regions the construction industry lags far behind the demand for housing.

Rural construction. Official Soviet sources admit the 'considerable backwardness of rural construction' and offer various reasons for it: the dispersion of construction organizations, the inadequate entrepreneurial approaches to construction, and even inadequate technical equip-

ment. The severe housing shortage on the collective and state farms exposes the contrast in Soviet practice between display projects and the real rural-housing situation. After the Second World War millions of peasants lived in mud huts, and still today many peasants live in deplorable conditions. The new display houses of one or two stories with two to four rooms are similar to single-family workers' houses. A few villages have sewage systems. The Model Collective-Farm Statute of 1969 defined the size of the plot assigned to the collective-farm homestead (0.25–0.70 ha), while at state farms each family receives 0.40 ha. The private plot encompasses the family house, farm buildings, orchard, flower garden, vegetable garden, small farmyard, and so on. The official policy is to replace private houses and plots with communal housing. There is a close resemblance between the buildings of the collective farms and the state farms. In 1975, according to official information, 96 percent of new rural construction in Ukraine was based on typical designs. The typical designs of various buildings and the preassembled reinforced-concrete structures that are altering the appearance of the Ukrainian village are prepared by the State Design and Scientific Research Institute for Rural Construction of the Ukrainian SSR. In the 1970s display models of farm buildings were put up in a number of villages – in Kodaky in Kiev oblast, Koshmanivtsi in Poltava oblast, and Korobky in Kherson oblast. According to official statistics, a total of 69 million sq m of living space was built in the villages in 1959–70. At the same time many facilities for animals and farm production were constructed on collective and state farms. It should be pointed out that the farm and residential buildings are poorly designed and constructed.

Transport construction. Transport construction in Ukraine is completely controlled by the Ministry of Transport Construction of the USSR in Moscow. Ukraine's transportation facilities lag behind the facilities of other European countries, and little has changed in this respect during the last five-year plans. In the last 40 years the public railway system has received only 2,400 km of new track and 6,900 km of electrified track. Track used by industrial enterprises has expanded more rapidly – by 5,300 km in 1965–80. The highway system of Ukraine has grown by 104,400 km, and new highways, such as the Kiev-Odessa, Kiev-Kalinovka-Moscow, Kiev-Poltava-Kharkiv-Rostov, and Symferopil-Yalta highways, have been constructed. A number of reinforced-concrete and metal bridges have been put up, including the Paton Bridge (1,543 m), the pedestrian Park Bridge (400 m), the Metro Bridge (700 m), the Moscow Bridge (816 m), and the Rusanivka Bridge (350 m) in Kiev and a number of bridges across the Dnieper in Dnipropetrovske. Navigable waterways increased by 1,500 km from 1940 to 1980. New port facilities have been built in Odessa, Illichivske, Sevastopol, and Yalta on the Black Sea. A number of airports have been constructed, the largest of which is in Boryspil near Kiev (1965). Oil and gas pipelines have been laid; in 1980 they carried 102 million tonnes of oil and petroleum products. In the area of municipal development and transportation an intercity mountain trolleybus line has been set up between Symferopil, Alushta, and Yalta. In 1960 a subway system (26.2 km by 1981) was opened in Kiev and in 1975 in Kharkiv (17.3 km). In the last 40 years trolleybus systems covering 3,100 km have been introduced in 35 cities.

Reinforced concrete is widely used in transport construction and prestressed reinforced concrete is used in bridge building. Mobile reinforced-concrete and asphalt plants are employed in road building.

Organization of the construction industry. In the USSR the construction industry is under the jurisdiction of the State Committee for Construction (Gosstroj) at the USSR Council of Ministers and the Ministry of Construction. Corresponding republican agencies exist in Ukraine – the State Committee for Construction (Derzhbud USSR) and the Ministry of Construction of the Ukrainian SSR (est 1963) – but their role is limited to carrying out directives of the all-Union ministries. In 1967 some specialized branches of construction were given their own Union-republican ministries: the construction of heavy-industry plants, industrial construction, assembly and special construction work, rural construction, amelioration of water and water management, and the manufacture of building materials. Analogous ministries were set up in Ukraine to implement the policies of the all-Union ministries and Gosstroj in Ukraine.

The problems that beset the construction industry are described in a series of decisions passed by the CPSU Central Committee and the USSR Council of Ministers: On the Development of Production of Assembled Reinforced-Concrete Structures and Details for Construction (1954), On the Measures to Further Industrialize, Improve the Quality of, and Reduce the Costs of Construction (1955), On Eliminating Excesses in Designing and Construction (promoting the development of typical designs, 1955), On the Development of Residential Construction in the USSR (1957), On the Further Development of Co-operative Residential Construction (1964), On the Measures to Improve the Quality of Residential-Civil Construction (1969), and On Putting Rural Construction in Order (1968). The CPSU and the Council of Ministers of the Ukrainian SSR also issued resolutions in this area: On the Measures for Implementing the Planned Reconstruction of Villages in the Ukrainian SSR (1964) and On the Measures to Improve the Quality of Residential-Civil Construction (1977). Yet, the situation in construction could not be significantly improved because of extreme centralization, formalism, and bureaucratization and the lack of individual initiative.

Design and research organizations that concentrate on improving the techniques and economics of production play an important role in the development of the construction industry. Among them are such institutes as the Southern Scientific Research Institute of Industrial Construction, the State Institute of City Planning for the Ukrainian SSR (Dipromist, est 1945), the State Institute for Designing Civil and Industrial Buildings (Diprotsvilprombud) in Kiev, the Ukrainian Institute of City Planning and Construction (Ukrmiskbudproiekt) in Kharkiv, the Kiev Building-Design Institute (Kievproiekt), the Kharkiv Building-Design Institute (Kharkivproiekt), and the Donetsk Building-Design Institute (Donetskproiekt). The development of collective farms and state farms is supervised by the Ukrainian State Chief Design and Scientific Research Institute of the Ministry of Agriculture of the Ukrainian SSR and the Ukrainian State Scientific Research and Design Institute of Civil and Rural Construction (Ukrndiprotsvilsilbud) of the State Committee for Construction of the Ukrainian SSR. In the area of transport construction the branches of the Chief Insti-

tute of Transportation Design (Holovtransproiekt) in Kiev and Kharkiv and the Scientific Research Institute of Building Production of the State Committee for Construction in Kiev and its branch in Dnipropetrovske are responsible for design.

Training and studies in construction. Until 1914 specialists in the field of construction were educated in Ukraine at the Kiev and Odessa polytechnical institutes, the Kharkiv Technological Institute, and the Lviv Polytechnic. Ukrainians also studied construction at higher institutions of learning in St Petersburg, Vienna, Prague, and Danzig. In the 1920s the system of technical education was reorganized in Soviet Ukraine, and technical secondary schools (tekhnikums) and institutes were introduced. Today the following institutes prepare specialists in the various branches of construction: the Polytechnical Institute, the Institute of Civil Engineering, and the Institute of Automobile Highways in Kiev; the Polytechnical Institute, the Institute of Civil Engineering, the Institute of Communal-Building Engineers, the Ukrainian Correspondence Polytechnical Institute, the Institute of Motorways, and the Institute for Mechanizing and Electrifying Agriculture (which has a faculty of agricultural construction) in Kharkiv; the Institute of Civil Engineering, the Institute of Railway-Transport Engineers, and the Mining Institute (which has a shaft-building faculty in Dnipropetrovske; the Polytechnical Institute in Donetsk; the Polytechnical Institute and the Institute of Civil Engineering in Odessa; the Polytechnical Institute and the Institute of Forest Technology in Lviv; the Polytechnical Institute, which has a faculty of civil engineering, in Vinnytsia; the Industrial Institute, with a construction faculty, in Zaporizhia; the Mining and Metallurgical Institute, with a construction faculty, in Komunarske; the Institute of Civil Engineering in Makiivka; the Institute of Civil Engineering in Poltava; the Institute of Water Management, which has a construction faculty, in Rivne; the Agricultural Institute, with a construction faculty, in Voroshylovhrad; the Mining Institute, with a construction faculty, in Kryvyi Rih; and 12 other agricultural institutes, some of which have construction faculties.

Before 1917 S. Tymoshenko, O. Dynnyk, and K. Symynsky distinguished themselves in the field of construction research, publishing works on the resistance of materials, construction mechanics, the theory of vibration, and vibrational strength. Ye. *Paton specialized in the theory of bridge building. In 1919 the Institute of Technical Mechanics was established at the Ukrainian Academy of Sciences, and in 1929 it was renamed the Institute of Construction Mechanics and then in 1959 the Institute of Mechanics of the Academy of Sciences of the Ukrainian SSR. Eventually, other institutes were set up in Kiev: of Problems of Materials Science, of Electric Welding, for Problems of the Strength of Materials, and of Hydro-mechanics. The Academy of Architecture of the Ukrainian SSR (est 1945) was an independent institution. From 1956 to 1964 it existed as the *Academy of Construction and Architecture of the Ukrainian SSR.

There are also a number of specialized scientific research institutes, such as the Institute of Building Production of the State Committee for Construction of the Ukrainian SSR (est 1957 in Kiev), which studies the technology and organization of industrial and civil construction, the complex mechanization of construction processes, and the scientific organization of work in

construction; the Kiev Department of the All-Union Scientific Research Institute of New Materials; the Institute of Typical and Experimental Design of Residential and Public Buildings; and the Ukrainian Roads and Transport Institute of the Ministry of Automobile Transport and Highways of the Ukrainian SSR. Some scientific research in the field of construction is carried on at the teaching institutes of civil engineering mentioned above. Ukrainian scholars have made important contributions to the various branches of construction: Ya. Stoliarov, I. Ulytsky, I. Kyriienko did research on reinforced concrete; F. Beliankin, M. Afanasev, S. Serensen, M. Kornoukhov, B. Horbunov, V. Yatsenko, V. Chudnovsky, and O. Strelbytska have developed the branch of construction mechanics; M. Budnykov, O. Harmash, and O. Nerovetsky have contributed to the industrialization of and the application of assembly-line methods to construction; M. Lavrentiev, Yu. Sukhomel, P. Slipchenko, and P. Neporozhnyi did research in hydromechanics and the construction of hydrotechnical structures; O. Byrulia, O. Frolov, M. Volkov, and B. Horbunov developed new types of bridges, railway tracks, and road surfaces in the field of transport construction.

The following periodicals specialize in construction problems: *Budivnychi materialy i konstruktzii*; *Arkhitektura i budivnytstvo* (1953-6), which was renamed *Budivnytstvo i arkhitektura* (1957-9) and then *Stroitel'stvo i arkhitektura*; *Promyshlennoe stroitel'stvo i inzhenernye sooruzheniia*; *Sil's'ke budivnytstvo*; and *Mis'ke gospodarstvo Ukrainy*.

Conclusion. To sum up the development of the construction industry during the Soviet period (1918-80), of the 335 billion rubles invested in the economy of the Ukrainian SSR, 207 billion, according to official statistics, was allocated for construction and assembly work. In this period 656 million sq m of living space were provided, and 26,460 schools were built. Construction became increasingly mechanized. In 1980 the construction industry in Ukraine made use of 14,427 excavators, 3,180 scrapers, 13,600 bulldozers, 22,520 mobile cranes (including 5,767 tower cranes), and 11,218 motorized cranes. Three hundred and ninety-five state construction-assembly trusts and 3,436 organizations (1,576 general construction organizations and 1,860 specialized construction firms) operated in Ukraine in 1980. In general, about 10 percent of all workers and office staff are employed in the construction industry in Ukraine, which accounts for about 10 percent of the gross national product (in 1976 the respective figures were 10.3 percent of the labor force and 9.4 percent of the gross national product).

In 1967 the construction industry in Ukraine employed 1,360,000 people, including 118,000 engineers and technicians. In 1980 the construction organizations employed 325,000 tradespeople, of whom 120,000 had a higher education and 205,000 had a secondary education.

Constructivism. Artistic movement based on the principle of functionalism and favoring mostly simple geometric forms. In architecture constructivism emphasizes the structure itself and the building materials (reinforced concrete, metals, glass) and avoids decoration. In Ukraine constructivism was popular after 1920 and manifested itself in a series of factorylike buildings: the Building of State Industry and the Projects Building (1925-9, designed by S. Kravets and S. Serafimov), the Post Office (1927-9, by A. Mordvinov), and the Railwaymen's Club in Kharkiv; the Palace of Culture in Kadiivka; the Palace of Labor in Dnipropetrovske, the Dnieper Hydroelectric Station, and so on. After the war a number of buildings in the constructivist style were built, mostly in Kiev: the Dnipro Hotel (1960), the Sports Palace (1960), the Boryspil airport (1965), and the complex of apartment buildings on Rusanivka Island (1963-6); Tarasova Hora Hotel in Kaniv (1961), the Shevchenko Theater of Music and Drama in Cherkasy (1965); the Ukraina Cinema and Concert Hall in Kharkiv (1963); the Suputnyk Theater in Dnipropetrovske (1963); and a large number of palaces of culture throughout Ukraine.

In painting, constructivism uses abstract combinations of lines, objects, and colored planes. The first constructivist artists in Ukraine were A. Archipenko, K. Malevich, A. Ekster, and M. Andriienko-Nechytailo. The influence of constructivism and cubism is evident in I. Kavaleridze's monuments to F. Artem (1923-4 in Artemivske and 1927 in Sviatohorske) and to T. Shevchenko (1926 in Poltava). Constructivism was adopted most widely in stage design. In the 1920s and at the beginning of the 1930s it was the dominant style in the theaters of Ukraine. Its main exponent was V. Meller and his students - D. Vlasiuk, M. Symashkevych, and others - at the maquette workshop of the *Berezil theater. Other prominent stage designers who worked in this style were M. Matkovych, M. Miuller, and Yu. Pavlovych at the Odessa Ukrainian Drama Theater; B. Kosariv, at the Kharkiv Chervonozavodskyyi Theater; H. Tsapok at the Franko Theater in Kiev; and A. Petrytsky, O. Khvostenko-Khvostov, and I. Kurochka-Armashevsky at the opera theaters of Kiev, Kharkiv, and Odessa. Constructivists took an architect-

tural approach to graphics and used various scripts. V. Krychevsky, P. Kovzhun, V. Yermilov, H. Tsapok, V. Tatlin, L. Khyzhynsky, and O. Sakhnovska were among those known for their graphics.

In literature, elements of constructivism can be found in the poetry of the early Ye. Malaniuk and M. Bazhan, O. Vlyzko, G. Shkurupii, and other authors of the *Nova Heneratsiia futurist group. Another literary group, organized by V. Polishchuk, *Avangard (1928-30), proclaimed the ideas of constructivism, dynamism, 'machinism,' and 'spiralism.'

In music, constructivism was manifest in the works of B. Liatoshynsky, B. Yanovsky, A. Rudnytsky, M. Verykivsky (in part), and others. In 1932 constructivism was declared in the Ukrainian SSR to be 'nationalistic' and harmful. Yet, because of its purely technical approach and skillful use of building materials, constructivism survived and developed in Soviet architecture, particularly after the cult of J. Stalin and the pseudoclassical style of architecture encouraged by him came under criticism.

S. Hordynsky

Consular service. Institution of international law based on international custom, treaties (consular, trade, etc), and the legislation of the exchanging states. Present consular law is based primarily on the 1963 Vienna Convention.

In the period of the Hetman state, consular services were performed by diplomatic embassies and delegations. Before the First World War foreign consulates in Russian-ruled Ukraine were located in Kiev, Odessa, Kharkiv, and Kherson; in Austrian Ukraine they were located in Lviv and Chernivtsi (both cities also had Russian consulates, which among other duties carried on Russophile propaganda).

In 1917-18 foreign consulates in Ukraine played a political role: they were the first to establish relations with the Ukrainian government. This was done, for example, by the British consul general in Odessa, J.P. Bagge, who later became a diplomatic representative to the government of the UNR. Most of the consulates in the Russian Empire continued to function under the various Ukrainian governments. After the Peace Treaty of *Brest-Litovsk (1918) the Central Powers opened consulates in Ukraine, while the consulates of the Entente states were closed down. Neutral countries represented the interests of the Entente countries in Ukraine.

Under the Hetman government (April-December 1918), when Ukraine's foreign relations were more or less normal, the following countries had consulates in Ukraine: Austria-Hungary in Kiev and Odessa (consulates general); Azerbaidzhan in Kiev; Belorussia in Kiev and Odessa; Bulgaria in Kiev; Denmark in Kiev; Estonia in Kiev; Finland in Kiev and Odessa; Georgia in Kiev (consulate general), Kharkiv, and Odessa; Germany in Kiev (consulate general), Kharkiv, Odessa, Katerynoslav, and Mykolaiv; Greece in Kiev and Odessa; Italy in Kiev (consulate general) and Odessa; Latvia in Kiev; Lithuania in Kiev; Norway in Kiev; Persia in Kiev (consulate general) and Odessa; Poland in Kiev and Odessa; Rumania in Kiev and Odessa (consulates general); Russia (RSFSR) in Kiev (consulate general), Kharkiv, Odessa, and Poltava; Spain in Kiev and Odessa (vice-consulate); Sweden in Kiev; Switzerland in Kiev; and Turkey in Kiev (consulate general) and Odessa.

The Ukrainian governments initially sent diplomatic missions to other countries and assigned them consular duties. Under the Hetman government a separate consular section was organized at the Ministry of Foreign Affairs, and special consular courses were set up in Kiev. Special agreements on consular relations were signed with the RSFSR (the preliminary peace treaty of 12 June 1918), Kuban (16 November 1918), Georgia (5 December 1918), and the Central Powers (Peace Treaty of Brest-Litovsk). In 1918–19 Ukrainian consulates, which were quite distinct from diplomatic missions, were maintained in Azerbaidzhan, Belorussia, Armenia, Georgia (Consul General Lisniak in Tbilisi; consulates in Batumi, Sukhumi, and Gagra), Denmark, the Don (Consul V. Mishchenko), Kuban (Consul Gen P. Poniatenko), Latvia, Lithuania, Germany (in Berlin, Munich [V. Orenchuk], and Danzig), Poland, Rumania (in Iași and Galați), Finland (Consul P. Slyvenko), Hungary, Czechoslovakia, Switzerland (Consul Ye. Sokovykh in Zurich and O. Bilinsky in Geneva), and Sweden (Consul General D. Antonovych).

Because of the large number of Ukrainian citizens in Soviet Russia, many Ukrainian consulates were established there shortly after the signing of the preliminary peace treaty (law of 4 July 1918). Consulates general were opened in Moscow (O. Kryvtsov) and Petrograd (S. Veselovsky). Consulates and consular agencies were set up in Alekseevsk (Svobodnyi), Arkhangelsk, Astrakhan, Blagoveshchensk, Chita, Kazan, Khabarovsk, Kursk, Nikolsk-Ussuriisk, Novo-Nikolaevsk (Novosibirsk), Omsk, Penza, Petropavlovsk, Rybinsk, Samara, Saratov, Tashkent, Tobolsk, Tomsk, Tsaritsyn, Tula, Vladivostok, and Voronezh. Consuls were usually appointed from among the leaders of local Ukrainian communities. The basic task of the consulates was to repatriate Ukrainian citizens and to organize Ukrainian cultural life. Sometimes they organized Ukrainian military units. On 24 December 1918 the Council of People's Commissars of the RSFSR ordered all Ukrainian consulates in Russia closed. The Ukrainian government ordered Russian consuls to leave Ukraine.

Under the Directory of the UNR embassies and diplomatic missions took over the consular functions, except where consulates still existed from the earlier period. The Western Ukrainian National Republic did not develop a consular system. In 1920 it maintained briefly a consulate in Uzhhorod (Consul General H. Stefaniv), where members of the Ukrainian Galician Army were staying at the time.

The Ukrainian SSR did not have a functioning consular service. On 19 March 1919, after the second Soviet occupation of Kiev, the government of the Ukrainian SSR expelled all foreign consuls from the capital. It justified this step by pointing out that their countries did not recognize the Ukrainian SSR and did not permit Soviet Ukrainian consulates to open on their territories. After the Peace Treaty of Riga had been concluded and diplomatic relations with certain non-Soviet countries had been established, consular services were provided by some Soviet Ukrainian missions (in Poland, Czechoslovakia, Germany, Austria) or by RSFSR missions. Treaties between the Ukrainian SSR and the Baltic countries, Turkey, Austria, and Czechoslovakia (1920–2) contain articles on consular exchange or, in some cases, undertakings to conclude consular treaties later. Nothing came

of these undertakings. With the formation of the USSR all foreign services of the Ukrainian SSR were abolished.

In the 1930s the following countries had consulates in the Ukrainian SSR: Germany, in Kiev, Kharkiv, and Odessa; Italy, in Kharkiv and Odessa; Poland, in Kharkiv and Kiev; Turkey, in Odessa; Japan, in Odessa; and Czechoslovakia, in Kiev. Beginning in 1935 the government of the USSR closed down these consulates as it purged itself of opposition elements, accusing them of collaborating with foreign diplomats. After 1937 only the Polish and Czechoslovakian consulates in Kiev remained. Ukrainians were employed at lower levels in the consular service of the USSR, particularly in countries in which the Ukrainian SSR had some interest because of their Ukrainian minorities. In the 1920s I. Kulyk was Soviet consul to Canada and Yu. Lapchynsky was Soviet consul to Poland (stationed in Lviv).

Ukrainian territories under Poland, Rumania, and Czechoslovakia had foreign consulates in Lviv (14), Chernivtsi, and Uzhhorod. While the Carpatho-Ukrainian state was autonomous (1938–9), there was a Polish consulate in Sevliush and a German consulate general and a Rumanian consulate in Khust.

According to the 1944 constitutional amendments in the USSR and the Ukrainian SSR, the latter has the right to enter into direct relations with foreign countries and to exchange diplomatic and consular representatives with them (art 15-b of the Ukrainian constitution). Yet, to this day, Ukraine has not been allowed to organize its own consular service, which in the USSR remains centralized. In the 1950s and 1960s the East European countries (Poland, Czechoslovakia, Hungary, the German Democratic Republic, Bulgaria, and Yugoslavia) opened consulates in Ukraine. From 1975 to 1980 an American consulate functioned in Kiev.

Contact Committee (Kontaknyi komitet). Committee that functioned in Lviv in 1937–9 to co-ordinate Ukrainian political activities under Poland on principal issues and to oppose the tactics of the *Ukrainian National Democratic Alliance (UNDO). The following were members of the committee: from the opposition in UNDO (the group known as Dilo), D. Levytsky and V. Kuzmowych; from the *Front of National Unity, D. Paliiv and S. Volynets; from the Ukrainian Socialist Radical party (USR, formerly *Ukrainian Radical party), M. Stakhiv and I. Kostiuik; from the *Union of Ukrainian Women (later *Druzhyna Kniahyni Olhy), M. Rudnytska and O. Fedak-Sheparovych; from the *Ukrainian Social Democratic party, V. Starosolsky; and from the Catholic group Nova Zoria, O. Nazaruk. The committee's activities were not public, yet its decisions were acted upon by all the organizations that were represented on it.

Contract. Principal source for contract law, a part of *civil law. A two-party or multiparty contract is a legal act based on the concordance of all parties; it establishes or changes their rights and obligations towards each other.

In the law of ancient Rus', contract was an important institution in customary law, and its conclusion involved a number of formal and symbolic acts. In the **Ruskaia Pravda*, contract, which was known as *riad* (settlement), was not associated with only one form. It was most often a verbal act. In old Rus' law there existed contracts of buying and selling, borrowing, rent, and deposit. Under the *Lithuanian Statute, contracts concerning the buying, selling, and exchange of immovables, as well as loans exceeding a certain amount, had to be drawn up in writing. The statute also normalized contracts of rent, deposit, gifts, and guaranty and included joint obligation, which attested to the more complex conditions of socioeconomic life. In the civil law of the Hetman state, and principally in the *Code of Laws of 1743, contract was referred to as *zapys* (written document), and most cases demanded written contracts. The conditions necessary for a contract to be binding were the manifestation of free will, the agreement of the contract with law and popular custom, the moral nature of the object of contract, and the legal accountability of the persons involved. The following types of contract were included in the code: pledge, guaranty, loan, deposit, purchase and sale, lease, grant, and redemption.

Under Russian and Austrian rule the norms of contractual law constituted part of the civil law that had been codified at the beginning of the 19th century under the influence of the Napoleonic Code and strongly emphasized the principle of freedom to enter into contract. These contract laws were still in force in the UNR and the Western Ukrainian National Republic from 1917 to 1920.

In the Ukrainian SSR, the postulates of contract law are set down in the Civil Code of 1922 (arts 130-398). Contracts of rental, purchase and sale, exchange, loan, undertaking to supply, guaranty, bestowal, grant, commission, insurance, and association are normalized in this code. The sections of the *Civil Code of the Ukrainian SSR regarding contract as an institution of civil law still had a relatively great deal in common with the law of non-Soviet states; however, their application became progressively more limited owing to the extension of government control over the social and economic sectors and to the planned character of the economy.

The function of contract changed with the introduction of a wholly planned economy in the Ukrainian SSR. In legal relations between private individuals, contract retained its old meaning, although the number of types of contract decreased. In the private sector at present, freedom of contract exists in principle (for contracts of purchase and sale, conveyance, exchange, bestowal, rental of domicile, rental of goods, etc).

Contracts of undertaking, in which one party obligates itself to carry out a certain task on the request of the second party (the parties may be private citizens, legal persons, or institutions), are regulated by chapter 28 of the Civil Code of the Ukrainian SSR. There are various types of contracts of undertaking, for example, for capital construction, housing, research, and construction work. These are regulated in detail by the standard regulations

(*typovi polozhennia*) for drawing up commercial contracts and by the decrees of the Council of Ministers of the USSR.

In place of contracts of association there exists a contract of joint action between socialist enterprises and, to a limited extent, between private persons. However, such a contract is not one between legal persons. There also exists a contract pertaining to an employee's material responsibility, which is drawn up in writing between the enterprise and the employee.

In the socialist sector freedom of contract does not exist. Enterprises and organizations must draw up contracts according to the plan of, and on the basis of instructions from, the responsible state institutions (ministries, material and technical-supply agencies). The instructions define the parties and the main terms of the contract, so that the parties are left to stipulate only the secondary conditions (eg, delivery date, type of packaging). The planned division of the means of production is effected by means of the plan and orders from above in the socialist sector, and the contract serves here as a means of controlling both parties. The drawing up of planned contracts takes place at designated times during the contracted period.

The major contract of the planned economy is the one for the delivery of goods. It is drawn up and carried out according to the Regulations for Goods' Delivery ratified by the Council of Ministers of the USSR and the Special Conditions of Goods' Delivery, established for various types of production by the Council of Ministers of the USSR and in certain necessary cases by the Council of Ministers of the Ukrainian SSR. Penalties for contraventions of goods'-delivery contracts include fines for breach of contract (monetary fines and imprisonment) and compensation for non-fulfillment of obligations by the contracted party (Civil Code of the Ukrainian SSR, 1964, art 253). Contractual disputes are resolved by state arbitration. The contracting parties are bound by contractual discipline, whose contravention (through, for example, expiration of term or non-fulfillment of contract) is punishable by stipulated contractual sanctions.

Other types of planned contracts include those regarding agricultural production drawn up between state supply organizations and collective farms or state farms. The state's purchase of agricultural products is based on these contracts.

In the labor law of the Ukrainian SSR there exist collective contracts, that is, agreements between trade-union organizations and the administrations of enterprises, by means of which the parties establish their mutual obligations in fulfilling state plans. Individual labor contracts have no particular significance, because all workers' rights and obligations are defined in the Code of Labor Laws and the 'rules of internal labor management' that exist in every enterprise (see *Labor law).

In the branch of copyright law, there are contracts between authors and the state publishing institutions, which are drawn up according to the model contracts ratified by the Council of Ministers of the Ukrainian SSR or, on its authority, by the appropriate departments and the 'creative associations' (see *Copyright law).

In the post-Stalin period voluntary insurance contracts (personal and property) were introduced. The form and conditions of these contracts are defined by the instructions of the Ministry of Finance of the USSR. These contracts differ little, in essence, from their counterparts in the free-market system (see *Insurance).

Regulations for drawing up all contracts are found in the 1964 Civil Code of the Ukrainian SSR (arts 153–60).

Contract fair (*konkraktovyi yarmarok*). Annual fair at which wholesale purchase contracts for manufactured and agricultural products, real-estate sale and lease contracts, and other commercial contracts were made. Contract fairs were introduced at the end of the 15th century in Ukraine and were particularly popular among the nobility and the wealthy burghers and merchants in the cities and towns of Ukraine and Poland. The fairs lasted several weeks during the winter season. The Lviv fair, which was discontinued at the beginning of the 19th century, was the best-known contract fair in the 17th century. In 1774 a contract fair was introduced in Dubno, Volhynia; in 1797 it was transferred to Kiev and merged with the existing Kiev fair. The *Kiev contract fair took place every year in the second half of February and the beginning of March (known as the Candlemas [*Stritenskyi*] Fair). Held at first in the city hall, from 1801 it was held in a hall built especially for this purpose by the architect A. Melensky in the Podil district. Eventually the contract fairs became ordinary fairs, which continued to function in Ukraine until 1927, when they were banned by the Soviet authorities.

Cooperage. Manufacture of wooden buckets, basins, barrels, and so on. For many centuries this was one of the better known trades in Ukraine. Products of this trade were found in ancient Slavic graves, and references to the trade are found in the literature of the Princely era. In the 16th–17th century the cooper's products were sold at markets, and coopers' guilds were organized in the cities in that period. In Ukraine the cooper's craft was known for the wide selection and distinctive character of its products and for its own terminology of an ancient origin. The trade was widely practiced in regions that were rich in timber – in Polisia, Volhynia, and Galicia, particularly in Subcarpathia and the Hutsul region; in the Chernihiv region; in the Radomyshl region; in some districts of the Poltava region; and in northern Slobidska Ukraine. In addition, coopers in villages throughout Ukraine served the needs of the population. Today coopers work mostly in artels belonging to manufacturing co-operatives.

Co-operative movement. Co-operative associations are based on the idea of economic co-operation and mutualism. By participating in a co-operative enterprise the members seek either to minimize their costs or to maximize their profits. The main features of co-operative associations are an unrestricted number of members, voluntary membership, equality of rights and obligations, and the election of officers. A co-operative attempts to gain for its enterprise lower interest rates on capital, a fair price for goods and services, and adequate wages. Some co-operatives try to improve the cultural life or the moral and civic virtues of their members. Advocates of the co-operative movement believe that it is capable of gradually overcoming the negative aspects of the present Western socioeconomic system. The Bolsheviks opposed in principle the co-operative movement because, according to them, it distracted the workers from the direct class struggle. Yet, when V. Lenin assumed power, he proposed a co-operative plan by which the state would

draw the small farmers, merchants, and entrepreneurs into the building of socialism. Under Soviet rule the state and the Party control the co-operatives; hence they lack the essential features that characterize co-operatives in the Western world.

The co-operative movement in Western Europe emerged in response to the needs of industrial workers. The Ukrainian co-operative movement, however, emerged in the late 1860s in response to the socioeconomic needs of the recently emancipated peasants and the petty artisans and laborers in the towns. The Ukrainians attributed greater importance to the movement than did most nations. Under the political conditions of the time, it served as a means of social and economic self-defense and became an integral part of the struggle for national independence. The self-governing economic associations not only strengthened the people's economic power and taught the masses civic responsibility, but also trained large numbers of civic leaders, who played a prominent role in the period of Ukrainian statehood.

Because of different political and legal conditions, the co-operatives developed differently in central and eastern Ukraine, in Western Ukraine, and under the Soviet regime.

Central and eastern Ukraine. Until 1917 the co-operative movement in this part of Ukraine was closely tied to the movement in Russia. It began in the 1860s: the first consumer co-operative was established by M. *Ballin in Kharkiv in 1866. The first credit co-operative appeared in Hadiache in 1869, and the second was founded by H. *Galagan in Sokyryntsi in Poltava gubernia in 1871. Up to the 1890s development was slow because of insufficient awareness of the potential of co-operatives among the population and the organizers, the government's hostile attitude to co-operatives, and the lack of co-operative legislation. Thus, the existing co-operatives were weak and often short-lived. In 1880 there were barely 130 co-operatives in Ukraine. By 1895 there were 290; most were credit unions (savings and loan associations), and some (50) were consumer co-operatives. The rural intelligentsia usually helped in founding such unions. Later the *zemstvos (particularly their agronomists) were for a long time the main proponents and instructors of co-operatives. After 1904 co-operatives were supported by state inspectors of co-operative credit, zemstvo instructors, and small credit banks.

The movement grew more rapidly in the 1890s, owing to a general upsurge in civic life and the enactment of co-operative legislation. The statute on consumer associations issued in 1897 gave local governors (instead of the central government) the power to confirm the statutes of co-operatives. The law on small credit unions of 1 June 1895 (amended in 1904 and 1910) regulated the organization of credit co-operatives. After 1905 the movement developed even more freely. At the time Poltava, Kiev, and Podilia gubernias had more consumer co-operatives than any other gubernias in the Russian Empire. From then on national aspirations, particularly the demand for independent co-operative associations, became increasingly marked in the co-operative movement in Ukraine.

The first co-operative associations in Ukraine were the Union of Credit Co-operatives in Berdianske (1901) and the unions of consumer co-operatives in Kiev (1908) and Vinnytsia (1910). In 1913 the consumer associations were

dissolved, and Ukrainian co-operatives had to join the Moscow Union of Consumer Societies. Through its efforts, the Consumer Society of Southern Russia was established in Kharkiv to carry out imperial centralist policies. The struggle of the Ukrainian co-operatives for their own movement was evident at the all-Russian co-operative congresses: at the first congress, held in Moscow in 1898, Ukrainian delegates agreed to co-operate among themselves in organizing a co-operative movement in Ukraine; at the second congress, held in Kiev in 1913, which also included Western Ukrainian participants, the delegates raised the question of their right to organize their own associations of co-operatives.

In 1913 Kiev was the center of the Ukrainian co-operative movement. It was the seat of the *Nasha Kooperatsiia society, which was the ideological focus of the Ukrainian movement, and the publishing capital of the Ukrainian co-operative press. The following figures show how the movement expanded: there were 450 co-operatives of all types in 1900; 820 in 1905; 2,100 in 1910, and 6,510 in 1914, of which 3,022 were consumer co-operatives (half of them rural, half urban) and 2,477 were credit and savings and loan unions. The most prominent leaders of the movement were V. *Domanytsky, O. *Yurkevych, Kh. *Baranovsky, B. *Martos, P. *Pozharsky, J. *Wołoszynowski, and M. *Stasiuk. Agricultural co-operatives (whether farm unions [1,020 in 1915] or farm associations [150]) and manufacturing co-operatives (founded first by M. *Levytsky at the end of the 19th century as farming artels, which in time became artisan and trades *guilds) were less important. Although Ukrainian co-operatives did not succeed in establishing one national independent organization before the revolution, they were, along with the zemstvos, an important factor in the economic life of Ukraine. Members of the intelligentsia that founded the co-operatives – M. Levytsky, V. Domanytsky, O. Yurkevych, F. Chernenko, and others – trained co-operative leaders and published the first popular brochures on co-operatives. In 1910 courses on co-operative management, many of which were organized by B. Martos, began to be offered.

During the First World War, even before 1917, the co-operatives expanded their activities. This was particularly true of the consumer co-operatives (owing to food shortages) and manufacturing co-operatives (owing to military requirements). With the outbreak of the revolution, the Ukrainian co-operatives began to withdraw from the Russian associations and to form their own. This process coincided with Ukraine's gradual political separation from Russia. The co-operative legislation adopted by the Russian Provisional Government on 20 March 1917 (after a 10-year struggle for its adoption) facilitated the growth of the co-operative movement.

The leaders of the Ukrainian movement wanted to use the co-operative structure as the foundation of the national economy of the new Ukrainian state, which lacked capital. Many Ukrainian political leaders emerged from the ranks of the co-operative movements: half of the members of the *General Secretariat of the Central Rada had once been active in the co-operatives. The three all-Ukrainian co-operative congresses – in May and August 1917 and the largest in May 1918 – determined the structural forms of the movement and set up the *Ukrainian Central Co-operative Committee (Kooptsentr) as the central organization for all of Ukraine's co-

operatives. In spite of the war, thousands of different co-operatives appeared: there were 9,200 in 1917 (up from 6,860 in 1915) and 22,300 in 1920. Individual co-operatives joined the numerous new co-operative unions, which numbered 253 by the end of 1918 (compared to a dozen or so before the war). Of these 120 were consumer unions, 43 were credit unions, 7 were farm unions, 41 were mixed unions, and 42 were other unions. The densest network of unions was in Kharkiv and Podilia gubernias, where most were small and localized. Poltava gubernia, in contrast, had a well-developed network of co-operatives, but only a few unions. At the beginning of 1920 there were 22,000 co-operatives of various types and about 270 unions.

There was hardly a locality without a co-operative. The co-operative movement had six million members, and almost 60 percent of the population participated in consumer co-operatives. Besides local and regional co-operatives, there were six all-Ukrainian central specialized co-operative organizations: the *Dniprosoiuz central union of consumer co-operatives (council chairman: B. Martos, executive president: D. Koliukh); the *Ukrainbank central union of credit unions (executive president: Kh. Baranovsky); the *Tsentral union of agricultural co-operatives (council chairman: K. Matsiievych; executive president: V. Koval); the *Trudosoiuz union of manufacturing co-operatives; the *Strakhsoiuz union of insurance co-operatives; and the *Knyhospilka union of publishing co-operatives. The latter three were established too late to develop fully. Besides these principal types of co-operatives, other, smaller national central organizations emerged (eg, the building co-operative union Oselia and the cinema co-operative union Ukrainfilm). The entire system was headed by the ideological and organizational center, the Ukrainian Central Co-operative Committee (council chairman: M. *Tuhan-Baranovsky, executive president: B. Martos). In 1919 three all-Ukrainian unions – Ukrainbank, Dniprosoiuz, and Tsentral – formed the Alliance of Central Ukrainian Co-operative Unions to represent Ukrainian co-operatives abroad and to engage in foreign trade. The idea was only partly successful.

Co-operative education developed rapidly. Co-operative schools were set up: the three-year school of the Soiuzbank in Kiev, known as the School of the Fiftieth Anniversary of Ukrainian Co-operatives; the one-year school of the Dniprosoiuz in Kiev, known as the Domanytsky School; the one-year Domanytsky School in Zvenyhorod; and so on. Co-operative courses of various types and levels were run almost constantly by county unions. Courses on co-operatives were given at the Kiev Commercial Institute, the Kiev Administration Institute, and Kiev University. The Kooptsentr had a special department for co-operative education and training; in 1919 it established the first advanced co-operative school in the world – the Tuhan-Baranovsky Co-operative Institute, which was reopened in the NEP period as the Chubar Co-operative Institute.

Co-operatives under the Soviets. In the period of War Communism all co-operatives were transformed into consumer communes or unified consumer societies (*yedyni spozhyvchi tovarystva* or *yesto*), which were under the authority of the People's Commissariat of Food Supplies and the quartermaster units of the Red Army. These communes distributed food, primarily in the cities. Membership was compulsory for all workers and public

employees until 1924, but all offices were elective, as in regular co-operatives. In certain villages the old Ukrainian co-operatives continued to function.

From 1924 on during the NEP period, co-operatives developed rapidly. In many respects they were similar to the former co-operatives, with elected offices, voluntary membership, competition in the free market, and free enterprise, but at the same time they were instruments of the Party and the state. In the villages the co-operatives became the main economic intermediary between the state and the peasant farmers. The latter could obtain manufactured goods and credits from the state only through them. In the cities the co-operatives became the privileged competitors of private manufacturing and trading enterprises. The state supported the co-operatives, especially in their competition with the kulaks and the nepmen. The co-operatives were the first to receive credits, orders, and supplies from the state and on more favorable terms than did the Nepmen or kulaks. Through subsidies the state helped keep the prices of goods sold by co-operatives below market value. The justification for such policies was Lenin's co-operative plan, which stated that 'co-operatives are the road to socialism.' These policies were in force until 1927-30.

In 1925 the consumer co-operatives (organized under the *All-Ukrainian Association of Consumer Co-operative Organizations [Vukoopspilka]) were separated from the credit and agricultural co-operatives and became the main, and then the sole, distribution outlets in the countryside for the manufactured goods of state-owned enterprises. The credit unions organized under the Ukrainbank developed considerably, especially in the villages. They provided loans for the purchase of farm implements and equipment, cattle, and housing and also funded various storage and marketing operations. The farm co-operatives organized under the *Sil'skyi Hospodar central agricultural co-operative union and certain specialized associations, such as Plodospilka (fruit growers, vintagers, and apiarists), Buriakspilka (sugar-beet growers), Ukrkoopstakh (poultry farmers), and Dobrobut (meat and dairy cattle farmers), ran their own marketing and processing enterprises. The manufacturing co-operatives of craftspeople received official encouragement beginning only in April 1925. Until then craftspeople had been regarded as nepmen and non-workers. From then on they were encouraged to join co-operatives and were given preference in providing goods to state-owned enterprises. A new type of cooperative - the housing-construction co-operative - was put in charge of confiscated buildings in the cities (see *Housing). The insurance co-operatives were organized under Strakhsoiuz. The central cooperative associations together set up the large Knyhospilka and the smaller *Rukh, *Siaivo, and other publishing co-operatives.

In 1928 the number of first-level co-operatives reached 41,734 (in 1924 it was 4,725), of which 9,423 were consumer co-operatives, 24,450 were agricultural co-operatives, 4,296 were cottage-industry co-operatives, and 2,417 were housing co-operatives. In addition, the Ukrainbank represented almost 5,800 credit unions. The following changes occurred in the structure of retail trade in the Ukrainian SSR: in 1925-6, 47 percent of the trade was under private control, 39 percent under co-operative control, and 14 percent under state control; in 1928-9, only 18 percent was under private control, while 74

percent was under co-operative control and 8 percent was under state control. In 1929, over 60 percent of the peasantry belonged to one type of co-operative or another. In the NEP period co-operatives had their own periodicals, propagated the idea of co-operation, and conducted a number of co-operative schools. The Chubar Co-operative Institute functioned in Kiev. Many former co-operative activists returned to the movement and occupied most of the leading positions in it. For this reason the co-operative movement in the Ukrainian SSR was one of the most important sources of national consciousness and was crushed because of its 'nationalism' during the terror of the 1930s. The prominent co-operative leaders of the period were D. Koliukh, F. Kryzhanovsky, M. Botvynovsky, V. Hanchel, P. Vysochansky, and D. Tokarevsky.

In 1927 the activities of co-operatives began to be restricted. The co-operatives were increasingly subordinated to state planning and to the People's Commissariat of Trade. Their competition with state enterprises was restricted. Yet the co-operatives in the countryside continued to receive support. All peasants were even pressed to join them, for the government hoped in this way to exact compulsory delivery quotas from them more efficiently. The First Five-Year Plan set various quotas for the co-operatives. In 1930 the government began to set prices on goods manufactured or sold by co-operatives. The right to procure supplies independently fell into abeyance, as co-operatives could not purchase anything outside of the state plan. Similarly, co-operative credit was included in the state financial plan. Furthermore, the co-operatives were heavily taxed: a profits tax and a gross-sales tax, the latter greatly exceeding the tax on state enterprises, were imposed. After 1936 only 20 percent of the profits could be distributed among members. After collectivization the agricultural co-operatives were transformed into a system of collective farms and machine tractor stations. From 1932 on, the specialized co-operative associations began to disappear, and in 1937 the housing co-operatives were abolished.

The decline of the co-operatives is evident from the fact that their share of the retail trade dropped from 86 percent in 1930 to 42 percent in 1934 and 29 percent in 1940. At the same time private enterprise collapsed completely, and state enterprise expanded. In the countryside the consumer co-operatives became agencies of the state's trade monopoly. The peasants were forced to obtain manufactured goods only from the co-operatives in exchange for their produce, which was priced very low. This system, with some improvements permitting peasants to buy goods in the cities, is still in force. Most villages still have co-operatives, not state stores.

In 1941-4 the Vukoopspilka was restored in the German-occupied territories, while in Soviet-held territories co-operatives declined. It was only the 9 November 1946 decree of the USSR government that again provided a stimulus to the development of consumer and manufacturing co-operatives. It permitted the purchase of raw materials and manufactured goods without ration cards, but at 'commercial' prices. Co-operatives organized by invalids received preferential treatment. However, after the monetary reform of 1947 the co-operatives were again strictly subordinated to state planning, and they declined again in the cities. In 1956 the manufacturing co-operatives were abolished, except for the co-operatives of

invalids and handicrafts co-operatives. However, the rights of rural consumer co-operatives were expanded. These co-operatives helped the peasants by transporting and selling their private produce in the cities, but thus also limited the initiative and movement of the individual collective farmer.

The consumer co-operatives in the Ukrainian SSR are now organized as follows: the lowest units are the village consumer societies, whose members hold shares (a minimum share costs 50 rubles). These local societies form raion consumer associations, which in turn form oblast associations and then the republican association *Ukoopspilka, which is subordinated to the all-Union association (Tsentrosoiuz) in Moscow. The Ukoopspilka network numbered 56,498 stores in 1956, of which 3,055 dealt in agricultural products, and controlled 31.3 percent of the retail trade. Its membership was close to 10 million in 1959. All offices in the co-operatives are elective, but are under Party control. In 1960 manufacturing co-operatives were abolished, leaving only consumer and housing co-operatives.

Co-operatives in Western Ukraine. The origins of the Ukrainian co-operative movement in Galicia in the 1870s were connected with the efforts mainly of the clergy to alleviate misery among the peasants by organizing self-help fraternal loan associations, community warehouses, and other enterprises in parishes and communities. From 1891 on the *Prosvita society was more successful in organizing stores and loan associations. But only the co-operatives that were founded under the 1873 Austrian law on commercial-trade associations proved to be truly viable. The *Narodna Torhovlia consumer co-operative, which was established in 1883 in Lviv by V. Nahirny, was the first of these co-operatives. After amending its charter in 1907, it became a central association of consumer co-operatives of the Rochdale type. Credit unions developed more rapidly, particularly after T. *Kormosh established a model co-operative called Vira in Peremyshl. In 1898 the first association of credit co-operatives – the Provincial Credit Union (see *Tsentrobank) – was organized. It became the principal financial institution of the co-operative movement, as well as its highest organizational center. From 1904 the Provincial Audit Union (see *Audit Union of Ukrainian Co-operatives) was the auditing center of the Ukrainian co-operative movement in Galicia. It developed into the leading organizational and ideological center of the movement.

Agricultural co-operatives began to be organized in 1904, starting with dairy co-operatives founded by Rev O. Nyzhankivsky and others in the Stryi region. They formed an association in 1907 known as *Maslosoiuz. In 1889 the Farming and Trading Association was founded in Peremyshl, and in 1911 it merged with the trade syndicate of the *Silskyi Hospodar association to form the Provincial Union of Farming and Trading Associations, which in 1924 was renamed *Tsentrosoiuz. By 1914 the union had helped to found almost 30 agricultural trade associations in Galicia. The *Dnister fire-insurance association, established in 1897, attained a membership of 250,000 by 1914. The *people's homes were co-operatives of a mixed type. The Educational Economic Congress, organized by the Prosvita society in 1909 in Lviv, holds an important place in the history of the co-operative movement. Representatives of co-operatives from all parts of Ukraine (except Transcarpathia) attended the congress

and adopted a set of common ideological and organizational principles for co-ordinated action. In 1914 the Provincial Audit Union represented 609 co-operatives, 60.9 percent of which were credit unions. In addition, 106 co-operatives belonged to the Russophile Audit Union of Ruthenian Co-operatives in Lviv, and about 400 small credit unions of the Raiffeisen type were supported by the executive branch of the Galician provincial diet.

During this period the *Raiffeisen credit co-operatives developed in Bukovyna. In 1903 about 150 peasant unions came together to form the association *Selianska Kasa. Its leaders were S. Smal-Stotsky and L. Kohut. The co-operative movement in Transcarpathia was weak because a nationally conscious intelligentsia was lacking. The credit co-operatives set up by E. Egan were part of the Hungarian co-operative movement.

During the First World War and until 1920 the Galician co-operative movement declined; it began to recover only in 1921 after the adoption of the Polish co-operative law in 1920. The co-operative movement developed more vigorously after the Provincial Committee for the Organization of Co-operatives was formed in 1922. Its purpose was to rebuild Galicia's economy with the help of co-operatives. Owing to its initiative, county committees were organized, and these later gave rise to county unions of co-operatives. The Provincial Audit Union, which in 1928 adopted the name Audit Union of Ukrainian Co-operatives (RSUK) and was headed by Yu. Pavlykovsky and O. Lutsky, expanded its activity into Volhynia and Polisia. By 1925 it represented 1,029 co-operatives, or almost twice as many as before the war. But financially it was far weaker than before: in 1912 its working capital amounted to 56.5 million zlotys, while in 1925 it was 9.2 million zlotys. By 1934 the union represented 3,193 co-operatives, but a new Polish law adopted that year increased government control over the co-operatives and restricted the union to the three Galician voivodeships, forcing 430 co-operatives in the northwest and the Lemko region to join Polish associations. In 1939 RSUK represented 3,455 co-operatives with a membership of 643,000.

The interwar Ukrainian co-operative movement in Galicia consisted of the same types of organizations as before 1914, but now the dominant co-operatives were agricultural, not credit, unions. In 1939 there were 2,360 agricultural co-operatives out of a total of 3,455 co-operatives (ie, 69 percent), organized into 27 county and district unions, which belonged to the central union Tsentrosoiuz. The dairy co-operatives formed 143 regional dairies, all of which belonged to Maslosoiuz. The network of credit unions, headed by Tsentrobank, included 115 larger city Ukrainbanks, 573 smaller rural banks of the Raiffeisen type, and other co-operatives. The Narodna Torhovlia association had 18 branches and 27 warehouses serving 194 urban consumer co-operatives. There were over 39 co-operatives of other types – manufacturing, health, building, and so on. In 1937–8 the assets of all the co-operatives amounted to 22.9 million zlotys, and the annual turnover was 159 million zlotys. The co-operatives sold 6.8 million zlotys' worth of their own products.

About 250 Ukrainian co-operatives in Galicia belonged to the Ruthenian Audit Union in Lviv, and about 600 co-operatives in the northwest and in the western part of the Lemko region belonged to Polish unions. Co-operatives in Volhynia belonged to unions that had head offices in Warsaw and to the regional union Hurt. In 1937

the two Ukrainian audit unions embraced 3,516 co-operatives, or 25.4 percent of all co-operatives in Poland, with 661,000 members, or 22 percent of all members in Poland (while the Ukrainian population of the three east Galician voivodeships in which the two unions operated constituted only 11 percent of the population of Poland). Thus, co-operative membership was proportionally twice as high among Ukrainians as among the population at large. The importance of Ukrainian co-operatives was great, despite the fact that they were much poorer than the Polish co-operatives. In spite of obstacles created by the Polish authorities, such as the pacification policy of 1930 and the restrictions placed on the RSUK in 1934, the Ukrainian co-operatives did much between the wars to alleviate poverty in the overpopulated countryside and to increase the economic power of the Ukrainian population.

The Narodna Torhovia association provided training for co-operative organizers in Galicia as early as the end of the 19th century. Later the Provincial Audit Union and the RSUK, as well as other central and county unions, organized short courses and correspondence schools. The Commercial School of the Prosvita society, founded in Lviv in 1911, trained co-operative workers and in 1920 was reorganized into the *Ridna Shkola commercial gymnasium. A lower co-operative school was established in Yavoriv, and a school for higher co-operative institutions – the three-year Co-operative Lyceum – was established in Lviv in 1938 by the RSUK. Co-operative education was part of the program of the Prosvita and Ridna Shkola societies. The annual 'co-operative holiday' on September 30 was used to promote co-operatives.

During the first Soviet occupation of Western Ukraine, the authorities dissolved the RSUK and the credit co-operatives. They nationalized the urban consumer co-operatives, but left the reorganized rural consumer co-operatives intact and introduced compulsory industrial co-operatives under Soviet management. The county unions were transformed into raion consumer associations and oblast consumer associations. Together the latter formed part of Ukoopspilka. In the German-occupied western regions of Galicia, which belonged to the Generalgouvernement, there were about 1,000 co-operatives (there had been only 160 before the war), which were organized in 10 county unions and one district union in Sianik. The audit departments of these unions were in Lublin and Cracow. After the Soviet withdrawal the RSUK resumed operations throughout Galicia and represented 4,624 co-operatives. But Ukrainian co-operatives were greatly hampered by the German authorities, who shut down many industrial enterprises and subordinated the co-operatives to various German economic agencies, requiring them to procure agricultural products for the government. After the second Soviet occupation the co-operative system in Galicia came to resemble that of the rest of Soviet Ukraine.

In Bukovyna Ukrainian co-operatives disappeared under the Rumanian occupation, but they flourished in Transcarpathia. In the 1930s the central Provincial Co-operative (Fraternal) Union in Uzhhorod represented over 400 co-operatives, most of which were Ukrainian. The co-operative movement in Transcarpathia gradually acquired a Ukrainian character.

Ukrainian co-operative leaders who found themselves

in Germany and Austria after the war organized small consumer and manufacturing co-operatives in the displaced persons camps. These were represented by the Unia association in Munich. In North America the first Ukrainian co-operative was Kalyna, founded by V. Topolnytsky in Winnipeg in 1930. The first *credit union was established in Saskatoon in 1939 and was named Nova Hromada. By the end of 1977 there were 83 Ukrainian co-operatives (credit unions) outside Ukraine: 39 in Canada, 30 in the United States, 7 in Australia, 3 in Argentina, and 4 in England. Their total membership was 94,670, and their annual turnover was \$291.4 million. These co-operatives belong to the World Council of Ukrainian Credit Unions.

From 1919 until the Second World War, Ukrainian co-operative associations were members of the International Co-operative Alliance, and Ukrainian representatives took part in international co-operative congresses. S. Borodaievsky and B. Martos were members of the International Institute for Co-operative Studies. The Union of Ukrainian Women belonged to the International Co-operative Guild. Today the co-operatives of the USSR are represented in the International Co-operative Alliance by the Moscow-based Tsentrosoiuz. (See also *Co-operative press and *Co-operative studies.)

Co-operative press. Periodical publications devoted to questions of the co-operative movement. These questions were always discussed in the general press and to some extent in agronomic journals. Special co-operative periodicals appeared only when the co-operative movement had greatly expanded.

In Russian-ruled Ukraine the first information about co-operatives appeared in an article by M. Ziber in *Kievskii telegraf* in 1868. As the co-operative movement grew rapidly in the 1890s, its problems were frequently discussed in the publications of provincial economic associations, particularly in *Khutorianin*, which was published by the Poltava Agricultural Society in 1895–1917. After the revolution of 1905 the Ukrainian press published articles on co-operatives; for example the monthly **Slovo* had a special section on co-operatives entitled 'Hurto' (Together). The agricultural press (*Rillia*, *Khliborob*, *Svitova zirnytsia*) and the zemstvo press (*Kievskaiia zemskaiia gazeta*) devoted much space to the movement. The first specialized co-operative periodicals appeared at this time in Russian: *Splotshchyna* and *Nashe delo* in Kiev and *Iuzhnyi kooperator* in Odessa. The newspapers of the Kiev association of credit unions (*Muraveinik-komashnia*), of the Kuban association (*Soiuz*), and of the Kharkiv association (*Potrebitel'*) were bilingual. Only in 1913 did a Ukrainian co-operative journal appear; this was *Nasha kooperatsiia*, which was published by an association of the same name in 1913–14.

With the outbreak of the revolution in 1917 and the rapid growth of Ukrainian co-operatives, the prewar **Muraveinik-komashnia* was Ukrainianized, and a number of new periodicals appeared. The central associations of various types of co-operatives published their own magazines: the **Dniprosoiuz* consumer association published **Kooperatyvna zoria* (1918–20); the **Sil'skyi Hospodar* agricultural association published *Sil's'kyi hospodar* (1918); the publishing association **Knyhospilka* published *Hromada*; the **Ukrainian Central Co-operative Committee* published *Ukraïns'ka kooperatsiia* (1918) and *Biuleten'* (1918). In addition, co-operative newspapers appeared in several gubernial and county towns. Altogether over 20 Ukrainian co-operative newspapers were published in Ukraine in 1918–20, including several bilingual ones.

Under the Soviet regime the co-operative press was revived in the NEP period. There were about 15 periodical publications, issued mostly by the central agencies of the various branches. The **All-Ukrainian Association of Consumer Cooperative Organizations* published the bi-weekly **Kooperatyvne budivnystvo* (1921–35); *Sil'skyi Hospodar* published *Kooperatyvne selo* (1922–8), which, together with the journal *Radianskyi kredyt*, gave rise to the bi-weekly *Kooperatyvna hromada* (1928–30); *Knyhospilka* published **Nova hromada* (1923–31); and the industrial association published *Visnyk promyslovoi ta promyslovo-kredytovoi kooperatsii Ukraïny* (1927–30), later renamed *Kooperatyvna fabryka* (1930). Regional and raion associations published their own magazines and bulletins. When the Soviets liquidated the co-operatives, the co-operative press in Soviet Ukraine ceased to exist.

In Western Ukraine, in Galicia and Bukovyna, for a long time information about co-operatives appeared only in the general economic press. It was only in 1904 that the Provincial Audit Union in Lviv began to publish the monthly **Ekonomist*, which contained much material on co-operatives. In 1909–14 it also published a popular monthly for members of co-operatives, *Samopomich*. The department for agricultural co-operatives of the Provincial Executive in Lviv published *Chasopys dlia spilok ril'nychykh* (1904–21) for the Ukrainian units of the so-called Stefczyk banks. The dairy co-operatives published *Hospodar i promyslovet's'* (1909–11).

After the war, by 1921, the co-operative press of Galicia revived. The monthly **Hospodars'ko-kooperatyvnyi chasopys* (1921–44) was published by the Audit Union of Ukrainian Co-operatives. The union also published **Kooperatyvna respublika* (1928–39), which was dedicated to the theoretical problems of the movement and to general economic problems, and the popular journal **Kooperatyvna rodyna* (1934–9). Journals dealing with particular branches of the movement were **Kooperatyvne molocharstvo* (1926–39), published by Maslosoiuz, and *Kredytova kooperatsiia* (1928–39), published by Tsentrobank. The Audit Union of Ruthenian Co-operatives published *Kooperatyvnyi visnyk* in Lviv. *Visnyk Povitovoho soiuzu kooperatyv* (1930) was published in Stanyslaviv, and the monthly *Torhivlia i promysl* (1929) came out in Kolomyia. The Polish authorities suppressed attempts to publish co-operative periodicals in Volhynia: *Zoria krashchoho* (Kremianets 1922) and *Supruha* (Zdolbuniv 1924).

In Germany the émigré Alliance of Ukrainian Co-operators published *Hospodars'ko-kooperatyvne zhyttia* (Augsburg 1947–8). In Canada the paper *Novyi shliakh*, published in Winnipeg, had a page devoted to co-operatives. *Nash kontakt* (Detroit 1954–9) was the periodical of the Ukrainian credit-union movement in North America. In 1959 the magazine merged with *Nash svit* in New York; since 1978 this publication has been published by the head office of the Self-reliance Association in America. The Ukrainian Co-operative Council of Canada publishes the journal *Koordinator* in Toronto, and the Council of Ukrainian Co-operatives in Australia published *Kooperatyvne slovo* in Melbourne. The Ukrainian Credit Union in Rochester, New York, published briefly the trimonthly *Kooperatyvna dumka*, and the Credit Union of northern Winnipeg has its own bulletin. From 1950 to 1959 the New York journal *Novyi svit* published materials on the co-operative movement.

Co-operative studies. The first Ukrainian works of a statistical-descriptive and then of a historical nature on the co-operative movement dealt with consumer co-operatives: M. Ziber wrote the monograph *Potrebitel'nye*

obshchestva (Consumer Societies, 1869) and studies of the theoretical foundations and the history of co-operatives, and M. Ballin published *Pervaia pamiatnaia knizhka potrebitel'nykh obshchestv* (The First Commemorative Book of Consumer Societies, 1870). The first study of credit unions was P. Chubynsky's monograph about the savings-and-loan association founded by H. Galagan in Sokyryntsi in 1871, which was published in *Zapiski* of the Southwestern Branch of the Imperial Russian Geographic Society. After a long interval the works of two theoreticians and practical organizers of co-operatives appeared: V. Domanytsky's brochures *Tovarys'ki kramnytsi* (Society Stores, 1904) and *Pro sil's'ku kooperatsiiu* (On Rural Co-operatives, 1906) and O. Yurkevych's brochures. The history of credit unions was presented in S. Borodaievsky's *Credit populaire en Russie* (1900), V. Kosynsky's *Ukrains'ka kooperatsiia* (Ukrainian Co-operation, 1918), and the works of H. *Kryvchenko and others. F. Shcherbyna's *Iuzhno-russkie arteli* (South Russian Artels, 1880) dealt with manufacturing co-operatives in the Ukrainian labor tradition, and M. Levytsky (founder of the first agricultural artels) discussed productive co-operatives in *Pro khliborob's'ki spilky* (On Agricultural Associations, 1919).

During Ukrainian independence research on co-operatives developed rapidly and emphasized the peculiarities of the Ukrainian co-operative movement. In 1917 the *Ukrainian Central Co-operative Committee was established in Kiev to pursue such research. Such famous Ukrainian economists as M. Tuhan-Baranovsky, K. Vobly, K. Matsiievych, B. Martos, and V. Sadovsky belonged to the committee. After 1920 similar research was conducted by the co-operative section of the Society of Ukrainian Economists in the All-Ukrainian Academy of Sciences, by the Chair of Co-operative Studies at the Kiev Co-operative Institute, which published five volumes of *Pratsi* in 1927–30, and by central associations, which published a wide range of periodicals (see *Co-operative press). By the end of the 1920s, when the Ukrainian co-operatives lost their autonomy, research on co-operatives almost ceased in Soviet Ukraine. Only practical handbooks and popular literature on co-operatives were published.

In Western Ukraine prior to the First World War research on the co-operative movement was conducted by the Provincial Audit Union, which published the journal **Economist*. In the 1920s and 1930s such research was pursued by the Society of Ukrainian Co-operators in Lviv and by the Economic, Sociological, and Statistical Commission of the Shevchenko Scientific Society. Émigré scholars of the Economics and Co-operative Department of the Ukrainian Husbandry Academy and of the Society of Ukrainian Co-operators in Poděbrady studied the subject of co-operation. Since the Second World War the subject has been studied at Ukrainian institutions of higher education and at the economics commissions of the Shevchenko Scientific Society and the Ukrainian Academy of Arts and Sciences.

The most eminent Ukrainian theoretician of the co-operative movement was M. *Tuhan-Baranovsky, who worked out the theoretical foundations of the concept of a co-operative enterprise and the classification of its branches in such works as *Sotsial'nye osnovy kooperatsii* (The Social Foundations of Co-operation, 1915, translated into many languages), *Kooperatsiia, ii pryroda ta meta* (Co-operation: Its Nature and Aim, 1918), and *Produktsiini pidprijemstva kooperatyv z tochky pohliadu kooperatyvnoi teorii*

(Producer Co-operative Enterprises from the Viewpoint of Co-operative Theory, 1919). S. Borodaievsky was a historian and theoretician of the co-operative movement, particularly of the credit-union movement. He published such works as *Kooperatsiia sredi slavian* (Co-operatives among the Slavs, 1921), *Istoriia kooperativnogo kredita* (A History of Co-operative Credit, 1923), and *Istoriia kooperatsii* (A History of the Co-operative Movement, 1925). K. Vobly gave much attention to the subject and published *Budivnycha kooperatsiia ta finansuvannia ii* (Building Co-operatives and Their Financing, 1919), *Kooperatyvnyi kramobih Ukraïny 1923–24 – 1926–27* (Co-operative Trade in Ukraine from 1923–4 to 1926–7, 1927), and *Studii do metodyky kooperatyvnoi statystyky* (Studies on the Methodology of Co-operative Statistics). B. Martos wrote studies on the classification of co-operatives, the limits to the growth of consumer co-operatives, and other theoretical and organizational topics. In Galicia the leading organizers – A. Zhuk, Yu. Pavlykovsky, K. Kobersky, and O. Lutsky – wrote studies of the ideology and history of the Ukrainian co-operative movement. P. Pozharsky, V. Vysochansky, and E. Deshko wrote lengthier historical outlines of the movement. I. Vytanovych and A. Kachor specialized in the history of co-operatives in Western Ukraine.

Among the investigators of particular branches of the co-operative movement the following should be mentioned: I. Ivasiuk and Kh. Baranovsky on credit unions; O. Mytsiuk, V. Domanytsky, Ye. Khraplyvy, and I. Batiuk on agricultural co-operatives; I. Petrushevych, A. Serbynenko, and D. Pisiachevsky on consumer co-operatives; I. Feshchenko-Chopivsky on manufacturing co-operatives; L. Bobyr-Bukhanovsky on co-operative financing; K. Mykhailiuk, A. Palii, and A. Mudryk on dairy co-operatives. In addition, V. Sadovsky, H. Kryvchenko, S. Ostapenko, P. Kovanko, V. Kosynsky, I. Zamsha, and others gave some attention to the co-operative movement in their writings.

I. Vytanovych

Copper ores. Mineral compounds that contain copper in concentrations that can be profitably extracted. In Ukraine copper ores are found in the northwestern part of the Donets Basin and the Slovianske-Artemivske Depression (in the sandstone layers and partly in the dolomite layers of the Permian age). Smaller deposits of copper ores are found in the Azov Upland, in the Kryvyi Rih region, in the basalt region of Volhynia (Yanova Valley), and in Galician Podilia along the Dniester River. All these deposits were exploited in the past – in the Donets Basin even as late as the 1870s (see *Metallurgy) – but today they have no commercial value.

Copyright law. The body of laws that protects an author's rights to control or benefit from his scholarly, literary, or artistic work. Copyright law is part of the civil code. Austrian copyright law was enforced in the Ukrainian lands ruled by Austria from the beginning of the 19th century. The first copyright laws were introduced in Russia in 1828 and were codified only in 1911.

In the Ukrainian SSR the author's rights were defined by the decrees of the All-Ukrainian Central Executive Committee and the Council of People's Commissars adopted on 6 February 1929. These decrees were based on the Foundations of the USSR Copyright Law. Today

copyright law is incorporated in the Civil Code of the Ukrainian SSR of 1963 (part IV). Until 1973 copyright law in the USSR was territorially restricted: works from abroad published in the USSR did not come under its protection nor did the works of Soviet authors published abroad. On 25 May 1973 the USSR adopted the Geneva Copyright Convention. Today an all-Union copyright agency oversees the publication of foreign books in the USSR and of Soviet books abroad. A branch of this agency functions in Ukraine.

At first glance Soviet copyright law seems very similar to that of non-socialist countries, although the term of protection is much shorter in the USSR. At the end of the term the work becomes state property. The author's copyrights are in force during his/her lifetime and for 25 years after his/her death, during which time they are controlled by the author's heirs. But there are important differences, which arise from the differences in the sociopolitical system. According to the Civil Code of the Ukrainian SSR, the author has the right to reproduce and distribute his/her work by any permissible means, the right to inviolability of the work, and the right to recompense. The author's royalties are determined by the norms issued by the Council of Ministers of the Ukrainian SSR in 1963, 1967, and 1968. These norms govern the contract between the author and the institution that will use his work.

According to the official ideology, works of literature, music, painting, and scholarship must promote the advancement of Communist society. Copyright law thus becomes a means of controlling and guiding creative work. The state (or state agency), which has a monopoly on publishing, is the publisher and user. For this reason the author's right to publish is very restricted. Only those works that agree with the official Party line are published. The state may force the author or his/her heirs to sell publication rights or control over a work's use. It can also declare any work to be state property when the term of protection runs out.

Writers', artists', architects', musicians', journalists', and filmmakers' unions, which are state-controlled organizations, protect the interests of authors. They mediate in authors' agreements with publishers, exercise control over royalties, and so on. In the USSR there is a standardized publication contract for every kind of creative work. Patent rights are in some respects similar to copyrights.

A. Bilynsky

Cormorant (*Phalacrocorax*; Ukrainian: *balkan*). Water bird of the family Phalacrocoracidae (order Pelecaniformes). The most common species in Ukraine is the great cormorant (*P. carbo*), which grows up to 80 cm in length and 2–3 kg in weight. Its wingspread is 1.4 m on the average. The bird lives on fish and nests on the coasts of the Black and Azov seas. Two other species of this genus are less common: the long-beaked shag (*P. aristotelis*) and the little cormorant (*P. pygmaeus*).

Corn (*Zea mays*; Ukrainian: *kukurudza*). Hybrid annual of the cereal family and one of the most important seed and feed plants in the world. In Ukraine corn is third in importance after wheat and barley. A kernel of corn contains 59–67 percent starch, 11–14 percent raw protein, and 4–8 percent fat. Corn is ground into flour and grits

and is used to manufacture oil and sugar. The starch and liquor industries use large quantities of corn. Corn flour is unsuitable for bread baking, but is consumed in the form of corn meal (particularly in Pokutia and Transcarpathia) or is mixed (up to 25 percent) with wheat flour. Corn on the cob is eaten freshly cooked. Certain varieties of corn are grown as feed, and young plants are used as green feed or as silage. Corn is valued for its high yield of seed and silageable mass. The plant requires warmth and moisture during the flowering period, but it can tolerate lack of moisture in the first half of the summer. The best soils for it are well-fertilized sandy soils and clayey chernozems. In a rotational system corn is planted after winter cultures, spring wheat, legumes, or potatoes. In the southern regions corn is grown on fallow land after the main harvest. Corn is a good predecessor for winter and spring wheat. Of all the varieties of corn, *Z. m. indurata* is the most common in Ukraine.

Corn began to be grown as early as the 17th century in Moldavia and the Crimea. In the 18th and 19th centuries its cultivation spread into the forest-steppe belt and the northern steppe belt. Before the revolution the main corn-growing areas were Pokutia, Bessarabia, and the adjacent parts of Podilia and Transcarpathia, where corn was the principal grain and the basic staple in the local diet. In the steppe (particularly the northern part) and in the southern part of the forest-steppe, 5–15 percent of the grain-growing land was devoted to corn. Prior to the revolution most of the corn was used for feeding people, but some was used as animal feed, mostly for hogs. The stalks were used for fuel. From 1881 to 1913 the amount of land devoted to corn doubled. By 1913, 855,000 ha within the present boundaries of the Ukrainian SSR were devoted to corn.

After the revolution the land area sown with corn increased greatly, particularly in the steppe belt. Corn growing became part of crop rotation, and corn partly replaced barley as fodder. In 1929, 2,300,000 ha were devoted to corn. In 1955 the January plenum of the Central Committee of the CPSU approved plans to increase the amount of land devoted to corn, improve the yield of corn, and use corn as the basis of the feed industry. These led to radical changes in the production of corn: there was an increase in mechanization and agrotechnology in corn growing, new seeding methods and improved seed were introduced, and corn growing was extended to regions where the plant does not mature or is used only as green pasturage (Polisia). Within these plans Ukraine was assigned a leading role. Grain farming in Ukraine became dominated by corn growing; this in turn led to an overwhelming emphasis on animal husbandry in Ukraine's agriculture. The land area devoted to corn in Soviet Ukraine increased from 2,300,000 ha in 1954 to 3,543,000 in 1955. (Table 1 shows the expansion of corn growing in the Ukrainian SSR.) But by the second half of the 1950s the 'corn fever' had died down, in terms of both the area devoted to corn seed (from 3,543,000 ha in 1955 to 3,037,000 ha in 1960) and the land devoted to silage and green feed (7,479,000 ha in 1960 and 4,375,000 ha in 1965). Tables 1 and 2 show changes in corn growing from 1913. The gross yield of corn seed in 1979 was as follows (in millions of tonnes): Ukrainian SSR, 4.0; USSR, 9.0; world, 396. The corresponding yield in centners per hectare was 32.2, 35.2, and 30.8.

Half of the area devoted to corn in the Ukrainian SSR is

TABLE 1
Corn production in Ukraine

	Thousands of hectares sown	% of all grainfields
1913	853	3.5
1928	2,303	11.5
1940	1,560	7.3
1950	2,757	13.8
1955	3,543	17.3
1960	3,037	22.1
1970	2,262	14.6
1980	1,498	9.1

TABLE 2
Area devoted to corn (in thousands of hectares)

	Seed	Silage and green feed	% of tilled land
1913	853	—	3.1
1940	1,560	—	5.0
1950	2,757	—	9.0
1960	3,037	7,479	31.1
1970	2,162	4,465	20.5
1979	1,416	3,813	12.6

in the northern and central steppes, one-third is in the forest-steppe, and 12 percent is in the southern steppe. Thirty-five hybrids and two varieties of corn are grown in Soviet Ukraine. Scientific research on the selection and cultivation of corn is conducted at the All-Union Scientific Research Institute for Corn in Dnipropetrovsk.

V. Kubijovyč

Corrective-Labor Code (*Vypravno-trudovi kodeks*). Body of legal norms that define the forms, methods, means, and regime of activities of Soviet corrective-labor institutions. The first corrective-labor code of the Ukrainian SSR was adopted in 1925 and was almost a literal translation of the 1924 code of the Russian SFSR. A new code, which introduced the 'corrective-labor camp' as the principal institution of re-education, was adopted in the Russian SFSR in 1933. Beginning with the period of collectivization, forced-labor camps, which supplied state enterprises with cheap labor, were set up throughout the country. Their operation was regulated by various secret decrees of the People's Commissariat (NKVD), and later Ministry (MVD), of Internal Affairs, and came under the supervision of the Chief Administration of Corrective-Labor Camps (GULAG). In 1971 the new corrective-labor code, which is based on the Foundations of the Corrective-Labor Legislation of the USSR and the Union Republics of 1969 and is very similar to the Russian SFSR code, was introduced in Ukraine. It defines the various forms of criminal punishment – deprivation of freedom, internal exile, banishment abroad, corrective labor without deprivation of freedom – and how they are to be fulfilled. The term 'corrective-labor colony' replaces the term 'camp.' There are four types of colonies, with regimes of different severity. Convicted persons are sentenced to one type or another depending on the seriousness of their crime, their past record, and so on. There are separate colonies for political prisoners and juveniles. (See also *Concentration camps.)

Correspondence courses. In the Ukrainian SSR correspondence courses are a way of attaining a secondary school diploma or of upgrading one's qualifications 'without withdrawing from the production process.' Before 1917 there were only a few correspondence schools in Russian-ruled Ukraine, and they were of little importance. In Western Ukraine correspondence courses were not widely available prior to its incorporation into the Ukrainian SSR. This form of extramural education developed rapidly in Soviet Ukraine in the second half of the 1920s, particularly in the area of pedagogical training. There was a shortage of teachers at the time because of the Ukrainization of education and the expansion of the school system on the one hand, and the inadequacy and instability of the system of intermediate and higher pedagogical education on the other. The All-Ukrainian Correspondence Institute of People's Education (vzino) was founded in the second half of the 1920s at the People's Commissariat of Education in Kharkiv and became the central agency responsible for correspondence courses. Later it was renamed the All-Ukrainian Institute for Upgrading the Qualifications of Pedagogues (virkp). At the beginning of the 1930s the institute was abolished, and its functions were transferred to a department of the People's Commissariat of Education. In the few years of its existence the institute developed a network of correspondence departments at intermediate and higher pedagogical schools and published a number of valuable methodological manuals and textbooks, such as L. Bulakhovsky's *Osnovy movoznavstva* (The Foundations of Linguistics) and O. Biletsky's *Ukrains'ka literatura* (Ukrainian Literature). In 1927 the network encompassed 17,000 students. In 1929 the organization of technical and medical correspondence courses was begun.

In the 1930s the entire school system was reorganized. The People's Commissariat of Education remained in charge of only elementary, secondary, and pedagogical education. All other specialized education was placed under the appropriate people's commissariats. Correspondence courses were reorganized along the same lines. Correspondence departments were set up at all universities, pedagogical institutes, and technical secondary schools, as well as at trade schools and secondary schools. Technical correspondence courses underwent a particularly great expansion in 1954–7, when correspondence departments were opened at technical institutes. In 1958 the Correspondence Polytechnical Institute was opened in Kharkiv, with 9,000 students enrolled in eight departments. By 1962–3 enrollment was over 11,000. In 1951–55, 22.4 percent (45,400) of all graduates of institutions of higher learning and 7 percent (27,700) of tekhnikum graduates obtained their diplomas through correspondence courses. The number of post-secondary graduates of correspondence courses continued to grow, increasing from 22,700 in 1960 to 26,600 in 1965 and 45,500 in 1970, then falling to 39,900 in 1975 and rising again to 41,200 in 1979. On the average, correspondence students constitute about 30 percent of the graduates of institutions of higher learning. The number of tekhnikum correspondence graduates was 18,900 in 1960, 44,200 in 1965, 60,900 in 1970, 64,400 in 1975, and 68,600 in 1979, again constituting about 30 percent of all tekhnikum graduates. Although correspondence-school degrees are generally of a lower standard than regular degrees, the government supports them for two reasons: first, they

provide education cheaply and, secondly, they allow for a steady supply of young people for low-skilled and low-paid jobs. For example, secondary school graduates are urged to take jobs in industry and on collective farms and are promised the opportunity of advancement through correspondence courses. Students of general secondary schools are also encouraged to work and to enroll in correspondence courses after grade seven. To this end correspondence departments are set up at secondary schools, and correspondence schools are established. By 1978 there were 502 correspondence schools with 566,000 students (58.9 percent of those who were studying while working) enrolled.

Corvée. See Serfdom.

Cossack encampment (*tabir*). Military tactic peculiar to the Ukrainian Cossacks in the 16th-17th century. The Cossack army marched under the protection of the encampment, that is, with five to six trains of supply wagons on each side of the marching column. On approaching the enemy the encampment would come to a halt, and the wagons would form a rectangle linked together by chains. The rectangle would be reinforced with a stockade and trench. This served as a base from which the Cossacks launched various operations - cannon bombardments, skirmishes, and infantry or cavalry attacks. The enemy usually tried to break into the encampment.

In the Princely era the armies of the princes used encampments for protection against the Cuman horsemen in the steppes. The tactic was used frequently in the Cossack wars: in 1596 H. Loboda used an encampment of five rows at Bila Tserkva, and in 1637 P. Pavliuk marched in an encampment of six trains. In 1628 the Zaporozhian Cossacks marched across the Crimea from Perekop to Bakhchesarai and back under the protection of an encampment. During the Cossack-Polish War the Cossack encampment played an important role in the battles of Starokostiantyniv (1649, 1651), Pyliavtsi (1648), Berestechko (1651), Loiv (1649), Bila Tserkva (1651), and Okhmativ (1655). At the end of the 17th century advances in artillery rendered the Cossack encampment obsolete.

Cossack helper (*pidpomichnyk*). Name of members of the poorer Cossacks, who constituted the majority of the Cossack estate in the 18th-century Hetman state. Too poor to own their own arms and equipment and therefore to perform military service, most Cossack helpers performed auxiliary tasks for the Cossack army such as providing supplies or cultivating the land of the *elect Cossacks when they were away fighting. They were obliged to equip and support one man for each two or three Cossack-helper households in time of war. In extreme emergencies (defense of the country) they were all pressed into military service as foot soldiers. In 1734-6 the Russian Governing Council of the Hetman Office made the final division of the Cossack estate into the elect Cossacks and Cossack helpers. Thereafter the status and privileges of the helpers differed little from those of the

common peasants. In 1764 there were about 200,000 Cossack helpers in Left-Bank Ukraine. With the official introduction of serfdom by the Russian government in 1783, the Cossack helpers were demoted to the status of *state peasants.

Cossack-Polish War (1648-57). The conflict began in 1648 as a typical Cossack uprising but quickly turned into a war of the Ukrainian populace, particularly the Cossacks and peasants, against the Polish Commonwealth. Hetman B. *Khmelnysky assumed leadership of the Ukrainian forces. The war can be divided into six phases.

January-November 1648. In this period a series of brilliant Cossack victories aroused the whole Ukrainian people and won wide support for Khmelnysky. What was strictly a Cossack rebellion became transformed into a mass movement against the Polish nobility.

On 21 January 1648 Khmelnysky led a small unit of registered and Zaporozhian Cossacks in an attack on the Polish garrison on Bazavluk Lake (on the Dnieper River) and overpowered it. This freed the Zaporozhian Sich from Polish control and won the Zaporozhian Cossacks over to Khmelnysky's side. He was elected hetman. The subsequent months were spent in preparations for a larger rebellion. Proclamations were sent out urging the Cossacks, peasants, and burghers to rise against the nobility. Khmelnysky concluded an important treaty with Turkey and the Crimean khan Islam Girei III, obtaining the aid of a 40,000-strong Tatar army under Tuhai Bey's leadership.

The Polish government sent an army of 30,000 men in April 1648 to suppress the uprising in Ukraine. The Polish commanders expected little opposition and made a serious tactical blunder by dividing their forces. About 10,000 rebels surrounded the Polish advance guard of 6,000 men, led by S. Potocki, Hetman M. Potocki's son, at *Zhovti Vody and destroyed it on 16 May 1648. Khmelnysky and the Tatar army met the main Polish force, commanded by Grand Hetman M. Potocki and Field Hetman M. Kalinowski, near Korsun and crushed it on 26 May 1648. The two Polish commanders were captured by the Tatars.

After these victories fighting between Cossack-peasant detachments and Polish troops flared up throughout Ukraine. In the summer of 1648 the detachment of Colonel M. *Kryvonis engaged in several bloody battles with the Polish nobility's force, led by Prince J. Wiśniowiecki. During this fighting the population suffered terrible losses. The Polish troops systematically killed all Cossacks and peasants, including women, children, and the old people who fell into their hands, while the rebels treated the nobles, Catholic clergy, and Jews, many of whom took the side of the Polish nobles, in a similar fashion.

At the end of the summer the Polish government sent another well-equipped army of 32,000 Poles and 8,000 German mercenaries against the Cossacks. The army's command, consisting of A. Koniecpolski, M. Ostroroh, and Prince D. Zaslowski, was weak and inexperienced. Wiśniowiecki, who wanted to be the commander in chief of the Polish forces, did not have adequate communications with the advancing Polish army. Confident of victory, the Polish commanders let Khmelnysky assume a very convenient position near *Pyliavtsi. During the battle that took place there on 23 September 1648, the

rebels, numbering about 80,000, completely crushed the Polish army. Khmelnytsky's army of about 100,000 men marched into Western Ukraine and in early November besieged Lviv. Several Cossack detachments advanced west into territories settled mostly by Poles or Belorussians, and antinoble and anti-Polish revolts also broke out there. At the request of the Ukrainian burghers Khmelnytsky lifted the siege of Lviv and besieged Zamostia, where the remnants of Wiśniowiecki's army had sought refuge. With the election in November of a new Polish king – Jan II Casimir, whose candidacy was supported by Khmelnytsky – the Ukrainian army returned to the Dnieper region and on 2 January 1649 triumphantly entered Kiev.

April–August 1649. Khmelnytsky decided to separate completely Ukraine from Poland, but although he continued to triumph on the battlefield, he could not overpower the enemy. Mobilizing all the forces of the Polish Commonwealth, Jan Casimir began the offensive against Khmelnytsky in April 1649. The main Polish force under the command of the king himself departed from Volhynia, while the Lithuanian army, commanded by the Lithuanian hetman, Prince J. Radziwill, marched on Kiev. On 10 July Khmelnytsky and Islam Girei surrounded a part of the king's forces in Zbarazh. When Jan Casimir with his army of 25,000 men went to the aid of the besieged troops, Khmelnytsky led a surprise attack on 15 July and encircled the king at *Zboriv. In the meantime, during June and July, the Lithuanian army almost reached Kiev, but the Cossack-peasant raids in the rear forced the Lithuanians to retreat. A decisive and final victory over the Poles appeared to be within Khmelnytsky's grasp. But at this critical moment Islam Girei, who was bribed by the Poles and disturbed by the rapid growth of the Ukrainian forces, withdrew his troops, which forced Khmelnytsky to negotiate with the Poles. On 28 August 1649 Khmelnytsky concluded the Treaty of *Zboriv with the Polish delegation headed by J. Ossoliński. The treaty did not really satisfy either side.

August 1650–September 1651. International factors began to play a more important role in the Ukrainian-Polish conflict. The Cossacks experienced their first defeats and were forced to retreat from the positions they had won previously.

In the summer of 1650 both sides tried to isolate each other by diplomatic means. Polish diplomats warned Moscow about the Cossack threat and succeeded in gaining the support of V. Lupul, the hospodar of Moldavia. Khmelnytsky strengthened his ties with the Crimean Tatars and the Ottoman Porte. To undermine Polish influence in Moldavia, Khmelnytsky sent a large Cossack-Tatar army there in August 1650 and forced Lupul to sign a treaty and to promise to give his daughter Rozanda in marriage to Khmelnytsky's son Tymish.

While the Cossacks were busy in Moldavia, a Polish army of 50,000 men attacked the Bratslav region on 20 February 1651. A major battle took place in June near the town of *Berestechko in Volhynia. The Polish army, which included about 20,000 German mercenaries who were veterans of the Thirty Years' War, faced the Ukrainian-Tatar forces. The Cossacks were betrayed once again by the Tatars and were defeated. On 10 July they retreated under difficult conditions to Bila Tserkva. At the beginning of August the Lithuanian army occupied and ravaged Kiev. In spite of these setbacks Khmelnytsky mobilized a force of 50,000 men and on 24–25 September 1651

engaged the enemy in battle near Bila Tserkva. The fighting was fierce but inconclusive. Drained of strength, both sides began negotiations, which led to a treaty unfavorable to Khmelnytsky – the Treaty of *Bila Tserkva – on 28 September.

Soon after the signing of the treaty Polish troops and nobles began to return to Ukraine and to restore the former order. Part of the population of Right-Bank Ukraine, threatened by the return of their former oppressors, began to abandon its villages and migrated east to Left-Bank and Slobidska Ukraine.

Spring 1652–winter 1653. Although the Cossacks scored several victories against the Poles, signs of fatigue and discouragement appeared, and Khmelnytsky began to rely increasingly on foreign help. In 1651–2 he strengthened his ties with the Tatars and the Porte. He focused his attention on Moldavia, hoping that Tymish's marriage with Rozanda would solidify the alliance of Ukraine with Moldavia and indirectly with Turkey and the Crimean Khanate. In the spring of 1652 Khmelnytsky sent Tymish with a large Cossack-Tatar army to Moldavia. On 2 June the army encountered a Polish force of 30,000 men at *Batih, and Khmelnytsky, who came to his son's aid, scored a brilliant victory. In August 1652 Tymish married Rozanda, but in the spring of 1653 the Moldavian boyars, supported by Wallachia and Transylvania, revolted against Lupul and the Cossacks, and Tymish died defending Suceava. His death on 15 September 1653 put an end to Khmelnytsky's Moldavian orientation.

In the meantime war again broke out in Ukraine. A large Polish army of 80,000 men invaded Podilia and was encircled at Zhvanets by the combined forces of the Cossacks and Tatars at the beginning of December 1653. At a critical moment the Tatars once again concluded an agreement with the Poles, forcing Khmelnytsky to make peace with the Poles on 5 December on the basis of the conditions of the Treaty of Zboriv of 1649. This latest act of Tatar treachery convinced Khmelnytsky to change his foreign policy.

Khmelnytsky had maintained diplomatic relations with Muscovy almost from the beginning of the rebellion, but Tsar Aleksei Mikhailovich refused to support the uprising, for this would lead to war with Poland. The Polish defeats and the danger of Khmelnytsky's acceptance of the Porte's suzerainty, however, persuaded Moscow to resume negotiations with the hetman in 1653. These negotiations culminated in the *Pereiaslav Treaty in January–March 1654, according to which Ukraine recognized the protectorate of the Russian tsar while maintaining its complete autonomy and received Russian military and political aid against Poland.

Summer 1654–autumn 1655. In this period the united Ukrainian and Muscovite forces took the offensive against Poland and scored significant victories. Major battles took place in Right-Bank Ukraine, Belorussia, and Western Ukraine. In the summer of 1654 the Muscovite army and 20,000 Cossacks, led by I. Zolotarenko, invaded Belorussia and captured Smolensk. Continuing the campaign in 1655, they took Vilnius in July. During the Belorussian campaigns a tension arose between the allies over the question of which side should control the captured territories – the Zaporozhian Host or Moscow. In the meantime the Poles invaded the Bratslav region in the fall of 1654 and on 20 January 1655 laid siege to Uman. Khmelnytsky and the Russian commander, V. Shere-

metev, led a joint army of 70,000 men against the enemy and fought a hard but inconclusive battle near *Okhmativ on 29 January 1655. In the spring the Ukrainian-Muscovite forces invaded Western Ukraine, and by the end of September they besieged Lviv. In October, however, when Poland's new allies, the Tatars, arrived with reinforcements, the Cossacks and Russians retreated east.

Autumn 1656–summer 1657. Khmelnytsky became increasingly disappointed with the Russians, and he began to look for other allies against Poland. In the summer of 1655 the Swedish king, Charles x Gustavus, took advantage of Poland's war with the Cossacks and Russians to seize the northern part of Poland and Lithuania. Moscow became perturbed at the growth of Swedish power. Hence, on 24 October 1656 it signed the Vilnius Peace Treaty with Poland and then jointly with Poland declared war on Sweden.

The Ukrainian government, whose representatives were excluded from the negotiations, was very indignant over the peace treaty. Hence, in October 1656, in spite of Russian protests, Khmelnytsky entered into a broad coalition with Sweden, Transylvania, Brandenburg, Moldavia, and Wallachia. The coalition had as its purpose the partition of Poland. In joining the coalition, the hetman was interested mainly in capturing the Western Ukrainian territories and uniting them with Ukraine.

The interests of the coalition members diverged, however. Furthermore, Poland obtained diplomatic and military support from Austria, Muscovy, and the Crimea. In spite of this a Ukrainian-Transylvanian army of 30,000 Hungarians and 20,000 Cossacks under the command of Prince George II Rákóczi and Colonel A. Zhdanovych invaded Poland in January 1657 and occupied Galicia and a large part of Poland, including Cracow and Warsaw. But the oppression of the local population by the Hungarians and the intrigues hatched by Muscovite agents among the Cossacks diminished the army's fighting capacity. Rákóczi was forced to retreat eastward before the Polish offensive. Towards the end of July 1657 he was encircled by the Poles and Tatars at Medzhybizh and was forced to sign the Treaty of Chornyi Ostriv on 22 July. Zhdanovych tried to hold the anti-Polish front but did not succeed. This catastrophe hastened the death of Khmelnytsky, which occurred on 6 August 1657. This marked the end of the Cossack-Polish War.

O. Subtelny

Cossack regiments. See Regiments.

Cossack *starshyna*, or simply *starshyna* (officers). General title applied to persons holding positions of authority in the Ukrainian Cossack *regiments and in the administration of the *Hetman state (1648–1781). The

starshyna was divided into the *General Officer Staff and regimental and company staffs.

A regimental *starshyna* consisted of a *colonel, an *oboznyi (quartermaster, artillery commander), a judge, a chancellor, an *osavul (aide-de-camp, the colonel's closest aide), and a *khорunzhyi* (flag-bearer, protector of the regimental banner). A company staff consisted of a *captain, company or town otaman (lieutenant), a scribe, an *osavul*, and a flag-bearer.

Often the term 'Cossack *starshyna*' was applied to the entire social elite of the Hetman state, including the *notable military fellows, who did not hold government or military posts.

Cossacks. The name *Cossack* (Ukrainian: *kozak*) is derived from the Turkic *kazak* (free man), meaning anyone who could not find his appropriate place in society and went into the steppes, where he acknowledged no authority. In European sources the term first appears in a dictionary of the Cuman language in the mid-13th century. It is also found in Byzantine sources and in the instructions issued by Italian cities to their colonies on the Black Sea coast, where it is applied to armed men who were engaged in military service in frontier regions and protected trade caravans traveling the steppe routes. By the end of the 15th century the name acquired a wider sense and was applied to those Ukrainians who went into the steppes to practice various trades and engage in hunting, fishing, beekeeping, the collection of salt and saltpeter, and so on.

The history of the Ukrainian Cossacks has three distinct aspects: their struggle against the Tatars and the Turks in the steppe and on the Black Sea; their participation in the struggle of the Ukrainian people against socioeconomic and national-religious oppression by the Polish magnates; and their role in the building of an autonomous Ukrainian state. The important political role played by the Ukrainian Cossacks in the history of their nation distinguishes them from the Russian Cossacks.

First period (1550–1648). In the mid-16th century the Cossack structure *Zaporizhia was created in the process of the steppe settlers' struggle against Tatar raids. The Tatar raids forced the army of the Grand Duchy of Lithuania to build fortresses in the southern region of Ukraine (in Kaniv, Cherkasy, Vinnytsia, Khmilnyk, Bratslav, Bar, and elsewhere). A second category of Cossacks, known as town (*horodovi*) Cossacks, was formed for the defense of the towns. They were organized by the local officials (in Cherkasy by O. Dashkevych and S. Polozovych; in Khmilnyk by P. Liantskoronsky; in Bar by B. Pretvykh) as well as S. Zborovskyy, Prince D. *Vyshnevetsky (Baida), Prince B. Ruzhynsky, and others. These leaders, together with the town and Zaporozhian Cossacks, went far into the steppes in pursuit of the Tatars in order to rescue captives or to attack Tatar and Turkish coastal towns. In time the Cossacks acquired military strength and experience as well as prestige in their own society and fame throughout Europe, which at that time was resisting the Turkish onslaught.

Another important factor in the growth of the Ukrainian Cossacks was the socioeconomic changes taking place in the Polish-Lithuanian Commonwealth in the 16th century. Because of the favorable conditions for selling grain in Western Europe, the Polish nobility introduced the manorial system of agriculture (see *Filvarok). This substantially worsened the lot of the peasantry: their land

allotments were decreased, their freedom of movement was limited, and corvée was expanded. The nobility and the Polish government attempted to impose Catholicism and Polonization on the Ukrainian population. The basic form of opposition by the peasants, and to some extent by the burghers, was flight. The fugitive peasants and townspeople fled to the sparsely populated steppe, established settlements, received, for a specified period (up to 30 years), the right to a tax-exempt settlement (**sloboda*), and called themselves free men – Cossacks. But legal ownership of the expanses of land in the Dnieper region was obtained from the Polish kings by the nobility, who created large latifundia and tried to impose feudal dependency on the local population – both peasants and Cossacks. By the end of the 16th and beginning of the 17th century this pressure of the magnates and nobility led to bloody conflicts in which the Cossacks fought against the Polish landowners and the Polish government: the uprisings of K. *Kosynsky (1591–3), S. *Nalyvaiko (1594–6), H. *Loboda (1596), M. *Zhmailo (1625), T. *Fedorovych (1630), I. *Sulyma (1635), P. *Pavliuk and D. *Hunia (1637), and Ya. *Ostrianyn and K. *Skydan (1638), all of them brutally suppressed by the Poles.

The growth of Cossackdom posed a dilemma for the Polish government: on the one hand the Cossacks were necessary for the defense of the steppe frontier; on the other hand they presented a threat to the magnates and the nobles, who governed the Polish-Lithuanian Commonwealth. The government tried to regulate and control 'the Cossack problem' by the establishment of a register, at first small, for up to 300 persons; later, under the pressure of events, this was increased to 6,000 and then 8,000 persons. Instead of allowing elected leaders, it appointed a government 'elder' and colonels. But the war of the Polish Commonwealth against Muscovy, Sweden, and Turkey forced the government to make concessions to the Cossacks. In 1578 King Stefan Batory granted them certain rights and freedoms. Gradually, the Cossacks began to conduct their own external policy independent of the government and frequently contrary to its interests (for example, they took part in Moldavian affairs and arranged a treaty with Emperor Rudolf II in the 1590s). The Cossacks became particularly strong in the first quarter of the 17th century, when Hetman P. *Sahaidachny not only spread their fame through his successful campaigns against the Tatars and the Turks and his aid to the Polish army at Moscow in 1618 and at Khotyn in 1621, but also tied Cossack interests to the Ukrainian struggle against Poland, reviving the traditions of the Kievan Rus' state.

Second period (1648–1775). The suppression of the Cossack uprisings of the 1630s curtailed the development of the Cossack movement. The Cossack register was significantly decreased; the *registered Cossacks were isolated from the ones who were excluded from the register and from the Zaporozhian Host. The offensive of the Polish Commonwealth against the Cossacks, together with intensified socioeconomic and national-religious oppression of the other classes of Ukrainian society, resulted in the *Cossack-Polish War led by Hetman B. Khmelnytsky and the consequent establishment of the *Hetman state. Parallel to these developments, the Zaporozhian Host existed autonomously on the territory of the *Zaporozhian Sich.

From 1654, when Ukraine recognized the authority of the Muscovite tsar (see *Pereiaslav Treaty), the principal

political problem of the Cossacks, and particularly their leaders, became the defense of the autonomous rights of Ukraine from the encroachment of Russian centralism. The hetmans I. *Vyhovsky, P. *Doroshenko, and I. *Mazepa tried to solve this problem by trying to separate Ukraine from Russia. After their failures later hetmans, such as I. *Skoropadsky, P. *Polubotok, and D. *Apostol, although they did not advocate an open break with Russia, stubbornly defended the autonomy of Ukraine. At the same time significant socioeconomic changes were taking place among the Cossacks. In 1725 the Cossacks in Left-Bank Ukraine numbered 55,000–65,000; in addition, there were 8,000–10,000 Zaporozhian Cossacks, and 23,000 Cossacks in *Slobidska Ukraine, which was part of the Russian state. Only about 50 percent of all Cossacks could afford to bear arms. In the first half of the 18th century the Cossacks and their families made up over 40 percent of the total population of Left-Bank Ukraine.

In the 18th century the socioeconomic differentiation among the Cossacks became more pronounced. Taking the privileged position of the Polish gentry as their model, the *Cossack *starshyna* (officers) (about 1,000 families) were successful in changing their status from an elected to a hereditary one. They expropriated land from the common Cossacks and increasingly exploited the peasants. The common Cossacks were divided into two categories: the richer *elect Cossacks, who could perform military service, and the poorer *Cossack helpers, who could not afford arms or military equipment. In time a large number of Cossack helpers were reduced to the status of peasants. In 1764 the elect Cossacks and their families numbered 176,886; the Cossack helpers and their families numbered 198,295.

In Slobidska Ukraine the Cossacks enjoyed wide autonomy within the Russian state. In Right-Bank Ukraine, which until the end of the 18th century remained under Polish rule, Cossack mercenary units existed. Their center was in Dymmer (Kiev region) until the 1680s and then in Nemyriv (Bratslav region). The hetmans and colonels were appointed by the Polish government. The need to secure its border from Turkish-Tatar invasions forced the government to organize on a territorial basis. Cossack bands came from Left-Bank Ukraine and the Zaporozhian Sich and settled in the Kiev and Bratslav regions beginning in the 1680s. With the permission of the Polish government Cossack regiments were formed in Korsun, Bohuslav, Fastiv, and Bratslav under the command of Cossack colonels, headed by an acting hetman, Col S. Samus from Bohuslav. But the actual head of the Right-Bank Cossacks was S. *Palii, colonel of Fastiv and Bila Tserkva; he led the Right-Bank Cossacks in their fight against Polish rule and oppression by the nobility and for the unification of Right-Bank and Left-Bank Ukraine under the rule of Hetman I. Mazepa (the uprising of 1702). This unification was realized in 1704. This new Cossack movement in Right-Bank Ukraine lasted until 1714, when it was wiped out jointly by the Polish and Russian governments. The few remaining Cossacks were resettled in Left-Bank Ukraine. But Cossack traditions lasted in Right-Bank Ukraine throughout most of the 18th century (see *Haidamaka uprisings). In 1790 the Polish Sejm decided to establish two Cossack regiments, but this resolution was never implemented.

Third period (1775–1917). The third period in the history of the Ukrainian Cossacks began with the de-

struction of the Zaporozhian Sich (1775) and the abolition of the Hetmanate (1780s). The abolition of the Cossack system evoked discontent among the Ukrainian populace, both from the officers, who had lost their political authority and feared they would also lose their rights as nobility (only a part of the Cossack *starshyna* were granted the rights of the Russian nobility), as well as from the common Cossacks, who, after the decree of 3 May 1783 on the enserfment of commoners, faced the threat of losing their privileges as an estate and even the possibility of enserfment. As a result there were numerous *starshyna* protests (eg, the 'Oda na rabstvo' [Ode on Slavery] of V. Kapnist in 1782 and his mission to Berlin to receive Prussian aid in 1791) on the one hand, and a number of Cossack-peasant disturbances, which sometimes took on dimensions that threatened the existing order (eg, the Turbair uprising in 1789–93), on the other. Against this background various petitions and projects in support of the restitution of the Cossacks appeared (eg, Kapnist's project of 1788). Sometimes they were successful with the Russian authorities; for example, a little Russian Muskeeter corps in Kiev was organized out of former Cossacks by General A. Levanidov in 1796, and rifleman regiments were created on the basis of former Cossack regiments and headed by former Cossack officers. Similar attempts occurred later as well, particularly when the Russian Empire was threatened (war with Turkey and France, uprisings in Poland, etc). In 1812, during the war with Napoleon, Senator M. Myklashevsky put together a project to restore Cossack regiments in Left-Bank Ukraine. This project was supported by V. Kapnist and D. Troshchynsky and was partially realized (with the formation of Cossack regiments, local militia, etc). It influenced the Cossack project of Prince M. Reprnin and I. Kapnist (the son of V. Kapnist) during the Polish uprising of 1830–1 and later projects (eg, during the Crimean War of 1853–6).

Although these projects were only partially realized and short-lived, they nevertheless had an influence on the preservation of the Cossacks as a distinct social class in the Chernihiv and Poltava regions. The Cossack estate survived there until the revolution of 1917 and retained its lawful rights and privileges, excluding those connected with military service. There were, however, some Cossack units, formed on the basis of the Zaporozhian Cossacks, that had a military character. These included the following: the *Danubian Sich on Turkish territory (1775–1828); the Cossacks in the *Banat region of the Austrian Empire (1785–1812); the *Boh Cossack Army, formed in 1784, which received land between the Dniester and the Boh rivers and was relocated in 1792 in the Kuban as the *Black Sea Cossacks, and in 1861, after its unification with the so-called *Frontier Army, was renamed the *Kuban Cossack Host; and the *Azov Cossack Host, formed out of parts of the Danubian host, which in 1828 went over to the Russian side, was settled on the Azov coast, and in 1865 was partially resettled in the Kuban. The Kuban host was the only formation of Ukrainian Cossacks that still existed in 1917 and had partial and very limited autonomy (see also *Kuban).

Certain Ukrainian noble families retained their national Cossack traditions, and many of their members took part in the Ukrainian independence movement and rebirth in the 20th century. Many members of the new Ukrainian intelligentsia were descendents of the Cossacks. The influence of Cossack traditions was evident in the Ukrai-

nian war for independence in 1917–20, particularly in the formation of the *Free Cossacks and regular army units, and in the establishment of the *Hetman government in 1918. But Hetman P. *Skoropadsky's attempt to revive the Cossack estate was not successful.

Cottage industry. Industry that developed out of home or domestic industry when the surplus production that remained after the producer's needs had been met was sold on the open market. Cottage industry differs from manufacture by the skilled trades in that the latter produce directly to order. For the peasantry cottage industry is a supplementary occupation to the basic work of farming. The producer in cottage industry is the owner of the enterprise, and the closest co-workers consist of the family members. Production takes place mostly in winter, when the peasants have a lot of free time.

In Ukraine cottage industry originated a long time ago. By the end of the 1920s it was widely practiced in the poor, overpopulated regions where factory manufacturing was insufficiently developed and where cheap raw materials were available. Thus, it was widespread in the forest belt, the Carpathians, and Subcarpathia. Cottage industry was less common in the forest-steppe belt and least common in the steppe belt and Subcaucasia, where the winters were short and there was no agrarian overpopulation. As the population density increased, more and more peasants stopped farming and turned to cottage industry to support themselves. In Poltava gubernia, for example, 58 percent of the peasants made a living in cottage industries. Usually the peasants sold their manufactured products directly at local markets and fairs, but sometimes they transported them to distant markets. Sometimes they sold their wares through middlemen and became dependent on them or even lost their independence completely and sank to the level of ordinary workers, differing from other workers only in that they worked at home.

In Ukraine cottage industries were found in various branches of manufacturing – from the production of

ordinary goods for the peasants to the production of artistic artifacts for the more prosperous part of the urban population. Ukraine's cottage industry can be divided into the following branches: woodworking, pottery, spinning and weaving, leathermaking, and metalworking.

The cottage woodworking industry was concentrated in the forested regions of Ukraine – in northern Ukraine and the Carpathian Mountains – and was less common in the forest-steppe belt. Forest labor such as the collecting of tar and resin and the cutting and sawing of timber was widespread only in Polisia and the Carpathians. The carpentry and woodworking trade produced mostly simple furniture and chests and was practiced most widely in the Poltava and Hutsul regions. Artistic woodwork was done in both of these regions as well. Cooperage was common everywhere but was particularly important in the forest regions. Wagons and wheels were built mainly in Kiev gubernia (Chyhyryn, Tarashcha, and Radomyshl), Poltava gubernia (Zinkiv, Lubni, and Hadiache), and Kharkiv gubernia (Sumy and Okhtyrka). Basket weaving was most common in the Chernihiv, Kiev, Poltava, and Kharkiv regions. The baskets and reed furniture made in Sosnytsia, Chernihiv gubernia, were widely sold throughout Ukraine. Pottery making was widely practiced throughout Ukraine (see *Ceramics).

The most important cottage industry was weaving, which produced thick, strong cloth, woolens, tablecloths, towels, kerchiefs, linen sheets, kilims, bedspreads, multicolored linen cloth, and decorative folk towels. This cottage industry was most developed in Poltava, Kiev, Chernihiv, and Kharkiv gubernias. In Galicia the Hutsul region was famous for its woven products. Ukrainian *embroidery is a special cottage industry (see also *Kilim weaving).

Leather making or tanning was widely practiced mainly in Kiev gubernia (Vasylkiv, Berdychiv, Radomyshl), Chernihiv gubernia (Baryshivka, etc), Poltava gubernia (Zinkiv, Novi Sanzhary, Tsarychanka, and especially Reshetylivka, which was known for its lambskins), Kharkiv gubernia (Okhtyrka, Valky, Nova Vodolaha, Zmiiv), and Galicia (Tysmenytsia, Kutly). Shoemaking and bootmaking usually developed in the leather-producing areas, mostly in Left-Bank Ukraine (see *Footwear industry).

Metalworking as a cottage industry was limited to blacksmithing and locksmithing. These were common throughout Ukraine but were particularly developed in the Kharkiv region (Bilovodske) and Chernihiv and Poltava gubernias. Blacksmiths produced iron-reinforced wagons, plows, harrows, hoes, sickles, and other farm implements (see *Blacksmithing).

The importance of the cottage industries before the revolution is indicated by the fact that in 1911–12 they employed 400,000 people in the nine ukrainian gubernias within the Russian Empire and produced annually 144 million rubles' worth of goods, accounting for slightly more than 10 percent of the total industrial production and 25 percent of the peasant demand for manufactured goods. Because factory manufacturing was not well developed, the cottage industries remained competitive. The government, and particularly the zemstvos, encouraged the development of the cottage industries by providing subsidies, credit, instructors, and so on.

In the first few years following the revolution the cottage industries assumed an even greater importance than before the war, because the productivity of the

factories had declined. In the mid-1920s the cottage industries accounted for about 20 percent of all manufactured goods and met 40 percent of the peasants' demand. As of 1 October 1928 there were 820,000 peasants and tradespeople employed in the cottage industries in Soviet Ukraine, and only 22.3 percent of them were in co-operatives. According to some rough estimates their production was worth 310 million rubles. Forced collectivization, a shortage of raw materials, and, most of all, exorbitant taxes brought about the decline of the cottage industries. By 1933 there were only 48,000 peasants and tradespeople employed in cottage industries in Soviet Ukraine. The Soviet authorities forced them to join co-operatives controlled by the government. Co-operative workers pay an income tax at the same rate as do workers and public employees (1.5–13 percent of their income; in 1960–5 the tax on incomes up to 100 rubles per month was canceled and that on incomes up to 200 rubles per month was reduced). Employees in cottage industries who do not belong to co-operatives must pay a much higher income tax – from 4 to 81 percent.

Some products of the cottage industries, such as ceramics, kilims, embroidery, and wood carvings, are of a high artistic standard and sometimes share common features with folk art.

Cotton (*Gossypium*, Ukrainian: *bavovna*). Cultivated in Ukraine from the mid-1920s to the mid-1950s. The cotton that was cultivated was a mountain variety of poor quality (*G. hirsatum*). Ukraine is the northern limit of cotton cultivation. At the beginning of the 1920s cotton was planted on some farms in the steppes. In the next few years it spread to some state farms in the south (particularly on the Black Sea coast), the Crimea, and the Kuban. Although climatic conditions in Ukraine are unsuitable for growing cotton, the Soviet government required it to be grown not only for the textile industry, but also for the manufacture of explosives (in cold or rainy years the unripened crop could be used only for that purpose). In 1940 the area devoted to cotton was 282,000 ha in the Ukrainian SSR (including the Crimea) and 400,000 ha in Ukrainian ethnic territories (20 percent of the area devoted to cotton in all of the USSR). But the yield was small; for example, it was 5 centners per ha in 1937, 5.9 in 1938, and only 2.2 in 1940. Research stations obtained yields of 14 centners per ha. Ukraine's annual production of cotton varied from 800,000 to 2,000,000 centners (5–10 percent of Soviet production). The government planned to increase the area devoted to cotton to 500,000 ha, but in the mid-1950s the experiment in growing cotton in Ukraine and the Kuban came to a halt. As a result, all the capital that had been invested in it was lost.

Beginning in 1930 cotton research in Ukraine was carried out by the Ukrainian Cotton Research Station, which in 1949 was renamed the Ukrainian Scientific Research Institute of Cotton Growing and Irrigation Farming of the Ministry of Agriculture of the Ukrainian SSR.

V. Kubijovyč

Cotton industry. One of the basic branches of the textile industry, producing cotton thread and cloth as well as industrial thread, cord, and so on. Because of the economic policy of the tsarist government, the industry hardly existed in Ukraine before 1917. It developed to some extent in the 1930s as a result of the experimental cultivation of cotton in southern Ukraine and the Kuban. In the interwar period there were 11 cotton mills in Ukraine. The largest mills were the spinning factory in Poltava, the textile factory in Kiev, and the cotton mills in Stebliv, Korostyshiv, and Radomyshl, which together produced 13.3 million meters of cloth (0.03 percent of the USSR production) and 12,200 tonnes of cotton thread (0.1 percent of the USSR total). The cotton industry's output increased somewhat in the 1960s, when the Kherson Cotton Mill was built (accounting for 60 percent of the cotton-cloth output of Ukraine) and new spinning mills were set up in Kiev, Lviv, and Chernivtsi. In the 1970s a cotton mill was built in Ternopil, and several spinning mills were built in Chernihiv, Lviv, Kiev, and other cities. At the same time production was partly modernized by introducing improved looms and assembly lines for processing cloth.

In spite of these measures the cotton industry in Ukraine remains one of the most backward branches of the textile industry. In the second half of the 1970s it produced about 450 million meters of cloth (5.5 percent of the USSR production). In 1970 it produced 94,400 tonnes of cotton thread (6.5 percent of the USSR production), and in 1981, 139,900 tonnes (7.6 percent).

The scientific and technical problems of the cotton industry are investigated by the Central Scientific Research Laboratory of the Kherson Cotton Mill and the Ukrainian Scientific Research Institute of the Textile Industry. (For a bibliography, see *Textile industry.)

B. Wynar

Council for Mutual Economic Assistance or Comecon (Rada ekonomichnoi vzaïmodopomohy). International organization of socialist countries established in 1949 for the purpose of economic co-operation, integration, and a common market in the Soviet bloc. The following countries are members of Comecon: the USSR, East Germany, Czechoslovakia, Poland, Hungary, Rumania, Bulgaria, Mongolia (since 1962), and Cuba (since 1972). Yugoslavia co-operates to some extent with Comecon, while Albania resigned from the organization in 1961. According to the charter of Comecon, each member country has the right to disagree with the decisions of the rest of the members. Trade among the members is regulated by bilateral agreements, because Comecon does not have a common currency or uniform prices. The internal economic plans of the member countries are co-ordinated; scientific and technical information is exchanged; and in 1971 a common investment bank was established. About one-third of Ukraine's foreign trade consists of trade with Comecon countries outside the USSR. Ukraine's exports to these countries (particularly to East Germany, Czechoslovakia, and Poland) exceeded imports from them by 42.5 percent in 1965. Ukraine also serves as the main market for Comecon exports to the USSR. In the early 1970s Czechoslovakia was investing its capital in the development of mines in the Kryvyi Rih region, while Bulgaria was investing in the expansion of the Zhdanov Metallurgical Plant. Despite the extensive integration of

Ukraine's economy with the economy of Eastern Europe, the Ukrainian SSR is not an independent member of Comecon.

V. Holubnychy

Council for the Study of the Productive Resources of the Ukrainian SSR (Rada po vyvchenniu produktyvnykh syl USSR). Formed in 1934 to replace the Commission for the Study of the Productive Resources of Ukraine of the All-Ukrainian Academy of Sciences. Before the Second World War the council studied economic planning, economic regionalization, and Ukraine's natural resources, thus encouraging the growth of geological exploration, mostly in the ore, coal, and petroleum regions of Ukraine. Much attention was given to the problem of the Greater Donbas and Greater Dnieper regions and the development of heavy industry. Several irrigation projects were drawn up, and the profile of local construction-material resources was to some extent researched. The first president of the council was O. *Shlikhter, who, with others, was used by the Stalinist authorities to help destroy the economic institutions of the All-Ukrainian Academy of Sciences (see *Economic studies). To avoid political persecution some academicians and research associates of the All-Ukrainian Academy of Sciences such as K. Vobly, M. Ptukha, H. Kryvchenko, M. Svitalsky, and O. Fomin conducted research for the council. But in spite of Shlikhter's patronage the council only escaped persecution temporarily. In 1936-8 many of the council's researchers were arrested; others were transferred to the State Planning Committee and other institutions; and the council's work came to a halt.

The council resumed work only in 1947. P. Pohrebniak, P. Pershin, M. Palamarchuk, and, since 1972, O. Alymov have directed the council. The task of the new council was to plan the development and utilization of the natural resources of the individual economic regions of the Ukrainian SSR, particularly the Kiev, Kharkiv, Lviv, and Ivano-Frankivske economic-administrative regions. It continued to study the potential for irrigation farming in southern Ukraine and devoted considerable attention to the utilization of energy resources, construction-material deposits, and so on. In 1959 the council became a scientific research institution on the same level as the institutes of the Academy of Sciences of the Ukrainian SSR. In 1963 it was recognized as the principal scientific institution and scientific-methodological center of the State Planning Committee of the Ukrainian SSR for studying the distribution and the development of Ukraine's productive resources. In 1966 the council was transferred again from the jurisdiction of the State Planning Committee to the Academy of Sciences of the Ukrainian SSR and was assigned the additional task of investigating the long-range development of Ukraine's economy.

In 1980 the council had 15 departments and 120 research associates. The more important specialists associated with the council are S. Bukhalo (the location of the coal industry), M. Palamarchuk (economic geography and economic regionalization), L. Koretsky (economic geography), P. Kovshul (ore resources), V. Onikiienko (labor resources), H. Yakusha (energy resources), O. Alymov and F. Zastavny (industrial regionalization), V. Kalchenko (electrification), I. Lukinov (agriculture), and P. Bahrii (mathematical modeling). The council has pro-

duced a number of projects for the economic development of Ukraine in 1970–80 and 1980–90 that take into account forecasts for economic resource development to the year 2000. Since 1965 the council has published irregularly the collection *Rozmishchennia produktyvnykh syl URSR* (The Distribution of Productive Resources in the Ukrainian SSR).

B. Wynar

Council of Conferences of Mining Industrialists of Southern Russia (Sovet sez dov gornopromyshlennikov yuga Rossii). Permanent executive agency of representative organizations, syndicates, and institutions of the coal and metallurgical industries of Ukraine. The council was established at the First Conference of Coal Industrialists in Tahanrih in 1874 through the initiative of O. Auerbakh, O. Sheierman, P. Gorlov, I. Ilovaisky, and other proprietors of large mines in the Donets Basin. The council's head office was located in Kharkiv. Its most active members were O. Alchevsky, Ya. Yasiukovych, F. Yenakiiev, and H. Kolberg. According to its charter the council's main function was to help and advise the Russian government in estimating and planning the production and sale of coal and metals three years in advance to railway companies, military installations, towns, and foreign buyers. Hence, besides industrialists, representatives of government, railways, zemstvos, and scientific and technical associations, as well as the consumers of coal and metals, had a right to participate in the conferences and to sit on the council. In time, as a result of the influence of foreign (French, Belgian, and German) capital, the council turned into an instrument of Ukrainian territorial *monopolies.

The council's representatives defended the interests of foreign and Ukrainian capital before the Russian government. In the 1870s–1880s the council advocated protective *tariffs on imported coal and metals; these tariffs were opposed by the Moscow Association of Factory Owners and Manufacturers, who preferred to import British coal via the Baltic Sea. The 'Kharkiv parliament,' as the council was called by the reactionary Moscow press, got its way because the government wanted to develop the industry of the empire. At the beginning of the 1900s the council encouraged the formation of Ukrainian territorial cartels such as *Produgol and *Prodamet and under their leadership began a struggle for influence over the government and control of the market against a similar organization – the Council of Conferences of the Mining Industrialists of the Urals. Eventually it emerged victorious again. The Kharkiv Committee for Railway Transportation of Mining and Factory Freight, which demanded preferential railway tariffs for Ukraine, co-operated closely with the council. The council gained almost complete control over the empire-wide Council of Conferences of the Representatives of Industry and Trade, which was organized in Moscow in 1906 and represented over 100 different syndicates and cartels, by securing the election of its president, N. Avdakov, to the presidency of the council in Moscow. During the council's sharpest conflicts with the Russian government, in 1903–12, the idea of seceding from Russia and establishing a 'Black Sea Republic' with its capital in Kharkiv or Odessa was aired in the council and at the conferences of its members. In 1917 the council criticized the Provisional Government for its concessions to the labor and social movements, and in 1918 it co-

operated through *Protofis with the Hetman government of Ukraine. The council was formally abolished by the Bolsheviks in January 1918, but in the first years of the New Economic Policy the Council of Conferences of Ukraine's Industry, Trade, and Transport was established, incorporating much of the earlier council's administrative and technical personnel. In a short while the new council was abolished as well.

In 1900–5 N. Avdakov presided over the council; he was followed by N. von Ditmar (1905–18). In 1897 a statistical office was established by the council, and it published a large number of books and other scientific material on Ukraine's heavy industry and markets. The council published a newspaper, *Gornozavodskoi listok* (1888–1909); a journal, *Gornozavodskoe delo* (1910–); and the annual *Trudy* of the mining industrialists' conferences. These publications contain a rich store of primary source material for the history of capitalism in Ukraine. The council's archives have not been preserved.

V. Holubnychy

Council of Labor and Defense (Sovet truda i oborony or STO). Agency of the Council of People's Commissars of the Russian SFSR in 1918–22 and then of the USSR in 1923–37. In the Ukrainian SSR the STO was called the Economic Council (EKOSO) in 1921–3 and then the Ukrainian Economic Council (UEN) up to 1937. The council had the powers of an interdepartmental commission and formed a kind of 'inner cabinet' in the Council of People's Commissars. Its decisions were binding for all Union and republican military and economic institutions. The Ukrainian councils were subordinate both to the STO and to the Ukrainian Council of People's Commissars. A representative of the UEN belonged to the STO. The chairman of the Council of People's Commissars presided over the STO and the UEN. The STO had among its members the people's commissars of defense, military industry, highways, and finances. Later, the Commissar of Heavy Industry and the chairmen of the State Planning Committee and the State Bank were added to its membership. Deputies of these Union commissars sat on the UEN. Among the functions of the STO, EKOSO, and UEN were the approval of annual and quarterly economic and financial plans (particularly military ones) and the general supervision of the work of the Higher Economic Council and of the regional economic councils. In 1937, as a result of government centralization, the UEN was abolished, and the STO was turned into an 'economic council' of the Council of People's Commissars of the USSR.

Council of Lords (Pany-rada). Institution of the central government of the Grand Duchy of Lithuania in the period preceding the Union of Lublin (1569). The council evolved from the grand duke's boyar councils and the council of Vilnius administrators of the grand duchy. Until the end of the 15th century the council based itself on customary law. The privileges bestowed on it in the charters of 1492 and 1506 made the council a permanent, legally entrenched institution. At first the council consisted of the most prominent and influential feudal lords – the *paniata* and *kniiazhata* and several representatives of the central government. As it evolved the number of members without office decreased while the number of government and Roman Catholic church representatives increased.

The council had wide powers in foreign, internal, administrative, legislative, judiciary (it could try members of the privileged estates), and financial matters. At the same time the council was an advisory body that the grand duke consulted in making the most important decisions of state. In the 16th century the council became a kind of upper chamber of the General Diet (Valnyi Soim) representing the ruling estates.

Council of Ministers of the Ukrainian SSR (Rada Ministriv URSR). Agency of state and economic administration in the Ukrainian SSR, succeeding in 1946 the *Council of People's Commissars. The Council of Ministers is formally elected by the Supreme Soviet of the Ukrainian SSR and consists of a chairman, deputy chairmen, ministers, and heads of central governing agencies. The council may include the heads of other agencies and organizations in Ukraine. The Presidium of the Council of Ministers, which is a non-sessional body of the Council of Ministers, consisting of a chairman and deputy chairmen, decides questions of state administration and economic policy. At the recommendation of the chairman of the Council of Ministers other members of the government may be included in the presidium. The Council of Ministers is accountable to and reports to the Supreme Soviet of the Ukrainian SSR. Between sessions it is responsible to the Presidium of the Supreme Soviet.

Since the Supreme Soviet of the Ukrainian SSR and its presidium are the highest representative bodies of the Ukrainian SSR and do not report to corresponding Union bodies, it may be thought that they are the government of a truly sovereign republic that is independent of the Council of Ministers of the USSR. But this is not true for several reasons: (1) The Council of Ministers of the Ukrainian SSR can deal only with those matters that are under the jurisdiction of the Ukrainian SSR. (2) USSR laws are equally valid in all the republics of the Union. In the case of conflict between a Union and a republic law, the Union law is overriding. (3) On questions referred to the USSR Council of Ministers, the council may suspend the decisions and orders of the republic councils of ministers. (4) Industries of a Union status that are located in Ukraine are directed by Union ministries and state committees; Union-republican ministries and state committees direct certain branches of industry in Ukraine assigned to them. These branches are subordinate to the Ukrainian Council of Ministers as well as to the appropriate Union-republican ministry and the USSR state committee. In this field the orders of the USSR ministries and state committees are binding on the agencies of the Ukrainian SSR. Only the republic ministries, such as the Ministry of Highways, of Transport, of Consumer Services, of Public Housing, of Communal Economy, of Local Industry, of Social Security, and of the Fuel Industry, are responsible exclusively to the Council of Ministers of the Ukrainian SSR. (5) The chairman of the Council of Ministers of the Ukrainian SSR belongs, as a representative of the republican government, to the Council of Ministers of the USSR; hence, all the decisions of the latter body are for him/her immediately binding. (6) According to art 6 of the Constitution of the Ukrainian SSR (1978), the CPSU is the leading and guiding force behind all government agencies. It defines the general direction of social development and Soviet domestic and foreign policy. The appropriate Party agencies are in charge of personnel administration for the

Council of Ministers and so the council is actually accountable to these agencies.

The Council of Ministers of the Ukrainian SSR functions on the basis of USSR law, which requires it to fulfill the decisions of the Supreme Soviet of the USSR and its presidium. For this purpose it issues resolutions and decrees and monitors their implementation (Constitution of the Ukrainian SSR, art 120). At the same time it issues resolutions and decrees on the basis of and for the enforcement of the laws of the Ukrainian SSR. The division of powers between the USSR and the Ukrainian SSR is decisive and is formally effected through the classification of ministries into Union, Union-republic, and republic ministries.

Until 1965 all-Union ministries and agencies had their representatives in Ukraine. They sat on the Council of Ministers of the Ukrainian SSR, and their activities in Ukraine were co-ordinated by the council. The council in turn has permanent representation on the USSR Council of Ministers in order to maintain constant communication between the governments of the USSR and the Ukrainian SSR.

The powers of the Council of Ministers of the Ukrainian SSR have changed with the policies of the USSR government. They were greatest in 1957–62 when economic administration by region was introduced. Later the powers of the council were greatly reduced, particularly in 1965, with the return to economic administration by branch. The most recent economic reforms, in 1979, broadened the powers of the council in certain areas: (1) It prepares outlines of the five-year and one-year plans and the budgets of those branches of the economy that are under republic control. (2) Guided by Union agencies, it prepares outlines of the plans and budgets of Union-republic ministries and state committees. (3) It presents proposals for the plans of all-Union associations, industries, and organizations located in Ukraine to the State Planning Committee of the USSR and the ministries and departments of the USSR. The basic indices of these associations, industries, and organizations are included in the five-year and one-year plans of the Ukrainian SSR.

The Council of Ministers of the Ukrainian SSR supervises the implementation of the plans by all the ministries and departments of the Ukrainian SSR, by their subordinate enterprises and oblast executive committees, and, finally, by the lower executive committees.

The Council of Ministers has the power to reverse the decisions and orders of the executive committees of oblast and city soviets, the ministries and departments of the Ukrainian SSR, and their subordinate agencies.

In theory the Council of Ministers of the Ukrainian SSR is a collegial body in which important questions are decided by a majority vote. Yet most matters are decided by the Presidium of the Council of Ministers, because ministers are hardly qualified to judge issues outside their fields. An agency of the USSR government known as the Office for the Affairs of the Council of Ministers of the Ukrainian SSR (Kerivnytstvo spravamy RM URSR) prepares the questions that are to be considered by the council.

The following have been chairmen of the Council of Ministers of the Ukrainian SSR: N. Khrushchev (1946–7), D. Korotchenko (1947–54), N. Kalchenko (1954–61), V. Shcherbytsky (1961–3 and 1965–72), I. Kazanets (1963–5), O. Liashko (since 1972).

Nothing is published on the inner discussions of the

council. The resolutions and decrees of the Council of Ministers of the Ukrainian SSR are published in *Zbirnyk postanov i rozporiadzhen' uriadu URSR* (The Collection of Decisions and Decrees of the Government of the Ukrainian SSR), which comes out in Ukrainian and Russian.

Council of National Ministers of the Ukrainian National Republic

(Rada Narodnykh Ministriv UNR). The executive branch of the Ukrainian National Republic, previously called the *General Secretariat of the Central Rada. The council existed from 22 January 1918 (it was established by the Fourth Universal) to Hetman P. *Skoropadsky's coup d'état (29 April 1918), and during the government of the *Directory of the UNR. The council's composition was determined by agreement among the major parties and was confirmed by the Central Rada. The head of the Central Rada proposed a list of cabinet members, having insured majority support for the list in the Central Rada.

In January 1918 the ministers in the council were the prime minister and minister of domestic affairs V. Vynnychenko (Ukrainian Social Democratic Workers' party [USDRP]); his deputies I. Kraskovsky (Ukrainian Party of Socialists-Federalists [UPSF]), O. Karpynsky, and L. Abramovych; the minister of foreign affairs O. Shulhyn (UPSF); the minister of defense and labor M. Porsh (USDRP) and his deputy O. Zhukovsky (Ukrainian Party of Socialist Revolutionaries [UPSR]); the minister of justice M. Tkachenko (USDRP); the minister of food supplies M. Kovalevsky (UPSR); the minister of communications V. Yeshchenko (independent); the minister of postal and telegraph services M. Shapoval (UPSR); the minister of marine affairs D. Antonovych (USDRP); the deputy finance minister V. Mazurenko (USDRP); the minister of education I. Steshenko (independent social democrat) and his deputy, P. Kholodny (UPSF); the minister of trade and industry V. Holubovych (UPSR); the minister of Russian affairs D. Odynets (Russian National Socialist party); the minister of Jewish affairs M. Zilberfarb (United Jewish Socialist party); the minister of Polish affairs M. Mickiewicz (Polish Democratic Centrist party); the state controller O. Zolotarov (Jewish Bund); and the state secretary I. Mirny (independent).

This cabinet was formed by the coalition of the USDRP, UPSR, UPSF, and the national minorities. A crisis in the USDRP and the UPSR on the issue of non-confidence in Vynnychenko's government led to Vynnychenko's resignation and the dissolution of the cabinet on 30 January 1918. A new council was composed of the opposition elements in the same parties. The new ministers were the prime minister and minister of foreign affairs V. Holubovych, the minister of defense A. Nemolovsky (UPSR), the minister of domestic affairs P. Khrystiuk (UPSR), the

minister of finance S. Perepelytsia (UPSR sympathizer), the minister of communications Ye. Sokovych (UPSR sympathizer), the minister of food supplies M. Kovalevsky, the minister of education N. Hryhoriiv (UPSR), the minister of agriculture A. Ternychenko (UPSR sympathizer), the minister of justice M. Tkachenko, the minister of marine affairs D. Antonovych, and the minister of postal and telegraph services H. Sydorenko (independent).

In February 1918 Holubovych reshuffled his cabinet in response to the Treaty of Brest-Litovsk and the temporary occupation of Kiev. The new ministers were the minister of foreign affairs M. Liubynsky (UPSR), the minister of defense O. Zhukovsky, the minister of domestic affairs M. Tkachenko, the minister of land affairs M. Kovalevsky, the minister of justice S. Shelukhyn (UPSF), the minister of finance P. Klymovych (independent), the minister of postal and telegraph services H. Sydorenko, the minister of education V. Prokopovych (UPSF), the minister of communications Ye. Sokovych, the minister of labor L. Mykhailiv (USDRP), the minister of trade and industry I. Feshchenko-Chopivsky (UPSF), the minister of food supplies S. Koliukh (independent), the state controller O. Lototsky (UPSF), and the state secretary P. Khrystiuk. Just before Hetman Skoropadsky's coup, members of the UPSF resigned from the council.

According to the Constitution of the UNR, adopted on 29 April 1918, the Council of National Ministers was to be the supreme executive power of the republic. It was to be formed by the president of the National Assembly, in consultation with the Council of Elders, and confirmed by the assembly. Members of the council were responsible, individually and collectively, to the assembly. The executive branch of the state under Hetman Skoropadsky was known as the Council of Ministers (see *Hetman government).

The Council of National Ministers was re-established under the Directory. The selection and functioning of the council was to conform, in principle, to the Constitution of the Central Rada. The *Labor Congress defined the temporary constitutional status of the council, recognizing it as the executive power of the UNR. The ministers in the council were to be selected by the Directory and were responsible to it when the congress was not in session. The Directory was the supreme legislative power and had supervisory authority over the council. One of the responsibilities of the council was to prepare legislative proposals. In practice, there were frequent conflicts over prerogatives between the two bodies, for the Directory often interfered in political and even administrative affairs.

On 26 December 1918 a new Council of National Ministers was formed. The ministers included the prime minister and minister of foreign affairs V. Chekhivsky (USDRP); the minister of domestic affairs O. Mytsiuk (UPSR); the minister of land affairs M. Shapoval; the minister of postal and telegraph services I. Shtefan (UPSR); the minister of finance V. Mazurenko; the minister of trade and industry S. Ostapenko (UPSR); the minister of food supplies B. Martos (USDRP); the minister of defense Gen O. Osetsky, succeeded by Gen O. Hrekov; the minister of marine affairs M. Bilynsky; the minister of communications P. Pylypchuk (National Republican party [NRP]); the minister of education P. Kholodny, succeeded by I. Ohienko (UPSF); the minister of religious

denominations I. Lypa (Ukrainian Party of Socialists-Independentists [UPSI]); the minister of justice S. Shelukhyn; the minister of arts D. Antonovych; the minister of national health B. Matiushenko (USDRP); the minister of labor L. Mykhailiv; the minister of Jewish affairs A. Revutsky (Poalei-Zion); the state secretary I. Snizhko, succeeded by M. Korchynsky (UPSF); the state controller L. Symoniv (URSI); and the minister of press and propaganda O. Nazaruk (UPSR).

The government consisted of a broad coalition of national parties that had formed the *Ukrainian National Union and had supported the overthrow of the hetman government. Socialist parties were the dominant force. On 13 February 1919 a new council, without USDRP and UPSR members, was formed in Vinnytsia to pave the way for talks between the Directory and Entente representatives about anti-Bolshevik military support. The ministers included the prime minister S. Ostapenko (former UPSR member), the minister of foreign affairs K. Matsiievych (UPSF), the minister of domestic affairs H. Chyzhevsky (NRP), the minister of defense O. Shapoval (UPSI), the minister of marine affairs M. Bilynsky, the minister of national economy I. Feshchenko-Chopivsky, the minister of finance M. Kryvetsky (UPSI), the minister of land affairs Ye. Arkhynpenko (NRP), the minister of education I. Ohiienko, the minister of religious affairs I. Lypa, the minister of justice D. Markovych, the minister of national health O. Korchak-Chepurkivsky, the minister of communications P. Pylypchuk, the minister of press and information O. Nazaruk, the state secretary M. Korchynsky, and the state controller L. Symoniv. This government consisted of more right-wing and non-partisan professional elements than had previous governments. At the same time Vynnychenko resigned from the Directory, and S. Petliura, who had left the USDRP, became its head.

The unsuccessful talks with the Entente undermined confidence in Ostapenko's government among the leftist majority. When the talks collapsed, a new council, consisting of the USDRP, UPSR, and Western Ukrainian Social Democratic party (USDP) members, was formed in Rivne on 9 April 1919. The new ministers were the prime minister and finance minister B. Martos; the deputy prime minister and justice minister A. Livytsky (USDRP); the minister of foreign affairs V. Temnytsky (USDP); the minister of domestic affairs I. Mazepa (USDRP); the minister of defense H. Syrotenko (UPSR), succeeded by Gen V. Petriv; the minister of highways M. Shadlun (USDRP); the minister of labor Y. Bezpalko (Bukovynian USDP); the minister of national health M. Bilous (Galician USDP), succeeded by D. Odryna (UPSR); the minister of land affairs M. Kovalevsky; the minister of national economy T. Cherkasky (UPSR); the minister of postal and telegraph services I. Palyvoda (UPSR); the minister of education A. Krushelnytsky (Galician Radical party), succeeded by N. Hryhoriiv; the minister of religious affairs M. Myrovych; the minister of Jewish affairs P. Krasny (Poalei-Zion); and the state secretary I. Lyzanivsky (UPSR).

In late August 1919 the council was reorganized under the leadership of I. Mazepa, with the following ministerial changes: in charge of national economy, M. Shadlun; of press and propaganda, T. Cherkasky; of communications, S. Tymoshenko (USDRP); of religious affairs, I. Ohiienko; and of defence (from November 1919), Gen V. Salsky.

Mazepa's government was dissolved after the signing of the Treaty of Warsaw with Poland. On 26 May 1920 a new council was formed. The ministers were the prime minister, V. Prokopovych; the deputy prime minister and minister of justice A. Livytsky, the minister of foreign affairs A. Nikovsky (UPSF), the minister of domestic affairs O. Salikovsky (UPSF), the minister of land affairs I. Mazepa, the minister of defense V. Salsky, the minister of national economy Ye. Arkhynpenko, the minister of finance Kh. Baranovsky (independent), the minister of communications S. Tymoshenko, the minister of education P. Kholodny, the minister of religious affairs I. Ohiienko, the minister of postal and telegraph services I. Kosenko, the minister of health S. Stempowski (Polish minority), and the state secretary V. Onikhimovsky. This was the last government that functioned on Ukrainian territory. The representation of the various parties in it was balanced. It consisted mostly of right-wing social democrats, members of the UPSF, and independents.

At the beginning of 1921 the government of the UNR went into exile. The Council of National Ministers was headed by V. Prokopovych, P. Pylypchuk, and A. Livytsky. After Livytsky became head of the Directory in exile (1926), the cabinet was headed, with few changes until 1939, by Prokopovych. The members of the Government of the UNR in exile lived in the principal émigré centers: Warsaw, Prague, and Paris. (For a bibliography, see *Ukrainian National Republic.)

V. Markus, M. Stakhiv, A. Zhukovsky

Council of Officers (Rada starshyn). One of the agencies of the central government in the Hetman state (1648–1764), which functioned alongside the hetman and the *General Military Council, particularly under hetmans I. Samoilovych and I. Mazepa. The powers of the Council of Officers and the General Military Council were not clearly divided, and the first often acted for the second. Besides dealing with the most important legislative, administrative, and judicial problems, the Council of Officers was especially concerned with state finances. It convened regularly to advise the hetman's *General Officer Staff. Its assemblies were usually held at the hetman's residence during Christmas and Easter holidays. Sometimes delegations of regimental officers and even notable military fellows participated in the assemblies. The Council of Officers can be viewed as a unique estate parliament.

Council of People's Commissars (Rada Narodnykh Komisariv or Radnarkom; Russian: Sovet Narodnykh Komissarov or Sovnarkom). Supreme executive and administrative body in the USSR and the Ukrainian SSR until 1946. It was first established as the government of the Russian SFSR under V. Lenin's leadership by the Second All-Russian Congress of Soviets in November 1917. In 1923 the Sovnarkom of the USSR became the Union government responsible to the Central Executive Committee and its presidium. It consisted of Union (amalgamated) commissariats and federated commissariats (the latter functioned also in the republican Sovnarkoms). The structure of the Sovnarkom of the USSR changed continually as the government became increasingly centralized, particularly after 1934, when the functions of the All-Union and the Union-republican commissariats were defined. The Sovnarkom was headed by Lenin

(1917–24), A. Rykov (1924–30), V. Molotov (1930–41), and J. Stalin (1941–6). In 1946 it was renamed the Council of Ministers of the USSR.

In Ukraine the first Soviet government called itself the *People's Secretariat in imitation of the government (General Secretariat) of the UNR. The second Soviet government, formed on 30 November 1918, was known as the *Provisional Workers' and Peasants' Government of Ukraine. It used this name until January 1919, when it adopted, after the Russian model, the name Council of People's Commissars of Ukraine (Radnarkom). For a short time in 1919–20 the Radnarkom was abolished, and its functions were carried out by the *All-Ukrainian Revolutionary Committee. According to article 16 of the 1919 Constitution of the Ukrainian SSR, the Radnarkom had the right to examine all legislative and administrative matters, but it could rule only on those matters that were delegated to it by the *All-Ukrainian Central Executive Committee. The constitution did not prescribe the number of people's commissars or define their functions. A number of government executive branches in Ukraine were directed by the appropriate people's commissariats of the Russian SFSR (eg, defense, foreign trade, postal and telegraph services, transportation), which had been granted jurisdiction by special treaties between Ukraine and Russia in 1919–21. The Russian commissars in charge of such areas were represented by deputies in the people's commissariats of Ukraine.

After the formation of the USSR in 1923, the jurisdiction of the central agencies of the Soviet Union was limited somewhat: the Sovnarkom of the USSR received from the Central Executive Committee of the USSR legislative authority only over the more important government matters.

The Radnarkom consisted of the people's commissars of Ukraine, their deputies in the government of Ukraine, the deputy of the State Political Administration (GPU) of the USSR, and other members who were designated by the Central Executive Committee. In accordance with the 1924 Constitution of the USSR, Ukraine had eleven commissariats, five of which had the same name as their all-Union counterparts: finance, labor, workers'-peasants' inspection, supplies (later called internal trade), and the *Higher Economic Council. The other six commissariats – justice, internal affairs, education, social security, land affairs, and public health – were independent. In addition, the Radnarkom included five deputies of the Union (amalgamated) commissariats: foreign affairs, military and naval affairs, foreign trade, roads and highways, and postal and telegraph services. These deputies, according to the decision of the Central Executive Committee of the USSR, functioned in an advisory capacity but also had the right to cast a decisive vote.

The 1936 constitution retained this division of powers in principle, but introduced new names for the commissariats. The Union commissariats directed their designated branches of administration throughout the USSR directly or through subordinate agencies; the Union-republican commissariats directed their corresponding branches, based on registers of enterprises or institutions, through republican commissariats of the same name; and the republican commissariats were responsible only to the councils of people's commissars in their own republics. Besides the commissariats, state committees

and central administrations such as the State Planning Committee and the Chief Administration of Workers' Recruitment and Resettlement belonged to the Radnarkom. After the reform of the economic administration in 1932–4, the number of USSR people's commissariats increased. In accordance with the official theory the Council of People's Commissars became the highest administrative body, carrying out within its jurisdiction and under the leadership of the Party the duties of the government of the Soviet state.

Formally, the chairman and the members of the Radnarkom were appointed by the All-Ukrainian Central Executive Committee and, starting in 1937, by the *Supreme Soviet of the Ukrainian SSR, to which the Radnarkom reported and was responsible. In reality, decision making belonged to the Moscow leadership of the Communist party and the Central Committee of the CP(B)U. The Radnarkom functioned under their control. The council's decisions took the form of decrees and decisions according to the Soviet constitution of 1924 and of decisions and ordinances according to the 1936 constitution.

The chairmen of the Radnarkom from 1919 to 1946 were Kh. Rakovsky (1919–23), V. Chubar (1923–34), P. Liubchenko (1934–7), M. Bondarenko (1937), D. Korotchenko (1938–9), L. Korniets (1939–44), and N. Khrushchev (1944–6).

In 1946 the Radnarkom was renamed the *Council of Ministers of the Ukrainian SSR, and the people's commissariats became ministries.

A. Bilynsky

Council of the Republic (Rada Respubliky). Parliament in exile of the Ukrainian National Republic established by the UNR law of 9 January 1921. Before the creation of the council, the UNR law of 12 November 1920 anticipated the creation of the State National Council (Derzhavna Narodnia Rada), but this body was never convened owing to the evacuation of the UNR government to Poland. The Council of the Republic met in Tarnów, Poland, in February 1921 as the 'provisional supreme organ of the people's government, which has the right of full authority.' It consisted of 67 deputies, representing various political parties, professional and cultural organizations, and zemstvos. At the end of March the council issued a universal to the Ukrainian nation. The council ceased functioning in August 1921 after several organizations resigned. The council was headed by I. *Feshchenko-Chopivsky.

Council on Religious Affairs (Rada v spravakh relihii pry Radi Ministriv SRSR). Government agency for the implementation of Soviet religious policy, attached to the Council of Ministers of the USSR and established in 1965 from the merger of two previous agencies – the Council on the Affairs of the Russian Orthodox Church (est 1943) and the Council on the Affairs of Religious Cults (est 1944). The Council on Religious Affairs consists of a chairman, deputy chairmen, members, and, ex officio, the council plenipotentiaries for Union republics. It is composed of departments in charge of individual denominations and general administrative offices. Plenipotentiaries appointed by the council in republics and oblasts are attached to the councils of ministers and oblast executive committees.

The functions of the Council on Religious Affairs include enforcing legislation and administrative rules concerning religion, monitoring their implementation, collecting information about the activities of religious organizations, drafting new measures for approval by the government, and assisting churches and religious organizations in their government-sponsored international contacts. The council decides on registration or de-registration of religious congregations and clergy and on the opening or closing of houses of worship. It controls theological seminaries (eg, the curriculum and admissions) and the ordination of clergy, has a power of veto over the election of congregation officers, and has an influence on the selection of church hierarchy.

In the Ukrainian SSR supervision over religions was entrusted in 1920–1 to the People's Commissariat of Justice (where it was a separate agency of government headed by I. Sukhopliuev). In the mid-1920s this function was transferred to the NKVD, which instituted an interdepartmental commission (made up of representatives of the NKVD, as well as of the commissariats of justice and education). In the 1930s supervision over religious organizations was exercised through the secretariat of the Presidium of the All-Ukrainian Executive Committee (after 1936, of the Supreme Soviet of the Ukrainian SSR). From 1944 there were two republican plenipotentiaries of the two newly established all-Union agencies, for the Russian Orthodox church and for other religious cults. The two offices merged in December 1965 into one republican plenipotentiary's office of the Council on Religious Affairs. In 1974 this office was transformed into a Council on Religious Affairs for the Ukrainian SSR, with K. Lytvyn as its head. The Ukrainian council had 125 officials in 1975, 34 of them in the central office in Kiev. Assisting the Council on Religious Affairs are oblast plenipotentiaries and administrative commissions for the raion soviets. The council's apparatus is known to work closely with the KGB.

Those parts of the 1927 Administrative Code of the Ukrainian SSR concerning religious organizations were replaced on 1 November 1976 by a decree of the Presidium of the Supreme Soviet of the Ukrainian SSR entitled Statute on Religious Associations in the Ukrainian SSR. It reproduces the changes introduced on 23 June 1975 in the RSFSR law on religious associations, incorporating some published and unpublished decrees and instructions on religion adopted since the Second World War.

County (Ukrainian: *povit*; Russian: *uezd*; Polish: *powiat*). Administrative-territorial entity introduced in Ukrainian territories in the second half of the 14th century, first in the territories under Poland and then in the territories under the Grand Duchy of Lithuania. In the second half of the 16th century the county system became the basis of the administrative-territorial system in all Ukrainian lands within the Polish Commonwealth. The county was not only an administrative but also a judicial territorial unit. The county was administered by the **starosta*. In 1772

there were 27 counties and lands (*zemli*) in the Ukrainian territories that belonged to the Polish Commonwealth.

In the Hetman state the county system was introduced in the 1760s (while the **regimental* and **company* systems were preserved) in connection with the judicial reforms of Hetman K. Rozumovsky. In 1782 counties became administrative and financial entities there as well. The county system was introduced to Slobidska Ukraine and southern Ukraine somewhat later (after 1775) and to Right-Bank Ukraine in the 1790s. The administrative and police authority in the counties was in the hands of the **ispraunik*. The county assemblies of the nobility and the **marshals* of the nobility elected by them were institutions of estate self-government. County zemstvo assemblies and county zemstvo executives (see **Zemstvo*) were the basis of zemstvo self-government. In 1913 there were 126 counties in Ukrainian territories belonging to the Russian Empire, 99 of which were in the territories that eventually formed the Ukrainian SSR.

In Galicia and Bukovyna under Austrian rule the counties were under the jurisdiction of county heads. County self-government was realized through county councils and county departments, which were headed by county marshals. In 1914 there were 59 counties in Galicia, 34 in Transcarpathia, and 10 in Bukovyna.

The county system was retained by the UNR. In Western Ukrainian territories under Poland, Czechoslovakia, and Rumania it was preserved until 1939. In the Ukrainian territories within the USSR, however, the county and gubernia system was replaced in 1924–5 (and in the Voronezh and Kursk regions in 1929) by the raion and okruha (later oblast) system (see **Administrative-territorial division*).

County school (*povitove uchylshche*). A two-year elementary superior school established in 1804 in the county and gubernia centers of the Russian Empire, including Ukraine, to prepare students from various social estates for admission to gymnasiums. County schools were supervised by gymnasium directors. In 1828 the connection between the county schools and the gymnasiums was abolished, and the schools were transformed into three-year elementary schools for the children of merchants, tradesmen, and other townfolk. In 1872 the county schools were reorganized into **city schools*.

Court functionaries. Stewards and servants in a prince's court. In Kievan Rus' the most important servitor was the *dvorskyi* or **ohnyshchanyin*, the prince's personal attendant, who managed the entire princely household and estates and supervised the court servitors and servants. His functions were similar to those of the medieval palatines or majordomos of Western Europe.

In general, all of the servitors in the princely courts of the 10th–14th century were called **court people* (*dvirski liudy*) and were categorized according to their functions, for example, **tyvun* or *tiun* (prince's steward and, later, state and judicial administrator), **ditskyi* (executive agent, junior member of the princely retinue or **druzhyina*), **otrok* (member of the retinue of a still lower grade, also with administrative functions), *kliuchnyk* (literally, 'keeper of the keys': housekeeper), *stolnyk* (originally, table servant at festive court dinners; later, high-ranking administrative officer), *chashnyk* (cupbearer). Some of these servitors gained competence as public officers of

the prince, and their functions began to extend even into judicial affairs.

In the Grand Duchy of Lithuania the personal servitors of the prince were called *dvirski*. Among them were *dvirskiyi marshalok* (court marshal; he headed the court servitors), *pidkantsler* (head of the court administrative office), *dvirskiyi pidskarbi* (court treasurer), *dvirskiyi khorunzhyi* (court standard-bearer), and *dvirskiyi hetman* (court military commander). All of these served as deputies to government or *zemski* (state) officials, whose titles and positions were parallel to their own: *marshal (*marshalok zemskiyi*), *chancellor (*kantsler zemskiyi*), *treasurer (*pidskarbi zemskiyi*), *grand hetman (*hetman zemskiyi*, meaning 'supreme military commander'). Court officials substituted for state officials during their absence. There were also court servants: *pidchashyi* (court attendant in charge of beverages), *mechnyk* (sword-bearer or sheriff), *kukhmistr* (court chef; later, an officer of the court), *stolnyk* (servant at table), *pokladnyk* (one in charge of stores and supplies), *koniushyi* (senior equerry, master of stables), *sokolnyk* (court falconer). Court functionaries were usually selected from the nobility.

Court people (*dvirski liudy*). Servant staff of a prince's court in the 10th–14th century. The staff consisted of stewards, young warriors, pages, butlers, waiters, drink pourers, and so on. Later, under Russia, court people were simply household servants of the landed gentry. They were often transferred by their masters to work in shops and factories. Most of them had a status similar to that of the serfs. In 1861 these domestic serfs were emancipated but were not granted plots of land.

Court system. In Kievan Rus' the courts already had a partly public character. Five types of courts existed: (1) the prince's court, headed by the prince or his representative (**tyvun*), in the principality's capital city or at county sessions, which was a court of the highest rank; (2) the town assembly court or **viche*, which dealt initially with a variety of cases, but which later was assigned to the most serious ones; (3) the community or people's court, presided over by elected elders ('men of justice'), with general jurisdiction, which was the oldest form of court and was based on *customary law; (4) private boyar courts, which had the right to decide on the cases of their subjects; and (5) ecclesiastical courts, which had jurisdiction over *church people and in cases that involved crimes against the faith, adultery, and so on.

During the Lithuanian-Ruthenian period, on the territories under Lithuanian domination, the old court system remained in force for some time (the grand duke having jurisdiction over his vassal appanage princes). Later (after 1386), the court system changed under Polish and Western influence, and four types of courts came into effect: (1) the state courts – provincial courts for free citizens and central (mostly appellate) courts; (2) *city courts in certain privileged cities; (3) *community courts (called *kopni sudy*) based on Rus' customary law; and (4) domanial courts, for nobles in their disputes with their subjects or tenants on their latifundia. In the Ukrainian provinces under Polish domination the Polish court system was introduced early, with the king's vicegerent (*starosta*) having supreme judicial power in a province, followed by city courts (based mainly on *Magdeburg law), local community (village) courts, and domanial

courts (for more serious local cases and appeals stemming from the community courts).

In the Hetman state (1648–1764), village courts for non-Cossack villagers, company courts for Cossacks on the territory of a military company, and regimental courts on the regimental territory were in operation (with every higher court having appellate jurisdiction over the lower one). City, domanial, and ecclesiastical courts were also in existence. All of the above courts were called 'provincial.' There was another group of courts, the central courts, which included the *General Military Court, the Court of the General Military Chancellery, and the Hetman's Court (of the Chief Magistrate), with technically unlimited judicial powers. Hetman K. Rozumovsky's reform of 1760, which was based on the Lithuanian Statute, changed the Cossack courts into *land, city (regimental), and chamberlain courts (see **pidkomorskiy* court); the reformed General Military Court remained the supreme court in the system. The courts of the Zaporozhian Sich had a different system, based on the military organization of that territory. The lower courts were those of the kurin otaman and the palanka colonel; higher courts were those of the military judge, of the *kish otaman, and of the *Sich Council. The kish otaman was considered chief magistrate, and had the power of final decision during wartime. In peacetime his decision could be appealed to the Sich Council, in which all Cossacks could participate.

The Russian court system was introduced on the Ukrainian territories under Russian occupation in 1782. It was based on the existing social estates, and had separate land, city, and provincial courts for the nobility, clergy, burghers, and peasants. After serfdom was introduced, the landed gentry had jurisdiction over their serfs. This system was later replaced (in 1864) by courts of general jurisdiction, rural district (*volost*) courts, and courts of appeal. Locally elected justices of the peace had jurisdiction over minor matters. An independent judiciary and trial by jury were introduced. Prosecutors (in criminal cases, under the minister of justice as the chief prosecutor) were attached to the courts.

In the Western Ukrainian provinces annexed later by Austria (Galicia, 1772; Bukovyna, 1774), the Austrian system was initially introduced. The revolution of 1848 stimulated reforms towards a modern, more liberal court system, which included county (*povit*) courts for minor civil and criminal matters, district (*okruha*) courts for more serious civil and criminal cases and as courts of appeal on decisions of the county courts, and one court of appeal, in Lviv. The Supreme Court in Vienna was the highest appellate court. Trial by jury was introduced for serious crimes, especially political ones. Prosecutors were attached to district courts and the court of appeal. Judges were appointed by the emperor for life. This system was in effect to the end of the Austro-Hungarian Empire (1918).

During the period of Ukrainian statehood (1917–20), the Central Rada undertook important measures to organize an independent court system, while maintaining some of the former judicial institutions. On 17 December 1917 the *General Court was created to serve as the highest judicial body. It consisted of criminal, civil, and administrative divisions. Hetman P. Skoropadsky's government (1918) reorganized the court system again by creating, on 8 July 1918, the *State Senate as the highest court, and criminal, civil, and administrative general courts. In

addition, three regional appellate chambers (Kiev, Kharkiv, Odessa) were established. This system was modeled on the previous Russian court system. Under the Directory the Central Rada's system was reintroduced. In the Western Ukrainian National Republic an independent judiciary, with the supreme court in Lviv, was provided for by the law of 21 November 1918.

Under the interwar Polish regime in Western Ukraine, Polish laws established (by the decree of 6 February 1928) a modern court system, with county and district courts, courts of appeal, and the supreme court in Warsaw. Trial by jury was in effect until 1928; it was then abolished and replaced by lay judges.

Under Soviet rule various decrees of the Russian SFSR, beginning with the first Decree on Courts of 24 November 1917, replaced the tsarist system with a new system. After the occupation of Ukraine these decrees were put into force and were later substantially copied in Soviet Ukrainian legislation. The new Soviet system consisted of 'people's courts and *revolutionary tribunals, the latter being given the task of trying 'counterrevolutionary crimes.' For the purpose of 'fighting the counterrevolution,' the *Cheka, a non-judicial security agency using terror as its principal weapon, was also established, and the Cheka *troika* (collegium of three) became an extrajudicial, repressive body. Two later decrees of the Ukrainian SSR (1922 and 1925) brought about further changes in the court system, each based on the Soviet Russian model.

On 25 December 1958 the Foundations of Legislation Concerning the Judiciary of the USSR and the Constituent Republics were enacted by the Supreme Soviet of the USSR. The Ukrainian Law Concerning the Judiciary was approved by the Supreme Soviet of the Ukrainian SSR on 30 June 1960. Under this law the court system consists of raion people's courts, oblast courts, and the Supreme Court of the Ukrainian SSR. Raion (municipal if in a city) people's courts constitute the lowest and basic courts, with jurisdiction over most simple civil and criminal cases. *Oblast courts deal in the first instance with specified civil and criminal cases (eg, divorces, first-degree murder, high treason) and also act as courts of appeal against decisions of the people's courts. The *Supreme Court of the Ukrainian SSR acts primarily as a court of appeal against the decisions of the oblast courts, but also has jurisdiction over certain civil and criminal cases of exceptional importance. It also hears protests against lower court judgments made by the procurators general of the Ukrainian SSR and the USSR and reviews the decisions of the lower courts. The Supreme Court of the USSR has supervisory jurisdiction over the decisions of all republican courts, including Ukraine's supreme court.

Under the provisions of the law, judges of the people's courts are elected directly for five years, but only from among candidates submitted by the Communist party or Party-controlled civic organizations; judges of the oblast courts and of the supreme court of the republic are elected for five years by the respective oblast soviets or the Supreme Soviet. All judges are 'accountable to their constituents,' have to report to them, and can be recalled if their decisions fail 'to agree with the policies of the Party and the government.' This makes questionable the provision that the judges are, in their decisions, 'independent and subject only to the law': their understanding and interpretation of the law must be based on 'socialist consciousness of the law' as formulated by the Party and

must be compatible with its policies. By the same procedures, 'people's assessors' (lay judges) are elected to sit with professional judges in people's and oblast courts.

Soviet law provides for an open court; in practice, however, the majority of criminal cases, especially those of a political character, are tried behind closed doors. Other rights granted by law to defendants, such as the right to a defense counsel and the right to use the native language in court, are equally restricted in practice.

Certain civil or even criminal cases can be adjudicated by agencies other than the courts. Disputes between state or co-operative institutions and between enterprises are decided by government *arbitration; within enterprises, housing projects, collective farms, and so on, so-called *comrades' courts decide on disputes between members and even punish them for minor violations of the law. Most characteristic, however, is the practice based on the act of 5 November 1934 (never repealed) of the USSR that granted the NKVD (now KGB) the right, through 'special boards,' to apply to persons deemed socially and politically dangerous such punitive measures as exile, banishment (from capital and large cities, or industrial centers), and confinement in 'correctional' labor camps without any of the safeguards of the judicial system.

Covenant of Brotherhoods (Zhoda bratstv). Fraternal mutual-aid organization established in Olyphant, Pennsylvania, in 1914. In 1938, when the organization had approximately 500 members in 29 branches, it merged with the *Ukrainian National Association. Its last president was Yu. Khyliak.

Crab (Brachyura; Ukrainian: *krab*). Suborder of crustaceans of the order Decapoda, about 15 species of which can be found in the Black Sea and the Sea of Azov. Canned crabmeat is an important commercial product in Ukraine.

Cracow (Polish: Kraków). One of the largest (1980 pop 800,000) and oldest cities of Poland, located in southwestern Poland on the Vistula River. It is an important cultural center. In the 11th-13th century Cracow was one of the two principal cities of Poland (Gniezno was the other). From 1320 to 1609 it was the capital of Poland and one of the largest cities of Central Europe.

In the Princely era Cracow's ties with Ukraine were

irregular and mostly commercial: an important trade route from Kiev to Prague and southern Germany ran through the city. Relations with Ukraine became closer in the second half of the 14th century when Cracow became the capital of Poland, which encompassed a part of Ukrainian territory. Under the Jagiello dynasty Ukrainians served at the royal court, and Ukrainian students studied at Cracow University (beginning in 1364). One of the university's professors was Yu. *Drohobych (from 1488), and the first printed Ukrainian book appeared in Cracow from the press of Schweipolt Viol in 1491. At the end of the 18th century a Greek Catholic parish was established in Cracow, and in 1808 the parish was given the Church of St Norbert. The Ukrainian colony grew in the second half of the 19th century, when Cracow was under Austrian rule. By the 1910s there were about 1,500 Ukrainians in Cracow, and in the 1930s about 2,000, some of whom were Polonized. Students and soldiers were transitory elements. The Ukrainians of Cracow were organized around the church and the Prosvita society, founded in 1894. Ukrainian students, numbering 60 in 1888, 200 in 1911, 100 in 1924, and 500 in 1930, belonged to the Ukrainian Students' Hromada (1924–39). In the 19th century the following Ukrainians lectured at the university in the department of the theology: F. Kudrevych, L. Lavrysevych, and O. Cherliunchakevych, all of whom were also Greek Catholic parish priests. In the period between the two world wars there were several Ukrainian professors at Cracow University: B. Lepky, who held the Chair of Ukrainian literature, I. Zilynsky, who held the Chair of Ukrainian language, S. Tomashivsky (history), V. Kubi-jovyč (geography), and Yu. Paneiko (law). I. Feshchenko-Chopivsky taught at the Mining Academy.

In 1939–41 Cracow was an important center for Ukrainian émigrés who had fled from Galicia after the Soviet occupation. There were over 3,000 Ukrainians in the city at the time. Because Cracow became the residence of the German governor general after the Nazi occupation of Poland, the *Ukrainian Central Committee (the official central representative of Ukrainian organizations in the Generalgouvernement) and the *Ukrainske Vydavnytstvo publishers were located in Cracow in 1940–4. After the war the tiny Ukrainian colony in Cracow became inactive. The Greek Catholic church was confiscated by the Polish authorities in 1947 and handed over to the Polish church. From the late 1950s Ukrainian Catholics in Cracow were once again permitted to have a chapel, which is located at the Augustine Monastery of St Catherine. The *Ukrainian Social and Cultural Society is also active there and supports the popular musical ensemble Karpaty.

A number of Ukrainian historical monuments can be found in the Czartoryski Museum (among them, a manuscript of the Lavryshiv Gospel and charters from the 14th–15th century), the Czapski Museum, the library of the Polish Academy of Sciences, the Jagellonian Library, the treasury of the Wawel Cathedral, and other places. The iconostasis of the church of St Norbert was designed by J. Mateiko and carved by his students. About 300 soldiers of the Ukrainian Galician Army who died at the Dąbie internment camp are buried at Rakowiecki Cemetery. Cracow and Kiev are sister cities.

Crafts. Small-scale manufacture by means of primitive tools of common articles of daily use, farm implements, construction tools, buildings, home furnishings, and, in past centuries, arms as well. With the decline of the barter economy crafts became separated from home manufacture, which served the needs of the producer and his/her neighbors, and became increasingly specialized. Crafts production was concentrated mostly in the cities and towns in the form of small enterprises. Usually products were made to order; sometimes they were made for the market. There was hardly any division of labor in the craft shops, except for partial help from family members, journeymen, or apprentices. The craftsman was the owner of the shop and the means of production. Alone or with a journeyman he was an independent producer capable of manufacturing the product from beginning to end. His craft was his basic occupation and means of livelihood. As technology developed, the trades required, besides natural skill and practical experience, increasingly specialized training. At the peak of their development the craftsmen formed a relatively closed social group of the burgher estate with a distinct way of life and civil status and special rights and duties, which were defined by the *guilds. In these respects crafts differ from *cottage industries, which are usually only supplementary occupations undertaken, for example, during a season free of farm work. Crafts also differ from industrial manufacture, which has a greater division of labor, a profit motive, and means of production not owned by the producers, and makes greater use of technical devices and natural energy forces such as wind and water. Yet, in the industrial age, in addition to manual labor (including the use of hand and foot machines), more sophisticated devices such as electrical machines have also been used in the manufacture of crafts.

Crafts were widely practiced in Ukraine from the earliest times, but for many centuries they were not divorced from other forms of work. Crafts were highly developed in the Hellenic city states on the northern coast of the Black Sea. At the beginning of the 1st millennium AD crafts began to be separated from farming, and there were two basic branches of craft manufacture – iron making and pottery. In the Princely era the urban crafts differed from the rural crafts in their more complex production process and the higher quality of their product. In the large cities there were close to 60 distinct crafts: specialized branches of metallurgy, blacksmithing, arms manufacturing, pottery, carpentry, weaving, tailoring, furriery, tanning, linen and wool cloth making, bone and stone carving, glassmaking, and the production of certain food products such as beverages. Crafts specializing in ornamental products such as clothes, church and palace decorations, icons, and jewelry were highly developed. By social rank the craftsmen of Kievan Rus' were

divided into free rural tradesmen; bondsmen (slaves) on the estates of princes, boyars, or monasteries; and free city craftsmen, who constituted the largest group. Most practitioners of a craft lived in one district or on one street of a city, and district or street names such as Swordmakers, Tanners, and Potters still testify to this fact. To protect their interests, the city tradesmen organized associations, which later developed into guilds. They were usually known as companies (*druzhyny*) and were headed by an elder (*starosta*). In some crafts, for example, in jewelry making, the craftsmen of the Kievan period were trained mainly on Greek models. The Romanovych princes invited master craftsmen from the West – from Germany, Bohemia, Poland – to settle in the cities of the Galician-Volhynian state and granted them special privileges. Many products were also imported from other countries, particularly from the Near East and Byzantium.

The Mongol-Tatar invasions caused the crafts to decline. Some crafts disappeared altogether, while others suffered a deterioration in technique and in the quality of the product. The ties of the city craftsmen with the market were weakened. The earliest revival of the crafts occurred in the Galician-Volhynian state, where in the second half of the 14th century and the first half of the 15th century guilds appeared in the towns and cities governed by *Magdeburg law. The guilds grew rapidly, so that by the end of the 16th and the beginning of the 17th century the craftsmen in almost all the larger cities of Ukraine were organized into guilds. The task of the guilds was to regulate the economic activities of the master craftsmen (production, quality, and prices) and to protect their members from the powerful magnates and the government and from the competition of rural craftsmen, who were moving into the cities. The guilds united tailors, shoemakers, furriers, barbers, tanners, saddlers, blacksmiths, locksmiths, iron-foundry masters, carpenters, coopers, turners, butchers, brewers, bakers, brick-makers, stonecutters, and, of the newer trades, glove-makers, belt-makers, Russian-leather-makers, fine-leather shoemakers, saber-makers, gunsmiths, clock-makers, printers, engravers, and so on.

The largest crafts center was Lviv, where by the second half of the 15th century there were already over 50 crafts and by the first half of the 17th century, 133 crafts. By the end of the 16th century there were 27 guilds there and in the first half of the 17th century 33 guilds, with a membership of about 2,000 craftsmen. The average shop employed four craftsmen – a master, two journeymen, and an apprentice. Kiev was the second-largest crafts center, with 20 trades in the 16th century. Lutske, Kamianets-Podilskyi, Peremyshl, and Yaroslav were smaller centers. The master craftsmen and the wealthier craftsmen who were not guild members belonged to the middle stratum of the burgher class, while the journeymen, apprentices, and most of the craftsmen outside the guilds (known as *partachi* ['bunglers']) belonged to the poor folk (*bidnota*). Most of the wealthy masters were Poles, Germans, or Armenians. Few Ukrainians belonged to the guilds in Western Ukraine, because certain guilds did not admit them or did not promote them to masters and prohibited Ukrainian apprentices from becoming journeymen. In Lviv, for example, although Ukrainians worked in about 50 crafts, they could belong to only 9 guilds, and even there they encountered many obstacles.

Often the city governments prohibited Ukrainians from residing and working in their trades outside of certain districts assigned to them; for example, beyond Ruska Street or in the suburbs. To defend their rights, Ukrainian craftsmen and other Ukrainian burghers organized into *brotherhoods. In general, the rights of craftsmen were limited in cities not governed by Magdeburg law.

In the second half of the 17th century the crafts declined in Western Ukraine and in Right-Bank Ukraine together with the cities and the burgher class. Non-guild craftsmen increased in number; for example, by the mid-17th century about 40 percent of the craftsmen in Lviv were 'bunglers,' and serf craftsmen from the countryside were given work at castles and at gentry manors in the cities and in the suburbs. Competition from Jewish craftsmen and the importation of products from Western Europe also undermined the established crafts system. The crafts were in a healthier state in Kiev and Left-Bank Ukraine, particularly in Poltava, Chernihiv, Novhorod-Siverskyi, Starodub, and Nizhen. They were common among the Cossacks and in the villages.

The guild law of the Russian Empire was extended in 1785 to Left-Bank Ukraine and in 1840 to Right-Bank Ukraine. In accordance with the law of 1852 crafts councils were formed in cities and towns. A craftsman who did not possess a master's license and was not registered in a guild could not direct a craft enterprise, hire workers, or hang out his shingle. According to data in 1858, 77,700 craftsmen belonged to guilds in the nine Ukrainian gubernias. Of these, 32,500 were masters, 28,400 journeymen, and 16,800 apprentices. Other data placed the number of craftsmen in the cities at about 100,000. According to the Austrian census of 1773 there were 44,000 craftsmen in all of Galicia, including the western (Polish) part. Of these, 17,900 were weavers, 2,800 blacksmiths, 1,800 furriers, 5,500 shoemakers, 2,800 tailors, 1,400 coopers, 1,200 potters, and 1,000 wheelwrights. Of these, 16,000 craftsmen were Jewish. By 1837 there were 45,000 craftsmen in Galicia who paid income tax.

In the first half of the 19th century the crafts in central and eastern Ukraine and in Galicia experienced the negative effect of government fiscal policy. In the second half of the 19th century the development of factory manufacture and capitalism and the building of railways, which facilitated the transportation of factory products (usually from outside Ukraine), had an even greater negative impact on the crafts. The guilds lost their importance, and in 1900 the Russian government began taking steps to abolish the remnants of the guild system. Crafts also declined owing to the poor education of most craftsmen and their indebtedness to usurers. The 1870s–1890s were a period of crisis for crafts. A large proportion of the city crafts could not withstand the competition of factory production and died out. Cottage industry survived more successfully. Government agencies, such as the Cottage Industry Committee (est 1888) and particularly the *zemstvos*, came to the aid of artisans and especially of the cottage-industry workers. They provided instructors, supplied certain kinds of raw materials from state enterprises, opened craft and cottage-industry training shops, and organized local and international exhibitions of cottage products at which Ukraine's products were well represented. The Chief Administration of Land Tillage and Agriculture promoted the sale of craft

and cottage products to such purchasers as the departments of the army and navy, supplied cottage workshops with sample looms, motors, and other equipment at no cost or on credit, and published artistic albums of samples of cottage products. The attempts at organizing cottage co-operatives, which by 1913 numbered 18 in the nine Ukrainian gubernias, met with some success.

In Galicia and Bukovyna the government did not provide any special support to crafts. The crafts chambers at the provincial administrations in Lviv and Chernivtsi gathered statistical data, organized craft exhibits, and maintained the Manufacturing Museum in Lviv. Ukrainian craftsmen received help from the brotherhoods in Lviv (from 1872) and then in other cities of Galicia. The *Zoria crafts association, founded by V. Nahirny in 1881, the building association founded by I. Levynsky in Lviv, and the seamstress association *Trud were particularly involved in helping young rural artisans to establish themselves in the cities. The development of Ukrainian crafts in the cities of Western Ukraine and to a lesser degree in central and eastern Ukraine was hampered by non-Ukrainian control of the crafts and by the reluctance of most children of well-off Ukrainian craftspeople to pursue their parents' trade.

Before the First World War, according to the data of the Russian Ministry of Trade and Industry, there were 700,000 cottage-industry workers and craftsmen in the nine Ukrainian gubernias. Of these, 358,000 were cottage-industry workers; 57,000, independent craftsmen; 105,000, unsurveyed cottage-industry workers and craftsmen; 135,000, workers of the food cottage industry; and 45,000, members of various non-market crafts. The cottage-industry workers usually lived in the country, the craftsmen in the cities. At the beginning of the 20th century in all of Galicia there were about 85,000 small craft enterprises, which employed about 130,000 people. Despite the partial decline of the crafts in Ukraine at the turn of the 20th century, the crafts and cottage industries remained the basic sources of consumer and food products until 1914. More workers were employed in the crafts and cottage industries than in large-scale manufacturing.

At the beginning of the 1920s the importance of crafts rose in Soviet Ukraine because of the devastation suffered by factory manufacture. By 1928 the number of craftsmen and cottage-industry workers in the Ukrainian SSR had increased to 820,000; 179,000 worked in cottage-industry co-operatives. At the time 620,000 workers were employed in large-scale manufacturing. However, the production of the crafts and cottage industries constituted only 15 percent of the total production. Eventually, as all enterprises were nationalized and factory production developed, the crafts slumped. The crafts and cottage industries were almost completely reorganized into manufacturing co-operatives, and by 1939 there were barely 57,700 independent craftsmen and cottage workers. In Western Ukraine before its absorption into the Ukrainian SSR conditions remained similar to those prior to 1914, and the number of craftsmen remained the same (around 90,000).

With the abolition of the manufacturing co-operatives in 1960 the crafts and cottage industries were brought under the state system of local industry. Since 1966 new varieties of production have been brought under local industry, and craft and cottage manufacturing, although not regulated by the government, have not disappeared. The products of these crafts are sold at markets, particu-

larly in rural areas, and continue to satisfy the demand of the local population for furnishings, clothing, and shoes. Official statistics provide no data on the number of craftspeople and cottage-industry workers in Ukraine, but the number is no doubt substantial.

Crane, common (*Grus grus*; Ukrainian: *zhuravel*). Nesting migratory bird of the family Gruidae (order Gruiformes). The male averages 1.2 m in length; the female is smaller. Its weight is 4-7 kg. Its wingspread is 2.3 m on the average. The crane lives in lake, marsh, and river areas. In Ukraine the crane is widespread in the forest belt and less common in the forest-steppe belt. Isolated colonies of cranes are found in the region of Syvash Lake. The crane migrates in August or September from Ukraine and returns in March or April.

Crath, Paul. See Krat, Pavlo.

Crayfish (*Astacus*; Ukrainian: *rak richkovyi*). Member of the Astacidae family of the order Decapoda, usually 6-15 cm in length, but sometimes reaching 80 cm. Three species of crayfish are found in Ukraine: the European crayfish (*Astacus astacus*), which is common in small streams and lakes on the right banks of the Dniester, Prut, and Teteriv rivers; the fat-clawed crayfish (*A. pachypus*), which is found in the Dnieper-Boh Liman; and the narrow-clawed crayfish (*A. leptodactylus*), which is found in all freshwater and saltwater reservoirs and has the greatest commercial value of all the crayfish in Ukraine.

Credit. Temporary grant of money or other goods by a creditor to a borrower, usually for a certain recompense (interest). Credit can be extended by individuals, banks (see *Banking system), or governments (see *State loans). Under the Russian and Austro-Hungarian empires the Ukrainian peasants were exploited by unscrupulous private creditors who loaned money or grain in times of hardship (crop failure or just before harvest) at very high interest rates. Ukrainian co-operatives helped the peasants in the struggle against such usury. After the Bolsheviks came to power, the credit system was nationalized. But until 1930 economic organizations obtained credit on the same basis as before: mutual credit was extended on the basis of special credit notes (*vekseli*), which could be exchanged at banks. In 1930-1 exchange credit was abolished and replaced by the system of direct

Credit extended to the economic sector of the Ukrainian SSR

	Short-term credit	Long-term credit
1950	2.093	0.202
% of USSR	12.0	10.0
1960	6.334	0.611
% of USSR	14.8	16.0
1970	17.850	3.360
% of USSR	17.0	15.0
1980	38.692	13.266
% of USSR	14.8	16.0

bank credit, which also helps the government to monitor the fulfillment of its economic plan. In 1969 the collective farms began receiving direct bank credit.

The postwar development of credit operations has been regulated by various laws; the most important are the 21 August 1954 law on the role and task of the USSR State Bank and the 7 April 1959 law on the reorganization of the banking system for long-term deposits. Today credit is centralized in two institutions: the State Bank of the USSR (which advances short-term credits to the national economic sector) and the Union Bank for Financing Capital Investment (Budbank), both of which have branch offices in Ukraine. The accompanying table shows the credit that has been extended to the economic sector of the Ukrainian SSR (in millions of rubles). The data in the table show that the credit Ukraine receives, particularly in the form of short-term loans, is significantly lower than its economic potential in the Soviet economy.

Credit union. Voluntary, co-operative organization that provides its members with short-term loans out of the co-operative's accumulated savings. Individual credit co-operatives appeared in Ukraine in the second half of the 19th century: the first society of this kind was organized in 1869 by T. Galagan in Hadiache. At the end of the 19th century *Raiffeisen credit co-operatives spread from Germany to Ukrainian territories under Russia and Austria. Generally, credit unions or savings and loan associations were the first co-operatives in Ukraine: by 1895 there were about 240 of them. Their development was encouraged by the *zemstvos and by the Russian law of 1 June 1895 on the organization of small-scale credit. As the number of credit unions in Ukraine increased, local associations of credit unions arose: the first association was founded in Berdianske in 1901. By 1914 there were about 2,500 savings and loan and credit societies in Russian-ruled Ukraine. Credit unions played a conspicuous role in improving and modernizing agriculture. After the February Revolution the Russian Provisional Government adopted on 20 March 1917 a progressive law on co-operatives, including credit unions. An extensive network of credit unions developed, and by 1919 as many as 43 national associations were formed. To co-ordinate them a central co-operative association – the *Ukrainbank

(president Kh. Baranovsky) – was set up. While trying to control credit policy, the Soviet authorities tolerated a degree of autonomy and accepted the Ukrainian character of the credit unions. The Ukrainbank, its branches, and the local credit unions continued during the NEP period to provide the peasants with loans for purchasing farming equipment and livestock and for house building. In 1928 the Ukrainbank represented about 5,800 credit co-operatives. At the beginning of the 1930s the credit unions were dissolved, as the government sought control over credit operations; they were never restored in the form of voluntary co-operative organizations.

In Galicia the origins of the Ukrainian credit co-operative movement date back to 1894 when the Vira co-operative bank was established in Peremyshl. By 1898 the Regional Credit Association (*Tsentrobank) was founded in Lviv. In 1914 the *Audit Union of Ukrainian Co-operatives represented 340 credit unions, which constituted 61 percent of the co-operative societies belonging to the union. Furthermore, about 400 smaller credit organizations of the Raiffeisen type were supported by the Galician provincial administration. In Bukovyna there were about 150 village banks by 1903; they were represented by the *Seliaska Kasa central bank union. In Transcarpathia the few credit organizations that existed in Ukrainian villages and towns did not have their own association.

In the interwar period the Ukrainian credit-union movement grew rapidly in Western Ukraine under the Polish regime: there were 573 small village banks (mostly of the Raiffeisen type) and credit co-operatives and 115 branches of the Ukrainbank and their central association the Tsentrobank. In Transcarpathia the Commercial Union of Agricultural Co-operatives represented 174 credit unions by the 1930s. In 1940 attempts were made to revive the credit-union movement in the Generalgouvernement and, by 1941, 61 credit unions were active, including 27 in the Lemko and Sian regions and 34 in the Kholm and Podlachia regions. The credit co-operative movement encountered serious difficulties in German-occupied Galicia: the German authorities severely restricted the activities of the Tsentrobank and the 71 branches of the Ukrainbank. In 1943 there were only 114 credit unions in the whole Generalgouvernement. The Soviet occupation of Western Ukraine in 1939–40 and 1944–5 marked the end of the credit co-operative movement there.

The first Ukrainian credit unions among immigrants outside Ukraine appeared in Canada at the end of the 1930s: the Nova Hromada Credit Union was organized in Saskatoon in 1939 and the Carpathia Credit Union was established in Winnipeg in 1940. New credit unions arose in the 1950s; some developed out of earlier consumer co-operatives. Most of the Ukrainian credit unions are affiliated with community organizations or parishes. In 1956 there were 56 Ukrainian credit unions in Canada: 32 of them in the Prairie provinces (21 in Manitoba, 6 in Saskatchewan, and 5 in Alberta) and 24 in eastern Canada (21 in Ontario and 3 in Quebec). Their total membership was about 25,000. Two credit-union associations were formed in the 1950s: the Kooperatyvna Hromada association in Winnipeg (president V. Topolnytsky) and the Co-ordinating Committee of Ukrainian Credit Co-operatives in Toronto.

In the United States the first Ukrainian credit unions were founded by the postwar immigrants in the 1950s. By

1961 there were 15 credit unions and by 1981 there were 34. The credit unions in the United States and Canada belong to a general central organization, the Credit Union National Association (CUNA), which has a common insurance company for group insurance on savings and loans. After the Second World War Ukrainian credit unions also developed in Australia and Argentina.

Ukrainian co-operative credit unions, along with five or six producer, consumer, and publishing unions, belong to the World Council of Ukrainian Credit Unions (est 1973). By the end of 1981 there were 36 Ukrainian credit unions in Canada, 34 in the United States, 7 in Australia, and 5 in Argentina. Their total membership was 122,000 and total assets were 495 million dollars. According to membership and assets the largest credit unions are the *Ukrainian (Toronto) Credit Union; the *Carpathia Co-operative Credit Union in Winnipeg; the *Buduchnist Credit Union in Toronto; the *Self-Reliance Co-operative Credit Union in Chicago, New York, and Detroit; the Dnister Credit Union in Melbourne, Australia; the Karpaty Credit Union in Sydney, Australia; and the Vidrodzhennia and Fortuna credit unions in Argentina.

The Ukrainian credit unions donate some of their profits to Ukrainian religious, charitable, and educational causes.

Creed. Formal statement of religious belief or doctrine; a confession of faith. Among several ancient creeds, the Niceno-Constantinopolitan Creed (adopted 381) is the version accepted by most Christians today. The creed has been used in public and private prayers and read or sung during the liturgy since the 5th century. A popular text of the creed was published by I. Fedorovych in his *Azbuka* (Alphabet, 1574) and by T. Shevchenko in his *Bukvar* (Primer, 1861). A reference to the procession of the Holy Spirit from the Father and also the Son (*Filioque* as this was known in the Western church) received the most varied interpretation in the Eastern and Western churches and was one of the reasons for their schism in 1054. Ukrainian polemical writings of the 16th–17th century devoted particular attention to this question. The Orthodox church does not accept the phrase 'and the Son,' while the Ukrainian Catholic church accepted this added phrase at the Synod of *Zamostia in 1720.

Crime. In the Princely era crime was called *obyda* (offense). The economic system, which consisted of farming and hunting and employed slave labor, determined the forms of crime. Theft (*tiatba*), including poaching, which was the most common crime against property, was also considered the most serious crime. Attempts against life or health were also common. Social differences basically had no bearing on the classification of the crime as long as the victim was free or half-free (an indentured laborer), but if he was a slave then an attempt on his life was considered to be an attack on property. An offense against the honor or liberty of a free man was considered to be a serious crime. Crimes against the public good included crimes against religion – black magic

(*zeleinytstvo*), witchcraft (*volkhuvannia*), idolatry, and heresy – particularly after the acceptance of Christianity. The family and marriage were protected by law, and offenses against family members, particularly bigamy and adultery, were treated as infringements of the public good. Immoral acts were treated in the same way. In the Princely era such crimes against the state as conspiring with the enemy, disturbing the public peace, disobeying the courts, and abusing one's office were recognized, and even princes could be called to account for committing them. Treason against the state and lese majesty, however, were not yet recognized as crimes.

In the Lithuanian-Ruthenian period most of the Ukrainian legal tradition was preserved, hence the concept of crime remained the same. However, the new political structure, the development in socioeconomic relations, and particularly the new inequality of the social estates gave rise to new forms of crime. Crimes against property became more differentiated: besides theft and other old forms, disturbing a person's peaceful enjoyment of his land or home, fraud, and the receiving of stolen goods were recognized as crimes. Treason and lese majesty against the grand duke or his relatives were admitted as crimes.

In the Hetman state the old laws and the Lithuanian Statute were preserved. Generally speaking, no new criminal legislation appeared. New forms of crime were defined only at the Zaporozhian Sich with its unique military system and way of life. Besides insubordination, such crimes as sodomy (*bezcholvichchia*), which consisted of homosexuality and bestiality, theft from a fellow Cossack, murder of a Cossack, and receiving of stolen goods were recognized.

In modern times the concept of crime among the Ukrainian people was shaped by new socioeconomic relations, the legislation of the Russian and Austrian empires, and the relatively normal operation of the criminal courts for several generations. Certain old, traditional concepts of crime were preserved, however; for example, in some areas the people considered horse stealing one of the most serious crimes, as it had been in the Princely era. In the 19th and even early 20th century horse thieves were occasionally lynched.

The Soviet occupation of Ukraine after the First World War brought about radical changes in political, economic, and social life. These changes led to new manifestations of crime: hooliganism among homeless juveniles and even cannibalism during the famine of the 1930s. At the same time new legislation defined old forms of crime in a new way. Thus, the range of state crimes was expanded greatly.

At the end of the 19th century and during the first decade of the 20th there were 42 criminal convictions per year on Ukrainian ethnic territories for every 100,000 people. The Odessa court district, because of its varied population and port towns, had the highest crime rate: 65 convictions per 100,000 people per year. It was followed by the Kiev district with 59, the Chernihiv district with 33, and the Mohyliv district with 32. In comparison, the crime rate in eastern Galicia was 90. Of the 15 crown lands of the Austro-Hungarian Empire, eastern Galicia was 14th on the crime scale.

The most common crimes were crimes against property – theft, burglary, appropriation, fraud, and so on. In central and eastern Ukraine the average conviction rate

The Crimean southern shore; a view towards the Crimean Mountains

for these crimes was 17 per 100,000 people per year, while in Galicia it was 48. The rate for bodily injury was 10 and 22 respectively; for homicide (murder and manslaughter), 2–2.3 in both regions; and for immoral crimes, 4 and 1.5.

After the First World War the crime rate increased on Ukrainian territories as it did in many other countries. In the mid-1930s there were 170 criminal convictions per 100,000 inhabitants in eastern Galicia (185 for Poland as a whole). Most of the crimes were crimes against property, among which theft had the highest frequency. Crimes against the individual came second; superficial bodily injury was the most frequent crime.

Soviet sources do not provide precise data on the prevalence of crime, but tentative information on specific types of crime published in 1935 shows that crimes against the regime and government which are commonly called political, had the highest frequency: 31.6 percent and 30.2 percent of all criminal convictions. Crimes against property were in third place, accounting for 28.7 percent of convictions. Bodily injury accounted for 0.9 percent, homicide for 0.5 percent, and immoral crimes for 0.2 percent.

Ukrainians abroad are noted for their relatively low crime rate. The most common crimes among them are bodily injury and disturbing the public peace under the influence of alcohol. See also *Criminal law.

Crimea (Ukrainian: Krym; Greek: Taurica, Chersonese). The most southerly part of Ukraine, the Crimea is an irregular quadrangular peninsula situated between the Black Sea (in the west and south) and the Sea of Azov (in the east). It has a breadth of 200 km north to south, a

maximum length of 320 km east to west, and an area of 27,000 sq km. It is connected to the mainland by the narrow, 7 km Perekop Isthmus, which is flanked by Karkinitzka Bay in the west and Syvash Lake in the east. In the east the Crimea is separated from the Kuban (the Taman Peninsula) by the Kerch Strait.

The Crimea consists of two very different parts – the semiarid, treeless steppe of the *Crimean Lowland in the north and the *Crimean Mountains in the south. The Crimean steppe, with its continental climate and steppe soils and vegetation, is a continuation of the Ukrainian steppe and together with the Kerch Peninsula occupies four-fifths of the Crimea's territory. The Crimean Mountains consist of a narrow range of foothills and a low mountain chain covered with forests and high pastures. Below the mountains in the south is a narrow (2–12 km) coastal lowland – the *Crimean southern shore – with a Mediterranean climate and vegetation.

The Crimea; the road to Ai-Petri

The Crimea owes its importance largely to its convenient location on the borders of Ukraine, Caucasia, and the two seas that connect it with the mouths of large rivers, such as the Dnieper, Dniester, Don, Danube, and Kuban, with other countries on the Black Sea, and with the Mediterranean Sea. As a result of these factors, the Crimea's protrusion into the sea, and its good natural harbors, the peninsula constitutes an outpost that controls the Black Sea, particularly its northern part. For this reason, in the past the Crimea was often dominated politically and culturally by southern states and peoples and was influenced by the states that controlled the Ukrainian mainland. These forces struggled for centuries for control over the Crimea. The peninsula itself was too small to take advantage of its favorable location and organize a strong, independent state. Usually it was the object of contention between large states. The Crimea was rarely politically unified and never ethnically uniform, for its northern part was closely tied to the peoples on the mainland, while its southern part was colonized by Mediterranean peoples. The descendants of various nomadic peoples that roamed the Ukrainian steppes over the centuries found refuge in the Crimean Mountains.

Because of its geographical location, the Crimea has the most ancient and richest history of all the regions of Ukraine. Control of the Crimea gives Ukraine today ready and safe access to the Black and Azov seas, the Kuban, and Caucasia, as well as a secure southern border.

Since 1954 the Crimea has constituted Crimea oblast of the Ukrainian SSR. The area is 27,000 sq km; and the population is 2,247,000, of which 1,545,000 is urban and 702,000 rural (1982). The oblast is divided into 15 raions and has 15 cities, 55 towns (smt), and 231 rural soviets.

History until the 20th century. The earliest known settlements in the Crimea date back to the Lower Paleolithic Age, about 100,000 years ago. They belonged to the Neanderthal man. Many Neanderthal relics have been uncovered in caves such as the Kiik-Koba cave. In the Bronze Age (2,000–800 BC) an Indo-European population appeared in the Crimea and engaged in herding and farming. The earliest historical population in the Crimea was the *Cimmerians, of Iranian descent, who came in the first centuries of the first millennium BC. They were forced out to Asia Minor by the *Scythians in the 7th century BC. Cimmerian remnants settled in the mountains until the end of the ancient period and were called *Taurians. In

the 7th century BC the *Greeks appeared on the Crimean coast and a century later began to found colonies. The most successful colonies were *Chersonese Taurica, *Panticapaeum, and Theodosia (see *Teodosiia). From the 5th century BC until the 4th century AD the *Bosporan Kingdom, with Panticapaeum as capital, controlled the eastern Crimea. In the 3rd–2nd century BC the remnants of the Scythians, who were forced from the steppes by the Sarmatians, had their own kingdom in the Crimean steppe, with its capital at *Neapolis, now the city of Symferopil. The kingdom collapsed in the 2nd century BC under the pressure of Chersonese and the Alans. Remnants of the Alans survived in the Crimea until the 10th century in the vicinity of Fula (Chufut-Kale). In the second half of the 1st century BC the Bosporan Kingdom became a vassal state of the *Romans, who controlled all of the Crimean coast and had garrisons in the larger towns and a fleet in Chersonese. With interruptions, Roman domination of the Crimea continued to the end of the 4th century AD. Thus, in the first centuries AD the Crimea belonged to three states: the Bosporan Kingdom, the republic of Chersonese, and the Scythian state. In the 3rd century AD the Goths invaded the Crimea, and in the 5th century they were forced from the steppes into the mountains by the Huns. A Gothic principality survived there until the 15th century.

The Huns destroyed the Scythian and Bosporan states and caused the downfall of the Crimea. Panticapaeum declined. At the end of the 5th century the Crimean coast came under the rule of Byzantium. A century later most of the Crimea was captured by the *Khazars. Byzantium re-established its rule over all of the Crimea only at the end of the 9th century. At that time the southwestern part of the peninsula was the most populated region. Chersonese, the largest city of the Crimea, and several small feudal principalities were situated here. Another important city was Sugdaea (now *Sudak) on the southeastern coast.

The influx of Slavs into the Crimea began probably in the 4th century and intensified in the 6th century. In the 6th–10th century Greco-Byzantine Crimea, particularly Chersonese, played an important role in the spread of Christianity, which was established in the Crimea in the 3rd–4th century, and of higher culture to neighboring Ukraine, Khazaria, and northern Caucasia. For a time the Crimea mediated between Rus' and Byzantium. The Kievan princes Ihor and Sviatoslav I the Conqueror, whose realm bordered on the Crimea in the south and east, tried to gain control over it. Volodymyr I the Great captured Chersonese in 988. In the 10th–12th century the eastern part of the Crimea belonged to the principality of *Tmutorokan, which was part of the Kievan state. Kiev's hold over the Crimea was loosened by the invasions of the Pechenegs and Cumans, who even controlled a part of the Crimea for a period. Vigorous trade between the Crimea and Kiev, which included the export of Crimean salt, followed two routes: the ancient route along the Dnieper and the Black Sea, and a newer route from the lower Dnieper via the steppe and the Perekop Isthmus.

When the Crusaders took Constantinople, Byzantium lost its influence in the Crimea. In the mid-13th century Venetian and, more importantly, Genoese trade colonies were established in the Crimea. The leading colony was Kafa-Theodosia; other important colonies were Chemballo-Balaklava, Sugdaea-Sudak, and Yevpatoria. Cher-

sonese declined completely in this period. In the 13th century Jewish traders appeared in the Crimea, and in the 14th century, with the fall of the Armenian state, many Armenians appeared. From the mid-13th century the Crimea, except for the Italian colonies, which remained self-governing for a long time, was seized by the Tatars of the Golden Horde. The geographical position of the Crimea favored the resistance of the *Crimean Tatars – led by Nogai (1290–1301), Mamai (1362–82), Edigei (beginning of the 15th century) – to the central authority in Sarai. This contributed to the disintegration of the Golden Horde and the formation in the Crimea in 1449 of a separate state known as the *Crimean Khanate, under the leadership of the Girei dynasty, which held power until 1783. Besides the Crimea the khanate controlled the lower Dnieper, the Azov steppe, and the upper Kuban.

In the second half of the 15th century *Bakhchesarai became the capital of the Crimean Khanate and the seat of the mufti, the head of the Moslem clergy. In 1474 Turkey captured the Italian colonies in the southern Crimea, and in 1478 the Crimean Khanate recognized the supremacy of the Ottoman Empire. The Crimean Tatars came under the cultural influence of the Turks and adopted their alphabet and literature. The Bilhorod, Edissan, Edichkul, and Dzhambuluk hordes, which lived in the steppes along the Black Sea, were the vassals of the Crimean khan.

The Crimean Tatars practiced animal husbandry, agriculture, orcharding, and artisanry. They also invaded neighboring lands, particularly Ukraine, plundering and inflicting heavy losses on them. Having signed a treaty with Muscovy's Ivan III and having secured the support of Turkey, the Crimean Tatars sacked Kiev in 1482. Tatar forces invaded Podilia, the Kiev region, Volhynia, Galicia, and the Chernihiv region almost annually, destroying the towns and villages and seizing inhabitants, whom they later sold at slave markets. In the 16th century the Ukrainian *Cossacks came to the defense of the population, and by the beginning of the 17th century they took the offensive against the Tatars. Under Hetman P. Sahaidachny the Cossacks sacked Perekop and Kafa (1616). Eventually peace was established, and on 24 December 1624 the Tatar khan concluded an alliance against Turkey with Hetman M. Doroshenko. The Cossacks helped Khan Shagin-Girei to destroy the Turkish fleet. In the end, however, the Turkish faction won the upper hand, and after Doroshenko's death near Bakhchesarai in 1628 his Cossacks were forced to retreat from the Crimea.

In 1648 Hetman B. Khmelnytsky concluded an alliance with the Crimean khan Islam-Girei III (1644–54), and the Tatar army helped Khmelnytsky defeat the Poles at Korsun (1648) and Zboriv (1649). To prevent Khmelnytsky's complete victory and the rise of a strong Ukrainian Cossack state, the Crimean khan forced Khmelnytsky to accept peace with Poland after the battle of Zboriv and the siege of *Zhvanets (1653) and betrayed him at the battle of *Berestechko (1651). The Tatars also plundered Ukraine and took many people into captivity (*yasyr*) on their return home. This forced Khmelnytsky to change allies and to sign the Treaty of Pereiaslav (1654) with Muscovy. Hetman I. Vyhovsky renewed the alliance with the Crimean khan, and the Tatars took part in the battle of Konotip (1659). Hetman P. Doroshenko had good relations with the Crimea, while the Zaporozhian Cossacks, under the leadership of I. Sirko, pursued for the most

The Crimea; the Golden Beach Sanatorium

part a policy of hostility towards the Tatars. Tatar aggression in Right-Bank Ukraine during the period 1660–80 ruled out any possibility of Ukrainian-Tatar co-operation. In the Peace Treaty of *Bakhchesarai (1681) the Tatars were forced to make concessions to Muscovy.

After the Eternal Peacy Treaty of 1686 between Poland and Muscovy, Ukrainian and Crimean interests again began to converge. An influential pro-Crimean orientation, supported by hetmans I. Samoilovych and, at first, I. Mazepa arose, in spite of the fact that the hetman forces had to take part in Muscovy's Crimean campaigns of 1687 and 1689. The Cossack leaders V. Kochubei and P. Ivanenko (Petryk) pursued a friendly policy towards the Crimea and Turkey. In 1692 Ivanenko concluded an alliance against Muscovy and Poland with the Crimean khan, who recognized him as the hetman of Ukraine. But the khan's plans did not succeed, and Ivanenko had to settle for the role of 'hetman' in khanate-controlled Ukraine. In putting together a coalition against Muscovy, Hetman P. Orlyk concluded an alliance with the Crimean khan in 1711 but did not receive the help he expected; instead, the Tatars plundered Right-Bank Ukraine and Slobidska Ukraine in 1711–14. This was the last attempt at Ukrainian-Tatar co-operation.

In the 18th century the Cossacks helped Russia wrest control of the Black Sea coast from Turkey and the Crimea. The 'alliance of eternal friendship,' signed by Russia and the Crimean khanate in Karasubazar in 1772, and Turkey's recognition of Crimean independence in the Peace Treaty of *Küçük Kaynarca in 1774 were diplomatic victories in Russia's strategy leading to the annexation of the Crimea in 1783.

During the 18th century the Hetman state and the Zaporozhian Sich had economic links with the Crimea. Ukraine imported Crimean products such as fish, salt, vegetables, textiles, and manufactured articles and exported to the Crimea grain, manufactured articles, and other goods. Trade with Turkey also flowed through the Crimea.

In the Russian Empire the Crimea became a part of the territory of *New Russia and then, in 1802, of *Tavriia gubernia. Russia immediately took advantage of the Crimea's strategic importance and built the port and fortress of Sevastopol, which became the home base of the Black Sea Fleet.

Vineyards in the Crimea

Religious and economic repression of the Tatars, during which they were forced to forfeit most of their lands to Russian landlords, caused a mass migration to Turkey, particularly in the first years of Russian rule and after the Crimean War. At the same time Ukrainian and Russian peasants, as well as German, Bulgarian, and other colonists, flowed into the Crimea, particularly into the steppe region. From the 1870s Russians moved increasingly into the towns and resorts, so that by the beginning of the 20th century the Crimea was an ethnically mixed land inhabited by Russians, Ukrainians, and Tatars.

1917–18. With the outbreak of the revolution in 1917, four political tendencies competed in the Crimea: the Russian, favoring the Crimea's continued allegiance to Russia; the Crimean Tatar, aspiring to Crimean autonomy and eventual sovereignty; the Ukrainian (which was fairly weak), advocating the Crimea's incorporation into Ukraine; and, after the October Revolution, the Bolshevik tendency. The Ukrainian Central Rada did not treat the Crimea as part of Ukraine in its Third Universal. In January 1918 the Bolsheviks occupied the Crimea; in April they were forced out of northern Crimea by Ukrainian forces commanded by Col P. Bolbochan. On 25 April 1918 Bolbochan took Symferopol and Bakhchesarai, but the German Command forced him to abandon these towns. This led to the loss of the Black Sea Fleet in Sevastopol, which had already raised the Ukrainian flag on its ships. With German support General S. Sulkevych (a Lithuanian Tatar) formed a government in which there was strong anti-Ukrainian sentiment. This provoked the Ukrainian government to declare a tariff war against the Crimea. The Crimean government was forced to negotiate in Kiev in September 1918 and to adopt a preliminary treaty by which the Crimea was to become an autonomous part of Ukraine, with its own diet, territorial army, and administration as well as a permanent state secretary in the Ukrainian Council of Ministers. The treaty was never put into effect, because as soon as the Germans retreated the Crimea fell into the hands of right-wing Russian forces, which were supported by the Allied expeditionary forces. In April 1919 the Crimea was briefly occupied by the Bolsheviks, who were forced out by Gen A. Denikin in June. In 1920 the Crimea served as Gen P. Wrangel's main base.

In November 1920 the Soviet armies occupied the Crimea for the third time. On 18 October 1921 the Cri-

mean autonomous republic was proclaimed. It was made part of the RSFSR, rather than the Ukrainian SSR, although the Crimea shared no border with Russia.

In the 1920s the Tatars were allowed to foster their culture in the Crimean ASSR. But in the 1930s a policy of Russification was introduced, and the Tatars were persecuted. The Ukrainian language had no standing in the Crimea, and there were no Ukrainian schools. During the Second World War the Crimea was occupied by the Germans for two and one-half years. After the war the Soviets deported the Tatar population for 'treason and collaboration with the Germans.' On 30 June 1945 the Crimean ASSR was abolished, and the region was turned into an ordinary oblast of the RSFSR. The deported Tatars were replaced partly by Ukrainians, from the western regions that remained in Poland, and partly by Russians, mostly from central Russia. By decree of the Presidium of the Supreme Soviet of the USSR the Crimea was transferred from the RSFSR to the Ukrainian SSR on 19 February 1954. The decree of 28 April 1956 forbade the Tatars to return to the Crimea. This prohibition is still in effect, although the decree of 5 September 1960 exonerated the Crimean Tatars from collaboration with the Germans.

Population. At the end of Tatar rule in 1775, the population of the Crimea was 250,000; of this most was Tatar and one-eighth was Greek. A few years before their annexation of the Crimea in 1783, the Russians resettled almost all of the Greeks (close to 30,000) from the Crimea to the Mariupol region; the Armenians were also resettled, in the Nakhichevan area of the lower Don region near Rostov. A mass emigration of the Tatars to Turkey ensued. The population of the Crimea thus fell to 158,000 in 1800, despite the immigration of Ukrainian and Russian settlers. At the beginning of the 19th century the Russian government encouraged German, Bulgarian, and other colonists to settle and cultivate the uninhabited lands of steppe Ukraine and the Crimea, particularly the north. A part of the Greeks in the Mariupol region also returned to the Crimea. Consequently, the population increased to 319,000 by 1855. But by 1865 it had fallen to 194,000 because of the Crimean War and a second mass emigration of the Tatars. A railway constructed in 1875 and the development of resorts attracted Ukrainian farmers into the steppes and Russians into the cities. By 1897 the population had grown to 545,000 and by 1913 to 729,000. Population changes in the interwar period were influenced by two famines, in 1921 and 1932–3, and the industrialization of the 1930s. In 1940 the population was 1,127,000. The population growth in the Crimea was much greater than in other parts of Ukraine: from 1897 to 1940 the population of Ukraine increased by 30 percent, while that of the Crimea increased by 107 percent. The Crimea always had the highest percentage of urban population. Table 1 gives the population of the Crimea in various years (in thousands).

TABLE 1

Year	Total	Urban	Rural	% urban
1897	545	227	318	41.7
1926	711	330	381	46.4
1940	1,127	586	541	52.0
1959	1,202	785	417	65.3
1970	1,814	1,147	667	63.2
1982	2,247	1,545	702	68.7

TABLE 2
Ethnic composition of population, 1926

Nationality	Population	
	in 1,000s	%
Ukrainian	77.4	10.8
Russian	301.4	42.2
Tatar	179.2	25.1

Greek	16.0	2.3
Bulgarian	11.4	1.6
Armenian	10.7	1.5
Other	34.2	4.8
Total	713.8	100

The ethnic composition of the Crimea was quite varied until 1940. The population according to the 1926 census is shown in table 2. The number of Tatars declined continuously in absolute and relative terms: in 1775 there were estimated to be 200,000 Tatars, constituting 80 percent of the population; in 1897 there were 194,000 or 35.5 percent; in 1926 there were 179,000 or 25.1 percent. In 1926 the Tatars lived mostly in the villages and constituted a majority only in the south (42.4 percent). The Germans lived mostly in the villages of the Crimean steppe (90 percent). The Bulgarians inhabited the south-east and Bilohirske raion. The Greeks and Armenians lived in the towns of the south. The Jews, Krymchaks (Tatar-speaking Jews), and Karaites resided in towns, mostly in Symferopil. Later the number of Jews increased greatly, because in 1927 the Soviet authorities began to settle them in the steppe areas. In 1936 the number of new Jewish settlers there reached 24,000, and a Jewish national raion – Larindorf – was established. Ukrainians and Russians constituted together 379,000 or 53 percent of the population. But official statistics do not provide reliable figures for the number of each nationality. There were most likely 180,000–200,000 Ukrainians (mostly in northern Crimea) and 180,000–200,000 Russians (mostly in the towns).

The Second World War completely altered the ethnic composition of the population. There was also a general decline in the population. Many Germans and a part of the Greeks had emigrated before the war. The Nazis eradicated most of the Jews, and the Soviet authorities deported the Tatars in 1946. After the war a large influx of Ukrainians and Russians ensued. In 1956 the Crimea's population reached its prewar level. By 1959 almost two-thirds of the population (65.3 percent) was urban. The population is not evenly distributed: the foothills and the coast are populated most densely, while the moun-

Other	27.4	2.3	55.0	3.1

The Crimean Mountains

tains and steppes are sparsely populated. In 1983 there were three cities with populations exceeding 100,000: Symferopil with 324,000 people, Sevastopol with 328,000, and Kerch with 163,000. Of the remaining twelve cities, three – Yevpatoriia, Teodosiia, and Yalta – had 50,000 to 100,000 inhabitants. Almost three-quarters of the urban population lives in towns and cities situated on two important physiographic lines: the southern coast and the steppe-mountain borderline. Kerch is a distinct region of urban concentration.

The ethnic composition of the Crimea according to the 1959 and 1970 census is shown in table 3. In 1970, 49 percent of the Ukrainians in the Crimea were urban and 51 percent, rural; 68.5 percent of the Russians were urban and 31.5 percent, rural. The urban Ukrainians constituted 21.1 percent of the population, while the rural Ukrainians constituted 36.7 percent (Russians constituted 72.9 and 57.7 percent respectively). In 1979, of 436,797 people who indicated they were fluent in Ukrainian, only 290,743 considered Ukrainian their mother tongue; 258,873 Ukrainians indicated Russian as their mother tongue.

Economy. Before Russia annexed the Crimea, the Tatars led a seminomadic existence on the steppes, engaging in herding and extensive farming, and, in the southern Crimea, in orcharding, vegetable farming, and cottage industries. Under Russian rule the economy of the Crimea at first declined because of the emigration of Tatars and Greeks; later it improved owing to the colonization of the steppes, the development of viticulture and tobacco growing in the south, and the eventual

completion of a railroad to Sevastopol. In the northern Crimea the steppes were put to the plow, and grain growing replaced animal husbandry. The proximity of good harbors facilitated grain export. In the south the intensive cultivation of crops that were in high demand in central Russia and the resort industry rapidly gained in importance. (At the beginning of the 1910s almost 150,000 tourists per year visited the Crimea.) Various branches of the food and salt industry, shipbuilding at Sevastopol, and later iron-ore mining in Kerch accounted for most of the industrial production. During the Soviet period industry has expanded rapidly: while in 1913 it accounted for 45 percent of the region's production, by 1940 it had reached 80 percent. Intensive farming expanded greatly, as did the number of resorts.

Industry. Food production is the Crimea's main industry, accounting for 44 percent of industrial production. It is followed by iron-ore mining, metallurgy, and machine building (27 percent of production). Less important are the chemical industry, the building-materials industry, and light industry.

The oldest and the basic industry of the Crimea, the food industry, processes locally grown produce. Wine-making is particularly important, accounting for over 20 percent of the Crimea's production. In 1968, 362 million liters of vinous material were produced. Dessert wines made by the firms of Masandra and Zolota Balka, which are located near Yalta, Alushta, Sevastopol, Sudak, and other cities, are sold throughout the USSR and the world. Grape juice is produced by plants in Sevastopol and Teodosiia. The fish-processing industry (13 percent of the Crimea's industry) is highly developed in Kerch, Sevastopol, Yalta, and Yevpatoriia. Fruit and vegetable canneries are located in Symferopil, Bakhchesarai, Dzhankoi, and Sevastopol. Tobacco is cured in Symferopil and Yalta and processed in Teodosiia. The essential-oils industry is concentrated in Symferopil, Bakhchesarai, Alushta, Sudak, and Nyzhnohirskiy and produces close to 40 percent of the USSR's rose oil and 50 percent of its lavender oil.

Heavy metallurgy is based on the rich deposits of the *Kerch Iron-Ore Basin. The Komysh-Burunskiy Iron-Ore Complex extracts local iron ore and ships it to the metallurgical plants of the Donets Basin and the Dnieper industrial region. The machine-building and metalworking industries are less important; they produce equipment for the food industry (Symferopil), tractor attachments (Dzhankoi), farming-machinery parts (Symferopil), electronic equipment, and parts for making and repairing ships (Kerch and Sevastopol). The chemical industry is based on the various large salt reserves of the Syvash and other lakes. Chemical-bromate plants are found in Saky and Perekop. Plastics and consumer-chemicals plants are located in Symferopil. The construction-materials industry is based on abundant local resources; it produces reinforced-steel products, cement, and bricks.

The energy to run industry is provided by the regional thermoelectric stations (DRES) near Symferopil, Sevastopol, and Kerch. In the 1960s natural gas began to be tapped in the western and northern Crimea (where there are resources of 14 billion cu m) and gas pipelines running from Hlibivka and Dzhankoi through Symferopil to Sevastopol have been laid.

Agriculture. There are three agricultural regions in the Crimea: the steppe region with its grain growing and

In the Crimean Mountains

animal husbandry; the southern coast and foothills with their fruit growing, grape growing, and tobacco farming; and the mountains with their forests and summer pastures. Arable land covers 56.2 percent of the Crimea's area. Pastures, hayfields, and grazing land cover 23.4 percent; forests and brush cover 16 percent; and vineyards and orchards cover 7.9 percent. The total area under cultivation was 1,179,000 ha in 1978 (1,144,000 ha in 1959 and 804,000 ha in 1913). Of this area 540,100 ha are devoted to grains (650,000 ha in 1959 and 700,000 ha in 1913); 93,300 ha to industrial crops; 41,100 ha (39,000 ha in 1959 and 12,000 ha in 1913) to vegetables and melons; and 504,100 ha (62,000 ha in 1959 and 19,000 ha in 1913) to feed.

Winter wheat is the main grain, with an area of 325,400 ha in 1970 (309,000 ha in 1959 and 439,000 ha in 1913), followed by barley with 130,000 ha (70,000 ha in 1959 and 224,000 ha in 1913) and seed corn with 49,000 ha (195,000 ha in 1959 and 4,000 ha in 1913). The most common industrial crops are sunflowers, essential-oil plants, and tobacco. Cotton growing, which was greatly expanded in the 1930s (57,100 ha in 1937), was completely abandoned after the war. The better sorts of tobacco, such as Diubek, which are grown mostly on the southern coast, are known throughout the USSR. The main essential-oil plants cultivated are the rose, lavender, and salvia. The Crimea is the main area of grape growing in Ukraine. The land area devoted to it has increased from 12,000 ha in 1940 to 22,400 in 1956, 90,250 in 1959, and 87,400 in 1979. Orchards and berry fields covered 74,600 ha in 1979 (15,500 in 1959). Various varieties of grape are grown for consumption or winemaking, mainly for making dessert and table wines. The grape crop in 1979 was 212,500 tonnes. The finer varieties of apple, pear, cherry, apricot, peach, walnut, and other fruits are grown. Of the subtropical plants the olive, fig, persimon, laurel berry, pistachio, and almond are common. Over 300,000 ha in the Crimea have been under irrigation since the construction of a series of reservoirs and the North Crimean Canal.

Animal husbandry. Animals are raised for milk and meat. In 1973 livestock production included (1916 figures in parentheses) 651,200 (210,800) cattle, including 225,400 (77,700) cows; 404,700 (83,600) hogs; and 953,100 (710,000) sheep.

Transport. In 1980 the Crimea had 644 km of railroad and 6,500 km of paved highways. The oldest (1875) and most important railway line is the Sevastopol-Zaporizhia-Kharkiv-Moscow line. A second railroad was built just

before the Second World War, connecting the Crimea through Perekop with Kherson. The main railway terminals are Dzhankoi and Symferopil. The first mountain trolley-bus line in the USSR (1961) connects Symferopil and Yalta. The main seaports are Kerch, Teodosiia, Yalta, Sevastopol, and Yevpatoriia. The Crimea has airline communications with the main cities of Ukraine and the rest of the Soviet Union.

Resorts and tourism. The Crimea is the main resort and tourist area of Ukraine and one of the main health-resort areas in the entire USSR, owing to its mild climate, the curative powers of the sea, salt lakes, and curative muds, and its natural beauty. The principal resort region is the Crimean southern shore, particularly west of Alushta. On the western coast lie the children's resort of Yevpatoriia and the mudbaths of Saky. In 1972 there were 105 sanatoriums and 24 rest homes, with accommodation for a total of 46,000 patients, in the Crimea. In the summer about 80,000 people are visiting the Crimea at any one time, and in the winter about 45,000. Over the entire year about four million people make use of these rest facilities.

In general the Crimea is important to Ukraine and to some extent the entire USSR as a region producing a surplus of iron ore and metals, valuable plant cultures (fruit, grapes, tobacco, spring vegetables, flowers), wines, fish, and canned goods, and as a resort and tourist region.

Crimean Astrophysical Observatory. Scientific research institution of the Academy of Sciences of the USSR. The original observatory, first founded in 1908 in Simeiz as the southern branch of the Pulkovo Observatory, was totally destroyed in the Second World War. In 1945 the Crimean Astrophysical Observatory was reinstated as an institution of the Academy of Sciences of the USSR. The 2.6 m telescope in Naukove, completed in 1960, is the largest reflector in Europe. The Naukove observatory also has two smaller reflectors (122 cm and 64 cm), a 50 cm telescope with a mirror, and a 40 cm double astrograph.

The branch in Simeiz has a 70 cm reflector. The Crimean Astrophysical Observatory is noted for its research in solar physics, stellar atmospheres, and interstellar space.

Crimean Game Preserve (Krymske zapovidno-my-slyvske hospodarstvo). Established in 1957, absorbing the former Crimean Preserve, which has existed since 1923. The preserve is located in the central and highest part of the Crimean Mountains at an elevation of 400–1,545 m and includes the peaks of Roman-Kosh (1,545 m) and Chatyr-Dag (1,525 m). Its area is 33,345 ha. The sources of most of the Crimean rivers – the Alma, Kosa, Mavlia, Kacha, and others – are found within the preserve's boundaries. Thirty percent of the preserve's area is covered with forest. The vertical vegetation belts that are characteristic of the northern slopes of the Crimean Mountains are represented in the Crimean Game Preserve: the belt of oak forests at 400–500 m, and beech forests at 600–1,300 m. On the southern slopes the Crimean pine and beech predominate in the extensive forests at 1,000–1,200 m. The yew, birch, and other trees are relicts of the Tertiary period. The principal animals that come under the protection of the preserve are the Crimean buck, roebuck, moufflon (acclimatized since 1920), fox, rock marten, and squirrel. Among the protected birds are the griffon vulture, eagle, and white-headed vulture.

Crimean Khanate. Tatar state in the Crimean Peninsula, bordering on the southern steppe of Ukraine and on the Kuban region. From the beginning of the 13th century it was ruled by the *Golden Horde; after its demise, beginning with the mid-15th century, the khanate was an independent state ruled by the Girei dynasty. In 1478 it became a vassal state of Turkey, and from 1774 it was under the protection of Russia, which finally occupied it in 1783. (For more detail see *Crimean Tatars and *Crimea.)

Crimean Lowland. Part of the *Black Sea Lowland in southern Ukraine, the Crimean Lowland lies in the northern Crimea between the Perekop Isthmus in the north and the foothills of the *Crimean Mountains (which are located a bit north of the line Bakhchesarai-Symferopil-Teodosiia) in the south. The lowland constitutes about four-fifths of the area of the Crimean Peninsula. Geologically, the lowland is a part of the *Black Sea Depression. Its base consists of Upper Cretaceous and Paleogene layers, and its surface of Neogene and Quaternary layers. The northeastern part of the lowland, which is adjacent to Syvash Lake, is the lowest and flattest part. The Tarkhakut Peninsula forms a higher (up to 178 m), undulating plain, with a steep shoreline 30–40 m high. This is a slightly elevated anticline. The northeastern part of the *Kerch Peninsula presents a different landscape. This is a hilly region up to 190 m in elevation, consisting of ridges separated by valleys and depressions. It is built of limestone and soft clayey soils of the Tertiary period, which were folded in the Neogene. There are lakes, extensive stretches of solonets soils, and numerous muddy volcanos among the hills and along the coast.

The climate of the Crimean Lowland is similar to the climate of the steppes, except that it is somewhat warmer because the lowland is farther south. Winters are mild (the mean January temperature varies from 1°C in the southwest to –2°C in the northeast) with frequent, violent

winds but little snowfall. Summers are hot (the July temperature fluctuates between 22.5°C and 24°C). Annual rainfall is 270–400 mm, and most of the rain comes in summer. The rainfall increases towards the south. Thus, the lowland is an area of drought. Its rivers are small and often dry up in summer. The largest river is the Salhyr (232 km). The Tarkhakut and Kerch peninsulas have no rivers at all. Artesian wells are the main source of irrigation water. The distribution of soils and plants is dependent on the amount of moisture. In the north-eastern part, which is the driest part, salinized chestnut soils and solonets soils with a salified-wormwood flora are common. The northern part is covered with chestnut soils and a feather-grass or fescue–feather-grass steppe. The southern part (and the central to some extent), which gets the most moisture, contains low-humus southern chernozem with a varied fescue–feather-grass steppe. About 60 percent of the primordial steppe has been put under cultivation and up to 30 percent is used for pasture.

V. Kubijovč

Crimean Mountains. Young, folded mountains of the Alpine mountain system located in the southern part of the *Crimea. Including the foothills, they cover one-fifth of the peninsula's area. They extend for about 150 km from Sevastopol to Teodosiia and are 40–50 km in width. The Crimean Mountains consist of three long, parallel ranges, separated by valleys. They descend gradually towards the north and fall sharply towards the south. The first two ranges starting from the north constitute the foothills; the third range, called the Yaila (the name is sometimes applied to the Crimean Mountains as a whole), constitutes the mountains proper. Between the steep southern slope of the mountains and the Black Sea lies a hilly coastal strip, the *Crimean southern shore.

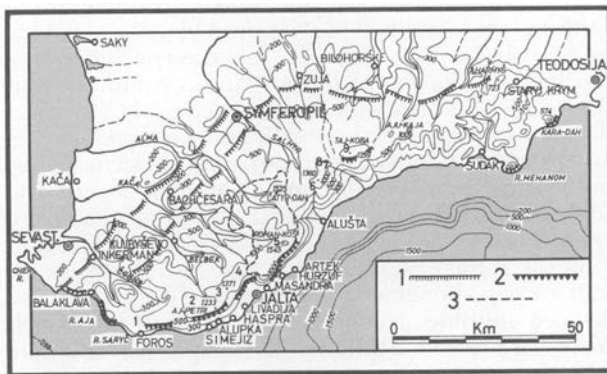

Geology. The Crimean Mountains are a large, integral, anticlinal platform whose southern wing sinks into the sea. The uplifting and folding occurred as early as the Jurassic period. At the end of the Lower Cretaceous period the anticline appeared, but the main orogenic

processes occurred only in the Miocene and Pliocene periods, when the lower part of the anticline broke off. The uplifting lasted into the Quaternary period, while the southern part of the mountains continued to subside. Besides longitudinal depressions, a series of latitudinal depressions appeared, and there was volcanic activity, particularly on the south side. Earthquakes still occur (the last violent one was in 1927), which indicates that tectonic movements have not ceased. The mountains are built mainly of sedimentary deposits of sea origin: sand-clayey schist, conglomerates, and sandstones and limestones of the Permian-Triassic and Jurassic periods. The hard Jurassic limestones are particularly common. The lower layers are built of Cretaceous and Tertiary layers, slightly inclined towards the north. The sedimentary layers are dissected by volcanic deposits.

Landscape. The relief of the Crimean Mountains is the result of complex interactions between the internal and external processes of the Tertiary and Quaternary periods. Repeated upliftings and subsidings caused active erosion to alternate with peneplanation.

The lower two ranges are longitudinal monoclines of the northern wing of the Crimean anticline. They have gentle northern slopes and steep southern slopes (cuestas), which appear wherever hard deposits break through the surface. The outer range reaches up to 342 m and is built of Neogene limestone and lime sandstone with an inside core of Upper Cretaceous and Lower Paleogene limestone (550–750 m) lying on soft chalk marl. The cuestas face insular, tablelike mountains, which indicate the former extension of the cuestas now retreating northward under the influence of denudation. Both ranges are dissected by latitudinal passes, often in the form of canyons. Between the ranges lies a wide (3–4 km) valley, traversed by the Sevastopol–Symferopol railroad and highway. A second longitudinal valley stretches southward from the middle range and merges with the first range in the east.

Beyond the second longitudinal valley the highest range, the Yaila, rises gradually. It is the axis of the anticline and consists of hard, Jurassic limestone. The top of the range forms a large, high plateau, which drops suddenly several hundred meters to the southern shore. In the west this range is quite unbroken and is divided into the *Ai-Petri Yaila (1,320 m), Yalta Yaila (1,406 m), Nikita Yaila (Demir-Kap peak, 1,504 m), and Babuhan Yaila (which has the highest peak, *Roman-Kosh, 1,545 m). Farther east the Yaila breaks up into more or less isolated, tablelike massifs: the *Chatyr-Dag (Eklizi-Burun peak, 1,525 m), Demerdzhi Yaila (1,237 m), Tyrke, Dolgorukii Yaila, and the circular Karabi Yaila (1,259 m). In the eastern part the tablelike massifs disappear; Aharmysh Mountain (723 m) is their last member. The mountains divide into many ridges and peaks, dissected by erosion, and decline below 1,000 m in altitude. The Yaila, particularly the western part, is peculiar because of its karst features of a Mediterranean variety: karroo fields in areas lacking topsoil; various closed forms of different sizes (funnellike sinkholes, gullies, depressions, etc); precipices where the snow lies year round; subterranean caves with stalactites and stalagmites, of which the best known are Byndash-Koba and Suuk-Koba in the vicinity of Chatyr-Dag. The surface of the Yaila is waterless, because precipitation penetrates the limestone layers and collects on the schists of the Middle Jurassic period, forming

CRIMEAN MOUNTAINS

subterranean lakes and rivers. The slopes of the Yaila are dissected by deep canyons.

In the west the Crimean Mountains descend directly into the sea. East of Foros the mountains recede from the sea for a few kilometers and create a narrow, sheltered shore.

Climate and soils. The mountains' climate is distinguished from the climate of the surrounding regions by its lower temperatures, high precipitation, strong winds, and microclimatic variation depending on elevation, relief, exposure, and so on. At 1,200 m the average July temperature is 15.7°C, the average January temperature is -4.2°C, and the average annual temperature is 5.7°C. In the west the annual precipitation is 1,000–1,200 mm; in the east, 510–700 mm. The soils are brown forest soils. At the highest elevation mountain-meadow subalpine soils are found, while on the southern slopes subtropical red soils are found. The foothills have a moderate continental climate – the average January temperature in Symferopil is -1°C, the average July temperature is 22°C, and the average annual temperature is 10°C – with an annual precipitation of 437 mm.

The soils are varied: low-humus southern chernozem, peat-carbonate, brown, and chestnut. The rivers are short and of irregular incline. They are fed by precipitation and subterranean waters. On the northern slopes we find the sources of the Chorna, Belbek, Kacha, Alma, Salhyr, and other rivers, and on the southern slopes, the Uchansu, Derekoika, Avunda, and others.

Flora. The mountain flora on the northern slopes differs from that on the southern coast, which has a Mediterranean climate. The following vegetation belts are found on the northern slopes: (1) in the foothills, the forest-steppe dotted with clusters of low oak, hornbeam, and other tree and brush species; (2) up to 600–700 m, oak forests with pilous oak at the lower elevations and rock oak at the higher; (3) up to 1,300 m, beech forests with an admixture of hornbeam, linden, maple, ash, yew, and, at the upper limit, crooked pine (*Pinus hamata*) and Crimean pine (*Pinus pallasiana*). The southern slopes of the Crimean Mountains up to 300 m and sometimes up to 500 m are covered with Mediterranean evergreen vegetation; at 800–900 m there are forests of Crimean pine and oak (*Quercus petraea*, *Q. calcarea*); and at 1,200–1,300 m there are beech forests (*Fagus taurica*) with an admixture of Crimean and crooked pine, hornbeam, maple, and so on. The most common tree in the Crimean Mountains is the oak, which covers more than half of the wooded area. The forests offer important protection against erosion and conserve water well.

The summit of the Crimean Mountains, the Yaila, is a forestless, karst, rocky plateau, covered with mountain meadows and juniper brush. For centuries the Yaila

provided summer pasturage for the sheep of the Tatars, and the vegetation has become impoverished. Today pasturage is restricted.

Both lower ranges of the Crimean Mountains are deforested and under cultivation. The lower, longitudinal valley is heavily populated and intensively cultivated. The upper longitudinal valley is covered mostly with forest, and its mountains are completely covered with forest and meadows.

Fauna. The Crimean Mountains and the coast belong to the Mediterranean zoogeographical subprovince and are distinctive in lacking many common forest species and in possessing Balkan, Near Eastern, Mediterranean, and endemic species. The mountain-forest fauna is richest on the northern slopes of the Yaila, particularly in the forests of the *Crimean Game Preserve, which contains the Crimean red deer (endemic subspecies), the Crimean chamois, forest marten, fox, rock marten, mole, and other species. Bird species include hawks, owls, jays, tomfits, mountainous yellowhammers, blackbirds, stonechats, and several Mediterranean birds. The amphibians are represented by leopard boas and smooth snakes. Few fish species are found here. Some species of animals – mouflon, squirrel, and so on – have been acclimatized at the preserve. Among the reptiles found on the southern coast are the endemic Crimean gecko, and such lizards as the rock lizard. Characteristic invertebrates include the cicada, praying mantis, scolopendra, Crimean scorpion, and Crimean black beetle. Many Mediterranean species of mollusk are common. Of the Diptera mosquitoes are most common. The original flora and fauna of the Crimea are preserved best at the Crimean Game Preserve.

(For population, economy, and bibliography, see *Crimea.)

V. Kubijovyč, E. Zharsky

Crimean southern shore (also known as the Crimean Riviera). Narrow (2–12 km) strip of land in the southern Crimea lying between the slope of the Crimean Mountains and the Black Sea. It stretches for about 150 km from Foros eastward to Kara-Dag, covering an area of about 600 sq km. Sheltered from north winds, the southern shore of the Crimea has a Mediterranean climate and flora. Its agriculture is subtropical. Because of its natural beauty and healthy climate, this area is heavily populated and famous for its health resorts and tourism.

The relief of the southern shore of the Crimea consists mainly of forms produced by the Taurian flysch formation of the Triassic period: low-resistance clay schist, limestone, conglomerates. The landscape is undulating, with gentle hills, shallow valleys, and a series of three to five terraces. In some places high chalk escarpments (called *khaosy*) and slides of clay sloping towards the sea add

variety to the relief. Volcanic forms are also characteristic of the southern shore. Among them are laccoliths (*Aiu-Dag, Cape Plaka, Kastel Mountain) that are the remains of extinct volcanoes (*Kara-Dag massif).

The southern shore of the Crimea lacks large bays suitable for harbors. Its appearance is influenced by the composition of the mountain rock strata: for example, the low-resistance schist is much more susceptible to abrasive activity than limestone or volcanic deposits, which usually form promontories such as Cape Fiolent, Aiu-Dag, and Kara-Dag. There are numerous cliffs and caves above and below water. Because of its incline, the shore is easily washed away by the sea, and wide beaches cannot develop. The beaches are no wider than 50 m and are often rocky.

The temperatures on the southern shore of the Crimea are, on the average, 3°C higher than on the northern slopes of the mountains. Summers are hot: for four months the temperature exceeds 20°C and it reaches 24.5°C in July. No rain falls in the summer, but the heat is reduced by breezes. Autumns are long, warm, and dry. Winters are moderate: the average January temperature is 4°C. Cold north winds, which can reduce the temperature to -15°C, are infrequent. The average annual temperature is 13°C. The annual rainfall is 400–550 mm, most of it coming in winter. This part of the Crimea gets 2,000–2,500 hours of sunlight per year (50–58 percent of possible sun hours; Yalta gets 76 percent). The swimming season lasts from May to October, the best months being August and September. This description applies to the western part of the coast. The coast east of Alushta is less adequately protected from the north winds and has a more continental climate.

A great variety of plants (about 1,500 species) are found on the southern shore of the Crimea. They are closely related to Mediterranean species. Among them are the pubescent oak (*Quercus pubescens*), juniper (*Juniperus excelsa*), wild pistachio (*Pistacia mutica*), the evergreen strawberry tree (*Arbutus andrachne*), sumac (*Rhus ponticus*), rockrose (*Cistus tauricus*), and ivy. Decorative trees are very prominent: cypress, cedar, evergreen oak, eucalyptus, certain species of palm, laurel, myrtle, and magnolia. Orchards (apple, pear, cherry, almond, apricot, peach, olive), vineyards, and plantations of tobacco and essential-oil crops (especially roses) are important economically. The flora of the eastern part of the coast is closer to steppe flora and is less varied. The oak-pine belt and the beech belt lie above the evergreen belt. The fauna of the Crimean shore also differs from the fauna of the rest of Ukraine (see *Crimean Mountains).

The southern shore of the Crimea has been famous since 1870 for its resorts and sanatoriums for respiratory ailments. The population growth on the western part of the coast is shown in the accompanying table.

Population growth on the western Crimean coast

	Total population	Population of Yalta	Tatar population (%)
1880	10,000	3,000	80
1897	23,000	13,000	39
1926	53,000	29,000	29
1959	110,000	40,000	–
1970	150,000	62,000	–

Visitors greatly outnumber residents: at the beginning of the 1880s about 8,000 people visited Yalta each year; in 1910, 50,000 came to Yalta; and today over 500,000 visit the Crimean coast. Yalta is the main resort area. Other important areas are Simeiz, Alupka, Masandra, Miskhor, Livadiia, Hurzuf, and Alushta. All are located on the coast within a 60 km strip and they are tending to merge. Except for Alushta, they come under the jurisdiction of the Yalta city soviet. A paved highway runs along the coast, and there is a regular bus service. Two main highways run north through the mountains: one to Sevastopol, and the other to Symferopil. The eastern part of the southern shore of the Crimea is less important. It has a population of 20,000. Its main resorts are Sudak and Planerske.

V. Kubijovyč

Crimean Tatars. Turkic-speaking nation that inhabited the Crimea until 1946, when it was deported en masse by the Soviet government. The Crimean Tatars are Sunni Moslems. In 1926 they numbered 179,000 and were divided into two groups: the northern (or steppe) Tatars and the southern Tatars. The steppe Tatars (125,000 in 1926) lived in the northern part of the Crimea and in the adjacent mountain foothills. Their language belongs to the Kipchak group of the Turkic languages, and they are descendants of the Mongol-Tatar invaders of the Crimea intermixed with other Turkic steppe peoples. The Tatars, who inhabit the southern part of the peninsula, including the Crimean Mountains, are descendants (54,000 in 1926) of Tatars intermixed with various other former inhabitants of the southern Crimea – Greeks, Goths, Khazars, Italians, and Slavs. Their language belongs to the Turkish group of the Turkic languages. Since the 1950s the Crimean Tatars have organized numerous mass campaigns for the right to return to their ancestral homeland from the Soviet interior, where they were forcibly resettled during the Second World War. These attempts have been only marginally successful and have been met repeatedly by opposition from the Soviet authorities. In 1979 there were 15,078 Tatars in Crimea oblast. (See also *Tatars.)

Crimean War (1853–6). War between Turkey and its allies – Britain, France, and Sardinia-Piedmont – against Russia, which was attempting to extend its empire and influence in the Near East and to destroy the Ottoman Empire. In particular, Russia asserted its protectorate over the Danubian principalities of Moldavia, Wallachia, Bulgaria, and Serbia and reserved the right to occupy Istanbul and the Black Sea straits. In June 1853 Russia occupied Moldavia and Wallachia. In October fighting broke out in Transcaucasia, and on 30 November the Turkish fleet suffered a defeat at Sinop. In January 1854 British and French fleets entered the Black Sea. When Russian troops crossed the Danube in the spring, the allies declared war. They were supported politically by other European countries. This forced the Russian army to retreat beyond the Prut River. The allies blockaded the Russian ports and in September disembarked in the Crimea, where they defeated the Russian army at Bala-

klava (25 October) and Inkerman (5 November). The danger that Bessarabia and southern, and even Right-Bank, Ukraine might be occupied, as well as the loss of Sevastopol on 2 September 1855, greatly alarmed Russian government circles.

The war did much damage to Ukraine's economy, for Ukraine served not only as a close rear but also in part as the theater of action. The consequent opposition to the war among Ukrainian landowners and commercial circles and growing peasant unrest, particularly the movement known as the *Kiev Cossacks in 1855, assumed dangerous proportions. The Russian government became particularly fearful of Ukrainian aspirations to freedom, which found support in the West as shown by the Prussian plans to dismember the Russian Empire (the *Wochenblatt* party of Bethmann-Hollweg; memorandum from the Prussian ambassador to London, C. von Bunsen, to King Friedrich Wilhelm IV in 1854), as well as by the sentiments prevailing at that time in Britain, in France (C. Barrault-Rouillon's comments on the danger of Russian expansionism and his hopes for a new Mazepa in Ukraine supported by Europe; P. Mérimée's *Les cosaques de l'Ukraine et leurs derniers atamans*), and in Polish émigré circles (Prince A. Czartoryski's plans and M. Czajkowski's [Sadyk-Pasha's] projects).

After Austria threatened to join the allies, Russia was compelled to sign the Paris Peace Treaty on 30 March 1856 and to surrender southern Bessarabia and the mouth of the Danube, as well as the right to keep a navy on the Black Sea.

The military and moral defeat suffered by Russia and the revolutionary events in Ukraine had a direct bearing on the abolition of serfdom in 1861 and the emergence of a Ukrainian political movement for emancipation.

Criminal Code of the Ukrainian SSR (Kryminalnyi kodeks URSR). Systematic source of criminal law in Soviet Ukraine. The first criminal code was enacted by the All-Ukrainian Central Executive Committee on 23 August 1922 (effective 15 September 1922); a revised criminal code became effective 8 June 1927 and was also temporarily applied in the Moldavian ASSR. The present criminal code was enacted by the Supreme Soviet of the Ukrainian SSR on 28 December 1960 (effective 1 April 1961) with later amendments. Pursuant to the provisions of the Constitution of the USSR, the criminal code was based substantially on the Foundations of Criminal Legislation of the USSR and Its Constituent Republics, enacted by the Supreme Soviet of the USSR on 25 December 1958. The criminal code is divided into two sections: the general section (arts 1–55) and the special section (arts 56–308). The first contains general principles, such as the objectives of the code, its legislative basis, the basis of criminal responsibility, territorial and temporal limitations, the concept of crime and forms of liability (intention, negligence, conspiracy, etc), and objectives and forms of punishment and

other measures and the conditions of their application. The special section contains definitions of specific crimes in pertinent groups, such as crimes against the state, which dominate the list (treason, espionage, terrorism, subversion, sabotage, etc); 'crimes against socialist property,' second in importance; crimes against life, health, liberty, and personal dignity; crimes against the political and labor rights of citizens; and crimes against personal property. Altogether, there are 11 such groups, with military crimes concluding the list. (See also *Criminal law.)

Yu. Starosolsky

Criminal law. In Kievan Rus' criminal law was based primarily on *customary law as recorded in the 11th and 12th century in **Ruskaia Pravda* (Rus' Justice). Crime was called *obyda* (offense) and originally had a private character; later it was considered public, however, since it constituted a 'breach of the peace.' Crimes against the public interest (sorcery, adultery, etc) were tried under ecclesiastical laws. Vengeance, state-controlled from an early date, was the oldest form of punishment, but was later replaced by recompense, supplemented by public punishment (*banishment and seizure, **vyra*, fines). The death penalty was introduced by Volodymyr the Great for a short period (under the influence of the Byzantine clergy), but was soon abolished and replaced by monetary fines.

In the Lithuanian-Ruthenian period the customary law of the *Ruskaia Pravda* remained in effect along with new official legal sources, in particular the *Lithuanian Statute. Criminal law became public. Guilt (criminal intent) was recognized as the basis of criminal liability. New categories of crimes of lese majesty and crimes against the state (treason, rebellion, assassination, conspiracy), religion, and family were introduced. Penalties became public, and there was wide application of the death penalty, even for adultery. Imprisonment also became effective as a penalty (its use was, however, limited).

During the period of the Hetman state (1648–1764), the old customary laws, the *Ruskaia Pravda*, and the Lithuanian Statute initially remained the principal sources of criminal law. Later, despite opposition from the Cossack *starshyna*, the Russian government ordered the publication of a new legal code entitled 'Laws by Which the Little Russian People Are Judged' (see *Code of Laws of 1743). The new criminal code was progressive in that it provided a better definition of individual crimes and outlined a wider scope of conditions for criminal liability. Punishment was both public (most frequently capital punishment, torture, and imprisonment) and private (intended both to correct a wrong and to punish).

In the Ukrainian lands that came under Polish domination (Galicia, 14th century; Right-Bank Ukraine, 16th century) and remained so until the partition of Poland, Polish criminal law was introduced gradually, but the basic ideas of the *Ruskaia Pravda* and the Lithuanian Statute remained in effect for centuries.

In Ukraine under Russia, the criminal provisions of the *Ruskaia Pravda* and the Lithuanian Statute remained in effect until replaced in 1840 by the Code of Laws of the Russian Empire. The final criminal code of 1903 (only partially enforced) showed some progress under the

influence of Western European laws, but retained certain typically Russian provisions, such as the principle of analogy or such punishments as exile with forced labor, deportation, and forcible resettlement in Siberia and other remote parts of the empire.

In Ukraine under Austria the criminal laws of the empire were introduced immediately. The code of 1852, a relatively modern one based on the ideas of the classical school of criminal law, remained in force until the fall of the empire in 1918.

The short-lived Ukrainian state of 1917–20 did not produce a new criminal code; the codes of the former empires, Russia and Austria, remained in force with certain logical changes in application.

After the First World War and the fall of the independent Ukrainian state and until the Second World War Ukrainian lands were under the domination of the USSR (central and eastern Ukraine), Poland (Galicia and the northwestern territories), Rumania (Bukovyna and Besarabia), and Czechoslovakia (Transcarpathia). In each of these regions the criminal laws of the respective occupying regimes were in force.

Criminal law in the Ukrainian SSR. Under the Constitution of the USSR the fundamentals of criminal legislation for all Soviet republics must be enacted by the Supreme Soviet of the USSR and subsequently accepted by the republics. Accordingly, the *Criminal Code of the Ukrainian SSR was enacted by the Supreme Soviet of the Ukrainian SSR on 28 December 1960, on the basis of the Foundations of Criminal Legislation of the USSR and Its Constituent Republics, approved by the Supreme Soviet of the USSR on 25 December 1958, and went into effect on 1 April 1961. The code (in sections 3 and 7) establishes the concept of crime as a 'socially dangerous act ... as defined by criminal law.' Thus, the law recognizes the 'material concept of crime,' firmly established in Soviet tradition, but limits its scope to acts specified by the law as crimes. Thus, the present code accepts the principle of 'no crime and no punishment without law,' as it is generally accepted by the codes of the Western world. Technically it rejects the traditional Soviet concept of crime as 'every socially dangerous act' regardless of whether or not it is specified by law (analogy).

The code also provides that punishment of criminals can be imposed only by courts (art 3). This principle of formal legality, however, is questionable in view of the widespread practice in the USSR of prosecuting and penalizing 'socially dangerous' people outside of the courts (eg, by the KGB) for actions not specified in the criminal code. (An act of 5 November 1934 giving the NKVD punitive powers was not superseded by the newer legislation.)

Criminal responsibility is based on guilt (*vyna*), a term not hitherto known in Soviet criminal law, which takes the forms of intent and negligence. The formal requirement of guilt as the condition of criminal responsibility, however, has not abolished the traditional concept of the 'social danger' of the perpetrator as the basis for the treatment he/she receives. The code (art 50) provides that if the court finds the perpetrator 'no longer socially dangerous,' he/she should be relieved of criminal responsibility.

Punishment, according to article 22 of the code, not only constitutes retribution for the crime, but also aims at rehabilitating the criminal. It asserts that punishment is

not aimed at inflicting physical suffering or offending human dignity. This provision loses its credibility, however, in light of the actual punitive practices of the Soviet system, such as 'corrective-labor' camps and harsh prisons, fabricated charges, long and often repeated sentences, exile to remote (Siberian) parts of the USSR, so-called therapy in psychiatric prisons (applied mostly to political opponents of the regime), and the absence of any official denial of V. Lenin's statement that criminal law, as an instrument of coercion, 'ought not to abolish terror.' Capital punishment, though it is referred to as an exceptional measure (art 24), is called for in nine kinds of crimes against the state, in several kinds of crimes against socialist property, and in military crimes. Prison and correctional camps, however, remain the most frequently applied penalties.

A special part of the code (arts 56–308), in accordance with ideas of 'social danger,' puts 'crimes against the state' (26 forms) at the head of the list, followed by crimes 'against socialist property'; military crimes conclude the list.

Yu. Starosolsky

Criminal procedure. In Kievan Rus' the rules of criminal procedure were included in the material law. The process had a public character, and, as a rule, the procedure was started by the injured party. For more serious crimes, however, public accusation was soon introduced. The trial, which was public and oral, was often preceded by a preliminary investigation.

The Lithuanian-Ruthenian period marked further development of the criminal process towards publicity; cases of official initiation of a criminal action became more frequent. Preliminary investigation was usually the basis for the trial. 'Doing justice' was mentioned as the task of the court action. The trial was public but the sentence was considered at a closed session. In certain criminal cases a procedure called 'scrutiny' was practiced; it was similar to the inquisition in Western Europe, though not as strict. Witnesses were interrogated at the site of the crime in the absence of the accused. The minutes of such inquiry served as the principal evidence on which the decision was based. In Galicia, then under Poland, the traditional court procedure was replaced (after 1434) by Polish laws.

During the period of the Hetman state, under Russian influence the procedure became more formalistic and

complicated, mainly because the judicial and administrative functions were united in the hands of the Cossack *starshyna*. The Zaporozhian Sich, however, retained a more liberal, democratic, and less-formalistic procedure. It was public as a principle; often the Cossacks themselves participated in the execution of punishments.

On the Ukrainian territories that came under Russian domination the procedural traditions of the *Lithuanian Statute were soon (1723) replaced by strict Russian laws. A typical inquisitorial practice was introduced, with the functions of investigation, accusation, and sentencing united in the hands of the same court organ and with torture used as a means of extracting evidence. The inquisitorial process was abolished in 1864; open and oral trial, as well as the jury, were introduced on the Western pattern. Soon, however, these liberal features were abolished (1887) or restricted.

In Western Ukraine, under Austria from the partition of Poland in 1772, criminal procedure underwent progressively modernizing reforms, which culminated in the Code of Criminal Procedure of 1873. The functions of accusation, trial, and sentencing were strictly separated, with a state attorney acting as the prosecuting agent; the trial was open, oral, direct, and aimed at establishing material truth; a jury gave verdicts in more serious criminal cases.

During Ukrainian independence (1917–20) no reforms of criminal procedure were undertaken: the rules of the former empires, Russia and Austria-Hungary, remained in effect, with necessary practical amendments.

In Western Ukraine, again under Polish domination (1919–39), the rules of criminal procedure of Austria and Russia were in effect until 1928, after which the new Polish Code of Criminal Procedure was enacted. It was based on a strict separation of the functions of accusation (in the hands of the prosecutor) and sentencing (by an independent court) and on an open and oral trial that sought to establish material truth. Trial by jury was in effect until it was abolished in 1938.

In the Ukrainian SSR the present criminal procedure is the result of 40 years of progressive development, which started when former tsarist Russian laws were declared void by the Communist government. The Decree on Courts was enacted in 1917 by the Council of People's Commissars of the Russian SFSR and made a mandatory model for Ukraine. Accordingly, the Ukrainian Decree on the People's Courts of 4 January 1918 and On the People's Courts and Revolutionary Tribunals of 14 February 1919 laid the foundation for the new court procedures. These decrees were followed by the codes of criminal procedure of 1922 and 1927. The code that is now in force was enacted by the Supreme Soviet of the Ukrainian SSR on 8 December 1961, in compliance with the Foundations of Criminal Procedure of the USSR and the Constituent Republics of 25 December 1958. Allegedly, the code is based on 'socialist democratic principles.' Some theoretically progressive and liberal provisions are in fact included in the code; they are in contrast, however, with the prevailing practice of the Soviet administration of criminal justice. Thus, the code (as well as the constitution) states that the court should be the only agency entrusted with the trial of criminal cases. Yet the power granted in 1934 to the 'special boards' of the NKVD (now MVD) to apply punitive measures to 'socially dangerous' persons has never been repealed; also, certain other agen-

cies (eg, the *comrades' courts) are given some punitive powers.

The code provides for an 'open court,' but most of the cases that are political in nature are being tried behind closed doors. The trial should be conducted in the Ukrainian language, but, in practice, the Russian language is used more often. The accused is guaranteed the right to counsel, but not during the preliminary investigation, when he/she is interrogated by organs of the militia, state security, and other agencies, and when, as practice shows, most 'confessions' are obtained. The Western idea that a person is presumed innocent until proven guilty is foreign to the code: it is regarded as an 'obsolete dogma of bourgeois law.' Neither the institution of habeas corpus nor any other legal measure for obtaining relief from illegal detention is provided by the code. The prosecutor, who represents Party policy in court, is not only the sole master of the preliminary investigation, but is, in fact, granted a dominant role during the trial. He/she orders the preliminary arrest and can extend it up to nine months. The code allows appeals to a higher court against the decisions of a lower court.

Yu. Starosolsky

Criminal Procedure Code of the Ukrainian SSR (*Kryminalno-protsesualnyi kodeks URSR*). Systematic source of the laws of criminal procedure in Soviet Ukraine. The first criminal procedure code was enacted by the All-Ukrainian Central Executive Committee on 13 September 1922 (effective 20 September 1922); a revised code became effective on 15 September 1927, reflecting the all-Union Foundations of Criminal Procedure of 31 October 1924. The present code was enacted by the Supreme Soviet of the Ukrainian SSR on 28 December 1960 (effective 1 April 1961), with later amendments. According to the provisions of the Constitution of the USSR, the Criminal Procedure Code of the Ukrainian SSR was based on the Foundations of Criminal Procedure of the USSR and Its Constituent Republics, enacted by the Supreme Soviet of the USSR on 25 December 1958. The code (with amendments) consists of 8 sections, 36 chapters, and 447 articles. Section 1 contains general provisions, such as the objective of the procedure, jurisdiction, rights and duties of the participants in the procedure (accused, defenders, prosecutors, plaintiffs and their representatives, etc), principles of criminal trial (administration of justice only by court, open court, independence of judges, evidence and its evaluation, etc); section 2 deals with preliminary investigation; section 3, with trial before a court of the first instance; section 4, with procedure before courts of appeal and cassation; section 5, with execution of decisions; section 6, with application of compulsory medical measures; section 7, with special procedure in cases of hooliganism; section 8, with procedure against juvenile delinquents.

Yu. Starosolsky

Croatia (*Hrvatska*). Country in the northwestern part of the Balkan Peninsula, which in 1946 became one of the constituent republics of the Socialist Federal Republic of Yugoslavia. Its area is 56,500 sq km, and its 1976 population was 4,500,000. Most of Croatia's population consists of Croats (80 percent); the remainder are Serbs (14 percent), Slovenes, Italians, Hungarians, and others. There are about 10,000 Ukrainians in Croatia, constituting 0.2 percent of its population. The Croatian population

in Yugoslavia is 4,400,000, and the total number of Croats in the world is 6,000,000, including émigrés in the United States, Canada, South America, Australia, Austria, and Hungary. The capital city of Croatia is Zagreb.

History. Since the 6th–7th century AD Croatia has been settled by Slavic tribes – the ancestors of the Croats and Serbs – which, according to some sources, migrated there from present-day southern Poland and western Ukraine between the Buh and the Dniester. In the 8th–9th century the Croats were conquered by the Franks, but in the 9th century they formed a separate principality and in 925 set up a kingdom under the rule of King Tomislav. The Croats adopted Christianity and the Latin alphabet from Rome and thus set themselves clearly apart from the Serbs, who shared the same Serbo-Croatian language but embraced Byzantine Christianity and used the Cyrillic alphabet. From 1102 to 1526 Croatia maintained a personal union with Hungary, in which it preserved its autonomy and a separate diet while recognizing the rule of Hungarian kings. The coastal part of Croatia (Dalmatia) was usually ruled by Venice. In the 16th–17th century the Ottoman Empire controlled most of Croatia, while the rest remained under the rule of the Hapsburgs. During the Hungarian rebellion against Austria (1848–9) the Croats took the Austrian side and declared their autonomy. In 1867 Croatia was again united with Hungary, which began to Magyarize the Croats. The national-cultural renaissance of Croatia began in the 19th century in the framework of the Illyrian movement, which advocated the unity of the southern Slavs. On 29 October 1918 the popular assembly in Zagreb declared Croatia's independence, and eventually Croatia joined the Serbian-Croatian-Slovenian Kingdom, which in 1929 was renamed Yugoslavia.

Croatia preserved its autonomy within the framework of the Yugoslavian state. In 1941–5 the Independent Croatian State under the leadership of A. Pavelić and the Ustaša party allied itself with Germany and Italy. In 1943–5 Croatia was the battleground of fierce fighting between the Serbs and the Croats, the Communists and the anti-Communists. With the support of the USSR and the Allies J. Broz-Tito, the partisan leader, defeated the occupation forces of the Axis powers and their Croatian allies. Croatia was again made a part of a federal Yugoslavia, ruled by a Communist regime.

Ukrainian-Croatian relations. Since the countries are not adjacent, relations between Ukraine and Croatia have been minimal and restricted for the most part to cultural ties. At the beginning of the 17th century the poet F. Gundulić in his *Osman* praised the courage of the Cossacks led by P. Sahaidachny in the Battle of Khotyn. The famous Russophile and Pan-Slavist J. Križanić (1613–83) left an account of his travels from Lviv to Moscow through Nizhen and advocated the union of Ukraine and Russia in his 'Speech to the Cherkasy [Ukrainians].' The Uniate missionary M. *Terletsky, who later became the bishop of Kholm, was active for a brief period among the Orthodox believers in Croatia. In the period of romanticism and national revival the Croats were fascinated by Cossack themes in literature: N. Gogol and the Polish writers of the Ukrainian school were translated into Croatian. The Croats also took an interest in Ukrainian literature written in the vernacular. A. Šenoa and A. Harambašić (*Pjesničke pripovijesti*, 1889) translated T. Shevchenko, Harambašić and V. Laboš translated Marko

Vovchok, and S. Sušnik and N. Andrić translated Yu. Fedkovych. V. Kovačević and Č. Bragal (Works on Shevchenko) wrote about Ukrainian literature, while F. Rački wrote on Ukrainian folklore. The noted Croatian music specialist F. Kuhač wrote a favorable review of M. Lysenko's collection in 1875. In the 20th century V. Žganec arranged Bačka-Ruthenian folk songs, which were published in his *Pjesme jugoslavenskih Rusina* (Songs of the Yugoslav Ruthenians, 1946). M. Krleža wrote the play *Galicija* (Galicia), dealing with the First World War. The historian I. Esih translated the epic **Slovo o polku Ihorevi* and wrote an article on the Lviv society *Prosvita. Some Croatian scholars were full members of the Shevchenko Scientific Society; for example, the philologists V. *Jagić, T. Maretić, and M. Rešetar; the historian of culture D. Šurmin; the mathematician V. Varičak; and the paleontologist D. Gorjanović-Kramberger.

There were some ties between the Ukrainians and Croats in Vienna and Budapest, mostly among students. Greek Catholic priests were sent from Transcarpathia, and in the 20th century from Galicia as well, to minister to the spiritual needs of Ukrainian settlers in Croatia and of Croatian Greek Catholics. Two of these priests, H. Palkovych and Yu. Drohobetsky, later served as bishops. In 1919 the government of the Western Ukrainian National Republic established a diplomatic mission in Zagreb. After 1920 a small group of political émigrés from Ukraine tried to popularize the idea of Ukrainian independence and Ukrainian culture among the Croats. After the Second World War some Ukrainian and Croatian political leaders abroad maintained ties with each other, particularly through the Anti-Bolshevik Bloc of Nations.

Because of cooling relations between the Soviet Union and Yugoslavia after 1948, the cultural ties between Soviet Ukraine and Croatia became insignificant. Since 1966 lecturers from Ukraine have taught courses in the Ukrainian language at the chair of Russian philology at Zagreb University. A Koval and A. Menac collaborated in compiling a Ukrainian-Serbo-Croatian and Serbo-Croatian-Ukrainian dictionary. The Ukrainian SSR has participated in fairs and industrial exhibitions in Zagreb. Kiev and Zagreb universities have maintained an exchange program. In 1979 Days of Ukrainian Culture were held in Croatia, and in 1980 Days of Croatian Culture were held in Ukraine; these featured theatrical performances, art exhibits, films, and concerts. In Soviet Ukraine the works of I. Andrić, M. Krleža, V. Deželić, and others have been translated into Ukrainian, while in Croatia those of I. Franko, V. Stefanyk, U. Samchuk, O. Honchar, and others have been translated into Croatian.

Ukrainians in Croatia. Ukrainians from Transcarpathia and *Bačka began to settle in the western part of *Srem as early as the end of the 18th century. In the 19th century individual Ukrainians from Galicia lived in Zagreb and other cities of Croatia. After 1945 some Ukrainians from *Bosnia settled in Croatia. Ukrainian communities and Greek Catholic parishes can be found in the following towns and villages: Petrovci, Mikloševci, Vukovar, Osijek, Slavonski Brod, Kanjiza, Sibirj, Lipovljani, and Rajevo Selo. They belong to the Bosnian-Slavonian vicariate of the *Križevci eparchy. There are almost 8,000 Greek Catholic Croats; they are under the same church jurisdiction as the Ukrainian Catholics. In the interwar period young people from Galicia studied in Zagreb. The Prosvita society and the student organizations Proboiem and

Dnipro were also active there. The newspaper **Dumka* was published. During the Ustaša period a Ukrainian delegation headed by V. Voitanivsky and possessing quasiconsular status was established on the basis of an agreement between the Melnyk faction of the OUN and the government of A. Pavelić. The Ukrainian Legion, consisting of Ukrainian settlers and immigrants, was organized within the Croatian army and was to be sent to the Soviet front. But on German orders it was used to fight Tito's partisans in Bosnia and Serbian Chetniks. Because of this the leaders and soldiers of the legion as well as the Ukrainian group in Croatia suffered severe reprisals from the Communist regime after 1944: Ukrainian organizations were disbanded, and many Ukrainian activists were executed or imprisoned, while some fled to the West. Only at the end of the 1960s were the Ukrainians in Croatia allowed to set up their own organizations. In 1968 the **Union of Ruthenians and Ukrainians of Croatia* was formed. The journal *Nova dumka* has been published in Vukovar since 1971. Art and drama groups have resumed their activities in the villages and towns.

Crop cultivation. Basic branch of agriculture, producing grain crops, industrial crops, feed crops, and vegetable-melon crops. Crop growing provides food for the population, raw materials for the food industry and light industry, and feed for farm animals. Cultivated crops account for about 65 percent of gross agricultural production and for 88 percent of gross plant production in Ukraine. For the history and present state of crop cultivation see **Agriculture*.

In 1950 arable land, which is the basis of crop cultivation, amounted to 34,512,000 ha, or 57 percent of the land area of the Ukrainian SSR. At that time 33,512,000 ha or 97.5 percent of the arable land, was under seed. Until 1913, because of the prevalence of the three-field system, about 80 percent of the arable land in central and eastern Ukraine and in the Kuban was under seed, while in Western Ukraine, where crop rotation was widely practiced, almost 95 percent was under seed. Within the present boundaries of the Ukrainian SSR the land under seed amounted to 27,952,000 ha (81 percent of the arable land) up to 1940, to 33,336,000 ha (97 percent) in 1940, and to 34,462,000 ha (close to 100 percent) in 1964 as a result of N. Khrushchev's agrarian policy.

Even greater changes took place in the structure of agriculture in Ukraine: feed crops increased rapidly; industrial crops and potatoes also increased, although not as rapidly, while grain crops decreased. Among grain crops, land planted with the most valuable crops, such as winter wheat and feed corn, has increased at the expense of land planted with low-yield grains, such as rye, barley, and oats. The changes in the structure of crop cultivation are presented in table 1. Since the second half of the 1930s

TABLE 1
Types of crops in Ukraine (in percentages)

	1913	1940	1950	1960	1969	1980
Grain crops	88.4	68.2	65.4	40.9	47.9	49.1
winter wheat	11.0	20.2	17.6	11.0	21.0	23.8
corn	3.1	5.0	9.0	9.1	8.0	4.5
spring barley	20.8	12.7	9.0	7.2	7.1	9.8
Industrial crops	3.2	8.6	9.4	10.7	12.0	12.1
sugar beets	2.0	2.6	2.7	4.3	5.1	5.3
sunflowers	0.3	2.3	2.9	4.5	5.1	5.0
Potatoes, vegetables, melons	5.0	9.0	8.1	8.4	7.8	7.0
Feed crops	3.4	14.2	17.1	40.0	32.3	31.8

and particularly since 1950, great efforts have been made in Ukraine to restructure crop cultivation and especially to increase productivity. **Agricultural technology*, **selection*, *experiment stations*, as well as **agricultural education* and **agricultural periodicals*, have contributed to the development of crop cultivation.

**Crop rotation* is fully applied in crop cultivation in Ukraine. Land-amelioration projects are being carried out: by 1980, 2,014,000 ha were under **irrigation* (only 934,000 ha were irrigated in 1970), and 2,539,000 ha had been drained (1,594,000 ha in 1970) (see **Drainage of land*). **Soil erosion* is being halted. Sowing and agricultural technology have improved, and a number of new plant varieties and hybrids have been bred. Eighty-five to 95 percent of agricultural crops are grown from quality seed. Chemical means are used to control pests, plant diseases, and weeds. Mineral fertilizer has been the most important factor in increasing crop yields. The use of fertilizers has increased from 163.6 kg/ha in 1965 to 486.1 kg/ha in 1980 (including 262.0 kg of nitrogen fertilizer, 132.1 kg of phosphate fertilizer, 18.5 kg of phosphorus powder, and 73.1 kg of potassium fertilizer). As a result of these efforts the productivity and the gross harvest of agricultural crops have increased, as is evident in tables 2 and 3.

TABLE 2
Productivity (in centners/ha)

Crop	1913	Annual average		
		1961-5	1966-70	1976-80
Grain crops	9.4	17.5	21.4	26.1
winter wheat	11.8	18.4	23.6	30.1
corn	10.2	24	27.6	29
Sugar beets	167	199	266	300
Sunflowers	9.3	13.8	16.4	14.4
Potatoes	79	88	100	120

TABLE 3
Gross harvest (in thousands of tonnes)

Crop	1913	Annual average	
		1961-5	1976-80
Grain crops	23,157	29,348	43,151
winter wheat	3,645	11,777	21,908
corn	870	8,034	23,766
Sugar beets	9,337	34,130	53,891
Sunflowers	71	2,287	2,422
Potatoes	8,546	18,446	20,541

Agricultural productivity in Ukraine is higher than in the USSR as a whole or in the Russian SFSR. Although in 1976–80 Ukraine accounted for only 16 percent of the land under seed in the USSR, it produced 24.9 percent of the grain crops (including 21.7 percent of all wheat, 42.8 percent of all corn), 59 percent of the sugar beets, 48.9 percent of the sunflowers, and 30 percent of the potatoes harvested in the USSR. In wheat production Ukraine is second in Europe (after the Russian SFSR) and fifth in the world, and in sugar-beet production it is first in the world. (For a bibliography see *Agriculture.)

V. Kubijovyč

Crop rotation. Intensive form of agriculture consisting of the scientifically planned rotation of crops over several years on the same tract of land. Changes of crop are accompanied by suitable tillage and the use of fertilizer. The purpose of crop rotation is to improve systematically the yield rate, that is, to obtain the highest output per unit of land at the lowest expenditure of labor and capital.

Crop rotation has been practiced in Europe since the 17th century. In the 19th century it was prevalent in Western and Central Europe. Prior to 1914 the system was practiced on Ukrainian territories only in Western Ukraine. It spread there at the same time as the cultivation of potatoes, feed crops, and sugar beets. At the time Right-Bank Ukraine made only a start at conversion from the three-field system to crop rotation. Now the crop-rotation system is used throughout Ukrainian territories. One or more crop rotations are practiced, depending on natural conditions, such as the soil and climate, and on economic conditions. Crop rotation is classified according to its purpose into field rotation and special rotation (near the farm, melon field, soil conservation, etc). In Ukraine the seven-to-nine-time field-rotation type is most prevalent. Mainly crops of the hoe-cultivation variety form part of this type of rotation. In the steppes the field-rotation system alternates the planting of grain crops with hoe crops or grain crops with twice-hoed crops; therefore the grain yields are very high. Eighty-four percent of the steppe land under field rotation is under grain crops, while feed crops cover 12 percent and soil-conservation crops cover 2.3 percent. In the forest-steppe belt, grain is usually rotated with sugar beets and they cover 85.5 percent of the land under crop rotation; feed crops cover 7.5 percent; soil-conservation crops, 3.2 percent; pasture crops, 1.2 percent; garden crops, 1.1 percent; and other crops, 1.5 percent. In the forest belt, grain is usually rotated with potatoes or with flax (in the latter case, the grain is rye and is rotated with potatoes), and lupine. Such crops cover 85.5 percent of the land under crop rotation in the forest belt; 5.9 percent is devoted to feed crops, 1.8 percent to pasture crops, 1.5 percent to soil-conservation crops, 0.8 percent to garden crops, and 1.5 percent to other crops. In the Carpathian Mountains various types of crop rotation are practiced, depending on the soil, the elevation, and the steepness of the slopes.

Crow (*Corvus*; Ukrainian: *vorona* or *gava*). Bird of the family Corvidae that is very common in Ukraine. It grows up to 50 cm in length. Two species are seen in Ukraine: the hooded crow (*C. c. cornix*) and, in the western regions, the carrion crow (*C. corone*).

Crown. Monetary unit of certain European states, in particular of Austria-Hungary (from 1892), where it equalled 100 hellers, and subsequently of Austria (*Krone*) and Hungary (*korona*), until 1925, and of Czechoslovakia, where the *koruna* is still used today.

Crown land. Administrative-territorial unit of the Austro-Hungarian Empire, determined by historical rather than ethnic considerations. A crown land enjoyed internal autonomy and had its own appointed and elected political-administrative agencies: a vicegerent, a diet, and an executive. The Ukrainian lands under Austria were part of the Kingdom of Galicia and Lodomeria from 1774 to 1849 and then of the Crown Land of Galicia or the new crown land – the Duchy of Bukovyna. Galicia included both Ukrainian and Polish ethnic territories, while Bukovyna included both Ukrainian and Rumanian ethnic territories. For this reason the Ukrainians of Galicia demanded as early as 1848 that the crown land be divided into separate Ukrainian and Polish lands and that a separate crown land consisting of the Ukrainian part of Galicia, Bukovyna, and Transcarpathia be established. Under Polish influence the Austrian government refused to implement this plan. Only in 1918 did the Austrian government, in a supplement to the Peace Treaty of Brest-Litovsk, promise the Ukrainian National Republic to create a separate crown land consisting of Ukrainian Galicia and Bukovyna, but it soon annulled this treaty.

Crucian carp (*Carassius*; Ukrainian: *karas*). Genus of freshwater commercial fish of the family Cyprinidae. It attains a length of up to 50 cm and a weight of up to 2 kg, but the usual weight when caught is 0.2–0.5 kg. The fish lives mostly in stagnant waters and ponds. Two species of the Crucian carp are common in Ukraine: the golden crucian carp (*C. carassius*) and the silver crucian carp (*C. auratus gibelio*).

Csopey, László [Čopej, Vasył'], b 1 October 1856, d 23 June 1934. Ukrainian Transcarpathian educator who taught in Budapest. Csopey compiled textbooks for Transcarpathian schools, as well as *Rusko-madiarskyi slovar* (Ukrainian-Hungarian Dictionary, 1883), which included many local words. He also published a study on Hungarianisms in Ukrainian (*Magyar szók a Rutén nyelvben* [Magyar Words in the Ruthenian Language, 1881]).

Cubism. Artistic movement that regarded painting not as a depiction of nature, but as a free play of forms subject to loosely treated laws of geometry. Cubism reduced all forms to their primary state – sphere, cone, cylinder, and cube – and at the same time introduced new materials into art, often combinations of paint, wood, metal, glass, wire, and so on.

M. *Boichuk and his school were closely related to the cubist movement as early as the mid-1910s. A. *Archi-penko is considered to be the first cubist sculptor in world art. The following Ukrainian artists made use of the innovations introduced by cubism: V. Yermilov, V. Meller, O. Bohomazov, M. Andriienko, O. Hryshchenko, and P. Kovzhun. They often combined the cubist style with *constructivism.

Cucumber (*Cucumis sativus*; Ukrainian: *ohirok*). Annual garden plant of the gourd family (Cucurbitaceae). Valued

for its pleasant taste and vitamin content, the cucumber may be consumed fresh or pickled. In Ukraine 22 percent of vegetable cropland is devoted to the cucumber, which ranks third behind cabbage and tomatoes in seeded area. Cucumbers are grown mostly near large cities. The most common varieties in Ukraine are the Nizhen 12 (80 percent of the area seeded to cucumbers), Nizhen Local, Crimean, Don 175, and the fast-ripening Success 221, Early Ukrainian, First Satellite, and Rocket.

Cultural Association of Ukrainian Workers (Kulturna spilka ukrainskykh trudiashchykh or ksut). Civic cultural and educational organization of the Ukrainian minority in Czechoslovakia, founded in 1951 to replace the *Ukrainian People's Council of the Prešov Region and called until 1954 the Union of Ukrainian Workers. The association, whose head office is in Prešov, operates only in eastern Slovakia and does not serve the Ukrainians scattered throughout Bohemia. ksut is controlled by the Communist party and is a member of the National Front. Its network includes five district organizations, one city (Košice) organization, and over 260 local branches at schools, enterprises, or villages. Its membership was about 20,000 in 1976. ksut conducts artistic and educational activities on a mass scale and sponsors about 190 amateur cultural circles. It holds public lectures, annual song and dance festivals in Svydnyk, choir festivals in Kamienka, and drama and recitation festivals in Medzilaborce. The *Ukrainian National Theater, the *Duklia Ukrainian Folk Ensemble (song and dance), and the Ukrainian section of the Slovak Writers' Union closely co-operate with the association. ksut publishes the weekly newspaper **Nove zhyttia*, the monthly magazine **Druzhno vpered*, the bimonthly journal **Duklia*, and *Naukovi zapysky* (Scholarly Papers, 9 vols by 1982). Two political purges (1954, 1968–9) to root out 'bourgeois nationalists' have greatly affected the association. The following individuals have served as presidents of ksut: P. Babei, V. Kapishovsky, V. Kopchak, I. Prokipchak, and F. Kovach.

V. Markus

Cultural exchange. Cultural exchange between the Ukrainian SSR and other countries was first co-ordinated in Moscow by the Foreign Aid Commission of the Central Executive Committee of the USSR. The commission organized tours, exhibits, book exchanges, photo services, propaganda literature, and so on. In 1925 it was replaced by the All-Union Society for Cultural Relations Abroad. A year later a branch of the society was set up in Kharkiv under the name All-Ukrainian Society for Cultural Relations Abroad. It had seven sections: education, industry, agriculture, literature and art, foreign-language study, medicine, and student exchanges. The society also had branches in Kiev and Odessa. It published and sent abroad *Khronika v URSR* (Events in the Ukrainian SSR) and other materials in various languages. In 1930 the All-Ukrainian Society had 147 correspondents. Until 1933 Ukrainian writers, artists, film directors, scientists, and musicians traveled abroad (eg, the Dumka Choir went to France in 1929). In 1930 the International Congress of Revolutionary Writers took place in Kharkiv and was attended by A. Koestler, L. Aragon, E. Triolet, and others. With the suppression of Ukrainian culture in

Ukraine in 1933, contacts with foreign countries almost ceased.

Cultural exchange revived briefly in 1945–6 when the USSR was formally an ally of the United States and other Western countries. The Ukrainian Society for Cultural Relations Abroad resumed exchanging books: in 1945 it sent 860 books abroad (compared to 7,245 in 1930) and received 1,796; in 1946 it sent out 1,060 and received 9,669. When this exchange was resumed after the Cold War, the number of books continued to be modest (1,200 in 1966). The number increased later, however. The libraries of the Ukrainian SSR are also involved in exchanges with foreign libraries (115 in 1965). In 1964 the Ukrknyhoeksport book export firm was set up, and in 1974 it sold books in 90 foreign countries.

In 1958 the All-Union Society for Cultural Relations Abroad became the Union of Soviet Societies for Friendship and Cultural Relations with Foreign Countries. The Ukrainian society was renamed the Ukrainian Society for Friendship and Cultural Relations with Foreign Countries. At first the Ukrainian society embraced 6 friendship societies in the Ukrainian SSR, which had exchanges only with countries of the Soviet bloc. In 1973 there were 14 societies, 4 of which had exchanges with non-Communist countries – Canada, France, Italy, and Austria. The Ukrainian society created 13 sections: social, pedagogical, medical, scientific, agricultural, architectural, legal, cinematographic, artistic, dramatic, musical, literary, and children's art. Later (1965–9) a war veteran's section, a women's section, and an Esperanto commission were added. In 1973 the Ukrainian society had branches in Donetsk, Transcarpathia, Zaporizhia, Lviv, Crimea, Odessa, Kharkiv, and Kherson oblasts. Together with the Writers' Union of Ukraine the society has published the periodical **Vsesvit* since 1958; a bulletin, *Po Sovetskoï Ukraine*, since 1968; and *Informatsiyni lyst*. The society functions nominally under the supervision of the Foreign Affairs Commission of the Supreme Soviet of the Ukrainian SSR, but is in fact controlled by the Union of Soviet Friendship Societies in Moscow.

The Ukrainian society co-ordinates cultural exchanges between various cities and oblasts of Ukraine and corresponding entities abroad and sends out and receives literature, films, exhibits, records, and so on. It welcomes delegations (in co-operation with Intourist), usually from Communist countries; in 1959–60, for example, only 326 of the 1,600 delegations received came from non-Communist countries. Together with the Academy of Sciences of the Ukrainian SSR, the society organizes scientific tours abroad. In 1965 the society had contacts with 112 countries.

Since the end of the 1950s foreign-relations departments have existed in the Ministry of Education, the Ministry of Higher and Secondary Specialized Education, the Ministry of Culture, the Academy of Sciences of the Ukrainian SSR, the Republican Council of Trade Unions, and other cultural institutions. Schools of higher education established relations with similar foreign institutions only in 1965; two years later they had relations with 35 foreign institutions. In 1967–8 over 4,500 foreigners from outside the USSR (2,072 from Communist countries) studied in the Ukrainian SSR.

Since the end of the 1960s the *Znannia society has participated in cultural exchange and organized exchanges of lecturers. The Composers' Union of the Ukrainian SSR co-operates with the Ukrainian society in

organizing concerts for foreign musicians in Ukraine. Certain museums in Kiev have direct contacts with museums abroad, for example, in London, Venice, and Plovdiv, Bulgaria. Tours of Ukrainian performers abroad (eg, the Verovka State Choir, P. Virsky's State Dance Ensemble, individual singers, musicians, and drama groups) are arranged by the Ministry of Culture of the Ukrainian SSR.

Cumans (also known as Kipchaks in the East, Kuns or Comani in the West, and Polovtsi in Ukraine). Turkic nomadic tribes racially related to the *Pechenegs. At the turn of the 10th century the Cumans inhabited the southern part of Central Asia as far east as the upper Irtysh River. After forcing out the *Torks, the Cumans migrated in the mid-11th century through the Black Sea steppes as far as the lower Danube River. In Eastern sources this territory was known as Dasht-i-Kipchak (the Cuman Steppe), while in Rus' sources only its western part was called the Land of the Polovtsi. The western Cuman tribes were in constant contact with Rus', Byzantium, Hungary, and Bulgaria.

According to the chronicles, the first encounter between Rus' and the Cumans took place in 1055 and resulted in a peace agreement. In 1061, however, the Cumans invaded the Pereiaslav principality and devastated it. In 1068, at the Alta River the Cumans crushed the combined forces of the three sons of Yaroslav the Wise – Iziaslav, Sviatoslav, and Vsevolod. From then on the Cumans repeatedly invaded Ukraine, devastated the land, and took captives whom they either kept as slaves or sold at slave markets in the south. The principalities of Pereiaslav, Novhorod-Siverskyi, and Chernihiv were the most exposed regions. The Cumans inflicted the gravest losses on Ukraine at the end of the 11th century under the leadership of Khan *Boniak, who was represented as a sorcerer in the Rus' folklore of the time. The divided Ukrainian princes could not organize a common defense against the invader. Some of them, for example, Oleh Sviatoslavych of Chernihiv, even sought aid from the Cumans in their internal squabbles. Only *Volodymyr Monomakh, who at first ruled Pereiaslav and then Kiev, began to organize a common Rus' coalition against the Cumans. As a result of an agreement reached at the *Dolobskoe council of princes, several joint campaigns into the Cuman steppes took place, in 1103, 1109, and 1111. The nomads were defeated and pushed back to the Volga and Subcaucasia. After the death of Monomakh's son Mstyslav (1132), who had successfully continued the policies of his father, the Cumans again became a threat to the Rus' principalities, although not as severe a threat as before. The Cuman encampments again moved up to the borders of the principalities, and Cuman incursions reached a peak in the 1180s under the leadership of Khan *Konchak. The Ukrainian princes responded with joint campaigns in 1184–94. Although the separate action of Prince Ihor Sviatoslavych in 1185, which is described in the epic

**Slovo o polku Ihorevi*, was a setback, the general outcome of the campaigns was favorable to the princes. Prince Roman Mstyslavych scored decisive victories over the Cumans in 1202 and 1204, which permitted Ukrainian colonization to expand about 100 km southward.

During the century and a half that the Cumans harassed Ukraine they did not form a state or even a common alliance of tribes. The basic unit of their society was the family, which consisted of blood relatives. Related families formed clans, which lived together in movable settlements called 'Cuman towers' by Rus' chroniclers. The tribes were larger social units that were led by khans. Each tribe had its own name, and their names – Tokso-bychi, Burchevychi, Yeltunovychi, Yetebychi, etc – are often mentioned in the Ukrainian chronicles. The various tribes were also distinguished by the territory they controlled. Thus, the seashore Cumans lived in the steppes between the mouths of the Dnieper and the Dniester; the coastal Cumans, on the coast of the Sea of Azov; the Dnieper Cumans, on both banks of the bend in the Dnieper Valley; and the Don Cumans, in the Don Valley.

Animal husbandry was the main occupation of the Cumans. They raised horses, sheep, goats, camels, and cattle. In summer they moved north with their herds; in winter, south. A few of the Cumans also engaged in farming and trading and led a semisettled life. The main exports of the Cumans were animals, particularly horses, and animal products. The Cumans also played the role of middlemen in the trade between Byzantium and the East, which passed through the Cuman-controlled ports of Surozh, Oziv, and Saksyn. Several land routes between Europe and the Near East ran through Cuman territories: the Zaloznyi Kiev-Azov route, the Solianyï Kiev-Crimea route, and the Greek route. Cuman towns – Sharukan, Suhrov, and Balin – appeared in the Donets Basin; they were inhabited, however, by other peoples besides the Cumans. Crafts were poorly developed among the Cumans and served only daily needs. Primitive stone figures called *stone babas, which are found throughout southern Ukraine, were closely connected with the Cuman religious cult of shamanism. Like other Turkic tribes, the Cumans tolerated all religions; hence, Islam and Christianity spread quickly among them. As a result of their proximity to the Rus' principalities, the Cuman khans and prominent families began to Slavicize their names, for example, Yaroslav Tomzakovych, Hlib Tyrievych, Yurii Konchakovych, and Danylo Kobiakovych. Ukrainian princely families were often connected by marriage with Cuman khans, and this tended to dampen political conflicts. Sometimes the princes and khans waged joint campaigns; for example, in 1221 they attacked the trading town of Sudak on the Black Sea, which was held by the Seljuk Turks and which interfered with Rus'-Cuman trade.

Mongol forces led by the warlords Subutai and Jebe crossed the Caucasus in pursuit of Muhammad II, the shah of Khorezm, and defeated the Cumans in Subcaucasia in 1220. The Cuman khans Danylo Kobiakovych and Yurii Konchakovych fell in battle, while the others, led by *Kotian (Mstyslav the Daring's father-in-law), obtained aid from the Rus' princes. The Rus'-Cuman forces were defeated, however, by the Mongols at the Kalka River in 1223. During the second Mongol invasion of Eastern Europe in 1237 the Cumans were defeated again. Most of them surrendered to the Mongols, while the others

followed Khan Kotian to Hungary and Bulgaria, where they mingled with the local population. The Mongols became masters of the steppes of Ukraine. Although the Cumans were crushed, their cultural heritage passed on to the Mongols. The Mongol upper circles, being a minority, adopted from the Cumans much of their language, traits, and customs, and the two peoples finally became assimilated through intermarriage. In the second half of the 13th and the first half of the 14th century the Cumans, together with the Mongols, adopted Islam.

M. Zhdan

Curator. Person appointed as a guardian of a certain field of activity. In tsarist Russia and in Poland supervisors of school districts were known as curators. In tsarist-ruled Ukraine there were three such districts – the Kiev, Kharkiv, and Odessa districts – each encompassing more than one gubernia. In the 1920s and 1930s Western Ukraine under Poland had two school districts – Lviv and Volhynia.

Curial electoral system. In the curial electoral system the electorate is divided into groups (curiae) according to socioeconomic status, education, profession, or national-religious affiliation. Usually the purpose of this system is to restrict electoral power to certain strata of the population. In Austria-Hungary the deputies to the provincial *diets of Galicia and Bukovyna and to the Hungarian parliament (and the Austrian house of representatives until 1907), as well as officials to local governing bodies, were elected by the curial system. The Ukrainian citizens of Austria-Hungary were treated unfairly under this system, and they demanded that a national curia be introduced. A national curia was established only in Bukovyna in 1911. In the Russian Empire representatives to municipal bodies and, from 1905, to the State Duma were elected by the curial system. Elections to the political-administrative bodies of the Ukrainian sssr until 1936 were also curial in nature (see *Elections). According to the electoral law of the Western Ukrainian National Republic, adopted on 14 April 1919, national curiae (Ukrainian, Polish, Jewish, and German) were to elect representatives to the diet. In this way the national minorities were to be guaranteed fair representation.

V. Markus

Curitiba. City in Brazil, capital of the southern state of Paraná. Its population in 1980 was over one million, including 13,750 Ukrainians. Ukrainian cultural and social life in Curitiba dates back to 1902, when a Ukrainian

Catholic parish and Prosvita society were established. Today the Agricultural Educational Union (est 1922) and the *Society of Friends of Ukrainian Culture (est 1947) are still active. In 1972 Curitiba became the seat of the St. John Ukrainian Catholic eparchy. There are two Ukrainian Catholic parishes and eight churches as well as a major seminary in the city. The Ukrainian Orthodox church was organized there in 1930 and has two parishes and two churches. A Ukrainian Baptist congregation was organized in 1950 and has its own church.

Currency and coins. State-controlled medium of exchange and a measure of value as well as a means of paying for services. Before 1917 Russian imperial currency was in use in Russian-ruled Ukraine. After S. Witte's reforms of 1899 this currency consisted of gold, and its basic unit was the *ruble (*karbovanets* in Ukrainian), which contained 0.7742 g of pure gold. In Western Ukraine under Austria-Hungary the monetary unit from 1892 was the Austrian krone, which contained 0.38875 g of pure gold. In the period of Ukrainian independence in 1917–20 Ukrainian money was issued (see below). In the Soviet period the Russian ruble has again been the basic monetary unit in Ukraine. Because of the excessive printing of bank notes at the beginning of the 1920s the Soviet ruble became almost valueless: at its lowest point 1 gold ruble was worth 5,457,000,000 Soviet rubles (*sovznaki*).

The monetary reform of 1922–4 introduced a new unit – the *chervonets*, which was based on gold (equivalent to 7.74234 grams). Until 1924 two currencies were used – *sovznaki* and *chervontsi*. Then the *sovznaki* were abolished, and a new currency was finally adopted, with 1 *chervonets* being worth 10 new rubles. Bank notes of 10 rubles and up, state treasury notes of 1, 3, and 5 rubles, and petty silver and copper coins were issued. Contrary to what most Soviet economic writings assert, the implementation of the first three five-year plans brought about inflation; it was concealed, however, by state-set prices and foreign-exchange rates. The Second World War led to an overt inflation. In December 1947 the currency was revalued, 1 unit of the new currency being worth 10 units of the old. Money that had been deposited in savings accounts or tied up in state loans was exchanged at various rates, from a 1:1 rate for deposits up to 3,000 rubles to a 5:1 rate for certain issues of government bonds. The peasants, who had saved up sizable sums of money during the war, were hardest hit by this reform. On 28 February 1950 a new monetary reform affected only the international exchange rate of the ruble. Until then the value of the ruble was defined by the American dollar and stood at 5.30 rubles per dollar. The reform tied the ruble to the gold standard and raised the gold content of the ruble from 0.16767 to 0.222168 g, which was equivalent to 25 American cents. This change in the ruble's exchange rate affected the Soviet bloc countries in Europe in a mainly negative way. The last monetary reform in the Soviet Union took place on 1 January 1961. The gold content of the new ruble was raised to 0.987412 g, and the new ruble was exchanged for 10 old ones. In 1973 a ruble was worth 1.33 American dollars.

Coins in Ukraine. The oldest coins found in eastern Ukraine are those of the Hellenic colonies on the northern coast of the Black Sea such as Tyras, Olbia, Chersonese Taurica, and Panticapeum and the coins of the Bosporan

Kingdom. Coins of cities in Asia Minor and on the western coast of the Black Sea have also been found. The coins date from the 6th century BC to the 4th century AD. Except for the coins of cities along the coast of Asia Minor from the period of the Pontic king Mithradates VI Eupator, such coins are rarely found, and when they are, it is usually near the coast of the Black Sea.

In contrast, Roman silver coins – the denarii of the second half of the 1st century AD and particularly of the 2nd century – have been found in great numbers throughout Ukraine, particularly along the Dnieper and the Dniester rivers. Over 1,000 discoveries of hoards or individual coins on Ukrainian territories have been registered. Altogether, close to 30,000 examples of coins have been reported, but this is only a small part of what has been found. The denarii were in circulation there during the 2nd–5th century. Discoveries of later Roman coins of the 3rd–5th century in eastern Ukraine are exceptionally rare.

In the 6th–7th century a small number of Byzantine silver coins known as hexagrams and bronze folles (1 follis = 40 nummi), as well as smaller denominations, appeared in Ukraine, probably in connection with the commercial activities of the Antes.

In the 9th and 10th centuries and until 1015 the silver coins known as dirhems flowed in large numbers from the Islamic countries of Asia, North Africa, and Spain into eastern and central Europe up to the Elbe River. Many of these coins circulated in the forest and forest-steppe belts of Ukraine. They have been discovered within hoards and separately. Dirhems remained in circulation until the mid-11th century and were used mainly as weight standards. At the same time a small number of Byzantine silver *miliarenses* and even fewer West European denarii were in circulation.

After adopting the Christian faith, the grand prince of Kiev, Volodymyr the Great (980–1015), minted his own gold coins, known as *zlato*, and silver coins, known as *srebro*. At the same time his son Yaroslav of Novgorod, his nephew Sviatoslav of Turiv, and other princes coined their own coins, but only of silver. Research on the oldest coins of Kievan Rus' has shown that they were minted not later than 1020. The purpose of the coining was probably political rather than commercial: to manifest, according to the ancient norms of Byzantine law, the sovereignty of the new Christian state and its component parts. This also explains the very limited number of the coins, particularly of Volodymyr's *zlato* and certain kinds of *srebro*.

Along with the imported Arab dirhem, local money was also used. From the names of some of the local units that are mentioned in various written sources of Kievan Rus' – *kuna* (marten), *veverytsa* (squirrel), *veksha* (squirrel) – the exchange units were apparently furs of such animals as the marten and squirrel. Other denominations of the exchange system, known as *nogata* and *rezana*, are not named directly after animals and can be interpreted in two ways – as names of furs or of metal coins. The more accepted view is that *nogata* in the 9th, 10th, and part of the 11th century referred to the Arab dirhem or half-dirhem, while *rezana* was a half or even less of a dirhem. All the denominations of the local monetary system were interchangeable with the **hryvnia* (*grivna*) at the following rate: 1 *hryvnia* = 20 *nogaty* or 25 *kuny* or 50 *rezany* (or

100 *veverytsi* (*vekshi*). In the 12th century 1 *hryvnia* was worth 50 *kuny*.

Although the question of the nature of the local currency has not been fully solved, it is very probable that at least from the second half of the 11th century to the mid-14th century all local denominations were furs or hides, for absolutely no metal coins in Ukraine except for the heavy *hryvni* are mentioned in the written sources of the time. The accounts of a number of foreign writers testify to the fur-hide basis of the local currency. The Persian scholar Ahmad at-Tüst (Najīb Hamadānī, according to the latest data) wrote in his work *'Ajā'ibu'l-makhlūqāt va gharā'ibu'l-maujūdāt* (The Wonders of Creatures and the Curiosities of Things, 1160): '... and the Rus' people have money of fur, the furs of [gray] squirrels, not dirhems, and skins without fur with the front and hind paws and claws.'

In the 12th–13th century *hryvni* were introduced, probably to provide a more permanent and secure currency at least for important financial transactions. These silver-alloy coins came in various shapes and sizes. There were the so-called Kiev, Chernihiv, and sticklike Novgorod *hryvni*.

In the 14th century coining was resumed in certain parts of Ukraine by foreign governments. In Galicia Casimir III (1333–70) and his successors – Louis I of Hungary (1370–82) and Władysław II Jagiełło (1386–1434), as well as Louis's viceroy in Galicia, Władysław of Opole (1372–8) – coined the silver *kwartnik* with the Galician emblem and the inscription 'moneta Ruscie' and the copper coins called *pulo* in Lviv. Władysław II Jagiełło also produced in Lviv the silver half-grosz with the full or abbreviated inscription 'moneta Lemburgensis.'

When the eastern Ukrainian territories were annexed by the Lithuanian Grand Duchy in the early 1360s, Prince Volodymyr (1362–94), son of Algirdas, and an unidentified prince minted their own silver coins in the Kiev appanage principality. The coins bear their emblems and names – Volodymyrovo (of Volodymyr) and Romienino (of Roman). The annexation by Lithuania opened Ukraine to the influx of Czech money – *Grossi Pragenses*, which at the time were the main currency of Lithuania. In Ukraine they were known as *hroshi shyroki* (broad coins). The coins of Emperor Charles IV (1346–78) and Wenceslas IV (1378–1419), made of silver, 600–650 pro mille and weighing 2.6–2.7 g, have been found throughout Ukraine, most frequently in Right-Bank Ukraine. The Czech coins were in circulation in Ukraine in the 14th–15th century.

Various other silver coins were also used in Ukraine: for example, early Polish and Lithuanian coins, the coins of Volodymyr, son of Algirdas, Genoese-Tatar aspers from Kaffa in the Crimea, dirhems of the Golden Horde, and the Crimean *akcheh*. Most of these have been found in hoards containing the Czech coins. The dirhems of the Golden Horde have also been discovered in separate hoards.

In the 15th–16th century, besides a certain quantity of Czech money and other foreign coins, Polish and Lithuanian coinage was in circulation. From the Union of Lublin in 1569 these two types of coins were equal in value (prior to the union the Polish coins were worth four-fifths of the Lithuanian coins), but differed sometimes in appearance. These were mostly half-groszy and to some extent the other denominations: *szóstaki* (six-grosz pieces), *trojaki*

(three-grosz pieces), groszy, *trzeciaki* (3 denar pieces), and denars. The coinage of certain towns in Prussia that were subject to the Polish-Lithuanian state – Elbląg, Gdańsk, Toruń, Wschowa, Poznań, and the Baltic cities – also circulated in Ukraine.

The rapid development of coinage under King Sigismund III (1587–1632) and the great influx of gold ducats and silver talers from central and western Europe into Poland were reflected to a significant degree in the circulation of money in Ukraine. Many Polish and foreign coins appeared in earlier and new denominations; for example, *orty*, which were equivalent to 16–18 groszy and were known in Ukrainian as *vruty*, *urty*, or *verty*; and in 1614–27 *półtoraki*, which were worth 1.5 groszy and were known as *chekhy* in Ukraine. In spite of their small value the *chekhy* played a very important role in internal trade in Ukraine, particularly in 1621–7, and remained in circulation for over a century, until Polish currency was finally displaced by Russian currency in Ukraine.

Important financial transactions were conducted in gold ducats, which were called *chervoni zoloti* (red gold coins) in Ukraine and came mostly from Venice (sequins), Hungary, and the United Provinces of the Netherlands; or in various high-quality silver talers, mostly from the Spanish Netherlands or from the Dutch Republic.

In the second half of the 17th century the Polish-Lithuanian coinages of Jan II Casimir (1648–68), Michał Wiśniowiecki (1669–73), and Jan III Sobieski (1674–96) were added to Sigismund's coins, which continued to circulate in Ukraine. Under Władysław IV only talers, and even then comparatively few of them, had been coined. Among the new coins the main ones were silver coins: low-quality gold coins (*złotówki*), which were issued in 1663–6 with an official value of 30 groszy and were called *tynfy* or *tymfy*; and copper shillings (*solidy*), which were known as *boratynki* and were issued in 1659–66. Because of their low market value, which differed sharply from the official exchange rate, the last two coins brought much confusion wherever they were introduced.

At this time Muscovite money was flowing into Left-Bank Ukraine in increasing quantities: the silver kopecks issued by tsars Mikhail Fedorovich (1613–45), Aleksei Mikhailovich (1645–76), and their successors, and the copper kopecks issued by Aleksei Mikhailovich in 1660–3. The latter were rejected by the population because of their market worthlessness. They were quickly withdrawn from circulation in Russia and Ukraine. The Ukrainian population also disliked the silver kopecks, although they had the same high-quality silver as the west European talers, because they were too small and lacked multiple denominations. The Muscovite government in 1686–7 issued *chekhy* minted in Sevsk in an attempt to partly replace the kopecks and the old Polish *chekhy*, but this attempt did not succeed because of the low quality of the new coins. The government had to withdraw the new coins from circulation and restore the circulation of the old Sigismund *chekhy*.

At the beginning of the 18th century Tsar Peter I carried out a radical reform of the Russian monetary system, modeling it on the West European systems, and decided to replace with his new money all the Polish-Lithuanian and foreign coins in Ukraine. S. Velychko in his chronicle says of Peter: 'After the battle of Poltava against the Swedes, he withdrew from all Little Russia and destroyed

the ancient Polish coins ... only a memory of the talers and ducats remained; and in their place he flooded Little Russia with his copper and silver petty and hard coins with fine ornamentation.' Other sources and discovered hoards of coins indicate, however, that Polish-Lithuanian and certain foreign coins circulated in Ukraine alongside the new Russian coins at least into the 1730s and sometimes even later. Only at the beginning of the 19th century were foreign coins completely replaced in Ukraine by Russian coins. Yet, certain names of the old coins, such as *zlotyi* (*zlot*) or *shah*, were applied to the Russian coins (1 *zlot* = 15 kopecks, 1 *shah* = 0.5 kopeck) and were preserved in certain localities of Ukraine until the revolution of 1917.

The Ukrainian state of 1917–20 did not mint any coins because of the difficult circumstances of the time. The Ukrainian SSR shares a common coinage with the other republics of the Soviet Union.

Currency of the Ukrainian state. In the independent Ukrainian state in 1917–20 a paper currency with the state emblems and Ukrainian inscriptions was issued. The various notes were designed by Yu. Narbut, V. Krychevsky, O. Krasovsky, I. Mozalevsky, A. Prykhodko, B. Romanovsky, and A. Sereda. The main units were the *karbovanets* and *hryvnia*: 1 *karbovanets* = 2 *hryvni*, 1 *hryvnia* = 100 *shahy*. The value of this new *karbovanets* was equivalent to 0.767 g of pure gold. On 1 January 1918 the Central Rada approved the first state credit note of 100 *karbovantsi*, which appeared in circulation on 6 January. Its dimensions were 167 mm × 103 mm, and the inscription was in four languages: Ukrainian on the face side and Russian, Polish, and Yiddish on the reverse side. *Karbovanets* notes of the following denominations were issued: 10, 25, 50, 100, 250, and 1,000.

The law passed by the Central Rada on 1 March 1918 made the *hryvnia* the main monetary unit. State credit notes of 2, 10, 100, 500, 1,000, and 2,000 *hryvni*, an exchange note of the UNR State Treasury worth 5 *hryvni*, and 3.6 percent bonds of the State Treasury worth 50, 100, 200, and 1,000 *hryvni* were issued. All the denominations of the *hryvnia* except the five-*hryvnia* note, which was printed in Stanyslaviv, were printed at the state printing house in Berlin. The quality of the materials selected and the careful technical work made counterfeiting difficult. Small change – the *shah* – was printed on carton with the same plates used for postage stamps. On the reverse side of the *shah* was the inscription 'equivalent to metal coinage.' *Shahy* of various denominations – 10, 20, 30, 40, and 50 – were in circulation.

Of the money printed by the Ukrainian government, only the 25, 50, and 100 *karbovanets* notes of the first edition and the *shah* of all denominations had no watermarks.

The shortage of small change and other circumstances led to the appearance of various city notes with different names: bonds, checks, exchange notes, exchange tokens, and so on. The cities of Volhynia in particular had their own currency – Kremianets had exchange notes worth 1, 3, and 5 *karbovantsi*; Dubno, checks worth 10 *karbovantsi*; Lutske, exchange tokens worth 20 *hryvni*; Zhytomyr, exchange notes worth 1, 3, and 5 *karbovantsi*. In Galicia, Brody had tokens worth 1, 2, 5, 10, and 20 *hryvni*; Zolochiv had coins worth 5 and 10 *hryvni*; Ternopil had bonds worth 2, 10, 20, and 50 *hryvni*; Zbarazh had

1

2

Ukrainian currency, designed by H. Narbut: 1) Central Rada issue of 1917; 2) Central Rada issue of 1918

bonds worth 1, 5, and 10 hryvni; and Sokal had bonds worth 1 hryvnia. Various kinds of money were also printed or stamped by various insurgent groups.

Curzon Line. Conventional designation of a line running through Hrodna, Yalivka, Nemyriv, Brest, Dorohusk, Ustyluh, east of Hrubeshiv, through Kryliv, west of Peremyshl, to the Carpathians, which was to constitute the eastern border of Poland, including Poland's border with Ukraine. The Curzon Line was first designated as Poland's eastern border by the Allied Supreme Council on 8 December 1919. In July 1920, during the Soviet advance on Warsaw, the same line was proposed by the British foreign secretary, G. Curzon (hence the name 'Curzon Line'), as the border between Poland and Soviet Russia. The Peace Treaty of Riga between Poland and the Soviet republics (1921) gave Poland some 135,000 sq km of territory east of the Curzon Line. On 23 August 1939 the Curzon Line was accepted (with corrections in favor of the USSR) as the German-Soviet boundary in the pact between Germany and the USSR. Finally, the Curzon Line was accepted as the Polish-Soviet boundary at the Yalta Conference (February 1945), this time with corrections in favor of Poland. It was later confirmed by a treaty between the USSR and Poland, signed in Moscow on 16 August 1945. In 1951, by mutual agreement between Poland and the USSR, further frontier adjustments were made.

Customary law (also known as the unwritten law). Norms of conduct that are practiced in society because they have been accepted for a long time and are regarded as obligatory. Customary law, some of whose norms and institutions predate written law, is the oldest legal system. As the legislative activity of the state developed, the role and extension of customary law diminished. Yet, customary law continues to exist alongside written law as a supplementary source of legal order. At one time customary law had an influence on the codification of law. Common law, which was originally based on customary law as it was formulated in judicial pronouncements, is the law of the land only in countries that have English law. As part of the national culture, customary law is permeated with the beliefs and attitudes of a given people and is the product of popular ethics of justice.

Customary law in Ukraine dates back to prehistoric times. In the Princely era legal relations were governed by customary law, which was eventually codified in **Ruskaia Pravda* (Rus' Justice). The decrees issued by the princes explicated customary law rather than creating new law. With the demise of Kievan Rus' Ukrainian customary law continued to operate even under the Tatars, who did not interfere in the internal affairs of their conquered territories, and then under Polish hegemony. For a time Poland recognized Ukrainian customary law as Rus' law.

The norms of Ukrainian customary law were also preserved under Lithuanian rule and were codified in the **Lithuanian Statute*, which to a large extent, particularly in respect to civil, criminal, and procedural norms, was based on ancient Ukrainian customary law. The principle governing the legislative authority of the Grand Duchy of Lithuania was that old traditions should not be tampered with and innovations should not be introduced. Lithuanian land statutes and protective charters guaranteed the validity of the old customary law in certain Ukrainian territories or for certain groups of the population, while writs of privilege restricted the application of customary law. In spite of providing detailed regulations for various legal relations, the Lithuanian Statute acknowledged the auxiliary role of customary law: if a specific law was lacking, then a judgment was based on ancient custom. During the Lithuanian-Ruthenian period the **community courts* were a judicial institution based on customary law. They continued to operate in the Cossack period, but their importance gradually diminished.

The law of the Hetman state recognized legal custom. The **Code of Laws of 1743* included many norms of customary law and introduced the principle of the auxiliary value of customary law: if the written law lacked new prescriptions, then the judgment was to be based on 'ancient, good custom.'

The legal systems that operated in Ukrainian territories in the 19th and 20th centuries prior to the Soviet period recognized the auxiliary function of customary law. The Russian civil code of 1864 provided for the application of customary law in questions of inheritance, family relations, or land if the code lacked the relevant laws. But the norms of customary law manifested themselves in the popular sense of right and wrong and in the typical institutions and legal relations governed by tradition and custom (communal use of pastures and forests, certain labor relations, inheritance and marriage arrangements, etc) more than in the state courts. The authority and

acceptance of these norms, as well as the sanctions, were based on public opinion.

Soviet law does not recognize customary law, not even as an auxiliary factor. However, the principles of Ukrainian customary law continue to manifest themselves in the popular consciousness, and various legal customs continue to be applied in certain legal situations, but without state support. At the beginning of the Soviet period efforts were made to recognize the auxiliary role of customary law in certain civil and property relations. Today, however, it is treated as a historical category.

Ukrainian customary law is vividly reflected in the folklore (proverbs) and in the folkways. It has been reflected more than the written law has been in certain symbolic acts and rituals (placing an elected prince on the throne, sprinkling an elected otaman with ashes, breaking the handshake in concluding an agreement, etc).

In Ukraine customary law has had regional variations, but has retained the same basic values and legal principles. Customary law became an object of study in the 19th century. The following Ukrainian scholars were among those who devoted attention to it: P. Chubynsky, the author of *Ocherk narodnykh iuridicheskikh obychaev i poniatii po grazhdanskomu pravu v Malorossii* (An Outline of Popular Juridical Customs and Concepts of Civil Law in Little Russia, 1869); P. Yefymenko; O. Levytsky; O. Yefymenko; and F. Shcherbyna.

In the 1920s a special **Commission for the Study of Ukraine's Customary Law* was formed at the All-Ukrainian Academy of Sciences in Kiev and published *Pratsi Komisii* (Transactions of the Commission, 3 issues – 1925, 1928, and 1928) under the editorship of A. Kryster and Y. Malynovsky. The two editors and the following did research on customary law: S. Borysenok, O. Dobrov, Ye. Yezersky, V. Kaminsky, M. Tovstolis, I. Cherkasky, and B. Yazlovsky. Y. Malynovsky raised the question of the emergence and investigation of 'revolutionary Soviet' customary law.

Less attention was devoted to customary law by scholars in Western Ukraine and in the diaspora. Most of the research in this field was done by V. Okhrymovych, R. Lashchenko, A. Yakovliv, and O. Mytsiuk. Much valuable material is scattered among general ethnographic publications. In the 1930s the Soviet authorities proscribed customary law as a subject of research.

Cybernetics (from the Greek κυβερνητική τέχνη [the skill to govern]). Science of systems control by means of information transfer among elements of a given system. N. Wiener's *Cybernetics: or, Control and Communication in the Animal and the Machine* (1948) introduced and popularized the term. Today cybernetics is understood as a science of systems that either by themselves (automatons) or under human control execute certain definite imposed tasks. Cybernetics deals with three main types of systems. (1) Technical cybernetics deals with the determinate systems of technical devices for automatic control. In this field computers are of particular importance. (2) Biological and medical cybernetics studies the laws of communication in plant and animal organisms and particularly in humans. (3) Sociotechnical cybernetics concentrates on

human organizations, that is, on systems of which human beings are the basic elements. In this area great strides have been made in the application of the knowledge and technology of cybernetics to economics.

In the Soviet Union cybernetics was at first rejected as a 'bourgeois invention,' but since the late 1940s it has become one of the most serious fields of research and technology because of its potential applicability in economic planning. By its very nature, the Soviet centralized economic system was suited to the mathematization of research methods and the search for precise methods of control. The rapidity of mathematical calculations by computers drew the attention of Soviet planners, who were faced with the task of automating the calculations necessary for planning. From that point no resources were spared in the Soviet Union in solving the theoretical and technical-practical problems of cybernetics.

The Academy of Sciences of the Ukrainian SSR became the center for the development of cybernetics in Ukraine, and Kiev became the center of theoretical cybernetics for the USSR. The earliest research was done in 1947 at the Institute of Electrotechnology (the Laboratory of Modeling and Computer Technology, headed by S. Lebedev) and at the Institute of Physics (Department of Memory Elements of Computers, headed by O. Kharkevych). In 1957 all this research was centralized in the Computing Center of the Academy of Sciences, headed by V. *Hlushkov, which in 1962 was transformed into the *Institute of Cybernetics. As early as 1945 V. Diachenko organized a laboratory of electrical modeling and computing technology at Kiev University. In 1955 it became the computing center of the university. In 1948–51 a research group under S. Lebedev constructed the first electronic computer (МЕОМ) in the USSR. V. Hlushkov made an important contribution to the theory of digital automata, the theory of self-organizing systems, and many other areas of the theory and application of cybernetics.

Among the researchers of theoretical cybernetics are B. Hniedenko, L. Kaluzhin, V. Koroliuk, and K. Yushchenko. They invented an algorithm language for calculations. To improve the automated system of economic planning and control, a state network of computing centers was established. A special algorithm language, ALGEX, based on the international language ALGOL-60, was developed for this network by a group of scientists headed by V. Hlushkov. O. Ivakhnenko, O. Kukhtenko, M. Kryzhanivsky, S. Lebedev, and others developed the theory of automatic regulation and its application to the control of manufacturing processes. In the Kiev Institute of Civil Airlines, the Dnipropetrovske Institute of Civil Engineering, and the Institute of Railway Transport Engineering the methods of electromodeling were applied to the problems of building mechanics and the theory of elasticity. Research on the application of cybernetics in the process of learning (the so-called teaching machines) is conducted at the Kiev Institute of Civil Engineering and the Lviv Polytechnical Institute as well as in other institutions of higher learning. Research in cybernetics is carried on in Ukraine by such scholars as M. Amosov (biological and medical cybernetics), V. Hladun (mathematical linguistics), V. Kovalevsky (reading automata), V. Mykhalevych (selection of optimal solutions by the method of sequential analysis of variables), H. Pukhov (theory of quasianalog modeling devices), and P. Filchakov (theory of electrodynamic analogs, integrators of

various construction). The Institute of Cybernetics in Kiev published *Entsyklopediia kibernetiky* (Encyclopedia of Cybernetics, 2 vols, 1973), the first of its kind in the world. The chief editor was V. Hlushkov.

Cycling. The sport of cycling developed in Ukraine in the 1890s when the first cycling clubs were organized in Kiev, Kharkiv, Sevastopol, and Katerynoslav. In the 1900s similar clubs appeared in Odessa and Symferopil. Yu. Malkevych from Kiev, who in 1900 bicycled from Kiev to North Africa, became a well-known figure in bicycle touring. The origins of cycling in Galicia also date back to the prewar period.

In 1927 an all-Ukrainian cycling tournament for men and women was held in Kharkiv with Odessa taking first place and Kharkiv second place. In 1937 a long-distance bicycle race through Ukraine was organized. In 1935 five bicyclists from Ukraine completed the Odessa to Vladivostok tour. In 1936 the Ukraine sports club of Lviv won the long-distance bicycle race through Galicia. Since the Second World War men's and women's bicycling competitions for the championship of the Ukrainian SSR are staged annually and consist of three kinds of races: velodrome, track, and cross-country. Amateur and professional bicyclists compete separately. Annual cycling meets are held for students of higher educational institutions and for rural youth. In 1896 cycling was admitted to the Olympic Games. The USSR participates in Olympic and European cycling competitions. Soviet cycling teams included the following Ukrainian bicyclists: V. Semenets, L. Kolumbet, I. Tselovalnikov, and A. Chukanov. The Kiev bicycle track (called the cyclodrome) was established in 1913 and was renovated in 1978–80. Bicycle touring is popular in Ukraine.

Cypress (*Cupressus*; Ukrainian: *kyparys*). Genus of evergreen conifers that grow in a warm-temperate climate. Many species are ornamental. In Ukraine the cypress is common on the Black Sea coast of the Crimea and Caucasia. The most widespread species is the Italian cypress (*C. sempervirens*), which attains a height of 30 m and a diameter of 50–60 cm. Its wood is used in furniture building. Cultivated varieties are pyramidal in shape.

Cyprian, ?–1406. Metropolitan of Kiev, probably of Bulgarian origin. He lived for some time at Mount Athos. In 1376 he was ordained as a bishop in Constantinople at the behest of the Lithuanian grand duke Algirdas. Because this ordination was not recognized by Moscow, he became the metropolitan of 'all Rus' only in 1389. He resided in Muscovy, although he visited Kiev and other Ukrainian eparchies. Cyprian left a few small liturgical works, translations of liturgical books, and three epistles, which explain pastoral practice and contain valuable information about church life in the 14th–15th century.

Cyril (Constantine), St. See St Cyril.

Cyril II [Kyrylo], ?–1281. Kievan metropolitan (1243–81) born in Galicia. Prior to his election to the metropolitanate Cyril was Bishop of Kholm. Refusing to live in Kiev, which was devastated by the Tatars, Cyril moved to Vladimir on the Kliazma but did not transfer the metropolitan cathedral there. He was buried in the Cathedral of St Sophia in Kiev. Cyril is taken to be the author of *Pravila o blagochinii zhizni i bogosluzheniia* (Rules of Piety in Life and Worship), adopted in 1274 at the bishop's council in Vladimir, which dealt with abuses in the church.

The Cyril and Methodius Brotherhood, a painting by O. Kurylas

Cyril and Methodius Brotherhood (Kyrylo-metodiivske bratstvo). Secret society established in December 1845–January 1846 in Kiev at the initiative of M. Kostomarov. The aim of the society was to transform the social order according to the Christian principles of justice, freedom, equality, and brotherhood. It proposed a series of reforms: (1) abolition of serfdom and equality of rights for all estates, (2) equal opportunity for all Slavic nations to develop their national language and culture, (3) education for the broad masses of the people, and (4) unification of all Slavs in the spirit of the Slavophilism of the time in a federated state in which Ukraine would play a leading role. Kiev was to be the capital of the federation and the seat of the all-Slavic diet. Among others, the following individuals belonged to the brotherhood: M. Kostomarov, M. Hulak, V. Bilozersky, O. Navrotsky, D. Pylchukiv, O. Petrov, P. Kulish, O. Markovych, Yu. Andruzky, I. Posiada, M. Savych, and T. Shevchenko. Since the brotherhood never reached an organizational stage requiring a clear criterion of membership, its composition cannot be determined exactly. For a long time the membership in the society of Shevchenko and Kulish was questioned, but research finally confirmed that they were members. There is but one testimony on the general size of the society – D. Pylchukiv's as noted down by O. Konytsky – and it gives the figure of about 100 members.

The basic documents in which the ideas and program of the society are formulated are *Knyhy bytiia ukrains'koho narodu* (Books of the Genesis of the Ukrainian People) and *Ustav Slov'ians'koho Tovarystva sv Kyryla i Metodiia. Holovni idei* (The Statute of the Slavic Society of ss Cyril and Methodius: Its Main Ideas), both written by M. Kostomarov, and an explanatory memorandum to the statute

written by V. Bilozersky. These documents and the society's activities were deeply influenced not only by the ideas of the Ukrainian renaissance of the first half of the 19th century, particularly by **Istoriia Rusov* (History of the Rus' People), but also by European romanticism, especially the ideas of P. Šafárik and J. Kollar and A. Mickiewicz's *Księgi narodu polskiego i pielgrzymstwa polskiego* (Books of the Polish People and the Polish Pilgrimage). The *Decembrist movement and contemporary Pan-Slavism also had some influence on the society's outlook.

The organizational looseness of the society permitted members who shared the same aims to differ markedly on the means of realizing them. M. Kostomarov, V. Bilozersky, and others stood for liberal moderate reform, while Shevchenko came out with revolutionary slogans. Somewhere between these two poles stood M. Hulak and O. Navrotsky. Before the society could become fully active, it was denounced by O. Petrov, and its members were arrested in March 1847. After a police investigation held in St Petersburg, the arrested members were punished without trial by exile or imprisonment. The relatively mild punishment meted out to the society's members (Shevchenko and Kulish were punished for crimes other than membership in the society), considering the antidespotic character of the society, can be explained, on the one hand, by the government's desire to conceal from the public any antigovernment tendencies and, on the other, by its reluctance to antagonize the Slavic movement in the West, which had ties through some of its representatives with members of the brotherhood. In spite of its brief existence the society made some impact on its contemporaries, as is evident from the propagation of anti-Russian proclamations during the detention of its members, and had an even more important influence on the development of the Ukrainian movement later on. Hence, Soviet historians (H. Serhiienko, F. Yastrebov, P. Zaionchkovskiy) partly acknowledge the 'progressive nature' (the struggle against despotism and national subjugation) of the society, but also underline its 'bourgeois' character (the absence of class conflict and its nationalist tendencies). The ss Cyril and Methodius Brotherhood received much attention in the later publications of its members and then in the works of O. Konytsky, S. Yefremov, D. Bahalii, M. Hrushevsky, M. Vozniak, P. Zaitsev, and many others.

I. Koshelivets

Cyril of Turiv (Kyrylo Turivskyy), b ca 1130–40 in Turiv, d ca 1182. Bishop of Turiv, writer, brilliant preacher (about 10 sermons have been preserved), author of about 30 prayers, 3 moralistic stories, and 2 canons. Cyril's sermons are original renditions of the works of St John Chrysostom and of other Greek sources, mostly devoted to Christology. Cyril of Turiv was a master of oratorical techniques (dialogue, lament, exhortation, etc) and frequently resorted to poetic descriptions (eg, his well-known description of spring). He showed an inclination towards a symbolical interpretation of the Bible. Cyril's sermons were influential beyond Ukraine and were published in various sermonaries. His strict and ascetic prayers are used to this day. The theme of one of his stories, about the blind man and the lame man, is common in Ukrainian folklore, and the theme of another story was taken from the medieval tale 'Barlaam and Josaphat.'

Cyrillic alphabet. Slavic system based on the Greek majuscule script (*ustav*, uncial letters). The Balkan Slavs may initially have used the Greek alphabet for the occasional notation of a Slavic name or an individual word. When, after their expulsion from Moravia in 885, the disciples of ss Cyril and Methodius settled in Bulgaria, they had recourse to the Greek alphabet as a replacement for the *Glagolitic alphabet developed by *St Cyril. The Greek alphabet was adapted to Slavic and supplemented by letters from the Glagolitic that rendered phonemes lacking in the Greek language. The original center of the Cyrillic alphabet was probably Preslav, Bulgaria. This synthesis of Greek and Glagolitic was named the Cyrillic alphabet in honor of the creator of the first Slavic alphabet. The original Cyrillic alphabet had 36 to 38 letters (the sounds *u* and *y* were rendered by the diphthongs *ou* and *yl*), some of which were used only, or primarily, in the writing of Greek words (*θ*, *ω*, *ψ*, *ξ*, *ν*). Most of the letters also had a numerical value (see chart). With the expansion of eastern Christianity, the Cyrillic alphabet spread from Bulgaria to other Slavic lands. The Cyrillic alphabet (with certain modifications, the most radical of which was the introduction of the *Hrazhdanka script) is still used today in the Ukrainian, Russian, Belorussian, Bulgarian, Macedonian, and Serbian writing systems. Modern Ukrainian Cyrillic has eliminated the letters *ѣ*, *Ѡ*, *ѡ*, *Ѣ*, *Ѥ*, *Ѧ*, *Ѩ*, *Ѭ*, *Ѯ*, *Ѱ*, *Ѳ*, *Ѵ*, *Ѷ* from the original alphabet; introduced the new letters *я*, *е*, *г* (M. Smotrytsky), *і* (P. Rudchenko, Ye. Zhelekhivsky); and changed the sound value of the letters *г* (= *h*, not *g*), *є* (= *je*, not *e*), *и* (= *y*, not *i*), *щ* (= *šč*, not *št*), *ь* (= soft sign, not the short front vowel).

G.Y. Shevelov

Czacki, Tadeusz, b 28 August 1765 in Porytske, Volhynia, d 8 February 1813 in Dubno. A notable Polish

educator, economist, historian, and jurist. In 1803 he became the school visitor of Volhynia, Podilia, and Kiev gubernias, and in 1805 he founded the *Kremianets Lyceum. Among his works are *O litowskich i polskich prawach ... i o statucie dla Litwy* (On Lithuanian and Polish Rights ... and on the Lithuanian Statute, 1800–1), *Czy prawo rzymskie było zasadą praw litewskich i polskich?* (Was Roman Law the Basis of Lithuanian and Polish Laws?, 1809) and articles on the Karaites, Jews, the name Ukraine, and the origin of the Cossacks.

Czajkowski, Michał (also known as Sadyk-Pasha), b 19 September 1804 in Halchyn, Volhynia, d 18 January 1886 in Borky, Ukraine. Polish writer, political émigré. Czajkowski was a representative of the Ukrainian school in Polish literature. He participated in the Polish rebellion of 1830–1 and after its defeat emigrated to France and then in 1841 to Constantinople. In 1850 he began to work for the Turkish government, converted to Islam, and during the Crimean War organized Cossack troops on the Turkish side. In 1873 he received an amnesty from the Russian government and returned to Ukraine. Czajkowski wrote romantic novels on Cossack themes, including *Powieści Kozackie* (Cossack Tales, 1837), *Wernyhora* (1838), *Kirdżali* (1839), *Owrućanin* (The Man from Ovruch, 1841), and *Ukrainki* (Ukrainian Women, 1841). These novels were quite popular and were translated into many European languages.

Czarniecki, Stefan, b 1599 in Czarnca, Poland, d 16 February 1665 in Sokolivka, Galicia. Prominent Polish 17th-century military leader, Ruthenian voivode from 1657, crown hetman in 1665. From 1648 Czarniecki participated in battles against B. Khmelnytsky's Ukrainian Cossack forces. In the battle at Zhovti Vody he was captured first by the Tatars and then by the Cossacks. After being freed, he fought as a colonel at Zboriv (1649), Berestechko (1651), and Batih (1652). In 1653 he was defeated in Podilia by the Cossacks under I. Bohun. But in 1654–6, during the *Cossack-Polish War, he took part, along with the Tatars, in the razing of the Bratslav region. In 1655–8 he led the Polish forces against the invading Swedes and Transylvanian Prince George II Rákóczi. In 1661–4 he took part in Poland's war with Muscovy. In 1664–5 he laid waste to the Kiev region (he went so far as to order the exhumation of B. Khmelnytsky, and his troops annihilated the population of the town of Stavysheche).

Czarnocki, Adam. See Dołęga-Chodakowski, Zorian.

Czartoryski (Ukrainian: Chartoriiskyy [Čartorijs'kyj]). Name of a Lithuanian-Ukrainian princely family that in 1433 received the title of Princes of the Holy Roman Empire. The family's founder, Vasyl, governed Chartoriiske in Volhynia from 1393. His sons Ivan, Oleksander, and Mykhailo held high posts in the Grand Duchy of Lithuania. Mykhailo (d ca 1489) was the vicegerent of the Bratslav region from 1463 and engaged in battles with the Tatars. After the Union of Lublin in 1569, which was supported by the Czartoryski family, its members received influential positions in the Polish government and expanded their estates in Volhynia. During the Cossack-Polish War Mykhailo Czartoryski (1621–92) fought against the Cossacks. The family became especially powerful in

the Polish Kingdom of the 18th century, particularly during the reigns of Augustus III and Stanislaus Augustus Poniatowski, whose mother was Princess Konstanca Czartoryska. Her brother, Prince Michał Fryderyk (1696–1775), became the grand chancellor of Lithuania in 1752. His younger brother, Prince Aleksander August, the Ruthenian voivode, inherited the immense estates of the Sieniawski family through his marriage with that family's last heir, Maria Zofia Sieniawska. Their grandson, Prince Adam Jerzy *Czartoryski (1770–1861), was the most renowned member of the Czartoryski family. A personal friend of Tsar Alexander I, he served as the Russian minister of foreign affairs in 1804–6 and was Alexander's chief adviser at the Congress of Vienna. As a senator of the Polish Congress Kingdom, he became one of the leaders of the Polish insurrection of 1830–1 and headed the 'national government' of Poland. After the rebellion was crushed, he played a leading role among the Polish émigrés in France.

At the end of the 18th century Joseph Klemens, a Czartoryski prince and Lithuanian chamberlain, developed large manufacturing enterprises on his Volhynian and Podilian estates that produced woolen and linen cloth, leather goods, porcelain and faience (in Korets and Horodysheche), and belts (in Medzhybizh).

Czartoryski, Adam Jerzy, b 14 January 1770 in Warsaw, d 15 July 1861 in Montfermeil, France. Prince, Polish political leader. Czartoryski was a trusted adviser of Tsar Alexander I and was Russia's foreign minister in 1804–6. During the Polish insurrection of 1830–1 he presided over the temporary insurgent government and tried to restore Poland within its old boundaries. As an émigré in France he headed the conservative-aristocratic Polish camp. Czartoryski tried to attract Ukrainians to his anti-Russian operations, particularly during the Crimean War, and was helped to do so by F. Duchński and M. Czajkowski. According to his plans a Cossack state federated with Poland was to be set up in Dnieper Ukraine, but Galicia was to remain part of Poland. *Trzeci Maj*, a magazine published by Czartoryski, contained information about Ukraine.

Czechoslovak Brigade. Brigade formed in 1942 in the USSR out of Czechoslovakian émigrés and refugees to fight the Germans. At first it constituted a separate battalion, then the Czechoslovak Brigade, and finally the Czechoslovak Army Corps. It was under the command of General L. *Svoboda. In 1943 the brigade was stationed for some time in Sokoliv, near Kharkiv. Seventy to 80 percent of the force consisted of Transcarpathian Ukrainians who fled from Hungarian occupational forces in 1940–1 to the Soviet Union. In 1944–5 the brigade was reinforced with Transcarpathian recruits. The brigade saw action in various battles with the Germans in Ukraine – at Kiev, Bila Tserkva, Zhashkiv. It suffered heavy casualties in the fighting for the *Duklia Pass.

Czechoslovakia (Československo). The Czechoslovak Socialist Republic (ČSSR) is a federative republic in central

Europe consisting of the Czech Socialist Republic and the Slovak Socialist Republic. Its territory covers 127,875 sq km. In 1983 its population was 15,420,000. Prague is the capital of the republic.

History of Czechoslovak-Ukrainian relations. The Czechoslovak Republic established its independence on 28 October 1918 as a result of Austria-Hungary's defeat in the First World War and the Czech and Slovak liberation movements. The main creators of the republic were T. Masaryk, E. Beneš, and Gen M. Štefánik. The Czech and Slovak troops, organized in Ukraine in 1917 from prisoners of war and the Czechoslovak National Council in Kiev, were essential parts of the movement. T. Masaryk stayed in Kiev for a time and maintained ties with the Ukrainian Central Rada. The Czechoslovak political leadership and army proclaimed a friendly neutrality in Ukraine's struggle against the Russian Provisional Government and the Bolsheviks. When the Central Rada concluded the Peace Treaty of Brest-Litovsk, the Czechoslovak army retreated eastward into Russia and Siberia before the advancing German and Austrian armies.

In 1919 the government of the Directory of the UNR established unofficial diplomatic relations with the Czechoslovak Republic. M. Slavynsky was the Ukrainian representative in Prague. The government of the Western Ukrainian National Republic (ZUNR) was also represented in Prague from the end of 1918 by a separate diplomatic mission, which was headed at first by S. Smal-Stotsky and then by Ye. Levytsky. In 1921 the Czechoslovak Republic gave de facto recognition to the Ukrainian SSR, which was represented in Prague by M. Levytsky. In 1921–2 a Czechoslovak trade and diplomatic mission was stationed in Kharkiv.

The attitude of the Czechoslovak government to the Ukrainian state depended on the attitude of the Entente and the Paris Peace Conference and on the situation on the Russian-Ukrainian front. There were two competing tendencies in Czechoslovak political circles – a conservative, pro-Russian tendency, represented by K. Kramář, J. Štrifbný, J. Dürich, and others, and a pro-Ukrainian tendency, represented by Masaryk's group, which at first included Beneš, J. Necas, P. Macha, A. Němec, and others. The latter tendency was particularly evident in the government's attitude to the ZUNR and in its refusal to recognize Polish claims to Galicia. The Czechoslovak government maintained friendly relations with the government of the ZUNR and signed a trade treaty with it, providing for the importing of oil from the Boryslav fields to Czechoslovakia and the export of manufactured goods and arms to Ukraine. Czechoslovak missions were stationed in Stanyslaviv and Sambir. Czechoslovakia supported by diplomatic means the demand for eastern Galicia's national self-determination. Prague's interest in Ukraine and Russia was based not only on Czechoslovakia's traditional Slavophilism, but also on economic interest, in particular on prospects for trade and capital investment in the East. For security reasons Czechoslovakia was interested first in a common border with Ukraine or Russia and then in forming a bloc of countries to counterbalance Austria and Hungary. Thus arose the concept of the Little Entente, to which Transcarpathia's incorporation in Czechoslovakia was essential as a bridge between Czechoslovakia and Rumania. In spite of their pro-Western policy and hostility towards the Soviet regime, the leaders of Czechoslovakia tried to normalize

relations with the USSR and in 1935 signed a non-aggression and mutual-assistance pact with Moscow.

Relations with the USSR did not prevent the Czechs from treating Ukrainian émigrés generously. Ukrainians found in Czechoslovakia the most liberal conditions and the fullest opportunities for their activities. In the inter-war period the main centers of Ukrainian émigré cultural, academic, and political life developed there (see *Prague and *Bohemia).

The first Czechoslovak Republic (1919–38) was a multinational state with all the attendant minority problems. Besides Czechs and Slovaks the country included Germans (23 percent of the population), Hungarians (5.6 percent), Poles (0.6 percent), and Transcarpathian Ukrainians (3.8 percent). The Transcarpathian Ukrainians joined the republic as a result of an agreement between T. Masaryk and the representatives of Transcarpathian immigrants in the United States and of a decision of the Ruthenian Central Council in Uzhhorod on 9 May 1919. This step received international sanction in the Treaty of Saint-Germain of 10 September 1919, which guaranteed Transcarpathia the status of an autonomous region within the Czechoslovak republic. (For Czechoslovak policies in this region see *Transcarpathia.) Prague had many problems with its minorities, particularly with the Germans and Hungarians, for whom Germany and Hungary demanded concessions. The Slovaks too were unhappy about their lack of territorial and political autonomy.

In the fall of 1938 Hitler, with Hungary's and Poland's support, created an international crisis over Czechoslovakia. The Munich Conference of 30 September 1938 handed the German Reich those districts of Bohemia and Moravia that were settled by Germans. Under Polish pressure the Czechoslovak government ceded Těšín (Cieszyn). Finally, the Vienna Award of 2 November 1938 transferred the southern regions of Slovakia and Carpatho-Ukraine, which were predominantly Hungarian, to Hungary.

The second republic, headed by President E. Hácha, lasted to the middle of March 1939 as a quasifederative state in which Slovakia and Carpatho-Ukraine (by the law of 22 November 1938) enjoyed a wide autonomy. On 15 March 1939 Bohemia and Moravia were occupied by the Germans and became a 'protectorate,' while Slovakia and Carpatho-Ukraine declared their independence. The latter was quickly occupied by the Hungarians. In 1940 a Czechoslovak government in exile, headed by E. Beneš, was formed in London. It soon received recognition from the Allied countries. In this government the interests of Transcarpathia's Ukrainians were represented by P. Tsi-bere and I. Petrushchak. In 1943 General L. Svoboda organized the *Czechoslovak Brigade in the USSR to fight the Germans. Many Transcarpathians belonged to this brigade.

In 1944–5 the territory of Czechoslovakia was liberated from the Germans and Hungarians by Soviet troops and partly by the Western Allies. Slovak independence came to an end. The third republic was established. From November 1944 to February 1945 a delegation of the Czechoslovak government chaired by the minister F. Němec resided in Khust and provisionally administered the five eastern districts of Transcarpathia. The local Communist administration of the People's Council of Transcarpathian Ukraine, which was set up under the

aegeis of Soviet army authorities, interfered with the delegation's functioning. Finally, Czechoslovakia ceded former Subcarpathian Ruthenia to the USSR in a treaty signed on 29 June 1945, and the territory was annexed to the Ukrainian SSR.

As a result of the treaty and the forced deportation of the German minority, the multinational character of Czechoslovakia changed. Slovakia obtained a broad autonomy, which was again gradually reduced. The Ukrainian population fell to 180,000 (1.4 percent of the total population, in comparison with 3.8 percent before the war). The Ukrainian, Polish, and Hungarian minorities enjoyed certain cultural rights. (For Ukrainians in Czechoslovakia after 1945 see *Prešov region.)

In February 1948 the Communist party staged a coup d'état with Soviet aid, and Czechoslovakia became a 'people's democracy' with a one-party regime and an integral part of the Soviet bloc. In 1967–8 the regime began to be reformed and democratized under A. Dubček. The country was restructured into a federation of Czechs and Slovaks. Ukrainian representatives sat on both legislative bodies and in the Slovak National Assembly.

In August 1968 the armed forces of the USSR and other Warsaw Pact nations invaded Czechoslovakia and put an end to the experiment of 'democratic socialism.' Fearing the influence of the 'Prague spring' in Ukraine, the leading Soviet Ukrainian members of the Politburo and the government, such as M. Pidhorny, P. Shelest, V. Shcherbytsky, and the Soviet ambassador to Czechoslovakia, S. Chervonenko, played a key role in the Kremlin's decision on military intervention. Czechoslovakia is still under Soviet occupation, but the passive resistance of the people and particularly the intellectuals continues. Pro-Soviet and Stalinist elements remain in power in Prague and Bratislava. Among them, a prominent role is played by V. *Bilak, a member of the Politburo of the Communist Party of Czechoslovakia, who is of Ukrainian descent. The party's secretary general is the Slovak G. Husak, who became president of the republic in 1975, replacing L. Svoboda. In the 1970s Czechoslovakia became one of the most-integrated and closely controlled states of the Soviet bloc.

Economic relations. Economic relations between Soviet Ukraine and Czechoslovakia are determined by their proximity, their membership in the Comecon, and the structure and resources of their economies, which to a large extent are complementary. In 1966 Czechoslovakia was the second-largest importer of Ukrainian goods. Ukrainian-Czechoslovak trade in 1967 exceeded 550 million rubles. Ukraine exported to Czechoslovakia iron ore (3,657,000 t or 72 percent of Czechoslovakia's imports in 1958, 6,953,000 t or 75 percent in 1964), manganese (34 percent), pig iron (72 percent), and rolled steel (75 percent). Ukraine also provides Czechoslovakia with food products – grain, meat, butter, and salt. In 1967 the Brotherhood pipeline, which delivers natural gas from Dashava in Western Ukraine to Czechoslovakia, was opened. Ukraine supplies Czechoslovakia with electricity through the Peace transmission line. Soviet Ukraine took part in equipping the huge east Slovak metallurgical complex in Košice. Czechoslovakia on its part has helped Ukraine to modernize its mines and transport systems. Czechoslovak machinery was used to a large extent in the conversion to electric trains. A wide-gauge railway line was built between Chop and Košice to improve the

transportation of goods from Ukraine. Ukraine imports precision machine instruments, refrigerators, cables, chemical and pharmaceutical products, furniture, and some food products from Czechoslovakia.

Economic relations and co-operation between Ukraine and Czechoslovakia are conducted according to general Soviet economic policy and are directed by Union agencies, often without consideration for Ukraine's economic interest. Cultural relations between the two countries are to some extent dependent on republican agencies (a branch of the Czechoslovak-Soviet Friendship Society) and on interblast and interinstitutional efforts at co-operation (eg, between the universities of Kiev and Bratislava). Sometimes 'days of Ukrainian culture' are staged in Czechoslovakia and 'days of Czechoslovak culture' in Ukraine. There is a consulate general of the Czechoslovak Socialist Republic in Kiev, but Soviet Ukraine has no representation in Czechoslovakia.

V. Markus

Czechowicz, Józef, b 15 March 1903 in Lublin, Poland, d 9 September 1939 in Lublin. Polish poet, modernist. Besides composing original, mostly philosophical and pessimistic, poetry, Czechowicz translated the works of foreign poets into Polish, including the Ukrainian poets T. Shevchenko and P. Tychna and other Soviet and émigré poets. He also translated works of Ukrainian prose writers V. Stefanyk and M. Kotsiubynsky. His translations were usually published in *Biuletyn polsko-ukraiński* and in the newspaper *Zet*. His translations of Ukrainian poetry were published in the book *Wiersze* (Poems, Lublin 1963).

Czechs. A West Slavic people related closely to the Lusatian Sorbs and Slovaks. The Czechs are now settled mostly in the Czech Socialist Republic. In 1977 there were 9,612,000 Czechs in Czechoslovakia, constituting 64 percent of its population. Of these, 9,440,000 lived in the Czech republic. Czechs can also be found in Austria (10,000), the United States (450,000), Canada (60,000), and in smaller concentrations in Germany, France, and Yugoslavia. In 1960 there were 15,000 Czechs in the Ukrainian SSR; about 70 percent of them gave Czech as their mother language, while 23 percent gave Ukrainian. These are the remnants of a larger Czech minority on Ukrainian territory in the past. Altogether there are about 10,500,000 Czechs around the world today.

Czechs in Ukraine. Economic, military, and cultural ties between *Bohemia and Ukraine account for small Czech settlements in Rus' as early as the 13th century. The Polish chronicler J. Długosz (1415–80) noted that,

during a famine in Bohemia in 1281–2, some Czech families moved to the Halych principality. During the reign of George II Boleslav, Czech immigrants were members of his retinue and of the local nobility. G. Chodko, the son of Jeromiř, was an adviser to the prince, while Chodko Otek was the palatine of Lutske.

Under Volodyslav of Opole (Władysław Opolczyk) traders, craftsmen, and some nobles emigrated to Ukraine. Some of the Roman Catholic clergy and even bishops on Rus' territories were Czechs. Later, Czech mercenaries served in the Polish army, mostly as guards on the Polish-Moldavian border along the Dniester River. J. Černin commanded an expedition to Moldavia in 1509. In Ukraine and Lithuania the Czechs were known as artillerymen in Polish companies and castles.

Individual Czechs settled in Peremyshl, Kolomyia, and Kholm, but mostly in Lviv, which in the 15th century attracted colonists from Czech and German lands because of its economic importance. In this period there were several surnames among the burghers of Lviv that indicated their place of origin (eg, those having the names Chekh, Chesky, and others). One of these burghers, N. Bohemus, built a chapel in honor of ss Vitus, Václav, and Procopius. In the 15th century Albert Czech Tuchampsky (Albertus dictus Czech de Tuczamp) was mayor of Lviv. During the religious wars in Bohemia and particularly after the Battle of Bilá Hora (1620) some members of the Unity of Brethren sought refuge in Western Ukraine. One of the leading Brethren, J. Brosius, settled with his followers in Volodava, Podlachia, in the 1630s. In 1634 a conference of the Unity of Brethren communities in Poland and Lithuania took place there with the participation of J. Comenius.

Czechs played a role in the history of the Ukrainian Cossacks. According to one hypothesis proposed by F. Palacký and V. Antonovych, the Czech prince Frederick (Bedřich) of Ostrih was one of the organizers of the movement. This hypothesis was rejected by M. Kostomarov. Czech influences are evident in the terminology used by the Cossacks, the organization of Cossack encampments, and their military tactics. Among Cossack officers, the Orlyk family, of which Hetman P. Orlyk was a member, was of Czech origin. General J.B. Weisbach served under Peter I and took part in the battle of Poltava. In 1735 he was appointed governor of Kiev. The tsar endowed him with large estates, which had belonged formerly to I. Mazepa and his officers. Weisbach set up various enterprises, particularly a textile industry.

In the 18th–19th century Czech musicians with their kapellen (*hudby*) toured the towns of Ukraine and were widely known. J. Prač, A. Jedlička, and J. Landvara were best known among them. Czech merchants and craftsmen visited Ukraine, and Czechs served as Austrian civil servants in Galicia and Bukovyna. Czech brewers were widely reputed.

In the 1860s whole colonies of Czech farmers began to settle in Ukraine, mostly in Volhynia. In Rivne a special commission for Czech resettlement was set up. After the abolition of serfdom the Czechs could purchase landowners' estates on favorable terms, particularly in the counties of Dubno, Lutske, Ostrih, Zhytomyr, and Volodymyr in Volhynia gubernia, but also in the Kherson, Tavriia, and Kuban regions. The following villages were the principal settlements of the Czechs: Liudhardivka (1863) in Volhynia, Chekhivka in Podilia, Tabir, Bo-

hemka, Parevych in the Crimea, and Chekhohrad near Melitopil. In 1870 the Russian government permitted the Czechs to become Russian subjects. They were registered as peasants, came under the local administration, and could set up their own rural districts (*volosti*) or join existing ones. Four Czech districts were formed: Rivne, Dubno, Lutske, and Kupychiv. The other Czech settlements belonged to Ukrainian districts. Altogether there were about 130 Czech settlements, and by the beginning of the 20th century the Czech population in Ukraine reached 65,000. Almost all of the Volhynian Czechs converted to the Orthodox faith. The first Czech publications were religious and included *Český pravoslavný kalendář* of 1888, published first in Kiev by F. Jareš, a teacher at Galagan College, and then in Zhytomyr. Some of the Czechs retained their Protestant faith (eg, the Czech Brethren).

For a long time the Czech settlements retained their distinctive character while adopting some of the forms of the Ukrainian milieu. In the towns the immigrants became assimilated more rapidly. Because of their progressive farming methods and skills, the Czechs prospered. They had their own schools, press, associations, and co-operatives. They imported farm machinery from Bohemia, and their farming methods and technology were imitated by their Ukrainian neighbors.

In Kiev the newspaper *Ruský čech* was edited by V. Vondrák in 1906–8, followed by *Čechoslovan*, edited by V. Švihovský and V. Charvát in 1911–14 and 1916–18, which advocated the liberation of Bohemia and Slovakia from Austria-Hungary. In August 1914 the local Czechs in Kiev set up the military organization Česká Družina, which became the base for the later Czechoslovak legion in Ukraine and Russia. These military organizations were joined by Czech and Slovak prisoners of war who had served in the Austro-Hungarian army and who by the end of 1917 numbered over 200,000. *Československý denník* and *Československý vojak* appeared briefly in Kiev. The Czechoslovak National Council, headed by B. Čermák, had its seat there and maintained friendly relations with the Ukrainian Central Rada. (For Czech-Ukrainian political ties, see *Czechoslovakia.)

In the UNR the rights of the Czech minority were guaranteed by a law on national and personal autonomy. In February–March 1918 only a small number of Ukrainian Czechs retreated eastward with the Czechoslovak legion. At the conclusion of the Peace Treaty of Riga about 20,000 Czechs found themselves in Poland. In the 1920s there were 12 Czech rural soviets in Soviet Ukraine. In 1926 there were 17,500 Czechs in the Ukrainian SSR and the Crimean ASSR. They had their own elementary schools.

During the Second World War the so-called Volhynian Czechs supported the effort to form Czechoslovak military units and in 1944 volunteered for the Czechoslovak Brigade. In accordance with the Czechoslovak-Soviet treaty of 1945, many Czechs returned to their ancestral homeland. Only slightly over 10,000 Czechs stayed behind, mostly in Zhytomyr oblast.

Another Czech group that lived among Ukrainians was the community in Transcarpathia in 1919–39. Its members were civil servants who were assigned to serve there in the administrative agencies, schools, transport system, and military. Some merchants and industrialists settled there also. A few hundred farmers moved to southern Transcarpathia in connection with the agrarian reforms in

some of the villages there. The number of Czechs in Transcarpathia increased to 30,000. Their above-average education, professional training, and status as representatives of the 'governing nation' assured them of a privileged position. There were special blocks (called colonies) inhabited mostly by Czechs in the towns. A Czech educational system was set up. In 1935 there were 3 Czech gymnasiums, 1 teachers' college, 23 junior high schools, and 182 elementary schools. As a rule, the Czechs did not learn Ukrainian and did not assimilate. On the contrary, they promoted the Czechoslovakization of the region. The Czech press flourished with such newspapers as *Podkarpatské hlasy* (an independent semi-weekly, 1925–38), *Hlas východu* (Social-Democrat weekly, 1928–33), and *Karpato-ukrajinská svoboda* and *Přehled z Karpatské Ukrajiny* (both weeklies, 1939). Under the autonomous Carpatho-Ukrainian state the number of Czechs living in the region diminished somewhat. They were represented in the diet by M. Drbal. During the Hungarian occupation all Czechs left Transcarpathia.

V. Markus

Czeczot, Jan, b 17 July 1797 in Maliushychy, Belorussia, d 23 August 1847 in Druskenniki, Poland. Polish and Belorussian poet and folklore specialist, friend of A. Mickiewicz. Czeczot (Belorussian: Chachot) was one of the founders of the student society known as the Society of Philomaths and was exiled to Russia. He collected Belorussian and about 100 Ukrainian folk songs, which he published in six volumes entitled *Piosnki wieśniacze z nad Niemna, Dniepra i Dniestra* (Village Songs from the Neman, Dnieper, and Dniester Regions, 1837–46).

Czernin (von und zu Chudenitz), Ottokar, b 26 September 1872 in Dymokury in present-day Czechoslovakia, d 4 April 1932 in Vienna. Austrian count, political leader, and diplomat. In 1916–18 Czernin was the minister of foreign affairs for Austria-Hungary. He headed the Austro-Hungarian delegation at the peace negotiations in Brest-Litovsk and on 9 February 1918 signed the Peace Treaty of Brest-Litovsk with Ukraine, including a secret agreement on the crown lands of Galicia and Bukovyna. His concessions to Ukraine on the Kholm region and the crown lands provoked protests from the Poles in Austria and undermined his position as the minister of foreign affairs. In April 1918 he resigned. Czernin signed the peace treaty with Ukraine only because of the food crisis in Austria. He coined the term 'Brotfrieden' (Bread Peace) for the Treaty of Brest-Litovsk.

Czeszek, Sebastian, b ? in Cracow, d ca 1612. Sculptor. From 1573 Czeszek lived and worked in Lviv, where he was a member and officer of the painters' guild. He sculpted grave monuments in the style of the late Renaissance; one of these, the monument on the grave of K. Romułtowa (1573), has been preserved at the Roman Catholic church in Drohobych.

Czołowski-Sas, Aleksander, b 27 February 1865 in Bakonchytsi, near Peremyshl, d 17 July 1944 in Lviv. Polish historian of Ukrainian origin. In 1891 he became the director of the city archives of Lviv, and in 1906–39 he served as director of the city museums. He was a specialist in the history of Lviv. He published *Pomniki dziejowe Lwowa* (The Historical Monuments of Lviv, 4 vols, 1891–1921). He wrote a number of works on the architectural monuments of the cities of the principality of Galicia-Volhynia and on the Polish wars with Turkey and Moldavia, for example, *Bitwa pod Obertynem* (The Battle of Obertyn, 1890).

Czumer, William. See Chumer, Vasyl.

D

Dąbkowski, Przemysław, b 23 February 1877 in Lviv, d there 18 December 1950. Polish historian of law, professor at Lviv University under Polish and Soviet rule, full member of the Shevchenko Scientific Society. Dąbkowski wrote a number of works on the history of Polish private law and Lithuanian-Ruthenian law, of which the most important are *Prawo prywatne polskie* (Polish Private Law, 2 vols, 1910–11) and *Dobra rodowe i nabyte w prawie litewskim* (Hereditary and Acquired Property in Lithuanian Law, 1916).

Dairy industry. A branch of the food industry that processes milk and produces various milk products, such as butter, cheese, sour cream, and concentrated canned milk. Before the First World War the manufacture of dairy products in Ukraine was mostly a cottage industry. In 1913 there were only 16 dairy plants in central and eastern Ukraine; their output was 2,975 tonnes of butter (3 percent of the butter production of the Russian Empire).

In the early Soviet period, particularly under NEP, co-operatives and private enterprises played an important role in the development of the dairy industry. When the five-year plans were introduced, dairy co-operatives in the Ukrainian SSR declined, and private dairies were abolished. The small dairy firms were replaced by large plants. By 1940 there were 483 state plants manufacturing butter, cheese, or canned dairy products; 44 of them were large dairy complexes. Butter making was the most highly developed branch of the industry and accounted for 14.4 percent of USSR butter production. The least-developed branch was cheese making.

In Western Ukraine during the interwar period co-operatives played an important role in the dairy industry (see *Maslosoiuz).

After the Second World War the dairy industry in Soviet Ukraine was rebuilt, and its productive capacity was considerably increased. Beginning in the 1960s, the organization of the industry became more concentrated (the average milk output of an enterprise increased from 7,500 tonnes in the 1950s to 25,000 tonnes in the 1970s), and the production process became increasingly automated. By the end of the 1970s there were about 500 dairy enterprises in Ukraine, including 300 butter- and cheese-

making plants, 170 milk-processing plants, and 13 dairy canning plants. The industry produced 6,200 brands of dairy products, among them 60 products from whole milk and 70 natural and processed cheeses. The largest dairy plants, with a capacity of 120–200 tonnes of production from whole milk per day, are in Donetske, Dnipropetrovske, Kiev, and Symferopil. The Slovianske and Zaporizhia butter-making complexes account for about 20 percent of the butter output in Ukraine. The largest cheese-making plants are in Krasni Okny in Odessa oblast, Kovel in Volhynia oblast, and Chortkiv in Ternopil oblast. The growth of the dairy industry is shown in the accompanying table.

The dairy industry is distributed almost throughout Ukraine, but butter making is most developed in the steppe region and Polisia; the plants producing whole-milk products and processed cheese are located mostly in large industrial cities, and natural-cheese plants are found mostly in the steppe region and the Carpathian Mountains. The dairy industry is studied in Kiev at the Ukrainian Scientific Research Institute of the Meat and Dairy Industry and the Ukrainian State Planning Institute of the Meat and Dairy Industry. The dairy industry ranks third in production (14 percent in 1979) among the branches of the food industry in Soviet Ukraine. It produces 26.9 percent of the USSR's butter, 18.9 percent of the milk, 23.6 percent of the canned dairy products, and 5 percent of the cheese.

also produced a series of engravings entitled *Reconstruction* (1945–7).

Dalsky, Volodymyr [Dal's'kyj] (pseudonym of Volodymyr Nesterenko), b 5 May 1912 in Nykopol, Katerynoslav gubernia. Comic actor. After completing his studies at the Lysenko Music and Drama Institute (1930–2), Dalsky joined the Kharkiv Young Spectator's Theater in 1935 and then worked with the Kharkiv Ukrainian Drama Theater (1937–41) and the theaters of the Kiev, Odessa, and Carpathian military districts (1941–57), joining the Kiev Ukrainian Drama Theater in 1957. Included in his repertoire are over a hundred roles from the classics of world and Ukrainian drama.

Damilovsky, Mykola [Damilovs'kyj], b 31 December 1880 in Kozatske, Chernihiv gubernia, d 21 March 1942 in Kiev. Architect and pedagogue. Damilovsky graduated from the Institute of Civil Engineering in St Petersburg in 1909. He was a co-founder of and professor at the Kiev Architectural Institute (1918–38) and the Kiev State Art Institute (from 1939). He invented the Damilovsky rule, which simplifies the construction of architectural perspectives. He designed many buildings in Kiev and pumping stations for the waterworks of Kryvyi Rih and Bila Tserkva. His work is in the modern Ukrainian style.

Dance. See Folk dance.

Dance songs. A genre of Ukrainian folk culture. Dance songs either accompany dances or are themselves accompanied by dances. The interrelation of song and dance in works of this genre is manifested in three principal forms. (1) *Khorovody* (dance games), in which lyrics, dance, and melody are organically united and dramatized. *Khorovody* echo ancient syncretic ritual elements in folk culture. (2) Dance songs proper, compositions sung to dance melodies during the performance of the dances. These include songs to accompany the **metelytsia*, **hopak*, **kozachok*, etc. Their themes include relations between young men and women, jokes, flirtation, rendezvous, thoughts of marriage, courtship, family life, weddings, infidelity, grandparents, godparents, etc. This group also includes genre dances: flax, buckwheat, smiths', reapers', shoemakers', and coopers' dances, as well as the **vasylykha* and **uvyvanets*. **Kolomyiky* constitute a separate group. (3) Songs with dance accompaniment, such as the *tryndychky*, usually performed without musical accompaniment at family gatherings. There is a separate group of songs to accompany **polkas*, *mazurkas*, *krakowiaks*, *csárdáses*, and *waltzes*.

Danchenko, Serhii [Dančenko, Serhij] b 17 March 1937 in Zaporizhia. Stage director, son of V. *Danchenko. After graduating from the Kiev Institute of Theater Arts in 1965, Danchenko worked as a director with the Lviv Ukrainian Drama Theater in 1965–7 and 1970–8. He was also the main director of the Young Spectator's

Theater in Lviv (1967–70) and the Kiev Ukrainian Drama Theater from 1978. His most successful plays include W. Shakespeare's *Richard III*, M. Kulish's *Maklena Grasa*, I. Franko's *Ukradene shchastia* (Stolen Happiness), and Lesia Ukrainka's *Kamynnyi hospodar* (Stone Host).

Danchenko, Volodymyr [Dančenko], b 21 April 1914 in Mariupol (now Zhdanov), d 17 December 1967 in Lviv. Dramatic actor known for his heroic roles. In 1933–7 he studied at the Kiev Theatrical Institute. From 1931 to 1933 and after 1937 he worked in the Zankovetska Theater, which was then in Zaporizhia; he moved with it to Lviv in 1944, where it became the Lviv Ukrainian Drama Theater. Among his main roles were Corrado in P. Giacometti's *La famiglia Lercari*, Yaroslav in O. Levada's *Faust i smert'* (Faust and Death), and Lukash in Lesia Ukrainka's *Lisova pisnia* (The Forest Song).

Daniel Oliveberg de Graecani Atheniensis. Diplomat in the service of hetmans B. Khmelnytsky and I. Vyhovsky. A hieromonk from Athens, he came to Ukraine in 1654. From 1655 to 1658, in the service of the Ukrainian government, he traveled on a number of diplomatic missions to Sweden, Transylvania, Moldavia, Wallachia, and Brandenburg. He was ennobled in Sweden and Poland; during the rule of Vyhovsky he was military secretary in Ukraine. His subsequent fate is unknown.

Danievsky, Pii [Danjevs'kyj, Pij], b 5 May 1820 in the Kiev region, d 19 April 1892. Lawyer. Danievsky studied at Kiev University and became a professor of civil law at the Nizhen Lyceum. He worked on legal reform in Russia in 1864, was head of a department of the Odessa Palace of Justice, and became a senator in 1870. His works include *Ob istochnikakh mestnykh zakonov nekotorykh gubernii i oblastei Rossii* (On the Sources of Local Laws of Some Gubernias and Oblasts of Russia, 1857) and *Istoriia obrazovaniia gosudarstvennogo soveta v Rossii* (The History of the Formation of the State Council in Russia, 1859).

Danievsky, Vsevolod [Danjevs'kyj], b 9 September 1852, d 6 April 1898 in Kharkiv. Son of P. *Danievsky, lawyer, specialist in international and criminal law, professor at Kharkiv University. His most important work is *Sistema politicheskogo ravnovesiia i legitimizma i nachalo natsional'nosti v ikh vzaimnoi sviazi* (The System of Political Equilibrium and Legitimism and the Concept of Nationality in Their Mutual Relations, 1882). Danievsky was one of the first to propose the principle of a 'universal legal order' to unite all nations for their mutual happiness and prosperity.

Danilevsky, Grigorii. See Danylevsky, Hryhorii.

Daniłowicz, Ignacy (Danylovych, Ihnatii), b 30 July 1787 in Hrynevychi, Podlachia (now in Poland), d 12 August 1843 in Gräfenberg, Silesia (now Śląsk Opawski, Poland). Legal historian. The son of a Ukrainian clergyman, Daniłowicz studied at Vilnius University, where he later taught (1822–4); he became a professor at the universities of Kharkiv (1825–30), Kiev (where in 1835–9 he was dean of the faculty of law), and Moscow. A student of Lithuanian-Ruthenian law, he enthusiastically advocated its revival. He discovered and published the statute of King Casimir IV and the Lithuanian-Ruthenian

Chronicle. The code of local laws for the western gubernias, which Daniłowicz prepared for the Russian government, was never implemented. His major works consisted of articles on the Lithuanian chronicles, Lithuanian Statute, and Lithuanian law.

Kostiantyn Dankevych

Dankevych, Kostiantyn [Dan'kevych, Kostjantyn], b 24 December 1905 in Odessa, d 26 February 1984 in Kiev. Composer, conductor, pedagogue. On graduating from the Odessa Institute of Music and Drama (now the Odessa Conservatory) in 1929, he joined its staff. He became a professor there in 1948, serving as its director until 1951; in 1953 he took up a professorship at the Kiev State Conservatory. From 1956 to 1967 he was head of the Composers' Union of Ukraine. His works include the operas *Trahediina nich* (Tragic Night, 1935), *Bohdan Khmelnytsky* (1951; new version, 1953), and *Nazar Stodolia* (1960); the ballet *Lileia* (Lily, 1939); two symphonies (1937, 1945); the symphonic poems *Otello* (Othello, 1937) and *Taras Shevchenko* (1939); a string quartet; a trio; choral works; and film scores and songs for solo voice. M. Mykhailov wrote a monograph on Dankevych (Kiev 1959, 1964, 1974).

Danshyn, Anatolii [Dan'shyn, Anatolij], b 27 January 1934 in Vovcha, Kharkiv oblast. Operatic baritone. Danshyn graduated from the Kharkiv State Conservatory in 1958 and has been with the Dnipropetrovske Opera Theater since 1975. His roles include Bohdan in K. Dankevych's *Bohdan Khmelnytsky*, Igor in A. Borodin's *Prince Igor*, Mazepa and Onegin in P. Tchaikovsky's operas, Figaro in G. Rossini's *Barber of Seville*, and Renato in G. Verdi's *Un Ballo in Maschera*.

Danube River (Ukrainian: Dunai). The second-largest European river in length (2,850 km) and basin size (817,000 km). Its lower section, from the mouth of the Prut River to the Black Sea, forms the 160 km border between the Ukrainian SSR (southern *Bessarabia) and Rumania (*Dobrudja). The Danube Basin within the Ukrainian SSR covers 28,800 sq km and includes the following Carpathian tributaries: the *Tysa (with a basin in Ukraine of 12,900 sq km, covering the Transcarpathian region), the *Prut (12,500 sq km), and the *Seret. Within the boundaries of Ukraine the Danube flows through the *Black Sea Lowland, forming a delta approximately 55 km below the mouth of the Prut and separating into three estuaries: the northern Kiliia (which follows the Ukrainian SSR

DANUBE DELTA

1. Border between the Ukrainian SSR and Rumania
2. Marshland
3. Steep banks of the Dobrudja Upland

border for almost 100 km), the middle Sulina, and the southern George. Approximately two-thirds of the Danube total runoff passes through the Kiliia Estuary (500–1,200 m in width and 10–20 m in depth) and separates into a series of branches before entering the sea. The entire Danube delta consists of floodplains interlaced by hundreds of creeks and channels and covered with reeds and brushwood. On Ukrainian territory the Danube is replete with fish, primarily sturgeon, and hence provides the population with one of its principal occupations – fishing. All sections of the Danube within the Ukrainian SSR are accessible to small seacraft. The major Ukrainian ports on the Danube are Reni, Izmail, Kiliia, and Vylkove. The great economic importance of the Danube lies in the fact that it links Ukraine directly with other Danube countries. The Danube became an international river open to all nations in 1856. Since 1949 the Ukrainian SSR has been represented by the USSR in the Danube Commission, an international organization with headquarters in Budapest that regulates navigation along the Danube.

The Danube has played a role in Ukrainian folklore and history. It appears in many Ukrainian folksongs as a symbol for a river or for water in general: this is perhaps a remnant from the age of the great migrations of the Slavs in the 5th–7th century, or from the later period of Ukrainian settlement on the Danube. The Danube is glorified in historical songs and epics, starting with *Slovo o polku Ihorevi*. The *Tivertsians reached the lower stretches of the Danube during the 9th and 10th centuries. In 968–71 and in 1116 the Kievan princes Sviatoslav Ihorevych and Volodymyr Monomakh attempted to establish a stronghold along the lower Danube, but this was successfully accomplished only by the Galician prince Yaroslav Osmomysl (1153–87). Either he himself or his kinsman Ivan Rostyslavych Berladnyk founded Malyy Halych (present-day Galați) on the northern bank of the Danube. In the 12th century, the Danube frontier was settled by the *Berladnyky. The principality of Halych lost the Danube regions to the Golden Horde in the 1240s. During the 16th and 17th centuries the Ukrainian Cossacks often attacked the Turkish garrisons in Kiliia. After the destruc-

The village of Vylky at the mouth of the Danube River

tion of the Zaporozhian Sich in 1775, the Cossacks founded the *Danubian Sich on the Danube delta, then under Turkish rule. Their descendants inhabit the area to this day. In the 19th century, under Russian rule many Ukrainian peasants were settled on the northern bank of the Danube.

Danubian Sich (Zadunaiska Sich). A settlement of Ukrainian Zaporozhian Cossacks, who fled to Turkish territory after the destruction of the *Zaporozhian Sich in 1775. They were first settled by the sultan at the mouth of the Danube in Dobrudja, but there they soon came into conflict with earlier emigrants – descendants of Don Cossacks who after K. Bulavin's rebellion were led by I. Nekrasov to the Kuban and then later migrated to the Danube. The Turkish government ordered the Zaporozhians to move to the Silistra-Rushchuk (now Ruse) line south of the Danube. Dissatisfied, a large number of them (about 8,000) migrated to Austrian territory in 1785 and settled in the *Banat (between the Tysa River and the Danube), where they received the right to an elective system of self-government and a fee for their service from the Austrian emperor. They could not, however, get used to the tight Austrian control and the bureaucratic imperial regime, and in 1811–12 returned to Dobrudja. After joining forces with the local Zaporozhian Cossacks to defeat the followers of Nekrasov, these Cossacks settled on a tributary of the Danube – the Dunavets River – and organized themselves on the model of the old Zaporozhian Sich: they had 38 kurins, an elected otaman, etc. The basic occupations in peacetime were fishing and small-scale farming. They were obligated to take part in Turkish military campaigns and were often forced, against their convictions, to fight against other Christians. At the same time the Russian government regarded a separate Cossack formation outside its control with suspicion and called upon the Danubian Cossacks to join Russian military formations. In 1828 during the Russo-Turkish war the Russians found an ally in Otaman Y. *Hladky, the commander of the Danubian Sich. Taking the military standards and treasury, Hladky went to the Russian side with a small force (1,500) of Cossacks. For this betrayal the Turks destroyed the Danubian Sich. The remaining scattered Cossacks were not able to renew the organized life of the Sich communities. Their descendants still live in the Danube delta (see *Dobrudja). Hladky's followers were organized by the Russian government into the *Azov Cossack Host.

B. Kravtsiv

Danylchuk, Ivan [Danyl'čuk], b 1900 in Canora, Saskatchewan, d 1942 in Winnipeg, Manitoba. Poet, community leader, and editor. A teacher by profession, Danylchuk was best known as a poet. His collected poems were published as *Svytaie den'* (The Day Breaks, Winnipeg 1929). In 1939 he edited and published the *Ukrainian Tribune and Review* in Edmonton and shortly before his death became editor of the magazine *Ukrainian Canadian Review* in Winnipeg. Danylchuk was prominent in the Ukrainian Self-Reliance League and a leader in the Canadian Ukrainian Youth Association.

Danylenko, Yosyp, b 15 November 1903 in Novyi Burluk near Chuhuiv in Kharkiv gubernia. Zootechnician, full member of the All-Union Academy of Agricultural Sciences since 1966. Since 1939 he has worked at the Scientific Research Institute of Animal Husbandry of the Forest-Steppe and Forest Regions of the Ukrainian SSR in Kharkiv, serving as its director from 1939 to 1973. His research studies are concerned with the feeding of farm animals, storing feed in silos, keeping animals at industrial complexes, and so on.

Danylevsky, Hryhorii [Danylevs'kyj, Hryhorij], b 26 April 1829 in the village of Danylivka, Kharkiv gubernia, d 18 December 1890 in St Petersburg. Russian writer of Ukrainian origin. Danylevsky studied in St Petersburg and remained there to work at the Ministry of Education. He did research on Ukrainian history and ethnography. At the end of the 1850s he moved to Kharkiv and took an active part in educational and zemstvo affairs. In 1881 he became editor of *Pravitel'stvennyi vestnik* in St Petersburg. Danylevsky began his literary career writing poetry, sketches of Ukrainian life, and articles on Ukrainian literature. Among his published works are several collections of short stories – *Slobozhane* (Slobidska Ukrainians, 1854), *Poltavskaia starina* (Poltava Antiquity, 1856), and *Poslednie zaporozhtsy* (The Last Zaporozhian Cossacks, 1878); a collection of historical and biographical sketches, *Ukrainskaia starina* (Ukrainian Antiquity, 1866); a collection of Ukrainian folk tales; and a trilogy about peasant life in the Azov region, *Beglye v Novorossii* (Fugitives in New Russia, 1862; Ukrainian translation, Lviv 1892), *Volia* (*Beglye vorotilis'*) (Freedom [The Fugitives Return], 1863), and *Novye mesta* (New Places, 1867; Ukrainian translation, Lviv 1897). Because of their ethnographic content and dynamic plots, Danylevsky's works were widely popular. Some were translated into West European languages.

Danylevsky, Oleksander [Danylevs'kyj], b 10 December 1838 in Kharkiv, d 8 June 1923 in Petrograd. Biochemist, founder of biochemistry in Ukraine and the Russian Empire. Danylevsky was a corresponding member of the

St Petersburg Academy of Sciences from 1898 and a professor at the universities of Kazan (1864–71) and Kharkiv (1885–92) and at the St Petersburg Military Medical Academy (from 1892). He produced studies on biopolymer exchanges, enzymes and antienzymes, the physiology of the nervous system, and dietary regimens. Together with his brother, Vasyl *Danylevsky, he initiated the publication, in Kharkiv, of the first journal of physiology in the Russian Empire (1888–91).

Vasyl Danylevsky

Vasyl Danylevych

Danylevsky, Vasyl [Danylevs'kyj, Vasyl], b 25 January 1852 in Kharkiv, d 25 February 1939 in Kharkiv. Brother of O. *Danylevsky, physiologist, full member of the Academy of Sciences of the Ukrainian SSR from 1926. Danylevsky was professor at Kharkiv University in 1883–1909 and 1917–21 and at the Kharkiv Medical Institute in 1921–6. His works deal with the nervous system, electrophysiology, endocrinology, protistology, hypnosis in humans and animals, etc. He identified the brain centers that regulate the activity of the internal organs.

Danylevsky, Viktor [Danylevs'kyj], b 4 September 1898 in Łódź, Poland, d 9 August 1960 in Leningrad. Historian of technology, full member of the Academy of Sciences of the Ukrainian SSR from 1948. In the late 1920s Danylevsky taught in institutions of higher learning in Kharkiv and from 1931 in Leningrad. In 1949–54 he was head of the Commission for the History of Science and Technology of the Academy of Sciences. He wrote the books *Rossiiskaia tekhnika* (Russian Technology, 1948) and *Lomonosov na Ukrainie* (Lomonosov in Ukraine, 1954).

Danylevych, Roman [Danylevyč], b 15 September 1903 in Pecheniia, Peremyshliany county, Galicia. Journalist, Catholic activist. Danylevych helped organize the *Ukrainian Youth for Christ festival in 1933 and the *Orly Catholic youth association. He contributed articles to the Ukrainian Catholic press in Galicia. During the Second World War he served as the liaison officer for prisoners of war at the Ukrainian Central Committee. Abroad he has worked as editor of *Khrystyians'kyi holos* (1949–54) and *Postup* (1959–62). He lives in Cleveland, Ohio, and has been active in the movement for a Ukrainian Catholic patriarchy and in Ukrainian Catholic brotherhoods. In 1951 he became president of the Obnova Ukrainian Catholic Academic Alliance.

Danylevych, Vasyl [Danylevyč, Vasyl'], b 1872 in Kursk, d 10 November 1936. Historian and archeologist. A student of V. Antonovych, he graduated from Kiev University and took up teaching positions at the universities of Kharkiv (1902) and Kiev (1907). Danylevych was a member of the Ukrainian Scientific Society in Kiev and a full member of the Scientific Research Chair of Ukrainian History in Kiev and of the Archeological Commission of the All-Ukrainian Academy of Sciences. He studied the Donets fortified settlement and grave sites in the Kharkiv region. Among his works are *Ocherk istorii Polotskoi zemli do kontsa XIV veka* (An Outline of the History of the Polatsk Land to the End of the 14th Century, 1897) and *Arkheologichna mynuvshyna Kyivshchyny* (The Archeological Past of the Kiev Region, 1925).

Danyiuk, Ivan [Danyljuk], b 3 December 1931 in the village of Rashkiv, Horodenka county, Galicia. Mathematician, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1965. Danyiuk graduated from Lviv University in 1955. In 1965 he became director of the Donetske Computation Center of the academy, which in 1970 became the Institute of Applied Mathematics and Mechanics, and a professor at Donetske University. In 1975 he became a department chairman in this institute. Danyiuk's main publications deal with hydrodynamics, equations of mathematical physics, the theory of limits, and singular integral equations.

Danyiuk, Mykhailo [Danyljuk, Myxajlo], b 1 October 1919 in Kremianets, Volhynia, d 2 March 1981 in Minneapolis, Minnesota. Surgeon, civic figure, journalist. Danyiuk fought in the Ukrainian Insurgent Army. After the war he studied medicine at the University of Munich and in the United States. He was active in the Melnyk faction of the OUN and in the government in exile of the UNR. He contributed medical articles to *Svoboda* and from 1971 had a weekly medical column on Voice of America radio. Danyiuk is the author of the memoirs *Povstans'kyi zapysnyk* (Insurgent's Notebook, 1968), *Likars'kyi dovidnyk* (Physician's Handbook, 1970), and *Korotkyi anhlo-ukraïns'kyi medychnyi slovnyk* (Brief English-Ukrainian Medical Dictionary, 1970).

Danyliv (Danylov), Vitalii, b 10 April 1902 in the Donbas village of Zhovte, Katerynoslav gubernia, d 19 March 1954 in Kiev. Physicist, full member of the Academy of Sciences of the Ukrainian SSR from 1951. Danyliv graduated from the Dnipropetrovske Institute of People's Education in 1926. In 1951 he became the director of the laboratory and in 1955 of the Institute of Metal Physics of the Academy of Sciences of the Ukrainian SSR. His principal works deal with the x-ray investigation of the atomic structure of rare metals and with the theory of crystallization. He analyzed the physics of the formation of centers of crystallization and is the author of over 70 scientific works.

Danyliv, Volodymyr, b 1 August 1881 in Dukhovshchina, now in Smolensk oblast, RSFSR, d 24 April 1970 in Leningrad. Literary historian and ethnographer, contributor to *Kievskaiia starina*, *Ukraina*, and *Zapysky Ukraïns'koho naukovoï tovarystva v Kyievi*. In the 1920s Danyliv worked for the *Leningrad Society of Researchers of

Ukrainian History, Literature, and Language. He was the author of several studies of T. Shevchenko and M. Kostomarov.

Danylo, 11th to the beginning of the 12th century. Writer and traveler, hegumen of one of the Chernihiv monasteries, author of the oldest surviving work of Rus' pilgrim literature, *Khozhdenie Danila Ruskyia Zemli igumena* (The Travels of Danylo, a Hegumen of the Rus' Land). In this book, written about 1113, he gives an account of his journey to Palestine in 1106–8. Danylo spent 16 months in Jerusalem and was received by the Latin crusader-king Baldwin I. Up to 100 transcriptions of the work were done in the 15th–19th century under various titles: *Khozhdenie* (Journey), *Strannik* (Traveler), *Palomnik* (Pilgrim), etc. It was one of the most popular works of Old Rus' literature. Based on recollections of the voyage undertaken by a whole company, it provides, besides elementary geographic and economic information, numerous stories about holy places, borrowed from the Bible, legends, and apocrypha. These account for the great literary value of the work.

Vitalii Danyliv

King Danylo Romanovych

Danylo Romanovych [Danylo Romanovyč], 1201–64. Prince of Volhynia and Galicia, king of Rus' (from 1253). After the death of his father, Prince *Roman Mstyslavych, in 1205, unrest among the boyars forced Danylo to take refuge at the Hungarian court, and later, with his mother and brother, *Vasylko Romanovych, in small principalities in Volhynia. Following a long struggle with neighboring princes and Galician boyars (1219–27) Danylo unified Volhynia. He failed in several attempts to gain control of Halych, but finally succeeded in 1238, with the support of the people. The next year he took Kiev, which had entered his sphere of influence earlier, and placed Voievode Dmytro in charge of the principality. As a result of Danylo's influence, which extended to the Turiv-Pynske principality and the Dorohychyn land, the advance of the Teutonic Order was checked in 1238.

However, the Tatar invasion of 1240–1, during which Kiev, Volodymyr, and Halych were destroyed, interfered with Danylo's plans for the unification of Ukrainian territories. He was nevertheless able, on 17 August 1245, to defeat a coalition of the Chernihiv princes, disaffected boyars, and their Hungarian and Polish allies at Yaroslav (now Jarosław) and finally to establish his control over Galicia. In order to save his state, Danylo was compelled

to recognize the khan's suzerainty, which he did in a visit to the khan's court at Sarai in 1246. Yet he prepared to overthrow his Tatar overlords. He sent raids against those who had become the Tatars' vassals who lived along the Sluch and Horyn rivers, built fortifications, and sought alliances in the West, particularly with Pope Innocent IV. To get the support of the pope, Danylo agreed to acknowledge him as head of the church in his principalities and accepted a crown from him in 1253. But these steps did not bring the aid Danylo had hoped for and had no practical consequences. In 1254 Danylo repulsed a Tatar attack on *Ponyzia and Volhynia. The Tatar voivode Burundai led a new campaign in 1260, forcing Danylo to dismantle his fortifications and to abandon his plans for independence.

Danylo was an exceptionally gifted ruler. For a time he unified the western territories of Ukraine. He built a number of new cities, including Kholm (his new capital) and Lviv; reformed the military forces, creating a heavy infantry based on the peasantry; and gained control over the boyars. Under his reign Western European cultural influences were strong in Ukraine, and Western European political and administrative forms took hold, particularly in the towns.

Dmytro Danylyshyn

Danylyshyn, Dmytro [Danylyšyn], b 2 April 1907 in Truskavets, Drohobych county, Galicia, d 23 December 1932 in Lviv. Member of the Ukrainian Military Organization and the Organization of Ukrainian Nationalists, tradesman. Danylyshyn took part in an OUN post office raid in Truskavets and carried out the assassination of the Polish politician T. Hołowko in August 1931. For raiding the post office in Horodok on 30 November 1932, he was sentenced to death by a Polish court and was hanged along with V. *Bilas at Brygidky Prison in Lviv.

Danylyshyn, Stepan [Danylyšyn], b 5 January 1909 in the village of Yukhymivtsi, Podilia gubernia, d 16 Decem-

ber 1973 in Ternopil. A theater set designer, Danylyshyn graduated from the Academy of Arts in Leningrad in 1940 and worked at the Ternopil Ukrainian Music and Drama Theater. He designed sets for the productions of O. Korniiuchuk's *Bohdan Khmel'nyts'kyi*, V. Vasylo's *V nedilii rano zillia kopala* (On Sunday Morning She Dug Up Herbs, based on the novel by Kobylianska), L. Ukrainka's *Kaminnyi hospodar* (The Stone Host), and other plays. A retrospective exhibit of the works of Danylyshyn took place in Lviv in 1962.

Danylna. See Tribute.

Darahan, Andrii, b 1 October 1902 in the town of Valky, Kharkiv gubernia. Sculptor, monumentalist. He studied at the Kharkiv Art Institute in 1927–31. With K. *Buldyn he designed projects for monuments to T. Shevchenko in Kharkiv and at T. Shevchenko's grave. For the latter he received first prize in a 1933 competition, although the project itself was never realized. Together with K. Buldyn and Ya. Razhba, Darahan executed the bas-reliefs in the frieze of the Workers' Club in Luhanske (now Voroshylovhrad) (1934–5) and the haut-relief frieze of the Opera and Ballet Theater in Dnipropetrovske (1936–7). He also created the sculptures in the Ukrainian Pavilion at the All-Union Agricultural Exhibition in Moscow (1939) and produced a number of busts. After emigrating, he created the monument to T. Shevchenko in Winnipeg (1961) and carved a number of wooden iconostases for Ukrainian churches in the United States, including the memorial church in South Bound Brook, New Jersey.

Darahan, Yurii, b 1894, d 17 March 1926 in Prague. Poet, captain in the Army of the Ukrainian National Republic. After his release from internment in Kalisz, Poland, Darahan lived in Prague. His single collection of poetry, *Sahaidak* (Quiver, 1925), was highly praised by critics. This collection, characterized by a subtle perception of nature, lyricism bound by rigid form, a philosophy of optimism and struggle, motifs of 'bronze and metal,' and particularly the revival of poetic images of Ukraine's Princely era in the cycle 'Luna mynuvshyny' (Echo of the Past), exerted considerable influence on the work of young contemporary poets in Western Ukraine and in the emigration.

Darnytsia. See Kiev.

Dashava [Dašava]. iv-5. Town smt (1978 pop 2,000) in Stryi raion, Lviv oblast. Dashava lies in Subcarpathia, 12 km east of the town of Stryi, on huge reserves of natural gas. This is the oldest center of the gas industry in Ukraine, having developed in the early 1920s. Before the Second World War a 75 km pipeline, built in 1926–8, delivered gas from Dashava to Lviv and to Stryi. In 1946–8 the Dashava-Kiev pipeline was built; in 1955 it was extended to Moscow. More recently, the Dashava-Minsk-Vilnius pipeline was completed.

Dashenko, Vasyl [Dašenko, Vasyl'], b 31 December 1916 in the town of Kaharlyk, Kiev gubernia. Stage actor, pedagogue. In 1941 Dashenko graduated from the Kiev Institute of Theater Arts, where he later lectured. He worked as an actor in the Kiev Artistic Film Studio in

1942–5 and subsequently in the Kiev Ukrainian Drama Theater. He has also taught at the studio of this theater. He has played many roles from the Ukrainian dramatic repertoire.

Dashevsky, Aron [Daševs'kyj], b 17 July 1904 in Rzhyschiv, Kiev gubernia. Ophthalmologist. In 1949 Dashevsky became a professor at the Dnipropetrovske Medical Institute. He developed an exact method of studying the eye's optic system, a procedure for early diagnosis of glaucoma, and a method of treating myopia.

Dashiv [Dašiv]. v-10. Town smt (1978 pop 5,400) in Illintsi raion, Vinnytsia oblast, on the Sob River in eastern Podilia. Its industry is of local importance only. In June 1648 M. Kryvonis and his Cossacks fought the Poles led by J. Wiśniowiecki near Dashiv; these battles have been immortalized in Ukrainian folklore. In the autumn of 1919 the Ukrainian army fought the Red Army and A. Denikin's troops near Dashiv.

Dashkevych, Mykola [Daškevyč], b 4 August 1852 in the village of Bezhiv, Zhytomyr region, d 20 January 1908 in Kiev. Literary scholar and historian. He completed his studies at Kiev University and eventually occupied the chair of Western literatures at this university. From 1907 he was a full member of the St Petersburg Imperial Academy of Sciences. Dashkevych wrote a series of works about Ukrainian, Russian, and Western writers (I. Kotliarevsky, A. Metlynsky, A. Pushkin, M. Lermontov, W. Shakespeare, G. Byron, J.W. von Goethe, and others) in which he examined literary phenomena using a historical-cultural and a comparative-historical approach. His main work, a survey of Ukrainian literature written in the form of a critique of a book by M. *Petrov, was entitled *Otzyv o sochinenii g. Petrova 'Ocherki istorii ukrainskoi literatury 19 stoletia'* (A Reply to Mr Petrov's Work 'Outlines of the History of Ukrainian Literature in the 19th Century,' St Petersburg 1888).

Rejecting the view that modern Ukrainian literature was heavily dependent on Russian literature, Dashkevych emphasized the independence of Ukrainian literature and its close ties with West European literary trends and styles. Dashkevych wrote several studies of I. Kotliarevsky (in *Kievskaiia starina*, 1893 and 1898; and in *Chtenia v Istoricheskom obshchestve Nestora Letopistsa*, 1907); a study of the popular *duma* about Oleksii Popovych; and the historical investigations *Bolokhovskaia zemlia i ee znachenie v russkoi istorii* (The Land of the Bolokhovians and Its Significance in Russian History, 1878), *Kniazhenie Daniila Galitskogo po russkim i inostrannym izvestiiam* (The Reign of Danylo of Halych According to Russian and Foreign Reports, 1883), and *Zametki po istorii Litovsko-Russkogo gosudarstva* (Notes on the History of the Lithuanian-Ruthenian State, 1885).

Dashkevych, Olena. See Stepaniv, Olena.

Dashkevych, Ostafii [Daškevyč, Ostafij] (also: Dashkovych), ?–1535. Military figure of boyar lineage in the Kiev region who served in the army of Ivan III, the grand prince of Moscow. Dashkevych took part in the revolt of M. Hlynsky. He later became starosta of Kaniv and Cherkasy (1514) and organized Cossack forces to defend the southeastern frontier, successfully repelling Tatar

incursions. In 1515 and 1521, in alliance with the Tatars, he organized campaigns against Muscovy. His plan for a standing defense force (1533) was approved by the Sejm, but the Polish government provided no material assistance. Traditionally, Dashkevych has been incorrectly considered the first Cossack hetman.

Mykola Dashkevych

Roman Dashkevych

Dashkevych, Roman [Daškevyč], b 6 December 1892 in Tustanovychi, near Boryslav, Galicia, d 12 January 1975 in Kufstein, Austria. Community, political, and military figure; lieutenant general of the Army of the Ukrainian National Republic. Before the First World War he was among the organizers of the paramilitary *Sich societies and the *Ukrainian Sich Riflemen in Lviv. In 1917 he was one of the first organizers of the *Sich Riflemen in Kiev and first head of the Riflemen's Council. He organized the artillery and commanded the artillery brigade of the Sich Riflemen. In the 1920s, working as a lawyer in Lviv, he revived the Sich societies. Upon their liquidation by the Polish authorities, he helped organize the sports association *Luh in 1925 and edited its publications.

Dashkevych, Vsevolod [Daškevyč], b 2 June 1907 in Ovruch, Volhynia gubernia. Ethnographer and folklorist, corresponding member of the Academy of Sciences of the Ukrainian SSR since 1945. Dashkevych has produced studies in Ukrainian philology, folklore, and ethnography, in particular on the custom of warming the dead, on animals in popular fantasy, and on changes in folk-song lyrics.

Dashkiiev, Mykola [Daškijev], b 16 May 1921 in Krasnokutske, Kharkiv region, d 23 February 1976 in Kharkiv. Poet and prose writer, graduate of Leningrad University and the Kharkiv Pedagogical Institute. Dashkiiev began to publish his poems in 1943, and in 1950 he turned to writing prose. He published a collection of poems, *Na perevali* (At the Pass, 1948), and a number of novels and science-fiction novellas: *Torzhestvo zhyttia* (The Triumph of Life, 1952; 2nd edn 1966), *Volodar vsesvitu* (Ruler of the Universe, 1955), *Zuby drakona* (The Dragon's Teeth, 1956), *Zahybel' Uranii* (The Fall of Urania, 1960), *Z bezodni mynuloho* (From the Depths of the Past, 1970). He also published a collection of short stories, *Halateia* (Galatea, 1967).

Datsei, Vasyl [Dacej, Vasył'], b 14 January 1936 in Vyrava, Prešov region. Writer and journalist. For some

time in the 1960s Datsei worked as the Ukrainian literature editor at the Slovak Publishing House in Prešov. Besides having written numerous articles in *Druzhno vpered* and *Duklia*, he is the author of satirical stories (*My i nashi znaiomi* [We and Our Acquaintances], 1961), psychological stories (*Monolohy* [Monologues], 1967), and two novels: *Ochi nevyraznoho koloru* (Eyes of Unclear Color, 1965) and *Zustrichi* (Meetings, 1973). After 1973 Datsei, like other writers and scholars, seems to have been silenced by the Czechoslovak government for taking part in the movement for democratization in the 1960s.

Datskiv, Teodor [Dackiv], b 1888 in Vasyliv, Rava Ruska county, Galicia, d 23 June 1956 in Winnipeg, Manitoba. Community leader and editor. A student of law in Lviv and Vienna prior to serving in the Austrian army during the First World War, Datskiv joined the Ukrainian Galician Army in December 1918 and participated in the Kiev campaign of August 1919. He emigrated to Canada in 1923, settling in Edmonton, Alberta, where he worked for an immigration bureau and edited *Nash postup* from 1923 to 1927. From 1932 to 1940 he was editor of **Kanadiis'kyi farmer* in Winnipeg. Later he worked for a government agency. A founder of the Ukrainian Canadian Committee in 1940, Datskiv served as its first treasurer on behalf of the United Hetman Organization.

Dauphin. Town (1971 pop 8,891) in southwestern Manitoba. Dauphin's Ukrainian settlement, one of the oldest in Canada, dates from 1896. In 1897 the agricultural colony was visited by Rev. N. Dmytriv and described in his booklet *Kanadiis'ka Rus'* (Canadian Ruthenia, Mount Carmel, Pa 1897). Between 1931 and 1971 Dauphin's Ukrainian population increased from 9.6 to 34.6 percent of the total population. Since the late 1960s Canada's National Ukrainian Festival, which features Ukrainian music, dance, arts, and crafts, has been held annually there.

Davyd-Horodok; a view of excavations conducted by R. Yakymovych in 1937-8

Davyd-Horodok (Belorussian: Davyd-Haradok). 1-8. City (1970 pop 8,900) in Stolín raion, Brest oblast, Belorussian SSR. Situated in Polisia on the Horyn River, 15 km from its junction with the Prypiat, it falls within the boundaries of Ukrainian ethnic territory. It is a river port with a fishing industry. In the 12th and 13th century Davyd-Horodok was the center of an appanage principality. Its founder was said to be Prince Davyd Ihorevych of Volodymyr-Volynskiy. Archeological excavations

conducted by R. Yakymovych (1937–8) and F. Lysenko (1963) uncovered the remains of wooden buildings, log-surfaced roads, ceramic materials, and wares of bronze, iron, glass, bone, and wood. Beneath the ruins of the court chapel the graves of the Ihorevych princely family were discovered.

Davyd Ihorevych, 1059–1112. Son of Prince Ihor Yaroslavych of Volodymyr-Volynskyi, grandson of Prince Yaroslav the Wise. In 1084 the grand prince of Kiev, Vsevolod Yaroslavych, bestowed the town of Dorohobuzh, Volhynia, on Davyd Ihorevych as an appanage; in 1085 he was given the town of Volodymyr. Davyd Ihorevych attempted to wrest Galicia away from princes Volodar and Vasylo Rostyslavych; in 1097 he blinded Vasylo. Set upon by the princes for this act, Davyd Ihorevych fled to Poland. He made several attempts to recover Volodymyr but was finally deprived of this possession at the *Vytychiv congress of princes. However, he was given other towns in Volhynia: Buzke, Ostroh, Dubno, and later Dorohobuzh, where he died.

Davyd Sviatoslavych, ?–1123. Descended from the Olhovych princely family of Chernihiv, he was prince of Smolensk (1095–7) and later of Chernihiv. He took part in campaigns against the Cumans in 1105, 1107, 1110, and 1111.

Davydov, Oleksander, b 26 December 1912 in Yevpatoriia, Crimea. Theoretical physicist, full member of the Academy of Sciences of the Ukrainian SSR since 1964. In 1945–53 and in 1964–6 Davydov worked at the Institute of Physics of the Academy of Sciences of the Ukrainian SSR. Since 1966 he has worked at the academy's Institute of Theoretical Physics, and since 1973 he has been the director of the institute. His theoretical works deal with excitons in crystals, the collective excitation of non-spherical atomic nuclei, spectra in molecular crystals, and quantum biophysics.

Davydovsky, Hryhorii [Davydovs'kyj, Hryhorij], b 18 January 1866 in Melnia, Chernihiv gubernia, d 13 April 1952 in Poltava. Choir conductor and composer. He graduated from the St Petersburg Conservatory. Beginning in 1888, he organized and conducted a total of 35 choirs in Russia and Ukraine. In the last years of his life he directed the Poltava Choir. Davydovsky composed more than 80 choral works, including 'Bandura,' 'Kobza,' 'Kuban,' 'Ukraïna,' and arrangements of Ukrainian and foreign folk songs.

Davydovych, Fedir [Davydovyč], b 1756 in the Chernihiv region, d in the 1820s. Jurist belonging to the Ukrainian nobility, lecturer at Chernihiv College. In 1797 Davydovych was appointed secretary of the Little Russian General Court. In 1804 he was appointed chairman of a commission in St Petersburg for compiling laws. The commission drafted a civil-law code for Left-Bank Ukraine, which was entitled 'Sobranie malorossiiskikh prav' (A Collection of Little Russian Laws); it was rejected by the tsarist government. Davydovych wrote a scholarly work on the sources of law and legal norms in 17th–18th-century Ukraine.

Day-care centers (*yasla*). In the Ukrainian SSR day-care centers admit children ranging in age from two months to three years. Children spend 9–10, 12–14, or 24 hours daily at these institutions. In addition to permanent day-care centers, there are seasonally functioning institutions on collective farms, particularly in the spring and summer months. Day-care centers multiplied rapidly with the introduction of the five-year plans (on industrial sites) and collectivization (on collective farms). Among the purposes underlying the development of Soviet day-care centers are the state's desire to weaken the family's influence on child rearing and to promote the large-scale employment of women in all sectors of the economy. In 1977 there were 19,417 day-care centers and nurseries in the Ukrainian SSR, which cared for a total of 2.1 million children.

Dazhboh. In Slavic mythology a benevolent sun god, the son of *Svaroh. In the Primary Chronicle he is ranked third among the pagan gods after *Perun and *Khors. In the medieval epic **Slovo o polku Ihorevi* the Rus' people are called the 'children of Dazhboh,' which indicates that the god was held in special regard by them.

Dazhboh. A literary monthly (semimonthly in 1935) of young nationalistic writers in Lviv from 1932 to 1935. It was named after a Slavic deity. The editors were Ye. Pelensky (1932–4), B. Antonych (1934), and B. Kravtsiv (1935). Among the contributors were I. Atamaniuk, Ya. Dryhynych, R. Zavadovych, V. Karkhut, V. Lasovsky, S. Lutsyk, A. Maliutsa, and B. Romanenchuk. Associated with the journal was the book series *Literaturna Biblioteka*, which included literary works by Antonych, Dryhynych, B. Kabarovsky, and U. Samchuk.

Death penalty. See Capital punishment.

De Balmen, Yakiv [De Bal'men, Jakiv], b 10 August 1813 in Lynovytsia, Poltava gubernia, d 26 July 1845 in Caucasia. Amateur artist, friend of T. Shevchenko, educated at the Nizhen Lyceum. In 1844 he transcribed Shevchenko's *Kobzar*, using the Latin alphabet, intending to publish it for West Slavic readers; with M. Bashilov he illustrated the manuscript (there were more than 80 illustrations). De Balmen died in a clash with Circassians in the Caucasus; Shevchenko dedicated the poem *Kavkaz* (The Caucasus) to him. De Balmen produced the album *Hoholivs'kyi chas* (Gogol's Time, published posthumously in 1909) and a diary of his travels in the Crimea, including 300 drawings in the text (1842).
